Emergent transdisciplinary fields, such as the environmental humanities, reflect a growing awareness that responses to contemporary environmental dilemmas require the collaborative work of not only diverse scientists, medical practitioners, and engineers, but also more expansive publics, including artists, urban and rural communities, social scientists, and legal fields. This course is inspired by the need to attend to environmental challenges, and their health, justice, and knowledge production implications, as inherently social concerns. The class is co-taught by faculty from the School of Arts and Sciences and the School of Medicine, and will address the challenges and possibilities of working across disciplinary boundaries, building collaborative affinities, and negotiating frictions between diverse methodologies and epistemological approaches. Dr. Kristina Lyons from the Department of Anthropology brings years of experience collaborating with soil scientists, small farmers, indigenous communities, lawyers, and judges in Colombia on watershed restoration projects, soil degradation, toxicity, and the implementation of socio-ecological justice. Dr. Marilyn Howarth is a medical doctor from the Center of Excellence in Environmental Toxicology of the School of Medicine and has experience engaging the public, legislators and regulators around environmental health issues affecting the quality of air, water, soil and consumer products. Through their different lenses, they will foster interdisciplinary environmental collaboration and scholarship by engaging students in discussions and research that bring together the arts and sciences regarding issues of urban air pollution, soil remediation, deforestation, and water contamination, among other environmental health problems. This inaugural course seeks to explore environmental humanities on the global scale. Using Dr. Lyons' deep insight and valuable connections to communities in Colombia, we will explore the experience of environmental degradation, opportunities and challenges for mitigation, and socio-environmental health implications there while placing these issues in conversation with U.S. public health, regulatory and political frameworks and community experiences on similar issues. A comparative exploration of environmental justice in both Colombia and the U.S. will be infused into much of the discussion. This class offers a unique opportunity for students from engineering, natural and social sciences, humanities and the arts to learn to converse and collaborate around pressing socio-environmental and public health issues. Taught by: Lyons
Course usually offered in spring term

Activity: Seminar
1.0 Course Unit

LALS 317 The Politics of Matter and the Matter of Politics
What is nature? What is culture? What kinds of practices and actors constitute what we call science? Who and what constitute the sphere we refer to as politics? A number of theoretical developments in cultural anthropology, political theory, critical geography, and feminist science studies have problematized the modernist ontological divide between Nature and Culture and a whole series of binary oppositions (such as objects/subjects, matter/form, bio/geo) that follow from it. Taking inspiration from this literature and placing it in conversation with Native and Indigenous scholarship and a series of contemporary socio-environmental struggles occurring in Latin America and beyond, this course will discuss the conceptual-methodological tools that a concern with politics of matter has generated. The epistemic and political implications of these tools go beyond their analytical usefulness as innovative devices to explore novel phenomena. They complicate well-established fields of inquiry, such as political ecology and economy, environmental studies, ethics, social justice, and modern politics; and, indeed, the singular ontology that these fields may inadvertently and explicitly sustain. We will explore how it is that things, stuff, matter, 'nature' came to fall outside modern politics as such, and the kinds of ethico-political repercussions that problematizing this division may produce.

Also Offered As: ANTH 317
Activity: Seminar
1.0 Course Unit

LALS 328 Diplomacy in the Americas - The Penn Model OAS Program
'Diplomacy in the Americas’ an academically based community service course in which students work with Philadelphia and Norristown public school students to explore solutions to critical problems facing the Americas. Entrenched political, economic, and social inequality, combined with environmental degradation, weak institutions, pervasive health epidemics, weapon proliferation, and other issues pose formidable hurdles for strengthening democratic ideals and institutions. The Organization of the American States (OAS), the world’s oldest regional organization, is uniquely poised to confront these challenges. 'Diplomacy in the Americas’ guides students through the process of writing policy resolutions as though the students were Organization of the American States (OAS) diplomats, basing their research and proposals on democracy, development, security, and human rights - the four pillars of the OAS. Students will also read literature about what it means to educate for a democracy and global citizenry, and they will have the opportunity to turn theory into practice by creating and executing curriculum to teach and mentor the high school students through interactive and experiential pedagogies.
Taught by: Bartch
Course usually offered in fall term

LALS 350 Archaeology of Civilizations in South America
This course provides a basic survey of the archaeology of civilizations of South America (the Andean region of the central highland and coastal areas that today are Peru and Bolivia and parts of Ecuador, Chile, and Argentina). Topics include the history of South American archaeology, peopling of the continent, origins and evolution of agriculture, early village life, ceremonial and domestic architecture, prehistoric art and symbolism, Andean cosmology and astronomy, indigenous technology, the historical ecology of landscapes, outside contacts and relationships, economics and trade, social and political structure, state formation and urbanism, and early contacts with Europeans. The lectures and readings are based on recent archaeological investigations and interpretations combined with appropriate analogy from ethnohistory and ethnography. The prehistory of the Amazonian lowlands and northern South America will be covered in other courses.
Taught by: Erickson
Course not offered every year
Also Offered As: ANTH 350
Activity: Lecture
1.0 Course Unit

LALS 359 Nutritional Anthropology
The course is an introduction to nutritional anthropology, an area of anthropology concerned with human nutrition and food systems in social, cultural and historical contexts. On the one hand, nutritional anthropologists study the significance of the food quest in terms of survival and health. On the other hand, they also know that people eat food for a variety of reasons that may have little, if anything, to do with nutrition, health, or survival. While the availability of food is dependent upon the physical environment, food production systems, and economic resources, food choice and the strategies human groups employ to gain access to and distribute food are deeply embedded in specific cultural patterns, social relationships, and political and economic systems. Thus, nutritional anthropology represents the interface between anthropology and the nutritional sciences, and as such, can provide powerful insights into the interactions of social and biological factors in the context of the nutritional health of individuals and populations. Because food and nutrition are quintessential biocultural issues, the course takes a biocultural approach drawing on perspectives from biological, socio-cultural and political-economic anthropology. Course content will include: a discussion of approaches to nutritional anthropology; basics of human nutrition; food systems, food behaviors and ideas; methods of dietary and nutritional assessment; and a series of case studies addressing causes and consequences to nutritional problems across the world.

LALS 385 Rel & Pol in Latin Amer
This course offers an introductory examination of the political and social role that the Catholic Church has played in Latin America from the time of the Spanish and Portuguese conquests in the 16th century to the end of the 20th century. Throughout this five-century period, the Catholic Church has not acted as a monolithic institution. Some members of the church have been associated with governments and those in power in order to exert control and domination over the population. Others have been among the few individuals or institutions that have spoken up against the injustices and oppression both of colonial governments in the 16th to 18th centuries, and of authoritarian regimes of independent republics in the 19th and 20th centuries. In this latter period, our analysis will include the churches role in defending human, civil, political, and indigenous rights and in promoting the transition from the period of military or civilian dictatorships that ruled a good part of the region starting in the 1960s to civilian democratic regimes in the 1980s and 1990s. We will analyze six countries, three of which were under national security regimes: Brazil, Chile, and Argentina, and three others that experienced internal wars between guerrillas and military-backed civilian juntas: Guatemala, El Salvador, and Nicaragua.

Activity: Seminar
1.0 Course Unit

LALS 387 Topics in Africana Studies
Topics vary: Black Feminist Approaches to History & Memory - The term black feminism emerged in public discourse amid the social, political, and cultural turbulence of the 1960s. The roots of black feminism, however, are much older, easily reaching back to the work of black women abolitionists and social critics of the nineteenth century. The concept continued to grow and evolve in the work of twentieth century black women writers, journalists, activists, and educators as they sought to document black women's lives. Collectively, their work established black feminism as a political practice dedicated to the equality of all people. More recently, black feminism has been deployed as a tool for theoretical and scholarly analysis that is characterized by an understanding that race, class, gender, and sexuality are inextricably interconnected.

LALS 391 Sustainable Development And Culture in Latin America
This interdisciplinary course exposes students to the three dimensions of sustainable development - environmental, economic, and social - through an examination of three products: peyote, coca, and coffee - that are crucial in shaping modern identity in areas of Latin America. The course integrates this analysis of sustainable development in relation to cultural sustainability and cultural practices associated with peyote, coca, and coffee and their rich, traditional heritage and place in literature, film, and the arts. This is an upper level seminar open to majors and minors of Spanish and those who have completed Pre-requisite SPAN 219 or SPAN 223 or permission of the Undergraduate Chair.

LALS 417 Comparative Racial Politics
This course combines scholarship on race and racism in plural societies with qualitative approaches to the study of political institutions, phenomena and actors. Germany, Brazil, France and Cuba will be examined as individual country cases and in comparative perspective. Conceptual and theoretical readings on race, racism and politics provide students with the analytic tools to draw more abstract lessons and generalizable conclusions about how racial and ethno-national hierarchy involves the role of the state and political economy, culture, norms and institutions. Students will also examine the impact of civil rights movements for political equality in response to legacies of racial and ethno-national hierarchy and inequality. Finally, students will become familiar with scholarship on nationalism and social movements as they relate to racial politics.
Taught by: Hanchard
One-term course offered either term
Also Offered As: AFRC 417, HIST 467, PSCI 412, SOCI 417
Activity: Lecture
1.0 Course Unit
LALS 420 Advanced Topics in Africana Studies
Topics vary. See the Africana Studies Department’s course list at https://africana.sas.upenn.edu for a description of the current offering. After an examination of the philosophical, legal, and political perspectives on Human Rights, this course will focus on US policies and practices relevant to Human Rights. Toward that end, emphasis will be placed on both the domestic and the international aspects of Human Rights as reflected in US policies and practices. Domestically, the course will discuss (1) the process of incorporating the International Bill of Human Rights into the American legal system and (2) the US position on and practices regarding the political, civil, economic, social, and cultural rights of minorities and various other groups within the US. Internationally, the course will examine US Human Rights policies toward Africa. Specific cases of Rwanda, Kenya, South Africa and Egypt, as well as other cases from the continent, will be presented in the assessment of US successes and failures in the pursuit of its Human Rights strategy in Africa. Readings will include research papers, reports, statutes, treaties, and cases.

LALS 451 The U.S. and the World since 1898
This class examines the emergence of the U.S. as a world power since 1898, and considers both the international and domestic consequences of U.S. foreign relations. In one respect, the twentieth century was a strange time to become a global empire: it was the period when colonial systems centered in Europe, Russia, Japan, and Turkey collapsed, and new nations emerged throughout Africa and Asia. This class explores the changing strategies of military, economic, and political intervention that the U.S. pursued as colonization lost legitimacy. Within that framework, the class invites students to think about several questions: How did the idea and practice of empire change over the twentieth century? How did the United States relate to new visions of independence emerging in Africa, Asia, and Latin America? How did global interactions both inform and reflect racial ideology in the United States? Finally, how did international affairs transform U.S. politics and social movements?
Taught by: Offner
One-term course offered either term
Also Offered As: HIST 451
Activity: Lecture
1.0 Course Unit

LALS 465 Race and Racism in the Contemporary World
This undergraduate seminar is for advanced undergraduates seeking to make sense of the upsurge in racist activism, combined with authoritarian populism and neo-fascist mobilization in many parts of the world. Contemporary manifestations of the phenomena noted above will be examined in a comparative and historical perspective to identify patterns and anomalies across various multiple nation-states. France, The United States, Britain, and Italy will be the countries examined.
Taught by: Hanchard
Course not offered every year
Also Offered As: AFRC 465, PSCI 410
Activity: Seminar
1.0 Course Unit

LALS 510 Inner Outer Space Travel Writing: A Creative Writing Workshop
Inner Outer Space Travel Writing is a creative writing workshop focused on writing work within the science fiction/speculative fiction/alternative futurities, science/land/travel writing, and creative-critical nonfiction traditions. Students will work within a variety of genres, with an emphasis on the essay, the short story, screen/tele-play, play, blog and performance. Students will read recommended texts from within their particular interests, and the course will culminate in both a public performance and dissemination/publication via another media platform (zine, website, podcast, etc). All levels of experience, from none/first-time writer to published writers, are encouraged to register for the course.
Taught by: Bracho
Course not offered every year
Also Offered As: ENGL 131, GSWS 510
Activity: Seminar
1.0 Course Unit
LALS 511 Ethics, Archaeology, and Cultural Heritage
This seminar will explore some of the most important issues that are now a central part of archaeological, anthropological and historical research throughout the world. The identification and control of cultural heritage is a central part of the framework for research within other communities. Issues for this course will also include cultural identity, human rights, repatriation, colonialism, working with communities and many other topics. Field research today must be based upon a new series of ethical standards that will be discussed and examined within this class. Major topics include: cultural heritage - definitions and constructs, cosmopolitanism and collecting, archaeology and looting, cultural heritage preservation, museums - universal and national, museum acquisition policies, cultural identity, international conventions (including underwater issues), national laws of ownership, community based development, cultural tourism, development models, and human rights.
Taught by: Leventhal
Course not offered every year
Also Offered As: ANTH 511
Activity: Seminar
1.0 Course Unit

LALS 512 Passion Projects: Radical Experiments in Writing Plays, Screenplays, and Pilots
This creative writing workshop will focus on writing for screen, stage and internet and is open to undergraduate and graduate students at every level of writing experience. The course will be writing intensive and also include the reading and analysis of feminist, trans, queer, working class and racially liberatory plays, films, television and performance as models of inspiration. Meditation, drawing, theater games, improv exercises, screenings and outings to see work on and off campus will round out this holistic and experimental approach to making work that illuminates and entertains audiences from across the US and global audience spectrum.
Taught by: Bracho
Also Offered As: ENGL 134, GSWS 512
Activity: Seminar
1.0 Course Unit

LALS 513 Latin American Politics
This graduate level course will be embedded in course PSCI/LALS 213, the same way that PSCI 517 (Russian Politics) is embedded in PSCI 217. In other words, graduate students taking this course will have to attend lectures twice a week, but instead of discussing materials in recitations will meet with Professor Falleti, either weekly (one hour) or biweekly (two hours), to discuss the main topics of the course and research questions and proposals related to the course.
Taught by: Falleti
Course usually offered in fall term
Also Offered As: PSCI 513

1.0 Course Unit

LALS 527 Spring 2015: Race, Gender & Auto/Biography
SPRING 2017: Market Women, Madames, Mistresses & Mother Superior
based in concepts and principles of Constitutional law and critical race theory, this course explores the interpretation and impact of seminal court cases in U.S. history as applied to Latinxs in the United States and abroad. With a particular focus on the 20th century, students will examine how court decisions have affected civil rights, immigration policies, welfare, political incorporation, education, and other important issues affecting Latinxs. Students will also explore additional themes including the status and treatment of Latinxs in the criminal justice system, representation of Latinxs in the judiciary and how Supreme Court decisions have affected U.S. foreign policy with Latin America.
Taught by: Bartch
Course usually offered summer term only
Activity: Seminar
1.0 Course Unit

LALS 557 Seminar in Archaeological Theory and Method: Archaeology of Landscapes
Advanced seminar for potential professional archaeologists. Course will examine critically main past and present theoretical issues in archaeological research and interpretation, and consider various methodologies utilized towards these interpretive ends. Prerequisite: If course requirement not met, permission of instructor required.
Taught by: Erickson, C.
Course not offered every year
Also Offered As: AAMW 557, ANTH 557
Prerequisite: ANTH 241 OR ANTH 600
Activity: Seminar
1.0 Course Unit

LALS 590 Introduction to Francophone Literature
An introduction to major literary movements and authors from five areas of Francophonie: the Maghreb, West Africa, Central Africa, the Caribbean and Quebec.
Course not offered every year
Also Offered As: CIMS 580, COML 590, ENGL 590, GSWS 589
Activity: Seminar
1.0 Course Unit

LALS 595 Introduction to Latin American Literature
This course will focus on the literature of Latin America. It will introduce students to the major literary movements and authors of Latin American literature and provide an understanding of the social, cultural, and political contexts in which these authors write. Prerequisite: Course 590.
Activity: Seminar
1.0 Course Unit
LALS 655 Democratization
This graduate class focuses on issues of democratization (and de-democratization), as studied in the comparative politics literature. The course is structured in four parts. In the first part, we scrutinize conceptualizations and measurements of democracy. In the second part, we study competing political theories about the origins of democracy. The third part of the seminar is devoted to the study of democratic transition and consolidation processes. To finish, we tackle specific issues in democratization such as social capital and civic participation, as well as the resilience of (subnational) authoritarianism.
Taught by: Falleti
Course not offered every year
Also Offered As: PSCI 655
Activity: Seminar
1.0 Course Unit

LALS 656 Topics in Black Political Thought: Difference And Community
This course is designed to familiarize graduate students with some of the key texts and debates in Africana Studies concerning the relationship between racial slavery, modernity and politics. Beginning with the Haitian Revolution, much of black political thought (thinking and doing politics) has advocated group solidarity and cohesion in the face of often overwhelming conditions of servitude, enslavement and coercion within the political economy of slavery and the moral economy of white supremacy. Ideas and practices of freedom however, articulated by political actors and intellectuals alike, have been as varied as the routes to freedom itself. Thus, ideas and practices of liberty, citizenship and political community within many African and Afro-descendant communities have revealed multiple, often competing forms of political imagination. The multiple and varied forms of political imagination, represented in the writings of thinkers like Eric Williams, Richard Wright, Carole Boyce Davies and others, complicates any understanding of black political thought as having a single origin, genealogy or objective. Students will engage these and other authors in an effort to track black political thought’s consonance and dissonance with Western feminisms, Marxism, nationalism and related phenomena and ideologies of the 20th and now 21st century.
Taught by: Hanchard
Also Offered As: AFRC 655, GSWS 655, PSCI 612
Activity: Seminar
1.0 Course Unit

LALS 661 Language Diversity and Education
Exploration of issues affecting educational policy and classroom practice in multilingual, multicultural settings, with an emphasis on ethnographic research. Selected U.S. and international cases illustrate concerns relating to learners’ bilingual/bicultural/biliterate development in formal educational settings. Topics include policy contexts, program structures, teaching and learning in the multilingual classroom, discourses and identities in multilingual education policy and practice, and the role of teachers, researchers, and communities in implementing change in schools. Prerequisite: Permission needed from the department.
Taught by: Hornberger/Flores
Course usually offered in fall term
Also Offered As: EDUC 661
Activity: Lecture
1.0 Course Unit

LALS 683 Collective Violence, Trauma, and Representation
This seminar is organized as a laboratory space for graduate students and faculty working in a number of adjacent fields and problems. Seminar discussions will be led not only by the primary instructors, but also by a number of guests drawn from the Penn faculty. For the first weeks of the course, we will focus on seminal works in the interlinked areas of history and memory studies, cultural representations of collective violence, trauma studies, and other related topics. Beginning with the Xth week of the course, we will turn to case studies in a variety of geographic, cultural and historical contexts. Additionally, some later sessions of the course will be devoted to a presentation and discussion of a work in progress of a Penn graduate student, faculty member or a guest lecturer.

Browse Penn Law’s courses by various criteria including instructor, subject area, and title using Penn Law’s Course Finder (https://goat.law.upenn.edu/cf/coursefinder/).

Law - Master in Law (LAWM)

Leadership and Communication (LEAD)
The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates/).
LEAD 101 Leadership Theory, Practice and Purpose
Using an innovative combination of academic theory, empirical research and self-reflection, this course is an intensive introduction to multiple and competing concepts of leadership. Students will critically analyze texts and research related to effective leadership and leaders and, at the same time, develop their own, individualized leadership traits and skills profile. A culminating biographical analysis paper requires students to compare and contrast their own distinctive leadership traits and skills to those of an admired leader. The course concludes with each student crafting a 5-year leadership and communication career plan.
Activity: Online Course
1.0 Course Unit

LEAD 102 Leadership Theory and Practice
Using an innovative combination of academic theory, empirical research and self-reflection, this course is an intensive introduction to multiple and competing concepts of leadership. Students will critically analyze texts and related to effective leadership and leaders and, at the same time, develop their own, individualized leadership traits and skills profile. A culminating biographical analysis paper requires students to compare and contrast their own distinctive leadership traits and skills to those of an admired leader. The course concludes with each student crafting a 5-year leadership and communication career plan.
Activity: Online Course
1.0 Course Unit

LEAD 202 Leadership Lessons from Social Sciences
Drawing on several social science fields and subfields, from economics to psychology and more, this course is an introduction to leadership as studied and applied in various scholarly disciplines in the social sciences. Academic texts will introduce students to several social science fields, while case studies will offer them the opportunity to consider the practical and organizational applications of the theories being studied. Students’ papers will synthesize the material of the course in thoughtful ways, and apply it to to problems of leadership. You have the option to enroll in the individual course without committing to the entire Certificate in Leadership and Communication, enjoying the flexibility and expertise offered by Penn LPS Online to suit your schedule and interests.
Activity: Online Course
1.0 Course Unit

LEAD 203 Leadership Lessons from Humanities
Using philosophy, literature, religious studies and biographies of famous public leaders, students conduct a searching examination of competing ideas and concepts regarding leadership, moral reasoning and ethical action. Students reflect on the complexities of problem-solving through an ethical lens and further define their individual interpretations and approaches to ethical decision-making. As an integral part of this simultaneously academic and practical exploration of leadership ethics, students co-author a mini-biography assessing the ethics of a famous (or infamous) public leader. Prerequisite: This course counts toward the Certificate in Leadership and Communication and degree concentration.
Taught by: Rebecca Padot
Prerequisite: LEAD 101 OR LEAD 304
Activity: Online Course
1.0 Course Unit

LEAD 304 Professional Communication and Self-Development
This writing-intensive course is designed to enhance each student’s ability to communicate effectively in the workplace and other professional settings. Students will learn how to edit their own writing, give persuasive oral presentations to different audiences, communicate effectively during conflicts or crises, and apply evidence-based lessons from positive psychology to personal development and professional success. Students who have taken LEAD 101 will complete the first draft of a plan.
Activity: Online Course
1.0 Course Unit

LEAD 305 Introduction to Data Analytics
In our digital world, data-driven decision-making is becoming more common and more expected. Effective leadership and communication, therefore, often hinges on the ability to acquire, manage, analyze, and display large, quantitative data sets. Even many entry-level jobs assume or require basic knowledge of data analytics. This course introduces students to important concepts in data analytics across a wide range of applications using the programming language R. Students complete the course with a clear understanding of how to utilize quantitative data in real-time problem identification, decision-making, and problem-solving. No prerequisites in statistics or math are required. This course will have required synchronous sessions and the instructor will offer a choice of times. Only open to Data Analytics certificate students in LPS Online Program. Please email lps@sas.upenn.edu to request a permit.
Taught by: Samantha Sangenito
Also Offered As: DATA 101
Activity: Online Course
1.0 Course Unit

LEAD 310 Leadership and Public Administration
In LEAD 310, Leadership and Public Administration, students are introduced to both classic and contemporary studies of how public laws and policies are translated into effective action, how and why government reform efforts succeed or fail, and complete an original case study on the ongoing revolution in public management theory and practice favoring public-private partnerships and collaborative governance.
Taught by: Rebecca Padot
Activity: Online Course
1.0 Course Unit

LEAD 320 Leadership and Business Organization
In LEAD 320, Leadership and Business Organization, students interactively and critically study five of the most influential books ever published regarding why for-profit enterprises succeed or fail; do an original ‘management consulting’ report on an actual business firm; and write a final paper on what, if any, particular individual styles or institutional structures predictably and reliably enable one to ‘succeed in business.’
Activity: Online Course
1.0 Course Unit
LEAD 330 Ldrshp Nonprofit Mgmt
In LEAD 330, Leadership and Nonprofit Management, students are immersed in research that profiles Americas vast and varied, large and growing independent sector, exploring what works (and what doesn't) when it comes to leadership and innovation in the non-governmental, not-for-profit organizations (charities, churches, private colleges, hospitals, and others) that, even if only counting the about 1.4 million registered with the IRS, now have more $2 trillion a year in annual revenues, more than $5 trillion in total assets, and more than 14 million full-time employees.
Activity: Online Course
1.0 Course Unit

LEAD 340 Introduction to Positive Psychology
In the 20th century, the field of psychology made enormous and important strides in addressing mental health challenges. Today research in the field has expanded, inspired, in part, by Martin E.P. Seligman's 1998 APA presidential address, to include the scientific study of optimal functioning and what helps people live full lives. This course focuses on the science of thriving-what does it mean to be 'happy'; and how can one cultivate well-being at the individual and community level? Students explore the foundations of this science, understand a conceptual framework for well-being, and actively engage in activities that help to cultivate well-being. Drawing upon theory, empirical research, ancient and collective wisdom, we examine these topics critically and experientially and together build our learning community. For those pursuing a Certificate in Applied Positive Psychology, this course is strongly recommended as a prerequisite for the other three courses.
Taught by: na
Also Offered As: APOP 100
Activity: Online Course
1.0 Course Unit

LEAD 350 Human Flourishing: Strengths and Resilience
What does it mean to flourish? What are we like when we are at our best? What helps us bounce back from challenges and adversity? Continuing the exploration of the science of positive psychology, students delve deeply into the study of character strengths as a framework for building positive character and well-being, and explore the concept of resilience, or the ability to overcome challenging situations. In this course, we explore how we can leverage our strengths to more effectively contribute to the greater world and enhance our own well-being. We also study the physical and psychological protective factors that constitute resilience, and how they are cultivated. Students learn about these topics from a scientific and experiential perspective, both as individuals and within our learning community. This course will have required synchronous sessions and the instructor will offer a choice of times. Students will have a more robust learning experience in this course if they first complete Introduction to Positive Psychology.
Also Offered As: APOP 120
Activity: Online Course
1.0 Course Unit

LEAD 360 Positive Psychology at Work
LEAD 360 Positive Psychology at Work
If flourishing is related to our lived daily experience, and approximately 50% of our waking hours are spent working, how do our workplaces contribute to, and diminish, our ability to thrive? Students are exposed to an array of research-informed strategies that have been applied in a variety of disciplines and workplaces, including business, education, health care, and nonprofit organizations. Exploration of case studies and salient research topics such as relationships at work, positive leadership, prosocial behavior, and our sense of meaning and purpose, guide our learning. Students gain an understanding of the variables that contribute to our ability to flourish at work and understand how we both experience and shape our work environments through our individual contributions. This course will have required synchronous sessions and the instructor will offer a choice of times.
Taught by: Meredith Myers

Activity: Online Course
1.0 Course Unit

LEAD 400 Global Leadership and Problem-Solving
LEAD 400 Global Leadership and Problem-Solving
According to research sponsored by the Organization for Economic Cooperation and Development (OECD), over the last 200 years, human beings in virtually every corner of the globe have become ever more likely to live longer, healthier, wealthier, and more personally satisfying lives. But, global progress in improving human well-being has been neither linear nor universal. For instance, measured at living on just $5.50 a day per person, nearly 3.5 billion people still live in extreme poverty. Moreover, humankind now faces several unprecedented existential threats to human life itself such as global warming and the persistence or spread of drug-resistant infectious diseases including ones once thought to be nearly eradicated. In this course, students are introduced to multiple and competing concepts and empirical theories on each of two interrelated questions regarding global leadership and problem-solving: (1) What, if any, particular approaches (for example, 'collaborative governance' or 'boundary-spanning leadership') might predictably and reliably increase the odds that the next century-long chapter in the annals of global human well-being—the chapter to be written between now and the decade that will begin in 2120—will be a tale of greater wealth, health, and happiness for all or most people worldwide? (2) Under what, if any, conditions can diverse institutions—families and social networks; neighborhood and community groups; nonprofit or social sector organizations; for-profit firms; and local, national, and transnational government institutions—act, either independently or in tandem with each other, to maintain or improve human well-being? Each student quasi-independently researches and writes a capstone research paper describing, analyzing, and assessing an existing policy or program pertaining to one of the following three challenges: elder care with a focus on China; education with a focus on Africa; or economic development with a focus on Latin America.
Activity: Online Course
1.0 Course Unit
LEAD 504 Professional Communication and Academic Writing
Writing effectively for a variety of audiences is a required skill for professional masters students, both inside the classroom and in the workplace. This graduate level online seminar introduces writing and communication strategies and skills for all graduate professional students who wish to pursue leadership opportunities in their chosen fields. Students will learn professional communication and academic writing practices and that will enable them to respond to a variety of workplace scenarios as well as influence and inspire others through effective written communication strategies. Through frequent writing assignments, hands-on exercises during class sessions, and a final analysis paper, students will learn how to write concise prose; summarize and evaluate documents and scenarios effectively; develop technical skills in writing clear instructions; and write persuasive proposals. The class will focus on strategies for effective critical thinking and writing, as well as how to write persuasively for multiple audiences, ranging from the general public to an academic audience. There will be special attention to analysis of genres and audiences, and effective writing and revision strategies. Most importantly, you will be able to use the skills developed in this class throughout your academic and professional careers.

Activity: Online Course
1.0 Course Unit
Notes: The course will meet virtually, via Zoom, on Wednesdays 8-9:30: May 29; June 5, 12, 19, and 26; and July 3, 10, and 17.

Legal Studies & Business Ethics (LGST)

LGST 100 Ethics and Social Responsibility
This course explores business responsibility from rival theoretical and managerial perspectives. Its focus includes theories of ethics and their application to case studies in business. Topics include moral issues in advertising and sales; hiring and promotion; financial management; corporate pollution; product safety; and decision-making across borders and cultures.

One-term course offered either term
Activity: Lecture
1.0 Course Unit

LGST 101 Law and Social Values
This course presents law as an evolving social institution, with special emphasis on the legal regulation of business in the context of social values. It considers basic concepts of law and legal process, in the U.S. and other legal systems, and introduces the fundamentals of rigorous legal analysis. An in-depth examination of contract law is included.

One-term course offered either term
Activity: Lecture
1.0 Course Unit

LGST 202 Law of Corporate Management and Finance
This course provides an introduction to the law of corporate management and finance, focusing on large publicly held corporations. It is presented from the perspective that before too long virtually all students will serve on one or more corporate boards of directors and that each should, therefore, know about the duties owed by directors and officers to those toward whom they bear a fiduciary duty. The course covers the basic obligations of corporate directors and managers under state corporate law and the federal securities laws. It also considers the rights and responsibilities of other major stakeholders in the governance of public corporations, including shareholders, creditors/bondholders, employees (including corporate executives), investment bankers, corporate lawyers, and accountants. Particular attention is given to the law of mergers and acquisitions. Important issues of social policy concerning large business corporations are also discussed.

Taught by: H. Hovenkamp
One-term course offered either term
Also Offered As: LGST 802
Activity: Lecture
1.0 Course Unit

LGST 204 Real Estate Law
This course examines the fundamentals of real estate finance and development from a legal and managerial perspective. The course serves as a foundation course for real estate majors and provides an introduction to real estate for other students. It attempts to develop skills in using legal concepts in a real estate transactional setting. The course will be of interest to students contemplating careers in accounting, real estate development, real estate finance, city planning, or banking. The main topics covered may include the following: land acquisition, finance; real estate development, real estate finance, city planning, or banking. The course will focus on strategies for effective critical thinking and writing, as well as how to write persuasively for multiple audiences, ranging from the general public to an academic audience. There will be special attention to analysis of genres and audiences, and effective writing and revision strategies. Most importantly, you will be able to use the skills developed in this class throughout your academic and professional careers.

Activity: Lecture
1.0 Course Unit
Notes: The course will meet virtually, via Zoom, on Wednesdays 8-9:30: May 29; June 5, 12, 19, and 26; and July 3, 10, and 17.

LGST 205 Innovation, Marketing Strategy, and Antitrust
This course considers business strategy and law, particularly the role of antitrust and intellectual property law in managing innovation. We will examine several highly innovative firms in technology rich areas, considering how they adapt their strategies to the competitive and legal environment, and asking whether antitrust law promotes or hinders innovation. The strategies of both current firms such as Uber, Google, Apple, and Microsoft and historical examples such as American Can Company, Standard Oil, Brown & Williamson Tobacco Co., and Kodak will provide context and source materials for the course. We will pay special attention to the role of intellectual property rights in fostering or hindering innovation. The legal focus is primarily on U.S. law, but the course will occasionally address foreign regimes as well. The course is useful to students interested in marketing or competitive business strategy, and, more broadly, to anyone desiring to understand the legal and public policy issues relating to competition and innovation.

Activity: Lecture
1.0 Course Unit
LGST 206 Negotiations
This course examines the art and science of negotiation, with additional
emphasis on conflict resolution. Students will engage in a number of
simulated negotiations ranging from simple one-issue transactions
to multi-party joint ventures. Through these exercises and associated
readings, students explore the basic theoretical models of bargaining and
have an opportunity to test and improve their negotiation skills.
One-term course offered either term
Also Offered As: MGMT 291, OIDD 291
Activity: Lecture

LGST 207 The Sports Industry: Business and Legal Aspects
This course examines various business disciplines as they apply to the
sports industry. The course provides the student with an overview of the
business of the intercollegiate, Olympic and professional sports
enterprises. In addition, the course investigates the business related
issues encountered by managers of sports organizations and covers how
business principles can be applied to effectively address these issues.
Taught by: DiGisi
One-term course offered either term
Activity: Lecture

LGST 208 The Law at Work: Employment Law for Managers
This course is based on the principle that knowledge and understanding
of employment law facilitate (1) promotion of a workforce with a high
degree of commitment to reaching business goals, (2) the development
of practical business solutions to problems arising in the workplace,
(3) effective human resources policy and procedures that comply with
applicable laws, and (4) justice for workers. The course provides students
with an introduction to the law of the workforce and examines the
balance between business goals and employment law compliance. The
course examines the various employment laws with which businesses
must comply and the legal rights and responsibilities of employees and
employers. The emphasis is on laws concerning equal employment
opportunity with respect to discrimination and harassment because of
sex, race, national origin, religion, sexual orientation, age, disability and
other characteristics protected by workforce laws; constitutional – and
especially free speech – rights at work; work-related privacy including
investigations, electronic communication and social media; classifying
workers in the gig economy; diversity and affirmative action; and labor/management
relations and collective bargaining.
Taught by: Sepinwall

Also Offered As: LGST 808
Activity: Lecture
1.0 Course Unit

LGST 212 Economic Analysis of Law
This course provides an introduction to the economic analysis of law
and legal institutions. Our goal is develop intuitions about the ways law
simultaneously shapes and responds to private behavioral incentives.
In the first half of the course, we will survey the application of key
economic concepts to basic features of the Anglo-American common
law of property, contract, and tort. In the second half of the course, we
will use the tools developed in our survey to focus in depth on the law of
intellectual property.

Also Offered As: BEPP 212
Activity: Lecture
1.0 Course Unit

LGST 213 Legal Aspect of Entrepreneurship
This practically oriented course examines the critical legal issues
confronting start-ups with a focus on innovation and disruption.
Cutting edge topics include blockchain, fintech, AI, digital and mobile
based issues. Students will learn to use the law to manage risk, deploy
resources and maximize value. The course covers the entire lifecycle
of a business, including confidentiality, non-competition and invention
assignment clauses, intellectual property (IP) including patent, trade
secrets, copyrights and trademarks, tax advantages of limited liability
companies (LLC) vs. corporations or partnerships, securities law strategy
for raising angel financing, convertible debt and venture capital (covering
SAFEs and KISSes), independent contractor vs. employee concerns,
discrimination laws, merger and acquisition exit plans, as well as
restructuring and bankruptcy. Students will emerge from the course with
the skills and tools to craft term sheets and contracts, negotiate deals
tailored to their business models, as well as mitigate liability via risk-
protective policies, insurance and management of litigation. The course
fulfills elective requirements for 5 Concentrations, Majors, or Minors: *
Wharton Legal Studies and Business Ethics; * Wharton Entrepreneurship and
Innovation/Management; * Wharton Social Impact and Responsibility;
* SAS Legal Studies Minor; * SAS STSC Major (Science, Technology and
Society)—with permission.

LGST 214 International Business Transactions
This course aims to familiarize students with and prepare students
for the conduct of international transactions. Students will work their
way through a series of hypothetical trade transactions, placed against
a background of concepts and general theories. Students will take a
hypothetical firm through a series of possible transnational investments,
again after discussion of concepts and general theories. Throughout,
the course will discuss issues of importance to emerging economies.
Students should be able to make thoughtful choices rather than simply
reciting bullet points about international business transactions.
Taught by: Nichols
Course not offered every year
Also Offered As: LGST 814
Activity: Lecture
1.0 Course Unit
LGST 215 Environmental Management: Law & Policy
This course provides an introduction to environmental management by focusing on foundational concepts of environmental law and policy and how they affect business decisions. The primary aim of the course is to give students a deeper practical sense of the important relationship between business and the natural environment, the existing legal and policy framework of environmental protection, and how business managers can think about managing their relationship with both the environment and the law.

Activity: Lecture
1.0 Course Unit

LGST 220 International Business Ethics
This course is a multidisciplinary, interactive study of business ethics within a global economy. A central aim of the course is to enable students to develop a framework to address ethical challenges as they arise within and across different countries. Alternative theories about acting ethically in global environments are presented, and critical current issues are introduced and analyzed. Examples include bribery, global sourcing, environmental sustainability, social reports, intellectual property, e-commerce, and dealing with conflicting standards and values across cultures. As part of this study, the course considers non-Western ethical traditions and practices as they relate to business.
Taught by: Berkey, Laufer

Activity: Lecture
1.0 Course Unit

LGST 221 Constitutional Law and Free Enterprise
The course explores the fundamentals of U.S. constitutional doctrine and adjudication, with an emphasis on commercial and business issues and implications of constitutional law. The course starts by considering the Constitution and the structure and relationship of the governmental entities it establishes and upon which it depends. Special attention is given to the role of the federal courts, especially the Supreme Court, in interpreting and applying constitutional principles. From this foundation, the course moves on to examine in detail the major economic and business implications of constitutional law in different eras of the nation's history. A core theme is how historical events and changing notions of public policy have affected and been affected by the evolution of constitutional doctrine.
Taught by: Sepinwall
One-term course offered either term
Activity: Lecture

LGST 222 Internet Law, Privacy, and Cybersecurity
This course looks at how courts, legislatures, and regulators confront the major issues of the internet world. Billions of people are now active on social media, and firms such as Google, Facebook, Amazon, and Alibaba are among the worlds most valuable and influential. The legal interfaces between the physical world and the digital world are therefore increasingly important. In particular, exploitation of personal information online by governments, digital platforms, and bad actors is becoming a constant source of major controversies. The material in the course ranges from the foundations of cyberlaw, developed during the e-commerce bubble of the 1990s, to current leading-edge questions around the power and responsibility of digital intermediaries; data protection in the U.S. and Europe; cybercrime;blockchain; and network neutrality. No pre-existing legal or technical knowledge is required.

LGST 223 Securities Regulation
The course examines the federal securities laws and the operation of the Securities Exchange Commission. The legal responsibilities of corporate managers, accountants, underwriters, and broker-dealers, occasioned by the securities regulatory scheme, will be investigated. Students will be encouraged to evaluate, from a managerial perspective, the various aspects of securities regulation studied. The course will discuss the recent financial crisis and ask the question whether enhanced securities regulation will prevent such a crisis in the future. The material covered in the course will provide familiarity with the basic legal structure of securities regulation and will assist in understanding the current policy issues in securities law. The course should help students to develop the ability to read and learn further in the field and to improve their effectiveness of communication with attorneys. It will also suggest ways of detecting instances in which an attorney should be consulted. The course is particularly useful for those students pursuing careers in corporate finance, investment banking, mergers and acquisitions, sales and trading, venture capital, private equity, entrepreneurship, accounting, corporate management, and real estate.

LGST 225 Markets, Morality & the Future of Capitalism
Markets play a central role in the life of a capitalist democracy. But is this a good thing? Should we let markets decide who is rich and who is poor? Who makes decisions and who follows them? Whose ideas get heard and whose ideas do not? The goal of this class will be to examine the market from the perspective of various social values to see whether we should want a market system and, if so, what kind of market system we should want. Among the issues we will examine are the following. Does the market contribute to the common good? If so, how? Does the market conflict with the idea that all human beings are of equal value? What is the relation between the market and freedom? Does the market liberate us or oppress us? Can we reconcile the market with our democratic ideals? What role should corporations play in a healthy democracy? What role should markets play in an increasingly globalized world? We will read several important philosophers, economists and political theorists writing on these issues, including Adam Smith, John Rawls, Amartya Sen, Friedrich Hayek, Karl Marx, Robert Nozick, Jurgen Habermas, and others. Grades will be based on three papers and class participation.

LGST 227 Literature of Success
This course explores the history, literature, and philosophy of two age-old questions: what does it mean to be successful and how does one achieve this elusive goal? It surveys some of the classics of the 'success' genre - from Benjamin Franklin's Autobiography in the 18th century to Dale Carnegie's How to Win Friends and Influence People and Marcus Buckingham's Now, Discover Your Strengths in the 20th and 21st centuries. Case studies of remarkable achievements in business and society and Arthur Miller's play Death of a Salesman provide additional contexts within which to reflect on the questions at the center of the course. Students will keep a personal journal and use web-based tools to examine their own character strengths, talents, and achievement orientations. Grading is based on class attendance and participation, reading response papers, personal journals on assigned topics involving self reflection, a mid-term paper on an assigned research subject related to success, and a final, longer paper exploring, based on course readings and original research, each students personal philosophy of success. No final exam.

1.0 Course Unit
LGST 228 Sports Law
This course focuses on the areas of association, contract, constitutional, labor, antitrust, and agency law as they apply to the sports industry. This course exposes the student to many of the legal issues facing stakeholders in sport organizations. Special attention is given to the regulation of professional sports leagues promoting competitive balance, as well as antitrust law and labor-management relations dealing with the organization structure of sports leagues. The course also takes an inside look at previous and newly formed collective bargaining agreements and the use of Salary Cap or lack thereof in professional sports leagues. The development of effective communication skills will be emphasized through class presentations, written assignments, and quizzes; leadership and interpersonal communications will be cultivated through small group projects and meetings, and critical thinking and problem solving skills will be fostered through the careful study of case law impacting the sports industry in a variety of facets.

LGST 230 Social Impact and Responsibility: Foundations
What role can business play in helping to meet global societal needs, whether it involves the environment, improving health, expanding education or eradicating poverty? Is there any responsibility on the part of business to help meet those needs? What are models of successful business engagement in this area? How should success be measured? Are there limits to what businesses can and should do, and what institutional changes will enable businesses and entrepreneurs to better succeed? This survey course provides students the opportunity to engage in the critical analysis of these and other questions that lie at the foundation of social impact and responsibility as an area of study. The course involves case studies, conceptual issues, and talks by practitioners. The course is designed to help students develop a framework to address the question: How should business enterprises and business thinking be engaged to improve society in areas not always associated with business? The course is required for the secondary concentration in Social Impact and Responsibility
Activity: Lecture
1.0 Course Unit

LGST 241 Theories of Business Enterprise
What is a business firm? How did various forms of business, including the corporation, arise historically? How do contemporary economic and financial theories explain how business firms evolve, grow, and die? What are the legal underpinnings of the forms of business enterprise, ranging from sole proprietorships to partnerships to family-owned enterprises to multinational corporate groups? How do business firms relate to politics and government, as well as religion? What about the environment? This interdisciplinary course offers an introduction to pursuing answers to these questions. Students will gain perspective on the nature of business enterprises from different points of view that will be useful in further research, as well as having practical application. Ubiquitous economic concepts such as agency costs, principal-agent relationships, transaction costs, and influence costs will be studied. Different legal structures of firms will also be introduced, including new hybrid organizations such as benefit corporations, which seek to meld non-profit and profit objectives. In the course, we will read high-profile U.S. Supreme Court cases such as Citizens United and Hobby Lobby and debate appropriate boundaries (or not) between business and politics, as well as business and religion. Business ethics and the nature of any social responsibilities owed by business and business people will be topics too.

LGST 242 Big Data, Big Responsibilities: The Law and Ethics of Business Analytics
Significant technologies always have unintended consequences, and their effects are never neutral. A World of ubiquitous data, subject to ever more sophisticated collection, aggregation, and analysis, creates massive opportunities for both financial gain and social good. It also creates dangers in areas such as privacy, security, discrimination, exploitation, and inequality, as well as simple hubris about the effectiveness of management by algorithm. Firms that anticipate the risks of these new practices will be best positioned to avoid missteps. This course introduces students to the legal, policy, and ethical dimensions of big data, predictive analytics, and related techniques. It then examines responses—both private and governmental—that may be employed to address these concerns.

0.5 Course Units
LGST 243 Other People's Money: The Law, Politics, and History of Financial Institutions
We learn in introductory economics courses that money is fungible: that is, one dollar is as good as the next. Indeed, using money as a ‘medium of exchange’ is one of its defining characteristics. But what happens when we take a big pile of money and put it in different buckets. On one bucket we might write ‘hedge fund’; on another, ‘central bank’; on still another, ‘payday lender.’ Then money starts to change in ways defined by law, history, ethics, and politics. This course will take you on a tour of these different buckets—different kinds of financial institutions, broadly defined—throughout the modern financial system. We will look at hedge funds, insurance companies, investment banks, sovereign wealth funds, central banks, consumer banks, payday lenders, state-sponsored enterprises (like the Export-Import Bank in the United States and much of the financial system in China), and the cutting edge of fintech, including crowd-funded lending, digital currencies, and more. In each case, students will be exposed to a series of specialized questions: Where did this institution come from? What problem is it trying to solve that other alternatives could not resolve? What is the basic business (or, where relevant, regulatory) model for each institution? How is each institution regulated, and by whom? What are the ethical considerations in each context? What are the political considerations that each market participant faces?

LGST 244 Blockchain & Cryptocurrencies: Business, Legal, and Regulatory Considerations
Blockchain technology is a form of decentralized database that allows for the secure exchange of value without reliance on trusted intermediaries. Blockchain is the foundation for cryptocurrencies such as Bitcoin, as well as for distributed ledger platforms used by enterprise consortia in various industries. Many believe that blockchain solutions have revolutionary potential. They promise to replace legal enforcement with technical mechanisms of cryptographic consensus as the means of generating trust. The technology has generated significant excitement, investment, and entrepreneurial activity in recent years. However, the business value of blockchain-based solutions is uncertain, cryptocurrency valuations are speculative, and there are serious legal, regulatory, and governance challenges to be addressed. This course is designed to give students the tools for critical assessment of ongoing developments in this evolving area.

1.0 Course Unit

LGST 245 Business, Law, and Democracy
What is the relationship between business and democracy? Do institutions of free enterprise depend on democratic government and vice versa? Do more democratic decision-making structures enhance efficient outcomes? What principles inform shareholder democracy? What is the relationship of business, democracy, and the rule of law? This course explores various dimensions of the relationship between business and democracy. Particular attention is given to legal structures that govern the relationship, but ethical considerations are examined as well.

LGST 247 Value of Values: Contemporary Ethical Issues in Business
This course explores the concepts of value and values in economic life. All strategic and many tactical decisions begin with a value proposition of some kind. Investors, customers, employees, suppliers, and community members are potential sources of value in the creation, exchange, distribution and sale of a good or service. This course examines different conceptions of ‘value/values’ in business life and the role they play in interpreting issues such as artificial intelligence, corporate governance, business and professional education, international business, value theory, and personal values. The class will utilize a combination of theoretical readings, class exercises, student presentations and case discussions.

LGST 292 Advanced Negotiation
This course is designed to teach negotiation principles and to enable students to develop their negotiation skills. This course assumes familiarity with the basic negotiation concepts covered in the prerequisite for this course: Negotiations. In this course, we extend the study and practice of negotiations and we develop a deeper understanding for how specific aspects of the negotiation process (e.g., emotions, deadlines, trust violations) impact outcomes. Through course lectures, readings, and case exercises, students will develop a rich framework for thinking about the negotiation process and acquire tools for guiding the negotiation process.

LGST 401 Global Social Enterprise Consulting Project
This proposed undergraduate capstone course, sponsored by the Legal Studies and Business Ethics Department, is a 7-week, .5 cu class designed to give Wharton seniors the chance to connect academic theory with complex real-world issues arising within the context of award-winning social enterprise projects identified by the World Bank’s ‘Ideas for Action Initiative.’ The course is especially appropriate for sponsorship by the Legal Studies and Business Ethics Department because the Initiative is jointly sponsored by the World Bank and Wharton’s Zicklin Center for Business Ethics Research. The aim of the course is to integrate and strengthen students’ academic skills by applying them in cross-functional ways to the production of real-world consulting reports for project founders. The course will also require students to grapple with current ethical and legal challenges that business organizations face, such as defining the purpose of a business, determining how to incorporate global standards like the Sustainable Development Goals or other Environmental, Social, and Governance (ESG) standards into a business plan, and designing mechanisms to promote ethical behavior and combat such systemic challenges as corruption.

Activity: Lecture
0.5 Course Units

LGST 524 Human Rts & Globalization
The 2000 UN Global Compact has confirmed the role of TNCs as central actors in the UN system of international human rights law, but whether their role should be voluntary or legally mandated remains in dispute. This course introduces students to how globalization has led to projects for expanding international human rights law to capture the operations of TNCs and why this development is opposed in many quarters. Competing perspectives on the pros and cons of imposing human rights responsibilities on TNCs and on the respective roles that businesses and governments should play will be examined. The positions of various governments, businesses, international institutions, academics, and NGOs will be considered, and a number of illustrative case studies will be analyzed.

LGST 611 Responsibility in Global Management
This course uses the global business context to introduce students to important legal, ethical and cultural challenges they will face as business leaders. Cases and materials will address how business leaders, constrained by law and motivated to act responsibly in a global context, should analyze relevant variables to make wise decisions. Topics will include an introduction to the basic theoretical frameworks used in the analysis of ethical issues, such as right-based, consequentialist-based, and virtue-based reasoning, and conflicting interpretations of corporate responsibility. The course will include materials that introduce students to basic legal (common law vs. civil law) and normative (human rights) regimes at work in the global economy as well as sensitize them to the role of local cultural traditions in global business activity. Topics may also include such issues as comparative forms of corporate governance, bribery and corruption in global markets, human rights issues, diverse legal compliance systems, corporate responses to global poverty, global environmental responsibilities, and challenges arising when companies face conflicting ethical demands between home and local, host country mores. The pedagogy emphasizes globalized cases, exercises, and theoretical materials from the fields of legal studies, business ethics and social responsibility. Format: class participation, midterm and final exams. Materials: coursepack.
One-term course offered either term
Activity: Lecture
0.5 Course Units
LGST 612 Responsibility in Business
This course introduces students to important ethical and legal challenges they will face as leaders in business. The course materials will be useful to students preparing for managerial positions that are likely to place them in advisory and/or agency roles owing duties to employers, clients, suppliers, and customers. Although coverage will vary depending on instructor, the focus of the course will be on developing skills in ethical and legal analyses that can assist managers as they make both individual-level and firm-level decisions about the responsible courses of action when duties, loyalties, rules, norms, and interests are in conflict. For example, the rules of insider trading may form the basis for lessons in some sections. Group assignments, role-plays, and case studies may, at the instructor’s discretion, be used to help illustrate the basic theoretical frameworks. Course materials will highlight industry codes and professional norms, as well as the importance of personal and/or religious values. Format: class participation, quiz, group report, and final paper or exam. Materials: coursepack. Prerequisites: none.

LGST 613 Business, Social Responsibility, and the Environment
This course focuses on the social and environmental responsibilities of business that may extend beyond profit maximization. In 2019, the Business Roundtable composed of leading chief executive officers of U.S.-based companies released a statement that resurrected and reinforced interest in this view. This view contrasts famously expressed by the economist Milton Friedman that ‘the social responsibility of business is to increase its profits.’ Although Friedman acknowledged normative side constraints to the profit motive—namely, a need to conform to the ‘basic rules of the society, both those embodied in law and those embodied in ethical custom’—he did not see business as playing a central role in the creation and sustenance of these ‘basic rules.’ As this course will explore in depth, Friedman’s view has been challenged by various competing views of business purpose, such as in normative stakeholder theory and the related idea of ‘shared value’—The profit-maximizing view of business purpose is the one most frequently modeled in business school classes. But if business firms are conceived as social institutions that can themselves affect the ‘basic rules of society’ rather than simply taking them as given, then the question becomes how business can or should do so. Take, for example, the global challenge of climate disruption treated in this course. Business operations are surely ‘part of the problem’ in the sense of being the source of the production and release of large quantities of greenhouse gases every year. But can and should businesses also become ‘part of the solution’? If so, how? Do business firms have an ethical, if not a legal responsibility to minimize their own carbon footprints or other externally harmful actions? When social or environmental priorities collide directly with the profit motive, how should these competing mandates be properly reconciled? Similar questions may be asked (and touched on in this class) about other social challenges in the world today, including democratic values, poverty reduction, fresh water supplies, and global health issues affecting those less able to pay for life-saving drugs and medical services.

LGST 641 Theories of Business Enterprise
What is a business firm? How did various forms of business, including the corporation, arise historically? How do contemporary economic and financial theories explain how business firms evolve, grow, and die? What are the legal underpinnings of the forms of business enterprise, ranging from sole proprietorships to partnerships to family-owned enterprises to multinational corporate groups? How do business firms relate to politics and government, as well as religion? What about the environment? This interdisciplinary course offers an introduction to pursuing answers to these questions. Students will gain perspective on the nature of business enterprises from different points of view that will be useful in further research, as well as having practical application. Ubiquitous economic concepts such as agency costs, principal-agent relationships, transaction costs, and influence costs will be studied. Different legal structures of firms will also be introduced, including new hybrid organizations such as benefit corporations, which seek to meld non-profit and profit objectives. In the course, we will read high-profile U.S. Supreme Court cases such as Citizens United and Hobby Lobby and debate appropriate boundaries (or not) between business and politics, as well as business and religion. Business ethics and the nature of any social responsibilities owed by business and business people will be topics too.

LGST 642 Big Data, Big Responsibilities: The Law and Ethics of Business Analytics
Significant technologies always have unintended consequences, and their effects are never neutral. A world of ubiquitous data, subject to ever more sophisticated collection, aggregation, and analysis, creates massive opportunities for both financial gain and social good. It also creates dangers in areas such as privacy, security, discrimination, exploitation, and inequality, as well as simple hubris about the effectiveness of management by algorithm. Firms that anticipate the risks of these new practices will be best positioned to avoid missteps. This course introduces students to the legal, policy, and ethical dimensions of big data, predictive analytics, and related techniques. It then examines responses—both private and governmental—that may be employed to address these concerns.

LGST 643 Other People's Money: The Law, Politics, and History of Financial Institutions
We learn in introductory economics courses that money is fungible: that is, one dollar is as good as the next. Indeed, using money as a 'medium of exchange' is one of its defining characteristics. But what happens when we take a big pile of money and put it in different buckets. On one bucket we might write 'hedge fund'; on another, 'central bank'; on still another, 'payday lender.' Then money starts to change in ways defined by law, history, ethics, and politics. This course will take you on a tour of these different buckets--different kinds of financial institutions, broadly defined--throughout the modern financial system. We will look at hedge funds, insurance companies, investment banks, sovereign wealth funds, central banks, consumer banks, payday lenders, state-sponsored enterprises (like the Export-Import Bank in the United States and much of the financial system in China), and the cutting edge of fintech, including crowd-funded lending, digital currencies, and more. In each case, students will be exposed to a series of specialized questions: Where did this institution come from? What problem is it trying to solve that other alternatives could not resolve? What is the basic business (or, where relevant, regulatory) model for each institution? How is each institution regulated, and by whom? What are the ethical considerations in each context? What are the political considerations that each market participant faces?

LGST 692 Advanced Topics Negotiation
This is a course the builds on the basic Negotiation course. In this course, we explore a wide range of negotiation topics from crisis and hostage negotiations, to the role of emotions including anxiety, envy and anger in negotiations, to backlash effects for women in negotiations, and the role of alcohol in negotiations. We will survey many aspects of current negotiation research, discuss historic negotiation cases, and students will participate in role-play exercises. Many of the role play exercises will involve multi-party negotiations and afford opportunities to hone skills in team-based negotiations.

LGST 729 Intellectual Property Strategy for the Innovation-Driven Enterprise
Announcing the first iPhone at Macworld 2007, Apple CEO Steve Jobs famously boasted: ‘And boy, have we patented it!’ How, and to what extent, do patents and intellectual property really provide competitive advantage for innovative technology companies? What makes an IP asset strategically powerful? How do patents impact, and even drive, major corporate decisions including M&A, venture funding and exits, and entry into new markets? In this course, students will learn to critically analyze and answer these questions, gaining insights they can leverage in their future roles as innovation industry executives, entrepreneurs, strategists, and investors. The course includes three major units. In Unit 1, Patents and Innovation Value, we examine closely the relationship between competitive advantage, value proposition, and intellectual property (particularly patents). We will apply our understanding of that relationship to critique and sharpen patent strategy to protect examples of cutting-edge technologies. In Unit 2, Patent Leverage and the Corporate Playbook, we study theory and examples of how intellectual property leverage strategically informs corporate transactions and decisions, for established companies as well as for start-ups. In unit 3, Limits and Alternatives to Patents, we confront the recent legal trend toward reigning in the power and scope of patents. We also consider the growing importance of data as a proprietary technology asset, and discuss options for adapting intellectual property strategy appropriately. Throughout, students will learn and practice applying the concepts we learn to decision-making in examples based on innovative real-world technologies and businesses.

LGST 762 Environmental Sustainability and Value Creation
This course provides an overview of topics related to corporate sustainability with a focus on how environmentally sustainable approaches can create value for the firm. The course explores trends in corporate practices and students consider specific examples of such practices to examine the interactions between the firm and the environment. This course has three objectives: to increase students’ knowledge of sustainability practices and their impact on firm performance; to teach students to think strategically and act entrepreneurially on environmental issues; and to help students design business approaches to improve environmental outcomes, while simultaneously creating value.

LGST 785 Business Strategy & Corp
This course explores strategic, business and legal decision making in a fluid real world corporate context. Classes will cover a series of timely financial and legal subjects as well as case studies that deal with topical problems in corporate governance, investment strategy, finance, private equity, executive compensation, and potential corporate and criminal behavior. Press, public market reaction, and governmental/political considerations will be integrated into the discussion. All students will be required to participate in one major and two minor team projects. An equal number of graduate law and business students will be enrolled in this class. The instructor, a 30 year veteran and partner at a major private equity firm, is also an attorney and CPA. No prerequisites.

Activity: Seminar
1.0 Course Unit

LGST 802 Corporate Law and Management in Global Perspective
This course provides an introduction to the law of corporate management and finance, focusing on large publicly held corporations. It is presented from the perspective that before too long virtually all students will serve on one or more corporate boards of directors and that each should, therefore, know about the duties owed by directors and officers to those toward whom they bear a fiduciary duty. The course covers the basic obligations of corporate directors and managers under state corporate law and the federal securities laws. It also considers the rights and responsibilities of other major stakeholders in the governance of public corporations, including shareholders, creditors/bondholders, employees (including corporate executives), investment bankers, corporate lawyers, and accountants. Particular attention is given to the law of mergers and acquisitions. Important issues of social policy concerning large business corporations are also discussed. Format: Lecture and legal case discussion. Materials: To be determined.

Also Offered As: LGST 202
Activity: Lecture
1.0 Course Unit
LGST 804 Real Estate Law
This course examines the fundamentals of real estate finance and development from a legal and managerial perspective. The course serves as a foundation course for real estate majors and provides an introduction to real estate for other students. It attempts to develop skills in using legal concepts in a real estate transactional setting. The course will be of interest to students contemplating careers in accounting, real estate development, real estate finance, city planning, or banking. The main topics covered may include the following: land acquisition, finance; choice of entity; tax aspects; management (leasing, environmental); disposition of real property (sale of mortgaged property, foreclosures, wraparound mortgages, sale-leasebacks); and recent legal developments. Lectures and class discussion required.
One-term course offered either term
Also Offered As: LGST 204, REAL 204, REAL 804
Activity: Lecture
1.0 Course Unit

LGST 805 Innovation, Marketing Strategy, and Antitrust
This course considers business strategy and law, particularly the role of antitrust and intellectual property law in managing innovation. We will examine several highly innovative firms in technology rich areas, considering how they adapt their strategies to the competitive and legal environment, and asking whether antitrust law promotes or hinders innovation. The strategies of both current firms such as Uber, Google, Apple, and Microsoft and historical examples such as American Can Company, Standard Oil, Brown & Williamson Tobacco Co., and Kodak will provide context and source materials for the course. We will pay special attention to the role of intellectual property rights in fostering or hindering innovation. The legal focus is primarily on U.S. law, but the course will occasionally address foreign regimes as well. The course is useful to students interested in marketing or competitive business strategy, and, more broadly, to anyone desiring to understand the legal and public policy issues relating to competition and innovation.

1.0 Course Unit

LGST 807 Securities Regulation
The course examines the federal securities law and the operation of the Securities Exchange Commission. The legal responsibilities of corporate managers, accountants, underwriters, and broker-dealers, occasioned by the securities regulatory scheme, will be investigated. Students will be encouraged to evaluate, from a managerial perspective, the various aspects of securities regulation studied. The course will discuss the recent financial crisis and ask the question whether enhanced securities regulation will prevent such a crisis in the future. The material covered in the course will provide familiarity with the basic legal structure of securities regulation and will assist in understanding the current policy issues in securities law. The course should help students to develop the ability to read and learn further in the field and to improve their effectiveness of communication with attorneys. It will also suggest ways of detecting instances in which an attorney should be consulted. The course is particularly useful for those students pursuing careers in corporate finance, investment banking, mergers and acquisitions, sales and trading, venture capital, private equity, entrepreneurship, accounting, corporate management and real estate. Requirements: Midterm and final exam. Materials: Text, pamphlet of statutes and rules, and study guide.
One-term course offered either term
Also Offered As: LGST 223

1.0 Course Unit

LGST 808 Employment Law
This course is based on the principle that knowledge and understanding of employment law facilitate (1) promotion of a workforce with a high degree of commitment to reaching business goals, (2) the development of practical business solutions to problems arising in the workplace, (3) effective human resources policy and procedures that comply with applicable laws, and (4) justice for workers. The course provides students with an introduction to the law of the workforce and examines the balance between business goals and employment law compliance. The course examines the various employment laws with which businesses must comply and the legal rights and responsibilities of employees and employers. The emphasis is on laws concerning equal employment opportunity with respect to discrimination and harassment because of sex, race, national origin, religion, sexual orientation, age, disability and other characteristics protected by workforce laws; constitutional -- and especially free speech -- rights at work; work-related privacy including investigations, electronic communication and social media; classifying workers in the gig economy; diversity and affirmative action; and the legal and regulatory environment regarding immigration, wage and hour, leaves of absence, hiring, termination and afterwards; and labor/management relations and collective bargaining.

LGST 813 Legal and Transactional Aspects of Entrepreneurship
Legal and Transactional Aspects of Entrepreneurship is a practical and intensive course that examines the critical legal and transactional issues confronting start-up and emerging growth companies. Although the context of the course is early stage companies, many of the concepts studied are equally applicable to more mature, established companies. The course provides perspective on how to use the law strategically to manage risk, deploy resources and maximize shareholder value. Topics include the enforceability of confidentiality, non-competition and other restrictive covenants in employment agreements; choice of business form including the legal, financial and tax advantages and disadvantages of general partnerships, limited partnerships, corporations and limited liability companies; tax and securities law; intellectual property law including trade secrets, copyrights, patents, and trademarks. Format: Lecture and discussion with coverage of legal cases and materials. Requirements: Class participation, midterm and final exam. Materials: Course pack.

LGST 820 International Business Ethics
This course is a multidisciplinary, interactive study of business ethics within a global economy. A central aim of the course is to enable students to develop a framework to address ethical challenges as they arise within and across different countries. Alternative theories about acting ethically in global environments are presented, and critical current issues are introduced and analyzed. Examples include bribery, global sourcing, environmental sustainability, social reports, intellectual property, e-commerce, and dealing with conflicting standards and values across cultures. As part of this study, the course considers non-Western ethical traditions and practices as they relate to business.

LGST 830 Social Impact and Responsibility: Foundations
What role can business play in helping to meet global societal needs, whether it involves the environment, improving health, expanding education or eradicating poverty? Is there any responsibility on the part of business to help meet those needs? What are models of successful business engagement in this area? How should success be measured? Are there limits to what businesses can and should do, and what institutional changes will enable businesses and entrepreneurs to better succeed? This survey course provides students the opportunity to engage in the critical analysis of these and other questions that lie at the foundation of social impact and responsibility as an area of study. The course involves case studies, conceptual issues, and talks by practitioners. The course is designed to help students develop a framework to address the question: “How should business enterprises and business thinking be engaged to improve society in areas not always associated with business?” Format: Twelve-session discussion-based course with midterm exam and final project
Activity: Lecture
0.5 Course Units

LGST 920 Ethics in Business and Economics
The seminar explores the growing academic literature in business ethics. It also provides participants an opportunity to investigate an ethical issue of their choosing in some depth, using their field of specialty as context. The seminar assumes no previous exposure to business ethics. Different business ethics theories and frameworks for investigating issues will be discussed, including corporate social responsibility, corporate moral agency, theories of values, and corporate governance. In turn, these theories will be applied to a range of issues, both domestic and international. Such issues include: corruption in host countries, the management of values in modern corporations, the ethical status of the corporation, ethics in sophisticated financial transactions (such as leveraged derivative transactions), and gender discrimination in the context of cultural differences. Literature not only from business ethics, but from professional and applied ethics, law, and organizational behavior will be discussed. Often, guest speakers will address the seminar. At the discretion of the class, special topics of interest to the class will be examined. Students will be expected to write and present a major paper dealing with a current issue within their major field. The course is open to students across fields, and provides integration of ideas across multiple business disciplines.
Course not offered every year

**LING 051 Proto-Indo European Language and Society**

Most of the languages now spoken in Europe, along with some languages of Iran, India and central Asia, are thought to be descended from a single language known as Proto-Indo-European, spoken at least six thousand years ago, probably in a region extending from north of the Black Sea in modern Ukraine east through southern Russia. Speakers of Proto-Indo-European eventually populated Europe in the Bronze Age, and their societies formed the basis of the classical civilizations of Greece and Rome, as well as of the Celtic, Germanic and Slavic speaking peoples. What were the Proto-Indo-Europeans like? What did they believe about the world and their gods? How do we know? Reconstruction of the Proto-Indo-European language, one of the triumphs of comparative and historical linguistics in the 19th and 20th centuries, allows us a glimpse into the society of this prehistoric people. In this seminar students will, through comparison of modern and ancient languages, learn the basis of this reconstruction – the comparative method of historical linguistics – as well as explore the culture and society of the Proto-Indo-Europeans and their immediate descendants. In addition, we will examine the pseudo-scientific basis of the myth of Aryan supremacy, and study the contributions of archaeological findings in determining the ‘homeland’ of the Indo-Europeans. No prior knowledge of any particular language is necessary. This seminar should be of interest to students considering a major in linguistics, anthropology and archaeology, ancient history or comparative religion. (Also fulfills Cross-Cultural Analysis.)

1.0 Course Unit

Notes: Freshman Seminar

**LING 054 Bilingualism in History**

This course introduces the foundations of linguistics - the scientific study of language - through exploration of multilingualism in the USA and in different societies around the world. Contacts between groups of people speaking different languages are documented from earliest records, and around the world it remains the norm to find more than one language in regular use in a single community. In this course we will see that multilingualism is a catalyst for linguistic change: sometimes languages are lost; sometimes new languages are created; sometimes the structure of a language is radically altered. We will consider: Which parts of linguistic structure are most susceptible to change under conditions of bilingualism? Does language contact - whether a result of trade, education, migration, conquest, or intermarriage - influence language structure in predictable ways? How do individual speakers handle multiple languages? How have attitudes to speakers of multiple languages changed through history? How have socio-historical events shaped the linguistic situation in the USA?

1.0 Course Unit

Notes: Freshman Seminar

---

**LING 001 Introduction to Linguistics**

A general introduction to the nature, history and use of human language, speech and writing. Topics include the biological basis of human language, and analogous systems in other creatures; relations to cognition, communication, and social organization; sounds, forms and meanings in the world’s languages; the reconstruction of linguistic history and the family tree of languages; dialect variation and language standardization; language and gender; language learning by children and adults; the neurology of language and language disorders; the nature and history of writing systems. Intended for any undergraduate interested in language or its use, this course is also recommended as an introduction for students who plan to major in linguistics.

For BA Students: Natural Science and Math Sector

One-term course offered either term

Activity: Lecture

1.0 Course Unit

---

**LGST 921 Foundations of Business Law**

This course will introduce students to basic jurisprudential discussions and debates that relate to understanding business in society. Topics will include a general overview of the nature of law and its relationship to ethics; history of legal thought, business in society; theories of contract, torts, and property; criminal law as it applies to business situations; and theories of the business enterprise and its regulation. Selected topics will also be chosen in accordance with the interest of participants in the seminar.

Course not offered every year

Activity: Seminar

1.0 Course Unit

**LGST 941 Theories of Business Enterprise**

What is a business firm? How did various forms of business, including the corporation, arise historically? How do contemporary economic and financial theories explain how business firms evolve, grow, and die? What are the legal underpinnings of the forms of business enterprise, ranging from sole proprietorships to partnerships to family-owned enterprises to multinational corporate groups? How do business firms relate to politics and government, as well as religion? What about the environment? This interdisciplinary course offers an introduction to pursuing answers to these questions. Students will gain perspective on the nature of business enterprises from different points of view that will be useful in further research, as well as having practical application. Ubiquitous economic concepts such as agency costs, principal-agent relationships, transaction costs, and influence costs will be studied. Different legal structures of firms will also be introduced, including new hybrid organizations such as benefit corporations, which seek to meld non-profit and profit objectives.

In the course, we will read high-profile U.S. Supreme Court cases such as Citizens United and Hobby Lobby and debate appropriate boundaries (or not) between business and politics, as well as business and religion. Business ethics and the nature of any social responsibilities owed by business and business people will be topics too.

**Linguistics (LING)**

---

---

---

---
LING 058 Language and Social Identity
Language is an important part of both human cognition as well as social organization. Our identities, our societies, and our cultures are all informed by and how we use language. Language interacts with the social, political and economic power structures in crucial ways. This course will focus on the ways in which language and the social facts of life are dependent upon each other. In this course, we will examine issues related to class, race, gender, culture and identity, as well as how language exists to both challenge and uphold systems of power.
Taught by: Holliday
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
Notes: Satisfies Quantitative Data Analysis

LING 102 Introduction to Sociolinguistics
Human language viewed from a social and historical perspective. Students will acquire the tools of linguistic analysis through interactive computer programs, covering phonetics, phonology and morphology, in English and other languages. These techniques will then be used to trace social differences in the use of language, and changing patterns of social stratification. The course will focus on linguistic changes in progress in American society, in both mainstream and minority communities, and the social problems associated with them. Students will engage in field projects to search for the social correlates of linguistic behavior, and use quantitative methods to analyze the results.
For BA Students: Society Sector
Taught by: Tamminga
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Satisfies Quantitative Data Analysis

LING 103 Introduction to Language: Language Structure and Verbal Art
The purpose of this course is to explore the relationship between linguistic structure and the use of language for artistic purposes. The syllabus is organized as a sequence of units, each built around a particular theme. These include the sound structure of poetry (meter, rhyme, and other linguistic patterns in Jabberwocky, the Odyssey, Shakespeare, the Troubadours, and others); how precise linguistic data can be used to solve an outstanding literary problem (determining the approximate date when Beowulf was composed); and the structure of folktales of various cultures and of narratives of everyday experience.
For BA Students: Arts and Letters Sector
Taught by: Ringe
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

LING 105 Introduction to Cognitive Science
How do minds work? This course surveys a wide range of answers to this question from disciplines ranging from philosophy to neuroscience. The course devotes special attention to the use of simple computational and mathematical models. Topics include perception, learning, memory, decision making, emotion and consciousness. The course shows how the different views from the parent disciplines interact and identifies some common themes among the theories that have been proposed. The course pays particular attention to the distinctive role of computation in such theories and provides an introduction to some of the main directions of current research in the field. It is a requirement for the BA in Cognitive Science, the BAS in Computer and Cognitive Science, and the minor in Cognitive Science, and it is recommended for students taking the dual degree in Computer and Cognitive Science.
Course usually offered in fall term
Also Offered As: CIS 140, COGS 001, PHIL 044, PSYC 207
Activity: Lecture
1.0 Course Unit
Notes: This counts as a Formal Reasoning course for College students.

LING 106 Introduction to Formal Linguistics
In this course, we study formal mathematical tools for the analysis of language that help us understand and classify the complex structures and rules that constitute language and grammar. These tools include set theory, formal language and automata theory, as well as aspects of logic, and will be applied to the syntax and semantics of natural language. In addition to learning something about formal tools for analyzing language, this will also enhance your general skills in analytical reasoning.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: This is a Formal Reasoning course.

LING 107 Language and Information
This course is an introduction to Information Theory, as originated by Claude Shannon, emphasizing its application to the study of language, including both modern structural linguistics and the quantitative study of language in use. The course will be of interest to linguistics students, cognitive science students, and students with an interest in ongoing developments in contemporary language technology.
Taught by: Kroch
One-term course offered either term
Activity: Lecture
1.0 Course Unit

LING 115 Writing Systems
The historical origin of writing in Sumer, Egypt, China, and Mesoamerica; the transmission of writing across languages and cultures, including the route from Phoenician to Greek to Etruscan to Latin to English; the development of individual writing systems over time; the traditional classification of written symbols (ideographic, logographic, syllabic, alphabetic); methods of decipherment; differences between spoken and written language; how linguistic structure influences writing, and is reflected by it; social and political aspects of writing; literacy and the acquisition of writing.
For BA Students: History and Tradition Sector
Taught by: Buckley
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
LING 150 The Keys to Language Structure (and How to Use Them)
The purpose of this course is to introduce students to the basic concepts of sentence structure in a ‘pretheoretical’ framework, demonstrating that any natural human language must have certain structures and must choose the rest from a restricted universal set. The textbook, which was written for this course, discusses each set of structures with examples from six languages: English, Spanish, Latin, Biblical Hebrew, Mandarin, and Navajo. The instructor will add languages from among those with which the students are familiar, within the limits of his competence. This course will help students not only to learn foreign languages, but also to improve their own writing skills, by making the structures that they must use more explicit and intelligible.
Taught by: Ringe
Course offered fall; even-numbered years
Activity: Lecture
1.0 Course Unit

LING 151 Language and Thought
This course describes current theorizing on how the human mind achieves high-level cognitive processes such as using language, thinking, and reasoning. The course discusses issues such as whether the language ability is unique to humans, whether there is a critical period to the acquisition of a language, the nature of conceptual knowledge, how people perform deductive reasoning and induction, and how linguistic and conceptual knowledge interact.
Taught by: Trueswell
One-term course offered either term
Also Offered As: PSYC 151
Prerequisite: PSYC 001 OR PSYC 207 OR COGS 001 OR LING 105
Activity: Lecture
1.0 Course Unit

LING 170 Experimental Methods for Linguists
Controlled experiments are a key element of empirical research, and they play an increasingly important role in the study of language and communication. This course will be divided into two halves. In the first half, students will be introduced to the fundamentals of how to conduct an experiment, along with a basic introduction to statistical methods. The emphasis will be on understanding the basic logic of experimental design, but special lectures will focus on the application of particular methods to the study of language. In the second half, classes will become more like lab meetings as students develop their own experimental projects from the ground up. At the end of the semester they will write up these projects as papers.
Taught by: Roberts
Course not offered every year
Activity: Seminar
1.0 Course Unit

LING 175 Language, Cognition and Culture
This is a course on how language relates to other cognitive systems. We will discuss the question of whether and how the language one speaks affects the way one thinks, the relation between words and concepts, the link between language acquisition and conceptual development in children, and the potential role of language in shaping uniquely human concepts. The course incorporates cross-linguistic, cross-cultural and developmental perspectives and combines readings from linguistics, psychology, philosophy, neuroscience and other fields within cognitive science.
Taught by: Anna Papafragou
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

LING 210 Introduction to Language Change
This course covers the principles of language change and the methods of historical linguistics on an elementary level. The systematic regularity of change, the reasons for that regularity, and the exploitation of regularity in linguistic reconstruction are especially emphasized. Examples are drawn from a wide variety of languages, both familiar and unfamiliar. The prerequisite for the course is any course in phonetics or phonology, or LING 001, or permission of the instructor. Note that this course does NOT satisfy any sector requirement.
Taught by: Ringe
Course not offered every year
Prerequisite: LING 001
Activity: Lecture
1.0 Course Unit

LING 220 Phonetics I: Experimental
This course focuses on experimental investigations of speech sounds. General contents include: the fundamentals of speech production and perception; speech analysis tools and techniques; and topics in phonetic studies. The course consists of integrated lectures and laboratory sessions in which students learn computer techniques for analyzing digital recordings.
Taught by: Kuang
Course usually offered in fall term
Also Offered As: LING 520
Activity: Lecture
1.0 Course Unit

LING 230 Sound Structure of Language
An introduction to phonetics and phonology. Topics include articulatory phonetics (the anatomy of the vocal tract; how speech sounds are produced); transcription (conventions for representing the sounds of the world’s languages); classification (how speech sounds are classified and represented cognitively through distinctive features); phonology (the grammar of speech sounds in various languages: their patterning and interaction) and syllable structure and its role in phonology. Prerequisite: A prior course in linguistics or permission of instructor.
Taught by: Noyer
Course usually offered in spring term
Also Offered As: LING 503
Prerequisite: LING 001 OR LING 105 OR LING 220
Activity: Lecture
1.0 Course Unit

LING 241 Language in Native America
This course is an introduction to linguistic perspectives on the languages native to the Americas (their nature and distribution, typological similarities and differences), with an emphasis on North America. The diverse languages of this region will be examined from the point of view of particular linguistic phenomena, such as phonology, morphology, and syntax; and in addition we will study their historical development and their place in culture, society, and thought.
Taught by: Buckley
Course not offered every year
Activity: Lecture
1.0 Course Unit
LING 242 Construct a Language
In this course, students construct their own language, one that is compatible with what is known about possible human languages. To this end, the course investigates language typology through lectures and examination of grammars of unfamiliar languages. Topics include language universals, points of choice in a fixed decision space, and dependencies among choices. Prerequisite: Students who have taken LING 140: Construct a Language are not eligible to enroll in LING 242. Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Students who have taken Ling 140: Construct a Language are not eligible to enroll in Ling 242.

LING 247 Structure of American Sign Language
This course covers the linguistic structure of American Sign Language (ASL), including its phonology (articulatory features, phonological constraints, nonmanuals), morphology (morphological constraints, compounds, incorporation, borrowing), and syntax (syntactic categories, basic phrase structure, common sentence types). Also discussed are the topics of classifiers and deixis. In keeping with the comparative perspective of linguistic theory, parallels and differences between ASL and other (primarily spoken) languages are pointed out where appropriate. Historical and sociolinguistic issues are addressed where they are relevant to elucidating linguistic structure. Though the course focuses on ASL, it necessarily touches on issues concerning signing languages more generally, notably the possible effects of modality (sign vs. speech) on linguistic structure and the implications of the signed modality for general linguistics. Although the course does not presuppose knowledge of ASL, it does require acquaintance with basic concepts of linguistics.
Taught by: Fisher/Santorini
Course not offered every year
Prerequisite: LING 001 OR LING 072
Activity: Lecture
1.0 Course Unit

LING 250 Introduction to Syntax
This course is an introduction to current syntactic theory, covering the principles that govern phrase structure (the composition of phrases and sentences), movement (dependencies between syntactic constituents), and binding (the interpretation of different types of noun phrases). Although much of the evidence discussed in the class will come from English, evidence from other languages will also play an important role, in keeping with the comparative and universalist perspective of modern syntactic theory.
Taught by: Santorini
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

LING 270 Language Acquisition
An introduction to language acquisition in children and the development of related cognitive and perceptual systems. Topics include the nature of speech perception and the specialization to the native language; the structure and acquisition of words; children's phonology; the development of grammar; bilingualism and second language acquisition; language learning impairments; the biological basis of language acquisition; the role in language learning in language change. Intended for any undergraduate interested in the psychology and development of language.
Taught by: Yang
Course not offered every year
Activity: Lecture
1.0 Course Unit

LING 295 Thinking with Models: Cultural Evolution
When a flu pandemic strikes, who should get vaccinated first? What's our best strategy for minimizing the damage of global climate change? Why is Philadelphia racially segregated? Why do most sexually reproducing species have two sexes, in roughly even proportions? These and many other scientific and practical problems require us to get a handle on complex systems. And an important part of deepening our understanding and sharpening our intuitions requires us to think with models, that is, to use models in our deliberations about what to believe and what to do. Modeling is the construction and analysis of idealized representations of real-world phenomena. This practice is ubiquitous across the sciences, and enters into many practical decisions from setting international policy to making everyday business decisions. The principal aim of this course is to acquaint students with the modeling process and, especially, to help students learn how to think critically about modeling results, as well as how to construct, analyze, and verify such models. Students who take this course will learn about the varied practices of modeling, and will learn how to construct, analyze, and validate models. Most importantly, students who take this course will learn how to critically evaluate the predictions and explanations generated by models, whatever the source of these results. While we will familiarize students with a variety of types of models, our primary focus will be on computer simulations, as they are increasingly relied upon for scientific research and practical deliberation. In addition to studying general methodological discussions about modeling, this will be a 'hands on,' laboratory-based course. Students will practice manipulating, modifying, and analyzing models, as well as constructing models from scratch. The conduct of the course will be heavily influenced by SAIL (structured active in-class learning) ideas. As such, in most class meetings there will be a short lecture and Q&A session, followed by individual and group exercises, which will be discussed later in the class. As an essential feature of learning about modeling we will actually design and build (program) models, which we then study. NetLogo will be the main programming environment. Students will learn to program in it and build agent-based models. NetLogo was designed to be easy to learn and we assume no prior programming experience. For approximately the first 2/3 of the course we will focus on learning NetLogo and building and analyzing models in it. During approximately the last 1/3 of the semester, students will work on their term projects and the course presentations will focus on modeling issues that transcend or extend the basics of modeling in NetLogo.
Taught by: Clark
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
LING 300 Tutorial in Linguistics
This tutorial allows students to deal in a concentrated manner with selected major topics in linguistics by means of extensive readings and research. Two topics are studied during the semester, exposing students to a range of sophisticated linguistic questions. Senior status or permission of the instructor to enroll. Majors only.
Taught by: Legate
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

LING 301 Conference
An independent study for majors in linguistics.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

LING 302 Linguistic Field Methods
Instruction and practice in primary linguistic research, producing a grammatical sketch and a lexicon through work with a native-speaker consultant and some reference materials. Consultant work is shared with LING 502.
Taught by: Buckley/Legate
Course not offered every year
Also Offered As: LING 502
Prerequisite: LING 230 AND LING 250
Activity: Seminar
1.0 Course Unit

LING 304 Neurolinguistics
This course is an upper level undergraduate/graduate seminar in neurolinguistics. We will explore language in the brain through readings and discussions.
Taught by: Schuler
Also Offered As: LING 504
Activity: Seminar
1.0 Course Unit

LING 310 History of the English Language
This course traces the linguistic history of English from its earliest reconstructable ancestor, Proto-Indo-European, to the present. We focus especially on significant large-scale changes, such as the restructuring of the verb system in Proto-Germanic, the intricate interaction of sound changes in the immediate prehistory of Old English, syntactic change in Middle English, and the diversification of English dialects since 1750.
Taught by: Ringe/Kroch
Course not offered every year
Activity: Lecture
1.0 Course Unit

LING 380 Introduction to Semantics
This course provides an introduction to formal semantics for natural language. The main aim is to develop a semantic system that provides a compositional interpretation of natural language sentences. We discuss various of the aspects central to meaning composition, including function application, modification, quantification, and binding, as well as issues in the syntax-semantics interface. The basic formal tools relevant for semantic analysis, including set theory, propositional logic, and predicate logic are also introduced.
Taught by: Schwarz
Course usually offered in fall term
Also Offered As: LING 580
Prerequisite: LING 250
Activity: Lecture
1.0 Course Unit

LING 398 Senior Thesis
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

LING 404 Morphological Theory
This course will explore some issues concerning the internal structure of words. After a brief introduction to some basic terms and concepts, we will discuss the interaction of morphology with phonology. We will look both at how morphology conditions phonological rules and how phonology conditions morphology. Then we will turn to the interaction of syntax and morphology. We will look at some problems raised by inflectional morphology, clitics and compounds. The main requirement for the class will be a series of homework exercises in morphological analysis and a short paper at the end of the semester.
Taught by: Embick
Course not offered every year
Activity: Lecture
1.0 Course Unit

LING 405 Morphology Theory II
This course takes a detailed look at a number of central topics in morphological theory. The material examined in the course consists of primary readings and reviews, covering a number of central topics in the field. These topics include (but are not restricted to) allomorphy, blocking, the interface of phonology and morphology, syncretism, affixation, the syntax-morphology interface, and compounding. The primary requirements for the class involve short assignments that are based on the readings, in the form of both problem sets and critical appraisals of core theoretical positions. In addition to this, students will write a short paper at the end of the semester.
Taught by: Embick
Course not offered every year
Prerequisite: LING 404
Activity: Lecture
1.0 Course Unit

LING 411 Old English
The main purpose of this course is to teach students to read Old English ('Anglo-Saxon'), chiefly but not exclusively for research in linguistics. Grammar will be heavily emphasized; there will also be lectures on the immediate prehistory of the language, since the morphology of Old English was made unusually complex by interacting sound changes. In the first eight weeks we will work through Moore and Knot's 'Elements of Grammar' and learn the grammar; the remainder of the term will be devoted to reading texts.
Taught by: Kroch
Course not offered every year
Activity: Lecture
1.0 Course Unit

LING 449 Language and Computation
The computational study of natural language and its implications for linguistic theories. Topics include finite state tools, computational morphology and phonology, grammar and parsing, computational models of language learning in children and machines.
Taught by: Yang
Course not offered every year
Activity: Seminar
1.0 Course Unit
LING 455 Experiments in the Study of Meaning
This course provides an introduction to the experimental study of meaning in natural language. We begin by introducing some basic notions of formal semantics and pragmatics and review relevant technical background. Next we discuss recent developments in studying meaning-related phenomena experimentally, which, in addition to theoretical questions, involve issues in the acquisition and processing of semantic information. In the course of this, we will also introduce the basics of experimental design and relevant psycholinguistic methodology. In addition to readings and homework assignments, students will embark on a small research project (individually or jointly), which will be presented in class at the end of the semester and written up as a term paper.
Taught by: Schwarz
Course not offered every year
Prerequisite: LING 106 OR LING 170 OR LING 250 OR LING 380 OR LING 580 OR LING 550
Activity: Seminar
1.0 Course Unit

LING 495 Games and Signals
Game Theory has provided a new way of looking at linguistic meaning, particularly pragmatics (the use of language). This course will survey the use of Game Theory in linguistics as well as develop the techniques for studying signaling behavior. We will look at the formal foundations of signaling with particular attention paid to games of incomplete information (games where even which game is being played is uncertain). This will allow us to extend pragmatics beyond Gricean conversational maxims to areas like deception and polite signaling.
Taught by: Robin Clark
Course not offered every year
Activity: Lecture
1.0 Course Unit

LING 496 Agents and Evolution
The course surveys Evolutionary Game Theory and Agent-Based Models with special reference to language. We will develop systems for modeling various types of language change as well as the dynamics of linguistic micro-variation. Topics include semantic/pragmatic cycles in signaling, the maintenance of conventional meaning, and testing for selection in language change.
Taught by: Clark
Course not offered every year
Activity: Lecture
1.0 Course Unit

LING 500 Research Workshop
This course is intended for advanced graduate students who are interested in developing a research paper. Each student will present his or her topic several times during the semester as the analysis develops, with feedback from the instructor and other students to improve the organization and content of the analysis. The goal is an end product appropriate for delivery at a national conference or submission to a journal.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

LING 502 Linguistic Field Methods
Instruction and practice in primary linguistic research, producing a grammatical sketch and a lexicon through work with a native-speaker consultant and some reference materials. Consultant work is shared with LING 302. Each student will write a final paper on some aspect of the language.
Taught by: Buckley/Legate
Course not offered every year
Also Offered As: LING 302
Activity: Seminar
1.0 Course Unit

LING 503 Sound Structure of Language
An introduction to articulatory and acoustic phonetics; phonetic transcription; basic concepts and methods of phonological analysis.
Taught by: Noyer
Course usually offered in spring term
Also Offered As: LING 230
Activity: Lecture
1.0 Course Unit

LING 504 Neurolinguistics
This course is a graduate seminar in neurolinguistics. We will explore language in the brain through readings and discussion.
Taught by: Schuler
Course usually offered in fall term
Also Offered As: LING 304
Activity: Seminar
1.0 Course Unit

LING 510 Historical and Comparative Linguistics
Taught by: Ringe
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

LING 511 Language Variation & Change
Speech communities as a focus for the understanding of language evolution and change: language variation in time and space. The relationship between language structure and language use; between language change and social change. Populations as differentiated by age, sex, social class, race, and ethnicity, and the relationship of these factors to linguistic differentiation.
Taught by: Tammenga
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

LING 515 Dynamics of Language
This course introduces the tools, techniques, as well as current research on the approach to language as a dynamical system, which seeks to fruitfully integrate linguistic theory, psycholinguistics, corpus linguistics, and historical linguistics through the means of mathematical modeling. Topics include: string processing, dynamical systems and stability, stochastic processes, mathematical models of population dynamics, and dynamical models of language learning, processing, and change.
Taught by: Yang
One-term course offered either term
Prerequisite: LING 510
Activity: Seminar
1.0 Course Unit
LING 520 Phonetics I
Speech: its linguistic transcription, its quantitative physical description, and its relationship to the categories and dimensions of language structure and use. The physical basis of speech: acoustics, vocal tract anatomy and physiology, hearing and speech perception, articulation and motor control. Phonetic variation and change. Prosody: stress, intonation, phrasing speech rate. Phonetic instrumentation, the design and interpretation of phonetic experiments, and the use of phonetic evidence in linguistic research, with emphasis on computer techniques. Introduction to speech signal processing. Speech technology: introduction to speech recognition, text-to-speech synthesis, speech coding. This course will emphasize the phonetics of natural speech, and its connections to issues in other areas of linguistics and cognitive science.
Taught by: Liberman/Kuang
Course usually offered in fall term
Also Offered As: LING 220
Prerequisite: LING 001
Activity: Lecture
1.0 Course Unit

LING 521 Phonetics II
This is a methodology course, which focuses on how to conduct phonetics research using very large speech corpora. Topics include scripting and statistical techniques, automatic phonetic analysis, integration of speech technology in phonetics studies, variation and invariability in large speech corpora, and revisiting classic phonetic and phonological problems from the perspective of corpus phonetics.
Taught by: Kuang/Liberman
Course usually offered in spring term
Prerequisite: LING 520
Activity: Lecture
1.0 Course Unit

LING 525 Computer Analysis and Modeling of Biological Signals and Systems
A hands-on signal and image processing course for non-EE graduate students needing these skills. We will go through all the fundamentals of signal and image processing using computer exercises developed in MATLAB. Examples will be drawn from speech analysis and synthesis, computer vision, and biological modeling.
Taught by: Liberman
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

LING 530 Phonology I
First half of a year-long introduction to the formal study of phonology. Basic concepts in articulatory phonetics; the distribution of sounds (phonemes and allophones); underlying and surface forms, and how to relate them using both ordered-rule and surface-constraint approaches. The survey of theoretical topics in this term includes distinctive features (context, organization, underspecification); the autosegmental representation of tone; and the theory of phonological domains and their interaction with morphological and syntactic constituency. Emphasizes hands-on analysis of a wide range of data.
Taught by: Noyer
Course usually offered in fall term
Prerequisite: LING 503
Activity: Lecture
1.0 Course Unit

LING 531 Phonology II
Second half of a year-long introduction; continues LING 530. Topics to be surveyed include syllable structure and moraic theory; the prosodic hierarchy; the properties and representation of geminates; templatic and prosodic morphology; reduplication and emergence of the unmarked; and metrical phonology (properties of stress, foot typology, and issues of constituency). Emphasizes hands-on analysis of a wide range of data.
Taught by: Buckley
Course usually offered in spring term
Prerequisite: LING 530
Activity: Lecture
1.0 Course Unit

LING 550 Syntax I
A general introduction at the graduate level to the analysis of sentence structure. The approach taken is that of contemporary generative-transformational grammar.
Taught by: Kroch
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

LING 551 Syntax II
The second half of a year-long introduction to the formal study of natural language syntax. Topics to be covered include grammatical architecture; derivational versus representational statement of syntactic principles; movement and locality; the interface of syntax and semantics; argument structure; and other topics. The emphasis is on reading primary literature and discussing theoretical approaches, along with detailed case-studies of specific syntactic phenomena in different languages.
Taught by: Legate
Course usually offered in spring term
Prerequisite: LING 550
Activity: Lecture
1.0 Course Unit

LING 556 Historical Syntax
Introduction to the study of the syntax of languages attested only in historical corpora. The course will cover methods and results in the grammatical description of such languages and in the diachronic study of syntactic change.
Taught by: Kroch
Course not offered every year
Prerequisite: LING 551
Activity: Seminar
1.0 Course Unit

LING 560 The Study of the Speech Community: Field Methods
For students who plan to carry out research in the speech community. Techniques and theory derived from sociolinguistic studies will be used to define neighborhoods, enter the community, analyze social networks, and obtain tape-recorded data from face-to-face interviews. Students will work in groups and study a single city block.
One-term course offered either term
Activity: Seminar
1.0 Course Unit
LING 562 Quantitative Study of Linguistic Variation
This course provides students with the opportunity to hone their statistical, computational, and organizational skill sets while conducting original linguistic research on data gathered in continuing fieldwork in the speech community. Topics include forced alignment and vowel extraction, auditory and automated variable coding, the application of linear and logistic regression, and techniques for effective data visualization.
Taught by: Tammenga
Course offered fall; odd-numbered years
Prerequisite: LING 560 OR STAT 500 OR STAT 501
Activity: Seminar
1.0 Course Unit

LING 570 Developmental Psycholinguistics
The generative literature on language acquisition has produced many accurate and insightful descriptions of child language, but relatively few explicit accounts of learning that incorporate the role of individual experience into the knowledge of specific languages. Likewise, the experimental approach to language development has identified processes that could provide the bridge between the data and the grammar, but questions remain whether laboratory findings can sufficiently generalize to the full range of linguistic complexity. This course is an overview of research in language acquisition with particular focus on the important connection between what children know and how they come to know it.
Taught by: Yang
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

LING 571 The Acquisition of Meaning
This is a seminar on the acquisition of a first language by children. We will discuss the acquisition of the meanings of words and sentences, and the pragmatic and social interpretation of sentences in context. We will also consider how language relates to other cognitive systems and to human social reasoning. Particular emphasis will be placed on discovering the mechanisms children possess that enable them to learn and use language.
Taught by: Papafragou
Course not offered every year
Activity: Seminar
1.0 Course Unit

LING 575 Mental Lexicon
An investigation of the psychological representations and processing of words. Topics include: the extraction of words from speech; lexical access and production; the induction of morphological and phonological regularities in word learning; decomposition of morphologically complex words; frequency effects in morphological processing; storage vs. computation in the lexicon; the past tense debate; morphological change. This course makes extensive use of linguistic corpora. Students will also be familiarized with experimental design issues in the psycholinguistic study of the lexicon.
Taught by: Yang
Course not offered every year
Activity: Lecture
1.0 Course Unit

LING 580 Semantics I
This course provides an introduction to formal semantics for natural language. The main aim is to develop a semantic system that provides a compositional interpretation of natural language sentences. We discuss various of the aspects central to meaning composition, including function application, modification, quantification, and binding, as well as issues in the syntax-semantics interface. The basic formal tools relevant for semantic analysis, including set theory, propositional logic, and predicate logic are also introduced.
Taught by: Schwarz
Course usually offered in fall term
Also Offered As: LING 380
Prerequisite: LING 550
Activity: Lecture
1.0 Course Unit

LING 581 Semantics II
The first part of the course expands the system from LING 580 to include intensional contexts. In particular, we discuss analyses of modals, attitude verbs, and conditionals, as well as the scope of noun phrases in modal environments. The second part of the course discusses a selection of topics from current work in semantics, such as the semantics of questions, tense and aspect, donkey anaphora, indefinites, genericity, degree constructions, events and situations, domain restriction, plurality and focus.
Taught by: Schwarz
Course usually offered in spring term
Prerequisite: LING 551
Activity: Lecture
1.0 Course Unit

LING 595 Game Theoretic Pragmatics
A great deal of linguistic meaning can be explained if we conceive of language as being a signaling system used by rational agents. Game theory provides an explicit mathematical account of rational, strategic interaction. This course will lay out the fundamentals of game theory, evolutionary game theory and multi-agent systems necessary to develop a theory of ‘radical pragmatics.’ We will discuss game theoretic models of implicature; presupposition and accommodation; reference tracking; scalar implicature as well as a number of other phenomena.
Taught by: Clark
Course not offered every year
Activity: Lecture
1.0 Course Unit

LING 596 Pragmatics Workshop
Pragmatics Workshop
Taught by: Clark
Course not offered every year
Activity: Seminar
1.0 Course Unit

LING 603 Topics in Phonology
Topics are chosen from such areas as featural representations; syllable theory; metrical structure; tonal phonology; prosodic morphology; interaction of phonology with syntax and morphology.
Taught by: Buckley/Noyer
Course not offered every year
Prerequisite: LING 530 OR LING 531
Activity: Seminar
1.0 Course Unit
LING 607 Topics in Psycholinguistics
Topics in Psycholinguistics
Taught by: Schuler
Activity: Seminar
1.0 Course Unit

LING 608 Topics in Semantics and Pragmatics
Topics in Semantics & Pragmatics
Taught by: Clark/Schwarz
Course not offered every year
Activity: Seminar
1.0 Course Unit

LING 610 Seminar in Historical and Comparative Linguistics
Selected topics either in Indo-European comparative linguistics or in historical and comparative method.
Taught by: Ringe
One-term course offered either term
Activity: Seminar
1.0 Course Unit

LING 615 Comparative Indo-European Grammar
A survey of phonology and grammar of major ancient Indo-European languages and the reconstruction of Proto-Indo-European. A knowledge of at least one ancient Indo-European language is required.
Taught by: Ringe
Two terms. student must enter first term.
Activity: Seminar
1.0 Course Unit

LING 616 Comparative Indo-European Grammar II
A survey of phonology and grammar of major ancient Indo-European languages and the reconstruction of Proto-Indo-European. A knowledge of at least one ancient Indo-European language is required.
Taught by: Ringe
One-term course offered either term
Activity: Seminar
1.0 Course Unit

LING 620 Topics in Phonetics
Topics in Phonetics
Taught by: Liberman/Kuang
Course not offered every year
Activity: Seminar
1.0 Course Unit

LING 630 Seminar in Morphology
Readings in modern morphological theory and evaluation of hypotheses in the light of synchronic and diachronic evidence from various languages.
Taught by: Noyer/Embick
Course not offered every year
Prerequisite: LING 530
Activity: Seminar
1.0 Course Unit

LING 650 Topics in Natural-Language Syntax
Detailed study of topics in syntax and semantics, e.g., pronominalization, negation, complementation. Topics vary from term to term.
Taught by: Kroch/Legate
One-term course offered either term
Prerequisite: LING 551
Activity: Seminar
1.0 Course Unit

LING 653 Topics in the Syntax-Semantics Interface
Topics in the Syntax-Semantics Interface
Taught by: Kroch
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

LING 660 Research Seminar in Sociolinguistics
Students approaching the dissertation level will explore with faculty frontier areas of research on linguistic change and variation. Topics addressed in recent years include: experimental investigation of the reliability of syntactic judgments; the development of TMA systems in creoles; transmission of linguistic change across generations. The course may be audited by those who have finished their course work or taken for credit in more than one year. This course will have different topics each term.
Course not offered every year
Activity: Seminar
1.0 Course Unit

Notes: This course will have different topics each term.

LING 662 Topics in Experimental Sociolinguistics
Topics in Experimental Sociolinguistics
Course not offered every year
Activity: Seminar
1.0 Course Unit

LING 670 Topics in the Cultural Evolution of Language
Readings in the cultural evolution of language. This encompasses research on the contribution of processes of cultural change to the emergence of language in the human species, the emergence of new languages, and language change viewed as a cultural-evolutionary process. There will be an emphasis on research employing empirical methods, particularly experimentation. Otherwise focus varies from term to term.
Course not offered every year
Activity: Seminar
1.0 Course Unit

LING 675 Language and Cognition
This is a seminar on how language relates to perception and cognition. The seminar pays particular attention to the question of whether and how language might affect (and be affected by) other mental processes, how different languages represent the mental and physical world, and how children acquire language-general and language-specific ways of encoding human experience. The course incorporates cross-linguistic, cognitive and developmental perspectives on a new and rapidly changing research area.
Taught by: Papafragou, Trueswell
Course usually offered in spring term
Also Offered As: PSYC 675
Activity: Seminar
1.0 Course Unit

LING 999 Independent Study and Research
Prerequisite: Student must submit brief proposal for approval. May be repeated for credit.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

Notes: Student must submit brief proposal for approval. May be repeated for credit.
Logic, Information and Computation (LGIC)

LGIC 010 Formal Logic I
This course provides an introduction to some of the fundamental ideas of logic. Topics will include truth functional logic, quantificational logic, and logical decision problems.
Taught by: Singer
One-term course offered either term
Also Offered As: PHIL 005, PHIL 505
Activity: Lecture
1.0 Course Unit
Notes: This is a Formal Reasoning course.

LGIC 210 Discrete Mathematics I
Topics will be drawn from some subjects in combinatorial analysis with applications to many other branches of math and science: graphs and networks, generating functions, permutations posets, asymptotics.
Course not offered every year
Also Offered As: MATH 340
Prerequisite: MATH 114 OR MATH 115 OR MATH 116
Activity: Lecture
1.0 Course Unit

LGIC 220 Discrete Mathematics II
Topics will be drawn from some subjects useful in the analysis of information and computation: logic, set theory, theory of computation, number theory, probability, and basic cryptography.
Also Offered As: MATH 341
Prerequisite: MATH 340 OR LGIC 210
Activity: Lecture
1.0 Course Unit

LGIC 310 Logic I
Taught by: Scedrov, Towsner, Weinstein
Course not offered every year
Also Offered As: MATH 570, PHIL 410
Prerequisite: MATH 371 OR MATH 503
Activity: Lecture
1.0 Course Unit

LGIC 320 Logic II
The second semester of a two-semester course on the fundamental results and techniques of mathematical logic. Topics will be drawn from model theory, proof theory, recursion theory, and set theory. Connections between logic and algebra, analysis, combinatorics, computer science, and the foundations of mathematics will be emphasized.
Taught by: Scedrov, Towsner, Weinstein
Course not offered every year
Also Offered As: MATH 571, PHIL 413
Prerequisite: PHIL 410 OR MATH 570
Activity: Seminar
1.0 Course Unit

LGIC 496 Topics in Logic
The course focuses topics drawn from the central areas of mathematical logic: model theory, proof theory, set theory, and computability theory.
Taught by: Weinstein
Course not offered every year
Also Offered As: MATH 671, PHIL 412
Activity: Seminar
1.0 Course Unit

Malagasy (MALG)

MALG 490 Elementary Malagasy
The main objective of this course is to allow students to study an African language of their choice, depending on the availability of the instructor.
The course will provide students with linguistics tools which will facilitate their research work in the target country. Cultural aspects of the speakers of the language will be introduced and reinforced. Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

MALG 491 Elementary Malagasy II
Continuation of AFST 490. Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

MALG 492 Intermediate Malagasy I
Intermediate level courses in a variety of African languages: Igbo, Shona, Wolof, Malagasy, Chichewa, Setswana, Manding, Afrikaans, Setswana. Focus on oral proficiency and productive language skills. All course are language specific and follow ACTFL proficiency guidelines. Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

MALG 493 Intermediate Malagasy II
Continuation of AFST 492. Prerequisite: Offered through Penn Language Center.
For BA Students: Last Language Course
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

MALG 494 Advanced Malagasy I
Language specific sections for students interested in doing country-specific research in a target language. Courses cover project-based skills for AFST research. Prerequisite: Offered through Penn Language Center.
For BA Students: Advanced Language Course
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

2020-21 Catalog | Generated 09/18/20
MALG 495 Advanced Malagasy II
Continuation of AFST 494. Prerequisite: Language will be specified in each section.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Languages will be specified in each section.

Malayalam (MLYM)

MLYM 408 Beginning Malayalam Part I
This course is designed to develop skills in reading, writing, and speaking. It will focus on the alphabet, basic vocabulary, nouns (cases, gender and number), verbs and their basic tenses, numerals, rules of joining words, adjectives, adverbs, and sentence structure. Guided conversation will be a part of every class. Students will receive considerable training in speaking and writing their own sentences and paragraphs.
For BA Students: Language Course
Taught by: Kurichi
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

MLYM 409 Beginning Malayalam Part II
This course is designed to develop skills in reading, writing, and speaking. It will focus on the alphabet, basic vocabulary, nouns (cases, gender and number), verbs and their basic tenses, numerals, rules of joining words, adjectives, adverbs, and sentence structure. Guided conversation will be a part of every class. Students will receive considerable training in speaking and writing their own sentences and paragraphs.
For BA Students: Language Course
Taught by: Kurichi
Course usually offered in spring term
Prerequisite: MLYM 408
Activity: Seminar
1.0 Course Unit

MLYM 428 Intermediate Malayalam Part I
This course is designed to further the language skills learned in Beginning Malayalam. Direct and indirect speech, passive voice, postpositions, and rules of joining words, will be included. Reading and discussion of texts from current Malayalam literature (essays, narration, short stories, and poems) will be a major portion of the course.
For BA Students: Language Course
Taught by: Kurichi
Two terms. student must enter first term.
Activity: Lecture
1.0 Course Unit

MLYM 429 Intermediate Malayalam Part II
This course is designed to further the language skills learned in Beginning Malayalam. Direct and indirect speech, passive voice, postpositions, and rules of joining words, will be included. Reading and discussion of texts from current Malayalam literature (essays, narration, short stories, and poems) will be a major portion of the course.
For BA Students: Last Language Course
Taught by: Kurichi
Course usually offered in spring term
Prerequisite: MLYM 428
Activity: Seminar
1.0 Course Unit

Management (MGMT)

MGMT 101 Introduction To Management
We all spend much of our lives in organizations. Most of us are born in organizations, educated in organizations, and work in organizations. Organizations emerge because individuals can’t (or don’t want to) accomplish their goals alone. Management is the art and science of helping individuals achieve their goals together. Managers in an organization determine where their organization is going and how it gets there. More formally, managers formulate strategies and implement those strategies. This course provides a framework for understanding the opportunities and challenges involved in formulating and implementing strategies by taking a ‘system’ view of organizations, which means that we examine multiple aspects of how managers address their environments, strategy, structure, culture, tasks, people, and outputs, and how managerial decisions made in these various domains interrelate. The course will help you to understand and analyze how managers can formulate and implement strategies effectively. It will be particularly valuable if you are interested in management consulting, investment analysis, or entrepreneurship - but it will help you to better understand and be a more effective contributor to any organizations you join, whether they are large, established firms or startups. This course must be taken for a grade.
One-term course offered either term
Activity: Recitation
1.0 Course Unit

MGMT 111 Multinational Management
Most successful firms go global in some way; why do they go global, and how do they navigate across international borders? This is the question at the core of multinational management. In this course, you will learn about topics such as how firms choose where and how to invest abroad, how shifts in the political economy landscape affect firm strategy, and how firms respond to restrictions on the movement of both physical and human capital across borders. The class utilizes economics and global strategy frameworks to provide students with an understanding of how to formulate multinational firm strategy. Fulfills the Global Economy, Business, and Society requirement. This course has a mandatory attendance policy.
Taught by: Britta Glennon
Prerequisite: WH 101 OR MGMT 101
Activity: Lecture
1.0 Course Unit

MGMT 198 SPECIAL TOPICS INDEPENDENT STUDY
Please check with the instructor for each section regarding the course content. Content is likely to vary across special topics sections. Feel free to contact the Management Department at: MGMT-Courseinfo@wharton.upenn.edu regarding course related inquiries. Taught by: Weigelt, K.; Guillen, M.
Activity: Lecture
0.5 Course Units
Notes: Special Topic Independent Studies vary in the Management Department. Please contact the instructor for course content for each study.
MGMT 205 Multinational Corporate Strategies
This course focuses on the creation of competitive advantage in the multinational firm. It examines the nature of global competition by exploring the characteristics of global versus non-global industries and firms. We also explore different types of international strategy and structure and examine the specific challenges of managing in multiple countries and markets. Finally, we consider the strategic allocation of resources along the value chain and the role of strategic alliances as a crucial element of an effective global strategy.
Course usually offered in spring term
Prerequisite: MGMT 101 AND MGMT 111 AND WH 101
Activity: Lecture
1.0 Course Unit

MGMT 208 Globalization and International Political Economy
Managing Globalization and Anti-Globalization is an upper level undergraduate course that provides students with a solid foundation in the history of globalization and anti-globalization, the institutions that manage the global economy, and the current challenges these institutions must address. The course objectives are to help students develop their own worldview, to provide a basis for thinking about the powerful forces now shaking the international political economy, and to build a solid foundation upon which new material can be added throughout the students' careers. In the first half of the course, students study the historical trajectory of globalization and the institutions that seek to manage it. In the second half, students study how these institutions manage present-day global governance challenges ranging from global migration, the rise of populist anti-globalization movements, the collapse of communism, and global inequality to disruptive technologies such as bitcoin. Format: Class discussions will be interactive and structured to encourage maximum student participation.
Requirements: midterm and final exam, a final course paper of 10-20 pages and short reaction papers dealing with the readings for the week.
Taught by: Mitchell Orenstein
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MGMT 209 The Political Environment of the Multinational Firm
Managers, consultants, investors and creditors increasingly acknowledge the importance of stakeholder opinions of the acceptability of a company's operations for that company's ability to achieve its organizational mission and to deliver a financial return. The rhetoric that companies must manage their stakeholder relations as well as shareholder relations is rapidly shifting from a philosophical critique of the functioning of the capitalist system to a strategic, financial, operational and societal imperative. Managers, consultants and investors are increasingly drawing on new unstructured data on the identity and issues of concern of stakeholders to align corporate and investment strategy with stakeholder demands on issues ranging from environmental externalities (e.g., climate change) to human rights. This course provides students the latest tools to use this data for stakeholder and issue mapping as well as financial valuation. It also offers more behavioral skills critical for external stakeholder engagement including trust building and communications as well as internal stakeholder engagement. In short, it prepares students to engage in Corporate Diplomacy (i.e., to influence or assess external stakeholders' opinions of the acceptability of a company's operations at a moment in time and to convince internal stakeholders to adapt their behaviors, systems and outputs' when necessary).
Taught by: Witold Henisz
Activity: Lecture
1.0 Course Unit

MGMT 211 Competitive Strategy
This is an advanced course in competitive strategy. The course will apply the tools of industrial organization economics and game theory to examine the strategic decisions that managers make. We will examine those decisions concerning pricing, capacity investment, advertising, new product introductions, and research and development. Emphasis will be placed on the strategic interaction among rival sellers. In particular we will look at the various methods of entry deterrence and strategic commitment. The course will attempt to integrate traditional economic models with case study materials. In addition to prerequisites, some knowledge of microeconomics is suggested. The course will be discussion oriented and based largely on case materials and mini-lectures.
Taught by: James Ostler
Course usually offered in fall term
Prerequisite: WH 101 AND MGMT 101
Activity: Lecture
1.0 Course Unit

MGMT 212 Social Entrepreneurship
This is a course on creating a business to attack a social problem and thereby accomplish both social impact and financial sustainability. For this course, social entrepreneurship is defined as entrepreneurship used to profitably confront social problems. This definition therefore views social entrepreneurship as a distinct alternative to public sector initiatives. The basic thesis is that many social problems, if looked at through an entrepreneurial lens, create opportunity for someone to launch a venture that generates profits by alleviating that social problem. This sets in motion a virtuous cycle - the entrepreneur is incented to generate more profits and in so doing, the more the profits made, the more the problem is alleviated. Even if it is not possible to eventually create a profit-making enterprise, the process of striving to do so can lead to a resource-lean not-for-profit entity. Creating a profitable social entrepreneurship venture is by no means a simple challenge. Cross-listed with MGMT 212.
Course usually offered in fall term
Also Offered As: MGMT 812
Activity: Lecture
0.5 Course Units

MGMT 213 Entrepreneurship through Acquisition
The objective of this course is to study the process of entrepreneurship through the acquisition of existing operating businesses. We will study this process through a series of lectures, assigned readings, case studies, and a final project which will follow the acquisition process. Freshmen require instructor’s permission.
Taught by: Richard Perlman
Prerequisite: FNCE 100 AND ACCT 101
Activity: Lecture
0.5 Course Units
Notes: Lectures, case discussions, and student presentations. Class participation, homework and final project. You are expected to attend all course sessions. Failure to attend will result in being automatically dropped from the course with no further right to admission.
MGMT 214 Market Dynamics and Technical Change
The course is designed to meet the needs of future managers, entrepreneurs, consultants and investors who must analyze and develop business strategies in technology-based industries. The emphasis is on learning conceptual models and frameworks to help navigate the complexity and dynamism in such industries. This is not a course in new product development or in using information technology to improve business processes and offerings. We will take a perspective of both established and emerging firms competing through technological innovations, and study the key strategic drivers of value creation and appropriation in the context of business ecosystems. There is definitely an overlap in content with other courses in intermediate microeconomics, or managerial economics. Nevertheless, the treatment is sufficiently distinctive to make it complementary to those other treatments for a student who is particularly interested in economic change, or is otherwise interested in acquiring a broader view of economics. Students need to have taken a first college course in economics. Multivariate calculus is generally useful in economic theory at this level, but does not carry significant weight in this course. Similarly, an understanding of basic linear algebra enhances the value of the linear programming analysis of the firm, but is not a prerequisite. The course is reserved for Wharton juniors and seniors.
Taught by: Rahul Kapoor
Activity: Lecture
1.0 Course Unit

MGMT 223 Business Strategy
This course encourages students to analyze the problems of managing the total enterprise in the domestic and international setting. The focus is on the competitive strategy of the firm, examining issues central to its long- and short-term competitive position. Students act in the roles of key decision-makers or their advisors and solve problems related to the development or maintenance of the competitive advantage of the firm in a given market. The first module of the course develops an understanding of key strategic frameworks using theoretical readings and case-based discussions. Students will learn concepts and tools for analyzing the competitive environment, strategic position and firm-specific capabilities in order to understand the sources of a firm's competitive advantage. In addition, students will address corporate strategy issues such as the economic logic and administrative challenges associated with diversification choices about horizontal and vertical integration. The second module will be conducted as a multi-session, computer-based simulation in which students will have the opportunity to apply the concepts and tools from module 1 to make strategic decisions. The goal of the course is for students to develop an analytical tool kit for understanding strategic issues and to enrich their appreciation for the thought processes essential to incisive strategic analysis. This course offers students the opportunity to develop a general management perspective by combining their knowledge of specific functional areas with an appreciation for the requirements posed by the need to integrate all functions into a coherent whole. Students will develop skills in structuring and solving complex business problems. In addition to prerequisites, enrollment is limited to seniors and juniors that have completed introductory courses in finance, marketing, and accounting.
Taught by: Saerom Lee
Prerequisite: WH 101 AND MGMT 101
Activity: Lecture
1.0 Course Unit

MGMT 224 Leading Diversity in Organizations
People in the workplace are constantly interacting with peers, managers, and customers with very different backgrounds and experiences. When harnessed effectively, these differences can be the catalyst for creative breakthroughs and the pathway to team and organizational learning and effectiveness; but when misunderstood, these differences can challenge employees' values, performance, workplace relationships, and team effectiveness. This course is designed to help students navigate diverse organizational settings more effectively and improve their ability to work within and lead diverse teams and organizations. It also offers students the opportunity to develop their critical thinking on topics such as identity, relationships across difference, discrimination and bias, equality, and equity in organizations and society and how they relate to organizational issues of power, privilege, opportunity, inclusion, creativity and innovation and organizational effectiveness. Class sessions will be experiential and discussion-based. Readings, self-reflection, guest speakers from organizations, case studies and a final project will also be emphasized. By the end of this course, you should be able to: 1) Evaluate the aspects of your identity and personal experiences that shape how you interact and engage with others and how they interact and engage with you in organizations 2) Explain how issues of power, privilege, discrimination, bias, equality, and equity influence opportunity and effectiveness in organizations 3) Propose ways to make relationships across difference in organizations more effective 4) Describe current perspectives on the relationships among diversity, inclusion, creativity, and innovation in organizations 5) Analyze a company's current approach to leading diversity and use content from this course to propose ways to enhance learning and effectiveness in that company.
Taught by: Stephanie Creary
One-term course offered either term
Activity: Lecture
0.5 Course Units
Notes: Class attendance is required. No more than 2 absences will be allowed to receive a passing grade in the course. Absences due to late enrollment will be counted towards the two max. No student will be allowed to enroll after the first day of class without instructor permission.
MGMT 225 Value Creation and Value Capture in American Business History

This course examines how the kind of firms in which most Wharton students will spend the next stage of their careers came to be as they are today. At a superficial level, the course’s objectives are descriptive and narrative. But history, considered thoughtfully and critically, is never just description and a narrative: the course’s deeper purpose is to give students some idea of how to think about the future evolution of firms and industries. In this the course is as much an applied strategy course as it is a historical survey. The course considers the development of the business enterprise as an economic institution. It also covers the evolution of competition and strategy, marketing institutions, some aspects of the history of operations management, and corporate finance. Issues arising in these different management disciplines are considered in part for the purpose of showing off their interrelationships. Questions of how value can be created and captured at the enterprise level form the core of the perspective. The course’s focus is on American developments, since many of the innovations took place here, but there is scope for comparison with Japan and the leading European economies if there is student interest. Chronologically the course runs from Franklin’s days through the early twenty-first century. It proceeds through discussion of actual business decisions and performance in a series of challenging and otherwise interesting moments in the evolution of the American business environment. The materials are unusual for the Wharton School—they are not just often case-like but wherever possible draw on documents contemporary to the decisions such as correspondence, internal memoranda, minutes of meetings, old newspaper and magazine stories, and eyewitness accounts. The objective in this is to give students as minimally mediated access as is feasible to what the embedded actors knew and thought. These materials require thoughtful preparation. Weekly short writing assignments during the first twelve weeks of the term develop students’ skill in turning such preparation into crisp analytical prose. The course as a process is much more focused on the students than many and the most productive experience of it demands that the students both engage with the materials when they prepare and then take an active role in the class discussion. The largest single element in the grading is a substantial term paper on a topic agreeable to both the student and the instructor. For more information, please contact the instructor: raff@wharton.upenn.edu. Taught by: Daniel Raff

Also Offered As: MGMT 714

Activity: Lecture

1.0 Course Unit

MGMT 229 Intellectual Property Strategy for the Innovation-Driven Enterprise

Announcing the first iPhone at Macworld 2007, Apple CEO Steve Jobs famously boasted: ‘And boy, have we patented it!’ How, and to what extent, do patents and intellectual property really provide competitive advantage for innovative technology companies? What makes an IP asset strategically powerful? How do patents impact, and even drive, major corporate decisions including M&A, venture funding and exits, and entry into new markets? In this course, students will learn to critically analyze and answer these questions, gaining insights they can leverage in their future roles as innovation industry executives, entrepreneurs, strategist and investors. The course includes three major units. In Unit 1, Patents and Innovation Value, we examine closely the relationship between competitive advantage, value proposition, and intellectual property (particularly patents). We will apply our understanding of that relationship to critique and sharpen patent strategy to protect examples of cutting-edge technologies. In Unit 2, Patent Leverage and the Corporate Playbook, we study theory and examples of how intellectual property leverage strategically informs corporate transactions and decisions, for established companies as well as for start-ups. In Unit 3, Limits and Alternatives to Patents, we confront the recent legal trend toward reigning in the power and scope of patents. We also consider the growing importance of data as a proprietary technology asset, and discuss options for adapting intellectual property strategy appropriately. Throughout, students will learn and practice applying the concepts we learn to decision-making in examples based on innovative real-world technologies and businesses.

Also Offered As: LGST 729, MGMT 729

Activity: Lecture

0.5 Course Units

Notes: See the description for MGMT 729. This is a cross-listed course.

MGMT 230 Entrepreneurship

MGMT 230 integrates the material introduced in business fundamental courses and applies it to the design and evaluation of new ventures. The purpose of this course is to explore the many dimensions of new venture creation and growth and to foster innovation and new business formations in independent and corporate settings. The course addresses both a theoretical perspective on venture initiation and the application of writing an actual business plan. In this course you are asked to get out of the habit of being a receiver of ideas, facts, concepts and techniques, and get into the habit of generating ideas, identifying problems, analyzing and evaluating alternatives, and formulating workable action plans, thus putting textbook knowledge into practice. Students will get this hands-on experience in the following ways: Through the formation and ongoing work of venture teams that will design a comprehensive business development plan for a particular start-up company. Teams are expected to utilize the tools and analytical approaches discussed in class to their venture, through simulations, labs, lectures and class discussions that are designed to familiarize students with the many dimensions of entrepreneurship and new venture initiation. Class format varies throughout the course. In some class sessions, there will be a lecture on specific topics. Other sessions will consist of live simulations, labs, in-class exercises, and discussions of a particular topic or venture ideas that students are developing. Guest speakers will also lead and participate in some class sessions.

Activity: Lecture

0.5 Course Units
MGMT 231 Entrepreneurial Implementation
This advanced course on entrepreneurship focuses on developing a validated opportunity or concept into a venture that is ready for seed financing and/or launching the product or service. Participants in this course must previously have developed a validated opportunity, either in a previous course or through independent efforts. Students may participate as a team of up to three people. Ideally, participants are committed to pursuing their opportunity commercially, or at least to seriously explore that possibility. The course provides a practical guidance for developing the product or service, forming the entity, raising capital building the team, establishing partnerships, and sourcing professional services. After completing the course, you will be ‘pitch ready’ – whether submitting to campus venture competitions or to outside investors. Most coursework is focused on applying concepts and frameworks to project tasks in developing the venture. Students must have successfully completed MGMT 801 before enrolling in this course. Students must have successfully completed MGMT801 before enrolling in this course. Format: Readings, discussion, and developing an implementation plan for a real venture.
Also Offered As: MGMT 806
Prerequisite: MGMT 801
Activity: Lecture
1.0 Course Unit

MGMT 233 Strategies and Practices of Family-Controlled Companies
This course is designed for those persons who desire to understand the distinct strategies and practices of family-controlled companies and family wealth creation. It will focus on stakeholder decision making; financial and resource driven options for long-run competitiveness, organizational structures, management team issues; strategic planning from a resource-based perspective; transition planning for the corporate entity, family dynamics and communication issues; and leadership empowerment. The course is intended for those who plan to consult or provide professional services to family-controlled companies and for those planning a career in a family firm. The class is structured around topical lectures with frequent utilization of case studies requiring active class participation, as well as on-site and off-site project work time. Submission of several written case studies, and a term project are required. Open to Wharton MBA and Penn graduate students. Format: The class is structured around topical lectures with frequent utilization of case studies. There will be in-class discussion, as well as on-site and off-site project work time.
Also Offered As: MGMT 833
Activity: Lecture
1.0 Course Unit

MGMT 237 Management of Technology
The course is designed to meet the needs of the future managers, entrepreneurs, consultants and investors who must analyze and develop business strategies in technology-based industries. The emphasis is on learning conceptual models and frameworks to help navigate the complexity and dynamism in such industries. This is not a course in new product development or in using information technology to improve business processes and offerings. We will take a perspective of both established and emerging firms competing through technological innovations, and study the key strategic drivers of value creation and appropriation in the context of business ecosystems. In addition to prerequisites, this course is exclusively reserved for Management and Technology students.
Taught by: Saikat Chaudhuri
Course usually offered in spring term
Prerequisite: WH 101 AND MGMT 101
Activity: Lecture
1.0 Course Unit

MGMT 238 Organizational Behavior
Management 238 is an organizational behavior course, examining individual, interpersonal, and group effectiveness at work. Topics range from decision-making, motivation, and personality to networks, influence, helping, leadership, teamwork, and organizational culture. The learning method is heavily experiential, with a focus on applying key principles to the human side of management in role-play exercises, simulations, a mini-TED talk, and group projects in local organizations. This course requires the instructor’s permission. Registration is by application only; Penn InTouch requests will not be processed. The link to the application form will be available on the Management Department’s website: https://mgmt.wharton.upenn.edu/programs/undergraduate. The deadline for applications is March 15, 2019 at 5 PM. Students will be notified by March 25, 2019 regarding the status of their application.
Activity: Lecture
1.0 Course Unit
Notes: This course is open to juniors and seniors across Penn. This course also has a first-day mandatory attendance policy.

MGMT 240 Group Dynamics
Open to all sophomores, juniors, and seniors. This course develops your knowledge and skills for designing, leading, and consulting with teams in organizations. The goals are to provide both the conceptual understanding and the behavioral skills required to improve team effectiveness. This course makes use of analytic and reflective writing, peer feedback and coaching, simulations, and an intensive field project with a real team in the Philadelphia area. There are four kinds of teams that are the focus of your study: teams of which you’ve been a member in the past; your 240 Team, with three or four other classmates; a team outside of 240 that your 240 Team will observe, analyze, and report on – your Host Team; and a team you expect to be on in the future. The primary case material for applying course concepts (learned from readings and lectures) will be these teams you know from direct observation and experience. Expect to leave this course with new knowledge of how to diagnose and intervene – as leader, member, or consultant – to improve the performance sustainability, and impact on the members of any team. Prerequisite: Sophomore standing or above.
Activity: Lecture
1.0 Course Unit
MGMT 241 Knowledge for Social Impact: Analyzing Current Issues & Approaches
Recent technological changes have raised awareness of the magnitude and devastating long-term effects of poverty, food insecurity, limited and unequal access to education, and other social issues. Coupled with growing awareness of these issues is the emerging sense that traditional government programs and charities may be unable to solve these problems - at least, not alone. What may be needed are new strategies - strategies borne of (a) a deep understanding of the issues; (b) interdisciplinary collaboration; and (c) access to business knowledge, frameworks, and resources. This course is designed to provide the information, strategies, examples, and analytical mindset to make students more rigorous, insightful, and effective in analyzing social ills and crafting potential solutions. Together, a cross-disciplinary group of undergraduate students, including students in Wharton, the College, and other Penn Schools, will examine the nature and extent of two pressing social problems - food insecurity and barriers to post-secondary education - and current approaches to solving these problems. After an introduction to the social impact landscape and review of frameworks and tools for social impact, we will meet with researchers, business leaders, and non-profit leaders to learn what's not working, what is working, and what might work even better.
Taught by: Klein, Katherine
Activity: Lecture
1.0 Course Unit

MGMT 242 Corporate Governance, Executive Compensation and the Board
This course examines the relationships between corporate managers, the boards of directors charged with overseeing them, and investors. We'll review the responsibilities of the board, including financial statement approval, CEO performance assessment, executive compensation, and succession planning. While boards are legally bound to represent the interests of equity investors, in the course of carrying out this role they are often called on to respond to the needs of numerous other stakeholders, including customers, employees, government and society at large. With global brands at risk and mistakes instantly transmitted via Internet and social media, the reputational stakes are very high. The course is a combination of lecture, guest lecture, discussion, case analysis, and in-class research workshops. We will review some of the theory underlying modern governance practice, drawing from theories and evidence provided by research across diverse fields, including finance, sociology, and organization and management theory. We'll study specific situations where boards and management teams faced governance challenges, and assess the strategies used to deal with them. Finally, we'll examine the ways in which governance arrangements and external stakeholder involvemnt in governance affects corporate social behavior and global citizenship.
Prerequisite: WH 101 AND MGMT 101
Activity: Lecture
1.0 Course Unit
Notes: Classes will comprise of a combination of mini-lectures and case discussions. Students will be expected to participate fully in class discussions. Effective participation will require sufficient and informed preparation of cases and assigned readings in advance of each class. See instructor regarding course materials.

MGMT 243 Work and Technology: Choices and Outcomes
Technology is changing the workplace, as it has since the Industrial Revolution, but now in new ways that can both enhance human capabilities and threaten to replace them. In the first module 'Technology, Operations, and Strategy,' we will look at how firms utilize human labor under different strategies and production paradigms, plus past and current approaches to automation (replacing labor) and outsourcing (moving where work is done). In the second module 'Technology and Managing People,' we'll examine how traditional practices of managing people are being transformed by new technologies that give managers new ways to enact control and induce commitment, while also giving individuals with high levels of human capital ('talent') new sources of leverage in negotiating the employment contract and new opportunities to acquire skills and construct a career path across firms. Take this course if you are fascinated by the intersection of the social (individuals and organizations) and the technical (technology and operations) - and if you want a glimpse into the future of your own work life. Students will be evaluated on class participation, written work and a group assignment.
Taught by: Professor John Paul MacDuffie
Course usually offered in spring term
Activity: Lecture
0.5 Course Units
Notes: Students will be evaluated on class participation, written work and group assignment.

MGMT 248 How to be the Boss
Despite the press accounts about the 'gig' economy, the Bureau of Labor Statistics calculates that about 92 percent of the people working in the US are employees who are supervised by someone. That figure has remained roughly the same for decades. The term 'supervisor' is sometimes used for the first-level of supervision in an organization, but in fact that role - and indeed the title? goes all the way up to the very top of any employer organization. Even CEO's are the supervisor of their direct reports. When people talk about their 'boss,' they almost always are referring to the person who supervises them. Stepping into a supervisor position is challenging, exceptionally so the first time. That time comes relatively soon for Wharton grads. Undergrads pursuing consulting jobs typically find themselves supervising new hires by their third year, those working for corporations find themselves in those roles even sooner. Roughly three-quarters of our MBA students report that they had been required to supervise subordinates after college and before arriving here. In this class, we examine the role of the supervisor and the unique tasks associated with performing that role. We pay special attention to the unique challenges of taking on that role for the first time.
Course not offered every year
Activity: Lecture
0.5 Course Units

MGMT 249 Mergers and Acquisitions
This course explores the role of mergers and acquisitions and alternative methods of corporate development in advancing the strategies of operating business. Emphasis is on the way companies use acquisitions to alter business mixes; seize opportunities in new products, technologies and markets; enhance competitive positioning; adjust to changing economics, and promote value-creating growth. Although the course will emphasize strategic acquisitions, it also will explore leveraged buy-outs and hostile financial acquisitions as well as their influence on corporate buyers. Please note that you must fulfill the prerequisites in order to enroll in this class.
Course usually offered in fall term
Prerequisite: WH 101 AND MGMT 101
Activity: Lecture
1.0 Course Unit
MGMT 251 Consulting to Growth Companies
This course offers students a unique opportunity to develop consulting skills and entrepreneurial expertise by working as consultants to thriving entrepreneurial ventures in the Philadelphia area. This capstone course combines both fieldwork and class work and allows students to apply knowledge and skills acquired through other course work to real world issues that must be addressed by operating companies. An understanding of characteristics producing rapid entrepreneurial growth and skills related to effective communications and management of a business relationship are emphasized. Team term consulting assignment, lectures, case analysis, and small group discussions. Junior or Senior standing recommended to enroll.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

MGMT 264 Venture Capital and Entrepreneurial Management
This course focuses on venture capital management issues in the context of a high-growth potential start-up company. The course is motivated by rapid increases in both the supply of and demand for private equity over the past two decades. The topic is addressed from two distinct perspectives: issues that relate to the demand for private equity and venture capital (the entrepreneur’s perspective) on the one hand, and issues that relate to the supply of capital (the investor’s perspective) on the other. As well, we will address management issues that relate to how the VC and the entrepreneur work together once an investment has been made, compensation issues, and governance issues in the privately held venture capital backed company. Format: Case/discussion format, supplemented by lectures and guest speakers. Requirements: Classroom participation, written case assignments, late midterm. Materials: Required Coursepack and supplemental recommended reading.
Course usually offered in fall term
Prerequisite: Junior or Senior Standing Recommended
Activity: Lecture
1.0 Course Unit

MGMT 265 Culture of Technology: Culture & Institutions of the Tech Sector--Bridging Research and Practice
Academics, students and practitioners alike are fascinated by the culture of tech sector - its people, practices, and organization. In this course we explore this sector using a combination of research papers, press coverage, and practitioner involvement. Each class session will be devoted to discussion of a single research article, during which we will be joined via state-of-the-art videoconferencing by a Wharton alum from the tech sector whose expertise is relevant to the paper topic. Therefore, the learning objectives half-credit course are to: 1) understand the managerial, organizational, and regional institutions that characterize the tech sector, with particular emphasis on the case of Silicon Valley 2)Bridge research and practice by critical analysis of academic research papers in conjunction with practitioner input 3) Forge connections with tech sector practitioners, particularly with our west coast alumni base.
Taught by: Vice Dean Lori Rosenkopf
Activity: Lecture
0.5 Course Units

MGMT 267 Entrepreneurship and Technological Innovation
This course will give you an overview of entrepreneurial development, especially within the realm of technical innovation. We will be concerned with content and process questions as well as with formulation and implementation issues that related to conceptualizing, developing and managing successful new ventures. The class serves as both a stand-alone one and as a preparatory course to a more in-depth venture implementation class (MGMT 231) as well as other classes in the domain of management and entrepreneurship. Management 267 will appeal to individuals who have a desire to become entrepreneurs at some stage of their career. Similarly, students who intend to work in the entrepreneurial ecosystem (such as in the venture capital industry) will benefit from the course.
Activity: Lecture
0.5 Course Units

MGMT 272 Power and Politics in Organizations
‘If you want to test a (person’s) character, give (him/her) power.’ These famous words articulate one of the many tensions of exercising power. Regardless of whether you have an appetite for power or disdain it, power and politics are likely to play an important role in your career. The purpose of this course is to introduce you to concepts that are useful for understanding, analyzing, and developing your political skill. But beyond discovering ways to extend your own power in organizations, we will also uncover lessons about ways in which power and politics can blind you, and how to navigate situations in which you are up against powerful people. Using a range of scholarly articles, cases, exercises, assessments and simulations, we will extract a variety of lessons relevant to your role in organizations. Topics include diagnosing power in organizations, building coalitions, change management, understanding networks, coping with intolerable bosses and incivility, and downsizing. Students will be expected to engage in field research for their coursework and final paper, and the course requires that students submit assignments for almost every class session. Organizations are inherently political arenas that require social astuteness, and an understanding of the ‘rules of the game.’ This course is designed for students aiming to develop their leadership, general management and career skills through a better understanding of power and politics, and relates to other courses in these topics in the Management department.

2020-21 Catalog | Generated 09/18/20
MGMT 276 Cultivating Judgment Skills: Forecasting in Business Politics
This course will explore the diverse ways in which scholars and practitioners have defined ‘good judgment.’ And it will introduce students to practical tools for assessing and improving judgment, with special emphasis on probabilistic reasoning. Students will have the opportunity both to fine-tune their personal judgment skills as well as to master and then weave together insights from several bodies of scientific knowledge, including frequentist and Bayesian statistics, psychological work on judgment and choice, group dynamics, organizational behavior and political science (key concepts discussed in Tetlock’s (2015) book ‘Superforecasting’). We will focus on bottom-line accuracy in sizing up real world problems. Class work will be primarily exercises, including working as an individual and in teams. You will have opportunities to forecast on a wide range of political, business, and macro-economic questions, which we will use as feedback tools to help you calibrate your judgment. Assessments include a weekly concept test and a final group presentation aimed to help you improve your judgment. The goal is to launch you on the lifelong process of learning how much trust you should place in your judgments of trustworthiness. Finally, note this has been approved by the Curriculum Committee effective 11/11/15.
Activity: Lecture

MGMT 288 Managing and Competing in China
The business environment in China is characterized by both uncertainty and complexity. On the one hand, it is changing fast; on the other hand, it is influenced by deep-rooted political, economic, and cultural forces that exhibit tremendous inertia. This course will help students—as potential managers, entrepreneurs, and investors—gain the knowledge and analytical skills necessary to compete effectively in China. We will discuss various types of firms in the Chinese economy—from large state-owned enterprises (SOEs) to newly minted Internet giants, from prominent multinational companies (MNCs) to virtually anonymous local suppliers—and the unique institutions in which these firms operate. Such discussions will also help managers whose firms compete or collaborate with Chinese firms on the global stage. We will use a combination of lectures, cases, debates, and role play in class. You will also have the opportunity to apply your learning to real business scenarios.
Also Offered As: MGMT 788
Activity: Lecture
1.0 Course Unit

MGMT 291 Negotiations
This course examines the art and science of negotiation, with additional emphasis on conflict resolution. Students will engage in a number of simulated negotiations ranging from simple one-issue transactions to multi-party joint ventures. Through these exercises and associated readings, students explore the basic theoretical models of bargaining and have an opportunity to test and improve their negotiation skills.
One-term course offered either term
Also Offered As: LGST 206, OIDD 291
Activity: Lecture
1.0 Course Unit

MGMT 292 Advanced Negotiation
This course is designed to teach negotiation principles and to enable students to develop their negotiation skills. This course assumes familiarity with the basic negotiation concepts covered in the prerequisite for this course: Negotiations. In this course, we extend the study and practice of negotiations and we develop a deeper understanding for how specific aspects of the negotiation process (e.g., emotions, deadlines, trust violations) impact outcomes. Through course lectures, readings, and case exercises, students will develop a rich framework for thinking about the negotiation process and acquire tools for guiding the negotiation process.
Taught by: Schweitzer, Staff

Prerequisite: LGST 206 OR OIDD 291 OR MGMT 291
Activity: Lecture
1.0 Course Unit

MGMT 301 Teamwork and Interpersonal Influence
Organizations emerge because individuals cannot (or do not want to) accomplish their goals alone. Therefore, an organization is most often defined as a collective oriented toward a common goal. Collaboration—in relationships and in teams—is the building block of organizational effectiveness. That is, much of your work each day will occur in a social context, and will require you to wield influence (and be influenced). Moreover, over 80% of Fortune 1,000 companies now use teams. The ability to work effectively in teams is thus a critical skill. In this course we will use the latest evidence from the science of organizations to understand an array of tactics that can help you work with others (and manage them) as you strive to attain shared goals, especially in the context of teams. You will develop a portable toolkit of ideas related to managing team decision making, team conflict, team diversity, interpersonal influence and emotional intelligence. This is a cross-listed course. Students may enroll in either MGMT 301 or WH 301.
Taught by: Professors Carton, Lee, and Parke
Activity: Lecture
0.5 Course Units
Notes: This course is the third module of the four-module set that comprises the Leadership Journey.

MGMT 353 Wharton Field Challenge FLCP
Do you want to make a real difference in the lives of a student? Do you want to set kids on a path to becoming financially literate? Do you want to learn leadership skills in the classroom? Here at the Financial Literacy Community Project (FLCP) we are able to create an experience that achieves all three. We partner with various public schools around the West Philadelphia area and teach concepts integral to financial literacy. We teach a wide range of grades from middle school to high school, and work with students to help them learn how to be financially responsible. In addition to teaching in neighboring high schools, we also have group class meetings run by Professor Keith Weigelt on Mondays from 7:00 PM-8:30 PM. We learn about the disparity of wealth and how to best address it while also learning teaching techniques, classroom strategies, and overall basic financial literacy. A basic understanding of personal financial literacy is required.
Taught by: Weigelt and Staff.

0.25 Course Units

MGMT 399 Service Learn Client Proj
MGMT 399 builds on the foundation established by the pre-requisites in the Leadership Journey. As seniors, you will draw on the self-awareness you acquired in WH101, the speaking skills you practiced in WH201, and the teamwork and interpersonal skills you honed in MGMT/WH 301. Moreover, MGMT 399 serves as a capstone course by giving you the opportunity to work with a robust nonprofit and in order to frame the problems and address the challenges your host organization faces; in the process, you will use your creative and critical thinking skills, apply what you have learned, and reflect on your growth and development through iterative feedback and constructive coaching. As a highly experiential course, MGMT 399 is relatively unstructured, giving you ample opportunity to demonstrate leadership by providing direction and teamwork by pulling together to deliver results for your host. MGMT 399 will enable you to draw on your Wharton undergraduate education and apply what you have learned in a way that promises to provide real impact for your host organization and a meaningful and memorable experience for you. This course requires permission of your advisor. It is only open to Wharton seniors. In short, MGMT 399 gives Wharton seniors the opportunity to: - Engage in a service learning and experiential course - Demonstrate leadership and work as a team on a real, host engagement - Think creatively, critically, and practically for the benefit of your host - Refine your interpersonal communication and presentation skills - Heighten your self-awareness through feedback and reflection Taught by: Professor Anne Greenhalgh and Professor Keith Weigelt Prerequisite: WH 101 AND WH 201 AND (WH 301 OR MGMT 301)
Activity: Lecture
0.5 Course Units

MGMT 409 Huntsman Capstone Study
The objective of the capstone study is to provide participants with the opportunity to integrate the knowledge gained in various courses Huntsman students take in Wharton and the College in a focused application to a specific project. The project would have sufficient breadth and depth to require participants to draw upon multiple analytical perspectives, theoretical lenses, and stocks of empirical data to collaboratively develop distinctive insights in relation to a given problem. The end product is a paper summarizing the research/application journey of the students, as well as a group presentation highlighting key findings as well as their theoretical and practical implications. Prerequisite: This course is only open to students in the Huntsman Program.
Taught by: Professor Exequiel Hernandez
Activity: Lecture
0.5 Course Units

MGMT 418 The India Startup Ecosystem
The objective of OIDD/MGMT 418 and the Wharton India Fellows program is to introduce Penn juniors to the entrepreneurship and innovation ecosystem in India through a course covering topics in entrepreneurship, innovation, venture capital and technology in India and then matching students to a specific short-term project with a Bangalore-based early-stage startup or rapidly scaling company. Students will complete preliminary work on the project assignment during the course, and then travel as a group to Bangalore with the instructor for a two week immersion in the company to which they have been assigned for their entrepreneurship project. Penn Wharton Entrepreneurship will cover airfare and lodging expenses for students selected as Wharton India Fellows for the duration of the 2 week immersion in India. For more information: https://entrepreneurship.wharton.upenn.edu/wharton-india-fellows/
Also Offered As: OIDD 418
Activity: Lecture
0.5 Course Units

MGMT 610 Foundations of Teamwork and Leadership
MGMT 610 is the first core course in the MBA Program and it cannot be waived. The first week of the fall term (in August) is dedicated to this formative and foundational experience. This course focuses on developing students’ knowledge and skill set for teamwork and leadership. It is meant to be an intense immersion experience that draws strongly on the pedagogy of the Wharton Teamwork and Leadership Simulation, a team-based, highly interactive simulation that was custom-designed specifically to allow students to experience the core concepts they learn in this class. The three goals of this course are for students to learn: 1. Leadership behaviors: how to enact the skills that contribute to a team’s effective performance. 2. Team dynamics: how to be an effective team member, as well as how to best design work teams; 3. Organizational awareness: understanding organizational culture. Format: A custom-designed Wharton-only simulation is paired with course sessions to deliver a unique learning experience. Classes will include experiential learning combined with debriefings, lectures, readings, class discussion and personal and group performance feedback. This course reflects the realities that informal leadership occurs in teams on an ongoing basis, that being a good team player is a part of leadership, and that many of one’s early experiences with leadership will occur while working on teams. Because of the team-based nature of this course, and time intensive nature of this experience, attendance is mandatory for ALL five sessions of this class. NOTE: Credit-bearing, core coursework begins with the MGMT610: Foundations of Teamwork and Leadership course.
Activity: Lecture
0.5 Course Units

MGMT 611 Managing Established Enterprises
This course is about managing large enterprises that face the strategic challenge of being the incumbent in the market and the organizational challenge of needing to balance the forces of inertia and change. The firms of interest in this course tend to operate in a wide range of markets and segments, frequently on a global basis, and need to constantly deploy their resources to fend off challenges from new entrants and technologies that threaten their established positions. The class is organized around three distinct but related topics that managers of established firms must consider: strategy, human and social capital, and global strategy.
Taught by: John Paul MacDuffie
Also Offered As: LAW 516
Activity: Lecture
1.0 Course Unit
MGMT 612 Management of Emerging Enterprises
This course is about managing during the early stages of an enterprise, when the firm faces the strategic challenge of being a new entrant in the market and the organizational challenge of needing to scale rapidly. The enterprises of interest in this course have moved past the purely entrepreneurial phase and need to systematically formalize strategies and organizational processes to reach maturity and stability, but they still lack the resources of a mature firm. The course is organized around three distinct but related topics that managers of emerging firms must consider: strategy, human and social capital, and global strategy.

MGMT 624 Leading Diversity in Organizations
People in the workplace are constantly interacting with peers, managers, and customers with very different backgrounds and experiences. When harnessed effectively, these differences can be the catalyst for creative breakthroughs and the pathway to team and organizational learning and effectiveness; but when misunderstood, these differences can challenge employees' values, performance, workplace relationships, and team effectiveness. This course is designed to help students navigate diverse organizational settings more effectively and improve their ability to work within and lead diverse teams and organizations. It also offers students the opportunity to develop their critical thinking on topics such as identity, relationships across difference, discrimination and bias, equality, and equity in organizations and society and how they relate to organizational issues of power, privilege, opportunity, inclusion, creativity and innovation and organizational effectiveness. Class sessions will be experiential and discussion-based. Readings, self-reflection, guest speakers from organizations, case studies and a final project will also be emphasized. By the end of this course, you should be able to: 1) Evaluate the aspects of your identity and personal experiences that shape how you interact and engage with others and how they interact and engage with you in organizations 2) Explain how issues of power, privilege, discrimination, bias, equality, and equity influence opportunity and effectiveness in organizations 3) Propose ways to make relationships across difference in organizations more effective 4) Describe current perspectives on the relationships among diversity, inclusion, creativity, and innovation in organizations 5) Analyze a company's current approach to leading diversity and use content from this course to propose ways to enhance learning and effectiveness in that company. Class attendance is required. No more than 2 absences will be allowed to receive a passing grade in the course. Absences due to late enrollment will be counted towards the two max. No student will be allowed to enroll after the first day of class without instructor permission.

MGMT 653 Field Application Project
FAP is an experiential-based course where learning is done outside of the classroom. It is unique in its lack of a classroom setting all meetings take place in a professor's office in small teams of 4 to 6 students. Teams are faced with real-time issues of outside organizations and work with faculty and host managers to construct innovative solutions. Solutions are integrative and cross-functional in nature. We encourage creative thinking giving students wide access to what we call 'area of expertise' faculty. Depending on the project scope we help students arrange meetings with professors who are experts in their field. Host organizations range from large multinational firms to start-ups. A significant percentage of the projects are with non-profits and organizations focused on social causes. Format: Teams (4-6 members) meet with faculty on a weekly basis (30-45 minutes). There are also 3-5 meetings with host managers. In addition to meeting with Faculty Head, students are given access to 'area of expertise' faculty. These faculty members are chosen based on their specific expertise. The final deliverable consists of an oral presentation and a written document. Requirements: Weekly team meetings with faculty project head and a final PowerPoint report and presentation. Course usually offered in spring term
Activity: Lecture

MGMT 656 Global Immersion Program
The Global Immersion Program is a pass/fail, 0.5 credit course that is designed to provide students with an in-depth exposure to international business practices and first-hand insights into a foreign culture. In past years, programs were offered in India, the Middle East, China, South America, Southeast, Asia, and Africa. The program offers students the opportunity to learn about a foreign business environment by way of academic lectures and a multi-week study tour, allowing students to visit with corporate and government officials, network with alumni, and take cultural excursions.
Taught by: Amy Miller
Course usually offered in spring term

MGMT 671 Executive Leadership
Leaders mobilize resources toward valued goals. In this course, the focus is on growing the student’s capacity as a leader in all parts of life. The purpose is to learn practical and customized lessons about how to improve performance and results at work, at home, in the community, and in the private self (mind, body, spirit) by finding mutual value among these four domains. The core idea is that leadership is about making a difference in all aspects of one’s life. This course offers students the opportunity to practice the skills needed to do so, now and in the future. Students learn and apply key leadership principles and actively explore what it means for them to be real (to act with authenticity by clarifying what’s important), to be whole (to act with integrity by respecting the whole person), and to be innovative (to act with creativity by experimenting with how things get done). Please visit www.totalleadership.org to learn more. This course is only available to Wharton MBA students.

Course usually offered in spring term
Activity: Lecture

MGMT 691 Negotiations
This course examines the art and science of negotiation, with additional emphasis on conflict resolution. Students will engage in a number of simulated negotiations ranging from simple one-issue transactions to multi-party joint ventures. Through these exercises and associated readings, students explore the basic theoretical models of bargaining and have an opportunity to test and improve their negotiation skills.

Taught by: Faculty

One-term course offered either term
Also Offered As: LAW 518, LGST 806, OIDD 691
Activity: Lecture
1.0 Course Unit

MGMT 692 Advanced Topics Negotiation
This is a course the builds on the basic Negotiation course. In this course, we explore a wide range of negotiation topics from crisis and hostage negotiations, to the role of emotions including anxiety, envy and anger in negotiations, to backlash effects for women in negotiations, and the role of alcohol in negotiations. We will survey many aspects of current negotiation research, discuss historic negotiation cases, and students will participate in role-play exercises. Many of the role play exercises will involve multi-party negotiations and afford opportunities to hone skills in team-based negotiations.

MGMT 701 Strategy and Competitive Advantage
This course is concerned with strategy issues at the business unit level. Its focus is on the question of how firms can create and sustain a competitive advantage. A central part of the course deals with concepts that have been developed around the notions of complementarities and fit. Other topics covered in the course include the creation of competitive advantage through commitment, competitor analysis, different organizational responses to environmental changes, modularity, and increasing returns. An important feature of the course is a term-length project in which groups of students work on firm analyses that require the application of the course concepts.

Prerequisite: MGMT 611 OR MGMT 612
Activity: Lecture
1.0 Course Unit

MGMT 711 Competitive Strategy and Industrial Structure
This is a course in analyzing competitive interactions. The course emphasizes a vision of strategy in which each competitor simultaneously chooses its strategy, taking into account the strategies of its opponents. Crucial to this vision is the anticipation of the moves of your opponent and, in particular, the expectation that your opponent is (almost) as smart as you are. Equal attention will be given to the development of techniques for analyzing competitive interactions and to the application of those techniques. Game theory and the economics of industrial organization provide the basis for the theoretical constructs developed in the course. Topics that will be explored include: market failures and profitability, competitive bidding, signaling, entry deterrence, agenda setting, regulations, and price wars.

Taught by: James Ostler
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
MGMT 712 Managing Strategic Partnerships
This course explores the management of strategic partnerships between firms, which have surged in recent years in response to globalization, technological evolution, deregulation, shortened product life cycles, and intensified competition. Today’s alliances drive corporate growth and change, and vary greatly in terms of partner type, commitment, equity investment, degree of control, between scale, and scope. They range from bilateral arrangements to ecosystems to outsourcing, often blurring traditional organizational boundaries and leading to the creation of globally distributed enterprises. In view of these contemporary developments, the objectives of the course are two-fold: (1) to arm you with a set of tools to facilitate the selection of an appropriate alliance strategy in a given situation; and, (2) to provide you with frameworks to help the initiate and implement different kinds of partnerships. The emphasis lies on strategic and organizational aspects in the formation and management of these transactions, rather than financial considerations. Alternative growth strategies to strategic alliances (e.g., acquisitions), the impact of these partnerships on competition within an industry, and regulatory constraints will also be discussed. In terms of its pedagogical approach, this is designed to be an interactive, applied, case-based course with accompanying conceptual readings to help structure your thinking. Given the nature of the course, we will also apply the lessons from the cases to understand the challenges and implications of relevant recent and on-going deals. In addition, guest speakers with experience in investment banking, consulting, and industry will be invited to share their perspectives. A group project is intended to give you the opportunity to apply your learning from the course to a context that is most interesting and relevant to you.
Course not offered every year
Prerequisite: MGMT 611 OR MGMT 612
Activity: Lecture
0.5 Course Units

MGMT 714 Value Creation and Value Capture in American Business History
This course examines how the kind of firms in which most Wharton students will spend the next stage of their careers came to be as they are today. At a superficial level, the course’s objectives are descriptive and narrative. But history, considered thoughtfully and critically, is never just description and a narrative: the course’s deeper purpose is to give students some idea of how to think about the future evolution of firms and industries. In this the course is as much an applied strategy course as it is a historical survey. The course considers the development of the business enterprise as an economic institution. It also covers the evolution of competition and strategy, marketing institutions, some aspects of the history of operations management, and corporate finance. Issues arising in these different management disciplines are considered in part for the purpose of showing off their interrelationships. Questions of how value can be created and captured at the enterprise level form the core of the perspective. The course’s focus is on American developments, since many of the innovations took place here, but there is scope for comparison with Japan and the leading European economies if there is student interest. Chronologically the course runs from Franklin’s days through the early twenty-first century. It proceeds through discussion of actual business decisions and performance in a series of challenging and otherwise interesting moments in the evolution of the American business environment. The materials are unusual for the Wharton School—they are not just often case-like but wherever possible draw on documents contemporary to the decisions such as correspondence, internal memoranda, minutes of meetings, old newspaper and magazine stories, and eyewitness accounts. The objective in this is to give students as minimally mediated access as is feasible to what the embedded actors knew and thought. These materials require thoughtful preparation. Weekly short writing assignments during the first twelve weeks of the term develop students’ skill in turning such preparation into crisp analytical prose. The course as a process is much more focused on the students than many and the most productive experience of it demands that the students both engage with the materials when they prepare and then take an active role in the class discussion. The largest single element in the grading is a substantial term paper on a topic agreeable to both the student and the instructor. For more information, please contact the instructor: raff@wharton.upenn.edu.

MGMT 715 Political Environment of the Multinational Firm
All successful firms go global. This course provides a broad introduction to international business. You will learn about who loses and who gains from trade, what are the effects of tariffs and non-tariff barriers, the World Trade Organization (WTO), regional trading blocs, and NAFTA. The course then turns to the international financial architecture, focusing on exchange rate risk. We then move to multinational firm strategies, including a discussion of the reasons for why firms choose to do business globally through trade or FDI, international tax strategy, joint ventures, technology transfer, different ways to be a multinational firm, and ethical dilemmas. The class is a mix of lectures and cases that allow students to synthesize the extensive materials on multinational management, international institutions, economic policies, and politics with a goal towards formulating multinational firm strategy.
Activity: Lecture
0.5 Course Units
MGMT 717 Deals: The Economic Structure of Transacting and Contracting

This course focuses on the role of professionals, including lawyers of all types (corporate, tax, securities, etc.), direct private equity investors, corporate business development officers, and investment bankers, in creating value through transaction engineering. The overall goal of the course is to explore how private parties could order their commercial interactions, to develop a theory of how they ought to do this, and to gain a thorough understanding of how business deals are actually done. The long first half of the course is devoted to analyzing impediments to transacting, including asymmetric information, difficulties intrinsic to contracting over time, enforceability, various forms of strategic behavior, exogenous risk, all with a view to understanding the logic of the variety of techniques used to ameliorate them and more broadly to create distributable value through transaction structuring. These Part I classes are accompanied by exercises of various sorts. In the second part of the course, student teams apply the conceptual tools and techniques developed in the first half to analyzing the fine detail of a series of recently completed and interestingly complex transactions. Each team is given access to the original documents implementing their deal. A week of class time is devoted to each transaction. In the first (Monday) session, the student teams present their deal to the class, laying out strategic motivations, analyzing key structuring moves, and exploring the advantages and disadvantages of proceeding in the way the participants did. In the second, on the Wednesday, one or (usually) more of the professionals who worked on it will present the deal from the participant perspective, address the always interesting process questions, and take questions from the class. The requirements for the class are regular attendance, active participation in class discussions, a series of homework assignments and a short individual paper in Part I, the group presentation project and a group memorandum from each deal team on what there was to be learned from the Wednesday presentation their week in Part II, and a six-hour take-home exam. The course meets jointly with an upper-class Law School and LLM course. Wharton enrollment will be restricted this year to 25 MBA students. In the event that the course is oversubscribed, students will be admitted from the waiting list only if other students drop the course. If this happens, it usually happens fairly early on. Priority for admission in these circumstances will go to students who have attended the class from the beginning. For more information, please contact the instructor: raff@wharton.upenn.edu.

MGMT 720 Corporate Diplomacy

Managers, consultants, investors and creditors increasingly acknowledge the importance of stakeholder opinions of the acceptability of a company’s operations for that company’s ability to achieve its organizational mission and to deliver a financial return. The rhetoric that companies must manage their stakeholder relations as well as shareholder relations is rapidly shifting from a philosophical critique of the functioning of the capitalist system to a strategic, financial, operational and societal imperative. Managers, consultants and investors are increasingly drawing on new unstructured data on the identity and issues of concern of stakeholders to align corporate and investment strategy with stakeholder demands on issues ranging from environmental externalities (e.g., climate change) to human rights. This course provides students the latest tools to use this data for stakeholder and issue mapping as well as financial valuation. It also offers more behavioral skills critical for external stakeholder engagement including trust building and communications as well as internal stakeholder engagement. In short, it prepares students to engage in Corporate Diplomacy (i.e., to influence or assess external stakeholders’ opinions of the acceptability of a company’s operations at a moment in time and to convince internal stakeholders to adapt their behaviors, systems and outputs’ when necessary). There are no formal prerequisites but participants should be able to contribute some individual expertise from previous coursework, training, and work experience and will, at other times, rely heavily on their peers to summarize and introduce key concepts and perspectives from other disciplines, industries or countries with which they may be less familiar.

Taught by: Witold Henisz
Activity: Lecture
1.0 Course Unit

MGMT 721 Corporate Development: Mergers and Acquisitions

This course explores the role of mergers and acquisitions and alternative methods of corporate development in advancing the strategies of operating business. Emphasis is on the way companies use acquisitions to alter business mixes; seize opportunities in new products, technologies and markets; enhance competitive positioning; adjust to changing economics, and promote value-creating growth. Although the course will emphasize strategic acquisitions, it also will explore leveraged buy-outs and hostile financial acquisitions as well as their influence on corporate buyers. Please note that you must fulfill the prerequisites in order to enroll in this class.

Prerequisite: MGMT 611 OR MGMT 612
Activity: Lecture
1.0 Course Unit
MGMT 729 Intellectual Property Strategy for the Innovation-Driven Enterprise
Announcing the first iPhone at Macworld 2007, Apple CEO Steve Jobs famously boasted: ‘And boy, have we patented it!’ How, and to what extent, do patents and intellectual property really provide competitive advantage for innovative technology companies? What makes an IP asset strategically powerful? How do patents impact, and even drive, major corporate decisions including M&A, venture funding and exits, and entry into new markets? In this course, students will learn to critically analyze and answer these questions, gaining insights they can leverage in their future roles as innovation industry executives, entrepreneurs, strategist and investors. The course includes three major units. In Unit 1, Patents and Innovation Value, we examine closely the relationship between competitive advantage, value proposition, and intellectual property (particularly patents). We will apply our understanding of that relationship to critique and sharpen patent strategy to protect examples of cutting-edge technologies. In Unit 2, Patent Leverage and the Corporate Playbook, we study theory and examples of how intellectual property leverage strategically informs corporate transactions and decisions, for established companies as well as for start-ups. In unit 3, Limits and Alternatives to Patents, we confront the recent legal trend toward reigning in the power and scope of patents. We also consider the growing importance of data as a proprietary technology asset, and discuss options for adapting intellectual property strategy appropriately. Throughout, students will learn and practice applying the concepts we learn to decision-making in examples based on innovative real-world technologies and businesses.

Also Offered As: LGST 729, MGMT 229
Activity: Lecture
0.5 Course Units

MGMT 731 Technology Strategy
The course is designed to meet the needs of future managers, entrepreneurs, consultants and investors who must analyze and develop business strategies in technology-based industries. The emphasis is on learning conceptual models and frameworks to help navigate the complexity and dynamism in such industries. This is not a course in new product development or in using information technology to improve business processes and offerings. We will take a perspective of both established and emerging firms competing through technological innovations, and study the key strategic drivers of value creation and appropriation in the context of business ecosystems. The course uses a combination of cases, simulation and readings. The cases are drawn primarily from technology-based industries. Note, however, that the case discussions are mainly based on strategic (not technical) issues. Hence, a technical background is not required for fruitful participation.

Taught by: Rahul Kapoor
Activity: Lecture
0.5 Course Units

MGMT 740 Leading Effective Teams
This course develops your knowledge and skills for designing, leading, and consulting with teams in organizations. The goals are to provide both the conceptual understanding and the behavioral skills required to improve effectiveness. This course emphasizes class participation, readings, analytic and reflective writing, assessments, peer feedback and coaching, lectures simulations and an intensive field project. with a real team in the Philadelphia area. Four kinds of teams are the focus of study: teams of which you’ve been a member in the past; your 740 team, with three or four classmates; a team outside of 740 that your 740 Team will observe, analyze, and report on--your Host Team; and a team that you expect to be on in the future. The case material for learning and applying course concepts will be these teams that you know from direct observation and experience. Expect to leave this course with new knowledge of how to diagnose and intervene - as leader, member, or consultant - to improve the performance, sustainability, an4 impact on the members of any team in any setting. The text is by J. Richard Hackman, Leading Teams (Harvard Business).

Prerequisite: MGMT 610
Activity: Lecture
0.5 Course Units
MGMT 751 Strategic Management of Human Assets
Successful firms often excel in the capability of employing and deploying human assets (resources) to achieve the effective implementation of business strategy. To understand this capability, this course will address two central themes: 1) How to think systematically and strategically about various aspects of managing the organization’s human assets; and 2) What really needs to be done to implement these policies and achieve competitive advantage. In order to think ‘systematically’ about this topic for any particular organization, we will consider the bundles of work practices and human resources processes that make up the overall system for managing people and evaluate whether these are internally consistent and aligned (‘internal fit’). To think ‘strategically’, we will then assess the relationship between practices/processes of managing people and the firm’s strategy and strategic context, e.g. industry structure, competitive landscape, political, social, and economic environment – for evidence of external fit. By paying attention to implementation, we will recognize that although many organizations recognize the importance of managing the workforce effectively (and even ‘know’ what approaches have been effective elsewhere), firms and managers very often fail to implement these approaches. The course is organized in four sections: 1) Setting out basic frameworks for viewing the strategic management of human assets as a source of competitive advantage for firms; 2) Comparing and contrasting four different approaches to organizing human assets: ‘Control’, ‘Commitment’ model, ‘Talent’ model, and ‘Collaborative’, 3) Addressing the ‘make’ vs. ‘buy’ decision for human assets, i.e. when to upgrade the internal skills of existing employees (including promotion from within) in order to boost capabilities and compete in new areas vs. when to hire people who already have the necessary skills, via external hires and/or hiring individuals on contract; and 4) Analyzing the relationships among culture, HR systems, and organization change when faced with strategic shifts; leadership crises; rapid growth; and global expansion. The strategic management of human assets is only one source of competitive advantage. Yet many managers recognize (and many successful organizations embody) the reality that the competitive edge gained from the newest technology, the latest marketing strategy, or the most creative product design may be relatively short-lived as competitors rush to imitate and follow. Aligning human resource systems with business strategy is not easy, but once achieved, it seems to offer a more sustainable – because more unique and difficult to imitate - source of competitive advantage.
Prerequisite: MGMT 611 OR MGMT 612
Activity: Lecture
0.5 Course Units

MGMT 765 Venture Capital and Entrepreneurial Management: Practices and Institutions of Silicon Valley
This elective half-semester course will highlight venture capital and entrepreneurship in general and will explore selected aspects of this industry, including: industry trends and dynamics in Silicon Valley and the South of Market area (SOMA) of San Francisco; the recent emergence of alternative sources of startup financing, including incubators/accelerators and crowdfunding platforms, angel groups and stage-agnostic institutional investors; business and operational aspects of early stage companies in transition to mezzanine-level stages of growth; and company ‘exits,’ including both initial public offerings and merger/sale transactions. MGMT765 and MGMT804 cover separate issues within the same general industry and are not redundant. This course addresses issues faced by later stage VC backed firms, while MGMT804 centers on early stage, pre-revenue startups. It is recommended students take MGMT 801 before enrolling in this course. The format of this course relies heavily on site visits and recognized leaders within the Bay Area to bring forth on-the-ground perspectives of a changing and important industry. While MGMT804 is not a prerequisite, the two courses are complementary.
Activity: Lecture
0.5 Course Units
Notes: Requirements: Individual participation in lectures, discussions, and company visits, student presentations, and final paper.

MGMT 772 Power and Politics in Organizations
‘If you want to test a (person’s) character, give (him/her) power.’ These famous words articulate one of the many tensions of exercising power. Regardless of whether you have an appetite for power or disdain it, power and politics are likely to play an important role in your career. The purpose of this course is to introduce you to concepts that are useful for understanding, analyzing, and developing your political skill. But beyond discovering ways to extend your own power in organizations, we will also uncover lessons about ways in which power and politics can blind you, and how to navigate situations in which you are up against powerful people. Using a range of scholarly articles, cases, exercises, assessments and simulations, we will extract a variety of lessons relevant to your role in organizations. Topics include diagnosing power in organizations, building coalitions, change management, understanding networks, coping with intolerable bosses and incivility, and downsizing. Students will be expected to engage in field research for their coursework and final paper, and the course requires that students submit assignments for almost every class session. Thematically, this course highlights how your relationships with organizational stakeholders and an understanding of the organizational context are crucial to successfully navigating the political terrain of organizations. Organizations are inherently political arenas that require social astuteness, and an understanding of the ‘rules of the game.’ This course is designed for students aiming to develop their leadership, general management and career skills through a better understanding of power and politics, and relates to other courses on these topics in the Management department.
Activity: Lecture
0.5 Course Units
MGMT 773 Managing Organizational Change
During the last decade it has become clear that in the global economy, firms must constantly adapt to changing technological, competitive, demographic and other environmental conditions in order to survive and prosper. The importance of acquiring the knowledge and tools for changing organizations successfully cannot be overemphasized (particularly for students headed for consulting and general management careers, although not limited to them). This course focuses on specific concepts, theories and tools that can guide executives entrusted with the task of leading organizational change to successful execution. Among other topics, the course will focus on various change strategies such as leading change, managing cultural change, and mergers acquisitions, corporate transformation, managing growth, building the customer centric organization, business process outsourcing both from client and provider perspectives, and managing radical organizational change. The perspective of the course is integrative and the focus is on successful execution.
Taught by: Pottruck D
Prerequisite: MGMT 611 OR MGMT 612
Activity: Lecture
0.5 Course Units

MGMT 782 Strategic Implementation
Much more is known about strategy formulation than its implementation, yet valid, sensible strategies often fail because of problems on the implementation side. This course provides you with tools to turn good strategy into successful reality. It covers the choices, structure, and conditions that enable the successful attainment of strategic objectives. Students learn from rigorous academic research on successful implementation, as well as a series of seasoned business leaders who will visit to share their own experience from the front lines.
Taught by: Professor Claudine Gartenberg
Prerequisite: MGMT 611 OR MGMT 612
Activity: Lecture
1.0 Course Unit

MGMT 784 Managerial Economics and Game Theory
The purpose of this course is to develop students' abilities to apply game theory to decision making. Development of the tools of game theory and the application of those tools is emphasized. Game theory has become an important tool for managers and consultants in analyzing and implementing tactical as well as strategic actions. This course will primarily focus on examples useful for developing competitive strategy in the private sector (pricing and product strategy, capacity choices, contracting and negotiating, signaling and bluffing, takeover strategy, etc.). Game theory can also be used to address problems relevant to a firm's organizational strategy (e.g., internal incentives and information flow within a firm) and to a firm's non-market environment (e.g., strategic trade policies, litigation and regulation strategy). Recommended background in intermediate microeconomics or equivalent. It is expected that the student has been introduced to some basic game theory. There will be a quick review of the basics and some recommended supplemental readings for those who have little or no background in game theory.
Prerequisite: MGEC 611
Activity: Lecture
0.5 Course Units

MGMT 788 Managing and Competing in China
The business environment in China is characterized by both uncertainty and complexity. On the one hand, it is changing fast; on the other hand, it is influenced by deep-rooted political, economic, and cultural forces that exhibit tremendous inertia. This course will help students—as potential managers, entrepreneurs, and investors—gain the knowledge and analytical skills necessary to compete effectively in China. We will discuss various types of firms in the Chinese economy—from large state-owned enterprises (SOEs) to newly minted Internet giants, from prominent multinational companies (MNCs) to virtually anonymous local suppliers—and the unique institutions in which these firms operate. Such discussions will also help managers whose firms compete or collaborate with Chinese firms on the global stage. We will use a combination of lectures, cases, debates, and role play in class. You will also have the opportunity to apply your learning to real business scenarios.
Also Offered As: MGMT 288
Activity: Lecture
1.0 Course Unit

MGMT 793 People Analytics
This course examines the use of data to improve how people are managed within organizations. Recent years have seen a growing movement to bring more science to how we manage people. In some cases, that means ensuring that whatever practices and approaches we adopt are backed up by solid evidence as to their effectiveness. Often, organizations will seek to go further, analyzing their own data to identify problems and learn what is working and what is not in their own context. This course applies the insights of the people analytics movement to help students become better managers and more critical analysts within their organizations. The course aims to develop students in three specific ways. First, it provides students with an up-to-the-minute grounding in current evidence about managing people, providing a knowledge base that can ensure that their future management is guided by best practices. Second, it develops the skills and understanding necessary to be thoughtful, critical consumers of evidence on people management, allowing them to make the most of the analysis available to them as they make people decisions. Third, it provides guidance and practice in conducting people analytics, preparing students to gather data of their own, and making them more skilled analysts. The course addresses these topics through a mixture of lecture, case discussion, and hands on exploration of a variety of data sets.
Taught by: Matthew Bidwell
Also Offered As: OIDD 793
Activity: Lecture
0.5 Course Units
MGMT 794 Understanding Careers and Executive Labor Markets
This course examines the structure of executive careers in order to help understand how those careers can be managed most effectively. By drawing on extensive economic, sociological and psychological research on careers, we will examine such questions as when executives should move on to the next job or even change fields altogether, and what are effective means of finding jobs, achieving promotions, managing networks, and achieving work-life balance. The first few sessions of the course explore the basic building blocks of the career, outlining our knowledge on the different orientations that individuals take to their careers, how approaches to the career change as people get older, and how different kinds of job moves within and across firms advance careers. The second part of the course explores in more detail the social resources that affect careers, notably social networks and relationships with mentors. The third section of the course then examines a number of the most important and difficult issues affecting modern careers, including making successful transitions, the effects of gender on careers, work life balance, and international careers. Format: The course is structured around a combination of academic research, cases, guest speakers, and examples and exercises. A project encourages the students to compare their own plans for their careers with the careers that have been experienced by older executives.

Activity: Lecture
0.5 Course Units

MGMT 799 Epidemics, Natural Disasters & Geopolitics: Managing Global Bus/Fin Uncertainty
Epidemics and natural disasters are exogenous shocks that create many challenges for companies, financial markets, and political systems. This class draws on the expertise of 12 Wharton faculty members to provide a deep understanding of how global business and financial uncertainty can be managed in the wake of such dramatic events. The topics include: leading in uncertain times, the reaction of the financial markets to the coronavirus, disaster risk and asset returns, the significance of borders in an integrated world, emotional contagion and epidemics, the evolving U.S./China relationship in the context of trade wars and the pandemic, and the disruption of trade and global supply chains. Students may take this class in person or online. Requirements include participation (in the classroom or in a class blog), daily multiple-choice tests, and a short team paper to be peer-graded.

Taught by: Mauro F. Guillen
Activity: Lecture
0.5 Course Units

MGMT 801 Entrepreneurship
MGMT 801 is the foundation course in the Entrepreneurial Management program. The purpose of this course is to explore the many dimensions of new venture creation and growth. While most of the examples in class will be drawn from new venture formation, the principles also apply to entrepreneurship in corporate settings and to non-profit entrepreneurship. We will be concerned with content and process questions as well as with formulation and implementation issues that relate to conceptualizing, developing, and managing successful new ventures. The emphasis in this course is on applying and synthesizing concepts and techniques from functional areas of strategic management, finance, accounting, managerial economics, marketing, operations management, and organizational behavior in the context of new venture development. The class serves as both a stand alone class and as a preparatory course to those interested in writing and venture implementation (the subject of the semester-long course, MGMT 806). Format: Lectures and case discussions
Requirements: Class participation, interim assignments, final project Enrollment limited to Wharton MBA students only.
Activity: Lecture
0.5 Course Units

MGMT 802 Change, Innovation & Entrepreneurship
Designed for students with a serious interest in entrepreneurship, this course will provide you with an advanced theoretical foundation and a set of practical tools for the management of startups and entrepreneurial teams in fast-changing and innovative environments. Building on the skills of MGMT 801, every class session is built around an experience where you have to put learning into practice, including the award-winning Looking Glass entrepreneurial simulation, role-playing exercises, and a variety of other games and simulations. The goal is to constantly challenge you to deal with entrepreneurial or innovative experiences, as you learn to navigate complex and changing environments on the fly, applying what you learned to a variety of scenarios. MGMT 802 is built to be challenging and will require a desire to deal with ambiguous and shifting circumstances. It is recommended students take MGMT 801 before enrolling in this course. Format: Lectures, discussion, interim reports, class participation, readings report, and presentations, and an innovation assessment in PowerPoint format.
Activity: Lecture
0.5 Course Units
MGMT 804 Venture Capital and Entrepreneurial Management
This elective half-semester course focuses on venture capital management issues in the context of the typical high-growth potential early stage start-up company. The course is fundamentally pragmatic in its outlook. It will cover seven principal areas relevant to the privately held high-growth start-up which include: commentary on the venture capital industry generally, as well as a discussion of the typical venture fund structure and related venture capital objectives and investment strategies; common organizational issues encountered in the formation of a venture backed start-up, including issues relating to initial capitalization, intellectual property and early stage equity arrangements; valuation methodologies that form the basis of the negotiation between the entrepreneur and the venture capitalist in anticipation of a venture investment; the challenges of fundraising, financing strategies and the importance of the business plan and the typical dynamics that play out between VC and entrepreneur. It is recommended students take MGMT 801 before enrolling in this course. Typical investment terms found in the term sheet and the dynamics of negotiation between the entrepreneur and the venture capitalist; compensation practices in a venture capital backed company; and corporate governance in the context of a privately-held, venture capital-backed start-up company and the typical dynamics that play out between VC and entrepreneur in an insider-led, ‘down round’ financing. Requirements: Classroom participation, weekly case assignments, and final exam Format: Lecture, case studies, class participation, weekly case assignments, and final exam.
Activity: Lecture
0.5 Course Units

MGMT 806 Venture Implementation
This advanced course on entrepreneurship focuses on developing a validated opportunity or concept into a venture that is ready for seed financing and/or launching the product or service. Participants in this course must previously have developed a validated opportunity, either in a previous course or through independent efforts. Students may participate as a team of up to three people. Ideally, participants are committed to pursuing their opportunity commercially, or at least to seriously explore that possibility. The course provides a practical guidance for developing the product or service, forming the entity, raising capital building the team, establishing partnerships, and sourcing professional services. After completing the course, you will be ‘pitch ready’ - whether submitting to campus venture competitions or to outside investors. Most coursework is focused on applying concepts and frameworks to project tasks in developing the venture. Students must have successfully completed MGMT 801 before enrolling in this course. Students must have successfully completed MGMT801 before enrolling in this course. Format: Highly interactive Requirements: Class participation, interim assignments.

Also Offered As: MGMT 231
Prerequisite: MGMT 801
Activity: Lecture
1.0 Course Unit

MGMT 809 Private Equity in Emerging Markets
This course investigates the private equity industry in emerging markets. The goal of the course is to give students a realistic understanding of the roles, responsibilities and analytical skills required of market practitioners, as well as the tensions that arise between various stakeholders, including government officials, investors, entrepreneurs and the press. The underlying premise is that the basic rules for private equity in those countries are similar to the rules in more industrialized countries, but market participants face a broader range of issues in areas such as valuations, governance, legal structures, contract enforcement and regulatory transparency. To provide students with a practical grasp of the issues, classes will be a mix of lectures, expert guest speakers and business cases. Cases will highlight the challenges and tasks at each stage of the investment cycle, such as structuring and launching a new fund, originating new deals, conducting due diligence, creating value, monitoring the performance of portfolio companies and exiting. Each class will focus on a specific topic, ranging from the basics of how and why private equity funds operate to complex issues such as fund governance and adding value to family firms.
Taught by: Peter Tropper
Prerequisite: FNCE 611
Activity: Lecture
0.5 Course Units

MGMT 811 Entrepreneurship Through Acquisition
MGMT 811 focuses on the theoretical, strategic, analytics, and practical issues of acquiring a business. Topics include: locating a business, due diligence, reviewing and analyzing data, valuation, raising capital/financing the deal, search funds, structuring the acquisition, letters of intent, contracts/asset purchase agreements, integrating the target, acquisition growth strategies, and transitioning/exiting the acquisition. Format: The class consists of lectures, in-class discussions of cases, assigned readings, homework problems, case studies, and a group or individual project. It is recommended students take MGMT 801 before enrolling in this course.
Taught by: Robert Chalfin
Activity: Lecture
0.5 Course Units

MGMT 812 Social Entrepreneurship
This is a course on creating a business to attack a social problem and thereby accomplish both social impact and financial sustainability. For this course, social entrepreneurship is defined as entrepreneurship used to profitably confront social problems. This definition therefore views social entrepreneurship as a distinct alternative to public sector initiatives. The basic thesis is that many social problems, if looked at through an entrepreneurial lens, create opportunity for someone to launch a venture that generates profits by alleviating that social problem. This sets in motion a virtuous cycle - the entrepreneur is incented to generate more profits and in so doing, the more the profits made, the more the problem is alleviated. Even if it is not possible to eventually create a profit-making enterprise, the process of striving to do so can lead to a resource-lean not-for-profit entity. Creating a profitable social entrepreneurship venture is by no means a simple challenge. Cross-listed with MGMT 212.
Course usually offered in fall term
Also Offered As: MGMT 212
Activity: Lecture
0.5 Course Units
MGMT 815 Sports Business Management
This course examines various business disciplines as they apply to the sports industry. The course provides the student with an overview of the business of the intercollegiate, Olympic and professional sports enterprises. In addition, the course investigates the business related issues encountered by managers of sports organizations and covers how business principles can be applied to effectively address these issues. This course is crosslisted with MGMT815.
One-term course offered either term
Also Offered As: LGST 809
Activity: Lecture
1.0 Course Unit

MGMT 816 Building Human Assets in Entrepreneurial Ventures
The success of entrepreneurial endeavors depends, even more so than in larger more bureaucratic organizations, on the ability to locate and manage talent effectively. Specifically, on the need to find the right people and keep them engaged in working on the organization's goals. We focus in this course on leading, building, and maintaining human assets in start-up and small, growing operations. The course is designed with several key components, these are: conceptual and practical readings relevant to the topic; case studies illustrating key concepts and issues; lecture on practical application and examples; and finally every class will also feature a presentation by and conversation with an outside expert whose work is relevant to guiding or advising start-ups and fast-growing small firms. We will focus on the following objectives: identifying the talent needed to initiate and sustain an entrepreneurial endeavor; structuring human resource policies and corporate culture to prepare for and facilitate firm growth; assessing the human aspects of valuing entrepreneurial companies; and responding to conflict and organizational threats within nascent firms. This course will apply recent research from strategic human resource management, personnel economics and organizational behavior to the practical issues of building and managing human assets in new ventures. Format: Case discussion, guest speakers and lectures, active class participation, final project Enrollment limited to MBA students only.
Activity: Lecture
0.5 Course Units

MGMT 833 Strategies and Practices of Family-controlled Companies
This course is designed for those persons who desire to understand the distinct strategies and practices of family-controlled companies and family wealth creation. It will focus on stakeholder decision making; financial and resource driven options for long-run competitiveness; organizational structures, management team issues; strategic planning from a resource-based perspective; transition planning for the corporate entity, family dynamics, communication issues; and leadership empowerment. The course is intended for those who plan to consult or provide professional services to family-controlled companies and for those planning a career in a family firm. The class is structured around topical lectures with frequent utilization of case studies requiring active class participation, as well as on-site and off-site project work time. Submission of several written case studies, and a term project are required. Open to Wharton MBA and Penn graduate students.
Also Offered As: MGMT 233
Activity: Lecture
1.0 Course Unit

MGMT 871 Advanced Global Strategy
This class is designed to develop world class, globally-minded managers. Many of the most important business issues of today are global in nature. Both 'macro' phenomena (e.g. nationalism, protectionism, demographic change) and 'micro' trends (e.g. competition within and from emerging markets, distributed talent and innovation, digitization and automation) are inherently international issues. They require firms and managers to think, innovate, and organize globally. This class offers a comprehensive set of tools to evaluate opportunities and challenges in global markets, to leverage cross-country differences to enhance innovation and performance, to manage the complexities of a business spread across multiple countries, and to win against foreign rivals. The course will focus on both the formulation and execution of global strategy, with a heavy emphasis on current events and hands on activities. Sample topics include: quantifying opportunities and risks of foreign investments; formulating and executing strategies that balance local responsiveness, global efficiency, and innovation; exploiting differences across countries to enhance innovation while protecting intellectual property; managing organizational structure, culture, and people in multinational organizations; structuring and managing cross-national and cross-cultural teams; developing a global mindset among managers and employees. This course builds on the global management portion of MGMT 611 or MGMT 612, but taking those classes is not a prerequisite for MGMT 871.

MGMT 892 Advanced Study Project - Collaborative Innovation Program
Business success is increasingly driven by a firm's ability to create and capture value through innovation. Thus, the processes used by firms to develop innovations, the choices they make regarding how to commercialize their innovations, the changes they make to their business models to adapt to the dynamic environment, and the strategies they use to position and build a dominate competitive position are important issues facing firms. In MGMT. 892, you will learn to address these issues through an action learning approach. MGMT. 892 is a 1.0-credit course conducted in the spirit of an independent study. By working on consulting projects for leading global companies, you will develop and then apply your knowledge about innovation management and help these firms better understand the challenges and opportunities posed by emerging technologies and markets.

MGMT 896 Decision Making in the Leadership Chair

Contact the Management Department for additional information at: Courseinfo@wharton.upenn.edu. Decision making in the leadership chair is a complex task and one that is difficult to teach in a business school setting. To bridge this gap, Mr. William P. Lauder and invited executives will bring their experiences into the classroom, primarily addressing key decision they made, how they weighed their options, and what they learned from the outcomes. The framework for the class centers around two crucial aspects of decision making in the leadership chair: the need to manage many groups of stakeholders, and the need to play many roles when doing this. This course is by application only to second-year Wharton MBAs and a maximum of 48 students will be selected. A communication will be sent regarding the application details.

MGMT 900 Economic Foundations of Management

This course examines some of the central questions in management with economic approaches as a starting point, but with an eye to links of behavioral perspectives on these same questions. It is not a substitute for a traditional microeconomics course. Economics concerns itself with goal directed behavior of individuals interacting in a competitive context. We adopt that general orientation but recognize that goal directed action need not take the form of maximizing behavior and that competitive processes do not typically equilibrate instantaneously. The substantive focus is on the firm as a productive entity. Among the sorts of questions we explore are the following: What underlies a firms capabilities? How does individual knowledge aggregate to form collective capabilities? What do these perspectives on firms say about the scope of a firms activities, both horizontally (diversification) and vertically (buy-supply relationships)? We also explore what our understanding of firms says about market dynamics and industry evolution, particularly in the context of technological change. A central property of firms, as with any organization, is the interdependent nature of activity within them. Thus, understanding firms as 'systems' is quite important Among the issues we explore in this regard are the following. Organizational 'systems' have internal structure, in particular elements of hierarchy and modularity. Even putting aside the question of individual goals and objectives and how they may aggregate, the question of organizational goal is non-trivial. To say that a firms objective is to maximize profits is not terribly operational. How does such an overarching objective get decomposed to link to the actual operating activities of individual subunits, including individuals themselves. This issue of goals has links to some interesting recent work that links the valuation process of financial markets to firm behavior. Financial markets are not only a reflection of firm value, but may guide firms initiatives in systematic ways.

1.0 Course Unit

MGMT 918 Personnel Economics A

This is a half-semester PhD course in the Management Department that is also open to any current PhD students at Wharton. The canonical model in economics views an agent as a fully rational, atomistic individual making optimal choices under scarcity. This approach has been very powerful theoretically and empirically to explain and to predict behavior in the workplace. This model has also been enriched to accommodate other phenomena arguably affecting behavior in the workplace like the social context (e.g. peer effects, altruism, or social comparison), non-standard time preferences, loss aversion, and cognitive costs. Incorporating these ideas into the standard model can be accomplished in various ways but the real stress test for these theories is whether they predict behavior more generally (i.e. we don't just use theory to explain one choice but choices more generally) and to generate empirical predictions that can be tested using experiments. In this mini-course we start-off with a tour de force of the fundamental principal-agent model and the various behavioral extensions. The core of the course is, however, not theoretical but a practical course on how to design field experiments to test these ideas.

Activity: Seminar
0.5 Course Units
MGMT 926 Corporate Transactions & Strategy
This course explores current research on firm boundaries and scope. Issues of firm boundaries and scope have received much attention in the strategic management field over the past twenty years. Theoretical frameworks explaining firm boundaries have been proposed, and empirical research on key success factors within particular boundary choices has flourished. Firm scope is one of the long-standing domains of research in strategic management that is still drawing substantial attention. While certain core perspectives have academic and empirical support, there is much debate and many new research questions to examine, particularly in a global context. In this class, we explore current research articles that best represent the research. Topics addressed include corporate diversification, choices between modes of market entry, key success factors in acquisitions and alliances, and impact of diversification on innovation.
Activity: Seminar
0.5 Course Units

MGMT 927 Technology & Innovation Strategy
This quarter-length doctoral seminar deals with major streams of management research in technology strategy and innovation. We will focus on both classical topics such as incumbents' management of technological change and industry evolution, and new emergent topics such as ecosystems and platforms. The emphasis will be on understanding the link between technologies and firms in terms of both strategy choices and performance outcomes.
Taught by: Rahul Kapoor
Activity: Seminar
0.5 Course Units

MGMT 932 Proseminar in Management in Qualitative Methods
This course is designed to provide students with an understanding of the methodological approaches we commonly think of as qualitative, with special emphasis on ethnography, semi-structured interviews, case studies, content analysis, and mixed-methods research. The course will cover the basic techniques for collecting, interpreting, and analyzing qualitative (i.e. non-numerical) data. In the spring quarter, the course will operate on two interrelated dimensions, one focused on the theoretical approaches to various types of qualitative research, the other focused on the practical techniques of data collection, such as identifying key informants, selecting respondents, collecting field notes and conducting interviews. In the fall semester, the course will operate on two interrelated dimensions, one focused on the theoretical approaches on building arguments and theory from qualitative data, the other focused on the practical techniques of data collection, such as analyzing data, writing, and presenting findings. Note: This class is part of a two-part sequence which focuses on qualitative data collection and analysis. The first of this course, offered in the Spring, focuses on data collection and the second half of the course, offered the following Fall, will focus on qualitative data analysis. Each course is seven weeks long. Students may take either class independently or consecutively.
Taught by: Professor Lindsey Cameron
Two terms. student may enter either term.

Notes: Topics for pro-seminars vary. Please contact the instructor as course content may vary.

MGMT 933 Psychological and Sociological Foundations of Research in Management
This course, is required of all first-year doctoral students in Management and open to other Penn students with permission, provides an introduction to the psychological and sociological roots of management theory and research. The course is predicated on the belief that to be effective as a contemporary management scholar one needs a background in ‘the classics.’ Therefore, we will be reading classics from the fields of psychology and sociology in their original form during this semester.
Course usually offered in fall term
Activity: Seminar
0.5 Course Units
MGMT 935 Network Theory and Applications
This course explores network models and their applications to organizational phenomena. By examining the structure of relations among actors, network approaches seek to explain variations in beliefs, behaviors, and outcomes. The beauty of network analysis is its underlying mathematical nature - network ideas and measures, in some cases, apply equally well at micro and macro levels of analysis. Therefore, we read and discuss articles both at the micro level (where the network actors are individuals within organizations) and at the macro level (where the network actors are organizations within larger communities) that utilize antecedents or consequences of network constructs such as small worlds, cohesion, structural equivalence, centrality, and autonomy. We begin by examining the classic problem of contagion of information and behaviors across networks, and follow by considering the various underlying models of network structure that might underlie contagion and other processes. The next two sessions address a variety of mechanisms by which an actor’s position in a network affects its behavior or performance. Then, the following two sessions address antecedents of network ties via the topics of network evolution and network activation. We close with a ‘grab bag’ session of articles chosen to match class interests.
Activity: Seminar
0.5 Course Units

MGMT 937 Entrepreneurship Research Seminar
The seminar seeks to expose students to theoretical and empirical perspectives on entrepreneurship research. We will focus on the main questions that define the field and attempt to critically examine how, using a range of methodologies, researchers have approached these questions. As we review the literature, we will seek to identify promising research areas, which may be of interest to you in the context of your dissertation research. In addition to addressing the content of the received literature, we will examine the process of crafting research papers and getting them published in top tier journals. Towards that end, we will characterize the key elements of high-impact papers and review the development process of such studies. Students are expected to come fully prepared to discuss and critique the readings that are assigned to each class (see details below). Each class will center on discussing in depth 4-5 papers from the reading list assigned to that class. Before each class, I will let you know which papers to prepare. Each student will serve as the discussion leader for one of more of the class sessions. Discussion leaders are expected to critically review several articles, identify new insights in the research that is being reviewed and evaluate its contribution to the literature, position the articles within the literature on the subject matter, raise discussion questions, and act as the discussion moderator for the class session. Each discussion leader is asked to prepare a one or two page summary of the assigned papers which includes a statement of the main research question(s), the methodology, data set if any, summary of findings, a commentary with your thoughts on the reading, and proposed discussion questions. Prior to each class, the discussion leader will meet the instructor to help plan the class meeting. Towards the end of each class, each student will be asked to articulate a research question that emerged from the session and describe the research design used to investigate the issue.
Activity: Seminar
0.5 Course Units

MGMT 938 Family Business Research Seminar
Family firms differ in a number of ways from non-family firms. These differences may result in differential behavior by and performance of family firms versus non-family firms. Although family-controlled firms make up the vast majority of businesses around the world, academic research in this space is sparse. This seminar seeks to expose students to theoretical and empirical perspectives on family businesses. Throughout the course, we will focus on the ownership, control, and management issues that set family firms apart. We will focus on the main issues faced by family firms, and attempt to critically examine how, using a range of methodologies, researchers have approached these issues. As we review the literature, we will seek to identify promising research areas, which may be of interest to you in the context of your dissertation research. In addition to addressing the content of the received literature, we will examine the process of crafting research papers and getting them published in top tier journals. Towards that end, we will characterize the key elements of high-impact papers and review the development process of such studies. Students are expected to come fully prepared to discuss and critique the readings that are assigned to each class (see details below). Each class will center on discussing in depth 4-5 papers from the reading list assigned to that class. Before each class, I will let you know which papers to prepare. Each student will serve as the discussion leader for one of more of the class sessions. Discussion leaders are expected to critically review several articles, identify new insights in the research that is being reviewed and evaluate its contribution to the literature, position the articles within the literature on the subject matter, raise discussion questions, and act as the discussion moderator for the class session. Each discussion leader is asked to prepare a one or two page summary of the assigned papers which includes a statement of the main research question(s), the methodology, data set if any, summary of findings, a commentary with your thoughts on the reading, and proposed discussion questions. Prior to each class, the discussion leader will meet the instructor to help plan the class meeting. Towards the end of each class, each student will be asked to articulate a research question that emerged from the session and describe the research design used to investigate the issue.

0.5 Course Units

MGMT 939 Seminar in Entrepreneurial Innovation
This quarter-length course explores key topics at the intersection of entrepreneurship and innovation. While the course primarily draws from established theory and empirics from management and economics, it will also include discussions of emerging phenomena in this rapidly evolving field. We will begin by reviewing the basic properties of ideas that uniquely shape the sources and dynamics of entrepreneurship and innovation. Subsequently, we will explore innovation-related challenges and opportunities for startups. Special focus will be placed on research application in which students design and present their own research proposal broadly in the area of entrepreneurship and innovation. Students are highly encouraged to take this course in sequence with MGMT 937.
Taught by: Daniel Kim
Activity: Seminar
0.5 Course Units
MGMT 951 Seminar in Micro-Organizational Behavior
The purpose of this course is to examine and understand basics in the theory and empirical research in the field of micro-organizational behavior and to build an understanding of people’s behavior in organizations. The course covers a blend of classic and contemporary literature so that we can appreciate the prevailing theories and findings in various areas of micro-organizational behavior. We will cover topics such as influence/status, virtual teams, job design, organizational culture and socialization, identity in organizations and overall look on where the field of organizational behavior is going. This is a seminar based course, with active discussion and analysis. For a complete understanding of the basics of organizational behavior it is important for students to have taken Mgmt 933 - micro organizational behavior, which covers the remaining topics in basic organizational behavior. However, it is not mandatory to have taken Mgmt 933 before Mgmt 951 as they cover different sets of topics.
Taught by: Sigal Barsade
Activity: Seminar
0.5 Course Units

MGMT 952 Seminar in Macro-Organizational Behavior
Organizations are ubiquitous, and so is organization. This half-semester course explores organization theory (OT) from the 1960s through the end of the 20th century. We will examine the proliferation of organizational theories during this time period (such as contingency theory, resource dependence theory, ecological theory, and institutional theory) and understand how each theory attempts to relate structure and action over varying levels of analysis. We will determine one or two additional schools to add once we discuss your exposure in other management classes to other potential topics such as behavioral decision theory, sense-making and cognition, organizational economics, corporate governance, social networks, and the like.
Activity: Seminar
0.5 Course Units

MGMT 953 Seminar on Research Methods
This is an introductory doctoral seminar on research methods in management. We examine basic issues involved in conducting empirical research for publication in scholarly management journals. We start by discussing the framing of research questions, theory development, the initial choices involved in research design, and basic concerns in empirical testing. We then consider these issues in the context of different modes of empirical research (including experimental, survey, qualitative, archival, and simulation). We discuss readings that address the underlying fundamentals of these modes as well studies that illustrate how management scholars have used them in their work, separately and in combination.
Activity: Seminar
1.0 Course Unit

MGMT 955 Seminar in International Management
The goal of the course is to provide you with a foundation in some of the major research areas that underpin the study of Multinational Management. International Business (and the study of MNCs) is an interdisciplinary field. As such, our survey of the seminal articles in the field will span a number of different theoretical and empirical approaches (i.e., economic, managerial, organizational and institutional). Much of our seminar discussions will focus on identifying and developing interesting research questions raised by this interdisciplinary literature, which offers many opportunities for systematic empirical study.
Taught by: Kogut
Activity: Seminar
0.5 Course Units

MGMT 957 Emotions in Organizations
This is a one quarter class where we examine and understand basics in emotions theory and its application in organizational behavior. To do so, we will cover a blend of basic psychological theories and organizational behavior literature so that we can appreciate the prevailing theories and findings in various areas of emotions and organizations, and gain a deep understanding of the psychological basis necessary to fully understand organizational behavior research. Specifically, we will examine how affect (consisting of emotions, moods, and affective traits) influences perceptions, cognitions and behavior within organizations. We will critically examine the existing knowledge of emotions in organizational life and identify possible future venues of research. We will begin by examining the nature of emotions in general and then focus on the organizational context, examining specific types of emotions and content areas that have been investigated within organizational behavior research.
Activity: Lecture
0.5 Course Units

MGMT 960 Institutions and Multinational Management
This course builds on the foundational material presented in MGMT 955 with a deeper focus on current research examining institutional influences on multinational management. These include regulative supports (e.g., laws, regulations, contracts and their enforcement through litigation, arbitration of incentive compatible self-regulation) but also normative (e.g., socially shared expectations of appropriate behavior, and social exchange processes) and cognitive (e.g., creating shared identity to bridge differences in values, beliefs and framing) elements of the institutional environment. We will examine not only strategic responses in the market environment but also influence strategies of multinational and domestic firms that seek to alter the institutional environment in which they operate. We will draw not only upon the international business literature but also related literatures including political economy, law, finance, communications, institutional theory, strategic corporate social responsibility, tourist management, construction management, management of extractive industries, negotiations, social movements and network theory (really!).
Activity: Seminar
0.5 Course Units

MGMT 961 Advanced Topics in Micro-organizational Behavior
The purpose of this quarter course is to continue to explore key concepts and research programs in the field of micro-organizational behavior that we began to study in MGMT 951. To do so, we will cover a blend of classic and contemporary literature so that we can appreciate the prevailing theories and findings in various areas of micro-organizational behavior. In addition, for each topic we will then try to go beyond the existing literature. We will work to increase our understanding by re-framing the research variables, altering the perspective, bringing in new theory, and comparing levels of analysis. Building on the topics we examined in MGMT 951, we will explore further organizational behavior topics including identity, fit, extra role behaviors, job design, creativity, status, power and influence.
Activity: Seminar
0.5 Course Units
MGMT 962 Multinational Firms Global Economy A
This is a graduate course focusing on the empirical aspects of multinational firms and international trade. The goal of the course is to familiarize graduate students with empirical work on multinational firms in the global economy, by reviewing the recent as well as older literature on this topic. Econometrics and statistical techniques for doing empirical work in international trade will also be discussed. We will focus on a variety of issues that are related to the multinational firm, beginning with trends in multinational activity, then moving to both horizontal and vertical theories of the multinational firm. Topics over the course of the semester will include patterns in the expansion of multinational firms, horizontal and vertical multinationals; the linkages between openness to trade and investment and growth; trade orientation and firm performance; technology transfer and spillovers; innovation and productivity; immigration; labor markets and multinational firms; and global value chains. This course has a mandatory attendance policy. Taught by: Britta Glennon
Activity: Seminar
0.5 Course Units

MGMT 963 Multinational Firms Global Economy B
This is continuation of Multinational Firms in Global Economies (A). It is a graduate course focusing on the empirical aspects of multinational firms and international trade. The goal of the course is to familiarize graduate students with empirical work on multinational firms in the global economy, by reviewing the recent as well as older literature on this topic. Econometrics and statistical techniques for doing empirical work in international trade will also be discussed. We will focus on a variety of issues that are related to the multinational firm, beginning with trends in multinational activity, then moving to both horizontal and vertical theories of the multinational firm. Topics over the course of the semester will include patterns in the expansion of multinational firms, horizontal and vertical multinationals; the linkages between openness to trade and investment and growth; trade orientation and firm performance; technology transfer and spillovers; innovation and productivity; immigration; labor markets and multinational firms; and global value chains. MGMT 970 Applied Methods for Management Research
Students taking the course will be introduced to the seminal readings on a given method, have a hands-on discussion regarding their application often using a paper and dataset of the faculty member leading the discussion. The goal of the course is to make participants more informed users and reviewers of a wide variety of methodological approaches to Management research including Ordinary Least Squares, Discrete Choice, Count Models, Panel Data, Dealing with Endogeneity, Survival/failure/event history and event studies, experiments, factor analysis and structural equation modeling, hierarchical linear modeling, networks, comparative qualitative methods, coding of non-quantitative data, unstructured text and big data simulations. This course is offered in fall term
Activity: Seminar
1.0 Course Unit

Management of Economics (MGEC)

MGEC 611 Microeconomics for Managers: Foundations
This course establishes the micro-economic foundations for understanding business decision-making. The course will cover consumer theory and market demand under full information, market equilibrium and government intervention, production theory and cost optimization, producing in perfectly competitive and monopoly markets, vertical relations, and game theory, including simultaneous, sequential, and infinitely repeated games. Finally, we will wrap up game theory with an application to auctions. Students are expected to have mastered these materials before enrolling in the second quarter course: Microeconomics for Managers: Advanced Applications. Taught by: Selman, Featherstone, Toikka and Berkouwer
One-term course offered either term
Activity: Lecture
0.5 Course Units

MGEC 612 Microeconomics for Managers: Advanced Applications
This course will cover the economic foundations of business strategy and decision-making in market environments with other strategic actors and less than full information, as well as advanced pricing strategies. Topics include oligopoly models of market competition, creation, and protection, sophisticated pricing strategies for consumers with different valuations or consumers who buy multiple units (e.g. price discrimination, bundling, two-part tariffs), strategies for managing risk and making decisions under uncertainty, asymmetric information and its consequences for markets, and finally moral hazard and principal-agent theory with application to incentive contacts. Taught by: Selman, Featherstone, Toikka and Lockwood
One-term course offered either term
Activity: Lecture
0.5 Course Units

Marathi (MRTI)

MRTI 410 Beginning Marathi I
The first year course in Marathi begins with learning the Devnagari script which is common for other important languages like Hindi and Nepali. With proper emphasis on grammar, vocabulary, and phonetics, the syllabus will see the student becoming able to speak conversational Marathi, read Marathi data from the Internet, and compose simple short essays on selected topics. Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course
Taught by: Ranade
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center
MRTI 411 Beginning Marathi II
Simple sentences in the present tense, narration (spoken as well written) of day to day activities, expressing likes & dislikes, culturally appropriate greetings and addressing, ability to describe events happening in present and present incomplete tense, consolidation of reading and writing skill acquired in the previous semester as well as proper pronunciations of common usage words and phrases. Speaking practices based upon the My Marathi Text book created by University of Mumbai. Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course
Taught by: Ranade
Course usually offered in spring term
Prerequisite: MRTI 410
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

MRTI 412 Intermediate Marathi I
Intermediate Marathi builds up upon the Beginning Level of Marathi. Gaining ability to speak about past and future is the most important skill in the intermediate course. Students learn the grammar, vocabulary, sentence structures to narrate and write in simple language about their experiences, short anecdotes, their observations and opinions and future plans.
For BA Students: Language Course
Taught by: Ranade
Course usually offered in fall term
Prerequisite: MRTI 411
Activity: Lecture
1.0 Course Unit

MRTI 413 Intermediate Marathi Part II
In the syllabus for the fourth semester Marathi course gaining language inputs regarding Marathi culture and day to day daily life in Maharashtra becomes one important topic. Day to day communication skills necessary to survive in Maharashtra on the street like interaction with a grocery store clerk or a vegetable sales woman in the market, a rikshaw driver, a policeman, a commoner, asking and providing directions on the street and various day to day real life situations are improvised and practiced. Vocabulary, sentence structures and associated grammar is acquired during practice and real life situations based exercises.
For BA Students: Last Language Course
Taught by: Renade
Course usually offered in spring term
Prerequisite: MRTI 412
Activity: Lecture
1.0 Course Unit

MRTI 449 Advanced Marathi
Theater and Films, Literature and poetry, Folk Songs, Dance and Music; this one semester course will explore the rich Marathi culture as well as will work on increasing the spoken, listening, reading and written proficiency of the students. News stories from the Marathi print media as well as glimpses from Marathi Television, News as well as Serials and popular comedy shows become the authentic materials in this course. Students learn the linguistic as well as cultural aspect of the variety of material through discussions, presentations in which students acquire and use the language to describe, narrate, express their opinions, evaluate, critique and appreciate these aspects of Marathi urban and rural culture.
For BA Students: Advanced Language Course
Taught by: Ranade
Course not offered every year
Activity: Lecture
1.0 Course Unit

Marketing (MKTG)

MKTG 101 Introduction to Marketing
The objective of this course is to introduce students to the concepts, analyses, and activities that comprise marketing management, and to provide practice in assessing and solving marketing problems. The course is also a foundation for advanced electives in Marketing as well as other business/social disciplines. Topics include marketing strategy, customer behavior, segmentation, market research, product management, pricing, promotion, sales force management and competitive analysis.
Taught by: Lamberton
One-term course offered either term
Activity: Recitation
1.0 Course Unit
Notes: MKTG 101 will not be offered in Spring 2021A. You must be registered for a lecture section, (MKTG101001, MKTG101002, MKTG101003 OR MKTG101004) AND one of the corresponding recitation sections (MKTG1012XX) listed for that particular lecture to be fully enrolled in the course. Failure to sign up for both a lecture and corresponding recitation will result in you being dropped from whichever part of the course you have in your schedule. Summer Session sections do not have recitations; you only need to sign up for the lecture MKTG101920 in summer. PLEASE NOTE: Recitation Section MKTG101220 is reserved only for Joseph Wharton Scholars and Benjamin Franklin Scholars. Do not request a permit to take MKTG101220 if you are not in one of these scholars programs.

MKTG 211 Consumer Behavior
This course is concerned with how and why people behave as consumers. Its goals are to: (1) provide conceptual understanding of consumer behavior, (2) provide experience in the application of buyer behavior concepts to marketing management decisions and social policy decision-making; and (3) to develop analytical capability in using behavioral research.
Taught by: Melamud, Sharif
One-term course offered either term
Also Offered As: MKTG 711
Prerequisite: MKTG 101
Activity: Lecture
1.0 Course Unit

2020-21 Catalog | Generated 09/18/20
**MKTG 212 Data and Analysis for Marketing Decisions**
This course introduces students to the fundamentals of data-driven marketing, including topics from marketing research and analytics. It examines the many different sources of data available to marketers, including data from customer transactions, surveys, pricing, advertising, and A/B testing, and how to use those data to guide decision-making. Through real-world applications from various industries, including hands-on analyses using modern data analysis tools, students will learn how to formulate marketing problems as testable hypotheses, systematically gather data, and apply statistical tools to yield actionable marketing insights.

Taught by: Ryan Dew, Zhenling Jiang  
One-term course offered either term  
Also Offered As: MKTG 712  
Prerequisite: MKTG 101 AND (STAT 101 OR STAT 111 OR STAT 430)  
Activity: Lecture  
1.0 Course Unit  
Notes: (Former course title Marketing Research.)

---

**MKTG 221 New Product Management**
Examination of the marketing aspects of products or services exclusive of their promotion, pricing or distribution. Focuses on decisions regarding product introduction, positioning, improvements, and deletion, and the tools available for making these decisions.

One-term course offered either term  
Also Offered As: MKTG 721  
Prerequisite: MKTG 101  
Activity: Lecture  
0.5 Course Units  
Notes: 0.5 c.u. One-half term. Check meeting dates. Students must register for this course before the end of the Course Selection period (September for fall, January for spring). The same deadline applies to all sections whether they are offered in the FIRST half or SECOND half of the semester.

---

**MKTG 224 Advertising Management**
Immersion in the advertising development process and examination of the practice of advertising. Focuses on decisions regarding advertising objectives, copy selection, budget setting and media selection.

One-term course offered either term  
Also Offered As: MKTG 724  
Prerequisite: MKTG 101  
Activity: Lecture  
0.5 Course Units  
Notes: 0.5 c.u. One-half term. Check meeting dates. Students must register for this course before the end of the Course Selection period (September for fall, January for spring). The same deadline applies to all sections whether they are offered in the FIRST half or SECOND half of the semester.

---

**MKTG 225 Principles of Retailing**
This course explores the domain of retailing; marketing to the final consumer. Emphasis is placed on marketing aspects of retailing not covered in other courses: retail strategy, merchandising, vendor relations and location.

Course usually offered in spring term  
Also Offered As: MKTG 725  
Prerequisite: MKTG 101  
Activity: Lecture  
0.5 Course Units  
Notes: 0.5 c.u. One-half term. Check meeting dates. Students must register for this course before the end of the Course Selection period (September for fall, January for spring). The same deadline applies to all sections whether they are offered in the FIRST half or SECOND half of the semester.

---

**MKTG 227 Digital Marketing and Electronic Commerce**
The effect of the Internet and related technologies on business and social institutions is more profound than that of any prior invention, including the printing press and the internal combustion engine. Furthermore, marketing is critical to the success of firms that will shape the consumption-led economies that are fueled by these technologies. MKTG 227 provides a research-based and framework-driven approach to succeeding in this environment, through a rigorous approach to understanding digital marketing and electronic commerce. The course is organized into two sections and utilizes relevant theory, empirical analysis, and practical examples, to develop the key learning points. Guest speakers will participate as well, as appropriate.

Taught by: Berman  
One-term course offered either term  
Also Offered As: MKTG 727  
Activity: Lecture  
0.5 Course Units  
Notes: 0.5 c.u. One-half term. Check meeting dates. Students should register for this course before the end of the Course Selection period (September for fall, January for spring). The same deadline applies to all sections whether they are offered in the FIRST half or SECOND half of the semester. Students may not take both MKGTG 227 and the full semester version of this course, MKTG 270 (formally MKTG 230 x) for credit.
MKTG 234 Idea Generation & the Systematic Approach for Creativity
The ability to solve problems creatively and generate change is a recognized standard of success and plays an important role in gaining a competitive advantage in many areas of business management. This course is designed to teach students several creative problem solving methodologies that complement other managerial tools acquired in undergraduate and graduate studies. The course offers students the opportunity to learn how to solve problems, identify opportunities, and generate those elusive ideas that potentially generate enormous benefits to organizations. The objectives of this course are to enhance the students’ (a) creativity, (b) ability to innovate and (c) ability to identify, recruit, develop, manage, retain, and collaborate with creative people. The course includes: 1. A review of the literature on creativity, creative people, innovation, and design as well as the leadership and management of creative people and innovation. 2. Hands on learning of approaches for generating creative ideas. Students will have the opportunity of implementing the techniques studied in class. 3. Applications of creativity to selected management domains - Approaches to the generation of creative options are not limited to the development of products and services or businesses, but can be applied to all areas of management, business, and life. The purpose of these sessions is to explore the applications of creative approaches to marketing, advertising, organizational design, negotiations, and other management challenges. 4. Integration - Both via individual assignments and a group project in which interdisciplinary teams of students generate a creative product/service/customer.
Taught by: Rom Schrift
Course usually offered in fall term
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. Students may not take both MKTG 292 and MKTG 234 for credit. Check meeting dates. Student must register for this course before the end of the Course Selection period (September for fall, January for spring). The same deadline applies to all sections whether they are offered in the FIRST half or SECOND half of the semester.

MKTG 237 Introduction to Brain Science for Business
This course provides an overview of contemporary brain science and its applications to business. Students are first rapidly introduced to the basic anatomy and physiology of the brain and become familiar with important techniques for measuring and manipulating brain function. The course then surveys major findings in neuroscience with applications to business, including vision, attention and advertising; valuation and marketing; decision making; learning, innovation and creativity; social influence, team-building, and leadership; and discussion of the ethical, legal, and societal implications of applying neuroscience to business. Applications to business, education, sports, law, and policy are discussed throughout.
Taught by: Platt
Course usually offered in spring term
Also Offered As: MKTG 737
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. Students must register for this course before the end of the Course Selection period (September for fall, January for spring). The same deadline applies to all sections whether they are offered in the First half or Second half of the semester. All freshman need a permit to register for this course. Students may not take both MKTG 351 (Special Topics version) and MGKTG 237 x for credit.

MKTG 239 Visual Marketing
As consumers, we are constantly exposed to advertisements and experience visual messages from product packages in stores, retail displays, and products already owned. In essence, visual marketing collateral is omnipresent and is an essential part of corporate visual identity, strategy, branding, and communication. Some of this falls to creative graphic design, but advertising, design, and marketing can also be significantly enhanced by knowledge of how visual information and its presentation context can be optimized to deliver desirable and advantageous messages and experiences. This course will emphasize how to measure, interpret, and optimize visual marketing. This course will use lectures, discussions, exercises and a group project, to help students understand the underlying processes that influence our visual perception and visual cognition. Students will learn about the theoretical processes and models that influence, attention and visual fluency. Students will also be exposed to eye-tracking instruments that help measure eye movement. Finally, we will explore how visual stimuli can influence consumer memory, persuasion, and choice. We will examine practical applications in marketing, advertising, packaging, retail, and design contexts.
Taught by: Kahn, Johnson
Course usually offered in spring term
Also Offered As: MKTG 739
Activity: Lecture
1.0 Course Unit
Notes: Students may not take both MKTG 354 (Special Topics version) and MKTG 239 x for credit.

MKTG 241 Entrepreneurial Marketing
This course focuses on the real life marketing challenges involved in launching an entrepreneurial venture. The primary goal of the course will provide a roadmap for students seeking to actively engage as entrepreneurs, investors or managers in the startup culture. Many of the entrepreneurial marketing principles studied in this course will be equally applicable to mid-size and larger companies seeking new approaches to drive top-line growth. The course will address how start-ups, early growth stage and more mature companies have used entrepreneurial marketing as an essential competitive weapon to grow their businesses by gaining customers, driving revenue, acquiring funding and recruiting A-level employees, advisors and directors. Students will form teams and select an idea/concept for an entrepreneurial venture, and by the conclusion of the course will have developed a fully fleshed out and testable marketing plan. Preferably, the selected venture will be one that one or more members of the team would consider implementing, should their plan prove feasible.
Taught by: Lodish, Lautman
Course usually offered in fall term
Also Offered As: MKTG 741
Prerequisite: MKTG 101 AND MKTG 212
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. Check meeting dates. Students must register for this course before the end of the Course Selection period (September for fall, January for spring). The same deadline applies to all sections whether they are offered in the FIRST half or SECOND half of the semester.
MKTG 247 Marketing Strategy for Technology Platforms
This course focuses on the unique aspects of creating effective marketing and management strategies for technology-intensive on-line and off-line businesses. It addresses the effective competitive marketing strategies for winning in markets which are powered by technology, specifically, how firms create value for customers and how they can integrate technology in delivering a better consumer experience. While competitive marketing strategy is important for all managers, this course will be particularly useful to students who are planning to accept a position in leading technology companies, and marketing firms in which technology is likely to play an important role. In addition, the course will provide value to those who expect to work in consulting or investing in technology industries, and must analyze firm strategies. Must be Sophomore standing.
Taught by: Pinar Yildirim
Course usually offered in spring term
Also Offered As: MKTG 747
Prerequisite: MKTG 101
Activity: Lecture
0.5 Course Units

MKTG 254 Pricing Policy
The pricing decision process including economic, marketing, and behavioral phenomena which constitute the environment for pricing decisions and the information and analytic tools useful to the decision maker.
One-term course offered either term
Also Offered As: MKTG 754
Prerequisite: MKTG 101
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. Check meeting dates. Students must register for this course before the end of the Course Selection period (September for fall, January for spring). The same deadline applies to all sections whether they are offered in the FIRST half or Second half of the semester. Students may not take both MKTG 254 and the full semester version of this course, MKTG 288, for credit

MKTG 250 Innovation, Marketing Strategy, and Antitrust
This course considers business strategy and law, particularly the role of antitrust and intellectual property law in managing innovation. We will examine several highly innovative firms in technology rich areas, considering how they adapt their strategies to the competitive and legal environment, and asking whether antitrust law promotes or hinders innovation. The strategies of both current firms such as Uber, Google, Apple, and Microsoft and historical examples such as American Can Company, Standard Oil, Brown & Williamson Tobacco Co., and Kodak will provide context and source materials for the course. We will pay special attention to the role of intellectual property rights in fostering or hindering innovation. The legal focus is primarily on U.S. law, but the course will occasionally address foreign regimes as well. The course is useful to students interested in marketing or competitive business strategy, and, more broadly, to anyone desiring to understand the legal and public policy issues relating to competition and innovation.
Taught by: H. Hovenkamp
One-term course offered either term
Also Offered As: LGST 205, LGST 805, MKTG 760
Activity: Lecture
1.0 Course Unit
Notes: (Former MKTG 236)

MKTG 262 New Product Development
In this hands-on experiential course, students will partner with a local start-up to apply design thinking steps taught throughout the course. Students will learn how to uncover deep consumer needs, effectively ideate, and create rapid prototypes to test their ideas with real customers. This class is well suited for those interested in careers in innovation or management consulting, marketing, product management, technology, or entrepreneurship. No prior experience or requirements are needed for this course.
Course not offered every year
Prerequisite: MKTG 101
Activity: Lecture
1.0 Course Unit
Notes: Students may not take both MKTG 262 and MKTG 221 for credit

MKTG 265 Principles of Advertising
This course focuses on advertising via all media - print, digital, video, TV, Internet, etc. Emphasis is placed on understanding the communication development process and consumer behavior (psychology), the measurement and evaluation of advertising effects, and developing appropriate media plans.
One-term course offered either term
Prerequisite: MKTG 101
Activity: Lecture
1.0 Course Unit
Notes: Students may not take both MKTG 265 and MKTG 224 for credit

MKTG 266 Marketing for Social Impact
Private and public sector firms increasingly use marketing strategies to engage their customers and stakeholders around social impact. To do so, managers need to understand how best to engage and influence customers to behave in ways that have positive social effects. This course focuses on the strategies for changing the behavior of a target segment of consumers on key issues in the public interest (e.g., health behaviors, energy efficiency, poverty reduction, fundraising for social causes). How managers partner with organizations (e.g., non-profits, government) to achieve social impact will also be explored.
Taught by: Deborah Small
Course usually offered in fall term
Prerequisite: MKTG 101
Activity: Lecture
1.0 Course Unit
Notes: Students may not take both MKTG 266 and MKTG 224 for credit.
MKTG 270 Digital Marketing, Social Media and E-Commerce
MKTG 270 explores the digital marketing environment from both a consumer and business perspective. The course provides an overview of various online business models and delves into digital advertising and social media marketing techniques and technologies. A mixture of case studies, guest speakers and assignments, including one that uses real advertising data, translates speakers into practice. It is recommended that students enrolling in the course be comfortable using Excel and are knowledgeable in applying regression analysis techniques. Students who would prefer a less technical course may wish to take MKTG 227, Digital Marketing and Electronic Commerce, a half cu course offered by the department.
Taught by: Berman
One-term course offered either term
Also Offered As: MKTG 770
Prerequisite: MKTG 101
Activity: Lecture
1.0 Course Unit
Notes: Students may not take both MKTG 270 and MKTG 227 for credit. This course replaces experimental course MKTG 230 x.

MKTG 271 Models for Marketing Strategy
In today's business environment, marketing executives are involved in complex decision-making and they become responsible for return on their marketing investments. The first objective of this course is to help participants become better executives. By exposing students to various analytical and computer-based tools, developed for solving marketing problems, it will help to prepare them for careers in industries such as consumer packaged goods, hi-tech, financial services, media and entertainment, pharmaceutical, consulting, and venture capital. The course's main focus is on various existing models, such as models that predict the consumer's dynamic adoption of an innovative product. However, at some point in their career, students may find themselves facing business problems for which a model can assist in making decisions, but no existing model is available. Hence, the second objective of the course is to provide participants with critical skills necessary to evaluate new models to which they may be exposed by attending presentations or reading the literature. The models to be discussed in the class have been implemented and proven useful in a wide range of industries (e.g., business-to-consumers and business-to-business). The course is not only about models, however. It also covers modeling needs. Some industries such as the media and entertainment or the pharmaceutical industries present unique problems and modeling needs. The third objective of the course is to expose participants to the nature and essence of such idiosyncratic problems as well as modeling needs in such industries. Overall, the course will make participants understand better critical marketing problems by analyzing them rigorously and will enhance their skills in either designing or evaluating models-based strategies.
Taught by: Eliashberg
Course usually offered in fall term
Also Offered As: MKTG 771
Prerequisite: MKTG 101 AND STAT 101
Activity: Lecture
1.0 Course Unit

MKTG 277 Marketing Strategy
This course views marketing as both a general management responsibility and an orientation of an organization that helps one to create, capture and sustain customer value. The focus is on the business unit and its network of channels, customer relationships, and alliances. Specifically, the course attempts to help develop knowledge and skills in the application of advanced marketing frameworks, concepts, and methods for making strategic choices at the business level.
Taught by: Robertson, Yildirim
Course usually offered in fall term
Also Offered As: MKTG 777
Prerequisite: MKTG 101
Activity: Lecture
1.0 Course Unit
Notes: Lectures, discussions, cases

MKTG 278 Strategic Brand Management
Which brands make you happy? Apple? Amazon? Starbucks? Everlane? Soulcycle? Sweetgreen? What draws you into these brands? How do companies create compelling brand experiences? How could you cultivate a well-loved brand? This course explores such questions with the goal of identifying the ingredients for building an inspired brand. The course is created for students interested in building a brand and/or immersing themselves in the enhancement of an existing brand, and it is comprised of lectures, cases, guest speakers, discussions, in and out of class exercises, and a final project. Broadly, the course will be divided into four parts: 1) Understanding Brand, 2) Crafting Brand, 3) Measuring Brand, and 4) Managing Brand. The course will provide students with an appreciation of the role of branding and (taking a consumer-centric approach) will augment students' ability to think creatively and critically about the strategies and tactics involved in building, leveraging, defending, and sustaining inspired brands.
Taught by: Williams
Course usually offered in spring term
Also Offered As: MKTG 778
Prerequisite: MKTG 101
Activity: Lecture
1.0 Course Unit

MKTG 288 Pricing Strategies
This course is designed to equip students with the concepts, techniques, and latest thinking on pricing issues, with an emphasis on ways in which to help a firm improve its pricing. The orientation of the course is about practice of pricing, not theory. We will focus on how firms can improve profitability through pricing, look at how firms set their prices and how to improve current practices to increase profitability. The first part of the course focuses on how to analyze costs, customers, and competitors in order to formulate proactive pricing strategies. The second part focuses on price promotions, price bundling, price discrimination, versioning, nonlinear pricing, pricing through a distribution channel, dynamic pricing, etc.
Taught by: Zhang
Course usually offered in spring term
Prerequisite: MKTG 101
Activity: Lecture
1.0 Course Unit
Notes: Students may not take both MKTG 288 and MKTG 254 for credit.
MKTG 306 Special Topics: Retail Merchandising
RETAIL MERCHANDISING: This course introduces the role of merchandising at various retailers with an emphasis on apparel and soft-line businesses. Selected topics will include product development, line planning, sourcing, product lifecycle, forecasting, buying, planning and vendor relations. Special emphasis will be placed on current trends in retail merchandising through current articles and industry guest speakers. The objective of this course is to familiarize students with merchandising theory and strategies considered to be current best practices in retailing.
Course usually offered in fall term
Also Offered As: MKTG 806
Prerequisite: MKTG 101 OR MKTG 225
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u., One-half term. Check meeting dates. Students must register for this course before the end of the Course Selection period (September for fall, January for spring). The same deadline applies to all sections whether they are offered in the FIRST half or SECOND half of the semester. All freshman need a permit to register for this course.

MKTG 309 Special Topics: Experiments for Business Decision Making
EXPERIMENTS FOR BUSINESS DECISION MAKING: In the past decade, massive shifts in how companies interact with their customers have suddenly made field experiments an economically feasible way to learn about a variety of business questions such as what types of promotions are most effective, what products should be stocked at a store, how e-mail promotions should be designed, how sales staff should be compensated, etc. Many marketers engaged in online retailing, direct-marketing, online advertising, media management, etc. are rapidly embracing a 'test and learn' philosophy and a number of platforms such as Google Website Optimizer, have been developed to facilitate rigorous field experiments in the online environment. Just as with the quality revolution in manufacturing during the 1980s and 1990s, the rapid rise of the 'test and learn' philosophy in marketing has created a huge demand for those who can design, field, and analyze marketing experiments. Through this course, you will learn and practice a wide range of critical skills, from the statistical methods used to design and analyze experiments to the management and strategy required to execute an experiment and act on the results. Although the cases and examples will focus on marketing problems, the material covered can be applied in a number of other domains particularly operations management and product design.
Course offered fall; even-numbered years
Also Offered As: MKTG 809
Prerequisite: MKTG 101 AND MKTG 212
Activity: Lecture
1.0 Course Unit

MKTG 350 Special Topics - Consumer Neuroscience
CONSUMER NEUROSCIENCE: How can studying the brain improve our understanding of consumer behavior? While neuroscience made tremendous strides throughout the 20th century, rarely were meaningful applications developed outside of medicine. Recently, however, breakthroughs in measurement and computation have accelerated brain science and created a dizzying array of opportunities in business and technology. Currently, applications to marketing research and product development are experiencing explosive growth that has been met with both excitement and skepticism. This mini-course provides an overview of the neuroscience behind and the potential for these developments. Topics will range from well-known and widely used applications, such as eye-tracking measures in the lab and field, to emerging methods and measures, such as mobile technologies, face-reading algorithms, and neural predictors of marketing response. The course will also discuss applications in branding and product development, including wearable physiological devices and apps, sensory branding for foods and fragrances, pharmaceuticals and medical devices, and neuroscience-based products designed to enhance cognitive functions. These applications stem from many subfields of cognitive neuroscience, including attention, emotion, memory, and decision making. This course is self-contained and has no prerequisites. However, students with some background in business, economics, psychology, and/or neuroscience are likely to find the material covered in this course complementary to their existing knowledge.
Taught by: Gideon Nave
Course usually offered in spring term
Also Offered As: MKTG 850
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. Check meeting dates. Students should register for this course before the end of the Course Selection period (September for fall, January for spring). The same deadline applies to all sections whether they are offered in the FIRST half or SECOND half of the semester. All freshman need a permit to register for this course.
MKTG 351 Special Topics: Introduction to Brain Science for Business
INTRODUCTION TO BRAIN SCIENCE FOR BUSINESS: Brain science offers the potential to unlock the future of business, by providing new insights that can enhance decision-making, improve precision in design and marketing team chemistry and cultivate leadership, fine-tune selection and human performance, drive creativity and innovation, create social valus, and optimize digital interactions. New developments in biometrics, implantable and wearable devices, genomics, proteomics, metabolomics, nutrition, and human microbiome, offer the opportunity for enhanced precision and impact in marketing, finance, management, analytics, and education. This course will provide an overview of contemporary brain science and its applications to business. Students first will be introduced to the basic anatomy and physiology of the brain and become familiar with important techniques for measuring and manipulating brain function. The course will then survey major findings in neuroscience with applications to business, including selective attention and advertising; valuation and marketing; decision making; learning; innovation and creativity; and social influence, team-building, and leadership. The course will end with a discussion of ethics, brain-machine interactions, and artificial intelligence. Applications to business, education, sports, law and policy will be discussed throughout.
Course usually offered in spring term
Also Offered As: MKTG 851
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. This course has been replaced by MKTG 237 x.

MKTG 352 Special Topics - Marketing Analytics
MARKETING ANALYTICS: Companies are currently spending millions of dollars on data-gathering initiatives - but few are successfully capitalizing on all this data to generate revenue and increase profit. Moving from collecting data to analysis to profitable results requires the ability to forecast and develop a business rationale based on identified data patterns. Marketing Analytics will cover the three pillars of analytics - descriptive, predictive and prescriptive. Descriptive Analytics examines different types of data and how they can be visualized, ultimately helping you leverage your findings and strengthen your decision making. Predictive Analytics explores the potential uses of data once collected and interpreted. You will learn to utilize different tools, such as regression analysis, and estimate relationships among variables to predict future behavior. Prescriptive Analytics takes you through the final step - formulating concrete recommendations. These recommendations can be directed toward a variety of efforts including pricing and social-platform outreach. Taught by: Iyengar
Course usually offered in fall term
Also Offered As: MKTG 852
Prerequisite: MKTG 101 AND STAT 101
Activity: Lecture
0.5 Course Units
Notes: 0.5 cu credit course. Check meeting dates. Students must register for this course before the end of the Course Selections period (September for fall, January for spring). The same deadline applies to all sections whether they are offered in the FIRST half or SECOND half of the semester.

MKTG 353 Special Topics

1.0 Course Unit
Notes: 1.0 c.u. This course has been replaced by MKTG 239 x.

MKTG 399 Independent Study
One-term course offered either term
Also Offered As: MKTG 899
Prerequisite: MKTG 212
Activity: Independent Study
1.0 Course Unit
Notes: Content arranged by student with project supervisor, 1.0 c.u

MKTG 401 Marketing Analytics Capstone: Learning by Doing
In this class students will (1) Apply knowledge to practice for an actual client, with a focus on the synthesis of knowledge acquired across curriculum (2) Practice analytical thinking skills (analyzing and framing business problems and problem-solving techniques), including consideration of ethical issues. (3) Practice written and oral communication skills, as well as working in an (assigned) team environment, by leveraging the experience developed in earlier years of the leadership Journey. (4) Reflect on their own social and intellectual development over their time at Wharton and Penn. Taught by: Iyengar
Course usually offered in spring term
Activity: Lecture
0.5 Course Units
Notes: MKTG 401 x fulfills the Wharton Senior capstone requirement. Students should have proficient knowledge of R/Python and SQL. Online courses are available through WCAI (Wharton Customer Analytics Initiative) if needed.
**MKTG 476 Applied Probability Models in Marketing**
This course will expose students to the theoretical and empirical ‘building blocks’ that will allow them to construct, estimate, and interpret powerful models of consumer behavior. Over the years, researchers and practitioners have used these models for a wide variety of applications, such as new product sales, forecasting, analyses of media usage, and targeted marketing programs. Other disciplines have seen equally broad utilization of these techniques. The course will be entirely lecture-based with a strong emphasis on real-time problem solving. Most sessions will feature sophisticated numerical investigations using Microsoft Excel. Much of the material is highly technical.
Taught by: Fader
Course usually offered in spring term
Also Offered As: MKTG 776, STAT 476, STAT 776
Activity: Lecture
1.0 Course Unit

**MKTG 611 Marketing Management**
This course addresses how to design and implement the best combination of marketing efforts to carry out a firm’s strategy in its target markets. Specifically, this course seeks to develop the student’s (1) understanding of how the firm can benefit by creating and delivering value to its customers, and stakeholders, and (2) skills in applying the analytical concepts and tools of marketing to such decisions as segmentation and targeting, branding, pricing, distribution, and promotion. The course uses lectures and case discussions, case write-ups, student presentations, and a comprehensive final examination to achieve these objectives.
Taught by: Berger, Iyengar, McCoy
Course usually offered in fall term
Activity: Lecture
0.5 Course Units
Notes: One half term. 0.5 cu

**MKTG 612 Dynamic Marketing Strategy**
Building upon Marketing 611, the goal of this course is to develop skills in formulating and implementing marketing strategies for brands and businesses. The course will focus on issues such as the selection of which businesses and segments to compete in, how to allocate resources across businesses, segments, and elements of the marketing mix, as well as other significant strategic issues facing today’s managers in a dynamic competitive environment. A central theme of the course is that the answer to these strategic problems varies over time depending on the stage of the product life cycle at which marketing decisions are being made. As such, the PLC serves as the central organizing vehicle of the course. We will explore such issues as how to design optimal strategies for the launch of new products and services that arise during the introductory phase, how to maximize the acceleration of revenue during the growth phase, how to sustain and extend profitability during the mature phase, and how to manage a business during the inevitable decline phase.
Taught by: Van den Bulte, Bradlow
One-term course offered either term
Prerequisite: MKTG 611
Activity: Lecture
0.5 Course Units
Notes: One half term. 0.5 cu, Check meeting dates.

**MKTG 613 Strategic Marketing Simulation**
Building upon Marketing 611, Marketing 613 is an intensive immersion course designed to develop skills in formulating and implementing marketing strategies for brands and businesses. The central activity will be participation in a realistic integrative product management simulation named SABRE. In SABRE, students will form management teams that oversee all critical aspects of modern product management: the design and marketing of new products, advertising budgeting and design, sales force sizing and allocation, and production planning. As in the real world, teams will compete for profitability, and the success that each team has in achieving this goal will be a major driver of the class assessment. The SABRE simulation is used to convey the two foci of learning in the course: the changing nature of strategic problems and their optimal solutions as industries progress through the product life cycle, and exposure to the latest analytic tools for solving these problems. Specifically, SABRE management teams will receive training in both how to make optimal use of marketing research information to reduce uncertainty in product design and positioning, as well as decision support models to guide resource allocation.
Taught by: Reibstein
Course usually offered in spring term
Prerequisite: MKTG 611
Activity: Lecture
0.5 Course Units
Notes: 0.5 cu. Typically offered on two consecutive weekends, or on 4 days pre-term in January. Check meeting dates.

**MKTG 711 Consumer Behavior**
Marketing begins and ends with the customer, from determining customers’ needs and wants to providing customer satisfaction and maintaining customer relationships. This course examines the basic concepts and principles in customer behavior with the goal of understanding how these ideas can be used in marketing decision making. The class will consist of a mix of lectures, discussions, cases, assignments, project work and exams. Topics covered include customer psychological processes (e.g., motivation, perception, attitudes, decision-making) and their impact on marketing (e.g., segmentation, branding, and customer satisfaction). The goal is to provide you with a set of approaches and concepts to consider when faced with a decision involving understanding customer responses to marketing actions.
Taught by: Reed
One-term course offered either term
Also Offered As: MKTG 211
Prerequisite: MKTG 211
Activity: Lecture
1.0 Course Unit
Notes: Format: Lectures and discussion, case analyses, presentations.
MKTG 712 Data and Analysis for Marketing Decisions
This course introduces students to the fundamentals of data-driven marketing, including topics from marketing research and analytics. It examines the many different sources of data available to marketers, including data from customer transactions, surveys, pricing, advertising, and A/B testing, and how to use those data to guide decision-making. Through real-world applications from various industries, including hands-on analyses using modern data analysis tools, students will learn how to formulate marketing problems as testable hypotheses, systematically gather data, and apply statistical tools to yield actionable marketing insights.
Taught by: Iyengar, Dew, Nave
One-term course offered either term
Also Offered As: MKTG 212
Prerequisite: MKTG 611 AND STAT 613
Activity: Lecture
1.0 Course Unit
Notes: Format: Lecture, discussion, and cases.

MKTG 721 New Product Management
This course provides a total immersion in the new product development process - from sourcing ideas and innovation, through new product sales forecasting. The focus is on collective learning, what works, what doesn't, and why. While the primary focus is the new product development process within a corporate structure, some coverage is given to key issues surrounding start-ups.
One-term course offered either term
Also Offered As: MKTG 221
Prerequisite: MKTG 611
Activity: Lecture
0.5 Course Units
Notes: One half term. 0.5 c.u, Check Meeting dates. Format: Lectures, cases, simulations, class discussions, and guest speakers.

MKTG 724 Advertising Management
The purpose of this course is to provide students with an opportunity to learn and apply the major frameworks, theories, current research findings, principles and practices of effective advertising management as part of an Integrated Marketing Communications (IMC) program. By the end of this course, students should not only be familiar with a large body of advertising knowledge, but should also be able to apply this information to create and evaluate effective advertising strategies and tactics. The emphasis will be on: 1) understanding the psychology of customer motivation and persuasion; 2) crafting effective and creative messages; 3) making efficient selections and use of media; and 4) understanding metrics, all within the broader Integrated Marketing Communications perspective.
One-term course offered either term
Also Offered As: MKTG 224
Prerequisite: MKTG 611 AND (MKTG 612 OR MKTG 613)
Activity: Lecture
0.5 Course Units
Notes: One half term. 0.5 cu, Check meeting dates. Format: Case discussions, in-class exercises, lectures, group projects, guest lectures by marketing professionals.

MKTG 725 Principles of Retailing
This course provides an interdisciplinary overview of the retailing industry. Primary focus will be on the customer facing activities of retailers, including assortment planning, private-label development and the management of in-store operations, and the back-door activities (forecasting and supply chain management) that support customer interaction. In addition, current issues facing retailers, such as customer relationship management, industry consolidation and supplier relations, will be explored. The course will also survey topics in finance, operations, information technology and real estate as they relate to retail.
Course usually offered in spring term
Also Offered As: MKTG 225
Prerequisite: MKTG 611 AND (MKTG 612 OR MKTG 613)
Activity: Lecture
0.5 Course Units

MKTG 727 Digital Marketing and Electronic Commerce
The effect of the Internet and related technologies on business and social institutions is more profound than that of any prior invention, including the printing press and the internal combustion engine. Furthermore, marketing plays a key role in shaping the modern consumption-led economies fueled by these technologies. MKTG 727 provides a research-based and framework-driven approach to understanding digital marketing and electronic commerce. The course is organized into two sections and utilizes relevant theory, empirical analysis, and practical examples, to develop the key learning points. Guest speakers will participate as well, as appropriate.
Taught by: Ron Berman
One-term course offered either term
Also Offered As: MKTG 227
Prerequisite: MKTG 611
Activity: Lecture
0.5 Course Units
Notes: One-half term. 0.5 cu, Check meeting dates. Students may not take both MKTG 727 and the full semester version of this course, MKTG 730 x or MKTG 770 for credit.

MKTG 733 Marketing for Social Impact
Private and public sector firms increasingly use marketing strategies to engage their customers and stakeholders around social impact. To do so, managers need to understand how best to engage and influence customers to behave in ways that have positive social effects. This course focuses on the strategies for changing the behavior of a target segment of consumers on key issues in the public interest (e.g., health behaviors, energy efficiency, poverty reduction, fund-raising for social causes). How managers partner with organizations (e.g., non-profits, government) to achieve social impact will also be explored.
Taught by: Deborah Small
Course usually offered in fall term
Prerequisite: MKTG 611
Activity: Lecture
0.5 Course Units
Notes: One half term. 0.5 cu, Check meeting dates. Format: Lecture, class discussion, simulations, cases and guest lecturers.
MKTG 734 Idea Generation and the Systematic Approach for Creativity
The ability to solve problems creatively and generate change is a recognized standard of success and plays an important role in gaining a competitive advantage in many areas of business management. This course is designed to teach students several creative problem solving methodologies that complement other managerial tools acquired in undergraduate and graduate studies. The course offers students the opportunity to learn how to solve problems, identify opportunities, and generate those elusive ideas that potentially generate enormous benefits to organizations. The objectives of this course are to enhance the students’ (a) creativity, (b) ability to innovate and (c) ability to identify, recruit, develop, manage, retain, and collaborate with creative people. The course includes: 1. A review of the literature on creativity, creative people, innovation, and design as well as the leadership and management of creative people and innovation. 2. Hands on learning of approaches for generating creative ideas. Students will have the opportunity of implementing the techniques studied in class. 3. Applications of creativity to selected management domains - Approaches to the generation of creative options are not limited to the development of products and services or businesses, but can be applied to all areas of management, business, and life. The purpose of these sessions is to explore the applications of creative approaches to marketing, advertising, organizational design, negotiations, and other management challenges.
4. Integration - Both via individual assignments and a group project in which interdisciplinary teams of students generate a creative product/service/customer
Taught by: Rom Schrift
Course usually offered in fall term
Activity: Lecture
0.5 Course Units
Notes: One half term. 0.5 cu, Check meeting dates. Students may not take both MKTG 792 and MKTG 734 for credit.

MKTG 737 Introduction to Brain Science for Business
This course provides an overview of contemporary brain science and its applications to business. Students are first rapidly introduced to the basic anatomy and physiology of the brain and become familiar with important techniques for measuring and manipulating brain function. The course then surveys major findings in neuroscience with applications to business, including vision, attention and advertising; valuation and marketing; decision making; learning, innovation and creativity; social influence, team-building, and leadership; and discussion of the ethical, legal, and societal implications of applying neuroscience to business. Applications to business, education, sports, law, and policy are discussed throughout.
Taught by: Platt
Course usually offered in spring term
Also Offered As: MKTG 237
Activity: Lecture
0.5 Course Units
Notes: One half term. 0.5 cu, Check meeting dates. Students may not take both MKTG 851 (Special Topics version) and MKTG 737 x for credit.

MKTG 739 Visual Marketing
As consumers, we are constantly exposed to advertisements and experience visual messages from product packages in stores, retail displays, and products already owned. In essence, visual marketing collateral is omnipresent and is an essential part of corporate visual identity, strategy, branding, and communication. Some of this falls to creative graphic design, but advertising, design, and marketing can also be significantly enhanced by knowledge of how visual information and its presentation context can be optimized to deliver desirable and advantageous messages and experiences. This course will emphasize how to measure, interpret, and optimize visual marketing. This course will use lectures, discussions, exercises and a group project, to help students understand the underlying processes that influence our visual perception and visual cognition. Students will learn about the theoretical processes and models that influence, attention and visual fluency. Students will also be exposed to eye-tracking instruments that help measure eye movement. Finally, we will explore how visual stimuli can influence consumer memory, persuasion, and choice. We will examine practical applications in marketing, advertising, packaging, retail, and design contexts.
Taught by: Kahn, Johnson
Course usually offered in spring term
Also Offered As: MKTG 239
Activity: Lecture
1.0 Course Unit
Notes: Students may not take both MKTG 854 (Special Topics version) and MKTG 739 x for credit. Format: In-class exercises, team-based learning, discussions, and lectures.

MKTG 741 Entrepreneurial Marketing
This course focuses on the real life marketing challenges involved in launching an entrepreneurial venture. The primary goal of the course will be to provide a roadmap for students seeking to actively engage as entrepreneurs, investors or managers in the startup culture. Many of the entrepreneurial marketing principles studied in this course will be equally applicable to mid-size and larger companies seeking new approaches to drive top-line growth. The course will address how start-ups, early growth stage and more mature companies have used entrepreneurial marketing as an essential competitive weapon to grow their businesses by gaining customers, driving revenue, acquiring funding and recruiting A-level employees, advisors and directors. Students will form teams and select an idea/concept for an entrepreneurial venture, and by the conclusion of the course will have developed a fully fleshed out and testable marketing plan. Preferably, the selected venture will be one that one or more members of the team would consider implementing, should their plan prove feasible.
Taught by Lodish, Lautman
Course usually offered in fall term
Also Offered As: MKTG 241
Prerequisite: MKTG 611 AND (MKTG 612 OR MKTG 613) AND MKTG 712
Activity: Lecture
0.5 Course Units
Notes: One half term. 0.5 cu, Check meeting dates. Format: Guest speakers, lecture, class discussions, team project
MKTG 747 Marketing Strategy for Technology Platforms
This course focuses on the unique aspects of creating effective marketing and management strategies for technology-intensive on-line and off-line businesses. It addresses the effective competitive marketing strategies for winning in markets which are powered by technology: specifically, how firms create value for customers and how they can integrate technology in delivering a better consumer experience. While competitive marketing strategy is important for all managers, this course will be particularly useful to students who are planning to accept a position in leading technology companies, and marketing firms in which technology is likely to play an important role. In addition, the course will provide value to those who expect to work in consulting or investing in technology industries, and must analyze firm strategies.
Taught by: Pinar Yildirim
Course usually offered in spring term
Also Offered As: MKTG 247
Prerequisite: MKTG 611
Activity: Lecture
0.5 Course Units

MKTG 754 Pricing Policy
The course provides a systematic presentation of the factors to be considered when setting price, and shows how pricing alternatives are developed. Analytical methods are developed and new approaches are explored for solving pricing decisions.
Taught by: Raju, Zhang
One-term course offered either term
Also Offered As: MKTG 254
Prerequisite: MKTG 611 AND (MKTG 612 OR MKTG 613)
Activity: Lecture
0.5 Course Units
Notes: Format: Lecture and discussion

MKTG 760 Innovation, Marketing Strategy, and Antitrust
This course considers business strategy and law, particularly the role of antitrust and intellectual property law in managing innovation. We will examine several highly innovative firms in technology rich areas, considering how they adapt their strategies to the competitive and legal environment, and asking whether antitrust law promotes or hinders innovation. The strategies of both current firms such as Uber, Google, Apple, and Microsoft and historical examples such as American Can Company, Standard Oil, Brown & Williamson Tobacco Co., and Kodak will provide context and source materials for the course. We will pay special attention to the role of intellectual property rights in fostering or hindering innovation. The legal focus is primarily on U.S. law, but the course will occasionally address foreign regimes as well. The course is useful to students interested in marketing or competitive business strategy, and, more broadly, to anyone desiring to understand the legal and public policy issues relating to competition and innovation.
Taught by: H. Hovenkamp
One-term course offered either term
Also Offered As: LGST 205, LGST 805, MKTG 260
Activity: Lecture
1.0 Course Unit

MKTG 768 Contagious: How Products, Ideas and Behaviors Catch On
Why do some products catch on and achieve huge popularity while others fail? Why do some behaviors spread like wildfire while others languish? How do certain ideas seem to stick in memory while others disappear the minute you hear them? More broadly, what factors lead to trends, social contagion, and social epidemics? Interactive media, word of mouth, and viral marketing are important issues for companies, brands, and organizations. This course looks at these and other topics as it examines how products, ideas, and behaviors catch on and become popular. Marketers want their product to be popular, organizations want their social change initiative to catch on and entrepreneurs want their ideas to stick. This course will touch on four main aspects: (1) Characteristics of products, ideas, and behaviors that lead them to be successful. (2) Aspects of individual psychology that influence what things are successful. (3) Interpersonal processes, or how interactions between individuals drive success. (4) Social networks, or how patterns of social ties influence success.
Taught by: Berger
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: Format: Lecture, class discussion, cases.

MKTG 770 Digital Marketing, Social Media and E-Commerce
MKTG 770 explores the digital marketing environment from both a consumer and business perspective. The course provides an overview of various online business models and delves into digital advertising and social media marketing techniques and technologies. A mixture of case studies, guest speakers and assignments, including one that uses real advertising data, translates theory into practice. It is recommended that students enrolling in the course be comfortable using Excel and are knowledgeable in applying regression analysis techniques. Students who would prefer a less technical course may wish to take MKTG 727, Digital Marketing and Electronic Commerce, a half cu course offered by the department.
Taught by: Berman
One-term course offered either term
Also Offered As: MKTG 270
Prerequisite: MKTG 611
Activity: Lecture
1.0 Course Unit
Notes: Students may not take both MKTG 770 and MKTG 727 for credit.
This course replaces experimental course MKTG 730 x.
MKTG 771 Models for Marketing Strategy
In today's business environment, marketing executives are involved in complex decision-making and they become responsible for return on their marketing investments. The first objective of this course is to help participants become better executives. By exposing students to various analytical and computer-based tools, developed for solving marketing problems, it will help to prepare them for careers in industries such as consumer packaged goods, hi-tech, financial services, media and entertainment, pharmaceutical, consulting, and venture capital.

The course's main focus is on various existing models, such as models that predict the consumer's dynamic adoption of an innovative product. However, at some point in their career, students may find themselves facing business problems for which a model can assist in making decisions, but no existing model is available. Hence, the second objective of the course is to provide participants with critical skills necessary to evaluate new models to which they may be exposed by attending presentations or reading the literature. The models to be discussed in the class have been implemented and proven useful in a wide range of industries (e.g., business-to-consumers and business-to-business).

The course is not only about models, however. It also covers modeling needs. Some industries such as the media and entertainment or the pharmaceutical industries present unique problems and modeling needs.

The third objective of the course is to expose participants to the nature and essence of such idiosyncratic problems as well as modeling needs in such industries. Overall, the course will make participants understand better critical marketing problems by analyzing them rigorously and will enhance their skills in either designing or evaluating models-based strategies.

Taught by: Eliashberg
Course usually offered in fall term
Also Offered As: MKTG 271
Prerequisite: MKTG 611 AND (MKTG 612 OR MKTG 613)
Activity: Lecture
1.0 Course Unit
Notes: Format: Evaluating marketing models; practicing with computer-based models and software; discussing case studies that describe modeling applications; group presentations of model-based marketing analysis and strategy.

MKTG 775 Managing Customer Value
As the concept of CRM becomes common parlance for every marketing executive, it is useful to take a step back to better understand the various different behaviors that underlie the development of successful CRM systems. These 'behaviors' include customer-level decisions, firm actions, and the delicate but complex interplay between the two. Accordingly this course is comprised of four main modules. We will start with the discussion of customer profitability - focusing on the concepts of 'customer lifetime value' and 'customer equity'. We will examine how to measure long-run customer profitability in both business-to-customer and business-to-business environments, and the uses of these measures as major components assessing overall firm valuation. Second, we move to the value that the firm provides to its customers - better understanding the true nature of customer satisfaction and its non-trivial relationship with firm profitability. Third, we examine each of the three main components of the firm's management of its customer base: customer acquisition, development, and retention - and the complex resource allocation task that must be balanced across them. Finally, we conclude with a discussion of various tactical and organizational aspects of customer relationship management.

Taught by: Fader
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Format: Lecture and discussion

MKTG 777 Applied Probability Models in Marketing
This course will expose students to the theoretical and empirical 'building blocks' that will allow them to construct, estimate, and interpret powerful models of consumer behavior. Over the years, researchers and practitioners have used these models for a wide variety of applications, such as new product sales, forecasting, analyses of media usage, and targeted marketing programs. Other disciplines have seen equally broad utilization of these techniques. The course will be entirely lecture-based with a strong emphasis on real-time problem solving. Most sessions will feature sophisticated numerical investigations using Microsoft Excel.

Much of the material is highly technical.

Taught by: Fader
Course usually offered in spring term
Also Offered As: MKTG 476, STAT 476, STAT 776
Activity: Lecture
1.0 Course Unit
Notes: Format: Lecture, real-time problem solving

MKTG 777 Marketing Strategy
This course views marketing as both a general management responsibility and an orientation of an organization that helps one to create, capture and sustain customer value. The focus is on the business unit and its network of channels, customer relationships, and alliances. Specifically, the course attempts to help develop knowledge and skills in the application of advanced marketing frameworks, concepts, and methods for making strategic choices at the business level.

Taught by: Robertson, Yildirim
Course usually offered in fall term
Also Offered As: MKTG 277
Prerequisite: MKTG 611 AND (MKTG 612 OR MKTG 613)
Activity: Lecture
1.0 Course Unit
Notes: Format varies by instructor. Typically, case, lecture, group projects and class discussion. See syllabus.
MKTG 778 Strategic Brand Management
Which brands make you happy? Apple? Amazon? Starbucks? Everlane? Soulcycle? Sweetgreen? What draws you into these brands? How do companies create compelling brand experiences? How could you cultivate a well-loved brand? This course explores such questions with the goal of identifying the ingredients for building an inspired brand. The course is created for students interested in building a brand and/or immersing themselves in the enhancement of an existing brand, and it is comprised of lectures, cases, guest speakers, discussions, in and out of class exercises, and a final project. Broadly, the course will be divided into four parts: 1) Understanding Brand, 2) Crafting Brand, 3) Measuring Brand, and 4) Managing Brand. The course will provide students with an appreciation of the role of branding and (taking a consumer-centric approach) will augment students' ability to think creatively and critically about the strategies and tactics involved in building, leveraging, defending, and sustaining inspired brands.
Taught by: Williams
Course usually offered in spring term
Also Offered As: MKTG 278
Prerequisite: MKTG 611 OR MKTG 612 OR MKTG 613
Activity: Lecture
1.0 Course Unit
Notes: One half term. 0.5 cu. Check meeting dates. Students should register for this course before the end of the Course Selection period (September for fall, January for spring), for sections offered in the SECOND half of the term.

MKTG 806 Special Topics: Retail Merchandising
RETAIL MERCHANDISING; This course introduces the role of merchandising at various retailers with an emphasis on apparel and soft-line businesses. Selected topics will include product development, line planning, sourcing, product lifecycle, forecasting, buying, planning and vendor relations. Special emphasis will be placed on current trends in retail merchandising through current articles and industry guest speakers. The objective of this course is to familiarize students with merchandising theory and strategies considered to be current best practices in retailing.
Course usually offered in fall term
Also Offered As: MKTG 306
Prerequisite: MKTG 611 OR MKTG 725
Activity: Lecture
0.5 Course Units
Notes: One half term. 0.5 cu. Check meeting dates. Format: Lecture, discussion.

MKTG 809 Special Topics: Experiments for Business Decision Making
EXPERIMENTS FOR BUSINESS DECISION MAKING: In the past decade, massive shifts in how companies interact with their customers have suddenly made field experiments an economically feasible way to learn about a variety of business questions such as what types of promotions are most effective, what products should be stocked at a store, how e-mail promotions should be designed, how sales staff should be compensated, etc. Many marketers engaged in online retailing, direct-marketing, online advertising, media management, etc. are rapidly embracing a 'test and learn' philosophy and a number of platforms such as Google Website Optimizer, have been developed to facilitate rigorous field experiments in the online environment. Just as with the quality revolution in manufacturing during the 1980s and 1990s, the rapid rise of the 'test and learn' philosophy in marketing has created a huge demand for those who can design, field, and analyze marketing experiments. Through this course, you will learn and practice a wide range of critical skills, from the statistical methods used to design and analyze experiments to the management and strategy required to execute an experiment and act on the results. Although the cases and examples will focus on marketing problems, the material covered can be applied in a number of other domains particularly operations management and product design.
One-term course offered either term
Also Offered As: MKTG 309
Prerequisite: MKTG 611
Activity: Lecture
1.0 Course Unit

MKTG 850 Special Topics - Consumer Neuroscience
CONSUMER NEUROSCIENCE: How can studying the brain improve our understanding of consumer behavior? While neuroscience made tremendous strides throughout the 20th century, rarely were meaningful applications developed outside of medicine. Recently, however, breakthroughs in measurement and computation have accelerated brain science and created a dizzying array of opportunities in business and technology. Currently, applications to marketing research and product development are experiencing explosive growth that has been met with both excitement and skepticism. This mini-course provides an overview of the neuroscience behind and the potential for these developments. Topics will range from well-known and widely used applications, such as eye-tracking measures in the lab and field, to emerging methods and measures, such as mobile technologies, face-reading algorithms, and neural predictors of marketing response. The course will also discuss applications in branding and product development, including wearable physiological devices and apps, sensory branding for foods and fragrances, pharmaceuticals and medical devices, and neuroscience-based products designed to enhance cognitive functions. These applications stem from many subfields of cognitive neuroscience, including attention, emotion, memory, and decision making. This course is self-contained and has no prerequisites. However, students with some background in business, economics, psychology, and/or neuroscience are likely to find the material covered in this course complementary to their existing knowledge.
Taught by: Gideon Nave
Course usually offered in spring term
Also Offered As: MKTG 350
Activity: Lecture
0.5 Course Units
Notes: One half term. 0.5 cu. Check meeting dates. Students should register for this course before the end of the Course Selection period (September for fall, January for spring), for sections offered in the SECOND half of the term.
MKTG 851 Special Topics: Introduction to Brain Science for Business

INTRODUCTION TO BRAIN SCIENCE FOR BUSINESS: Brain science offers the potential to unlock the future of business, by providing new insights that can enhance decision-making, improve precision in design and marketing, team chemistry and cultivate leadership, fine-tune selection and human performance, drive creativity and innovation, create social values, and optimize digital interactions. New developments in biometrics, implantable and wearable devices, genomics, proteomics, metabolomics, nutrition, and human microbiome, offer the opportunity for enhanced precision and impact in marketing, finance, management, analytics, and education. This course will provide an overview of contemporary brain science and its applications to business. Students first will be introduced to the basic anatomy and physiology of the brain and become familiar with important techniques for measuring and manipulating brain function. The course will then survey major findings in neuroscience with applications to business, including selective attention and advertising; valuation and marketing; decision making; learning, innovation and creativity; and social influence, team-building, and leadership. The course will end with a discussion of ethics, brain-machine interactions, and artificial intelligence. Applications to business, education, sports, law and policy will be discussed throughout.

Taught by: Michael Platt
Course usually offered in spring term
Also Offered As: MKTG 351
Activity: Lecture
0.5 Course Units
Notes: One half term. 0.5 cu, Check meeting dates. This course is now offered as MKTG 737 x.

MKTG 852 Special Topics - Marketing Analytics

MARKETING ANALYTICS: Companies are currently spending millions of dollars on data-gathering initiatives - but few are successfully capitalizing on all this data to generate revenue and increase profit. Moving from collecting data to analysis to profitable results requires the ability to forecast and develop a business rationale based on identified data patterns. Marketing Analytics will cover the three pillars of analytics - descriptive, predictive and prescriptive. Descriptive Analytics examines different types of data and how they can be visualized, ultimately helping you leverage your findings and strengthen your decision making. Predictive Analytics explores the potential uses of data once collected and interpreted. You will learn to utilize different tools, such as regression analysis, and estimate relationships among variables to predict future behavior. Prescriptive Analytics takes you through the final step - formulating concrete recommendations. These recommendations can be directed toward a variety of efforts including pricing and social-platform outreach.

Taught by: Iyengar
Course usually offered in fall term
Also Offered As: MKTG 352
Prerequisite: MKTG 611 AND STAT 613
Activity: Lecture
0.5 Course Units
Notes: One half term. 0.5 cu, Check course meeting dates. Students should register for this course before the end of the Course Selection period (September for fall, January for spring) for sections offered in the SECOND half of the term.

MKTG 853 Special Topics: Design Thinking - A Human-Centered Approach to Innovation

DESIGN THINKING - A HUMAN-CENTERED APPROACH TO INNOVATION: In this hands-on experiential course, students will partner with a local start-up to apply design thinking steps taught throughout the course. Students will learn how to uncover deep consumer needs, effectively ideate, and create rapid prototypes to test their ideas with real customers. This class is well suited for those interested in careers in innovation or management consulting, marketing, product management, technology, or entrepreneurship. No prior experience or requirements are needed for this course.

Taught by: Caputo
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MKTG 854 Special Topics: Visual Marketing

VISUAL MARKETING: As consumers, we are constantly exposed to advertisements and experience visual messages from product packages in stores, retail displays, and products already owned. In essence, visual marketing collateral is omnipresent and is an essential part of corporate visual identity, strategy, branding, and communication. Some of this falls to creative graphic design, but advertising, design, and marketing can also be significantly enhanced by knowledge of how visual information and its presentation context can be optimized to deliver desirable and advantageous messages and experiences. This course will emphasize how to measure, interpret, and optimize visual marketing. This course will use lectures, discussions, exercises and a group project, to help students understand the underlying processes that influence our visual perception and visual cognition. Students will learn about the theoretical processes and models that influence, attention and visual fluency.

Students will also be exposed to eye-tracking instruments that help measure eye movement. Finally, we will explore how visual stimuli can influence consumer memory, persuasion, and choice. We will examine practical applications in marketing, advertising, packaging, retail, and design contexts.

Taught by: Johnson and Kahn
Course usually offered in spring term
Also Offered As: MKTG 354

1.0 Course Unit
Notes: 1.0 cu. This course has been replaced by MKTG 739 x. Format: In-class exercises, team-based learning, discussions, and lectures.
MKTG 890 Advanced Study Project (ASP)

RETAIL ECOSYSTEM ACTION LEARNING PROJECTS: This course offers graduate students from Wharton and other Penn schools an opportunity to work on real-world projects for companies in the retail industry and in the wider retail ecosystem. It requires the exploration and analysis of actual business issues or opportunities identified by sponsoring/client companies, as well as the formulation of recommendations. It combines 1) academic principles, 2) application of prior business knowledge to the project at hand, and 3) a solutions-oriented mentality. In addition to supervised project work and regular updates to the corporate client/project sponsor, the course involves classroom meetings and discussions on topics pertaining to the projects. While this course focuses on ‘marketing’ topics, projects might also incorporate topics from related disciplines such as operations, management of innovation & technology, data analytics, international management, design, and real estate. Indeed, the goal will be to constitute interdisciplinary teams from Wharton and other relevant Penn graduate schools. ADVANCED STUDY PROJECT (GENERAL): The principal objectives of this course are to provide opportunities for undertaking an in-depth study of a marketing problem and to develop the students' skills in evaluating research and designing marketing strategies for a variety of management situations. Selected projects can touch on any aspect of marketing as long as this entails the elements of problem structuring, data collection, data analysis, and report preparation. The course entails a considerable amount of independent work. (Strict library-type research is not appropriate) Class sessions are used to monitor progress on the project and provide suggestions for the research design and data analysis. The last portion of the course often includes an oral presentation by each group to the rest of the class and project sponsors. Along with marketing, the projects integrate other elements of management such as finance, production, research and development, and human resources.

MKTG 893 Advanced Study: MKTG in Emerging Economies: Understanding & MKTG to the Chinese and Indian Consumer

This course is a two part series. The first part concentrates on the Indian Consumer and the second part concentrates on the Chinese Consumer. India and China add up to half of the world’s population. Each presents its own challenges and opportunities. US and European MNCs have been in both countries for many years, but emerging market MNCs are becoming stronger and in many cases overtaking US and European companies despite their strong brands and know-how. Marketing to the Indian Consumer will provide a careful understanding of: The opportunity and challenges in the Indian consumer market 2) Various segments within the Indian consumer market. 3) Consumer psychology and decision making processes in each segment 4) Distribution channels in India: Mass, Local and non-traditional. 6) Bottom of the pyramid consumers and rural markets. 7) Product design and development decisions. The course will focus on the following industries: consumer packaged goods, mobile phones, financial services (insurance and banking), healthcare, sports and entertainment, and transportation. The course will involve case studies from local and international companies, guest lecturers, and visits to consumer homes to observe their tastes, habits, and preferences. Marketing to the Chinese Consumer will provide students with a critical understanding of the Chinese consumer, distribution channels, pricing environment, branding and competitive dynamics so as to enhance their ability to market to the Chinese consumer successfully. The course will consist of a combination of lectures, case studies, presentations by industry experts, and a short evening field trip.

Taught by: Raju and Zhang
Course not offered every year
Also Offered As: WH 216
Activity: Lecture
0.5 Course Units
Notes: Indian Consumer Section of the Course is taught in Mubai, India, The Chinese Consumer Section of the Course is taught in Beijing, China.
MKTG 895 Global Business Week

GLOBAL BUSINESS WEEK: MKTG 895 is one in an array of Global Business Week (GBW) study tour courses offered by various departments across Wharton. Each of the GBW courses offered in a term, will entail travel to a different part of the world and address a different element of economic driver for a country or industry. A faculty member will drive the topic and curriculum associated with a study tour to a region of the world where the study of a topic will provide insights and clarity available only by being in country. In country lectures from the lead faculty and area experts in industry, academia and government will form much of the basis of class time. In addition, students will experience relevant company and cultural settings where they will again hear from industry experts. Each course will require an individual student paper, a participation component, and a pre-travel or in-country set of assignments. See course syllabus for details. CUSTOMER CENTRICITY AT THE LEADING EDGE OF ANALYTICS AND TECHNOLOGY: LEARNING FROM SCANDINAVIA. Instructor: Peter Fader. The concept of `customer centricity`, i.e., that not all customers are created equal, is gaining credibility and traction. More and more firms are coming to the realization that understanding and leveraging the behavioral differences across customers can potentially be more sustainably profitable than more conventional product-centric thinking that continues to dominate today's business landscape. At the heart of this transformation are three critical ingredients data, analytics, and technology. Using customer data at a granular level allows firms greater visibility into customer interactions, their use of social media, biometrics, and geolocation as tools to enhance business models and even create new ones. It allows a firm to be deliberate about which customers to go after and what kinds of services to provide them. For many, the key to profitable growth lies in successfully harnessing and developing the tools, organizational structures, and corporate cultures that create and enhance these capabilities. Companies in Scandinavia are using these approaches in unique ways and more prevalently than in other regions of the world. Their unique ecosystem is a key to creating organizations that can flourish right out of the gate, and to help established ones adapt and change successfully. Ultimately the course will examine how customer centricity enables firms to change their interaction with consumers, vendors, government, and other ecosystem players in facilitating these changes.

Notes: Wharton Executive MBA Course. Course must be taken for a grade (no pass/fail option) and will be subject to the standard CMGPA and LT requirements for MBA courses.

MKTG 897 Advanced Study: Luxury Branding and Retailing in Italy and Beyond

New retail brands and opportunities for growth are emerging at an unprecedented rate, for online retailers and offline retailers alike. In this course we will: (1) articulate key principles for successful branding and for understanding consumer shopping behavior in retail environments, (2) demonstrate unique challenges and opportunities that luxury brands face, and (3) discuss concepts and empirical methods for analyzing consumer shopping behavior.

Taught by: David Bell, Barbara Kahn

MKTG 899 Independent Study

A student contemplating an independent study project must first find a faculty member who agrees to supervise and approve the student’s written proposal as an independent study (MKTG 899). If a student wishes the proposed work to be used to meet the ASP requirement, he/she should then submit the approved proposal to the MBA adviser who will determine if it is an appropriate substitute. Such substitutions will only be approved prior to the beginning of the semester.

MKTG 940 Measurement and Data Analysis in Marketing - Part A

In this course we consider models for binary, count, and continuous data including contingency table models, logistic and probit regression, ANOVA, ANCOVA, conjoint analysis, and OLS. In addition we cover multidimensional techniques such as MDS, cluster analysis, principal components analysis, factor analysis, and discriminant analysis. We utilize the statistics package SPlus 2000, and also BUGS for implementing many of the techniques described in a Bayesian manner.

MKTG 942 Research Methods in Marketing - Part A

This course provides an introduction to the fundamental methodological issues that arise in experimental and quasi-experimental research. Illustrative examples are drawn from the behavioral sciences with a focus on the behavior of consumers and managers. Topics that are covered include: the development of research ideas; data collection and reliable measurement procedures; threats to validity; control procedures and experimental designs; and data analysis. Emphasis is placed on attaining a working knowledge of the use of regression methods for non-experimental and quasi-experimental data and analysis of variance methods for experimental data. The primary deliverable for this course is a meta-analysis of a research problem of the students choosing that investigates the effects of research methods on empirical results.

**MKTG 950 Judgment and Decision Making Perspectives on Consumer Behavior - Part A**

The purpose of this course is to provide a solid foundation for critical thinking and research on the judgment, decision-making and choice aspects of consumer behavior. There is a focus on how people process information when making judgments and choices and how the processes of judgment and choice might be improved. Topics of discussion include rationality, judgment under uncertainty, judgment heuristics and biases, risk taking, dealing with conflicting values, framing effects, prospect theory, inter-temporal choice, preference formation, and the psychology of utility. The focus will be on the individual decision-maker, although the topics will also have some applicability to group and organizational decision-making and behavioral research methodologies.

**MKTG 952 Information Processing Perspectives on Consumer Behavior - Part A**

The purpose of this seminar is to provide graduate students with a solid foundation for critical thinking and research in psychology and marketing on information processing related topics. Topics of discussion include consumer knowledge (learning, memory and categorization), attitude theory, persuasion, affect and social influence. The course draws from the literature in marketing, psychology and economics. The course will enable students to conceptualize, operationalize, and develop research ideas. Therefore, the focus is on understanding theoretical and methodological approaches to various aspects of consumer behavior, as well as advancing this knowledge by developing testable hypotheses and theoretical perspectives that build on the current knowledge base.

**MKTG 954 Economic/OR Models of Marketing - Part A**

This doctoral seminar reviews analytical models relevant to improving various aspects of marketing decisions such as new product launch, product line design, pricing strategy, advertising decisions, sales force organization and compensation, distribution channel design and promotion decisions. The primary focus will be on analytical models. The seminar will introduce the students to various types of analytical models used in research in marketing, including game theory models for competitive analysis, agency theory models for improving organization design and incentives within organizations, and optimization methods to improve decision making and resource allocation. The course will enable students to become familiar with applications of these techniques in the marketing literature and prepare the students to apply these and other analytical approaches to research problems that are of interest to the students.

MKTG 956 Empirical Models in Marketing - Part A
This course is designed to generate awareness and appreciation of the way several substantive topics in marketing have been studied empirically using quantitative models. This seminar reviews empirical models of marketing phenomena including consumer choice, adoption of new products, sales response to marketing mix elements, and competitive interaction. Applies methods and concepts developed in econometrics and statistics but focuses on substantive issues of model structure and interpretation, rather than on estimation techniques. Ultimately, the goals are a) to prepare students to read and understand the literature and b) to stimulate new research interests. By the end of the course, students should be familiar with the key issues and approaches in empirical marketing modeling.
Course usually offered in spring term

MLA 541 Academic Writing and Research Design in the Arts and Sciences
Have you ever noticed that scholars in different academic disciplines seem to speak different languages? Have you wondered how scholars put together a plan for their research, explain their findings, and organize and write their papers? The class is designed to introduce MLA students and other advanced students to the research and writing conventions used by scholars in the arts and sciences. With attention to disciplines in the humanities, social sciences, and sciences, we will identify and explore some of the theories, sources, language, and qualitative and quantitative methodologies that scholars use as they conduct original research in their fields. Throughout the class, we will also discuss writing conventions across the arts and sciences, with special attention to the structure of argument; the use of evidence; voice and style in both traditional academic writing and more innovative forms of writing; and documentation conventions. Students will develop an original research project through incremental writing assignments, and will write a formal research proposal (15-20 pages), which can be used as their Capstone proposal if they wish.

Master of Science in Social Policy (MSSP)

MSSP 601 The Power of Partnerships between Government, Non-profits, & the Private Sector
Everything from the Affordable Care Act to the Mayor’s Rebuild Initiative here in Philadelphia could not be implemented by government without strong and vital partnerships with non-profits and the private sector. These collaborations provide an opportunity to help people, impact and change policy, improve outcomes, and multiply the impact that non-profit and private sector organizations can have. The course will help graduate (and advanced undergraduate) students not only understand the theory, policy, and practice of these collaborations but also learn how they actually happen. Students will also learn the characteristics of these three sectors, their roles and contributions, and competitive forces that are often at work in the collaborative process. Topics for discussion will include attitudes and expectations in the public sector, the ingredients of effective partnerships, and effective communication strategies with elected and appointed officials. The course will be conducted on a seminar basis. Graduate students are expected to take an active part in shaping the discussion. Students will be expected to rotate leadership for the class discussions and to supplement course materials with independent study of relevant magazine and newspaper articles. Course grades are assigned as follows: 20 percent for class participation, 15 percent for an in-class written exam, 30 percent for a group presentation and write up of a case study, and 35 percent for a final project. High quality written work and accurate citations is an expectation in all assignments.
Taught by: Ezekiel Dixon-Roman
Activity: Seminar
1.0 Course Unit

MSSP 606 Data for Equitable Justice Lab
Data for Equitable Justice Lab is a non-credit research group that gives SP2 Masters students an opportunity to analyze some of today’s most important social issues through data and, with faculty support, create a product for audiences well beyond our classrooms and campus. With guidance from the lab faculty, students develop a project - either individually or as part of a team - to examine a contemporary social policy or political issue through or on data or digital technology. Through these projects students will produce an op-ed, blog post, podcast, academic article, short film, or other product of their choosing that creates or contributes to contemporary discourse.
Taught by: Dan Treglia
Course offered summer, fall and spring terms
Activity: Laboratory
0.0 Course Units
MSSP 607 Practical Programming for Data Science
This course familiarizes students with no prior programming experience with the core concepts of programming and the practice of software development for data-intensive applications in industry and government. After this course, students will be comfortable (1) writing code to save and load from files and spreadsheets into basic data structures like strings, lists, and maps; (2) manipulating data with code to perform tasks such as generating aggregate statistics and filtering data into subsets; (3) effectively communicating findings from interactive, exploratory programming with others; and (4) working with technical teams, using best practices of software development when building line-of-business applications.
Taught by: Elijah Mayfield
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

MSSP 608 Practical Machine Learning Methods
This course prepares students with no background in machine learning or data science to use tools from those fields effectively in applied contexts. Using GUI-based software - or optionally, by programming with libraries - students will build skills including (1) feature representations of spreadsheet-based or text datasets; (2) training classification and regression models for prediction tasks; (3) evaluation of machine learning model accuracy and error analysis; and (4) reasoning about predictive models and making tradeoffs like bias vs. variance, granularity and annotation complexity in labeled training data, and the ethical application of predictive modeling to human-centered data.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MSSP 609 Invisible Injustices: How Policy & Bureaucracy Create (& Hide) Diff. & Power
How does the design of everyday objects and systems in our social world - from the workplace to the civic sector - produce variation in our political participation to promote or stifle the collective project of social justice? Systemic injustice expresses itself in everything from software interface designs to paper passport applications. Using these objects and others, this course focuses on the ways in which power operates through and within aesthetics to create and enforce difference and produce the inequalities that demand a collective reimagining of our world. What might we learn from these 'aesthetic assemblages' of power and difference, and their manifestations in current social policy? In this course, we will work with case studies from a range of politically urgent topics - mass incarceration, immigration reform, healthcare inequality - through the lens of critical theories and pedagogies that center the lives of those communities most impacted by discriminatory social policy.
Students will learn to apply the thinking of scholars such as Fred Moten & Stefano Harney, Dean Spade, and Mel Chen towards their own social justice-informed approaches to social policy and practice. Through independent study projects, students will explore their own unique areas of interest beyond the scope of this course to rethink how critical theory can shape and be shaped by on-the-ground, everyday practices.
Taught by: Nicole Sansone
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

MSSP 627 Practice and Policy
Critical skills in many policy frameworks include: problem definition and analysis, review of relevant research, identification of possible actions, implementation and evaluation, and fiscal analysis. Competency in written and oral communication is also essential. To develop these related skills, this course utilizes as a base a dynamic social problem analysis framework that addresses issues of equity, equality and adequacy. It also examines multiple theoretical and analytical perspectives. Through the review of contemporary and historical social policy debates and provisions, selected case examples and policy briefs, this course provides students with an understanding of the policy roles of the legislative and executive branches of government, including goal setting, policy rulemaking and enactment, allocation of resources, financing, regulation, and implementation. The policy process at state and local levels of government will also be addressed. The primary focus is on U.S. policy although global policies will be discussed when relevant.
Taught by: Amy Baker
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

MSSP 629 Quantitative Reasoning/Social Statistics
The primary goals of this course are (1) to provide students with a solid understanding of the logic of social science research as well as (2) to provide students with an introduction to a broad range of statistical methods commonly used in social science research. The first portion of the semester concentrates on defining research problems, research design (including sampling, measurement, and causal inference), and assessing research quality. The latter portion of the semester focuses upon data analysis including descriptive statistics, measures of association for categorical and continuous variables, introduction to t-tests, ANOVA and regression, and the language of data analysis. Students will learn how to choose and apply statistical tools to data sources, how to interpret quantitative studies, and will gain experience using SPSS - a statistical software package.
Taught by: Ioana Marinescu
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
MSSP 631 Law and Social Policy
This course introduces students to the basics of the American legal system, focusing on the interplay between litigation and social policy. Students will learn how law, and particularly case law, is made, how to read case law and evaluate precedent, legal reasoning and argument. This course will utilize various teaching methods including introduction to the 'Socratic' lecturing method which is frequently utilized in the study of law. Students will also study the structure of court systems at both state and federal levels as well as the litigation process and the role of law and courts in shaping and addressing social policy issues. Students will also learn the basics of several areas of substantive law, with an eye toward consideration of how that law has been, and can be, used to effect social change.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MSSP 632 Capstone Seminar I: Policy Communications
The focus of the Capstone Seminar is three-fold: 1) to enhance student integration of the theory and practice of social policy analysis; 2) to enhance the student’s competencies in the written and oral communication processes and procedures necessary for the policy world; and 3) to ensure basic knowledge about federal budget processes, stakeholder roles, and inter-organizational collaboration. Registration restricted to majors only.
Course usually offered in spring term

0.5 Course Units

MSSP 633 Capstone Seminar II: Policy Internship
Capstone II consists of an intensive, multi-week policy internship that is selected through a consultative process involving the student, MSSP advisors, internship coordinator/advisor, and mentors/supervisors at potential sites. The internship provides an opportunity for the student to expand horizons beyond the academic. It serves as a medium to integrate classroom learning with experiences in policy making activity. Registration restricted to majors only.
Course usually offered in spring term
Activity: Seminar
0.5 Course Units

MSSP 634 MSSP/DA Capstone I: Telling Stories with Data
The volume and complexity of data continues to increase in the world around us, including science, business, medicine, social media and everyday human activity. This course aims to expose students to visual representation methods and techniques that increase the understanding of complex data. Good visualizations not only present a visual interpretation of data, but do so by improving comprehension, communication, and decision making. In this course, students will learn about the fundamentals of perception, the theory of visualization, and good design practices for visualization. The course will also provide hands-on experience on the process of data communication, from initial data analysis, to identifying appropriate visualization techniques, to crafting informative visualizations.
Course usually offered in fall term
Activity: Seminar

MSSP 667 Critical Global Politics, Policy & Identity
What is identity? Why do we identify with categories such as ‘Black’, ‘Latino’, ‘Queer’, ‘American’ or ‘Asian’? How do these categories play a role in current Global Politics, and how have Global Politics & Policies helped configure different identities throughout history? According to Fredric Jameson, in the 60’s there was a Global Shift by which the ‘natives of the world’ became human beings. Concepts such as ‘diversity’ and ‘identity’ as we know them today originated in these global reconfigurations of subjectivity that occurred in the context of the decolonization of Africa, the Civil Rights movements in the United States, and the Cuban Revolution, among other historical events. As western nations were coming to terms with Otherness within their own borders, confronting the needs of women and minorities, underdeveloped nations were fighting for independence and liberation claiming their rights in the new geopolitical arena. At the same time, the Orient had become the West’s most powerful cultural contestant and, as Edward Said put it, its ‘deepest and most recurring’ Other. This course is designed to provide students with the critical and analytical tools to understand different global policies and political events, while examining their implications in the formation of identity through the lens of critical theory. Each class will be structured around a case study that students will reflect upon using the assigned readings and supporting materials. Students will learn about the discursive formations that have made possible to name ourselves in opposition or in relation to others, claiming gender, race, national, class identities that are indebted to power-knowledge dynamics rooted in colonialism. We will examine how class is reformulated into different types of Capitals that inform positionality in the social space (Bourdieu). We will analyze how race as a tool for classifying bodies became a global category present, for example, in the War on Terror after 9/11, as well as in the Global division of nations based on different degrees of development. We will question how nationalism is formed and enacted in a changing world where migration is so prevalent. Along with racial, national, and global processes for subjectivization, we will examine gender, non-binary and queer identities, and how they all intervene LGBTQ rights, abortion and same-sex marriage policies. Finally, we will discuss ethics and climate change in the context of environmental racism (i.e. Flint & Newark) and Global climate strikes instigated by activist Greta Thunberg. This course will enable students to analyze and understand policy as always-already intersectional, global, and political.

MSSP 668 Economics for Social Policy
Economics allows us to determine the costs and benefits of social policies like cash benefits, unemployment insurance, health insurance, pensions, education, etc. Policies typically affect the behavior of agents like individuals, families and firms, and we have to take these reactions into account when analyzing policy. Economics allows us to predict how policy is likely to affect behavior by understanding how the policy changes individuals’ decisions, and what collective outcomes these myriad individual decisions bring about. For example, a universal basic income allows individuals to sustain themselves and their families when they are not working. At the same time, such guaranteed income has the potential to discourage people from looking for a job. If enough people are discouraged from looking for a job, employment in the economy will decrease, leading to lower production and lower tax revenues for the government. Policy makers have to take these phenomena into account in order to design a good income support system.

Taught by: Ioana Marinescu
Course usually offered in fall term

MSSP 701 Race, Technology, & the Body
The history of the relationship between race and technology has long been fraught. On the one hand, the sociopolitical formation of race constituted black and brown bodies in juxtaposition to the logics of reason that the instruments of post-Enlightenment technicity were built. On the other hand, as Wendy Chun argues, the discursive formation of race was a technology in and of itself that was designed to hierarchize and differentiate bodies as well as to make black and brown bodies extracted technologies for labor and Capital. This seminar will explore this deeply enmeshed history between race and technology by engaging text in the history of science and philosophy, critical theories of technology, cybernetics, and critical theories of difference. These text will range in topics from the transparent subject to surveillance of technology, cybernetics, and critical theories of difference. The text will include both scholarly written products as well as media and popular culture. Students will learn about the history of philosophy and technology in relation to race and the (em)body as well as how to examine for speculative futures.

Taught by: Ezekiel Dizon-Roman
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MSSP 702 Aestheticizing Assemblages: Power, Policy, Bureaucracy, and Difference
While social mechanisms of power might be kept out of sight, their productive capacities are generative of volumes of material. This course focuses on the material traces of power to map how bureaucracy, at all scales and registers, creates and enforces difference as a power differential. Specifically, we will explore how power expresses itself aesthetically in bureaucratic processes as in, for example, the organization of spreadsheets, the distribution of administrative power via forms and chains of command, and software design. Course materials, assignments, and lectures will triangulate theory, evidence, and policy as a way of grounding parallel inquiries into the ethics of these assemblages and their manifestations. The final three weeks of term have been reserved for group reflection and synthesis. Students are able to introduce new areas of exploration at this time specific to their interests.

Taught by: Nicole Sansone
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MSSP 703 Visual Techniques for the Contestation of an Unjust World
This course will observe alternate modes of contesting power asymmetries in society and culture. In particular we will observe how projects such as those organized by the Black Panther Party, Brown Berets, and the Farm Workers Movement reveal something to us about how policies are unjustly received on the ground, and how para-governmental projects can provide a pathway for understanding how to create more just societies, policies, and alliances. We will also explore more contemporary practices of social justice through art practices that have also specifically targeted policy, such as those carried out by the Carrot Workers Collective, Critical Art Ensemble, Natalie Jeremijenko, and others. The aim of the course will be to use these practices to try to develop an ethics divorced from norms that could then productively be applied to policy making.

Taught by: Nicole Sansone
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MSSP 704 Critical Studies in Health Inequity and Policymaking
The relentless focus on the being of health inequity often overshadows the becoming of health inequity. Each drip of social injustice pools into a confrontation that disproportionately affects the health and healthcare of the socially disadvantaged groups. This course navigates health policymaking through a sociohistoric lens and grapples with contemporary perspectives in health equity. We explore the theoretical frameworks that best informs the existence of health inequity along with the practices that eliminate health inequity. Students will have the opportunity to learn how to effectively communicate evidence-based strategies in both policy and academic grant formats. While generally structured as a seminar, this course extends the walls of the classroom and encourages students to confront real-life health policy issues while engaging local, state, and federal health policy influencers. Students will spend time in the robust archives and cutting-edge medical facilities at Penn to best hone their policymaking voice.

Taught by: Kevin Jenkins
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
MSSP 710 Democratizing Data? Critical Data Studies in Algorithmic Governance
With the advent of digital technologies nad the increasing power of computational analytics, the proliferation and ubiquity of data production has increased at exponential rates enabling new possibilities for social analysis. This course will examine the emergence of democratizing data – the movement to make government and other data more widely or publicly available and its potential enabling for democratic possibilities. The types of data being made available, through various analytic systems, and the ways in which their accessibility and inaccessibility is contributing to reconfigured power relations, will be described. The paradigmatic tensions and shifts that have emerged in the debates on ‘Big Data,’ such as deductive versus inductive reasoning and the challenges posed to statistical sampling theory, will be interrogated. The appropriation of machine learning and predictive analytic algorithms for social analysis will be critically explored. Issues related to the ethical and legal use of administrative data, particularly data related to patient, client, student, and taxpayer information will be considered, as well as from internet-based sources including social media. Potential solutions to data security challenges will be additionally considered. Methods for web-scraping of data, analysis of web traffic data, and the use of social networking data in the modeling of social phenomena and public opinion will be examined. Students will learn how to make results accessible to non-technical audiences via data visualization tools, such as web-based data dashboards and web-based maps. These topics will be discussed for the analysis of health, education, and social policy as well as their implications for questions pertaining to race, gender, class, sexuality, dis/abilities, age and youth culture. This course will develop students’ knowledge of computational and data analytics and its applications for social policy analysis.
Taught by: Ezekiel Dixon-Roman
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

MSSP 741 Gender & Social Policy
Gender and Social Policy develops an advanced understanding of social policies through a focus on social issues and conditions through the lens of gender, economic and critical theory. The specialized focus on gender and social policy provides students with the opportunity to develop more specialized knowledge about how market dynamics and government policies respond to the needs and risks faced by women. Specific emphasis is placed on utilizing theoretical frameworks to evaluate the intersection between social policy, history and social science in relationship to gender issues. Students are also expected to conduct a policy analysis that includes an evaluation of how current and former social movements surrounding gender issues shaped their policy of interest.
Taught by: Baker
Course usually offered in spring term
Also Offered As: SWRK 741
Activity: Lecture
1.0 Course Unit

MSSP 755 International Social Policy & Practice: Perspectives from the Global South
This interdisciplinary course will introduce students to social policy and practice perspectives from outside the U.S. and especially from communities in the Global South. The course will familiarize them with global professions and help prepare them for overseas/cross-cultural practice. Through the course students will identify numerous strategies and skills professionals have used to collaboratively build interventions within human rights, social policy, social welfare, education, healthcare and sustainable development arenas.
Taught by: Anastasia Shown
Course usually offered in fall term

MSSP 768 Social Policy Through Literature
Also Offered As: SWRK 768
Activity: Lecture
1.0 Course Unit

MSSP 780 Policy and ‘Difference’ in Postmodernity
Social constructions of ‘difference’ permeate the institutions, spaces, and assumptions of our society. These social constructions include but are not limited to the racialized, gendered, sexed, classed, and dis/abled constructions of the body. By leaning on postmodern thinkers such as Iris Marion Young, Pierre Bourdieu, Judith Butler, Jacques Derrida, Ernesto Laclau, and Michel Foucault, this seminar course will begin by engaging the questions of what is ‘difference’ and how is ‘difference’ discursively constructed and reproduced in society. Using a postmodern lens, the remainder of the course will engage various social science texts that deal with the varieties of ‘difference’ (i.e. race, gender, class, sexuality) and the explicit and/or implicit policy implications of these works. Thus, we will critically engage policies such as welfare, affirmative action, economic policies of taxation, and same-gender marriage, among others. The underlying questions throughout the course will be to what extent does social policy enable the possibilities of freedom, justice, and democracy for the ‘Other’, the deviant, the abject, the marginalized, those of assumed ‘difference’? And, to what extent does policy constrain those possibilities at the same time? This course does assume familiarity with social theory and is an introduction to postmodern thought on the law, the political, and policy.
Taught by: Dixon-Roman
Course usually offered in spring term
Also Offered As: SWRK 780
Activity: Seminar
1.0 Course Unit
MSSP 796 Family Economic Mobility: Problems and Policies
The experiences and voices of mothers, fathers, children, employers, children's teachers, human service workers, job training providers, policymakers and others in cities across America graphically show us the 'real life' challenges to economic mobility facing today's families and organizations. These voices particularly illustrate how economic, social, and cultural policies, practices, and beliefs intersect to perpetuate economic inequality for low-income and many middle-income working families alike. The labor market, welfare and workforce programs, public schools and government are some of the institutions implicated in this intersection. In the course we deconstruct concepts such as the 'work ethic,' 'family-friendly workplace,' and 'good jobs' in terms of economic, racial and cultural inequalities and, more broadly, in terms of their meaning, aims and rhetoric. At base, this course examines occupational mobility in America within the broad framework of capitalism, democracy, race, ethnicity and gender. Students from GSE, SAS, City Planning, and Communications often join SP2 students to read and critique classic and contemporary literature from multiple disciplines and explore generative roles for 'meso-oriented' social change professionals.

MSSP 797 Social Policy in Revolutionary Cuba (1959-2017)
Cuba represents one of the world's long-standing institutionalized revolutions whose narrative and policies have changed from a strong nationalism yearning for independence, to an alignment with communism's ideology and modus operandi, to a nostalgic, post-Soviet Union 'socialism' ruled by a binary, state-controlled capitalism. In addition to the myriad of social and political changes affecting the island, the transition of leadership from Fidel Castro to his brother, Raul, and the death of the former in 2016, has put into question the theoretical pillars of the Revolution, thus undermining its initial legitimacy. This course is designed to provide students with the critical and analytical tools to dissect Cuban revolutionary politics, policies, and identity mutations within the island's historical trajectory. We will begin by critically reviewing key points of diplomatic and historical relationships between the U.S and Cuba, followed by an analysis of the notion of independence - upon which Castro relied to gather massive support - in the context of the 60's debates on decolonization and underdevelopment. In addition, we will delve into the theoretical foundations of the Revolution focusing, among other texts, on the literature by Cuba's 'founding father' Jose Marti, who deeply influenced the Spanish-American war (1898)'s outcomes as well as Fidel Castro's vision for Cuba. Throughout the course, students will also have the opportunity to critically read and discuss main Cuban social policies such as its famous Literacy Campaign, and other Education, Housing, Cultural, Health, and Immigration policies, as well as the island's complex relationship with technological development and communications. Finally, we will study identity and race dynamics, which are inextricably embedded in Cuba's political landscape. This course will begin with six introductory sessions at the University of Pennsylvania, followed by six class meetings during a two-week stay in Havana, Cuba. Once on the island, students will visit key historical and cultural sites such as El Mueso de la Revolucion (The Museum of the Revolution), El Museo de la Alfabetizacion (The Literacy Museum), and La Escuela de Artes Plasticas (National Art School). Parallel to these endeavors, students will also engage in conversations with distinguished Cuban scholars and cultural critics. Lastly, students are required to develop a research project on a particular Cuban social policy and produce a final paper or writing/multimedia project.

Course usually offered in spring term

Activity: Lecture

MSSP 799 Independent Study
Independent studies provide a flexible opportunity for standing faculty and students to work together in pursuing a topic of special interest that is not sufficiently covered by other courses in the curriculum. The content of independent studies is highly specialized and, as such, requires a plan of study developed jointly by the student(s) and the supervising standing faculty member. Part-time faculty members are not eligible to offer independent studies. Independent studies require the academic advisor's approval.

Activity: Independent Study
1.0 Course Unit
MSSP 806 Systematic Reviews: Meta-Analysis and Meta-Synthesis
Systematic reviews and the synthesis of their primary studies (meta-
analyses for quantitative studies and meta-synthesis for qualitative
studies) are proliferating, and emerging scholars need to be conversant
in the methodology, so they can contribute this type of valuable evidence
to their knowledge areas. Through this course, students will learn how
to locate, understand, and critically appraise systematic reviews. They
will also learn how to write a protocol for an original systematic review
and carry one out within a small student group. At the completion of the
course, students will have a finished systematic review.
Taught by: Jacqueline Corcoran
Course usually offered in spring term
Also Offered As: SWRK 806
Activity: Lecture
1.0 Course Unit

MSSP 897 Applied Linear Modeling
This course deals with the underlying assumptions and applications
of the general linear model with social science, education, and social
policy related questions/data. The first half of the course begins by
covering simple linear regression and the assumptions of the general
linear model, assumption diagnostics, consequences of violation, and
how to correct for violated assumptions. This will also include methods
of incomplete case analysis (i.e. missing data analysis). Then various
aspects of regression analysis with multiple independent variables will
be covered including categorical explanatory variables (e.g. to estimate
group differences), interaction effects, mediating effects (e.g. to estimate
the indirect effect of social processes), and non-linear effects. The course
will then cover some of the applications of the general(ized) linear model
including logistic regression, some elements of path modeling (structural
equation modeling), multilevel analysis (hierarchical linear modeling),
and longitudinal modeling (growth modeling). The course will be taught using
SAS, but students are welcome to use any statistical package of comfort.
Introductory Graduate Statistics is a prerequisite.
Taught by: Ezekiel Dixon-Roman
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MSSP 999 Independent Study
Independent studies provide a flexible opportunity for standing faculty
and students to work together in pursuing a topic of special interest that
is not sufficiently covered by other courses in the curriculum. The content
of independent studies is highly specialized and, as such, requires a
plan of study developed jointly by the student(s) and the supervising
standing faculty member. Part-time faculty members are not eligible
to offer independent studies. Plans for an Independent Study should
include: a statement of the issue(s) to be studied; a rationale for why
the identified issue(s) should be pursued via an independent study; a
statement of how the independent study fits into the student’s overall
educational plan; a summary of the independent study’s major learning
objectives; the methods to be used in carrying out the study; a workable
plan; the educational ‘products’ that will result from the study (normally a
written report or paper); and the expected date by which the independent
study will be completed. The process for arranging an independent study
requires approval of both the student’s academic advisor and a standing
faculty member who has agreed to conduct the independent study.
The procedures to be followed are: 1) the student discusses interest in
doing an independent study with the academic advisor; 2) if the advisor
concurs with the student’s submission, the advisor and student will
discuss potential standing faculty sponsors; 3) if a standing faculty
sponsor can be located, the student and standing faculty sponsor craft
the specific plan, including learning objectives, content, and structure
for the course; and 4) the academic advisor informs the registrar that
an independent study for the student has been approved. On the rare
occasions that a student is unable to schedule a regular School course,
the academic advisor makes a recommendation to the Associate Dean
for Academic Affairs who will try to identify a standing or adjunct faculty
member able to supervise the course delivered as an independent study.

Master of Science in Translational
Research (MTR)

MTR 510 Introduction to Clinical and Translational Research
This introductory course lays the foundation for understanding practical
aspects of conducting clinical research in an academic environment.
The course is divided into two modules: Module 1: Research Methods
& Protocol Development and Module 2: Regulatory Environment for
Clinical Trials. The first module introduces clinical research, clinical
protocols, study designs and biostatistics that underlie such studies.
The second module covers ethical considerations in clinical research,
study execution and oversight, and the regulatory environment for clinical
research. Upon completion, students should have a strong foundation
in the fundamentals of clinical research and should be able to apply
contemporary research tools to clinically relevant areas of investigation.
Prerequisite: This course requires permission to register. Please contact
Bethany Germany at (bgermany@upenn.edu) to register.
Taught by: Emma Meagher, MD
Course usually offered in fall term
Also Offered As: REG 510
Activity: Lecture
1.0 Course Unit
MTR 535 Introduction to Bioinformatics
This course provides overview of bioinformatics and computational biology as applied to biomedical research. A primary objective of the course is to enable students to integrate modern bioinformatics tools into their research activities. Course material is aimed at addressing biological questions using computational approaches and the analysis of data. A basic primer in programming and operating in a UNIX environment will be presented, and students will also be introduced to Python, R, and tools for reproducible research. This course emphasizes direct, hands-on experience with applications to current biological research problems. Areas include DNA sequence alignment, genetic variation and analysis, motif discovery, study design for high-throughput sequencing RNA, and gene expression, single gene and whole-genome analysis, machine learning, and topics in systems biology. The relevant principles underlying methods used for analysis in these areas will be introduced and discussed at a level appropriate for biologists without a background in computer science. The course is not intended for computer science students who want to learn about biologically motivated algorithmic problems; BIOL 437/GCB 536 and GCB/CIS/BIOL 537 are more appropriate. Prerequisites: An advanced undergraduate course such as BIOL 421 or a graduate course in biology such as BIOL 526 (Experimental Principles in Cell and Molecular Biology), BIOL 527 (Advanced Molecular Genetics), BIOL 540 (Genetic Systems), or equivalent, is a prerequisite.
Taught by: B Voight, C Greene
Course usually offered in spring term
Also Offered As: CIS 535, GCB 535, PHRM 535
Prerequisite: BIOL 421 OR BIOL 526 OR BIOL 527 OR BIOL 528 OR BIOL 540
Activity: Lecture
1.0 Course Unit

MTR 600 Introduction to Biostatistics
This course prepares students to understand and apply the necessary statistical methods to their thesis project, critically assess the application of statistical methods in the literature, and collaborate with biostatisticians.
Taught by: Roger Vaughan, MS, DrPH
Course usually offered in fall term
Also Offered As: REG 600
Activity: Lecture
1.0 Course Unit
Notes: Only MTR degree and certificate students may enroll in this course.

MTR 601 Review Writing
This course will lead students through the process of writing a review article during their first summer in the MTR program. Review articles will be authored with the student’s primary mentor and will be used to accomplish the following goals: 1) attain rapid familiarity with background in their new area of study; 2) a mechanism for mentor and student to create a productive working/writing relationship; 3) help the student identify key gaps in the literature and/or areas of controversy that would benefit from pivotal experiments; 4) understand the factors that contribute to variability in research outcomes in their area and; 5) introduce the student to other scientists in their new area through an initial publication early in their career. Mentors will be asked to agree to participate in this process, or identify another senior individual in their group who would perform the function. The course director will provide guidance and critical reviews throughout the process.
Taught by: Rachel Locke, PhD
Course usually offered summer term only
Activity: Seminar
1.0 Course Unit
Notes: Only MTR degree students may take this course.

MTR 602 Proposal Development
Focuses on study design and proposal development as they relate to studies that probe the mechanism of disease. Discusses concepts such as writing a background section, asking a research question, designing a study, use of biomarkers, writing a research proposal, overview of study designs addressing feasibility issues. Development of thesis proposal starts during this course and concludes with each student submitting and presenting their proposal to the MTR faculty panel for critique and feedback.
Taught by: Anil Vachani, MD
Two terms. student must enter first term.
Also Offered As: REG 602
Activity: Seminar
1.0 Course Unit
Notes: Only MTR degree students may enroll in this course.

MTR 603 Disease Measurement
Students will acquire the knowledge to effectively incorporate disease measurements into the design of clinical and translational research protocols, gain a basic understanding of measurement methodologies used in clinical medicine, understand how ‘normal’ values are determined, and how to interpret test results in the context of patients/research subjects. Students will also approach disease measurements as a means of answering questions, and be able to choose appropriate tests to answer the questions posed. The measurement aspects of the student’s research protocols are evaluated during this course. The course is separated into lab and imaging sections, with common introductory lectures.
Taught by: David Mankoff, MD, PhD, Yong Fan, PhD, Tracey Polsky, MD, PhD, Charlene Bierl, MD, PhD
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
Notes: Only MTR degree students may enroll in this course.
MTR 604 Scientific & Ethical Conduct
In this course, students will learn the foundational principles of scientific and ethical conduct of research, complete directed experience in evaluating these principles through IRB membership and ultimately be able to apply them to their own work. By the end of the foundational class sessions, students will understand scientific conduct, ethical considerations including human subjects and animal protections, regulations governing the use of health information, drugs, and devices, good laboratory practices, conflict of interest, and ethics in challenging new research domains. The directed experience will include membership for six months on an Institutional Review Board (IRB) at either the University of Pennsylvania or the Children’s Hospital of Philadelphia. This membership experience will expose students to real issues, considerations, and solutions in human subjects research and study design.
Taught by: Emma Meagher, MD
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MTR 605 Data Manuscript Writing
Students will write a primary data manuscript for publication with their primary lab mentor. Emphasis will be placed on identifying publishable data that was either generated by the student, or which is made available to the student for analysis from the mentor’s lab. The student will be expected to learn the role of first author including 1) coordination with the senior mentor to write the introduction, 2) organize data, analyses and figures, 3) obtain or write methods and results from collaborators, 4) writing a discussion and, 5) getting it out the door. Mentors will be asked to agree to participate in this process, or identify another senior individual in their group who would perform the function as a condition to have MTR students funded in their program. Course director and members of the curriculum committee will provide guidance and critical review of work throughout the process.
Taught by: Kachina Allen, PhD
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
Notes: Only MTR degree students may enroll in this course.

MTR 607 Thesis I
Candidates are expected to complete a thesis that involves designing a research project, writing a formal research proposal, performing the study described in it, preparing a comprehensive scholarly scientific paper reporting the results, and presenting and defending the thesis at a public seminar. At the time of application, each candidate specifies the project they will pursue, along with the lead mentor who will supervise the project.
Taught by: Emma Meagher, MD

1.0 Course Unit

MTR 620 Commercializing Translational Therapeutics
To provide an in-depth view of the process by which scientific discoveries are commercialized. This course covers discovery in the laboratory, technology transfer, regulatory, financial, and managerial issues involved in moving a technology from the lab into the market place. The course contents fall into three broad categories: (1) examples of scientific discoveries that are candidates for commercialization, (2) fundamental elements of technology transfer, such as intellectual property protection and licensing, and (3) aspects of commercialization, such as regulatory approval, financing, and startup formation. In using this structure, the course provides parallel coverage of both the science and the commercialization process, in such a way that the elements of one contribute to the student’s experience in learning the other. Prerequisite: Undergraduates and graduate students in other departments are welcome. Please contact mmmaxwell@upenn.edu to request permission to register.
Taught by: Nalaka Gooneratne, MD
Also Offered As: CAMB 707, REG 621
Activity: Lecture
1.0 Course Unit

MTR 621 Cell and Gene Therapy
This course will provide students with a general overview of translational research in the area of gene and cell therapy. This includes technical considerations, translating preclinical investigation into therapeutics, the execution of gene and cell therapies clinical trials, and key regulatory issues. Entrepreneurial considerations will be discussed as well. By the end of this course, students will understand the basic technologies employed for gene and cell therapy along with approaches and pitfalls to translating these therapies into clinical applications including regulatory and commercial aspects of this emerging area. Prerequisite: At least one course in immunology.
Taught by: Michael C. Milone, MD, PhD, Elizabeth Hexner, MD, MSTR
Course usually offered in spring term
Also Offered As: CAMB 707, REG 621
Activity: Lecture
1.0 Course Unit

MTR 622 New Trends in Medicine and Vaccine Discovery
Modern drug discovery has evolved to include human genetic diagnosis and various biological approaches which has enabled progress in a variety of fields, including rare diseases, immuno-oncology, precision medicine, and biomarkers. The goal of this course is for students to understand newer treatment modalities and approaches beyond one size fits all small molecule drugs, as well as the technologies that empower them. Students will learn regulatory processes that govern medicine discovery and development and also consider business and societal aspects of medical progress. Students will be able to apply concepts directly to work in the healthcare industry. Students will be taught by experts in the field internal and external to Penn. Prerequisite: Permission required to register. Please contact Rachel McGarrigle (rmcg@upenn.edu) to request a permit.
Taught by: Claudine Bruck, PhD
Course usually offered in fall term
Also Offered As: REG 622
Activity: Lecture
1.0 Course Unit

MTR 623 Business and Technology Transfer
This course will provide students with an in-depth overview of translational research in the area of business and technology transfer. This includes technical considerations, translating preclinical investigation into therapeutics, the execution of gene and cell therapies clinical trials, and key regulatory issues. Entrepreneurial considerations will be discussed as well. By the end of this course, students will understand the basic technologies employed for gene and cell therapy along with approaches and pitfalls to translating these therapies into clinical applications including regulatory and commercial aspects of this emerging area. Prerequisite: At least one course in immunology.

Master of Urban Spatial Analytics (MUSA)

MUSA 500 Spatial Statistics and Data Analysis
This hands-on course will provide an introduction to statistical methods and will serve as a prequel to ESE502. Topics covered will include exploratory univariate analysis, correlation and Chi-square analysis, t-tests and ANOVA. Non-parametric alternatives to the standard tests will be discussed. OLS regression, including assumptions and diagnostics, will be covered in detail. Heavy emphasis will be placed on the application of each method covered. The course will conclude with an introduction to spatial statistical methods and a brief overview of linear algebra and matrix notation for OLS and spatial regression. Students will learn to use JMP-IN, ArcGIS and GeoDa for data analysis.
Taught by: Eugene Brusilovsky
Course usually offered in fall term
Also Offered As: CPLN 671
Activity: Lecture
1.0 Course Unit

MUSA 503 Modeling Geographical Objects
This course offers a broad and practical introduction to the acquisition, storage, retrieval, maintenance, use, and presentation of digital cartographic data with vector-oriented (i.e. drawing-based) geographic information systems (GIS) for a variety of environmental science, planning, and management applications. Previous experience in GIS is not required.
Taught by: Tomlin or O’Neill
Course usually offered in fall term
Also Offered As: CPLN 503
Activity: Lecture
1.0 Course Unit

MUSA 508 Public Policy Analytics
Data scientists convert data into actionable intelligence. While most private sector data scientists optimize for profit, their public sector counterparts must address multiple complex bottom lines including economics, equity, politics, bureaucracy and social cohesion. This course teaches students how to wrangle government data; how to mine it for descriptive and predictive intelligence and how to communicate results to non-technical decision-makers. Broadly, coursework is focused on spatial analysis and geospatial machine learning and taught 70/30 in R and ArcGIS. Use cases include home price prediction, forecasting in criminal justice, land use modeling, transportation modeling and real estate site suitability. Prerequisites include vector and raster GIS and introductory statistics.
Taught by: Ken Steif
Course usually offered in fall term
Also Offered As: CPLN 592
Activity: Lecture
1.0 Course Unit

MUSA 509 Geospatial Cloud Computing & Visualization
This course teaches students how to collect, store, wrangle and display cartographic data in a cloud-based setting. Students will learn a reproducible approach for pulling spatial data from APIs with emphasis on PostGIS, Socrata and BigQuery; to wrangle these data in python; and visualize in various platforms including Seaborn and Carto. Students will build their own APIs and eventually develop their own introductory custom web applications. This course is the first in a progression and leads to the Spring course on Javascript Programming for Planning (a class on building comprehensive mapping applications.)
Taught by: Andy Eschbacher
Activity: Lecture
1.0 Course Unit

MUSA 550 Geospatial Data Science in Python
This course will provide students with the knowledge and tools to turn data into meaningful insights, with a focus on real-world case studies in the urban planning and public policy realm. Focusing on the latest Python software tools, the course will outline the ‘pipeline’ approach to data science. It will teach students the tools to gather, visualize, and analyze datasets, providing the skills to effectively explore large datasets and transform results into understandable and compelling narratives. The course is organized into five main sections: Exploratory Data Science; Introduction to Geospatial Data Science; Data Ingestion & Big Data; Geospatial Machine Learning; Data Visualization & Storytelling.
Taught by: Nick Hand
Course usually offered in fall term
Also Offered As: CPLN 672
Activity: Seminar
1.0 Course Unit

MUSA 611 Java Script Programming for Planners and Designers
This course will introduce City Planning, MUSA and design graduate students to Javascript. Students will learn the logic and syntax of the Java programming language for use in a simple web application (weeks 1 to 7); as well as how to program database and map-oriented web and desktop applications using Javascript (weeks 8 to 14). The ‘hands-on’ uses of Javascript in urban planning applications will be emphasized. Students will hone their programming and applications development skills through a series of bi-weekly assignments.
Taught by: Faculty
Course usually offered in fall term
Also Offered As: CPLN 692
Activity: Lecture
1.0 Course Unit
Materials Science and Engineering (MSE)

MSE 099 Undergraduate Research and/or Independent Study
An opportunity for the student to become closely associated with a professor (1) in a research effort to develop research skills and technique and/or (2) to develop a program of independent in-depth study in a subject area in which the professor and student have a common interest. The challenge of the task undertaken must be consistent with the student's academic level. To register for this course, the student and professor jointly submit a detailed proposal to the undergraduate curriculum chairman no later than the end of the first week of the term. Note: a maximum of 2 c.u. of MSE 099 may be applied toward the B.A.S. or B.S.E. degree requirements. Open to all students.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: Open to all students

MSE 201 Materials Lab I
This hands-on laboratory course covers mechanical testing, metal processing and various imaging methods.
Taught by: Karen I. Winey
Course usually offered in fall term
Prerequisite: ENGR 105 AND CHEM 101
Corequisite: MSE 220
Activity: Laboratory
0.5 Course Units

MSE 202 Materials Lab II
This hands-on laboratory course includes phase diagrams, thermal transitions and electronic and optical properties.
Taught by: Karen I. Winey
Course usually offered in spring term
Prerequisite: MSE 201
Corequisite: MSE 215 AND MSE 260
Activity: Laboratory
0.5 Course Units

MSE 215 Introduction to Functional Materials: From Macro to Nanoscale
The purpose of this course is: 1) to introduce key concepts underlying the design, properties and processing of functional materials and their applications, and 2) to apply these concepts in the rapidly growing field of nanomaterials and nanotechnology. Fundamental chemical and physical principles underlying electronic, dielectric, optical and magnetic properties will be developed in the context of metals, semiconductors, insulators, crystals, glasses, polymers and ceramics. Miniaturization and the nanotechnology revolution confronts materials science with challenges and opportunities. Examples in which nanoscale materials exhibit qualitatively different properties compared to bulk will be emphasized.
Course usually offered in spring term
Prerequisite: MSE 221
Activity: Lecture
1.0 Course Unit
MSE 220 Introduction to Materials Science and Engineering
The course is an introduction to the most important concepts in materials science and engineering. You will learn how the control of chemical bonding, synthesis, processing, structure and defects can be used to tailor the properties and performance of materials for applications that range from sustainable sources of energy, to construction, to consumer electronics. Case studies are also included to highlight environmental issues associated with materials degradation. This course includes lab demonstrations of key materials properties and a final project where students research an area of materials technology of their own interest.
Taught by: Dr. Peter Davies
Course usually offered in fall term
Also Offered As: MEAM 220
Prerequisite: CHEM 101 OR PHYS 140 OR MEAM 110
Activity: Lecture
1.0 Course Unit

MSE 221 Quantum Physics of Materials
This course develops the background in basic physics required to understand the behavior of electrons in atoms, molecules and solids. Beginning with experiments and ideas that led to the foundation and postulates of Quantum Mechanics, the behavior of an electron in simple potential wells is treated. The electron in a harmonic oscillator well and the Coulomb potential of a hydrogen atom are treated next. Pauli’s exclusion principle and generalization to multi-particle systems are introduced. The Fermi energy, density of states and free electron band structure will be introduced. Many state-of-the-art materials analysis techniques will also be demonstrated throughout the course.
One-term course offered either term
Prerequisites: PHYS 140, 141 concurrent and MATH 240
Activity: Lecture
1.0 Course Unit
Notes: Meets Natural Science Requirement

MSE 250 Nano-scale Materials Lab
In this class you will learn laboratory methods used to synthesize materials, to examine the structure of materials, to measure electrical, mechanical and thermal properties, and to investigate the relationships between processing, structure and properties. Emphasis is placed on laboratory skills, technical understanding, and technical communications (figures, writing). The laboratory exercises involve: 1) learning how to use state of the art equipment for studying the properties and internal structure of materials, 2) qualitative and quantitative interpretation of data and observations, and 3) the development of analytical skills necessary to form general and fundamental conclusions from observations and data. This course focuses on how materials’ structure and chemistry can be controlled to tailor properties and how properties of nanoscale materials can differ significantly from their bulk counterparts.
Course usually offered in spring term
Prerequisite: MSE 220
Activity: Lecture
1.0 Course Unit

MSE 260 Energetics of Macro and Nano-scale Materials
Basic principles of chemical thermodynamics as applied to macro and nano-sized materials. This course will cover the fundamentals of classical thermodynamics as applied to the calculation and prediction of phase stability, chemical reactivity and synthesis of materials systems. The size-dependent properties of nano-sized systems will be explored through the incorporation of the thermodynamic properties of surfaces. The prediction of the phase stability of two and three component systems will be illustrated through the calculation and interpretation of phase diagrams for metallic, semiconductor, inorganic systems.
Course usually offered in spring term
Prerequisite: CHEM 102
Activity: Lecture
1.0 Course Unit

MSE 296 Study Abroad
Activity: Lecture
1.0 Course Unit

MSE 301 Materials Lab III
This hands-on laboratory course covers X-ray diffraction, ceramic synthesis, nanoparticle synthesis, and thin film fabrication, as well as superconductivity and electro-optical properties of nanoparticles.
Taught by: Karen I. Winey
Course usually offered in fall term
Prerequisite: MSE 201 AND MSE 202
Corequisite: MSE 360
Activity: Laboratory
0.5 Course Units

MSE 330 Self-Assembly of Soft Materials
Soft matter is found in diverse applications including sports (helmets & cloths); food (chocolate, egg); consumer products (e.g., lotions and shampoo); and devices (displays, electronics). Whereas solids and liquids are typically hard and crystalline or soft and fluid, respectively, soft matter can exhibit both solid and liquid like behavior. In this class, we investigate the thermodynamic and dynamic principles common to soft matter as well as soft (weak) forces, self-assembly and phase behavior. Classes of matter include colloidal particles, polymers, liquid crystalline molecules, amphiphilic molecules, biomacromolecules/membranes, and food. Active learning activities will be included.
Course usually offered in fall term
Also Offered As: BE 330
Prerequisite: CHEM 102 OR MSE 220 OR BE 220
Activity: Lecture
1.0 Course Unit

MSE 360 Structure at the Nanoscale
To understand the atomic arrangements of crystalline matter, this class focuses on crystallography, symmetry, and diffraction techniques. The first half focuses on learning how to describe the structure of crystalline matter through the basics of crystallography and symmetry by introducing two-dimensional symmetry operations, point, and plane groups; this knowledge is then extended into three-dimensions to arrive at an understanding of space lattices and space groups. The second half is concerned with applying this information to understand structures through various diffraction and microscopy techniques.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
MSE 393 Materials Selection
Throughout mankind’s history, materials have played a critical role in civilization and technology. The selection of materials has been based on availability and functionality. The rapid advances of materials technologies in the last 150 years, however, have made nearly all classes and forms of materials available, at a cost. These costs include the dollars and cents costs that typically accompany the use of stronger, lighter materials, but environmental costs are also important and significant. Therefore, in theory at least, materials selection can now proceed on a rational basis as an optimization process involving performance and costs - both financial and environmental. In this course, we will focus on structural applications where mechanical design is central. By the end of the course, the students can expect to acquire a level of engineering familiarity with a broad range of materials, and be prepared to undertake responsible material design projects in the future.
Prerequisite: Junior standing or approval of the instructor
Course usually offered in spring term
Prerequisite: MSE 220
Activity: Lecture
1.0 Course Unit

MSE 405 Mechanical Properties of Macro/Nanoscale Materials
The application of continuum and microstructural concepts to elasticity and plasticity and the mechanisms of plastic flow and fracture in metals, polymers and ceramics. Topics covered include elasticity, viscoelasticity, plasticity, crystal defects, strengthening, crystallographic effects, twinning, creep and fatigue. Emphasis will be on mathematical and physical understanding rather than problem solving.
Course usually offered in spring term
Also Offered As: MEAM 405, MEAM 505, MSE 505
Prerequisite: MSE 220 OR MEAM 210 OR MATH 240
Activity: Lecture
1.0 Course Unit

MSE 430 Introduction to Polymers
Polymer is one of the most widely used materials in our daily life, from the rubber tires to clothes, from photoresists in chip manufacturing to flexible electronics and smart sensors, from Scotch tapes to artificial tissues. This course teaches entry-level knowledge in polymer synthesis, characterization, thermodynamics, and structure-property relationship. Emphasis will be on understanding both chemical and physical aspects of polymers, polymer chain size and molecular interactions that drive the microscopic and macroscopic structures and the resulting physical properties. We will discuss how to apply polymer designs to advance nanotechnology, electronics, energy and biotechnology. Case studies include thermodynamics of block copolymer thin films and their applications in nanolithography, shape memory polymers, hydrogels, and elastomeric deformation and applications.
Course usually offered in fall term
Also Offered As: CBE 430, CBE 510, MSE 580
Prerequisites: MSE 260 or CBE 231, CHEM 221, MEAM 203
Activity: Lecture
1.0 Course Unit

MSE 440 Phase Transformations
The state of matter is dependent upon temperature, thermal history, and other variables. In this course the science of structural transitions is treated, with the purpose in mind of utilizing them for producing materials with superior properties. The subjects covered include the methods of structural analysis, solidification, solid state transformation, and order-disorder transition.
Course usually offered in spring term
Prerequisites: MSE 220, MSE 260, or equivalent or permission of the instructor
Activity: Lecture
1.0 Course Unit

MSE 455 Electrochemical Engineering of Materials
After introducing electrochemical concepts (redox reactions, electrolytic versus galvanic cells, standard oxidation potentials), this course will cover the broad impact of electrochemical phenomena on materials. Topics that will be discussed include: (1) Materials extraction from ores to finished products by electrowinning, (2) Chemical refining (Mond process) and electrorefining of materials, (3) Materials degradation by destructive electrochemical corrosion, (4) Three-dimensional nanostructured materials by selective electrochemical corrosion, (5) Enhancing the electrochemical performance of materials via nanostructuring - e.g. lithium-ion battery electrodes; (6) Enhancing the electrochemical performance of materials via surface chemistry - e.g. oxygen evolution electrocatalysts; (7) Light-enhanced electrochemical performance of materials - e.g. solar water splitting photoelectrocatalysts. Students will be engaged in interactive classroom activities.
Course usually offered in fall term
Also Offered As: MSE 555
Activity: Lecture
1.0 Course Unit

MSE 460 Computational Materials Science
This course provides an introduction to modeling and simulation in materials science, covering continuum methods (e.g. finite element methods) and atomistic and molecular simulation (e.g. molecular dynamics). These tools play an increasingly important role in modern engineering. You will get hands-on training in both the fundamentals and applications of these methods to key engineering problems. The lectures will provide an exposure to areas of application, based on the scientific exploitation of the power of computation. We will use software packages (Comsol and LAMMPS) and thus extensive programming skills are not required. Matlab background needed for the course will be covered in a self-contained module. Junior or Senior Standing. Ability to write simple computer codes would be an advantage.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
MSE 465 Fabrication and Characterization of Micro and Nanostructured Materials
This course surveys various processes that are used to produce materials structured at the micron and nanometer scales for electronic, optical and biological applications. Basic principles of materials chemistry, physics, thermodynamics and surface/interfacial science are applied to solid state, liquid, and colloidal approaches to making materials. A wide range of nano- and microfabrication techniques, including photolithography, soft lithography, nanoimprint lithography, 3D printing and self-assembly, are covered. The course is heavily lab based, with 30% of class time and 50% of the homework devoted to hands on experiences and lab report writing. Lab assignments are a series of structured individual/group projects. Evaluation is based on 3 lab reports, 4 problem sets with journal paper reading assignment, and a final project design.
Course usually offered in spring term
Also Offered As: MSE 565
Activity: Lecture
1.0 Course Unit

MSE 495 Senior Design
The senior design course is a two-semester capstone program that gives students the opportunity to design and execute an original experimental or theoretical project in materials science, engineering, or product/device development that is solving a real world problem. Students will work closely with a scientific advisor in their lab and meet once a week in the classroom to learn from an innovative curriculum that will build real-world skills in the context of their research and design project. These skills include project management, networking, teamwork, impactful written and verbal communications, upward management, self-reflection and feedback. Students will also learn how to design research in the context of having an impact on the world. This will be through weekly vignettes of innovative materials science solutions that solve problems in industries ranging from construction to healthcare to consumer products.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

MSE 496 Senior Design
The senior design course is a two-semester capstone program that gives students the opportunity to design and execute an original experimental or theoretical project in materials science, engineering, or product/device development that is solving a real world problem. Students will work closely with a scientific advisor in their lab and meet once a week in the classroom to learn from an innovative curriculum that will build real-world skills in the context of their research and design project. These skills include project management, networking, teamwork, impactful written and verbal communications, upward management, self-reflection and feedback. Students will also learn how to design research in the context of having an impact on the world. This will be through weekly vignettes of innovative materials science solutions that solve problems in industries ranging from construction to healthcare to consumer products.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MSE 500 Experimental Methods in Materials Science
This laboratory course introduces students to a variety of experimental methods used in materials science and engineering. Hands-on training will be provided for atomic force microscopy, X-ray diffraction and scattering, mechanical testing with image capture, and dynamic light scattering. Students will use numerous software packages for data collection and analysis, as well as being introduced to LabVIEW as a method for customizing experiments. In addition, students will see demonstrations of scanning electron microscopy, transmission electron microscopy, and electron diffraction and analyze data from these methods. The format for the course will include a weekly lecture (1.5 hours), a weekly lab session (4 hours) and six assignments. Prerequisite: Permission of the Undergraduate Curriculum Chair and Instructor
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

MSE 505 Mechanical Properties of Macro/Nanoscale Materials
The application of continuum and microstructural concepts to elasticity and plasticity and the mechanisms of plastic flow and fracture in metals, polymers and ceramics. Topics covered include elasticity, viscoelasticity, plasticity, crystal defects, strengthening, crystallographic effects, twinning, creep and fatigue. Emphasis will be on mathematical and physical understanding rather than problem solving.
Course usually offered in spring term
Also Offered As: MEAM 405, MEAM 505, MSE 405
Prerequisite: MSE 220 OR MEAM 210 OR MATH 240
Activity: Lecture
1.0 Course Unit

MSE 506 Failure Analysis of Engineering Materials
This course will introduce students to the broad field of failure through hands-on real-life examples of specific failures. All engineering materials classes will be considered, including metals, polymers, elastomers, ceramics, and glasses. Emphasis will be placed on understanding how to actually analyze a failed component and understand the cause of failure. Several classes will be conducted by outside experts from places like the NTSB, FBI and OSHA.
Taught by: David Pope, Prof.
Course usually offered in fall term
Also Offered As: MEAM 506
Prerequisite: MSE 220 AND (MSE 393 OR MEAM 354)
Activity: Lecture
1.0 Course Unit

MSE 507 Fundamentals of Materials
This course will provide a graduate level introduction to the science and engineering of materials. It is designed specifically to meet the needs of students who will be doing research that involves materials but who do not have an extensive background in the field. The focus is on fundamental aspects of materials science and will emphasize phenomena and how to describe them. The course assumes an undergraduate background in any area of physical/chemical science and undergraduate mathematics appropriate to this. The course will also be accessible to students of applied mathematics.
Course usually offered in fall term
Also Offered As: MEAM 507
Activity: Lecture
1.0 Course Unit
MSE 515 Mathematics for Materials Science
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

MSE 520 Structure of Materials
Prerequisite: Permission of the Undergraduate Curriculum Chair and Instructor
Taught by: I-Wei Chen
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MSE 525 Nanoscale Science and Engineering
Overview of existing device and manufacturing technologies in microelectronics, optoelectronics, magnetic storage, Microsystems, and biotechnology. Overview of near- and long-term challenges facing those fields. Near- and long-term prospects of nanoscience and related technologies for the evolutionary sustension of current approaches, and for the development of revolutionary designs and applications. Prerequisite: If course requirement not met, permission of instructor required.
Course usually offered in fall term
Also Offered As: ESE 525
Prerequisite: ESE 218 OR PHYS 240 OR MSE 220
Activity: Lecture
1.0 Course Unit

MSE 530 Thermodynamics and Phase Equilibria
Fundamental elements of engineering thermodynamics, statistical thermodynamics, chemical thermodynamics and defect thermodynamics. Thermodynamic functions, stability, phase transitions, mixtures (gases, condensed matter, polymer solution), defects and interfaces. Phase diagrams and predominance diagrams. Applications to energy problems (engines, efficiency, power, electrochemical cells) and properties (Curie's law, rubber elasticity, specific heat, phonon/photon spectra, constitutive equations, equation of states). Prerequisite: Permission of the Undergraduate Curriculum Chair and instructor
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

MSE 535 Electronic Properties of Materials
This course will introduce the physical principles underlying broad spectrum of electronic properties in the solid state. Starting with the band structure of solids, the course will give an overview of electronic, dielectric, magnetic, thermal and optical properties of materials. The treatment will use quantum mechanical and statistical mechanical concepts familiar to students at the undergraduate level. Commonly used theories and models will be introduced and their predictions will be compared with observations. Students who have taken MSE 221/MSE 260 and/or MSE 570/MSE 575 will benefit from this advanced introduction to material properties.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MSE 536 Electronic Properties of Materials
This course will introduce the physical principles underlying broad spectrum of electronic properties in the solid state. Starting with the band structure of solids, the course will give an overview of electronic, dielectric, magnetic, thermal and optical properties of materials. The treatment will use quantum mechanical and statistical mechanical concepts familiar to students at the undergraduate level. Commonly used theories and models will be introduced and their predictions will be compared with observations. Students who have taken MSE 221/MSE 260 and/or MSE 570/MSE 575 will benefit from this advanced introduction to material properties.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MSE 537 Nanotribology
Engineering is progressing to ever smaller scales, enabling new technologies, materials, devices, and applications. This course will provide an introduction to nano-scale tribology and the critical role it plays in the developing areas of nanoscience and nanotechnology. We will discuss how contact, adhesion, friction, lubrication, and wear at interfaces originate, using an integrated approach that combines concepts of mechanics, materials science, chemistry, and physics. We will cover a range of concepts and applications, drawing connections to both established and new approaches. We will discuss the limits of continuum mechanics and present newly developed theories and experiments tailored to describe micro- and nano-scale phenomena. We will emphasize specific applications throughout the course. Reading of scientific literature, critical peer discussion, individual and team problem assignments, and a peer-reviewed literature research project will be assigned as part of the course. Prerequisite: Freshman physics or consent of instructor.
Course not offered every year
Also Offered As: MEAM 537
Prerequisite: MEAM 354
Activity: Lecture
1.0 Course Unit

MSE 540 Phase Transformations
The phase of a material determines macroscopic properties such as strength, diffusion, and permeability. Whereas thermodynamics provides an idealistic understanding of phase behavior, the real phase (composition) and morphology of a solid material depends on the rate of transformation from one state to another. Namely, kinetics is the study of the rates at which systems approach the ideal state predicted by thermodynamics. Thus, transport/diffusion underlies our understanding of phase transformations. Technology applications will include, polymer nanocomposites as kinetically arrested materials, rapid solidification to create new materials, purification methods for integrated circuits, and drug delivery. Prerequisite: Permission of the Undergraduate Curriculum Chair and Instructor
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
MSE 545 Materials for Energy and Environmental Sustainability
This course will cover the fundamental materials science issues central to the design of sustainable energy technology. The goal of this course is to expose students to the emerging advances in materials science and materials chemistry that underpin technologies for energy conversion (fuel cells, thermoelectrics, photovoltaics, wind energy etc.), storage (biofuels, artificial photosynthesis, batteries etc) and distribution (smart grids and hydrogen and methane economy concepts etc.) and to place these in a real world context. This class will emphasize concepts in 'green materials and green engineering practices' that are emerging with a global focus on 'Sustainable Technology.' 'Sustainability is defined as meeting the needs of the present without compromising the ability of future generations to meet their needs.' Engineering materials and processes at all scales; molecular/nanometer, micro, and the macro-scale are critical to developing the tools society required to meet the growing needs for energy and sustainable materials for the built environment. This course is appropriate for graduate students and advanced undergraduates in Penn's Material Science Programs. Core MSE curriculum components in thermodynamics, structure, electronic & ionic transport, mechanics, polymers and optical materials will be expected, and exposure to the preparation in basic Chemistry and Physics will be advantageous in this highly interdisciplinary course. Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

MSE 550 Elasticity and Micromechanics of Materials
This course is targeted to engineering students working in the areas on micro/nanomechanics of materials. The course will start with a quick review of the equations of linear elasticity and proceed to solutions of specific problems such as the Hertz contact problem, Eshelby's problem etc. Failure mechanisms such as fracture and the fundamentals of dislocations/plasticity will also be discussed. Prerequisite: graduate standing or permission of the instructor.
Taught by: Reina Romo
Course usually offered in fall term
Also Offered As: MEAM 519
Activity: Lecture
1.0 Course Unit

MSE 555 Electrochemical Engineering of Materials
After introducing electrochemical concepts (redox reactions, electrolytic versus galvanic cells, standard oxidation potentials), this course will cover the broad impact of electrochemical phenomena on materials. Topics that will be discussed include: (1) Materials extraction from their ores to finished products by electrowinning, (2) Chemical refining (Mond process) and electorefining of materials, (3) Materials degradation by destructive electrochemical corrosion, (4) Three-dimensional nanostructured materials by selective electrochemical corrosion, (5) Enhancing the electrochemical performance of materials via nanostructuring - e.g. lithium-ion battery electrodes; (6) Enhancing the electrochemical performance of materials via surface chemistry - e.g. oxygen evolution electrocatalysts; (7) Light-enhanced electrochemical performance of materials - e.g. solar water splitting photoelectrocatalysts. Students will be engaged in interactive classroom activities.
Course usually offered in fall term
Also Offered As: MSE 455
Activity: Lecture
1.0 Course Unit

MSE 561 Atomic Modeling in Materials Science
This course covers two major aspects of atomic level computer modeling in materials. 1. Methods: Molecular statics, Molecular dynamics, Monte Carlo, Kinetic Monte Carlo as well as methods of analysis of the results such as radial distribution function, thermodynamics deduced from the molecular dynamics, fluctuations, correlations and autocorrelations. 2. Semi-empirical descriptions of atomic interactions: pair potentials, embedded atom method, covalent bonding, ionic bonding. Basics of the density functional theory. Mechanics, condensed matter physics, thermodynamics and statistical mechanics needed in interpretations are briefly explained. Prerequisite: Ability to write a basic code in a computer language such as fortran, C, C++
Course usually offered in spring term
Also Offered As: MEAM 553
Activity: Lecture
1.0 Course Unit

MSE 565 Fabrication and Characterization of Micro and Nanostructured Materials
This course surveys various processes that are used to produce materials structured at the micron and nanometer scales for electronic, optical and biological applications. Basic principles of materials chemistry, physics, thermodynamics and surface/interfacial science are applied to solid state, liquid, and colloidal approaches to making materials. A wide range of nano- and microfabrication techniques, including photolithography, soft lithography, nanoimprint lithography, 3D printing and self-assembly, are covered. The course is heavily lab based, with 30% of class time and 50% of the homework devoted to hands on experiences and lab report writing. Lab assignments are a series of structured individual/group projects. Evaluation is based on 3 lab reports, 4 problem sets with journal paper reading assignment, and a final project design. Prerequisite: If course requirement not met, permission of instructor required.
Course usually offered in spring term
Also Offered As: MSE 465
Prerequisite: MSE 360
Activity: Lecture
1.0 Course Unit

MSE 570 Physics of Materials I
Failures of classical physics and the historical basis for quantum theory. Postulates of wave mechanics; uncertainty principle, wave packets and wave-particle duality. Schroedinger equation and operators; eigenvalue problems in 1 and 3 dimensions (barriers, wells, hydrogen, atom). Perturbation theory; scattering of particles and light. Use of computer-aided self-study will be made. Undergraduate physics and math through modern physics and differential equations
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
MSE 575 Statistical Mechanics
Statistical Mechanics is a unique branch of physics that permeates our understanding of matter at all length scales, from nanometers to stellar dimensions, and ranging in temperatures from picokelvin (or lower) to billions of degrees Kelvin. This course will provide an overview of select topics in equilibrium and non-equilibrium statistical mechanics. The course will introduce the basic postulates of classical and quantum equilibrium statistical mechanics, explain the methodology of calculating observable properties, and discuss several applications in diverse fields. The second part of the course will introduce the methodology of non-equilibrium processes and discussing important theorems and results in the linear response regime. Finally, a brief discussion of systems far from equilibrium will be presented. Select applications from condensed matter physics, chemistry, materials science, biology, astrophysics, economics and meteorology will be used to illustrate the fundamental principles.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MSE 580 Introduction to Polymers
Polymer is one of the most widely used materials in our daily life, from the rubber tires to clothes, from photoresists in chip manufacturing to flexible electronics and smart sensors, from Scotch tapes to artificial tissues. This course teaches entry-level knowledge in polymer synthesis, characterization, thermodynamics, and structure-property relationship. Emphasis will be on understanding both chemical and physical aspects of polymers, polymer chain size and molecular interactions that drive the microscopic and macroscopic structures and the resulting physical properties. We will discuss how to apply polymer designs to advance nanotechnology, electronics, energy and biotechnology. Case studies include thermodynamics of block copolymer thin films and their applications in nanolithography, shape memory polymers, hydrogels, and elastomeric deformation and applications.
Course usually offered in fall term
Also Offered As: CBE 430, CBE 510, MSE 430
Prerequisites: MSE 260 or CBE 231, CHEM 221, MEAM 203
Activity: Lecture
1.0 Course Unit

MSE 597 Master's Thesis Research
One-term course offered either term
Activity: Masters Thesis
1.0 Course Unit

MSE 599 Master's Indep Study
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

MSE 610 Transmission Electron Microscopy
Theory and application of transmission electron microscopy methods to problems in materials science and engineering, condensed matter physics, soft matter, polymeric materials, inorganic chemistry and chemical engineering. The principles of microscope operation, electron scattering, image formation and spectroscopy will be described, with an emphasis on both theory and experiment. With laboratory.
Taught by: Eric Stach
Course not offered every year
Activity: Lecture
1.0 Course Unit

MSE 611 Advanced Synchrotron and Electron Characterization of Materials
This course provides an overview of the latest techniques for the characterization of materials with synchrotron x-rays and electron microscopy. Emphasis is placed on understanding of x-ray and electron interactions with matter, and how these may be exploited to characterize structure and chemistry at the nanometer to atomic scale. Prerequisite: Graduate students: Background in solid-state physics, crystallography and quantum mechanics is strongly recommended. Undergraduates: MSE 570.
Taught by: Eric Stach
Activity: Lecture
1.0 Course Unit

MSE 640 Optical Materials
This course discusses the optical properties of modern materials engineered for specific functionality and cover exciting new developments being made in this rapidly evolving field. Emphasis is placed on how modern nanotechnology reshapes the light-matter interaction and delivers novel optical properties that are not available in nature.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MSE 650 Mechanics of Soft and Biomaterials
This course is aimed to expose the students to a variety of topics in mechanic materials via discussion of ‘classic’ problems that have had the widest impact long period of time and have been applied to analyze the mechanical behavior a variety of biological and engineering materials.
Course not offered every year
Also Offered As: MEAM 650
Activity: Lecture
1.0 Course Unit

MSE 790 Selected Topics in Materials Science and Engineering
Students should check department office for special topics.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

MSE 895 Teaching Practicum.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

Mathematical Sciences (MTHS)
The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates/).
MTHS 100 Mathematical Foundations for Data Analytics
This course provides an introduction to key topics that form the foundation for further study in mathematics, data analytics, and statistics. Topics covered include finite math, logic, algebra (including basics of matrix algebra), functions, probability, and a conceptual introduction to calculus. Through this course, students will develop both an understanding of the concept the ability to apply the concepts and techniques to analysis and problem-solving. Course format includes readings, lectures and demonstrations, and extensive hands-on practice with instructor and peer feedback.
Taught by: Dennis Deturck
Activity: Online Course
1.0 Course Unit

MTHS 200 Maths All Around
This course covers topics logic, sets, probability, history and philosophy of mathematics, graph theory, game theory, geometry, and their relevance to contemporary science and society.
Activity: Online Course
1.0 Course Unit

MTHS 220 Introduction to Applied Statistics
This course is an introduction to statistics, the science of collecting, organizing, and interpreting numerical data. Emphasis will be placed on statistical reasoning and data analysis. The main topics are study design, descriptive statistics, probability theory, and statistical inference. Statistical methods covered include the one and two sample t-tests, one and two proportion tests, correlation, regression, and analysis of variance. This course makes heavy use of technology to solve problems involving real data.
Activity: Online Course
1.0 Course Unit

Mathematics (MATH)

MATH 104 Calculus, Part I
Brief review of High School calculus, applications of integrals, transcendental functions, methods of integration, infinite series, Taylor’s theorem, and first order ordinary differential equations. Use of symbolic manipulation and graphics software in calculus.
One-term course offered either term
Activity: Recitation
1.0 Course Unit
Notes: Non-LPS recitation sections are listed as TBD because they will be meeting during one of the lecture periods. For more information please refer to: <a href='https://www.math.upenn.edu/undergraduate/calculus-penn'>https://www.math.upenn.edu/undergraduate/calculus-penn</a>

MATH 114 Calculus, Part II
Functions of several variables, vector-valued functions, partial derivatives and applications, double and triple integrals, conic sections, polar coordinates, vectors and vector calculus, first order ordinary differential equations. Applications to physical sciences. Use of symbolic manipulation and graphics software in calculus.
One-term course offered either term
Prerequisite: MATH 104
Activity: Recitation
1.0 Course Unit
Notes: This is a Formal Reasoning course.

MATH 115 Calculus, Part II with Probability and Matrices
Functions of several variables, partial derivatives, multiple integrals, differential equations; introduction to linear algebra and matrices with applications to linear programming and Markov processes. Elements of probability and statistics. Applications to social and biological sciences. Use of symbolic manipulation and graphics software in calculus.
One-term course offered either term
Prerequisite: MATH 104
Activity: Recitation
1.0 Course Unit
Notes: This is a Formal Reasoning course.

MATH 116 Honors Calculus
Students who are interested in math or science might also want to consider a more challenging Honors version of Calculus II and III, Math 116 and Math 260 (the analogues of Math 114 and Math 240, respectively). These courses will cover essentially the same material as 114 and 240, but more in depth and involve discussion of the underlying theory as well as computations.
One-term course offered either term
Activity: Recitation
1.0 Course Unit
Notes: This is a Formal Reasoning course.

MATH 122 Community Algebra Initiative
Community Algebra Initiative
One-term course offered either term
Activity: Lecture
1.0 Course Unit

MATH 123 Community Math Teaching Project
This course allows Penn students to teach a series of hands-on activities to students in math classes at University City High School. The semester starts with an introduction to successful approaches for teaching math in urban high schools. The rest of the semester will be devoted to a series of weekly hands-on activities designed to teach fundamental aspects of geometry. The first class meeting of each week, Penn faculty teach Penn students the relevant mathematical background and techniques for a hands-on activity. During the second session of each week, Penn students will teach the hands-on activity to a small group of UCHS students. The Penn students will also have an opportunity to develop their own activity and to implement it with the UCHS students.
Course not offered every year
Activity: Lecture
1.0 Course Unit
MATH 170 Ideas in Mathematics
Topics from among the following: logic, sets, calculus, probability, history and philosophy of mathematics, game theory, geometry, and their relevance to contemporary science and society. Prerequisite: May also be counted toward the General Requirement in Natural Science & Mathematics.
For BA Students: Natural Science and Math Sector
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: May also be counted toward the General Requirement in Natural Science & Mathematics.

MATH 202 Proving Things: Analysis
This course focuses on the creative side of mathematics, with an emphasis on discovery, reasoning, proofs and effective communication, while at the same time studying real and complex numbers, sequences, series, continuity, differentiability and integrability. Small class sizes permit an informal, discussion-type atmosphere, and often the entire class works together on a given problem. Homework is intended to be thought-provoking, rather than skill-sharpening.
One-term course offered either term
Corequisite: MATH 104 OR MATH 114 OR MATH 240
Activity: Seminar
1.0 Course Unit

MATH 203 Proving things: Algebra
This course focuses on the creative side of mathematics, with an emphasis on discovery, reasoning, proofs and effective communication, while at the same time studying arithmetic, algebra, linear algebra, groups, rings and fields. Small class sizes permit an informal, discussion-type atmosphere, and often the entire class works together on a given problem. Homework is intended to be thought-provoking, rather than skill-sharpening.
One-term course offered either term
Corequisite: MATH 104 OR MATH 114 OR MATH 240
Activity: Lecture
1.0 Course Unit

MATH 210 Mathematics in the Age of Information
This course counts as a regular elective for both the Mathematics Major and Minor. This is a course about mathematical reasoning and the media. Embedded in many stories one finds in the media are mathematical questions as well as implicit mathematical models for how the world behaves. We will discuss ways to recognize such questions and models, and how to think about them from a mathematical perspective. A key part of the course will be about what constitutes a mathematical proof, and what passes for proof in various media contexts. The course will cover a variety of topics in logic, probability and statistics as well as how these subjects can be used and abused.
One-term course offered either term
Prerequisite: MATH 114 OR MATH 115
Activity: Lecture
1.0 Course Unit

MATH 240 Calculus, Part III
Linear algebra: vectors, matrices, systems of linear equations, vector spaces, subspaces, spans, bases, and dimension, eigenvalues, and eigenvectors, matrix exponentials. Ordinary differential equations: higher-order homogeneous and inhomogeneous ODEs and linear systems of ODEs, phase plane analysis, non-linear systems. One-term course offered either term
Prerequisite: MATH 114
Activity: Recitation
1.0 Course Unit
Notes: Non-LPS recitation sections are listed as TBD because they will be meeting during one of the lecture periods. For more information please refer to: <a href='https://www.math.upenn.edu/undergraduate/calculus-penn'>https://www.math.upenn.edu/undergraduate/calculus-penn</a>

MATH 241 Calculus, Part IV
Partial differential equations and their solutions, including solutions of the wave, heat and Laplace equations, and Sturm-Liouville problems. Introduction to Fourier series and Fourier transforms. Computation of solutions, modeling using PDE's, geometric intuition, and qualitative understanding of the evolution of systems according to the type of partial differential operator. One-term course offered either term
Prerequisite: MATH 240 OR MATH 260
Activity: Recitation
1.0 Course Unit

MATH 260 Honors Calculus, Part II
This is an honors version of Math 240 which explores the same topics but with greater mathematical rigor.
Course not offered every year
Prerequisite: MATH 116
Activity: Recitation
1.0 Course Unit

MATH 280 Entropy Math Evolution
The goal of this is to explore a new theory of evolution developed by L. Demetrius at MIT based on the second law of thermodynamics. The essential idea is that life exists because if increases overall entropy quicker than other process es. The course will include an introduction to thermodynamics as well as to the information theory definition of entropy. Eventually I want to apply this to other systems. For instance, I think the theory explains why political candidates who create chaos, tweet and require more bits of information to describe each day are favored by the second law. Demetrius makes a distinction between robust high entropy environments and precarious low entropy environments which is a very interesting in many different systems.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

MATH 290 Undergraduate Mathematics Research Course
This is a project-oriented mathematics research course that teaches students to solve real-world problems by constructing and analyzing mathematical models. Typically the problems considered will come from mathematics, chemistry, biology, and materials science but sometimes they will also come from economics, finance, and social sciences. The research problems in the course vary from year to year.
Activity: Lecture
1.0 Course Unit

MATH 299 Undergraduate Research in Mathematics
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
MATH 312 Linear Algebra
Linear transformations, Gauss Jordan elimination, eigenvalues and eigenvectors, theory and applications. Mathematics majors are advised that MATH 312 cannot be taken to satisfy the major requirements.
Prerequisite: Students who have already received credit for either Math 370, 371, 502, or 503 cannot receive further credit for Math 312 or Math 313/513. Students can receive credit for at most one of Math 312 and 313/513.
Course not offered every year
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit
Notes: Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for MATH 312 or MATH 313/513. Students can receive credit for at most one of MATH 312 and MATH 313/513.

MATH 313 Computational Linear Algebra
Many important problems in a wide range of disciplines within computer science and throughout science are solved using techniques from linear algebra. This course will introduce students to some of the most widely used algorithms and illustrate how they are actually used.
Prerequisite: Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for Math 313. Students can receive credit for at most one of Math 312 and Math 313. Some specific topics: the solution of systems of linear equations by Gaussian elimination, dimension of a linear space, inner product, cross product, change of basis, affine and rigid motions, eigenvalues and eigenvectors, diagonalization of both symmetric and non-symmetric matrices, quadratic polynomials, and least squares optimization. Applications will include the use of matrix computations to computer graphics, use of the discrete Fourier transform and related techniques in digital signal processing, the analysis of systems of linear differential equations, and singular value decompositions with application to a principal component analysis. The ideas and tools provided by this course will be useful to students who intend to tackle higher level courses in digital signal processing, computer vision, robotics, and computer graphics.
Also Offered As: MATH 513
Prerequisite: MATH 240 OR MATH 260
Activity: Lecture
1.0 Course Unit
Notes: Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for MATH 312 or MATH 313/513. Students can receive credit for at most one of MATH 312 and MATH 313.

MATH 314 Advanced Linear Algebra
Topics will include: Vector spaces, Basis and dimension, quotients; Linear maps and matrices; Determinants, Dual spaces and maps; Invariant subspaces, Canonical forms; Scalar products: Euclidean, unitary and symplectic spaces; Orthogonal and Unitary operators; Tensor products and polynomials; Symmetric and skew-symmetric tensors and exterior algebra. Prerequisite: MATH 314/514 covers Linear Algebra at the advanced level with a theoretical approach. Students can receive credit for at most one of Math 312 or Math 314.
Taught by: Staff.
Also Offered As: AMCS 514, MATH 514
Prerequisite: MATH 240 OR MATH 260
Activity: Lecture
1.0 Course Unit
Notes: Math 314/514 covers Linear Algebra at the advanced level with a theoretical approach. Students can receive credit for at most one of MATH 312 and MATH 314.
MATH 370 Algebra
Syllabus for MATH 370-371: an introduction to the basic concepts of modern algebra. Linear algebra, eigenvalues and eigenvectors of matrices, groups, rings and fields. Prerequisite: MATH 502-503 is a masters level version of this course. Students who have already received credit for either Math 370, 371, 502, or 503 cannot receive further credit for Math 312 or Math 313/513. Students can receive credit for at most one of Math 312 and math 313/513.
One-term course offered either term
Prerequisite: MATH 240 OR MATH 260
Activity: Lecture
1.0 Course Unit
Notes: Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for MATH 312 or MATH 313/513. Students can receive credit for at most one of MATH 312 and MATH 313/513.

MATH 371 Algebra
Prerequisite: Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for Math 312 or Math 313/513. Students can receive credit for at most one of MATH 312 and MATH 313/513.
One-term course offered either term
Prerequisite: MATH 370 OR MATH 502
Activity: Lecture
1.0 Course Unit
Notes: Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for MATH 312 or MATH 313/513. Students can receive credit for at most one of MATH 312 and MATH 313/513.

MATH 410 Complex Analysis
Complex numbers, DeMoivre's theorem, complex valued functions of a complex variable, the derivative, analytic functions, the Cauchy-Riemann equations, complex integration, Cauchy's integral theorem, residues, computation of definite integrals by residues, and elementary conformal mapping.
One-term course offered either term
Also Offered As: AMCS 510
Prerequisite: MATH 240 OR MATH 260
Activity: Lecture
1.0 Course Unit

MATH 420 Ordinary Differential Equations
After a rapid review of the basic techniques for solving equations, the course will discuss one or more of the following topics: stability of linear and nonlinear systems, boundary value problems and orthogonal functions, numerical techniques, Laplace transform methods.
One-term course offered either term
Also Offered As: AMCS 520
Prerequisite: MATH 240 OR MATH 260
Activity: Lecture
1.0 Course Unit

MATH 425 Partial Differential Equations
Method of separation of variables will be applied to solve the wave, heat, and Laplace equations. In addition, one or more of the following topics will be covered: qualitative properties of solutions of various equations (characteristics, maximum principles, uniqueness theorems), Laplace and Fourier transform methods, and approximation techniques. Course usually offered in fall term
Also Offered As: AMCS 525
Prerequisite: MATH 240 OR MATH 260
Activity: Lecture
1.0 Course Unit

MATH 432 Game Theory
A mathematical approach to game theory, with an emphasis on examples of actual games. Topics will include mathematical models of games, combinatorial games, two person (zero sum and general sum) games, non-cooperating games and equilibria.
One-term course offered either term
Prerequisite: MATH 240 OR MATH 260
Activity: Lecture
1.0 Course Unit

MATH 460 Topology
Point set topology: metric spaces and topological spaces, compactness, connectedness, continuity, extension theorems, separation axioms, quotient spaces, topologies on function spaces, Tychonoff theorem. Fundamental groups and covering spaces, and related topics.
Course not offered every year
Also Offered As: MATH 500
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit

MATH 465 Differential Geometry
Differential geometry of curves in the plane and in 3-space; n gauge theories Surfaces in 3-space; The geometry of the Gauss map; ons. The language of Intrinsic geometry of surfaces; Geodesics; Moving frames; of vector bundles, The Gauss-Bonnet Theorem; Assorted additional topics. Course not offered every year
Also Offered As: MATH 501
Prerequisite: MATH 240 OR MATH 260 AND MATH 314 OR MATH 514
Activity: Lecture
1.0 Course Unit
MATH 480 Topics in Modern Math
Mathematics 480 will open with a review of the basics of real analysis (brief or extended background may be required). The review will include: introduction of the real numbers through Dedekind cuts, continuity of real-valued functions on the real line; Cantor-embedded-interval principle, basic results for continuous functions, Maximum and Intermediate Value theorems, Heine-Borel Theorem, Uniform Continuity on closed intervals; metric spaces, convergence of sequences, Cauchy sequences, completeness, more general uniform continuity and intermediate value theorems; general topology, separation, compactness, product spaces, Tychonoff’s Theorem. Special topics in analysis: Weierstrass Polynomial Approximation Theorem, Bernstein polynomials and simultaneous approximations to derivatives and discontinuities, topics from divergent series, summation methods, measure theory, the Lebesgue integral, Lp spaces, Holder, Minkowski, and and Cauchy-Schwarz inequalities; basics of Functional Analysis, normed spaces, Banach spaces and Hilbert space, with examples (Lp spaces, continuous-functions spaces), Banach spaces and spectral theory, groups and Fourier transforms, Tauberian theorems; approximation theory, again, through the prism of functional analysis; extension of the polynomial approximation theorem (Stone-Weierstrass theorem), Muntz approximation theorem (by polynomials with preassigned powers), compact operators, the Spectral theorem, Stone’s theorem (representations of the additive group of real numbers); Peter-Weyl theory (representations of compact groups). A selection from these topics as time and class preparation allow. Prerequisite: A year of analysis at the 300 level or above (for example, MATH 360 AND MATH 361 OR MATH 508 AND MATH 509); a semester of linear algebra at the 300 level or above (for example, MATH 314).
Course not offered every year
Prerequisites:
A year of analysis at the 300 level or above (for example, Mathematics 360-361, 508-509); a semester of linear algebra at the 300 level or above (for example, Mathematics 370).
Activity: Lecture
1.0 Course Unit

MATH 499 Supervised Study
Study under the direction of a faculty member. Intended for a limited number of mathematics majors. Prerequisite: Hours and credit to be arranged.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: Hours and credit to be arranged

MATH 500 Geometry-Topology, Differential Geometry
Point set topology: metric spaces and topological spaces, compactness, connectedness, continuity, extension theorems, separation axioms, quotient spaces, topologies on function spaces, Tychonoff theorem. Fundamental groups and covering spaces, and related topics.
Course not offered every year
Also Offered As: MATH 460
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit

MATH 501 Geometry-Topology, Differential Geometry
The course moves from a study of extrinsic geometry (curves and surfaces in n-space) to the intrinsic geometry of manifolds. After a review of vector calculus and a section on tensor algebra, we study manifolds and their intrinsic geometry, including metrics, connections, geodesics, and the Riemann curvature tensor. Topics include Eulerian curvature and Euler’s theorems, the Gauss map and first/second fundamental forms, the Theorema Egregium, minimal surfaces in n-space; other topics as time permits.
Course not offered every year
Also Offered As: MATH 465
Prerequisite: MATH 240 OR MATH 260 AND MATH 314 OR MATH 514
Activity: Lecture
1.0 Course Unit

MATH 502 Abstract Algebra
An introduction to groups, rings, fields and other abstract algebraic systems, elementary Galois Theory, and linear algebra – a more theoretical course than MATH 370. Prerequisite: If course requirement not met, permission of instructor required. Students who have already received credit for either MATH 370, 371, 502 or 503 cannot receive further credit for MATH 312 or MATH 313/513. Students can receive credit for at most one of Math 312 and Math 313/513.
Course usually offered in fall term
Prerequisite: MATH 240 OR MATH 260 AND MATH 314 OR MATH 514
Activity: Lecture
1.0 Course Unit
Notes: Students who have already received credit for either MATH 370, 371, 502 or 503 cannot receive further credit for MATH 312 or MATH 313/513. Students can receive credit for at most one of MATH 312 and MATH 313/513.

MATH 503 Abstract Algebra
Continuation of Math 502. Prerequisite: Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for MATH 312 or MATH 313/513. Students can receive credit for at most one of Math 312 and Math 313/513.
Course usually offered in spring term
Prerequisite: MATH 502
Activity: Lecture
1.0 Course Unit
Notes: Students who have already received credit for either MATH 370, 371, 502 or 503 cannot receive further credit for MATH 312 or MATH 313/513. Students can receive credit for at most one of MATH 312 and MATH 313/513.

MATH 504 Graduate Proseminar in Mathematics
This course focuses on problems from Algebra (especially linear algebra and multilinear algebra) and Analysis (especially multivariable calculus through vector fields, multiple integrals and Stokes theorem). The material is presented through student solving of problems. In addition there will be a selection of advanced topics which will be accessible via this material.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
MATH 505 Graduate Proseminar in Mathematics
This course focuses on problems from Algebra (especially linear algebra and multilinear algebra) and Analysis (especially multivariable calculus through vector fields, multiple integrals and Stokes theorem). The material is presented through student solving of problems. In addition there will be a selection of advanced topics which will be accessible via this material.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MATH 508 Advanced Analysis
Construction of real numbers, the topology of the real line and the foundations of single variable calculus. Notions of convergence for sequences of functions. Basic approximation theorems for continuous functions and rigorous treatment of elementary transcendental functions. The course is intended to teach students how to read and construct rigorous formal proofs. A more theoretical course than Math 360.
Course usually offered in fall term
Prerequisite: MATH 240 OR MATH 260 AND MATH 241 OR MATH 425
Activity: Lecture
1.0 Course Unit

MATH 509 Advanced Analysis
Course usually offered in spring term
Prerequisite: MATH 508
Activity: Lecture
1.0 Course Unit

MATH 512 Advanced Linear Algebra
Topics will include: Vector spaces, Basis and dimension, quotients; Linear maps and matrices; Determinants, Dual spaces and maps; Invariant subspaces, Canonical forms; Scalar products; Euclidean, unitary and symplectic spaces; Orthogonal and Unitary operators; Tensor products and polynlinear maps; Symmetric and skew-symmetric tensors and exterior algebra.
Prerequisite: Math 512 covers Linear Algebra at the advanced level with a theoretical approach. Students can receive credit for at most one of Math 312 and Math 512.
Activity: Lecture
1.0 Course Unit
Notes: Math 512 covers Linear Algebra at the advanced level with a theoretical approach. Students can receive credit for at most one of MATH 312 and MATH 512.

MATH 513 Computational Linear Algebra
A number of important and interesting problems in a wide range of disciplines within computer science are solved by recourse to techniques from linear algebra. The goal of this course will be to introduce students to some of the most important and widely used algorithms in matrix computation and to illustrate how they are actually used in various settings. Motivating applications will include: the solution of systems of linear equations, applications matrix computations to modeling geometric transformations in graphics, applications of the Discrete Fourier Transform and related techniques in digital signal processing, the solution of linear least squares optimization problems and the analysis of systems of linear differential equations. The course will cover the theoretical underpinnings of these problems and the numerical algorithms that are used to perform important matrix computations such as Gaussian Elimination, LU Decomposition and Singular Value Decomposition.
Also Offered As: MATH 313
Prerequisite: MATH 240 OR MATH 260
Activity: Lecture
1.0 Course Unit

MATH 514 Advanced Linear Algebra
Topics will include: Vector spaces, Basis and dimension, quotients; Linear maps and matrices; Determinants, Dual spaces and maps; Invariant subspaces, Canonical forms; Scalar products; Euclidean, unitary and symplectic spaces; Orthogonal and Unitary operators; Tensor products and polynlinear maps; Symmetric and skew-symmetric tensors and exterior algebra.
Also Offered As: AMCS 514, MATH 314
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit

MATH 520 Selections from Algebra
Informal introduction to such subjects as homological algebra, number theory, and algebraic geometry.
Course not offered every year
Corequisite: MATH 502
Activity: Lecture
1.0 Course Unit

MATH 530 Mathematics of Finance
This course presents the basic mathematical tools to model financial markets and to make calculations about financial products, especially financial derivatives. Mathematical topics covered: stochastic processes, partial differential equations and their relationship. No background in finance is assumed.
Course not offered every year
Prerequisite: MATH 240 OR MATH 260 AND STAT 430
Activity: Lecture
1.0 Course Unit
MATH 546 Advanced Probability
The required background is (1) enough math background to understand proof techniques in real analysis (closed sets, uniform convergence, fourier series, etc.) and (2) some exposure to probability theory at an intuitive level (a course at the level of Ross’s probability text or some exposure to probability in a statistics class). After a summary of the necessary results from measure theory, we will learn the probabilist’s lexicon (random variables, independence, etc.). We will then develop the necessary techniques (Borel-Cantelli lemmas, estimates on sums of independent random variables and truncation techniques) to prove the classical laws of large numbers. Next come Fourier techniques and the Central Limit Theorem, followed by combinatorial techniques and the study of random walks.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

MATH 547 Stochastic Processes
Course not offered every year
Also Offered As: MATH 649, STAT 931
Prerequisite: MATH 546 OR STAT 930
Activity: Lecture
1.0 Course Unit

MATH 560 Selections from Geometry and Topology
Informal introduction to such subjects as homology and homotopy theory, classical differential geometry, dynamical systems, and knot theory.
Course not offered every year
Corequisite: MATH 500
Activity: Lecture
1.0 Course Unit

MATH 561 Selections from Geometry and Topology
Informal introduction to such subjects as homology and homotopy theory, classical differential geometry, dynamical systems, and knot theory.
Course not offered every year
Corequisite: MATH 500
Activity: Lecture
1.0 Course Unit

MATH 570 Introduction to Logic and Computability
Course not offered every year
Also Offered As: LGIC 310, PHIL 410
Prerequisite: MATH 371 OR MATH 503
Activity: Lecture
1.0 Course Unit

MATH 571 Introduction to Logic and Computability
Continuation of Math 570. Prerequisite: Permission of instructor if course prerequisites not met
Course not offered every year
Also Offered As: LGIC 320, PHIL 413
Prerequisite: MATH 570
Activity: Seminar
1.0 Course Unit

MATH 580 Combinatorial Analysis and Graph Theory
Generating functions, enumeration methods, Polya’s theorem, combinatorial designs, discrete probability, extremal graphs, graph algorithms and spectral graph theory, combinatorial and computational geometry. Permission of the instructor required to enroll.
Course not offered every year
Activity: Lecture
1.0 Course Unit

MATH 581 Combinatorial Analysis and Graph Theory
Continuation of Math 580.
Course not offered every year
Prerequisite: MATH 580
Activity: Lecture
1.0 Course Unit

MATH 584 The Mathematics of Medical Imaging and Measurement
The last several decades have seen major revolutions in both medical and non-medical and imaging technologies. Underlying all of these advances are sophisticated mathematical tools to model the measurement process and reconstruct images. This course begins with an introduction of the mathematical models and then proceeds to discuss the integral transforms that underlie these models: the Fourier transform, the Radon transform and the Laplace transform. We discuss how each of these transforms is inverted, both in theory and in practice. Along the way we study interpolation, sampling, approximation theory, filtering and noise analysis. This course assumes a thorough knowledge of linear algebra and a knowledge of analysis at the undergraduate level (Math 314 and Math 360 and Math 361, or Math 508 and Math 509).
Taught by: Staff.
Course not offered every year
Also Offered As: AMCS 584, BE 584
Prerequisite: MATH 114 AND MATH 360 OR MATH 508 AND MATH 361 OR MATH 509
Activity: Lecture
1.0 Course Unit

MATH 586 Topics in Mathematical Biology
This course will cover various mathematical models and tools that are used to study modern biological problems. The specific emphasis will vary from year to year, but typically will include an introduction to stochastic processes and computational methods that arise in evolutionary biology and population genetics. No prior knowledge of biology is needed to take this course, but a strong background in probability and familiarity with algorithms and combinatorics will be assumed. Prerequisite: MATH 24 and 340 are recommended
Course not offered every year
Also Offered As: BIOL 586
Prerequisite: MATH 430
Activity: Lecture
1.0 Course Unit
MATH 594 Mathematical Methods of Physics
Introduction to mathematics used in physics and engineering, with the goal of developing facility in classical techniques. Vector spaces, linear algebra, computation of eigenvalues and eigenvectors, boundary value problems, spectral theory of second order equations, asymptotic expansions, partial differential equations, differential operators and Green's functions, orthogonal functions, generating functions, contour integration, Fourier and Laplace transforms and an introduction to representation theory of SU(2) and SO(3). The course will draw on examples in continuum mechanics, electrostatics and transport problems.
Course not offered every year
Also Offered As: PHYS 500
Activity: Lecture
1.0 Course Unit

MATH 599 Independent Study
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

MATH 600 Topology and Geometric Analysis
Course usually offered in fall term
Prerequisite: MATH 500 AND MATH 501
Activity: Lecture
1.0 Course Unit

MATH 601 Topology and Geometric Analysis
Covering spaces and fundamental groups, van Kampen's theorem and classification of surfaces. Basics of homology and cohomology, singular and cellular; isomorphism with de Rham cohomology. Brouwer fixed point theorem, CW complexes, cup and cap products, Poincare duality, Kunneth and universal coefficient theorems, Alexander duality, Lefschetz fixed point theorem.
Course usually offered in spring term
Prerequisite: MATH 600
Activity: Lecture
1.0 Course Unit

MATH 602 Algebra
Course usually offered in fall term
Prerequisite: MATH 370 AND MATH 371 OR MATH 502 AND MATH 503
Activity: Lecture
1.0 Course Unit

MATH 603 Algebra
Continuation of Math 602.
Course usually offered in spring term
Prerequisite: MATH 602
Activity: Lecture
1.0 Course Unit

MATH 604 First Year Seminar in Mathematics
This is a seminar for first year Mathematics graduate student, supervised by faculty. Students give talks on topics from all areas of mathematics at a level appropriate for first year graduate students. Attendance and preparation will be expected by all participants, and learning how to present mathematics effectively is an important part of the seminar. Open to first year Mathematics graduate students. Others need permission of the instructor.
Course usually offered in fall term
Prerequisites: Open to first year Mathematics graduate students. Others need permission of the instructor.
Activity: Seminar
1.0 Course Unit

MATH 605 Analysis
Complex analysis: analyticity, Cauchy theory, meromorphic functions, isolated singularities, analytic continuation, Runge's theorem, d-bar equation, Mittag-Leffler theorem, harmonic and sub-harmonic functions, Riemann mapping theorem, Fourier transform from the analytic perspective. Introduction to real analysis: Weierstrass approximation, Lebesgue measure in Euclidean spaces, Borel measures and convergence theorems, C0 and the Riesz-Markov theorem, Lp-spaces, Fubini Theorem. One-term course offered either term
Also Offered As: AMCS 608
Prerequisite: MATH 508 AND MATH 509
Activity: Lecture
1.0 Course Unit

MATH 606 Functional Analysis
Complex analysis: analyticity, Cauchy theory, meromorphic functions, isolated singularities, analytic continuation, Runge's theorem, d-bar equation, Mittag-Leffler theorem, harmonic and sub-harmonic functions, Riemann mapping theorem, Fourier transform from the analytic perspective. Introduction to real analysis: Weierstrass approximation, Lebesgue measure in Euclidean spaces, Borel measures and convergence theorems, C0 and the Riesz-Markov theorem, Lp-spaces, Fubini Theorem. One-term course offered either term
Also Offered As: AMCS 608
Prerequisite: MATH 508 AND MATH 509
Activity: Lecture
1.0 Course Unit

MATH 607 Real Analysis
Also Offered As: AMCS 609
Prerequisite: MATH 608
Activity: Lecture
1.0 Course Unit

MATH 608 Analysis
Also Offered As: AMCS 609
Prerequisite: MATH 608
Activity: Lecture
1.0 Course Unit

MATH 609 Analysis
Also Offered As: AMCS 609
Prerequisite: MATH 608
Activity: Lecture
1.0 Course Unit

MATH 610 Functional Analysis
Also Offered As: AMCS 610
Prerequisite: MATH 608 OR MATH 609
Activity: Lecture
1.0 Course Unit
MATH 612 Selections from Algebra
Informal introduction to such subjects as homological algebra, number theory, and algebraic geometry.
Course not offered every year
Corequisite: MATH 600 AND MATH 602
Activity: Lecture
1.0 Course Unit

MATH 618 Algebraic Topology, Part I
Course usually offered in fall term
Prerequisite: MATH 600 AND MATH 601
Activity: Lecture
1.0 Course Unit

MATH 619 Algebraic Topology, Part I
Rational homotopy theory, cobordism, K-theory, Morse theory and the h-cobordism theorem. Surgery theory.
Course usually offered in spring term
Prerequisite: MATH 618
Activity: Lecture
1.0 Course Unit

MATH 620 Algebraic Number Theory
Dedekind domains, local fields, basic ramification theory, product formula, Dirichlet unit theory, finiteness of class numbers, Hensel’s Lemma, quadratic and cyclotomic fields, quadratic reciprocity, abelian extensions, zeta and L-functions, functional equations, introduction to local and global class field theory. Other topics may include: Diophantine equations, continued fractions, approximation of irrational numbers by rationals, Poisson summation, Hasse principle for binary quadratic forms, modular functions and forms, theta functions.
Course not offered every year
Prerequisite: MATH 602 AND MATH 603
Activity: Lecture
1.0 Course Unit

MATH 621 Algebraic Number Theory
Continuation of Math 620.
Course not offered every year
Prerequisite: MATH 620
Activity: Lecture
1.0 Course Unit

MATH 622 Complex Algebraic Geometry
Algebraic geometry over the complex numbers, using ideas from topology, complex variable theory, and differential geometry. Topics include: Complex algebraic varieties, cohomology theories, line bundles, vanishing theorems, Riemann surfaces, Abel’s theorem, linear systems, complex tori and abelian varieties, Jacobian varieties, currents, algebraic surfaces, adjunction formula, rational surfaces, residues.
Course not offered every year
Prerequisite: MATH 602 AND MATH 603 AND MATH 609
Activity: Lecture
1.0 Course Unit

MATH 623 Complex Algebraic Geometry
Continuation of Math 622.
Course not offered every year
Prerequisite: MATH 622
Activity: Lecture
1.0 Course Unit

MATH 624 Algebraic Geometry
Algebraic geometry over algebraically closed fields, using ideas from commutative algebra. Topics include: Affine and projective algebraic varieties, morphisms and rational maps, singularities and blowing up, rings of functions, algebraic curves, Riemann Roch theorem, elliptic curves, Jacobian varieties, sheaves, schemes, divisors, line bundles, cohomology of varieties, classification of surfaces.
Course not offered every year
Prerequisite: MATH 602 AND MATH 603
Activity: Lecture
1.0 Course Unit

MATH 625 Algebraic Geometry
Continuation of Math 624.
Course not offered every year
Prerequisite: MATH 624
Activity: Lecture
1.0 Course Unit

MATH 626 Commutative Algebra
Topics in commutative algebra taken from the literature. Material will vary from year to year depending upon the instructor’s interests.
Course not offered every year
Prerequisite: MATH 624
Activity: Lecture
1.0 Course Unit

MATH 628 Homological Algebra
Complexes and exact sequences, homology, categories, derived functors (especially Ext and Tor). Homology and cohomology arising from complexes in algebra and geometry, e.g. simplicial and singular theories, Cech cohomology, de Rham cohomology, group cohomology, Hochschild cohomology. Projective resolutions, cohomological dimension, derived categories, spectral sequences. Other topics may include: Lie algebra cohomology, Galois and etale cohomology, cyclic cohomology, l-adic cohomology. Algebraic deformation theory, quantum groups, Brauer groups, descent theory.
Course not offered every year
Prerequisite: MATH 602 AND MATH 603
Activity: Lecture
1.0 Course Unit

MATH 629 Homological Algebra
Continuation of Math 628.
Course not offered every year
Prerequisite: MATH 628
Activity: Lecture
1.0 Course Unit

MATH 634 Arithmetic Geometry
Arithmetic Geometry
Activity: Lecture
1.0 Course Unit

MATH 642 Topics in Partial Differential Equations
Problems in differential geometry, as well as those in physics and engineering, inevitable involve partial derivatives. This course will be an introduction to these problems and techniques. We will use P.D.E. as a tool. Some of the applications will be small, some large. The proof of the Hodge Theorem will be a small application. Discussion of the Yamabe problem and Ricci flow (used to prove the Poincare Conjecture) will be larger.
Prerequisite: MATH 608 AND MATH 609
Activity: Lecture
1.0 Course Unit
MATH 644 Partial Differential Equations
Subject matter varies from year to year. Some topics are: the classical theory of the wave and Laplace equations, general hyperbolic and elliptic equations, theory of equations with constant coefficients, pseudo-differential operators, and non-linear problems. Sobolev spaces and the theory of distributions will be developed as needed.
Course not offered every year
Prerequisite: MATH 608 AND MATH 609
Activity: Lecture
1.0 Course Unit

MATH 645 Partial Differential Equations
Subject matter varies from year to year. Some topics are: the classical theory of the wave and Laplace equations, general hyperbolic and elliptic equations, theory of equations with constant coefficients, pseudo-differential operators, and nonlinear problems. Sobolev spaces and the theory of distributions will be developed as needed.
Course not offered every year
Prerequisite: MATH 608 AND MATH 609
Activity: Lecture
1.0 Course Unit

MATH 648 Probability Theory
Course usually offered in fall term
Also Offered As: STAT 930
Prerequisite: STAT 430 OR STAT 510 OR MATH 608
Activity: Lecture
1.0 Course Unit

MATH 649 Stochastic Processes
Course not offered every year
Also Offered As: MATH 547, STAT 931
Prerequisite: MATH 546 OR STAT 930
Activity: Lecture
1.0 Course Unit

MATH 652 Operator Theory
Subject matter may include spectral theory of operators in Hilbert space, C*-algebras, von Neumann algebras.
Course not offered every year
Activity: Lecture
1.0 Course Unit

MATH 654 Lie Groups
Connection of Lie groups with Lie algebras, Lie subgroups, exponential map. Algebraic Lie groups, compact and complex Lie groups, solvable and nilpotent groups. Other topics may include relations with symplectic geometry, the orbit method, moment map, symplectic reduction, geometric quantization, Poisson-Lie and quantum groups.
Course not offered every year
Prerequisite: MATH 600 AND MATH 601 AND MATH 602 AND MATH 603
Activity: Lecture
1.0 Course Unit

MATH 655 Lie Groups
Continuation of Math 654.
Course not offered every year
Prerequisite: MATH 654
Activity: Lecture
1.0 Course Unit

MATH 656 Representation of Continuous Groups
Possible topics: harmonic analysis on locally compact abelian groups; almost periodic functions; direct integral decomposition theory, Types I, II and III: induced representations, representation theory of semisimple groups.
Course not offered every year
Activity: Lecture
1.0 Course Unit

MATH 657 Representation of Continuous Groups
Possible topics: harmonic analysis on locally compact abelian groups; almost periodic functions; direct integral decomposition theory, Types I, II and III: induced representations, representation theory of semisimple groups.
Course not offered every year
Activity: Lecture
1.0 Course Unit

MATH 660 Differential Geometry
Riemannian metrics and connections, geodesics, completeness, Hopf-Rinow theorem, sectional curvature, Ricci curvature, scalar curvature, Jacobi fields, second fundamental form and Gauss equations, manifolds of constant curvature, first and second variation formulas, Bonnet-Myers theorem, comparison theorems, Morse index theorem, Hadamard theorem, Preissmann theorem, and further topics such as sphere theorems, critical points of distance functions, the soul theorem, Gromov-Hausdorff convergence.
Course not offered every year
Prerequisite: MATH 600 AND 601 AND 602 AND 603
Activity: Lecture
1.0 Course Unit

MATH 661 Differential Geometry
Continuation of Math 660.
Course not offered every year
Prerequisite: MATH 660
Activity: Lecture
1.0 Course Unit

MATH 671 Topics in Logic
Discusses advanced topics in logic.
Course not offered every year
Also Offered As: LGIC 496, PHIL 412
Prerequisite: MATH 570 AND MATH 571
Activity: Seminar
1.0 Course Unit

MATH 694 Mathematical Foundations of Theoretical Physics
Selected topics in mathematical physics, such as mathematical methods of classical mechanics, electrodynamics, relativity, quantum mechanics and quantum field theory.
Course not offered every year
Activity: Lecture
1.0 Course Unit
MATH 695 Mathematical Foundations of Theoretical Physics
Selected topics in mathematical physics, such as mathematical methods of classical mechanics, electrodynamics, relativity, quantum mechanics and quantum field theory.
Course not offered every year
Activity: Lecture
1.0 Course Unit

MATH 702 Topics in Algebra
Topics from the literature. The specific subjects will vary from year to year.
Course not offered every year
Activity: Lecture
1.0 Course Unit

MATH 720 Advanced Number Theory
Ramification theory, adeles and ideles, Tate's thesis, group cohomology and Galois cohomology, class field theory in terms of ideles and cohomology, Lubin-Tate formal groups, Artin and Swan conductors, central simple algebras over local and global fields, general Hasse principles. Other topics may include the following: zero-dimensional Arakelov theory, Tate duality, introduction to arithmetic of elliptic curves, local and global epsilon factors in functional equations, p-adic L-functions and Iwasawa theory, modular forms and functions and modular curves.
Course not offered every year
Prerequisite: MATH 620 AND MATH 621
Activity: Lecture
1.0 Course Unit

MATH 721 Advanced Number Theory
Continuation of Math 720.
Course not offered every year
Prerequisite: MATH 720
Activity: Lecture
1.0 Course Unit

MATH 724 Topics in Algebraic Geometry
Topics from the literature. The specific subjects will vary from year to year.
Course not offered every year
Prerequisite: MATH 622 AND MATH 623 OR MATH 624 AND MATH 625
Activity: Lecture
1.0 Course Unit

MATH 730 Topics in Algebraic and Differential Topology
Topics from the literature. The specific subjects will vary from year to year.
Course not offered every year
Prerequisite: MATH 618 AND MATH 619
Activity: Lecture
1.0 Course Unit

MATH 731 Topics in Algebraic and Differential Topology
Topics from the literature. The specific subjects will vary from year to year.
Course not offered every year
Prerequisite: MATH 618 AND MATH 619
Activity: Lecture
1.0 Course Unit

MATH 748 Topics in Classical Analysis
Harmonic analysis in Euclidean space, Riemann surfaces, Discontinuous groups and harmonic analysis in hyperbolic space, Pseudodifferential operators and index theorems, Variational methods in non-linear PDE, Hyperbolic equations and conservation laws, Probability and stochastic processes, Geometric measure theory, Applications of analysis to problems in differential geometry. The specific subjects will vary from year to year.
Course not offered every year
Prerequisite: MATH 608 AND MATH 609
Activity: Lecture
1.0 Course Unit

MATH 752 Topics in Operator theory
Topics from the literature. The specific subjects will vary from year to year.
Course not offered every year
Activity: Lecture
1.0 Course Unit

MATH 753 Topics in Operator Theory
Topics from the literature. The specific subjects will vary from year to year.
Course not offered every year
Activity: Lecture
1.0 Course Unit

MATH 760 Topics in Differential Geometry
Topics from the literature. The specific subjects will vary from year to year.
Course not offered every year
Prerequisite: MATH 660 AND MATH 661
Activity: Lecture
1.0 Course Unit

MATH 761 Topics in Differential Geometry
Topics from the literature. The specific subjects will vary from year to year.
Course not offered every year
Prerequisite: MATH 660 AND MATH 661
Activity: Lecture
1.0 Course Unit

MATH 820 Algebra Seminar
Seminar on current and recent literature in algebra.
Course not offered every year
Activity: Seminar
1.0 Course Unit

MATH 830 Geometry-Topology Seminar
Seminar on current and recent literature in geometry-topology
Course not offered every year
Activity: Seminar
1.0 Course Unit

MATH 831 Geometry-Topology Seminar
Seminar on current and recent literature in geometry-topology
Course not offered every year
Activity: Seminar
1.0 Course Unit

MATH 871 Logic Seminar
Seminar on current and recent literature in logic.
Course not offered every year
Activity: Seminar
1.0 Course Unit
MATH 878 Probability and Algorithm Seminar  
Seminar on current and recent literature in probability and algorithm.  
Taught by: Staff.  
Activity: Seminar  
1.0 Course Unit

MATH 881 Combinatorics Seminar  
Seminar on current and recent literature in combinatorics.  
Course not offered every year  
Activity: Seminar  
1.0 Course Unit

Mechanical Engineering and Applied Mechanics (MEAM)

MEAM 099 Independent Study  
An opportunity for the student to become closely associated with a professor in (1) a research effort to develop research skills and technique and/or (2) to develop a program of independent in-depth study in a subject area in which the professor and student have a common interest. The challenge of the task undertaken must be consistent with the student's academic level. To register for this course, the student and professor jointly submit a detailed proposal. Subject to the approval of the MEAM Undergraduate Curriculum Chair.  
One-term course offered either term  
Activity: Independent Study  
1.0 Course Unit  
Notes: Open to all students. A maximum of 2 c.u. of MEAM 099 may be applied toward the B.A.S. or B.S.E. degree requirements

MEAM 101 Introduction to Mechanical Design  
This hands-on, project-based course covers the fundamentals of the modern mechanical design process, from needfinding and brainstorming to the basics of computerized manufacturing and rapid prototyping. Topics include: product definition (needfinding, observation, sketching, and animation using SolidWorks); fundamental engineering design practices (material selection, dimensioning, tolerances, etc.); basic computer simulation and analysis; and rapid prototyping (laser cutter, 3-D fused-deposition modeling, and an introduction to computer-controlled machining).  
One-term course offered either term  
Activity: Lecture  
1.0 Course Unit  
Notes: This course is available to all Engineering majors. Seniors are not permitted to register for this class.

MEAM 110 Introduction to Mechanics  
This lecture course and a companion laboratory course (MEAM 147) build upon the concepts of Newtonian (classical) mechanics and their application to engineered systems. This course introduces students to mechanical principles that are the foundation of upper-level engineering courses including MEAM 210 and 211. The three major parts of this course are: I. Vector Mechanics; II. Statics and Structures; and III. Dynamics. Topics include: vector analysis, statics of rigid bodies, introduction to deformable bodies, friction, kinematics of motion, work and energy, and dynamics of particles. Case studies will be introduced, and the role of Newtonian mechanics in emerging applications including bio- and nano-technologies will be discussed.  
Course usually offered in fall term  
Corequisite: MATH 104 AND MEAM 147  
Activity: Lecture  
1.0 Course Unit

MEAM 147 Introduction to Mechanics Lab  
This half-credit laboratory class is a companion to the Introduction to Mechanics lecture course (MEAM 110). It investigates the concepts of Newtonian (classical) mechanics through weekly hands-on experiments, emphasizing connections between theoretical principles and practical applications in engineering. In addition to furthering their understanding about the workings of the physical world, students will improve their skills at conducting experiments, obtaining reliable data, presenting numerical results, and extracting meaningful information from such numbers.  
Course usually offered in fall term  
Corequisite: MEAM 110  
Activity: Laboratory  
0.5 Course Units

MEAM 201 Machine Design and Manufacturing  
Building upon the fundamentals of mechanical design taught in MEAM 101, this hands-on, project-based course provides students with the knowledge and skills necessary to design, analyze, manufacture, and test fully-functional mechanical systems. Topics covered include an introduction to machine elements, analysis of the mechanics of machining, manufacturing technology, precision fabrication (milling, turning, and computer-controlled machining), metrology, tolerances, cutting-tool fundamentals and engineering materials. Enrollment is limited.  
Taught by: Graham Wabiszewski  
One-term course offered either term  
Prerequisite: MEAM 101  
Activity: Lecture  
1.0 Course Unit

MEAM 202 Introduction to Thermal and Fluids Engineering  
This course introduces students to the main concepts and applications of thermodynamics, fluid mechanics, and heat transfer. Topics covered include the first law of thermodynamics, fluid statics, Bernoulli's equation, drag, lift, streamlines, conduction, convection, radiation, thermal resistances, and lumped capacitance. Mass, momentum, and energy equations are developed using the Reynolds Transport Theorem.  
Taught by: Paulo Campos Arratia  
Prerequisite: MATH 104 AND (MEAM 110 OR PHYS 150)  
Corequisite: MATH 114  
Activity: Lecture  
1.0 Course Unit

MEAM 203 Thermodynamics I  
Thermodynamics studies the fundamental concepts related to energy conversion in such mechanical systems as internal and external combustion engines (including automobile and aircraft engines), compressors, pumps, refrigerators, and turbines. This course is intended for students in mechanical engineering, chemical engineering, materials science, physics and other fields. The topics include properties of pure substances, first-law analysis of closed systems and control volumes, reversibility and irreversibility, entropy, second-law analysis, exergy, power and refrigeration cycles, and their engineering applications.  
Course usually offered in spring term  
Prerequisites: MATH 104, 114  
Activity: Lecture  
1.0 Course Unit
MEAM 210 Statics and Strength of Materials
This course is primarily intended for students in mechanical engineering, but may also be of interest to students in materials science and other fields. It continues the treatment of statics of rigid bodies begun in MEAM 110/PHYS 150 and progresses to the treatment of deformable bodies and their response to loads. The concepts of stress, strain, and linearly elastic response are introduced and applied to the behavior of rods, shafts, beams and other mechanical components. The failure and design of mechanical components are discussed.
Course usually offered in fall term
Prerequisites: MEAM 110,147 or PHYS 150
Corequisite: MATH 240 AND MEAM 247
Activity: Lecture
1.0 Course Unit

MEAM 211 Engineering Mechanics: Dynamics
This course introduces the basic concepts in kinematics and dynamics that are necessary to understand, analyze and design mechanisms and machines. These concepts are also fundamental to the modeling and analysis of human movement, biomechanics, animation of synthetic human models and robotics. The topics covered include: Particle dynamics using energy and momentum methods of analysis; Dynamics of systems of particles; Impact; Systems of variable mass; Kinematics and dynamics of rigid bodies in plane motion; Computer-aided dynamic simulation and animation.
Taught by: Michael Posa
Course usually offered in spring term
Prerequisites: MEAM 210 AND MATH 240 AND ENGR 105
Corequisite: MATH 241 OR ENM 251
Activity: Lecture
1.0 Course Unit

MEAM 220 Introduction to Materials Science and Engineering
The course is an introduction to the most important concepts in materials science and engineering. You will learn how the control of chemical bonding, synthesis, processing, structure and defects can be used to tailor the properties and performance of materials for applications that range from sustainable sources of energy, to construction, to consumer electronics. Case studies are also included to highlight environmental issues associated with materials degradation. This course includes lab demonstrations of key materials properties and a final project where students research an area of materials technology of their own interest.
Taught by: Dr. Peter Davies
Course usually offered in fall term
Also Offered As: MISE 220
Prerequisite: CHEM 101 OR PHYS 140 OR MEAM 110
Activity: Lecture
1.0 Course Unit

MEAM 247 Mechanical Engineering Laboratory I
This is the first of a two semester sophomore level laboratory sequence that students complete over the fall and spring semesters. The course teaches the principles of experimentation and measurement as well as analysis and application to design. This fall semester course follows closely with MEAM 210, involving experiments to explore the principles of statics and strength of materials. Prerequisite: Sophomore standing in engineering
Course usually offered in fall term
Corequisite: MEAM 210
Activity: Laboratory
0.5 Course Units

MEAM 248 Mechanical Engineering Lab I
This is the second of a two-semester sophomore level laboratory sequence that students complete over the fall and spring semesters. The course teaches the principles of experimentation and measurement as well as analysis and application to design. The spring semester course follows closely with MEAM 203 and MEAM 211, expanding upon the principles of experimentation, measurement, analysis, and design of systems through hands-on laboratories and projects in thermodynamics and dynamics. Prerequisite: Sophomore standing in engineering
Course usually offered in spring term
Corequisite: MEAM 203 AND MEAM 211
Activity: Lecture
0.5 Course Units

MEAM 302 Fluid Mechanics
Physical properties; fluid statics; Bernoulli equation; fluid kinematics; conservation laws and finite control-volume analysis; conservation laws and differential analysis; inviscid flow; The Navier-Stokes equation and some exact solutions; similitude, dimensional analysis, and modeling; flow in pipes and channels; boundary layer theory; lift and drag.
Course usually offered in fall term
Prerequisites: MATH 241 or ENM 251 and PHYS 150 or MEAM 110, 147
Activity: Lecture
1.0 Course Unit

MEAM 320 Intro to Mechanical and Mechatronic Systems
This course introduces topics in the design and analysis of modern mechanical systems. The course will cover concepts in mechanism design, kinematics, electronic circuits, motors and electromechanical systems, and measurement and filtering. Specific topics include kinematics of linkages, operational amplifiers, and interfacing with mechanical systems by programming microcontrollers.
Prerequisite: MEAM 211
Corequisite: MEAM 347
Activity: Lecture
1.0 Course Unit

MEAM 321 Dynamic Systems and Control
This course teaches the fundamental concepts underlying the dynamics of vibrations for single-degree of freedom, multi-degree and infinite-degree of freedom mechanical systems. The course will focus on Newton’s Force Methods, Virtual-Work Methods, and Lagrange’s Variation Methods for analyzing problems in vibrations. Students will learn how to analyze transient, steady state and forced motion of single and multi-degree of freedom linear and non-linear systems. The course teaches analytical solution techniques for linear systems and practical numerical and simulation methods for analysis and design of nonlinear systems.
Course usually offered in spring term
Prerequisites: MATH 241, ENM 251 MEAM 211
Activity: Lecture
1.0 Course Unit
MEAM 333 Heat and Mass Transfer
This course covers fundamentals of heat and mass transfer and applications to practical problems in energy conversion and conservation. Emphasis will be on developing a physical and analytical understanding of conductive, convective, and radiative heat transfer, as well as design of heat exchangers and heat transfer with phase change. Topics covered will include: types of heat transfer processes, their relative importance, and the interactions between them, solutions of steady state and transient state conduction, emission and absorption of radiation by real surfaces and radiative transfer between surfaces, heat transfer by forced and natural convection owing to flow around bodies and through ducts, analytical solutions for some sample cases and applications of correlations for engineering problems. Students will develop an ability to apply governing principles and physical intuition to solve problems.
Course usually offered in spring term
Prerequisites: MEAM 203, 302
Activity: Lecture
1.0 Course Unit

MEAM 405 Mechanical Properties of Macro/Nanoscale Materials
The application of continuum and microstructural concepts to elasticity and plasticity and the mechanisms of plastic flow and fracture in metals, polymers and ceramics. Topics covered include elasticity, viscoelasticity, plasticity, crystal defects, strengthening, crystallographic effects, twinning, creep and fatigue. Emphasis will be on mathematical and physical understanding rather than problem solving.
Course usually offered in spring term
Also Offered As: MEAM 505, MSE 405, MSE 505
Prerequisite: MSE 220 OR MEAM 210 OR MATH 240
Activity: Lecture
1.0 Course Unit

MEAM 415 Product Design
This course provides tools and methods for creating new products. The course is intended for students with a strong career interest in new product, development, entrepreneurship, and/or technology development. The course follows an overall product design methodology, including the identification of customer needs, generation of product concepts, prototyping, and design-manufacturing. Weekly student assignments are focused on the design of a new product and culminate in the creation of a prototype, which is launched at an end-of-semester public Design Fair. The course project is a physical good - but most of the tools and methods apply to services and software products. The course is open to any Penn sophomore, junior, senior or graduate student.
Taught by: Faculty
Also Offered As: IPD 515, OIDD 415, OIDD 515
Activity: Lecture
1.0 Course Unit

MEAM 421 Control For Autonomous Robots
This course introduces the hardware, software and control technology used in autonomous ground vehicles, commonly called ‘self-driving cars.’ The weekly laboratory sessions focus on development of a small-scale autonomous car, incrementally enhancing the sensors, software, and control algorithms to culminate in a demonstration in a realistic outdoor operating environment. Students will learn basic physics and modeling: controls design and analysis in Matlab and Simulink; software implementation in C and Python; sensor systems and filtering methods for IMUs, GPS, and computer vision systems; and path planning from fixed map data. Prerequisite: If course requirement not met, permission of instructor required.
Course usually offered in fall term
Also Offered As: ESE 421
Prerequisite: (CIS 110 OR CIS 120 OR ENGR 105) AND (ESE 210 OR ESE 215 OR MEAM 211)
Activity: Lecture
1.5 Course Unit

MEAM 445 Mechanical Engineering Design Projects
This capstone design project course is required of all mechanical engineering students. Student teams will design and test complex mechanical systems that address a societal or consumer need. Projects are devised by the team, sponsored by industry, or formulated by Penn professors. Each project is approved by the instructor and a faculty advisor. Topics treated in the course include project planning, prototyping, patent and library searches, intellectual property, ethics, and technical writing and presentations. The work is spread over MEAM 445 and MEAM 446. Prerequisite: Junior standing
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
MEAM 446 Mechanical Engineering Design Projects
This is the second course in the two course sequence involving the capstone design project. See MEAM 445 for course description.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MEAM 502 Energy Engineering in Power Plants and Transportation Systems
Most energy consumed in the U.S. and in the world is produced using thermal-to-mechanical energy conversion. In this course, students will learn the engineering principles that govern how heat is converted to mechanical power in electric power plants, jet aircraft, and internal combustion engines. Topics covered include a review of thermodynamics and basic power cycles, supercritical, combined, and hybrid cycles, cogeneration, jet propulsion, and reciprocating internal combustion engines. A brief introduction to desalination and combustion is also included. The material in this course will provide students a foundation important for industrial and research employment in energy engineering.
Course usually offered in fall term
Prerequisites: MEAM 203, 333
Activity: Lecture
1.0 Course Unit

MEAM 503 Direct Energy Conversion: from Macro to Nano
The course focuses on devices that convert thermal, solar, or chemical energy directly to electricity, i.e., without intermediate mechanical machinery such as a turbine or a reciprocating piston engine. A variety of converters with sizes ranging from macro to nano scale will be discussed, with the advantages offered by nanoscale components specifically highlighted. Topics will include thermoelectric energy converters and radioisotope thermoelectric generators (RTGs), thermionic energy converters (TEC), photovoltaic (PV) and thermophotovoltaic (TPV) cells, as well as piezoelectric harvesters. Additional topics may include magneto-hydrodynamic (MHD) generators, alkali metal thermal-to-electric converters (AMTEC), and fuel cells. The course will comprehensively cover both theoretical and practical tribology, the science and technology of interacting surfaces in relative motion. The various modes of lubrication, hydrodynamic, elastohydrodynamic, hydrostatic, mixed, solid and dry, will be studied in detail. The contact between solid surfaces will be covered, leading to an understanding of friction and various modes of wear. At each stage, it will be shown how the tribological principles learned can be applied in practice to improve the efficiency and durability of mechanical equipment and thereby enhance sustainability through energy and materials conservation. Prerequisite: Senior standing in Mechanical Engineering or Material Science of permission of the instructor.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

MEAM 505 Mechanical Properties of Macro/Nanoscale Materials
The application of continuum and microstructural concepts to elasticity and plasticity and the mechanisms of plastic flow and fracture in metals, polymers and ceramics. Topics covered include elasticity, viscoelasticity, plasticity, crystal defects, strengthening, crystallographic effects, twinning, creep and fatigue. Emphasis will be on mathematical and physical understanding rather than problem solving.
Course usually offered in spring term
Also Offered As: MEAM 405, MSE 405, MSE 505
Prerequisite: MSE 220 OR MEAM 210 OR MATH 240
Activity: Lecture
1.0 Course Unit

MEAM 506 Failure Analysis of Engineering Materials
This course will introduce students to the broad field of failure through hands-on real-life examples of specific failures. All engineering materials classes will be considered, including metals, polymers, elastomers, ceramics, and glasses. Emphasis will be placed on understanding how to actually analyze a failed component and understand the cause of failure. Several classes will be conducted by outside experts from places like the NTSB, FBI and OSHA.
Taught by: David Pope, Prof.
Course usually offered in fall term
Also Offered As: MSE 506
Prerequisite: MSE 220 AND (MSE 393 OR MEAM 354)
Activity: Lecture
1.0 Course Unit

MEAM 507 Fundamentals of Materials
This course will provide a graduate level introduction to the science and engineering of materials. It is designed specifically to meet the needs of students who will be doing research that involves materials but who do not have an extensive background in the field. The focus is on fundamental aspects of materials science and will emphasize phenomena and how to describe them. The course assumes an undergraduate background in any area of physical/chemical science and undergraduate mathematics appropriate to this. The course will also be accessible to students of applied mathematics.
Course usually offered in fall term
Also Offered As: MSE 507
Activity: Lecture
1.0 Course Unit

MEAM 508 Materials and Manufacturing for Mechanical Design
The selection of materials and manufacturing processes are critical in the design of mechanical systems. Material properties and manufacturing processes are often tightly linked, thus this course covers both topics in an integrated manner. The properties and manufacturing processes for a wide range of materials (i.e., metals, ceramics, polymers, composites ) are examined from both a fundamental and practical perspective.
From a materials standpoint, the course focuses on mechanical properties, including modulus, strength, fatigue, creep. Established and emerging manufacturing processes will be discussed. Design-based case studies are used to illustrate the selection of materials and processes.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
MEAM 510 Design of Mechatronic Systems
In many modern systems, mechanical elements are tightly coupled with electronic components and embedded computers. Mechatronics is the study of how these domains are interconnected, and this hands-on, project-based course provides an integrated introduction to the fundamental components within each of the three domains, including: mechanical elements (prototyping, materials, actuators and sensors, transmissions, and fundamental kinematics), electronics (basic circuits, filters, op amps, discrete logic, and interfacing with mechanical elements), and computing (interfacing with the analog world, microprocessor technology, basic control theory, and programming). Prerequisite: Graduate standing in engineering or permission of the instructor
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

MEAM 513 Feedback Control Design and Analysis
Basic methods for analysis and design of feedback control in systems. Applications to practical systems. Methods presented include time response analysis, frequency response analysis, root locus, Nyquist and Bode plots, and the state-space approach. Course usually offered in spring term
Also Offered As: ESE 505
Prerequisite: MEAM 321 OR ESE 210
Activity: Lecture
1.0 Course Unit

MEAM 514 Design for Manufacturability
This course is aimed at providing current and future product design/development engineers, manufacturing engineers, and product development managers with an applied understanding of Design for Manufacturability (DFM) concepts and methods. The course content includes materials from multiple disciplines including: engineering design, manufacturing, marketing, finance, project management, and quality systems. Prerequisite: Senior or graduate standing in the School of Design, Engineering, or Business with completed product in development and/or design engineering core coursework or related experience.
Course usually offered in spring term
Also Offered As: IPD 514
Prerequisites: MEAM 101, 210
Activity: Lecture
1.0 Course Unit

MEAM 516 Advanced Mechatronic Reactive Spaces.
This course combines performance art and advanced mechatronics concepts that include the design and implementation of large-scale actuation, advanced sensing, actuation and control. This course pairs design school and engineering students to form interdisciplined teams that together design and build electro-mechanical reactive spaces and scenic/architectural elements in the context of the performing arts. The two disciplinary groups will be treated separately and receive credit for different courses (ARCH746 will be taught concurrently and in some cases co-located) as they will be learning different things. Engineering students gain design sensibilities and advanced mechatronics in the form of networked embedded processing and protocols for large scale actuation and sensing. Design students learn elementary mechatronics and design reactive architectures and work with engineering students to build them. The class will culminate in a some artistic performance (typically with professional artists) such as a Shakespeare play, robotic ballet, a mechatronic opera.
Course not offered every year
Also Offered As: IPD 516
Prerequisite: MEAM 510
Activity: Lecture
1.0 Course Unit

MEAM 517 Control and Optimization with Applications in Robotics
This course covers a variety of advanced topics in model-based nonlinear control, primarily focused on computational techniques and dynamic robotic applications. Students will learn both the theoretical basics of nonlinear and optimal control along with computational algorithms. Topics include dynamic programming, trajectory optimization, canonical underactuated systems, control of limit cycles, stability analysis, nonsmooth mechanics, and model predictive control. Applications include walking and running robots, manipulation, and flying machines. As the course will cover state of the art techniques, we will review relevant research papers. At the end of the semester, students will prepare and present a final project on a related topic of their choosing. Prerequisite: If course requirement not met, permission of instructor required.
Course not offered every year
Prerequisites: MATH 312, MEAM 513 or ESE 500, 505, MEAM 211, 520
Activity: Lecture
1.0 Course Unit

MEAM 519 Elasticity and Micromechanics of Materials
This course is targeted to engineering students working in the areas on micro/nanomechanics of materials. The course will start with a quick review of the equations of linear elasticity and proceed to solutions of specific problems such as the Hertz contact problem, Eshelby’s problem etc. Failure mechanisms such as fracture and the fundamentals of dislocations/plasticity will also be discussed. Prerequisite: graduate standing or permission of the instructor.
Taught by: Reina Romo
Course usually offered in fall term
Also Offered As: MSE 550
Activity: Lecture
1.0 Course Unit
MEAM 520 Introduction to Robotics
The rapidly evolving field of robotics includes systems designed to replace, assist, or even entertain humans in a wide variety of tasks. Recent examples include human-friendly robot arms for manufacturing, interactive robotic pets, medical and surgical assistive robots, and semi-autonomous search-and-rescue vehicles. This course presents the fundamental kinematic, dynamic, and computational principles underlying most modern robotic systems. The main topics of the course include: rotation matrices, homogeneous transformations, manipulator forward kinematics, manipulator inverse kinematics, Jacobians, path and trajectory planning, sensing and actuation, and feedback control. The material is reinforced with hands-on lab exercises involving a robotic arm. Taught by: Cynthia Sung
Course usually offered in fall term
Prerequisite: MEAM 211 AND MATH 240 AND ENGR 105
Activity: Lecture
1.0 Course Unit

MEAM 523 Control Systems for Robotics
In this course, we present approaches for designing controllers for a varied class of robotic systems. We focus on mathematical concepts of linear and nonlinear control theory and how the theory translates to practical robotic applications with emphasis on manipulators, ground, and aerial robots. Topics include inverse kinematics based controllers, trajectory following controllers, non-holonomic robot controllers, artificial potential functions, and model predictive control. Coursework consists of problem sets, programming assignments, critical reading of research papers, and a final project. Prerequisite: If course requirement not met, permission of instructor required.
Course not offered every year
Prerequisites: MEAM 513, 520, ESE, 500
Activity: Lecture
1.0 Course Unit

MEAM 527 Finite Element Analysis
The objective of this course is to equip students with the background needed to carry out finite elements-based simulations of various engineering problems. The first part of the course will outline the theory of finite elements. The second part of the course will address the solution of classical equations of mathematical physics such as Laplace, Poisson, Helmholtz, the wave and the Heat equations. The third part of the course will consist of case studies taken from various areas of engineering and the sciences on topics that require or can benefit from finite element modeling. The students will gain hands-on experience with the multi-physics, finite element package FemLab.
Course usually offered in fall term
Prerequisite: MATH 241 OR ENM 251 AND PHYS 151
Activity: Lecture
1.0 Course Unit

MEAM 529 Introduction to Micro- and Nano-electromechanical Technologies
Taught by: Troy Olsson
Course usually offered in spring term
Also Offered As: ESE 529
Activity: Lecture
1.0 Course Unit

MEAM 530 Continuum Mechanics
This course serves as a basic introduction to the Mechanics of continuous media, and it will prepare the student for more advanced courses in solid and fluid mechanics. The topics to be covered include: Tensor algebra and calculus, Lagrangian and Eulerian kinematics, Cauchy and Piola-Kirchhoff stresses, General principles: conservation of mass, conservation of linear and angular momentum, energy and the first law of thermodynamics, entropy and the second law of thermodynamics; constitutive theory, ideal fluids, Newtonian and non-Newtonian fluids, finite elasticity, linear elasticity, materials with microstructure. Multivariable Calculus, Linear Algebra, Partial Differential Equations.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MEAM 535 Advanced Dynamics
MEAM 211 and some Linear Algebra. Senior or Master’s Standing in Engineering or permission of the instructor.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
MEAM 536 Viscous Fluid Flow and Modern Applications
This is an intermediate course that builds on the basic principles of Fluid Mechanics. The course provides a more in depth and unified framework to understand fluid flow at different time and length scales, in particular viscous flows. Topics include review of basic concepts, conservation laws (momentum, mass, and heat), fluid kinematics, tensor analysis, Stokes’ approximations, non-Newtonian fluid mechanics, and turbulence. The course will explore important modern topics such as microfluidics, swimming of micro-organisms, wind turbines, rheology, biofluid mechanics, and boundary layers. This course is intended for juniors, seniors, and graduate students from the School of Engineering and/or Arts and Sciences that have a general interest in fluid dynamics and its modern applications. Students should have an understanding of basic concepts in fluid mechanics and a good grasp on differential equations.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: This course is intended for juniors, seniors and graduate students from the Schools of Engineering and/or Arts and Sciences that have a general interest in fluid dynamics and its modern applications. Students should have an understanding of basic concepts in fluid mechanics and a good grasp on differential equations.

MEAM 537 Nanotribology
Engineering is progressing to ever smaller scales, enabling new technologies, materials, devices, and applications. This course will provide an introduction to nano-scale tribology and the critical role it plays in the developing areas of nanoscience and nanotechnology. We will discuss how contact, adhesion, friction, lubrication, and wear at interfaces originate, using an integrated approach that combines concepts of mechanics, materials science, chemistry, and physics. We will cover a range of concepts and applications, drawing connections to both established and new approaches. We will discuss the limits of continuum mechanics and present newly developed theories and experiments tailored to describe micro- and nano-scale phenomena. We will emphasize specific applications throughout the course. Reading of scientific literature, critical peer discussion, individual and team problem assignments, and a peer-reviewed literature research project will be assigned as part of the course. Prerequisite: Freshman physics or consent of instructor.
Course not offered every year
Also Offered As: MSE 537
Prerequisite: MEAM 354
Activity: Lecture
1.0 Course Unit

MEAM 538 Turbulence
This course is an introductory course on turbulent flows. The course provides physical and mathematical framework for quantitative and qualitative descriptions of fundamental processes involved in turbulent flows. Topics include the Navier-Stokes equations, the statistical description of turbulence, equations for mean and fluctuations, energy cascade, turbulence spectra, Kolmogorov hypotheses, behavior of shear flows, and isotropic turbulence. The course will also explore modern topics such as computational modeling of turbulence. Prerequisite: Instructor permission required for undergraduates
Course usually offered in spring term
Prerequisites: MEAM 570, 536
Activity: Lecture
1.0 Course Unit
Notes: Instructor Permission required for undergraduates

MEAM 543 Performance, Stability and Control of UAVs
This course covers the application of classical aircraft performance and design concepts to fixed-wing and rotary-wing Unmanned Aerial Vehicles (UAVs). A survey of the latest developments in UAV technology will be used to motivate the development of quantitative mission requirements, such as payload, range, endurance, field length, and detectability. The implications of these requirements on vehicle configuration and sizing will be revealed through application of the fundamentals of aerodynamics and propulsion systems. The course will also cover basic flight dynamics and control, including typical inner-loop feedback applications.
Course usually offered in fall term
Prerequisites: MEAM 210, 211, MATH 240
Activity: Lecture
1.0 Course Unit

MEAM 545 Aerodynamics
Review of fluid kinematics and conservation laws; vorticity theorems; two-dimensional potential flow; airfoil theory; finite wings; oblique shocks; supersonic wing theory; laminar and turbulent boundary layers.
Course usually offered in spring term
Prerequisite: MEAM 302
Activity: Lecture
1.0 Course Unit

MEAM 550 Design of Microelectromechanical Systems
A course that covers the design and fabrication of micro- and nano-electromechanical systems. Topics in the course include micro- and nano-fabrication techniques, mechanics of flexures, thin film mechanics, sensing and actuation approaches (e.g., electrostatic, piezoelectric, and piezoresistive), as well as materials and reliability issues. The fundamentals of these topics will be augmented with device-based case studies.
Course not offered every year
Prerequisite: MEAM 354
Activity: Lecture
1.0 Course Unit

MEAM 553 Atomic Modeling in Materials Science
This course covers two major aspects of atomic level computer modeling in materials. 1. Methods: Molecular statics, Molecular dynamics, Monte Carlo, Kinetic Monte Carlo as well as methods of analysis of the results such as radial distribution function, thermodynamics deduced from the molecular dynamics, fluctuations, correlations and autocorrelations. 2. Semi-empirical descriptions of atomic interactions: pair potentials, embedded atom method, covalent bonding, ionic bonding. Basics of the density functional theory. Mechanics, condensed matter physics, thermodynamics and statistical mechanics needed in interpretations are briefly explained. Prerequisite: Ability to write a basic code in a computer language such as fortran, C, C++
Course usually offered in spring term
Also Offered As: MSE 561
Activity: Lecture
1.0 Course Unit
MEAM 555 Nanoscale Systems Biology
Nano-science and engineering approaches to systems in biology are of growing importance. They extend from novel methods, especially microscopies that invite innovation to mathematical and/or computational modeling which incorporates the physics and chemistry of small scale biology. Proteins and DNA, for example, are highly specialized polymers that interact, catalyze, stretch and bend, move, and/or store information. Membranes are also used extensively by cells to isolate, adhere, deform, and regulate reactions. In this course, students will become familiar with cell & molecular biology and nano-biotechnology through an emphasis on nano-methods, membranes, molecular machines, and ‘polymers’ - from the quantitative perspectives of thermodynamics, statistical physics, and mechanics. We specifically elaborate ideas of energetics, fluctuations and noise, force, kinetics, diffusion, etc. on the nano- thru micro- scale, drawing from very recent examples in the literature. Laboratory experiments will provide hands-on exposure to microscopies in a biological context (eg. fluorescence down to nano-scale, AFM), physical methods (eg. micromanipulation, tracking virus-scale particles or quantum dots), and numerical problems in applied biophysics, chemistry, and engineering. A key goal of the course is to familiarize students with the concepts and technology (plus their limitations) as being employed in current research problems in nanoscale systems biology, extending to nanobiotechnology. Prerequisite: Background in Biology, Physics, Chemistry or Engineering coursework in Thermodynamics or permission of the instructor. Taught by: Discher Course usually offered in fall term Also Offered As: BE 555, CBE 555 Activity: Lecture 1.0 Course Unit

MEAM 564 The Principles and Practice of Microfabrication Technology
A laboratory-based course on fabricating microelectronic and micromechanical devices using photolithographic processing and related fabrication technologies. Lectures discuss: clean room procedures; microelectronic and microstructural materials; photolithography; diffusion, oxidation; materials deposition; etching and plasma processes. Basic laboratory processes are covered for the first two thirds of the course with students completing structures appropriate to their major in the final third. Students registering for ESE 574 will be expected to do extra work (including term paper and additional project). Course not offered every year Also Offered As: ESE 460, ESE 574 Prerequisites: ESE 218, MSE 321, MEAM 333, CBE 351, PHYS 250 Activity: Lecture 1.0 Course Unit

MEAM 561 Thermodynamics: Foundations, Energy, Materials
To introduce students to advanced classical equilibrium thermodynamics based on Callen’s postulatory approach, to exergy (Second-Law) analysis, and to fundamentals of nonequilibrium thermodynamics. Applications to be treated include the thermodynamic foundations of energy processes and systems including advanced power generation and aerospace propulsion cycles, batteries and fuel cells, combustion, diffusion, transport in membranes, materials properties and elasticity, superconductivity, biological processes. Undergraduate thermodynamics. Course usually offered in spring term Activity: Lecture 1.0 Course Unit

MEAM 560 Transport Processes I
The course provides a unified introduction to momentum, energy (heat), and mass transport processes. The basic mechanisms and the constitutive laws for the various transport processes will be delineated, and the conservation equations will be derived and applied to internal and external flows featuring a few examples from mechanical, chemical, and biological systems. Reactive flows will also be considered. Prerequisite: graduate standing or permission of the instructor. Taught by: Campos Arratia Course usually offered in fall term Activity: Lecture 1.0 Course Unit

MEAM 571 Advanced Topics in Transport Phenomena
The course deals with advanced topics in transport phenomena and is suitable for graduate students in mechanical, chemical and bioengineering who plan to pursue research in areas related to transport phenomena or work in an industrial setting that deals with transport issues. Topics include: Transport processes with drops, Bubbles and particles; Phase change Phenomena: -condensation, evaporation, and combustion; Radiation heat transfer: non-participating media, participating media, equation of radiative transfer, optically thin and thick limits; Introduction to Hydrodynamic and Thermal Instability; Microscale energy transport; Nano-particle motion in fluids and transport. Prerequisite: If course requirements not met, permission of instructor required. Course not offered every year Prerequisite: MEAM 570 OR MEAM 642 OR CBE 640 Activity: Lecture 1.0 Course Unit

MEAM 570 Transport Processes I
The course provides a unified introduction to momentum, energy (heat), and mass transport processes. The basic mechanisms and the constitutive laws for the various transport processes will be delineated, and the conservation equations will be derived and applied to internal and external flows featuring a few examples from mechanical, chemical, and biological systems. Reactive flows will also be considered. Prerequisite: graduate standing or permission of the instructor. Taught by: Campos Arratia Course usually offered in fall term Activity: Lecture 1.0 Course Unit

MEAM 575 Micro and Nano Fluidics
The course focuses on topics relevant for micro-fluidics, lab on chip technology, point of care diagnostics, nano-technology, biosensing, and interfacial phenomena. Although we will discuss briefly the fabrication of micro and nano fluidic devices, the course will mostly focus on physical phenomena from the continuum point of view. The mathematical complexity will be kept to a minimum. The course will be reasonably self-contained, and any necessary background material will be provided, consistent with the students’ background and level of preparation. Specifically, we will examine fluid and nanoparticle transport under the action of pressure, electric, magnetic, and capillary forces; the structure and role of superhydrophobic surfaces; how the solid/liquid interface acquires electric charge; ion transport in electrolytes (Poisson-Nernst-Planck equations); colloid stability; electroosmosis, electrophoresis, and particle polarization; electrowetting and digital microfluidics; particle and cell sorting; immunoassays; and enzymatic amplification of nucleic acids. Course not offered every year Activity: Lecture 1.0 Course Unit
**MEAM 580 Electrochemistry for Energy, Nanofabrication and Sensing**
Principles and mathematical models of electrochemical processes in energy conversion and storage, water desalination, nanofabrication, electroplating, and sensing for engineering and science graduate students and advanced undergraduates, lacking prior background in electrochemistry. The course covers equivalent circuits, electrode kinetics, electrokinetic and transport phenomena, and electrostatics. The course will introduce and use the finite element program COMSOLTM. We will discuss, among other things, applications to stationary and flow batteries, supercapacitors, integrated circuit fabrication, electrokinetics, and biosensing. In contrast to CBE 545 Electrochemical Energy Conversion that focuses on solid state electrochemistry, this course emphasizes liquid-based electrochemistry.
Course usually offered in spring term
Prerequisites: MEAM 302, 333
Activity: Lecture
1.0 Course Unit

**MEAM 597 Master's Thesis Research**
One-term course offered either term
Activity: Masters Thesis
1.0 Course Unit

**MEAM 599 Master's Independent Study**
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

**MEAM 613 Non-Linear Control Theory**
The course studies issues in nonlinear control theory, with a particular emphasis on the use of geometric principles. Topics include: controllability, accessibility, and observability, for nonlinear systems; Forbenius' theorem; feedback and input/output linearization for SISO and MIMO systems; dynamic extension; zero dynamics; output tracking and regulation; model matching disturbance decoupling; examples will be taken from mechanical systems, robotic systems, including those involving nonholonomic constraints, and active control of vibrations.
Course not offered every year
Also Offered As: ESE 617
Prerequisite: ESE 500
Activity: Lecture
1.0 Course Unit

**MEAM 620 Advanced Robotics**
This course covers advanced topics in robotics and includes such topics as multi-body dynamics, nonlinear control theory and planning algorithms with application to robots and systems of multiple robots. Prerequisite: Graduate standing in engineering
Course usually offered in spring term
Prerequisite: MEAM 520 OR MEAM 535 OR ESE 500 OR CIS 580
Activity: Lecture
1.0 Course Unit

**MEAM 630 Advanced Continuum Mechanics**
This course is a more advanced version of MEAM 530. The topics to be covered include: tensor algebra and calculus, Lagrangian and Eulerian kinematics; Cauchy and Piola-Kirchhoff stresses. General principles: conservation of mass, conservation of linear and angular momentum, energy and the first law of thermodynamics, entropy and the second law of thermodynamics. Constitutive theory, ideal fluids, Newtonian and non-Newtonian fluids, finite elasticity, linear elasticity, materials with microstructure. One graduate level course in applied mathematics and one in either fluid or Solid Mechanics.
Course not offered every year
Activity: Lecture
1.0 Course Unit

**MEAM 632 Plasticity**
This course develops the mathematical theory of plastic deformation for both crystalline and disordered materials. Phenomenological models for strain-hardening, creep and size-dependent plastic flow as well as physically-based theories for single crystals are discussed. Applications are drawn from problems in structural mechanics, deformation processing, friction and contact, and fracture. Large strain deformations and problems involving strain localization are considered. Prerequisite: If course requirement not met, permission of instructor required.
Course not offered every year
Prerequisites: MEAM 519, ENM 510
Activity: Lecture
1.0 Course Unit

**MEAM 633 Mechanics of Adhesion and Fracture**
This course focuses on mechanics aspects of adhesion and fracture of solids. The topics are intimately related, as fracture involves decohesion. Topics include forces of interaction between surfaces of solids, perfect versus imperfect adhesion, aspects of contact mechanics, linear analysis of cracks in elastic materials, non-linear analysis of cracks in elastic-plastic materials, J-integral methods, phenomenological theories, crack growth and healing, and stability. Micro-mechanical models of fracture are analyzed using non-linear elasticity and energy methods. Applications to various material systems and processes, including structural materials, layered materials, friction and wear.
Course not offered every year
Prerequisite: MEAM 519 AND ENM 510
Activity: Lecture
1.0 Course Unit

**MEAM 634 Rods and Shells**
This course is intended for 2nd year graduate students and introduces continuum mechanics theory of rods and shells with applications to structures and to biological systems as well as stability and buckling. The course begins with topics from differential geometry of curves and surfaces and the associated tensor analysis on Riemannian spaces. A brief introduction to variational calculus is included since variational methods are a powerful tool for formulating approximate structural mechanics theories and for numerical analysis. The structural mechanics theories of rods, plates and shells are introduced including both linear and nonlinear theories. First-year graduate-level applied mathematics for engineers (ENM 510 and 511) and a first course in continuum mechanics or elasticity or permission of instructor.
Course not offered every year
Activity: Lecture
1.0 Course Unit
MEAM 635 Composite Materials
This course deals with the prediction of the average, or effective properties of composite materials. The emphasis will be on methods for determining effective behavior. The course will be concerned mostly with linear mechanical and physical properties, with particular emphasis on the effective conductivity and elastic moduli of multi-phase composites and polycrystals. However, time-dependent and non-linear properties will also be discussed.
Course not offered every year
Prerequisite: ENM 510
Corequisite: ENM 511
Activity: Lecture
1.0 Course Unit

MEAM 642 Advanced Fluid Mechanics
Fluid mechanics as a vector field theory; basic conservation laws, constitutive relations, boundary conditions, Bernoulli theorems, vorticity theorems, potential flow. Viscous flow; large Reynolds number limit; boundary layers.
Course not offered every year
Activity: Lecture
1.0 Course Unit

MEAM 646 Computational Mechanics
The course is divided into two parts. The course first introduces general numerical techniques for elliptical partial differential equations - finite difference method, finite element method and spectral method. The second part of the course introduces finite volume method. SIMPLER formulation for the Navier-Stokes equations will be fully described in the class. Students will be given chances to modify a program specially written for this course to solve some practical problems in heat transfer and fluid flows.
Course not offered every year
Prerequisites: ENM 510, ENM 511, and one graduate level introductory course in mechanics. FORTRAN or C programming experience is necessary.
Activity: Lecture
1.0 Course Unit

MEAM 650 Mechanics of Soft and Biomaterials
This course is aimed to expose the students to a variety of topics in mechanic materials via discussion of 'classic' problems that have had the widest impact long period of time and have been applied to analyze the mechanical behavior a variety of biological and engineering materials.
Course not offered every year
Also Offered As: MSE 650
Activity: Lecture
1.0 Course Unit

MEAM 662 Advanced Molecular Thermodynamics
This course begins with a brief review of classical thermodynamics, including the development of Maxwell relationships and stability analysis. The remainder of the course develops the fundamental framework of statistical mechanics, then reviews various related topics including ideal and interacting gases, Einstein and Debye models of crystals, lattice models of liquids, and the basis of distribution function theory.
Course usually offered in fall term
Also Offered As: BE 662, CBE 618
Activity: Lecture
1.0 Course Unit

MEAM 663 Mechanics of Macromolecules
This course is targeted for engineering/physics students working in the areas of nano/bio technology. The course will start with a quick review of statistical mechanics and proceed to topics such as Langevin dynamics, solution biochemistry (Poisson-Boltzmann and Debye-Huckel theory), entropic elasticity of bio-polymers and networks, reaction rate kinetics, solid state physics and other areas of current technological relevance. Students will be expected to have knowledge of undergraduate mechanics, physics and thermodynamics.
Course not offered every year
Activity: Lecture
1.0 Course Unit

MEAM 690 Advanced Topics in Thermal Fluid Science or Energy
This course will be offered when demand permits. The topics will change due to the interest and specialties of the instructor(s). Some topics could include: Computational Fluid Mechanics, Visualization of Computational Results, Free Surface Flows, Fluid Mechanics of the Respiratory System, and transport in Reacting Systems.
Course not offered every year
Activity: Lecture
1.0 Course Unit

MEAM 691 Special Topics in Mechanics of Materials
This course will be offered when demand permits. The topics will change due to the interests and specialties of the instructor(s). Some topics could include: Compliant Mechanisms, Optimal Control, and Fluid-Structure interaction.
Course not offered every year
Activity: Lecture
1.0 Course Unit

MEAM 692 Topics in Mechanical Systems
This course will be offered when demand permits. The topics will change due to the interests and specialties of the instructor(s). Some topics could include: Compliant Mechanisms, Optimal Control, and Fluid-Structure interaction.
Course not offered every year
Activity: Lecture
1.0 Course Unit

MEAM 699 MEAM Seminar
The seminar course has been established so that students get recognition for their seminar attendance as well as to encourage students to attend. Students registered for this course are required to attend weekly departmental seminars given by distinguished speakers from around the world. In order to obtain a satisfactory (S) grade, the student must not only attend more than 70% of the departmental seminars but also provide satisfactory answers to the mini-essay assignments (shown as quizzes on Canvas) about three of those seminars. It is recommended that the student pick the seminars closest to their research interests, but they may choose any seminar they wish. There will be three such quizzes distributed through the semester, graded pass/fail. Participation in the seminar course will be documented and recorded on the students transcript. In order to obtain their degree, doctoral students will be required to accumulate six seminar courses and MS candidates two courses. Under special circumstances, i.e. in case of conflict with a course, the student may waive the seminar requirement for a particular semester by petition to the Graduate Group Chair.
One-term course offered either term
Activity: Seminar
1.0 Course Unit
MEAM 891 Shop Training: Special Topics
Intended for graduate students conducting research. Building upon the fundamentals of mechanical design, this hands-on, project-based course provides participants with the knowledge and skills necessary to design, analyze, manufacture, and test fully functional subtractive manufacturing processes and part components. Topics covered include an introduction to machine elements, analysis of the mechanics of machining, manufacturing technology, precision fabrication (milling turning and computer-controlled machining), metrology, tolerances, cutting-tool fundamentals and engineering materials. Graduate standing in engineering or permission of the instructor. Completion of MEAM 101 or suitable computer aided design experience; this prerequisite may be waived at the discretion of the instructor if a CAD portfolio which includes technical drawings and assemblies is demonstrated.
One-term course offered either term
Activity: Lecture
0.25 Course Units

MEAM 892 Shop Training: Additive Fundamentals
Intended for graduate students conducting research. This course introduces students to the methods, techniques, and machines utilized in additive manufacturing spaces at Penn. The focus will be on iterative design using Fused Deposition Modeling, Stereolithography, and Polyjetting. These methods will be compared with alternatives such as Digital Light Processing, Selective Laser Sintering, Subtractive Manufacturing, and other fabrication techniques. Students will use computer-aided design tools and additive machines to solve problems of physical device and item manufacture. Graduate Standing in engineering or permission of the instructor. MEAM 101 or a suitable 3D computer aided design experience to be determined by the instructor.
One-term course offered either term
Activity: Lecture
0.25 Course Units

MEAM 895 Teaching Practicum
This course provides training in the practical aspects of teaching. The students will work with a faculty member to learn and develop teaching and communication skills. As part of the course, students will participate in a range of activities that may include: giving demonstration lectures, leading recitations, supervising laboratory experiments, developing instructional laboratories, developing instructional material, preparing homework assignments, and preparing examinations. Some of the recitations will be supervised and feedback and comments will be provided to the student by the faculty responsible for the course. At the completion of the 0.5 c.u. of teaching practicum, the student will receive a Satisfactory/Unsatisfactory grade and a written evaluation from the faculty member responsible for the course. The evaluation will be based on comments of the students taking the course and the impressions of the faculty.
One-term course offered either term
Activity: Lecture
0.5 Course Units

MEAM 899 Independent Study
For students who are studying specific advanced subject areas in mechanical engineering and applied mechanics. Before the beginning of the term, the student must submit a proposal outlining and detailing the study area, along with the faculty supervisor’s consent, to the graduate group chair for approval. At the conclusion of the independent study, the student should prepare a brief report.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
MPHY 604 Radiological Physics
Fundamental concepts underlying radiological physics and radiation dosimetry. Covers photon and neutron attenuation; radiation and charged particle equilibrium; and interactions of photons and charged particles with matter and radiotherapy dosimetry including photographic, calorimetric, chemical and thermoluminescence dosimetry (formerly Medical Radiation Engineering).
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: CAMPEP core course.

MPHY 605 Medical Ethics / Governmental Regulation
Fundamentals of professional ethics for medical physicists through exploration of Code of Ethics (published by the American Association of Physicians in Medicine); case studies; survey of governmental regulations pertinent to medical physics.
Activity: Lecture
0.5 Course Units
Notes: CAMPEP core course.

MPHY 606 Physics of Radiation Therapy
Clinical radiation oncology physics; principles of radiation- producing equipment; photon and electron beams; ionization chambers and calibration protocols; brachytherapy, dose modeling and calculations; treatment planning.
Activity: Lecture
1.0 Course Unit
Notes: CAMPEP core course.

MPHY 607 Radiation Biology
Fundamental knowledge of mechanisms and biological responses of human beings to ionizing and non-ionizing radiation through the study of effects of radiation on molecules, cells and humans; radiation lesions and repair; mechanisms of cell death; cell cycle effect, radiation sensitizers and protectors; tumor radiobiology; relative sensitivities of human tissue and radiation carcinogenesis. This course is required by the American Board of Radiology (ABR).
Activity: Lecture
1.0 Course Unit
Notes: CAMPEP core course.

MPHY 608 Radiation Detection and Measurement
Fundamentals of detection and measurement of ionizing radiation; working principles of many detectors used currently in the field including their application in radiotherapy, nuclear medicine, and diagnostic radiology.
Activity: Lecture
1.0 Course Unit
Notes: CAMPEP core course.

MPHY 610 Computational Medical Physics
Fundamentals of computational calculations with MATLAB on common problems in radiation therapy physics: Compton scattering cross- section and its applications; Bremsstrahlung scattering cross- sections and its applications; 3D photon dose calculation algorithms; 3D electron dose calculation algorithms; CT reconstruction; DICOM format.
Activity: Lecture
1.0 Course Unit

MPHY 611 Medical Physics Laboratory
Lab course offering hands-on experience with a range of measurements commonly encountered in the practice of clinical medical physics. Project offerings may include: Task Group 51 calibration of linear accelerators; 4-Dimensional Computed Tomography (4DCT) imaging and image analysis; Deformable image registration and dose sum reconstruction; Monthly linear accelerator Quality Assurance (QA) procedures; Brachytherapy source calibration and High Dose Rate (HDR) machine QA; Positron emission tomography (PET) imaging and image analysis; MRI imaging and image analysis; Linear accelerator shielding calculations and radiation survey.
Activity: Laboratory
1.0 Course Unit

MPHY 699 Independent Study
Activity: Independent Study
1.0 Course Unit

MPHY 700 Clinical Practicum
Practical experience in a subspecialty of medical physics including radiation therapy, diagnostic imaging, radiation safety, and nuclear medicine. Taking place in a clinical setting and supervised by a qualified medical physicist, the 256 hour practicum provides an understanding of instrumentation methodology, calibration, treatment planning, and quality assurance; and may include patient interaction, clinical conference attendance, and a review of new techniques in radiation oncology.
Activity: Laboratory
1.0 Course Unit

MPHY 990 THESIS I
Faculty-mentored research project (extended research paper or original research) resulting in a final paper and short oral presentation that is the culmination of a master student's graduate study.
Activity: Masters Thesis
1.0 Course Unit

MPHY 991 THESIS II
Faculty-mentored research project (extended research paper or original research) resulting in a final paper and short oral presentation that is the culmination of a master student's graduate study.
Activity: Masters Thesis
1.0 Course Unit

Military Science (MSCI)

MSCI 101 Basic Leadership I Laboratory/Practicum
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. No credit, or as awarded by cross-enrolled schools.
Course usually offered in fall term
Corequisite: MSCI 110
Activity: Laboratory
1.0 Course Unit

MSCI 102 Basic Leadership I Laboratory/Practicum
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. No credit, or as awarded by cross-enrolled schools.
Course usually offered in spring term
Corequisite: MSCI 120
Activity: Laboratory
1.0 Course Unit
**MSCI 110 Leadership and Personal Development**
Introduces students/cadets to the personal challenges and competencies that are critical for effective leadership. Focus is placed on developing basic knowledge and comprehension of the U.S. Army’s Leadership Dimensions while gaining a ‘big picture’ understanding of the Army ROTC program, its purpose in the U.S. Army and our nation, and its advantages for the student. Classes are conducted for one hour once each week. Credit excluded from full-time calculation.
Course usually offered in fall term
Corequisite: MSCI 101
Activity: Lecture
1.0 Course Unit

**MSCI 120 Foundations In Leadership**
Reviews leadership fundamentals such as setting direction, problem solving, listening, presenting briefs, providing feedback and using effective writing skills. Students/cadets are also exposed to key fundamentals of skills required to be successful as an MS II cadet; namely military map reading and land navigation, and small unit operations/leadership drills. Credit excluded from full-time calculation.
Course usually offered in spring term
Corequisite: MSCI 102
Activity: Lecture
1.0 Course Unit

**MSCI 201 Basic Leadership 2 Laboratory/Practicum**
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. No credit, or as awarded by cross-enrolled schools.
Course usually offered in fall term
Corequisite: MSCI 210
Activity: Laboratory
1.0 Course Unit

**MSCI 202 Basic Leadership Laboratory/Practicum**
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. Basic Course Leadership Laboratory. 2h. Open only to (and required of) students in the associated Military Science course. Series, with different roles for students at different levels in the program. Learn and practice basic skills. Gain insight into Advanced Course in order to make an informed decision whether to apply for it. Build self-confidence and team-building leadership skills that can be applied throughout life. Basic Course Physical Fitness. Only open to students in MSCI 101, MSCI 102, MSCI 201 and MSCI 202. Series, with different roles for students at different levels in the program. Participate in and learn to lead a physical fitness program. Emphasis on the development of an individual fitness program and the role of exercise and fitness is one’s life. Students who continue in the advanced course as juniors and seniors become obligated to serve either on active duty or in the reserve component. The Advanced Course consists of the courses MSCI 301, MSCI 302, MSCI 401 and MSCI 402. It is open only to students who have completed the Basic Course or earned placement credit for the basic course (various methods). The Advanced Course is designed to qualify a student for a commission as an officer of the United States Army. Students must complete all courses numbered greater than 300, to include a six-week Advanced Camp during the summer, usually between the junior and senior years. The courses must be taken in sequence unless otherwise approved by the Professor of Military Science. All contracted students receive $150 per month stipend during the school year. No credit, or as awarded by cross-enrolled schools.
Course usually offered in spring term
Corequisite: MSCI 220
Activity: Laboratory
1.0 Course Unit

**MSCI 210 Innovative Tactical Leadership**
Explores the dimensions of creative and innovative tactical leadership strategies and styles by studying historical case studies and engaging in interactive student exercises. Focus is on continued development of the knowledge of leadership values and attributes through an understanding of rank, uniform, customs and courtesies. Credit excluded from full-time calculation.
Course usually offered in fall term
Corequisite: MSCI 201
Activity: Lecture
1.0 Course Unit

**MSCI 220 Leadership In Changing Environments**
Examines the challenges of leading in complex contemporary operational environments. Students/cadets are exposed to more complex land navigation/map reading tasks, as well as more advanced small unit operations/leadership drills. Cadets develop greater self awareness as they practice communication and team building skills. Credit excluded from full-time calculation.
Corequisite: MSCI 202
Activity: Lecture
1.0 Course Unit

**MSCI 230 Adaptive Team Leadership**
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. Taught by: Kushner
Activity: Laboratory
1.0 Course Unit
MSCI 301 Leadership Laboratory/Practicum 3
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. ROTC Advanced Camp. A six-week camp conducted at an Army post. Only open to (and required of) students who have completed MSCI 301 and MSCI 302. The student receives pay. Travel, lodging and most meal costs are defrayed by the US Army. The Advanced Camp environment is highly structured and demanding, stressing leadership at small unit levels under varying, challenging conditions. Individual leadership and basic skills performance are evaluated throughout the camp. The leaders and skills evaluations at the camp weigh heavily in the subsequent selection process that determines the type commission and job opportunities given to the student upon graduation from ROTC and the university Nurse Summer Training Program. Consist of three weeks at an Advanced Camp (see above) and up to five weeks serving as a nurse in a military medical treatment facility. Only open to (and required of) nursing students who have completed MSCI 301 and MSCI 302. Replaces normal advanced. The student receives pay. Travel, lodging and most meal costs are defrayed by the US Army. The camp and clinical environments are demanding, stressing leadership and basic skills performance are evaluated throughout. The leadership and skills evaluations weigh heavily on the subsequent selection process that determines the job opportunities offered to the nurse upon graduation. No credit, or awarded by cross-enrolled schools.
Course usually offered in spring term
Prerequisite: MSCI 101 AND MSCI 102 AND MSCI 110 AND MSCI 120 AND MSCI 201 AND MSCI 202 AND MSCI 210 AND MSCI 220
Corequisite: MSCI 310
Activity: Laboratory
1.0 Course Unit

MSCI 302 Leadership Laboratory/Practicum
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. ROTC Advanced Camp. A six-week camp conducted at an Army post. Only open to (and required of) students who have completed MSCI 301 and MSCI 302. The student receives pay. Travel, lodging and most meal costs are defrayed by the US Army. The Advanced Camp environment is highly structured and demanding, stressing leadership at small unit levels under varying, challenging conditions. Individual leadership and basic skills performance are evaluated throughout the camp. The leaders and skills evaluations at the camp weigh heavily in the subsequent selection process that determines the type commission and job opportunities given to the student upon graduation from ROTC and the university Nurse Summer Training Program. MSCI 320 Complex Team Leadership Issues
Challenges cadets with more complex leadership issues to further develop, practice, and evaluate adaptive leadership. Cadets continue to analyze and evaluate their own leadership values, attributes, skills and actions in preparation for the Leadership Development and Assessment Course (LDAC). Primary attention is given to preparation for LDAC and the development of both tactical skills and leadership qualities. Credit excluded from full-time calculation.
Course usually offered in fall term
Prerequisite: MSCI 101 AND MSCI 102 AND MSCI 110 AND MSCI 120 AND MSCI 201 AND MSCI 202 AND MSCI 210 AND MSCI 220

Modern Middle East Studies (MODM)

The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates/).

MODM 100 The Middle East and the West
This course provides an overview of themes and issues in Middle Eastern history from the medieval era to the present, with an emphasis on encounters and exchanges between the 'Middle East' (defined as Southwest Asia and North Africa) and the 'West' (chiefly Europe and the United States). Key topics include perceptions of Islam since its inception, conflicts between predominantly Christian Europe and the Islamic world during the Crusades, East-West encounters during the age of exploration, European colonial domination of the Middle East from the 19th century, independence movements and the rise of nationalism in the 20th century, the Middle East and the Cold War, and the challenge of Islamist radicalism and anti-Western sentiment in recent times.
Activity: Online Course
1.0 Course Unit

MODM 200 Women and Gender in the Middle East
Depictions of Middle Eastern women frequently present them as voiceless, oppressed, and disadvantaged, and often cite Islam as the cause. This course explores the many complexities of gender and the position of women in the predominantly Islamic Middle East, surveying the major developments, themes, and problems in women's history from the medieval era to the contemporary period. Special emphasis will be placed on the role of women in foundational Islamic texts and the many interpretations of those texts regarding questions of gender. The course will also challenge the idea that gender divisions and the role assigned to women have been static throughout history, by tracing women's legal status, sexual morality, family life, and economic and political participation over time. Themes discussed include the importance of the harem and the influence of women in political life, the challenges posed by the impact of the West, women's reactions to these challenges, the return of Islam and Islamism, and the repercussions for women in dress, employment, and morality. The course will also consider gender norms and homoerotic relations. In addition, the course will also look at Western representations of the Oriental woman, the effects of colonialism and nationalism on Middle Eastern women, and the rise of Muslim women activist movements. We will also address the highly contested subject of veiling and consider the effects of modern US wars on Middle Eastern women. Seeking to go beyond just scholarly studies, this course will make use of art, documentaries, and literature in order to demonstrate how, in the modern period, women have defined themselves amid great political, social and economic turmoil.
Activity: Online Course
1.0 Course Unit

MODM 260 Oil, Poli in Mid East
Few issues have dominated the economic and political landscape of the Middle East over the past hundred years more visibly than oil. This course examines the historical, economic, political and social dimensions of petroleum exploration in the region, from the first major oil discoveries in Iran in 1908 to more recent attempts to diversify the region's economic and energy practices. Topics discussed include oil and economic development, colonialism and foreign oil exploration, petro-nationalism and the rise of OPEC, the Arab oil embargo of 1973, the significance of oil in the US-Saudi relationship, and the role of climate change and sustainability priorities in the Middle East.
Activity: Online Course
1.0 Course Unit
MODM 300 Riggs Trads Mid East
Understanding the modern Middle East is almost impossible without first developing an appreciation for the importance of its diverse religious traditions, and the role that religion has played in the development of the region since antiquity. This course examines the many ways that religion has functioned in Middle Eastern societies, beginning with ancient, pre-Islamic practices, such as the Zoroastrian religion of the Persian Empire, the development of Judaism among the ancient Israelites, and the spread of Christianity in the eastern Roman Empire. Of special interest will be the rise of Islam in the seventh century, and the development of unique and localized Islamic traditions in the rapidly expanding Arab empires of the medieval period. The class will focus on such themes as the differences between Sunni and Shia Islam, the position of non-Muslim minorities in Islamic history and the different responses offered by Muslims to the challenge of western hegemony in predominantly Muslim lands.

The class will conclude by looking closely at the many ways religion is practiced in the Middle East today, from the official secularism of states like Turkey, to the post-revolutionary religious politics of the Islamic Republic of Iran, to the complex relationship between Judaism and Zionism in Israel, to the special challenges faced by Christian and other minorities in places like Egypt or Lebanon.

Music (MUSC)

MUSC 005 College Music Program
Private study in voice, keyboard, strings, woodwind, brass, percussion, and non-western instruments. Such study is designed to meet the artistic, technical, and/or professional needs of the student. Note: This is not a syllabus. Course requirements and assessment will be determined by the private instructor. Private lessons in the College House Music cannot be taken Pass/Fail. Please visit http://www.sas.upenn.edu/music/performance. Students cannot register through Penn In Touch. Registration will be maintained by the music department upon receipt of application and instructor permission. Prerequisite: Permits will be entered after student completes College Music House. Forms available in Music department.

Activity: Studio
0.5 Course Units

Notes: Permits will be entered after student completes College Music House form. Forms available in Music department.

MUSC 007 Ensemble Performance
Successful participation in a music department sponsored group. Ensemble groups: University Orchestra, University Wind Ensemble, Choral Society, University Choir, Ancient Voices, Baroque and Recorder Ensemble, Chamber Music Society, Arab Music Ensemble, Samba and Jazz Combo. This course must be taken for a letter grade (Pass/Fail registration option may not be utilized for this course). Prerequisite: Please contact Ensemble Director if you are interested in taking Music 007 for credit.

Activity: Studio
0.5 Course Units

Notes: Please contact Ensemble Director if you are interested in taking Music 007 for credit.

MUSC 010 Marian Anderson Performance Program
Special instruction in vocal and instrumental performance for music majors and minors only. Students must demonstrate in an audition that they have already attained an intermediate level of musical performance. They also must participate in a Music Department ensemble throughout the academic year, perform in public as a soloist at least once during the year (recital), perform a jury at the end of the spring semester, and attend and participate in masterclasses. Prerequisite: Must be a music major or minor.

Two terms. student must enter first term.

Activity: Lecture
0.5 Course Units

MUSC 016 Freshman Seminar
The primary goal of the freshman seminar program is to provide every freshman the opportunity for a direct personal encounter with a faculty member in a small setting devoted to a significant intellectual endeavor. Specific topics will be posted at the beginning of each academic year. Please see the College Freshman seminar website for information on current course offerings http://www .college.upenn.edu/courses/seminars/freshman.php. Fulfills Arts and Letters sector requirement.

MUSC 030 1000 Years of Musical Listening
We know that we like music and that it moves us, yet it is often difficult to pinpoint exactly why, and harder still to explain what it is we are hearing. This course takes on those issues. It aims to introduce you to a variety of music, and a range of ways of thinking, talking and writing about music. The majority of music dealt with will be drawn from the so-called 'Classical' repertory, from the medieval period to the present day, including some of the 'greats' such as Handel, Beethoven, Mozart, Berlioz, and Verdi, but will also introduce you to music you will most likely never have encountered before. This course will explore the technical workings of music and the vocabularies for analyzing music and articulating a response to it; it also examines music as a cultural phenomenon, considering what music has meant for different people, from different societies across the ages and across geographical boundaries. As well as learning to listen ourselves, we will also engage with a history of listening. No prior musical knowledge is required. (Formerly Music 021)
Fulfills College Cross Cultural Foundational Requirement.

For BA Students: Arts and Letters Sector

Taught by: Calcagni, Caldwell, Goodman

One-term course offered either term

Activity: Lecture
1.0 Course Unit

Notes: Open to all students
MUSC 032 Composers
This course will center on the biography, works, and cultural context of a specific composer or group of composers. As well as introducing students to the musical works of the composer(s), the course will examine issues such as reception history, the canon, mechanisms of cult formation, authorship and attribution, identity, historical and social contexts, and nationalism and patriotism.
For BA Students: Arts and Letters Sector
Taught by: Calcagno, Caldwell, Goodman, Kallberg
Course not offered every year
Activity: Lecture
1.0 Course Unit

MUSC 033 History of Opera
An investigation, through a series of representative works, of the central problem of opera: how does the combination of music, text, and visual spectacle create an art form in which the whole is more powerful than its parts. Today this issue can be examined not only in live performances but also through media such as film, DVD, streaming video-- media to which this four-centuries-old multimedia form has adapted, evolving in still compelling ways. The works chosen for the course provide a chronological survey but also represent the variety of sources on which opera has drawn for it subject matter: myth and legend, the epic, the novel, and the play.
For BA Students: Arts and Letters Sector
Taught by: Calcagno, Goodman
Course not offered every year
Activity: Lecture

Fulfills Cultural Diversity in the U.S.

MUSC 044 Thinking About Popular Music
Catchy and controversial, fluffy and hard-hitting: by definition popular music snags our attention and entertains. This course digs into the experiences of musicians and fans, unpacking how popular music manifests the hopes, contradictions, ingenuity, and challenges of life in the United States. Music 44 is organized around three core questions: first, what counts as good music and who gets credit for being creative; second, why has popular music, at various points in history, been perceived as socially dangerous (and musicians as deviant); third, what is the history of borrowing and appropriation, and how do these habits, which overwhelmingly affect musicians of color, continue to play out today? We delve into these questions and more by analyzing the musical traits of specific repertoire, profiling artists’ lives, investigating changes in the music industry, and situating popular music in U.S. cultural history from the mid-nineteenth century to today. Lectures introduce the social and cultural history of popular music. Through close listening exercises in and out of class students will learn how to hear and respond to music critically. Selected readings demonstrate for students how to form an argument using musical sources. Discussions in class, presentations and debates, exams, and writing assignments provide students the chance to build, exercise, and improve these skills.

MUSC 047 That's My Song!: Musical Genre as Social Contract
Music in American history has been fundamental to identity formation because, as one scholar notes, it comprises 'the deepest feelings and qualities that make a group unique. Through moving and sounding together in synchrony, people can experience a feeling of oneness with others.' This course examines how various musical genres have served as 'social contracts' among audiences throughout the process of this country's nation building process. Within America's melting pot ideal, communities of listeners have asserted their powerful convictions about social identity through musical praxis and its 'rules of engagement.' The discourses surrounding the notion of 'genre' have often made these meanings legible, audible and powerful for many. From Protestant church performance practices, to minstrelsy, to Tin Pan Alley to rock and hip-hop, the social agreements of musical genres help us understand the dynamism of American identities.

MUSC 049 Listening to Nostalgia from the Phonograph to YouTube.
In revising the past, nostalgia invites us to also rethink the present, its ideals and its utopias. This CWIC course covers a century of nostalgia's aural technological mediation, from the invention of the phonograph to today's digital media such as YouTube. We will explore how conflicting forms of aural nostalgia (the longing for the sounds of other times or other places) are seen either as a suspicious refuge or an empowering cultural resource, and how they affect personal and collective identities, such as enhancing self-esteem or providing interpersonal bonds. The objective is to develop the students public speaking skills by voicing their own experiences of nostalgia while trying to understand the broader social, cultural, and communal issues at stake in nostalgic sounds. Through the examination of readings, analyses of recent and archival recordings, exhibits, and discussions, we will examine the intricate roles nostalgia has played at the intersections of aesthetics, technology, politics, marketing, the environment, and various audiovisual media, and how they affect us as individuals and communities. In order to develop their oral communication skills, students will be required to give presentations on two nostalgic topics of their choice in formats that employ different research, organization, and presentation competencies. Every week a small group of students will report on an example of sonic nostalgia found in Philadelphia in the style of a nostalgic radio program (or podcast). Each student will give a more formal oral critique of a nostalgic artifact of their choice, engaging with the plurality of oral (and aural) forms of nostalgia. Prerequisite: Communication within the Curriculum. Taught by: Pare-Morin Course not offered every year Activity: Lecture 1.0 Course Unit Notes: Communication within the Curriculum.

MUSC 050 World Musics and Cultures
This course examines how we as consumers in the 'Western' world engage with musical difference largely through the products of the global entertainment industry. We examine music cultures in contact in a variety of ways—particularly as traditions in transition. Students gain an understanding of traditional music as live, meaningful person-to-person music making, by examining the music in its original site of production, and then considering its transformation once it is removed, and recontextualized in a variety of ways. The purpose of the course is to enable students to become informed and critical consumers of 'World Music' by telling a series of stories about particular recordings made with, or using the music of, peoples culturally and geographically distant from the US. Students come to understand that not all music downloads containing music from unfamiliar places are the same, and that particular recordings may be embedded in intriguing and controversial narratives of production and consumption. At the very least, students should emerge from the class with a clear understanding that the production, distribution, and consumption of world music is rarely a neutral process. Fulfills College Cross Cultural Foundational Requirement. For BA Students: Arts and Letters Sector Taught by: Muller,Rommen,Sykes One-term course offered either term Also Offered As: AFRC 050, ANTH 022, FOLK 022 Activity: Lecture 1.0 Course Unit

MUSC 051 Music of Africa
African Contemporary Music: North, South, East, and West. Come to know contemporary Africa through the sounds of its music: from South African kwela, jazz, marabi, and kwai to Zimbabwean chimurenga; Central African soukous and pygmy pop; West African Fuji, and North African rai and hophop. Through reading and listening to live performances, audio and video recordings, we will examine the music of Africa and its intersections with politics, history, gender, and religion in the colonial and post colonial era. (Formerly Music 053). Fulfills College Cross Cultural Foundational Requirement. For BA Students: Arts and Letters Sector Taught by: Muller Course not offered every year Also Offered As: AFRC 053, COML 053 Activity: Lecture 1.0 Course Unit

MUSC 053 Music in Troubled Places
In this class, we go beyond the headlines to discuss the history and cultures of peoples who have had to endure terrible suffering, particularly through ethnic conflict and civil war. We will focus on a curious phenomenon: populations typically defined as separate from one another (e.g., Israelis and Palestinians) often have a history of shared or related cultural practices, of which music is a prime example. We will survey a number of current and recent conflict zones and use music as a way to deepen our understanding of the identities and relationships between the peoples involved including through a consideration of my own fieldwork in Sri Lanka. Querying the very definitions of music, trouble, and place, the course then broadens out to consider how musicians have been affected by and/or responded to important global problems like slavery, sexual violence, climate change and other ecological disasters, like Hurricane Katrina. Regions to be considered in our lectures and/or readings include: Afghanistan, Iraq, Syria (including Kurdish musics), Israel-Palestine, Sri Lanka, the Maldives, Myanmar/Burma, Uganda, Sierra Leone, North and South Korea, the Marshall Islands, Cambodia, Mexico, and the United States. Taught by: Sykes Course not offered every year Also Offered As: ANTH 053, NELC 054 Activity: Lecture 1.0 Course Unit

MUSC 056 Seeing/Hearing Globally: Knowing People, Culture, and Places through Travel
Students are provided a general introduction to a country's history, politics, environment, and performance through a range of resources: scholarly literature, film, music, and online resources; with particular focus on sites, communities, and events included in the 12 day intensive travel to that country (either Fall semester Intro with winter break travel, or spring semester Intro with late spring intensive travel). Students are given guidelines for writing about and representing live performances and experiences of exhibits and heritage sites for journaling and are expected to produce a written/creative project at the end of the travel. The itinerary and specific course content will vary according to the travel site and focus of each class. Taught by: Muller Course not offered every year Also Offered As: AFRC 056, ANTH 056, COML 056 Activity: Seminar 1.0 Course Unit Notes: Application required through Penn Global: <a href='https://global.upenn.edu/pennabroad/pgs'>https://global.upenn.edu/pennabroad/pgs</a>

2020-21 Catalog | Generated 09/18/20
MUSC 070 Introduction to Theory and Musicianship: Making Sense of Music

This course will cover basic skills and vocabulary for reading, hearing, performing, analyzing, and writing music. Students will gain command of musical rudiments, including notation, reading and writing in treble and bass clefs, intervals, keys, scales, triads and seventh chords, and competence in basic melodic and formal analysis. The course will include an overview of basic diatonic harmony, introduction to harmonic function and tonicization. Musicianship skills will include interval and chord recognition, rhythmic and melodic dictation and familiarity with the keyboard. There will be in-depth study of selected compositions from the 'common practice' Western tradition, including classical, jazz, blues and other popular examples. Listening skills—both with scores (including lead sheets, figured bass and standard notation), and without—will be emphasized. There is no prerequisite. Fulfills College Formal Reasoning and Analysis Foundational Requirement.

Taught by: Waltham-Smith, Weesner
One-term course offered either term
Activity: Lecture
1.0 Course Unit

MUSC 075 Musical Interfaces and Robotics

Musical Interfaces and Robotics is a skills and discussion-based class for students interested in learning the basics of electricity and physical computing specifically for musical purposes. Discussions will be organized around readings related to art and technology with a focus on sound-based works. Students will learn to program Arduinos that control DC motors and respond to physical buttons or sensors. We will learn how to integrate these tools with music applications that communicate with MIDI such as Reaper, Logic Pro, and/or Max/MSP. As a final project students will present a working prototype for a new instrument they’ve created or plans for an art installation featuring a kinetic sculptural element.

Taught by: Jacobs
Activity: Seminar
1.0 Course Unit

MUSC 077 Introduction to Electronic Musicmaking

An exploration of composition, style, and technique in a variety of popular and experimental electronic music genres. We’ll study and practice making works in genres including acousmatic music, beat-driven music such as hip-hop and techno, pop songwriting, and sound art. As we proceed, we’ll investigate techniques including field recording, sampling, sound synthesis, and generative music. Within each genre, we’ll begin from the analysis and technique of exemplary music, then work towards presentation and group discussion of student composition projects.

Taught by: Burns
Course not offered every year
Activity: Lecture
1.0 Course Unit

MUSC 081 Film Music in Post 1950 Italy: Nino Rota and Ennio Morricone

An exploration of cinematic sound through the lens of specific composer/director collaborations in post-1950 Italy, examining scores, soundtracks, and the interaction of diegetic and non-diegetic music with larger soundscapes. Composers Nino Rota and Ennio Morricone serve as case studies, in partnership with directors Fellini, Visconti, Leone, Pontecorve, Pasolini, and Coppola. Highlights include several excerpts from the Fellini/Rota collaboration, including The White Sheik, I vitelloni, The Road, Nights of Cabiria, La dolce vita, 8 1/2, Juliet of the Spirits, Satyricon, The Clowns, Roma, Amarcord, Casanova, and Orchestra Rehearsal. Rota’s music for Visconti will be examined in Senso, the Leopard, and Rocco and his Brothers, along with his Transatlantic collaboration for The Godfather. Morricone’s work with various directors will be discussed in The Good, the Bad, and the Ugly, The Battle of Algiers, and Teorema, as well as for American films such as Malick’s Days of Heaven and Tarantino’s The Hateful Eight. Weekly screenings required. Open to all: music majors, minors, and non-majors; will count toward requirements for music minor. Knowledge of music and Italian helpful but not required. All readings and lectures in English.

Taught by: Samuel
Also Offered As: CIMS 081, ITAL 081
Activity: Seminar
1.0 Course Unit

MUSC 099 Guided Research

Individual research under the supervision of a member of the faculty. One-term course offered either term
Activity: Independent Study
1.0 Course Unit

MUSC 130 Introduction to European Art Music

This course aims to introduce students to what it means to study the European musical tradition. Students will approach the diverse music for Visconti will be examined in Senso, the Leopard, and Rocco and his Brothers, along with his Transatlantic collaboration for The Godfather. Morricone’s work with various directors will be discussed in The Good, the Bad, and the Ugly, The Battle of Algiers, and Teorema, as well as for American films such as Malick’s Days of Heaven and Tarantino’s The Hateful Eight. Weekly screenings required. Open to all: music majors, minors, and non-majors; will count toward requirements for music minor. Knowledge of music and Italian helpful but not required. All readings and lectures in English.

Taught by: Samuel
Also Offered As: CIMS 081, ITAL 081
Activity: Seminar
1.0 Course Unit

MUSC 070 Introduction to Theory and Musicianship: Making Sense of Music

This course will cover basic skills and vocabulary for reading, hearing, performing, analyzing, and writing music. Students will gain command of musical rudiments, including notation, reading and writing in treble and bass clefs, intervals, keys, scales, triads and seventh chords, and competence in basic melodic and formal analysis. The course will include an overview of basic diatonic harmony, introduction to harmonic function and tonicization. Musicianship skills will include interval and chord recognition, rhythmic and melodic dictation and familiarity with the keyboard. There will be in-depth study of selected compositions from the 'common practice' Western tradition, including classical, jazz, blues and other popular examples. Listening skills—both with scores (including lead sheets, figured bass and standard notation), and without—will be emphasized. There is no prerequisite. Fulfills College Formal Reasoning and Analysis Foundational Requirement.

Taught by: Waltham-Smith, Weesner

Taught by: Burns
Course not offered every year
Activity: Lecture
1.0 Course Unit
MUSC 135 Introduction to the Music Life in America
This course surveys American musical life from the colonial period to the present. Beginning with the music of Native Americans, the European legacy, and the African Diaspora, the course treats the singular social and political milieu that forged the profile of America's musical landscape. Attention will be given to the establishment of the culture industry and to various activities such as sacred music, parlor music, concert and theater music, the cultivation of oral traditions, the appearance of jazz, the trajectory of western art music in the United States, and the eventual global dominance of American popular music. Music 070 prerequisite. Preference given to music Majors and Minors. Fulfills the Cultural Diversity in the U.S. College Requirement.
Taught by: Ramsey, Goodman
Course not offered every year
Activity: Lecture
1.0 Course Unit

MUSC 150 Introduction to Ethnomusicology
This course introduces students to the field of ethnomusicology through a series of case studies that explore a range of traditional, popular, and art musics from around the world. The course takes as a point of departure several works of musical ethnography, musical fiction, and musical autobiography. Through in-depth reading of these texts, close listening to assigned sound recordings, and in-class case studies, generates a context within which to think and write about music. Prerequisite: Fulfills the requirements of the Music Major.
Taught by: Muller, Rommen, Sykes
Course not offered every year
Activity: Lecture
1.0 Course Unit
Notes: Fulfills the requirements of the Music Major.

MUSC 170 Theory and Musicianship I
Introduction to and development of principles of tonal voice-leading, harmonic function, counterpoint, and form through written analysis, composition, improvisation, and written work. Course covers diatonic harmony and introduction to chromaticism. Repertoires will focus on Western classical music. Musicianship component will include sight-singing, dictation keyboard harmony. Fulfills College Formal Reasoning and Analysis Foundational Requirement. Required of music majors.
Taught by: Moreno, Primosch, Weesner
Course usually offered in fall term
Prerequisite: MUSC 070
Activity: Lecture
1.5 Course Unit
Notes: Required of music majors.

MUSC 171 Theory and Musicianship II
Continuation of techniques established in Theory and Musicianship I. Explores chromatic harmony. Concepts will be developed through analysis and model composition. Musicianship component will include sight singing, clef reading, harmonic dictation and keyboard harmony. Required of music majors.
Taught by: Moreno, Weesner
Course usually offered in spring term
Prerequisite: MUSC 170
Activity: Lecture
1.5 Course Unit
Notes: Required of music majors.
MUSC 235 Studies in African-American Music
This course explores aspects of the origins, style development, aesthetic philosophies, historiography, and contemporary conventions of African-American musical traditions. Topics covered include: the music of West and Central Africa, the music of colonial America, 19th century church and dance music, minstrelsy, music of the Harlem Renaissance, jazz, blues, gospel, hip-hop, and film music. Special attention is given to the ways that black music produces ‘meaning’ and to how the social energy circulating within black music articulates myriad issues about American identity at specific historical moments. The course will also engage other expressive art forms from visual and literary sources in order to better position music making into the larger framework of African American aesthetics. (Formerly Music 146).
Taught by: Ramsey
Course not offered every year
Also Offered As: AFRC 147
Activity: Lecture
1.0 Course Unit

MUSC 236 Performance, Analysis, History
Participation in the course is contingent upon a successful audition. This course must be taken for a letter grade (pass/fail option may not be utilized for this course). This weekly seminar will explore music from the past and present through class discussions of performance, historical context, and analytical aspects of the music led by a professor and/or performer. One example of a class in this number will be an indepth study of chamber music repertoire led by the Daedalus Quartet. Students will prepare for a final performance at the end of the semester as well as a paper/presentation. Students interested in this applied approach to music may also wish to take 256 and/or 276. Prerequisite: Students must successfully audition to be in the course; previous private study in an instrument is required. Basic fluency in rudiments of music theory is also required.
Taught by: Weesner
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

MUSC 239 Honors Thesis in Music I
Individual research under the supervision of a member of the faculty. Prerequisite: either 130 or 135 or 150; and 170. The objective is the development of honors thesis proposal. Students must complete Honors Thesis I and II (each counting for half a credit) in order to be eligible for departmental honors.
Course usually offered in fall term
Prerequisite: (MUSC 130 OR MUSC 135 OR MUSC 150) AND MUSC 170
Activity: Independent Study
0.5 Course Units

MUSC 252 Music, Religion, Ritual in South and Southeast Asia.
What role does music play in articulating religious identities and spaces? What is the importance of ritual musics as they persist and change in the modern world? How does music reflect and articulate religious ways of thinking and acting? In this course, we explore these and other questions about the interrelations between music, religion, and ritual in South and Southeast Asia. Focusing on India, Sri Lanka, Malaysia, and Indonesia, the course emphasizes musics from Hindu, Buddhist, Muslim and Christian traditions; nevertheless, it draws widely to touch upon sacred musics in Pakistan, Nepal, Burma, Thailand, Vietnam, and among some indigenous peoples in the region. Throughout, we explore ontologies of sound; sonic occurrences in religious structures, public processions, and pilgrimage sites; the construction of religion and ritual as ideas forged through colonial encounter and modern scholarship on religion; the politics of sacred sounds in today’s public spaces and contemporary media, such as television and online; and the surprising fluidity between popular and sacred musical genres.
Taught by: Sykes
Course not offered every year
Also Offered As: ANTH 242, SAST 252
Activity: Lecture
1.0 Course Unit

MUSC 255 Accordions of the New World
This course focuses on the musical genres and styles (both traditional and popular) that have grown up around the accordion in the New World. We will begin our explorations in Nova Scotia and move toward the Midwest, travelling through the polka belt. From there, our investigation turns toward Louisiana and Texas--toward zydeco, Cajun, and Tex-Mex music. We will then work our way through Central and South America, considering norteno, cumbia, vallenato, tango, chamame, and forro. Our journey will conclude in the Caribbean, where we will spend some time thinking about merengue and rake-n-scrape music. Throughout the semester, the musical case studies will be matched by readings and film that afford ample opportunity to think about the ways that music is bound up in ethnicity, identity, and class. We will also have occasion to think about the accordion as a multiply meaningful instrument that continues to be incorporated into debates over cultural politics and mobilized as part of strategies of representation through the New World. (Formerly Music 157).
Taught by: Rommen
Course not offered every year
Also Offered As: AFRC 157, FOLK 157, LALS 157
Activity: Lecture
1.0 Course Unit

MUSC 256 Music and Performance of Africa
This class provides an overview of the most popular musical styles and discussion of the cultural and political contexts in which they emerged in contemporary Africa. Learning to perform a limited range of African music/dance will be part of this course. No prior performance experience required.
Taught by: Muller
Course not offered every year
Also Offered As: AFRC 253, ANTH 263
Activity: Lecture
1.0 Course Unit
MUSC 257 Caribbean Music and Diaspora
This course considers Caribbean musics within a broad and historical framework. Caribbean musical practices are explored by illustrating the many ways that aesthetics, ritual, communication, religion, and social structure are embodied in and contested through performance. These initial inquiries open onto an investigation of a range of theoretical concepts that become particularly pertinent in Caribbean contexts—concepts such as post-colonialism, migration, ethnicity, hybridity, syncretism, and globalization. Each of these concepts, moreover, will be explored with a view toward understanding its connections to the central analytical paradigm of the course—diaspora. Throughout the course, we will listen to many different styles and repertories of music ranging from calypso to junkanoo, from rumba to merengue, and from dance hall to zouk. We will then work to understand them not only in relation to the readings that frame our discussions but also in relation to our own North-American contexts of music consumption and production. (Formerly Music 258).
Taught by: Rommen
Course not offered every year
Also Offered As: ANTH 256, LALS 258
Activity: Lecture
1.0 Course Unit

MUSC 258 Latin American Music
This survey course considers Latin American musics within a broad cultural and historical framework. Latin American musical practices are explored by illustrating the many ways that aesthetics, ritual, communication, religion, and social structure are embodied in and contested through performance. These initial inquiries open onto an investigation of a range of theoretical concepts that become particularly pertinent in Latin American contexts—concepts such as post-colonialism, migration, ethnicity, and globalization. Throughout the course, we will listen to many different styles and repertories of music and then work to understand them not only in relation to the readings that frame our discussions but also in relation to our own, North American contexts of music consumption and production. (Formerly Music 158).
Taught by: Rommen
Course not offered every year
Also Offered As: AFRC 258, LALS 158
Activity: Lecture
1.0 Course Unit

MUSC 259 Honors Thesis in Music II
Individual research under the supervision of a member of the faculty.
Prerequisite: either 130 or 135 or 150; 170; 239. The objective is the writing and completion of Honors Thesis. Students must complete Honors Thesis I and II (each counting for half a credit) in order to be eligible for departmental honors
Course usually offered in fall term
Prerequisite: (MUSC 130 OR MUSC 135 OR MUSC 150) AND MUSC 170
Activity: Independent Study
0.5 Course Units

MUSC 270 Theory and Musicianship III
Continuation of techniques established in Theory and Musicianship I and II. Concepts will be developed through analysis and model composition. Musicianship component will include advanced sight singing, clef reading, harmonic dictation and keyboard harmony.
Taught by: Moreno, Primosch, Weesner
Course usually offered in fall term
Prerequisite: MUSC 170 AND MUSC 171
Activity: Lecture
1.5 Course Unit
Notes: Required of music majors.

MUSC 271 Composition I: Historical Practices
Studies in selected 16th through 19th century compositional practices. Possible topics may include 16th century modal counterpoint; sonata forms in Viennese classicism; advanced chromatic harmony. Course includes analysis of relevant pieces and student compositional projects reflecting course topic.
Taught by: Primosch
Course not offered every year
Prerequisite: MUSC 170 AND MUSC 171
Activity: Lecture
1.0 Course Unit

MUSC 272 Composition II: Contemporary Practices
Studies in selected 20th and 21st century compositional practices. Possible topics may include symmetry in post-tonal harmony; composing for piano; the sonata in the 20th century. Course includes analysis of relevant pieces and student compositional projects reflecting course topic.
Course not offered every year
Prerequisite: MUSC 170 AND MUSC 171
Activity: Lecture
1.0 Course Unit

MUSC 273 Orchestration
An introduction to writing for the instruments of the orchestra. Course will include study of individual instruments and various instrumental combinations, including full orchestra. Representative scores from the 18th century to the present day will be analyzed. Students will be responsible for several scoring projects and will have opportunities to hear readings of their projects. Prerequisite: at least two semesters of music theory or permission of instructor. (Formerly 285).
Taught by: Primosch
Course not offered every year
Prerequisite: MUSC 070 OR MUSC 170
Activity: Lecture
1.0 Course Unit

MUSC 275 Electronic Music
MUSC 275 offers an introduction to electronic music/sound production with a focus on analogue systems and performance. Guest artists will join us for in-class visits and performances during the semester. Meetings will take place in the classroom, in concert spaces and in the studio. Preference given to Music majors and minors for registration.
Taught by: Lew
Course not offered every year
Prerequisite: MUSC 070 OR MUSC 170
Activity: Lecture
1.0 Course Unit
MUSC 277 Recording Music.
An introduction to music and sound recording with a focus on concerts and live performances. The entire process will be examined from start to finish, including the roles played by composers, musicians, listeners, performance spaces, and recording technology. Meetings will take place in the classroom, in concert spaces and in the studio. Music majors and minors will be given preference for registration.
Taught by: Lew
Course usually offered in fall term
Prerequisite: MUSC 070 OR MUSC 170
Activity: Seminar
1.0 Course Unit
Notes: This course is for Music Majors and minors.

MUSC 278 Composition for Musicians
Music 278 is a Composition Seminar that treats composing as both an end in itself and a means for thinking broadly and speculatively about music. We will work on various compositional techniques through exercises as well as ‘free’ composition, giving attention to skills as well as to personal voice. We will survey the current musical landscape through listening, analysis and discusion. The question of musical style itself will be pursued, and while we will be oriented to western art music, we will consider a wide range of styles, including popular music. It is assumed that students will have fluency with musical notation. Prerequisite: If course requirement not met, permission of the instructor.
Taught by: Weesner
Prerequisite: MUSC 171
Activity: Seminar
1.0 Course Unit
Notes: Music 171 prerequisite

MUSC 330 Seminar in Music History
This is an advanced seminar, primarily for juniors and seniors who are prepared to engage deeply and critically with a specialized research topic. The topic of the seminar is determined by the instructor, and can focus on a particular genre or body of repertoire, music-maker or composer, the cultural and social dynamics of a period in music history. Prerequisites: MUSC 170 or other demonstration of familiarity with music notation and music theory. It is recommended that students also have taken MUSC 130 and at least one 200-level course. However, students who have not taken these courses may be admitted at the discretion of the instructor.
Taught by: Calcagno, Caldwell, Goodman, Kallberg, Ramsey
Course not offered every year
Prerequisite: MUSC 170
Activity: Seminar
1.0 Course Unit

MUSC 350 Seminar in Ethnomusicology
Advanced study in a selected topic in Ethnomusicology.
Taught by: Muller, Rommen, Sykes
One-term course offered either term
Activity: Seminar
1.0 Course Unit

MUSC 370 Seminar in Theory and Composition
This is an advanced seminar, primarily for juniors and seniors who are prepared to engage deeply with study of Composition and Theory. Possible course content includes: compositional practice in the first half of the 20th century (Anna Weesner), study of compositional practices of the past fifty years (including a range of musical styles-James Primosch) and seminar in Theory (Popular Music-Jairo Moreno). Please check department website for specific course term descriptions. https://music.sas.upenn.edu/
Taught by: Moreno
Course not offered every year
Prerequisite: MUSC 170 AND MUSC 171
Activity: Seminar
1.0 Course Unit

MUSC 508 Advanced Musicianship
Advanced techniques of score reading and general musicianship at the keyboard. Goals of the course include increasing proficiency in sight singing (including C clefs). Taking harmonic, melodic, and rhythmic dictations. Accurate performance of rhythms. Prerequisite: Reasonable keyboard and sight-reading facility.
Two terms. student must enter first term.
Activity: Lecture
1.0 Course Unit

MUSC 520 Composing with Instruments
Students will study the capabilities of instruments, singly and in combination. Historical and contemporary practices will be analyzed. Creative projects will be completed. Please see department website https://music.sas.upenn.edu/courses for current term course descriptions.
Taught by: Diels, Primosch, Sorey, Weesner
Course not offered every year

MUSC 530 Composing with Electronics
Students will study a variety of hardware and software used in making electronic music. Historical and contemporary practices will be analyzed. Creative projects will be completed. Please see department website https://music.sas.upenn.edu/courses for current term course descriptions.
Taught by: Diels, Primosch
Course not offered every year

MUSC 550 Composing with Computers
MUSC 540 Composing with Performers
The goal of this course is to explore and mine for possibilities the space between a score and the performance of a score. What do performers bring to a piece of music and how do composers best anticipate these possibilities? How much 'room' for interpretation exists and how do composers capitalize on it? What is performance practice? The course will engage compositional techniques in connection with a wide range of performance practices. In order to highlight and pursue elements of interpretation in music performance, students will coach performers in both old and new repertoire. The course will involve interactions with live performers, often Penn's string quartet-in-residence, The Daedalus Quartet. Other topics may include notational solutions, the role of improvisation, aleatoric techniques, and music analysis. Please see department website https://music.sas.upenn.edu/courses for current term course descriptions.
Taught by: Diels, Primosch, Sorey, Weesner
Course not offered every year
Activity: Seminar
1.0 Course Unit

MUSC 542 Archiving Jazz: Visuality And Materiality In The Phila Jazz Community 1945-2019
This seminar will be organized around three distinct pathways. First, it will serve as an introduction to Jazz Studies and thus be attentive to the ways that jazz music has sparked an interdisciplinary conversation that is wide-ranging and ongoing. Second, we will be partnering with the African American Museum of Philadelphia to consider jazz within the realm of visual art. In light of efforts to map the 'black interior', how have visual artists (e.g. painters, sculptors, filmmakers, and photographers) sought to represent jazz? Third, we will endeavor to develop partnerships with the Philadelphia (and beyond) jazz community, especially as it pertains to creating and sustaining an archive that serves as way to understand jazz as an instrument of placemaking and also as a vehicle for jazz musicians to take ownership of their narratives. The seminar will meet at the African American Museum of Philadelphia and be team taught with members of the Museum staff. The course will culminate with a virtual exhibit of visual works and archival materials centering on Philadelphia's jazz community and (if funding is available) a free concert to be held at AAMP. Undergraduates are welcome to register for the course with permission of the instructor.
Taught by: Beavers
Course not offered every year
Also Offered As: AFRC 542, ARTH 519, ENGL 541, URBS 542
Activity: Seminar
1.0 Course Unit

MUSC 559 Audio Ethnography
This is an intensive, graduate-level, practice-based course in which students will record, edit, and produce anthropologically informed audio works that record and interpret culture and lived experience. Projects in this class will look beyond conventional linguistic or musical codes to sounds whose semiotic or affective value may be less immediately evident. Through the process of making location recordings, analyzing those recordings, composing them into autonomous works, and critiquing every step of the way, this course will engage with questions of ethnographic representation through the medium of sound. In parallel with contextualizing readings and sound projections, throughout the semester students will work intensively on audio projects, receiving training on recording techniques, audio editing, and basic post-production techniques. The course is an opportunity to open up the question of what might constitute 'audio documentary' or 'ethnographic audio'. Presentation strategies for final projects will be discussed and decided on individual bases. Projects will be situated in relationship to cognate fields, including the anthropology of the senses, interdisciplinary sound studies, ethnomusicology, ethnographic cinema, sound art, sound mapping, soundscape composition, and experimental nonfiction media practices which involve location recording. Through weekly sound projections and home listening, students will also gain a familiarity with existing genres and uses of nonfiction audio in anthropology and related fields.
Taught by: Karel
Course not offered every year
Also Offered As: ANTH 559
Activity: Seminar
1.0 Course Unit

MUSC 576 Anthromedialities: Experimental Theory and Practice
In recent years much has been made of the 'beyond text' turn in anthropology, specifically the need to re-evaluate the singular authority of 'writing culture.' Several new approaches advocate for non-textual medialities, with representations originating in both sonovisual media and performance. Less, however, has been theorized and advocated about intermediality and the multicompositional practices of transmediality and plurimediality, specifically their more transgressive multisensory epistemology. This course will examine these radical approaches to interacting textual, visual, sonic and performative mediations, theorizing their epistemic and ethical implications, collaborative potentials, affordances in narrative and non-narrative representation, and political and aesthetic investments. Students will both critically engage histories of transmedial anthropology, and produce projects that are multicompositional.
Taught by: Feld
Course not offered every year
Also Offered As: ANTH 576, COMM 877
Activity: Seminar
1.0 Course Unit

MUSC 601 Texts and Material Culture
Topics may include book, manuscript, and print culture; history of the book; history of music notation; codicology and paleography; textual criticism, philology, and editing; encoding and textual technologies; musical bibliographies.
Taught by: Caldwell
Course not offered every year
Activity: Seminar
1.0 Course Unit
MUSC 603 Topics in Musicology
This seminar investigates topics unfolding across different historical periods. See department website (under course tab) for current term course description: https://music.sas.upenn.edu
Taught by: Calcagno, Caldwell, Goodman, Kallberg
Course not offered every year
Activity: Seminar
1.0 Course Unit

MUSC 604 Historical and Historiographic Approaches
This course focuses on theories and models of historical investigation. It explores, among others, methodologies and conceptions of archival research, textual criticism and editing, codicology and paleography, philology and bibliography, encoding and textual technologies, and digital humanities; critical frameworks such as performance, gender/sexuality, critical race, transnational, environmental/landscape, materiality, and ritual and religious studies; and topics concerning oral histories, notational systems, and book, manuscript, and print cultures.
Taught by: Calcagno, Caldwell, Goodman, Kallberg, Ramsey
Course not offered every year
Activity: Seminar
1.0 Course Unit

MUSC 605 Intellectual History of Ethnomusicology
Topics may include the intellectual history of ethnomusicology, current readings in ethnomusicology, a consideration of theoretical principles based upon the reading and interpretation of selected monographs, and area studies. Please see department website https://music.sas.upenn.edu/ for current term course descriptions. Prerequisite:
Open to graduate students from all departments.
Taught by: Muller, Rommen, Sykes
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Open to graduate students from all departments

MUSC 606 The Interpretation of Oral Traditions
Topics may draw on methodologies derived from jazz studies, chant studies, and ethnomusicology. See department website (under course tab) for current term course description: https://music.sas.upenn.edu
Taught by: Ramsey
Course not offered every year
Also Offered As: AFRC 606
Activity: Seminar
1.0 Course Unit

MUSC 620 Creative and Compositional Approaches
This course focuses on methods for thinking and engaging creatively through sound, whether compositionally or through other kinds of sound objects. Topics may include: compositional strategies; recording and producing; film; sound installations; experimental ethnography; sound art; and performance practice. Students will begin to put these methodological ideas into practice by developing semester-long projects. These projects can be individual or collaborative.
Taught by: Diels, Primosch, Sorey, Weesner
Course not offered every year
Activity: Seminar
1.0 Course Unit

MUSC 621 Theory-Critical Perspectives
Study of the relation of theory and criticism to analytic, ethnographic, and historical methods. Topics may include anthropology of nature and culture; archaeology and genealogy; actor-network and assemblage theories; critical race theory; deconstruction; feminist theories; gender and sexuality; materialisms and new materialisms; media archaeology and cultural techniques; phenomenology; technics.
Taught by: Moreno
Course not offered every year
Activity: Seminar
1.0 Course Unit

MUSC 622 Analytical and Theoretical Approaches
This course focuses on the analytical methods and theoretical approaches. Topics may include: the politics of listening; score-based analysis; social and critical theories; issues and politics of translation, inscription, and transcription; questions of form; the history of theory; performance studies; the history of musical notation; voice and vocality; and sound studies. Students will typically begin to put these methodological ideas into practice through a series of hands-on assignments which could be either individual or collaborative in nature.
Taught by: Moreno
Course not offered every year
Activity: Seminar
1.0 Course Unit

MUSC 630 Perspectives on the String Quartet
Course not offered every year
Activity: Seminar
1.0 Course Unit

MUSC 650 Ethnographic and Anthropological Approaches
This course focuses on the ethics, politics, and practice of ethnography. Topics may include: fieldwork methods; collaborative practice; ethnography and the archive; power and subjectivity; multimodal approaches; reciprocity and questions of accessibility; oral histories; experimental ethnography; and the politics of transcription, inscription, and translation. Students will begin to put these methodological ideas into practice by developing semester-long ethnographic projects. These projects can be individual or collaborative partnerships, and might also connect students to ongoing community-based research.
Taught by: Muller, Rommen, Sykes
Course not offered every year
Activity: Seminar
1.0 Course Unit

MUSC 700 Seminar in Composition
Seminar in selected compositional problems, with emphasis on written projects. See department website (under course tab) for current term course description: https://music.sas.upenn.edu
Taught by: Diels, Primosch, Sorey, Weesner
Course not offered every year
Activity: Seminar
1.0 Course Unit

MUSC 705 Seminar in Ethnomusicology
Topics in Ethnomusicology. Open to graduate students from all departments. See department website (under course tab) for current term course description: https://music.sas.upenn.edu
Taught by: Muller, Rommen, Sykes
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
Notes: Open to graduate students from all departments
MUSC 710 Studies in Medieval Music
Seminar on selected topics in the music of the Middle Ages. See department website (under course tab) for current term course description: https://music.sas.upenn.edu.
Taught by: Caldwell
Course not offered every year
Activity: Seminar
1.0 Course Unit

MUSC 720 Studies in Renaissance Music
Seminar on selected topics in the music of the Renaissance.
Course not offered every year
Activity: Seminar
1.0 Course Unit

MUSC 730 Studies in Baroque Music
Seminar on selected topics in the music of the Baroque period.
See department website (under course tab) for current term course description: https://music.sas.upenn.edu
Taught by: Calcagno
Course not offered every year
Activity: Seminar
1.0 Course Unit

MUSC 740 Studies in Classical Music
Seminar on selected topics in the music of the Classical period. Please see department website https://www.sas.upenn.edu/music/courses for current term course descriptions.
Taught by: Goodman, Kallberg
Course not offered every year
Activity: Seminar
1.0 Course Unit

MUSC 750 Studies in 19th Century Music
Advanced research topics in the music of the 19th century. See department website (under course tab) for current term course description: https://music.sas.upenn.edu
Taught by: Kallberg
Course not offered every year
Activity: Seminar
1.0 Course Unit

MUSC 760 Studies in 20 and 21st Century Music
Seminar on selected topics in the music of the twentieth and twenty-first century. See department website (under course tab) for current term course description: https://music.sas.upenn.edu
Taught by: Kallberg
Course not offered every year
Activity: Seminar
1.0 Course Unit

MUSC 770 Seminar in African-American Music
Seminar on selected topics in African American Music. See department website (under course tab) for current term course description: https://music.sas.upenn.edu
Taught by: Ramsey
Course not offered every year
Also Offered As: AFRC 771
Activity: Seminar
1.0 Course Unit

MUSC 780 Studies in Music Theory and Analysis
Seminar on selected topics in music theory and analysis. Please see department website https://www.sas.upenn.edu/music/courses for current term course descriptions.
Taught by: Moreno, Waltham-Smith
Course not offered every year
Activity: Seminar
1.0 Course Unit

MUSC 781 Writing Sound--Sounding Literature
Seminar on selected topics in sound studies. Please see department website https://www.sas.upenn.edu/music/courses for current term course descriptions.
Taught by: Waltham-Smith
Course not offered every year
Also Offered As: COML 781
Activity: Seminar
1.0 Course Unit

MUSC 799 Guided Reading in Musical Scholarship
Guidance in preparation for the A.M. comprehensive examination in the history and theory of music.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

MUSC 800 Teaching Music History
The teaching of music history courses to undergraduates.
Course not offered every year
Activity: Independent Study
1.0 Course Unit

MUSC 801 Teaching Music Theory
The teaching of music theory courses to undergraduates.
Course not offered every year
Activity: Independent Study
1.0 Course Unit

MUSC 802 Teaching World Musics
The teaching of world music courses to undergraduates.
Taught by: Muller, Rommen.
Course not offered every year
Activity: Independent Study
1.0 Course Unit

MUSC 994 Preparation of Ph.D. Proposal
Preparation of Ph.D. essay. Completion of Course and submission of Ph.d. essay marks official entry to Ph.D. program.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

MUSC 998 Composers' Forum
Composer’s Forum is a regular meeting of graduate composers, often along with other members of the Penn composing community, in which recent performances are discussed, musical issues taken up, and visitors occasionally welcomed to present their work or offer master classes. In addition to weekly Forum meetings, students will be paired with a composer for individual lessons in composition. Ph.d. Candidates in Composition in their third year in the program will continue non-credit participation in both forum and lessons.
Taught by: Diels, Primosch, Sorey, Weesner
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: May be taken for multiple course-unit credit
MUSC 999 Independent Study and Research
Individual study and research under the supervision of a member of the faculty. May be taken for multiple course-unit credit.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: May be taken for multiple course-unit credit

Naval Science (NSCI)
NSCI 100 Naval Science Drill
A professional laboratory covering various aspects of naval leadership and professional development. While emphasis is given to military marching, formation, and parade, the course also includes lectures from sources in and out of the Navy. Guest speakers cover topics such as leadership, Navy career paths, equal opportunity, rights and responsibilities, AIDS awareness, terrorism/counterterrorism, naval warfare doctrine, employment of naval forces, ethics and values, operations security, and safety. Must be taken concurrently with NSCI 101 (fall) NSCI 102 (spring).
One-term course offered either term
Activity: Lecture
1.0 Course Unit

NSCI 101 Naval Orientation
A course designed to familiarize the student with the history, characteristics and present employment of sea power. Particular emphasis is placed upon our naval forces and their capability in achieving and maintaining our national objectives. Naval organization and operational functions are discussed in conjunction with sea power concepts. Additionally, the student is given an insight into the Naval Service, shipboard organization and safety, time management skills and study techniques.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

NSCI 102 Seapower and Maritime Affairs
A broad survey of naval history designed to add historical perspective to current defense problems. Topics covered include: naval power as an aspect of national defense policy, navies as an instrument of foreign policy, strategy selection, resource control, technology, and manning.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Only Engineering and Nursing students receive credit.

NSCI 201 Leadership & Management
This course emphasizes principles of leadership, personnel and material management, and subordinate development in the context of the naval organization. Practical applications are explored through experiential exercises and case studies.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Only Engineering, Nursing, and Wharton students receive credit.

NSCI 202 Navigation I
A comprehensive study of the theory and practice of terrestrial, and electronic navigation and the laws of vessel operations. Topics include fundamentals of coastal and harbor piloting, electronic navigation and mean of navigating without reference to land. An in-depth study of the international and inland nautical Rules of the Road is also included. Case studies and practical exercises are used to reinforce the fundamentals of marine navigation.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Only Engineering students receive credit.

NSCI 301 Engineering
This course provides an overview of how propulsion and electricity are provided to our Navy’s fighting ships. The basic engineering principles relating to thermodynamics, steam propulsion (conventional and nuclear), gas turbine propulsion, internal combustion engines, electricity generation and distribution, and various support systems will be taught. Ship design, stability, damage control, and some engineering-related ethical issues will also be discussed.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Only Engineering students receive credit.

NSCI 302 Weapons
This course provides an overview of the theory and concepts underlying modern weapons systems. The principles behind sensors and detection systems, tracking systems, computational systems, weapon delivery systems, and the fire control problem will be examined, with a consistent emphasis on the integration of these components into a ‘weapons system’. Case studies will be used to illustrate and reinforce concepts introduced in the course.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Only Engineering students receive credit.

NSCI 310 Evolution of Warfare
This course is designed to add broad historical perspective to understanding military power. Treating war and the military as an integral part of society, the course deals with such topics as: war as an instrument of foreign policy, military influences on foreign policy, the military as a reflection of society, manning and strategy selection.
Course offered fall; even-numbered years
Activity: Lecture
1.0 Course Unit
NSCI 401 Navigation II
Insight into modern naval operations is gained through analysis of relative motion pertaining to ships at sea, underway replenishment, shiphandling, and tactical communications. The process of command and control and leadership is examined through case studies of actual incidents at sea.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

NSCI 402 Leadership and Ethics
The capstone course of the NROTC curriculum, this course is intended to provide the midshipman with the ethical foundation and basic leadership tools to be effective junior officers. Topics such as responsibility, accountability, ethics, the law of armed conflict, military law, division organization and training, and discipline are introduced through practical exercises, group discussion, and case studies.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Only Wharton students receive credit.

NSCI 410 Fundamentals of Maneuver Warfare
This course prepares future military officers and other leaders for service by studying modern tactical principles, current military developments, and other aspects of warfare and their interactions with the influences on maneuver warfare doctrine. There is a specific focus on the United States Marine Corps as the premier maneuver warfighting organization. Study also includes historical influences on tactical, operational, and strategic levels of maneuver warfare practices in the current and future operating environments.
Course offered fall; odd-numbered years
Activity: Lecture
1.0 Course Unit

Near Eastern Languages & Civilization (NELC)

NELC 010 Archaeology & Technology
Spring 2018: This seminar explores how humans apply and modify technologies in contexts as diverse as everyday life, major politico-economic undertakings, or scholarly research. We investigate this through a comparison of technologies of the past with technologies of the present used to study the past. We will dig into the details of topics like building pyramids and tombs, the function of ancient astronomical devices, pre-telegraph long-distance communication, tools for cutting and carving stone, and kilns for firing pottery. Archaeologists study these issues by examining the material remains of past societies: the cut-marks on stone blocks, extant tomb structures, the debris of manufacturing activities, and much more. Today's technologies enable the detailed scientific examination of the evidence, improving our understanding of the past. Thus, in parallel with our investigation of past technologies, we will also study the history of the application of present technologies to research on the archaeological record. We will dig into topics like the first uses of computers and databases, the development of statistical methods, early digital 3d modeling of objects and architecture, the adoption of geophysical prospection and geographic information systems, and the emerging uses of machine learning. In some cases, we can even compare old and new technologies directly, such as with land measurement and surveying techniques. Throughout the class we will engage in readings and discussions on the theory of humans and technology, to gain a better understanding of how processes such as innovation function in all time periods.
Taught by: Cobb, Peter
Also Offered As: ANTH 010, ARTH 010, CLST 010
Activity: Seminar
1.0 Course Unit

NELC 031 History of the Middle East Since 1800
A survey of the modern Middle East with special emphasis on the experiences of ordinary men and women as articulated in biographies, novels, and regional case studies. Issues covered include the collapse of empires and the rise of a new state system following WWI, and the roots and consequences of the Palestinian-Israeli conflict, the Iranian revolution and the U.S.-Iraq War. Themes include: the colonial encounter with Europe and the emergence of nationalist movements, the relationship between state and society, economic development and international relations, and religion and cultural identity.
For BA Students: History and Tradition Sector
Taught by: Kashani-Sabet/Troutt-Powell
Course usually offered in fall term
Also Offered As: HIST 081
Activity: Lecture

NELC 034 Israel in the Middle East
This introductory level course will offer an in-depth look at Israeli history and society, and how it relates to the Middle East through varying lenses. We will consider such topics as the rise of Jewish, Palestinian, and Arab nationalism in the context of changing imperial control over Palestine/Israel (from Ottoman to British), and the emergence of the Middle East in its current borders; Conflict and conflict-resolution in Israel, Palestine, and the Middle East; Israel's Palestinian minority. Jewish immigrants to Israel from the Middle East, food and music culture in Israel, and their connection to the Middle East; or the place of the Middle East in Israeli literature and film. We will use cutting edge research from several disciplines, as well as literature, film, audio, and photographic evidence. Students will leave the class with a firm grasp of Israeli history and society, and will be widely familiar with the different narratives, viewpoints, and complexities concerning Israel and its position in the Middle East. Prior knowledge of Israeli or Middle Eastern history is not required.
Taught by: Tam
Also Offered As: JWST 041
Activity: Seminar
1.0 Course Unit

NELC 036 The Middle East through Many Lenses
This freshman seminar introduces the contemporary Middle East by drawing upon cutting-edge studies written from a variety of disciplinary perspectives. These include history, political science, and anthropology, as well as studies of mass media, sexuality, religion, urban life, and the environment. We will spend the first few weeks of the semester surveying major trends in modern Middle Eastern history. We will spend subsequent weeks intensively discussing assigned readings along with documentary films that we will watch in class. The semester will leave students with both a foundation in Middle Eastern studies and a sense of current directions in the field.
Taught by: Sharkey H
Course usually offered in fall term
Also Offered As: CIMS 036
Activity: Seminar
1.0 Course Unit

NELC 046 Myths and Religions of the Ancient World
This course will survey the religions of the ancient Middle East, situating each in its historical and socio-cultural context and focusing on the key issues of concern to humanity: creation, birth, the place of humans in the order of the universe, death, and destruction. The course will cover not only the better-known cultures from the area, such as Egypt and Mesopotamia, but also some lesser-known traditions, such as those of the Hittites, or of the ancient Mediterranean town of Ugarit. Religion will not be viewed merely as a separate, sealed-off element of the ancient societies, but rather as an element in various cultural contexts, for example, the relationship between religion and magic and the role of religion in politics will be recurring topics in the survey. Background readings for the lectures will be drawn not only from the modern scholarly literature, but also from the words of the ancients themselves in the form of their myths, rituals, and liturgies.
For BA Students: History and Tradition Sector
Taught by: Frame
Course usually offered in spring term
Also Offered As: ANCH 046, RELS 014
Activity: Lecture
1.0 Course Unit

NELC 051 Jews and Judaism in Antiquity
A broad introduction to the history of Jewish civilization from its Biblical beginnings to the Middle Ages, with the main focus on the formative period of classical rabbinic Judaism and on the symbiotic relationship between Judaism, Christianity, and Islam.
For BA Students: History and Tradition Sector
Taught by: Dohrmann
Course usually offered in fall term
Also Offered As: HIST 139, JWST 156, NELC 451, RELS 120
Activity: Lecture
1.0 Course Unit

NELC 052 Medieval and Early Modern Jewry
Follow the journey of one global diaspora over a millennium of cultural, intellectual, social, and religious change. From the rise of Islam in the seventh century to the separation of church and state in the seventeenth, Jewish people were intimate parts of, and at the same time utterly othered by, the many societies in which they lived. This basic duality is at the heart of this course, exploring how Jewish religion and culture evolved in relationship with Muslim and Christian majorities. Students will develop an understanding of the rich dynamism of premodern Judaism and Jewish life, with an emphasis on global diversity and internal differentiation as well as change over time. We will look for threads of continuity and moments of transformation, decode illustrative texts, images, and documents (in English), and ask how the Judaism that faced modernity had been shaped by a staggering array of different cultural circumstances after antiquity. The course includes attention to anti-Jewish phenomena like expulsion and blood libel, but also at coexistence and creative cultural synthesis, avoiding any simplistic narrative and asking about their legacy in the present day. It will look at the Jewish past from the inside, including less familiar dimensions including philosophy, magic, messianism, and family life.
For BA Students: History and Tradition Sector
Taught by: Oravetz Albert
Course usually offered in fall term
Also Offered As: HIST 140, JWST 157, RELS 121
Activity: Lecture
1.0 Course Unit

NELC 053 Jews in the Modern World
This course offers an intensive survey of the major currents in Jewish culture and society from the late middle ages to the present. Focusing upon the different societies in which Jews have lived, the course explores Jewish responses to the political, socio-economic, and cultural challenges of modernity. Topics to be covered include the political emancipation of Jews, the creation of new religious movements within Judaism, Jewish socialism, Zionism, the Holocaust, and the emergence of new Jewish communities in Israel and the United States. No prior background in Jewish history is expected.
For BA Students: History and Tradition Sector
Taught by: Ruderman
Course usually offered in spring term
Also Offered As: HIST 141, JWST 158, RELS 122
Activity: Lecture
1.0 Course Unit
NELC 054 Music in Troubled Places
In this class, we go beyond the headlines to discuss the history and cultures of peoples who have had to endure terrible suffering, particularly through ethnic conflict and civil war. We will focus on a curious phenomenon: populations typically defined as separate from one another (e.g., Israelis and Palestinians) often have a history of shared or related cultural practices, of which music is a prime example. We will survey a number of current and recent conflict zones and use music as a way to deepen our understanding of the identities and relationships between the peoples involved including through a consideration of my own fieldwork in Sri Lanka. Querying the very definitions of music, trouble, and place, the course then broadens out to consider how musicians have been affected by and/or responded to important global problems like slavery, sexual violence, climate change and other ecological disasters, like Hurricane Katrina. Regions to be considered in our lectures and/or readings include: Afghanistan, Iraq, Syria (including Kurdish musics), Israel-Palestine, Sri Lanka, the Maldives, Myanmar/Burma, Uganda, Sierra Leone, North and South Korea, the Marshall Islands, Cambodia, Mexico, and the United States.
Taught by: Sykes
Course not offered every year
Also Offered As: ANTH 053, MUSC 053
Activity: Lecture
1.0 Course Unit

NELC 061 Literary Legacy of Ancient Egypt
This course surveys the literature of Ancient Egypt from the Old Kingdom through the Greco-Roman period, focusing upon theme, structure, and style, as well as historical and social context. A wide range of literary genres are treated, including epics; tales, such as the ‘world’s oldest fairy tale;’ poetry, including love poems, songs, and hymns; religious texts, including the ‘Cannibal Hymn;’ magical spells; biographies; didactic literature; drama; royal and other monumental inscriptions; and letters, including personal letters, model letters, and letters to the dead. Issues such as literacy, oral tradition, and the question poetry vs. prose are also discussed. No prior knowledge of Egyptian is required.
Taught by: Houser Wegner
Course not offered every year
Also Offered As: ANTH 053, MUSC 053
Activity: Lecture
1.0 Course Unit

NELC 062 Land of the Pharaohs
This course provides an introduction to the society, culture and history of ancient Egypt. The objective of the course is to provide an understanding of the characteristics of the civilization of ancient Egypt and how that ancient society succeeded as one of the most successful and long-lived civilizations in world history.
For BA Students: History and Tradition Sector
Taught by: Wegner
One-term course offered either term
Also Offered As: AFRC 062
Activity: Lecture
1.0 Course Unit

NELC 064 The World of Cleopatra
The figure of Cleopatra is familiar from modern stories, legends, and film. Was this famous woman a brazen seductress or a brilliant political mind? How many of these presentations are historically accurate? This class will examine the Ptolemaic period in Egypt (305-30 BCE), the time period during which Cleopatra lived, in an attempt to separate myth from reality. The Ptolemaic period is filled with political and personal intrigue. It was also a time of dynamic multiculturalism. Arguably one of the most violent and fascinating eras in ancient Egyptian history, the Ptolemaic period is largely unknown and often misunderstood. This course will examine the history, art, religion and literature of Egypt’s Ptolemaic period which culminated in the reign of Cleopatra VII.
Taught by: Houser Wegner
Course not offered every year
Also Offered As: NELC 664
Activity: Lecture
1.0 Course Unit

NELC 068 Art and Architecture in Ancient Egypt
This course will be an introduction to the art, architecture and minor arts that were produced during the three thousand years of ancient Egyptian history. This material will be presented in its cultural and historical contexts through illustrated lectures and will include visits to the collection of the University Museum.
Taught by: Silverman
Course not offered every year
Also Offered As: AAMW 618, ANCH 068, ARTH 218, ARTH 618, NELC 668
Activity: Lecture
1.0 Course Unit

NELC 088 From Oil Fields to Soccer Fields: The Middle East in the 20th Century
How did the Middle East become modern? This seemingly simple question requires a complex appraisal of civic society. Life changed in spectacular ways for the denizens of the Middle East in the span of a century. Oil – once considered a scarce natural commodity – was discovered and exported in substantial quantities that altered the economic landscape of the region and the world. Movie theaters, sewage systems, and public housing projects changed the urban backdrop of Middle Eastern cities and towns. Soccer, swimming, and volleyball became some of the new-fangled sports embraced by Middle Eastern communities. This course will traverse these fascinating and fraught cultural transformations of the Middle East in the twentieth century. Although inclusive of the military battles and conflicts that have affected the region, this class will move beyond the cliches of war to show the range of issues and ideas with which intellectuals and communities grappled. The cultural politics and economic value of oil as well as the formation of a vibrant literary life will be among the topics covered. By considering illustrative cultural moments that shed light on the political history of the period, this course will develop a nuanced framework to approach the history of the U.S. involvement in the region, the Iran-Iraq war, the Arab/Israeli conflict, and the current crises in the Persian Gulf.
Taught by: Kashani-Sabet
Also Offered As: HIST 088
Activity: Lecture
1.0 Course Unit
NELC 101 Introduction to the Ancient Near East
The great pyramids and mysterious mummies of Egypt, the fabled Tower of Babel, and the laws of the Babylonian king Hammurabi are some of the things that might come to mind when you think of the ancient Near East. Yet these are only a very few of the many fascinating -- and at time perplexing -- aspects of the civilizations that flourished there c. 3300-300 BCE. This is where writing first developed, where people thought that the gods wrote down what would happen in the future on the lungs and livers of sacrificed sheep, and where people knew how to determine the length of hypotenuse a thousand years before the Greek Pythagoras was born. During this course, we will learn more about these other matters and discover their place in the cultures and civilizations of that area. This is an interdisciplinary survey of the history, society and culture of the ancient Near East, in particular Egypt and Mesopotamia, utilizing extensive readings from ancient texts in translation (including the Epic of Gilgamesh, 'one of the great masterpieces of world literature'), but also making use of archaeological and art historical materials. The goal of the course is to gain an appreciation of the various societies of the time, to understand some of their great achievements, to become acquainted with some of the fascinating individuals of the time (such as Hatshepsut, 'the women pharaoh,' and Akhenaten, 'the heretic king'), and to appreciate the rich heritage that they have left us.

Course usually offered in fall term
Also Offered As: ANCH 025, HIST 024
Activity: Lecture
1.0 Course Unit

NELC 102 Introduction to the Middle East
This is the second half of the Near East sequence. This course surveys Islamic civilization from circa 600 (the rise of Islam) to the start of the modern era and concentrates on political, social, and cultural trends. Although the emphasis will be on Middle Eastern societies, we will occasionally consider developments in other parts of the world, such as sub-Saharan Africa, Central Asia, and Spain, where Islamic civilization was or has been influential. Our goal is to understand the shared features that have distinguished Islamic civilization as well as the varieties of experience that have endowed it with so much diversity.
For BA Students: History and Tradition Sector

Notes: Fulfills Cross-Cultural Analysis

NELC 103 Origin and Culture of Cities
The UN estimates that 2.9 of the world's 6.1 billion people live in cities and that this percentage is rapidly increasing in many parts of the world. This course examines urban life and urban problems by providing anthropological perspectives on this distinctive form of human association and land use. First we will examine the 'origin' of cities, focusing on several of the places where cities first developed, including Mesopotamia and the Valley of Mexico. We will then investigate the internal structure of non-industrial cities by looking at case studies from around the world and from connections between the cities of the past and the city in which we live and work today.
For BA Students: History and Tradition Sector
Taught by: Zettler
Course usually offered in fall term
Also Offered As: ANTH 121, URBS 121
Activity: Lecture
1.0 Course Unit

NELC 106 Pastoral Nomadism in the Past and Present
Pastoral nomadism is a 'third way' of human subsistence separate from farming and foraging. It is a sustainable human adaptation to grassland and arid environments practiced through particular technologies and domesticated animals. This course begins by examining the human ecology and social organization that emerge from mobile ways of life, drawing on modern, ethnographic, and archaeological examples of pastoral nomadic groups in the Middle East and Central Asia. Academic readings and ethnographic films will form the basis of discussions about several larger themes, including: the origins of pastoral nomadism and horse riding; the development of dairy-based foods and human adaptations allowing the digestion of lactose; the historical relationship between mobile groups of pastoralists and territorial states; popular perceptions of nomads in various forms of historical and modern media; and the influence of ideas about nomads on modern senses of heritage and nationalism in the Middle East and Central Asia.

Activity: Seminar
1.0 Course Unit
NELC 111 Water in the Middle East Throughout History
Water scarcity is one of the most important problems facing much of the Middle East and North Africa today. These are arid regions, but human and natural systems have interacted to determine relative water scarcity and abundance at different times and places. This course examines the distribution of water resources throughout the Middle East and the archaeology and anthropology of water exploitation and management over the last 9000 years, looking at continuities and changes through time. Students will learn to make basic digital maps representing Middle Eastern hydro-geography and arguments about modern and historic water resources in the region. The class will cooperatively play an ‘irrigation management game’ designed to familiarize personnel involved in the operation of irrigation schemes with the logistical and social issues involved in water management. We will engage with a variety of media, including academic readings, popular journalism, films, satellite imagery, and digital maps, in our quest to explore whether or not the past can inform present efforts to better manage modern water resources. The course is structured in units focused on each of the major hydro-environmental zones of the Middle East: the river valleys of Mesopotamia, Egypt, and the Levant, the internal basins of western Central Asia and the Levant, the deserts of Arabia and North Africa, highland zones in Yemen and Iran, and coastal marsh areas along the Persian Gulf. We will examine irrigation systems, water supply systems, and ways of life surrounding water sources known from ethnoarchaeological studies, history, and archaeological excavations. These data will allow us to engage with debates in Middle Eastern anthropology, including those concerning the relationship between water and political power, the environment in which the world’s earliest cities arose, and the relevance of ‘lessons of the past’ for present and potential future water crises and ‘water wars.’ In our final weeks, we will discuss archaeology and historical anthropology’s contribution to conceptions of water ‘sustainability’ and examine attempts to revive traditional/ancient technologies and attitudes about water.

NELC 118 Iranian Cinema: Gender, Politics and Religion
This seminar explores Iranian culture, society, history and politics through the medium of film. We will examine a variety of cinematic works that represent the social, political, economic and cultural circumstances of contemporary Iran, as well as the diaspora. Along the way, we will discuss issues pertaining to gender, religion, nationalism, ethnicity, and the role of cinema in Iranian society and beyond. Discussions topics will also include the place of the Iranian diaspora in cinema, as well as the transnational production, distribution, and consumption of Iranian cinema. Films will include those by internationally acclaimed filmmakers, such as Rakhshan Bani-Etemad, Asghar Farhadi, Bahman Gobadi, Abbas Kiarostami, Mohsen Makhmalbaf, Dariush Mehrjui, Tahmineh Milani, Jafar Panahi, Marjane Satrapi and others. All films will be subtitled in English. No prior knowledge is required.

NELC 130 Introduction to the Qur’an
The goal of this course is to provide students with a general introduction to the holy scripture of the religion of Islam, the Qur’an. In particular, students will become familiar with various aspects of Qur’anic content and style, the significance of the Qur’an in Islamic tradition and religious practice, scholarly debates about the history of its text, and contemporary interpretations of it. Through close readings of a wide range of passages and short research assignments, students will gain first-hand knowledge of the Qur’an’s treatment of prophecy, law, the Biblical tradition, and many other topics. No previous background in Islamic studies or Arabic language is required for this course.

NELC 133 Penn/Philadelphia/and the Middle East
This seminar explores the historic engagement of the University of Pennsylvania and its faculty, students, and graduates in the Near and Middle East. It does so while drawing on archives, rare books and manuscripts, and artifacts that are now preserved in the University Archives, the Penn Museum, and the Penn Libraries. Together we will consider how, beginning in the late nineteenth century, Penn scholars engaged in archaeological expeditions to celebrated sites like Ur (in what is now Iraq) and Memphis (in Egypt) and how some of these efforts influenced the late Ottoman Empire’s policies towards antiquities and museums. We will examine how Penn’s curriculum changed over time to accommodate Semitics, including the study of languages and biblical traditions, in light of or in spite of historic tensions at the university between secular and religious learning. We will assess how Penn responded to changing American popular attitudes and U.S. foreign policy concerns relative to the Middle East, including during the Cold War and post-2001 (post-9/11) eras. Finally, we will trace the stories or biographies of some individual objects in Penn collections in order to appreciate the university’s roles in collecting, preserving, analyzing, and disseminating knowledge about the region’s deep cultural heritage. Ultimately, by investigating and writing.

NELC 134 Getting Crusaded
What did it feel like to get crusaded? In this course, we will examine the roughly two-century period from the call of the First Crusade in 1095 to the final expulsion of Latin Crusaders from the Middle East in 1291. Our examination will be primarily from the perspective of the invaded, rather than the invaders, as is usually done. How did the Muslims, Jews, and Eastern Christians of the medieval Middle East respond to the presence of Frankish invaders from Europe?

NELC 136 Introduction to Islam
This course is an introduction to Islam as a religion as it exists in societies of the past as well as the present. It explores the many ways in which Muslims have interpreted and put into practice the prophetic message of Muhammad through historical and social analyses of varying theological, philosophical, legal, political, mystical and literary writings, as well as through visual art and music. The aim of the course is to develop a framework for explaining the sources and symbols through which specific experiences and understandings have been signified as Islamic, both by Muslims and by other peoples with whom they have come into contact, with particular emphasis given to issues of gender, religious violence and changes in beliefs and behaviors which have special relevance for contemporary society.

NELC 137 Arab/Israeli Conflict in Literature and Film
This course will explore the origins, the history and, most importantly, the literary and cinematic art of the struggle that has endured for a century over the region that some call the Holy Land, some call Eretz Israel and others call Palestine. We will also consider religious motivations and interpretations that have inspired many involved in this conflict as well as the political consequences of world wars that contributed so greatly to the reconfiguration of the Middle East after the fall of the Ottoman Empire, and after the revelations of the Holocaust in Western Europe. While we will rely on a textbook for historical grounding, the most significant material we will use to learn this history will be films, novels, and short stories. Can the arts lead us to a different understanding of the lives lived through what seems like unending crisis?

NELC 148 Warriors, Concubines & Converts: the Ottoman Empire in the Middle East & Europe
For almost six hundred years, the Ottomans ruled most of the Balkans and the Middle East. From their bases in Anatolia, Ottoman armies advanced into the Balkans, Syria, Egypt, and Iraq, constantly challenging the borders of neighboring European and Islamicate empires. By the end of the seventeenth century, Constantinople, Jerusalem, Cairo, Baghdad, Sarajevo, Budapest, and nearly Vienna came under Ottoman rule. As the empire expanded into Europe and the Middle East, the balance of imperial power shifted from warriors to converts, concubines, and intellectuals. This course examines the expansion of the Ottoman sultanate from a local principality into a sprawling empire with a sophisticated bureaucracy; it also investigates the social, cultural, and intellectual developments that accompanied the long arc of the empire’s rise and fall. By the end of the course, students will be able to identify and discuss major currents of change in the Ottoman Empire and the Middle East. The student will have a better understanding of the roles of power, ideology, diplomacy, and gender in the construction of empire and a refined appreciation for diverse techniques of historical analysis.

NELC 153 How to Read the Bible
The aim of this course is to explore what the Bible means, and why it means such different things to different people. Why do people find different kinds of meaning in the Bible. Who is right in the struggle over its meaning, and how does one go about deciphering that meaning in the first place? Focusing on the book of Genesis, this seminar seeks to help students answer these questions by introducing some of the many ways in which the Bible has been read over the ages. exploring its meaning as understood by ancient Jews and Christians, modern secular scholars, contemporary fiction writers, feminist activists, philosophers and other kinds of interpreter.

NELC 154 Women in Jewish Literature

‘Jewish woman, who knows your life? In darkness you have come, in darkness do you go’ J. L. Gordon (1890). This course will bring into the light the long tradition of women as readers, writers, and subjects in Jewish literature. All texts will be in translation from Yiddish and Hebrew, or in English. Through a variety of genres – devotional literature, memoir, fiction, and poetry -- we will study women's roles and selves, the relations of women and men, and the interaction between Jewish texts and women's lives. The legacy of women in Yiddish devotional literature will serve as background for our reading of modern Jewish fiction and poetry from the past century. The course is divided into five segments. The first presents a case study of the Matriarchs Rachel and Leah, as they are portrayed in the Hebrew Bible, in rabbinic commentary, in pre-modern prayers, and in modern poems. We then examine a modern novel that recasts the story of Dinah, Leah's daughter. Next we turn to the seventeenth century Gilk of Hamel, the first Jewish woman memoirist. The third segment focuses on devotional literature for and by women. In the fourth segment, we read modern women poets in Yiddish, Hebrew, and English. The course concludes with a fifth segment on fiction written by women in Yiddish, Hebrew, and English. All readings and lectures in English.

NELC 155 Archaeology & The Bible

Archaeology and the Bible is a chronological survey of the long span of human occupation in the Land of the Bible, known by the names of the modern nation-states and political entities that occupy the area, as well as various short hands such as Levant and Syria-Palestine, from ca. 10,000 BCE, when humans first began to farm and herd animals through the time of the Divided Monarchy of Israel and Judah. While archaeology has moved beyond a primary concern with illuminating the Bible, NELC 155 will investigate the broader import of archaeological discoveries for our understanding of ancient Israel and its neighbors. NELC 156 Great Books of Judaism (Fall 2018: Lifecycle in the Talmud)

The Babylonian Talmud, known simply as the Bavli, is the foundational legal and ethical document of rabbinic Judaism. It is one of the best read works of world literature, and it is the most widely disseminated and revered rabbinic work. It not only contains legal discussions and rulings but rather it also presents the worldview of the rabbis. This course will analyze and contextualize the perspectives of the Talmud towards the important phases of life. We will examine in-depth several Talmudic passages relating to the various stages of the human lifecycle: birth and naming of the child; circumcision; bar/bat mitzva and adulthood; earning a livelihood and choosing a career; marriage and divorce; procreation and raising children; death, burial, mourning and the belief in the resurrection of the dead among others. We will evaluate these teachings in light of other traditions and in their broader late antiquity and contemporary contexts. All texts will be read in their English translation but originals will also be provided.

NELC 159 Modern Hebrew Literature and Film in Translation: Autobiography

This course examines cinematic and literary portrayals of childhood. While Israeli works constitute more than half of the course's material, European film and fiction play comparative roles. Many of the works are placed, and therefore discussed, against a backdrop of national or historical conflicts. Nonetheless, private traumas (such as madness, abuse, or loss) or an adult's longing for an idealized time are often the central foci of the stories. These issues and the nature of individual and collective memory will be discussed from a psychological point of view. Additionally, the course analyzes how film, poetry and prose use their respective languages to reconstruct the image of childhood, it discusses the authors and directors struggle to penetrate the psyche of a child and to retrieve fragments of past events.

**NELC 160 The Making of Scripture: From Revelation to Canon**

The Bible as we know it is the product of a lengthy process of development, elaboration, contest, and debate. Rather than a foregone conclusion, the process by which the texts and traditions within the Bible, and the status ascribed to them, was turbulent and uncertain. This course examines that process, examining the Bible, traditions and communities from the Second Temple Period - such as the Dead Sea Scrolls and Community - that rewrote, reconsidered, revised, or rejected now well-recognized figures and stories, and constructed distinct ideas of what was considered scripture and how it should be approached. Even as the Bible began to resemble the corpus as we now know it, interpretive strategies rendered it entirely different, such as Hellenistic Allegorizers, working from the platonic tradition, rabbincic readers who had an entirely different set of hermeneutics, early Christians, who offered different strategies for reading the ‘Old’ and ‘New’ Testaments alongside one another (and employing categories like ‘Old’ and ‘New,’ themselves constituting a new attitude and relationship to and between these texts), and lastly early Muslim readers, who embraced many of the stories in the Bible, altered others, and debated the status of these corpuses under Islam.

**NELC 168 Women in Ancient Egypt**

This class will examine the many roles played by women in ancient Egypt. From goddesses and queens, to wives and mothers, women were a visible presence in ancient Egypt. We will study the lives of famous ancient Egyptian women such as Hatshepsut, Nefertiti and Cleopatra. More independent than many of their contemporaries in neighboring areas, Egyptian women enjoyed greater freedoms in matters of economy and law. By examining the evidence left to us in the literature (including literary texts and non-literary texts such as legal documents, administrative texts and letters), the art, and the archaeological record, we will come away with a better understanding of the position of women in this ancient culture.

**NELC 180 Narrative Across Cultures**

The purpose of this course is to present a variety of narrative genres and to discuss and illustrate the modes whereby they can be analyzed. We will be looking at shorter types of narrative: short stories, novellas, and fables, and also some extracts from longer works such as autobiographies. While some works will come from the Anglo-American tradition, a larger number will be selected from European and non-Western cultural traditions and from earlier time-periods. The course will thus offer ample opportunity for the exploration of the translation of cultural values in a comparative perspective.

**NELC 182 Ancient Civilizations of the World**

This course explores the archaeology (material culture) of early complex societies or civilizations in Egypt, Mesopotamia, and the Aegean. According to the traditional paradigm, civilization first emerged during the fourth millennium BCE in Egypt and Mesopotamia. In the Mediterranean, state-level societies first appeared in Crete and mainland Greece in the early second millennium BCE. This course investigates how and why these civilizations developed, as well as their appearance and structure in the early historic (or literate) phases of their existence. A comparative perspective will illustrate what these early civilizations have in common and the ways in which they are unique. This course will consist largely of lectures which will outline classic archaeological and anthropological theories on state formation, before turning to examine the available archaeological (and textual) data on emerging complexity in Egypt, Mesopotamia, and the Aegean. This course does not presuppose any knowledge of archaeology or ancient languages; the instructor will provide any background necessary. Because this is a course on material culture, some of the class periods will be spent at the Penn Museum of Archaeology and Anthropology. These will consist of a guided tour of a relevant gallery, as well as a hands-on object-based lab with archaeological materials selected by the instructor. This course meets the General Education Curriculums Cross Cultural Analysis foundational approach, whose aim is to help students understand and interpret the cultures of peoples (even long-dead peoples) with histories different from their own; it also fulfills the History and Tradition Sector breadth requirement.

NELC 187 The Material Past in a Digital World
The material remains of the human past - objects and spaces - provide tangible evidence of past people's lives. Today's information technologies improve our ability to document, study, and present these materials. But what does it mean to deal with material evidence in a virtual context? In this class, students will learn basic digital methods for studying the past while working with objects, including those in the collections of the Penn Museum. This class will teach relational database design and 3D object modeling. As we learn about acquiring and managing data, we will gain valuable experience in the evaluation and use of digital tools. The digital humanities are a platform both for learning the basic digital literacy students need to succeed in today's world and for discussing the human consequences of these new technologies and data. We will discuss information technology's impact on the study and presentation of the past, including topics such as public participation in archaeological projects, educational technologies in museum galleries, and the issues raised by digitizing and disseminating historic texts and objects. Finally, we will touch on technology's role in the preservation of the past while working with objects, including those in the collections of the Penn Museum. This class will teach relational database design and 3D object modeling. As we learn about acquiring and managing data, we will gain valuable experience in the evaluation and use of digital tools. The digital humanities are a platform both for learning the basic digital literacy students need to succeed in today's world and for discussing the human consequences of these new technologies and data. We will discuss information technology's impact on the study and presentation of the past, including topics such as public participation in archaeological projects, educational technologies in museum galleries, and the issues raised by digitizing and disseminating historic texts and objects. Finally, we will touch on technology's role in the preservation of the past.
NELC 222 Art of Ancient Iran
This course offers a survey of ancient Iranian art and culture from the painted pottery cultures of the Neolithic era to the monuments of the Persian Empire. Particular emphasis is placed on the Early Bronze Age. Taught by: Pittman
Course not offered every year
Also Offered As: AAMW 624, ARTH 222, ARTH 624, NELC 624
Activity: Lecture

NELC 231 Modern Arabic Literature
This course is a study of modern Arabic literary forms in the context of the major political and social changes which shaped Arab history in the first half of the twentieth century. The aim of the course is to introduce students to key samples of modern Arabic literature which trace major social and political developments in Arab society. Each time the class will be offered with a focus on one of the literary genres which emerged or flourished in the twentieth century: the free verse poem, the prose-poem, drama, the novel, and the short story. We will study each of these emergent genres against the socio-political backdrop which informed it. All readings will be in English translations. The class will also draw attention to the politics of translation as a reading and representational lens.

NELC 235 Food in the Islamic Middle East: History, Memory, Identity
In the tenth century, a scholar named Ibn Sayyar al-Warraq produced an Arabic manuscript called Kitab al-Tabikh (The Book of Cooking). This volume, which compiled and discussed the recipes of eighth- and ninth-century Islamic rulers (caliphs) and their courts in Iraq, represents the oldest known surviving cookbook of the Arab-Islamic world. Many more such cookbooks followed; in their day they represented an important literary genre among cultured elites. As one food historian recently noted, there are more cookbooks in Arabic from before 1400 than in the rest of the worlds languages put together. Ibn Sayyars cookbook can help us to think about the historical and cultural dynamics of food. In this class, we will focus on the Middle East across the sweep of the Islamic era, into the modern period, and until the present day, although many of the readings will consider the study of food in other places (including the contemporary United States) for comparative insights. The class will use the historical study of food and foodways as a lens for examining subjects that relate to a wide array of fields and interests. These subjects include economics, agricultural and environmental studies, anthropology, literature, religion, and public health. With regard to the modern era, the course will pay close attention to the consequences of food for shaping memories and identities including religious, ethnic, national, and gender-based identities particularly among people who have dispersed or otherwise migrated. It will also focus considerably on the politics of food, that is, on the place of food in power relations. Among the questions we will debate are these: How does food reflect, shape, or inform history? By approaching the study of Middle Eastern cultures through food, what new or different things can we see? What is the field of food studies, and what can it offer to scholars? What is food writing as a literary form, and what methodological and conceptual challenges face those who undertake it?

NELC 238 Introduction to Islamic Law
This course will introduce students to classical Islamic law, the all-embracing sacred law of Islam. Among the world’s various legal systems, Islamic law may be the most widely misunderstood and even misrepresented; certainly, misconceptions about it abound. Islamic law is, however, the amazing product of a rich, fascinating and diverse cultural and intellectual tradition. Most of the readings in this course will be taken from primary sources in translation. Areas covered will include criminal law, family law, law in the Quran, gender and sexuality, the modern application of Islamic law, Islamic government and other selected topics.

**NELC 239 Migration and the Middle East**
This reading-and discussion-intensive seminar examines the phenomenon of migration into, out of, within, and across the Middle East and North Africa. We will focus on the period from the late nineteenth century to the present, and will emphasize the cultural (rather than economic) consequences of migration. Along the way we will trace connections between the Middle East and other regions— notably the Americas, sub-Saharan Africa, South Asia, the Caucasus, and Western Europe. Readings are interdisciplinary and include works of history, anthropology, sociology, medical research, literature, political science, geography, and human rights advocacy. As students develop final projects on topics of their choice, we will spend time throughout the semester discussing tactics for research and writing.

**NELC 241 Iraq: Ancient Cities and Empires**
Iraq: Ancient Cities and Empires is a chronological survey of the ancient civilization that existed in the drainage basin of the Tigris and Euphrates Rivers from the early settled village farming communities of the 7th millennium BCE to the middle of the 1st millennium BCE, when Nebuchadnezzar II ruled Babylon and much of the Middle East. Though organized period by period, NELC 241 explores various social, political, economic, and ideological topics, exposing students to various strands of evidence, including settlement survey data, excavated architectural remains, artifacts, and documentary sources, as well as an eclectic mix of theoretical perspectives. The course aims to provide students with a strong foundation for the further study of the ancient and pre-modern Middle East.

**NELC 244 Reading Ancient Mesopotamia**
An introduction to the literature of Ancient Mesopotamia. The literature of ancient Mesopotamia flourished thousands of years ago in a culture all of its own, yet the survival of hundreds of thousands of written records challenges us to read it and make sense of it without simply approximating it to the realm of our own understanding. How can we learn to do this? Situating our understanding of how we read and how we understand culture within an interdisciplinary range of literary-critical and analytic approaches, we will approach this question by immersing ourselves in the myths tales and mentalities that made Mesopotamian literature meaningful. To give us a measure of our progress we will bracket the semester by reading Gilgamesh which is never less than a great story, but which will take on new layers of meaning as the semester develops and we learn to read the text in more and more Mesopotamian ways. As we journey through these mysterious realms we will reflect not only Mesopotamia and its immortal literature but on what it means to read and understand any cultures other than our own.

NELC 260 Middle Eastern Jews in Israel
This undergraduate seminar offers an in-depth look at the history of Middle Eastern and North African Jews, focusing in particular on their place in Israeli society and culture. It will begin with a historical background on the Jewish communities in Ottoman Palestine, and in the larger Ottoman Empire, Iran, and Morocco. We will then proceed to consider the engagement of these Jewish communities with Zionism, and with other conflicting forces, such as European colonialism, Arab nationalism, and Cosmopolitanism. We will learn about Jewish immigration from the region to Palestine/Israel in the period between 1880 to 1948, and about their exodus/expulsion post-1948. We will then explore in depth their settlement in Israel: governmental policies towards Jewish immigrants from the Islamic World, especially between the 1950s and the 1970s; their integration in Israeli society; identity politics in Israel (or: the 'invention' of 'Mizrahim'); Mizrahi political action; Mizrahi music, film, literature, and food culture; and Mizrahi attitudes towards Arabs, both within and outside Israel. Students will leave the class with a firm grasp of the social and cultural history of Middle Eastern Jews in Israel, and the issues facing third-generation Mizrahim in Israel today. Students will also be introduced to basic methods of inquiry in history, sociology, anthropology, and cultural studies. Students will engage with a mix of scholarly research, readings in original documents, film, literature, music, and some material and visual artifacts.

NELC 261 Ancient Iranian Empires
Iran - as a landmass and a political entity - was central to the ancient world in a variety of ways. Ancient Iranian Empires were of central importance to - and centrally located in - the ancient world. It was the successor kingdom to the Assyrians and Babylonians; the power against which Greece and Rome defined themselves; and the crucible in which various communities and models of rule developed. This course offers a survey of the history of the ancient Persianate world, focusing in particular on the political and imperial entities that rose to power, the cultural, political, mercantile, and other contacts they shared with their neighbors to the East and West, and the communities and religious groups that arose and flourished within their lands. Ancient Iranian empires rivaled the Greek and Roman Empires to their West, and the central and eastern Asian Empires to their east, and the ongoing history of diplomacy, cultural contact, and war between these regions was formative to each and to the ancient world as a whole. Iran was home to and similarly formative for a variety of religions, including Zoroastrianism, Judaism, Christianity, Manichaeism, and Islam, and a central question Ancient Iranian political powers sought to address was how to negotiate and address the variety of populations under their control. The course will conclude by studying how, rather than a simplistic story of decline, the strategies, policies, institutions, and memory of the Iranian Empires continued to shape early Islam, medieval imagination, and modern political regimes.

NELC 275 History and Society of Early Mesopotamia
The fourth millennium BCE saw the rise of cities and the birth of writing in ancient Mesopotamia (modern Iraq). This class traces the history of Mesopotamia from about 3000 BCE to about 1600 BCE (the end of the Old Babylonian Period), examining political history and changes in social organization as well as developments in religion, literature and art.

NELC 290 Faces of Love: Gender, Sexuality and the Erotic in Persian Literature
Beloved, Lover and Love are three concepts that dominate the semantic field of eroticism in Persian literature and mysticism. The interrelation among these concepts makes it almost impossible to treat any one of the concepts separately. Moreover, there exists various faces and shades of love in the works of classical and modern Persian literature that challenges the conventional heteronormative assumptions about the sexual and romantic relationships between the lover and the beloved.
A sharp contrast exists between the treatment of homosexuality and 'queerness' in Islamic law, on the one hand and its reflection in Persian literature, particularly poetry (the chief vehicle of Persian literary expression), on the other. This course introduces and explores different faces of love, eroticism and homoeroticism in the Persian literary tradition from the dawn of dawn of the Persian poetry in the ninth century all through to the twenty-first century. It offers a comprehensive study of representations and productions of heteronormativity, sexual orientation and gender roles with particular reference to the notion of love, lover and beloved in Persian literature. Prerequisite: No prior knowledge of Persian is required as all literary works will be available in English translation.
Students are expected to attend seminars and take part in discussions. Please note that this syllabus is subject to change.

NELC 306 Gunpowder, Art and Diplomacy: Islamic Empires in the Early Modern World
In the sixteenth century, the political landscape of the Middle East, Central Asia, and India changed with the expansion and consolidation of new Islamic empires. Gunpowder had transformed the modes of warfare. Diplomacy followed new rules and forms of legitimation. The widespread use of Persian, Arabic and Turkish languages across the region allowed for an interconnected world of scholars, merchants, and diplomats. And each imperial court, those of the Ottomans, the Safavids, and the Mughals, found innovative and original forms of expression in art and literature. The expansion of these Islamic empires, each of them military giants and behemoths of bureaucracy, marked a new phase in world history. The course is divided in four sections. The first section introduces the student to major debates about the so-called gunpowder empires of the Islamic world as well as to comparative approaches to study them. The second section focuses on the transformations of modes of warfare and military organization. The third section considers the cultural history and artistic production of the imperial courts of the Ottomans, the Mughals, and the Safavids. The fourth and final section investigates the social histories of these empires, their subjects, and the configuration of a world both connected and divided by commerce, expansion, and diplomacy.

NELC 320 Digital Exploration of the Past: Archives, Databases, Maps, and Museums
This course exposes students to digital methods for investigating past environments and societies, including digitization of analog records, the construction and querying of databases, and the creation of digital maps. The ultimate goal of the course will be to carry out a final project that benefits the Penn Museum and the public. In fall 2018, our exploration of digital methods will center around the archaeological site of Ur (Tell el-Muqayyar), located in southern Iraq. Ur was one of the earliest cities in the world, and, thanks to campaigns partly funded by Penn in the 1920s and 1930s, is one of the best-excavated sites in southern Mesopotamia. Here at Penn, we have unparalleled access to archival documentation and artifacts from the site. We will draw upon this access to contribute to an on-going digital humanities project in the Penn Museum (the public ‘Ur Online’ database). In the process, students will re-assess data that has the potential to change anthropological ideas about issues such as the environmental setting of the earliest cities and archaeological ideas about demographic and urban structure within the city of Ur itself. There are no prerequisites, but students must bring an interest in Mesopotamian archaeology and/or the origins of urbanism and be motivated to carry out individual and group research guided by the instructor & classmates.
Taught by: Hammer
Also Offered As: AAMW 619, NELC 620
Activity: Seminar
1.0 Course Unit

NELC 323 Origins of Art / Origins of Writing
Each of the earliest systems of writing had intimate and enduring ties to pictorial traditions. This seminar addresses the fundamental relationship between texts and visual imagery in the Mesopotamian, Egyptian, Chinese, and Maya traditions. The class will take a comparative approach to examine the parallel development of scripts and images, extending from their earliest beginnings to their on-going lives as mature systems. As the individual scripts became more capable of representing speech, the subject matter, composition, and function of images changed, and one goal of this class is to identify these processes. Emphasis will be put on seeing text and image as collaborative and interactive constructions, in which parts of a single message can be encoded and presented in different ways. The class will make extensive use of the collections and the curatorial expertise of the Penn Museum.

1.0 Course Unit

NELC 325 Who Owns the Past? Archaeology and Politics in the Middle East
This course explores the role of cultural heritage and archaeological discoveries in the politics of the Middle East from the nineteenth century to the recent aftermath of the Arab Spring. We will explore how modern Middle East populations relate to their pasts and how archaeology and cultural heritage have been employed to support particular political and social agendas, including colonialism, nationalism, imperialism, and the construction of ethnic-religious identities. Although it was first introduced to the Middle East as a colonial enterprise by European powers, archaeology became a pivotal tool for local populations of the Middle East to construct new histories and identities during the post-WWII period of intensive nation-building after the dissolution of the Ottoman Empire. To understand this process, we will first look at the nineteenth-century establishment of archaeology by institutions like the Penn Museum. Then we will move on to individual case studies in Turkey, Iraq, Egypt, Israel/Palestine, Iran, and the republics of former Soviet Transcaucasia to look at the role of archaeology and cultural heritage in the formation of these countries as modern nation-states with a shared identity among citizens. We will conclude with an examination of the recent impact of the Islamic State on material heritage in Syria and Iraq, the changing attitudes of Middle Eastern countries toward foreign museums, and the role of UNESCO in defining Middle Eastern sites of world heritage. The course will also include field trips to the Penn Museum.

NELC 330 The University, the Museum, and the Middle East
This seminar explores how two kinds of institutions - the research university and the museum - developed in the United States as American scholars and philanthropists and the U.S. government engaged with the wider world. We will take the involvement of the University of Pennsylvania and the Penn Museum in the Middle East as a test case for this history, while focusing on the period from the late nineteenth century to the present. We will approach questions in transnational intellectual, cultural, and political history through the lens of Penn's Middle Eastern engagements. For example, how did the university and its museum contribute to the construction of the Middle East as a zone of U.S. diplomatic intervention? How have American scholarly traditions shaped academic fields of inquiry including 'Semitics' (a term used a century ago to suggest the study of biblical languages and traditions), 'Oriental Studies' (a now-passe and politically loaded term suggesting connections to American traditions of Orientalist thought), 'Islamic Studies', and 'Egyptology'? How did Penn's archaeological expeditions to celebrated sites like Ur in the late nineteenth century influence the late Ottoman Empire's policies towards antiquities and museums? How did Penn's broader expeditions in the twentieth century, to Egypt, Iran, and elsewhere, shape nationalist imaginations in the United States and in Middle Eastern countries, while also informing international antiquities policies? Finally, how have institutions like Penn and the Penn Museum responded to changing American popular attitudes and U.S. foreign policy concerns relative to the Middle East, during the Cold War and post-2001 ('post-9/11') eras, and most recently, amid civil strife in Syria and Iraq? This seminar offers students an opportunity to consult Penn's phenomenal collections of Middle East-related materials as they pursue end-of-semester research. These collections include artifacts (museum objects), archival records (such as documents, drawings, and photographs), and rare books and manuscripts from the Penn Museum and Penn Libraries. Prerequisite: Middle Eastern history survey

NELC 331 Women Making History: The Penn Museum and the Centennial 2020
The year 2020 marks the 100th anniversary of the 19th Amendment to the U.S. Constitution, which declared that the right of citizens to vote 'shall not be denied or abridged by the United States or by any State on account of sex'. To mark this centennial - to both celebrate it and critically assess its impact on American society - we will investigate the history of women at the Penn Museum as archaeologists, ethnographers, epigraphers, philanthropists, and more. At the same time, we will examine material in the Penn Museum that women collected, donated, or studied. Our goal will be to produce original research that may contribute to future exhibits and publications as well as to broader public forums. Sponsored by the Department of Near Eastern Languages and Civilizations, our seminar will focus heavily on western Asia, southeastern Europe, and North Africa - all zones that scholars have variously associated with the Near East or Middle East, and where the Penn Museum has been active since its foundation in 1887. To situate the Penn Museum and its collections within a global and comparative frame, we will also study select women who made major scholarly contributions to other parts of the world such as the Americas and Oceania. Among the figures we will study are Sarah Yorke Stevenson (Egypt), Katharine Woolley (Mesopotamia/Iraq), Harriet Boyd Hawes (Ottoman Crete and Greece), Florence Shotridge (Alaska), Zelia Nuttall (Mexico and Russia), and Tatiana Proskouriakoff (Guatemala). We will venture into many different kinds of history. In regional terms, our scope will be transnational and international: we will cover the United States and the Middle East in the wider world. In thematic and methodological terms, we will approach our subject through biography, oral history, and microhistory; material history and museum studies; cultural and intellectual history; women's and gender studies; and the history of academic disciplines, especially archaeology and anthropology. Some background in Middle Eastern history; or Anthropology; or Women's History; or Museum Studies recommended.

NELC 332 North Africa: History, Culture, Society
This interdisciplinary seminar aims to introduce students to the countries of North Africa, with a focus on the Maghreb and Libya (1830-present). It does so while examining the region's close economic and cultural connections to sub-Saharan Africa, Europe, and the Middle East. Readings will include histories, political analyses, anthropological studies, and novels, and will cover a wide range of topics such as colonial and postcolonial experiences, developments in Islamic thought and practice, and labor migration. This class is intended for juniors, seniors, and graduate students. Prerequisite: A university-level survey course in Middle Eastern, African, or Mediterranean history.

Course not offered every year
Also Offered As: AFRC 332, AFRC 632, HIST 370, NELC 632
Activity: Seminar
1.0 Course Unit
NELC 333 Urban Life in the Middle East and North Africa
With rapid urbanization, most people in the Middle East and North Africa are living now in cities and towns, rather than in rural areas. This seminar introduces the complex realities of living in the major cities of the region, in terms of globalization, social class, politics, gender and sexuality, culture, religion, communal identities, communal networks, and more. Through intensive engagement with the various readings and films, both documentaries and feature films, we will explore how those realities and processes shape the urban space, or express themselves in it. In addition, we will explore the basic premises of such disciplines as anthropology, cultural studies, history, or sociology, and learn how they can help us research and understand the realities of urban life in the modern and contemporary Middle East and North Africa. We will use Cairo, Egypt, as our main case study, while looking at a range of other cities, such as Istanbul, Turkey, and Marrakesh, Morocco, for further insights.

NELC 335 Muslims, Christians, and Jews in the Middle East: Historical Perspectives
A reading- and discussion-intensive seminar that addresses several recurring questions with regard to the Middle East and North Africa. How have Islam, Judaism, and Christianity influenced each other in these regions historically? How have Jews, Christians, and Muslims fared as religious minorities? To what extent have communal relations been characterized by harmony and cooperation, or by strife and discord, and how have these relations changed in different contexts over time? To what extent and under what circumstances have members of these communities converted, intermarried, formed business alliances, and adopted or developed similar customs? How has the emergence of the modern nation-state system affected communal relations as well as the legal or social status of religious minorities in particular countries? How important has religion been as one variable in social identity (along with sect, ethnicity, class, gender, etc.), and to what extent has religious identity figured into regional conflicts and wars? The focus of the class will be on the modern period (c. 1800-present) although we will read about some relevant trends in the early and middle Islamic periods as well. Students will also pursue individually tailored research to produce final papers. Prior background in Islamic studies and Middle Eastern history is required. Middle Eastern history is required. This class is intended for juniors, seniors, and graduate students.

1.0 Course Unit

NELC 336 Nationalism and Communal Identity in the Middle East
This seminar views the phenomenon of nationalism as it affected the modern Middle East in the nineteenth and twentieth centuries. Together we will consider the diverse components of nationalism, including religion, language, territorial loyalty, and ethnicity, and test the thesis that nations are ‘imagined communities’ built on ‘invented traditions’. At the same time, we will examine other forms of communal identity that transcend national borders or flourish on more localized scales. This class approaches nationalism and communal identity as complex products of cultural, political, and social forces, and places Middle Eastern experiences within a global context. Students must take a survey of modern Middle Eastern history or politics before enrolling in this class. This class is intended for juniors, seniors, and graduate students.
Taught by: Sharkey
Course usually offered in fall term
Also Offered As: NELC 536
Prerequisite: NELC 102

NELC 337 Jewish Magic: Defense Against the Dark Arts
The Hebrew Bible legislates against magic and witchcraft. But Jewish literature is replete with demons, witches, spells and incantations. This course will examine the phenomenon of Jewish magic in the longue duree. We will explore a wide array of sources describing ancient Jewish magical practices, and attempt to reconstruct the various aspects of ancient Jewish magic. We will start with demonology and exorcism in biblical and Second Temple literature. Then we will examine rabbinic attitudes towards magic and sorcery and rabbinic magical recipes. We then turn to material artifacts: late antique Jewish amulets and magic bowls. Finally we will survey the large corpus of magical texts from the Cairo Geniza and Hebrew manuscripts of magic from the middle ages. During the course we will consider broader questions such as the relationships between magic and religion, the identity of the Jewish magicians and their clients, relationship between Jewish and contemporary non-Jewish magic, and the role of women in magical practice.
Taught by: Gross
Also Offered As: JWST 337
Activity: Lecture
1.0 Course Unit

NELC 342 Egypt in Four Revolutions
This seminar offers an in-depth look at the political and social history of revolution and protest in modern Egypt. We will examine four such seminal events, through different lenses: The Urabi Revolution (1879-1882), The 1919 Revolution, The 1952 Revolution, and The 2011 Revolution. We will discuss their political, social, and economic causes and effects; popular participation and the use of public space; the roles of the army, women, youth, and social organizations in those events; their ideological and international aspects; their colonial and post-colonial contexts; and more. We will use cutting edge research from several disciplines, as well as literature, film, music, photography, and social media as sources. Students will leave the class with a firm grasp of the social and political history of modern Egypt, as well as of current scholarly discussions about the nature of revolution and protest.
Taught by: Tam
Also Offered As: NELC 642

NELC 346 GIS for the Digital Humanities and Social Sciences
This course introduces students to theory and methodology of the geospatial humanities and social sciences, understood broadly as the application of Geographical Information Systems (GIS) and spatial analysis techniques to the study of social and cultural patterns in the past and present. By engaging with spatial theory, spatial analysis case studies, and technical methodologies, students will develop an understanding of the questions driving, and tools available for, humanistic and social science research projects that explore change over space and time. We will use ESRI's ArcGIS software to visualize, analyze, and integrate historical, anthropological, and environmental data. Techniques will be introduced through the discussion of case studies and through demonstration of software skills. During supervised laboratory sessions, the various techniques and analyses covered will be applied to sample data and also to data from a region/topic chosen by the student.

NELC 359 Seminar in Modern Hebrew Literature
This course introduces students to selections from the best literary works written in Hebrew over the last hundred years in a relaxed seminar environment. The goal of the course is to develop skills in critical reading of literature in general, and to examine how Hebrew authors grapple with crucial questions of human existence and national identity. Topics include: Hebrew classics and their modern 'descendents,' autobiography in poetry and fiction, the conflict between literary generations, and others. Because the content of this course changes from year to year, students may take it for credit more than once. This course is conducted in Hebrew and all readings are in Hebrew. Grading is based primarily on participation and students' literary understanding.

NELC 362 Intro to Digital Archaeology
Digital methodologies are now an integral part of archaeological practice and archaeologists are now expected to possess basic computing skills and be familiar with a range of data collection, analysis and visualization techniques. This course will use case studies and applied learning opportunities centered on a course project to explore a broad array of digital approaches in archaeology. The technological underpinnings, professional procedures, and influences on archaeological practice and theory will be discussed for each method covered in the course. Applied learning opportunities in digital data collection methods will include aerial and satellite image analysis, global navigation satellite system (GNSS) survey, 3D scanning methods, close-range photogrammetry, and near-surface geophysical prospection. Students will also have opportunities for practical experience in digital database design and management, geographic information science (GIS) and 3D visualization. Students will communicate the results of the course project in a digital story that will be presented at the end of the term. Prior archaeological classwork and/or experience preferred.

Course not offered every year
Also Offered As: JWST 213
Activity: Seminar
1.0 Course Unit

NELC 385 Eastern Christianities
The history of Christianity is often told from the perspective of its spread westward from Israel to Rome. Yet, in the first millennium, there were more Christians living in the East, in places as far away as Persia, Yemen, India, China, and Mongolia, than in the West. Spread across the Asian continent, these Christians were actively involved in local and imperial politics, composed theological literature, and were deeply embedded in the cultural fabric of their host societies. This course traces the spread of Christianity eastward, paying particular attention to its regional developments, its negotiations with local political powers, and its contact with other religions, including Buddhism, Manichaeism, and Islam. Readings will cover a broad range of sources, including selections from classical Syriac literature, Mesopotamian magic bowls, the so-called 'Jesus Sutras,' and the Quran.

NELC 419 Mining Archaeology
In ancient times, materials such as stone and metals were used to produce artifacts including pigments, jewelry, tools, and weapons. This course is designed to introduce students to research on the early exploitation of mineral resources. Which techniques were used to access and process raw materials in antiquity? Which archaeological methods can be used to investigate these features and artifacts? The course will provide worldwide examples through time, ranging from Stone Age flint mining, Iron Age rock salt mining to Medieval silver mining. Ethnographic studies and hands-on activities will contribute to our understanding of mining in archaeology, and artifacts from the Museum’s collections will undergo scientific analysis in the Center for the Analysis of Archaeological Materials. Prerequisite: Desired but not mandatory: ANTH 221/521
Material World in Archaeological Science

NELC 437 Islamic Intellectual Tradition
This comprehensive survey of the traditions of rational thought in classical Islamic culture is distinguished by its attempt to contextualize and localize the history of what is best described as philosophy in Islam, including not only the Islamic products of the Hellenistic mode of thought but also religious and linguistic sciences whose methodology is philosophical. The course examines the influence of these different disciplines upon each other, and the process of the Islamic ‘aspecting’ of the Greek intellectual legacy. The readings thus include not only the works of Hellenized philosophers (falasifa) of Islam, but also those of theologians (mutakallimun), legists (fiqh scholars), and grammarians (nahw/lugha scholars). No prerequisites. Additional advanced-level assignments can be given for graduate credit.

NELC 451 Jews and Judaism in Antiquity
A broad introduction to the history of Jewish civilization from its Biblical beginnings to the Middle Ages, with the main focus on the formative period of classical rabbinic Judaism and on the symbiotic relationship between Judaism, Christianity, and Islam.
Taught by: Dohrmann
Course usually offered in fall term
Also Offered As: HIST 139, JWST 156, NELC 051, RELS 120
Activity: Lecture
1.0 Course Unit

NELC 454 Spirit and Law
While accepting ‘the yoke of the commandments’, Jewish thinkers from antiquity onward have perennially sought to make the teachings of revelation more meaningful in their own lives. Additional impetus for this quest has come from overtly polemical challenges to the law, such as those leveled by Paul, medieval Aristotelians, Spinoza and Kant. This course explores both the critiques of Jewish Law, and Jewish reflections on the Law’s meaning and purpose, by examining a range of primary sources within their intellectual and historical contexts. Texts (in English translation) include selections from Midrash, Talmud, medieval Jewish philosophy and biblical exegesis, kabbalah, Hasidic homilies, Jewish responses to the Enlightenment, and contemporary attempts to re-value and invent Jewish rituals.

NELC 456 Great Books of Judaism (Fall 2018: Lifecycle in the Talmud)
The Babylonian Talmud, known simply as the Bavli, is the foundational legal and ethical document of rabbinic Judaism. It is one of the best read works of world literature, and it is the most widely disseminated and revered rabbinic work. It not only contains legal discussions and rulings but rather it also presents the worldview of the rabbis. This course will analyze and contextualize the perspectives of the Talmud towards the important phases of life. We will examine in-depth several Talmudic passages relating to the various stages of the human lifecycle: birth and naming of the child; circumcision; bar/bat mitzvah and adulthood; earning a livelihood and choosing a career; marriage and divorce; procreation and raising children; death, burial, mourning and the belief in the resurrection of the dead among others. We will evaluate these teachings in light of other traditions and in their broader late antiquity and contemporary contexts. All texts will be read in their English translation but originals will also be provided.

For BA Students: Arts and Letters Sector
Course usually offered in fall term
Also Offered As: COML 057, JWST 151, NELC 156, RELS 027
Activity: Seminar
1.0 Course Unit

NELC 458 Jewish Literature in the Middle Ages in Translation
Course explores the cultural history of Jews in the lands of Islam from the time of Mohammed through the late 17th century (end of Ottoman expansion into Europe) --in Iraq, the Middle East, al-Andalus and the Ottoman Empire. Primary source documents (in English translation) illuminate minority-majority relations, internal Jewish tensions (e.g., Qaraism), and developments in scriptural exegesis, rabbinic law, philosophy, poetry, polemics, mysticism and liturgy. Graduate students have additional readings and meetings. Spring 2015
Taught by: Fishman
One-term course offered either term
Also Offered As: COML 257, JWST 153, NELC 158
Activity: Seminar
1.0 Course Unit

NELC 459 Prose Narrative
Historical, literary, comparative, and ethnographic methods contribute to study of prose narratives which were told in oral societies in antiquity and in modern times and were documented in literary societies for different purposes. Oral storytellers, both professional and amateurs, performed them in private and public spaces. Their recording from antiquity to modern times became an integral element of modern life in general and in education and arts in particular. The storytellers, their performances in oral and literary cultures, their genres, and their symbolic meanings are the subjects of the course, together with the analytical methods that help mapping their distribution worldwide.

1.0 Course Unit

NELC 463 Literary Legacy of Ancient Egypt
This course surveys the literature of Ancient Egypt from the Old Kingdom through the Graeco-Roman period, focusing upon theme, structure, and style, as well as historical and social context. A wide range of literary genres are treated, including epics; tales, such as the 'world's oldest fairy tale'; poetry, including love poems, songs, and hymns; religious texts, including the 'Cannibal Hymn'; magical spells; biographies; didactic literature; drama; royal and other monumental inscriptions; and letters, including personal letters, model letters, and letters to the dead. Issues such as literacy, oral tradition, and the question poetry vs. prose are also discussed. No prior knowledge of Egyptian is required.

Taught by: Silverman
Course not offered every year
Also Offered As: NELC 061
Activity: Lecture
1.0 Course Unit

NELC 467 History of Egypt -New Kingdom
Covers principal aspects of ancient Egyptian culture (environment, urbanism, religion, technology, etc.) with special focus on archaeological data; includes study of University Museum artifacts. Follows NELC 266/466 - History of Egypt taught in the fall semester.

Taught by: Wegner
Course not offered every year
Activity: Lecture
1.0 Course Unit

NELC 468 The Religion of Ancient Egypt
Weekly lectures (some of which will be illustrated) and a field trip to the University Museum's Egyptian Section. The multifaceted approach to the subject matter covers such topics as funerary literature and religion, cults, magic religious art and architecture, and the religion of daily life.

Taught by: Silverman/Wegner
Course not offered every year
Also Offered As: NELC 166, RELS 114
Activity: Lecture
1.0 Course Unit

NELC 469 The Archaeology of Nubia
The course will examine the archaeology of Ancient Nubia from Pre-history through the Bronze and Iron Ages, ca. 5000 BCE to 300 AD. The course will focus on the various Nubian cultures of the Middle Nile, and social and cultural development, along with a detailed examination of the major archaeological sites and central issues of Nubian archaeology.

Taught by: Wegner
Course not offered every year
Activity: Lecture
1.0 Course Unit

NELC 479 Medieval Islamic Art & Architecture
An introduction to the major architectural monuments and trends, as well as to the best-known objects of the medieval (seventh-to-fourteenth-century) Islamic world. Attention is paid to such themes as the continuity of late antique themes, architecture as symbol of community and power, the importance of textiles and primacy of writing. Suitable for students of literature, history, anthropology as well as art history.

Taught by: Holod
Course not offered every year
Also Offered As: AAMW 435, ARTH 435
Activity: Lecture
1.0 Course Unit
NELC 501 Curatorial Seminar
Curatorial seminars expose students to the complexity of studying and working with objects in the context of public display. With the guidance of faculty and museum professionals, students learn what it means to curate an exhibition, create catalogues and gallery text, and/or develop programming for exhibitions of art and visual/material culture. Students in this curatorial seminar will participate in planning the exhibition of Japanese illustrated books from the Tress collection to be held in the Kislak Center in spring 2021. Japanese illustrated books are celebrated for their high technical and aesthetic achievements and the collection spans all genres and formats over more than three hundred years. In this course, students will be thinking through how we can tell the story of the illustrated book in Japan in the space of the exhibition. We will think through how these materials related to their broad and largely literate audiences, and we’ll pay close attention to artists, genres, technologies, and subjects. Students will conduct research, prepare didactic labels, write entries for the catalogue, and develop the website and symposium as part of their curatorial practice. There will be extensive hands-on engagement with examples from the Kislak collections as well as practical training in papermaking, materials, and binding. By permission only.
Course not offered every year
Also Offered As: AAMW 509, ARTH 501

Activity: Seminar
1.0 Course Unit

NELC 523 Narrative in Ancient Art
Art history, and its cousins in religious, social, political and literary studies, have long been fascinated with the question of narrative: how do images engage time, tell stories? These are fundamental questions for ancient Near Eastern, Egyptian and Mediterranean art history and archaeology, whose rich corpus of narrative images is rarely considered in the context of 'Western' art. Relations between words and things, texts and images, were as fundamental to the ancient cultures we examine as they are to modern studies. As we weigh classic modern descriptions of narrative and narratology, we will bring to bear recent debates about how (ancient) images, things, monuments, and designed spaces engage with time, space, and event, and interact with cultural memory. We will ask 'who is the story for, and why?' for public and private narratives ranging from political histories to mythological encounters. Our case studies will be drawn from the instructors' expertise in Mesopotamian visual culture, and in the visual cultures of the larger Mediterranean world from early Greek antiquity to the Hellenistic, Roman, and Late Antique periods. One central and comparative question, for instance, is the nature of recording history in pictures and texts in the imperial projects of Assyria, Achaemenid Persia, the Hellenistic kingdoms, and Rome.

Also Offered As: AAMW 523, ARTH 523, CLST 523
Activity: Seminar
1.0 Course Unit

NELC 530 The University, the Museum, and the Middle East
This seminar explores how two kinds of institutions - the research university and the museum - developed in the United States as American scholars and philanthropists and the U.S. government engaged with the wider world. We will take the involvement of the University of Pennsylvania and the Penn Museum in the Middle East as a test case for this history, while focusing on the period from the late nineteenth century to the present. We will approach questions in transnational intellectual, cultural, and political history through the lens of Penn's Middle Eastern engagements. For example, how did the university and its museum contribute to the construction of the Middle East as a zone of U.S. diplomatic intervention? How have American scholarly traditions shaped academic fields of inquiry including 'Semitics' (a term used a century ago to suggest the study of biblical languages and traditions), 'Oriental Studies' (a now-passe and politically loaded term suggesting connections to American traditions of Orientalist thought), 'Islamic Studies', and 'Egyptology'? How did Penn's archaeological expeditions to celebrated sites like Ur in the late nineteenth century influence the late Ottoman Empire's policies towards antiquities and museums? How did Penn's broader expeditions in the twentieth century, to Egypt, Iran, and elsewhere, shape nationalist imaginations in the United States and in Middle Eastern countries, while also informing international antiquities policies? Finally, how do institutions like Penn and the Penn Museum responded to changing American popular attitudes and U.S. foreign policy concerns relative to the Middle East, during the Cold War and post-2001 ('post-9/11') eras, and most recently, amid civil strife in Syria and Iraq? This seminar offers students an opportunity to consult Penn's phenomenal collections of Middle East-related materials as they pursue end-of-semester research. These collections include artifacts (museum objects), archival records (such as documents, drawings, and photographs), and rare books and manuscripts from the Penn Museum and Penn Libraries.
Taught by: Sharkey

NELC 531 Women Making History: The Penn Museum and the Centennial 2020

The year 2020 marks the 100th anniversary of the 19th Amendment to the U.S. Constitution, which declared that the right of citizens to vote ‘shall not be denied or abridged by the United States or by any State on account of sex’. To mark this centennial - to both celebrate it and critically assess its impact on American society - we will investigate the history of women at the Penn Museum as archaeologists, ethnographers, epigraphers, philanthropists, and more. At the same time, we will examine material in the Penn Museum that women collected, donated, or studied. Our goal will be to produce original research that may contribute to future exhibits and publications as well as to broader public forums. Sponsored by the Department of Near Eastern Languages and Civilizations, our seminar will focus heavily on western Asia, southeastern Europe, and North Africa - all zones that scholars have variously associated with the Near East or Middle East, and where the Penn Museum has been active since its foundation in 1887. To situate the Penn Museum and its collections within a global and comparative frame, we will also study select women who made major scholarly contributions to other parts of the world such as the Americas and Oceania. Among the figures we will study are Sarah Yorke Stevenson (Egypt), Katharine Woolley (Mesopotamia/Iraq), Harriet Boyd Hawes (Ottoman Crete and Greece), Florence Shotridge (Alaska), Zelia Nuttall (Mexico and Russia), and Tatiana Proskouriakoff (Guatemala). We will venture into many different kinds of history. In regional terms, our scope will be transnational and international: we will cover the United States and the Middle East in the wider world. In thematic and methodological terms, we will approach our subject through biography, oral history, and microhistory; material history and museum studies; cultural and intellectual history; women’s and gender studies; and the history of academic disciplines, especially archaeology and anthropology. Some background in Middle Eastern history; or Anthropology; or Women’s History; or Museum Studies recommended.

NELC 535 Muslims, Christians, and Jews in the Middle East: Historical Perspectives

This class is a reading- and discussion-intensive seminar that addresses several recurring questions with regard to the Middle East and North Africa. How have Islam, Judaism, and Christianity influenced each other in these regions historically? How have Jews, Christians, and Muslims fared as religious minorities? To what extent have communal relations been characterized by harmony and cooperation, or by strife and discord, and how have these relations changed in different contexts over time? To what extent and under what circumstances have members of these communities converted, intermarried, formed business alliances, and adopted or developed similar customs? How has the emergence of the modern nation-state system affected communal relations as well as the legal or social status of religious minorities in particular countries? How important has religion been as one variable in social identity (along with sect, ethnicity, class, gender, etc.), and to what extent has religious identity figured into regional conflicts and wars? The focus of the class will be on the modern period (c. 1800-present) although we will read about some relevant trends in the early and middle Islamic periods as well. Students will also pursue individually tailored research to produce final papers. Prior background in Islamic studies useful.

Activity: Seminar
1.0 Course Unit

NELC 536 Nationalism and Communal Identity in the Middle East

This seminar views the phenomenon of nationalism as it affected the modern Middle East in the nineteenth and twentieth centuries. Together we will consider the diverse components of nationalism, including religion, language, territorial loyalty, and ethnicity, and test the thesis that nations are ‘imagined communities’ built on ‘invented traditions.’ At the same time, we will examine other forms of communal identity that transcend national borders or flourish on more localized scales. This class approaches nationalism and communal identity as complex products of cultural, political, and social forces, and places Middle Eastern experiences within a global context.

Activity: Seminar
1.0 Course Unit
NELC 550 The Bible in Translation
This course introduces undergraduates and graduate students to one specific Book of the Hebrew Bible. 'The Bible in Translation' involves an in-depth reading of a biblical source against the background of contemporary scholarship. Depending on the book under discussion, this may also involve a contextual reading with other biblical books and the textual sources of the ancient Near East. Although no prerequisites are required, NELC 250 is a perfect follow-up course for NELC 150 'Intro to the Bible.'
One-term course offered either term
Also Offered As: COML 380, JWST 255, NELC 250, RELS 224
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit.

NELC 559 Introduction to Modern Hebrew Literature: Short Story Reinvented
The objective of this course is to develop an artistic appreciation for literature through in-depth class discussions and text analysis. Readings are comprised of Israeli poetry and short stories. Students examine how literary language expresses psychological and cultural realms. The course covers topics such as: the short story reinvented, literature and identity, and others. Because the content of this course changes from year to year, students may take it for credit more than once. This course is conducted in Hebrew and all readings are in Hebrew. Grading is based primarily on participation and students’ literary understanding.

NELC 561 Ancient Iranian Empires
Iran, as a landmass and a political entity, was central to the ancient world in a variety of ways. Ancient Iranian Empires were of central importance to - and centrally located in - the ancient world. It was the successor kingdom to the Assyrians and Babylonians; the power against which Greece and Rome defined themselves; and the crucible in which various communities and models of rule developed. This course offers a survey of the history of the ancient Persianate world, focusing in particular on the political and imperial entities that rose to power, the cultural, political, mercantile, and other contacts they shared with their neighbors to the East and West, and the communities and religious groups that arose and flourished within their lands. Ancient Iranian empires rivaled the Greek and Roman Empires to their West, and the central and eastern Asian Empires to their East, and the ongoing history of diplomacy, cultural contact, and war between these regions was formative to each and to the ancient world as a whole. Iran was home to and similarly formative for a variety of religions, including Zoroastrianism, Judaism, Christianity, Manichaeism, and Islam, and a central question Ancient Iranian political powers sought to address was how to negotiate and address the variety of populations under their control. The course will conclude by studying how, rather than a simplistic story of decline, the strategies, policies, institutions, and memory of the Iranian Empires continued to shape early Islam, medieval imagination, and modern political regimes.

1.0 Course Unit

NELC 565 Themes Jewish Tradition: Iberian Conversos: Jew-Christian?
Course topics will vary; they have included: Holy Men & Women (Ben-Amos); Rewriting the Bible (Dohrmann); Jewish Political Thought & Action (Fishman) When did the Bible become the Bible? What was the nature of canon and authority in early Israel and Judaism, and how did biblical communities think about their sacred texts? How and what did the Bible mean to ancient readers? The answers to these questions are varied and surprising. This course looks at early biblical and Jewish texts that both write and re-write the tradition’s own central texts. We will think widely and creatively about ancient textuality, orality, interpretation, composition, and authority. Drawing on literary theory, the course will examine the ways that biblical and post-biblical literature from the Second Temple to the rabbinic period (with some forays into contemporary literature) manifest complex ideas about power, meaning, and religiosity in early Judaism.

NELC 557 Seminar in Rabbinic Literature
Most of the foundational writings of rabbinic Judaism corpora of Midrash, Mishna, and the two Talmuds were in existence by the end of the sixth century CE. Yet, for several centuries thereafter, there is little evidence attesting to the lived nature of rabbinic culture and society. Course will focus on writings by Jews and about Jews, produced between the 7th and 10th centuries, complemented by secondary sources. Texts will include selections from archaeological inscriptions; Midrash; liturgical poetry; Targum; Masora; geonic responsa, writings by Muslims and by Church Fathers. While students must be able to read Hebrew, much class time will be devoted to the improvement of reading and comprehension skills. Undergraduates should seek permission of the instructor. Prerequisite: Proficiency in Hebrew and/or Greek recommended. Undergraduates need permission to enroll. May be repeated for credit.
Course usually offered in spring term
Also Offered As: HEBR 557, JWST 553
Activity: Seminar

NELC 562 Intro to Digital Archaeology
Digital methods allow archaeologists to approach research questions about the human past with increasing accuracies on larger datasets and at multiple scales. This class introduces students to the three main steps of digital archaeology: data management, analysis, and sharing. Data management involves the design, creation, and curation of digital objects that capture the archaeological process and evidence. Students will gain deep familiarity in working with the main types of digital archival data: structured data (relational databases), 3d models/spatial data, and raster images. The class will provide abundant hands-on experience with the latest equipment and software for working with many different kinds of data. We will learn about data analysis techniques through a close examination of a variety of case studies in the literature that demonstrate how other archaeologists have applied digital methods to their archaeological questions. Finally, we will discuss the importance of sharing data through open access data publication and we will apply our skills with structured data to existing online archaeological datasets. The goal of this class is to prepare students to make methodological decisions during future research endeavors, both in the field and in the archaeological lab. Prerequisite: Prior archaeological classwork and/or experience preferred.
Taught by: Peter Cobb
Activity: Lecture
1.0 Course Unit

NELC 567 Seminar on Egyptian Archaeology and History
Specific topics will vary from year to year.
Taught by: Wegner
Course not offered every year
Activity: Seminar
1.0 Course Unit

NELC 568 Women in Ancient Egypt
This class will examine the many roles played by women in ancient Egypt. From goddesses and queens, to wives and mothers, women were a visible presence in ancient Egypt. We will study the lives of famous ancient Egyptian women such as Hatshepsut, Nefertiti and Cleopatra. More independent than many of their contemporaries in neighboring areas, Egyptian women enjoyed greater freedoms in matters of economy and law. By examining the evidence left to us in the literature (including literary texts and non-literary texts such as legal documents, administrative texts and letters), the art, and the archaeological record, we will come away with a better understanding of the position of women in this ancient culture.
Course usually offered in spring term
Also Offered As: NELC 168
Activity: Lecture
1.0 Course Unit

NELC 572 Geophysical Prospection for Archaeology
Near-surface geophysical prospection methods are now widely used in archaeology as they allow archaeologists to rapidly map broad areas, minimize or avoid destructive excavation, and perceive physical dimensions of archaeological features that are outside of the range of human perception. This course will cover the theory of geophysical sensors commonly used in archaeological investigations and the methods for collecting, processing, and interpreting geophysical data from archaeological contexts. We will review the physical properties of common archaeological and paleoenvironmental targets, the processes that led to their deposition and formation, and how human activity is reflected in anomalies recorded through geophysical survey through lectures, readings, and discussion. Students will gain experience collecting data in the field with various sensors at archaeological sites in the region. A large proportion of the course will be computer-based as students work with data from geophysical sensors, focusing on the fundamentals of data processing, data fusion, and interpretation. Some familiarity with GIS is recommended.
Taught by: Herrmann
Course offered spring; even-numbered years
Also Offered As: AAMW 572, ANTH 572, CLST 572
Activity: Laboratory
1.0 Course Unit

NELC 574 Faces of Love: Gender, Sexuality, and the Erotic in Persian Literature
Beloved, Lover and Love are three concepts that dominate the semantic field of eroticism in Persian literature and mysticism. The interrelation among these concepts makes it almost impossible to treat any one of the concepts separately. Moreover, there exists various faces and shades of love in the works of classical and modern Persian literature that challenges the conventional heteronormative assumptions about the sexual and romantic relationships between the lover and the beloved. A sharp contrast exists between the treatment of homosexuality and queerness in Islamic law, on the one hand and its reflection in Persian literature, particularly poetry (the chief vehicle of Persian literary expression), on the other. This course introduces and explores different faces of love, eroticism and homoeroticism in the Persian literary tradition from the dawn of dawn of the Persian poetry in the ninth century all through to the twenty-first century. It offers a comprehensive study of representations and productions of heteronormativity, sexual orientation and gender roles with particular reference to the notion of love, lover and beloved in Persian literature.
Taught by: Shams
Course usually offered in fall term
Also Offered As: COML 275, COML 574, GSWS 275, GSWS 575, NELC 290
Activity: Lecture
1.0 Course Unit
Notes: No prior knowledge of Persian is required as all literary works will be available in English translation. Students are expected to attend seminars and take part in discussions. Please note that this syllabus is subject to change.
NELC 575 History and Society of Early Mesopotamia
The fourth millennium BCE saw the rise of cities and the birth of writing in ancient Mesopotamia (modern Iraq). This class traces the history of Mesopotamia from about 3000 BCE to about 1600 BCE (the end of the Old Babylonian Period), examining political history and changes in social organization as well as developments in religion, literature and art.
Taught by: Tinney
Course offered spring; odd-numbered years
Also Offered As: NELC 275
Activity: Seminar
1.0 Course Unit

NELC 585 Archaeobotany Seminar
In this course we will approach the relationship between plants and people from archaeological and anthropological perspectives in order to investigate diverse plant consumption, use, and management strategies. Topics will include: archaeological formation processes, archaeobotanical sampling and recovery, lab sorting and identification, quantification methods, and archaeobotany as a means of preserving cultural heritage. Students will learn both field procedures and laboratory methods of archaeobotany through a series of hands-on activities and lab-based experiments. The final research project will involve an original in-depth analysis and interpretation of archaeobotanical specimens.
By the end of the course, students will feel comfortable reading and evaluating archaeobotanical literature and will have a solid understanding of how archaeobotanists interpret human activities of the past.
Taught by: Chantel White
Course not offered every year
Also Offered As: AAMW 539, ANTH 533, CLST 543
Activity: Seminar
1.0 Course Unit

NELC 606 Pastoral Nomadism in the Past and Present
Pastoral nomadism is a ‘third way’ of human subsistence separate from farming and foraging. It is a sustainable human adaptation to grassland and arid environments practiced through particular technologies and domesticated animals. This course begins by examining the human ecology and social organization that emerge from mobile ways of life, drawing on modern, ethnographic, and archaeological examples of pastoral nomadic groups in the Middle East and Central Asia. Academic readings and ethnographic films will form the basis of discussions about several larger themes, including: the origins of pastoral nomadism and horse riding; the development of dairy-based foods and human adaptations allowing the digestion of lactose; the historical relationship between mobile groups of pastoralists and territorial states; popular perceptions of nomads in various forms of historical and modern media; and the influence of ideas about nomads on modern senses of heritage and nationalism in the Middle East and Central Asia.
Taught by: Hammer

Activity: Seminar
1.0 Course Unit

NELC 618 Iranian Cinema: Gender, Politics and Religion
This seminar explores Iranian culture, art, history and politics through film in the contemporary era. We will examine a variety of works that represent the social, political, economic and cultural circumstances of post-revolutionary Iran. Along the way, we will discuss issues pertaining to gender, religion, nationalism, ethnicity, and the function of cinema in present day Iranian society. Films to be discussed will be by internationally acclaimed filmmakers, such as Abbas Kiarostami, Mohsen Makhmalbaf, Rakshsh Bani-Etemad, Tahmineh Milani, Jafar Panahi, Bahman Ghobadi, among others.
One-term course offered either term
Also Offered As: CIMS 118, COML 120, GSWS 118, NELC 118
Activity: Seminar
1.0 Course Unit

NELC 620 Digital Exploration of the Past: Archives, Databases, Maps, and Museums
This course exposes students to digital methods for investigating past environments and societies, including digitization of analog records, the construction and querying of databases, and the creation of digital maps. The ultimate goal of the course will be to carry out a final project that benefits the Penn Museum and the public. In fall 2018, our exploration of digital methods will center around the archaeological site of Ur (Tell el-Muqayyar), located in southern Iraq. Ur was one of the earliest cities in the world, and, thanks to campaigns partly funded by Penn in the 1920s and 1930s, is one of the best-excavated sites in southern Mesopotamia. Here at Penn, we have unparalleled access to archival documentation and artifacts from the site. We will draw upon this access to contribute to an on-going digital humanities project in the Penn Museum (the public ‘Ur Online’ database). In the process, students will re-assess data that has the potential to change anthropological ideas about issues such as the environmental setting of the earliest cities and archaeological ideas about demographic and urban structure within the city of Ur itself. There are no prerequisites, but students must bring an interest in Mesopotamian archaeology and/or the origins of urbanism and be motivated to carry out individual and group research guided by the instructor & classmates.
Taught by: Pittman
Also Offered As: AAMW 619, NELC 320
Activity: Seminar
1.0 Course Unit

NELC 622 Art of Ancient Iran
This course offers a survey of ancient Iranian art and culture from the painted pottery cultures of the Neolithic era to the monuments of the Persian Empire. Particular emphasis is placed on the Early Bronze Age.
Taught by: Pittman
Course not offered every year
Also Offered As: AAMW 622, ARTH 222, ARTH 622, NELC 222
Activity: Lecture
1.0 Course Unit
NELC 624 Art of Mesopotamia
The class presents a survey of the art and archaeology of Mesopotamia beginning with the appearance of the first cities and ending with the fall of the Assyrian Empire in the seventh century BCE. It presents the major artistic monuments of Mesopotamian culture, embedding them in their historical context. Focus is placed in particular on the interactions with surrounding cultures of Iran, Central Asia, the Caucasus, the Persian Gulf and Anatolia in order to decenter the discourse from a strictly Mesopotamian perspective. The format is lecture; assignments involve reading response papers; there are in class midterm and final exams. Taught by: Pittman

Also Offered As: AAMW 624, ARTH 224, ARTH 624, NELC 224
Activity: Lecture
1.0 Course Unit

NELC 632 North Africa: History, Culture, Society
This interdisciplinary seminar aims to introduce students to the countries of North Africa, with a focus on the Maghreb and Libya (1830-present). It does so while examining the region’s close economic and cultural connections to sub-Saharan Africa, Europe, and the Middle East. Readings will include histories, political analyses, anthropological studies, and novels, and will cover a wide range of topics such as colonial and postcolonial experiences, developments in Islamic thought and practice, and labor migration. This class is intended for juniors, seniors, and graduate students. Taught by: Sharkey
Course not offered every year
Also Offered As: AFRIC 332, AFRIC 632, HIST 370, NELC 332
Activity: Seminar
1.0 Course Unit

NELC 633 Seminar in Selected Topics in Arabic Literature
This is the graduate seminar course in which a variety of aspects of Arabic literature studies are covered at the advanced graduate level. Students in this course are expected to be able to read large amounts of literature in Arabic on a weekly basis and to be able to discuss them critically during the class itself. Topics are chosen to reflect student interest. Recent topics have included: 1001 NIGHTS; the short story; the novel; MAQAMAT; classical ADAB prose; the drama; the novella; modern Arabic poetry. Taught by: Allen
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

NELC 638 Approaches to Islamic Law
This course aims to introduce students to the study of Islamic law, the all-embracing sacred law of Islam. In this course we will attempt to consider many different facets of the historical, doctrinal, institutional and social complexity of Islamic law. In addition, the various approaches that have been taken to the study of these aspects of Islamic law will be analyzed. The focus will be mostly, though not exclusively, on classical Islamic law. Specific topics covered include the beginnings of legal thought in Islam, various areas of Islamic positive law (substantive law), public and private legal institutions, Islamic legal theory, and issues in the contemporary development and application of Islamic law. Prerequisite: Some background knowledge about Islam is an asset. Taught by: Lowry
Course not offered every year
Also Offered As: LAW 737, RELS 648
Activity: Seminar
1.0 Course Unit

NELC 641 Iraq: Ancient Cities and Empires
This course consists of an analytical survey of civilization in the ancient Mesopotamia from prehistoric periods to the middle centuries of the first millennium B.C. A strong focus is placed on Mesopotamia (Iraq, eastern Syria) proper, but it occasionally covers its adjacent regions, including Anatolia (Turkey), north-central Syria, and the Levantine coast. As we chronologically examine the origin and development of civilization in the region, various social, political, economic, and ideological topics will be explored, including subsistence, cosmology, writing, trade, technology, war, private life, burial custom, and empire. Based on both archaeological and historical evidence, these topics will be examined from archaeological, anthropological, historical and art historical perspectives. Students will be exposed to a variety of theoretical approaches and types of relevant evidence, including settlement survey data, excavated architectural remains and artifacts, and written documents. The course aims to provide students with a strong foundation for further study in Near Eastern civilization. Taught by: Zettler
Course not offered every year
Also Offered As: ANTH 236, ANTH 636, NELC 241, URBS 236
Activity: Lecture
1.0 Course Unit

NELC 642 Egypt in Four Revolutions
This seminar offers an in-depth look at the political and social history of revolution and protest in modern Egypt. We will examine four such seminal events, through different lenses: The Urabi Revolution (1879-1882), The 1919 Revolution, The 1952 Revolution, and The 2011 Revolution. We will discuss their political, social, and economic causes and effects; popular participation and the use of public space; the roles of the army, women, youth, and social organizations in those events; their ideological and international aspects; their colonial and post-colonial contexts; and more. We will use cutting edge research from several disciplines, as well as literature, film, music, photography, and social media as sources. Students will leave the class with a firm grasp of the social and political history of modern Egypt, as well as of current scholarly discussions about the nature of revolution and protest. Taught by: Tam
Also Offered As: NELC 342
Activity: Seminar
1.0 Course Unit
NELC 645 Archaeological Fieldwork in Southern Iraq
After several decades of closure to foreign researchers, the heartland of
the world’s earliest cities (southern Iraq) has reopened for archaeological
expeditions. This course is a seminar for graduate students who will
depend on fieldwork in Spring 2019 at two major Mesopotamian cities,
Ur (Tell al-Muqayyar) and Lagash (Tell al-Hiba), as part of Penn-led
teams. Leading up to fieldwork, we will conduct a critical review of past
investigations at these and other contemporary Mesopotamian sites of
the fifth-second millennium BC. We will discuss how recent work in
northern Mesopotamia (Syria, SE Turkey, Kurdistan), Anatolia, and South
Caucasia provides new archaeological approaches to be applied, new
questions to be answered, and new models to be tested in southern
Iraq. In the field, students will work alongside the instructor and other
archaeological project staff to learn and hone excavation and survey
techniques. During and following fieldwork, each student will conduct an
independent project on material excavated and surveyed in the field at Ur
and/or Lagash. This project should align with the student’s interests and
will further the research program of the archaeological teams at Ur and
Lagash.
Taught by: Hammer
Course offered spring; odd-numbered years
Also Offered As: AAMW 647
Activity: Seminar
1.0 Course Unit

NELC 646 GIS for the Digital Humanities and Social Sciences
This course introduces students to theory and methodology of the
geospatial humanities and social sciences, understood broadly as the
application of Geographical Information Systems (GIS) and spatial
analysis techniques to the study of social and cultural patterns in the
past and present. By engaging with spatial theory, spatial analysis
case studies, and technical methodologies, students will develop
an understanding of the questions driving, and tools available for,
humanistic and social science research projects that explore change
over space and time. We will use ESRI's ArcGIS software to visualize,
analyze, and integrate historical, anthropological, and environmental
data. Techniques will be introduced through the discussion of case
studies and through demonstration of software skills. During supervised
laboratory sessions, the various techniques and analyses covered will be
applied to sample data and also to data from a region/topic chosen by
the student.
Taught by: Hammer
Course usually offered in fall term
Also Offered As: AAMW 646, ANTH 346, NELC 346
Activity: Lecture
1.0 Course Unit

NELC 659 Seminar in Modern Hebrew Literature
This course introduces students to selections from the best literary
works written in Hebrew over the last hundred years in a relaxed seminar
environment. The goal of the course is to develop skills in critical reading
of literature in general, and to examine how Hebrew authors grapple
with crucial questions of human existence and national identity. Topics
include: Hebrew classics and their modern ‘descendents,’ autobiography
in poetry and fiction, the conflict between literary generations, and others.
Because the content of this course changes from year to year, students
may take it for credit more than once. This course is conducted in Hebrew
and all readings are in Hebrew. Grading is based primarily on participation
and students’ literary understanding.
Taught by: Gold
Course usually offered in spring term
Also Offered As: COML 359, JWST 359, JWST 659, NELC 359
Prerequisite: HEBR 059
Activity: Seminar
1.0 Course Unit

NELC 664 The World of Cleopatra
The figure of Cleopatra is familiar from modern stories, legends, and film.
Was this famous woman a brazen seductress or a brilliant political mind?
How many of these presentations are historically accurate? This class
will examine the Ptolemaic period in Egypt (305-30 BCE), the time period
during which Cleopatra lived, in an attempt to separate myth from reality.
The Ptolemaic period is filled with political and personal intrigue. It was
also a time of dynamic multiculturalism. Arguably one of the most violent
and fascinating eras in ancient Egyptian history, the Ptolemaic period
is largely unknown and often misunderstood. This course will examine
the history, art, religion and literature of Egypt’s Ptolemaic period which
culminated in the reign of Cleopatra VII.
Taught by: Houser Wegner
Course not offered every year
Also Offered As: NELC 064
Activity: Lecture
1.0 Course Unit

NELC 666 History of Ancient Egypt
Review and discussion of the principal aspects of ancient Egyptian
history, 3000-500 BC.
Taught by: Wegner
Course usually offered in fall term
Also Offered As: NELC 266
Activity: Lecture
1.0 Course Unit

NELC 668 Art and Architecture in Ancient Egypt
This course will be an introduction to the art, architecture and minor
arts that were produced during the three thousand years of ancient
Egyptian history. This material will be presented in its cultural and
historical contexts through illustrated lectures and will include visits to
the collection of the University Museum.
Taught by: Silverman
Course not offered every year
Also Offered As: AAMW 618, ANCH 068, ARTH 218, ARTH 618, NELC 068
Activity: Lecture
1.0 Course Unit
NELC 672 Key Concepts in Modern Persian Poetry
This graduate seminar which is tailored for graduate students with higher intermediate and advanced command of Persian language focuses on a variety of recurrent concepts in Modern Persian poetry. The seminar will run as a workshop and students are expected to embark on a project in which they explore large amounts of literary materials in Persian. Students must feel confident to read and discuss large amounts of literature in Persian on a weekly basis. Concepts such as exile, home, belonging, body, borders, nationalism and selfhood will be explored. Taught by: Shams
Course usually offered in spring term
Prerequisites: PERS 015, PERS 016
Activity: Seminar
1.0 Course Unit

NELC 681 Topics In Anthropology and the Modern World
This course relates anthropological models and methods to current problems in the Modern World. The overall objective is to show how the research findings and analytical concepts of anthropology may be used to illuminate and explain events as they have unfolded in the recent news and in the course of the semester. Each edition of the course will focus on a particular country or region that has been in the news. Taught by: Spooner
Course usually offered in spring term
Also Offered As: ANTH 100, ANTH 654, NELC 281, SAST 161
Activity: Lecture
1.0 Course Unit

NELC 731 Topics in Islamic Archaeology
Topic varies. Fall 2019’s seminar will address the problems of studying architecture in the Islamic world. Considered will be issues of architectural design, regional and trans-regional constructional traditions, structural know-how and innovation, patronage and use. The examples discussed will be mainly religious and social service complexes. Attention will be paid to the manner of transmission of architectural design knowledge and constructional skill. Taught by: Holod
Course not offered every year
Also Offered As: AAMW 738, ARTH 738
Activity: Seminar
1.0 Course Unit

NELC 740 Topics in the Art of the Ancient Near East
Topic varies. Fall 2019: During the short period of the Neo Sumerian Empire at the end of the third millennium BCE, Mesopotamian concepts of kingship were crystallized through images, buildings, and textual creations. This seminar will examine this central institution from many points of view that invite cross historical and cross-cultural consideration. Taught by: Pittman
Course not offered every year
Also Offered As: AAMW 723, ARTH 723
Activity: Seminar
1.0 Course Unit

NELC 999 Independent Study
Directed research or candidacy exam and proposal preparation. One-term course offered either term
Activity: Independent Study
1.0 Course Unit

Network and Social Systems Engineering (NETS)

NETS 112 Networked Life
What kind of science is appropriate for understanding the Facebook? How does Google find what you’re looking for... and exactly how do they make money doing so? What properties might we expect any social network to reliably have, and are there simple explanations for them? How does your position in an economic network (dis)advantage you? How are individual and collective behavior related in complex networks? What might we mean by the economics of spam? What do game theory and the Paris subway have to do with Internet routing? Networked Life looks at how our world is connected -- socially, economically, strategically and technologically -- and why it matters.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

NETS 150 Market and Social Systems on the Internet
Want to understand the sociological and algorithmic aspects of friend recommendation? Want to know how Google decides what 10 answers to return, out of the 10 million matching results? Want to understand how search engines have revolutionized advertising? Then this is the course for you! NETS 150 provides an overview of the issues, theoretical foundations, and existing techniques in networks (social, information, communication) and markets on the Internet. Subsequent NETS courses are available for students wishing to explore any of these topics in greater detail.
Prerequisite: CIS 110
Activity: Lecture
1.0 Course Unit

NETS 212 Scalable and Cloud Computing
What is the ‘cloud’? How do we build software systems and components that scale to millions of users and petabytes of data, and are ‘always available’? In the modern Internet, virtually all large Web services run atop multiple geographically distributed data centers: Google, Yahoo, Facebook, iTunes, Amazon, EBAY, Bing, etc. Services must scale across thousands of machines, tolerate failures, and support thousands of concurrent requests. Increasingly, the major providers (including Amazon, Google, Microsoft, HP, and IBM) are looking at ‘hosting’ third-party applications in their data centers - forming so-called ‘cloud computing’ services. This course, aimed at a sophomore with exposure to basic technologically -- and why it matters.
Course usually offered in fall term
Prerequisites: CIS 120, 160
Corequisite: CIS 121
Activity: Lecture
1.0 Course Unit
NETS 213 Crowdsourcing and Human Computation
Crowdsourcing and human computation are emerging fields that sit squarely at the intersection of economics and computer science. They examine how people can be used to solve complex tasks that are currently beyond the capabilities of artificial intelligence algorithms. Online marketplaces like Mechanical Turk and CrowdFlower provide an infrastructure that allows micropayments to be given to people in return for completing human intelligence tasks. This opens up previously unthinkable possibilities like people being used as function calls in software. We will investigate how crowdsourcing can be used for computer science applications like machine learning, next-generation interfaces, and data mining. Beyond these computer science aspects, we will also delve into topics like prediction markets, how businesses can capitalize on collective intelligence, and the fundamental principles that underlie democracy and other group decision-making processes.
One-term course offered either term
Prerequisite: CIS 120
Activity: Lecture
1.0 Course Unit

NETS 312 Theory of Networks
Want to understand how memes spread across the Internet? How organisms exhibit flocking behavior? How the structure of a network can help predict behavior among the nodes? This course is a rigorous study of the structure and function of complex networks. From World Wide Web to networks of banks and lenders that form the financial sector, to friendship networks that influence our opinion and everyday decision-making, networks have become an integral part of our daily lives.
One-term course offered either term
Prerequisites: CIS 110 and 160 and ESE 205, 301 and MATH 312
Activity: Lecture
1.0 Course Unit

NETS 412 Algorithmic Game Theory
How should an auction for scarce goods be structured if the sellers wish to maximize their revenue? How badly will traffic be snarled if drivers each selfishly try to minimize their commute time, compared to if a benevolent dictator directed traffic? How can couples be paired so that no two couples wish to swap partners in hindsight? How can you be as successful as the best horse-racing expert at betting on horse races, without knowing anything about horse racing? In this course, we will take an algorithmic perspective on problems in game theory, to solve problems such as the ones listed above. Game theory has applications in a wide variety of settings in which multiple participants with different incentives are placed in the same environment, must interact, and each ‘player’s actions affect the others.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

Neuroscience (NEUR)
The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates/).

NEUR 100 Introduction to Neuroscience
This course serves as an introduction to the structure and function of the vertebrate nervous system. We begin the course with the study of nerve cells: their basic structure, how they establish and maintain the resting membrane potential, how they propagate an action potential, and how they transfer information via the process of neurotransmission. We next move into an investigation of the anatomy of the central nervous system (brain and spinal cord) with an emphasis on neurodevelopment. With the above knowledge in hand, we move into the sensory systems and investigate smell, hearing, vision, and pain sensation by focusing on how physical stimuli (such as sound waves) are converted into neural signals, where these signals travel in the brain, and how they are processed. We finish the course with an investigation into the function of the various motor systems and the autonomic nervous system.
Activity: Online Course
1.0 Course Unit

NEUR 160 The Neuroscience of Music
Music is a biological mystery: a ubiquitous human behavior with no obvious value for survival. Why do all human cultures have music? What accounts for the common threads running through the world’s music? We look for answers by looking at the auditory system: the ear and especially the brain, in humans and in animals. Topics like musical universals, consonance and dissonance, scale structure, music, and emotion, music theory, talent, and improvisation are greatly illuminated by thinking about their neurobiological foundations. You have the option to enroll in this individual course without committing to the entire Certificate in Neuroscience, enjoying the flexibility and expertise offered by Penn LPS Online to suit your schedule and interests. BAAS students, certificate students, and those taking individual courses must first complete NEUR 100 before enrolling in this course.
Taught by: Michael Kaplan
Activity: Online Course
1.0 Course Unit

NEUR 200 Behavior Neuroscience
An introduction to the experimental analysis of natural animal behavior and its neurobiological basis. Behavior is examined in an evolutionary and ecological context, and questions are focused on the neural processes that allow animals to carry out critical activities such as locating prey and finding mates. The course is comparative and strives to identify common principles in sensory and motor processing and brain function.
Activity: Online Course
1.0 Course Unit

NEUR 260 Hormones, Brain, Behavior
This course aims to introduce students to important interactions between the brain, behavior, and endocrine systems. Students learn about diverse vertebrate species, a variety of physiological systems, and the molecular mechanisms of hormone action. The specific neuroendocrine systems to be studied include reproduction, social bonding, fluid and energy balance, and emotional regulation. In addition, students develop skills required for critical reading of primary neuroscience literature and scientific communication.
Activity: Online Course
1.0 Course Unit
NEUR 280 Autonomic Pharmacology
In this course, students learn how the central nervous system regulates the activity of peripheral tissues to maintain homeostasis in the body. Output from the autonomic nervous system affects a variety of physiological parameters, including blood glucose levels, blood pressure, and ingestive behaviors. Students then apply the knowledge of the autonomic outflow to understand the actions of a variety of classes of drugs, including those prescribed for diabetes, hypertension, and other conditions.

Taught by: Toshinori Hoshi, Doug Coulter
Activity: Online Course
1.0 Course Unit

NEUR 400 Psychopharmacology
Students examine drugs used in the treatment of central nervous system (CNS) dysfunction, including psychiatric diagnoses and neurodegenerative diseases. Explore the strategies, techniques, and challenges of psychopharmacological research and the use of drugs to probe neural substrates of behavior. Introductory material will be followed by advanced discussion of specific topics through the reading and discussion of primary journal articles.

Taught by: Jennifer Heerding
Activity: Online Course
1.0 Course Unit

Neuroscience (NGG)

NGG 510 Neurotransmitter Signaling & Neuropsychopharmacology
The goals of this course are three-fold: 1) Provide an overview of major psychiatric disorders. 2) Provide in-depth information on neurotransmitters, emphasizing the wealth of new molecular information on how neurons function and communicate, as well as the basis for psychotherapeutics (one class per week). 3) Develop skills to appreciate, present and critically evaluate the current literature in neurotransmitter signaling and neuropsychopharmacology (one class per week). Prerequisite: Permission of course director.

Taught by: Staff Dr. Steve Thomas; Dr. Chris Pierce; Dr. Wade Berrettini; Dr. Liz Heller
Course offered spring; even-numbered years
Also Offered As: PHRM 510
Activity: Lecture
1.0 Course Unit

NGG 521 Brain-Computer Interfaces
The course is geared to advanced undergraduate and graduate students interested in understanding the basics of implantable neuro-devices, their design, practical implementation, approval, and use. Reading will cover the basics of neuro signals, recording, analysis, classification, modulation, and fundamental principles of Brain-Machine Interfaces. The course will be based upon twice weekly lectures and 'hands-on' weekly assignments that teach basic signal recording, feature extraction, classification and practical implementation in clinical systems. Assignments will build incrementally toward constructing a complete, functional BMI system. Fundamental concepts in neurosignals, hardware and software will be reinforced by practical examples and in-depth study. Guest lecturers and demonstrations will supplement regular lectures. Recommended coursework includes BE 301 (Signals and Systems) or equivalent, computer programming experience, preferably MATLAB (e.g., as used the BE labs, BE 310). Some basic neuroscience background (e.g. BIOL 215, BE 305, INSC core course), or independent study in neuroscience, is required. This requirement may be waived based upon practical experience on a case by case basis by the instructor.

Course usually offered in spring term
Also Offered As: BE 521
Activity: Lecture
1.0 Course Unit

NGG 534 Seminar on current genetic research: Human Disease Modeling in Experimental Sys
An advanced seminar course emphasizing genetic research in model organisms and how it informs modern medicine. Each week a student will present background on a specific human disease. This is followed by an intense discussion by the entire class of 2 recent papers in which model organisms have been used to address the disease mechanism and/or treatment. As a final assignment, students will have the opportunity to write, edit, and publish a 'News & Views' style article in the journal 'Disease Models and Mechanisms'. Offered spring semester. Prerequisite: If course requirements not met, permission of instructor required.

Taught by: T. Jongens
Course usually offered in spring term
Also Offered As: CAMB 534
Prerequisite: CAMB 542 OR CAMB 605
Activity: Seminar
1.0 Course Unit

NGG 572 Electrical Language of Cells
This course introduces students to high-speed electro-chemical signaling mechanisms that occur in nerve and other excitable cells during normal activity. Topics considered in substantial detail include: a) a basic description of the passive and active membrane electrical properties; b) the molecular architecture and functional role of ion channels in cell signaling; c) the role of the calcium ion as an ubiquitous chemical messenger, with applications to neuro-secretion; d) excitatory and inhibitory transmission in the central nervous system; e) sensory transduction, as illustrated by the visual, olfactory, and auditory pathways. The course assumes a standard background in cell biology, as well as basic concepts from college physics and college calculus.

Taught by: Toshinori Hoshi, Doug Coulter
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
NGG 573 Systems Neuroscience
This course provides an introduction to what is known about how neuronal circuits solve problems for the organism and to current research approaches to this question. Topics include: vision, audition, olfaction, motor systems, plasticity, and oscillations. In addition, the course aims to provide an overview of the structure of the central nervous system. A number of fundamental concepts are also discussed across topics, such as: lateral inhibition, integration, filtering, frames of reference, error signals, adaptation. The course format consists of lectures, discussions, readings of primary literature, supplemented by textbook chapters and review articles. Taught by: Yale Cohen, Christopher Pierce Course usually offered in spring term Also Offered As: PSYC 609 Activity: Lecture 1.0 Course Unit

NGG 575 Neurobiology of Learning and Memory
This course focuses on the current state of our knowledge about the neurological basis of learning and memory. A combination of lectures and discussions will explore the molecular and cellular basis of learning in invertebrates and vertebrates from a behavioral and neural perspective. This course is intended for upper level undergraduate and graduate students. Taught by: Hilary Gerstein Course offered fall; odd-numbered years Also Offered As: BIBB 442, BIOL 442, PSYC 421 Activity: Seminar 1.0 Course Unit

NGG 584 Neurobiology of Sleep and Arousal
The objectives of this course are to discuss mechanisms controlling sleep and arousal; to survey novel approaches to investigations in these areas; indicate the clinical relevance of these ideas where possible. The course is run in the style of a journal club where in each weekly session, students review and discuss influential papers in the field. Taught by: David Raizen, Max Kelz Course offered fall; even-numbered years Activity: Lecture 1.0 Course Unit

NGG 588 Topics in Translational Neuroscience
This course will introduce graduate students in neuroscience and related disciplines to basic mechanisms and clinical features of major categories of nervous system disease. Each two-hour class will consist of two parts; a formal lecture followed by a seminar on the same topic. The formal basic science lectures will discuss genetic, molecular, and cellular mechanisms relevant to the disease examined while the seminar will illustrate how that information can be used in the clinical setting to promote further discovery and inform treatment. Some of the seminar will be associated with the Clinical Neuroscience Training Program (CNST) to provide the opportunity to interact with medical students and clinicians. The course will rely on assigned readings of primary research papers and discussions during class. Taught by: Mariella De Biasi Course usually offered in spring term Activity: Lecture 1.0 Course Unit

NGG 589 Neuroendocrinology
Goals: This course aims to familiarize students with recent discoveries in neuroendocrine research with a focus on puberty. Students have an opportunity to consider how neuroendocrine hypotheses are generated and learn how to analyze data for themselves. Students will master this emerging topic and develop writing and presenting skills as they develop their own research ideas. Format: We will spend three class meetings dissecting each of four journal articles from a single lab in chronological order. These three meetings will involve fully understanding the key concepts, methods, results and future directions. The professor will provide background information in short (20-30 min) lectures. Students will be expected to participate in discussions and work collaboratively with other students. At the end of the course, each student will present a proposal of future directions based on the papers we have discussed. Student Evaluation: Eighty percent of the final grade will be based on participation in these in-depth journal club discussions. The final twenty percent of the grade will be based on the presentation of Future Directions to the class. Prerequisite: Permission of course director. Taught by: Lori Flanagan-Cato Course offered spring; odd-numbered years Activity: Seminar 0.5 Course Units

NGG 591 Digital Signal Processing
The course is designed for an audience that does digital signal processing (e.g., people who do neuroscience) but that do not have a strong math or engineering background. The goal of the course is that after you have completed it you’ll have a fairly sophisticated understanding of how to apply several digital signal processing techniques, including better understanding to what is really happening when you push certain buttons in packaged neuroimaging software (e.g., filter settings). After completing the course you’ll also better understand how to collect neuroimaging data (e.g., data sampling rate). Digital Signal Processing contains four sections: Basics, Tutorial, Try It, and Literacy. Part 1: Introduction to sine/cosine functions, discussion of time series and spatial data, discussion of amplitude, frequency, and phase, and a section on adding sine waves. There’s also a brief introduction to complex numbers and the Euler identities. Students also read in time and spatial data (grayscale images). Part 2: Detailed discussion of the Nyquist Theorem and aliasing (time and spatial domain), a section on multiplying sine waves, and a brief discussion of plotting complex numbers and determining the magnitude and phase of complex numbers. Part 3: Convolution, and via convolution, filtering. Ideas are explored in the time domain. In this process, students are introduced to high- and low-pass filters and gain functions. Students use convolution to filter several time domain datasets. Part 4: Generally the same as Chapter 3, but now examining spatial data. Students use convolution methods to filter grayscale and color images. Normal distributions and random noise are also discussed. Part 5: Using sine and cosine to compute the magnitude and phase of activity at different frequencies: time and spatial data. Students also see that magnitude and phase information can be obtained more easily using complex exponentials. Part 6: The Fourier transform is finally introduced and some of the limitations (and ways to overcome some of these limitations) of time-frequency transforms examined. Students are also introduced to the idea of filtering using forward and inverse Fourier transforms. Prerequisite: Graduate-level students must have a laptop with Mathematica v12. Taught by: J. Christopher Edgar Course usually offered in spring term Activity: Seminar 1.0 Course Unit
NGG 594 Theoretical and Computational Neuroscience
This course surveys recent theoretical models of neural function. Students will be introduced to the basic techniques of modelling and computer simulation. Topics include models of synaptic plasticity, neuronal processing and oscillations, and models of various brain regions including cortex, thalamus, cerebellum, and hippocampus. Particular emphasis will be placed on models of the visual system from development to perceptual phenomena such as structure-from-motion, shap-from-shading, and stereopsis. Higher level processes including cortical integration will be considered. Applied neural network models of Hopfield, Sejnowski, and parallel distributed processing will also be presented. Previous coursework in physiology and in differential equations and some familiarity with computers or instructor permission required.

Taught by: Vijay Balasubramanian
Course usually offered in spring term
Also Offered As: BE 530, BIBB 585, PHYS 585, PSYC 539
Activity: Lecture
1.0 Course Unit

NGG 597 Neural Development, Regeneration and Repair
General Description: The goals of this course are to examine the principles underlying the nervous system development and to learn how understanding developmental mechanisms can inform strategies to promote regeneration and repair. This is not a survey course. Rather, the course will focus on selected topics, for which we will discuss the genetic, molecular and cellular strategies employed to study these problems in different model organisms. Emphasis is on how to interpret and critically evaluate experimental data. Students who are not in one of the BGS graduate programs need instructor permission to enroll.

Taught by: Wenqin Luo, Jonathan Raper
Course usually offered in fall term
Also Offered As: CAMB 597
Prerequisite: BIOM 600
Activity: Lecture
1.0 Course Unit

NGG 605 NeuroCore: Quantitative Rigor and Reproducibility in Neuroscience
The quantitative neuroscience core course is designed to be an overview of quantitative approaches used for rigorous and reproducible neuroscience research. This course does not cover statistics in a traditional way, in the sense that it does not provide a comprehensive survey of statistical tests, nor does it dive very deeply into formal mathematical derivations of those tests (information about such things can be found in textbooks and all over the web). Instead, the course focused on teaching students how to apply quantitative approaches to now they think about neuroscience research from beginning to end, including defining clear hypotheses; designing experiments to test those hypotheses; collecting, visualizing, analyzing, and interpreting data in reference to those hypotheses; and keeping effective and transparent records at each stage to ensure rigor and reproducibility. There are two main components to the course. The first component consists of a series of four modules, each of which is designed to use a specific example from neuroscience to illustrate a set of quantitative approaches and tools. The second component consists of group projects that focus on designing and implementing quantitative analyses for existing data sets (e.g., from rotation projects).

Taught by: Josh Gold
Activity: Lecture
1.0 Course Unit

NGG 615 Protein Conformation Diseases
Protein misfolding and aggregation has been associated with over 40 human diseases, including Alzheimer’s disease, Parkinson’s disease, amyotrophic lateral sclerosis, prion diseases, alpha (1)-antitrypsin deficiency, inclusion body myopathy, and systemic amyloidoses. This course will include lectures, directed readings and student presentations to cover seminal and current papers on the cell biology of protein conformational diseases including topics such as protein folding and misfolding, protein degradation pathways, effects of protein aggregation on cell function, model systems to study protein aggregation and novel approaches to prevent protein aggregation. Target audience is primarily 1st year CAMB, other BGS graduate students, or students interested in acquiring a cell biological perspective on the topic. MD/PhDs and Postdocs are welcome. MS and undergraduate students must obtain permission from course directors. Class size is limited to 14 students.

Taught by: Yair Argon
Course usually offered in fall term
Also Offered As: BMB 518, CAMB 615
Prerequisite: BIOM 600
Activity: Lecture
1.0 Course Unit

NGG 618 Recovery After Neural Injury
The human nervous system is subject to several types of injury, (traumatic, ischemic, epileptic, demyelinating and/or inflammatory) that cause serious functional deficits. The mechanisms used by the central and peripheral nervous systems for functional recovery from these injuries will be described in this course. The molecular and cellular pathobiology of CNS injury will be reviewed and methods to enhance functional recovery will be discussed in detail. These include the limitation of secondary neuronal damage by pharmacological manipulations (neuroprotection), the promotion of regeneration, and plasticity, the application of bioengineering strategies, and the use of behavioral rehabilitative approaches. Course Format: a combination of lecture, journal club type student presentations and classroom discussion.

NGG 695 Scientific Writing
This 7-class course is designed to introduce students to basic scientific writing skills and is timed for second year graduate students preparing for qualifying examinations. Participants will review the general principles of clear, persuasive writing, and will apply these principles to writing for a scientific audience. Particular emphasis will be placed on conveying the significance of your research, outlining the aims, and discussing the results for scientific papers and grant proposals. The course will also provide an overview of the structure and style of research grant proposals and scientific manuscripts. Classes are highly interactive, and the majority of class time will be spent discussing student scientific writing. The goal of the course is to encourage active and open interaction among students. Ideal endpoints include improved self-editing, and development of effective strategies for offering and receiving editorial recommendations among peers. Prerequisite: NGG pre-candidacy exam students only.

Activity: Laboratory
3.0 Course Units

NGG 706 Neuroeconomics
This seminar will review recent research that combines psychological, economic and neuroscientific approaches to study human and animal decision-making. This course will focus on our current state of knowledge regarding the neuroscience of decision-making, and how evidence concerning the neural processes associated with choices might be used to constrain or advance economic and psychological theories of decision-making. Topics covered will include decisions involving risk and uncertainty, decisions that involve learning from experience, decisions in strategic interactions and games, and social preferences.
Taught by: Joseph Kable
One-term course offered either term
Also Offered As: BIUB 473, PSYC 473
Prerequisite: PSYC 149 AND PSYC 253 AND PSYC 265
Activity: Seminar
1.0 Course Unit

NGG 713 Neuroepigenetics
This is a course intended to bring students up to date concerning our understanding of Neural Epigenetics. It is based on assigned topics and readings covering a variety of experimental systems and concepts in the field of Neuroepigenetics, formal presentations by individual students, critical evaluation of primary data, and in-depth discussion of potential issues and future directions, with goals to: 1) Review basic concepts of epigenetics in the context of neuroscience, 2) Learn to critically evaluate a topic (not a single paper) and set the premise, 3) Improve experimental design and enhance rigor and reproducibility, 4) Catch up with the most recent development in neuroepigenetics, 5) Develop professional presentation skills - be a story teller. Each week will focus on a specific topic of Neuroepigenetics via a ‘seminar’ style presentation by a class member. Prerequisite: If course requirement not met, permission of instructor is required.

Nonprofit Leadership (NPLD)

NPLD 510 Social Innovation
This is a class focused on understanding how innovation plays a central role in public problem solving. We will explore how social entrepreneurs develop their ideas, define intended impact, market their solutions, understand competition, and collaborate with other actors. At the end of the course, students will have mastered a set of conceptual tools that will allow them to be effective problem solvers in diverse settings throughout their careers. The course has five core objectives: 1) To introduce students to the concepts and practices of social entrepreneurship; 2) To introduce students to the components of a successful social enterprise; 3) To equip students with the tools to be able to accurately identify and assess innovation and impact in social enterprises; 4) To train students to view the world from a perspective of social innovation; and 5) To empower students to develop their own innovative solutions to difficult social problems around the world.
Taught by: Frumkin
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

NPLD 511 Social Innovation Asia
Development challenges in Asia are varied and often seem daunting. Even though considerable progress has been made, gaps remain. This is despite the efforts of many Government agencies and non-governmental organisations (NGOs). Using insights from research through field experiments and randomized control trials, some recent innovations have successfully addressed long existing gaps. A social innovation is a new way of addressing a social problem that is superior to prior solutions in terms of cost, efficacy, sustainability, or equity. This course explores the concept of social innovation in the context of Asia. The course consists of ten sessions. In the first session definitions of social innovation and the related term, social entrepreneurship will be discussed. A model to map out social innovation will also be discussed. The seven subsequent sessions will relate to seven major development challenges: hunger, health care, education, credit provision, risk management, provision of savings avenues and livelihood creation. The prevailing scenario, the progress made and the gaps that remain will be discussed. In each case, recent innovative solutions based on field experiments and research studies will be highlighted after which one or two innovation cases will be discussed in detail.
Taught by: Savita Shankar
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
NPLD 561 Nonprofit Branding
This half credit course will provide the tools and framework for helping to understand the role that marketing and brand building can play in the non-profit sector. As such, we will create a shared understanding of the key concepts that help define branding and the classic elements of marketing that will serve as a foundation for discussion and analysis throughout the semester. We will identify the fundamental differences that non-profit organizations face in building their brands and how those challenges differ from traditional/for profit brand building. We will identify tools and frameworks that brands/organizations can use to help design and implement marketing strategy. We will utilize current and relevant case studies that help demonstrate the core concepts of this course. For term specific details please consult our website: https://www.sp2.upenn.edu/academics/ms-in-nonprofit-leadership
Taught by: James A Rosenberg
Course usually offered in fall term
Activity: Seminar
0.5 Course Units

NPLD 562 (Almost) Everything You Need to Know About Nonprofit Law
This half credit course will provide a basic understanding of the law that applies to nonprofit organizations, with an emphasis on the law affecting 501(c)(3)public charities. It will focus on ways to obtain and maintain federal tax exempt status, including issues of private inurements and private benefit, limits on advocacy, lobbying and electioneering, unrelated business income tax, and excess benefits taxes. It will show how legal structure and governance procedures affect the answer to the questions ‘Whose Organization Is It?’ Students will review bylaws of multiple organizations to see how differences in structure reflect the great diversity of nonprofits and why ‘one size does not fit all’ within the sector. They will learn how to avoid bad legal drafting that can create problems for dysfunctional organizations. The course will explain the fiduciary duty of officers and directors, explore the extent of potential personal liability, and review necessary insurance and indemnification. It will review Form 990 publicly available tax returns of multiple nonprofits to see why a tax return may be a nonprofit’s most important public relations document. It will also review the basics of charitable giving through a mock meeting of university development officers, outline the concepts of planned giving, and discuss the requirements for charitable solicitation registration at the state level. It will explain the legal requirements for maintaining endowments and discuss a series of ethical issues that can face nonprofit executives and their lawyers. Students will receive one year of free access to Don Kramer's Nonprofit Issues website, and will emerge with a better understanding of key legal issues facing the nonprofit sector that regularly make the news.

Activity: Lecture
0.5 Course Units

NPLD 563 Raising Philanthropic Capital
Americans gave more than $350 billion to nonprofit organizations last year, the highest total ever recorded. Now, more than ever, it is crucial that nonprofit leaders master the art and science of raising philanthropic capital. Participants in this innovative class will: 1) acquire an understanding of the nonprofit funding landscape; 2) learn proven and creative strategies to secure investments; 3) gain the experience of giving and motivating charitable commitments; and 4) receive peer evaluation and professional consulting feedback. This experiential and interactive learning course will provide students an opportunity to evaluate a nonprofit organization endeavoring to attract voluntary support, and coach students to think through and develop the ideas, skills, and tools required to participate personally in today’s philanthropic market.
Taught by: Hagin
Course usually offered in spring term
Activity: Lecture

NPLD 564 Social Impact and International Development
Social Impact and International Development will explore impact creation in resource-constrained settings, especially outside of one’s home community. We will meet online on 5 consecutive Thursday evenings starting October 24th. The class will cover 1) adapting solutions as a way of generating ideas, 2) careful stakeholder segmentation, 3) challenges of deliverability and distribution, 4) revenue and developing a unit of transaction, and 5) identifying and reducing uncertainty and risk. Students will produce written and verbal reflections on the tensions of working in a developing context; insider- outsider identities and tradeoffs; and ethics, tensions, and opportunities of working in and out of one’s home community. Fall 2019 course meeting pattern: Thursday evenings: October 21st-November 22nd 6-7:30pm lesson 7:30-8pm office hours.
Taught by: Ariel Schwartz
Course usually offered in spring term
Activity: Online Course
0.5 Course Units

NPLD 565 Financial Management of Nonprofits
The half credit class will provide students with the ability to use the financial tools of cash flow, budgeting and forecasting models to assist in strategic thinking as it relates to a nonprofit organization. In addition, the class will provide tools that can be used to follow implementation of such strategies including: personal cash flow; basic financial statements; supplemental schedules; and cash flow, budgeting, and forecasting.
Taught by: Boylston
Course usually offered in spring term
Activity: Lecture
0.5 Course Units
NPLD 566 Social Media Strategies
This course is intended as an introduction to strategic use of social media for social ventures. Many of you already use social media platforms in your personal lives, and have developed an intuitive understanding of how they work, and use them reflexively. If you’re unfamiliar with various social media venues, that’s ok! Many social media platforms will be described briefly in the lectures, but the course is not intended as a how-to for using them. We suggest that if you’re new to the various social media platforms mentioned, that you jump in and try them out! These platforms are designed for individuals with all levels of technical proficiency, and they’re designed to be inviting. You might find that with only a bit of effort that you become comfortable with them quickly. We expect that, regardless of your skill level, comfort, and current personal use of social media, you will gain real value from this course. Much of this value relates to conveying an understanding of how to use these tools strategically, and on behalf of a social venture or a social cause you care about. This sort of use of social media is significantly different than the way you would use it in your personal life. We hope, as you move through this course, you will wonder: 1) What does it mean to craft the voice of an institution? 2) What is it like to speak in the voice of an institution instead of my own? 3) How could one possibly develop a strategic plan to organically and authentically engage a community? 4) How do you define, find, and build community? 5) More than retweets and likes, what is engagement, how do you measure it, and how do you create engagement to spark social change? Course usually offered in fall term Activity: Online Course 0.5 Course Units

NPLD 567 Unleashing Large Scale Social Movements
There is no shortage of compelling ideas and effective interventions for making the world better, however, very few of these great ideas spread. Aspiring leaders of big social change rarely succeed in engaging others in a meaningful or comprehensive way, their passion and their knowledge reaching hundreds or thousands when millions more could benefit. There are exceptions to this pattern, however, and this course seeks to explain what sets apart the initiatives that become successful large-scale movements. These efforts reliably address three questions in order to have a big impact: 1. How can we secure a genuine commitment from others to join us in the hard work ahead? 2. How can we set a strategy that gives us leverage and reach, making the the most of our finite resources? 3. How can we take action, day in and day out, in such a way that we meet our aims for growth and impact, optimizing rapid learning and improvement by everyone in our movement? Drawing on examples from around the world and across the social sector, this course will walk you through these questions and provide you with a blueprint for spreading ideas, innovations, and programs that work, allowing you to engage the most people possible to change behavior and social outcomes at scale.
Taught by: Joe McCannon

NPLD 570 Philanthropy: Society’s Passing Gear
The United States has a vast nonprofit sector that features 1.3 million organizations. (And that doesn't include 250,000 religious institutions!). Approximately $1.5 trillion of earned and contributed revenue flows through the so-called third sector. In 2018, Giving USA reported that $427 billion of those funds came from philanthropy -- given by a mix of individuals, foundations and corporations. The use of philanthropic dollars is as diverse as the donors who give those dollars. But what is the best use of those dollars? Sustaining high performing nonprofits? Supporting catalytic action? Nurturing individual excellence in the arts or sciences? This course will explore field of Philanthropy -- what it is, how it works, who participates, and its intersection with public policy and government.
Taught by: Greg Goldman and Doug Bauer

NPLD 571 Major Gifts: Strategies in Practice
There has never been a more important time for nonprofits to contribute to the common good. But nonprofits face a major challenge: With 1% of donors accounting for 49% of donations, in a $42 billion market, the philanthropic pyramid is looking more like the Eiffel Tower. The answers lie in major gift strategy and tactics. This course will provide a framework for conceptualizing a major gift strategy as well as tools for designing and making a major gift solicitation. This course's goal is to ensure that each student has a case for support and a pitch for use in the immediate future.

NPLD 580 Effective Governance Practices for Nonprofits
Effective governance relies upon consistent and ethical board leadership, yet nonprofit organizations that exemplify truly model governance are few and far between. This course introduces students to broad frameworks of governance, but will focus most deeply on the human dimensions of board leadership. In particular, we will examine real examples and cases of moral and ethical dilemmas faced by nonprofit boards and executive leaders, and the nuanced practices required to achieve effective board governance. This will involve a careful look at several real cases, as well as guest lectures from 3-4 different nonprofit board and CEO leaders. The invited leaders will use their own experiences to guide students through some of the most challenging ethical and managerial situations that can be encountered, with the goal of providing a practical grounding for students who expect to contribute to nonprofit leadership in their careers - either as executive staff or as board members.
Taught by: Shmavonian
One-term course offered either term
Activity: Lecture
0.0 Course Units
NPLD 582 NGOs and International Development
The first part of the course will offer a broad perspective on development, aid, and the role of NGOs. The latter half of the course will focus on issues in NGO management: problem analysis, solution design, fundraising, staffing (expatriate and local), monitoring and evaluation (including randomized controlled trials). The course is aimed at students with none to moderate experience in international development, but students with extensive work experience with NGOs or development work are encouraged to join.

NPLD 585 Social Impact Lab
NPLD 585 is a 5-day, off-site, intensive service-learning course in social innovation. Students will learn how innovation and entrepreneurship play a central role in public problem solving. The course will explore how social entrepreneurs co-develop new ideas with key stakeholders, articulate problems and solutions, define intended impact, understand competition, and collaborate with other actors. At the end of the course, students will have mastered a set of conceptual tools and strategies that will allow them to be effective problem solvers in diverse settings throughout their careers. The course has five core objectives: 1) To introduce students to the concepts and practices of social entrepreneurship; 2) To introduce students to the components of a successful social enterprise; 3) To train students to view the world from a perspective of social innovation; 4) To encourage and empower students to develop their own innovative solutions to different social problems around the world. 5) To introduce students to real social issues and social innovations in a real-world setting.

NPLD 586 Empowering Nonprofit Leaders to Thrive
This course is designed for interdisciplinary students interested in cultivating flourishing organizations, engaged stakeholders, and inspiring leaders across sectors and especially within nonprofits. Over the past several years, the field of Positive Organizational Scholarship (POS) has proliferated, yielding a compelling body of knowledge on how and when people thrive at work. This course focuses on both the theoretical and practical insights that can be gained from cutting-edge POS research and applied to help practitioners enrich people's experiences at work and beyond. Special attention is placed on how this wisdom applies not only across sectors but also specifically to the nonprofit organizational context. In particular, the learning objectives of the course provide students with: 1) Techniques and real-world experience in using positive leadership concepts to enrich one's own career, relationships, and life; 2) Ability to identify opportunities to use positive leadership practices in the workplace to enhance stakeholder engagement, individual and organizational performance, and collective impact; 3) Tools for applying positive leadership concepts in nonprofits, as well as all other organizational domains (e.g., business, government, coaching, the family, etc.). Additionally, the course is built upon a foundation of experiential learning, such that students can expect to experiment and apply course concepts in their own lives throughout the semester. In other words, students will start with themselves as the first site of learning and development. The experiential community is enhanced further with small group peer coaching throughout the course, as well as highly interactive live class sessions. At the end of the course, students will feel a strong grounding in: their own positive core of strengths and values, their authentic leadership, their ability to connect with others in meaningful, supportive ways, and their capacity to surface opportunities that inspire constructive change at any level of interaction or organizing. The final paper will help students to crystallize their unique vision for a successful future and design clear action steps to pursue after the course ends.

NPLD 587 Interpersonal Dynamics In Nonprofits That Thrive
This course is designed for interdisciplinary students with an enthusiastic interest in cultivating flourishing organizations, engaged stakeholders, and inspiring leaders across sectors and especially within nonprofits. Over the past several years, the field of Positive Organizational Scholarship (POS) has proliferated, yielding a compelling body of knowledge on how and when people thrive at work. This course focuses on both the theoretical and practical insights that can be gained from cutting-edge POS research and applied to help practitioners enrich people's experiences at work. Special attention is placed on how this wisdom applies not only across sectors but also specifically to the nonprofit organizational context. The course is built upon a foundation of experiential learning, such that students can expect to experiment and apply course concepts in their own lives throughout the semester. In other words, students will start with themselves as the first site of learning and development. The experiential community is enhanced further with team projects where students assess and consult with local nonprofit organizations. These team projects culminate in students presenting to their actual nonprofit organizations their recommendations for enhanced strategy and practices. In particular, the learning objectives of the course provide students with: 1) Techniques and real-world experience in using positive leadership concepts to enrich one's own career, relationships, and life; 2) Ability to identify opportunities to use positive leadership practices in the workplace to enhance stakeholder engagement, individual and organizational performance, and collective impact; 3) Tools for applying positive leadership concepts in nonprofits, as well as all other organizational domains (e.g. business, government, coaching, the family etc.); 4) Research and consulting experience with a local non-profit organization.

NPLD 589 Ethics and The Pursuit of Social Impact
Leaders of organizations must often make difficult decisions that pit the rights of one set of stakeholders against another. Having multiple stakeholders or bottom-lines brings with it challenges when conflicts arise, with the perennial question of whose rights/benefits prevail? What trade-offs need to be made between multiple bottom lines? Does the mission of the organization prevail over the privileges of employees/clients? To what extent can large donors influence the mission of the organization? What is an appropriate social return on investment? In the workplace, how do leaders engage, communicate, and influence key stakeholders? This course is designed for students to think and act ethically. Students will use the skills of ethical reasoning and decision making to develop virtue that serves the organization best. They will gain knowledge and understanding, critical judgment, and practical skills for sensitive and effective engagement with financial and economic matters of significance.
Taught by: Andrew Lamas
Course usually offered in fall term
Also Offered As: NPLD 790
Activity: Lecture

1.0 Course Unit

NPLD 591 Change Making: Personal Traits and Professional Skills
Over the past decade, researchers have identified some of the key skills that people need to succeed in their work and in their lives. These are skills that anyone can develop with practice. In this class, we will teach three of the key skills: resilience (the ability to thrive in difficult times); creativity (the ability to come up with innovative solutions to problems); and productivity (the ability to make the best use of your time and find life balance). This summer session will take place through dynamic, interactive workshops. During the first session we will learn the key skills. Over the course of the next three weeks, we will practice these skills to see significant improvement in important areas of our daily lives. By the final day of class, we will talk about how to sustain these gains in our personal and professional lives long after the course has ended. This course is not a traditional lecture course. While we will review the best scientific research on the skills for effective change makers, the main part of the course is devoted to practicing these skills. In other words, this is a highly experiential, interactive, and dynamic course!
Taught by: Sherman
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

NPLD 593 Design Thinking for Social Impact
Thinking like a designer can transform the way people and organizations develop products, services, processes, and strategy. This approach, called design thinking, brings together what is desirable from a human point of view with what is technologically feasible and economically viable. It also allows people who aren’t trained as designers to use creative tools to address a vast range of challenges. Design thinking is a deeply human process that taps into abilities we all have but get overlooked by more conventional problem-solving practices. It relies on our ability to be intuitive, to recognize patterns, to construct ideas that are emotionally meaningful as well as functional, and to express ourselves through means beyond words or symbols. Design thinking is something you can learn only by doing, so we’ll get out into the world and tackle a design challenge of our own together. We’ll learn how to research by researching, learn how to prototype by prototyping and learn how to communicate our ideas by pitching to a group of experts. At the end of the class you should feel confident in your abilities to apply design thinking to any challenges you’re facing and to come up with new ideas and solutions as a result.
Taught by: J Charu
Course usually offered summer term only
Activity: Seminar
1.0 Course Unit
NPLD 594 Technology and Social Impact
As mobile computing technologies become increasingly functional and affordable, donor and grassroots organizations find ways to justify and massively fund their use in social sector work. This reading- and discussion-based class will be driven by concern that technological resources be used maximally to promote social initiatives’ efficiency, effectiveness, cultural appropriateness, and sustainability. We will use organizational and sociotechnical frameworks to understand how resource-constrained social organizations translate potentially performance-improving technologies into actual performance improvements for stronger mission achievement. No technology influences social outcomes in a vacuum - we will study how implementation environments, and distribution and adoption strategies, influence technologies’ uptake and mission-advancement.
Taught by: Ariel Schwartz
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

NPLD 595 Effective Communication and Storytelling
Great leaders are storytellers. They are able to engage and entertain their communities, and tell a compelling narrative about how the world works. They use language powerfully and communicate in ways that uplift and inspire others. In this class, we will explore the power of telling great stories, and learn how to do it most effectively when promoting your campaigns to make the world a better place. We will also look at the skills of framing language in ways that will win over an audience. Finally, we will look at other key skills of effective communication, including the best strategies for persuasion, negotiation, and conflict resolution.

Course usually offered summer term only
Also Offered As: SWRK 595
Activity: Lecture
1.0 Course Unit

NPLD 596 Design and Incorporation of High Impact Nonprofits
Design and Incorporation of High Impact Not-For-Profits is designed for those who have a practitioner’s interest in the design, governance, leadership, and management of high impact not-for-profit organizations. This course is taught through learning best practice theory, applying this theory to a simulation experience, and providing students the opportunity to apply their new knowledge and experience in an interview with a current not-for-profit leader. Students, through the combination of theory and practice, are provided with the essential competencies and tools to design and incorporate a not-for-profit, conduct in-depth analysis of a not-for-profit’s effectiveness including, but not limited to, governance, leadership, social impact, financial sustainability, and systems and policy influence. Through the mock simulation process of designing, incorporating, and governing, students will leave with a ‘best practice’ for not-for-profit manual that includes articles of incorporation, bylaws, governance deliverables, strategic business plan, organizational scorecard, 3-5 year budget, development plan and public policy strategy. The knowledge and tools gained through readings and the mock simulation experience, will be applied, in the form of a thorough analysis, to the governance, leadership, strategic and/or business model, financial sustainability, social impact, marketing and communication, and public policy influence of an existing organization.
Course usually offered summer term only
Also Offered As: SWRK 596
Activity: Lecture
1.0 Course Unit

NPLD 597 Social, Public, and Law Policy for Nonprofits
'SOCIAL, PUBLIC and LAW POLICY is designed for students to strengthen and develop their skills to formulate, shape, and influence public policy. Students will strengthen and develop their skills in policy formulation and implementation. The social, economic, legal, ethical, and political environments, which influence public policy, planning, evaluation, and funding will be explored. Participants will (a) analyze the structural, social, and policy issues that have galvanized advocacy efforts and (b) explore the roles that the government, private sector, and consumers and advocacy groups play in setting policy agendas and examine the intended and unintended effects of these policies. With an increasing competitive market, the overall social sector is changing the landscape for private, nonprofit and government organizations nationally and globally. The public, as well as leaders in government, social investors and philanthropists are demanding new social models that are cost effective, financially self-sustainable, adaptive to feedback and metrics, with clear outcome accountability measures, and the potential for large-scale impact, policy influence, and systems change.’
Taught by: Nicholas Torres and Tine Hansen-Turton

NPLD 598 Social Norms for Social Change
Social practices, pressures, and paradigms exert enormous influence on our lives, from how we spend our money to how we treat each other. Social norms, in particular, can be a powerful tool for social change, but in order to use them, change agents need to know what they are and how they influence behavior and decisions. In this course, students will learn what social norms are, how to measure them, and how to use them in pursuit of lasting social change. Applications of social norms theory in the nonprofit sector include programmatic efforts to change harmful behaviors, policies that promote behavior change at scale, strengthening effectiveness within an organization, and engaging with donors and other stakeholders. Students will learn from readings, case studies, and guest speakers working on social norms change in many different contexts. Throughout the course, students will plan their own social norms-based intervention or program to apply to their own work.

1.0 Course Unit
**NPLD 720 Data Analysis for Social Impact**
Practitioners, leaders, and researchers need to engage with the latest cutting-edge research findings in their field. In this class you will develop an understanding of the quantitative methods that underpin social impact research, in an applied lab-based context. Theoretically, we will focus on developing your working statistical knowledge, and practically we will develop your data analysis skills by introducing you to a range of approaches for analyzing and handling large-scale secondary quantitative data that capture social impact. The substantive focus of the course will be on individual-level participation in the Nonprofit Sector in activities such as volunteering and charitable giving. This applied course covers the fundamental elements and approaches to handling and analyzing quantitative survey data. The emphasis is on developing an adequate understanding of basic theoretical statistical principles, descriptive and exploratory methods of analysis, graphical representation, operational procedures and interpretation of statistical results using STATA. The course will cover a wide range of statistical techniques from basic descriptive statistics to more advanced multivariate statistical techniques, such as OLS regression and logistic regression. You will also be introduced to a number of important topics, including theory testing and development; philosophy of science and research judgement; and replication in social impact research. This course is an introduction to applied social impact research and is designed for those who want to engage with quantitative social impact research, but also those who wish to make their own original research contributions. No prior statistical knowledge or programming skills are required to enroll in the course.

**NPLD 730 Difficult Art of Listening**
The art of listening ethnographically has many benefits. Using a generally anthropological framework to organize sessions, this course attempts to make a case for the productive force (for scholars, policy makers, nonprofit leaders and others) of hearing in proactive and nuanced ways. Highlighting the value of acoustemological ways of understanding the world (knowing through hearing), the course asks students to listen in newfangled ways to many of the things they've heard before - while also listening out for things that they've never previously taken note of. Thinking about how listening carefully greases the wheels for successful interpersonal communication and overall cultural understanding, students will be asked to observe themselves listening in ways that might allow for innovative translations of observable/empirical data into knowledge that can be deployed in serice to personal, institutional, and structural change.

**NPLD 750 Corporate Social Responsibility (CSR): Partnerships and Practices**
Businesses performing philanthropic activity often use their platform of CSR activities to engage with society, directly, via a corporate foundation, or through partnerships with nonprofit organizations. Although such philanthropic activities are not directly related to profit-making ventures, they may boost their reputation, be used in marketing their products, talent recruitment, increase employee engagement and commitment, and thus contribute to the profit indirectly. Many businesses undertake their CSR related philanthropic activities using strategic partnerships with nonprofits or public sector organizations to meet their goals. This provides opportunities to nonprofit and public sector leaders in achieving social and sustainable change.

1.0 Course Unit

**NPLD 751 Widening the Aperture: Assessing Global Social Impact Interventions**
Part of being a working professional in social impact is assessing the effectiveness of intervention models. This is true whether you work in service delivery, consulting, evaluation or philanthropy. This course offers students a unique, experience-based opportunity to assess an organization's work from afar, then on the ground in Malawi. The expectation is that several assumptions established in the beginning of the course will hold through to the end. Importantly, others will not. Students will understand how we build a knowledge base about an organization's work, what assertions we come to, and then how we test those assumptions. This process represents a vital skill set including research, perspective-taking, and direct engagement with the communities served and the people doing the work. The course will provide students with a practical framework for analyzing social impact interventions through three important and complementary lenses: sector practice, environmental factors and organizational implementation. Students will use the immersive, travel experience in Malawi to engage directly with one of three service organizations to apply the framework. They will also use data collected about these organizations through the Lipman Family Prize selection process, a University of Pennsylvania-based social impact prize, combined with their own research, both quantitative and qualitative. The course will hold through to the end. Importantly, others will not. Students will understand how we build a knowledge base about an organization’s work, what assertions we come to, and then how we test those assumptions. This process represents a vital skill set including research, perspective-taking, and direct engagement with the communities served and the people doing the work. The course will provide students with a practical framework for analyzing social impact interventions through three important and complementary lenses: sector practice, environmental factors and organizational implementation. Students will use the immersive, travel experience in Malawi to engage directly with one of three service organizations to apply the framework. They will also use data collected about these organizations through the Lipman Family Prize selection process, a University of Pennsylvania-based social impact prize, combined with their own research, both primary and secondary, to better understand the organizations, staff, and forces influencing the intervention. Students will use ethnographic tools to collect and analyze primary data regarding staff attitudes and perceptions at these organizations. Students will present their findings to the organizational leadership while still in the country. The course will include significant team-based project work.

NPLD 781 Understanding and Managing Volunteers for Impact
In chemistry, an atom is the smallest unit of matter that has the properties of an element. In the same vein, volunteers are the atoms of voluntary action. Volunteers are the backbone of many human service organizations, environmental organizations, and other nonprofit organizations. Volunteers serve almost every function from stuffing envelopes to sitting on boards of nonprofit organizations. They make many programs such as education, and environmental protection possible and fill the void created by the fiscally retreating governments as well as newly arising social problems and human needs. Without volunteer participation, the services that are offered by many nonprofit organizations would be unavailable or provided at a higher cost to government, clients, and donors. The literature as to what constitutes volunteering and what produces committed and effective volunteers is confusing and full of contradictions. Furthermore, only few organizations know how to face the challenges of managing unpaid staff and how to motivate volunteers without offering material benefits. Volunteers are simultaneously non-remunerated employees and independent support with a different agency than paid employees. This course will combine presentations, group work, discussions, case studies, video clips, and readings to delve into the challenges of volunteering.
Taught by: Ram A Cnaan
Course usually offered in spring term
Activity: Lecture

NPLD 782 Small Group Processes
Studying the behavior of groups and the actions/inactions of people within groups provides a doorway to deeper understanding of our selves, our families, our friends, our colleagues, our organizations, and our communities. This half credit course is designed for Penn Graduate students eager to generate constructive group processes when chairing a committee, managing a work group, teaching in a classroom, conducting a support/therapy group or facilitating strategy formulation. It is easy to look back and see what went right or wrong in a group or when observing what others are doing. But tuning into and gaining a comprehensive grasp of these processes when they are happening and learning how to take constructive actions in the here and now when it can have a meaningful impact requires a high level of cognitive capability combined with a special form of relational artistry. This weekend course is an amalgam of experiential activities and energizing ways to internalize the rich concepts developed during a hundred years of research. Participants are required to be fully present and fully engaged for the whole weekend, read the equivalent of a book’s worth of material, and write an 8-page (double spaced) paper. For term specific details please consult our website: https://www.sp2.upenn.edu/academics/ms-in-nonprofit-leadership. Prerequisite: Attendance at Course Primer.
Taught by: Kenwyn Smith
One-term course offered either term
Activity: Seminar
0.5 Course Units

NPLD 783 Field Exercise in Social Impact Measurement
The twofold purpose of social impact measurement is to assess and improve the impact of nonprofit programs, and to offer actionable information for ongoing improvement. Social impact measurement is an essential learning opportunity for grantmaker and grantee. However, developing an evaluation plan, instruments, and process that is culturally responsive with an equity lens and also aligned with a nonprofit’s capacity is crucial. This course will offer an overview of leading social impact measurement methodologies and tools and field exercise experience. During the field exercise, student teams will develop an evaluation plan and associated instruments for a nonprofit using one or more of the methodologies. Teams will present their evaluation plans and offer recommendations for implementation. Lectures will be complemented by class time devoted to field exercise team meetings and off-site work.

NPLD 784 The Nonprofit Sector: Concepts and Theories
Can you imagine a world without the vitality and diversity of the nonprofit sector? What would it be like? Everything from health care to education, from serving the disadvantaged to protecting and restoring the environment, nonprofit organizations seem to have become an inseparable part of every aspect of our lives. So often they are taken for granted that we seldom pause and reflect on the roles and functions of these vital organizations in our community. This course will introduce you to the various roles that voluntary, philanthropic and nonprofit organizations play in American society. It will cover the theory, size, scope and functions of the sector from multiple disciplinary perspectives including historical, political, economic, and social views. The course also has a ‘hidden agenda.’ Take this class to see and discover what this agenda is!
Taught by: Allison Russell
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
NPLD 785 Group Dynamics and Organizational Politics
This is one of the courses referred to as 'The Power Lab at Penn.'
This intensely experiential course is designed for those providing
and institutional leadership at any level of a human enterprise,
managing work groups, chairing committees, serving on special task
forces, conducting support groups, offering legal services, teaching in
classrooms, facilitating groups in clinical settings, etc. Participants will
focus on two topics: (1) an in-depth understanding of group dynamics
while they are in action, and (2) the organizational relationships between
groups that are in a powerful position, groups locked in a powerless state
and those caught in the middle between the powerful and the powerless.
Prerequisite: Permit required; all potential participants are required to
attend a Primer class which consists of one evening session AND an all
day session. Permits are granted only after students have completed the
primer classes. Course Structure: This course has six components: (1)
A pre-course discerning process, which consists of a one evening plus
one full day Primer workshop; (2) Module 1 which is focused on group
dynamics; (3) reading an assigned book and writing a paper based on
Module 1 experiences; (4) Module 2 which addresses power relationships
among groups with differential resources; (5) reading two assigned
books and writing a paper based on Module 2 experiences; and (6) a post-
course debriefing. The Primer provides all potential participants with a
common conceptual base for engaging in the essential learning and lays
out the intellectual foundations of the course.
Taught by: Kenwyn Smith
Course usually offered in fall term
Also Offered As: SWRK 766
Activity: Lecture
1.0 Course Unit

NPLD 786 Strategic Management and Leadership of Nonprofits
This course is about doing good and doing well. It is designed to
introduce you to the fundamental issues in accountability and
governance and the administration and management in nonprofit
organizations. Through research and analysis, you will understand
multiple structures of accountability and the various stakeholders in
nonprofits, understand the duties and dynamics of boards of directors
in conjunction with other mechanisms of governance (e.g. chief
executive officers, advisory boards, etc.), and develop an understanding
of management techniques and leadership skills for enhancing the
effectiveness of nonprofit organizations. You will be asked to think about
the challenges of running nonprofit organizations in a comparative
context, with cases drawn from both the U.S. and abroad. The emphasis
of this course is on acquiring operational skills. The course is designed for
those who may have had years of experience managing other people
and programs in the nonprofit sector but who want to develop a more
systematic mastery of this challenge, as well as students from other
sectors who aspire to a nonprofit leadership role.
Taught by: Guo
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

NPLD 787 Leadership Designing the Future
'This experiential, highly interactive course is for those preparing to serve
in managerial/leadership positions, charged with creating/maintaining
the organizational and fiscal viability of public, non-profit or private
enterprises. Candidates in all graduate programs are welcome. The
educational methodology of NPLD 787 is based on discovery-learning
processes about the critical inter-dependencies among phenomena
such as: strategy formulation-execution and organizational practices
that unleash latent possibilities wealth creation and the dynamics of
competition/collaboration within and among groups robust economic
metrics and intra/inter-group decision-making sophistication leadership
of market-financial-political ecosystems and quality group-based
followership the efficacy of work-based activities and system conflict
management capabilities building new forms of private, public, non-profit
ventures and developing human capital dealing with being in positions of
power, powerlessness and middleness. This course combines intellectual,
experiential, and emotional learning about the business of organizing
and the organizing of productive enterprises. It is based on cutting-edge
sociological, economic, psychological, managerial, and anthropological
thinking about wealth-creation/circulation, the power of combining left-
brain and right-brain reasoning, the harnessing of energies trapped by
classic organizational conflicts, and accessing the abundance located in
contexts of seeming scarcity. For term specific details please consult
our website: https://www.sp2.upenn.edu/academics/ms-in-nonprofit-
leadership'
Taught by: Kenwyn Smith
One-term course offered either term
Prerequisite: NPLD 782
Activity: Lecture
1.0 Course Unit

NPLD 790 Social Finance
'Economic analysis and financial accounting are like languages: fluency
comes with practice. In-class review of case studies (including, on
occasion, in-person discussions with the representatives of diverse
agencies and organizations featured in the case studies) will enable
students to test and develop their capacity for applying conceptual tools
and analytical methods to sometimes messy and always complicated,
real-life situations. The course objective is to develop theoretical
understanding, critical judgment, and practical skills for sensitive
and effective engagement with financial and economic matters of
significance.'
Taught by: Andrew Lamas
Course usually offered in fall term
Also Offered As: NPLD 590
Activity: Lecture
1.0 Course Unit
NPLD 791 Leadership: Designing the Future
This is one of the two courses referred to as The Power Lab at Penn. The other is NPLD 785/SWRK 766. This experiential, highly interactive seminar is for those eager to serve in managerial/leadership positions of human systems that create/maintain the organizational and fiscal viability of public, non-profit or private enterprises, including their partnerships. Candidates in all Penn graduate programs are welcome, whether one's ambition is to generate sustainable livelihoods, renewable energy, wealth, clean water, viable environments, robotics, or quality services in fields such as education, health care, AI, communication, the arts, or criminal justice, or security. Course participants are members of decision-making groups that run a computer-based, data-driven, future-creating, socio-economic simulation while synchronously studying the intra and inter-group dynamics inherent in all leadership actions. The educational methodology of this course is based on discovery-learning processes about the critical inter-dependencies among several phenomena, such as: strategy formulation-execution and organizational practices that unleash latent possibilities; wealth creation and the dynamics of competition/collaboration within and among groups; robust economic metrics and intra/inter-group decision-making and sophistication; leadership of market-financial-political ecosystems and quality group-based followership; the efficacy of work-based activities and system conflict management capabilities; building new forms of private, public, non-profit ventures and developing human capital. This course combines intellectual and experiential learning about the business of organizing and an organization's businesses. It is based on cutting-edge sociological, economic, psychological, managerial and anthropological thinking about wealth-creation/circulation, the power of combining left-brain and right-brain reasoning, the harnessing of energies trapped by classic organizational conflicts and accessing the abundance located in contexts of seeming scarcity. The Faculty - provides the intellectual architecture for this learning adventure; builds and manages the structures for all the experiential events; facilitates the discovery processes of participants; links the lessons of scholarship to challenges experienced in every-day workplaces; offers group and system-wide feedback about the universal lessons located in the unique dynamics, co-manufactured by course participants sin their simulated world. This course meets on two Wednesday evenings and two consecutive weekends. It is a distinct advantage to have previously taken NPLD 782; those who have done this course will be given first access to NPLD 791. Permit required; all potential participants are required to attend a Primer class which consists of one evening session AND an all day session. Permits are granted only after students have completed the primer classes. Taught by: Smith

One-term course offered either term
Activity: Lecture
1.0 Course Unit

NPLD 792 Social Entrepreneurship
Social entrepreneurs are individuals with innovative vision seeking to accomplish important public purposes through the creative and aggressive mobilization of people and resources. Using academic theory and research on social entrepreneurship as a framework, student innovators learn to design, develop, and lead social change organizations of their own invention. Students turn their passion for changing the world into concrete plans for launching a venture. Over the course of the semester, we will cover a broad array of topics associated with social innovation and entrepreneurship, including defining the problem/opportunity, refining the mission/vision, developing market research and industry analysis, defining a financial and operating structure, assessing results and progress, and scaling an enterprise. This course is neutral on sector. Graduate students in any of Penn's graduate and professional schools who want to create social value through either nonprofit or for-profit ventures are invited to take the class and develop their ideas. The class will expose students to the process of getting an organization - regardless of sector - off the ground and running. While this is a class on innovation and entrepreneurship, students do not need to be committed to starting a venture upon graduation. The skills and tools contained in the course have wide applicability in the workplace. Being able to develop a coherent venture plan is great training for anyone who wants to work in government, philanthropy, or the business sector funding or managing existing organizations. The course attempts to convey a picture of what a well-considered and well-executed venture plan looks like with the goal of developing in students an appreciation for clear thinking in the pursuit of the creation of public value. Students will work throughout the term on a plan for an organization that they devise, with assignments spread out throughout the term. Elements of a venture plan will be drafted through multiple class assignments, and students present formally and informally several times throughout the semester, receiving feedback from faculty, peers, social entrepreneurs, and invited guests. At the end of the term, students will assemble all the pieces they have worked on in the class, revise and hone these elements, and then put them into a coherent venture plan for their organization. This course is ideal preparation for the Dell Social Innovation Challenge (www.dellchallenge.org), which the instructor founded and which awards funds to launch new social ventures. Entry into the Challenge is not required.

One-term course offered either term
Activity: Online Course
1.0 Course Unit
NPLD 796 Philanthropy and Fundraising Tools for Managers of Nonprofit Organizations
This fall semester course will review the everyday tools that nonprofit managers and development officers need to raise funds from individuals and other sources of private philanthropy. Last year, Americans gave approximately $300 million to charitable organizations and 83% of it was from individual giving. The fundraising profession has created a body of knowledge in the past twenty years that can guide effective fundraising programs so that development organizations can support their mission. The class sessions will review the theory and practical techniques that development professionals use everyday in large and small organizations, including annual giving, major gifts, planned giving, cultivation of donors, making your case for support, the Seven Faces of Philanthropy, special events, and prospect research. There will also be discussions of philanthropic trends and current giving patterns. For those who are interested in nonprofit leadership and positions of influence, these will be critical tools to understand. Taught by: Eileen Heisman Tuzman Course usually offered in spring term Activity: Lecture 1.0 Course Unit

NPLD 797 Philanthropy and the City
This course will focus on how urban communities are shaped by the nonprofit sector and the billions of philanthropic dollars that fuel their work. By bridging theory and practice, the class explores what dynamics are at play to deliver vital services or programs in healthcare, education, the arts, community development, and other issues. The course will also focus on these important questions: (1) Whose responsibility is the public good? How is that responsibility shared by the public, private, and nonprofit sectors? and (2) Given that responsibility for the public good, which individuals and groups make the decisions about how to serve the public good? How are these decisions made, and who benefits from these decisions? Students will consider these questions in an interdisciplinary context that will bring a historical and philosophical perspective to the examination of the values and institutions that characterize the contemporary philanthropy and the nonprofit sector. Taught by: Bauer/Goldman Course usually offered in spring term Also Offered As: URBS 404 Activity: Seminar 1.0 Course Unit

NPLD 799 Independent Study
Independent studies provide a flexible opportunity for students and NPL faculty or part-time instructors to work together in pursuing a topic of special interest that is not sufficiently covered by other courses in the curriculum. The content of independent studies is highly specialized and, as such, requires a plan of study developed jointly by the student(s) and the supervising professor. Independent studies require the academic advisor’s approval. Activity: Independent Study 1.0 Course Unit

Nursing (NURS)
NURS 061 Biologically-Based Chemistry
A contextual approach will be used in studying the concepts in General, Organic and Biological Chemistry that are foundational to an understanding of normal cellular processes. Topics that will be covered include measurements, atomic structure, bonding, chemical reactions, properties of gases and liquids, solutions, equilibrium, acids and bases, pH, buffers, nuclear chemistry, nomenclature and properties of the main organic functional groups, and the structures and function of carbohydrates, proteins and lipids. Course usually offered in fall term Activity: Lecture 0.5 Course Units

NURS 065 Fundamentals of Nutrition
Essentials of normal nutrition and their relationships to the health of individuals and families. These concepts serve as a basis for the development of an understanding of the therapeutic application of dietary principles and the nurse’s role and responsibility in this facet of patient care. Prerequisite: Equivalent Science Sequence Course if course prerequisites not met Course usually offered in spring term Prerequisite: NURS 061 OR NURS 068 Activity: Lecture 1.0 Course Unit

NURS 068 Integrated Cell Biology and Microbiology
This course will include the major topics of cell biology and microbiology that are foundational for an understanding of normal and pathological cellular processes. Topics will include the brief study of prokaryotic and eukaryotic cell structures and functions; the main biological molecules; membrane transport; cellular communications; the flow of genetic information; cell division; and cellular metabolism. The course will also examine the role of cells and microbes in human health and infectious diseases. It will include a description of the main types of microbes, how they are identified, their growth requirements, and the role of the immune system in controlling infections, the control of microbes, host-microbe interactions. The context for this course will be the application of cell biology and microbiology for understanding the cellular basis of cancer and infectious human infection disease processes. This course will include special sessions from a clinical perspective in the various fields of medicine, microbiology, and immunology. Course usually offered in fall term Activity: Lecture 1.0 Course Unit

NURS 101 The Nature of Nursing Practice
This course facilitates students’ ability to conceptualize the experiences of individuals, families, communities, and populations living with health and illness. It emphasizes the integration of knowledge from other disciplines and of nursing science as the basis for practice. The course introduces the four core themes of the undergraduate nursing program: engagement, inquiry, judgment, and voice and examines how the themes are used to characterize the nature of nursing practice. Course usually offered in fall term Activity: Lecture 0.5 Course Units
**NURS 102 Situating the Practice of Nursing**
This course emphasizes not only how nursing is practiced, but also where it is practiced. The course further explores the four core themes of engagement, inquiry, judgment, and voice as it provides guided observational experiences in a wide variety of settings. These experiences help the student to discover what is not known and what is subsequently necessary to know. These experiences also explore the place of the natural and social sciences and the arts and humanities in nursing practice. This course also will highlight the relationships between and among members of the interprofessional team and families and patients. NURS 102 fosters development of the professional role and sets the stage for life-long learning.
Course usually offered in spring term
Prerequisite: NURS 101
Activity: Lecture
0.5 Course Units

**NURS 103 Psychological and Social Diversity in Health and Wellness**
This course explores and integrates the intersection of psychological, cognitive, and social development with the lived experiences of individuals, families, and communities across the lifespan in order to conduct socially contextualized health assessments and health teaching. Extant theories will be critically analyzed and examined with respect to issues of health care access, health history, health promotion, and issues of equity and diversity from a life-course perspective. This knowledge will be synthesized and integrated with the development of the student's communication skills and interviewing processes necessary to develop socially attuned health history and teaching that promote psychological well being and healthy lifestyles. Simulated and observational experiences provide students with opportunities to acquire and apply knowledge necessary for conducting a comprehensive health history of an individual situated within a diverse community. They also provide opportunities to develop prioritized health teaching plans in partnership with that individual. Offered in Summer for Accelerated BSN Program
Course usually offered in fall term
Prerequisite: NURS 101 AND NURS 102
Activity: Lecture
1.0 Course Unit

**NURS 112 Nutrition: Science & Applications**
An overview of the scientific foundations of nutrition. The focus is on the functions, food sources and metabolism of carbohydrate, fat, protein, vitamins and minerals. Effects of deficiency and excess are discussed and dietary recommendations for disease prevention are emphasized. Current issues and controversies are highlighted. Students will analyze their own dietary intakes and develop plans for future actions. Prerequisite: For Non-nursing Students
Taught by: DeJonghe; Hayes
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: For Non-Nursing Majors

**NURS 131 Human Anatomy and Physiology - Part A**
The structural and functional organization of the human organism is presented, along with the fundamentals of developmental anatomy and embryology. Histologic and gross anatomical features of selected organ systems are related to the physiologic and biochemical mechanisms which enable the human body to maintain homeostasis in an ever-changing environment. Prerequisite: Equivalent College Level Chemistry and Biology if course prerequisites not met
Taught by: Scanga
Course usually offered in spring term
Prerequisite: NURS 061 OR NURS 068 OR CHEM 101 OR BIOL 101
Activity: Lecture
1.5 Course Unit

**NURS 132 Human Anatomy and Physiology - Part B**
The structural and functional organization of the human organism is presented, along with the fundamentals of developmental anatomy and embryology. Histologic and gross anatomical features of each organ system are related to the physiologic and biochemical mechanisms which enable the human body to maintain homeostasis in an ever-changing environment. Basic concepts of pathophysiology are introduced and applied to certain clinical disorders.
Taught by: Scanga
Course usually offered in fall term
Activity: Lecture
1.5 Course Unit

**NURS 159 Pathways to Practice**
This course builds on the accelerated student's background and experience and uses them as building blocks to garner the intellectual capital needed to integrate his/her identity as a professional nurse. The course links the Penn Compact 2020 to the four core themes of Penn's BSN nursing program: engagement, inquiry, judgment, and voice. It introduces phenomena of concern to nursing, contextualizes societal meanings of nursing practice and health care delivery across time and place, and stresses the importance of nursing science as the basis for practice. Emphasis is placed on debate, critical analysis, and constructing a logical and lucid verbal and written argument regarding issues related to professional nursing practice and health care delivery.
Activity: Lecture
1.0 Course Unit
Notes: For students in the Accelerated BSN program

**NURS 160 Physical Assessment**
This is a laboratory course designed to help beginning nursing students to develop competence in the process of physical assessment. Students engage in actual practice of physical assessment with fellow students as their 'patient' subject. A blending of instructor demonstration and supervision of physical examination practice sessions is used in the learning laboratory setting. Students prepare via self-learning activities with a variety of supplied resources (readings, videotapes, computer programs) and have the opportunity to refine their skill through faculty-supervised practice sessions. Procedural skills that correlate with the presentations of physiologic system assessment are included. Prerequisite: For students in Accelerated BSN Nursing Program Only
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit
NURS 163 Integrated Anatomy, Physiology, and Physical Assessment I
This is the first part of a two-semester course designed to provide a comprehensive study of the structure and function of the human body along with essential embryology and maturational physiology. Histological and gross anatomical features of selected organ systems are related to the physiologic and biochemical mechanisms that enable the human body to maintain homeostasis. Within each system, deviations from normal are considered to situate the student’s understanding of health problems and to foster an appreciation for the complexity of the human organism. Integrated into each topic are the correlated physical assessment parameters and related procedural skills. Laboratories exercises and case study analysis provide a contextual base to acquire and use domain-specific knowledge of concern to the practice of nursing. Prerequisite: Equivalent Science Sequence Course if course prerequisites not met.
Taught by: Scanga; Quigley
Course usually offered in spring term
Activity: Lecture
2.0 Course Units

NURS 164 Integrated Human Anatomy, Physiology & Physical Assessment II
This is the second part of a two-semester course designed to provide a comprehensive study of the structure and function of the human body along with essential embryology and maturational physiology. Histological and gross anatomical features of selected organ systems are related to the physiologic and biochemical mechanisms that enable the human body to maintain homeostasis. Within each system, deviations from normal are considered to situate the student’s understanding of health problems and to foster an appreciation for the complexity of the human organism. Integrated laboratories and case studies provide a contextual base to acquire and use domain-specific knowledge that includes physical assessment, and procedural.
Taught by: Scanga; Quigley
Course usually offered in fall term
Prerequisite: NURS 163
Activity: Lecture
2.0 Course Units

NURS 165 Integrated Pathophysiology, Pharmacology, and Therapeutics
Pathophysiologic concepts and processes are introduced with major emphasis on commonly occurring acute and chronic illnesses and their therapeutic interventions. Major classes of drugs that are used to support organ function are explored. The physiological and pathophysiologic rationale for each drug indication, mechanisms of drug action, individualized dosing implications, and adverse drug events will be explored for prototypical agents used in the selected cases. The course will enhance the student's comprehension of the scientific complexity of therapeutic interventions in various conditions and will build upon the foundational sciences. Additionally, the course will provide the student with sufficient scientific knowledge and skills to prepare administer and monitor drugs and therapies in a safe and effective manner.
Course usually offered in spring term
Prerequisite: NURS 164
Activity: Lecture
2.0 Course Units

NURS 215 Nursing of Women and Infants
This course emphasizes the child-bearing cycle, and the related issues of maternal and infant mortality and morbidity. It also explores women and infant’s health care and health promotion needs across the lifespan. It provides a global perspective, and uses the United Nations’ Pillars of Safe Motherhood and World Health Organization's Millennium Development Goals as the vehicles to enable students to understand the interrelationships among issues of health and health promotion; social, economic, political and environmental contexts; and the care of women across the lifespan. Clinical experiences provide opportunities for students to understand the connections between the local and the global; to use their developing knowledge base to affect the health of women and their infants. Students will have opportunities for hospital-based care of child-bearing women and their infants. In addition, community-based experiences with individual women and with groups of women across the life cycle will be provided in order to enhance teaching, interviewing and assessment skills.
Course usually offered in spring term
Prerequisite: NURS 101 AND NURS 102 AND NURS 103 AND NURS 160 AND NURS 164
Activity: Lecture
1.5 Course Unit

NURS 225 Pediatric Nursing
This course considers how nursing influences the health and healing capacities of infants, children, adolescents and their families. It focuses on the knowledge and skill acquisition needed to care for these patients at particular moments, across the continuum of care, and through transitions in an illness experience. It addresses pediatric nursing phenomena of concern and major final common pathways of pediatric illness from infancy through adolescence using a using a developmental and systems approach. Emphasis is placed on family-centered care through transitions in the illness and recovery phases. The course emphasizes clinical reasoning; family centered strategies for optimizing health and maintaining individuality; promoting optimal developmental, physiological, and psychological functioning; and enhancing strengths within the context of family. Clinical experiences at various children’s hospitals and simulation experiences provide sufficient opportunities for clinical reasoning, clinical care and knowledge integration. Additional Prerequisite: Clinical 12 hours weekly and 2 hours Simulated Laboratory Weekly
One-term course offered either term
Prerequisite: NURS 215
Activity: Lecture
1.5 Course Unit
NURS 230 Statistics for Research and Measurement
This course examines statistical methods used by scientists in the analysis of research data. The fundamental theorem for this course is the 'square root law' (central limit theorem). Students become literate in statistical terminology and symbols and knowledgeable of assumptions for statistical tests. Fundamental statistics include basic theorems and principles, sample, population and data distributions, measures of central tendency, correlational techniques, and commonly used parametric and nonparametric statistical tests. Parameters for inferential and descriptive statistics are examined as the basis for explaining the results from research studies. Students apply chance models in estimating confidence intervals of percentages and means, and in hypothesis testing. This content is taught in the context of nursing research and measurement of nursing phenomena. Examination of research publications enable students to apply their knowledge to reading and understanding data analyses used in studies. Students evaluate tables and graphs as ways to summarize research findings. Course content prepares students to examine statistical and clinical significance of research findings.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

NURS 235 Psychiatric Nursing
This course examines how nursing influences the health and healing capacities of individuals and families experiencing severe psychiatric distress. It focuses on the knowledge and skill acquisition needed to care for these patients at particular moments, across the continuum of care, and through transitions in an illness experience. The course addresses nursing phenomena of concern related the meanings of an illness experience, the development of healing relationships with or within individuals, families, and groups, and on the advanced communication strategies needed to engage individual and families in mental health promotion strategies. It also provides the tools to enable students to construct effective treatment groups with patients; work groups with disciplinary and inter-professional colleagues; and to understand the healing dimensions of environments. Clinical and simulation experiences provide sufficient opportunities for clinical reasoning, clinical care and clinically situated knowledge integration. Additional Prerequisite: Clinical 12 hours weekly and 2 hours Simulated Laboratory Weekly One-term course offered either term
Prerequisite: NURS 215
Activity: Lecture
1.5 Course Unit

NURS 245 Nursing of Young and Middle Aged Adults
This course considers how nursing influences the health and healing capacities of young and middle aged adults who experience functional status impairments as a result of serious illness or injury. It focuses on the knowledge and skill acquisition needed to care for these patients at particular moments, across the continuum of care, and through transitions in an illness experience. It addresses nursing phenomena of concern, including risk factors for illness or injury, strategies to overcome barriers and support personal health resources, alleviate suffering and reduce the impact of illness or injury on the functioning of the person. Content and clinical experiences integrate developmental and role issues; policy, cultural and ethical considerations. Clinical experiences in acute care hospital units and simulation experiences provide opportunities for clinical reasoning, clinical care, and knowledge integration. Additional Prerequisite: Clinical 12 hours weekly and 2 hours Simulated Laboratory Weekly
One-term course offered either term
Prerequisite: NURS 215
Activity: Lecture
1.5 Course Unit

NURS 255 Nursing of Older Adults
This course considers how nursing influences the health and healing capacities of older adults. It focuses on the knowledge and skill acquisition needed to care for these patients at particular moments, across the continuum of care, and through transitions in an illness experience. It addresses nursing phenomena of concern including the unique set of principles and body of knowledge and skills necessary to the practice of nursing with older adults. Students are provided with the theoretical background necessary to understand health system issues affecting older adults. Students will attain the knowledge necessary to complete a comprehensive assessment of the older adult’s physical, functional, psychosocial, and cognitive capacities. Common problems associated with cardiovascular, respiratory, neurological, musculoskeletal, sensory, and genitourinary systems that affect older adults will be discussed. In addition, principles of continuity of care, rehabilitation, nutritional and pharmacodynamic changes, cultural diversity and ethics will be integrated throughout the course. Clinical experiences in acute care hospitals and simulation experiences provide sufficient opportunities for clinical reasoning, clinical care, and knowledge integration. Special emphasis is placed on transitional care for older adults across the health care continuum. Additional Prerequisite: Clinical 12 hours weekly and 2 hours Simulated Laboratory Weekly One-term course offered either term
Prerequisite: NURS 215
Activity: Lecture
1.5 Course Unit

NURS 299 Independent Study in Nursing
An opportunity to develop and implement an individual plan of study under faculty guidance. Additional Prerequisite: Permission of Instructor One-term course offered either term
Activity: Independent Study
1.0 Course Unit
NURS 303 Contemporary Issues in Human Sexuality and Health
Course content emphasizes theories of sexual development and factors influencing sexual behavior within the continuum of health and illness. Common sexual practices of people are studied within the context of lifestyle and situational life crises. Concepts of normal sexual function and dysfunction are examined. Contemporary sexual issues are explored. Course usually offered in spring term
Also Offered As: NURS 503
Activity: Lecture
1.0 Course Unit

NURS 305 Narrative Matters in Health and Illness Experiences
This course emphasizes the uses of narrative and memoir to consider major themes and events related to the experience of health and illness in the United States as well as the carative role, as either family member or health professional and crafting policy.
Taught by: Alicia Kachmar
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

NURS 306 Opioids: From Receptors to Epidemics
This survey course reviews the neuropharmacology of opioids including central and peripheral sites of opioid actions. Opioid receptor pharmacology as well as cellular and molecular neuroadaptations to opioids are discussed in relation to addiction, physical dependence, tolerance, hyperalgesia and withdrawal. Genetic and pharmacogenomic effects on variation of opioid response are also presented. Opioid addiction and the actions of opioids on pain systems are reviewed with an emphasis on their pre-clinical and clinical expression. The effects of regulatory, pharmaceutical and criminal justice justice forces on opioid prescription in the US are considered vis-a-vis pain management and opioid addiction. Finally, the causes and consequences of the of the current ‘opioid epidemic’ are reviewed, as well as federal, healthcare and community efforts to address it. Prerequisite: Permission of instructors.
For BSNs: NURS 165
Taught by: Compton; Schmidt
Course usually offered in fall term
Also Offered As: NURS 506
Prerequisite: NURS 165 OR BIOL 101 OR BIOL 121
Activity: Lecture
1.0 Course Unit

NURS 312 Nutritional Aspects of Disease
This course provides an advanced understanding of the role of nutrition in integrated biological systems. Students will develop a rigorous comprehension of major clinical disorders, including the underlying pathophysiology and conditions that are affected by nutrition and how optimization of nutritional variables may modulate these processes. A critical overview of the role of nutrition in disease prevention, management and treatment, and in health maintenance will be emphasized throughout the course.
Course usually offered in spring term
Also Offered As: NURS 512
Prerequisite: NURS 065 OR NURS 112
Activity: Lecture
1.0 Course Unit

NURS 313 Obesity and Society
This course will examine obesity from scientific, cultural, psychological, and economic perspectives. The complex matrix of factors that contribute to obesity and established treatment options will be explored. This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.
Taught by: Compher
Course usually offered in fall term
Also Offered As: NURS 513
Activity: Lecture
1.0 Course Unit
Notes: This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

NURS 315 Sociocultural Influences on Health
This course is intended for students interested in U.S/Global Healthcare. It includes lectures, discussions, readings, and written assignments focused on various social, cultural, and economic factors that impact the health and illness perceptions and behaviors of various ethnic and minority groups. In particular, it focuses on how culture affects health and disease, and how health and disease affect culture. This course takes a critical approach to knowledge development by scrutinizing values, theories, assumptions, and practices cross culturally. It relies upon a range of interdisciplinary approaches to analyze how disease is diagnosed, treated, and experienced differently in various cultural contexts. At the same time, students will have the opportunity to examine and critique cultural assumptions and theories, the shifting nature of cultures, the situational use of cultural traditions, and the ethnocentrism of contemporary Western health care. Special attention is given to the influence of race, class, gender, religious, and spiritual ideas about health and illness.
Taught by: Jacoby
Course usually offered in spring term
Also Offered As: NURS 515
Activity: Lecture
1.0 Course Unit
Notes: Foundational Course for Minor in Multicultural/Global Health Care

NURS 316 International Nutrition: Political Economy of World Hunger
A detailed consideration of the nature, consequences, and causes of hunger and undernutrition internationally. Approaches are explored to bringing about change, and to formulating and implementing policies and programs at international, national, and local levels, designed to alleviate hunger and under-nutrition.
Course usually offered in spring term
Also Offered As: NURS 516
Activity: Lecture
1.0 Course Unit
NURS 324 Children's Health in the United States, 1800-2000
This course explores the impact of historical ideas, events, and actors pertaining to the history of children's health care in the United States. Emphasis is placed on tracing the origins and evolution of issues that have salience for twenty-first century children's health care policy and the delivery of care. Prerequisite: For Benjamin Franklin Scholars & Nursing Honors Students This course satisfies the History & Traditions Sector for Nursing Class of 2012 and Beyond.
Course usually offered in fall term
Also Offered As: GSWS 324
Activity: Seminar
1.0 Course Unit
Notes: For Benjamin Franklin Scholars & Nursing Honors Students. This course satisfies the History & Traditions Sector for Nursing Class of 2012 and beyond.

NURS 327 Foundations of Global Health
This interdisciplinary course covers fundamental concepts of global and population health. Epidemiology and methodology, historical and contemporary contexts, physical (water, air, climate change, and food/nutrition) and social (health inequities, sex/reproduction, injury/violence) determinants of health, and interventions for health improvement are addressed. Health problems such as infectious and chronic diseases cannot be understood apart from history, economics, environment, and inequalities - they are not simply medical issues. Global Health refers not only to the health problems of 'others' living in far corners of the world (low- and middle-income countries), but also to our own health problems as citizens of a very rich, but very unequal and multicultural nation. The aim of the course is to help students become more informed and active global citizens. Learning methods include faculty presentations, student presentations, and small group discussions. Although this course has a health focus, it is aimed at all students interested in global issues.
Taught by: Jianghong Liu
Course usually offered in fall term
Also Offered As: NURS 527
Activity: Lecture
1.0 Course Unit

NURS 330 Theoretical Foundations of Health Care Ethics
The theoretical foundations of health care ethics including definitions of ethics, history of bioethics and nursing ethics, and the influence of religion, psychology of moral development and philosophy in the development of ethical theory. Nursing code of ethics, changing ideas in ethics, and discussion of the developing profession of nursing are included.
Taught by: Perlman; Ulrich
One-term course offered either term
Activity: Lecture
1.0 Course Unit

NURS 334 Public Policy and the Nation's Health
This course examines health care and social policy from domestic and international perspectives. It is designed to engage undergraduate students in critical thinking about health policy issues as they affect our health care, employment, taxes, and social investments. The current national debate on health care reform is used as a frame of reference for examining the strengths and weaknesses of health care services in the U.S. from the perspectives of patients/families, health professionals, health services providers, insurers, employers, and public policy makers, and the pros and cons of a range of prescriptions for system improvement from across the political spectrum. About a third of the course focuses more specifically on global public health challenges and the policy strategies for reducing health disparities worldwide. Please note, the online version of this course has a synchronous component (live online class sessions). The day/time will be listed in the course register.
Course usually offered in spring term
Also Offered As: NURS 540
Activity: Lecture
1.0 Course Unit

NURS 343 Global Engagement Seminar
This course is a Global Seminar which includes a travel component; topics vary. Topics and locations may include Chile, Ghana, or China. For more information and to apply: https://global.upenn.edu/pennabroad/ pgs.
Also Offered As: NURS 543
Activity: Seminar
1.0 Course Unit

NURS 351 Case Study: Sleep through the Life Span
This case study introduces foundational theories on sleep, diagnosis, measurements, and treatments of various sleep disorders, and the impacts of sleep/sleep disorders in health promotion and the care of illness across the life span. This course aims to prepare nursing students to play a vital role in comprehensive patient care and education in sleep in the community and in various clinical settings. This course also includes 14-hour field work/shadowing at sleep clinics to provide an opportunity to observe and work with individuals who suffer from sleep problems.
Prerequisite: NURS 163 AND NURS 164
Activity: Lecture
1.0 Course Unit

NURS 353 Health Communication in the Digital Age
Health communication spans activities from in-person communication to technology based interventions and mass media campaigns. Health communication interventions are applied across a variety of health promotion and disease prevention activities. In this course, we will explore a variety of approaches to using communication strategies to improve individual and population health. The course will provide an introduction to the theory, design, and evaluation of health communication programs. We will review and critique several health communication interventions. The course will also include a special emphasis on new media and technology, as well as developing practical skills for developing health communication programs.
Also Offered As: NURS 565, PUBH 565
Activity: Lecture
1.0 Course Unit
NURS 354 Case Study - Addressing the Social Determinants of Health: Community Engagement Immersion
This case study offers students experiential learning to develop an in depth understanding of social determinants of health in vulnerable, underserved populations and to collaboratively design and refine existing health promotion programs based on the needs of the community site. Grounded on an approach that builds upon the strengths of communities, this course emphasizes the development of techniques to lead effective, collaborative, health-focused interventions for underserved populations. Students are required to draw on skills and knowledge obtained from previous classes related to social determinants of health and community engagement and will engage in specific creative, innovative community based programs developed for populations across the life span. These culturally relevant programs, which have been shown to positively impact communities, create opportunities for students to address the social determinants of health, build engagement and leadership skills and increase program success and sustainability. Prerequisite: Completion of sophomore year nursing requirements Activity: Lecture 1.0 Course Unit
Notes: This case study offers students experiential learning to develop an in depth understanding of social determinants of health in vulnerable, underserved populations and to collaboratively design and refine existing health promotion programs based on the needs of the community site. Grounded on an approach that builds upon the strengths of communities, this course emphasizes the development of techniques to lead effective, collaborative, health-focused interventions for underserved populations. Students are required to draw on skills and knowledge obtained from previous classes related to social determinants of health and community engagement and will engage in specific creative, innovative community based programs developed for populations across the life span. These culturally relevant programs, which have been shown to positively impact communities, create opportunities for students to address the social determinants of health, build engagement and leadership skills and increase program success and sustainability. Additional Prerequisite: Completion of sophomore year nursing requirements

NURS 355 Case Study: Self-Care of Chronic Illness
Self-care is done by lay people to prevent or manage chronic illness. In this case study, we will discuss the history, definitions, predictors, and outcomes of self-care in various chronically ill populations. A focus of discussion will be an in depth exploration of the factors that influence self-care. Understanding these factors will prepare nurses for their role in promoting self-care. Fieldwork experiences are designed to provide practical experience in engaging well individuals in preventing illness and helping chronically ill perform self-care. Course usually offered in spring term Prerequisite: NURS 163 OR NURS 164 Activity: Lecture 1.0 Course Unit Notes: 2 hour seminar; 1 hour fieldwork / week

NURS 356 Case Study: Culture of Birth
This course will explore the cultural context of birth, the practices and paradigms and the activities of birthing people and professionals and/or attendants. The history of caring for people at birth, international health care, cultural mores/societal values, place of birth, psychosocial factors, ethical decision-making and the role of technology are content areas that will be discussed. Prerequisite: If course requirement not met, permission of instructor required. Open to Nursing and non-Nursing majors. Traditionally, this course includes a weekend long Doula training; after completion, students may serve as Doulas. 2020-2021 Academic year, this course will be offered in both the Fall and Spring semesters. Taught by: M Guidara, MSN, CNM, FACNM Course usually offered in spring term Prerequisite: NURS 215 OR NURS 225 Activity: Lecture 1.0 Course Unit

NURS 357 Case Study: Innovation in Health: Foundations of Design Thinking
Innovation, defined as a hypothesis-driven, testable, and disciplined strategy, is important to improve health & healthcare. Employing new ways of thinking, such as with design thinking, will help open up possibilities of ways to improve health & the process of healthcare. Incorporating current & emerging social & digital technologies such as mobile apps, wearables, remote sensing, and 3D printing, affords new opportunities for innovation. This course provides foundational content & a disciplined approach to innovation as it applies to health & healthcare. A flipped classroom approach has the in-class component focusing on group learning through design thinking activities. The course is open to undergraduate nursing students as a case study & upper-level undergraduates and graduate students from across the Penn campus. The course provides a theoretical foundation in design thinking & may provide an overview of innovation technology & digital strategies as well as social & process change strategies. To enhance the didactic component, students will actively participate in a design case study. Students will be matched by interest and skill level with teams & will work with community-based organizations, healthcare providers and/or innovation partners. Student teams will meet their partners to identify & refine a health or healthcare problem to tackle. Students will work throughout the semester to create an innovative solution that will be pitched to their community-based organization, healthcare provider, and/or innovation partner at the end of the semester. Prerequisite: Completion of freshman & sophomore level courses Taught by: Leary One-term course offered either term Also Offered As: NURS 573 Activity: Lecture 1.0 Course Unit

NURS 358 Case Study: Nurses and the Child Welfare System
Building on knowledge and skill acquired through undergraduate nursing courses, this case study offers nursing majors an in depth and interprofessional opportunity to study research, policy, and practice-based issues in children and families involved with the child welfare system. Special emphasis is placed on the role of the nurse in the child welfare system. Fieldwork experiences will enable students to gain practical experience regarding the needs of children and families with an emphasis on a consideration of how to achieve partnership and create alliances with parents and youngsters. Course usually offered in fall term Prerequisite: NURS 163 AND NURS 164 Activity: Lecture 1.0 Course Unit
NURS 359 Case Study: Healthcare Quality and Patient Safety
The 1999 Institute of Medicine Report 'To Err is Human: Building a Safer Health System' called national attention to the shocking crisis of patient injury and death in the United States health care systems. This case study examines errors in health care and how nurses, working inter and intra-professionally, contribute to and/or lead quality improvement efforts in health care settings to make care safer. Through classroom discussion, clinical observations and special quality improvement project experience, the student will become familiar with the Science of Improvement grounded in W. Edwards Deming’s body of knowledge called a ‘System of Profound Knowledge.’ The student will also learn patient safety strategies, behaviors and practices that reduce or eliminate the risk of patient harm and develop an appreciation for attributes of an organization that contribute to a strong patient safety culture.
Prerequisite: Completion of sophomore year nursing requirements
Taught by: Pinola; Sparrow
Course usually offered in spring term
Prerequisite: NURS 163 AND NURS 164
Activity: Lecture
1.0 Course Unit

NURS 360 Case Study: Nursing Practice with HIV+ Patients
This course is directed at the need to increase nursing majors knowledge and clinical expertise in the care of persons with HIV/AIDS. Hands on clinical practice with nurses who are AIDS experts will be combined with seminars that provide epidemiologic, clinical assessment, infection control, symptom management, patient teaching, psychosocial, ethical, cultural, political, and policy information.
Course usually offered in fall term
Prerequisite: NURS 163 AND NURS 164
Activity: Lecture
1.0 Course Unit

NURS 361 Case Study: Breast Feeding & Human Lactation
Human milk is recognized universally as the optimal diet for newborn infants. The health benefits of breastfeeding are so significant that a National Health Objective set forth by the Surgeon General of the United States for the year 2010 is to increase the proportion of mothers who breastfeed their babies in the postpartum period. Through classroom and clinical experiences, this course will provide an in depth examination of the anatomy and physiology of lactation, essential aspects of establishing and maintaining lactation, and the nurses’ role in counseling the breastfeeding family. Emphasis will be placed on current research findings in the content area.
Course usually offered in fall term
Prerequisite: NURS 163 AND NURS 164
Activity: Lecture
1.0 Course Unit

NURS 362 Case Study: Aggressive Behavior in Healthcare: Assessment Prevention and Treatment
The escalating incidence and prevalence of aggression in the health care setting requires that providers acquire a new set of pragmatic competencies for managing its complex sequelae. This course presents theoretical frameworks for understanding, predicting, preventing and responding to aggressive behaviors across the life span. Historical, bio-behavioral, social, and cultural explanations for aggression will be synthesized and analyzed within the context of multiple points of entry into the health care system across clinical settings. Personal self-awareness, debriefing, and stress management techniques exemplify techniques to prevent untoward consequences in providers. This course also uses exemplars and a range of experiential learning strategies, including skill development, situation analysis, concept mapping, unfolding case studies and cooperative learning, to examine the assessment, prevention, treatment, and response to aggressive behavior in patients and management of its consequences in self and others.
Course usually offered in spring term
Prerequisite: NURS 163 AND NURS 164
Activity: Lecture
1.0 Course Unit

NURS 363 Case Study: Cancer
This elective case study offers students the opportunity to learn about the etiology, diagnosis, and management of cancer across the lifespan. Building on existing clinical knowledge and skills, students will explore cancer care from the perspectives of prevention, early detection, treatment, survivorship, and death. Observational clinical experiences and selected case studies will enhance students’ understanding of patients’ and families’ cancer experience. Class instruction includes small group discussion, case studies, and some lectures. Students will complete 12 clinical hours, to include observation, panels and tours of treatment areas. Permission of instructor required.
Course usually offered in spring term
Prerequisite: NURS 163 AND NURS 164
Activity: Lecture
1.0 Course Unit

NURS 364 Case Study: Case Analysis in Clinical Nutrition
This course is designed for present and future nurse professionals who wish to increase their knowledge of nutrition and expertise and application of knowledge to achieve optimal health of clients and themselves. Principles of medical nutrition therapy in health care delivery are emphasized in periods of physiologic stress and metabolic alterations. Individual nutrient requirements are considered from pathophysiologic and iatrogenic influences on nutritional status. Nutritional considerations for disease states will be explored through epidemiological, prevalence, incidence, treatment and research data. Understanding application of medical nutrition therapy are included through case analysis and field experiences.
Taught by: Dolan
Course usually offered in spring term
Prerequisite: NURS 163 AND NURS 164
Activity: Lecture
1.0 Course Unit
NURS 367 Case Study: Principles of Palliative Care
This course prepares students to collaborate effectively with an interdisciplinary team in assessing patients and families, and planning and evaluating palliative and end of life care for diverse populations with progressive illness in multiple health care settings. Course content and assignments focus on the nurse's role in addressing the complex assessment and responses to the psychosocial and spiritual concerns of patients and caregivers across the trajectory of advanced illness.
Course usually offered in fall term
Also Offered As: NURS 557
Prerequisite: NURS 163 AND NURS 164
Activity: Lecture
1.0 Course Unit

NURS 368 Case Study: Home Health Care
This course examines the major aspects of home-based care across patients' life spans from acute to long term care. New trends, advances, and issues in home management of complex conditions, innovative delivery systems and legal, ethical and policy consideration will be explored.
Course usually offered in fall term
Prerequisite: NURS 163 AND NURS 164
Activity: Lecture
1.0 Course Unit

NURS 375 Nutrition Throughout The Life Cycle
Understanding and meeting nutritional needs from conception through adulthood will be addressed. Nutrition-related concerns at each stage of the lifecycle, including impact of lifestyle, education, economics and food behavior will be explored.
Taught by: Berman-Levine
Course offered fall; odd-numbered years
Activity: Lecture
1.0 Course Unit

NURS 376 Issues in Nutrition, Exercise, and Fitness
An examination of the scientific basis for the relationship between nutrition, exercise and fitness. The principles of exercise science and their interaction with nutrition are explored in depth. The physiological and biochemical effects of training are examined in relation to sports performance and prevention of the chronic diseases prevalent in developed countries.
Taught by: Compher; Dougherty
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

NURS 377 Weight Management: Principles and Practices of Obesity Treatment
This course focuses on the principles and theories guiding the clinical care and treatment of people with obesity across the lifespan. We will discuss the effectiveness and evidence-base supporting a variety of obesity treatments diet, physical activity, behavioral therapy, pharmacological, surgical, and combined approaches. Emphasis will be placed on the practical aspects of providing obesity education and counseling to assist individuals and families in attaining and maintaining a healthy weight.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

NURS 380 Nursing in the Community
This course considers how nursing influences the health and healing capacities of both communities as a whole (populations) and of groups, families, and individuals living within particular communities locally and globally. It addresses the complexity of nursing practice using a public health paradigm. It requires students to draw from prior class and clinical knowledge and skills and apply this practice base to communities across care settings, ages, and cultures with different experiences of equity and access to care. It provides the tools needed to engage in collaborative community work and to give voice to the community's strengths, needs, and goals. It also moves students from an individual and family focus to a population focus for health assessment and intervention. Students consider the science, policies, and resources that support public health, and community based and community-oriented care. Clinical and simulated experiences in community settings provide sufficient opportunities for clinical reasoning, clinical care and knowledge integration in community settings. Students will have opportunities to care for patients and populations within selected communities.
Course usually offered in fall term
Prerequisite: NURS 225 AND NURS 235 AND NURS 245 AND NURS 255
Activity: Lecture
2.0 Course Units

NURS 386 Benjamin Franklin Scholars in Nursing Capstone Honors Research Project
This course is an advanced seminar for research and scholarship to be taken by Benjamin Franklin Scholars in Nursing. Enrollment is concurrent with student's final year of studies and entails undertaking a capstone project for Benjamin Franklin Scholars in Nursing. Practical considerations in carrying out such a project, including scholarly approach and scientific integrity as well as scholarly writing and dissemination will be discussed and illustrated, using exemplars and student projects. The various phases of students' projects will be used as launching points for discussions and to complement students' work with their faculty supervisor. Paths and planning for careers in nursing and related disciplines and the idea of scholarly trajectories will be developed throughout the course.
Taught by: Kagan
Prerequisite: NURS 547
Activity: Seminar
0.5 Course Units
Notes: Enrollment in Nursing Undergraduate Honors Program Required
NURS 389 Research/Inquiry-Based Service Residency
This course is designed to facilitate students’ intellectual curiosity and independence in exploring the research process in an area of interest. Similar to clinical practica, NURS389 serves as the research practicum for NURS230 and NURS547. In this applied course, students will engage in a structured, hands-on faculty-mentored experience. Students will be contacted approximately 6-10 weeks prior to the start of the semester of enrollment to either: 1) submit a proposal to work on an existing project with an established mentor, or 2) identify their key areas of interest and select from an existing list of projects/preceptors that varies by semester. Students will be matched with a research preceptor based on their selections and, in collaboration with their preceptor, they will define learning objectives to guide their individualized plan of study. Students have opportunities to experience systematic methods for research, service-based clinical inquiry, or quality improvement. This mentored residency can be fulfilled by completing one of the following options: * Research-based practicum in basic or social science, clinical research, nursing history, healthcare policy, ethics, or informatics. * Inquiry-based Service practicum such as conducting quality improvement procedures or program evaluations in an affiliated healthcare institution. Students must register for both the lecture and recitation sections. For the recitation section students are expected, with the assistance of their advisor, to allocate 2 hours of work outside of class each week towards their project. Students can schedule this work based on their own schedule but must be prepared to complete the work each week. The course is taken in the final semester of the senior year.

Taught by: Bridgette Brawner
One-term course offered either term
Prerequisite: NURS 547
Activity: Lecture
0.5 Course Units
Notes: Recitation/practicum hours individually scheduled with project mentors

NURS 390 Leadership in the Complex Healthcare System
This two-part course provides the didactic and clinical experiences in increasingly complex nursing care situations and environments which facilitate the students’ transition to independent practice. In the lecture component, the focus is on the integration of knowledge and skill for nursing practice and develops the ability of students to see nursing practice as part of a complex system. It examines systems thinking and complexity, development of a leadership role and skills, inter-professional communication and teamwork, and leading change in healthcare organizations. This course also examines the nurse’s role in improvement science and patient care delivery, focusing on quality improvement processes, patient safety, nurse sensitive process and outcome metrics with micro-systems. This course also allows students to develop the capacity for clinical expertise, leadership, and for translating the science of the profession into practice. Students also are assigned to a seminar component that is correlated with their selected site for the specialty clinical practicum. This aspect of the course allows the student to further develop leadership concepts learned in lecture while developing additional expertise in a specialty area of practice. These seminar components are adult health and illness, adult critical care, obstetrics/labor & delivery, and pediatrics. Advanced simulation experiences and extensive clinical practice in an area of the students' choice provide multiple opportunities to synthesize the multidimensional aspects of nursing and provide the environment which facilitates transition to professional nursing practice. Students select from a variety of settings in which to refine their practice skills. Principles of leadership, accountability and change will be applied to clinical practice as the student begins to operationalize the professional nursing role. Emphasis is placed on the nurse as a knowledgeable provider of health care who is both a change agent and advocate.

One-term course offered either term
Prerequisite: NURS 380
Activity: Lecture
3.0 Course Units

NURS 400 Advances In Health Systems Research And Analysis
Capstone Course for NURS/WH Joint Degree Students. Prerequisite: By Permission Only
Taught by: McHugh, M
Course offered spring; odd-numbered years
Activity: Seminar
1.0 Course Unit
Notes: by Permission Only

NURS 500 Introduction to Principles and Methods of Epidemiology
This course provides an introduction to epidemiologic methods and overview of the role of epidemiology in studies of disease etiology and in the planning, delivery and evaluation of health services. The population-based approach to the collection and analysis of health data will be emphasized throughout the course. Through textbook reading, problems sets, class discussion and review of the recent literature, students will become acquainted with the basic designs of epidemiologic studies in theory and in practice. Students will develop the basic skills necessary to use epidemiologic knowledge and methods as the basis for scientific public health practice. Background in elementary statistics is a prerequisite for this course.

Taught by: Jill Johnson; Jennifer Pinto-Martín
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
NURS 503 Contemporary Issues in Human Sexuality and Health
Emphasizes the theories of sexual development and sexual behavior within the continuum of health and disease. Common sexual practices of people are studied in relation to life-style and/or situational life crisis. Contemporary issues in sexuality and health will be examined. Prerequisite: Junior and Senior Undergraduates. Open to all graduate students. This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.
Activity: Lecture
1.0 Course Unit
Notes: Junior and Senior undergraduates. Open to all graduate students. This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and beyond.

NURS 506 Opioids: From Receptors to Epidemics
This survey course reviews the neuropharmacology of opioids including central and peripheral sites of opioid actions. Opioid receptor pharmacology as well as cellular and molecular neuroadaptations to opioids are discussed in relation to addiction, physical dependence, tolerance, hyperalgesia and withdrawal. Genetic and pharmacogenomic effects on variation of opioid response are also presented. Opioid addiction and the actions of opioids on pain systems are reviewed with an emphasis on their pre-clinical and clinical expression. The effects of regulatory, pharmaceutical and criminal justice forces on opioid prescription in the US are considered vis-a-vis pain management and opioid addiction. Finally, the causes and consequences of the current 'opioid epidemic' are reviewed, as well as federal, healthcare and community efforts to address it. Permission of Instructor required.
Taught by: Compton; Schmidt
Course usually offered in fall term
Also Offered As: NURS 306
Activity: Lecture
1.0 Course Unit

NURS 509 The Child with Special Healthcare Needs
This course is designed to assist prospective practitioners develop advanced skills in identifying the needs and interventions for medically fragile neonates, children and their families.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit
Notes: Summer Session II

NURS 511 Loss, Grief and Bereavement
Loss, grief and bereavement are pervasive aspects of the human experience. The content of this course provides a basis both for personal development and professional growth. Through a series of seminars, key issues surrounding loss, death, dying, grief and bereavement will be examined.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit
Notes: Summer Session II

NURS 512 Nutritional Aspects of Disease
This course provides an advanced understanding of the role of nutrition in integrated biological systems. Students will develop a rigorous comprehension of major clinical disorders, including the underlying pathophysiology and conditions that are affected by nutrition and how optimization of nutritional variables may modulate these processes. A critical overview of the role of nutrition in disease prevention, management and treatment, and in health maintenance will be emphasized throughout the course.
Taught by: Matt Hayes
Course usually offered in spring term
Also Offered As: NURS 312
Activity: Lecture
1.0 Course Unit

NURS 513 Obesity and Society
This course will examine obesity from scientific, cultural, psychological, and economic perspectives. The complex matrix of factors that contribute to obesity and established treatment options will be explored.
Prerequisite: Undergraduate by permission of instructor. This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.
Taught by: Compher
Course usually offered in fall term
Also Offered As: NURS 313
Activity: Lecture
1.0 Course Unit
Notes: This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond. Undergraduates by permission of instructor

NURS 515 Sociocultural Influences on Health
This course is intended for students interested in U.S./Global Healthcare. It includes lectures, discussions, readings, and written assignments focused on various social, cultural, and economic factors that impact the health and illness perceptions and behaviors of various ethnic and minority groups. In particular, it focuses on how culture affects health and disease, and how health and disease affect culture. This course takes a critical approach to knowledge development by scrutinizing values, theories, assumptions, and practices cross culturally. It relies upon a range of interdisciplinary approaches to analyze how disease is diagnosed, treated, and experienced differently in various cultural contexts. At the same time, students will have the opportunity to examine and critique cultural assumptions and theories, the shifting nature of cultures, the situational use of cultural traditions, and the ethnocentrism of contemporary Western health care. Special attention is given to the influence of race, class, gender, religious, and spiritual ideas about health and illness.
Course usually offered in spring term
Also Offered As: NURS 315
Activity: Lecture
1.0 Course Unit
NURS 516 International Nutrition: Political Economy of World Hunger
A detailed consideration of the nature, consequences, and causes of hunger and undernutrition internationally. Approaches are explored to bringing about change, and to formulating and implementing policies and programs at international, national, and local levels, designed to alleviate hunger and under-nutrition. Prerequisite: Graduate Students Only This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.
Course usually offered in spring term
Also Offered As: NURS 316
Activity: Lecture
1.0 Course Unit
Notes: Prerequisite: Graduate Students Only

NURS 518 Nursing and the Gendering of Health Care in the United States and Internationally, 1860-2000
This course examines changing ideas about the nature of health and illness; changing forms of health care delivery; changing experiences of women as providers and patients; changing role expectations and realities for nurses; changing midwifery practice; and changing segmentation of the health care labor market by gender, class and race. It takes a gender perspective on all topics considered in the course. A comparative approach is used as national and international literature is considered. This focus is presented as one way of understanding the complex interrelationships among gender, class, and race in health care systems of the United States and countries abroad.
Course usually offered in spring term
Also Offered As: GSWS 518
Activity: Lecture
1.0 Course Unit

NURS 521 Current Topics in Nutrition
The objective of the course is to integrate the nutrition knowledge obtained from previous course work in nutrition and provide the student the opportunity to explore, analyze and formulate implications of the research and related literature on a self-selected topic under the guidance of the faculty coordinator. Current topics and controversies in nutrition will be discussed weekly. Readings will be assigned in coordination with each discussion topic and students will be required to seek out other sources of information to add to the class discussion. Topics will change from year to year to reflect the most recent interests and issues.
Course not offered every year
Activity: Seminar
0.5 Course Units

NURS 523 Advanced Nutrition: Molecular Basis of Nutrition
Essentials of nutritional biochemistry of macronutrient (protein, carbohydrate,lipid) metabolism from the molecular level to the level of the whole human organism. Linkages between energy and nitrogen balance and states of health and disease are examined. Topics include energy metabolic pathways, nutrient transportation, nutrient catabolism, nutrient anabolism, body composition, and biomarkers.
Activity: Lecture
1.0 Course Unit

NURS 524 Advanced Human Nutrition and Micronutrient Metabolism
Essentials of vitamin and mineral digestion, absorption, metabolism, and function in humans during states of health and disease are examined. Linkages between key vitamins and their function in biological systems, such as bone health, energy metabolism, hematopoietic function, and immune function, are explored in depth. Topics include pertinent research methodologies, biomarkers, deficiency and toxicity states, and requirements across the life cycle. Prerequisite: Special permission
Activity: Lecture
1.0 Course Unit

NURS 525 Ethical Aspects of Health and Technology
Interdisciplinary approach to the study of the interface between ethics and law in the provision of health and illness care. This course draws upon the disciplines of philosophy, law, biomedical engineering and nursing in examining such concepts as the use/nonuse of biomedical technology, who and how one decides what shall be done for a given ‘patient’; and the ‘rights’ and responsibilities (accountability) of all persons involved in health/illness care decisions. The interplay of ethical theory, personal value systems, law and technology will be stressed throughout. Lectures, seminars and case studies will be used. Special permission This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.
Taught by: Ulrich
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

NURS 526 Child and Adolescent Mental Health
This course is designed to prepare advanced practice registered nurses to address mental health concerns of children, adolescents and their families from a bio-psycho-socio-cultural perspective. Prevention, assessment, and treatment of psychiatric disorders affecting children and adolescents in a variety of settings will be presented in the context of mental health, school and primary health care delivery systems. Students will explore both pharmacologic and nonpharmacologic treatment strategies, as well as methods to identify and implement evidence-based practice in child and adolescent populations. Mental health policy, as well as the unique needs of special populations (e.g., youth in the juvenile justice system) will also be discussed. Prerequisite: Matriculation in a MSN Program or permission of instructors. Priority will be given to Psychiatric Mental Health NP students
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Priority will be given to Psychiatric Mental Health NP students
NURS 527 Foundations of Global Health
This interdisciplinary course covers fundamental concepts of global and population health. Epidemiology and methodology, historical and contemporary contexts, physical (water, air, climate change, and food/nutrition) and social (health inequities, sex/reproduction, injury/vviolence) determinants of health, and interventions for health improvement are addressed. Health problems such as infectious and chronic diseases cannot be understood apart from history, economics, environment, and inequalities - they are not simply medical issues. Global Health refers not only to the health problems of ‘others’ living in far corners of the world (low- and middle-income countries), but also to our own health problems as citizens of a very rich, but very unequal and multicultural nation. The aim of the course is to help students become more informed and active global citizens. Learning methods include faculty presentations, student presentations, and small group discussions. Although this course has a health focus, it is aimed at students interested in global issues.
Taught by: Liu, Jianghong
Course usually offered in fall term
Also Offered As: NURS 327
Activity: Lecture
1.0 Course Unit

NURS 529 Telehealth and mHealth Systems and Applications
This course is designed to develop intelligent consumers, managers, and researchers of telehealth and mHealth systems through guided exploration into the components of such systems. The course is designed to introduce many of the challenges facing designers and managers of telehealth/ mHealth and remote health care delivery networks. The spectrum of activity ranging from research into implications of system design for applications that bridge geographic distance to the development of practical applications is considered in both historical context and in case studies. The current status and future trends of this emerging domain are reviewed.
Taught by: Demiris, George
Also Offered As: BMIN 509
Activity: Lecture
1.0 Course Unit

NURS 532 Cognitive Behavior Strategies in Health Care
Cognitive therapy will be studied as it has been adapted to treat a broad spectrum of clinical disorders including depression, anxiety, phobias, substance, obesity, marital problems, sexual dysfunction, and psychosomatic disorders. Students will have an opportunity to study and observe the crucial link between thoughts and emotions and the sense of competency patients can develop through self-help techniques. The course utilizes didactic, experiential and observational techniques.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

NURS 535 Comparing Health Care Systems in an Intercultural Context: Study Abroad
This course offers students an opportunity to: 1) expand their knowledge base in health care systems; 2) develop intercultural competency skills and 3) shape a conceptual framework for improving the quality of health care for the individual, the family, the community and society at large. Emphasizes the relational, contextual nature of health care and the inseparability of the notions of the health of individuals and the health of family, society, and culture. Includes field experience. Prerequisite: Permission of instructor Seminar held in Spring, study abroad field experience held intra-session
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Seminar held in Spring, study abroad field experience held intra-session Permission of instructor

NURS 540 Current Issues In Health and Social Policy
Analysis of key contemporary issues in health and social policy that will provide students with a deeper understanding of the design and structure of the U.S. health care system, the policy initiatives that have shaped it, and the roles of the government, the private sector, and consumers and advocacy groups in setting the policy agenda. Seminars will examine the origins of each issue, the policies enacted and their effects, both intended and unintended, and will propose and debate the merits of alternative policy solutions. The role of health services and policy research in informing the policy debate and directions will be highlighted. Please note, the online version of this course has a synchronous component (live online class sessions). The day/time will be listed in the course register. This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.
Course offered summer, fall and spring terms
Also Offered As: NURS 334
Activity: Online Course
1.0 Course Unit
Notes: This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and beyond.

NURS 543 Global Health Seminar
Global course topics vary by section. Please contact the program for additional details.
Also Offered As: AFRC 343, NURS 343
Activity: Seminar
1.0 Course Unit

NURS 545 Maternal and Infant Care in the Americas
This clinical elective will provide an intensive historical, sociopolitical, and cultural perspective of health and health care delivery in the Americas with a special emphasis on Latin America and the Caribbean. Classroom, direct clinical care and field experiences are designed to provide students with a broad view of the history and culture system of the country of focus. The delivery of health care to women and children will be explored from a sociopolitical, cultural and historical context. Service learning experiences are an integral component of this course. The course includes 5 seminars on campus and 10-14 days on site in the country of focus. The country of focus may vary each semester. Prerequisite: Permission of instructor
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Registration By Permission of Instructor
NURS 547 Scientific Inquiry for Evidence-based Practice
This course is designed to advance students’ understanding of the research process, methods of scientific inquiry, and analytical techniques. Students acquire knowledge of systematic approaches used by scientists to design and conduct studies. Course content prepares students to appraise quantitative and qualitative research, and evaluate the scientific merit and clinical significance of research for translation into practice. Evidence-based guidelines are examined and rated for strength of evidence and expert consensus using evidence grading systems and defined criteria. Students engage in variety of creative learning experiences to facilitate appreciative inquiry, clinical reasoning, and evidence-based practice. Quality improvement, comparative effectiveness analyses, information science, and electronic health systems technology demonstrate the capacity for measurement and surveillance of nursing-sensitive and other outcomes used to evaluate quality nursing care and test interventions. Ethical, legal and health policy implications for research are explored. This course serves as the basis for scientific inquiry about human experiences to address important problems that require solutions and to expand the research and the evidence base for professional nursing practice.
One-term course offered either term
Prerequisite: NURS 230 OR STAT 101 OR STAT 111
Activity: Lecture
1.0 Course Unit

NURS 548 Negotiations in Healthcare
This course examines the process that leads to change in health care settings and situations. Students will develop skills that lead to effective negotiations in interpersonal and organizational settings. Included in the discussion are: concepts of organizational structure and power, negotiating in difficult situations, and the role of the health care professional in negotiation and change. The course also examines techniques leading to successful implementation of negotiated change in the practice setting. Prerequisite: Undergraduates must have permission of instructor
This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and beyond.

NURS 549 Human Resources Management in Healthcare
Today’s healthcare industry continues to be highly turbulent in nature presenting many challenges for leaders in the workplace. Competency in workforce planning and recruitment, selection and retention of top talent for organizational innovation and growth are essential for nursing leaders. Utilizing the American Organization of Nurse Executives (AONE) Competencies (2006) as a curricular guide, this course emphasizes human resources management skills essential for any nurse leader to address employee relations challenges and provide for an enriching work environment.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit
Notes: Summer Course

NURS 553 Innovation & Applied Technology in Health Care
This course is offered to undergraduate and graduate students from across the Penn campus who want to join interdisciplinary teams that tackle health care challenges using technology in the form of games, apps, websites, or other technology. Students from nursing, engineering, computer science, design, marketing, or communication, or other schools or departments will be matched by interest and skill to multidisciplinary teams. Types of technology, theory of gaming, motivation, and incentives to change health behaviors are a few of the topics that may be identified as a project. The course provides a forum for germinating and developing conceptual models, programming, using game theory for therapeutic interventions, and entrepreneurship. Examples of such applications are medication management tools, health risk detectors, games that teach health skills and behaviors, e-prescribing applications, recruitment tools for greater diversity in nursing, applications that improve the workflow in health care settings, and applications that promote patient-centered care.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

NURS 555 Health Education for Incarcerated Women
This elective course will afford students the opportunity to develop and implement health education workshops for incarcerated women in the Philadelphia jail system. Students will explore the social and historical framework and trends in the incarceration of women, as well as the needs of this population, and will identify specific areas that need to be addressed by particular disciplines or professions. Students will have direct contact with the jail system, its staff, and female inmates.
Taught by: Brown, K.
Course usually offered in fall term
Also Offered As: GSWS 555
Activity: Lecture
1.0 Course Unit

NURS 556 Men and Incarceration
Students in this course will develop and implement health and wellbeing education programming for incarcerated men in the Philadelphia Department of Prisons. Most of the classroom time is in the Philadelphia Prison interacting with male inmates. Evidence suggests improved self-regulation may enhance other therapeutic methodologies consequently reducing the frequency of reoffending. Students will explore the social and legal trends driving the incarceration of urban men and the resulting health and wellbeing needs of this population. Students will have direct contact with the jail system, its staff, and male inmates.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
NURS 557 Principles of Palliative Care
This course examines national and global perspectives and clinical issues in the delivery of palliative care with diverse populations in multiple health care settings. Students focus on the care of persons with life-threatening, progressive illness, emphasizing respect for patients' and families' beliefs, values, and choices. Students also explore psychosocial and spiritual dimensions of palliative care. Historical, sociocultural, economic, legal, and ethical trends in palliative care are discussed. Factors affecting health care systems and societal attitudes are considered in evaluating the delivery of care during advanced illness and at the end of life. Students engage in the critical analysis of literature, research, and observational experiences concerning biopsychosocial needs of patients and families. Students acquire competencies in patient/family assessment, communication, decision-making, and interdisciplinary collaboration in palliative care. Prerequisite: Undergraduate Students need permission This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond. Course usually offered in fall term Also Offered As: NURS 367 Activity: Lecture 1.0 Course Unit Notes: Undergraduate Nursing students need faculty permission

NURS 565 Health Communication in the Digital Age
Health communication spans activities from in-person communication to technology based interventions and mass media campaigns. Health communication interventions are applied across a variety of health promotion and disease prevention activities. In this course, we will explore a variety of approaches to using communication strategies to improve individual and population health. The course will provide an introduction to the theory, design, and evaluation of health communication programs. We will review and critique several health communication interventions. The course will also include a special emphasis on new media and technology, as well as developing practical skills for developing health communication programs. Also Offered As: NURS 353, PUBH 565 Activity: Lecture 1.0 Course Unit

NURS 567 An Evidence-based Approach to Managing Symptoms in Advanced Illness
This course uses an evidence-based approach towards systematic assessment and management of common symptoms and symptom clusters accompanying progressive, life-limiting illnesses within a framework of nationally recognized standards and guidelines for palliative and end-of-life care. Students are prepared to apply principles of palliative management to diverse patient populations across clinical settings including acute, primary, long-term, and community care. Refer to course syllabus or email course faculty for respective requirements. Prerequisite: Junior and senior undergraduates may be admitted with course faculty permission Course usually offered in spring term Activity: Lecture 1.0 Course Unit

NURS 570 Foundations of Public Health
This course will provide a topical overview of the inter-disciplinary field of public health and provides grounding in the public health paradigm. Through a series of lectures and recitation sessions, students will learn about the history of public health and the core public health sciences including behavioral and social sciences, biostatistics, epidemiology, environmental health, and policy and management. Other topics include ethics in public health, context analyses (specifically sociographic mapping and urban health), community participation in research, public health promotion, and the prevention of chronic and infectious diseases. Course usually offered in fall term Also Offered As: PUBH 500 Activity: Lecture 1.0 Course Unit

NURS 573 Innovation in Health: Foundations of Design Thinking
Innovation, defined as a hypothesis-driven, testable, and disciplined strategy, is important to improve health & healthcare. Employing new ways of thinking, such as with design thinking, will help open up possibilities of ways to improve health & the process of healthcare. Incorporating current & emerging social & digital technologies such as mobile apps, wearables, remote sensing, and 3D printing, affords new opportunities for innovation. This course provides foundational content & a disciplined approach to innovation as it applies to health & healthcare. A flipped classroom approach with the in-class component focusing on group learning through design thinking activities. The course is open to undergraduate nursing students as a case study & upper-level undergraduates and graduate students from across the Penn campus. The course provides a theoretical foundation in design thinking & may provide an overview of innovation technology & digital strategies as well as social & process change strategies. To enhance the didactic component, students will actively participate in a design case study. Students will be matched by interest and skill level with teams & will work with community-based organizations, healthcare providers and/or innovation partners. Student teams will meet their partners to identify & refine a health or healthcare problem to tackle. Students will work throughout the semester to create an innovative solution that will be pitched to their community-based organization, healthcare provider, and/or innovation partner at the end of the semester. Taught by: Leary One-term course offered either term Also Offered As: NURS 357 Activity: Lecture 1.0 Course Unit

NURS 575 Health, Sustainability, Built Environment Design
Placemaking is a powerful tool for healthy communities. This course is open to students in nursing, public health, medicine, environmental policy, planning and design for intersectoral professional work. Through the design of place, including housing, schools, healthcare facilities, and the workplace, the class will investigate the impact of Social Determinants of Health and build a Culture of Health. Course work covers design and planning theory that intersects with diseases, sustainability, climate action and interconnectivity. Case studies, seminars, and tours will help students synthesize how to promote health through the design and development process and to make effective communication to enhance health equity. Taught by: Joyce Lee Course not offered every year Activity: Lecture 1.0 Course Unit Notes: Spring 2020 class dates: January 2,3,6,7,9,10 & 13, 2020 (9am-4pm)

NURS 575 Health, Sustainability, Built Environment Design
Placemaking is a powerful tool for healthy communities. This course is open to students in nursing, public health, medicine, environmental policy, planning and design for intersectoral professional work. Through the design of place, including housing, schools, healthcare facilities, and the workplace, the class will investigate the impact of Social Determinants of Health and build a Culture of Health. Course work covers design and planning theory that intersects with diseases, sustainability, climate action and interconnectivity. Case studies, seminars, and tours will help students synthesize how to promote health through the design and development process and to make effective communication to enhance health equity. Taught by: Joyce Lee Course not offered every year Activity: Lecture 1.0 Course Unit Notes: Spring 2020 class dates: January 2,3,6,7,9,10 & 13, 2020 (9am-4pm)
NURS 580 Pharmacology of Anesthesia and Accessory Drugs I
This course explores the various routes of anesthetic administration addressing the potential benefits and risk of each. Special emphasis is placed on specific anesthetic agents and their appropriate use. The responses and common complications associated with these agents are discussed.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

NURS 587 Advanced Leadership Skills in Community Health
Grounded in a social justice perspective, this course aims to provide the student with a foundational overview of the field of community health and leadership skills in public health advocacy. The course encourages critical thinking about health outcomes framed by the broad context of the political and social environment. This course analyzes the range of roles and functions carried out by leaders in healthcare advocacy for marginalized communities; integrates knowledge of health policy and the key influence of government and financing on health outcomes; explores community-based participatory research and interventions as tools for change; and discusses ways to develop respectful partnerships with community organizations. An assets-based approach that draws upon the strengths of communities and their leaders provides a foundation for community-engagement skill building. The course emphasizes the development of skills and techniques to lead effective, collaborative, health-focused interventions for disenfranchised groups, including residents of urban neighborhoods. Prerequisite: Undergraduates with permission of the instructor
Taught by: Klurasitz
Course usually offered in spring term
Also Offered As: HPR 588, PUBH 588
Activity: Lecture
1.0 Course Unit
Notes: Undergraduates need permission of the instructor

NURS 588 The Politics of Women's Health Care
This course will utilize a multidisciplinary approach to address the field of women's health care. The constructs of women's health care will be examined from a clinical, as well as sociological, anthropological and political point of view. Topics will reflect the historical movement of women's health care from an an obstetrical/gynecological view to one that encompasses the entire life span and life needs of women. The emphasis of the course will be to undertake a critical exploration of the diversity of women's health care needs and the past and current approaches to this care. Issues will be addressed from both a national and global perspective, with a particular focus on the relationship between women's equality/inequality status and state of health. This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.
Taught by: Lessner
Course usually offered in fall term
Also Offered As: GSWS 588
Activity: Lecture
1.0 Course Unit
Notes: This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and beyond.

NURS 600 Principles and Practice of Transformative Nursing Education
This course is designed to provide expert nurses with a theoretical foundation to promote excellence in teaching in both faculty and professional development roles. Principles of adult learning theory, learning styles and preferences are explored with a focus on impact for educational design. Students will review various learning domains and approaches for curriculum development including writing measureable learning objectives. Content also includes an examination of numerous didactic teaching strategies, general tactics for the use of simulation, approaches for inter-professional collaboration, and methods for evaluating learner competence. Prerequisite: permission of instructor
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Hybrid format - online content; on-campus fall 2019 meetings are October 17-18, and December 5-6, 9am-4pm

NURS 601 Teaching Nursing in an Academic Environment
This course provides students with the fundamental knowledge and skills in preparation for teaching in a faculty role in an academic environment. Specific focus will be placed on program design, development of teaching skills in the didactic, simulation, clinical, and online learning environments, management of didactic and clinical course offerings including effective use of learning management systems, and methods for evaluation of student performance including various test constructions and paper grading rubrics. This course also reviews approaches and resources for working with students who have learning challenges or performance issues.
Taught by: Deborah Becker
Course usually offered in spring term
Prerequisite: NURS 600
Activity: Hybrid Course
1.0 Course Unit

NURS 602 Teaching Professional Nurses in the Practice Environment
This blended online/in-class graduate level course prepares expert nurses who are considering work in nursing professional development in a variety of practice settings. This course is taken after completing the prerequisite NURS 500 Principles and Practice of Transformative Nursing Education offering, and will utilize the most current American Nurses Association Nursing Professional Development Scope & Standards of Practice as a foundation for examining roles and responsibilities of nursing professional development (NPD) practitioners. Content will address the when, who, where, how, what and why of nursing professional development including but not limited to principles related to onboarding/orientation, education and role development, competency management, developing collaborative partnerships, translating evidence-to-practice, facilitating quality improvement, and measuring the value of NPD.
Prerequisite: Basic course in research design, statistics and/or reearch utilization or by permission of the instructor Highly recommended for BSN-PhD students and MSN students exploring the possibility of returning for a research doctorate. A version of this seminar will be offered to students in the honors BSN program.
Course usually offered in spring term
Prerequisite: NURS 600
Activity: Lecture
1.0 Course Unit
Notes: Most sessions online; contact program for in-class meeting dates and times
NURS 603 Basic Principles of Nurse Anesthesia Practice II
This course provides students the opportunity to integrate theory and principles into practice within the clinical setting. Scope of practice, role development, ethical and cultural considerations and anesthetic interventions will be introduced and explored in the classroom and simulation suite. The student will transition to the surgical suite to begin clinical fieldwork, where they will progress from the care of healthy patients undergoing minimally invasive surgical procedures to the more complex patients with multiple health issues.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

This course focuses on theory and research from the behavioral and nursing sciences on the psychological and social consequences of on-going illness. In addition, the health policy issues engendered by these problems will be addressed. Prerequisite: Primary Care Majors or instructor permission
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

NURS 605 Advanced Principles of Nurse Anesthesia Practice: Cardiac, Vascular, and Thoracic Surgery
The basic principles of anesthesia practice will be expanded upon, focusing on specific populations, including the incidence and prevalence of various disease states. This course explores the special considerations required for the care of cardiac, vascular and thoracic patients undergoing anesthesia. An in-depth analysis of the pre-anesthesia assessment, perioperative considerations and post anesthesia monitoring necessary to facilitate optimal patient outcomes are summarized. Further, evidence-based case studies will be discussed highlighting the epidemiologic considerations for various disease states.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

NURS 606 Adv Principles of Nurse Anesthesia Practice: Neurosurgery, Orthopedics, Pain Management & Trauma
The basic principles of anesthesia practice will be expanded upon, focusing on specific populations, including the incidence and prevalence of various disease states. This course explores the special considerations required for the care of the neurosurgical, orthopedic and traumatically injured patients undergoing anesthesia. An additional focus will be directed towards pain management in the surgical population. An in-depth analysis of the pre-anesthesia assessment, perioperative considerations and post-anesthesia monitoring necessary to facilitate optimal patient outcomes are summarized. Further, evidence based case studies will be discussed, highlighting the epidemiologic considerations for various disease states.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

NURS 607 Advanced Physiology and Pathophysiology
This course will integrate advanced physiology with pathophysiology and clinical implications across the lifespan for advanced nursing practice. Organ systems function and dysfunction from the level of the cell through integrated organ levels will be presented, and the genetic basis of disease will be discussed. Recent scientific advances will be discussed with application to new approaches to disease and symptom management. The interrelationships between basic physiology, clinical pathophysiology, and genetics are emphasized through lecture and case studies. Prerequisite: Enrollment in MSN or DNP program or permission of instructor
Taught by: Libonati
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

NURS 608 Advanced Pharmacology and Therapeutics for Nursing Practice
Advanced principles of clinical pharmacology and therapeutics are applied to the nursing care of individuals across the life-stage spectrum. It focuses on the content and knowledge employed by the advanced practice registered nurse in the management of various conditions and disease states. The course builds on the pharmacology knowledge base acquired in the baccalaureate nursing program. The advanced pharmacology and therapeutics of several common diseases or conditions found in the acute care and primary care setting is presented. This is supplemented with pharmacotherapy modules to meet program specific needs.
One-term course offered either term
Prerequisite: NURS 607 OR NURS 685
Activity: Lecture
1.0 Course Unit

NURS 609 Advanced Principles of Nurse Anesthesia Practice: Special Surgery
This course explores the perioperative evaluation and advanced anesthetic principles related to patient populations undergoing a broad range of surgical procedures. Emphasis is placed on selection and administration of anesthesia to these populations to ensure optimal patient care, safety, monitoring and implementing interventions to prevent and treat common perioperative emergencies. Prerequisite: Enrollment in NANS program - year 2
Taught by: Dawn Bent
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

NURS 610 Concepts in Healthcare Economics
This course examines health care from an economic perspective tailored for the nurse manager and executive. Emphasis is on the allocation of health care resource policies in the United States with examination of different health care programs. Within the health care industry, focus is on public and private health care funding in addition to the role of managed care systems with relation to financing and delivery of health services. This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units
NURS 611 Advanced Principles of Nurse Anesthesia Practice: Problem-Based Learning
Exploration of the conceptual-theoretical basis of nursing. Analysis and evaluation of conceptual models of nursing and nursing theories with emphasis on implications for nursing practice. Prerequisite: Enrollment in CRNA program; year 3
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

NURS 612 Principles and Practice of Healthcare Quality Improvement
Healthcare delivery is complex and constantly changing. A primary mission of leading healthcare organizations is to advance the quality of patient care by striving to deliver care that is safe, effective, efficient, timely, cost effective, and patient-centered. The goal of this interprofessional course is to provide students with a broad overview of the principles and tools of quality improvement and patient safety in health care while also guiding them through the steps of developing a quality improvement project. It will provide a foundation for students or practicing clinicians who are interested in quality improvement and patient safety research, administration, or clinical applications. As part of this course, students will design and plan for a real quality improvement project in their area of interest within healthcare using the methods and tools taught in the course.
Taught by: Myers, Greysen
Course usually offered in fall term
Also Offered As: HQS 612
Activity: Lecture
1.0 Course Unit

NURS 613 Behavioral Economics and Health
This course will explore answers to pressing public health questions through the lens of behavioral economics. Behavioral economics, a field at the intersection of psychology and economics, suggests that humans rarely behave rationally when making health-related decisions. The course will take a very pragmatic, hands-on orientation to behavioral economics and health research and practice. It will also leverage the deep and rich expertise of Penn’s Center for Health Incentives and Behavioral Economics, a leading research organization in the field.
Also Offered As: PUBH 608
Activity: Lecture
1.0 Course Unit

NURS 614 Advanced Principles of Nurse Anesthesia Practice: Professional Practice
Population specific topics of concern to nurse anesthetists are reviewed and discussed. Seminal works in the field of anesthesia are reviewed and discussed to facilitate a comprehensive review of contemporary anesthesia practice. The gaps between research and its implementation in practice will be considered. Students will focus on completing a comprehensive review of 1) Basic sciences; 2) Equipment, Instrumentation and Technology; 3) Basic Principles of Anesthesia Practice; and 4) Advanced Principles of Anesthesia Practice as described by National Council on Certification and Recertification of Nurse Anesthetists. Prerequisite: Must be enrolled in the Nurse Anesthesia program
Taught by: Dawn Bent
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

NURS 616 Interpreting Epi Literature to Inform and Influence
This course is designed for students interested in further exploration of epidemiologic methods and the challenge of establishing a causal relationship between exposure and outcome using an observational science. We will utilize case studies to address the application of epidemiologic data to specific issues of relevance to public health. The nature of observational data will be explored through these case studies and specific methodological challenges will be highlighted and examined.
Taught by: Amanda Bennett Palladino; Kate Wallis
Also Offered As: PUBH 606
Activity: Lecture
1.0 Course Unit

NURS 623 Nutrition Counseling
This 8-week online course introduces the future healthcare professional to the foundations of nutrition counseling. Each asynchronous session focuses on theory and application for promoting effective behavior change.
Taught by: Monique Dowd
One-term course offered either term
Activity: Online Course
0.5 Course Units

NURS 624 Pathogenesis of Mental Disorders and Psychopharmacology Across the Lifespan
The conceptual and practice application of brain-behavior relationships for individuals with psychiatric conditions is developed in this course. Specific biological theories of diagnostic classifications found in the Diagnostic and Statistical Manual of Mental Disorders Fifth Edition (DSM-5). This provides the basis for the development of a fund of psychopharmacology knowledge, critical thinking, and clinical judgment in the application of psychopharmacology agents in the treatment of psychiatric conditions for advanced practice psychiatric mental health nursing practice. Using case study methods to encourage the application of knowledge to clinical practice, the course pragmatically addresses culturally diverse client populations across the lifespan who present with a range of symptom manifestations, at all levels of severity. The course emphasizes evidence-based practice, research based clinical decision making and a holistic approach to integrating the science and biology of the mind with social and behavioral interventions.
Course usually offered in fall term
Prerequisite: NURS 607
Activity: Lecture
1.0 Course Unit

NURS 625 Clinical Modalities Across the Life Cycle in Advanced Practice
Crisis intervention, brief psycho-therapy, group processes and practices, milieu therapy, and intervention with families are examined as they relate to nursing practice in mental health.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit
NURS 626 Family and Organizational Systems Across the Life Span
This course presents Bowen Family Systems Theory as it applies to families over the life and organizations over time. This is a theoretical course whose purpose is to provide the student with a broad, systemic perspective on human functioning. The course begins with a detailed presentation of Systems Theory, from both a family and organizational perspective. As presented there is a continual compare and contrast to other dominant theories of human functioning. It then applies the concepts of Systems Theory to the understanding and assessment of the stages of the normal family life cycle from a multi-generational, multi-cultural perspective. This is followed by discussions of the theory's application to the emotional problems of children, adolescents, adults and their families. Likewise, application to organizational behavior is made, including health care organizations. Relevant research is discussed throughout.
Taught by: Pollack, F.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit
Notes: Summer Session I

NURS 628 Mental Health and Aging
An examination of the psycho-socio-cultural processes which influence the behavior patterns, coping, and adaptation of older adults. The course emphasizes strategies to promote mental health as well as assessment, presentation, and intervention in the major acute and chronic psychiatric disorders affecting the older adult.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

NURS 629 Basic Principles of Nurse Anesthesia Practice
The fundamental concepts learned in Advanced Physical Assessment and Clinical Decision Making will be used as a foundation to inform the basics of anesthesia practice. Assessment of the patient is reviewed with a specific focus on the anatomic and physiologic issues involved in the administration, maintenance and recovery from anesthesia. In addition, the course will encompass an overview of anesthesia history, nurse anesthesia practice and the perioperative environment. The student will transition to the surgical suite to begin clinical fieldwork at the conclusion of the course. Prerequisite: enrollment in NANS program, year 1
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

NURS 636 Pain Science and Practice
This interprofessional course focuses on the biopsychosocial aspects of pain and pain management from the perspectives of individualized pain care, scientific discoveries, evidence-based practice and cross-disciplinary learning. Content includes an integrated overview of the neurobiology of pain, psychosocial aspects of the pain experience, pain assessment and outcomes measurement, pharmacological and nonpharmacological approaches to the treatment of acute and chronic pain syndromes, national health policies for pain, evidence-based guidelines and best practices, and interprofessional care delivery models. Peripheral and central modulation of pain, neuroanatomical pathways, neurochemical mediators, and genetics are examined as the basis for explaining pain perception, behaviors and responses to treatments. Pain assessment and management for vulnerable populations are addressed along with strategies to reduce pain treatment disparities. Several acute and chronic (persistent) pain syndromes are discussed across the continuum of care (e.g., primary care, hospital, outpatient pain centers, and home care). Current research findings and evidence-based guidelines are applied to interprofessional collaboration and clinical decision-making to promote optimal care and outcomes for persons experiencing pain. Through case-based and directed learning, classroom simulation, and interactive discussions with national leaders spanning multiple disciplines, students acquire a strong scientific and practice foundation in the clinical care of persons with acute and chronic pain.
Course usually offered in spring term
Also Offered As: MED 536
Activity: Lecture
1.0 Course Unit
Notes: See department for class meeting dates and times

NURS 637 Introduction to Research Methods and Design
The relationships among nursing theory, research and practice will be examined. An emphasis will be placed on research competencies for advanced practice nurses (APNs), including understanding nursing research methods and strategies in order to evaluate research results for applicability to practice and to design projects for evaluating outcomes of practice. An understanding of statistical techniques will be integrated into the course and build on the required undergraduate statistics course. Published nursing research studies will be evaluated for scientific merit and clinical feasibility, with a focus on evidence-based practice. Please note, the online version of this course has a synchronous component (live online class sessions). See department for meeting days/times.
Prerequisite: Undergraduate Statistics Class, Must hold an RN license
Course offered summer, fall and spring terms
Activity: Lecture
1.0 Course Unit
**NURS 640 Global Health Policy and Delivery**
This participatory interdisciplinary seminar course examines contemporary issues in global health policy and delivery. The overall organizing framework for the class is the social determinants of health. The class will consider evidence that inequalities in education, income, and occupation influence health status. Students will develop skills in policy analysis, policy brief development, and policy impact monitoring. The public policy process will be explored using a variety of contemporary global health case studies which focus on content areas such as maternal health, HIV policy, refugee health, and global healthcare delivery. Finally, we will examine the global health workforce and the impact of widespread global migration of health professionals on receiving and sending countries.

Course usually offered in spring term
Also Offered As: PUBH 551, SWRK 793
Activity: Lecture
1.0 Course Unit
Notes: There are no prerequisites. The course is designed for graduate students in the social and behavioral sciences, health professions, public health, business and law. Advanced undergraduate students will be admitted with permission.

**NURS 641 Autism Spectrum Disorder: Prevalence, Etiology, Screening and Assessment**
Through classroom and clinical experiences, this course provides an overview of the public health problem of autism spectrum disorder (ASD). Content addresses the natural history, etiology, rising prevalence, risk factors, and core features. Changes in prevalence statistics and possible causes are outlined. These subjects are described in general terms for an overall picture of the disorder. Taking a developmental approach, students begin case management and follow a family through screening, diagnosis and treatment planning. Key information is elaborated through case studies. The course highlights the important and evolving role of nurses in the care of people with ASD. Content is supported by the scientific literature. Students' clinical experiences start the identification of and collaborative work with a family that has a young child with ASD. The student follows that family and the child through diagnosis, treatments and long term planning. This case approach allows the student to work with the same family over the entire post-masters program to learn the value of interdisciplinary, contiguous care. Prerequisite: Junior and senior undergraduate students may be admitted with course faculty permission. Post-BSN students only
Taught by: Pinto-Martin; Souders
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Junior and senior undergraduate students may be admitted with course faculty permission.

**NURS 642 Health and Behavioral Care Planning and Intervention for Autism Spectrum Disorder**
Through classroom and clinical experiences, this course focuses on the application of various treatment approaches to the management of acute and chronic problems of autism spectrum disorder. Approaches to behavioral, psychological and medical co-morbidities are explored, practiced and evaluated. Students' clinical experiences build on the previous semester and continue with the application of class instruction to patient and family care. The student works closely with behaviorists, psychologists and occupational therapists to integrate nursing care planning with other services. This case approach continues, and exposure to a second family is added to expand learning opportunities and develop nursing services.

Taught by: Pinto-Martin, Souders
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

**NURS 643 Leadership, Advocacy, and the Practice of Integrated Nursing Care of ASD**
Emphasis is on the synthesis of course content practice. Through classroom and clinical experiences, students critically examine the role of nursing in the life-long care of people with ASD, and identify ways to expand the scope of nursing care for this vulnerable population. Students explore the availability of services in the community and discuss approaches to patient advocacy. Students have opportunities to select an area of specialization to develop specific practice expertise. Such areas are Diagnosis and Referral Practices (e.g. ADOS Training), Behavioral Therapy Training (e.g. Applied Behavioral Analysis), and clinical research. Practical issues of collaboration and reimbursement for services are explored. Students' clinical experiences are designed to facilitate scholarship, independence and advanced specialization in a chosen component of ASD care, for example, behavioral analysis, screening and/or diagnosis, or an agenda for research. Students identify and implement an independent project.

Taught by: Pinto-Martin, Souders
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

**NURS 644 Health Care in an Aging Society**
Individual and societal influences on the care of older adults are examined in detail within the context of an emerging health care system. Normal changes in physical and psychological health are explored in depth. Significant issues affecting care of older adults and their families at the global and national level are discussed.

Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
NURS 646 Primary Care: Diagnosis and Management of Adults Across the Lifespan
This course focuses on development of critical thinking skills to address health care problems of adults across the lifespan, with an emphasis on middle-aged and older adults, develop differential problem solving skills and determine appropriate management interventions. The management of common acute and chronic health conditions will include evidence based primary preventions, drug and treatment therapeutics, and referral to other health care providers. Students have the opportunity to build on previously acquired skills and to apply concepts of primary care to manage the health problems of adults across the lifespan.
Course usually offered in fall term
Prerequisite: NURS 657
Corequisite: NURS 647
Activity: Lecture
1.0 Course Unit

NURS 647 Primary Care Clncl Practicum: Diagnosis & Mgmt of Adults across the Lifespan
Management and evaluation of primary care problems of middle-aged and older adults in a variety of ambulatory and occupational settings. Opportunity to implement the role of the nurse practitioner with middle-aged and older adults and their families in the community. Interdisciplinary experiences will be pursued & collaborative practice emphasized. Students are expected to assess and begin to manage common chronic health problems in consultation with the appropriate provider of care. The initiation of health promotion & health maintenance activities with individuals and groups is stressed. Includes 16 hours a week of clinical experience with a preceptor.
Taught by: Kathleen DeMutis
Course usually offered in fall term
Prerequisite: NURS 657
Corequisite: NURS 646
Activity: Clinic
1.0 Course Unit

NURS 648 Primary Care: Complex Diagnosis and Management of Adults across the Lifespan
This course will build on concepts presented in the Diagnosis and Management of Adults across the Lifespan (NURS 646) course. The focus is on refining health assessment skills, interpreting findings, developing and implementing appropriate plans of care to meet common health maintenance needs of adults and to promote the health of adults with more complex health problems with an emphasis on the frail adult. The student will gain increased expertise in communication skills, health assessment skills, interpreting findings, epidemiological concepts and developing and implementing plans of care. The emphasis will be placed upon managing an aging population with complex, chronic healthcare needs and promoting healthy behaviors across the lifespan.
Course usually offered in spring term
Prerequisite: NURS 646 AND NURS 647
Corequisite: NURS 649
Activity: Lecture
1.0 Course Unit

NURS 649 Primary Care Clinical Practicum: Complex Diagnosis and Management of Adults across the Lifespan
The focus of this course is the application of concepts presented in the Complex Diagnosis and Management of Adults Across the Lifespan (NURS 648) including initial workups of new patients, and the evaluation and management of patients with self-limiting acute problems, or stable chronic illnesses. Students will gain increased clinical expertise in a variety of community-based clinical settings including but not limited to health maintenance organizations, community clinics, long term care, assisted living, continuing care retirement communities, occupational health settings, and private practice. The student will gain increased expertise in communication skills, health assessment skills, interpreting findings, applying epidemiological concepts and developing and implementing plans of care for adults across the lifespan with health maintenance needs, and/or common acute and chronic health problems.
Taught by: Cotter; Taylor
Course usually offered in spring term
Prerequisite: NURS 646 AND NURS 647
Corequisite: NURS 648
Activity: Clinic
1.0 Course Unit

NURS 650 Systems Thinking in Patient Safety
This blended online/in-classroom graduate level course integrates principles of systems thinking with foundational concepts in patient safety. Utilizing complexity theories, students assess healthcare practices and identify factors that contribute to medical errors and impact patient safety. Using a clinical microsystem framework, learners assess a potential patient safety issue and create preventive systems. Lessons learned from the science of safety are utilized in developing strategies to enhance safe system redesign. Core competencies for all healthcare professionals are emphasized, content is applicable for all healthcare providers including, but not limited to, nurses, pharmacists, physicians, social workers and healthcare administrators, and may be taken as an elective by non-majors.
Taught by: Keim, Shaw
Course usually offered in spring term
Also Offered As: HQS 650
Activity: Lecture
1.0 Course Unit

NURS 651 Healthcare Informatics
Healthcare systems and consumers today are becoming increasingly reliant on information technology. The objective of this course is to provide a foundation for knowledge about health information technology and to expose students, clinicians, and administrators to the breadth of tools and systems currently used in practice. We will explore topics such as mobile health applications/telehealth and their implications for clinical practice and impact on patient outcomes; electronic health records, data analytics, and visualization tools and how these can effectively be used to support decision making and patient care.
Course usually offered summer term only
Activity: Online Course
1.0 Course Unit
NURS 652 Applied Healthcare Accounting and Business Planning
This course focuses on the management of financial resources in the healthcare industry particularly in inpatient and ambulatory care settings. Specific emphasis is on applied accounting, budgeting, capital planning, nursing staffing/scheduling and variance analysis. Additionally, students will apply concepts in developing a business/program plan including completion of an environmental scan, cost-benefit analysis and marketing plan. Students will engage in strategic planning, stakeholder analysis and benchmarking efforts.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

NURS 655 Nursing Administration Practicum
This administrative practicum will be individually tailored to meet each student's career goals. Students will be placed with an expert role model who in most instances will be a practicing nurse executive. The setting may vary according to the student's interests and objectives. Examples include acute care, home care, long term care, occupational health, community based clinics, consulting groups and political/legislative experiences.
One-term course offered either term
Activity: Clinic
1.0 Course Unit

NURS 656 Professional Role Issues for Nurse Practitioners
This course is intended for students planning a career that involves primary health care delivery. It includes lectures, discussions, readings, and projects focused on health, social, economic and professional factors influencing health care delivery in the community.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

NURS 657 Advanced Physical Assessment and Clinical Decision Making
This laboratory/clinical course is designed to help future advanced practice nurses develop advanced clinical assessment skills. Provider-patient interaction, data collection, and hypothesis formulation are emphasized. All participants engage in actual practice with fellow students, and/or models, and consenting patients. This course is to be taken the semester before clinical begins.
Taught by: Bischof, Reger
One-term course offered either term
Activity: Lecture
1.0 Course Unit

NURS 658 Clinical Management of Primary Care with Young Families
Assessment and treatment of the young child in ambulatory care settings is the focus of this developmentally organized course. This course provides the nurse practitioner student with the necessary knowledge and experience to assist individuals with the most common health problems, including acute episodic illness. The concepts of health promotion and health maintenance are integrated throughout the curriculum. Using a developmental framework, the maturational tasks and problems of children and their families in relation to illness and health are explored.
One-term course offered either term
Prerequisite: NURS 656 AND NURS 657
Corequisite: NURS 659
Activity: Lecture
1.0 Course Unit

NURS 659 Clinical Practicum: Primary Care with Young Families
Management and evaluation of primary care problems of children in a variety of ambulatory settings. Opportunity to implement the role of nurse practitioner with children and their families in the community occurs under the guidance of faculty and experienced preceptors. The initiation of health promotion and health maintenance activities with individuals and groups is stressed. Collaborative, interdisciplinary practice is emphasized as students assess and manage common problems in consultation with an appropriate provider of care. 20 hours a week of clinical experience with a preceptor is arranged.
One-term course offered either term
Prerequisite: NURS 656 AND NURS 657
Corequisite: NURS 658
Activity: Clinic
1.0 Course Unit

NURS 660 Clinical Practice with Select Populations: Adolescents
Focus on assessment and treatment of adolescents in a variety of settings. Didactic emphasis is on the special needs encountered among adolescents. This course adds to the student's previous knowledge and skill in the delivery of primary care. Working with this specific population the student gains necessary knowledge and experience in assisting individuals with most common health problems, including acute episodic illness and stable chronic disease, as well as health promotion needs.
Course usually offered summer term only
Activity: Clinic
1.0 Course Unit
Notes: Summer Session I

NURS 661 Clinical Management of Primary Care with Adults
Assessment and treatment of younger adults in ambulatory care settings is the focus of this clinical course. The course provides the nurse practitioner student with the necessary knowledge and experience to assist individuals with most common health problems, including acute episodic illness. The concepts of health promotion and health maintenance are integrated throughout the curriculum. Using a developmental framework, maturational tasks and problems of the adult and family in relation to illness and health are explored.
Course usually offered summer term only
Prerequisite: (NURS 646 AND NURS 647) OR (NURS 690 AND NURS 691)
Activity: Clinic
1.0 Course Unit
Notes: Summer Session I

NURS 663 Advanced Concepts in Primary Care
In conjunction with the development of advanced clinical skills, students focus on advanced practice role development and the study of issues in health service delivery related to the practice of primary health care. Economics, case management and cultural/ethical aspects of care are discussed.
Course usually offered summer term only
Activity: Clinic
1.0 Course Unit
NURS 664 Advanced Practice Nursing for Oncology Care
Students are introduced to cancer epidemiology and pathophysiology, cancer genetics, prevention, risk assessment and reduction for specific cancers, screening techniques, diagnostic procedures and criteria, and local and systemic therapies used to treat cancer. The influence of individual characteristics on health promotion, health behaviors, population cancer risk, and cancer detection are explored in the context of biological, psychological, socioeconomic and sociocultural factors across age groups from adolescents to older adults. Evidence-based practice guidelines and research are applied to promote healthy lifestyles, monitor cancer risk, address psychosocial issues, facilitate access to care, and reduce health care disparities for populations at risk and diagnosed with cancer, and cancer survivors. Online course with both synchronous and asynchronous components. Students are also required to attend two days of on-campus instruction in the fall semester. Permission to take this course as an elective must be approved by the course faculty.
Course usually offered in fall term
Activity: Online Course
1.0 Course Unit

NURS 666 Effects of Cancer and Cancer Therapy
Principles of cancer treatment, associated responses and symptom management are presented. Emphasis is on the development of advanced clinical decision making skills in identifying multiple alterations resulting from cancer and cancer therapy. Online course with both synchronous and asynchronous components Students are also required to attend two days of on-campus instruction in the spring semester. Permission to take this course as an elective must be approved by the course faculty.
Course usually offered in spring term
Prerequisite: NURS 664
Activity: Online Course
1.0 Course Unit

NURS 667 Oncology Nursing: Assessment, Diagnosis, & Cancer Management
Emphasis is on the application of critical thinking and diagnostic reasoning skills in advanced clinical decision making. Students access, diagnose, and manage the care of oncology patients with a variety of cancers. The delivery of care and evaluation of role effectiveness within the health care system are examined. Online course with both synchronous and asynchronous components. Course includes 240 clinical hours in an oncology setting
Course usually offered summer term only
Prerequisite: NURS 666
Activity: Online Course
1.0 Course Unit

NURS 670 Principles of Adult Gerontology Acute Care I
This didactic course examines the epidemiologic, assessment, diagnostic, management and evaluation of acutely or critically ill adults across the adult-older adult age spectrum. Students explore the dynamic interplay between the pathophysiologic basis of disease and the psychosocial and socio-cultural responses to acute and critical illness and injury as they develop clinical decision-making skills. An evidence-based approach to nursing and medical management including pharmacologic and non-pharmacologic modalities is emphasized.
Cardiovascular and pulmonary systems, infectious and prevention issues commonly encountered by adults are covered. Particular focus is placed on specific issues related to the older adult such as frailty, dehydration, loss of functional mobility, falls, and other geriatric syndromes.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

NURS 671 Principles of Adult Gerontology Acute Care II
In this didactic course, students learn to integrate their advanced pharmacology and pathophysiology background with their understanding of acute illness and injury. The focus is on the evidence-based management of patients with neurologic, gastrointestinal, renal, oncologic, and metabolic health problems. Students develop skills to create a differential diagnosis when an adult/older-adult presents with a constellation of symptoms. Common and atypical presentations of illness and disease are explored. Focus is placed on holistic care including the psychosocial, cultural, and spiritual aspects of patients’ response to their illness or injury. Epidemiology, assessment, diagnosis, management, and advanced clinical decision making based on current clinical research are emphasized.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

NURS 672 Principles of Adult Gerontology Acute Care III
This didactic course examines issues related to the epidemiology, assessment, diagnosis, and evaluation of acute, critical and complex chronically ill adults across the adult-older adult age continuum. Students explore the dynamic interplay between the pathophysiologic basis of disease and the psychosocial and socio-cultural responses to illness and injury across the adult age continuum as they develop clinical decision-making skills. An evidence-based approach to nursing and medical management including pharmacologic and non-pharmacologic modalities is emphasized. Content focuses on special adult and older adult patient populations with commonly encountered health problems.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit
**NURS 673 Advanced Clinical Decisions in Adult Gerontology Acute Care**
This didactic and fieldwork course focuses on development of a systematic approach to advanced physical assessment, the use and interpretation of diagnostic technologies and development of diagnostic reasoning as it applies to patient management of the adult-older adult acutely ill or injured patient. Emphasis is placed on development of competence to perform a comprehensive history and physical examination, incorporating the analysis of biotechnological data trends. Building fundamental skills in developing differential diagnoses and clinical decision making for acutely ill patients across the adult age continuum is a focus of this course.
Course usually offered in fall term
Prerequisite: NURS 607 AND NURS 657
Activity: Seminar
1.0 Course Unit

**NURS 674 Adult Gerontology Acute Care NP: Professional Role and Clinical Practicum I**
This didactic and clinical fieldwork course explores issues relevant to the role of the Adult Gerontology Acute Care Nurse Practitioner within the complex U.S. health care system. Role development, reimbursement issues, provision of quality and ethical care and evidence-based nursing and medical interventions are introduced and discussed in the classroom. Clinical fieldwork focuses on assessment of complex acute, critical and chronically-ill patients for urgent and emergent conditions, using both physiologically and technologically derived data, to evaluate for physiologic instability and potential life-threatening conditions, development of differential diagnoses, application of diagnostic reasoning and formulation, implementation, evaluation and modification of individualized plans of care including pharmacological and non-pharmacological modalities. Development of advanced clinical competencies and clinical decision making abilities about adults across the age continuum is emphasized. Prerequisite: Clinical field component requires two 10-hour clinical days, to be scheduled with the student’s individual preceptor.
Course usually offered in spring term
Prerequisite: NURS 673
Activity: Lecture
1.0 Course Unit
Notes: Clinical field component requires two 10-hour clinical days, to be scheduled with the student’s individual preceptor.

**NURS 675 Adult Gerontology Acute Care NP: Professional Role and Clinical Practicum II**
This didactic and fieldwork course focuses on the role of the Adult Gerontology Acute Care Nurse Practitioner and the expansion of advanced clinical competencies and clinical decision making abilities. Clinical experiences in acute care settings provide the student with opportunities to refine history and physical examination techniques, diagnostic reasoning, formulation, implementation, evaluation and modification of individualized management plans. Specific attention is given to the unique presentation of syndromes and constellation of symptoms that may be typical or atypical presentation of complex acute, critical and chronic illness in adults and older adults. Facilitating transition of patients at varying life stages through the complex health care system is encouraged exploring the multiple governmental, social and personal resources available to acutely ill adults across the age continuum. The application of advanced nursing, medical and biopsychosocial knowledge in the management of patients and the collaboration between the nurse practitioner and the patient, family and interprofessional healthcare team are emphasized.
Course usually offered summer term only
Prerequisite: NURS 674
Activity: Lecture
1.0 Course Unit

**NURS 676 Obesity and Health**
This 7-week online course introduces the learner to the etiology, prevalence, and pathophysiology of obesity in children and adults. This series of asynchronous sessions focuses on the biological, genetic and environmental causes of obesity and highlights the impact of obesity on chronic disease.
Taught by: Tanja Kral
Course usually offered in spring term
Activity: Online Course
0.5 Course Units

**NURS 677 Environmental Toxicology: Risk Assessment and Health Effects**
This course presents general principals of toxicology and the disposition of toxins in the body. Case studies of the effects of environmental and occupational toxins on individuals will be analyzed. This course is designed for students who desire a strong foundation in toxicological concepts and principals and provides an overview of major toxins in our environment and their association with human health. Prerequisite: Undergraduates needs permission
Taught by: Liu
Course not offered every year
Also Offered As: PUBH 530
Activity: Lecture
1.0 Course Unit
NURS 681 Applied Physiology for Nurse Anesthesia I
This course provides an in-depth analysis of the anatomy, physiology and pathophysiology of the respiratory and cardiovascular systems and related anesthesia implications. The concepts of ventilation and perfusion as they relate to oxygen and anesthetic delivery and metabolism are examined. The effects of compromised cardiac and pulmonary function and their implications for the patient and anesthesia plan are reviewed. The impact of anesthesia on the structure and function of the heart as a pump as well as the characteristics of systemic circulation will be explored. The effect of surgery and anesthesia on the respiratory and cardiovascular systems will be emphasized.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

NURS 682 Applied Physiology for Nurse Anesthesia II
This course provides an in-depth analysis of the anatomy, physiology and pathophysiology of the hepatic, renal, nervous, hormonal, immunologic and hematological systems and related anesthesia implications. The focus of discussion will be on the special considerations when delivering anesthetic agents to patients. Emphasis will be placed on the assessment of the patient with common disorders of these systems. Nurse anesthesia care related to patients undergoing surgeries involving each system will be discussed.
Course usually offered in fall term
Prerequisite: NURS 681
Corequisite: NURS 607
Activity: Lecture
1.0 Course Unit

NURS 683 Applied Physiology for Nurse Anesthesia III
This course is an in-depth analysis of the chemical and physical principles as they apply to nurse anestheisa practice. Aspects of organic and biochemistry including the chemical structures of compounds and its significance in pharmacology will be explored. Applications of the laws of physics as they pertain to nurse anesthesia practice will be reviewed with specific examples. Emphasis on the dynamics of the anesthesia delivery system and related equipment will be presented.
Taught by: Magro; Lynn; Scanga
Course usually offered in spring term
Prerequisite: NURS 682
Activity: Lecture
1.0 Course Unit

NURS 685 Advanced Developmental Physiology and Pathophysiology
This course will address advanced human embryology, physiology and pathophysiology. Biochemical genetics and the genetic basis of disease will be discussed. Normal fetal development and physiology of organ systems will be used as the foundation for understanding the pathophysiology of disease across the lifespan. Prerequisite: Undergraduate course in Anatomy & Physiology
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

NURS 686 Well Women Health Care, Theory
This course focuses on the management and evaluation of physical, emotional, socio-cultural and educational needs of gynecologic primary health care of women from adolescence through post-menopausal years. The content is directed at expanding the expertise of the student in meeting the primary women's health care needs in contemporary society. Social influences that have an impact on women's lives are also explored.
Course usually offered in fall term
Also Offered As: NURS 781
Prerequisite: NURS 607 AND NURS 657 AND NURS 780
Activity: Lecture
1.0 Course Unit

NURS 688 Complementary/Alternative Therapies in Women's Health
The dramatic rise in the use of complementary and alternative medicine (CAM) by the American public requires that the contemporary health care practitioner have an awareness of CAM therapies and modalities currently available. The end result of this is course will not be proficiency in the practice of any of these modalities in particular, but rather a basic understanding of each approach to common conditions and their potential contribution to health and well-being. The focus of the CAM modalities discussed in this course will center on their use in women's health care provision.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

NURS 690 Family Focused Primary Care of the Middle-Aged and Older Adult
This course focuses on primary care problems encountered by middle-aged and older adults and their families. Students have the opportunity to build on previously acquired skills and to apply concepts of primary care to manage the complex health problems of middle-aged and older adults.
Course usually offered in spring term
Prerequisite: NURS 656 AND NURS 657
Corequisite: NURS 691
Activity: Lecture
1.0 Course Unit

NURS 691 Clinical Practicum: Family Focused Primary Care of the Middle Aged and Older Ad
The focus of this course is the evaluation and management of primary care problems in middle-aged and older adults. Students will have an opportunity to implement the role of the nurse practitioner in the clinical setting. Interdisciplinary collaborative experiences will be essential to the clinical practicum. The initiation of health promotion and health maintenance activities with individuals, groups and families is stressed. Students are expected to assess and manage common chronic health problems in the clinical setting.
Course usually offered in spring term
Prerequisite: NURS 656 AND NURS 657
Corequisite: NURS 690
Activity: Clinic
1.0 Course Unit
NURS 693 Professional Issues in Midwifery
In-depth discussion of current issues facing the profession of nurse-midwifery which impact on professional education, certification, and practice. Includes ethical, legal, and political aspects of nurse-midwifery practice.
Course usually offered in fall term
Prerequisite: NURS 787 AND NURS 788
Corequisite: NURS 786
Activity: Lecture
1.0 Course Unit

NURS 696 Quality Improvement in Healthcare Capstone: MHQS Program
The purpose of the quality improvement capstone is to provide a culminating experience in the master’s program that requires the integration and application of knowledge attained in pre- and co-requisite coursework. Students will apply this knowledge through completion of a mentored quality improvement project in a healthcare organization. In collaboration with faculty and health organization advisors, students will identify a quality improvement opportunity and use improvement methodology to describe the extent of the problem, analyze the current system, design tests of change (countermeasures), implement at least two plan-do-study-act cycles, and measure results. Students will also reflect on lessons learned and process of change.
Taught by: Myers; Keim
Course usually offered in spring term
Prerequisite: NURS 612
Corequisite: NURS 650
Activity: Field Work
1.0 Course Unit

NURS 697 Leadership in Advanced Oncology Nursing Practice
Students explore the diagnosis and treatment of common cancers in a multidisciplinary approach. The broad array of bio-medical and psychosocial issues that result from the disease itself across the illness continuum are studied. Quality of life, rehabilitation and palliative care issues related to cancer care are addressed. Additionally, students complete an administrative practicum with a nursing leader in an oncology specialty area within a healthcare organization.
Course usually offered summer term only
Activity: Field Work
1.0 Course Unit

NURS 698 Quality Improvement in Healthcare Capstone: Certificate and Graduate Minors
The purpose of the quality improvement capstone is to provide a culminating experience in the minor or certificate program that requires the integration and application of knowledge attained in pre- and co-requisite coursework. Students will apply this knowledge through completion of a mentored quality improvement project in a healthcare organization. In collaboration with faculty and health organization advisors, students will identify a quality improvement opportunity and use improvement methodology to describe the extent of the problem, analyze the current system, design tests of change (countermeasures), implement at least two plan-do-study-act cycles, and measure results. Students will also reflect on lessons learned and process of change.
Taught by: Hart
Course usually offered in spring term
Activity: Field Work
1.0 Course Unit

NURS 699 Advanced Roles in Administrative Nursing Practice
Offered at the end of the Nursing and Health Care Administration or Health Care Leadership programs, this course prepares the graduate for entry into a myriad of administrative or leadership roles. Students will explore role responsibilities for various levels of management positions; health care consultants; health policy advocates; global health leaders; staff development directors; and administrators in non-traditional settings i.e., journal editors, professional associations etc. Prerequisite: For Students of the Nursing Administration and Healthcare Leadership Only
Taught by: Keim/Fitzpatrick
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit
Notes: see department for class dates

NURS 705 Advanced Practice Nursing Practice: Psychiatric Mental Health NP I
Supervised advanced psychiatric mental health nursing practice with children, adolescents and their families, or adults and/or older adults and their families in a variety of settings, depending on the subspecialty option selected. Focus is on clinical assessment/diagnosis and decision-making. A minimum of 16 hours of practice and 3 hours of small group supervision is required.
Course usually offered in fall term
Activity: Clinic
1.0 Course Unit

NURS 706 Advanced Practice Nursing Practice: Psychiatric Mental Health NP II
Supervised advanced psychiatric mental health nursing practice with children, adolescents and their families, or adults and/or older adults and their families in a variety of settings, depending on the subspecialty option selected. Refinement and development of clinical intervention with an increasingly diverse caseload. A minimum of 16 hours of practice and 3 hours of small group supervision is required.
Course usually offered in spring term
Activity: Clinic
1.0 Course Unit

NURS 707 Advanced Practice Nursing Practice: Psychiatric Mental Health NP III
Supervised advanced psychiatric mental health nursing practice with children, adolescents and their families, or adults and/or older adults and their families in a variety of settings, depending on the subspecialty option selected. Outcome evaluation, termination and professional role development. A minimum of 16 hours of practice and 3 hours of small group supervision is required.
Course usually offered summer term only
Activity: Clinic
1.0 Course Unit
NURS 708 Public Policy Leadership in the American Public/Private System of Health Care
This course will explore the philosophy and growth of public policy that has directed the American Health Care System in its ever expanding movement toward universal health care for all citizens. Analysis of health policy and systems content will assist the students to identify the knowledge and skills needed for the health or human service provider to assume leadership roles in the formulation of public policy for change; this includes system restructuring, service delivery and funding of health care. Emphasis will be on the effect of policy on the individual/family user of health care services rather than the effect on professional health care providers or health care delivery systems. Special attention will be given to the effect of policy on populations, both urban and rural, living near and below the poverty level.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

NURS 714 Management of Critically Ill Children with Acute and Chronic Conditions: Advanced
This clinical course is designed with emphasis on continued development of advanced clinical decision-making skills in the care of critically ill children. Emphasis is placed on knowledge and skills that allow the advanced practitioner to efficiently and effectively manage children who are dependent upon or assisted by technological devices to carry out life processes.
Course usually offered summer term only
Prerequisite: NURS 736
Activity: Lecture
1.0 Course Unit

NURS 715 Common Management Issues of Children with Acute and Chronic Conditions: Pediatric Oncology
This course examines the unique contribution made by nurses with advanced clinical skills in the care of children with oncologic and hematologic disorders, and their families, from the time of diagnosis throughout the treatment period and beyond. The course provides the student with the most recent advances in knowledge about cancer in childhood. While the focus is on oncology, hematologic disorders as well as AIDS will be discussed. Recent methods of treatment and the nursing management of children and their families will be addressed.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

NURS 720 Nursing of Children Theory I: Child and Family Development
This course focuses on developmental theories and concepts that form the basis for nursing assessment and intervention with children and families. Emphasis is given to current research and issues in child and family development and functioning.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

NURS 721 Advanced Physical Assessment and Clinical Decision Making: Nursing of Children Clinical I
This clinical course is designed to help prospective advanced practice nurses develop advanced skills in physical and developmental assessment of children in a variety of well-child, clinic and hospital settings. Data collection, data interpretation, and hypothesis formulations are emphasized for the purpose of clinical decision making. The role of the advanced practice nurse in assessment of primary health care issues and health promotion is incorporated throughout the course. Collaboration as an integral part of assessment will be an ongoing focus.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

NURS 731 High-Risk Neonate, Theory
This course focuses on the care of high-risk neonates within the context of the family unit. The biological and psychosocial aspects are studied as a basis for nursing practice. Emphasis is placed on the role of the Advanced Practice nurse in improving services to high-risk neonates with the purpose of decreasing mortality and morbidity rates and improving the quality of life of high-risk newborns and infants.
Course usually offered in spring term
Prerequisite: NURS 721
Corequisite: NURS 733
Activity: Lecture
1.0 Course Unit

NURS 733 Clinical Practicum for the High Risk Neonate
This clinical course focuses on the care of the high risk infant within the context of the family unit. Clinical experiences provide students with opportunities to expand their skills in managing the care of infants, both acutely ill and growing neonates. Students continue their experiences with neonatal nurse practitioners to examine role issues of these individuals.
Course usually offered in spring term
Prerequisite: NURS 721
Corequisite: NURS 731
Activity: Lecture
1.0 Course Unit

NURS 734 Intermediate Principles of Pediatric Acute Care
This course focuses on evidenced based care for infants, children, and adolescents with complex acute and chronic health conditions. Emphasis is placed on developing a framework for practice based on a synthesis of knowledge from biological, behavioral, and nursing sciences through the process of advanced clinical decision making. The student gains the necessary clinical management skills to provide specialized patient centered care across the entire pediatric age spectrum from complex chronic illness to physiologic deterioration and life threatening instability with emphasis on the patient and family as a full partner in decision making.
Course usually offered in spring term
Prerequisite: NURS 720 AND NURS 721 AND (NURS 607 OR NURS 685)
Corequisite: NURS 735
Activity: Lecture
1.0 Course Unit
NURS 735 Pediatric Acute Care NP: Professional Role and Intermediate Clinical Practice
This course focuses on the implementation of the professional role of the Pediatric Acute Care Nurse Practitioner (PNP-AC). Particular emphasis is placed on the role components of the nurse practitioner in pediatric acute care. Applications of nursing, biological and behavioral science are emphasized in the advanced clinical assessment, clinical decision making and management skills needed to care for complex, unstable acutely and chronically ill children and their families. The role of the advanced practice nurse in promoting optimal child/family outcomes is emphasized.
Taught by: Jessica Strohm-Farber
Course usually offered in spring term
Prerequisite: NURS 720 AND NURS 721 AND (NURS 607 OR NURS 685)
Corequisite: NURS 734
Activity: Lecture
1.0 Course Unit

NURS 736 Advanced Principles of Pediatric Acute Care
This course expands the student’s understanding evidenced based care for infants, children, and adolescents with complex acute and chronic health conditions. Emphasis is placed on advancing a framework for practice based on a synthesis of knowledge from biological, behavioral, and nursing sciences through clinical decision making. The student continues to gain the necessary clinical management skills to provide specialized patient centered care across the entire pediatric age spectrum from complex chronic illness to physiologic deterioration and life threatening instability with emphasis on the patient and family as a full partner in decision making.
Course usually offered summer term only
Prerequisite: NURS 734 AND NURS 735
Corequisite: NURS 737
Activity: Lecture
1.0 Course Unit

NURS 737 Pediatric Acute Care Nurse Practitioner: Professional Role and Advanced Clinical Practice
This course focuses on the implementation of the professional role of the Pediatric Acute Care Nurse Practitioner (PNP-AC). This course adds to the students’ previous knowledge and skills and prepares them to deliver care to children of any age who require frequent monitoring and intervention. Applications of nursing, biological and behavioral science are emphasized in the advanced clinical assessment, clinical decision making and management skills needed to care for complex, unstable acutely and chronically ill children and their families.
Course usually offered summer term only
Prerequisite: NURS 734 AND NURS 735
Corequisite: NURS 736
Activity: Lecture
1.0 Course Unit

NURS 740 Advanced Practice Concepts for the Childbearing Family
The seminar will provide students with the skills necessary to provide primary health care to high risk infants in ambulatory settings. Course material will include detailed physical assessment skills of the infant through the first year of life. The clinical component will include home visits and experience in the ambulatory and long term care settings.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

NURS 741 Mgmt of Chldrn with Acute and Chronic Conditions: Nursing of Children in the Community Adv Clinical
This clinical course focuses on the implementation of the role of the advanced practice nurse with particular emphasis on providing continuity of care for children with specialized health needs across their transitions in sites of care delivery and throughout phases in the cycle of their illnesses. Application of nursing, biological and behavioral science is emphasized in the community aspects of clinical assessment and management of children with health care needs and their families.
Course usually offered summer term only
Prerequisite: NURS 736
Activity: Lecture
1.0 Course Unit

NURS 743 Fetal Evaluation
This course focuses on identifying at risk and high risk maternal fetal dyads, developing knowledge relating to assessment of fetal well being, and understanding the implications of obstetric, non obstetric, and fetal complications on the management of the high risk pregnancy. Additionally the course provides an understanding of the scientific basis for new technologies used to evaluate at risk and high risk populations. Information about the physics of ultrasound, pulse echo imaging, and doppler techniques will be provided. Students must be able to practice ultrasound skills while in this course.
Taught by: Hanne Harbison
Course usually offered in spring term
Prerequisite: NURS 607
Activity: Lecture
1.0 Course Unit

NURS 745 Data Analytics
This course approaches statistics from both applied and theoretical perspectives in order to develop an understanding of the ways that data are analyzed and reported. The course is situated in healthcare data analytics and the varied ways existing/new data is analyzed and results communicated. Focus is given to learning the appropriate application, including decision-making for analysis plan, and interpretation of statistical analyses. The course addresses data transformation, effect size and power analysis, clinical significance, parametric and non-parametric statistical tests including t-tests, analysis of variance, chi square, correlation, linear and logistic regression and other methods of analyses for continuous and categorical data. Emphasis is placed on understanding why statistical methods are chosen, developing a cohesive analysis plan, applying best practices for data preparation and management, executing an analysis and using statistical software programs, including conduct of analyses, review of output and interpretation using existing software programs.
Taught by: Sawyer/Fleck
Course usually offered in fall term
Activity: Online Course
1.0 Course Unit

NURS 748 Leadership Development in Healthcare
This course will provide the conceptual and theoretical framework for examining the concept of leadership within the contexts of health systems, health professionals and health policy. It will focus on characteristics of personal and professional leadership, change theory, and the application of critical thinking to the analysis of work environments, systems and the politics of health.
Course usually offered in fall term
Activity: Online Course
1.0 Course Unit
Notes: Spring class is asynchronous online content
NURS 749 History, Health and Social Policy
This course explores the impact of historical ideas, events, and actors on current issues in health and illness care. Topics include the movement from hospitals to health care systems; the changing definitions of professionalism and professional practice patterns; and the ways historical context shapes definitions of leadership roles and theoretical knowledge.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

NURS 750 Inquiry and Nursing
This course introduces students to the process of intellectual inquiry. It explores the intellectual foundations of scholarly disciplines in general and the discipline of nursing in particular. Emphasis is placed on the process of knowledge development, with particular emphasis on historical, philosophical, positivist, and gendered and phenomenological ways of knowing. Emphasis is also placed on having students develop their particular intellectual approach to disciplinary inquiry and on formulating ideas for publications and presentations. Prerequisite: PhD Student
Taught by: Kagan, Jacoby
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: For doctoral students in Nursing

NURS 751 Clinical Fieldwork for Nurse Anesthesia Practice I
This course provides students the opportunity to integrate theory into practice within the clinical setting. The focus is on the development of diagnostic, therapeutic, ethical, and cultural judgments with the perioperative patient. Students' progress from the care of healthy patients undergoing minimally invasive surgical procedures to the more complex patient with multiple health issues. Clinical preceptors are experienced CRNAs or anesthesiologists who act as mentors to facilitate the learning process. Students' progress along the learning continuum as they integrate theory into practice and assume the role of the advanced practice nurse. The student begins to develop an advanced practice nursing role that integrates role theory, nursing theory, and research knowledge through clinical practice.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

NURS 752 Clinical Fieldwork for Nurse Anesthesia Practice II
This course provides the opportunity for students to integrate theoretical knowledge and research findings into practice within the clinical setting. The clinical progression allows students to provide anesthesia care to patient with complex, multisystem problems. Selected surgical specialty rotations begin, introducing the student to the particular requirements for these special situations. Techniques for managing the acute pain of clients are also emphasized. The student grows in the ability to individualize a plan of care specific to the patients' needs and surgical requirements. The student also now possesses the ability to combine theories and skills in selected clinical situations. The guidance of CRNA faculty preceptors contributes to the development of the students critical thinking.
Taught by: TBD
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

NURS 753 Evolving Nursing Science
We will examine concepts, propositions, and theories from specific areas of nursing science, investigating the adequacy of existing knowledge in specific areas of nursing science and the beliefs and assumptions that underlie that knowledge. Generalizability or transferability of the knowledge will be addressed. The impact of knowledge on nursing practice and health policy will be evaluated. Prerequisite: PhD Students and faculty permission required.
Taught by: Riegel
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
Notes: For Nursing Doctoral students

NURS 754 Quantitative Research Design and Methods
This one semester survey course provides an overview of quantitative clinical research design and methods. Ethical and legal considerations in human subjects research, access to patient populations, sampling designs and power analysis, experimental and non-experimental designs, measurement of variables, data collection techniques, and data management are included. This course is intended for doctoral students in the health sciences. Prerequisite: Students must have completed at least one doctoral-level statistics course. PhD Students
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

NURS 755 Clinical Fieldwork for Nurse Anesthesia Practice III
This course is the first and second of four residencies that provide the nurse anesthetist student the opportunity to attain competencies within the Certified Registered Nurse Anesthesia (CRNA) scope of practice. Throughout the residency, the nurse anesthesia resident will utilize appropriate clinical judgment to manage the complex medical, physical and psychosocial needs of clients in the perioperative phases. Further refinement of the patient assessment, anesthesia administration, and critical thinking skills will be emphasized. Students' progress by providing anesthesia care for patients throughout the continuum of health care services. The guidance of CRNA faculty preceptors contributes to the development of the independence of the CRNA student. Collaborative practice within a care team model is emphasized and the student assumes more overall responsibility for the quality of care for the patients throughout the perioperative experience, with clinical support as required. Prerequisite: Enrollment in NANS program, year 2
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

NURS 756 Nurse Anesthesia Residency I
This course is the first and second of four residencies that provide the nurse anesthetist student the opportunity to attain competencies within the Certified Registered Nurse Anesthesia (CRNA) scope of practice. Throughout the residency, the nurse anesthesia resident will utilize appropriate clinical judgment to manage the complex medical, physical and psychosocial needs of clients in the perioperative phases. Further refinement of the patient assessment, anesthesia administration, and critical thinking skills will be emphasized. Students' progress by providing anesthesia care for patients throughout the continuum of health care services. The guidance of CRNA faculty preceptors contributes to the development of the independence of the CRNA student. Collaborative practice within a care team model is emphasized and the student assumes more overall responsibility for the quality of care for the patients throughout the perioperative experience, with clinical support as required. Prerequisite: Enrollment in NANS program, year 2
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
NURS 757 Nurse Anesthesia Residence II
This course is the second of four residencies that provide the nurse anesthetist student the opportunity to attain competencies within the Certified Registered Nurse Anesthesia (CRNA) scope of practice. Throughout the residency, the nurse anesthesia resident will utilize appropriate clinical judgment to manage the complex medical, physical and psychosocial needs of clients in the perioperative phases. Further refinement of the patient assessment, anesthesia administration, and critical thinking skills is emphasized. Students progress by providing anesthesia care for patients throughout the continuum of health care services. The guidance of CRNA faculty preceptors contributes to the development of the independence of the CRNA student. Collaborative practice within a care team model is emphasized and the student assumes more overall responsibility for the quality of care for the patients throughout the perioperative experience, with clinical support as required. Prerequisite: Enrollment in NANS program, year 2
Taught by: Loriann Winner
Course usually offered in spring term
Prerequisite: NURS 756
Activity: Lecture
1.0 Course Unit

NURS 758 Nurse Anesthesia Residency III
This course is the third of four residencies that provide the nurse anesthetist student the opportunity to attain competencies within the Certified Registered Nurse Anesthesia (CRNA) scope of practice. Throughout the residency, the nurse anesthesia resident will utilize appropriate clinical judgment to manage the complex medical, physical and psychosocial needs of clients in the perioperative phases. Further refinement of the patient assessment, anesthesia administration, and critical thinking skills will be emphasized. Students' progress by providing anesthesia care for patients throughout the continuum of health care services. The guidance of CRNA faculty preceptors contributes to the development of the independence of the CRNA student. Collaborative practice within a care team model is emphasized and the student assumes more overall responsibility for the quality of care for the patients throughout the perioperative experience, with clinical support as required.
Course usually offered summer term only
Prerequisite: NURS 757
Activity: Lecture
1.0 Course Unit

NURS 759 Nurse Anesthesia Residency IV
This course is the fourth of four residencies that provide the nurse anesthetist student the opportunity to attain competencies within the Certified Registered Nurse Anesthesia (CRNA) scope of practice. Throughout the residency, the nurse anesthesia resident will utilize appropriate clinical judgment to manage the complex medical, physical and psychosocial needs of clients in the perioperative phases. Further refinement of the patient assessment, anesthesia administration, and critical thinking skills is emphasized. Students progress by providing anesthesia care for patients throughout the continuum of health care services. The guidance of CRNA faculty preceptors contributes to the development of the independence of the CRNA student. Collaborative practice within a care team model is emphasized and the student assumes more overall responsibility for the quality of care for the patients throughout the perioperative experience, with clinical support as required. Prerequisite: Enrollment in NANS program, year 3
Course usually offered in fall term
Prerequisite: NURS 757
Activity: Lecture
1.0 Course Unit

NURS 760 Nurse Anesthesia Residency V
This course is the fourth and final residency that will provide the nurse anesthetist student the opportunity to attain competencies within the Certified Registered Nurse Anesthesia (CRNA) scope of practice. Throughout the residency, the nurse anesthesia resident will utilize appropriate clinical judgment to manage the complex medical, physical and psychosocial needs of clients in the perioperative phases. Further refinement of the patient assessment, anesthesia administration, and critical thinking skills is emphasized. Students' progress by providing anesthesia care for patients throughout the continuum of health care services. The guidance of CRNA faculty preceptors contributes to the development of the independence of the CRNA student. Collaborative practice within a care team model is emphasized and the student assumes more overall responsibility for the quality of care for the patients throughout the perioperative experience, with clinical support as required.
Activity: Lecture
2.0 Course Units

NURS 764 Advanced Technologies & Clinical Decisions in Acute Care
This fieldwork course focuses on development of a systematic approach to advanced physical assessment, the use of diagnostic technologies and the development of a diagnostic reasoning as it applies to patient management of the acutely ill and injured. Emphasis is placed on development of competence to perform a comprehensive history and decision making for the management of acutely ill patients.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

NURS 768 Role of the Clinical Nurse Specialist
This clinical course provides students the opportunity to apply CNS theory to practice and enables students to develop strategies to overcome barriers to safe, quality healthcare delivery. Students acquire knowledge and skills characteristic of CNS practice as it relates to clinical judgment, facilitation of learning, advocacy and moral agency, caring practice and response to diversity.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

NURS 769 Clinical Nurse Specialist Clinical I
This clinical course provides students the opportunity to apply CNS theory to practice and enables students to develop strategies to overcome barriers to safe, quality healthcare delivery. Students acquire knowledge and skills characteristic of CNS practice as it relates to clinical judgment, facilitation of learning, advocacy and moral agency, caring practice and response to diversity.
Course usually offered in spring term
Prerequisite: NURS 657
Activity: Lecture
1.0 Course Unit
NURS 770 Clinical Nurse Specialist Clinical II
This clinical course focuses on the application of CNS theory to practice. Students focus on furthering the development of the knowledge and skills related to the core competencies of the CNS. Strategies to improve provider and system issues related to the provision of care to the population of interest are developed, implemented and evaluated. Developing leadership in the development of system-wide or healthcare policy is promoted. Advocating for the individual, family, caregiver and population of interest needs within the context of clinical practice and policy making is encouraged.
Taught by: Becker; Dubendorf; Muller
Course usually offered summer term only
Prerequisite: NURS 657
Activity: Lecture
1.0 Course Unit

NURS 777 High Risk Neonate Theory II
This course examines specific pathophysiological mechanisms which may result in body system failure. Strategies for clinical management are examined based on a synthesis of biological, behavioral, medical, pharmacological, and nursing knowledge. Theoretical analysis of the roles of the advanced practitioner with critically ill patients is emphasized.
Course usually offered summer term only
Prerequisite: NURS 731 AND NURS 733
Corequisite: NURS 777
Activity: Hybrid Course
1.0 Course Unit

NURS 777 High Risk Neonatal Clinical II
This clinical course is designed with emphasis on continued development of advanced clinical skills in the care of critically ill children. Emphasis is placed on integration of the roles of the advanced practitioner. This course adds to the student’s previous knowledge and skills in advanced practice and prepares them to manage care of critically ill children.
Course usually offered summer term only
Prerequisite: NURS 731 AND NURS 733
Corequisite: NURS 777
Activity: Lecture
1.0 Course Unit

NURS 778 Health Care of Women and Primary Care
The focus of this course is a clinical approach to primary care problems commonly encountered by women in an ambulatory setting. This course provides the women’s health care nurse practitioner and midwifery student student with the knowledge and problem solving approach to assist individuals with the most common health problems, including acute episodic illness as well as stable chronic disease. The concepts of health promotion and health maintenance are integrated throughout the curriculum.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

NURS 781 Well Women Health Care, Theory
This course focuses on the management and evaluation of physical, emotional, socio-cultural and educational needs of gynecologic primary health care of women from adolescence through post-menopausal years. The content is directed at expanding the expertise of the student in meeting the primary women’s health care needs in contemporary society. Social influences that have an impact on women's lives are also explored.
Course usually offered in fall term
Also Offered As: NURS 686
Prerequisite: NURS 607 AND NURS 657 AND NURS 780
Activity: Lecture
1.0 Course Unit

NURS 782 Well Women Health Care, Clinical
This clinical course further prepares students in understanding and developing the Women’s Health Care Nurse Practitioner and Nurse-Midwifery roles. This clinical course focuses on the management and evaluation of physical, emotional, socio-cultural and educational needs of gynecologic primary health care needs of women from adolescence through post-menopausal years. Emphasis is placed on promoting and maintaining wellness, clinical decision making, systematic health interview, physical assessment, interpretation of laboratory findings, and diagnosis and treatment of gynecological problems.
Course usually offered in fall term
Prerequisite: NURS 607 AND NURS 657 AND NURS 780
Corequisite: NURS 781
Activity: Lecture
1.0 Course Unit

NURS 783 Health Care of Childbearing Women, Theory
The antepartum course builds upon the well-woman health care course. The focus is management of prenatal care for the childbearing family. Conceptual threads of public policy and ethics are integrated within the content to help students to identify broader implications for prenatal care. Content includes theory and practice related to nurse-midwifery/nurse practitioner management of the normal pregnant woman, and nurse-midwifery/nurse practitioner management and strategies to reduce selected obstetric complications.
Taught by: Candice Carbone
Course usually offered in spring term
Prerequisite: NURS 781 AND NURS 782
Corequisite: NURS 743 AND NURS 784
Activity: Lecture
1.0 Course Unit
NURS 784 Health Care of Childbearing Women, Clinical
This course focuses on the management and evaluation of the childbearing women and their families in primary care settings. The course presents the opportunity to implement the role of the Nurse Practitioner with the childbearing woman and her family. The focus is on comprehensive physical, psychosocial and educational management of women and their families during pregnancy and postpartum.
Taught by: Mary Guidera
Course usually offered in spring term
Prerequisite: NURS 781 AND NURS 782
Corequisite: NURS 743 AND NURS 783
Activity: Lecture
1.0 Course Unit

NURS 785 Integration I
Intensive integration of theory and clinical practice in women's health care with emphasis on ambulatory care. Clinical practice in all areas of ambulatory women's health care, teaching rounds, case presentations, and seminars with professional colleagues.
Course usually offered summer term only
Prerequisite: NURS 783 AND NURS 784
Activity: Clinic
1.0 Course Unit

NURS 786 Integration II: Midwifery Integration
Intensive integration of theory and clinical practice in women's health care with emphasis on intrapartum, postpartum, and newborn care. Clinical practice during the intrapartum and postpartum, teaching rounds, case presentations, and seminars with professional colleagues.
Course usually offered in fall term
Prerequisite: NURS 783 AND NURS 784
Activity: Clinic
1.0 Course Unit

NURS 787 Intrapartum / Postpartum / Newborn Care, Theory
Anatomy and physiology relevant to the care of the women and their families during the intrapartum, postpartum and newborn periods. Includes management of selected obstetrical emergencies and medical complications.
Course usually offered summer term only
Prerequisite: NURS 783 AND NURS 784
Corequisite: NURS 788
Activity: Lecture
1.0 Course Unit

NURS 788 Intrapartum / Postpartum / Newborn Care, Clinical
Clinical care and management of women, newborns and their families during the intrapartum, postpartum and newborn periods. Includes management of selected obstetrical emergencies and medical complications. Clinical assignments related to module objectives.
Course usually offered summer term only
Corequisite: NURS 787
Activity: Lecture
1.0 Course Unit

NURS 789 Principles of Patient Safety & Quality Improvement in Healthcare
The course integrates the principles and methodologies of both quality and patient safety, which transforms and sustains high reliability organizations. Knowledge of the elements to complete a framework for safe and reliable healthcare will be described, as well as used by the students to apply the framework to a patient safety clinical situation. In addition, critical components of the current status of health care quality will be discussed, with emphasis on the role of patients, leadership, microsystems, and policy leaders. Organizational excellence will be examined in case reviews and discussions on strategies to develop and sustain quality and safety in the delivery of safe, effective, patient centered, timely, efficient, and equitable care.
Course usually offered in fall term
Activity: Online Course
1.0 Course Unit
Notes: Asynchronous, online course

NURS 790 Health Care Economics and Business Planning
This course integrates principles of health care economics and business planning. The course will be designed to facilitate the student knowledge and application of financial principles. Content to include: overview of health care landscape, health insurers, introduction to statistical modeling, ratios and forecasting, prediction models, earnings management, financial planning cycle, business case development and management of Big Data. Prerequisite: Asynchronous, online course
Course usually offered in fall term
Activity: Online Course
1.0 Course Unit

NURS 795 Nurse Anesthesia Residency II
This course is the second of two residencies that provide the nurse anesthetist student the opportunity to attain competencies within the Certified Registered Nurse Anesthesia (CRNA) scope of practice. Throughout the residency, the nurse anesthesia resident will utilize appropriate clinical judgment to manage the complex medical, physical and psychosocial needs of clients in the perioperative phases. Further refinement of the patient assessment, anesthesia administration, and critical thinking skills is emphasized. Students progress by providing anesthesia care for patients throughout the continuum of health care services. The guidance of CRNA faculty preceptors contributes to the development of the independence of the CRNA student. Collaborative practice within a care team model is emphasized and the student assumes more overall responsibility for the quality of care for the patients throughout the perioperative experience, with clinical support as required.
Course usually offered in spring term
Activity: Seminar
2.0 Course Units
NURS 796 Diagnosis and Management of Adult Gerontology Acute Care Patients I
This on-line, didactic course is designed for the practicing nurse practitioner or clinical nurse specialist who seeks to gain additional knowledge and skills related to the care of adult gerontology acutely ill patients with a specific focus on cardiovascular and pulmonary systems, thoracic issues, infectious processes, wound healing and diabetes. Particular focus is placed on specific issues related to the older adult such as frailty, dehydration, loss of functional mobility, falls, and other geriatric syndromes. The basics of ECG, CXR and PFT interpretation, ABG analysis and ventilator modes are highlighted. This course examines the epidemiologic, assessment, diagnostic, management and evaluation of acutely or critically ill adults across the adult-older adult age spectrum. An evidence-based approach to nursing and medical management including pharmacologic and non-pharmacologic modalities is emphasized. Prerequisite: For Streamlined Adult Gero Program Students Only
Course offered summer, fall and spring terms
Activity: Online Course
1.0 Course Unit
Notes: For Streamlined Adult Gero Program Students Only

NURS 797 Diagnosis and Management of Adult Gerontology Acute Care Patients II
This online didactic course, designed for the practicing nurse practitioners or clinical nurse specialists seeking to gain knowledge and skills relative to care of adult gerontology acute care patients, focuses on the medical and surgical issues of the neurological, renal, gastrointestinal, hematological, oncologic and orthopedic systems. This course examines the epidemiologic, assessment, diagnosis, management and evaluation of acutely or critically ill adults across the adult-older adult age spectrum. An evidence-based, interprofessional team approach to the nursing and medical management of patients is emphasized. Prerequisite: For Streamlined Adult Gero Program Students Only
Taught by: Morelli
Course offered summer, fall and spring terms
Prerequisite: NURS 796
Activity: Online Course
1.0 Course Unit
Notes: For Streamlined Adult Gero Program Students Only

NURS 798 Adult Gero Acute Care NP. Prof Role & Clinical Practice for Primary Care Prepa
This online didactic course and accompanying clinical fieldwork focuses on issues essential to the implementation of the role of the Adult Gerontology Acute Care Nurse Practitioner. Clinical fieldwork focuses on the unique assessment, diagnosis, management and evaluation of acutely, critically and complex chronically-ill adults, across the adult age continuum, experiencing acute, urgent and emergent conditions, using both physiologically and technologically derived data. Evaluating for physiologic instability and potential life-threatening conditions is emphasized. Attention is given to the typical and atypical presentation of syndromes and constellation of symptoms exhibited by adults and older adults experiencing complex acute, critical and complex chronic illness. Issues related to the transition of patients through the health care system are explored. Collaboration between the nurse practitioner, patient, family and interprofessional healthcare team are encouraged. Prerequisite: For Streamlined Adult Gero Program Students Only
Course offered summer, fall and spring terms
Prerequisite: NURS 796
Activity: Online Course
1.0 Course Unit
Notes: For Streamlined Adult Gero Program Students Only

NURS 799 MSN Clinical Remediation
Students whose clinical performance would benefit from additional clinical exposure in order to demonstrate the expected competencies are, with course faculty and faculty advisor approval, eligible to register for NURS 799. This experience will be allotted no more than one credit unit and must be completed in a time frame not to exceed one academic semester. A course may be remediated only one time.
Course not offered every year
Activity: Clinic
1.0 Course Unit

NURS 800 Dissertation Seminar I
Advanced study and research in nursing leading to the completion of the dissertation proposal. Prerequisite: PhD Students
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
Notes: For doctoral students in Nursing

NURS 809 Hillman Scholar Seminar in Nursing Innovation
This course is designed to provide an exploration of innovation in society, health care, and nursing. It will provide a broad overview of innovation from historical to current times and from a variety of disciplines. It will focus on promoting innovation and discovery and its translation to policy, the health care system and nursing practice. Emphasis is placed on having scholars develop their individual approach to innovation and strategize implementation and evaluation strategies for innovation. Prerequisite: Selection as a Hillman Scholar in Nursing Innovation; 1.5 hour seminar every other week until completion of PhD courses with Hillman Scholar.
Taught by: Hodgson
One-term course offered either term
Activity: Seminar
1.0 Course Unit

NURS 813 Qualitative Paradigm Empirical Nursing Research
Study of selected qualitative paradigm empirical research approaches, including design and methodology. Critique of selected qualitative research reports from the literature of nursing and related disciplines. Fieldwork exercise and research proposal required. Prerequisite: PhD Students
Taught by: Bradway, Kagan
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
Notes: For doctoral students in Nursing

NURS 814 Doctoral Seminar: Ethics and Nursing
A critical review of the theoretical and empirical literature dealing with bioethics, nursing ethics, moral development, women's ethics and specific ethical concerns in health and illness care. Students will study topics related to their own interests/needs, guided by the instructor in relation to the discipline of ethics. Prerequisite: PhD Students
Course offered spring; odd-numbered years
Activity: Seminar
1.0 Course Unit
Notes: For doctoral students in Nursing
NURS 818 Families and Research
This seminar will explore issues related to research of families. Included in the ongoing discussion will be an analysis of nursing and other theories in relationship to research of families. Methodological issues related to research of families will be discussed, as will the analysis of family data and measurement issues common to research of families. The seminar will conclude with an agenda for future directions to research of families. Prerequisite: PhD Students
Course offered spring; even-numbered years
Activity: Seminar
1.0 Course Unit
Notes: For doctoral students in nursing

NURS 819 Seminar on the Social History of Nursing
This course will involve a guided review of the pertinent literature relating to the history of technology in 20th century America. The focus will include a critical examination and review of the social origins and implications of technological development and diffusion in healthcare. Various theoretical frameworks in the history of technology will be closely examined in an attempt to assist the student in the development of their own framework. Prerequisite: PhD Students
Activity: Seminar
1.0 Course Unit
Notes: For doctoral students in nursing

NURS 823 Designing Interventions to Promote Health and Reduce Health Disparities
Advanced analysis, design and evaluation of interventions to promote health and reduce health disparities with a focus on underserved vulnerable minority or ethnic populations, through culturally competent research, education and clinical practice. Areas to be evaluated include:
- Health disparities as it relates to health promotion and disease prevention behavioral intervention research in vulnerable communities
- Concepts of marginalization, race, ethnicity, class, gender and culture as it relates to health disparities
- Social-psychological theoretical and research approaches related to developing culturally congruent health promotion interventions to reduce health disparities for vulnerable populations
- The use of elicitation, focus groups and ethnographic techniques to tailor health behavior theory to meet the needs of the population
- Culturally competent research methodologies, involving education and/or clinical practice, e.g. culturally competent measures, recruitment, retention, and informed consent in hard to reach populations
- Community participatory research as a strategy for working with the community to build research partnership and build capacity for sustained health promotion initiatives
- Health promotion intervention strategies for reducing health disparities in vulnerable communities
- Strategies to evaluate the effectiveness of interventions using randomized controlled trials (RCTs) in community and clinical settings
- Strategies for tailoring successful evidenced-based health promotion interventions to a variety of different populations for use in clinical trials and community settings
- Examine approaches for the translating and disseminating evidenced-based intervention research
Prerequisite: PhD Students
Course offered spring; odd-numbered years
Also Offered As: PUBH 539
Activity: Seminar
1.0 Course Unit

NURS 824 Health Equity: Conceptual, Linguistic, Methodological, and Ethical Issues
The course focuses on advanced analysis and evaluation of theories, concepts, and methods related to health equity. Topic areas include models and frameworks of health equity; linguistic choices related to equity, disparity, and vulnerability; role of economics, class, gender, sex, sexuality, race, and ethnicity; health equity in special populations; and issues in health policy, research ethics, and research methods. Emphasis is on advanced discourse and analysis of health equity theory and research. Prerequisites: PhD Students
Course offered fall; odd-numbered years
Activity: Seminar
1.0 Course Unit
Notes: For Doctoral Students Only

NURS 825 Seminar on Integrative Science in Aging
This fall semester interprofessional seminar will prepare students and fellows fellows to identify appropriate measurement tools for use in aging research. We will specifically focus on analysis of selected concepts, models and measures central to the integrative science in aging. Topics include measurement of geriatric syndromes, models commonly used in integrative science of aging, outcomes of evidence-based care in older adults, regulatory and ethical issues specific to the conduct of research with older adults. Prerequisite: PhD Students
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
Notes: For Doctoral Students Only

NURS 826 Advanced Qualitative Research Methods
The course extends beginning qualitative research methods skills to a more advanced level. Students planning a dissertation or career focus in qualitative or mixed methods may use the course to refine interest and skill. The focus of the course centers on interactionist perspectives and collective analysis though methods tangential to these perspectives. Standpoint and participatory methods and analysis may be considered given sufficient student interest. Students are actively involved in selection and critique of seminal and critical readings. Students must have at their disposal a suitable dataset with commensurate permissions or have plans to collect qualitative data amenable to analysis during the course term. This data base can be from previous research proposals and fieldwork can be used as the building blocks for the course assignment(s). The course will focus on data collection, analyses, interpretation, and presentation of results. Skill building will center on collection and management of data; analytic technique including comparative, narrative, and text analysis; development and management of coding schemas; abstraction and development of situation specific theory; and dissemination and diffusion of findings, theories, and relevance to similar phenomena and use in practice. Prerequisite: PhD Students
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
Notes: For Doctoral Students Only
NURS 828 Response to Chronic Illness: Theory and Research
Millions of people of all ages live with chronic illness(es). A diagnosis of a chronic illness is a life-changing event, causing disruption and a sense of loss for many. Common early responses are stress, anxiety, depression, fear, and anger. Over time, with support and experience with the illness, many adjust. But, others report persistent feelings of loss due to physical, emotional, spiritual/existential, social, occupational, and/or financial influences of chronic illness. Those who adjust the best typically find a way to return a sense of normalcy to their lives. Loved ones and caregivers are equally affected by chronic illness and much has been written in recent years about caregiver burden. However, some individuals (caregivers and patients) report positive responses to illness, including a deepened purpose for living and a reordering of life priorities. The focus of this course is on individual responses to chronic illness—those diagnosed and his/her loved ones. This course is intended to complement N818, which focuses on families and dyads dealing with chronic illness. In this course we will explore the major theoretical perspectives that underlie this field. The literature describing common responses of both those diagnosed and their loved ones as well as the social and cultural context that helps explain the responses of individuals facing chronic illness will be examined. Methods used to study chronic illness will be explored in depth.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

NURS 830 Conducting Research in Global Women's Health
An introduction to theoretical and methodological issues as they relate to conducting research in global women’s health. Advanced analysis of historical, social, cultural, economic, political, technological and geographical contexts as they influence the health of girls and women across the lifespan and their relation to health care systems as both clients and providers. This includes contextual issues that constrain the provision & receipt of adequate healthcare. Prerequisites: Completion of course in Global Health (this may include a reputable online course eg: Coursera), or equivalent background (eg. global health field experience). Permission of Instructor. For graduate and professional students from any field with an interest in global women’s health; Master students by permission of instructor. A critical examination of theoretical and methodological issues pertaining to research on women and girls conducted around the world across disciplines. A focused and intensive exploration of place as it pertains to women and girls formal and informal structures of health care delivery as those needing and/or seeking health care, and as those providing health care to others. Students will examine the multiple dimensions and qualities of these endeavors (e.g. activity, power, control, visibility, value, and remuneration) and the intersection of gender and health - locally, globally and across borders. Students will focus their examination on the implications of seeking and providing health care for women’s and girls’ health and well-being. By examining issues in local and global contexts and across geographical boundaries, students will have the opportunity to challenge gendered, class, political, and cultural assumptions related to women’s health.
Course usually offered in fall term
Also Offered As: GSWS 830
Activity: Seminar
1.0 Course Unit

NURS 833 Measurement of Health-Related Behavior and Determinants
This one semester seminar will provide a detailed overview of measurement of health-related behaviors and determinants of behavior. The course will cover characteristics of measures, data collection, and how to apply the science of measurement to specific health research questions. The course will emphasize This one semester seminar will provide a detailed overview of measurement of the intersection of self-report measures with biological and physical measures, and the use of newer technologies to collect data and improve data quality. Students will integrate concepts and topics covered in the course as they work on a measurement project in their specific area(s) of interest and engage in problem-solving with their peers. This course is intended for doctoral student and advanced masters-level students in the health sciences.
Activity: Seminar
1.0 Course Unit
Notes: This one semester seminar will provide a detailed overview of measurement of health-related behaviors and determinants of behavior. The course will cover characteristics of measures, data collection, and how to apply the science of measurement to specific health research questions. The course will emphasize This one semester seminar will provide a detailed overview of measurement of the intersection of self-report measures with biological and physical measures, and the use of newer technologies to collect data and improve data quality. Students will integrate concepts and topics covered in the course as they work on a measurement project in their specific area(s) of interest and engage in problem-solving with their peers. This course is intended for doctoral student and advanced masters-level students in the health sciences.

NURS 837 Web-based Research Methodology
This doctoral elective course will provide an introduction to Web-based research methods in health-related disciplines. This course will examine research methods that have been adapted to the study of human subjects through the Web. This course will have particular emphasis on quantitative and qualitative empirical methods using the Web as a data collection medium. Another important feature of this course will be intensive analysis of ethical and methodological issues conducting research through the Web. Areas to be analyzed include: types of Web-based research; advantages and disadvantages of Web-based research; vehicles (e.g. funding, mentoring) that have supported Web-based research; human subject protection issues; issues/concerns in recruitment and data collection in Web-based research; and professional vehicles (e.g. scholarly publication, lay publications, speaking forums) that have helped disseminate the knowledge derived from Web-based research. Prerequisites: PhD Student
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

NURS 839 Mixed Methods Research
This course will focus on mixed methods research techniques including mixed methods designs, developing mixed methods research questions, data collection, analyses focusing on data integration of qualitative and quantitative data, interpretation, and presentation of results. Skill building will center on sampling, collection, and management of data; data integration techniques; data visualization, methodological rigor and reporting data including dissemination of findings. Students will complete a mixed methods ‘mini’ proposal.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
NURS 849 Exploring Data Science Methods with Health Care Data
The growth and development of electronic health records, genetic information, sensor technologies and computing power propelled health care into the big data era. This course will emphasize data science strategies and techniques for extracting knowledge from structured and unstructured data sources. The course will follow the data science process from obtaining raw data, processing and cleaning, conducting exploratory data analysis, building models and algorithms, communication and visualization, to producing data products. Students will participate in hands-on exercises whenever possible using a clinical dataset.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

NURS 851 Translating Evidence into Practice (DNP Project #1)
This course focuses on the translation of research into practice to achieve sustainable improvements in clinical, patient and systems outcomes. Course content builds on the foundational principles of evidence-based practice and the critical scientific appraisal of evidence to guide advanced evidence-based reasoning and decision-making for translation and application to practice.
Taught by: Rosemary Polomano
Activity: Online Course
1.0 Course Unit

NURS 852 DNP Project Planning II (DNP Project #2)
This course provides an overview of the concepts, procedures, and fundamental processes of project management for Doctor of Nursing Practice students. Principles, tools and techniques of project management within an integrative framework are reviewed and applied to the development of the practice change/quality improvement project proposal. Students will develop a proposal for an evidence-based project that addresses a health problem, health promotion opportunity, healthcare system issue, community health concern, clinical problem, integration of technology/informatics in care or a policy-related issue. Students will finalize the project plan by the conclusion of the course.
Students will develop a partnership with key stakeholders relative to their intended project and meet with key stakeholders and members within a healthcare agency and/or communities of interest where the project is to be implemented. Students are expected to develop collaborative working relationships and team leadership skills throughout the course of the semester through regularly scheduled team meetings that engage project site stakeholders and project mentors, including both site and faculty project mentors.
Taught by: Amy M. Sawyer, PhD, RN
Course usually offered in fall term
Prerequisite: NURS 851
Activity: Online Course
0.5 Course Units
Notes: .5 credit unit

NURS 853 DNP Project Implementation (DNP Project #3)
This course requires DNP students to implement their project and determine how the results can be used to improve processes and procedures within the healthcare agency or community of interest. Students are expected to integrate evidence-based practice paradigms and process principles into the development of a final report and present the findings to each other for peer critique. Barriers from people, places and policies will be addressed and strategies developed to negotiate solutions. Principles of sustainable evidence-based practice change across disciplines and within various healthcare settings will be discussed. Students will assume the role of leader in the interprofessional collaboration, consultation, and partnership with the healthcare organization or communities of interest.
One-term course offered either term
Prerequisite: NURS 852
Activity: Lecture
0.5 Course Units
Notes: .5 credit unit

NURS 854 DNP Project Evaluation and Dissemination (DNP Project #4)
The Doctor of Nursing Practice (DNP) project is the terminal project for fulfillment of the DNP Degree requirements. The DNP Project prepares students to lead and conduct a scientific clinical inquiry project that integrates and applies learning from coursework and clinical practicums. The DNP project is a logical extension of the practice emersion experience, and uses evidence and the literature-related information to guide improvements in either practice or patient outcomes. The DNP Project will culminate in the development of an evidence-based, practice manuscript.
Taught by: Ann O'Sullivan
Course usually offered in fall term
Prerequisite: NURS 853
Activity: Lecture
1.0 Course Unit

NURS 858 Professional Aspects & Leadership for Nurse Anesthesia Practice
This course will provide students with an opportunity to explore professional issues which affect the practice of nurse anesthesia and the healthcare delivery system. Discussion of professional issues which impact nurse anesthetist practice will include professionalism, scope of practice, patient safety from a systems perspective, medical legal concerns, ethical decision making, reimbursement and other financial issues which impact healthcare delivery. Students will be afforded the opportunity to develop their own sense of professionalism as they explore these issues and develop a professional presentation.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit
NURS 890 Nursing Doctoral Teaching Residency
The purpose of this required one semester teaching residency is to enhance the expertise of students in the role of educator. The residency will be tailored to the student's individual learning needs. At the minimum, students with no or minimal prior teaching experience will gain a beginning level of expertise in course planning, course evaluation, dealing with difficult student situations, test construction, paper assignment construction and grading, content delivery methods, as well as other aspects of the faculty teaching role. Students with more extensive teaching experience will tailor their residences with their residency supervisor to enhance their expertise in these various areas. Prerequisites: PhD Student
Taught by: Designated Member of the School of Nursing Grad Group
Activity: Independent Study
1.0 Course Unit
Notes: For Nursing Doctoral Students Only

NURS 897 Nursing Doctoral Research Residency
The purpose of this required one semester research residency is to enhance student research training early in the doctoral program by providing a mentored research experience. The residency is designed to be a tailored hands-on experience to provide students with exposure and the opportunity to participate in one or more aspects of an ongoing research project. Research residencies are experiential activities designed to meet the student's individual learning needs. At the minimum, students with no or minimal prior research experience will gain a beginning level of experience on a variety of components of an ongoing research project. Students with more extensive research experience will tailor their residences with their residency supervisor to enhance their expertise in these various areas. Prerequisites: PhD Student
Taught by: Designated Member of the School of Nursing Grad Group
Course usually offered in fall term
Activity: Independent Study
1.0 Course Unit
Notes: For Nursing Doctoral Students Only

NURS 900 Directed Study
Must be arranged with the written permission of the sponsoring faculty member prior to registration.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

NURS 995 Dissertation
Dissertation General Tuition
One-term course offered either term
Activity: Dissertation
1.0 Course Unit

Operations, Information and Decisions (OIDD)

OIDD 005 Grit Lab: The Science and Practice of Passion and Perseverance
The aims of Grit Lab are two-fold: (1) equip you with generalizable knowledge about the science of passion and perseverance (2) to help you apply these insights to your own life. At the heart of this course are cutting-edge scientific discoveries about how to foster passion and perseverance for long-term goals. As in any undergraduate course, you will have an opportunity to learn from current research. But unlike most courses, Grit Lab encourages you to apply these ideas to your own life and reflect on your experience.
Taught by: Duckworth
Course usually offered in fall term
Also Offered As: PSYC 005
Activity: Lecture
1.0 Course Unit
Notes: There are no prerequisites to Grit Lab, and it is open to all enrolled undergraduate students. However, admittance does require completing an online, written application. Since enrollment is by application only, accepted applicants will be administratively registered. No need to submit an advance registration request. Course grade mode is Pass/Fail only.

OIDD 101 An Introduction to Operations, Information and Decisions
OIDD 101 explores a variety of common quantitative modeling problems that arise frequently in business settings, and discusses how they can be formally modeled and solved with a combination of business insight and computer-based tools. The key topics covered include capacity management, service operations, inventory control, structured decision making, constrained optimization and simulation. This course teaches how to model complex business situations and how to master tools to improve business performance. The goal is to provide a set of foundational skills useful for future coursework at Wharton as well as providing an overview of problems and techniques that characterize disciplines that comprise Operations and Information Management. One-term course offered either term
Activity: Lecture
1.0 Course Unit

OIDD 105 Developing Tools for Data Access and Analysis (VBA and SQL Programming)
This course provides an introduction to the construction of data analysis tools that are commonly used for business applications, especially in consulting and finance. The course builds on the spreadsheet and analytical skills developed in OPIM101, providing a much more extensive treatment of spreadsheet application development and database management. The first portion of the course will focus on programming in VBA, the embedded programming language in the Microsoft Office suite of applications. This will be supplemented with discussion of industry best practice in software development, such as specification development, interface design, documentation, and testing. The second portion of the class will emphasize data access and analysis utilizing SQL, the industry standard language for interacting with database software.
Activity: Lecture
1.0 Course Unit
OIDD 201 Technology Management, Information and the Digital Economy
OIDD 201 introduces students to two critically important and tightly linked concepts. The first is online business model innovation, including key opportunities to exploit information-based strategies in businesses as diverse as Capital One and Uber (newly vulnerable markets) and Amazon and Airbnb (online channel conflict). The second is computer-based simulation modeling to assess the viability of an online innovation, the strategies for its launch, and its economic value.
Activity: Lecture
1.0 Course Unit

OIDD 210 Online Business Models and the Information-Based Firm
This course provides a broad-based introduction to the management of information technology focusing on three interrelated themes: technology, organization, and strategy. The goal of this course is to equip students with the knowledge and tools to utilize information systems to pursue a firm's strategic and organizational goals. The course has no prerequisites other than a general interest in the applications of information technology.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

OIDD 215 Intro to Analytics and the Digital Economy
Over the past decade, there has been a dramatic rise in the use of technology skills and data analytic thinking to provide business solutions in many domains, including finance, HR, policy, transport, and strategy. As a result, the modern ‘analytic leader’ increasingly requires the use of technology, statistics, and data skills to facilitate business analysis. This includes knowing how to effectively frame data-driven questions and use a new generation of technology tools that are becoming available to acquire, analyze, interpret, and communicate insights derived from data. Students in this hands-on course will engage with weekly labs that introduce them to new technologies, techniques, and data-driven business challenges.
Activity: Lecture
0.5 Course Units

OIDD 220 Introduction to Operations Management
This course introduces basic concepts of operations management and application of the same in business practice today. We will examine the theoretical foundations of operations management and how these principles or models can be employed in both tactical and strategic decision making. Topics covered in detail are forecasting techniques, principles or models can be employed in both tactical and strategic management, and supply chain coordination. We will conclude by discussing how supply chains evolve under technological change.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

OIDD 222 Internet Law, Privacy, and Cybersecurity
This course looks at how courts, legislatures, and regulators confront the major issues of the internet world. Billions of people are now active on social media, and firms such as Google, Facebook, Amazon, and Alibaba are among the world's most valuable and influential. The legal interfaces between the physical world and the digital world are therefore increasingly important. In particular, exploitation of personal information online by governments, digital platforms, and bad actors is becoming a constant source of major controversies. The material in the course ranges from the foundations of cyberlaw, developed during the electronic commerce bubble of the 1990s, to current leading-edge questions around the privacy and responsibility of digital intermediaries; data protection in the U.S. and Europe: cybercrime, blockchain, and network neutrality. No pre-existing legal or technical knowledge is required.
One-term course offered either term
Also Offered As: LGST 222
Activity: Lecture
1.0 Course Unit

OIDD 224 Analytics for Service Operations
This course considers tools and concepts that can generate operational excellence for the production and delivery of services in industries such as banking, transportation, health care, and communications. Since services typically are intangible, not storable or transportable, and often highly variable, the management of their operations is complex and involves distributed operations with a significant amount of customer contact. Therefore, the understanding and effective management of service operations requires specialized analytical tools and customer-centric focus. This course covers a mix of topics with the emphasis on quantitative methods, application of analytics and strategic frameworks. The class will introduce simple models and basic concepts that support analysis of tradeoffs in a variety of common service processes. Students will also have the opportunity to apply the ideas and analytical models developed in the course to a particular service industry. They will do so by conducting a guided, application group project which includes opportunities for in-depth analysis of a particular service process and field work.
Taught by: Faculty
Activity: Lecture
1.0 Course Unit

OIDD 236 Scaling Operations in Technology Ventures: Linking Strategy and Execution
This course helps students learn to make strategic scaling decisions that are grounded in operational reality. Students will study how to build and evaluate the ‘operation systems’ of the firm to maximize value with the focus on scaling the firm’s operations. This involves tailoring the firm’s operational competencies, assets, and processes to a specific business strategy. The course will approach this problem by taking a holistic view that incorporates competitive strategy, financial evaluation, and the customer experience.
Activity: Lecture
1.0 Course Unit
OIDD 245 Analytics and the Digital Economy
Students who take this course will engage with the world of data science using tools such as Tableau and R that are becoming increasingly popular in industry. The first half of the course is designed for students with limited experience with data projects, and while familiarity with R, via courses such as STAT 405 or STAT 470, will be ideal preparation, students with other programming exposure can pick up the required skills via review sessions and self-instruction. The second half of the course extends students’ experience to industry applications of text mining and machine learning and requires students to work with more unstructured data. Each week of the course will be devoted to analysis of a data set from a particular industry (e.g., HR, sports, fashion, real estate, music, education, politics, restaurants, non-profit work), which we will use to answer business questions by applying analytic techniques. The course is very hands-on, and students will be expected to become proficient at applying data to business decisions and at effectively analyzing large data sets to inform decisions about business problems.
Activity: Lecture
1.0 Course Unit

OIDD 255 Artificial Intelligence, Data and Society
The progression of AI-based technologies promises to transform many aspects of business, labor, and even society. The goal of this course is to provide students with an understanding of the capabilities of modern AI technologies, with an emphasis on being able to critically assess where they can provide societal value, and where they may create new challenges. The course is not intended to provide a deep-dive into the workings of these technologies in the same way as a computer science course might. Rather, business and policy decision-makers will be confronted with a number of important issues as AI becomes integrated into the social decision-making fabric. This course is intended to provide a framework for people who may have to confront these legal, ethical, and economic challenges. In doing so, an objective is to ensure that students who complete the course are comfortable enough in the inner-workings of these technologies to think critically across many AI contexts as well as different domains ranging from public policy, to criminal justice, to health inspections, HR, and marketing. The 0.5 CU course is oriented around hands-on critical written assessments, labs, exams, and a presentation. Broadly, data rich firms in finance, tech, management, marketing, and other industries are increasingly adopting AI as a tool to accelerate and improve decision-making. It is important for modern managers to understand the opportunities and challenges introduced by data and AI so that they can credibly communicate about these issues with others. We will cover many of these issues, so that you will be able to think about the opportunities and challenges that arise when firms try to use AI to solve business problems. Labs will reinforce your learning of how AI works, and how it is being used to solve business problems. During labs, we will focus on gaining experience with introductory machine learning concepts. Students will spend time inside and outside of the classroom combining data and code to provide a foundation for understanding the deep challenges that this will bring to organizations.
Taught by: Prasanna Tambe
Activity: Lecture
0.5 Course Units

OIDD 261 Risk Analysis and Environmental Management
This course is designed to introduce students to the role of risk assessment, risk perception and risk management in dealing with uncertain health, safety and environmental risks including the threat of terrorism. It explores the role of decision analysis as well as the use of scenarios for dealing with these problems. The course will evaluate the role of policy tools such as risk communication, economic incentives, insurance, regulation and private-public partnerships in developing strategies for managing these risks. A project will enable students to apply the concepts discussed in the course to a concrete problem.
Taught by: Kunreuther
One-term course offered either term
Also Offered As: BEPP 261, BEPP 761, BEPP 961, ESE 567, OIDD 761
Activity: Lecture
1.0 Course Unit
Notes: Crosslisted with OIDD 761, BEPP 261, 761, 961, and ESE 567. See description under OIDD 761.

OIDD 263 Environmental & Energy Economics and Policy
This course examines environmental and energy issues from an economist’s perspective. Over the last several decades, energy markets have become some of the most dynamic markets of the world economy, as they experienced a shift from heavy regulation to market-driven incentives. First, we look at scarcity pricing and market power in electricity and gasoline markets. We then study oil and gas markets, with an emphasis on optimal extraction and pricing, and geopolitical risks that investors in hydrocarbon resources face. We then shift gears to the sources of environmental problems, and how policy makers can intervene to solve some of these problems. We talk about the economic rationale for a broad range of possible policies: environmental taxes, subsidies, performance standards and cap-and-trade. In doing so, we discuss fundamental concepts in environmental economics, such as externalities, valuation of the environment and the challenge of designing international agreements. At the end of the course, there will be special attention for the economics and finance of renewable energy and policies to foster its growth. Finally, we discuss the transportation sector, and analyze heavily debated policies such as fuel-economy standards and subsidies for green vehicles. Prerequisites: An introductory microeconomics course (ECON1, or another course approved by the instructor) will be sufficient in most cases; BEPP 250 or an equivalent intermediate microeconomics course is recommended.
Taught by: Arthur van Benthem
Also Offered As: BEPP 263
Activity: Lecture
1.0 Course Unit
Notes: Crosslisted with OIDD 761, BEPP 261, 761, 961, and ESE 567. See description under OIDD 761.

OIDD 290 Decision Processes
This course is an intensive introduction to various scientific perspectives on the processes through which people make decisions. Perspectives covered include cognitive psychology of human problem-solving, judgment and choice, theories of rational judgment and decision, and the mathematical theory of games. Much of the material is technically rigorous. Prior or current enrollment in STAT 101 or the equivalent, although not required, is strongly recommended.
Prerequisite: STAT 101
Activity: Lecture
1.0 Course Unit
OIDD 291 Negotiations
This course examines the art and science of negotiation, with additional emphasis on conflict resolution. Students will engage in a number of simulated negotiations ranging from simple one-issue transactions to multi-party joint ventures. Through these exercises and associated readings, students explore the basic theoretical models of bargaining and have an opportunity to test and improve their negotiation skills.
One-term course offered either term
Also Offered As: LGST 292, MGMT 292
Prerequisite: LGST 206 OR OIDD 291 OR MGMT 291
Activity: Lecture
1.0 Course Unit

OIDD 292 Advanced Negotiation
This course is designed to teach negotiation principles and to enable students to develop their negotiation skills. This course assumes familiarity with the basic negotiation concepts covered in the prerequisite for this course: Negotiations. In this course, we extend the study and practice of negotiations and we develop a deeper understanding for how specific aspects of the negotiation process (e.g., emotions, deadlines, trust violations) impact outcomes. Through course lectures, readings, and case exercises, students will develop a rich framework for thinking about the negotiation process and acquire tools for guiding the negotiation process.
Taught by: Schweitzer, Staff
One-term course offered either term
Also Offered As: LGST 292, MGMT 292
Prerequisite: LGST 206 OR OIDD 291 OR MGMT 291
Activity: Lecture
1.0 Course Unit

OIDD 299 Judgment & Decision Making Research Immersion
This class provides a high-level introduction to the field of judgment and decision making (JDM) and in-depth exposure to the process of doing research in this area. Throughout the semester you will gain hands-on experience with several different JDM research projects. You will be paired with a PhD student or faculty mentor who is working on a variety of different research studies. Each week you will be given assignments that are central to one or more of these studies, and you will be given detailed descriptions of the research projects you are contributing to and how your assignments relate to the successful completion of these projects. To complement your hands-on research experience, throughout the semester you will be assigned readings from the book Nudge by Thaler and Sunstein, which summarizes key recent ideas in the JDM literature. You will also meet as a group for an hour once every three weeks with the class's faculty supervisor and all of his or her PhD students to discuss the projects you are working on, to discuss the class readings, and to discuss your own research ideas stimulated by getting involved in various projects. Date and time to be mutually agreed upon by supervising faculty and students. the 1CU version of this course will involve approx. 10 hours of research immersion per week and a 10-page paper. The 0.5 CU version of this course will involve approx 5 hours of research immersion per week and a 5-page final paper. Please contact Maurice Schweitzer if you are interested in enrolling in the course: schweitzer@wharton.upenn.edu
Course usually offered in fall term
Activity: Lecture
0.5 Course Units
Notes: Instructor permission required to enroll.

OIDD 311 Business Computer Languages
This course is taught with the more descriptive title of 'Scripting for Business Analytics.' 'Business Analytics' refers to modeling and analysis undertaken for purposes of management and supporting decision making. The varieties of techniques and methods are numerous and growing, including simple equational models, constrained optimization models, probabilistic models, visualization, data analysis, and much more. Elementary modeling of this sort can be undertaken in Excel and other spreadsheet programs, but ‘industrial strength’ applications typically use more sophisticated tools, based on scripting languages. Scripting languages are programming languages that are designed to be learned easily and to be used for special purposes, rather than for large-scale application programming. This course focuses on the special purposes associated with business analytics and teaches MATLAB and Python in this context. MATLAB and Python are widely used in practice (both in management and in engineering), as are the business analytic methods covered in the course. Prior programming experience is useful, but not required or presumed for this course.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

OIDD 314 Enabling Technologies
Conducting business in a networked economy invariably involves interplay with technology. The purpose of this course is to improve understanding of technology (what it can or cannot enable), the business drivers of technology-related decisions in firms, and to stimulate thought on new applications for commerce (including disruptive technologies). The class provides a comprehensive overview of various emerging technology enablers and culminates in discussion of potential business impact of these technologies in the near future. No prior technical background is assumed and hence every effort is made to build most of the lectures from the basics. However, the Fall semester class will assume basic understanding of statistics and will focus more on big data analytics. Some assignments in the fall will involve data analytics using Python or R.
One-term course offered either term
Also Offered As: OIDD 662
Activity: Lecture
1.0 Course Unit

OIDD 319 Advanced Decision Systems: Evolutionary Computation
This course is taught with the more descriptive title of ‘Agents, Games, and Evolution.’ It explores applications and fundamentals of strategic behavior. Strategic, or game-theoretic, topics arise throughout the social sciences. The topics include–and we discuss–trust, cooperation, market-related phenomena (including price equilibria and distribution of wealth), norms, conventions, commitment, coalition formation, and negotiation. They also include such applied matters as design of logistics systems, auctions, and markets generally (for example, markets for electric power generation). In addressing these topics we focus on the practical problem of finding effective strategies for agents in strategic situations (or games). Our method of exploration will be experimental: we review and discuss experiments, principally computational experiments, on the behavior of boundedly rational agents in strategic (or game-theoretic) situations. Course work includes readings, discussions in class (organized as a seminar), examinations, and a course project on a topic chosen by the participants.
One-term course offered either term
Activity: Seminar
1.0 Course Unit
OIDD 321 Introduction to Management Science
Understanding how to use data and business analytics can be the key differential for a company's success or failure. This course is designed to introduce fundamental quantitative decision-making tools for a broad range of managerial decision problems. Topics covered include linear, nonlinear, and discrete optimization, dynamic programming, and simulation. Students will apply these quantitative models in applications of portfolio management, electricity auctions, revenue management for airlines, manufacturing, advertising budget allocation, and healthcare scheduling operations. Emphasis in this course is placed on mathematical modeling of real world problems and implementation of decision making tools.
Taught by: Faculty
One-term course offered either term
Activity: Lecture
1.0 Course Unit

OIDD 325 Computer Simulation Models
This course focuses on agent-based computational models in the social sciences, especially in economic, in commercial and in strategic (game-theoretic) contexts. This relatively recent and now rapidly-developing form of computer simulation seeks to explain and predict complex social phenomena 'from the ground up', through interactions of comparatively simple agents. The course reviews experimental and theoretical results, and exposes the students to modern development environments for this form of simulation. Students have the opportunity to design and implement agent-based simulations. Programming, however, is not required. This course aims to integrate various topics in agent-based simulation, while developing an appreciation of the problems that are particularly characteristic of this form of simulation so that students will understand its promise and potential.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

OIDD 353 Mathematical Modeling and its Application in Finance
Quantitative methods have become fundamental tools in the analysis and planning of financial operations. There are many reasons for this development: the emergence of a whole range of new complex financial instruments, innovations in securitization, the increased globalization of the financial markets, the proliferation of information technology and the rise of high-frequency traders, etc. In this course, models for hedging, asset allocation, and multi-period portfolio planning are developed, implemented, and tested. In addition, pricing models for options, bonds, mortgage-backed securities, and other derivatives are studied. The models typically require the tools of statistics, optimization, and/or simulation, and they are implemented in spreadsheets or a high-level modeling environment, MATLAB. This course is quantitative and will require extensive computer use. The course is intended for students who have strong interest in finance. The objective is to provide students the necessary practical tools they will require should they choose to join the financial services industry, particularly in roles such as: derivatives, quantitative trading, portfolio management, structuring, financial engineering, risk management, etc. Prospective students should be comfortable with quantitative methods such as basic statistics and the methodologies (mathematical programming and simulation) in OIDD612 Business Analytics and OIDD321 Management Science (or equivalent). Students should seek permission from the instructor if the background requirements are not met.

1.0 Course Unit

OIDD 380 Operations Strategy Practicum
This course focuses on the management of operations at manufacturing and service facilities located in Israel that are used either by domestic corporations or by multinational companies. The emphasis is on the evolving patterns of operations strategies adopted by firms for producing products, sourcing manufacturing, distributing products, delivering services and managing product design as well as on programs for enhancing quality, productivity and flexibility and managing technology. We will focus on formulation and execution of such strategies for established Israeli multinationals with world class operations and innovative strategies as well as start-ups and smaller companies that are scaling their global supply chain infrastructure to support growth. The course will consist of a set of site visits in Israel during Winter Break that will provide the opportunity to observe company processes directly and in-class sessions which include lectures, case discussions and management speakers who will describe their companies' current strategy. NOTE: THIS COURSE REQUIRES YOU TO SUBMIT AN APPLICATION FOR ADMISSION. Enrollment will be limited. Please contact Ramon Jones at ramjones@wharton.upenn.edu for more information. Application available at https://global.upenn.edu/pennabroad/pgs OIDD 101 is recommended but not required.
Activity: Lecture
1.0 Course Unit
OIDD 397 Retail Supply Chain Management
This course is highly recommended for students with an interest in pursuing careers in: (1) retailing and retail supply chains; (2) businesses like banking, consulting, information technology, that provides services to retail firms; (3) manufacturing companies (e.g. P&G) that sell their products through retail firms. Retailing is a huge industry that has consistently been an incubator for new business concepts. This course will examine how retailers understand their customers’ preferences and respond with appropriate products through effective supply chain management. Supply chain management is vitally important for retailers and has been noted as the source of success for many retailers such as Wal-mart and Home Depot, and as an inhibitor of success for e-tailers as they struggle with delivery reliability. See M. L. Fisher, A. Raman and A. McClelland, ‘Rocket Science Retailing is Coming - Are You Ready?’; Harvard Business Review, July/August 2000 for related research. Taught by: Faculty
Also Offered As: OIDD 697
Activity: Lecture
0.5 Course Units
Notes: See description under OIDD 697

OIDD 399 Supervised Study
This course number is currently used for several course types including independent studies, experimental courses and Management & Technology Freshman Seminar. Instructor permission required to enroll in any independent study. Wharton Undergraduate students must also receive approval from the Undergraduate Division to register for independent studies. Section 002 is the Management and Technology Freshman Seminar; instruction permission is not required for this section and is only open to M&T students. For Fall 2020, Section 004 is a new course titled AI, Business, and Society. The course provides a overview of AI and its role in business transformation. The purpose of this course is to improve understanding of AI, discuss the many ways in which AI is being used in the industry, and provide a strategic framework for how to bring AI to the center of digital transformation efforts. In terms of AI overview, we will go over a brief technical overview for students who are not actively immersed in AI (topic covered include Big Data, data warehousing, data-mining, different forms of machine learning, etc.). In terms of business applications, we will consider applications of AI in media, Finance, retail, and other industries. Finally, we will consider how AI can be used as a source of competitive advantage. We will conclude with a discussion of ethical challenges and a governance framework for AI. No prior technical background is assumed but some interest in (and exposure to) technology is helpful. Every effort is made to build most of the lectures from the basics. One-term course offered either term
Activity: Independent Study
1.0 Course Unit

OIDD 410 Decision Support Systems
The past few years have seen an explosion in the amount of data collected by businesses and have witnessed enabling technologies such as database systems, client-server computing and artificial intelligence reach industrial strength. These trends have spawned a new breed of systems that can support the extraction of useful information from large quantities of data. Understanding the power and limitations of these emerging technologies can provide managers and information systems professionals new approaches to support the task of solving hard business problems. This course will provide an overview of these techniques (such as genetic algorithms, neural networks, and decision trees) and discuss applications such as fraud detection, customer segmentation, trading, marketing strategies and customer support via cases and real datasets. Taught by: Faculty
One-term course offered either term
Also Offered As: OIDD 672
Activity: Lecture
1.0 Course Unit
Notes: Crosslisted with OIDD 672. See description under OIDD 672.

OIDD 415 Product Design
This course is intended for students with a strong career interest in new product, development, entrepreneurship, and/or technology development. The course follows an overall product design methodology, including the identification of customer needs, generation of product concepts, prototyping, and design-manufacturing. Weekly student assignments are focused on the design of a new product and culminate in the creation of a prototype, which is launched at an end-of-semester public Design Fair. The course project is a physical good - but most of the tools and methods apply to services and software products. The course is open to any Penn sophomore, junior, senior or graduate student. Taught by: Faculty
Also Offered As: IPD 515, MEAM 415, OIDD 515
Activity: Lecture
1.0 Course Unit

OIDD 418 The India Startup Ecosystem
The objective of OIDD/MGMT 418 and the Wharton India Fellows program is to introduce Penn juniors to the entrepreneurship and innovation ecosystem in India through a course covering topics in entrepreneurship, innovation, venture capital and technology in India and then matching students to a specific short-term project with a Bangalore-based early-stage startup or rapidly scaling company. Students will complete preliminary work on the project assignment during the course, and then travel as a group to Bangalore with the instructor for a two week immersion in the company to which they have been assigned for their entrepreneurship project. Penn Wharton Entrepreneurship will cover airfare and lodging expenses for students selected as Wharton India Fellows for the duration of the 2 week immersion in India. For more information: https://entrepreneurship.wharton.upenn.edu/wharton-india-fellows/
Also Offered As: MGMT 418
Activity: Lecture
0.5 Course Units
OIDD 469 Information Strategy and Economics
The course is devoted to the study of the strategic use of information and the related role of information technology. The topics of the course vary year to year, but generally include current issues in selling digital products, intermediation, and disintermediation, designing and competing in electronic markets, outsourcing, and technology project management. Heavy emphasis is placed on utilizing information economics to analyze new and existing businesses in information-intensive industries. Technology skills are not required, although a background in information technology management (equivalent to OIDD 210), strategic management or managerial economics is helpful.

One-term course offered either term
Activity: Lecture
1.0 Course Unit

OIDD 477 Introduction to Python for Data Science
The goal of this course is to introduce the Python programming language within the context of the closely related areas of statistics and data science. Students will develop a solid grasp of Python programming basics, as they are exposed to the entire data science workflow, starting from interacting with SQL databases to query and retrieve data, through data wrangling, reshaping, summarizing, analyzing and ultimately reporting their results. Competency in Python is a critical skill for students interested in data science. Prerequisites: No prior programming experience is expected, but statistics, through the level of multiple regression is required. This requirement may be fulfilled with Undergraduate courses such as Stat 102, Stat 112.
Taught by: Richard Waterman
Also Offered As: OIDD 777, STAT 477, STAT 777
Activity: Lecture
0.5 Course Units

OIDD 490 The Science of Behavior Change
The objective of this 14-week discussion-based seminar for advanced undergraduates is to expose students to cutting-edge research from psychology and economics on the most effective strategies for changing behavior sustainably and for the better (e.g., promoting healthier eating and exercise, encouraging better study habits, and increasing savings rates). The weekly readings cover classic and current research in this area. The target audience for this course is advanced undergraduate students interested in behavioral science research and particularly those hoping to learn about using social science to change behavior for good. Although there are no pre-requisites for this class, it is well-suited to students who have taken (and enjoyed) courses like OIDD 290: Decision Processes, PPE 203/PSYC 265: Behavioral Economics and Psychology, and MKTG 266: Marketing for Social Impact and are interested in taking a deeper dive into the academic research related to promoting behavior change for good. Instructor permission is required to enroll in this course. Please complete the application if interested in registering for this seminar: http://bit.ly/bcfg-class-2020. The application deadline is July 31, 2020. Prerequisite: Permission of instructor required.
Taught by: Katherine Milkman and Angela Duckworth
One-term course offered either term
Also Offered As: PSYC 490
Activity: Seminar
1.0 Course Unit

OIDD 515 Product Design
This course provides tools and methods for creating new products. The course is intended for students with a strong career interest in new product development, entrepreneurship, and/or technology development. The course follows an overall product design methodology, including the identification of customer needs, generation of product concepts, prototyping, and design-for-manufacturing. Weekly student assignments are focused on the design of a new product and culminate in the creation of a prototype, which is launched at an end-of-semester public Design Fair. The course project is a physical good - but most of the tools and methods apply to services and software products. The course is open to any Penn sophomore, junior, senior or graduate student.
Also Offered As: IPD 515, MEAM 415, OIDD 415
Activity: Lecture
1.0 Course Unit
Notes: Only Wharton MBA candidates are allowed to register for OIDD 515. Non-MBA students must register for the OIDD 415, MEAM 415 or IPD 515 cross-listing for the course.

OIDD 525 Thinking with Models: Business Analytics for Energy and Sustainability
Models are lenses. They are instruments with which we view, interpret, and give meaning to data. In this course, students will be exposed to and do work in all phases of the modeling life-cycle, including model design and specification, model construction (including data gathering and testing), extraction of information from models during post-solution analysis, and creation of studies that use modeling results to support conclusions for scientific or decision making purposes. In addition, the course will cover critical assessments of fielded models and studies using them. The course will focus broadly on models pertaining to energy and sustainability. This is not only an inherently interesting and important area, but it is very much a public one. In consequence, models, data, and studies using them are publicly and profusely available, as is excellent journalism, which facilitates introductions to specific topics. The course covers selected topics in energy and sustainability. Essential background will be presented as needed, but the course is not a comprehensive overview of energy and sustainability. Modeling in the area of energy and sustainability analytics is rife with uncertainty, and yet decisions must be made. Uncertainty, and how to deal with it in model-based decision making, is an overarching theme of the course. We will focus on energy and sustainability, but that area is hardly unique in being beset with deep and vexing uncertainties. The lessons we learn will generalize. The overall aim of the course is to teach facility with modeling and to use real-world data, models, and studies in doing so. In addition, students with interests in investment or policy analysis in the energy sphere will find the course's subject area focus useful. OIDD 325 is not a prerequisite for this course, but it's helpful if you have already taken it.
Taught by: Steve O Kimbrough
Activity: Lecture
1.0 Course Unit
OIDD 611 Quality and Productivity
Matching supply with demand is an enormous challenge for firms: excess supply is too costly, inadequate supply irritates customers. In the course, we will explore how firms can better organize their operations so that they more effectively align their supply with the demand for their products and services. Throughout the course, we illustrate mathematical analysis applied to real operational challenges—we seek rigor and relevance. Our aim is to provide both tactical knowledge and high-level insights needed by general managers and management consultants. We will demonstrate that companies can use (and have used) the principles from this course to significantly enhance their competitiveness.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

OIDD 612 Business Analytics
'Managing the Productive Core: Business Analytics' is a course on business analytics tools and their application to management problems. Its main topics are optimization, decision making under uncertainty, and simulation. The emphasis is on business analytics tools that are widely used in diverse industries and functional areas, including operations, finance, accounting, and marketing.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

OIDD 613 Online Business Models and the Information-Based Firm
Information technology has transformed many industries, including media, financial services, and retailing, among others. These technologies have changed not only how we produce services (e.g., outsourcing and offshoring, and their newest extension, cloud computing) but what services we offer (virtual experiences, online advertising, long tail products and services, and social networking). The purpose of this course is to improve understanding of how information technologies enable transformation of business models within existing organizations as well as the development of completely new business models and new organizational forms. The course will serve as an introductory course on information technologies and will serve as a foundation on which students can explore more advanced technology concepts.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

OIDD 614 Innovation
The course is first and foremost an intensive, integrative, project course in which student teams create one or more real businesses. Some businesses spun out of the course and now managed by alumni include Terrapass Inc. and Smatchy Inc. The project experience is an exciting business spinout, a range of analytical methods that are useful tools and qualitative frameworks. Neither is more important than the other. Taught by: Faculty
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

OIDD 615 Operations Strategy
Operations strategy is about organizing people and resources to gain a competitive advantage in the delivery of products (both goods and services) to customers. This course approaches this challenge primarily from two perspectives: 1) how should a firm design their products so that they can be profitably offered; 2) how can a firm best organize and acquire resources to deliver its portfolio of products to customers. To be able to make intelligent decisions regarding these high-level choices, this course also provides a foundation of analytical methods. These methods give students a conceptual framework for understanding the linkage between how a firm manages its supply and how well that supply matches the firm’s resulting demand. Specific course topics include designing service systems, managing inventory and product variety, capacity planning, approaches to sourcing and supplier management, constructing global supply chains, managing sustainability initiatives, and revenue management. This course emphasizes both quantitative tools and qualitative frameworks. Neither is more important than the other.
Taught by: Faculty
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

OIDD 636 Scaling Operations: Linking Strategy and Execution
The goal of this course is to make strategic scaling decisions that are grounded in operational reality. We study how to build and evaluate the operational business model of the firm to maximize value with the focus on scaling the firm’s operations. We will approach the challenge of scaling by taking a holistic view that incorporates competitive strategy, financial evaluation, and the customer experience. We focus on decisions and challenges that many firms that try to scale their operations face with the focus on assessing the readiness of the firm to scale, and the required steps to scale. In particular, we will discuss whether the firm should build competencies in-house (i.e., investing in a portfolio of assets) or buy them (i.e., developing and implementing a global sourcing strategy and integrating external partners) and the risks associated with scaling. We will also discuss the organizational implications of scaling. There are no formal pre-requisites to the class. Students who have already taken OIDD 611, OIDD 615, and STAT 613 should be equipped for the class. Other students should have a solid understanding of elementary probability and statistics. For questions regarding the specifics of your background, please contact the instructor.
Activity: Lecture
0.5 Course Units

OIDD 642 Analytics for Services
This course covers a range of analytical methods that are useful tools for capacity management in services, and it will provide you with insights into the economics of a range of services businesses including (i) High-level planning models that account for multiple dimensions of service capacity, (ii) Low-level models of system congestion that capture the relationship between capacity choices, quality of service and, in some cases, system revenue, (iii) Statistical estimation and forecasting models to characterize key measures of future supply and demand. Students who have already taken OIDD 611, OIDD 612, and STAT 613 should be well-equipped for the class. Other students should have a solid understanding of elementary probability, statistics and linear programming. For questions regarding the specifics of your background, please contact the instructor.
Activity: Lecture
0.5 Course Units
Notes: Class participation, case write-ups, online quizzes, self-study exercises and a final exam.
OIDD 643 Analytics for Revenue Management
This course introduces you to the essential concepts and techniques required to understand and implement revenue management (RM). The need for repeated, rapid cycles of estimation and optimization has driven the development of a set of analytical tools that are particularly well suited for RM. This course focuses on those tools. Prerequisites: Students who have already taken OIDD 612 and STAT 613 should be well equipped for this class. Other students should have a solid understanding of elementary probability, statistics and constrained optimization. For questions regarding the specifics of your background, please contact the instructor.
Taught by: Faculty
Activity: Lecture
0.5 Course Units
Notes: Class participation, case write-ups, online quizzes, self-study exercises and a final exam.

OIDD 652 Design and Development of Web-Based Products and Services
This course is designed as an introduction to the process of product design with a focus on Web-based desktop and mobile consumer products and services. This is a course on designing products as distinct from (and complementary to) building a business. The course is implemented as a team-based experiential learning exercise; students learn the design process by developing multiple prototypes of a Web/mobile-based product or service. Teams will apply different prototyping techniques (paper, wireframes, landing pages) over multiple iterations of their project. This is not a course on Web engineering. Technical skills are not a prerequisite. Neither should students expect to learn specific programming tools or techniques. This is not an entrepreneurship course. Students do not analyze business models, market size, pricing, costs, etc. This class introduces an iterative, data-driven, experiment-based design process. Through their project, students will practice multiple design iterations and gain exposure to tools for designing digital products and services.
Taught by: Faculty
Course not offered every year
Prerequisite: OIDD 614
Activity: Lecture
0.5 Course Units

OIDD 653 Mathematical Modeling and its Application in Finance
Quantitative methods have become fundamental tools in the analysis and planning of financial operations. There are many reasons for this development: the emergence of a whole range of new complex financial instruments, innovations in securitization, the increased globalization of the financial markets, the proliferation of information technology and the rise of high-frequency traders, etc. In this course, models for hedging, asset allocation, and multi-period portfolio planning are developed, implemented, and tested. In addition, pricing models for options, bonds, mortgage-backed securities, and other derivatives are studied. The models typically require the tools of statistics, optimization, and/or simulation, and they are implemented in spreadsheets or a high-level modeling environment, MATLAB. This course is quantitative and will require extensive computer use. The course is intended for students who have strong interest in finance. The objective is to provide students the necessary practical tools they will require should they choose to join the financial services industry, particularly in roles such as: derivatives, quantitative trading, portfolio management, structuring, financial engineering, risk management, etc. Prospective students should be comfortable with quantitative methods, such as basic statistics and the methodologies (mathematical programming and simulation) taught in OIDD 612 Business Analytics or OIDD 321 Management Science (or equivalent). Students should seek permission from the instructor if the background requirements are not met.

1.0 Course Unit

OIDD 654 Product Management
The course provides the student with a number of tools and concepts necessary for creating and managing product development processes. The course consists of two interwoven parts. First, it presents the basic steps that are necessary for moving from a ‘cool idea’ to a product sufficiently mature to launch an entrepreneurial start-up. This includes cases, lectures, and exercises on topics like identifying customer needs, developing a product concept as well as effective prototyping strategies. The capstone of this first part is a real project in which student teams conceptualize and develop a new product or service up to the completion of a fully functional prototype. Second, the course discusses a number of challenges related to product development as encountered by management consultants, members of cross-functional development teams as well as general managers. We will analyze several cases related to, among others, resource allocation in R&D organizations, organizational forms of product development teams, as well as managing development projects across large geographic distances.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units
Notes: Lectures, case and problem analyses, group presentations, the development of a new product to the prototype stage.
OID 658 Service Operations Management
The service sector represents the largest segment of most industrial economies. In the U.S., for example, it accounts for approximately 70% of GDP and 70% of employment. In addition to this ‘pure’ service sector, the operations and competitive positions of many manufacturing firms are becoming increasingly service-oriented. While operational excellence is critical for success in most industries today, in a wide range of service industries this is particularly true. For example, recent, significant deregulation in banking, health care, and communications has led to intensified competition and pressure on operations. At the same time, the rapid evolution of information technology has enabled firms to operate in a fashion - and offer a level of service - that has not been previously possible. Elements common to most services make the management of their operations complex, however. In particular, services are intangible, not storable or transportable, and often highly variable. Frequently their delivery involves distributed operations with a significant amount of customer contact. All of these factors make service operations end up looking quite a bit different than manufacturing operations, and the task of achieving excellence in them requires specialized analysis frameworks and tools. This course covers a mix of qualitative and quantitative models that provide the necessary tools. The class will focus on simple models that should help you to better understand both the difficulty of managing and the underlying economics of the service operations being considered. You will have the opportunity to apply these course tools in a group service assessment field project. Prerequisite: Courses in operations management, linear programming, probability and statistics
One-term course offered either term
Activity: Lecture
0.5 Course Units

OID 659 Advanced Topics
The specific content of this course varies from semester to semester, depending on student and faculty interest. Recent topics have included global operations, product design and development, quality management, and logistics strategy. See department for course description.
Prerequisites for the course change semester to semester depending on the course content.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

OID 662 Enabling Technologies
This course is about understanding emerging technology enablers with a goal of stimulating thinking on new applications for commerce. The class is self-contained (mainly lecture-based) and will culminate in a class-driven identification of novel businesses that exploit these enablers. No prerequisite or technical background is assumed. Students with little prior technical background can use the course to become more technologically informed. Those with moderate to advanced technical background may find the course a useful survey of emerging technologies. The course is recommended for students interested in careers in consulting, investment banking and venture capital in the tech sector.

Notes: Lectures, discussions, assignments and class participation.

OID 673 Global Supply Chain Mgmt.
Several forces, ranging from technology that has dramatically reduced the cost of communication, to political developments such as the opening up of China, Vietnam, and Eastern Europe, have created an avalanche of outsourcing and offshoring and lead to supply chains that stretch halfway around the world. This course will study the many questions that arise in the management of such global supply chains, including: Which design and production activities to do in-house and which to outsource? Where to locate various activities around the world? How to forecast the many factors that influence these decisions, including inflation in cost factors such as labor and freight, and the likelihood of future government regulation or political instability? How to keep the supply chain flexible so as to adapt to change? How to manage a geographically disbursed supply chain, including what relationships to have with vendors to ensure low cost, high quality, flexibility, safety, humane labor practices and respect for sustainability of the environment? The course is highly interactive, using case discussions in most classes and senior supply chain executives in many sessions. Grades are based one-third each on class participation, individual write-ups of the discussion questions for 3 of the class sessions, and a course paper.
Taught by: Faculty
Activity Lecture

OID 680 Operations Strategy Practicum
This course will focus on the management of operations at manufacturing and service facilities of domestic corporations and foreign multinational companies. Our emphasis will be on the evolving patterns of operations strategies adopted by firms for producing products, sourcing manufacturing, distributing products, delivering services and managing product design as well as on programs for enhancing quality, productivity and flexibility. The course will focus on the formulation and execution of such strategies for a collection of firms in the context of the current dynamics of global competition. The course consists of a set of site visits and in-class sessions which include lectures, case discussions and management speakers who will describe their company’s current strategy.
Taught by: Morris Cohen
Activity: Lecture
1.0 Course Unit

OID 690 Managerial Decision Making
The course is built around lectures reviewing multiple empirical studies, class discussion, and a few cases. Depending on the instructor, grading is determined by some combination of short written assignments, tests, class participation and a final project (see each instructor’s syllabus for details).
One-term course offered either term
Also Offered As: MGMT 690
Activity: Lecture
1.0 Course Unit
Notes: Crosslisted with MGMT 690.
OIDD 691 Negotiations
This course examines the art and science of negotiation, with additional emphasis on conflict resolution. Students will engage in a number of simulated negotiations ranging from simple one-issue transactions to multi-party joint ventures. Through these exercises and associated readings, students explore the basic theoretical models of bargaining and have an opportunity to test and improve their negotiation skills. Cross-listed with MGMT 691/OIDD 691/LGST 806. Format: Lecture, class discussion, simulation/role play, and video demonstrations. Materials: Textbook and course pack.

Also Offered As: LAW 518, LGST 806, MGMT 691, OIDD 291
Activity: Lecture
1.0 Course Unit
Notes: Crosslisted with LGST 806, MGMT 691. Lectures, cases, presentations, and written assignments.

OIDD 692 Advanced Topics Negotiation
This is a course the builds on the basic Negotiation course. In this course, we explore a wide range of negotiation topics from crisis and hostage negotiations, to the role of emotions including anxiety, envy and anger in negotiations, to backlash effects for women in negotiations, and the role of alcohol in negotiations. We will survey many aspects of current negotiation research, discuss historic negotiation cases, and students will participate in role-play exercises. Many of the role play exercises will involve multi-party negotiations and afford opportunities to hone skills in team-based negotiations.
Taught by: Faculty
One-term course offered either term
Also Offered As: LGST 692, MGMT 692
Activity: Lecture
1.0 Course Unit
Notes: Cases, presentations, lecture and discussion.

OIDD 693 Influence
Building, protecting and using influence is critical for achieving your goals. This requires good personal decision making as well as understanding others' decision-making, proficiency at the negotiation table as well as with the tacit negotiations before and after sitting at the table. In this course, we focus on building your facility with a wide range of influence tools to help with these efforts. Topics include power and status, informal networks, coalitions and persuasion.

One-term course offered either term
Also Offered As: LGST 693
Activity: Lecture
0.5 Course Units

OIDD 695 Semester in San Francisco Regional Seminar
As part of the Wharton Semester in San Francisco (SSF) program, this course is designed to (i) provide integrative material that emphasizes links between finance, marketing, product design, negotiations, and other themes in the SSF academic curriculum; (ii) link classroom theories and principles to actual practice by reflecting on the academic literature and (iii) highlight the unique characteristics of, and the programs proximity to, the Bay Area economy. All students participating in the SSF are required to register for this Regional Seminar.
One-term course offered either term
Activity: Lecture
0.5 Course Units

OIDD 697 Retail Supply Chain Management
This course is highly recommended for students with an interest in pursuing careers in: (1) retailing and retail supply chains; (2) businesses like banking, consulting, information technology, that provides services to retail firms; (3) manufacturing companies (e.g. P&G) that sell their products through retail firms. Retailing is a huge industry that has consistently been an incubator for new business concepts. This course will examine how retailers understand their customers' preferences and respond with appropriate products through effective supply chain management. Supply chain management is vitally important for retailers and has been noted as the source of success for many retailers such as Wal-mart and Home Depot, and as an inhibitor of success for e-tailers as they struggle with delivery reliability. See M. L. Fisher, A. Raman and A. McClelland, 'Rocket Science Retailing is Coming - Are You Ready?,' Harvard Business Review, July/August 2000 for related research.
One-term course offered either term
Also Offered As: OIDD 397
Activity: Lecture
0.5 Course Units
Notes: Lectures, case discussion, guest speakers. Class participation, papers, and a team report.

OIDD 761 Risk Analysis and Environmental Management
This course will introduce students to concepts in risk governance. We will delve into the three pillars of risk analysis: risk assessment, risk management, and risk communication. The course will spend time on risk financing, including insurance markets. There will be particular emphasis on climate risk management, including both physical impact risk and transition risk, although the course will also discuss several other examples, including management of environmental risks, terrorism, and cyber-security, among other examples. The course will cover how people perceive risks and the impact this has on risk management. We will explore public policy surrounding risk management and how the public and private sector can successfully work together to build resilience, particularly to changing risks.
One-term course offered either term
Also Offered As: BEPP 261, BEPP 761, BEPP 961, ESE 567, OIDD 261
Activity: Lecture
1.0 Course Unit
Notes: Cross-listed with OIDD 261, BEPP 261, 761, 961, and ESE 567

OIDD 762 Environmental Sustainability and Value Creation
This course provides an overview of topics related to corporate sustainability with a focus on how environmentally sustainable approaches can create value for the firm. The course explores trends in corporate practices and students consider specific examples of such practices to examine the interactions between the firm and the environment. This course has three objectives: to increase students' knowledge of sustainability practices and their impact on firm performance; to teach students to think strategically and act entrepreneurially on environmental issues; and to help students design business approaches to improve environmental outcomes, while simultaneously creating value.
Taught by: G. Surviz
One-term course offered either term
Also Offered As: LGST 762
Activity: Lecture
0.5 Course Units
OIDD 763 Energy Markets & Policy
Over the last several decades, energy markets have become some of the most dynamic markets of the world economy. Traditional fossil fuel and electricity markets have been seen a partial shift from heavy regulation to market-driven incentives, while rising environmental concerns have led to a wide array of new regulations and ‘environmental markets’. The growth of renewable energy could be another source of rapid change, but brings with it a whole new set of technological and policy challenges. This changing energy landscape requires quick adaptation from energy companies, but also offers opportunities to turn regulations into new business. The objective of this course is to provide students with the economist’s perspective on a broad range of topics that professionals in the energy industry will encounter. Topics include the effect of competition, market power and scarcity on energy prices, the impact of deregulation on electricity and fossil fuel markets, extraction and pricing of oil and gas, geopolitical uncertainty and risk in hydrocarbon investments, the environmental impact and policies related to the energy sector, environmental cap-and-trade markets, energy efficiency, the economics and finance of renewable energy, and recent developments in the transportation sector.
Taught by: Arthur Van Benthem
Also Offered As: BEPP 763
Activity: Lecture
1.0 Course Unit

OIDD 777 Introduction to Python for Data Science
The goal of this course is to introduce the Python programming language within the context of the closely related areas of statistics and data science. Students will develop a solid grasp of Python programming basics, as they are exposed to the entire data science workflow, starting from interacting with SQL databases to query and retrieve data, through data wrangling, reshaping, summarizing, analyzing and ultimately reporting their results. Competency in Python is a critical skill for students interested in data science. Prerequisites: No prior programming experience is expected, but statistics, through the level of multiple regression is required. This requirement may be fulfilled with MBA courses such as STAT 613/621; or by waiving MBA statistics.
Taught by: Richard Waterman
Also Offered As: OIDD 477, STAT 477, STAT 777
Activity: Lecture
0.5 Course Units

OIDD 793 People Analytics
This course examines the use of data to improve how people are managed within organizations. Recent years have seen a growing movement to bring more science to how we manage people. In some cases, that means ensuring that whatever practices and approaches we adopt are backed up by solid evidence as to their effectiveness. Often, organizations will seek to go further, analyzing their own data to identify problems and learn what is working and what is not in their own context. This course applies the insights of the people analytics movement to help students become better managers and more critical analysts within their organizations. The course aims to develop students in three specific ways. First, it provides students with an up-to-the-minute grounding in current evidence about managing people, providing a knowledge base that can ensure that their future management is guided by best practices. Second, it develops the skills and understanding necessary to be thoughtful, critical consumers of evidence on people management, allowing them to make the most of the analysis available to them as they make people decisions. Third, it provides guidance and practice in conducting people analytics, preparing students to gather data of their own, and making them more skilled analysts. The course addresses these topics through a mixture of lecture, case discussion, and hands on exploration of a variety of data sets.
Taught by: Matthew Bidwell
Also Offered As: MGMT 793
Activity: Lecture
0.5 Course Units

OIDD 895 Global Business Week

OIDD 900 Foundations of Decision Processes
The course is an introduction to research on normative, descriptive and prescriptive models of judgement and choice under uncertainty. We will be studying the underlying theory of decision processes as well as applications in individual group and organizational choice. Guest speakers will relate the concepts of decision processes and behavioral economics to applied problems in their area of expertise. As part of the course there will be a theoretical or empirical term paper on the application of decision processes to each student’s particular area of interest.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: Non-PhD students must contact instructor for permission to enroll.
**OIDD 904 Experimental Economics**

This course will help prepare you to run your own economics laboratory and field experiments. Experimental methods have been widely adopted by economists to develop new insights, and some economic theories and hypotheses are uniquely well-suited for testing with experimental tools and data. Achieving high internal and external validity requires careful experimental design. Substantive areas of application in the course will include market equilibrium, asset bubbles, learning in games, public good provision, and labor market relationships. Additional topics may include biases in individual decision-making, field experiments in development economics, and happiness, neuroeconomics, and behavioral/experimental welfare economics. Economists' typical interests in strategic and market-based interactions raise particular methodological challenges and opportunities.

Course not offered every year
Also Offered As: BEPP 904
Activity: Lecture
1.0 Course Unit

**OIDD 906 Proseminar in Operations and Information Management**

Advanced seminar focusing on topics in Operations, Information and Decisions research
Course not offered every year
Activity: Seminar
1.0 Course Unit

**OIDD 910 Intro to Linear, Nonlinear and Integer Optimization**

Introduction to mathematical optimization for graduate students who would like to be intelligent and sophisticated users of mathematical programming but do not necessarily plan to specialize in this area. Linear, integer and nonlinear programming are covered, including the fundamentals of each topic together with a sense of the state-of-the-art and expected directions of future progress. Homework and projects emphasize modeling and solution analysis, and introduce the students to a large variety of application areas.

Course usually offered in fall term
Also Offered As: ESE 504
Activity: Lecture
1.0 Course Unit

Notes: Crosslisted w/ ESE 504.

**OIDD 912 Introduction to Optimization**

This course constitutes the second part of a two-part sequence and serves as a continuation of the summer math camp. Mathematical optimization provides a unifying framework for studying issues of rational decision-making, optimal design, effective resource allocation and economic efficiency. It is a central methodology of many business-related disciplines, including operations research, marketing, accounting, economics, game theory and finance. In many of the disciplines, a solid background in optimization theory is essential for doing research. This course provides a rigorous introduction to the fundamental theory of optimization. It examines optimization theory in two primary settings: static optimization and optimization over time (dynamic programming). Applications from problem areas in which optimization plays a key role are also introduced. The goal of the course is to provide students with a foundation sufficient to use basic optimization in their own research work and/or to pursue more specialized studies involving optimization theory.

The course is designed for entering doctoral students. The prerequisites are calculus, linear algebra and some familiarity with real analysis, as covered in summer math camp. Other concepts are developed as needed throughout the course.

Prerequisite: OIDD 910
Activity: Lecture
0.5 Course Units

**OIDD 913 Advanced Linear Programming**

Course not offered every year
Prerequisite: OIDD 910 OR ESE 504
Activity: Lecture
1.0 Course Unit

**OIDD 914 Advanced Non-Linear Programming**

Course not offered every year
Prerequisite: OIDD 910
Activity: Lecture
1.0 Course Unit

**OIDD 915 Advanced Graph Theory**

Deals mainly with algorithmic and computational aspects of graph theory. Topics and problems include reachability and connectivity, setcovering, graph coloring, location of centers, location of medians, trees, shortest path, circuits, traveling salesman problem, network flows, matching, transportation, and assignment problems.

Course not offered every year
Activity: Lecture
1.0 Course Unit
OIDD 916 Advanced Integer Programming
In-depth review of solution methods: Lagrangean relaxation and column generation, Benders partitioning, cross-decomposition, surrogate relaxation, cutting planes and valid inequalities, logical processing, probing, branch-and-bound, branch-and-price. Study of special problems and applications: matching, location, generalized assignment, traveling salesman, forest planning, production scheduling. Prerequisite: OIDD 910/ESE 504 or equivalent. Please email the instructor for any questions regarding the prerequisite.
Course not offered every year
Prerequisite: OIDD 910 OR ESE 504
Activity: Lecture
1.0 Course Unit

OIDD 920 Empirical Research in Operations Management
Empirical research in Operations Management has been repeatedly called for over the last 10-15 years, including calls made from the academic thought leaders in the field as well as by many of the editors of the top academic journals. Remarkably though, most researchers in the field would be pressed to name even three empirical papers published in such journals like Management Science or Operations Research. But, has there really been so little published related to empirical Operations Management (you might be surprised to learn that all five bullets listed above has been addressed by Management Science papers)? What types of problems in operations are interesting and worthwhile studying from an empirical viewpoint? How can one get started with an empirical research project in Operations Management? These are the questions that are at the heart of this course. Specifically, the objective of this course is to (a) expose doctoral students to the existing empirical literature and (b) to provide them with the training required to engage in an empirical study themselves.
Activity: Lecture
0.5 Course Units

OIDD 930 Stochastic Models
This course introduces mathematical models describing and analyzing the behavior of processes that exhibit random components. The theory of stochastic processes will be developed based on elementary probability theory and calculus. Topics include random walks, Poisson processes, Markov chains in discrete and continuous time, renewal theory, and martingales. Applications from the areas of inventory, production, finance, queueing and communication systems will be presented throughout the course.
Course usually offered in fall term
Prerequisite: STAT 510 OR STAT 550
Activity: Lecture
0.5 Course Units

OIDD 931 Stochastic Processes II
Extension of the material presented in OIDD930 to include renewal theory, martingales, and Brownian motion.
Course usually offered in spring term
Prerequisite: OIDD 930
Activity: Lecture
0.5 Course Units

OIDD 932 Queuing Theory
This course presents the mathematical foundations for the analysis of queueing systems. We will study general results like Little’s law and the PASTA property. We will analyze standard queueing systems (Markovian systems and variations thereof) and simple queueing networks, investigate infinite server models and many server approximations, study GI/G/1 queues through random walk approximations, and read papers on applied queueing models.
Course offered spring; even-numbered years
Prerequisite: OIDD 930
Activity: Lecture
0.5 Course Units

OIDD 934 Dynamic Programming and Stochastic Models
The course goal is to provide a brief but fairly rigorous introduction to the formulation and solution of dynamic programs. Its focus is primarily methodological. We will cover discrete state space problems, over finite or infinite time horizon, with and without discounting. Structured policies and their theoretical foundation will be of particular interest. Computational methods and approximation methods will be addressed. Applications are presented throughout the course, such as inventory policies, production control, financial decisions, and scheduling.
Course usually offered in spring term
Prerequisite: OIDD 930
Activity: Lecture
0.5 Course Units

OIDD 937 Methods Stumblers: Pragmatic Solutions to Everyday Challenges in Behavioral Research
This PhD-level course is for students who have already completed at least a year of basic stats/methods training. It assumes students already received a solid theoretical foundation and seeks to pragmatically bridge the gap between standard textbook coverage of methodological and statistical issues and the complexities of everyday behavioral science research. This course focuses on issues that (i) behavioral researchers are likely to encounter as they conduct research, but (ii) may struggle to figure out independently by consulting a textbook or published article.
One-term course offered either term
Activity: Lecture
0.5 Course Units

OIDD 940 Operations Management
Concepts, models, and theories relevant to the management of the processes required to provide goods or services to consumers in both the public and private sectors. Includes production, inventory and distribution functions, scheduling of service or manufacturing activities, facility capacity planning and design, location analysis, product design and choice of technology. The methodological basis for the course includes management science, economic theory, organization theory, and management information system theory.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: Crosslisted with ESE 620

OIDD 941 Distribution Systems Seminar
Seminar on distribution systems models and theory. Reviews current research in the development and solution of models of distribution systems. Emphasizes multi-echelon inventory control, logistics management, network design, and competitive models.
Course usually offered in spring term
Prerequisite: OIDD 940
Activity: Lecture
0.5 Course Units
**OIDD 943 Retail Operations**

Activity: Lecture

0.5 Course Units

**OIDD 950 Perspectives on Information Systems**

Provides doctoral students in Operations and Information Management and other related fields with a perspective on modern information system methodologies, technologies, and practices. State-of-the-art research on frameworks for analysis, design, and implementation of various types of information systems is presented. Students successfully completing the course should have the skills necessary to specify and implement an information system to support a decision process.

One-term course offered either term

Activity: Lecture

1.0 Course Unit

**OIDD 951 Seminar on Logic Modeling**

Seminar on the elements of formal logic necessary to read and contribute to the Logic modeling literature, as well as the implementation principles for logic models. The primary topics include elements of sentence and predicate logic, elements of modal logics, elements of semantics, mechanical theorem proving, logic and database, nonmonotonic reasoning, planning and the frame problem, logic programming, and metainterpreters. Permission of the instructor and some prior knowledge of logic or Prolog.

Course not offered every year

Activity: Seminar

1.0 Course Unit

**OIDD 952 Computational Game Theory**

Seminar on principles of knowledge-based systems including expert systems. Topics include basics of expert systems, knowledge representation, meta-level reasoning, causal reasoning, truth maintenance systems, model management, planning systems and other applications. Permission of instructor and knowledge of logic and Prolog or Lisp.

Course not offered every year

Activity: Seminar

1.0 Course Unit

**OIDD 955 Research Seminar in Information Systems**

This course provides an overview of some of the key Information Systems literature from the perspective of Insormation Strategy and Economics (ISE) and Information Decision Technologies (IDT). This course is intended to provide an introduction for first year OIDD doctoral students, as well as other Wharton doctoral students, to important core research topics and methods in ISE and IDT in order for students to do research in the field of Information Systems. While it is intended as a ‘first course’ for OPIM doctoral students in ISE and IDT, it may also be useful for students who are engaged in research or plan to perform information technology related research in other disciplines.

Activity: Lecture

1.0 Course Unit

**OIDD 960 Research Seminar in Information Technology - Economic Perspectives**

Explores economic issues related to information technology, with emphasis on research in organizational or strategic settings. The course will follow a seminar format, with dynamically assigned readings and strong student contribution during class sessions (both as participant and, for one class, as moderator.)

Course usually offered in fall term

Activity: Lecture

1.0 Course Unit

**OIDD 961 Research Seminar in Information: Strategy, Systems and Economics**

This is the advanced doctoral-level research research in information strategy and economics that builds on the foundations developed in OPIM960. Much of the content will be focused on current research areas in information strategy such as the information and organizational economics, information technology and firm performance, search cost and pricing, information and incentives, coordination costs and the boundary of the firm, and the economics of information goods (including pricing and intellectual property protection). In addition, promising empirical approaches such as the use of intelligent agents for data collection or clickstream data analysis will be discussed.

Activity: Lecture

1.0 Course Unit

**OIDD 989 Topics in Operations and Information Management**

The specific content of this course varies form semester to semester, depending on student and faculty interests.

Course not offered every year

Activity: Lecture

0.5 Course Units

**OIDD 992 Conflict Mgmt Seminar**

This seminar exposes students to the central issues in conflict management research. This course covers both analytic and behavioral perspectives of conflict management, and describes how the field has developed. Through discussions of theory and empirical research, the course aims to develop a foundation for understanding the extant literature and how common methodological tools have shaped the types of questions conflict management scholars have investigated - and neglected.

Course usually offered in spring term

Activity: Lecture

1.0 Course Unit

---

**Organizational Anthropology (ORGC)**

The courses listed on this page are exclusive to the LPS BAAS degree ([https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/](https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/)) and LPS Online certificates ([https://lpsonline.sas.upenn.edu/academics/certificates/](https://lpsonline.sas.upenn.edu/academics/certificates/)).

**ORGC 160 Introduction to Team Culture**

In this course, students learn about the basics of team dynamics. Students explore the foundations of effective teams, and understand why they inevitably become misaligned. Students then step through a process for generating passion and high-performance in any group that has to work together toward a common goal. Through engaging case studies and role plays, students get practice diagnosing and managing interpersonal issues that can derail teams.

Activity: Online Course

1.0 Course Unit

**ORGC 201 Virtual Collaboration**

Virtual Collaboration looks at interconnections and synergies that can be intentionally created in the virtual space of workby following frameworks and techniques that allow greater and more frequent exchange of views, freedom to express divergent views and harness the richness of variety of people, thoughts geographies, cultures and social norms, intelligence and above all experience. Students practice course tools and techniques by collaborating and providing peer feedback in the virtual classroom environment.

Activity: Online Course

1.0 Course Unit
Organizational Dynamics (DYNM)

**ORGC 301 Anthropology of Corporations**
In this course, students learn what organizational culture is and how it affects performance. Students step through foundational theories that explain how and why culture moves through organizations and changes. Students also learn to identify the drivers of cultural conflict that can hinder strategies and reduce collaboration. Drawing on anthropological frameworks and theories, students develop skills for understanding an organization's particular cultural characteristics and creating sustainable change.

Activity: Online Course
1.0 Course Unit

**ORGC 330 Building Influence Across Cultural Boundaries in Organizations**
Every organization has subcultures defined by different divisions, departments, and teams that make it difficult to collaborate and get things done. In this course, students develop the ability to communicate across these cultural boundaries to build influence and effectiveness. Drawing on current insights from psychology, anthropology, and behavioral economics, students learn to use practical, field-tested frameworks for connecting with people who have different perspectives and winning support for their ideas. Through interactive discussions and exercises, students master the similarities and differences among influencing, persuading, and negotiating.

Activity: Online Course
1.0 Course Unit

**DYNM 501 Perspectives on Organizational Dynamics**
'Perspectives' is both a fundamental and integrating course intended for MSOD students at any point in the program who wish to understand and deploy a multiplicity of dynamics operative in organizations and in the minds that create and inhabit them. It is particularly useful for those in their first year and for non-MSOD students. One key focus is on understanding the implicit mental and emotional frameworks or metaphors that 'inform' organizing so that we can virtually see more robust and complex approaches to effectiveness and to leadership within them. Several faculty members highlight their specialties. One special theme examines new management models and thinking frameworks designed to prevail in a 21st century context. Lectures, discussion, and experiential learning are used to build an informed grounding in the history, philosophy, theory and practice of Organizational Dynamics. The course requirements are active class participation, potential application projects/weekly journal, a midterm paper and a final paper. Permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit

Taught by: Greco

Course usually offered summer term only
Activity: Seminar
1.0 Course Unit
Notes: DYNM Category: A; DYNM Concentration: LMC.

**DYNM 542 Theories, Models, and Practices that Inform Coaching**
This course will examine how theory guides the effective practice of coaching. Students will be introduced to a theory and model that encompasses a multi-disciplinary approach to coaching in an organizational setting. With this framework as a basis, students will select, research, and present a theoretical model of their own choosing and design a coaching application that demonstrates theory in action. Students will leave the course with an array of theoretical frameworks and practical techniques that will enhance their own coaching capabilities as managers and consultants. Undergraduates may enroll in 500-level courses only with permission of the instructor. Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit.

Taught by: Orenstein

One-term course offered either term
Activity: Seminar
1.0 Course Unit

**DYNM 551 Devil's Advocate: Power of Divergent Thinking**
This course meets synchronously on Wednesdays between May 13th and July 1st. There will be 6 asynchronous sessions. Short-term or long-term? Us or them? Build or buy? Margin or volume? My way or the highway? Ad infinitum, apparent forced choices—or no choice—and limited perspectives can create costly tugs of war or constricted judgment without our minds (and hearts) and in organization dynamics, persuasive, and often hidden, divergence in thinking offers great opportunity for learning, creativity, and sound decision-making. This course offers several robust, practical techniques for bringing the value of diverse perspectives in politically productive ways to leadership thinking, communications, and organization dynamics. Prerequisite: Permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit

Taught by: Greco

Course usually offered summer term only
Activity: Seminar
1.0 Course Unit
Notes: DYNM Category: A; DYNM Concentration: LMC.

2020-21 Catalog | Generated 09/18/20
DYNM 555 The Idea of Nationalism
Nationalism has been the most important geo-political phenomenon of the past two hundred years. Its continuing power has been amply demonstrated by recent events in many parts of the world. The principle of national self-determination and closely related notions of individualism and human rights shape the global context in which businesses, governments, organizations, and individuals must operate in the 21st century. This seminar course will explore the ideology of nationalism through the lens of institutions and organizations, corporations, nonprofits, government, NGOs, unions, religious communities, etc. Starting with concrete examples from students own experiences and the contemporary conflicts confronting governments, organizations, and businesses, we will examine the ideology of nationalism, its meaning and content, its philosophical foundations, its underlying assumptions about the nature of human identity, and its contemporary expressions in nationalist movements and ethno-political conflicts around the world. In the process, we will explore such questions as: What is a nation? Does every identifiable ethnic or national group have a valid claim to a nation-state of its own? How are claims to national self-determination justified? Why do nationalist movements seem so often to engender political extremism and violent ethno-political conflicts? Is national self-determination compatible with our commitments to individualism, rationality, and universal human rights? What are the best strategies to cope with the persistence of nationalism in the 21st century? Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit. Taught by: Steinberg

DYNM 558 Social Media and the Organization
With each passing day, the 24-7 cycle of social media continues to wildly evolve. Facebook. Twitter. YouTube. LinkedIn. Instagram. Over the last 15 years since many of these social media services have launched, they've transformed society in many significant ways. Social Media and the Organization will deepen your understanding of and offer real time practical experience with social media. The course will examine the current trends and use of social media in marketing, product development, customer service, networking and other facets of organizational policy and practice. Students will have hands-on participation online with the class blog, http://upennsocialbook.wordpress.com, sharing relevant case studies, analyzing social media campaigns and critiquing their own organization's culture and values surrounding social media including social media policy, staff challenges, and evaluation of challenges and opportunities in its use. Prerequisite: Non-DYNM students must complete a course permit request: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit. Taught by: Warren
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: DYNM Category: A; DYNM Concentration: LMC

DYNM 601 Gender, Power, and Leadership in Organizations
For the last several years, issues related to gender in organizations and organizational leadership have not been hot topics of discussion in the popular media, in organizations themselves, or in academia. That is no longer true. The advent of #metoo and the revelation of sexual harassment in corporations, government sector organizations, and nonprofits has highlighted the ways in which those with more power have been using their power to both harass and silence their victims, many of whom are women—although this dynamic is true for others belonging to groups with less power. Addressing these issues effectively will require more than lawsuits and more than sexual harassment and bystander training. This course will explore what will be required if we are to have organizations that effectively leverage the skills and talents of both men and women. Although in the last 30 years there has been some significant progress made in placing women in leadership roles in organizations, we will take a deep look at the data about where and how gender differences continue to exist in organizations including differences in both professional and outcomes. This class will examine the social, cultural, and structural dynamics within organizations that unintentionally, but differentially, affect women and men. In particular, we will consider how men and women are viewed, how their contributions are evaluated, and the opportunities that are available to them. Specific topics that will be addressed include exploration of theories explaining the development of gender identity and related behaviors that appear to be gender-based; the social construction of gender; the intersectionality of gender, race, and class in terms of power and organizational dynamics; the various explanations for gender differences in organizational life; the theories that connect gender and leadership; policies and practices that reinforce gendered dynamics; how sexual harassment, long illegal, has quietly persisted in organizations and why now new instances of harassment are being revealed nearly every day; methods for understanding the multiple sources of gender inequities in organizations; and methods for changing organizations to create equity in terms of the roles and treatment of women and men. The seminar will involve a substantial amount of reading from required books and articles. Assignments will focus on students' examination and assessment of gender-linked dynamics in their own workplaces. Classroom time will be structured in a seminar format, including presentation of material by the instructor, group discussions of readings, experiential learning activities, student presentations, and group discussions, and examination of students' own organizational experiences as they relate to the course material. A significant portion of the learning will result from discussions in class, so attendance is important. The course is structured to first address the development of a theoretical framework for understanding gender issues in the workplace from personal, interpersonal, group, and organizational perspectives. During the second section of the course, we will explore more specific ways in which policies and practices have differential effects on employees and managers by virtue of gender. In the last section, we will focus on alternative conceptualizations, structures, policies, and practices that could enable both men and women to be successful in the workplace and to avoid gender-based inequities. In this last section we will specifically discuss interventions and strategies for enhancing gender equity. Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit. Taught by: Vanderslice

1.0 Course Unit
DYNM 602 Leader-Manager as Coach
Course Schedule: 9/26, 10/17, 31; 11/14, 21. New work technologies, increased competition, and employees’ desire for more involvement in their work are changing the traditional role of the manager. Rather than directing, planning, and controlling the work, managers and leaders are facilitating processes and coaching and developing their employees. Team-based organizations are built on coaching as a core requirement of the team leader role. This course explores the theory and practices of individual coaching as leadership behavior. The focus is on helping managers develop their skills and improve their performances as coaches. We will examine the need to provide others with successful performance strategies, timely feedback on strengths and on development needs, and growth opportunities in order to challenge others to reach their potential. We will explore workplace environments that foster the growth and achievement of those we lead. Course permits for Non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit
Taught by: Russo

DYNM 603 Leading Emergence: Creating Adaptive Space in Response to Complex Challenges
This course will meet in-person over two weekends (February 14-16 & April 17-19) and have three 1.5 hour virtual meetings (February 3; March 16; April 20) This seminar is designed to be highly experiential so that participants can engage in the practices necessary to enable innovation and adaptation. Participants will examine emergent innovation theory by addressing the dynamics and conditions in which ideas emerge in an informal manner, garner organizational attention, and gain momentum towards becoming successful innovations or bold changes within complex organizations. This will include examining the need for adaptive space in generating value that drives growth by enabling an environment of idea generation, entrepreneurship and innovation while leveraging the benefits of existing, formal systems to scale these ideas. Participants will explore and engage in such topics as creative experimentation, idea emergence, organizational network analysis, social capital, design thinking, organizational analytics and complexity leadership. Prerequisite: Permit request for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit
Taught by: Arena

Notes: DYNM Categories: F, A; DYNM Concentration: LMC. In-Person Course Meeting Schedule: 3 weekends, TBA. Virtual Meetings: 2 meetings, TBA.

DYNM 605 Organizational Project Risk and Uncertainty
This course will meet on the following dates: 9/12, 26; 10/3, 10, 17; 11/7, 21; 12/5, 12. The syllabus and calendar outline which of those dates are synchronous and which are asynchronous. DYNM 605 is a uniquely blended content of thought leadership vetted by subject matter experts worldwide adapted to today’s constraints and challenges of virtual communications. This participant-centered set of seminars is an opportunity to increase both awareness and knowledge of risk and uncertainty by examining causes of unexpected events in predictive (classic) and adaptive (agile) project frameworks. Successful applications of non-deterministic approaches are explored as antidotes to constrained command and control project environments. Course content is valuable in roles, organizations, and sectors of all types. Prominent project/operational risk management methodologies are included in this seminar. Processes advanced by the Project Management Institute, AACE International, U.K. Association for Project Management, International Council on Systems Engineering, and by the International Organization for Standardization are contrasted with industry specific practices, including the U.S. Food and Drug Administration, NASA, and the Departments of Defense and Energy. Case examples are based on relevant experience. Participants perform hands-on implementation of processes in realistic team working sessions and facilitated dialogue. Spreadsheet/network analysis using Monte Carlo Simulation tools will be included in the course and clinics (see syllabus). DYNM 606 Leading from the Center: Unleashing Your Leadership Potential
This course has two in-person weekends: July 17-19 and August 14-16. There will also be virtual connects, schedule TBA. This seminar is designed to support existing and emerging leaders who recognize their need for more adaptive leadership skills to effectively respond to rapidly changing environments. We will weave leadership theory and practice in a highly experiential seminar so that participants can actively engage in a leadership lab including deep reflective thinking, rapid prototyping and experimenting with new behaviors and practices. The purpose of the seminar is to evoke personal leadership at more impactful levels and improve organizational performance and personal satisfaction. Participants will examine their own, and others’, leadership theories by identifying assumptions about leading, creating a preferred model for individual leadership, and field testing actual shifts in behavior. Participants will engage in a three-part exploration over the course of the seminar: first, we will have an opportunity to examine our own models and those of the leading theorists in the field; second, participants will be asked to articulate and improve their own model; and finally, participants will be asked to activate and test their model and report back on the experience. This course is designed to create an ‘action-learning’ community in which you will integrate your professional experience, this class, and other graduate course work with a final exploration of leadership concepts, theory, and applied practice. This course is also designed to strengthen your ability to lead, including as a colleague who can support leadership behavior in peers and as one who can promote leadership behavior in supervisors and subordinates. Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit.

DYNM 607 Psychodynamics of Organizations
As an area of study, the psychodynamics of organizations draws out attention to the tacit, implicit, and unconscious dimensions of organizational life. It presumes that a person takes up his or her role at work by drawing on both individual history and the organizational context that helps define a role, its boundary, and the resources available to take it up. In both these aspects, the organizational context, and one’s individual biography, people are often unaware of the thoughts and feelings that animate their behavior. This course will introduce students to some basic concepts of psychoanalysis, which focuses on individual motivation, and systems psychodynamics, which focuses on group dynamics and group psychology. System psychodynamics also emphasizes how an organization’s primary task, or its ‘reason for being,’ influences individual experience. Readings include case studies as well as expositions of theory. The instructor will also draw on his own consulting cases. Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit.

DYNM 610 Knowing Yourself: The Coach as an Instrument of Change
Note: This class is predicated on the assumption that prior to offering coaching assistance, a coach should have a deep understanding of his or her own behavior and its impact on a client. Utilizing validated tools and strategies available for coaches, the students practice sets of coaching skills on each other. This includes practice in interviewing and observational skills. In addition, students will have the opportunity to give and analyze 360 degree feedback data, as well as use a variety of other instruments that can be foundational for a useful coaching experience. Premise: Coaching others is very serious business. Intrepid individuals willing to take on this responsibility should be willing to answer the following questions: Who am I as a leader and helper? What are the assets I bring to the coaching relationship? What are my deficits, overused strengths, or underutilized skills and behaviors? What historical influences from my family of origin influence my capacity to build a positive relationship with my coaching client? Are there discrepancies in relation to my self-perceptions and those who know me well—family members, peers, colleagues, friends, boss, and direct reports? As a result, are these specific areas of personal development that I need to address as I move? Similar to most traditional programs where the focus is on the management of change, the course is organized to: 1) A diagnostic phase in which the values, history, assumptions, and behaviors of the client will be assessed. In this case the client will be the student/coach. 2) The applied phase in which analysis, interpretation, and formal learning will be the central focus. The end result will be individuals with a deep and abiding understanding of their own psychodynamics and their personal impact. Finally, by modeling many of the tools and strategies useful in any effective coaching effort and practicing them on themselves and their student peers, it is hoped that the experiential nature of the course will allow maximum transference to the real work of coaching. DYNM 611 Effective Collaboration for a Changing Global Workplace
Effective collaboration requires a combination of strong self-awareness and an ability to make adjustments at the individual and group level. This course provides tools for building teams that leverage individual strengths and a mutual learning process of continuously addressing collaboration barriers to improve team performance. The seminar/lab is designed to extend each participant’s analytical skills and gain practice implementing high performance practices through a team-based simulation. Specific learning objectives are to: 1. Understand leading-edge frameworks for building effective teams. 2. Learn and apply tools for diagnosing barriers to collaboration. 3. Develop implementation plans for teams and organizations consistent with best practices. 4. Provide tools for self-assessment of participants to leverage their strengths for teamwork success. 5. Apply learning from classroom-based teamwork simulation to participants’ real-life experiences. The course will be conducted in a university classroom and use several breakout rooms for teamwork among participants. Case study teams will use web-based communication software (TBD) for inter-session collaboration on projects. Weekly facilitated discussions by course instructors will be conducted at each weekend session. Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit.

DYNM 612 Mastering Organizational Politics and Power
The purpose of this course is to explore, enhance, and expand the participants’ competence in organizational politics. Students will observe political dynamics as they occur in their own organizations and will interview senior managers in other organizations to learn how political realities vary from one organization to another. Theoretical ideas about a dimension of organizational politics of particular interest to each individual participant will be analyzed in a term paper. In addition, each participant will keep a personal diary of political dynamics in his or her own workplace. The course will also explore ways to master the political skills of networking, negotiating, influencing, leading, and following, as well as developing a political strategy. Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit.

DYNM 613 Is Bigger - Inevitable, Better or Worse in Organizations?
Is the modern large corporation alienating, inflexible, unproductive? Is the small organization or work team engaging, innovative or creative, productive? Has it always been this way in the U.S.? Is change possible? In this unique, informal, “turbo” seminar, we will examine the large corporation in terms of history, governance and control, and delivery of (office) work. We will consider whether “bigness” and bureaucracy are inevitable, and how organizations of the present, and probably the future, are affected by those of the past. This seminar has been structured to cover a good deal of ground in a short time. The seminar will meet on six Saturdays. The subject matter of the seminar is the large-scale organization. Questions to be raised include: 1) Is the modern large corporation alienating, inflexible, and unproductive? 2) Are bigness and bureaucracy inevitable? 3) Is the small organization or work team engaging, innovation, creative, and productive? 4) What does the historical record for the United States reveal? 5) Are organizational alternatives and change possible? Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit.

DYNM 614 Consulting/Coaching Tools and Techniques
This course will offer a conceptual comprehension of the tools and techniques used in effective internal and external organizational consulting engagements. By contrasting the theory and practice of alternative coaching models, we will build tools and techniques for effective coaching as a leadership competency. Through an analysis of the coaching relationships in your organization, you will learn to develop a personalized approach to coaching and expand upon and within organizational settings. Participants learn the “how and why” as well as consulting frameworks. Additionally, the relevant and often symbiotic connection between consulting and coaching will be studied. What process tools are most useful to today’s executive coach in a consultative environment? How do approaches to consulting and coaching differ? How are they similar? How can a confluence of coaching and consulting lead to more effective decision-making and wide-scale organizational performance? This course will be presented over five class meetings. The class sessions will be taught utilizing lectures, case studies, structured small group discussions, individual and team presentations, faculty and participant experience, and guest speakers. In addition to textbooks for this course, students will also need to purchase an assessment. Details on this process will be provided to students before the course start. Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit.

DYNM 615 Global PENNovation: Making Tomorrow’s Cities Sustainable Cities
This class will operate in a hybrid format. We will have four 90-minute virtual class sessions (via Zoom) on four Thursdays (6 PM to 7:30 PM) – January 23, February 13, March 5th, and March 26th. These sessions will cover key material on sustainable cities and will help guide students in their thinking for course deliverables. The course also has an independent study element similar to a capstone course - as students will have considerable independent time to complete course material and conduct research for their projects throughout the term. Environmentalist Paul Hawken challenged a class of 2009 college graduates that they would have to “figure out what it means to be a human being on earth at a time when every living system is declining, and the rate of decline is accelerating.” That theme is at the heart of this course. While we have seen the notion of sustainability gaining traction in recent years, our quality of life in the near future hinges on the development and implementation of sustainable solutions to enormously complex global environmental and social problems. This course is designed to foster the thinking that is needed to address those enormous problems. It involves focusing on a critical global problem with sustainability and social dimensions - in this case, the rapid shift of an increasing global population to cities - and providing the framework for students to take a deep dive into evaluating and recommending solutions to meet that challenge. The World Health Organization (WHO) estimates that in 1990, less than 40% of the global population lived in cities, and that figure is expected to grow to 60% by 2030 and 70% by 2050. Such growth brings tremendous sustainability and design challenges in both developed and developing countries in terms of resource consumption, food security, water security, energy security, air quality, transportation, infrastructure, waste processing, recycling, and public health. It also brings opportunity. In 2020, students will conduct research on the challenges and opportunities created by increasing urbanization, drawing on readings from thought leaders in conjunction with their own creative insights, with a focus on advancing development of sustainable cities to ensure the long-term health of people and planet. DYNM 616 Myths to Media: Stories on a Mission
What determines our behavior? How do we come to understand? Who determines our purpose? Is now the only time? When asked “What if there were nothing in the universe,” one professor replied, “How do we know there isn’t?” The more our world seems to dis-integrate into discrete and unpredictable units and actors, the more we crave guidance from robust human models and conceptual frameworks of intellect, emotion, psyche, and action. Fortunately, our 100,000-year-old brains retain mechanisms enabling us even now to enhance our choice using the ‘stories beneath the stories’ that—in form and content—have driven our purposes and actions since sentient beings could communicate. Yoda you should ask. This course offers several means of deploying these powerful ancient sense-making tools—myths and stories—to purposefully communicate and foment action with individuals, groups, and organizations, particularly in our global social media milieu. We will learn many practical story-based ways to apply this power to several ‘missions’: engaging others in individual and collective action, increasing understanding of patterns in human behavior, and harnessing the driver of purpose for business and social enterprise. DYNM 617 Economics of Human Behavior and Organizational Life
As a society, we choose many different ways to organize different aspects of our lives. The institutions and organization we choose to provide us with the necessities and comforts of life range from the fundamental institutions of family and religious organizations, to firms in the capitalistic market and democratically elected governments. We respond to this environment in unique ways: we marry, we worship, we buy and sell goods and services, and we vote. The primary goal of this course is an examination of the various aspects of human behavior in the context of organizational and institutional life from an economic perspective. We recognize that the choices we make are sensitive to the costs and benefits of different actions and use this economic perspective to gain insights into social, economic and political behavior in our daily lives. We start the course with an examination of how micro economists view the world and examine their favorite toolkit. We discuss concepts such as: efficiency, opportunity cost, marginal analysis, externalities, incentives, free-riding, rent-seeking, and transaction costs. These concepts are fundamental if an economic perspective and they will be presented using every day examples. Before concluding the course, we will look at several topics such as: Human capital and investment in education (Should you invest in an Ivy League school education?); Law and enforcement (When is it profitable to break the law?); Bribes and gifts (Quid pro quo?); Economics of information (Used cars and the market for ‘lemons’); Why we discriminate against minorities?; Property rights and externalities (The tragedy of the commons: Should we have smoke-free environments?); and Free-riding (Should I vote in the next election? Should I volunteer to clean up?) Prerequisite: Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit Taught by: Handy

DYNM 619 Organizational Project Management
Fall 2020 meeting dates: 9/26; 10/3, 10, 24; 11/7, 14, 21; 12/5. The course provides an overview of the concepts, procedures, and fundamental processes of project management for working professionals. Participants are introduced to the principles, tools, and techniques of project management within an integrative framework. The course emphasizes that, for most organizations, projects are the primary means for implementing strategic initiatives. Course Objectives: 1) Understand and critically evaluate expectations, procedures and processes of program management as currently practiced in large for-profit enterprises; 2) Understand the content and processes and standards of practice as defined by the Program Management Institute (PMI); 3) Understand how to build and manage effective project teams; 4) Become familiar with the critical components of effective project plans. In addition to the scheduled meeting dates, additional class activities will be planned between faculty and students. Prerequisite: Non-DYNM students must complete a course permit request form: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit

DYNM 620 The Art and Science of Understanding Paradox in Organizations
This course introduces multiple approaches to understand and interpret the paradoxes that baffle us, such as: 1) Why is it that we go to hospitals to be healed and get well, but we leave sick and infected? 2) How is it that we come together to do purposeful work and end up doing mundane, boring tasks? 3) Why is it that banks were created to protect and ensure financial security, but banks have caused a global recession? 4) Why do we not learn from history? Why do we repeat the mistakes we have made before? 5) Why is it that the ‘Developed and Advanced’ countries of the world are destroying the planet? This highly interactive, flexible, and remarkably diverse online course will offer frames to observe the paradox in ourselves, our families, our friendships, our workplace, and our relationships with individuals, teams, and systems--the three units of analysis that constitute every paradoxical situation. Paradox appears in our organizations, our relationships, and our experience as contributing members and leaders of our society. The value proposition of this course is for managers, leaders, and strategic thinkers who wish to understand the art and science behind the paradoxes in the systems within which we live and operate—the visible and the invisible and the rational and irrational. Understanding the unconscious forces that lead to inconsistencies and contradictions will help us be resilient in the face of paradox. This online course will have weekly synchronous and asynchronous sessions of 2-3 hours in length. Through guest speakers and multiple interdisciplinary discussions, we will explore many angles of our understanding of paradoxes. Course grading will be based on class participation, contribution to the collective wisdom, and academic excellence in written assignments. DYNM 622 Diversity and Inclusion: Strategies to Confront Bias and Enhance Collaboration
This hybrid course meets on the following schedule: In-person Saturdays: May 30; June 13 & 27. Tuesdays via Zoom: June 2, 9, & 16. In the workplace it is inevitable that difference between individuals will cause conflict—whether explicit or beneath the surface. Denial and unconscious bias will prevent issues from being addressed. This course will expand participant perspectives about strategies for addressing bias and for creating effective collaborations that bridge difference. The approach of the course is based heavily in experiential learning, structured reflection, and practical application. Through a self-assessment and group reflection, participants will create, implement, and adjust action plans for addressing unconscious bias and for enhancing communication that drive inclusive goal and norm setting. A live, building case provides an opportunity to apply the course concepts in a dynamic team setting. One additional facilitator per weekend will be brought in for short guest lectures and team observation/debriefing to provide an appropriate and relevant source of challenge to work through difficult issues raised through course concepts. The overall course structure will combine three intensive on-site Saturday meetings with opportunities for remote collaboration to create a seamless and continuous learning community. To maximize collaboration and networking opportunities, students will participate in two teams: one in which they will be tasked to solve a business challenge related to diversity and inclusion and the other for discussing strategies to implement course learning within their workplace or organization. DYNM 623 Building Intercultural Competence in A Global Work Environment
This engaging course will promote intercultural competence and heighten cross-cultural awareness. You will engage in activities, simulations, and discussion about culture, values, perceptions, communication styles, and cultural patterns of thought and behavior that will help you understand the basic concepts, theories, and issues of intercultural communication related to intercultural relationships and how these concepts apply to your personal and professional lives. This fun and stimulating course will also explore ways to create an interculturally-competent work environment. Learning opportunities will examine tools to interact more positively with each other. As we build intercultural competence, we will sometimes encounter barriers as we interact with people whose cultural backgrounds vary from our own. As learners of intercultural communication, we will be bringing different cultural experiences and perspectives. As we interact and learn together, you will be exposed to different viewpoints and cultural lenses. We will all realize that as we unravel differences, you will find that what is acceptable and appropriate in one culture may be disrespectful from another cultural vantage point. As we cultivate, learn, and shape our intercultural competences, we may need to have an open mindset to learn new things and unlearn misinformation. The cultural competency of learning and unlearning, shaping and reshaping is a life skill that will be useful and extended well beyond the course to our work settings and personal lives. Finally, this real-life application course will help you develop a greater understanding of the behaviors and practices other individuals from your workplace may bring with them from their cultural backgrounds. Areas that will be tackled will include: 1) practical tips for working with diverse cultures and individuals, 2) how values, perceptions, and expectations differ between cultures, 3) how to manage conflicts and problems with other individuals, and 4) what you need to know about the workplace dynamics, behaviors, and practices in international cultures. DYNM 625 Ethnography of Everyday Life: A Master Class
Ethnography is a fundamental method within the social sciences that concerns the systematic study of culture. It involves a ‘thick description’ of how people actually live their everyday lives, personal or professional. Ethnographers study how human groups form institutions and how these structures grow, function, maintain themselves, and persist. Also at issue is how people share their understandings and develop ideologies pertaining to these processes. Social negotiation and the development of ‘local knowledge’ in the culture of interpersonal affairs will be emphasized, particularly as it is transmitted from one generation to the next. Through direct observation and discussion, students will treat Philadelphia as an ‘urban laboratory’ and seek to identify, to study, and to learn about local people and places. In this vein, the class will visit communities and organizational settings to gain exposure to ordinary people but, particularly, to apply ethnographic methods to the complexities of the modern workplace as well as to everyday life of the city. The final paper will be a synthesis of ethnographic literature and observations of local urban life and culture, particularly as these issues apply to understanding and organization or a local community. Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit.

DYNM 626 Navigating the Post-Professional World
This course will explore the emerging space between virtual reality and augmented reality as they manifest themselves in the marketplace shifts in both startups and large corporations. The goal of this course is to design, from the future back to the present, a graduate curriculum that supports the evolution and transformation of traditional professional training and development. Leaders of professional services from disparate fields, including health/medicine, law, architecture/design, information technology, and spirituality/religion will be engaged to participate in identifying trends for future professional enhancement. These representatives would be asked to be both resources to the class and recruiters within their own organizations so we can obtain participants for a Delphi study for the future of that profession. Course work will include the literature on the post-professional world as well as the use of both virtual reality and augmented reality. A capstone quality paper will be supported as a group project and could serve as a pre-capstone individual project. A particular focus will be on the trend of white-collar automation and its impact on the professions. Students interested in engaging with colleagues around the future and its consequences and opportunities are encourage to participate. Special attention will be developed on the role of building trust between post professionals and their stakeholders. DYNM 628 Organizational Diagnosis: Diagnostic Strengths for Effectiveness
This seminar is designed to help participants learn multiple approaches to diagnosing the complex ways in which issues and/or problems manifest themselves in organizations. Frequently, when organizations find themselves in trouble, i.e., there are rumblings in the system about such things as lack of leadership, poor communication, diminished productivity, low morale, etc., there is a tendency to frame the problem(s) simplistically and/or locate blame in a few difficult individuals or groups. However, upon closer examination, problematic issues are often found to be symptomatic and/or symbolic of multiple issues within the organization. This course will help students understand how problems which appear at one level of the system (for example, at the personal or interpersonal level) often represent problems at other levels of the system (e.g., at the group and/or institutional level) or signify a range of inter-related issues. It will provide students with the theoretical constructs and application skills necessary for identifying and framing problem areas, collecting data, and organizing feedback to client systems. Real-time examples will inform our discussions as we consider the relationships between diagnosis, organizational reflection and appropriate action.

DYNM 629 Strategic Approaches to Human Capital Management & Its Implications for Leaders
In this course we look at how human capital strategy is changing in response to increasing demands for results and more purposeful practice. We look first at the broader landscape of human capital management and see what’s new in the way an organization should approach its human capital practice. Then, we look more closely at the specific challenges—demographically, structurally, and organizationally—facing managers and Human Capital professionals in an age of uncertainty, and learn what they can do to remain adaptive and competitive. By the end of the course, through meetings and discussions, assignments, presentations, case studies, research, and required reading, participants will: 1) Learn how to assess and adjust Human Capital Development (HCD) policies, processes, and practices; 2) Think strategically about the critical human capital concerns in their own organization; 3) Connect and align individual and organizational learning imperatives; 4) Learn how to reshape human capital goals to meet continuously changing global, political, and economic environments; 5) Inspire leadership of human capital that is results-oriented and ethical; 6) Identify and explore a specific human capital issue relevant and important to their organization and develop a strategic approach for addressing it. DYNM 630 Digital Business Transformation: A Process Approach to Results at Minimum Risk
According to newest research, over 70% of organizations worldwide have started digital transformation initiatives or at least plan for them. New digital tools are available almost daily - and many of them have the potential of a major business impact. They enable high performance practices and often even new business models. The resulting transformation of business processes leads to superior customer or supplier experience and organizations become more efficient, agile, meet compliance requirements, or improve the quality of products and services. They help achieving a level of process performance you would never have thought of before. Robotic Process Automation (RPA), Blockchain, Artificial Intelligence, the Internet of Things and Cloud-based software architectures with next generation automation approaches are some examples. However, many organizations underestimate the challenges of digital business transformation resulting in initiatives delivering little or no business value. A major financial organization, for example, stopped the use of over 1000 robots since that digital workforce had created severe issues: processes changed more frequently than expected - the robots didn't which led to numerous exception cases that had to be handled manually. The elimination of bottlenecks created more severe issues downstream. Value-driven Digital Business Transformation addresses those challenges. It proposes approaches, methods and tools that help to focus on the right sub-processes to transform and improve those areas considering the end-to-end business context as well as sustain the results through appropriate governance. The systematic use of digital technologies requires a hybrid workforce management aligning people, robots and other technologies through appropriate business processes management practices. A value-driven digital transformation prepares for this situation. The course discusses design and execution principles as well as related methods and tools to realize the full business value of digital business transformations, delivering results fast and at minimal risk. It combines newest case studies with current research findings to master business impacts of digitalization. DYNM 631 Everyday Intergenerational Conversations: Baby Boomers and Millennials

This hybrid course delves into three big questions around the burning theme of everyday intergenerational conversations. The class experience will be a living such conversation with Dr. Barstow, a Baby Boomer, and Amrita Subramanian, a millennial. The course format is 20% in person and 80% on a virtual platform. It's a learner-centric and a learner-driven course. It is created to mine the practical know-how and life experiences of all participants, so all generations within the class can have a revealing experience that they can immediately apply at work and their personal relationships in life. At this exact point in time there are 300+ million people in the workforce and four generations at play. We begin to see the tiers of own understanding falling apart. It's no longer about stereotyping or simply managing by default or banking on quick-recall labels—and here's why—workplace performance or productivity or engagement or intergenerational respect and trust cannot be left to chance or opinions. We have to pause and consider the following questions: 1) What: What are the generation names and labels we use? What purpose do they serve? How do they help and how do they hurt? What do they hide, obstruct or make us miss? 2) So what? Intergenerational communication is poor and we can do better. Understand it and skills (strategies and tactics) to prosper and cope. How to use agency and brokerage? What of cognitive dissonance? Responding versus reacting to Fake News? 3) What’s next? What have we learned from this whole century about the 4 generations at work? At home? At meetings or webinars or potluck parties? What of families at Thanksgiving? How can we expect to have valuable and meaningful conversations and relationships with all generations—current and future? The primary goal is not to make up our minds just yet or have cookie-cutter retorts. It’s not just what to think but how to think about this very pertinent issue at hand for all practitioners, leaders, managers, and folks from all walks of life. There are bound to be far more questions than answers as we begin, and by the time we close, we would have configured our own responses to these questions that appreciate the context of our own unique lives. Prerequisite: Course permit for Non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit Taught by: Barstow and Subramanian One-term course offered either term Activity: Hybrid Course 1.0 Course Unit Notes: DYNM Category: A; DYNM Concentration: LMC, GS. Course schedule: In person session 9/8 from 10-2 pm. Synchronous and asynchronous session schedules are listed on the syllabus.

DYNM 632 Developing Agile Leaders and Organizations

Who amongst us hasn’t been overwhelmed by the constantly changing business environment and industry evolution that places a premium on speed and agility? Because our organizations were never designed for speed and agility, there is increasing pressure on leaders to help their organizations develop and implement a better strategy for the future. The goal of this course is to provide you, as that leader, with the necessary tools, strategies, and insights to help lead these initiatives in your organization. We'll explore how Agile is a new way of working. Agile is a series of practices used in functions like HR, Finance, Marketing, Supply Chain, and others to improve organizational agility, responsiveness, and performance. Students will learn from case studies by HR leaders at IBM, DuPont, Philips, and ING who have transformed their organizations through the adoption of agile practices. The course is based on 5 building blocks: 1. The new world of work: the gig economy, alternative work arrangements, and adaptive organizational design models 2. 2025: what could be the new roles, capabilities, and organizational structures in the future based upon research by the Chreate consortium 3. Developing and executing a business strategy case: making the business case, leading change management, and gaining leadership buy-in 4. Deconstructing work: how to break down work and organizational models to incorporate the growing role of automation, AI, robots, and chat bots 5. Building organizational agile practices: how to leverage agile practices to improve project throughput and agility By combining lessons learned with research on the future of HR and crowdsourced templates and resources, this interactive course will provide you with a strong theoretical framework and practical applications to create your enterprise-level transformation project and roadmap. The final project will be a comprehensive 2025 transformation plan that students could present to a live panel of business leaders who will serve as judges and mentors for students' transformation plans. Taught by: Hart and Tarken Course usually offered in spring term Activity: Seminar 1.0 Course Unit Notes: For additional information, please see our website at: <a href='http://www.organizationaldynamics@upenn.edu'>http://www.organizationaldynamics@upenn.edu</a>
DYNM 634 Process Improvement Tools and Strategies
Process improvement as taught in this course often provides high-leverage, high visibility opportunities for showcasing coaching and leadership skills as a member, coach, or leader of cross-functional process improvement teams. Cross-functional process improvement teams (running lean and six sigma projects) have evolved into a major pathway for developing leadership and coaching talent in such organizations as Baptist Healthcare, Federal Express, Ritz Carlton, Toyota Motor Co., and General Electric. Process improvement project leaders and team members use specific tools and capabilities to analyze as-is processes and to define and deploy new or improved processes that deliver better outcomes and customer satisfaction with less non-value added effort. Leading or serving on cross-functional process improvement teams creates opportunities to work and network with people from other parts of your organization and creates opportunities for visibility to executives and managers sponsoring strategic improvements. Participating in or leading process improvement is also a great leadership, coaching and professional development activity. Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit.

DYNM 635 Organizational Essentials for Leadership
This course will meet both synchronously and asynchronously. Synchronous meeting days are Tuesday evenings from May 26th to June 30th. Through presentations by expert speakers, case discussions, and participation in team projects, students will review and evaluate critical issues from across the frames of business, including general; human resource; marketing; information and stakeholder management; leadership; corporate culture; communications; organizational behavior; sales, marketing and public relations; finance and financial reporting; ethics and social responsibility; unions and government relations; and business law. Each of these elements will be studied in light of changing environmental conditions, including the economy; society; consumer behavior; market trends; regulation; politics, unpredictable events such as 9/11; organizational change; history; and internationalism. DYNM 636 Frontiers of Leadership Development
The best organizations for leadership development use a blend of internal and external coaching to a.) Support leadership performance; b.) Develop high-potential talent capabilities; c.) Accelerate individual, team, and organizational agility; and d.) Support strategy execution. Leaders must navigate increasingly complex and volatile global environments and rapid technological developments that are accelerating the pace of change in the nature of work, organizational arrangements, and workforce compositions. This context demands agility, resilience, proactive, continuous learning, and the ability to cultivate diverse relational networks. Coaching must support these capabilities. This course is intended for students with an interest in culturally complex leadership development and organizational change. Existing coaching models focus on a variety of ‘soft’ skills, but few focus directly on culture learning and the ability to lead in a variety of cultural environments. The course is based on the premise that our current workplaces require an ability to function effectively in a variety of cultural environments and that leadership requires an ability to recognize and leverage ‘cultural diversity’ in teamwork, communication, collaboration, conflict, and change. Coaching, as a leadership development practice, must help leaders grow in their ability to recognize and leverage the national, professional, functional, and organizational cultures that influence workforce engagement, productivity, satisfaction, and innovation. The purpose of this course is to enhance student understanding of coaching models, methods, and cases informed by cross-cultural psychology, intercultural communication, anthropology, and international business disciplines. Through reading, class discussion, written reflection, and guided practice, students will develop their skills in coaching across cultural differences. Students will co-facilitate organization development exercises designed to illustrate how to leverage cultural differences. Using Rosinsky’s global coaching process as an illustrative example of this kind of coaching, students will coach one another through a self-assessment, development planning process, and initial movement toward their objectives using a global scorecard. Students will then apply what they learned in a final coaching project. Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit

Notes: DYNM Course Category: A; DYNM Course Concentrations: LMC, GL, OC. Meeting Schedule: 5/19 & 7/28 from 9-12; 6/15-16; 7/13-14 from 9-5.
DYNM 637 Creating High-Performing Groups and Teams: A Course in Real-Time Experiential Learning
This course will be offsite in Pennsylvania, August 4th through 9th, 2017. This course will have an additional course fee to cover lodging and other program logistics. Registration permits will be issued upon signed Travel Agreement being returned to the Organizational Dynamics program office. This course is limited to 12 students. This five-day, offsite program is more about the 'how' to develop high performing teams than the intellectual 'what' of such teams. For five days the twelve members will immerse themselves into what differentiates a high performing team from the dysfunctional teams with which we are familiar. We will take a deep dive into the fundamentals of any group or team in our efforts to become such a team. We will, along the way, learn about the art of design – internalizing the skills and tools essential for building strategic interventions into a team in real time. Not only will we design them, but also we will be critiqued in relation to the quality of our efforts as well as to the facilitation skills we used during the process. This course is not for the faint of heart, with participants leaving their names and histories at the door. We will learn by doing and relate what we learn to both theory and research. Everything done during the five days will be ‘intentional’ with a keen eye toward the consequences of our behaviors and their impact on the evolving team. That will mean long days and an occasional long evening. While not a walk in the park, it will be full of laughter and personal insights that should have a lasting impact on the student as leader, far after the program ends. The course is limited to twelve students, and each must be interviewed to make certain that this experience is what they are ready for. After all, the course involves dealing with challenging group dynamics and accompanying issues of power and authority, with dominating personalities; managing differences; building trust; and dealing with the myriad issues that often drive groups, teams, and meetings into dysfunction.

DYNM 638 Organizing for Entrepreneurial Effectiveness
This course is a mix of in-person and virtual sessions. In-person meeting dates are 9/5; 10/3; 11/14; 12/12. Entrepreneurship has become a popular aspiration for many individuals in the United States and around the world. In fact, a recent survey by UK Trade & Investment confirmed that roughly 1 in 3 individuals under the age of 34 have expressed a desire to form their own new venture within the next five years. This represents a marked increase in aspirational levels over the past two decades. Although not all new ventures are entrepreneurial in nature, the motivation for starting a new venture is ultimately rooted in a desire to change one’s professional and/or personal circumstances. Most individuals never achieve this objective because they fail to take the first step in organizing their entrepreneurial aspirations into an effective plan. This course is designed for mid-career professionals who aspire to either form an independent new venture (i.e., entrepreneurial venture) or lead the creation of a new venture within their existing organization (i.e., intrapreneurial venture). Participants in this course will: 1) learn the internal and external motivational forces that drive individuals in general and themselves in particular; 2) become familiar with the general competencies and skills needed for a new venture to be effective; 3) understand the unique needs associated with creating a balance team for the new venture; 4) cover the practical aspects of developing an effective new venture; and 5) prepare a formal plan designed to marshal the necessary resources and support the new venture. The course will culminate with each student preparing a formal executive summary and professional presentation to support the creation of a new venture in a new or existing organization.

DYNM 639 Sustainable Change: Managing Organizational Culture to Achieve Leadership Goals

'Culture eats strategy for breakfast,' as management guru Peter Drucker famously said. We know that leaders who can effectively manage their organization's culture are better at adapting to market trends, retaining employees, and engaging external stakeholders who demand more corporate transparency and social responsibility. Yet most of us find it difficult to understand what culture really is, let alone manage it successfully. This challenge is magnified at a time when technological and demographic trends have made organizational boundaries more porous and ambiguous than ever, threatening to make traditional models of top-down change management ineffective. This course will therefore take a bottom-up, contextual approach to helping students understand and manage organizational culture in order to achieve their strategic and career goals. We will start with the individual, learning how culture works to shape organizational politics. We will discuss ways in which students can develop strategies for navigating organizational culture to achieve their career goals. We will then move to the group level, examining how cultural barriers form between teams, functions, and divisions, harming communication and coordination. The final section of the course will build to the organization level and provide students with a toolkit for creating strategies to achieve sustainable cultural change. The course will be heavily focused on practical application: students will conduct semester-long cultural research/consulting projects with organizations located in Philadelphia. We will also apply course frameworks and tools to case studies of leaders attempting to create sustainability-oriented cultures in their organizations. DYNM 640 Virtual Collaboration

NOTE: Logitech ClearChat Headphones and Logitech QuickCam Pro9000 are required for this course. Please see the syllabus for other requirements. Across the globe companies, both large and small, are increasingly conducting culturally complex work through technology channels and virtual personnel transfers, making multicultural organization and virtual work inextricably intertwined. In this context electronically mediated collaboration and communication capabilities across time, distance, organization, culture, and other knowledge boundaries have become necessary for the everyday work of telecommuters, virtual teams, remote managers, professional knowledge communities, and electronic marketplaces. This course is primarily intended for students with an interest in globally distributed work and collaborative virtual organizations. The purpose of this elective is to enhance student understandings of virtual forms of human collaboration and to develop student abilities to work jointly with others via electronic tools. This course design makes typical social patterns encountered in virtual organizations visible so that students can learn from participating and collectively reflecting on their course experiences. This course has an online course fee of $150. Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit. Taught by: Reyes

DYNM 641 The Art and Science of Organizational Coaching

Coaching has become a primary tool for consultants, human resources professionals and administrators interested in promoting and sustaining leadership and executive development, behavioral change, and role transition. This course explores the theory and practices associated with organizational coaching. We examine and practice the steps of the normative coaching process, the issues and boundaries that effect coaching, and pitfalls to avoid. This is an introductory course that follows a hybrid model of instruction, learning and application in class and in virtual class. The first class will be a weekend face-to-face experience followed by consecutive virtual classroom sessions with a variety of different applications. Students will practice phone coaching and virtual coaching as well as virtual group written discussion. Throughout the course we will contrast theory and practice through our own experience and observation via assignments and behavioral experimentation. DYNM 642 A Cognitive Playbook: Out-Think, Out-Perform

Strategy and organization are of a piece. Bain & Company's Chris Zook put the matter ironically: 'I don't know whether organization is the new strategy, or strategy is the new organization, but it’s something like that.' Too often, however, these realms are treated as discrete. This course not only integrates strategy and organization; it adds metacognition (thinking about thinking) to the mix. A Cognitive Playbook enables students to understand the three perspectives—strategy creation, organizational design, and critical thinking—in light of each other. Students gain both big-picture scope and nitty-gritty tools for organizational analysis, planning and change. They also learn how to speed-read the literature on strategy, organization, leadership, management, and the like—because so much of it is derivative and redundant. Old wine in new bottles. This course is highly graphic. At its core are six 'cognitive plays,' or geometries of thinking: point, linear, curvilinear, angular, triangular, and cubic. Each play has its time and place. The challenge is to mix and match appropriately. Playbook shows how. The course is grounded in my two most recent books, The Geometry of Strategy and Seeing Organizational Patterns, and incorporates material from a book about metacognition that I am writing. Throughout the semester, students will assemble cognitive playbooks (personal journals of thinking styles based on their work, educational, and other life experience/observations). They also will create narratives (analysis of past and present, plan for the future) about their current or most recent organization, using the strategic scaffolding framework presented in Geometry. DYNM 643 Trappings, Substance, and Memories: Effective Public Presentations in Organizations
In spite of the technological advances that have transformed organizational communication, the ability to articulate and present ideas, arguments, and positions in a face-to-face context remains a vital skill. At the same time, the opportunities to develop fundamentally sound presentation skills are rather limited, and, in many cases, organizations don’t train their employees to do so. In this very hands-on course, we will resurrect this age-old practice by exploring the tried and true presentation methods and approaches while simultaneously making direct connections to how technology has transformed presentation speaking in organizations. We will initially explore the fundamentals of public presentations: what makes an effective presentation, the arguments for developing strong presentation skills, and specific analysis of business speech. How does one establish proper credibility and build the trust necessary for success? Where does structure play a role and how can certain elements from theater, storytelling, and narrative help create highly impactful organizational presentations. We’ll explore what determines ethical presentations, where charisma (or lack thereof) plays a role, and how to most effectively incorporate visual accompaniments such as PowerPoint into presentations. We will dig much deeper into the development of strong persuasive arguments with emphasis on how social media has impacted credibility in novel ways. Finally, we will use improvisational techniques as a way to prepare for those sudden moments when one is called upon to make a quick presentation. DYNM 644 Applied Organizational Change: Methods Dojo
This course will meeting synchronously on Thursdays from 6:00 pm to 7:30 pm. There will be two Saturday afternoon sessions toward the end of the semester, dates TBA. This seminar is designed to support existing and emerging leaders who recognize their need for more adaptive practices to effect organizational and individual change in complex and rapidly changing environments. Building on a strong base of theory, this seminar is largely experiential. Students are expected to identify a real need in a system (work, internship, or volunteer), which, if improved, would have a substantial improvement on overall organizational performance and satisfaction. Beginning with this problem or dilemma, the seminar is designed as a ‘dojo’ or practice space, where students can clarify their own assumptions about how and why change occurs and practice new techniques and approaches for eliciting change. Theory provides the foundation for our work and students will be expected to recognize and be able to articulate how they are operationalizing theory in their setting. The purpose of the seminar is to evoke change at more impactful levels and improve organizational performance and personal satisfaction. Participants will examine their own and others’ change theories by identifying assumptions about change, testing methods that evoke change, and field-testing actual shifts in behavior. Participants will engage in a four-phase exploration over the course of the seminar: first, participants will have an opportunity to articulate their mental models about how change occurs and examine those of a few cutting-edge theorists; second, participants will be asked to learn and practice a minimum of 16, and possibly up to 25, organizational change micro-methods in class; third, participants will be asked to activate and test their change model using some selection of these methods learned in class on the problem they identified at the beginning of class real-time; and finally, participants will be asked to report on their experiences and re-examine their own models for possible revisions. This course is designed to create an ‘action-learning’ community in which participants will gain new knowledge and applied skills and give and receive feedback while weaving their professional experience, this class, and other graduate course work into a new, more robust toolkit of change methodology. This course is also designed to strengthen students’ ability to lead change from wherever they find themselves in a system. DYNM 646 Race, Ethnicity, and the American Workplace
The U.S. workplace has long been one of the foremost spheres in which racial and ethnic inequality is created and perpetuated. This course investigates how racial and ethnic inequality affect our experiences in the workplace as well as how we as employees, managers, and the like, can positively impact upon our work environments against bias to promote equality and inclusion. Although most Americans largely perceive the employment relationship as one's personal relationship with his/her ‘boss,’ one's occupation and/or ‘job’ encompasses much more than that. How we come to work at the jobs that we do is about our access to larger institutional structures within society including education, family background, and, importantly our ascribed location within the social hierarchy. In the first part of the course, we focus on understanding history and evolution of diversity and inclusion practices in the workplace as they relate to addressing racial and ethnic inequality. How have diversity and inclusion practices in the private and public sector evolved over time? How do these practices reflect broader historical and societal trends concerning social inequality? What does it mean to go from compliance to commitment? Have we moved from 'diversity for its own sake' to true and meaningful inclusion? Here, we will also spend time studying race and ethnicity as dynamic social and political constructs that evolve through time and space. We will examine how these constructs relate to social stratification, intergroup and intragroup relations, and economic and political hierarchies within U.S. society. The objective here is to provide you with a better understanding of how and why race continues to be such a powerful stratifying agent in all part of contemporary America. For the rest of the semester, we will examine how workplace inequality gets produced and reproduced along racial and ethnic fault lines. Do D & I programs tailored to distinct groups alleviate issues of marginalization for employees? Why are successful D & I programs profitable for big business? We will also look at the intersections of race, gender, and class in the workplace; how do these intersections impact how we address inequality in hiring, promotions, and recidivism? We will study in-depth how and why personal and organizational biases remain mechanisms of inequity as well as how social class and gender intersect with race/ethnicity to contribute to workplace discrimination. We will host several guest lecturers throughout the semester. Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit Taught by: Torres Activity: Seminar 1.0 Course Unit Notes: DYNM Category: F. DYNM Concentrations: LMC, GL

DYNM 647 Influence and Persuasion
Course meeting schedule: 3/20-22 & 4/3-5 Former Chrysler chairman Lee Iacocca once noted, 'You can have brilliant ideas; but if you can't get them across, your ideas won't get you anywhere.' This course builds on Iacocca's insight, helping students develop the ability to win support for their perspectives, proposals, and projects from key people in the workplace. Everyone needs to know how to sell ideas. Sales people obviously need this skill and so do managers of all kinds. Even CEOs need it to gain buy-in for a vision. Influence and persuasion help you work with and through others—customers, teammates, colleagues, direct reports, and stakeholders—who have different professional backgrounds, roles, opinions, and agendas. In highly interactive discussions and exercises, students will learn about practical field-tested frameworks that draw on current insights from psychology, anthropology, and behavioral economics. When the course is completed, students will have mastered the latest thinking about: 1) Persuasion styles and how they can adapt them to achieve desired outcomes. 2) The five barriers to communication and collaboration and methods for overcoming the barriers. 3) The systematic steps in the process of selling ideas and negotiating when you need to. 4) The similarities and differences among influencing, persuading, and negotiating. 5) Ways to build momentum for ideas. 6) Techniques for motivating others to take action. 7) Winning support for culture change. These insights will enable students to work across the boundaries that create warring workplace tribes. Nearly every organization contends with this tribal warfare and leaders need to know how to counter-act the natural human tendency to square off against co-workers who have different professional backgrounds or roles. Prerequisites: Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit Taught by: Moussa Activity: Seminar 1.0 Course Unit Notes: DYNM Category: F. DYNM Concentration: LMC. Course Schedule: Two weekends Friday, Saturday, and Sunday. Dates TBA.
DYNM 650 Outdoor Dynamics
This course will have a course fee to support the travel logistics. This course explores the implications of past and future changes in land use and population changes over time in one of the least densely populated areas of the country, but which serves as both a winter and summer playground for millions of urban residents each year. Set in the White Mountains of New Hampshire, only a day’s drive for over 10 million Americans, the area boasts some of the most pristine and exotic microenvironments in the world, left from the last Ice Age. Over 250,000 people visit the summit of Mt. Washington, the region’s highest peak, every year, driving, hiking or riding the cog railway to the top. The focus of this course is the growing interest in promoting ‘sustainable development,’ which most people envision as protecting the environment and wild species from human encroachment and pollution. The course will examine the human sphere and the natural sphere as common ground in the analysis of competing issues; areas of compatibility; and future plans to promote a sustainable environment in this region. The course will focus on three themes: 1) how the people and institutions tasked with being the environment’s guardians go about their jobs; 2) how the area is used by visitors; and 3) how industry and its stakeholders have worked with local regulators and politicians to create jobs and promote growth. The course will ask students to overlay the principles of sustainability and issues management, in managing the increasing concern that the trajectory of land use and industrial growth will compromise the region’s native ecology and wilderness and backcountry attractiveness. Left to its own momentum, how will the future of the area fare versus promoting and implementing more sustainable goals? Changes in behavior will be needed to bring the two into line, and that leads to organizational dynamics. How will stakeholders resolve the natural tensions of the institutions’ (primarily those that operate in the region) mission and development goals with outsiders’ desires? What leverage do they and others have in the debate over the future of the region? In addition to an active outdoor week in the White Mountains, participants will meet with key players and leaders from the area and come away with a deeper understanding of the major issues in the tensions between ‘the place no one knew and the place that got loved to death.’ Interested students must: 1. complete a course application: https://sasupenn.qualtrics.com/jfe/form/SV_3sFXMSKuCxt77Ex; 2. sign and return a travel agreement, which can be found under course syllabus in this listing.

DYNM 651 Group and Team Dynamics
Although groups and teams are often lauded as the mechanisms that provide the competitive edge for organizations in today’s challenging economic environment, there is often little attention paid to the deeper social and psychological currents influencing group and team dynamics. Organizational leaders and facilitators frequently lack an in-depth understanding of how work groups, multifunctional teams, and cross-national executive groups develop, operate, accomplish their goals—or not—and end. Team members often struggle to make meaning of the myriad spoken, as well as unexpressed, factors influencing the process and outcomes of the groups of which they are a part. This course, by emphasizing both theory and practice, provides students with a thorough grounding in the ways groups and teams develop and learn. The class will also examine approaches to building group and team competencies related to effective communication, conflict-resolution, and solving complex strategic problems as well as ways to manage the range of intentional and more hidden dynamics that both support and challenge high performance. The course is designed to include seven 3-hour classroom meetings across the semester and two extended sessions that will afford students the opportunity to explore various theoretical frameworks. In addition to drawing on the extensive literature and research in group dynamics and team building, the class will rely on experiential methods to help students develop keener understanding and insight into the ways in which their own leadership and followership dynamics, as well as the dynamics of the group-as-a-whole, influence their team’s ability to accomplish its tasks. DYNM 653 Coaching Others to Manage Conflict
Not a day goes by when you or I, or a person we are coaching, is not faced with some tantalizing, challenging conflict. It may be with someone we love, a conflict in a team, a struggle between two direct reports, a difference with our boss, or the challenge of a difficult, perhaps aggressive persona in a meeting we facilitate. The problem is not that there is a conflict. The problem is that most of us have a very thin, often inadequate repertoire of responses to the conflicts that engage us on a daily basis. The result is that all too often we are predictable in our responses. Thus, if we take these same limited skills and attempt to provide them to a client in our role as a coach, the consequences will more than likely be similar. This course is about expanding your repertoire of responses to a wide array of conflict situations. In the process, you will increase your understanding of the theoretical constructs that underlie successful conflict management. Not only will your strategies for managing a variety of conflicts expand, but you will be better able to design unique responses that relate to the particular situation with which your client is faced. How you translate these ideas to your clients and, in the process, provide them the confidence to use them, will be a central theme throughout the course. This course provides a balance between intellectual theory, skills, and applied strategies along with the time to practice them. DYNM 654 Crisis Communications and Reputation Risk
Chemical plant explosions, defective products, financial impropriety, cover-ups, corrupt practices, reckless behavior, and other corporate failings are ruining reputations, toppling corporations, and sending responsible parties to prison for failing to obey the law or act ethically. Worse, these behaviors are harming the public and the institutional trust with which our society must have in order to function. Whereas improper, illegal, and even immoral behavior on the part of business owners and operators is not new, the Internet and social media are bringing such acts into public scrutiny with both 24/7 coverage and worldwide attention. Reputations that took sometimes a century to build are lost in minutes, either never to be rebuilt or permanently damaged, harming customers, shareholders, employees, and suppliers in their wake. Individuals as well are subject to the same forces and dynamics of reputation and ethical behavioral lapses. Yet why do some companies and individuals rebound while others do not? Are common factors at work? Do they have a predictive quality in terms of other or all organizations? Crises are often blamed on bad PR, a poor crisis communications plan, or a less-than-credible spokesperson. If so, the company could just hire a slick PR firm, media-savvy advisor, or say a few mea culpas and move on. Often what is at stake is a core failing—a breakdown in ethical behavior or problem-solving systems—that can’t catch problems before they happen or when they do, tap into a network and a reservoir of employee goodwill, customer credibility, supplier loyalty, and stakeholder confidence. Still, even an ethically-guided, resilient organization that has all these assets will need help when a crisis hits. That’s when solid and real-world based crisis communications take front and center stage. The course will both tease out how dysfunctional organizational dynamics can lead a company or organization down such a path and what options it took or should have taken to restore its reputation and what an ethical company can do when an event threatens to derail its reputation. It will examine the variables involved in crisis formation, communication once a crisis occurs, and management as it unfolds. In doing so we will consider the organization’s vulnerabilities, the environment in which it thrives, the stakeholders who can influence its operation, and the strategies best suited to maintaining or enhancing its reputation. We will also examine the role of media in a crisis, as both a catalyst and intermediary in a communication strategy, and what to say and not say. This will include a real-life ‘hot box’ session that will be video-taped in which students will prepare and read a crisis statement and then be grilled by both students, the professor, and outside guest experts about their organization’s crisis and response. By course end, students should have developed a deeper understanding of the range of crises facing organizations, an enhanced appreciation of communication tactics and strategies that can be brought to bear in such situations, and a greater understanding and ability to diagnose and formulate viable outcomes.

DYNM 655 Using the Political Process to Effect Organizational Change
At one time or another, each of us has said something like, ‘I know what to do to make some really effective—and possibly even profitable—changes in this organization, but the politics make it almost impossible to get anything done.’ The sense is that, although there are changes that should be made to improve organizational performance, politics (internal, external, governmental) simply obstructs our ability to make a difference. Frustrations notwithstanding, depending on how it is employed, politics can be either an impediment or, more importantly, a source of opportunities for improving organizations. Politics is the art and science of coordinating individuals, departments, management, markets—the entire organizational environment—to effect a balance between the organization’s objectives and the methods used to achieve them. As with the other factors that are employed to affect organizational performance—methods used to improve manufacturing, marketing, sales, finance, and so on—the means that organizations can use to initiate and maintain critical personal and institutional relationships One of the seminar readings—Latimer’s ‘Why Do They Call It Business If It’s Mostly Politics?’ is used to provide illustrations of the ambiguous nature of much of what is regarded as organizational politics. What is critical to understand and appreciate from the outset, however, is that politics is not an external factor that is imposed on organizations. Politics is not only a means for achieving personal or institutional power; it is also a method for developing and maintaining personal and institutional relationships within and among individuals and organizations of all types. This seminar will discuss organizational politics and the ways that it is used to identify, characterize, and effect change—both within and among organizations. After reviewing several perspectives on organizations and the roles that political processes play in decision-making, a series of cases is presented that illustrate the contexts and conditions for effective political communication and coordination. DYNM 656 The New Normal: Racial and Ethnic Diversity in the 21st Century Workplace
This course examines the social construction of race and ethnicity, including relations within and across groups, with a particular focus on their implications for organizational culture and management. In a very real sense, the workplace is a microcosm of the larger society; a place where our individual experiences, beliefs, and biases related to race and ethnicity intersect, creating both opportunities and challenges. Our capacity to understand the different backgrounds and experiences that individuals and groups bring to the organization, as well as recognizing our own biases and the biases of others are directly implicated in our ability to both manage and be managed in the organizations that we are a part of. A primary objective in this course is to increase our capacity to first understand the contours of racial and ethnic diversity in twenty-first century America by investigating (1) the historical context that influences present-day understandings of racial/ethnic diversity (2) how and why individuals from different racial/ethnic backgrounds can ‘see’ the same thing but interpret it very differently, depending on experience, culture, and social position relative to race/ethnicity (3) the meaning and importance of dominant and minority groups, the degree to which a racial hierarchy exists, and the implications of that hierarchy for important outcomes (4) the degree to which the workplace is, indeed, a microcosm of the larger society (5) the pitfalls of ‘colorblindness’ (6) the nature of stigma and its workplace implications and (7) the benefits and drawbacks of affirmative action policy in the workplace. DYNM 657 Strategic Engagement with Government
June 6 to July 25 (8 weeks) Synchronous sessions: Saturdays 8:30 to 11:00 am, with one 30-minute break (except as noted) Wednesdays 6:00 to 8:30 pm, with one 30-minute break (except as noted) Government actions play a major role in business, shaping the environment in which companies operate and making direct purchasing and investment decisions. Most organizations, however, do little to consider, respond to and shape government decisions that impact them. This course will explore ways in which the private and public sectors interact and will equip organization leaders to engage strategically with governments around the world. Students will study how government actions influence business results and will learn proven methods for optimizing growth and reducing risk from interaction with governments. The instructor will draw on his 40 years of professional experience as international government affairs leader for General Electric, as a consultant, and as a trade negotiator in the Office of the United States Trade Representative. The course will use case studies and small group exercises to illustrate and emphasize key points. Students will also engage with business and government leaders, who will discuss challenges they face and successful approaches to addressing those challenges. Students will work in small groups on exercises and simulations between some class sessions and will then present their results during the subsequent class period. Reading assignments will also take place between class sessions. There will be at least one written assignment during the course. Each student will hold at least one 20 minute 1-1 discussion of the course material with the instructor during the course period. The course schedule provides two periods for these discussions, and students can arrange an alternative time with the instructor. Students are responsible for scheduling their sessions.

DYNM 658 Fundamentals of Sustainability
This course is designed to provide an introduction to sustainability concepts and challenges through the lens of the world’s most significant framework to address them: the United Nations’ Sustainable Development Goals (UN-SDGs). The UN-SDGs serve as a blueprint for addressing the world’s most critical social and environmental challenges, calling for urgent collaboration and change to reset the world on a path that operates within planetary boundaries and promotes global prosperity and security. This course will explore extraordinarily significant threats to the way of life of future generations—such as climate change, ecosystem degradation, health and nutrition, pollution, and resource depletion—with specific attention to sustainability challenges and solutions involving food, water, energy, oceans, waste, plastics, biodiversity loss, and urbanization. Further, the course will include focus on the importance of transitioning from linear to circular systems and maximizing life cycle resource utilization. Case studies of scalable sustainability practices and organizational leadership for sustainability will be reviewed with additional input from global thought leaders. Course permits for students outside of the DYNM, MES, or MSAG programs: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit.

DYNM 659 Art and Relational Skills
This course will meet on the following schedule: Tuesdays: 9/8, 22; 10/13, 27; 11/10, 17 Saturdays: 9/12, 19; 10/3, 10; 11/7; 12/5 Art and creativity offer a rich experiential learning opportunity to develop personal and interpersonal skills. This understanding builds on existing research and literature as well as in the experience of the instructors implementing art and creativity. This course offers an opportunity to create a safe environment to learn, practice and develop key relational skills using art and creativity, shared learning experiences and reflection, modeling newly acquired skills for the participants’ professional and personal practice. This experiential course will support the development of relational skills, such as interpersonal connection, presence, and empathy using art and creativity. It is a 100% hands-on course that requires personal commitment, an open mind, and a desire to learn and grow in new, non-traditional and effective ways. Throughout the course, participants will assess their own relational skills, choose areas for development, and work on enhancing their continuing growth and development using the means provided. Participants will be able to use the tools and models to continue their development after the course as well as for implementing them in their coaching practice or leadership roles. Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit.

DYNM 660 Theory and Practice of Organizational Leadership
This is a practical course designed to help participants engage in reflective practice regarding their own leadership and their relationship to leadership by others. Students will present case material from their workplaces or other settings, which the class will work live with the aim of creating new insights and actions students can implement and report back on. Foundational readings will provide a shared language and conceptual framework. Likely outcomes for students are an increased experience of choice, responsibility, and personal power in work and other relationships. DYNM 661 Organizational Culture Change: Theory and Practice

The importance of organizational culture as a factor that can influence organizational performance either positively or negatively gained renewed attention beginning in the mid-1990s. The success of high-profile firms with ‘quirky cultures’ such as Southwest Airlines and the entrepreneurial cultures of high tech firms that, along with the emergence of culture-based assessment programs such as Great Places to Work, Best Place to Work, and B-Corps have generated recognition that organizational culture can be an important factor contributing to organizational success. The related emergence of ‘high performance organizations’, acknowledgment that organization culture can trump the implementation of organizational strategy, competition among companies to attract the best employees, and the failure of many financially promising mergers and acquisitions all point to the importance of understanding and intentionally managing organizational culture. This course will address many of the major debates about organizational culture as well as provide students with tools for better assessing and understanding organizational culture, and leading and managing culture change. Course material and discussions will consistently address issues related to both theory and practice. The course will begin by engaging the debate about how to define organizational culture and what key factors determine culture as well as asking: ‘What evidence is there that culture really matters?’ We will explore different models of categorizing cultures, examine the implications of different conceptual models for diagnosing culture, and consider the usefulness of a variety of diagnostic tools. We will discuss the extent to which there is any solid evidence that culture is really related to performance as well as explore factors that may modify any culture/performance relationship. During this section of the course we will describe, compare, and contrast the cultures of different organizations—both those of the class participants and those of other organizations. We will begin the second section of the course by examining both the theoretical and applied literature on organizational culture change. One of the central questions in the organizational culture debate is whether a culture, particularly of a large organization, really can be changed significantly. After developing a generic framework for the culture change process, we will read cases describing culture change efforts and hear from guest speakers who will discuss specific culture change efforts, successful and not. From this base, students will derive and articulate models of culture change. In addition, this section of the course will introduce students to specific organizational intervention strategies that can be used to facilitate culture change. In particular, we will discuss traditional top-down change strategies, Real Time Strategic Change, Appreciative Inquiry, and other approaches to culture change. During the last section of the course, the class will discuss individual, personal change management as a major factor in successful organizational change; other factors that are essential in most successful culture change efforts; barriers that can be expected; predictable but unintended side-effects of culture change efforts; and strategies for overcoming barriers and managing potential side-effects. Finally, students in this class will apply what they have learned about organizational culture change to their own organizations. This course meets on the following schedule: Wednesday from 6-9: 1/15 Saturdays from 9-5: 1/25; 2/15; 3/7; 4/4 Mondays from 6-9: 2/3, 24; 3/16, 23* *Indicates meeting via Zoom Prerequisite: Non-DYNM students must complete a course permit request: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit

DYNM 662 Entrepreneurship and Leadership: Creating Winners

Peter Drucker once famously said that ‘entrepreneurs innovate.’ The course looks at how innovation drives the entrepreneurial process in both large organizations and in startup ventures. It stresses the importance of bringing entrepreneurial vision and energy to all organizations: profit and non-profit, as well as government and institutional. The course examines the characteristics of successful entrepreneurs. Participants will learn how to develop their own entrepreneurial instincts and how to encourage an entrepreneurial culture in their organizations. The course examines the challenges of startup ventures and provides practical information to participants who are considering an entrepreneurial venture. It explores strategies for identifying opportunities, creating successful business models, valuing a business, raising capital and managing the business. The course builds understanding of how a culture of entrepreneurship and innovation are critical to any organization that wants to survive and prosper in the future. The course discusses how sustainability is becoming a global force for change, creating exceptional entrepreneurial opportunities. The course looks closely at the leadership roles of both the CEO in a large organization and the entrepreneur in a venture. The course examines how leaders in all kinds of organizations set priorities, identify game-changing opportunities, shape the organizational culture and motivate their teams to achieve outstanding performance or, sometimes, fail. The course stresses the leadership responsibilities of the board of directors in providing governance and oversight in both for-profit and non-profit organizations. DYNM 663 Green Skepticism: Communicating and Implementing Sustainable Business
Green initiatives are creating competitive advantage for businesses. Smart companies are integrating environmental stewardship into their strategies, operations, marketing, and product innovation. Companies that successfully embed sustainability in their core business strategy and culture—rather than 'bolting it on' as a peripheral activity—are gaining the most value added. Embedding sustainability requires the active engagement of all organizational stakeholders, many of whom may be green skeptics, dubious of the need to change. ‘Many people who feel passionately about sustainability cannot relate to those who have a harder time understanding the need for a change...’ - Corporate associate & MBA candidate. The business case for sustainability has been made many times, yet skepticism about the need for change remains widespread. While adopting sustainable business practices must make sense financially, an economic argument alone may not be enough to convince people to purchase green business products and services or to implement sustainability practices. The course is based on the assumption that ‘task significance’ is an important factor for implementing sustainable business practices. This means helping people see the connection between small tasks they are being asked to do and the big picture of global sustainable business. The first part of the course focuses on understanding sustainability driven changes in the global business landscape through a coherent framework. The second part of the course focuses on what those changes mean for business fundamentals: consumption, production systems, innovation, and emerging economies. The third part of the course focuses on communicating and implementing sustainable business strategies and initiatives. Students will have the opportunity, with a team, to design a communication and implementation program for an organization. Throughout the course, strategies and tactics that work to engage skeptics who do not understand the need for change, as well as tactics that don’t work, will be studied. The course is based on the instructor’s experience leading hundreds of business and environmental professionals from skepticism to enthusiasm for sustainable business over the past decade. This course is designed for everyone tasked with engaging others in implementing sustainable business practices and for entrepreneurs selling green business products and services. It will provide strategies for enhancing a technical and economic sales pitch. The course is also for those who may be skeptical themselves, and want to reconsider their skepticism. DYNM 664 Organizational Culture and Learning
What is organizational culture? What is organizational learning? How do organizations learn effectively and change their culture? A learning organization is skilled at acquiring and transferring knowledge, and at modifying its behavior to reflect new knowledge (Garvin, 1993). According to Ray Stata, Chairman of Analog Devices, 'The rate at which individuals and organizations learn may become the only sustainable competitive advantage.' However we define and prioritize organizational learning, we must still struggle with how to do it. This is a tougher question. The thesis of this seminar is that an enriched understanding of culture can enhance organizational learning. Participants will explore the concept of culture, study the work of Chris Argyris, and discover practices and behaviors that promote organizational learning and culture change. The objective of this seminar is to help participants get beyond highly abstract philosophy and develop a deeper understanding and useful skills based on these concepts. This course will meet on the following Wednesdays: May 27th; June 3rd, 10th, and 17th; July 22nd and 29th.

DYNM 666 Systems and Design Thinking
This course is designed to challenge the traditional thinking of basic management strategy and practice and to show why organizations must learn to think differently. This course takes a multidisciplinary approach to challenge participants to rethink their assumptions and move beyond the traditional practice of complex problem and management strategy formulation and execution. The course will look at the challenges and opportunities that come from integrating Systems and Design Thinking to create more sustainable solutions. The prevailing pattern of thought employed by management is analytical. A new pattern of thought is required: synthetic. Systems thinking involve both analysis - to produce knowledge of organizations (systems) - and synthesis to provide understanding. Without both, effective solutions to problems cannot be obtained. To go beyond understanding to wisdom requires awareness of the difference between doing things right (efficiency) and doing the right thing (effectiveness). The better we do the wrong thing, the more wrong we become. Today a great deal of energy is expended by organizations in an effort to increase the efficiency with which wrong things are done. This course looks at how systems and design thinking can increase the chances of making the right decisions; doing the right thing.

DYNM 669 The Power of Confusion
Confusion is a lack of clarity about some situation that matters to you, which causes you to feel so uncertain or uncomfortable that you have a hard time making decisions. You may be confused about whether you fit into an organization; or about what work makes you feel great versus work that you are good at or about the right thing to do when you are frightened. The power of confusion is that it forces you to stop and seek clarity in your life and career. This seminar addresses seven types of personal and organizational confusion encountered in organizational life during a professional career: 1) confusion over which personal ethics, skills, and talents you find most meaningful; 2) confusion over discovering what is really going on in an organization; 3) confusion of who is in charge—leadership and which direction ‘we’ are moving toward; 4) confusion over ‘what’s in it for me?’ How motivation and satisfaction relate to incentives and pay schemes; 5) confusion caused by blaming, rather than developing skills needed to make lasting changes and improvements; 6) confusion about how teams pull together; 7) confusion caused by committing random acts of improvement instead of building a system for making customer-oriented organizational innovations and improvements. You were not born with any inherited knowledge or wisdom, yet you are certain to face fear and confusion during your lifetime. You were born with curiosity and the ability to ask ‘why?’ when you face a confusing situation. You were also born with the ability to think for yourself, listen to others, and learn from experience. Confusion spurs you to use these abilities to gain the clarity that leads to understanding and wisdom; you will need tools to guide your learning. This seminar will show you how to use simple tools to achieve that clarity. Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit.

DYNM 671 Workplace Ethics: Ownership, Participation, Productivity
In this course, you will have the opportunity to: 1) examine ethical, religious, legal, technological, and economic bases for different ownership systems from early human history through the 20th century; 2) develop a theoretical framework for understanding ownership issues in the contemporary workplace; 3) review social science concerning ownership and the related organizational issues of motivation, performance, productivity, profitability, culture, diversity, and equity; 4) analyze a variety of cases to measure ownership's effects across many industries and business situations; 5) learn about various forms of ownership and compensation in use today in small and large organizations, both public and private; 6) utilize a diagnostic tool for assessing the ways in which your own organization’s culture and business outcomes are impacted by the firm’s ownership system; 7) describe your own experiences of the different ownership systems with which you may have engaged, including: family, schools, little leagues and professional sports, volunteer service organizations, charities, religious institutions, professional service providers (e.g., doctors, lawyers, veterinarians), the places where you shop (e.g., think about Genuardi’s before and after it was sold to Safeway), and the different places you have worked...as a way of systems; 8) assess and refine your views regarding ownership in light of your own social, political, religious, and ethical commitments. Who is going to own what we all have a part in creating? The history of American business is an evolving answer to the question of ownership. Of all the issues relevant to organizational dynamics, ownership is arguably the most important and least understood. Matters of ownership have also been and remain of intimate concern to ordinary Americans—the slave yearning to be free, the young couple with a dream of home ownership, the entrepreneur who wants to be his own boss, the consultant who wants to form a partnership with her best friends, and the indebted, mid-level manager reviewing last year’s 401(k) statement. At the first class meeting, the and students will discuss modifying the schedule by reducing the number of meetings or the hours of Sunday meeting by having some of the course hours via Zoom.
DYNM 673 Stories in Organizations: Tools for Executive Development
As we all know, living in—and out-of organizations is getting exponentially harder. Things seem to be multiplying, splintering, and coalescing kaleidoscopically, and each of us is increasingly taxed to make sense of it all, let alone create meaning for ourselves and those we manage and care about. Remarkably, a powerful tool for helping us is one we have already mastered: stories. As humans we think, feel, speak, listen, explain, and believe in narrative form. Yet this capability is dramatically under-exploited at work. This course examines a variety of ways to bring the power of stories to organizational life. We will look at how stories enhance communication, support change, and intensify learning and development in individuals and organizations, thus informing your leadership style and effectiveness. We will have many opportunities in class to apply ‘story-based technologies’ to issues you face in personal or professional life. Readings come from the literatures of human development, narrative psychology, organizational change, executive learning, and, of course, from literature itself. DYNM 674 How to Speak, Think, and Act Like a CEO
DYNM Course Category: A; DYNM Concentration: LMC In this course we look at how great CEOs communicate, engage, build credibility, and lead. The purpose of the study is to guide potential future senior leaders to recognize and develop the necessary habits and perform effective leadership practices that helps them to build their credibility and create a lasting legacy of great leadership. We take the position that most accomplished CEOs do three things brilliantly: 1) Make good strategic decisions based on how they see their environment; 2) Behave in a way that sincerely honors those they lead, and 3) Create meaning and purpose by having and communicating a compelling vision of the future. These are the three agendas. How does the effective leader make this real? How do they develop the capacities that enable emotional intelligence, futuristic thinking, and being a respected leader who others want to follow? Creating the conducive environment is a two-way street - building your own capabilities that create a culture that others want to work in. These are skills that can be learned. It begins with self-awareness about your strengths and blind spots and how to build high performing teams. By the end of the course, through self-assessments, individual and peer coaching, class meetings, discussions, assignments, presentations, case studies, research, and required readings, participants will: 1) Define and communicate their own strengths and blind spots; 2) Engage with models for learning how to people read and collaborate effectively to engage in learning with others; 3) Receive feedback and coaching from peers and faculty; 4) Describe the leadership and team dynamics that enable organizations to thrive; 5) Explore models and frameworks for strategic application and presentation delivery; 6) Present effectively to various group sizes and audiences; 7) Learn how to assess personal effectiveness in the execution of executive communication and engagement; 8) Work with a model for effective decision making to guide their own actions. DYNM 675 Advanced Seminar in Organizational Politics
This course will meet both synchronously and asynchronously. The synchronous sessions will be Tuesday evenings from May 19th to July 7th. The goal of this course is to assess/advance the participant’s competence in applying the ‘eighth habit’—that of organizational politics and power, in a variety of organizational settings, system levels and contexts. Course requirements are: 1) a detailed learning log (to be supplied and reviewed weekly); 2) A political autobiography (guide to be supplied); 3) Active participation in all sessions; 4) Three interviews of senior managers on the topic of politics (interview guide to be supplied); 5) An assessment of the political map of a complex organization (map to be developed in class); 6) A peer completed assessment using the ‘political skills inventory’ (see Ferris). DYNM 676 Communication Competence: Extracting Value in Key Organizational Interactions
Often an organization can facilitate its own success by employing fundamental communication practices during value-latent interpersonal interactions. In this course we explore the direct relationship between competent communication and the ability to extract maximum value in most Key Organizational Interactions. Starting off on a personal development note and building off time-tested principles, participants will conduct their own communication skills assessment to determine their own communication strengths and identify specific areas for improvement. Qualities such as effective empathy and active listening are also explored. Moving into the organizational realm, together we define then locate those Key Organizational Interactions, both within and external to the organization, that significantly impact how that organization is perceived. We explore all the possible value points within these Key Organizational Interactions, how they tie into the organization’s strategic objectives, and how to best approach them interpersonally. Non-DYNM students must complete a course permit request: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit

DYNM 693 The Global Leader
The ‘Global Leader’ is a co-listed INTS/DYNM course, developed as part of the Lauder Institute’s new Global Program that will prepare students for leadership roles in international and culturally diverse environments. The course will focus on developing skills through a hands-on approach that includes using case students, in-class exercises, movie clips, and class discussion, with readings that emphasize theory and application. The course is comprised of two modules. The first module - Globally Capable Leadership - will introduce students to the core qualities of leadership that transcend cultures, as well as examine how cultural context influences leadership efficacy. The second module - Managing Across Borders - will teach students how to negotiate effectively in a variety of contexts, including conflict resolution, transactional settings, conflict resolution, and across borders, such as those of gender, ethnic identity, national culture, and differences in values and beliefs.

DYNM 705 Capstone Course
In Summer 2020, the capstone course will meet completely online during the 11-week session. The course will meet synchronously on Monday evenings and also have some asynchronous sessions. This course requires the student to study a topic of their own choice, discuss their progress with the class in regular meetings and to deliver a final paper that meets the following criteria: 1. Makes an argument, describes or summarizes a position that is unique, original, or which directly applies to the student; 2. Uses primary sources or applies to a primary organization as much as possible; 3. Conforms to the style and format of good academic writing and the MSOD Capstone Presentation Guidelines; 4. Allows a student to demonstrate competencies gained from the courses completed in the Organizational Dynamics program. The role of the capstone professors is to coordinate the development of each student’s capstone committee, to offer facilitation during peer-review discussion, to discuss the student’s work as the capstone is written. A course professor may also be the student’s primary advisor or a reader. For details about the capstone course, including delivery dates, please see the DYNM Canvas community site.
Taught by: Barstow and Russo

Notes: DYNM Category: Capstone. This course is an online and in-person course.

DYNM 720 Foundations of Organizational Consulting and Executive Coaching
This 5.5 day intensive course is the first in a six-course cohort program in Organizational Consulting and Executive Coaching. During this course students will experience the formation of a group (their cohort) and learn the dynamics that commonly affect groups. Students will be taught a variety of theoretical constructs which influence the helping professional role and also start to practice as helping professionals through live coaching and case studies. In addition to textbooks for this course, students will also need to purchase an assessment. Details on this process will be provided to students before the course start. All OCEC courses are registration by permit only. The program office will issue registration permits prior to the semester start so that students can register. Prerequisite: This course is for OCEC Cohort members only.
Taught by: Ostrowsky, Pennington, Subramanian
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: DYNM Category: F; DYNM Concentration: OCEC. Course Schedule: TBA

DYNM 721 Making Meaning from Org Exp & Establishing Frameworks for Consulting & Coaching
This course is designed to immediately follow the five-day DYNM 720 intensive in order to build on cohort member experiences by introducing a broad range of coaching and consulting theories. Using newly introduced theories and your own experiences and observations, you will begin applying them to assess, interpret, and make meaning of behavior at three levels: individual, group, and organizational. Using your knowledge and research, you will begin narrowing and deepening theories you are drawn toward to begin laying a foundation for your further work in DYNM 723 and 724. DYNM 722 culminates with each cohort member researching and executing a high-level presentation based on one theoretical approach. You will continue your cohort-based learning with your deeper appreciation of one approach, as well as benefiting from each of your cohort member’s presentations. Prerequisite: This course is for OCEC Cohort members only.
Taught by: Ostrowsky

Notes: DYNM Category: F; DYNM Concentration: OCEC. Course Schedule: TBA

DYNM 722 Consulting and Coaching Process: Knowing Yourself
Participants learn to be coaches by being coaches to one another. Over a two-month period, cohort members expand their repertoire of skills and tools, share their experiences, and together scrutinize the client/coach relationship.
Taught by: Pennington
One-term course offered either term
Activity: Seminar
1.0 Course Unit
DYNM 724 Beyond the Dyad: Group Coaching Theory and Practice
This course explores the application of coaching principles, models, and techniques in the context of groups and teams. While most coaching is dyadic in nature, coaching in group or team settings requires an understanding of the complex social dynamics that shape learning and change in groups, as well as the levers and mechanisms that enable collective action toward common goals. The course is designed to build on and complement your growing base of scholarship and practice from 720, 722, and 723.
Taught by: Bergey/Pennington/Russo
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

Notes: DYNM Category: A; DYNM Concentration: OCEC

DYNM 725 Executive Coaching Internship
This course provides the opportunity to contract with a client to provide consulting/coaching services. Individual supervision is provided on a weekly basis by a core faculty member and peer supervision is provided in two clinics, where cohort members share their experiences and learning with one another and, at the conclusion of the second clinic, bid the cohort farewell as members are now ready for their internship experiences. This course is open to OCEC students only. This course fills the following Organizational Dynamics requirements:
Categories: A Concentrations: OCEC
Taught by: Russo/Napier/Orenstein
One-term course offered either term
Activity: Seminar
1.0 Course Unit

Notes: For additional information, please see our website at: <a href='http://www.organizationaldynamics.upenn.edu'>http://www.organizationaldynamics.upenn.edu</a>

DYNM 727 Practicum Experience in Consulting and Coaching
Participants integrate everything they have learned by contracting with a client to provide consulting/coaching services. Individual supervision is provided on a weekly basis by a core faculty member and peer supervision is provided in two clinics, where cohort members share their experiences and learning with one another and, at the conclusion of the second clinic, bid the cohort farewell as members are now ready for their internship experiences. This course is open to OCEC students only. This course fills the following Organizational Dynamics requirements:

DYNM 758 Sweden: Strategies for Thriving in the 21st Century
Neutral during WWII, and claiming a 'Middle Way' between east and west in the post-war twentieth century, Sweden - its people, institutions, and culture - has left its mark on our global society. In today’s world, the influence of Swedish ideas and innovations can be seen in government structures, health and social policies, business organizations, working life, education, science, art, literature, and, of course, the design and style of many products and services which enjoy high demand. These are impressive impacts from a nation-state of only eight million people. What lessons are there for Americans and our institutions as we enter the twenty-first century where our leadership position, ability to determine the rules and control the agenda of world economic and political affairs are diminished? In this course, we focus on 'the people philosophy' of Sweden, its government, businesses and organizations. We cover healthcare issues and policy, sustainable development, the European Community and the human relations issues in organizations. This course will include meetings with academics and leaders from industry, government, health care, science, media, arts and culture. Students will meet with and learn from these representatives in order to explore Swedish organizational dynamics, both in terms of its economic prosperity and the problems Swedish society faces today.

DYNM 770 Process Excellence in South America: Chile on Its Journey to Productivity and Performance
This course will travel to Chile July 21st through 29th. The class will meet on campus before and after departure on dates to be determined. This course will have an additional course fee to cover lodging and other program logistics. Registration permits will be issued upon a signed Travel Agreement being returned to the Organizational Dynamics program office. Chile is a long and narrow strip of land along the pacific coast of South America. It is the longest country in the world, 2,700 miles in length, which is about the distance from San Francisco to New York. In 1973 the military imposed a dictatorship, led by Augusto Pinochet, who ruled the country until 1990. The Chilean strategy to be part of the world economy has been based on open markets and the development of Free Trade Agreements. A report by The Economist Intelligence Unit shows Chile has the best environment in the region for business and is among the top 20 countries worldwide. Chile stands out for the effectiveness of its policies, labor, and infrastructure. The strength and stability of its banking and financial systems have generated high credibility indexes in foreign markets, which has meant that big companies want to invest in the country, improving access to goods and services. Chilean companies have started improving the way they organize themselves. Business Process Management and Digitalization have become important topics in many organizations. The Universidad de Chile offers numerous courses and certificates in that field. Chile is making good progress on its journey to productivity and performance. Students will meet with academics and business leaders and observe the organizational dynamics of Students will also learn Chile’s journey to high performance and what it mean to do business with organizations in this emerging market.

DYNM 781 Dynamic Hub of the Americas: Entrepreneurship & Sustainable Development on the
What a difference a century makes! This Penn Organizational Dynamics course offered in Panama will provide the opportunity to examine and assess the Panama Canal a huge project with global impact undertaken in the early 1900s, completed in 1914, and recently expanded alongside innovative, entrepreneurial, and paradigm-shifting sustainable development projects underway in early 21st Century Panama. Central Americas largest and fastest growing economy, Panama is developing rapidly. This course will explore avenues by which the nation is tackling sustainability challenges while balancing economic growth, cultural values, conservation of biodiversity, and exploitation of natural resources. The early 1900s were about Imperialism and political and financial dominance invoked to make something happen that was colossal in scale and macro in scope. Todays Panama is about bright spots, positive deviance, and emergence of new economic initiatives and development based on a different world view, but these micro scale projects also have the potential to change world order. We will spend the first half of the trip in Panama City, during which we will visit the Canal and take a day trip to Colon and the Free Trade Zone. We will travel to the islands of Bocas del Toro for the second half of the week to broaden our perspective on Panamas historical and contemporary approaches to sustainable development. The learning objective of this course is to examine a paradigm shift in economic development over the past 100 years using Panama as a critical case study. This course will have an additional fee to cover logistical costs. This course requires interested students to submit a course application. The application can be found here: https://sasupenn.qualtrics.com/jfe/form/SV_bIOn90FjVxUDZQN. Registration permits will be issued upon receipt of a signed travel agreement.

DYNM 786 European Approaches to Multi-Stakeholder Project Management
In the interconnected world of global corporations, studying Project Management from the standpoint of U.S. firms is not enough. Broadening perspectives is the goal of the seminar in Paris, France. Dr. Jean-Marc Choukroun will lead Organizational Dynamics students in a study of European approaches to the challenges of large project management, particularly those involved in public-private and other multi-group projects. Dr. Choukroun notes that 'In today’s global economy, managing multi-national, multi-cultural teams, devising innovative financing arrangements and securing public-private cooperation are increasingly becoming standard requirements for complex projects. European integration has made dealing with these issues a priority with many European organizations. Students will be exposed to new ideas, and new ways of applying time-tested methods and techniques that European organizations in general, and more specifically French organizations, have developed to address these issues. Properly adapted, some of these ideas should prove to be readily applicable in the US context. In addition, students will discover how French managers in the public and private sectors frame issues, approach problems and implement solutions.'

Activity: Masters Thesis
1.0 Course Unit
Notes: DYNM 899 is a required registration for MPhil candidates.

Pashto (PASH)
PASH 405 Elementary Pashto I
The first semester is focused on mastering the writing system, basic structures, and simple conversation using texts, writing samples, and numerous structure and dialogue drills. We remain within the present and future tenses only, developing vocabulary with lessons and discussions centered around greetings, family, weather, foods, and directions. Students use authentic online and textbook materials. Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

PASH 406 Elementary Pashto II
The second semester covers more advanced structures with reinforcing drills, and begin reading longer texts of an assorted variety, mostly short stories and some news articles. The past tense is introduced, as well as longer more complex texts. Topics within simple simulated contexts (taxi, hotel, restaurant, food shopping, time, family). Short writing exercises and dictations are expected at this time, as well as simultaneous translations to and from Pashto. Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course
Course usually offered in spring term
Prerequisite: PASH 405
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

PASH 425 Intermediate Pashto I
A more in-depth study of the Pashto language. Reading, writing, speaking, and listening comprehension are all stressed in this more advanced course which also builds on the grammar of beginning level. Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course
Course usually offered in fall term
Prerequisite: PASH 406
Activity: Lecture
1.0 Course Unit

PASH 426 Intermediate Pashto II
The second semester of intermediate study and a more in-depth study of the Pashto language. Reading, writing, speaking, and listening comprehension are all stressed in this more advanced course which also continues to build on grammar skills. Prerequisite: Offered through Penn Language Center.
For BA Students: Last Language Course
Two terms. student must enter first term.
Prerequisite: PASH 425
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

PASH 446 Advanced Pashto Readings
One-term course offered either term
Activity: Seminar
1.0 Course Unit
This course is designed to help you start learning Persian and to give you the necessary tools to continue your study of Persian. This course introduces the Persian alphabet alongside grammar and vocabulary. Emphasis is placed on actively using the language for interpersonal, interpretive, and presentational modes of communication. The four language skills (i.e., listening, speaking, reading and writing) as well as pronunciation and culture are integrated into the curriculum. There is no prerequisite.

For BA Students: Language Course
Taught by: Entezari
Course usually offered in fall term
Also Offered As: PERS 611
Activity: Lecture
1.0 Course Unit

This course is designed to help you build upon what you have learned in Elementary Persian I. Emphasis is placed on using the language for interpersonal, interpretive, and presentational modes of communication. Therefore use of English is restricted. Listening, speaking, reading, and writing as well as culture, vocabulary, grammar, and pronunciation are integrated into the course. Students must either have successfully completed PERS 011, or take the departmental exam.

For BA Students: Language Course
Taught by: Entezari
Course usually offered in spring term
Also Offered As: PERS 612
Prerequisite: PERS 011
Activity: Lecture
1.0 Course Unit

This course is conducted in Persian and designed to help you continue expanding upon what you have learned in Elementary Persian II (PERS-012). In this course, we will begin to address a broader variety of cultural topics in order to increase your proficiency in linguistic as well as cultural terms. Emphasis is placed on actively using the language for interpersonal, interpretive and presentational modes of communication. Therefore use of English is restricted. Listening, speaking, reading, and writing are integrated into the course, as are culture, grammar, vocabulary, and pronunciation. Students must either have successfully completed PERS 012 or take the departmental placement exam.

For BA Students: Language Course
Taught by: Entezari
Course usually offered in fall term
Also Offered As: PERS 613
Prerequisite: PERS 012
Activity: Lecture
1.0 Course Unit

In this course, we will continue to address a broader variety of cultural topics in order to increase your proficiency in linguistic as well as cultural terms. Emphasis is placed on actively using Persian for interpersonal, interpretive and presentational modes of communication. Therefore use of English is restricted. Listening, speaking, reading, and writing are integrated into the course, as are culture, grammar, vocabulary, and pronunciation. Students must either have successfully completed PERS 013 or PERS 017, or take the departmental placement exam.

For BA Students: Last Language Course
Taught by: Entezari
Course usually offered in spring term
Also Offered As: PERS 614
Prerequisite: PERS 013 or PERS 017
Activity: Lecture
1.0 Course Unit

This course is designed to help you strengthen your skills by learning not only to read and write, but also to engage in more complex forms of discourse in Persian. In this course, we will begin to address a variety of topics in order to increase your proficiency in linguistic as well as cultural terms. Emphasis is placed on actively using the language for interpersonal, interpretive and presentational modes of communication. Therefore, English is restricted. Listening, speaking, reading, and writing are integrated into the course, as are culture, grammar, vocabulary, and pronunciation. Students must be proficient in spoken Persian (whether Farsi or Dari), and lack reading and writing skills.

Taught by: Entezari
Course usually offered in fall term
Also Offered As: PERS 617
Prerequisite: PERS 018
Activity: Lecture
1.0 Course Unit

A course designed to develop greater skills in reading and writing standard modern Persian for those with a competency in spoken Persian. The course will focus on the lexical and syntactic differences between written and spoken Persian, and the problems of Persian spelling.

Prerequisite: Offered through the Penn Language Center.
One-term course offered either term
Prerequisite: PERS 017
Activity: Lecture
1.0 Course Unit
PERS 019 Advanced Persian in the Media
This course is designed for advanced students of Persian interested in contemporary Persian media from Iran as well as Afghanistan and abroad, who wish to gain a deeper understanding of contemporary Persian-speaking societies and politics. Students will advance their skills in reading and listening, as well as in writing and speaking. Prerequisite: Offered through the Penn Language Center. Taught by: Assefi-Shirazi Course usually offered in spring term
Prerequisite: PERS 016 Activity: Lecture 1.0 Course Unit Notes: Offered through the Penn Language Center.

PERS 040 Introduction to Sorani Kurdish
Introduction to Sorani Kurdish is an introductory-level course designed to help you start learning Sorani Kurdish and to give you the necessary tools to continue your study of Kurdish language. This course introduces the Kurdish alphabet (Arabic script) alongside grammar and vocabulary. Toward the end of the semester, the course will also involve some Kurdish classical and modern poetry. Emphasis is placed on actively using the language for interpersonal, interpretive, and presentational modes of communication. The four language skills (i.e., listening, speaking, reading, and writing) as well as pronunciation and culture are integrated into the curriculum. There is no prerequisite. Taught by: Salih Also Offered As: PERS 640 Activity: Lecture 1.0 Course Unit

PERS 320 Persian Culture, Literature and Film for Advanced Learners I
Taught by: Shams Esmaeili Also Offered As: PERS 620 Activity: Lecture 1.0 Course Unit

PERS 611 Elementary Persian I
This course is designed to help you start learning Persian and to give you the necessary tools to continue your study of Persian. This course introduces the Persian alphabet alongside grammar and vocabulary. Emphasis is placed on actively using the language for interpersonal, interpretive, and presentational modes of communication. The four language skills (i.e., listening, speaking, reading, and writing) as well as pronunciation and culture are integrated into the curriculum. There is no prerequisite. For BA Students: Language Course Taught by: Entezari Course usually offered in fall term Also Offered As: PERS 011 Activity: Lecture 1.0 Course Unit

PERS 612 Elementary Persian II
This course is designed to help you build upon what you have learned in Elementary Persian I. Emphasis is placed on using the language for interpersonal, interpretive, and presentational modes of communication. Therefore use of English is restricted. Listening, speaking, reading, and writing-as well as culture, vocabulary, grammar, and pronunciation—are integrated into the course. Students must either have successfully completed PERS 611, or take the departmental exam. For BA Students: Language Course Taught by: Entezari Course usually offered in spring term Also Offered As: PERS 012 Prerequisite: PERS 011 Activity: Lecture 1.0 Course Unit

PERS 613 Intermediate Persian I
This course is conducted in Persian and designed to help you continue expanding upon what you have learned in Elementary Persian II (PERS-012). In this course, we will begin to address a broader variety of cultural topics in order to increase your proficiency in linguistic as well as cultural terms. Emphasis is placed on actively using the language for interpersonal, interpretive and presentational modes of communication. Therefore use of English is restricted. Listening, speaking, reading, and writing are integrated into the course, as are culture, grammar, vocabulary, and pronunciation. PHRM 495 High Throughput discovery: A multidisciplinary approach to cancer
The newly developed massively parallel technologies have enabled the simultaneous analysis of many pathways. There are several large-scale international efforts to probe the genetics and drug sensitivity of cancer cell lines. However, there are some rare cancers that have not been analyzed in depth. One of these rare cancers is malignant peripheral nerve sheet tumors (MPNST). MPNST, although a rare cancer, are common in patients with neurofibromatosis type. In the course, students will take part in a high throughput discovery effort in two phases. Phase 1 is a training phase, which will consist of quantitative profiling the sensitivity of MPNST cell lines to a library of >120 common and experimental cancer drugs. These will be conducted in the UPenn High Throughput Screening Core. (http://www.med.upenn.edu/cores/High-ThroughputScreeningCore.shtml). While we call this a training phase, the data from this will be subject to rigorous quality control for eventual publication and development of a public database for rare tumors. Phase 2 is an independent research project. Examples of projects include, but are not limited to: Combinatorial screens (synthetic lethal); siRNA screens; novel compound screens; determining mechanisms of cell death; developing tools for data analysis and database development. During phase 2, students will also modify compounds of interest using the Penn Chemistry: Upenn/Merck High Throughput Experimentation Laboratory (https://www.chem.upenn.edu/content/penn-chemistry-upennderck-high-throughput-experimentation-laboratory), and then retest them for activity to determine structure activity relationships. We will sponsor phase 2 projects relevant to neurofibromatosis. However, in phase two students can also research other areas if they develop sponsorships from professors. We expect the course to be a hypothesis engine that generates ideas for further research. Prerequisites include a strong foundation in biology and chemistry. Students will prepare an abstract proposal by week four on their phase 2 projects, and a report in scientific paper style, due on the last day of the semester. In addition to attending the class lecture, an estimated 10 hours a week Independent Laboratory Research is expected.
Taught by: Dr.'s Jeffrey Field, David Schultz, and Simon Berritt
Course usually offered in spring term
Also Offered As: CHEM 495
Activity: Laboratory
1.0 Course Unit

PHRM 510 Neurotransmitter Signaling & Neuropsychopharmacology
The goals of this course are three-fold: 1) Provide an overview of major psychiatric disorders. 2) Provide in-depth information on neurotransmitters, emphasizing the wealth of new molecular information on how neurons function and communicate, as well as the basis for psychotherapeutics (one class per week). 3) Develop skills to appreciate, present and critically evaluate the current literature in neurotransmitter signaling and neuropsychopharmacology (one class per week). Prerequisite: Permission of course director
Taught by: Staff Dr. Steve Thomas; Dr. Chris Pierce; Dr. Wade Berrettini; Dr. Liz Heller
Course offered spring; even-numbered years
Also Offered As: NGG 510
Activity: Lecture
1.0 Course Unit
PHRM 532 Human Physiology
This course will present a survey of the physiology of most of the major organ systems. It will integrate knowledge of cellular and molecular mechanisms into an understanding of function at the tissue, organ, and organism levels. It will begin with a brief review of membrane physiology, followed by electrophysiology and signaling in nerve. Then, after a brief outline of neural control systems and their role in homeostasis, it will present motility and muscle, the cardiovascular system, respiration, the renal and gastrointestinal systems, and selected topics from the endocrine system, the reproductive systems, environmental and exercise physiology. As well as providing a basis of integrative physiology for students in fields such as physiology, bioengineering and pharmacology, it should be of interest to students of cellular and molecular biology and genetic engineering who will need to appreciate the roles of specific systems and molecules at higher levels of organization. Prerequisite: Although not a formal prerequisite, a good foundation in cell bio level of BIOM/CAMB 600 (or an equivalent upper level undergraduate strongly recommended. A general understanding of the chemistry a biochemistry of macromolecules, and of basic molecular biology wi assumed. This course is primarily designed for 2nd year BGS stud year students in BGS or other programs will require the permissio instructor. This course is not open to undergraduates.
Taught by: Tejvir Khurana, Ben Prosser, and Paul Titchenell
Course usually offered in fall term
Also Offered As: CAMB 532
Activity: Lecture
1.0 Course Unit

PHRM 534 Experimental Genome Science
This course will survey methods and questions in experimental genomics, including next generation sequencing methods, genomic sequencing in humans and model organisms, functional genomics, proteomics, and applications of genomics methods. Students will be expected to review and discuss current literature and to propose new experiments based on material learned in the course. Prerequisite: Undergraduates and Masters students need BIOL 431.
Taught by: C. Brown, J. Murray
Also Offered As: GCB 534
Prerequisite: BIOL 431
Activity: Lecture
1.0 Course Unit

PHRM 535 Introduction to Bioinformatics
This course provides overview of bioinformatics and computational biology as applied to biomedical research. A primary objective of the course is to enable students to integrate modern bioinformatics tools into their research activities. Course material is aimed to address biological questions using computational approaches and the analysis of data. A basic primer in programming and operating in a UNIX enviroment will be presented, and students will also be introduced to Python R, and tools for reproducible research. This course emphasizes direct, hands-on experience with applications to current biological research problems. Areas include DNA sequence alignment, genetic variation and analysis, motif discovery, study design for high-throughput sequencing RNA, and gene expression, single gene and whole-genome analysis, machine learning, and topics in systems biology. The relevant principles underlying methods used for analysis in these areas will be introduced and discussed at a level appropriate for biologists without a background in computer science. The course is not intended for computer science students who want to learn about biologically motivated algorithmic problems; BIOL 437/GCB 536 and GCB/CIS/BIOL537 are more appropriate. Prerequisites: An advanced undergraduate course such as BIOL 421 or a graduate course in biology such as Biol 526 (Experimental Principles in Cell and Molecular Biology), BIOL 527 (Advanced Molecular Genetics), BIOL 540 (Genetic Systems), or equivalent, is a prerequisite.
Taught by: B Voight, C Greene
Course usually offered in spring term
Also Offered As: CIS 535, GCB 535, MTR 535
Prerequisite: BIOL 421 OR BIOL 526 OR BIOL 527 OR BIOL 528 OR BIOL 540
Activity: Lecture
1.0 Course Unit

PHRM 542 Topics in Molecular Medicine
TiMM is planned as a once-weekly seminar course whose goal is to introduce students to the ways in which biomedical research can provide new insights into clinical medicine and, conversely, how knowledge of clinical disease impacts scientific discovery. There are two sections for the course – 401 and 402. Section 401 is for first year MD/PhD students only and section 402 is for VMD/PhD and PhD students.
Taught by: Section 401: Johnson, Kohli Section 402: Atchison, Mason
Course usually offered in fall term
Also Offered As: CAMB 542
Activity: Seminar
1.0 Course Unit

PHRM 564 Drug Delivery
The topics include drug transport, distribution and interactions in the body, specific challenges for biotherapeutics, pharmacokinetics, drug delivery systems and nanocarriers, gene delivery systems, targeted drug delivery, and translational aspects of new drug delivery systems. Faculty from engineering and medicine will give lectures related to their research interests. The students read current journal articles on drug delivery systems. The major group assignment for the course is a written and oral group proposal on a new drug delivery system.
One-term course offered either term
Also Offered As: CBE 564
Activity: Lecture
1.0 Course Unit
PHRM 570 Principles of Cardiovascular Biology: Vascular biology, medicine and engineering

Lectures to be presented by various Medical School faculty members. Topics covered include: general principles of vascular biology and hemodynamics, endothelial cells and integral vascular functions, signaling in the cardiovascular system, angiogenesis, hemostasis and thrombosis, platelets, platelet/vascular interactions, vascular integrins and adhesion molecules, vascular inflammation and oxidative stress, white blood cells, vasoactive compounds and drugs, mechanisms of atherosclerosis, cholesterol and lipid metabolism, hypertension, novel vascular directed gene and enzyme therapies. Permission of course director required to enroll.

Taught by: Drs. Vladimir Muzykantov and Tilo Grosser
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

PHRM 580 Pharmacogenetics

This is a 'literature-based' course (i.e. a seminar course/literature survey). It will survey the emerging technologies and computational advances that have permitted the field of Pharmacogenomics to mature into a major biomedical discipline over the past few years. It will consider the likely impact on disease target identification; the development of new drugs for established and 'niche' markets; the advent of 'personalized medicine' including the selection of therapies that have maximum efficacy and minimum side-effect profiles. This course will also touch on some of the ethical issues associated with the routine genetic testing of patients to facilitate treatment choices and clinical monitoring.

Taught by: Steve Whitehead
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

PHRM 590 Molecular Toxicology: Chemical and Biological Mechanisms

Course Goals: Exposures to foreign compounds (drugs, carcinogens, and pollutants) can disrupt normal cellular processes leading to toxicity. This course will focus on the molecular mechanisms by which environmental exposures lead to end-organ injury and to diseases of environmental etiology (neurodegenerative and lung diseases, reproduction disruption and cardiovascular injury). Students will learn the difficulties in modeling response to low-dose chronic exposures, how these exposures are influenced by metabolism and disposition, and how reactive intermediates alter the function of biomolecules. Mechanisms responsible for cellular damage, aberrant repair, and end-organ injury will be discussed. Students will learn about modern predictive molecular toxicology to classify toxicants, predict individual susceptibility and response to environmental triggers, and how to develop and validate biomarkers for diseases of environmental etiology. Students are expected to write a term paper on risk assessment on an environmental exposure using available TOXNET information. Pre-requisites: Must have taken or will take Fundamentals of Pharmacology concurrently. Undergraduate course work in biochemistry and chemistry essential. Exceptions allowed based on past course work. Please consult with students with required prerequisites; residents in Environmental and Occupational Health, and professional masters students (MPH and MTR).

Taught by: Dr. Trevor M. Penning
Course usually offered in spring term
Also Offered As: REG 590
Activity: Lecture
1.0 Course Unit

PHRM 605 Drug Discovery and Development

This course will expose graduate-level students to the process of drug discovery and development. The course will be structured to cover topics from the identification of a disease-relevant target through to Phase III Clinical Trials. The course will be lecture based and there will also be student-led journal club presentations as part of the course. There will also be a writing project consisting of a 3 page proposal of how to advance one of the areas of Drug Discovery & Development covered in the course.

Taught by: Dr. Ben E. Black, UPenn and Dr. Craig A. Leach, GlaxoSmithKline
Course usually offered in spring term
Also Offered As: BMB 605, CAMB 710
Activity: Lecture
1.0 Course Unit

PHRM 623 Fundamentals of Pharmacology

This course is designed to introduce students to basic pharmacological concepts with special emphasis on the molecular actions of drugs. Subject matter includes use of microcomputers to analyze pharmacological data. Prerequisite: Permission of course director

Taught by: Dr. Jeffrey Field and staff
Course usually offered in fall term
Also Offered As: REG 623
Activity: Lecture
1.0 Course Unit

PHRM 624 Medical Pharmacology

This course surveys the major classes of drugs used to treat human conditions, and focuses in the detail on their molecular mechanisms of action. It consists of two 2-hour lectures per week and problem sets. Student evaluation is based 50% on exams and 50% on problem sets. PHRM 624 is required of all 2nd year PGG students. PGG students must co-enroll in PHRM 532/CAMB 532 (Human Physiology). Prerequisite: Non-PGG students must have permission from course director to enroll.

Taught by: Course Directors: Paul H. Axelsen, Park Cho Park, Akiva Cohen, Steve Whitehead
Prerequisite: PHRM 623 AND BIOM 600
Activity: Lecture
2.0 Course Units
PHRM 632 Cell Control by Signal Transduction Pathways
This course, 'Targeting the cancer cell: from mechanism to precision medicine', will examine how various signal transduction mechanisms influence cell functions including replication, growth, transcription, translation and intracellular trafficking. We will also consider how non-cell autonomous mechanisms, such as the tumor microenvironment and the immune system influence cancer cell signaling. We will consider how important signaling pathways, such as Ras, Raf, Notch, Wnt, TGF beta, and various kinases/phosphatases become dysregulated in cancer, as well as delve into how the DNA damage response, immune system, and tumor microenvironment exert important influences on oncogenic signaling. In the first half of the course, invited faculty members will pick 2 relatively recent papers from their field that highlight important areas. Each paper will be assigned to a student, who will meet with the faculty mentor prior to the class to discuss the paper and their presentation. During the class, students will present each paper for approximately 45 minutes with time for discussion. Students will present the important background, break down the paper, look for strengths and weaknesses and come up with a plan of what the next set of experiments could or should be. In the second half of the course, students will independently pick a relevant paper for in class presentation and will also write a short 'News and Views' style article based on the paper they have chosen. The goal of the course is to provide students with a view of the cancer cell that integrates both cell autonomous and non-cell autonomous signals and to use this information to consider how to successfully treat cancer.

Taught by: X. Hua, J. Field, A. Resnick, and W. Pear
Course usually offered in spring term
Also Offered As: CAMB 632
Prerequisite: BIOM 600
Activity: Seminar
1.0 Course Unit

PHRM 650 Current Biochemical Topics
Participation in the 'Dr. George W. Raiziss Biochemical Rounds', a weekly seminar program sponsored by the Department of Biochemistry and Biophysics. Program deals with a wide range of modern biochemical and biophysical topics presented by established investigators selected from our faculty, and by leading scientists from other institutions. Prerequisite: Permission needed from Department
Taught by: Black and Shorter
Course offered summer, fall and spring terms
Also Offered As: BMB 650, CAMB 702
Activity: Seminar
1.0 Course Unit

PHRM 657 Introduction to Superfund Sites and Health Effects of Hazardous Waste
Superfund hazardous waste sites are prevalent in our nation and the exposures to toxicants from these sites raise immediate health concerns. The aims of this course are to educate students about such sites and provide a scientific basis for hazard identification, hazard characterization, risk communication and risk management. The course will describe the effect of these hazardous chemicals on the ecosystem and vice-versa, and remediation and mitigation approaches. These environmental science issues will lead into the environmental health aspects of exposures including: biomonitoring (external and internal dose, biomarkers and the exposome), toxicological properties of contaminants and mode-of-action. The course will be complemented with visits to two Superfund sites in the region: Ambler (asbestos) and Palmerton (heavy metals). Prerequisite: 400 level course in Biology/Chemistry and Biochemistry
Taught by: Jane Willenbring, Richard Pepino, Trevor Penning
Also Offered As: ENVS 657
Activity: Lecture
1.0 Course Unit

PHRM 699 Laboratory Rotation
Activity: Laboratory
1.0 Course Unit

PHRM 799 Independent Study
One-term course offered either term

PHRM 995 Dissertation
Activity: Dissertation
1.0 Course Unit

Philosophy (PHIL)

PHIL 001 Introduction to Philosophy
Philosophers ask difficult questions about the most basic issues in human life. Does God exist? What can we know about the world? What does it mean to have a mind? How should I treat non-human animals? Do I have free will? This course is an introduction to some of these questions and to the methods philosophers have developed for thinking clearly about them.

For BA Students: Humanities and Social Science S
Taught by: Forbes
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: Also fulfills General Requirement in History & Tradition for Class of 2009 and prior. Freshman Seminar sections offered.
PHIL 002 Ethics
Ethics is the study of right and wrong behavior. This introductory course will introduce students to major ethical theories, the possible sources of normativity, and specific ethical problems and questions. Topics may include euthanasia, abortion, animal rights, the family, sexuality, bioethics, crime and punishment and war.
For BA Students: Society Sector
Taught by: S.Meyer, Tan, Lord, M.Meyer
One-term course offered either term
Activity: Lecture
1.0 Course Unit

PHIL 003 History of Ancient Philosophy
What is philosophy? How does it differ from science, religion, literature, and other modes of human discourse? This course traces the origins of philosophy as a discipline in the Western tradition, looking to thinkers of Ancient Greece and Rome. We will examine how natural philosophers such as Thales, Anaximander, and Heraclitus distinguished their inquiries from the teachings of poets such as Homer and Hesiod, how ancient atomism had its origins in a response to Parmenides' challenge to the assumption that things change in the world; how Socrates reoriented the focus of philosophy away from the natural world and toward the fundamental ethical question, how shall I live? We will also examine how his pupil, Plato, and subsequently Aristotle, developed elaborate philosophical systems that address the nature of reality, knowledge, and human happiness. Finally, we will examine the ways in which later thinkers such as the Epicureans and Stoics transformed and extended the earlier tradition.
For BA Students: History and Tradition Sector
Taught by: S.Meyer
Course usually offered in fall term
Also Offered As: CLST 103
Activity: Lecture
1.0 Course Unit

PHIL 004 History of Modern Philosophy
This course is an introduction to a few central themes in philosophy in the 17th and 18th centuries, and to some of the crucial thinkers who addressed those themes. Topics to be covered may include, among others, the nature of the human being (including the human mind), the relationship between God and the created world, the nature of freedom, and the relations among natural sciences, philosophy and theology in this rich period of human history.
For BA Students: History and Tradition Sector
Taught by: Hatfield, Detlefsen, Chignell
Course usually offered in spring term
Also Offered As: GSWS 006
Activity: Lecture
1.0 Course Unit

PHIL 005 Formal Logic I
This course provides an introduction to some of the fundamental ideas of logic. Topics will include truth functional logic, quantificational logic, and logical decision problems.
Taught by: Singer
One-term course offered either term
Also Offered As: LGIC 010, PHIL 505
Activity: Lecture
1.0 Course Unit
Notes: This is a Formal Reasoning course.

PHIL 006 Formal Logic II
An introduction to first-order logic including the completeness, compactness, and Lowenheim-Skolem theorems, and Godel's incompleteness theorems.
Taught by: Weinstein
Course usually offered in spring term
Also Offered As: PHIL 506
Activity: Lecture
1.0 Course Unit

PHIL 008 The Social Contract
This is a critical survey of the history of western modern political philosophy, beginning from the Early Modern period and concluding with the 19th or 20th Century. Our study typically begins with Hobbes and ends with Mill or Rawls. The organizing theme of our investigation will be the idea of the Social Contract. We will examine different contract theories as well as criticisms and proposed alternatives to the contract idea, such as utilitarianism. Besides the above, examples of authors we will read are Locke, Rousseau, Hume, Mill and Marx.
For BA Students: Society Sector
Taught by: Tan
Course usually offered in spring term
Also Offered As: PPE 008
Activity: Lecture
1.0 Course Unit

PHIL 010 Topics in Philosophy I
The emergence of animal life marks a pivotal moment in our planet’s natural history. Animal consciousness also raises complex and perplexing questions for scientists and philosophers alike. This course sets out to address some of these questions in a systematic fashion, placing the interdependent disciplines of science and philosophy into close dialogue with one another. The central theme of the course will address the question, ‘What is life?’: in particular, how to understand its particular expression in ‘animacy’, or what it is to be an animal, and the emergence and concept of humanity within the context of that natural history. In the background of diverse world cultures and faith traditions, seminar participants will also consider the possible role of creative deity within the evolution of creaturely life. The scientific component of this course will therefore focus on theories of evolution, life, language, and death. The philosophical component of the course will begin with ancient approaches to questions about nature and the structure of reality, change and motion, causation, and the idea of 'essential kinds', while also considering modern and contemporary sources for understanding the relationship between life sciences and philosophical thought. No prior knowledge is required. Students will evaluate the topics and arguments of this course through close examination of primary texts, material artifacts, audio-visual sources, and contemporary philosophical and scientific scholarship.
Taught by: Tan
Course not offered every year
Activity: Seminar
1.0 Course Unit
PHIL 011 Knowledge, Religion and Values
This First Year Undergraduate Seminar is an introduction to Philosophy organized around the topics of knowledge (epistemology), religion (metaphysics) and values (ethics). We will examine questions such as what is the difference between true knowledge and mere beliefs, the challenge of skepticism, the nature of the human mind, the nature of God and arguments for and against the existence of God, and ethical questions such as how should I live and what do I owe to others. We will draw on a range of philosophical writings, historical and contemporary, from different philosophical traditions. Examples of authors we will read include Plato, Descartes, Hume, Zhuangzi and Mengzi.
Taught by: Tan
Course not offered every year
Activity: Seminar
1.0 Course Unit

PHIL 012 Introduction to Moral Philosophy
Four sorts of questions belong to the study of moral philosophy in the analytic tradition: (1) Practical ethics discusses specific moral problems, often those we find most contested (e.g. abortion, euthanasia, killing noncombatants in war). (2) Ethical theory tries to develop systematic answers to moral problems, often by looking for general principles that explain moral judgments and rules (e.g. consequentialism, contractualism). (3) Meta-ethics investigates questions about the nature of moral theories and their subject matter (e.g. are they subjective or objective, relative or non-relative, related to a deity or not?). (4) Finally, there are questions about why any of this does, or should, matter to us (e.g. what kind of reason for acting is a moral reason and how is it related to a prudential reason?). We will investigate all four of these types of questions. A large part of the course will be focused on two highly contentious moral problems, abortion and killing noncombatants in war. The central aims of the required readings and discussion are: a) to develop each question deeply and sharply enough for us to understand why it has been contentious; b) to see what new evidence could change the nature of the problem; and c) to suggest how to seek that further evidence. We will focus on how to read complex contemporary philosophical prose in order to outline and evaluate the arguments embedded within it. This will provide the basis for writing papers in which you defend a position with evidence and arguments. These skills are central to the practice of Philosophy. This course does not presuppose that students already have these skills. It is intended to teach them and presupposes a willingness on the part of students to do what is necessary to learn them. What this involves is detailed in ‘Success in this Course’. You should read this note to understand the commitment this course involves.
Taught by: Meyer
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

PHIL 015 Logic and Formal Reasoning
This course offers an introduction to three major types of formal reasoning: deductive, inductive (probabilistic and statistical), and practical (decision-making). The course will begin with the study of classical sentential and predicate logics. It will move on to elementary probability theory, contemporary statistics, decision theory and game theory.
For BA Students: Formal Reasoning and Analysis
Taught by: Domotor
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

PHIL 021 First Year Seminar: Philosophy and Autobiography
In this course, we will study the interaction of autobiography and philosophy. We will read some autobiographies written by philosophers to understand how their philosophical thinking and commitments arose and how these commitments shaped their lives. We will also read texts that examine philosophical issues related to the phenomenon of writing autobiographies, including the nature of the self, questions surrounding interpretation and understanding, the paradoxes of self-deception, and the meaning and narrative structure of human life.
Taught by: Detlefsen
Activity: Seminar
1.0 Course Unit

PHIL 025 Philosophy of Science
What counts as a scientific theory? What counts as evidence for a scientific theory? Are scientific inferences justified? Does science give us truths or approximate truths about a world that exists independently of us? How can we know? Does it matter? These are all perennial questions in the philosophy of science, and the goal of this course is to look at how philosophers have answered these questions since the scientific revolution. In addition to reading classic work by philosophers of science, we will read material from living and dead scientists in order to gain a deeper appreciation of the philosophical questions that have troubled the most brilliant scientists in Western science.
For BA Students: Natural Science and Math Sector
Taught by: Weisberg, Spencer
One-term course offered either term
Activity: Lecture
1.0 Course Unit

PHIL 026 Philosophy of Space and Time
This course provides an introduction to the philosophy and intellectual history of space-time and cosmological models from ancient to modern times with special emphasis on paradigm shifts, leading to Einstein’s theories of special and general relativity and cosmology. Other topics include Big Bang, black holes, stellar structure, the metaphysics of substance, particles, fields, and superstrings, unification and grand unification of modern physical theories. No philosophy of physics background is presupposed.
For BA Students: Natural Science and Math Sector
Taught by: Skillings
One-term course offered either term
Also Offered As: STSC 026
Activity: Lecture
1.0 Course Unit

PHIL 028 Introduction to Feminist Philosophy
This course is an introduction to feminist thought, both in theory and in practice. We will consider how feminist thought emerged and evolved, as well as how feminist theories respond to various intellectual, social and political challenges. Questions we will address include: What exactly is feminism? How does one’s gender identity impact one’s lived experiences? How should we revise, reformulate, or rethink traditional answers to political and ethical issues in light of feminist theories? How can feminist analyses contribute to the development of better science, and our conceptions of knowledge? Prerequisite: Offered through the College of General Studies.
Taught by: M.Meyer
Course not offered every year
Also Offered As: GSWS 028
Activity: Seminar
1.0 Course Unit
PHIL 029 Philosophy of Sport
This is an introductory philosophy course that uses philosophical tools to understand and answer questions that arise in and about sports. Is there a principled basis for determining which methods of performance enhancement are acceptable? Developing a framework to answer this question will take us through: 1) questions about rules: what is their point in sports and what are appropriate reasons to change them; 2) questions about the point of participation in a sport; 3) questions about the kinds of virtues sports participants can demonstrate; and 4) questions about integrity of participants and a sport itself. A related set of questions concerns the appropriate competitors in sporting events: Should competition be restricted to single sex categories; Should competition be divided into disabled and non-disabled categories?
Taught by: M.Meyer
Course not offered every year
Activity: Seminar
1.0 Course Unit

PHIL 030 Ethics and Contemporary Policy Debates
A central value of liberal democracy is the free and robust exchange of ideas. However, the polarized nature of contemporary public discourse threatens to undermine our democracy. On a variety of pressing moral issues, we disagree more and do so more strongly. How can we better engage with each other on the problems that affect us as democratic citizens? In this CWiC seminar, we will examine the most pertinent policy problems we face today that generate deep ethical disagreement. Topics include: immigration policy, climate change, eating meat, taxation, reparations, racial and gender injustice, access to healthcare, gun control, social media’s effect on democracy and artificial intelligence. Students will read philosophical writings on these topics. They will then engage in a group-based class debate with their peers on a chosen topic. The debate will likely be supplemented by other oral assignments, such as an individual presentation, audience participation during the debate, and general class participation. By having students debate with their peers and uncover the underlying ethical complexities of these problems, this CWiC critical speaking seminar aims to highlight the importance of practicing toleration and civility if we are to overcome deep ethical disagreement.
Taught by: Cetty
Course not offered every year
Activity: Seminar
1.0 Course Unit

PHIL 034 Philosophy of Religion
An introductory philosophical examination of questions regarding the nature of religious experiences and beliefs; arguments for and against the existence of God; the problem of evil; the relationships of faith, reason and science, the possibility of religious knowledge, the role of religious communities, etc. Readings from the history of philosophy, 20th century and contemporary philosophy.
Taught by: Steinberg
Course not offered every year
Activity: Lecture
1.0 Course Unit

PHIL 040 Machine Fairness: the Ethics of Algorithms
Artificial intelligence is causing unprecedented disruptions in many sectors of society, raising fundamental ethical and philosophical questions. Researchers across a variety of disciplines are currently studying how tasks can be automated efficiently to produce the best outcomes for society. This course offers a non-technical introduction to an emerging area of research at the intersection of philosophy, machine learning, computer science, statistics, and psychology. It focuses on a number of applications, including criminal sentencing, predictive policing, self-driving vehicles, autonomous weapons, and healthcare. Although these areas of application are different, they all involve handing over decisions formerly made by humans to machines. This presents the possibility of improving on human decision making, leading to a fairer society, but also threatens to undermine longstanding traditions and raises new ethical questions. What biases might enter into algorithms, and what are their origins? How should we evaluate whether the outcomes of an algorithmic process are fair? When things go wrong, who should be held accountable? And what standards of transparency, if any, can be demanded of the algorithms that shape our lives? The course addresses these questions by developing and applying methods and theories from philosophical ethics.
Taught by: Humphreys
One-term course offered either term
Activity: Lecture
1.0 Course Unit

PHIL 044 Introduction to Cognitive Science
How do minds work? This course surveys a wide range of answers to this question from disciplines ranging from philosophy to neuroscience. The course devotes special attention to the use of simple computational and mathematical models. Topics include perception, learning, memory, decision making, emotion and consciousness. The course shows how the different views from the parent disciplines interact and identifies some common themes among the theories that have been proposed. The course pays particular attention to the distinctive role of computation in such theories and provides an introduction to some of the main directions of current research in the field. It is a requirement for the BA in Cognitive Science, the BAS in Computer and Cognitive Science, and the minor in Cognitive Science, and it is recommended for students taking the dual degree in Computer and Cognitive Science.
Course usually offered in fall term
Also Offered As: CIS 140, COGS 001, LING 105, PSYC 207
Activity: Lecture
1.0 Course Unit
Notes: This counts as a Formal Reasoning course for College students.

PHIL 050 Introduction to Indian Philosophy
This course will take the student through the major topics of Indian philosophy by first introducing the fundamental concepts and terms that are necessary for a deeper understanding of themes that pervade the philosophical literature of India—arguments for and against the existence of God, for example the ontological status of external objects, the means of valid knowledge, standards of proof, the discourse on the aims of life. The readings will emphasize classical Hindu, Buddhist, and Jain philosophical articulations (from 700 B.E. to 16th century CE) but we will also supplement our study of these materials with contemporary or relatively recent philosophical writings to modern India.
For BA Students: History and Tradition Sector
One-term course offered either term
Also Offered As: RELS 155, SAST 050, SAST 603
Activity: Lecture
1.0 Course Unit
PHIL 051 Yoga and Philosophy

"Yoga" means to yoke in Sanskrit. Metaphorically, this is often interpreted as union, or integration. This course will explore central aspects of yogic philosophy and practice, and how they relate to, and might be integrated with, contemporary analytic philosophy, college life, and beyond. We will focus on three key issues: (1) What is yogic philosophy? How does it relate to the western philosophical tradition more commonly taught in philosophy departments in the U.S.? (2) What does the practice of yoga have to do with theoretical understanding? (3) Is it possible to integrate a yogic worldview and a scientific worldview? Is there scientific evidence that yoga ‘works’? What does that even mean? This course will contain both a theoretical component and a practice component. In addition to writing analytical essays on these topics, students will maintain a yoga practice and a reflective journal throughout the course. No prior experience with yoga is required.

Taught by: Miracchi
Activity: Seminar
1.0 Course Unit

PHIL 067 19th Century Philosophy

Selected topics in nineteenth century European Philosophy. Works of philosophers such as Schopenhauer, Nietzsche, and Kierkegaard.

Taught by: Jarosinski
Course not offered every year
Also Offered As: COML 268, GRMN 248
Activity: Lecture
1.0 Course Unit

PHIL 072 Biomedical Ethics

This course is an introduction to bioethics, focusing on ethical questions arising at the beginning and end of life. Topics will include procreative responsibilities, the question of wrongful life, and prenatal moral status as well as questions of justice related to markets for sperm, eggs and gestation. We will also attend to dilemmas at the end of life, including the authority of advance directives, euthanasia and the allocation of life-saving therapies.

For BA Students: Society Sector
Course not offered every year
Also Offered As: PPE 072
Activity: Lecture
1.0 Course Unit

PHIL 074 Business Ethics

We will examine practical ethical issues facing businesses, and the philosophical tools for addressing them. Topics may include corporate responsibility, shareholders vs. stakeholders, whistle blowing, raiding and restructuring, the morality of markets, fair hiring practices, workers rights, sexual harassment, environmental impact.

Course not offered every year
Activity: Seminar
1.0 Course Unit

PHIL 076 Political Philosophy

An introduction to some central issues in social and political philosophy: liberty, equality, property, authority, distributive justice. Readings may be from Hobbes, Locke, Mill, Marx, and more recent theorists such as Rawls and Nozick.

Taught by: Freeman
Course not offered every year
Activity: Lecture
1.0 Course Unit

PHIL 077 Philosophy of Law

This course is an introduction to some of the central philosophical problems of law. What is law? What makes law? What is the relationship between law and morality? Can laws be unjust? Is there a moral obligation to obey the law? We will look at different theories of law, such as positivism and natural law theory, and discuss topics like civil disobedience, liberty and the law, and punishment and the law. The third and final section of the course will consider an unusual and particularly significant kind of law: constitutional law. We will consider the purpose(s) of constitutions, how constitutionalism relates to democracy, and how constitutions ought to be understood and interpreted, in light of our answers to these first two questions. Throughout the course, we will engage with both classic and contemporary work, reading work by Michelle Alexander, Jeremy Bentham, Angela Davis, Ronald Dworkin, John Hart Ely, H.L.A. Hart, Thomas Hobbes, John Locke, John Stuart Mill, Robert Nozick, Martha Nussbaum, Richard Posner, Jeremy Waldron, and others.

For BA Students: Society Sector
Taught by: Hutler
Course not offered every year
Activity: Lecture
1.0 Course Unit

PHIL 079 Environmental Ethics

In this course we will investigate some of the ethical issues that arise from our relationship with the environment. Topics may include: What are our responsibilities toward the environment, as individuals and as members of institutions? How do our responsibilities toward the environment relate to other ethical considerations? Do non-human animals/species/ecosystems have intrinsic value? What should conservationists conserve?

Course not offered every year
Activity: Seminar
1.0 Course Unit

PHIL 080 Aesthetics

This course examines philosophical issues centering on the nature and value of the arts. Some questions we'll consider are: What is art? What does it mean to have an aesthetic experience? How are aesthetic experiences different from non-aesthetic ones? What is the relation between art and truth? How do the moral qualities in a work of art affect its aesthetic qualities? Why are emotions important in our interpretations of artworks? What is the relation between art and expression? Do forgeries necessarily have less aesthetic value than original artworks? What are aesthetic judgments, and are they merely expressions of taste?

Lecture and discussion will center on both classical and contemporary works in aesthetics.

For BA Students: Arts and Letters Sector
Course not offered every year
Activity: Seminar
1.0 Course Unit
PHIL 118 Benjamin Franklin and His World
Benjamin Franklin was a preternaturally talented Renaissance man. He was a world-famous scientist whose insights into electricity are still relevant today; a leading citizen and civic leader; a first-class printer who helped define and expand the world of letters; a preeminent journalist, essayist, and aphorist; a skilled politician and diplomat. His tremendous legacy of political, cultural, scientific and civic organizations continues to influence his city and country. His Autobiography is an essential feature of the American literary canon. But Benjamin Franklin's life also raises deep and disturbing questions for students. He owned slaves and profited from the sale of enslaved persons. He copied and reworked many of his most famous phrases. His sexual habits and behavior are incompatible with the character of the 'Me Too' era. He broke promises, circulating - knowing they would become public- personal letters of great political import, which he had pledged to keep private. Through examining Franklin's life, we will consider weighty questions in history, citizenship, ethics, and science. This course will explore the life and ethos of Benjamin Franklin. We will study the history of the 18th century, including the American Revolution, the details of Franklin's life and accomplishments, and six major ethical issues he confronted. Over the course, students will follow Franklin's own advice for establishing order in life. Students will keep a detailed moral diary modeled on Franklin's. For a 5-day period, students will emulate the diet he had as a young and low-paid-adult. The course will encourage students to critically examine the 18th Century, the 'great man' theory, and the ability to make moral evaluation of people living in other times. They will critically examine the relevance of the life of a world historical figure for how to lead their own civically engaged, ethical life.

PHIL 148 Public Philosophy & Civic Engagement
In recent years professional philosophy has witnessed numerous efforts to break down the barriers that stand between the academy and its neighboring communities. Such work has invited a lively debate across the discipline about the role philosophy can and should play outside the classroom. This course gives students the opportunity to make a substantive contribution to this timely issue both by reflecting upon and by engaging in ‘public philosophy.’ Undergraduates will have the opportunity to read, discuss, and distill philosophical texts on a range of topics in moral and political philosophy, especially topics that pertain to civic life in democratic society. Topics include duties and obligations (e.g., the duty to vote), oppression and injustice, cosmopolitanism, patriotism, civil disobedience, propaganda, and political liberalism. Students will also engage with public-facing work done by philosophers on these topics, with the aim of preparing students from a West Philadelphia high school (details TBA) to produce a written piece of public philosophy of their own at the end of the semester. Guest speakers will on occasion visit the seminar to discuss public philosophy or pre-college pedagogy. This course is an Academically Based Community Service course.
Taught by: Vazquez
Activity: Seminar
1.0 Course Unit
Notes: This course is an Academically Based Community Service course. Students are encouraged to reach out to the instructor, Michael Vazquez (vazm@sas.upenn.edu), with any questions.

PHIL 155 Continental Philosophy
This course is an introduction to 20th-century continental European philosophy, focusing on the origins and development of phenomenology, existentialism, hermeneutics, and deconstruction. The centrality of phenomenology to an understanding of these movements and other contemporary trends in European thought will be emphasized throughout. No previous background in philosophy is required.
Taught by: Steinberg
Course not offered every year
Activity: Seminar
1.0 Course Unit

PHIL 205 What is Meaning?
This course will survey several central topics in philosophy of mind and language, as well as investigate how these areas of philosophy interact with the scientific study of the mind. Questions addressed may include: What is it to have a mind? What is consciousness? What is it to think, to perceive, to act, to communicate, to feel emotions? What is the relationship between the mind and the brain? Can there be a science of the mind? Of language? What can it tell us? What can philosophy contribute to cognitive science? We will look for more precise ways of asking these questions, and we will study some canonical answers to them.
Course not offered every year
Activity: Lecture
1.0 Course Unit

PHIL 209 Introduction to Plato
A survey of selected dialogues of Plato, an Athenian philosopher of the fourth century BCE. Works read may include the Euthyphro, Crito, Gorgias, Laches, Charmides, Phaedo, Philebus, Statesman, and Plato's last dialogue, the Laws. The course will be run as a seminar. All works will be read in English translation. Topics to be discussed may include metaphysics, epistemology, psychology, ethics, and political theory.
Taught by: S.Meyer
Course not offered every year
Activity: Seminar
1.0 Course Unit

PHIL 210 Introduction to Aristotle
Aristotle (384-323 BCE) was one of the most important philosophers in Classical Greece, and his legacy had unparalleled influence on the development of the Western philosophical thought through the medieval period. We will study a selection of his works in natural philosophy, metaphysics, epistemology, psychology, ethics and politics. All texts will be read in English translation. No background in Greek philosophy or knowledge of Greek is required.
Taught by: S.Meyer
Course not offered every year
Activity: Lecture
1.0 Course Unit

PHIL 211 Ancient Moral Philosophy
A survey of ethical philosophy in the Ancient Greek tradition. We will study the work of Plato, Aristotle, Epicurus, and the Stoics, including writings of later Roman authors such as Cicero, Seneca, Epictetus, and Marcus Aurelius. The class will be run as a seminar. All works will be read in English translation.
For BA Students: Society Sector

Course not offered every year
Also Offered As: CLST 211
Activity: Seminar
1.0 Course Unit
PHIL 221 Philosophy East and West
Our goal in this course is to bring Western Philosophy and Eastern Philosophy into dialogue. Topics we will cover include skepticism and knowledge, ethics and the good life, moral responsibility and personal relationships, and political obligations and justice. Do the Western and Eastern philosophical traditions approach these topics in the same way? Do they even share an understanding of what the problems and issues at stake are? And what can we learn from comparative philosophy? This seminar does not presuppose prior knowledge of philosophy. Examples of authors we will study include Descartes, Aristotle, Mencius, and Confucius.
Taught by: Tan
Course not offered every year
Activity: Seminar
1.0 Course Unit

PHIL 223 Philosophy and Visual Perception
In this course, we'll use the biology, psychology and phenomenology of vision to explore philosophical questions about color, such as these: Color vision helps us get around in our environments, but in what sense is it a window onto reality, if it is? Are colors properties of objects, or are they inherently private, subjective properties of minds? What can non-human forms of color vision teach us about the nature of color, and how should we empirically study color vision? Do we need to see in color to understand it? How do our ordinary ways of talking and thinking about colors relate to the experiences we have in color? How does color vision figure in aesthetic judgment? And to what degree can it be influenced by learning, or by social biases like sexist or racist prejudices?
Taught by: Hatfield, Connolly
Also Offered As: VLST 223
Activity: Seminar
1.0 Course Unit

PHIL 226 Philosophy of Biology
This course consists of a detailed examination of evolutionary theory and its philosophical foundations. The course begins with a consideration of Darwin's formulation of evolutionary theory and the main influences on Darwin. We will then consider two contemporary presentations of the theory: Richard Dawkins' and Richard Lewontin's. The remainder of the course will deal with a number of foundational issues including adaptation, the units of selections, the evolution of altruism, and the possibility of grounding ethics in evolutionary theory. Prerequisite: Application required through Penn Global; https://global.upenn.edu/pennabroad/pgs
For BA Students: Natural Science and Math Sector
Taught by: Weisberg
Course not offered every year
Also Offered As: PHIL 521, PPE 225
Activity: Seminar
1.0 Course Unit

PHIL 228 Philosophy of Social Science
This course is about the foundations of contemporary social science. It focuses on the nature of social systems, the similarities and differences between social and natural sciences, the construction, analysis, and confirmation of social theories, and the nature of social explanations. Specific topics may include: What are social norms and conventions? What does it mean to have one gender rather than another, or one sexual orientation rather than another? Should social systems be studied quantitatively or qualitatively?
Taught by: Weisberg, Bicchieri
Course not offered every year
Also Offered As: PPE 314
Prerequisite: PHIL 008 OR PHIL 025 OR PPE 153 OR ECON 001 OR ECON 002
Activity: Lecture
1.0 Course Unit

PHIL 231 Epistemology
Two basic assumptions of academic research are that there are truths and we can know them. Epistemology is the study how knowledge, what it is, how it is produced, and how we can have it. Metaphysics, the study of the basic constituents of reality, the study of being as such. In this introduction to metaphysics and epistemology, we will ask hard questions about the nature of reality and knowledge. No philosophy background is required for this course.
Taught by: Singer
Course not offered every year
Activity: Lecture
1.0 Course Unit

PHIL 233 Philosophy of Economics
In this course, general philosophy of science issues are applied to economics, and some problems specific to economics are tackled. While analytical questions like 'What is economics?' or 'What is economic explanation' must be pursued, the ultimate goal is practical: What is good economics? How can economists contribute to a better understanding of society, and a better society? How can we make economics better? Topics to be discussed include the following: specific object and method of economics as a social science; its relation with other disciplines (physics, psychology and evolutionary theory); values in economics (welfare, freedom, equality and neutrality); the role of understanding and possible limits of a quantitative approach to human behavior (purposefulness, freedom, creativity, innovation); prediction, unpredictability and the pretension of prediction; causation in econometrics and in economic theory (equilibrium); selfishness and utility maximization (cognitive and behaviorist interpretations); economic models and unrealistic assumptions (realism and instrumentalism); empirical basis of economics (observation and experiment); microeconomics and macroeconomics (reductionism and autonomy); pluralism in economics (mainstream economics and heterodox schools).
Taught by: Pereira Di Salvo, Carlos
Course not offered every year
Also Offered As: PPE 233
Activity: Lecture
1.0 Course Unit
PHIL 243 Topics In Metaphysics
In this class we employ science fiction thought experiments as a means of reflecting on questions like: What is reality? What is the nature of the self and mind? Might you be in a computer simulation (e.g., as in The Matrix)? Is time travel possible? Can your mind survive the death of your brain by uploading? Is time real or is it merely an illusion?
Taught by: Domotor
Course not offered every year
Activity: Seminar
1.0 Course Unit

PHIL 244 Introduction to Philosophy of Mind
This course will survey several central topics in philosophy of mind, as well as investigating how philosophy of the mind interacts with scientific study of the mind. Among the questions we'll be asking are: What is it to have a mind? What is the relationship between the mind and the brain? Can there be a science of the mind? What can it tell us? What can philosophy contribute to a science of the mind? What is consciousness? What is it to think, to perceive, to act? How are perception, thought, and action related to one another?
Taught by: Domotor, Miracchi
One-term course offered either term
Also Offered As: PPE 244, VLST 221
Activity: Lecture
1.0 Course Unit

PHIL 247 Free Radicals: Marx, Marxism, and the Culture of Revolution
‘A spectre is haunting Europe—the spectre of Communism’: This, the famous opening line of The Communist Manifesto, will guide this course’s exploration of the history, legacy, and potential future of Karl Marx’s most important texts and ideas, even long after Communism has been pronounced dead. Contextualizing Marx within a tradition of radical thought regarding politics, religion, and sexuality, we will focus on the philosophical, political, and cultural origins and implications of his ideas. Our work will center on the question of how his writings seek to counter or exploit various tendencies of the time; how they align with the work of Nietzsche, Freud, and other radical thinkers to follow; and how they might continue to haunt us today. We will begin by discussing key works by Marx himself, examining ways in which he is both influenced by and appeals to many of the same fantasies, desires, and anxieties encoded in the literature, arts and intellectual currents of the time. In examining his legacy, we will focus on elaborations or challenges to his ideas, particularly within cultural criticism, postwar protest movements, and the cultural politics of the Cold War. In conclusion, we will turn to the question of Marxism or Post-Marxism today, asking what promise Marx’s ideas might still hold in a world vastly different from his own. All readings and lectures are in English.
For BA Students: Humanities and Social Science S
Taught by: Jarosinski
Course not offered every year
Also Offered As: COML 247, GRMN 247
Activity: Lecture
1.0 Course Unit

PHIL 248 High School Ethics Bowl
In this course, teams of undergraduate students, each joined by a graduate student in philosophy, will coach teams of high school students for participation in the National High School Ethics Bowl, an annual competitive yet collaborative event in which teams analyze and discuss complex ethical dilemmas. Cases for the 2019-20 Ethics Bowl will be released in September 2019, and these will serve as a foundational starting point for the undergraduate students’ investigations into ethical theory and the study of the ethics bowl itself, to develop the capacities to provide coaching and mentorship to the teams of high school students from schools in West Philadelphia and across the city. Undergraduates will travel to these school as part of the course, and there will be one or two Saturday sessions when all high school convene on Penn’s campus for practice scrimmages. This course will introduce the ethics bowl to many new Philadelphia School District schools and students, and it will provide Penn students with the opportunity to develop their teaching and communication skills, build collaborative relationships with community schools, and solidify their knowledge of ethical theory through coaching.
Taught by: Detlefsen
Also Offered As: GSWS 248
Activity: Lecture
1.0 Course Unit
Notes: This is an Academically-Based Community Service course. Enrollment in the course is by permit only following an interview with the instructor. Please be in touch with Professor Detlefsen <detlefsse@sas.upenn.edu> to schedule an interview.

PHIL 249 Philosophy of Education
We sometimes see philosophy as an inaccessible subject and the philosopher a solitary academic musing about abstract concepts from her office chair. However, philosophical thinking lies at the heart of many aspects of human life. Anyone who has pondered over questions regarding goodness, value, personal identity, justice, how to live well, or how to determine the right course of action has thought philosophically. These issues are of great interest and importance not just to adults, but also to children and teenagers. Introducing younger students to philosophical thought consists, in part, of showing them the ways in which they are already thinking philosophically. In this course, we will study a variety of topics in philosophy with the aim of developing curricula and lesson plans for delivery in middle school (6th through 8th grades). Course participants will work with the instructor and with help from a curricular planner from Penn’s Graduate School of Education to develop a series of one-hour lessons in philosophy, which participants will then teach to the middle school students in a local school. Part of the course will be held on Penn’s campus, and part of the course will be held on-site with one of our partner schools. This course is an Academically Based Community Service course. Registration in this class requires a permit, following an interview with the instructor.

Activity: Seminar
1.0 Course Unit
PHIL 260 World Philosophies
In this course, we will study philosophies or thought systems from around the world. Placing these philosophies within historical, cultural and political contexts, we will study the theoretical bases (including questions regarding the nature of reality, human nature, claims about knowledge and memory) of practical engagement with the world (including concerns with individual human interactions, social-political structures, educational theory, the nature of history, the nature of the arts and the like). Philosophies or thought systems we will study will come from across Africa, across Asia, and from native peoples of the Americas, the South Pacific, New Zealand and Australia.
For BA Students: Humanities and Social Science S
Taught by: Detlefsen
Course not offered every year
Activity: Seminar
1.0 Course Unit

PHIL 271 Global Justice
This course is an introduction to some of the central problems in global justice. Samples of these topics include: What are our duties to respond to world poverty and what is the basis of this duty? Is global inequality in itself a matter of justice? How universal are human rights? Should human rights defer to cultural claims at all? Is there a right to intervene in another country to protect human rights there? Indeed can intervention to protect human rights ever be a duty? Who is responsible for the environment? We will read some influential contemporary essays by philosophers on these topics with the goal of using the ideas in these papers as a springboard for our own further discussion and analysis.
Taught by: Tan
Course not offered every year
Activity: Seminar
1.0 Course Unit

PHIL 277 Justice, Law and Morality
The course will focus on the philosophical background to the individual rights protected by the U.S. Constitution, including 1st Amendment freedoms of religion, expression, and association; the 14th amendment guarantee of Due Process and the rights of privacy, abortion, assisted suicide, and marriage; the Equal Protection clause and equal political rights and the legitimacy of affirmative action; and the Takings and Contract clauses and their bearing on rights of private property and economic freedoms. In addition to Supreme Court decisions on these issues, we will read works by political philosophers and constitutional theorists, including J.S. Mill, Ronald Dworkin, Cass Sunstein, Martha Nussbaum, Katherine MacKinnon and others.
Taught by: Freeman, Allen
Course not offered every year
Also Offered As: PPE 277
Activity: Lecture
1.0 Course Unit

PHIL 281 Philosophical Issues around Love and Sex
This is a course on philosophical topics surrounding love and sex. We will touch on issues in all areas of philosophy including ethics, political philosophy, metaphysics, philosophy of language, and epistemology. You will develop the sorts of skills fundamental to philosophy: understanding and reconstructing arguments, evaluating arguments, and developing your own argumentative abilities. You will also acquire theoretical tools that might be useful for thinking about your own love and sex lives, and the lives of those around you.
Taught by: Hirji
Course offered spring; even-numbered years
Activity: Seminar
1.0 Course Unit

PHIL 291 Philosophy of Race
Historically, philosophical questions about race have been about the nature and reality of race, the nature of racism, and social or political questions related to race or racism. In fitting with that history, the first part of the course will focus on the nature and reality of race, as understood in biology and as understood by ordinary people. We will begin by looking at biological race theories from Francois Bernier in 1684 to Pigliucci and Kaplan in 2003. Next, we will look at the philosophical work that has been done on the nature and reality of race as ordinarily understood in the contemporary United States. We will discuss racial anti-realism, social constructionism about race, and biological racial realism from well-known philosophers of race like Anthony Appiah, Sally Haslanger, and Joshua Glasgow. The second part of the course will focus on the nature of racism and social or political questions related to race or racism. In our discussion of racism, we will cover, at least, intrinsic racism, extrinsic racism, and institutional racism. In our discussion of social or political issues related to race or racism, we will look at whether any US racial groups should be used to diagnose, study, or treat genetic disorders.
Taught by: Spencer
Course not offered every year
Activity: Seminar
1.0 Course Unit

PHIL 292 Racial Justice
This course will focus on contemporary philosophical debates around racial justice. Some of the themes for this course are quite obvious: the nature of racism and discrimination, for example, will recur. But the main focus of the course will be on debates about politically pertinent policy issues, such as racial segregation, reparations, and mass incarceration. A guiding question in the course will be whether in these areas we should think that certain moral duties are owed to racial groups, or only to particular individuals.
Taught by: Wodak
Course not offered every year
Activity: Lecture
1.0 Course Unit

PHIL 299 Independent Study
Student arranges with a faculty member to pursue a program of reading and writing on a suitable topic.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
PHIL 301 Directed Honors Research
Open only to senior majors in philosophy. Student arranges with a faculty member to do an honors thesis on a suitable topic.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

PHIL 325 Topics in Philosophy of Science
A seminar for philosophy majors on selected topics in the Philosophy of Science. In Spring 2019, the course will explore some of the relationships between philosophy and computer science, with a focus on connections with computational complexity theory. Topics will include the bearing of computational learning theory on the problem of induction and the philosophical explication of the notion of randomness. The readings will come from articles in journals made available via Canvas.
PREREQUISITES: The course is entirely self-contained: All topics in computational complexity theory that are necessary for understanding the pertinent philosophical problems will be reviewed in class.
Taught by: Weinstein
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: Department Majors Only

PHIL 330 Philosophy of Perception
Taking our perceptual experience as a given, what causes it? In a realistic mood, we accept that objects in the environment, or in the ‘external world,’ cause us to have the perceptual experiences that we do (as of a table with food, or as of a garden with flowers in it). Yet on this realistic view, our perception is the result of a causal chain that leads from object to eye to brain to experiences, and we are only given the last element: the experience. So how do we really know how our experiences are caused, and where do we get the idea that they are caused by an external world of physical objects? The seminar will focus on the problem of the external world as examined by David Hume, Thomas Reid, G. E. Moore, and Bertrand Russell, along with recent authors.
Taught by: Hatfield
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Department Majors Only

PHIL 343 Philosophy of Mind
This majors seminar will focus on selected topics in Philosophy of Mind.
Taught by: Miracchi
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Department Majors Only

PHIL 359 Topics in Theoretical Philosophy
This majors seminar will cover selected topics in metaphysics, epistemology, philosophy of mind, philosophy of science, or philosophy of language. Topics will vary from term to term.
Taught by: Spencer
Activity: Seminar
1.0 Course Unit
Notes: Department Majors Only

PHIL 361 Ancient Philosophical Figures
A study of selected topics, texts, and figures from classical Greek philosophy. Topics will vary from term to term.
Taught by: S. Meyer
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Department Majors Only

PHIL 362 Modern Philosophical Figures
A study of selected topics, texts, and figures from 17th and 18th century European philosophy. Figures studied may include Descartes, Leibniz, Locke, Berkeley, Hume, or Kant. Topics will vary from term to term.
Taught by: Hatfield, Detlefsen
Course not offered every year
Also Offered As: GRMN 363, PHIL 565
Activity: Seminar
1.0 Course Unit
Notes: Department Majors Only

PHIL 372 Topics in Ethics
This majors seminar will cover selected topics in ethics. The content will vary from semester to semester.
Taught by: Freeman
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Department Majors Only

PHIL 376 Justice
This majors seminar will focus on contemporary works on liberalism, democracy, capitalism, and distributive justice. Questions to be discussed may include: Which rights and liberties are fundamental in a constitutional democracy? What is equality and what requirements does it impose? Are economic rights of property and freedom of contract equally important as personal liberties of speech, religion, and association? Does capitalism realize a just distribution of income and wealth? What is socialism and is it potentially just, or necessarily unjust?
Readings from works by John Rawls, Robert Nozick, Milton Friedman, and others.
Taught by: Freeman
Course not offered every year
Activity: Seminar
1.0 Course Unit

PHIL 379 Topics in Political Philosophy
This majors seminar will focus on various topics in political philosophy. Topics will vary from term to term.
Taught by: Pereira Di Salvo
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Department Majors Only
PHIL 380 Marx's Moral, Social, and Political Philosophy
A majors seminar in Philosophy. Karl Marx is one of the most politically and intellectually influential philosophers of the modern period. Even today, in the aftermath of Soviet Communism, but also in the aftermath of the Great Recession, his ideas continue to be debated in academic circles, in the financial press, and among pundits, activists, and politicians. This seminar will survey his canonical writings roughly in chronological order. We will focus thematically on: Marx's views on morality and ideology; his theories of history, the modern capitalist economy, and the modern state; his views on political change and political agency; and on the few but suggestive passages in which he imagined what a post-capitalist society might look like. Readings will span from the Economic and Philosophic Manuscripts of his youth to the Ethnological Notebooks written during the last decade of his life.
Taught by: Pereira Di Salvo
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Department Majors Only

PHIL 405 Philosophy of Language
This course provides an overview of 20th century analytic philosophy of language. Questions we will ask may include: How do words refer? How do they combine to express thoughts? How do words relate to concepts or to thoughts more generally? What do words and sentences mean? How do we use them to communicate with each other? How does word and sentence meaning depend on the contexts in which they are spoken or heard, or on stable features of environments of linguistic speakers? Must have taken at least one philosophy course before enrolling.
Taught by: Miracchi
Course not offered every year
Prerequisite: PHIL 005 OR PHIL 505
Activity: Seminar
1.0 Course Unit

PHIL 407 Aristotle
A study of Aristotle's main writings on language, reality, knowledge, nature and psychology. All texts will be read in English translation. No background in Greek philosophy or knowledge of Greek is required, although previous work in philosophy is strongly recommended.
Taught by: S.Meyer
Course not offered every year
Activity: Seminar
1.0 Course Unit

PHIL 409 Plato's Selected Dialogues
A study of selected dialogues of Plato. All texts will be read in translation. No prior experience in Plato is required, but students should have some background in philosophy. Dialogues studied will vary from term to term.
Taught by: S.Meyer
Course not offered every year
Activity: Seminar
1.0 Course Unit

PHIL 410 Introduction to Logic and Computability
Taught by: Weinstein
Course not offered every year
Also Offered As: LGIC 310, MATH 570
Prerequisite: MATH 371 OR MATH 503
Activity: Lecture
1.0 Course Unit

PHIL 412 Topics in Logic
The course focuses topics drawn from the central areas of mathematical logic: model theory, proof theory, set theory, and computability theory.
Taught by: Weinstein
Course not offered every year
Also Offered As: LGIC 496, MATH 671
Activity: Seminar
1.0 Course Unit

PHIL 413 Logic II
The second semester of a two-semester course on the fundamental results and techniques of mathematical logic. Topics will be drawn from model theory, proof theory, recursion theory, and set theory. Connections between logic and algebra, analysis, combinatorics, computer science, and the foundations of mathematics will be emphasized.
Taught by: Scedrov, Towsner, Weinstein
Course not offered every year
Also Offered As: LGIC 320, MATH 571
Prerequisite: PHIL 410 OR MATH 570
Activity: Seminar
1.0 Course Unit

PHIL 414 Philosophy of Mathematics
The course will focus on the development of the foundations and philosophy of mathematics from the late nineteenth-century through the present day. Topics may include logicism, formalism, intuitionism, and the foundations of set theory. Ample consideration will be given to some of the fundamental results of mathematical logic, such as the Godel incompleteness theorems and the independence of the Continuum Hypothesis from Zermelo-Fraenkel set theory, that have had a profound impact on contemporary approaches to the philosophy of mathematics.
Taught by: Weinstein, Ewald
Course not offered every year
Activity: Seminar
1.0 Course Unit
PHIL 423 Philosophy and Visual Perception
Central issues in the philosophy of perception from the modern period, including: what we perceive, the meaningful content of perception, and its relation to a mind-independent external world. Additional topics may include: (1) color perception and color metaphysics; (2) object perception in its interplay between Gestalt organizational factors and background knowledge; (3) the role of ecological regularities in the formation of our visual system and in the ongoing tuning of the system to the environment; (4) the geometry of visual space and the phenomenology of visual appearances of size and shape; (5) the problem of how visual scenes are experienced by means of images. Readings from authors such as Bertrand Russell, R. W. Sellars, Tim Crane, Evan Thompson, Robert Swartz, Wolfgang Metzger, Nelson Goodman, Richard Wollheim, and William Hopp, among others.
Taught by: Hatfield
One-term course offered either term
Activity: Seminar
1.0 Course Unit

PHIL 425 Philosophy of Science.
An advanced introduction to the central philosophical questions concerning the nature of scientific knowledge and its relation to experience, and the metaphysical assumptions underlying the natural sciences. Topics to be covered include: science versus pseudoscience, laws of nature, causation, determinism and randomness, theories and models in science, scientific explanation, underdetermination of theories by observation and measurement, realism and antirealism, reductionism and intertheory relations, objectivity and value judgments in science, hypothesis testing and confirmation of scientific theories, and classical paradoxes in scientific methodology. Prerequisite: Backround in elementary logic and some rudiments of science.
Taught by: Domotor
One-term course offered either term
Activity: Seminar
1.0 Course Unit

PHIL 426 Philosophy of Psychology
An examination of major trends of thought in experimental psychology in relation to philosophy and the philosophy of science. What is the subject matter and object of explanation of experimental psychology? What is the relation between psychology and neuroscience? How is scientific psychology related to traditional philosophical investigations of the mental? The course covers the classical systems and schools of psychology (Wundt, James, behaviorism, Gestalt psychology, cognitive and perceptual psychology, and cognitive science) and such contemporary problems as consciousness, philosophical foundations of cognitive science; theories of the extended and embodied mind; and the relation between neuroscience and psychology.
Taught by: Hatfield
Course not offered every year
Activity: Seminar
1.0 Course Unit

PHIL 428 Norms and Nudges
Social norms are the rules we live by, and we encounter them in any area of our life. Social norms often guarantee the smooth functioning of a group or organization. Sometimes, however, these norms are inefficient or do not benefit society at large. What can we do to change these harmful collective behaviors? Social psychology, philosophy, sociology, rational-choice, legal theory, and even economics, are investigating and theorizing pro-social behavior, justice motivation, and moral and social norms.
In this course, we will examine the latest and best in this emerging multidisciplinary field. Students will be encouraged to apply its findings and methods to their area of interest.
Taught by: Bicchieri
Also Offered As: BDS 502
Prerequisite: ECON 212 OR MATH 432 OR PSCI 552 OR PSYC 253 OR PSYC 170
Activity: Lecture
1.0 Course Unit

PHIL 429 Sports as Legal Systems: An Investigation into Law and Legal Thinking
Formal organized sports - from the NFL to NASCAR to the LPGA - are either genuine legal systems of a specialized kind or close analogues to legal systems. Like ordinary legal systems, they use general rules, promulgated by rule-making bodies and enforced by impartial adjudicators, to facilitate or incentivize desired behaviors and to prevent or deter undesired behaviors. As such, sports are proper subjects of study by legal scholars and philosophers. A standard course on ‘sports law’ examines the regulation of sports by law. This course, in contrast, examines sports as legal systems in their own right. A small sample of the topics to be addressed includes: (1) What are sports, and what is their relationship to games? (The IOC has determined that bridge and chess are sports. Is this correct? Does it matter?) (2) What form should the rules take? (For example, should sports rules contain ‘mens rea’ terms? Should they be more ‘rule-like’ or more ‘standard-like’?) (3) How much discretion do and should officials have? (Chief Justice Roberts said that ‘judges are like umpires.’ Is this true? In what ways?) (4) Should on-field decisions be appealable and, if so, what should the procedures and standards of appellate review be? (For example, is the ‘indisputable visual evidence standard’ of review in the NFL and NCAA football justified?) (5) What is cheating? (Did the badminton players at the London Olympics who tried to lose ‘cheat’? Do baseball players cheat when they falsely claim to be hit by a pitch?) (6) What should the rules of eligibility be? (Should women be allowed to compete against men? Should MTF transgender athletes be allowed to compete against cisgender women? Should double amputees like the South African Oscar Pistorius be allowed to compete against non-disabled runners?) In exploring questions like these, the course will, where appropriate, draw upon, and examine possible lessons for, ordinary law. The course is therefore both an in-depth and rigorous investigation into sports and a vehicle for deepening one’s understanding of law. It is appropriate for law students and for non-law students seeking an engaging and accessible introduction to legal systems and legal analysis.
Taught by: Berman
Also Offered As: LAW 715
Activity: Lecture
1.0 Course Unit
PHIL 430 Philosophy of Mind
This course studies particular topics in contemporary philosophy of mind and cognitive science. Examples include: the nature of consciousness, naturalistic accounts of intentionality, the nature scope of scientific explanation in studying the mind, the intersection of philosophy of mind and epistemology, and theories of agency. Typically, readings include both philosophy and empirical work from relevant sciences.
Taught by: Miracchi
Course not offered every year
Activity: Seminar
1.0 Course Unit

PHIL 431 Theory of Knowledge
Selected topics in Epistemology such as: bridging the gap between mainstream and formal epistemology, the familiar tripartite definition of knowledge (knowledge as justified true belief), basic logical and probabilistic models of knowledge (Hintikka, Aumann, and Bayesian) and their multi-agent variants, logical omniscience and other problems (including the epistemic closure principle), attempts at formalizing joint and common knowledge, resource-bounded knowledge, knowledge under limited logical powers, and empirical knowledge obstructed by system complexity.
Taught by: Domotor
Course not offered every year
Activity: Seminar
1.0 Course Unit

PHIL 455 Existence in Black
Racial, colonial, and other political formations have encumbered Black existence since at least the fifteenth-century. Black experiences of and reflections on these matters have been the subject of existential writings and artistic expressions ranging from the blues to reggae, fiction and non-fiction. Reading some of these texts alongside canonical texts in European existential philosophy, this class will examine how issues of freedom, self, alienation, finitude, absurdity, race, and gender shape and are shaped by the global Black experience. Since Black aliveness is literally critical to Black existential philosophy, we shall also engage questions of Black flourishing amidst the potential for pessimism and nihilism.
Taught by: Amponsah
Course usually offered in spring term
Also Offered As: AFRC 406, HIST 406, PHIL 555
Activity: Seminar
1.0 Course Unit

PHIL 465 Kant I
The course will concentrate on the Critique of Pure Reason and discuss in detail Kant’s conception of knowledge and experience, his criticism of traditional metaphysics and the resulting project of a system of transcendental philosophy.
Taught by: Horstmann
Course not offered every year
Also Offered As: GRMN 551
Activity: Seminar
1.0 Course Unit

PHIL 466 Kant II
This course is a study of Kant’s moral and political philosophy. Texts may include Kant’s Lectures on Ethics, Groundwork for the Metaphysics of Morals, Critique of Practical Reason, Religion within the Boundaries of Mere Reason, and Metaphysics of Morals.
Course not offered every year
Also Offered As: GRMN 552
Activity: Seminar
1.0 Course Unit

PHIL 468 Hegel
A study of Hegel’s philosophy, focusing primarily on his Phenomenology of Spirit, with attention to relevant passages in other works such as Hegel’s Logic and Philosophy of Right. Topics may include: (1) Hegel’s conception of philosophy, (2) the development of his system, (3) the problem of an introduction to his system (Phenomenology of Spirit), (4) Hegel’s criticism of traditional metaphysics, (5) his notion of a ‘concept’ (Begriff), his theory of the Idea. The seminar will focus primarily on some of Hegel’s early Jena writings, his Phenomenology of Spirit, on passages from different versions of Hegel’s Logic and (maybe) on aspects of his Philosophy of Right. Topics that are dealt with include: (1) Hegel’s conception of philosophy, (2) the development of his system, (3) the problem of an introduction to his system (Phenomenology of Spirit), (4) Hegel’s criticism of traditional metaphysics, (5) his notion of a ‘concept’ (Begriff), his theory of the Idea. Other topics might become of interest as well.
Taught by: Horstmann
Course not offered every year
Also Offered As: GRMN 583
Activity: Seminar
1.0 Course Unit

PHIL 472 Survey of Ethical Theory
This course is an investigation of the main questions and problems in metaethics since the turn of the 20th century. We will investigate questions about the metaphysics of morality, the philosophy of language of moral talk, the philosophy of mind of moral thought, the epistemology of morality and the objectivity of morality.
Taught by: Lord
Course not offered every year
Activity: Seminar
1.0 Course Unit
PHIL 474 Normative Ethics
Some particular acts are morally right; other acts are morally wrong. The task of normative ethics is to provide a general account of which acts are morally right or wrong and why they are morally right or wrong. The primary goal of this course is to provide an advanced survey of two theories that dominate contemporary ethics: consequentialism and deontology. Consequentialists - such as, most famously, the British utilitarians: Bentham, Mill and Sidgwick - hold that acts are right or wrong because of their good or bad consequences. Consequentialism faces numerous objections: that it is wrong to make trade-offs between benefits and harms to different individuals; that it requires us to violate rights; that it is too demanding; and that it does not respect our special obligations to our friends and family. These objections are used to motivate deontology. We will explore Immanuel Kant’s influential version of deontology, and the challenges that it faces in relation to the prohibition on lying, on how we should treat the risk of wrong-doing, and on the moral status of animals. The secondary goal of this course is to develop the philosophical skills that we use to understand, evaluate, and defend moral theories.
Taught by: Freeman
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

PHIL 479 Modern Political Philosophy
A survey of several works in modern political philosophy, including Thomas Hobbes’s, Leviathan; John Locke’s, Second Treatise on Government and Letter Concerning Toleration; David Hume’s ‘Of the Original Contract’ and ‘On Justice’. John Stuart Mill’s Utilitarianism, On Liberty, and The Subjection of Women; excerpts from Karl Marx’s Capital and other writings; and John Rawls’s A Theory of Justice.
Taught by: Freeman
Course not offered every year
Activity: Seminar
1.0 Course Unit

PHIL 480 Topics in Aesthetics
Topic title for Spring 2018: Walter Benjamin. Walter Benjamin (1892-1940) is a philosopher whose writings on art, literature, and politics have had tremendous influence on many disciplines in the Humanities and Social Studies. He has been variously described as one of the leading German-Jewish thinkers, and a secular Marxist theorist. With the publication of a four-volume collection of this works in English, many more of his writings have been made accessible to a wider public. Our seminar will undertake a survey of his work that begins with his studies on language and allegory, and continues with his autobiographical work, his writings on art and literature, and on the imaginary urban spaces of the nineteenth-century.
Course not offered every year
Also Offered As: ARTH 560, COML 582, GRMN 580, JWST 582
Activity: Seminar
1.0 Course Unit

PHIL 489 Ethnicity, Identity and Nationhood
This MLA seminar will deepen our understanding of the role that political and cultural ideologies – such as liberalism, conservatism, nationalism, totalitarianism, fundamentalism, etc. – play in contemporary public discourse and the psychology of ideological thinking that makes political conflicts so difficult to resolve. Drawing on a series of case studies in contemporary political, social and cultural conflict such as recent political campaigns and nationalist movements around the globe, we will identify and examine the ideologies driving such conflicts, and from these we will draw out the common philosophical characteristics and psychological features of ideological thinking. We will begin by considering a series of case studies in contemporary political, social and cultural conflict, drawn from contemporary events such as the 2012 political campaigns, the 2011 debt ceiling debate in Congress, nationalist movements around the globe, etc. We will identify and examine the ideologies driving such conflicts, and from these we will draw out the common philosophical characteristics and psychological features of ideological thinking. Throughout, we will seek to understand the deep attraction of ideological commitments and why they tend to push public discourse and behavior to extremes and even violence. Finally, we will consider efforts to reduce or resolve ideological conflicts through strategies of political compromise, dialogue, toleration, and democratic deliberation.
Course not offered every year
Activity: Seminar
1.0 Course Unit

PHIL 505 Formal Logic I
This course provides an introduction to some of the fundamental ideas of logic. Topics will include truth functional logic, quantificational logic, and logical decision problems.
Taught by: Singer
One-term course offered either term
Also Offered As: LGIC 010, PHIL 005
Activity: Lecture
1.0 Course Unit
Notes: Undergraduates Need Permission

PHIL 506 Formal Logic II
An introduction to first-order logic including the completeness, compactness, and Lowenheim-Skolem theorems, and Godel’s incompleteness theorems. UNDERGRADUATES NEED PERMISSION
Taught by: Weinstein
Course usually offered in spring term
Also Offered As: PHIL 006
Activity: Lecture
1.0 Course Unit
Notes: Undergraduates Need Permission.

PHIL 511 Aristotle's Ethics
A study of Aristotle’s ethical works, with emphasis on the NICOMACHEAN ETHICS. Topics may include moral psychology, practical reasoning, the nature of the good, emotion and reason, responsibility, and friendship.
Taught by: Meyer
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Undergraduates Need Permission
PHIL 512 A Survey of Aristotle's Teleology
The course examines the role teleology plays in Aristotle's metaphysics, his natural science, and his ethical theory, and investigates the relationship between being and goodness.
Taught by: Hirji
Activity: Seminar
1.0 Course Unit

PHIL 521 Philosophy of Biology
This course consists of a detailed examination of evolutionary theory and its philosophical foundations. The course begins with a consideration of Darwin's formulation of evolutionary theory and the main influences on Darwin. We will then consider two contemporary presentations of the theory, Richard Dawkins' and Richard Lewontin's. The remainder of the course will deal with a number of foundational issues including adaption, the units of selection, the evolution of altruism, and the possibility of grounding ethics in evolutionary theory. UNDERGRADUATES NEED PERMISSION

Course not offered every year
Notes: Undergraduates Need Permission
Also Offered As: PHIL 226, PPE 225
Activity: Seminar
1.0 Course Unit

PHIL 525 Topics in the Philosophy of Science
For the last four centuries, scientific research has provided our most reliable understanding of the world. Although the scientific revolution started modestly with attempts to understand stellar movement, we now know the age and constitution of the universe, the basis of heredity, and we can make and break chemical bonds at will. By all appearances, science seems to have made substantial progress from the scientific revolution to the global scientific enterprise of the 21st century. This course is about how science has generated this knowledge, and whether it has been as progressive and reliable as it seems. We will consider methodological issues such as the sources of scientific knowledge, objectivity, the growing importance of computation in the natural sciences, and the nature of modeling. We will examine products of scientific research: explanations, models, theories, and laws of nature. And we will discuss questions about science and values, including whether non-scientific values can and should enter scientific research, the relationship between science and religion, and the role of the public in guiding the scientific enterprise.
Taught by: Weisberg, Bicchieri
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Undergraduates Need Permission

PHIL 526 Philosophy of Psychology
An investigation of issues that arise from scientific psychology and are investigated philosophically or have implications for philosophy. Specific topics vary by semester. In Spring 2019 the seminar will examine various instances of appealing to appearances in analyzing perception and its relation to an external world. Authors to be studied include Descartes, Hume, Russell, Sellars, and Chisholm.
Taught by: Hatfield
Course not offered every year
Also Offered As: GRMN 527
Activity: Seminar
1.0 Course Unit
Notes: Undergraduates Need Permission

PHIL 530 Philosophy of Mind
This course explores core issues in philosophy of mind, such as: the nature of mental states and events, the mind-body problem, and the relationship between philosophy of mind and related disciplines, such as cognitive science. We approach these issues through more specific topics, depending on the interests of the instructor. Topics may include: identity theories, grounding physicalism, functionalism, computationalism, disjunctivism and knowledge-first theories, internalism and externalism, consciousness, self-knowledge, perception, emotion, action, representationalism, mental causation, and intersections with psychology, artificial intelligence, linguistics, and neuroscience. For details in a specific year, consult with the instructor and/or department.
UNDERGRADUATES NEED PERMISSION.
Taught by: Hatfield, Miracchi

1.0 Course Unit
Notes: Undergraduates Need Permission

PHIL 531 Social Norms
This is a graduate research seminar covering interdisciplinary research in psychology, philosophy, sociology and behavioral economics related to social norms. Social norms are informal institutions that regulate social life. We will devote particular attention to the following questions: 1. What is a good, operational definition of social norms? 2. Is there a difference between social and moral norms? 3. How can we measure whether a norm exits, and the conditions under which individuals are likely to comply with it? 4. Are behavioral experiments a good tool to answer questions 3? 5. How do norms emerge? 6. How are norms abandoned? 7. What is the role of trendsetters in norm dynamics?
Taught by: Bicchieri
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Undergraduates Need Permission

PHIL 532 Topics in Epistemology
This seminar will cover topics of interest to contemporary epistemologists. Possible topics may include skepticism, accounts of knowledge and justification, virtue epistemology, formal epistemology, social epistemology, feminist epistemology, meta-epistemology and epistemic normativity.
Taught by: Lord, Errol
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Undergraduates Need Permission

PHIL 536 Stoicism
A study of some major texts in Ancient Greek Stoicism, the school founded by Zeno of Citium in the post-Aristotelian period. Topics may include: ethics, natural philosophy, epistemology, and metaphysics. Authors may include: Cicero, Seneca, Epictetus, and Marcus Aurelius. Against the Ethicists will be the other major texts studied in this course. All readings will be in English translation. No knowledge of Greek or Latin is required.
Taught by: S. Meyer
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Undergraduates Need Permission
PHIL 537 MLA Seminar Philosophy & Psychoanalysis: Freud & the Interpretation of Culture
MLA proseminar. More than a century after Sigmund Freud transformed - for better or worse - our understanding of what it means to be human, Freudian psychoanalysis still exerts a profound influence in our culture. This seminar course is an exploration of the philosophical issues raised by Freudian psychoanalysis as a theory of mind and culture. After a close reading of Freud’s theoretical writings on the nature of the mind and human behavior, we will explore why Freud’s theories - despite more than a century of criticism - remain highly influential as a framework for the interpretation of art, literature, religion, society, politics, and history. Readings from Freud’s ‘meta-psychological’, cultural, and social writings, Paul Ricoeur’s Freud and Philosophy, and other contemporary authors in philosophy, psychoanalysis, and other fields. No previous knowledge of psychoanalysis, psychology, or philosophy required.
Taught by: Steinberg
Activity: Seminar
1.0 Course Unit
Notes: Undergraduates Need Permission.

PHIL 540 Topics in Philosophy of Language
This course explores core issues in philosophy of language, such as: meaning, reference, truth, communication, speech acts, the norms governing language use, and the relationship between philosophy of language and related disciplines, such as linguistics. We approach these issues through more specific topics, depending on the interests of the instructor. Topics may include: the nature of propositions, truth, context-sensitive expressions, the relationship between logical structure and linguistic structure, the relationship between mental and linguistic meaning, the mechanisms of communication, the semantic/pragmatic distinction, the norms of assertion, relativism, expressivism, injustice in linguistic communication. For details in a specific year, consult with the instructor and

PHIL 545 Plato and Aristotle in the Renaissance
In one of the most evocative frescoes of the Renaissance, Raphael juxtaposes Plato and Aristotle. The pairing would seem obvious, since the two thinkers had been for centuries symbols of philosophy and wisdom. But only the recent revival of Plato, begun in the mid-fifteenth century, had allowed Latin West to gain a better understanding of Platonic philosophy and therefore to compare Plato’s doctrines directly to those of Aristotle. Were master and disciple in harmony? And if not, which of the two should be favored? Such questions were less innocent than one might think, and the answers to them had implications for philosophy, theology, speculation on the natural world, and even politics. The course will offer an overview of Renaissance philosophy and culture by focusing on the different ways in which Plato and Aristotle were read, interpreted and exploited between the fifteenth and seventeenth centuries. The course will be conducted in English; a basic knowledge of Latin is desirable but not required.
Taught by: Del Soldato
Course not offered every year
Also Offered As: CLST 540, COML 545, ITAL 540
Activity: Seminar
1.0 Course Unit
Notes: Undergraduates Need Permission.

PHIL 550 Topics in Philosophy of Education
In this course, we will examine problems in contemporary philosophy of education, including: how much control over a child’s education ought to be allocated to parents and how much to the state; what role, if any, ought religion to play in education; how do race and gender impact individuals’ educational experiences and how should such issues should be addressed in the classroom; what sort of (if any) civic education ought to be taught in schools (especially in wartime such as in the post 9-11 USA); and how should schools be funded? We will deal with a number of case studies, mostly recent, but some crucial historical cases as well. Our readings will be primarily philosophical texts, supplemented with those from other fields, such as psychology, history and sociology, in order to provide empirical context to the theoretical problems facing education today.
Taught by: Detlefsen
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Undergraduates Need Permission.

PHIL 551 Topics in Early Modern Philosophy
125 A seminar in philosophy of the early modern period (roughly 1600-1800), covering specific figures and/or topics. Examples of figures studied include (but are not limited to) Descartes Cavendish, Astell, Locke, Hume, Du Chatelet,or Kant. Examples of topics studied include (but again are not limited to) substance, causation, freedom, natural philosophy, education, the human being, the private and the public, or political authority.

Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Undergraduates Need Permission.

PHIL 552 MLA Seminar in Philosophy of Education
In this MLA proseminar course, we will examine some of the most pressing problems in contemporary philosophy of education. These problems include: how much control over a child's education ought to be allocated to parents and how much to the state; what role, if any, ought religion to play in education; how do race and gender impact individuals' educational experiences and how should such issues should be addressed in the classroom; what sort of (if any) civic education ought to be taught in schools (especially in wartime such as in the post 9-11 USA); and how should schools be funded? We will deal with a number of case studies, mostly recent, but some crucial historical cases as well. Our readings will be primarily philosophical texts, supplemented with those from other fields, such as psychology, history and sociology, in order to provide empirical context to the theoretical problems facing education today. As a seminar, the instructor welcomes student participation, including students bringing their own interests in educational theory to the classroom. At the same time, the instructor will lecture to the extent necessary to make classroom discussion especially rich.
Taught by: Detlefsen
Activity: Seminar
1.0 Course Unit
PHIL 554 Contemporary Continental Philosophy
This MLA seminar is an introduction to 20th-century continental European philosophy, focusing on the origins and development of phenomenology, existentialism, hermeneutics, and deconstruction. No previous background in philosophy is required. We will begin with an introduction to the phenomenology of Edmund Husserl and the contemporary debate over its proper interpretation. Then we will examine three existential critics of Husserl, whose philosophies have influenced much of recent continental thought: Martin Heidegger, Jean-Paul Sartre, and Maurice Merleau-Ponty. Finally, we will examine the important influence of phenomenology and existentialism on contemporary trends in continental philosophy as exhibited in works by Paul Ricoeur, Hans Georg Gadamer, Jacques Derrida, Hannah Arendt, and Emmanuel Levinas. Finally, we will examine the important influence of phenomenology and existentialism on contemporary trends in continental philosophy as exhibited in works by Paul Ricoeur, Hans Georg Gadamer, Jacques Derrida, Hannah Arendt, and Emmanuel Levinas. PHIL 556 Constitutional Inte
Course not offered every year Also Offered As: LAW 946 Activity: Seminar 1.0 Course Unit

PHIL 557 Topics in Philosophy of Law
This seminar will examine leading academic theories of constitutional interpretation, starting with classic texts by (for illustration) Thayer, Wechsler, Ely, Bobbitt, Dworkin, and Scalia, and emphasizing current debates within originalism and between originalists and their critics. While the focus will be on American constitutional interpretation, we will also see how that literature is currently running up against, and possibly contributing to, more ‘philosophical’ or ‘jurisprudential’ accounts of the contents of law. Consistent with the nature of the material, the reading load is likely to be somewhat heavier and more demanding than in the average seminar. Students will be expected to read the assigned material carefully and to participate actively in class discussions; they will have the option of submitting either a single research paper or several shorter papers. Taught by: Perry, Berman, Finkelstein Course not offered every year Activity: Seminar 1.0 Course Unit Notes: Undergraduates Need Permission

PHIL 572 Contemporary Ethics
A venerable idea throughout the history of ethics is that rationality is a fundamental or foundational part of the metaphysics of the normative. The course will be an investigation of several different strains of this rationalist idea. We'll discuss four rationalist views of the nature of normative reasons (Kantian, Humean, Aristotelian, and new-fangled constructivism). Our aim will be to investigate the plausibility of these rationalist views against the backdrop of a more recent hypothesis about the metaphysics of the normative—viz., the claim that normative reasons themselves are the fundamental constituents of the normative. Taught by: Freeman, Meyer Course not offered every year Activity: Seminar 1.0 Course Unit Notes: Undergraduates Need Permission

PHIL 576 Rationality, Morality and Law
This class will be dedicated to investigating topics related to rationality in its many forms. Potential areas of study are metaethics, epistemology, moral psychology, and the philosophies of mind, language and action. UNDERGRADUATES NEED PERMISSION. Taught by: Freeman, Lord Course not offered every year Activity: Seminar 1.0 Course Unit Notes: Undergraduates Need Permission

PHIL 577 Topics in Philosophy of Law
This seminar will examine leading academic theories of constitutional interpretation, starting with classic texts by (for illustration) Thayer, Wechsler, Ely, Bobbitt, Dworkin, and Scalia, and emphasizing current debates within originalism and between originalists and their critics. While the focus will be on American constitutional interpretation, we will also see how that literature is currently running up against, and possibly contributing to, more ‘philosophical’ or ‘jurisprudential’ accounts of the contents of law. Consistent with the nature of the material, the reading load is likely to be somewhat heavier and more demanding than in the average seminar. PHIL 552 MLA Proseminar in Philosophy: World Philosophies
Most philosophy as it is taught in universities in the USA focuses on western philosophy. But people across the globe practice philosophy, often in a wide variety of genres and using a range of methods, and sometimes to grapple with problems and questions that grow out of local lived experience. This course focuses on a range of philosophies from around the world, including texts from Latin America, Indigenous North and South America, Africa and Asia. In addition to gaining a broader understanding of how philosophy has been practiced, and continues to be practiced, around the world, we will spend time interrogating the nature of philosophy itself, and what we can learn about our discipline by expanding our view of its practitioners and the modes in which it is practiced. Taught by: Detlefsen Course not offered every year Activity: Seminar 1.0 Course Unit
PHIL 587 MLA Seminar in Political Philosophy
This is a topics-based MLA proseminar in political philosophy. Examples of topics we can examine in this course include distributive justice, liberty, equality, and global justice. Course readings will be drawn from a combination of seminal and more recent works on the selected topics.
Taught by: Tan
Activity: Seminar
1.0 Course Unit

PHIL 588 MLA Seminar: The Idea of Nationalism
Nationalism has been the most important geo-political phenomenon of the past two hundred years. This MLA proseminar course will explore the ideology of nationalism, what it means, its philosophical foundations, underlying assumptions about the nature of human identity, moral implications, and political consequences. What is a nation? Does every identifiable ethnic or national group have a valid claim to a nation-state of its own? How are claims to national self-determination justified? How do nations differ from states, peoples, groups, communities, and citizenries? How does nationalism relate to notions of ‘chosenness’ or ethnic and cultural superiority? Why do nationalist movements seem to so often engender political extremism and violent ethno-political conflicts? Is national self-determination compatible with our commitments to individualism, rationality, and universal human rights?
Taught by: Steinberg
Activity: Seminar
1.0 Course Unit

PHIL 600 Proseminar
An intensive seminar for first-year doctoral students, with readings drawn from recent and contemporary eistemology and metaphysics, broadly construed. Students will develop their abilities to present and discuss philosophical texts, and to write and revise their own papers.
Taught by: Singer,Daniel
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
Notes: Graduate Students Only

PHIL 601 Consortium Course
For graduate students taking courses at other institutions belonging to the Philadelphia area Philosophical Consortium.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: Graduate Students Only

PHIL 611 Plato and Aristotle on Human Nature
The place of humans in the order of things was a perennial question for ancient philosophers. The puzzle typically begins with questions of humans’ place within a hierarchy, setting them between inanimate things and non-human living things on the one side, and the divine on other. These categories, along with others like metabolism, growth and decay, death, sentience, cognition, and knowledge, will form the background against which we look closely at Plato’s and Aristotle’s views. We will read sections of Phaedo, Republic, and Timaeus, along with On the Soul, On the Motion of Animals, and On Divination During Sleep. The course will invite both broad synthetic thinking, and focused textual analysis. Students will be responsible for a class presentation, a stint as lead questioner, a presentation of work toward a research paper, and a final research paper.
Taught by: Struck
Course not offered every year
Also Offered As: GREK 601
Activity: Seminar
1.0 Course Unit

PHIL 612 Topics in Hellenistic Philosophy
The ancient Stoics famously rejected the tripartite psychology of Plato and the Aristotelian division of the psyche into rational and non-rational parts. Everything we think, say, feel, and do is an exercise of reason, specifically, an assent to an impression. This includes the pathe--emotions such as fear, anger, and pity and love. According to the Stoic doctrine of apatheia, we should eradicate the pathe from our lives. But there are some emotions of which the Stoics approve: the so-called ‘good feelings’ (eupatheiai) which include joy, reverence, and goodwill. We will examine the difference between the pathe and the eupatheiai in the context of their Stoic doctrine of apatheia, we should eradicate the pathe from our lives. But there are some emotions of which the Stoics approve: the so-called ‘good feelings’ (eupatheiai) which include joy, reverence, and goodwill. We will examine the difference between the pathe and the eupatheiai in the context of their Stoic doctrine of ‘impulse’ (horne), and of their ethical theory more generally. All texts will be read in translation, and will include selections from: Cicero: Tusculan Disputations, On Ends, On Duties, Epictetus: Discourses, Seneca: Letters, Stobaeus: Eclogues, Galen: On the Doctrines of Hippocrates and Plato.
Taught by: S.Meyer

Philosophy, Politics, Economics (PPE)

PPE 008 The Social Contract
This is a critical survey of the history of western modern political philosophy, beginning from the Early Modern period and concluding with the 19th or 20th Century. Our study typically begins with Hobbes and ends with Mill or Rawls. The organizing theme of our investigation will be the idea of the Social Contract. We will examine different contract theories as well as criticisms and proposed alternatives to the contract idea, such as utilitarianism. Besides the above, examples of authors we will read are Locke, Rousseau, Hume, Mill and Marx.
For BA Students: Society Sector
Taught by: Tan
Course usually offered in spring term
Also Offered As: PHIL 008
Activity: Lecture
1.0 Course Unit

PPE 036 Law and Economics
The relationship of economic principles to law and the use of economic analysis to study legal problems. Topics will include: property rights and intellectual property; analysis of antitrust and economic analysis of legal decision making. Credit cannot be received for both ECON 036 and 234.
One-term course offered either term
Also Offered As: ECON 036
Prerequisite: ECON 001 OR ECON 010
Activity: Lecture
1.0 Course Unit
Notes: Credit cannot be received for both ECON 036 and 234.

PPE 072 Biomedical Ethics
This course is an introduction to bioethics, focusing on ethical questions arising at the beginning and end of life. Topics will include procreative responsibilities, the question of wrongful life, and prenatal moral status as well as questions of justice related to markets for sperm, eggs and gestation. We will also attend to dilemmas at the end of life, including the authority of advance directives, euthanasia and the allocation of life-saving therapies.
For BA Students: Society Sector
Course not offered every year
Also Offered As: PHIL 072
Activity: Lecture
1.0 Course Unit

PPE 101 Introduction to PPE: Ethics and Economics of Wealth Creation
This interdisciplinary course provides an overview of how markets work, and under what conditions they create wealth and prosperity. We will also consider when markets fail to create wealth or function well. Along the way, we will think about the role of political institutions in structuring market exchange and allocating resources. (For Penn PPE majors, this class will satisfy the philosophy foundation, or a thematic concentration class for Choice and Behavior or Distributive Justice).
Taught by: Anomaly
Course not offered every year
Activity: Seminar
1.0 Course Unit

PPE 153 Judgment and Decisions
Thinking, judgment, and personal and societal decision making, with emphasis on fallacies and biases. Prerequisite: One semester of Statistics or Microeconomics.
One-term course offered either term
Also Offered As: PSYC 253
Activity: Lecture
1.0 Course Unit

PPE 225 Philosophy of Biology
This course consists of a detailed examination of evolutionary theory and its philosophical foundations. The course begins with a consideration of Darwin’s formulation of evolutionary theory and the main influences on Darwin. We will then consider two contemporary presentations of the theory: Richard Dawkins’ and Richard Lewontin’s. The remainder of the course will deal with a number of foundational issues including adaptation, the units of selection, the evolution of altruism, and the possibility of grounding ethics in evolutionary theory. Prerequisite: Application requires through Penn Global: https://global.upenn.edu/pennabroad/pgs
For BA Students: Natural Science and Math Sector
Taught by: Weisberg
Course not offered every year
Also Offered As: PHIL 226, PHIL 521
Activity: Lecture
0.0 Course Units
Notes: Application required through Penn Global: <a href='https://global.upenn.edu/pennabroad/pgs'>https://global.upenn.edu/pennabroad/pgs</a>
PPE 233 Philosophy of Economics
In this course, general philosophy of science issues are applied to
economics, and some problems specific to economics are tackled.
While analytical questions like 'What is economics?' or 'What is an
economic explanation' must be pursued, the ultimate goal is practical:
What is good economics? How can economists contribute to a better
understanding of society, and a better society? How can we make
economics better? Topics to be discussed include the following: specific
object and method of economics as a social science; its relation
with other disciplines (physics, psychology and evolutionary theory);
values in economics (welfare, freedom, equality and neutrality); the
role of understanding and possible limits of a quantitative approach
to human behavior (purposefulness, freedom, creativity, innovation);
prediction, unpredictability and the pretension of prediction; causation
in econometrics and in economic theory (equilibrium); selfishness and
utility maximization (cognitive and behaviorist interpretations); economic
models and unrealistic assumptions (realism and instrumentalism);
empirical basis of economics (observation and experiment);
macroeconomics and macroeconomics (reductionism and autonomy);
pluralism in economics (mainstream economics and heterodox schools).
Course usually offered in fall term
Also Offered As: PHIL 233
Activity: Lecture
1.0 Course Unit

PPE 244 Introduction to Philosophy of Mind
This course will survey several central topics in philosophy of mind, as
well as investigating how philosophy of the mind interacts with scientific
study of the mind. Among the questions we'll be asking are: What is
it to have a mind? What is the relationship between the mind and the
brain? Can there be a science of the mind? What can it tell us? What can
philosophy contribute to a science of the mind? What is consciousness?
What is it to think, to perceive, to act? How are perception, thought, and
action related to one another?
Taught by: Domotor, Miracchi
Course not offered every year
Also Offered As: PHIL 244, VLST 221
Activity: Lecture
1.0 Course Unit

PPE 275 Introduction to Political Psychology
This course will explore psychological approaches to understanding
political beliefs, attitudes, and actions at the levels of both individual
citizens and national leaders. It will also explore the possibility that
psychological science itself is not immune to the political debates
swirling around it. Specific topics will include: the workings of belief
systems (and their power to shape what we 'see'), cognitive biases (and
their power to cause miscalculations), sacred values and their role in
stabilizing belief systems and social interaction, personality and ideology
(the linkages between the personal and the political), and clashing
conceptions of morality and distributive and corrective justice (striking
variations among people in what they consider to be fair). We shall also
explore some topics that have sparked controversy in the psychological
research literature and that tend to polarize opinion along political lines,
including work on intelligence and unconscious bias. Prerequisite: Note:
Students who are more interested in business-related issues may want
Wharton 276x which is a modified version of this course specifically for
Wharton undergraduates.
Taught by: Tetlock
One-term course offered either term
Also Offered As: PSYC 275
Prerequisite: PSYC 001 OR COGS 001
Activity: Lecture
1.0 Course Unit
Notes: NOTE: Students who are more interested in business-related
issues may want Wharton 276x which is a modified version of this course
specifically for Wharton undergraduates.

PPE 277 Justice, Law and Morality
The course will focus on the philosophical background to the individual
rights protected by the U.S. Constitution, including 1st Amendment
freedoms of religion, expression, and associaton; the 14th amendment
guarantee of Due Process and the rights of privacy, abortion, assisted
suicide, and marriage; the Equal Protection clause and equal political
rights and the legitimacy of affirmative action; and the Takings and
Contract clauses and their bearing on rights of private property and
economic freedoms. In addition to Supreme Court decisions on these
issues, we will read works by political philosophers and constitutional
theorists, including J.S. Mill, Ronald Dworkin, Cass Sunstein, Martha
Nussbaum, Katherine MacKinnon and others.
Taught by: Freeman, Allen
Course not offered every year
Also Offered As: PHIL 277
Activity: Lecture
1.0 Course Unit
PPE 311 Strategic Reasoning
This course is about strategically interdependent decisions. In such situations, the outcome of your actions depends also on the actions of others. When making your choice, you have to think what the others will choose, who in turn are thinking what you will be choosing, and so on. Game Theory offers several concepts and insights for understanding such situations, and for making better strategic choices. This course will introduce and develop some basic ideas from game theory, using illustrations, applications, and cases drawn from business, economics, politics, sports, and even fiction and movies. Some interactive games will be played in class. There will be little formal theory, and the only pre-requisites are some high-school algebra and having taken Econ 1. However, general numeracy (facility interpreting and doing numerical graphs, tables, and arithmetic calculations) is very important. This course will also be accepted by the Economics department as an Econ course, to be counted toward the minor in Economics (or as an Econ elective). Prerequisite: This course may not be taken concurrently with or after ECON 212. Taught by: Dillenberger Course usually offered in fall term Also Offered As: ECON 013 Prerequisite: ECON 001 Activity: Lecture 1.0 Course Unit Notes: This course may NOT be taken concurrently with or after Econ 212.

PPE 312 Public Policy Process
This course introduces students to the theories and practice of the policy-making process. There are four primary learning objectives. First, understanding how the structure of political institutions matter for the policies that they produce. Second, recognizing the constraints that policy makers face when making decisions on behalf of the public. Third, identifying the strategies that can be used to overcome these constraints. Fourth, knowing the toolbox that is available to participants in the policy-making process to help get their preferred strategies implemented. While our focus will primarily be on American political institutions, many of the ideas and topics discussed in the class apply broadly to other democratic systems of government. Taught by: Levendusky, Meredith Course usually offered in spring term Also Offered As: PSCI 236 Activity: Recitation 1.0 Course Unit

PPE 313 Behavioral Economics and Psychology
Our understanding of markets, governments, and societies rests on our understanding of choice behavior, and the psychological forces that govern it. This course will introduce you to the study of choice, and will examine in detail what we know about how people make choices, and how we can influence these choices. It will utilize insights from psychology and economics, and will apply these insights to domains including risky decision making, intertemporal decision making, and social decision making. Taught by: Bhatia Course usually offered in fall term Also Offered As: PSYC 265 Prerequisite: ECON 001 Activity: Lecture 1.0 Course Unit

PPE 314 Philosophy of Social Science
This course is about the foundations of contemporary social science. It focuses on the nature of social systems, the similarities and differences between social and natural sciences, the construction, analysis, and confirmation of social theories, and the nature of social explanations. Specific topics may include: What are social norms and conventions? What does it mean to have one gender rather than another, or one sexual orientation rather than another? Should social systems be studied quantitatively or qualitatively? Taught by: Weisberg, Bicchieri Course not offered every year Also Offered As: PHIL 228 Prerequisite: PHIL 008 OR PHIL 025 OR PPE 153 OR ECON 001 OR ECON 002 Activity: Lecture 1.0 Course Unit

PPE 401 Independent Study
Student arranges with a faculty member to pursue a research project on a suitable topic. For more information about research and setting up independent studies, visit: https://ppe.sas.upenn.edu/study/curriculum/independent-studies One-term course offered either term Activity: Independent Study 1.0 Course Unit

PPE 402 Research in Philosophy, Politics & Economics
Led by fellows in the Philosophy, Politics and Economics program, this course teaches students how to conduct research in PPE with an emphasis on creating a well-formed research question, determining what kinds of data or scholarly research bears on that question, and how to carry out an interdisciplinary, research-driven project on that question. One-term course offered either term Activity: Seminar 1.0 Course Unit

PPE 460 Experiments in Behavioral Ethics
In reality, our understanding of different mechanisms and (economic) relationships is hampered by the lack of data. More often than not, either the observation itself is difficult or the data is not reliable. Over the last decades, economic experiments have become a vital part of the scientific discourse, facilitating our understanding of the world we live in (much like in Biology, Chemistry, Physics or the like). Economic experiments allow exploring economic behavior under controlled conditions by generating observations under different experimental designs and controlled conditions. Pioneering this field of research, Daniel Kahneman and Vernon Smith were awarded the Nobel memorial prize in recognition of their work on behavioral and experimental economics. In this course, we provide you with the methodology of how to develop a research idea and a proper experimental design that allows to explore this idea. Essentially, you will learn how to think about ideas, generate predictions, and how to use economic experiments to test them. Taught by: Bicchieri, Dimant Activity: Seminar 1.0 Course Unit
PPE 470 Capstone: Social Policy
Social policy is the study of human wellbeing and is concerned with the effects in areas of health care, criminal justice, inequality, and education, among others. As a PPE Capstone, this is an integrative senior seminar (open to others by departmental permission). For more see: https://ppe.sas.upenn.edu/study/curriculum/advanced-interdisciplinary-courses
Taught by: Dimant
Course not offered every year
Activity: Seminar
1.0 Course Unit

PPE 471 Capstone: Political Economy
Political Economy studies the relationships between individuals and society and between markets and the state. As a PPE Capstone, this is an integrative senior seminar (open to others by departmental permission). For more see: https://ppe.sas.upenn.edu/study/curriculum/advanced-interdisciplinary-courses
Taught by: Danese
Course not offered every year
Activity: Seminar
1.0 Course Unit

PPE 472 Capstone: Networks
Network Theory studies graphs as a representation of the structure of relationships between social entities. It can be used to examine how the behavior of individuals in a socio-economic system affects - and is affected by - the structure of connections of the system. As a PPE Capstone, this is an integrative senior seminar (open to others by departmental permission). For more see: https://ppe.sas.upenn.edu/study/curriculum/advanced-interdisciplinary-courses
Taught by: Sontuoso
Course not offered every year
Activity: Seminar
1.0 Course Unit

PPE 473 Capstone: Modeling
Modeling provides a way to identify and analyze the salient features of complex problems or dynamic social situations. Using models can further provide a way to see what strategies may be rational over time. As a PPE Capstone, this is an integrative senior seminar (open to others by departmental permission). For more see: https://ppe.sas.upenn.edu/study/curriculum/advanced-interdisciplinary-courses
Taught by: Funcke
Course not offered every year
Activity: Seminar
1.0 Course Unit

PPE 474 Capstone: Judgment and Decision Making
The interdisciplinary study of individual's and groups' judgments and decisions, including normative, descriptive, and prescriptive theories. As a PPE Capstone, this is an integrative senior seminar (open to others by departmental permission). For more see: https://ppe.sas.upenn.edu/study/curriculum/advanced-interdisciplinary-courses
Taught by: Hart
Course not offered every year
Activity: Seminar
1.0 Course Unit

PPE 477 Capstone: Social Psychology
Social psychology explores how an individual's judgments and behaviors can be influenced or determined by others and their social context. Prerequisite: As a PPE Capstone, this is an integrative senior seminar (open to others by departmental permission).
Taught by: Royzman
Course not offered every year
Also Offered As: PSYC 478
Activity: Seminar
1.0 Course Unit

PPE 478 Inequality: An interdisciplinary perspective
In this advanced undergraduate seminar we will study the economic, political, and psychological consequences of inequality. In particular, one of the main aims of the course will be to understand the mechanisms through which people demand more or less redistribution. In doing so we will pay close attention to distinguish between actual inequality and people's perceptions of it. Using both classic and recent scholarly literature from these three fields, we will analyze what shapes perceptions of inequality and how these, in turn, shape policy preferences.
Taught by: Aldama Navarrete
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

PPE 481 Capstone: Political Science
A PPE capstone offered by faculty in Political Science. As a PPE Capstone, this is an integrative senior seminar (open to others by departmental permission). For more see: https://ppe.sas.upenn.edu/study/curriculum/advanced-interdisciplinary-courses
Taught by: Berger
Course not offered every year
Activity: Seminar
1.0 Course Unit

PPE 482 Capstone: Psychology
A PPE Capstone offered by faculty in Psychology. As a PPE Capstone, this is an integrative senior seminar (open to others by departmental permission). For more see: https://ppe.sas.upenn.edu/study/curriculum/advanced-interdisciplinary-courses
Taught by: Bhatia
Course not offered every year
Activity: Seminar
1.0 Course Unit

PPE 483 Capstone: Economics
A PPE Capstone seminar offered by faculty in Economics. As a PPE Capstone, this is an integrative senior seminar (open to others by departmental permission). For more see: https://ppe.sas.upenn.edu/study/curriculum/advanced-interdisciplinary-courses
Taught by: Dillenberger
Course not offered every year
Activity: Seminar
1.0 Course Unit

PPE 484 Capstone: Philosophy
A PPE Capstone seminar offered by faculty in Philosophy. As a PPE Capstone, this is an integrative senior seminar (open to others by departmental permission). For more see: https://ppe.sas.upenn.edu/study/curriculum/advanced-interdisciplinary-courses
Taught by: Bicchieri
Course not offered every year
Activity: Seminar
1.0 Course Unit
PPE 498 Directed Honors Research
Student arranges with a faculty member to do research and write a thesis on a suitable topic. For more information on honors visit: https://ppe.sas.upenn.edu/study/curriculum/honors-theses
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

PPE 499 Advanced Research
This course may be taken by a PPE student for advanced research. Enrollment by permit only.
Course not offered every year
Activity: Independent Study
1.0 Course Unit

Physics (PHYS)

PHYS 008 Physics for Architects I
An introduction to the classical laws of mechanics, including static equilibrium, elasticity, and oscillations, with emphasis on topics most relevant to students in architecture. Students first learn and practice the use of mechanics concepts such as momentum, energy, force, and torque, then apply these ideas to analyze basic structural elements such as cables, trusses, and beams. Students considering the ARCH major will find that PHYS 008 provides a solid foundation for later study of architectural structures (e.g. ARCH 435). Students who have previously taken PHYS 101, PHYS 150, or PHYS 170 cannot subsequently take PHYS 008 for credit. Students with AP or Transfer Credit for PHYS 091 or 093 who complete PHYS008 will thereby surrender the AP or Transfer Credit. Prerequisite: Entrance credit in Algebra and Trigonometry. Also, credit is awarded for only one of the following courses: PHYS 008, 101, 170. Students with AP or Transfer Credit for PHYS 091 or 093 who complete PHYS 006 will thereby surrender the AP or Transfer Credit.
For BA Students: Physical World Sector
Taught by: Ashmanskas
Course offered fall; odd-numbered years
Activity: Lecture
1.0 Course Unit

PHYS 009 Physics for Architects II
Briefly reviews Newton’s laws, then introduces waves, sound, light, fluids, heat, electricity, magnetism, and circuits, with emphasis on topics most relevant to students in architecture. Illustrates physics principles using examples drawn from architecture. Students with a strong high-school physics background may take PHYS 008 and PHYS 009 in either order. Prerequisite: Credit is awarded for only one of the following courses: PHYS 009, 102, 151, 171. Students with AP or Transfer Credit for PHYS 092 or 094 who complete PHYS 008 will surrender the AP or Transfer Credit.
For BA Students: Physical World Sector
Course offered fall; even-numbered years
Activity: Lecture
1.0 Course Unit

PHYS 016 Energy, Oil, and Global Warming
The developed world’s dependence on fossil fuels for energy production has extremely undesirable economic, environmental, and political consequences, and is likely to be mankind’s greatest challenge in the 21st century. We describe the physical principles of energy, its production and consumption, and environmental consequences, including the greenhouse effect. We will examine a number of alternative modes of energy generation - fossil fuels, biomass, wind, solar, hydro, and nuclear - and study the physical and technological aspects of each, and their societal, environmental and economic impacts over the construction and operational lifetimes. No previous study of physics is assumed. Prerequisites: Algebra and Trigonometry. May be counted as Science Studies for students in Class of 2009 and prior. Target audience: Non-science majors (although science/engineering students are welcome).
For BA Students: Natural Science and Math Sector
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: May be counted as Science Studies for students in Class of 2009 and prior. Target audience: Non-science majors (although science/engineering students are welcome).

PHYS 050 Physics Laboratory I
Experiments in classical mechanics. Prerequisite: AP score of 5 on the Physics B or Physics C - Mechanics exam, or transfer credit for PHYS 91 or PHYS 93. Only for students with above prerequisite. Prerequisite: Course carries .5 course unit and student received grade. Permit required.
One-term course offered either term
Activity: Laboratory
0.5 Course Units

PHYS 051 Physics Laboratory II
Experiments in electromagnetism and optics. Prerequisite: AP score of 5 on the Physics B or Physics C - Electricity and Magnetism exam, or transfer credit for PHYS 92 or PHYS 94. PHYS 050. Only for students with above prerequisite. Also, Course carries .5 course unit and student received grade. Permit required.
One-term course offered either term
Activity: Laboratory
0.5 Course Units
PHYS 080 Physics and Consciousness
We will explore the basic classical and quantum physics concepts, and link them to newly observed physical phenomena and technologies, as well as to brain research, in the context of tools that physicists helped bring about like the seminal magnetic resonance imaging. The course content is mostly physics, although we link it to cognitive sciences, but the main focus is on motivating and explaining the basic physical laws behind new phenomena and related technologies. Examples include wave-particle duality and its relevance for technological applications, behavior of spin particles in a magnetic field to explain magnetic resonance imaging, ion flow through ion channels and ohm's law to explain electrical signal flow in our body, and other examples within the core of physics and bridging to interdisciplinary areas of material science and devices, biology and neuroscience. As we learn about particle spins, we will talk about brain imaging studies enabled by Nobel winning physics research. We will then discuss consciousness and free will, and read original texts by Schrodinger, Einstein and other physicists, and our course discussion will be uniquely motivated by related physical phenomena and experiments, including quantum entanglement and relativity of space and time. I will explain the basic ideas behind quantum computing and information processing, and we learn about basic quantum logic gates and Dirac’s matrix formalism in quantum mechanics. Prerequisite: This is an intro level physics course. Students do not have to have prior course in physics. Familiarity with algebra is a plus, although I will teach students the math required such as how to multiply matrices in case they have forgotten. An ideal student taking this course is a beginning student interested in a general STEM course. This course should not be taken by physics senior majors. It should be for non-science majors or science majors interested in learning about modern phenomena and technologies and the basic physics behind it, rather than for students with advanced knowledge, as they may want more, and I will not be able to provide more because I have to satisfy the beginner students too and talk about basics required. For BA Students: Natural Science and Math Sector Taught by: Ashmanskas Course usually offered in fall term Activity: Lecture 1.0 Course Unit

PHYS 101 General Physics: Mechanics, Heat and Sound
An introduction to the classical laws of motion, including kinematics, forces in nature, Newton’s laws of motion, conservation of energy and momentum, fluid statics and dynamics, oscillations, and waves. Suggested for students in a pre-health program. Credit is awarded for only one of the following courses: PHYS 008, PHYS 101, or PHYS 170. Students with AP or Transfer Credit for PHYS 91 or PHYS 93 who complete PHYS 101 will thereby surrender the AP or Transfer Credit. For BA Students: Physical World Sector Course offered summer, fall and spring terms Activity: Lecture 1.5 Course Unit Notes: Credit is awarded for only one of the following courses: PHYS 008, PHYS 101, PHYS 150, PHYS 170. Students with AP or Transfer Credit for PHYS 91 or PHYS 93 who complete PHYS 101 will thereby surrender the AP or Transfer Credit.

PHYS 102 General Physics: Electromagnetism, Optics, and Modern Physics
A continuation of PHYS 101 emphasizing an introduction to classical electricity and magnetism, light and optics, special relativity, the quantum theory of matter, and nuclear physics. Suggested for students in a pre-health program. Credit is awarded for only one of the following courses: PHYS 009, 102, 151, 171. Students with AP or Transfer Credit for PHYS 92 or PHYS 94 who complete PHYS 102 will thereby surrender the AP or Transfer Credit. For BA Students: Physical World Sector Course offered summer, fall and spring terms Prerequisite: PHYS 101 OR PHYS 150 OR PHYS 170 Activity: Lecture 1.5 Course Unit Notes: Credit is awarded for only one of the following courses: PHYS 008, PHYS 102, PHYS 151, PHYS 171. Students with AP or Transfer Credit for PHYS 92 or PHYS 94 who complete PHYS 101 will thereby surrender the AP or Transfer Credit.

PHYS 137 Community Physics Initiative
This is an Academically Based Community Service Course (ABCS). It will be aligned to the Philadelphia School District curriculum in introductory physics at University City High School (UCHS). The UCHS curriculum roughly parallels the contents of first semester introductory physics (non-calculus) at Penn. Course usually offered in fall term Activity: Lecture 1.0 Course Unit

PHYS 140 Principles of Physics I (without laboratory)
The topics of this calculus-based course are: Classical laws of motions; interactions between particles; conservation laws and symmetry principles; particle and rigid body motion; gravitation, harmonic motion, and applications of mechanics to real-world problems. Engineering students only. Prerequisite: For Engineering students whose course of study does not require a physics laboratory course. Those who are enrolled in a dual degree program with the college must register for the lab-based version of this course, PHYS 150. One-term course offered either term Corequisite: MATH 104 Activity: Lecture 1.0 Course Unit

PHYS 141 Principles of Physics II (without laboratory)
The topics of this calculus-based course are electric and magnetic fields; Coulomb's, Gauss's, Ampere's, and Faraday's laws; DC and AC circuits; Maxwell’s equations and electromagnetic radiation. Engineering students only. Prerequisite: For engineering students whose course of study does not require a physics laboratory course. Those who are enrolled in a dual degree program with the college must register for the lab-based version of this course, PHYS 151. Course offered summer, fall and spring terms Prerequisite: PHYS 140 Corequisite: MATH 114 Activity: Lecture 1.0 Course Unit
PHYS 150 Principles of Physics I: Mechanics and Wave Motion
This calculus-based course is recommended for science majors and engineering students. Classical laws of motion; interactions between particles; conservation laws and symmetry principles; particle and rigid body motion; gravitation, harmonic motion, and applications of mechanics to real-world problems. Credit is awarded for only one of the following courses: PHYS 008, PHYS 101, 150, 170. Students with AP or Transfer Credit for PHYS 91 or 93 who complete PHYS 150 will thereby surrender the AP or Transfer Credit. Prerequisite: Students in PHYS 150 should already have taken MATH 104 or the equivalent, or be taking it simultaneously with PHYS 150.
For BA Students: Physical World Sector
One-term course offered either term
Activity: Lecture
1.5 Course Unit
Notes: Credit is awarded for only one of the following courses: PHYS 008, PHYS 101, PHYS 150, PHYS 170. Students with AP or Transfer Credit for PHYS 91 or PHYS 93 who complete PHYS 101 will thereby surrender the AP or Transfer Credit.

PHYS 151 Principles of Physics II: Electromagnetism and Radiation
The topics of this calculus-based course are electric and magnetic fields; Coulomb’s, Gauss’s, Ampere’s, and Faraday’s laws; DC and AC circuits; Maxwell’s equations and electromagnetic radiation. Credit is awarded for only one of the following courses. PHYS 009, 102, 151, 171. Students with AP or Transfer Credit for PHYS 92 or 94 who complete PHYS 151 will thereby surrender the AP or Transfer Credit. Prerequisite: Students in PHYS 151 should already have taken MATH 114 or the equivalent, or be taking it simultaneously with PHYS 151.
For BA Students: Physical World Sector
Course offered summer, fall and spring terms
Prerequisite: PHYS 150
Activity: Lecture
1.5 Course Unit

PHYS 170 Honors Physics I: Mechanics and Wave Motion
This course parallels and extends the content of PHYS 150, at a somewhat higher mathematical level. Recommended for well-prepared students in engineering and the physical sciences, and particularly for those planning to major in physics. Electric and magnetic fields; Coulomb’s, Ampere’s, and Faraday’s laws; special relativity; Maxwell’s equations, electromagnetic radiation.
For BA Students: Physical World Sector
Course usually offered in fall term
Prerequisite: (MATH 114 OR MATH 116) AND (PHYS 150 OR PHYS 170)
Corequisite: MATH 240 OR MATH 260
Activity: Seminar
1.5 Course Unit
Notes: Benjamin Franklin Seminar. Credit is awarded for only one of the following courses: PHYS 009, PHYS 102, PHYS 151, or PHYS 171. Students with AP or Transfer Credit for PHYS 092 or PHYS 094 who complete PHYS 171 will thereby surrender the AP or Transfer Credit.

PHYS 171 Honors Physics II: Electromagnetism and Radiation
This course parallels and extends the content of PHYS 151, at a somewhat higher mathematical level. Recommended for well-prepared students in engineering and the physical sciences, and particularly for those planning to major in physics. Electric and magnetic fields; Coulomb’s, Ampere’s, and Faraday’s laws; special relativity; Maxwell’s equations, electromagnetic radiation.
For BA Students: Physical World Sector
Course usually offered in spring term
Prerequisite: (PHYS 150 OR PHYS 151 OR PHYS 170 OR PHYS 171) AND (MATH 104 OR MATH 114 OR MATH 116)
Corequisite: MATH 240
Activity: Lecture
1.0 Course Unit

PHYS 230 Principles of Physics III: Thermal Physics and Waves
Laws of thermodynamics, gas laws and heat engines. Waves on a string, electromagnetic waves including optical phenomena such as refraction, interference and diffraction. Introduction to special relativity including time dilation, length contraction, simultaneity, Lorentz transforms and relativistic energy and momentum. Students are encouraged but not required to take Math 240 concurrently or in advance.
Course usually offered in fall term
Prerequisite: (PHYS 150 OR PHYS 151 OR PHYS 170 OR PHYS 171) AND (MATH 104 OR MATH 114 OR MATH 116)
Corequisite: MATH 240
Activity: Lecture
1.0 Course Unit

PHYS 240 Principles of Physics IV: Modern Physics (without laboratory)
An introduction to the experimental basis for and principles of quantum mechanics, properties of electrons, protons, neutrons, and the elements of atomic structure and nuclear structure. Electromagnetic radiation and photons; interaction of photons with electrons, atoms, and nuclei. Students are encouraged but not required to take Math 241 concurrently or in advance.
Course usually offered in spring term
Prerequisite: (PHYS 150 OR PHYS 151 OR PHYS 170 OR PHYS 171) AND MATH 240
Corequisite: MATH 240
Activity: Lecture
1.0 Course Unit

PHYS 250 Principles of Physics IV: Modern Physics
An introduction to the experimental basis for and principles of quantum mechanics, properties of electrons, protons, neutrons, and the elements of atomic structure and nuclear structure. Electromagnetic radiation and photons; interaction of photons with electrons, atoms, and nuclei. Students are encouraged but not required to take Math 241 concurrently or in advance.
Course usually offered in spring term
Prerequisite: (PHYS 150 OR PHYS 151 OR PHYS 170 OR PHYS 171) AND MATH 240
Corequisite: MATH 240
Activity: Lecture
1.0 Course Unit
Notes: PHYS 250 students take a two-hour lab
PHYS 280 Physical Models of Biological Systems
Classic case studies of successful reductionistic models of complex phenomena, emphasizing the key steps of making estimates, using them to figure out which physical variables and phenomena will be most relevant to a given system, finding analogies to purely physical systems whose behavior is already known, and embodying those in a mathematical model, which is often implemented in computer code. Topics may include bacterial genetics, genetic switches and oscillators; systems that sense or utilize light; superresolution and other new microscopy methods; and vision and other modes of sensory transduction.
Course usually offered in fall term
Also Offered As: BCHE 280
Prerequisite: (PHYS 101 OR MATH 104) AND (MATH 114 OR MATH 104) AND (MATH 115 OR MATH 116)
Activity: Lecture
1.0 Course Unit

PHYS 299 Independent Study
Special projects and independent study under the direction of faculty member. Prerequisite: Repetitive Credit
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: Repetitive credit

PHYS 314 Ocean-Atmosphere Dynamics and Implications for Future Climate Change
This course covers the fundamentals of atmosphere and ocean dynamics, and aims to put these in the context of climate change in the 21st century. Large-scale atmospheric and oceanic circulation, the global energy balance, and the global energy balance, and the global hydrological cycle. We will introduce concepts of fluid dynamics and we will apply these to the vertical and horizontal motions in the atmosphere and ocean. Concepts covered include: hydrostatic law, buoyancy and convection, basic equations of fluid motions, Hadley and Ferrel cells in the atmosphere, thermohaline circulation, Sverdrup ocean flow, modes of climate variability (El-Nino, North Atlantic Oscillation, Southern Annular Mode). The course will incorporate student led discussions based on readings of the 2007 Intergovernmental Panel on Climate Change (IPCC) report and recent literature on climate change. Aimed at undergraduate or graduate students who have no prior knowledge of meteorology or oceanography or training in fluid mechanics. Previous background in calculus and/or introductory physics is helpful. This is a general course which spans many subdisciplines (fluid mechanics, atmospheric science, oceanography, hydrology).
Taught by: Marinov
Course usually offered in spring term
Also Offered As: ENVS 312, ENVS 640
Prerequisite: MATH 114
Activity: Lecture
1.0 Course Unit

PHYS 351 Analytical Mechanics
An intermediate course in the statics and dynamics of particles and rigid bodies. Lagrangian dynamics, central forces, non-inertial reference frames, and rigid bodies.
Course usually offered in spring term
Prerequisite: (PHYS 150 AND PHYS 151) OR (PHYS 170 AND PHYS 171) AND (MATH 104 OR MATH 114) AND MATH 240
Activity: Lecture
1.0 Course Unit

PHYS 358 Data Analysis for the Natural Sciences
This is a course on the fundamentals of data analysis and statistical inference for the natural sciences. Topics include probability distributions, linear and non-linear regression, Monte Carlo methods, frequentist and Bayesian data analysis, parameter and error estimation, Fourier analysis, power spectra, and signal and image analysis techniques. Students will obtain both the theoretical background in data analysis and also get hands-on experience analyzing real scientific data.
Prerequisite: Prior programming experience.
Taught by: Sako
Course offered fall; even-numbered years
Prerequisite: MATH 240 AND PHYS 260
Activity: Lecture
1.0 Course Unit

PHYS 360 Statistics, Data Mining, and Machine Learning
This is a practical course on computing, numerical methods, statistics, and data analysis techniques with particular emphasis on data mining and machine learning applied to large datasets. Topics include basic numerical methods and algorithms, probability theory, classical and Bayesian statistical inference, model fitting, Monte Carlo methods, and classification. We will be using Python for the exercises. Prior experience in programming (in any language) is required.
Taught by: Sako
Course usually offered in spring term
Prerequisite: MATH 240 AND CIS 110
Activity: Lecture
1.0 Course Unit

PHYS 361 Electromagnetism I: Electricity and Potential Theory
First term course in intermediate electromagnetism. Topics include electrostatics, static potential theory, multipole expansions, Laplace equation, image solutions, fields in polarized matter.
Course usually offered in fall term
Also Offered As: PHYS 561
Prerequisite: (PHYS 151 OR PHYS 171) AND MATH 241
Activity: Lecture
1.0 Course Unit

PHYS 362 Electromagnetism II: Magnetism, Maxwell's Equations, and Electromagnetic Waves
Second term course in intermediate electromagnetism. Topics include magnetostatic forces and fields, magnetized media, Maxwell's equations, Poynting and stress theorems, free field solutions to Maxwell's equations, and radiation from separable and nonseparable time dependent charge and current distributions.
Course usually offered in spring term
Also Offered As: PHYS 562
Prerequisite: PHYS 361
Activity: Lecture
1.0 Course Unit

PHYS 365 Statistics, Data Mining, and Machine Learning
A practical course on computing, numerical methods, statistics, and data analysis techniques with particular emphasis on data mining and machine learning applied to large datasets. Topics include basic numerical methods and algorithms, probability theory, classical and Bayesian statistical inference, model fitting, Monte Carlo methods, and classification. We will be using Python for the exercises. Prior experience in programming (in any language) is required.
Taught by: Sako
Course usually offered in spring term
Prerequisite: MATH 240 AND CIS 110
Activity: Lecture
1.0 Course Unit
PHYS 364 Laboratory Electronics
A laboratory-intensive survey of analog and digital electronics, intended to teach students of physics or related fields enough electronics to be effective in experimental research and to be comfortable learning additional topics from reference textbooks. Analog topics include voltage dividers, impedance, filters, operational amplifier circuits, and transistor circuits. Digital topics may include logic gates, finite-state machines, programmable logic devices, digital-to-analog and analog-to-digital conversion, and microcomputer concepts. Recommended for students planning to do experimental work in physical science. Prerequisite: Familiarity with electricity and magnetism at the level of PHYS 102, 141, 151, 171.
One-term course offered either term
Also Offered As: PHYS 564
Activity: Lecture
1.0 Course Unit

PHYS 401 Thermodynamics and the Introduction to Statistical Mechanics and Kinetic Theory
Entropy, temperature, and introduction to ensemble theory, distribution functions, and phase transitions.
Course usually offered in fall term
Also Offered As: PHYS 240 OR PHYS 250
Prerequisite: PHYS 240 OR PHYS 250
Activity: Lecture
1.0 Course Unit

PHYS 411 Introduction to Quantum Mechanics I
An introduction to the principles of quantum mechanics designed for physics majors and graduate students in physics-related disciplines. The Schroedinger equation operator formalism, central field problem, angular momentum, and spin. Application to one-dimensional and central field problems.
Course usually offered in fall term
Also Offered As: PHYS 511
Prerequisite: (PHYS 150 OR PHYS 170) AND (PHYS 240 OR PHYS 250) AND (MATH 240 OR MATH 260)
Activity: Lecture
1.0 Course Unit

PHYS 412 Introduction to Quantum Mechanics II
Perturbation theory, variational principle, application of the quantum theory to atomic, molecular, and nuclear systems, and their interaction with radiation.
Course usually offered in spring term
Also Offered As: PHYS 512
Prerequisite: PHYS 411
Activity: Lecture
1.0 Course Unit

PHYS 414 Laboratory in Modern Physics
In this course you will have the opportunity to do a variety of experiments, ranging from 'classic experiments' such as measuring G with a torsion balance, determining the relativistic mass of the electron, and muon lifetime, to experiments studying atomic spectroscopy, NMR, Optical pumping, Mossbauer effect, nuclear energy levels, interaction of gamma rays with matter, single photon interference, and magnetic susceptibility. There are also experiments using a High-Tc superconducting tunnel junction and a PET scanner. You will learn basic statistics, become proficient in analysis using Python, acquire an understanding of systematic errors, and learn how to write a professional report. Many of the laboratories provide excellent opportunities to exercise, and expand upon, the knowledge you have gained in your physics courses.
Taught by: Williams
Course usually offered in spring term
Also Offered As: PHYS 521
Prerequisite: PHYS 250 OR PHYS 411
Activity: Lecture
1.0 Course Unit

PHYS 421 Modern Optics
Course not offered every year
Also Offered As: PHYS 529
Prerequisite: (PHYS 240 OR PHYS 250) AND PHYS 362
Activity: Lecture
1.0 Course Unit

PHYS 433 Order of Magnitude Physics
This course focuses on the art of estimating physical quantities to within the nearest factor of ten. Problem solving techniques such as dimensional analysis and scaling relations will be covered and applied to a wide range of topics including fluid mechanics, waves and sound, atomic physics, material properties, astrophysics, everyday life, and more. The course is intended for advanced undergraduate students.
One-term course offered either term
Prerequisite: PHYS 411
Activity: Lecture
1.0 Course Unit

PHYS 499 Senior Honor Thesis
Experimental and theoretical research projects in various areas of physics planned by student in consultation with a member of faculty. A written thesis and an oral presentation and defense are required.
One-term course offered either term
Prerequisite: PHYS 412 AND PHYS 414
Activity: Independent Study
1.0 Course Unit

PHYS 500 Mathematical Methods of Physics
A discussion of those concepts and techniques of classical analysis employed in physical theories. Topics include complex analysis, Fourier series and transforms, ordinary and partial equations, Hilbert spaces, among others.
Course usually offered in fall term
Also Offered As: MATH 594
Activity: Lecture
1.0 Course Unit
PHYS 501 Introduction to Research
Introduction to research in particle, nuclear, condensed matter and astrophysics. Selected current topics from journals. Prerequisite: Taken by all first-year graduate students. This is a required seminar that does not carry or a grade.
One-term course offered either term
Activity: Lecture
0.0 Course Units

PHYS 503 General Relativity
This is a graduate level, introductory course in general relativity. The basics of general relativity will be covered with a view to understanding the mathematical background, the construction of the theory, and applications to the solar system, black holes, gravitational waves and cosmology. The latter part of the course will cover some of the basic modern topics in modern cosmology, including the current cosmological model, the accelerating universe, and open questions driving current research.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

PHYS 505 Introduction to Cosmology
Introduction to physical cosmology emphasizing recent ideas on the very early evolution of the universe. The course will introduce standard big bang cosmology, new theories of the very early universe, and the key observations that have tested and will be testing these ideas. No prior knowledge of astrophysics, cosmology, general relativity, or particle physics will be assumed, although aspects of each will be introduced as part of the course. The course is intended for graduate students and advanced undergraduates.
Course offered spring; odd-numbered years
Activity: Lecture
1.0 Course Unit

PHYS 516 Electromagnetic Phenomena
Survey of electrodynamics, focusing on applications to research done in the Department. Topics include mathematical structure and relativistic invariance properties of Maxwell equations, tensor methods, and the generation and scattering of radiation, in vacuum and in materials. Applications vary from year to year but include optical manipulation, astrophysical phenomena, and the generalizations from Maxwell's theory to those of other fundamental interactions (strong, electroweak, and gravitational forces).
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

PHYS 517 Particle Cosmology
This introduction to cosmology will cover standard big bang cosmology, formation of large-scale structure, theories of the early universe and their observational predictions, and models of dark energy. It is intended for graduate students or advanced undergraduates. No prior knowledge of general relativity or field theory will be assumed, although aspects of each will be introduced as part of the course.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

PHYS 518 Introduction to Condensed Matter Physics
An introduction to condensed matter physics designed primarily for advanced undergraduate and graduate students desiring a compact survey of the field. Band theory of solids, phonons, electrical magnetic and optical properties of matter, and superconductivity. Prerequisite: Undergraduate training in Quantum mechanics ans Statistical Thermodynamics.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

PHYS 521 Advanced Laboratory
In this course you will have the opportunity to do a variety of experiments, ranging from 'classic experiments' such as measuring G with a torsion balance, determining the relativistic mass of the electron, and muon lifetime, to experiments studying atomic spectroscopy, NMR, Optical pumping, Mossbauer effect, nuclear energy levels, interaction of gamma rays with matter, single photon interference, and magnetic susceptibility. There are also experiments using a High-Tc superconducting tunnel junction and a PET scanner. You will learn basic statistics, become proficient in analysis using Python, acquire an understanding of systematic errors, and learn how to write a professional report. Many of the laboratories provide excellent opportunities to exercise, and expand upon, the knowledge you have gained in your physics courses.
Course usually offered in spring term
Also Offered As: PHYS 414
Prerequisite: PHYS 250 OR PHYS 411
Activity: Lecture
1.0 Course Unit

PHYS 522 Introduction to Elementary Particle Physics
An introduction to elementary particles (photons, leptons, hadrons, quarks), their interactions, and the unification of the fundamental forces.
Course not offered every year
Activity: Lecture
1.0 Course Unit

PHYS 526 Astrophysical Radiation
This is a course on the theory of the interaction of light and matter designed primarily for graduate and advanced undergraduate students to build the basic tools required to do research in astrophysics. Topics to be discussed include structure of single- and multi-electron atoms, radiative and collisional processes, spectral line formation, opacity, radiation transfer, analytical and numerical methods, and a selection of applications in astrophysics based on student research interest.
Course offered fall; even-numbered years
Activity: Lecture
1.0 Course Unit

PHYS 528 Introduction to Liquid Crystals
Overview of liquid crystalline phases, their elasticity, topology, and dynamics.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

PHYS 529 Modern Optics
Course offered spring; even-numbered years
Also Offered As: PHYS 421
Prerequisite: (PHYS 240 OR PHYS 250) AND PHYS 362
Activity: Lecture
1.0 Course Unit
PHYS 530 Modern Optical Physics and Spectroscopy
Introduction to contemporary optics. Topics include propagation and guiding of light waves, interaction of electromagnetic radiation with matter, lasers, non-linear optics, coherent transient phenomena, photon correlation spectroscopies and photon diffusion. Prerequisite: Graduate level course for beginning or intermediate graduate students in Physics, but is likely to be of use to a broader community including beginning graduate students whose research involves light scattering in Electrical Engineering, Chemistry, and Biophysics, and advanced undergraduates. Prerequisite: Working knowledge of electricity and magnetism and quantum mechanics. For example, at least at the level of Physics 362, PHYS 411.
Course not offered every year
Activity: Lecture
1.0 Course Unit

PHYS 531 Quantum Mechanics I
Graduate-level introduction to quantum theory. Topics covered include the postulates of quantum mechanics, unitary operators, time evolution and Schrodinger’s equation, theory of angular momentum, density matrices, and Bell’s inequalities. Other topics may include semi-classical (WKB) approximation, bound state techniques, periodic potentials and resonance phenomena. Prerequisite: A minimum of one semester of Quantum Mechanics at the advanced undergraduate level.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

PHYS 532 Quantum Mechanics II
Continuation of PHYS 531. Topics covered include the path integral formulation, symmetries in quantum mechanics, scattering theory, and decoherence. Other topics may include time independent and time dependent perturbation theory, and atomic and molecular systems.
Course usually offered in spring term
Prerequisite: PHYS 531
Activity: Lecture
1.0 Course Unit

PHYS 533 Topics in Cosmology
This course aims to survey three or four topics of current research interest in cosmology, mostly at the level of review articles. The topics will be covered in greater depth and with more connections to ongoing research than the introductory cosmology course, ASTR 525. The course will be largely accessible to first and second year graduate students. Some exposure to cosmology and general relativity will be helpful but the first two weeks will attempt to bridge that gap. The topic selection will be done in part with input from the students.
Course not offered every year
Activity: Lecture
1.0 Course Unit

PHYS 561 Electromagnetism I
First term course in intermediate electromagnetism. Topics include electrostatics, static potential theory, multipole expansions, Laplace equation, image solutions, fields in polarized matter.
Course usually offered in fall term
Also Offered As: PHYS 361
Prerequisite: (PHYS 151 OR PHYS 171) AND MATH 241
Activity: Lecture
1.0 Course Unit

PHYS 562 Electromagnetism II: Magnetism, Maxwell's Equations, and Electromagnetic Waves
Second term course in intermediate electromagnetism. Topics include magnetostatic forces and fields, magnetized media, Maxwell’s equations, Poynting and stress theorems, free field solutions to Maxwell’s equations, and radiation from separable and nonseparable time dependent charge and current distributions.
Course usually offered in spring term
Also Offered As: PHYS 362
Prerequisite: PHYS 361
Activity: Lecture
1.0 Course Unit

PHYS 564 Laboratory Electronics
A laboratory-intensive survey of analog and digital electronics, intended to teach students of physics or related fields enough electronics to be comfortable learning additional topics on their own from a reference such as Horowitz and Hill. Specific topics will vary from year to year from the selection of topics listed below. Analog topics may include voltage dividers, impedance, filters, operational amplifier circuits, and transistor circuits. Digital topics may include logic gates, finite-state machines, programmable logic devices, digital-to-analog and analog-to-digital conversion, and microcomputer concepts. Recommended for students planning to do experimental work in physical science. Prerequisite: Familiarity with electricity and magnetism at the level of PHYS 102, 141, 151, 171.
One-term course offered either term
Also Offered As: PHYS 364
Activity: Lecture
1.0 Course Unit

PHYS 580 Biological Physics
The course will explore the basic physical principles behind the structure and function of life across many length and time scales (molecule, cell, organism, population). Emphasis will be given on overarching physical themes such as entropy and biological noise, and how they affect the organization of living matter and its emergent properties. Topics may include biopolymers and single molecule biophysics, molecular motors, gene and transcription networks, pattern formation in biological systems, phyllotaxis, neural computing and evolution. Prerequisite: Recommended: Basic background in biology.
Course not offered every year
Also Offered As: BCHE 580
Prerequisite: MATH 240 AND MATH 241 AND PHYS 401
Activity: Lecture
1.0 Course Unit
Notes: Recommended: Basic background in biology.

PHYS 581 Thermodynamics
Course usually offered in fall term
Also Offered As: PHYS 401
Prerequisite: PHYS 240 OR PHYS 250
Activity: Lecture
1.0 Course Unit
PHYS 585 Theoretical and Computational Neuroscience
This course will develop theoretical and computational approaches to structural and functional organization in the brain. The course will cover: (i) the basic biophysics of neural responses, (ii) neural coding and decoding with an emphasis on sensory systems, (iii) approaches to the study of networks of neurons, (iv) models of adaptation, learning and memory, (v) models of decision making, and (vi) ideas that address why the brain is organized the way that it is. The course will be appropriate for advanced undergraduates and beginning graduate students. A knowledge of multi-variable calculus, linear algebra and differential equations is required (except by permission of the instructor). Prior exposure to neuroscience and/or Matlab programming will be helpful.
Taught by: Vijay Balasubramanian
Course usually offered in spring term
Also Offered As: BE 530, BIBB 585, NGG 594, PSYC 539
Activity: Lecture
1.0 Course Unit

PHYS 601 Introduction to Field Theory
Elementary relativistic quantum field theory of scalar, fermion, and Abelian gauge fields. Feynman Diagrams.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

PHYS 611 Statistical Mechanics
Course usually offered in fall term
Prerequisite: PHYS 401 AND PHYS 531
Activity: Lecture
1.0 Course Unit

PHYS 612 Advanced Statistical Mechanics
In depth study of classical and quantum lattice spin models, perturbation techniques, and the renormalization group.
Course not offered every year
Prerequisite: PHYS 611
Activity: Lecture
1.0 Course Unit

PHYS 622 Introduction to Elementary Particle Physics
Introduction to the phenomenology of elementary particles, strong and weak interactions, symmetries.
Course not offered every year
Prerequisite: PHYS 601
Activity: Lecture
1.0 Course Unit

PHYS 632 Relativistic Quantum Field Theory
Advanced topics in field theory, including renormalization theory.
Course not offered every year
Prerequisite: PHYS 601
Activity: Lecture
1.0 Course Unit

PHYS 633 Relativistic Quantum Field Theory
A continuation of PHYS 632, dealing with non-Abelian gauge theories.
Course not offered every year
Prerequisite: PHYS 632
Activity: Lecture
1.0 Course Unit
PLSH 502 Elementary Polish II
This course is a continuation of the PLSH 501. This is for students who want to acquire the linguistic skills necessary for communication in everyday situations and that would constitute a solid base for further study of the Polish language. In addition students will become acquainted with various aspects of Polish culture (including Polish films), history and contemporary affairs. Students will learn through classroom exercises based on a modern textbook, completion of individual and group assignments and work with various audio and video materials. The textbook Hurra - Po Polsku 1 is written in the spirit of the communicative approach, which makes it possible to communicate from the very beginning of the learning process. The special attention, however, will be paid on systematic development of all language skills: listening, reading, speaking and writing. Prerequisite: Offered through the Penn Language Center.
For BA Students: Language Course
Taught by: Wolski-Moskoff
Two terms. student may enter either term.
Prerequisite: PLSH 501
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

PLSH 503 Intermediate Polish I
This is a first-semester intermediate-level language course that emphasizes the development of the four basic skills (reading, writing, listening, and speaking) within a culturally based context. Class time will focus on communicative activities that combine grammatical concepts, relevant vocabulary, and cultural themes. Students will learn through classroom exercises based on a modern textbook: Hurra Po Polsku 2, completion of individual and group assignments and work with various audio and video materials. Major course goals include: the acquisition of intermediate-level vocabulary, the controlled use of the Polish cases; the aspect of the verbs, the development of writing skills. Prerequisite: Offered through the Penn Language Center.
For BA Students: Language Course
Taught by: Wolski-Moskoff
Two terms. student may enter either term.
Prerequisite: SLAV 502
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

PLSH 504 Intermediate Polish II
This course is a continuation of the PLSH 503. This is a second-semester intermediate-level language course that emphasizes the development of the four basic skills (reading, writing, listening, and speaking) within a culturally based context. Class time will focus on communicative activities that combine grammatical concepts, relevant vocabulary, and cultural themes. Students will learn through classroom exercises based on a modern textbook: Hurra Po Polsku 2, completion of individual and group assignments and work with various audio and video materials. Major course goals include: the acquisition of intermediate-level vocabulary, the controlled use of the Polish cases; the aspect of the verbs, the development of writing skills. Prerequisite: Offered through the Penn Language Center.
For BA Students: Last Language Course
Taught by: Wolski-Moskoff
Two terms. student may enter either term.
Prerequisite: PLSH 503
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

PLSH 505 Polish for Heritage Speakers I
The course is addressed to students who have spoken Polish at home and seek to achieve proficiency in the language. The main goal of this course is to provide instruction directed at students continued development of existing competencies in the Polish language. Students will acquire skills that range from learning grammar and spelling, and developing vocabulary, to interpretation and analysis of different literary genres. Students will explore a broad variety of cultural themes. Topics will include: Polish. Upon completion of the Polish for Heritage Speakers course, students are expected to confidently understand, read, write and speak Polish with an increased vocabulary and a better command of Polish grammar. They will increase their reading skills through interpretation and analysis of different Polish literary genres. Students will be able to organize their thoughts and write in a coherent manner. They will increase their writing skills by writing personal essays, compositions and others. Students will further their knowledge of the Polish language and will engage in class discussion on various topics. Students will gain a better understanding of the Polish culture. Instructor permission required to enroll.
For BA Students: Language Course
Taught by: Dziedzic
Course not offered every year
Activity: Lecture
1.0 Course Unit

PLSH 506 Polish for Heritage Speakers II
Continuation of PLSH 505. The course is addressed to students who have spoken Polish at home and seek to achieve proficiency in the language. The main goal of this course is to provide instruction directed at students continued development of existing competencies in the Polish language. Students will acquire skills that range from learning grammar and spelling, and developing vocabulary, to interpretation and analysis of different literary genres. Students will explore a broad variety of cultural themes. Topics will include: Polish literature - classic and modern, social life, contemporary affairs and films. Students will be able to organize their thoughts and write in a coherent manner. They will increase their writing skills by writing personal essays, compositions and others. Students will further their knowledge of the Polish language and will engage in class discussion on various topics. Students will gain a better understanding of the Polish culture. Instructor permission required to enroll.
For BA Students: Language Course
Taught by: Dziedzic
Course not offered every year
Prerequisite: PLSH 505
Activity: Lecture
1.0 Course Unit

Political Science (PSCI)

PSCI 010 Freshman Seminar: The World After 1800
Freshman seminars are small, substantive courses taught by members of the faculty and open only to freshmen. These seminars offer an excellent opportunity to explore areas not represented in high school curricula and to establish relationships with faculty members around areas of mutual interest. See www.college.upenn.edu/admissions/freshmen.php
One-term course offered either term
Also Offered As: AFRC 012, LALS 107
Activity: Seminar
1.0 Course Unit
PSCI 102 Information Communication Technologies for Development
The seminar will focus on the role that innovations in Information Communication Technologies can play in improving development outcomes in low-income countries. The seminar will focus especially on the promises and perils for utilizing mobile technologies and GIS for better governance: to improve citizen voice and government accountability. This is an exciting area of research that brings together tech giga, policy makers, Non-government organizations and researchers. The seminar will be of interest to undergraduates from diverse backgrounds, such as political science, engineering, communication, sociology and business administration. The idea will be to highlight not only the promise of ICT4D but also the challenges (e.g., that it widen participation, since it tends to exclude marginalized populations).
The course will survey innovative applications in agriculture, financial services, health services, but also governance. The trip to Uganda during spring semester will allow students to meet with NGOs and local governments that are experimenting with new products and applications; hear their challenges and participate in meetings to brainstorm new apps.
Permission needed from instructor to enroll.
Taught by: Grossman
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

PSCI 107 Introduction to Data Science
Understanding and interpreting large, quantitative data sets is increasingly central in political and social science. Whether one seeks to understand political communication, international trade, inter-group conflict, or other issues, the availability of large quantities of digital data has revolutionized the study of politics. Nonetheless, most data-related courses focus on statistical estimation, rather than on the related but distinctive problems of data acquisition, management and visualization—in a term, data science. This course addresses that imbalance by focusing squarely on data science. Leaving this course, students will be able to acquire, format, analyze, and visualize various types of political data using the statistical programming language R. This course is not a statistics class, but it will increase the capacity of students to thrive in future statistics classes. While no background in statistics or political science is required, students are expected to be generally familiar with contemporary computing environments (e.g. know how to use a computer) and have a willingness to learn a variety of data science tools.
You are encouraged (but certainly not required) to register for both this course and PSCI 338 at the same time, as the courses cover distinct, but complimentary material.
Taught by: Hopkins
Course not offered every year
Activity: Recitation
1.0 Course Unit

PSCI 110 Introduction to Comparative Politics
This course is designed to introduce students to comparative political analysis. How can the political behavior, circumstances, institutions, and dynamic patterns of change that people experience in very different societies be analyzed using the same set of concepts and theories? Key themes include nationalism, political culture, democratization, authoritarianism, and the nature of protracted conflict.
For BA Students: Society Sector
One-term course offered either term
Activity: Recitation
1.0 Course Unit

PSCI 111 Gender and Elections in America and Beyond
This course tackles four theoretical and empirical challenges related to gender and political equality: the extension of citizenship rights and voting rights to women; the problem of women’s persistent under-representation in politics; the nature of the gender gap in preferences across time and space; and the possibilities for substantive representation. We will focus about half the class on the US (contrasting the experiences of white and black women and men in politics) and the other half on other countries, detailing how different party systems, variation in electoral rules (like proportional representation), and institutional innovations such as gender quotas, enable or constrain gender equality in politics.
Taught by: Teele
One-term course offered either term
Also Offered As: GSWS 111
Activity: Lecture
1.0 Course Unit

PSCI 112 Socialism
Socialism has become a hot topic in US politics. Some advocate it as an ideology that supports economic equality; others decry it as a path towards excessive state control. But what does the word socialism really mean? Why does it seem to mean different things to different people? What is the historical background of socialism? Are there meaningful differences between different forms of socialism or are they more or less the same thing? Which societies are socialist in practice, both past and present? What about the US? What are the different proposals US and other Socialists make today? What is their logic? How socialist are they? Are their policy ideas or bad? What effects would they have? This course will introduce students to socialism in theory and practice, with an emphasis on different models of Western social democracy and how they are impacting political discourse right now.
Taught by: Orenstein
One-term course offered either term
Also Offered As: REES 133
Activity: Lecture
1.0 Course Unit
PSCI 116 Comparative Politics of Developing Areas
This is a comparative politics course that examines patterns of political and socio-economic change across the developing post-colonial areas Asia, Africa and Latin America. The course is not as concerned with keeping up with current events as with analyzing the relationships between colonial legacies, the initial challenges of post-colonial political and socioeconomic development, and how these interact with contemporary problems and global trends. Although chiefly concerned with 'political change' within countries, it will also devote substantial attention to economic, socio-cultural and international factors. The course is divided into three parts. The first examines the common and distinctive features of colonial rule in different regions as well as the varying challenges of political and economic development in diverse post-colonial settings. The second part focuses on elaborating on the themes developed in the first by looking more closely at the developmental experiences of Brazil, India, Algeria, Iran, Nigeria, and South Korea (with passing references to other countries as comparative referents). The third part focuses on trends and challenges that have emerged over the last two decades - including market reforms, democratization, and problems related to gender and the environment. The concluding lecture considers the implications of the distinctive perspectives offered above for revising some of the assumptions behind U.S. foreign policy and the organization of global institutions.
For BA Students: Society Sector
Taught by: Sil
Course offered fall; odd-numbered years
Activity: Recitation
1.0 Course Unit

PSCI 130 Introduction to American Politics
This course is intended to introduce students to the national institutions and political processes of American government. What are the historical and philosophical foundations of the American Republic? How does American public policy get made, who makes it, and who benefits? Is a constitutional fabric woven in 1787 good enough for today? How, if at all, should American government be changed, and why? What is politics and why bother to study it? If these sorts of questions interest you, then this course will be a congenial home. It is designed to explore such questions while teaching students the basics of American politics and government.
For BA Students: Society Sector
One-term course offered either term
Activity: Recitation
1.0 Course Unit

PSCI 131 American Foreign Policy
This course analyzes the formation and conduct of foreign policy in the United State. The course combines three elements: a study of the history of American foreign relations; an analysis of the causes of American foreign policy such as the international system, public opinion, and the media; and a discussion of the major policy issues in contemporary U.S. foreign policy, including terrorism, civil wars, and economic policy.
Taught by: Horowitz, Vitalis
One-term course offered either term
Activity: Recitation
1.0 Course Unit

PSCI 135 The Politics of Food and Agriculture
Students will use course readings and their community service to analyze the institutions, ideas, interests, social movements, and leadership that shape the 'politics of food' in different arenas. Service opportunities include work with the Urban Nutrition Initiative, Community School Student Partnerships, and the possibility of other placements as approved by the professors.

PSCI 136 Urban Politics in the United States
This course explores the political character of contemporary urban American life. Particular attention is given to the relationship between urban politics and policymaking – including the structural and ideological factors (e.g., dynamics of political economy, race, ethnicity, pluralism and gender) that constrain the policy context and shape the urban environment as a terrain for commingling, competition and conflict over uses of space. It makes considerable use of case studies to throw into relief the complex and sometimes subtle processes that shape urban life.

PSCI 144 Communism
The rise and fall of Communism dominated the history of the short twentieth century from the Russian revolution of 1917 to the collapse of the Soviet Union in 1991. As a system of government, Communism is more or less dead, but its utopian ideals of liberation from exploitation and want live on. Communism remains the one political-economic system that presented, for a time, an alternative to global capitalism. In this course, students will gain an introduction to socialist and Communist political thought and explore Communist political and economic regimes - their successes and failures, critics and dissidents, efforts at reform, and causes of collapse. We will learn about the remnants of Communism in China, North Korea, and Cuba and efforts of contemporary theorists to imagine a future for Communism.

1.0 Course Unit

PSCI 150 Introduction to International Relations
This course is an introduction to the major theories and issues in international politics. The goals of the course are to give students a broad familiarity with the field of international relations, and to help them develop the analytical skills necessary to think critically about international politics. The course is divided into four parts: 1) Concepts and Theories of International Relations; 2) War and Security; 3) The Global Economy; and 4) Emerging Issues in International Relations.

For BA Students: Society Sector
Taught by: Mansfield
One-term course offered either term

1.0 Course Unit

PSCI 151 International Security
This lecture course introduces students to the subfield of international security or strategic studies. In order to grasp the usefulness of the theoretical ideas presented in readings and lectures, abstract concepts are linked with a study of the national security policies states have adopted in the decades following World War II. Topics include current debates about nuclear proliferation, terrorism, the Iraq war, Europe’s changing international role, the rise of China, Asian “flashpoints” (Korea, the Taiwan Strait), and US security policy for the 21st century - considering some of the main strategic alternatives to the US as well as their implications for the types of forces deployed (the impact of the ‘revolution in military affairs,’ the future of missile defense, and the economic burden to be shouldered).

Taught by: Goldstein
One-term course offered either term
Activity: Recitation
1.0 Course Unit

PSCI 152 International Political Economy
This course examines the politics of international economic relations. The course will analyze the interplay between politics and economics in three broad areas: international trade, international finance, and economic development. In each section, we will first discuss economic theories that explain the causes and consequences of international commerce, capital flows, and economic growth. We will then explore how political interests, institutions, and ideas alter these predictions, examining both historical examples and current policy debates.

Taught by: Gray, Brutger
Course not offered every year
Activity: Recitation
1.0 Course Unit

PSCI 153 International Law & Institutions
This lecture course examines the role that international law and institutions play in international relations. The course begins by exploring broad theoretical questions - questions about why states create international law and international institutions; how states design institutions; the impact that institutional design may have on the effectiveness of international institutions; and the conditions under which states are likely to comply with the rules set out by international institutions and the dictates of international law. Specific topics include collective security institutions such as the League of Nations, the United Nations, and NATO; human rights law; the laws of war; international intervention and peacekeeping; international justice and the International Criminal Court; environmental law; international trade law and the World Trade Organization; economic development and the World Bank; and international finance and the role of the International Monetary Fund.

PSCI 180 Ancient Political Thought
Through reading texts of Plato (Socrates), Aristotle, Augustine and Aquinas, the student encounters a range of political ideas deeply challenging to--and possibly corrosive of--today's dominant democratic liberalism. Can classical and medieval thinking offer insight into modern impasses in political morality? Is such ancient thinking plausible, useful, or dangerous?

Course not offered every year
Also Offered As: CLST 185
Activity: Recitation
0.0 Course Units
PSCI 181 Modern Political Thought
This course will provide an overview of major figures and themes of modern political thought. We will focus on themes and questions pertinent to political theory in the modern era, particularly focusing on the relationship of the individual to community, society, and state. Although the emergence of the individual as a central moral, political, and conceptual category arguably began in earlier eras, it is in the seventeenth century that it takes firm hold in defining the state, political institutions, moral thinking, and social relations. The centrality of ‘the individual’ has created difficulties, even paradoxes, for community and social relations, and political theorists have struggled to reconcile those throughout the modern era. We will consider the political forms that emerged out of those struggles, as well as the changed and distinctly ‘modern’ conceptualizations of political theory such as freedom, responsibility, justice, rights and obligations, as central categories for organizing moral and political life.

1.0 Course Unit

PSCI 182 Contemporary Political Thought
This course is intended as a general introduction to political theory since 1900, examining prominent theorists of politics including Max Weber, Hannah Arendt, Carl Schmitt, Isaiah Berlin, Jurgen Habermas, John Rawls, Michel Foucault, and Jacques Derrida. Our theme for the Fall 2012 course will be: The Disenchantment of the World? Topics include: the nature of the the political and the concern, particular to the last century, that politics is itself under attack; the spread of liberal democracy across the globe and a critical appraisal of the moral meaning of this regime; contemporary theories of social justice; and an exploration of various issues pertaining to violence and the politics of security.
Taught by: Green, Hirschmann

PSCI 183 American Political Thought
Whether America begins with the Puritans and the Mayflower Compact, or with the Declaration of Independence and the Revolution, it is founded in resistance to empire. In the generations between, Americans have desired, dreaded and debated empire. This course will focus on empire and imperialism in American political thought. We will read primary texts addressing empire: from the departure and dissent of the Puritans, and Burke’s Speech on Conciliation with the Colonies, to twentieth and twenty-first century debates over America’s role in the world. These texts will include political pamphlets and speeches, poetry, novels, policy papers and film.

1.0 Course Unit

PSCI 207 Applied Data Science
Jobs in data science are quickly proliferating throughout nearly every industry in the American economy. The purpose of this class is to build the statistics, programming, and qualitative skills that are required to excel in data science. The substantive focus of the class will largely be on topics related to politics and elections, although the technical skills can be applied to any subject matter.
Taught by: Lapinski
Course not offered every year
Prerequisite: PSCI 107 OR PSCI 338
Activity: Lecture
1.0 Course Unit

PSCI 208 International Organizations in Latin America
International Organizations (IOs) play a powerful role in mitigating conflict at the global level. What role do they play in solving problems related to global politics, economic development, corruption, inequality and civil society in Latin America? How much power, influence and control do they possess in the region? This course examines the role and impact international organizations have had on Latin America since the mid-20th century. After a review of theoretical and methodological perspectives on the significance of IOs in international relations, students will examine the workings, issues and often controversies surrounding IOs in Latin America, including the IMF, World Bank, UN, OAS and ICC as well as regional organizations such as the Inter-American Court of Human Rights and area trade blocs and agreements of Mercosur, NAFTA and others. There will be a special focus on the Organization of American States in preparation for the Washington Model OAS students will be invited to attend from April 6-10, 2020 in Washington, D.C. Students attending this simulation will represent the delegation of Dominican Republic. In addition, the course hosts policymakers and scholars as guest speakers throughout the semester.

PSCI 210 Contemporary African Politics
This course provides an introduction to contemporary African politics. The core questions that motivate the course are (i) to what extent are political outcomes in contemporary Africa a consequence of its history, culture and geography? (ii) Why are state structures and institutions weaker in Africa than elsewhere? (iii) What accounts for Africa’s relatively slow economic growth? (iv) Why have some African countries been plagued by high levels of political violence while others have not? (v) What explains the behavior of key African actors: parties or politicians?

Activity: Recitation
1.0 Course Unit

PSCI 215 The European Union
This lecture course, after introductory sessions which outline the EU’s core institutions, is built on an exposition of the works of major thinkers who have reflected on the European Union’s origins, outcomes and significance. It critically reviews their arguments, especially their relevance to major recent crises, notably: the failure of the European Constitution, the current crisis of credibility facing the Euro. Whether the European Union is a confederation, a federation, an empire, or a novel political formation shall be examined. Whether its recent major widening signals an end to its institutional deepening will be discussed. Whether the Union has ‘a democratic deficit’ is examined, as is the claim that in external relations it represents a novel form of soft power.

Course not offered every year
Activity: Recitation
1.0 Course Unit

PSCI 217 Russian Politics
This course will present an in-depth examination of political, economic and social change in post-Soviet Russia within a historical context. After a brief discussion of contemporary problems in Russia, the first half of the course will delve into the rise of communism in 1917, the evolution of the Soviet regime, and the tensions between ideology and practice over the seventy years of communist rule up until 1985. The second part of the course will begin with an examination of the Gorbachev period and the competing interpretations of how the events between 1985 and 1991 may have contributed to the collapse of the Soviet Union. We will then proceed to make sense of the continuities and changes in politics, economics and society in contemporary Russia. Important topics will include the confrontations accompanying the adoption of a new constitution, the emergence of competing ideologies and parties, the struggle over economic privatization, the question of federalism and nationalism, social and political implicatons of economic reform, and prospects for Russia’s future in the Putin and post-Putin era.
Taught by: Sil
Course usually offered in spring term
Also Offered As: PSCI 517, REES 217

**PSCI 220 The Politics of Slow Moving Crises**

Slow-moving policy crises like climate change, population growth/change (aging, immigration, pensions), and water availability involve policy areas with a seemingly high probability of negative consequences, where the need for policy coordination seems clear but the pressures for coordination are often somewhat removed, since the consequences of policy action or inaction may be felt only years down the road. The questions underlying these cases are: how does a democratic political system, which operates on the short time horizon of elections, complicate policy decisions regarding social and natural processes with much longer time horizons (say decades rather than years), and for which the policy consequences may be quite serious, not to say catastrophic, but far removed from the political timeframe. How do politicians and policy makers evaluate the appropriate response to the problems posed by these processes? If the usual policy making framework is inadequate to responding to these kinds of processes and the problems they pose, then how can the institutions and processes of policy-making be amended to allow for improvement? What lessons can be drawn from other fields (psychology, economics, political science, sociology, etc.) and other decision-making arenas? On one level the goal of this course is to introduce students to key concepts of rational choice, externalities, risk assessment, time horizons, event probabilities, path dependency and unintended consequences through readings in political science, economics and sociology; and on another level to give students the tools to evaluate failures (and successes) of policy responses in areas in which policy consequences are often far removed, temporally and otherwise, from those making decisions.

Taught by: Jones-Correa
Course offered spring; odd-numbered years
Activity: Lecture
1.0 Course Unit

**PSCI 221 Comparative Health Politics**

This course examines the relationship between politics and the health of populations in the worlds rich democracies, including the Unites States. The key questions the course addresses are why and why countries differ in their health care policies, public health policies, and policies that affect the social determinants of health. There are no prerequisites, but prior coursework in comparative politics at the 100 or 200 level will be helpful.

Taught by: Lynch
Course not offered every year
Activity: Lecture
1.0 Course Unit

**PSCI 223 Issues Comp Pol/Gender**

Struggles over gender roles and rights have been prominent in the Middle East and North Africa since the 19th century and continue to mark contemporary political and social discourses. Since the colonial period, gender categories and sexualities have been critiqued and negotiated on behalf of empire, the nation, modernity, personal freedom; today debates and struggles over global rights, islamic law, and modernity continue to mark politics. Despite the particularity of ideas and events in the region, a comparative framework helps to overcome exoticization of the region and develop a more acute understanding. The topics of the course include engagement with the discourse of the Exotic Other, the effects of modernity, the role of nationalism and the state, state-society negotiation, islamic formulations, and continuously, the question: where does change come from? Issues of the veil and islamic dress the expansion of anti-gay laws, the disciplining of bodies in state and social settings - these issues of gender and sexuality extend the realm of the political into intimate spaces. Assignments include a midterm and a short paper that develops research and analytical skills. The course is 200 level. While background in the study of the Middle East or gender is not necessary, an introductory political science or social science course is required.

Taught by: Harrold
Course not offered every year
Also Offered As: GSWS 225
Activity: Seminar
1.0 Course Unit

**PSCI 224 Political Economy of Development**

The course surveys some of the principal themes in the political economies of lower income countries. The questions we shall seek to address cover a broad terrain. Who are the key actors? What are their beliefs, interests and motivations? What are their constraints? How are these being affected by closer economic linkages between national economies? While there is no single integrative framework or paradigm into which these themes neatly fit, a common thread is the changing dynamics and interplay between the local, the national, and the global. A familiarity with basic economic concepts will be helpful, but is not necessary.

Taught by: Kapur
Course not offered every year
Activity: Recitation
1.0 Course Unit
PSCI 225 Sex and Power
Gender has been a primary way of organizing power relations throughout history. This class asks how transformations in the global economy, technological change, new patterns of household formation, and social movements, have influenced women's access to economic and political positions over the past two centuries. We will examine how women's mobilization contributed to the abolition of slavery, reform of property and franchise laws, and to the formation of the welfare state. Next, we turn to thinking about how women's increasing labor force participation was hindered by institutions like marriage bars and union policy. Third, we look at cross-national patterns of women's political participation and descriptive representation including whether and how the adoption of electoral quotas influences gender equality more generally. Finally, we study how institutional norms and gender stereotypes affect political representation. This class will draw on examples from around the world, and will look a experiences of women from all economic, social, and aspiritive backgrounds.

Taught by: Teele
Course not offered every year
Also Offered As: GSWS 227
Activity: Lecture
1.0 Course Unit

PSCI 226 Ethnic Conflict
This course explains ethnic conflict, focusing on its most violent form, civil war. There have been more than 170 civil wars and many more episodes of lower-level armed conflict around the world since 1945. Most of these conflicts have been fought along ethnic lines. Antipathies and competition between ethnic groups are a constant feature of human history. Across societies, there is evidence of in-group bias and out-group prejudice in human behavior. Some theorists argue that people are hard-wired to dislike, and even fight against, members of ethnic out-groups. But large-scale ethnic violence is relatively rare. Under what conditions does ethnic conflict become violent and when does that violence rise to the level of civil war? What interventions are effective in ending these wars and returning countries to peace? Is ethnic conflict rooted in economic factors, such as poverty, growth decline, commodity price shocks, or dependence on mineral wealth? Or is it due to political reasons, such as repression, authoritarianism, or political exclusion of minority groups? This course addresses these questions from an interdisciplinary perspective, drawing on quantitative political science, history, social psychology, and behavioral economics. By the end of the course, students should be able to discuss these questions with reference to ongoing cases of civil war in Iraq, Afghanistan, and Syria as well as historical cases such as Bosnia and Rwanda. Prerequisite: Introductory courses in Comparative Politics, International Relations, and Economics. At least one course in Quantitative Methods will be helpful.

Taught by: Sambanis
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

PSCI 227 China: Institution & the Economy
The rise of China since its economic reform starting from 1978 is one of the most important developments the world witnessed in the twenty first century. In this seminar course, we explore topics including the political logic of China's economic reform, the institutional foundations of the Chinese economic growth miracle, as well as detailed analysis of Chinese financial markets, housing markets, fiscal reform, corruption/anti-corruption, labor market transitions, China's integration into the world economy, village democracy and its impact on resource allocation, the impact of population ageing, the impact of China on US economy and politics, among others. The discussions will focus on China, but will relate broadly to emerging and developed economies. The course will be based on reading and discussing research articles and books selected by the instructors.

Also Offered As: ECON 272

PSCI 229 China's Political Economy
This is an advanced course on the main issues of contemporary China's political economy. There is a strong focus on the reform period (post 1978). We will spend considerable time and energy on understanding the major themes and challenges of China's reforms, including the political system, the legal system, the inequality, foreign direct investment, village elections, lawmaking, environmental degradation, social opposition, corruption, and religion. We also investigate the many political and social consequences of reform and changing landscape of Chinese politics.

A prior course on Chinese politics (for example, PSCI219) is highly recommended.

Taught by: Hou
Course not offered every year
Activity: Seminar
1.0 Course Unit

PSCI 231 Race and Ethnic Politics
This course examines the role of race and ethnicity in the political discourse through a comparative survey of recent literature on the historical and contemporary political experiences of the four major minority groups (Blacks or African Americans, American Indians, Latinos or Hispanic Americans, and Asian Americans). A few of the key topics will include assimilation and acculturation seen in the Asian American community, understanding the political direction of Black America in a pre and post Civil Rights era, and assessing the emergence of Hispanics as the largest minority group and the political impact of this demographic change. Throughout the semester, the course will introduce students to significant minority legislation, political behavior, social movements, litigation/court rulings, media, and various forms of public opinion that have shaped the history of racial and ethnic minority relations in this country. Readings are drawn from books and articles written by contemporary political scientists.

Course usually offered in fall term
Also Offered As: COMM 226
Activity: Lecture
1.0 Course Unit

PSCI 233 Introduction to African American Politics
This course is an historical survey of the main bases and substances of politics among black Americans and the relation of black politics to the American political order. Its two main objectives are: 1) to provide a general sense of pertinent historical issues and relations as a way of helping to make sense of the present and 2) to develop criteria for evaluating political scientists’ and others’ claims regarding the status and characteristics of black American political activity.
Taught by: Reed
Course not offered every year
Activity: Lecture
1.0 Course Unit

PSCI 234 Changing American Electorate
In 1960, a Democratic candidate won a very narrow Presidential victory with just 100,000 votes; in 2000, the Democratic candidate lost but received 500,000 more votes than his opponent. Still, contemporary scholars and journalists have made a variety of arguments about just how much the American political landscape changed in the intervening 40 years, often calling recent decades a transformation. This course explores and critically evaluates those arguments. Key questions include: how, if at all, have Americans political attitudes and ideologies changed? How have their connections to politics changed? What has this meant for the fortunes and strategies of the two parties? How have the parties base voters and swing voters changed? What changes in American society have advantaged some political messages and parties at the expense of others? Focusing primarily on mass-level politics, we consider a wide range of potential causes, including the role of race in American politics, suburbanization, economic transformations, the evolving constellation and structure of interest groups, declining social capital, the changing role of religion, immigration, and the actions of parties and political elites. For three weeks in the semester, we will take a break from considering broader trends to look at specific elections in some depth.
Taught by: Hopkins
Course not offered every year
Activity: Recitation
1.0 Course Unit

PSCI 236 Public Policy Process
This course introduces students to the theories and practice of the policy-making process. There are four primary learning objectives. First, understanding how the structure of political institutions matter for the policies that they produce. Second, recognizing the constraints that policy makers face when making decisions on behalf of the public. Third, identifying the strategies that can be used to overcome these constraints. Fourth, knowing the toolbox that is available to participants in the policy-making process to help get their preferred strategies implemented. While our focus will primarily be on American political institutions, many of the ideas and topics discussed in the class apply broadly to other democratic systems of government.

Course usually offered in fall term
Also Offered As: PPE 312
Activity: Recitation
1.0 Course Unit

PSCI 237 The American Presidency
This course surveys the institutional development of the American presidency from the Constitutional convention through the current administration. It examines the politics of presidential leadership, and how the executive branch functions. An underlying theme of the course is the tensions between the presidency, leadership, and democracy.
Taught by: Gottschalk
Course usually offered in fall term
Activity: Recitation
1.0 Course Unit

PSCI 241 Polarization
Are ordinary Americans polarized? What about political elites? Is there any connection between mass and elite polarization? What do we even mean when we say some group is ‘polarized’? This class will explore these questions in some detail, and try to sort out all of the discussions about polarizations, red states and blue states, and the like.
Taught by: Levendusky
Course not offered every year
Activity: Seminar
1.0 Course Unit

PSCI 243 Dilemmas of Immigration
Beneath the daily headlines about refugees blocked entry, and undocumented migrants deported there is a set of hard questions which deserve closer attention: Should countries have borders? If countries have borders, how should they decide who is kept out and who is allowed in? How many immigrants is ‘enough’? Are immigrants equally desirable? What kinds of obligations do immigrants have to their receiving society? What kinds of obligations do host societies have to immigrants? Should there be ‘pathways’ to citizenship? Should citizenship be automatic? Can citizenship be earned? This course explores these and other dilemmas raised by immigration.
Taught by: Jones-Correa
Course offered spring; even-numbered years
Activity: Lecture
1.0 Course Unit
PSCI 247 American Campaigns and Elections
This lecture course will teach students about American campaigns and elections, from the local level to the presidential level. We will cover as many topics as possible including: the nominating process, the general campaign, campaign strategy, turnout, campaign finance, the role of issues, the importance of the economy, the power of party identification, and the role of data analysis used by campaign professionals. We will also consider how these factors matter in terms of who wins the election. In addition to the literature on campaigns and election, this lecture will put minor focus on the most recent 2016 presidential election relative to what the literature would have predicted. After the first part of the course about presidential elections, the second part will focus on Congressional elections (and a bit about state and local elections). Lastly, the third part of the course will examine how data analytics that originated in political science are now being used by campaign practitioners to win elections. Taught by: Gooch
Course not offered every year
Activity: Lecture
1.0 Course Unit

PSCI 250 U.S. Intervention in Latin America
Why has the United States government participated in regime change in Latin America? How have these interventions affected Latin American political and economic outcomes? How have they helped or hurt U.S. interests in the region? This lecture course provides an introduction to the history and politics of U.S. participation in regime change in Latin America since 1949. For each event, the course will help students understand (1) the goals of the U.S. government; (2) the historical and political context of the intervention; and (3) the outcomes and consequences, both in Latin America and for the United States. One set of short writing assignments will train students to identify the main argument of a reading and assess the quality of the evidence presented in support of that argument; a second set of short writing assignments will train students to make and defend their own argument (see draft syllabus for details). Taught by: Kronick
Course offered spring; even-numbered years
Also Offered As: LALS 250
Activity: Recitation
1.0 Course Unit

PSCI 251 Arab Israeli Relations
In this course the Arab-Israeli dispute from 1948 to the present will serve as a vehicle for understanding how domestic and global political processes interact to shape, contain, or aggravate Middle Eastern wars between states and non-state actors. Particular stress will be placed on understanding how wars affect international politics in states and political organizations and how ideological and structural features of states and organizations find expression in wars and complicate or enable the search for peace. In addition, the key features of the conflict will be interpreted as both a clash between the political interests of national and/or religious groups and as a reflection of global political power struggles. Attention will be given toward the end of the course to alternative ideas about possible resolution of the conflict as well as to the increasingly prominent argument that, in this case, there is no solution. Taught by: Lustick
One-term course offered either term
Also Offered As: JWST 248
Activity: Recitation
1.0 Course Unit

PSCI 252 War, Strategy and Politics
This class examines the strategy and politics of warfare, focusing on the way actors plan military campaigns and the factors that are likely to lead to victory and defeat. The course readings center in particular on the factors driving changes in warfare and civil-military relations. The course will cover a wide range of topics from theories of war-fighting to historical military campaigns to insurgency warfare, terrorism, and the future of war. Taught by: Horowitz
One-term course offered either term
Activity: Recitation
1.0 Course Unit

PSCI 253 International Politics of the Middle East
This course will focus primarily on episodes of external intervention by Great Powers in the politics of Middle Eastern states. We shall begin by examining the emergence of the Middle Eastern state system after the disappearance of the Ottoman Empire in the early part of the 20th century. This discussion will provide opportunities to develop key concepts in the study of international politics and will serve as crucial historical background. We shall then turn our attention to the primary concern of the course - a systematic consideration of the motives, operational results, and long-term implications of a number of important examples of intervention by Great Powers in the Middle East. Among the episodes to be considered will be British policies toward the end of World War I, in Palestine in the 1930s, and, along with the French, in Suez in 1956. Soviet intervention in the first Arab-Israeli war, in 1948, will be analyzed along with Soviet policies toward Egypt in the early 1970s. American intervention in Iran in 1953 and in the Gulf War in 1991 will also be examined.
Taught by: Lustick
Course usually offered in spring term
Also Offered As: JWST 253
Activity: Recitation

PSCI 255 The Causes of War & Peace
The existence and endurance of war provides one of the most important puzzles of politics: why is it that people keep making use of such a destructive and painful way of resolving their disputes? This course addresses this question and the related question of what factors contribute to peace, focusing on both academic and popular explanations for conflict, including among others anarchy, over-optimism, shifting power, diversionary war, the malevolent influence of war profiteers, and a variety of explanations grounded in culture, religion and other ideational variables. In this discussion, we will focus on both interstate and civil wars, and on both the onset and the eventual termination of war. At various points in the course we will discuss a wide range of historical and contemporary cases, including the World Wars, Vietnam, the Gulf War, the Iraq War, the various Arab-Israeli wars, the India-Pakistan rivalry, and a number of recent civil conflicts such as the wars in Yugoslavia, Congo, and Sudan. The course concludes with a discussion of strategies for managing ongoing conflicts and for securing peace in post war settings. Taught by: Weisiger
One-term course offered either term

PSCI 259 Chinese Foreign Policy
This seminar examines the influences on and patterns of China's international relations. Topics to be covered include the following: theoretical approaches to analyzing foreign policy; the historical legacy and evolution of China's foreign policy; contemporary China's foreign policy on traditional national security concerns as well as economic, environmental, and humanitarian issues; China's military modernization; China's foreign policy in Asia, Africa, Europe, and Latin America; China's rise and its implications for relations with the United States. The class is a seminar in which student preparation and participation will essential. Students planning to enroll in the course must have taken PSCI 219 (or, with the instructor's permission, its equivalent). You are expected to complete all required readings each week and come to seminar meetings prepared to discuss them.

PSCI 261 Emerging Technologies and the Future of the World
Technological change is always occurring, but the rate of change seems to be accelerating. Advances in robotics, artificial intelligence, cyber, biotechnology, and other arenas generate promise as well as peril for humanity. Will these emerging technologies unleash the innovative capacity of the world, generating new opportunities that help people live meaningful lives? Alternatively, are automation and other technologies chipping away at the labor market in a way that could create severe generational dislocation at best, and national and international turmoil at worst? These questions are important, and have consequences for how we live our lives, how nations interact, and the future of the world writ large. Emerging technologies could shape public policy at the local, national, and international level, and raise questions of fairness, ethics, and transparency. This course takes a unique approach, combining insights from engineering, political science, and law in an interdisciplinary way that will expose students both to the key technologies that could shape the future and ways to think about their potential politics, and society.

Activity: Seminar
1.0 Course Unit

PSCI 267 Russia and Eastern Europe in International Affairs
Russia and the European Union (EU) are engaged in a battle for influence in Eastern Europe. EU foreign policy towards its Eastern neighbors is based on economic integration and the carrot of membership. With the application of this powerful incentive, Central and Southeastern European countries such as Poland, Hungary, the Czech Republic, and Croatia have progressed rapidly towards integration with the EU (and NATO). Yet, given Russia’s opposition to the further enlargement, membership is off the table for the large semi-Western powers such as Russia itself and Turkey and the smaller countries inhabiting an emerging buffer zone between Russia and the EU, such as Georgia, Ukraine, Azerbaijan, Moldova, and Belarus. These in-between countries find themselves subject to intense competition for influence between Eastern and Western powers. In this context, EU countries must balance their energy dependence on Russia and need for new markets and geopolitical stability with concern for human rights, democratic governance, and self-determination. What are the trade-offs implicit in the foreign policies of Russia, EU member states, and Eastern Europe? What are the best policy approaches? What are the main opportunities and obstacles?

PSCI 271 Constitutional Law: Public Power & Civil Rights to 1912
This course explores the creation and transformations of the American constitutional system's structures and goals from the nation's founding through the period of Progressive reforms, the rise of the Jim Crow system, and the Spanish American War. Issues include the division of powers between state and national governments, and the branches of the federal government; economic powers of private actors and government regulators; the authority of governments to enforce or transform racial and gender hierarchies; and the extent of religious and expressive freedoms and rights of persons accused of crimes. We will pay special attention to the changing role of the Supreme Court and its decisions in interpreting and shaping American constitutionalism, and we will also read legislative and executive constitutional arguments, party platforms, and other influential statements of American constitutional thought.

1.0 Course Unit

PSCI 282 Lying, Cheating, Stealing, and Killing: How to Think About Professional Ethic
Professionals - in business, medicine, law, and politics - face myriad ethical dilemmas in their daily work life that challenge, and sometimes conflict with, the moral commitments that guide their everyday life. This course systematically examines the ethical dimensions of these four professional roles, asking questions such as: Are there limits to what we should sell? How far should competitors go to 'win'? Who should get ventilators in a flu pandemic? Is it morally permissible for physicians to assist in suicide? Should lawyers represent terrorists or child killers? How far does attorney-client privilege go? Is it morally justifiable to torture enemy combatants? Should politicians lie?

Also Offered As: BIOE 282
Activity: Lecture
1.0 Course Unit

PSCI 286 Islamist Political Theory: From al-Banna to bin Laden
This course focuses on one of the most important but least understood strands of Muslim political theory: Islamist political thought. We begin by defining such politically-laden terms as Islam, Islamism, the West, terrorism, jihadism, etc. We then systematically analyze the arguments of a range of Islamist thinkers and organizations, including al-Banna, Qutb, Mawdudi, al-Ghazali, Khomeini, al-Qaradawi, bin Laden, Hamas and ISIS. Among the questions central to the course are: what is the relationship, if any, between Islamism and democracy? How do Islamists seek to remake the modern state? What explicit claims about women, and implicit assumptions about gender; characterize the work of many Islamist thinkers, and why does this matter? What does jihad mean, and does it necessarily legitimate violence? Relatedly, is violence ever justifiable, and under what conditions? What are the arguments for globalizing jihad? And importantly: why ask these questions rather than others; what assumptions are built into them; and what kinds of political dangers do they court? Prior coursework in political theory, philosophy or on Islam is strongly recommended. Open to first years with permission of the instructor.
Taught by: Euben
Activity: Lecture
1.0 Course Unit

PSCI 298 Selected Topics in Political Science

PSCI 313 People of the Land: Indigeneity and Politics in Argentina and Chile
This undergraduate seminar compares the evolution of relations between settler colonial nation-states and indigenous peoples and movements throughout the Americas, with a particular focus on the Mapuche people of the Patagonia region, in the south of nowadays Argentina and Chile. The main goal of the course is to comparatively study the organization of indigenous communities and analyze their political demands regarding plurinationality, self-determination, territory, prior consultation, living well, and intercultural education and health care, as well as the different ways in which settler colonial nation-states accommodate or respond to such demands. The course is organized in three parts. The first part of the course studies indigenous rights in international law and in global affairs, particularly in the United Nations, the Organization of American States, and the International Labor Organization. The second part of the course studies indigenous organization, movements, parties, and political representation, in Latin America since the 1990s, when indigenous demands acquired national and international notoriety throughout Latin America. The third part of the course zooms in a comparative analysis of the relationship between the Mapuche (Mapu: land; -che: people) and the formation and evolution of the settler colonial nation-states in Argentina and Chile. Once international travel resumes, the course will have an eight-day travel component. Students will travel to the south of Argentina to visit indigenous Mapuche communities to experience and learn firsthand about their culture, intercultural education and health, recuperation of identity and language practices, different models of economic sustainability, and of territorial claims and arrangements - including co-management between indigenous communities and the National Parks system.
Taught by: Falleti
Course offered spring; odd-numbered years
Prerequisite: SPAN 202
Activity: Seminar
1.0 Course Unit

PSCI 314 Democracy in Latin America
Since the inception of the twenty first century, Latin America has undergone major economic, social, and political transformations. Many of the neoliberal policies of the last quarter of the twentieth century were reversed or revisited, economic inequality decreased significantly across the region, and anumber of governments turned to the left of the political spectrum, often instituting major public policy and constitutional reforms. How have those changes affected citizenship and democracy in the region? In particular, have citizens' channels for representation and participation changed in the recent past? What has happened to local participatory institutions since the return to the right in some countries of the region? The course will explore these and related questions. Students will develop their own research projects throughout the semester. While not a requirement, the ability to read Spanish or Portuguese will significantly enhance students' learning experience.
Taught by: Falleti

1.0 Course Unit
PSCI 320 Who Gets Elected and Why? The Science of Politics
What does it take to get elected to office? What are the key elements of a successful political campaign? What are the crucial issues guiding campaigns and elections in the U.S. at the beginning of the 21st century? This class will address the process and results of electoral politics at the local, state, and federal levels. Course participants will study the stages and strategies of running for public office and will discuss the various influences on getting elected, including: Campaign finance and fundraising, demographics, polling, the media, staffing, economics, and party organization. Each week we will be joined by guest speakers who are nationally recognized professionals, with expertise in different areas of the campaign and election process. Students will also analyze campaign case studies and the career of the instructor himself. Edward G. Rendell is the former Mayor of Philadelphia, former Chair of the Democratic National Committee, and former Governor of Pennsylvania. A note if you are not able to gain a seat in this course: Please write to urbs@sas.upenn.edu to be added to a waitlist. Waitlisted students are encouraged not to miss the first class. The professors will be able to register many waitlisted students in the first week of the semester, but only after the first class session on Monday, Sept. 14th, 6-9pm. Taught by: Rendell Course usually offered in fall term Also Offered As: GAFL 509, URBS 320 Activity: Lecture 1.0 Course Unit

PSCI 327 Modern India
This course attempts to examine the experience of representative democracy in India and the country’s development record in a historical framework. It will ask questions such as: How did representative democracy emerge in India and what explains its persistence? What are the sources of its vulnerability? What kind of a sense of nationhood does this democratic experience rest upon? What are the exclusions built into this conception of nationhood? What is the relationship between India’s development experience and its democratic experiment? How have India’s ‘traditional’ institutions adapted or failed to adapt to modern circumstances? Why has India performed well in certain economic sectors such as IT even while its record in providing basic social services has been poor? How has India’s self-perception about its place in the world changed in recent years and what are its implications? Taught by: Kapur Course not offered every year Activity: Seminar 1.0 Course Unit

PSCI 328 Diplomacy in the Americas - The Penn Model OAS Program
'Diplomacy in the Americas’ an academically based community service course in which students work with Philadelphia and Norristown public school students to explore solutions to critical problems facing the Americas. Entrenched political, economic, and social inequality, combined with environmental degradation, weak institutions, pervasive health epidemics, weapon proliferation, and other issues pose formidable hurdles for strengthening democratic ideals and institutions. The Organization of the American States (OAS), the world’s oldest regional organization, is uniquely poised to confront these challenges. ‘Diplomacy in the Americas’ guides students through the process of writing policy resolutions as though the students were Organization of the American States (OAS) diplomats, basing their research and proposals on democracy, development, security, and human rights - the four pillars of the OAS. Students will also read literature about what it means to educate for a democracy and global citizenry, and they will have the opportunity to turn theory into practice by creating and executing curriculum to teach and mentor the high school students through interactive and experiential pedagogies. Taught by: Bartch Course usually offered in fall term Also Offered As: LALS 328 Activity: Seminar 1.0 Course Unit

PSCI 330 PIW Semester Core Seminar: Conducting Public Policy Research in Washington DC
This seminar is taught in Washington D.C. for students enrolled in the Washington Semester Program. It includes an orientation to observation and research in the Washington Community and a major independent research project on the politics of governance. Taught by: Martinez One-term course offered either term Activity: Seminar 2.0 Course Units

PSCI 332 Survey Research & Design
Survey research is a small but rich academic field and discipline, drawing on theory and practice from many diverse fields including political science and communication. This course canvasses the science and practice of survey methods, sampling theory, instrument development and operationalization, and the analysis and reporting of survey data. Major areas of focus include measurement and research on survey errors, application to election polling, new frontiers in data collection, overall development of data management and introductory statistics. Taught by: Dutwin Course not offered every year Also Offered As: COMM 332 Activity: Seminar 1.0 Course Unit
PSCI 333 Political Polling
Political polls are a central feature of elections and are ubiquitously employed to understand and explain voter intentions and public opinion. This course will examine political polling by focusing on four main areas of consideration. First, what is the role of political polls in a functioning democracy? This area will explore the theoretical justifications for polling as a representation of public opinion. Second, the course will explore the business and use of political polling, including media coverage of polls, use by politicians for political strategy and messaging, and the impact polls have on elections specifically and politics more broadly. The third area will focus on the nuts and bolts of election and political polls, specifically with regard to exploring traditional questions and scales used for political measurement; the construction and considerations of likely voter models; measurement of the horserace; and samples and modes used for election polls. The course will additionally cover a fourth area of special topics, which will include exit polling, prediction markets, polling aggregation, and other topics. It is not necessary for students to have any specialized mathematical or statistical background for this course.
Equivalent R based course if prerequisite not met.

PSCI 335 Healthy Schools
This Fox Leadership and academically based community service seminar will use course readings and students' own observations and interviews in their service learning projects in West Philadelphia schools to analyze the causes and impact of school health and educational inequalities and efforts to address them. Course readings will include works by Jonathan Kozol, studies of health inequalities and their causes, and studies of No Child Left Behind, the CDC's School Health Index, recess, school meal, and nutrition education programs. Course speakers will help us examine the history, theories, politics and leadership behind different strategies for addressing school-based inequalities and their outcomes. Service options will focus especially on the West Philadelphia Recess Initiative. Other service options will include work with Community School Student Partnerships and the Urban Nutrition Initiative.

PSCI 338 Statistical Methods PSCI
The goal of this class is to expose students to the process by which quantitative political science research is conducted. The class will take us down three separate, but related tracks. Track one will teach some basic tools necessary to conduct quantitative political science research. Topics covered will include descriptive statistics, sampling, probability and statistical theory, and regression analysis. However, conducting empirical research requires that we actually be able to apply these tools. Thus, track two will teach us how to implement some of these basic tools using the computer program R. However, if we want to implement these tools, we also need to be able to develop hypotheses that we want to test. Thus, track three will teach some basics in research design. Topics will include independent and dependent variables, generating testable hypotheses, and issues in causality. You are encouraged to register for both this course and PSCI 107 at the same time, as the courses cover distinct but complementary material. But there are no prerequisites nor is registering for PSCI 107 necessary, in order to take this course. The class satisfies the College of A Science Quantitative Data Analysis (QDA) requirement.

PSCI 353 Security & Anxiety at International Borders: Turkey & USA in Global Perspective
Borders are increasingly contested in global order, yet function as distinct markers of statehood and sovereignty. How states control their borders physically is an important manifestation of their sovereignty rights. In this course, we explore the meaning attached to international borders for two allies in very different regions of the world, Turkey and the United States. We inquire into the role that national territorial and international borders have come to play in their national identities. We will place these two countries in the context of their ‘neighborhoods’ to understand the threats and opportunities seem to attend border spaces. With their extensive coastlines and land boundaries, these states are subject in different ways to external influences. Both have extensive trade relations with the rest of the world, as well as extensive illicit economies along their borders. The United States is a nation of immigrants currently questioning the value of immigration. Turkey is host to the largest number of refugees in the world. Each state faces its own version of an ontological crisis, as they decide how to engage, filter or deflect extraterritorial flows and influences. These developments raise intense issues of identities and boundaries - in particular the question of how different societies engage in border protection. This seminar focuses on the comparative experiences of Turkey and the USA in their methods of maintaining borders and dealing with anxiety about uncontrolled transnational flows of products and people across their borders. The seminar explores how security and insecurity are understood, produced, and implemented in the form of border security policies. The comparative study of American and Turkish border control will uncover both similarities in the framing of border policies, but also distinct differences on how these two countries deal with border security. The international focus will enable students to appreciate the global aspect of border security issues, and research multiple questions on the extent to which what is facing the USA in terms of border security is not unique on its own. This course will be co-taught with a professor and students at Sabanci University. We will overlap with their classroom for roughly half of out three hour seminar meeting, and the professors will co-teach the course. Common readings will be discussed each week, but each Professor will assign additional readings of her choice to complement the common discussions. In the Penn seminar, we will aim to produce a research paper, so in addition to discussing the substantive readings, we will concentrate on formulating interesting research questions, think carefully about how to bring data to bear on specific questions or hypotheses, become familiar with data sources, and discuss research design. Instructor permission (students must apply).
Taught by: Simmons
Course not offered every year
Activity: Seminar
1.0 Course Unit

PSCI 355 Topics in Race and International Relations
This seminar focuses on issues of race in international relations. The specific focus of the course will vary by semester.

Course not offered every year
Activity: Seminar
1.0 Course Unit

PSCI 358 International Law
Do legal rules really affect international politics? This course explores why international law has the form and content it does, and its role in shaping how states and other actors behave. It combines law and social science to examine important issues of the day, including security policies, human rights, and economic relationships.
Taught by: Beth Simmons
Course not offered every year
Also Offered As: LAW 708
Activity: Lecture
1.0 Course Unit

PSCI 395 Power Sharing in Deeply Divided Places - BFS
This course examines conceptual, explanatory and normative debates over power-sharing systems. We explore the circumstances in which federal, consociational and other power-sharing institutions and practices are proposed and implemented to regulate deep national, ethnic, religious or linguistic divisions. We evaluate these systems, seeking to explain why they are formed or attempted, and why they may endure or fail, paying special attention to bi- and multi-national, multi-ethnic, multi-religious and multi-lingual environments. Restricted to Benjamin Franklin Scholars, seniors and juniors in Political Science, seniors in PPE; others by permission.
Taught by: O’Leary
Course not offered every year
Activity: Seminar
1.0 Course Unit

PSCI 398 Selected Topics in Political Science
Consult department for detailed descriptions. More than one course may be taken in a given semester. Recent titles have included: Sustainable Environmental Policy & Global Politics; Shakespeare and Political Theory.
Taught by: Gans
One-term course offered either term
Activity: Seminar
1.0 Course Unit

PSCI 404 Media and Politics
Media and Politics will examine multiple issues specific to the past and present political media environment in the United States. Focus will be primarily, though not exclusively, on the contemporary news media. Topics covered will include political primaries, how elections have been influenced by the rise of partisan media, selective exposure, freedom of political speech as it relates to elections, the theoretical purpose of elections, money and media, political targeting, etc. We will also explore the quantitative and qualitative methods underlying what is and is not known about how elections work. Reading expectations will be relatively heavy, and under the supervision of the professor, students will write an original research paper examining a specific topic in greater depth.

Course not offered every year
Also Offered As: COMM 404
Activity: Seminar
1.0 Course Unit
PSCI 410 Race and Racism in the Contemporary World
This undergraduate seminar is for advanced undergraduates seeking to make sense of the upsurge in racist activism, combined with authoritarian populism and neo-fascist mobilization in many parts of the world. Contemporary manifestations of the phenomena noted above will be examined in a comparative and historical perspective to identify patterns and anomalies across various multiple nation-states. France, The United States, Britain, and Italy will be the countries examined. Taught by: Hanchard
Course not offered every year
Also Offered As: AFRC 465, LALS 465
Activity: Seminar
1.0 Course Unit

PSCI 412 Comparative Politics
This seminar focuses on comparative political systems. Themes include political participants, leadership, institutions, instability, and system transformation in developed and less developed countries. Course not offered every year
Also Offered As: AFRC 417, HIST 467, LALS 417, SOCI 417
Activity: Lecture
1.0 Course Unit

PSCI 413 Evidence Based Policies of Economic and Political Development
This class provides a 'hands-on' introduction to the promises and limitations of using Randomized Control Trials (RCTs) to inform policy makers, practitioners, and academics of the conditions under which policies likely would have a positive effect on economic and political outcomes, in the context of international development. This course has three parts: the first is devoted to understanding the 'nuts and bolts' of running field experiments / RCTs in developing countries. In part, we will be reading Glennester and Takavarasha's Running Randomized Evaluations: A Practical Guide. In addition, we will discuss core behavioral concepts from both behavioral economics and social psychology (prospect theory). The second part of the course will be devoted to demonstrating how schools have used RCTs to inform core policy debates (e.g. What are some effective ways to reduce corruption? How can we improve the performance of frontline service providers? What can politicians be more responsive to their constituents?) In the third part, students will be presenting their own research proposals, explicitly designed to address either a core policy question in the developing world or—for those interested—in the USA. Here students will have an opportunity to partner with the Social and Behavioral Sciences Team (https://sbst.gov), which is under the National Science and Technology Council.
Taught by: Grossman
One-term course offered either term
Also Offered As: GAFL 530
Activity: Seminar
1.0 Course Unit

PSCI 418 Evolution, Politics and Computer Simulation
In this course we shall explore how recent developments in evolutionary theory relate to larger questions raised by students of complexity and complex adaptive systems. We shall study how they together provide a basis for important critiques of standard approaches in political science and enable fascinating and powerful understandings of politics and political phenomena – including national identity and identity change, state formation, revolution, globalization, and leadership. An important vehicle for the application of these insights for understanding politics is computer simulations featuring agent-based modeling. Students will use ‘PS-I’ an agent based computer simulation platform, to develop their own models, conduct experiments, test hypotheses, or produce existence proofs in relation to popular theoretical positions in contemporary political science. No knowledge of computer programming is required.
Taught by: Lustick
One-term course offered either term
Activity: Seminar
1.0 Course Unit

PSCI 433 Social Movements
Social movements and political protest have become some of the most effective tools for citizens and non-citizens to influence the political system. This course is designed to introduce students to the theoretical and methodological approaches taken in understanding these behaviors. Analyzing social movements that range from civil discontent to contentious political protest, the course will address a variety of questions: What is the origin of movement behavior and why do individuals turn to these actions in lieu of simply engaging in institutional modes of political action such as voting? What were the strategies of these movements? What are the political conditions that allow social movements to resonate with the American public? In addition to addressing these topics, this course surveys the policy successes of major social and political movements. From the Civil Rights and Women's Right Movement to the recent Tea Party movement and Hong Kong demonstrations over democracy, this course explores the various public policies that have resulted from citizens' protest actions. While state level and local level government responsiveness will be addressed, special attention will be given to how political protest influences public policy in all three branches of the federal government.

PSCI 434 Advanced Topics in American Politics
This seminar is designed to serve as a 'capstone' experience for advanced undergraduates interested in American politics. It exposes students to some of the issues currently being studied and debated by the leading scholars in the field. For each topic we will read works that take competing or opposing positions on an issue; for example we will examine the current controversy over the causes and and consequences of divided government. Students will write a research paper analyzing one of the debates.
Taught by: Gillion
Course not offered every year
Also Offered As: AFRC 435
Activity: Seminar
1.0 Course Unit
PSCI 436 Political Psychology
How do campaign advertisements influence voters’ perceptions and behavior? What roles do emotions play in politics? Do we all harbor some measure of racism, sexism, or homophobia, and what role do these stereotypes play in political behavior? How and why do ideologies form, and how does partisanship influence the way that voters understand the political world? How do people perceive threat, and what are the psychological consequences of terrorism? These questions, and many others, are the province of political psychology, an interdisciplinary field that uses experimental methods and theoretical ideas from psychology as tools to examine the world of politics. In this course, we will explore the role of human thought, emotion, and behavior in politics and examine the psychological origins of citizens’ political beliefs and actions from a variety of perspectives. Most of the readings emphasize politics in the United States, though the field itself speaks to every aspect of political science.
Taught by: Margolis
Course not offered every year
Activity: Seminar
1.0 Course Unit

PSCI 437 Race & Criminal Justice
Why are African Americans and some other minority groups disproportionately incarcerated and subjected to penal sanctions? What are the political, social and economic consequences for individuals, communities, and the wider society of mass incarceration in the United States? What types of reforms of the criminal justice system are desirable and possible? This advanced seminar analyzes the connection between race, crime, punishment, and politics in the United States. The primary focus is on the role of race in explaining why the country’s prison population increased six-fold since the early 1970s and why the United States today has the highest incarceration rate in the world. The class will likely take field trips to a maximum-security jail in Philadelphia and to a state prison in the Philadelphia suburbs.

PSCI 497 Political Science Honors
This is a mandatory seminar for all students planning to submit an honors thesis for the purpose of possibly earning distinction in Political Science upon graduation. The course is aimed at helping students identify a useful and feasible research question, become familiar with the relevant literatures and debates pertaining to that question, develop a basic understanding of what might constitute ‘good’ and ‘original’ research in different subfields, and set up a plan for conducting and presenting the research. The course is also aimed at building a community of like-minded student researchers, which can complement and enrich the honor student’s individual experience of working one-on-one with a dedicated faculty thesis advisor. Students apply in the spring of their junior year for admissions to the honors program and enrollment in PSCI497.
Taught by: Doherty-Sil
One-term course offered either term
Activity: Seminar
1.0 Course Unit

PSCI 498 Selected Topics in Political Science
Consult department for detailed descriptions. Recent topics include: Globalization; Race & Criminal Justice; Democracy & Markets in Postcommunist Europe.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

PSCI 499 Independent Study - Honors
Individual research to be taken under direction of faculty member. Students wishing to complete work on an honors paper should contact the Political Science Department.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
PSCI 511 Society and Politics in India
This course examines the experience of representative democracy in India and the country's development record in a historical framework. It will ask questions such as: How did representative democracy emerge in India, and what explains its persistence? What are the sources of its vulnerability? What kind of a sense of nationhood does this democratic experience rest upon? What are the exclusions built into this conception of nationhood? What is the relationship between India's development experience and its democratic experiment? How have India's 'traditional' institutions adapted or failed to adapt to modern circumstances? Why has India performed well in certain economic sectors even while its record in providing basic social services has been dismal? How have the Indian State and its public institutions managed and coped with these changes? And how has India's self-perception about its place in the world changed in recent years, and what are its implicatons?
Taught by: Kapur, Frankel
Course not offered every year
Activity: Seminar
1.0 Course Unit

PSCI 513 Latin American Politics
This graduate level course will be embedded in course PSCI/LALS 213, the same way that PSCI 517 (Russian Politics) is embedded in PSCI 217. In other words, graduate students taking this course will have to attend lectures twice a week, but instead of discussing materials in recitations will meet with Professor Falleti, either weekly (one hour) or biweekly (two hours), to discuss the main topics of the course and research questions and proposals related to the course.
Taught by: Falleti
Course usually offered in fall term
Also Offered As: LALS 513
Activity: Lecture
1.0 Course Unit

PSCI 517 Russian Politics
This course will present an in-depth examination of political, economic and social change in post-Soviet Russia within a historical context. After a bref discussion of contemporary problems in Russia, the first half of the course will delve into the rise of communism in 1917, the evolution of the Soviet regime, and the tensions between ideology and practice over the seventy years of communist rule up until 1985. The second part of the course will begin with an examination of the Gorbachev period and the competing interpretations of how the events between 1985 and 1991 may have contributed to the collapse of the Soviet Union. We will then proceed to make sense of the continuities and changes in politics, economics and society in contemporary Russia. Important topics will include the confrontations accompanying the adoption of a new constitution, the emergence of competing ideologies and parties, the struggle over economic privatization, the question of federalism and nationalism, social and political implicatons of economic reform, and prospects for Russia's future in the post-Yeltsin era. This course may also be taken as a graduate seminar (PSCI 517) with the permission of the instructor and the completion of additional requirements.
Taught by: Sil
Course usually offered in spring term
Also Offered As: PSCI 217, REES 217
Activity: Recitation
1.0 Course Unit

PSCI 530 The Political Economy of Gender
Over the past two hundred years, with the rise industrial production, growing educational attainment, and availability of contraception, women have entered the formal labor market in vast numbers. Yet despite advances, there are still important disparities between the sexes, often exacerbated by class and racial politics. This course unpacks the elements of the transition in the political economy of gender and examines its limits. We set out to understand women's labor in emerging industrial and post-industrial economies; the causes and consequences of women's political inclusion; gendered opportunities in the labor force including the persistence of pay gaps; and the formation of economic and political preferences across the genders. Theoretically, we will engage with Marxian political economy, and new institutionalist approaches to understand how political and economic institutions reproduce or remedy contemporary problems including the gender gap in wages, in political representation, and in women's economic opportunities. Throughout the course we will pay special attention to challenges faced by minority groups and by women in developing countries.
Taught by: Teele
Course usually offered in fall term
Also Offered As: GSWS 598
Activity: Seminar
1.0 Course Unit

PSCI 531 Public Opinion & Elections
This course is designed to give advanced undergraduates and graduate students exposure to the literature on political behavior in American politics (the course is part of the departments 3-course graduate sequence in American politics). The course will cover both the classics and more recent studies of public opinion and political behavior from the Columbia, Michigan, and Rochester schools, as well as more current topics and debates in the literature. Topics include (but are not limited to) the early voting studies, the role of partisanship, the nature and origins of ideology, mass-elite interactions, heuristics and low information rationality, the nature of the survey response, campaign and media effects, framing effects, and the role of institutions in structuring behavior. Undergraduates are welcome in the class, but they should know that the class assumes familiarity with quantitative approaches to studying politics.

PSCI 545 Politics and Education
How is education a form of political action? In this course we look at
the governance of schools, the trust in them and their relations to socio-
economic conditions in society, among other topics, using research in
education, political science, and political theory.
Taught by: BEN-PORATH
Course usually offered in fall term
Also Offered As: EDUC 595
Activity: Seminar
1.0 Course Unit

PSCI 550 Borders & Boundaries in International Relations
This research seminar explores the meanings, rules and consequences of
borders and boundaries in international relations. How was a political
world based on territorial sovereignty created, how are international
borders determined, and how are they adjudicated and maintained?
How do international borders influence war and peace between
states? How do borders, border regions, and border activities speak to
national encounters with neighbors and the rest of the world? How do
they affect international trade and development? When and how are
international borders ‘securitized,’ and how does this affect the flow of
goods, people, and illicit activities around and across the border? How
do states ‘cooperate’ across international borders? We will examine
the meaning and function of boundary-making between states from
multiple disciplines and perspectives: political science, international law,
international relations, history, geography, sociology, and economics.
Borders, borders and border crossings have multiple significance
as designations of state authority, security buffers, expressions of social
meaning and opportunities for economic integration. We explore their
creation, challenges, and reinforcement over time and around the world.
As a seminar designed primarily to stimulate research, this course will be
concerned with historical and current problems relating to international
borders around the world. We will concentrate on formulating interesting
research questions, think carefully about how to bring data to bear on
specific questions or hypotheses, become familiar with data sources,
and design our own research. All assignments are related to developing
research skills; there are no in-class exams.
Taught by: Simmons
Course not offered every year
Also Offered As: LAW 989
Activity: Seminar
1.0 Course Unit

PSCI 552 Game Theory
This course provides an introduction to non-cooperative game theory
and its applications to political science. The goal of the course is to
provide students with the background and understanding necessary
to read published game-theoretic work in political science journals.
To that end, the course covers the basic concepts of game theory,
including Nash equilibrium and its main refinements, simultaneous and
sequential games, repeated games, evolutionary game theory, and games
of incomplete and private information. In addition, we will cover some
of the central models used in political science, notably models of public
choice (such as the median voter theorem) and models of bargaining.
Taught by: Weisiger
Course not offered every year
Activity: Seminar
1.0 Course Unit

PSCI 558 Human Rights
This course will examine the theoretical, historical and political
foundations of contemporary human rights debates. The course will
cover not only broad conceptual issues, but also specific issue areas
(e.g., civil rights, economic rights, women’s rights, business and human
rights), as well as the question of how new rights norms emerge and
diffuse in the international arena. The course is open to students in the
Master of Liberal Arts Program, as well as students who are actively
pursuing the Graduate Certificate in Interdisciplinary Studies in Global
Human Rights.
Taught by: Doherty-Sil
Also Offered As: PSCI 258
Activity: Recitation
1.0 Course Unit

PSCI 582 Gender, Power & Feminist Theory
This seminar will examine the theme of power as it engages questions of
sex and gender. Subsidiary themes that will be developed over the
course of the semester include: the modernism/postmodernism debate
as it particularly relates to feminism; the intersectionality of race, gender,
sexuality and class and how feminists can and do talk about ‘women’;
the relevance of feminist theory to policy issues, and which theoretical
approaches are the most appropriate or have the most powerful potential.
The readings will start with ‘foundational’ texts in feminist theory—
texts that anyone who wants to work in or teach feminist theory needs
to have in their repertoire, they set out the background and history
of contemporary feminist theory, and they operate from a variety of
disciplinary frameworks. We then will move onto some newer scholarship
and some more specific political issues and topics, depending on what
students in the course are interested in studying. This course is open to
undergraduates who have had some prior course work in feminist theory,
gender and sexuality studies, and/or political theory, in consultation with
the professor.
Taught by: Hirschmann
Course not offered every year
Also Offered As: GSWS 582
Activity: Seminar
1.0 Course Unit

PSCI 584 Political Philosophy
An examination of basic theoretical problems of political science
divided into three parts. First, specific features of social sciences will
be examined and three most important general orientations of social
sciences (analytical, interpretative and critical) will be compared and
analyzed. Second, basic concepts of social and political sciences will
be studied: social determination, rationality, social change, politics,
power, state, democracy. Third, the problem of value judgments will be
considered: Is there a rational, objective method for the resolution of
conflicts in value judgments? Is morality compatible with politics?

1.0 Course Unit

PSCI 598 Selected Topics
Consult department for detailed descriptions. More than one course
may be taken in a given semester. Recent titles have included: Race
Development and American International Relations, Hegel and Marx, and
Logic of the West.
One-term course offered either term
Activity: Seminar
1.0 Course Unit
PSCI 600 International Relations Theory
This purpose of this course is two-fold. First, the survey course is designed to introduce students to a wide range of theories of international politics. During the course of the semester we will examine neo-realism, power transition theory, hegemonic stability theory, the modern world system, international regimes and interdependence, the democratic peace, bureaucratic politics, organizational theory, constructivism, and decision making theory. Second, the course will sharpen students’ research design skills. The written assignments require students to take the often abstract theories presented in the readings and develop practical research designs for testing hypotheses derived from the theories. The papers will not include data collection or the execution of actual tests. Rather, they will focus on the conceptual problems of designing tests which eliminate competing hypotheses, operationalizing variables, and identifying potential sources of data. Student’s grades will be based on five short research designs and discussion leadership. 
Course not offered every year

1.0 Course Unit

PSCI 610 Comparative Political Analysis
This seminar is aimed primarily at graduate students planning to take doctoral exams in comparative politics. It provides a critical survey of the field of comparative politics, tracing the intellectual history of the field, examining shifts in conceptual frameworks and research traditions, and comparing alternative methodological approaches. The first half of the course generally examines how processes of political, economic, and social change have been theorized in the social sciences from the mid-19th century to the present. In this process, particular attention is paid to the bifurcation between theories that emphasize the ‘universal’ (e.g. the homogenizing effects of specific processes or variables) and the ‘particular’ (e.g. the persistence of distinctive historical legacies and trajectories). Since this bifurcation is reinforced by distinct styles and methods of research, the seminar also probes the recent battles between rational-choice, cultural, and structuralist scholars, while considering the trade-offs between varieties of formal, quantitative, and qualitative methods. In the second half, the focus shifts to the range of substantive problems investigated by scholars in the field of comparative politics. These topics cover the complex relations among nations, states and societies; the origins, consolidation, and patterns of democratic governance; political economy in relation to development processes and social policies; the intersection of international/global economy and domestic politics; the dynamics of revolutions and social movements; and alternative problematics constructed from the point of view of real actors such as workers, women, and local communities. In all cases, As a whole, the course is designed to provide an introduction to important issues and debates that comparativists have regularly engaged in; to help you understand the assumptions behind, and differences between, particular approaches, methods, and styles of research; to examine whether current debates are spurring new or better research in a given field in light of past approaches; and to gauge whether there has been progress, fragmentation, or stagnation in the field of comparative politics as a whole.
Taught by: Sil
Course not offered every year
Activity: Seminar
1.0 Course Unit

PSCI 612 Topics in Black Political Thought: Difference And Community
This course is designed to familiarize graduate students with some of the key texts and debates in Africana Studies concerning the relationship between racial slavery, modernity and politics. Beginning with the Haitian Revolution, much of black political thought (thinking and doing politics) has advocated group solidarity and cohesion in the face of often overwhelming conditions of servitude, enslavement and coercion within the political economy of slavery and the moral economy of white supremacy. Ideas and practices of freedom however, articulated by political actors and intellectuals alike, have been as varied as the routes to freedom itself. Thus, ideas and practices of liberty, citizenship and political community within many African and Afro-descendant communities have revealed multiple, often competing forms of political imagination. The multiple and varied forms of political imagination, represented in the writings of thinkers like Eric Williams, Richard Wright, Carole Boyce Davies and others, complicates any understanding of black political thought as having a single origin, genealogy or objective. Students will engage these and other authors in an effort to track black political thought’s consonance and dissonance with Western feminisms, Marxism, nationalism and related phenomena and ideologies of the 20th and now 21st century.
Taught by: Hanchard
Also Offered As: AFRC 655, GSWS 655, LALS 656
Activity: Seminar
1.0 Course Unit

PSCI 614 Political Identity & Political Institution
Course not offered every year
Activity: Seminar
1.0 Course Unit

PSCI 615 Political Economy of Development
This course examines the debate in development studies arising from recognition that economic models, theories, methods, and strategies abstracted from the specific experience of western societies and cultures do not have general applicability. A broader social science approach is adopted, one which emphasizes the need to understand the social structures and cultures of the developing countries, the capabilities of weak versus strong states, and the links with the international system that influence transformative processes to which industrializing economies are subjected. The readings offer an overview of the most influential theories of development and underdevelopment that structured debate from the 1960’s through the 1990’s, and focus on the elements of these approaches that advance understanding of development and stagnation in several key countries, including Brazil, Mexico, India and selected countries in East and Southeast Asia.

Course not offered every year
Activity: Seminar
1.0 Course Unit

PSCI 618 International Political Economy
Examination of the relationship between the international, political, and economic systems from a variety of theoretical perspectives that have emerged in the postwar period, including liberalism, transnationalism, statism, Marxism, and dependency. 
Taught by: Mansfield
Course not offered every year
Activity: Seminar
1.0 Course Unit
PSCI 619 Strategic Studies Seminar
This seminar offers graduate students an introduction to the subfield of international relations labeled strategic studies (or security studies). In addition to exploring key theoretical issues, we consider their usefulness for understanding relevant events in international politics since World War II. Although the course emphasizes the distinctive features of great power strategy in the nuclear age, we also look at the continuing role of conventional forces, the strategic choices of lesser powers, and selected security problems in the post-Cold War world (e.g., proliferation, terrorism).
Taught by: Goldstein
Course not offered every year
Activity: Seminar
1.0 Course Unit

PSCI 631 American Political Development
Analyzes important patterns of continuity and change in American politics by examining the development of the American State from a comparative and historical perspective. Covers issues and debates central to not only the subfield of American politics, but also the discipline of political science more broadly. These include the role of the state, political culture, interests, ideas, and institutions in politicaleducation, and the role of history in political analysis. Open to advanced undergraduates with the permission of the instructor.
Taught by: Gottschalk

Activity: Seminar
1.0 Course Unit

PSCI 633 Hegemonic Analysis: Theories and Applications
An important strain within contemporary political science has been the attempt to explain how power is exercised through the manipulation or exploitation of consciousness, habits, and cultural predispositions. One of the key concepts in the study of these issues is that of 'hegemony' – the establishment of particular beliefs as commonsensical presumptions of political life. In this course that notion will be systematically explored. Of particular interest will be how authors who conduct hegemonic analysis cope with the problem of analyzing the effect of what the objects of their analysis, by definition, do not and, in some sense, cannot, think about. Illustrations of hegemonic phenomena and attempts to analyze them will be drawn from a variety of fields, such as political theory, historiography, comparative politics, American politics, rational choice theory, agent based modeling, and epistemology.
Taught by: Lustick
Course not offered every year

PSCI 635 Experimental Design and Issues in Causality
The main goal of this course is to familiarize students with experiments, quasi-experiments, survey experiments and field experiments as they are widely used in the social sciences. Some introductory level statistics background will be assumed, though this is a research design course, not a statistics course. By the end of the course, students will be expected to develop their own original experimental design that makes some original contribution to knowledge. Throughout the course of the semester, we will also consider how to deal with the issue of causality as it occurs in observational studies, and draw parallels to experimental research.

1.0 Course Unit

PSCI 805 Analysis of Election Data
This course is intended to serve as a workshop for students interested in the empirical analysis of elections, public opinion and political communication more generally. The centerpiece of the course will be an original research paper produced by each student on a topic of his or her own choosing. The requirements for these papers are fairly open, but demanding: the research papers must a) involve empirical analysis of a major election data set, b) be oriented toward answering an original research question selected with the guidance of the instructor, and c) aim to be of publishable quality. There are no formal prerequisites for the course. However, if you have less than two semesters of statistical training, and/or no formal background in the study of elections, public opinion or political communication, then this is probably not the right course for you. In order to be able to formulate an original research question, you need some background in the literature, which is provided by other courses, but is not a formal part of this course.

Portuguese (PRTG)

**PRTG 110 Elementary Portuguese I**

Portuguese 110 is a first-semester introductory language course for students who have not studied Portuguese before, or who have had little exposure to the language. The course will emphasize the development of foundational reading, writing, listening and speaking abilities within a cultural context. Students will participate in paired and group activities designed to elicit meaningful and accurate exchanges of information. The course will introduce students to Portuguese and Lusophone culture through a variety of authentic materials, including texts, songs, films and other audio and video material. Classes will be conducted in Portuguese.

For BA Students: Language Course

Course usually offered in fall term

Activity: Seminar

1.0 Course Unit

**PRTG 114 Portuguese for Spanish Speakers I**

Portuguese 114 is designed for students who have studied Spanish. The course begins with exposure to basic vocabulary and structures, advancing at an accelerated pace. Classroom activities will emphasize pronunciation, spoken production as well as language structures and vocabulary. Students will participate in pairs, small-groups and whole-class activities that focus on the meaningful and accurate exchange of information. The class will be conducted in Portuguese.

One-term course offered either term

Activity: Seminar

1.0 Course Unit

**PRTG 120 Elementary Portuguese II**

This class continues the development of a basic proficiency that will help reinforce the student’s abilities and confidence. A broad range of lively, high-interest readings such as newspaper and magazine articles in current events on Brazilian culture will allow the student to gain a genuine sense of current usage. A Brazilian movie is presented and discussed in groups. Daily homework assignments involve writing exercises, short compositions and group projects.

For BA Students: Language Course

Course usually offered in spring term

Prerequisite: PRTG 110

Activity: Seminar

1.0 Course Unit

**PRTG 130 Intermediate Portuguese I**

This is a third-semester intermediate course, in a four-course strand, designed for students who have taken at least two semesters of Portuguese. Classroom activities will emphasize pronunciation, spoken production, grammar and language structures, and vocabulary at the intermediate level. Students will explore movies, music, short stories, and other media as they further develop speaking, writing, reading and interpretive skills in Portuguese. The course will be conducted in Portuguese.

For BA Students: Language Course

Course usually offered in fall term

Prerequisite: PRTG 120

Activity: Seminar

1.0 Course Unit

**PRTG 134 Portuguese for Spanish Speakers II**

Portuguese 134 is an accelerated intermediate course designed for students who have taken Portuguese for Spanish Speakers I, or its equivalent. Classroom activities will emphasize the development of pronunciation and spoken production, the use of language structures and vocabulary at the intermediate level. In addition, students will explore movies, music, short stories, and other media as they further develop reading, speaking and interpretive skills in Portuguese. The course will be conducted in Portuguese.

One-term course offered either term

Prerequisite: PRTG 114

Activity: Seminar

1.0 Course Unit

**PRTG 140 Intermediate Portuguese II**

This is a fourth-semester intermediate course, in a four-course strand, designed for students who have taken at least three semesters of Portuguese. Classroom activities will emphasize pronunciation, spoken production, grammar and language structures, and vocabulary at the advanced intermediate level. Students will explore movies, readings, news, music and other media as they further develop speaking, writing, reading and interpretive skills in Portuguese. The course will be conducted in Portuguese.

For BA Students: Language Course

Course usually offered in spring term

Prerequisite: PRTG 130

Activity: Seminar

1.0 Course Unit

**PRTG 202 Advanced Portuguese**

This course is designed for students who have already taken basic and intermediate levels of Portuguese. It complements students’ knowledge of Portuguese by emphasizing the use of advanced grammatical structures and vocabulary. Classes will focus on practicing such advanced language structures by reading a diverse range of texts, including short stories by different authors of the Lusophone countries, and one novel; speaking and writing about a variety of contemporary texts; watching movies and documentaries; and listening to news, songs and other authentic audio material. The emphasis will be on language usage and culture. This course will be conducted in Portuguese.

For BA Students: Advanced Language Course

One-term course offered either term

Prerequisite: PRTG 134 OR PRTG 140

Activity: Seminar

1.0 Course Unit

**PRTG 215 Portuguese for the Professions**

Portuguese for the Professions is designed for advanced-level students to develop their ability to use a wide technical vocabulary. The course will cover an array of topics in the areas of Economy, Politics, Science, Technology, Law and others as they pertain to the societies and cultures of the Lusophone countries, with particular emphasis placed on Brazil. Through readings, movies, discussions, essays and presentations, students will enhance their ability to write about and discuss these topics while employing the appropriate technical vocabulary.

Professional Writing (PROW)
The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates/).

PROW 100 Fundamentals of Professional Writing
Using an immersive, scenario-based teaching style, this course is an introduction to critically analyzing any writing situation and making your writing a purposeful act of communication. You engage in a series of authentic writing scenarios and a range of activities that provide hands-on practice and instructor coaching and feedback. Coursework includes targeted exercises for improving grammar, mechanics, clarity, precision, and persuasiveness. This collaborative, problem-based learning approach provides you with the strategies and flexibility you need to adapt to an ever-changing multimedia communication environment.
Taught by: Michael Chiappini
Activity: Online Course
1.0 Course Unit
Notes: Program fee of $175 for On Campus Learning Experience for those enrolled in the HYBRID sections of the course. The HYBRID sections of PROW 100 are open to admitted BAAS students only. Those sections which are NOT HYBRID are open to PENN LPS Online certificate students, BAAS students, Gateway students, and other coursetakers. Please check with your advisor if you have questions.

PROW 101 Fundamentals of Academic Reading and Writing
This course focuses on the fundamentals of academic writing and is designed to accommodate differing levels of expertise, from undergraduates who are new to academic writing, to those who are returning to college to complete their degrees and need a refresher, and to those who work with academic writers or are engaged in professional academic writing and seek individualized guidance and feedback. The course will introduce participants to the key knowledge domains in academic writing, including a review of academic genres. We will explore planning, reading, and research writing strategies, modes of academic reasoning and rhetoric; writing in the disciplines; context-specific writing processes; collaborative writing, and giving, receiving, and revising in response to professional-style peer review. All students will receive individualized feedback from the instructor as well as peer reviews from colleagues as a means of applying and accelerating skills by working with diverse readers and writers. Assignments will include readings drawn from different genres across the disciplines; writing assignments will be a mix of short, targeted pieces along with some source-based work.
Activity: Online Course
1.0 Course Unit

PROW 102 The Elements of Style
This course is for anyone who has been charmed by a novel, article, or tweet and wanted to have similar power as a writer. What makes a sentence pop? What makes a piece of writing seem effortless? Effective writers use words purposefully and grab their readers attention by fulfilling and sometimes disrupting expectations. Grammar is not a set of rules so much as it is a set of tools that enable us to make meaning; it allows us to appeal to the senses by creating rhythm and helping readers to feel and see our ideas. We will fill our collective toolbox through sentence-level choices such as arrangement of words, concrete versus abstract language, and sentence length. We will provide customized exercises for those who wish to work on their grammar and mechanics alongside developing other strategies for powerful, effective writing.

1.0 Course Unit

PROW 200 Writing with Data
TBA
Taught by: Dana Walker
Activity: Online Course
1.0 Course Unit
PROW 201 Presentation Design
This class focuses on how to build powerful, persuasive presentations as well as to provide advanced insight and practice in the fundamentals of professional writing. We study the genre of presentations to familiarize you with major applications—PowerPoint, Keynote, and Google Slides—as well as basic presentation formats, including live group delivery; pre-recorded narration (for asynchronous presentations); and the recent trend of slides used on corporate and other websites to provide more detailed information about the organization or its products. We also explore different presentation subgenres, such as the Ted Talk, lightning talks, and Pecha Kucha (20 slides, 20 seconds each, auto-advance). Throughout, we focus on tailoring your presentation to target audiences and purposes as we explore and practice the design elements of building presentation: space, grids, choice of fonts, images, and animation. Finally and most importantly, we work on building a powerful message, teaching you how to develop ideas and translate content into a deck that exemplifies your understanding of information hierarchies and human cognition with the goal of engaging, informing, and persuading your audiences.
Taught by: n/a
Activity: Online Course
1.0 Course Unit

PROW 301 The Power of Storytelling
From business and science to medicine and nonprofit organizations, storytelling is increasingly recognized as one of the strongest tools of communication and persuasion. This course introduces students to the use and art of storytelling, also known as narrative studies. Students review storytelling in academic and professional communities as both a research tool for gathering information about particular communities or types of individuals, and as an effective rhetorical strategy for generating emotional appeal and action, and brand identity. They also explore storytelling as a compelling means of conveying complex and memorable information. This course explores how storytelling may be variously used for inquiry, evidence gathering and persuasion. Lessons are reinforced through the examination of business anecdotes, case studies, narrative medicine, biographical notes, personal statements, and cover letters.
Activity: Online Course
1.0 Course Unit

PROW 400 Writing for Social Media
This course explores the use of social media campaigns for building organizational or brand identities for audiences including customers, interest groups and followers on Facebook, Twitter, and Instagram. We look at how to use social media to create coherent messaging, build a reputation and cultivate reader loyalty. We also explore how readers and designers approach multimedia texts as complex entities that bring together language, image, sound, and gesture to produce a coherent message. With its multiple modalities—visual, aural, and somatic—social media makes different types of demands of its creators and its audiences than those imposed by conventional top-down, left-to-right texts that one encounters in books, essays or letters, requiring an expanded understanding of rhetorical strategies and contexts. By the end of the course, students will have multiphase platform portfolio of social content to show employers, colleagues, or clients.
Taught by: Matthew Osborn
Activity: Online Course
1.0 Course Unit

PROW 401 Composing a Professional Identity
This course is intended for those who would like to focus on building their individual professional identity for job searches as well as professional recognition and advancement. The course will examine how professional identities are constructed and networked across different media within professional communities of practice. Our particular focus will be on the primary discourse communities, genres, and media involved in professional identity construction, including cover letters, resumes, LinkedIn profiles, and web-portfolios; we will also touch upon the role of other social media in creating a professional identity. The course will support students in developing rhetorical fluency with regard to job searches and career advancement, including identifying and researching potential employers, networking, and cultivating mentors. This writing-intensive course will be a combination of theory, acquired through a series of readings and analysis, and practice, implemented through hands-on guided writing exercises, peer and professor feedback, and reflection. By the end of the course, students will have developed a professional profile, including a foundational cover letter and resume, a LinkedIn profile, and a web-portfolio (whether published or not will be up to the individual student).
Taught by: Stacy Kastner
Activity: Online Course
1.0 Course Unit

Psychology (PSYC)

PSYC 001 Introduction to Experimental Psychology
This course provides an introduction to the basic topics of psychology including our three major areas of distribution: the biological basis of behavior, the cognitive basis of behavior, and individual and group bases of behavior. Topics include, but are not limited to, neuropsychology, learning, cognition, development, disorder, personality, and social psychology.
For BA Students: Living World Sector
One-term course offered either term
Activity: Lecture
1.0 Course Unit

PSYC 005 Grit Lab: The Science and Practice of Passion and Perseverance
The aims of Grit Lab are two-fold: (1) equip you with generalizable knowledge about the science of passion and perseverance (2) to help you apply these insights to your own life. At the heart of this course are cutting-edge scientific discoveries about how to foster passion and perseverance for long-term goals. As in any undergraduate course, you will have an opportunity to learn from current research. But unlike most courses, Grit Lab encourages you to apply these ideas to your own life and reflect on your experience.
Taught by: Duckworth
Course usually offered in fall term
Also Offered As: OIDD 005
Activity: Lecture
1.0 Course Unit
Notes: There are no prerequisites to Grit Lab, and it is open to all enrolled undergraduate students. However, admittance does require completing an online, written application, which must be completed by the end of the day on April 22, 2020. Use the link after ‘Additional Course Information,’ above. Since enrollment is by application only, accepted applicants will be administratively registered. No need to submit and advance registration request.
PSYC 006 The Pursuit of Happiness
What is happiness? Can it be successfully pursued? If so, what are the best ways of doing so? This interactive course will consider various ways of answering these questions by exploring theoretical, scientific, and practical perspectives on flourishing, thriving, and wellness. We will discuss approaches to happiness from the humanities and the sciences and then try them out to see how they might help us increase our own well-being and that of the communities in which we live.
Taught by: Pawelski
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

PSYC 097 Psych Abroad
Psych Abroad
Taught by: TBD
One-term course offered either term
Activity: Lecture
1.0 Course Unit

PSYC 109 Introduction to Brain and Behavior
Introduction to the structure and function of the vertebrate nervous system, including the physiological bases of sensory activity, perception, drive, motor control and higher mental processes. The course is intended for students interested in the neurobiology of behavior. Familiarity with elementary physics and chemistry will be helpful.
For BA Students: Living World Sector
One-term course offered either term
Also Offered As: BIBB 109, BIOL 109
Activity: Lecture
1.0 Course Unit

PSYC 111 Perception
How the individual acquires and is guided by knowledge about objects and events in their environment.
One-term course offered either term
Also Offered As: VLST 211
Prerequisite: PSYC 001 OR COGS 001
Activity: Lecture
1.0 Course Unit

PSYC 127 Physiology of Motivated Behaviors
This course focuses on evaluating the experiments that have sought to establish links between brain structure (the activity of specific brain circuits) and behavioral function (the control of particular motivated and emotional behaviors). Students are exposed to concepts from regulatory physiology, systems neuroscience, pharmacology, and endocrinology and read textbook as well as original source materials. The course focuses on the following behaviors: feeding, sex, fear, anxiety, the appetite for salt, and food aversion. The course also considers the neurochemical control of responses with an eye towards evaluating the development of drug treatments for: obesity, anorexia/cachexia, vomiting, sexual dysfunction, anxiety disorders, and depression.
Taught by: Grill
One-term course offered either term
Also Offered As: BIBB 227
Prerequisite: PSYC 001
Activity: Lecture
1.0 Course Unit

PSYC 149 Cognitive Neuroscience
The study of the neural systems that underlie human perception, memory and language; and of the pathological syndromes that result from damage to these systems.
Taught by: Epstein or Mackey
One-term course offered either term
Also Offered As: BIBB 249
Prerequisite: PSYC 001 OR COGS 001
Activity: Lecture
1.0 Course Unit

PSYC 151 Language and Thought
This course describes current theorizing on how the human mind achieves high-level cognitive processes such as using language, thinking, and reasoning. The course discusses issues such as whether the language ability is unique to humans, whether there is a critical period to the acquisition of a language, the nature of conceptual knowledge, how people perform deductive reasoning and induction, and how linguistic and conceptual knowledge interact.
Taught by: Trueswell
One-term course offered either term
Also Offered As: LING 151
Prerequisite: PSYC 001 OR PSYC 207 OR COGS 001 OR LING 105
Activity: Lecture
1.0 Course Unit

PSYC 159 Memory
This course presents an integrative treatment of the cognitive and neural processes involved in learning and memory, primarily in humans. We will survey the major findings and theories on how the brain gives rise to different kinds of memory, considering evidence from behavioral experiments, neuroscientific experiments, and computational models.
Taught by: Schapiro
Also Offered As: BIBB 159
Activity: Lecture
1.0 Course Unit

PSYC 160 Personality and Individual Differences
This course provides an introduction to the psychology of personality and individual differences. Many psychology courses focus on the mind or brain; in contrast to those approaches of studying people in general, the focus in this course is on the question ‘How are people different from each other?’ It will highlight research that take a multidimensional approach to individual differences and attempts to integrate across the biological, cognitive-experimental, and social-cultural influences on personality.
One-term course offered either term
Prerequisite: PSYC 001
Activity: Lecture
1.0 Course Unit

PSYC 162 Abnormal Psychology
The concepts of normality, abnormality, and psychopathology; symptom syndromes, theory and research in psychopathology and psychotherapy.
Taught by: Ruscio
One-term course offered either term
Prerequisite: PSYC 001
Activity: Lecture
1.0 Course Unit
PSYC 170 Social Psychology
An overview of theories and research across the range of social behavior from intra-individual to the group level including the effects of culture, social environment, and groups on social interaction.
For BA Students: Society Sector
One-term course offered either term
Prerequisite: PSYC 001
Activity: Lecture
1.0 Course Unit

PSYC 181 Intro to Developmental Psychology
The goal of this course is to introduce both Psychology majors and non-majors majors to the field of Developmental Psychology. Developmental Psychology is a diverse field that studies the changes that occur with age and experience and how we can explain these changes. The field encompasses changes in physical growth, perceptual systems, cognitive systems, social interactions and much more. We will study the development of perception, cognition, language, academic achievement, emotion regulation, personality, moral reasoning, and attachment. We will review theories of development and ask how these theories explain experimental findings. While the focus is on human development, when relevant, research with animals will be used as a basis for comparison.
Taught by: Brannon
One-term course offered either term
Prerequisite: PSYC 001
Activity: Lecture
1.0 Course Unit

PSYC 207 Introduction to Cognitive Science
How do minds work? This course surveys a wide range of answers to this question from disciplines ranging from philosophy to neuroscience. The course devotes special attention to the use of simple computational and mathematical models. Topics include perception, learning, memory, decision making, emotion and consciousness. The course shows how the different views from the parent disciplines interact and identifies some common themes among the theories that have been proposed. The course pays particular attention to the distinctive role of computation in such theories and provides an introduction to some of the main directions of current research in the field. It is a requirement for the BA in Cognitive Science, the BAS in Computer and Cognitive Science, and the minor in Cognitive Science, and it is recommended for students taking the dual degree in Computer and Cognitive Science.
Course usually offered in fall term
Also Offered As: CIS 140, COGS 001, LING 105, PHIL 044
Activity: Lecture
1.0 Course Unit
Notes: This counts as a Formal Reasoning course for College students.

PSYC 210 Functional Neuroanatomy Laboratory
A laboratory course designed to familiarize the student with the fundamental gross and histological organization of the brain. The mammalian brain will be dissected and its microscopic anatomy examined using standard slide sets. Comparative brain material will be introduced, where appropriate, to demonstrate basic structural-functional correlations.
Taught by: McLean
One-term course offered either term
Also Offered As: BIBB 310
Prerequisite: BIBB 109
Activity: Laboratory
1.0 Course Unit

PSYC 217 Visual Neuroscience
An introduction to the scientific study of vision, with an emphasis on the biological substrate and its relation to behavior. Topics will typically include physiological optics, transduction of light, visual thresholds, color vision, anatomy and physiology of the visual pathways, and the cognitive neuroscience of vision.
Taught by: Stocker
Course usually offered in spring term
Also Offered As: BIBB 217, VLST 217
Prerequisite: PSYC 109
Activity: Lecture
1.0 Course Unit

PSYC 225 Drugs, Brain, and Mind
The course will begin with a review of basic concepts in pharmacology including: routes of drug administration, drug metabolism, the dose response curve, tolerance and sensitization. Following a brief overview of cellular foundations of neuropharmacology (neuronal biology, synaptic and receptor function), the course will focus on several neurotransmitter systems and the molecular and behavioral mechanisms mediating the mind-altering, addictive and neuropsychiatric disorders, including depression, schizophrenia, and anxiety with an emphasis on their underlying neurobiological causes, as well as the pharmacological approaches for treatment.
Taught by: Kane
Course usually offered in fall term
Also Offered As: BIBB 270
Prerequisite: BIBB 109 OR PSYC 109
Activity: Lecture
1.0 Course Unit

PSYC 231 Evolution of Behavior: Animal Behavior
The evolution of social behavior in animals, with special emphasis on group formation, cooperation among kin, mating systems, territoriality, and communication.
Course not offered every year
Also Offered As: BIBB 231, BIOL 231
Prerequisite: BIOL 102 OR BIOL 121 OR PSYC 001
Activity: Lecture
1.0 Course Unit

PSYC 233 Neuroethology
In course, students will learn how neurobiologists study the relationship between neural circuitry and behavior. Behaviors such as bat echolocation, birdsong, insect olfaction, spatial navigation, eye movement and others will be used to explore fundamental principles of brain function that include brain oscillations, population codes, efference copy, sensorimotor maps and sleep replay. The course will also discuss the various methodologies that are used to address these questions. The reading material will be derived mostly from the primary literature.
Taught by: McLean
Course usually offered in spring term
Also Offered As: BIBB 233
Prerequisite: BIBB 109
Activity: Lecture
1.0 Course Unit
PSYC 235 Psychology of Language
This course describes the nature of human language, how it is used to speak and comprehend, and how it is learned. The course raises and discusses issues such as whether language ability is innate and unique to humans, whether there is a critical period for the acquisition of a language, and how linguistic and conceptual knowledge interact.
Taught by: Dahan
One-term course offered either term
Prerequisite: PSYC 151 OR LING 001
Activity: Lecture
1.0 Course Unit

PSYC 239 Neuroendocrinology
This course is designed to examine the various roles played by the nervous and endocrine systems in controlling both physiological processes and behavior. First, the course will build a foundation in the concepts of neural and endocrine system function. Then, we will discuss how these mechanisms form the biological underpinnings of various behaviors and their relevant physiological correlates. We will focus on sexual and parental behaviors, stress, metabolism, neuroendocrine-immune interactions, and mental health.
Taught by: Flanagan-Cato
One-term course offered either term
Also Offered As: BIBB 260
Prerequisite: BIBB 109
Activity: Lecture
1.0 Course Unit

PSYC 247 Neuroscience and Society
Cognitive, social, and affective neuroscience have made tremendous progress in in the last two decades. As this progress continues, neuroscience is becoming increasingly relevant to all of the real-world endeavors that require understanding, predicting and changing human behavior. In this course we will examine the ways in which neuroscience is being applied in law, criminal justice, national defense, education, economics, business, and other sectors of society. For each application area we will briefly review those aspects of neuroscience that are most relevant, and then study the application in more detail.
Taught by: Gerstein
One-term course offered either term
Prerequisite: PSYC 109 OR PSYC 149
Activity: Lecture
1.0 Course Unit

PSYC 253 Judgment and Decisions
Thinking, judgment, and personal and societal decision making, with emphasis on fallacies and biases. Prerequisite: One semester of Statistics or Microeconomics.
One-term course offered either term
Also Offered As: PPE 153
Activity: Lecture
1.0 Course Unit

PSYC 255 Behavioral Economics and Psychology
Our understanding of markets, governments, and societies rests on our understanding of choice behavior, and the psychological forces that govern it. This course will introduce you to the study of choice, and will examine in detail what we know about how people make choices, and how we can influence these choices. It will utilize insights from psychology and economics, and will apply these insights to domains including risky decision making, intertemporal decision making, and social decision making.
Taught by: Bhatia
Course usually offered in fall term
Also Offered As: PPE 313
Prerequisite: ECON 001
Activity: Lecture
1.0 Course Unit

PSYC 265 Introduction to Positive Psychology
An introduction to the study of positive emotions, positive character traits, and positive institutions. The positive emotions consist of emotions about the past (e.g., serenity, satisfaction, pride), about the future (e.g., hope, optimism, faith), and emotions about the present (pleasure and gratification). The distinction among the pleasant life, the good life, and the meaningful life is drawn. The positive traits include wisdom, courage, humanity, justice, temperance, and spirituality, and the classification of these virtues is explored. The positive institutions are exemplified by extended families, free press, humane leadership, and representative government.
Course usually offered in spring term
Prerequisite: PSYC 001
Activity: Lecture
1.0 Course Unit

PSYC 272 Evolutionary Psychology
This course introduces the field of evolutionary psychology, which is an approach to the study of human behavior. We will consider the theoretical underpinnings of the field, including evolutionary theory, development, kinship, and adaptations for social life, and will sample some of the recent empirical contributions to this growing area.
One-term course offered either term
Prerequisite: PSYC 001
Activity: Lecture
1.0 Course Unit

PSYC 273 Neuroeconomics
This course will introduce students to neuroeconomics, a field of research that combines economic, psychological, and neuroscientific approaches to study decision-making. The course will focus on our current understanding of how our brains give rise to decisions, and how this knowledge might be used to constrain or advance economic and psychological theories of decision-making. Topics covered will include how individuals make decisions under conditions of uncertainty, how groups of individuals decide to cooperate or compete, and how decisions are shaped by social context, memories, and past experience.
Taught by: Kable
Course not offered every year
Also Offered As: BIBB 273
Activity: Lecture
1.0 Course Unit
PSYC 275 Introduction to Political Psychology
This course will explore psychological approaches to understanding political beliefs, attitudes, and actions at the levels of both individual citizens and national leaders. It will also explore the possibility that psychological science itself is not immune to the political debates swirling around it. Specific topics will include: the workings of belief systems (and their power to shape what we ‘see’), cognitive biases (and their power to cause miscalculations), sacred values and their role in stabilizing belief systems and social interaction, personality and ideology (the linkages between the personal and the political), and clashing conceptions of morality and distributive and corrective justice (striking variations among people in what they consider to be fair). We shall also explore some topics that have sparked controversy in the psychological research literature and that tend to polarize opinion along political lines, including work on intelligence and unconscious bias. Prerequisite: Note: Students who are more interested in business-related issues may want Wharton 276x which is a modified version of this course specifically for Wharton undergraduates.
Taught by: Tetlock
One-term course offered either term
Also Offered As: PPE 275
Prerequisite: PSYC 001 OR COGS 001
Activity: Lecture
1.0 Course Unit
Notes: NOTE: Students who are more interested in business-related issues may want Wharton 276x which is a modified version of this course specifically for Wharton undergraduates.

PSYC 280 Developmental Psychology: Social and Emotional Development
This course will cover theory and research related to the development of attachment, emotional regulation, peer and intimate relationships, personality, moral reasoning, and emotional and behavioral disorders. The course will emphasize the degree to which family, peer, and community contexts influence development from infancy into adulthood. Efforts will be made to integrate biological and environmental accounts of development across the lifespan.
One-term course offered either term
Prerequisite: PSYC 001
Activity: Lecture
1.0 Course Unit

PSYC 281 Cognitive Development
What infants and young children come to know about the world, and how they learn it. Topics will include changes in children’s thinking, perceptual development, language acquisition, and current theories of cognitive development.
Taught by: Swingley
One-term course offered either term
Prerequisite: PSYC 001 OR COGS 001
Activity: Lecture
1.0 Course Unit

PSYC 281 Research Experience in Perception
In this research course, students will begin by first replicating earlier experiments to measure human visual memory capacity. After several class discussions to discuss ideas, each student will design and conduct their own experiment to further investigate visual and/or familiarity memory. Prerequisite: One semester of Statistics, and one of the following: PSYC 111 or 149 or 151 or 217, or permission of instructor.
Taught by: Rust
One-term course offered either term
Also Offered As: VLST 212
Activity: Seminar
1.0 Course Unit
Notes: Dept permission required. Undergraduates only.

PSYC 351 Research Experience in Cognitive Psychology
Students will work in small groups to develop, empirically test, and report on a research question in the field of cognitive psychology. Through this process, students will learn how to conduct and report a psychological study, including the appropriate statistical tests. Class discussions will help students craft their projects, and in-class presentations will provide the opportunity to develop and refine presentation skills. Psychology majors only. Class size is limited to 16 students. Prerequisite: One semester of statistics.
Taught by: Weisberg
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: Dept permission required. Psych majors only.

PSYC 362 Research Experience in Abnormal Psychology
Prerequisite: PSYC 362, 301 is a two-semester course starting in the Fall. Class size limited to 8 students.
Taught by: Dr. Melissa Hunt
Activity: Seminar
1.0 Course Unit

PSYC 360 Research Experience in Social Psychology
In this research course, students will work in small groups to develop, empirically test, and report on a research question within one of the domains of social psychology. Depending on the nature of the project, students will employ survey, experimental, or observational research methodology, and learn how to conduct and report the appropriate statistical tests with Excel and/or SPSS (typically, correlations, t-tests, ANOVA and ANCOVA, multiple regression, factor analysis, and measures of reliability). Class discussions will help students craft their projects, and in-class presentations will provide the opportunity to develop and refine presentation skills. Psychology majors only. Class size is limited to 12 students. Prerequisite: PSYC 170 and one semester of statistics is required.
Taught by: Royzman
Activity: Seminar
1.0 Course Unit
Notes: Dept permission required. Psychology majors only.

PSYC 370 Research Experience in Social Psychology
In this course students will work in small groups to develop, empirically test, and report on a research question within one of the domains of social psychology. Depending on the nature of the project, students will employ survey, experimental, or observational research methodology, and learn how to conduct and report the appropriate statistical tests with Excel and/or SPSS (typically, correlations, t-tests, ANOVA and ANCOVA, multiple regression, factor analysis, and measures of reliability). Class discussions will help students craft their projects, and in-class presentations will provide the opportunity to develop and refine presentation skills. Psychology majors only. Class size is limited to 12 students. Prerequisite: PSYC 170 and one semester of statistics is required.
Taught by: Royzman
Activity: Seminar
1.0 Course Unit
Notes: Dept permission required. Psychology majors only.
**PSYC 399 Individual Empirical Research**
Individual research involving data collection. Students do independent empirical work under the supervision of a faculty member, leading to a written paper. Normally taken in the junior or senior year.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: Dept permission required

**PSYC 400 Senior Honors Seminar in Psychology**
Open to senior honors candidates in psychology. A two-semester sequence supporting the preparation of an honors thesis in psychology. Students will present their work in progress and develop skills in written and oral communication of scientific ideas. Prerequisite: Acceptance into the Honors Program in Psychology.
Taught by: Thompson-Schill
Activity: Seminar
0.5 Course Units
Notes: Dept permission required

**PSYC 421 Neurobiology of Learning and Memory**
This course focuses on the current state of our knowledge about the neurobiological basis of learning and memory. A combination of lectures and student seminars will explore the molecular and cellular basis of learning invertebrates and vertebrates from a behavioral and neural perspective.
Taught by: Gerstein
Course usually offered in fall term
Also Offered As: BIBB 442, BIOL 442, NGG 575
Prerequisite: BIBB 251 OR BIOL 251
Activity: Seminar
1.0 Course Unit

**PSYC 429 Big Data, Memory, and the Human Brain**
Advances in brain recording methods over the last decade have generated vastly more brain data than had been collected by neuroscientists during the previous century. To understand the human brain, scientists now use computational methods that exploit the power of these huge data sets. This course will introduce you to the use of big data analytics in the study of human memory and its neural basis. Through hands-on programming projects, we will analyze multi-terabyte data sets both to replicate existing phenomena and to make new discoveries. Although the course has no formal neuroscience or psychology prerequisites it does require CIS 121 and Python experience. Because of the heavy computing resources required to perform the assignments enrollment is limited to 15 students and there is a required course application. https://forms.gle/CfeogYQm5mwUBk3x7
Taught by: Kahana
Also Offered As: BIBB 429
Prerequisite: CIS 121
Activity: Seminar
1.0 Course Unit
Notes: Instructor permission required. Application form can be found here: <a href='https://forms.gle/CfeogYQm5mwUBk3x7'>https://forms.gle/CfeogYQm5mwUBk3x7</a>

**PSYC 434 Computational Neuroscience Lab**
This course will focus on computational neuroscience from the combined perspective of data collection, data analysis, and computational modeling. These issues will be explored through lectures as well as Matlab-based tutorials and exercises. The course requires no prior knowledge of computer programming and a limited math background, but familiarity with some basic statistical concepts will be assumed. The course is an ideal preparation for students interested in participating in a more independent research experience in one of the labs on campus. For the Spring 2019 semester, the course will focus on the topic of visual memory.
Taught by: Nicole Rust
Course usually offered in spring term
Also Offered As: BIBB 334
Prerequisite: BIBB 109
Activity: Laboratory
1.0 Course Unit

**PSYC 435 Psycholinguistics**
Taught by: Dahan
Prerequisite: PSYC 151 OR PSYC 235 OR LING 001
Activity: Seminar
1.0 Course Unit

**PSYC 439 Neuroendocrinology Seminar**
This course is designed to examine the various roles played by the nervous and endocrine systems in controlling both physiological processes and behavior. First, the course will build a foundation in the concepts of neural and endocrine system function. Then, we will discuss how these mechanisms form the biological underpinnings of various behaviors and their relevant physiological correlates. We will focus on sexual and parental behaviors, stress, metabolism, neuroendocrine-immune interactions, and mental health.
Taught by: Flanagan-Cato
One-term course offered either term
Also Offered As: BIBB 460
Prerequisite: PSYC 109
Activity: Seminar
1.0 Course Unit

**PSYC 440 Sleep and Sleep Disorders**
This class will provide an introduction to sleep and sleep disorders, focusing on current research in the field. Students will learn about the neurobiology of sleep/wake regulation, the relationship between sleep and memory and how sleep is related to physical and mental health. Sleep disorders, including sleep apnea, insomnia, and narcolepsy will be covered in terms of pathophysiology, assessment and treatment.
Taught by: Gehman
Course usually offered summer term only
Prerequisite: PSYC 001
Activity: Online Course
1.0 Course Unit
PSYC 447 Neurological Insights into Cognition and Behavior
Our modern understanding of the brain began with very humble foundations. Long before transgenic mice, MRI scans, and neuronal recordings, most knowledge about brain function was based on clinical observations of human patients with neurological lesions. This advanced seminar will focus on the cognitive neuroscience of perception, emotion, language, and behavior – through the unique perspective of real-life patients – to illustrate fundamental concepts of brain function. Tuesday classes will explore different cognitive neuroscience topics through student presentations and discussion. Thursday classes will involve observing medical history taking and examination of a patient with cognitive deficits pertinent to the Tuesday topic, with opportunity for students to interact with the patient. Pre-requisites: Instructor permission required and PSYC 109/BIBB 109. Taught by: Gottfried  
One-term course offered either term  
Prerequisite: PSYC 109  
Activity: Seminar  
1.0 Course Unit  
Notes: Juniors and Seniors only. Permission of instructor required. Must submit a statement (up to 300 words) describing your interest in taking this seminar.

PSYC 449 Seminar in Cognitive Neuroscience
Topics vary each semester. PSYC 449 (Gerstein) Neuroscience for Policymakers: This seminar will provide an overview of the neuroscience behind some of the most relevant issues in public health policy today. We will examine the primary scientific literature as well as delve into lay articles about the science and policy surrounding each issue. PSYC 449 (Epstein) Consciousness: Consciousness is our subjective experience of the world, including both perceptions and felt internal states. In this seminar, we will explore the the burgeoning scientific literature on the neural basis of consciousness. We will focus in particular on three topics: What are the neural systems underlying visual awareness? What are the mechanisms that control the progression of conscious contents to create our stream of thought? What is the relationship between consciousness and behavior? PSYC 449 (Jenkins) The Social Brain: This seminar examines the cognitive and neural mechanisms that enable humans to predict and understand people’s behavior. We will be propelled throughout the course by fundamental questions about the human social brain. For example, why are humans so social? Does the human brain have specialized processes for social thought? Consideration of these questions will involve advanced treatment of a range of topics. Prerequisite: PSYC 449, 601 are LPS courses. PSYC 449, 301, 303 are Psych Department courses. Prerequisite: PSYC 149  
Activity: Seminar  
1.0 Course Unit  
Notes: PSYC 449-601 is an LPS course. PSYC 449-301,-302 and -303 are Psych Dept. cour

PSYC 453 Seminar in Decision Making: Judgment and Decisions
This seminar will be a series of engaging discussions on a variety of topics that are important to the field of behavioral decision theory. We'll cover issues such as constructed preferences, loss aversion, nudging, emotions, well-being, other-oriented decisions, intuitive predictions, unethical choices, and more. Students will be asked to present papers and generate ideas for potential research projects each week. Grades will be based on class contributions and a paper that is either a literature review or a careful and detailed proposal for a research project. Taught by: Mellors  
One-term course offered either term  
Prerequisite: PSYC 253 OR PSYC 265  
Activity: Seminar  
1.0 Course Unit  
Notes: Undergraduates only.

PSYC 462 Seminar in Abnormal Psychology
Topics vary each semester. Prerequisite: PSYC 162  
Activity: Seminar  
1.0 Course Unit  
Notes: Undergraduates only. 462-601 is an LPS course.

PSYC 466 Seminar in Positive Psychology
This intensive, discussion-based seminar focuses on the key research that has shaped Positive Psychology. This seminar will equip students with useful insight and critical analysis about Positive Psychology by emphasizing scientific literacy. The workload for this seminar requires intensive reading. To excel in this seminar, students must be willing to enthusiastically read, dissect, and critique ideas within Positive Psychology. This requires students to articulate various ideas in verbal and written form. Taught by: Connolly  
Course not offered every year  
Activity: Seminar  
1.0 Course Unit

PSYC 470 Seminar in Social Psychology
Topics vary each semester. One-term course offered either term  
Prerequisite: PSYC 170  
Activity: Seminar  
1.0 Course Unit  
Notes: Undergraduates only.

PSYC 472 Behavioral Biology of Women
A course that explores female behavior focusing on evolutionary, physiological, and biosocial aspects of women’s lives from puberty, through reproductive processes such as pregnancy, birth, lactation to menopause and old age. Examples are drawn from traditional and modern societies and data from nonhuman primates are also considered. Taught by: Apicella  
One-term course offered either term  
Prerequisite: PSYC 272 OR BIOL 102 OR ANTH 104 OR ANTH 143  
Activity: Seminar  
1.0 Course Unit
**PSYC 473 Neuroeconomics**
This course will review recent research that combines psychological, economic and neuroscientific approaches to study human and animal decision-making. A particular focus will be on how evidence about the neural processes associated with choices might be used to constrain economic and psychological theories of decision-making. Topics covered will include decisions involving risk and uncertainty, reinforcement learning, strategic interactions and games, and social preferences.
Taught by: Joseph Kable
One-term course offered either term
Also Offered As: BIBB 473, NGG 706
Prerequisite: PSYC 149 OR PSYC 253 OR PSYC 265
Activity: Seminar
1.0 Course Unit

**PSYC 474 PSYC 474-301: Being Human; PSYC 474-601: Cultural Psychology**
Prerequisite: Undergraduates only. PSYC 474 and 601 are LPS courses.
Taught by: Platt (PSYC 474-301); Abiola (PSYC 474-601)
Prerequisite: PSYC 001
Activity: Seminar
1.0 Course Unit

**PSYC 478 Capstone: Social Psychology**
Social psychology explores how an individual's judgements and behaviors can be influenced or determined by others and their social context. Prerequisite: As a PPE Capstone, this is an integrative senior seminar (open to others by departmental permission).
Taught by: Royzman
Course not offered every year
Also Offered As: PPE 477
Activity: Seminar
1.0 Course Unit

**PSYC 479 Neural Systems and Behavior**
This advanced course will investigate neural processing at the systems level. Principles of how brains encode information will be explored in both sensory (e.g. visual, auditory, olfactory, etc.) and motor systems. Neural encoding strategies will be discussed in relation to the specific behavioral needs of the animal. Examples will be drawn from a variety of different model systems.
Taught by: Medina/Schmidt
Course usually offered in spring term
Also Offered As: BIBB 479, BIOL 451
Prerequisite: BIOL 251 OR BIBB 251
Activity: Lecture
1.0 Course Unit

**PSYC 480 Seminar in Developmental Psychology**
PSYC 480-301 (Brannon): The field of educational neuroscience is an emerging field with the goal of joining knowledge gained from the disciplines of neuroscience, cognitive science, developmental psychology, and education. This interdisciplinary course will focus on how scientific exploration of the mind and brain can inform educational practices. PSYC 480-302 (Connolly): This advanced discussion-based seminar will focus on approaches to success in domains of modern life such as social living and academia. The first portion of this seminar will be a psychology book club where we read various books written by psychology researchers. This will contribute to an ongoing discussion about scientific communication, and the presentation of psychological research to various audiences. From there, students will focus on a specific area of interest, and write a literature review based on contemporary empirical research critiquing their given topic. Students must understand the workload for this seminar requires intensive reading culminating in a large written assignment.
Taught by: Weisberg, Brannon, or Connolly
Prerequisite: PSYC 001
Activity: Seminar
1.0 Course Unit
Notes: Undergraduates only.

**PSYC 482 Inside the Criminal Mind**
This seminar explores the development of antisocial behavior including psychopathy, aggression, and violence. At its core, this course examines what increases the risk that children will develop behavior problems and go onto more chronic and extreme forms of violence and psychopathic personality that results in harm to others. We will examine psychiatric diagnoses associated with these antisocial behaviors in both childhood and adulthood and how they link to other relevant forms of psychopathology (e.g., substance use, ADHD). We will explore research elucidating the neural correlates of these behaviors, potential genetic mechanisms underlying these behaviors, and the environments that increase risk for these behaviors. Thus, there will be a focus on neurobiology and genetics approaches to psychiatric outcomes, as well as a social science approach to understanding these harmful behaviors, all while considering development across time. We will also consider ethical and moral implications of this research.
Taught by: Waller
Prerequisite: PSYC 162 AND PSYC 181
Activity: Seminar
1.0 Course Unit
Notes: Undergraduates only.
PSYC 490 The Science of Behavior Change
The objective of this 14-week discussion-based seminar for advanced undergraduates is to expose students to cutting-edge research from psychology and economics on the most effective strategies for changing behavior sustainably and for the better (e.g., promoting healthier eating and exercise, encouraging better study habits, and increasing savings rates). The weekly readings cover classic and current research in this area. The target audience for this course is advanced undergraduate students interested in behavioral science research and particularly those hoping to learn about using social science to change behavior for good. Although there are no pre-requisites for this class, it is well-suited to students who have taken (and enjoyed) courses like OIDD 290: Decision Processes, PPE 203/PSYC 265: Behavioral Economics and Psychology, and MKTG 266: Marketing for Social Impact and are interested in taking a deeper dive into the academic research related to promoting behavior change for good. Instructor permission is required to enroll in this course. Please complete the application if interested in registering for this seminar: http://bit.ly/bcfg-class-2020. The application deadline is July 31, 2020. Prerequisite: Permission of instructor required.
Taught by: Katherine Milkman and Angela Duckworth
One-term course offered either term
Also Offered As: OIDD 490
Activity: Seminar
1.0 Course Unit
Notes: Undergraduates only. Please complete the application form via the link in the ‘Additional Course Information’ above to be considered for admission.

PSYC 492 Social Cognition
Activity: Seminar
1.0 Course Unit

PSYC 511 Prob Models of Perceptio
Activity: Lecture
1.0 Course Unit

PSYC 521 Judgment & Decisions
Activity: Seminar
1.0 Course Unit

PSYC 525 Controversies in Psychology and Neuroscience
In this seminar, we will discuss several recent controversies in psychology and neuroscience, for example: ‘p-hacking,’ replicability, methodological terrorists, neural activity in dead salmon and failures to control the false positive rate in neuroimaging, ‘voodoo correlations’ and double dipping, whether Tic-Tacs can improve self-control and whether reading ‘old’ makes you walk slower. Our goal is not just to engender ennui and/or schadenfreude, but also to ask what we can learn from these discussions about how to do science in the most rigorous, reproducible manner possible.
Activity: Seminar
1.0 Course Unit

PSYC 539 Theoretical and Computational Neuroscience
This course will develop theoretical and computational approaches to structural and functional organization in the brain. The course will cover: (i) the basic biophysics of neural responses, (ii) neural coding and decoding with an emphasis on sensory systems, (iii) approaches to the study of networks of neurons, (iv) models of adaptation, learning and memory, (v) models of decision making, and (vi) ideas that address why the brain is organized the way that it is. The course will be appropriate for advanced undergraduates and beginning graduate students. A knowledge of multi-variable calculus, linear algebra and differential equations is required (except by permission of the instructor). Prior exposure to neuroscience and/or Matlab programming will be helpful.
Taught by: Vijay Balasubramanian
Course usually offered in spring term
Also Offered As: BE 530, BIBB 585, NGG 594, PHYS 585
Activity: Lecture
1.0 Course Unit

PSYC 541 Sleep and Memory
Why do we sleep? This question has puzzled scientists for centuries, but one reason emerging from research in the area is that sleep is critical for forming, retaining, and transforming our memories over time. This seminar explores human and animal research in psychology and neuroscience that has shed light on how sleep carries out these functions. Topics will include the different stages of sleep and their roles in memory consolidation, the neural systems involved in representing memory at different timescales, and the role of dreams in processing memories.
Activity: Seminar
1.0 Course Unit

PSYC 547 Foundations of Social, Cognitive, and Affective Neuroscience
Activity: Lecture
1.0 Course Unit
**PSYC 549 A Neuroscience Perspective of Artificial Intelligence**
This seminar course asks what would be required to achieve Strong Artificial Intelligence, also referred to as Artificial General Intelligence (AGI), in light of what we know about the emergence of life and mind in the universe. Specifically, we will consider the question whether it is possible for machines to become self-aware by asking what Natural Intelligence is, and considering what it implies about whether and how AGI can be achieved. To grapple with this question, in Part I of the course we will examine what is known about the emergence of Natural Intelligence in the universe. This study includes the phenomena of: (1a) Abiogenesis, (1b) The Universal Role of Entropy and Information in Evolution, (1c) Signal Transduction, intracellular signaling, and Mechanism of Stimulus-Response Coupling in Unicellular Organisms; (2a) The Evolution of the Metazoa during the Cambrian Explosion, (2b) The Consequences of Motility and Prey - Prey Dynamics in the Metazoa for the Evolution of Complex Nervous Systems and Behaviors; (3a) The Implications of Invertebrate Navigation by Dead Reckoning for Understanding Insect Behavior, (3b) Insect Behavior in Relation to Robotics; (4a) Origin of the Vertebrates and the Evolution of the Vertebrate Nervous System, (4b) The Mammalian Neocortex; (5) Molecular Mechanisms of Synaptic Plasticity; (6) The Evolution of the Hominins and the Hominin Brain; (7) Higher-Order Thinking and Epistemology; (8a) Meta-awareness as the Foundation of Human Consciousness, (8b) The Fluidity of Mind Embodiment, (8c) Theories and Philosophy of Human Consciousness. (9a) Other Minds: The Atypical Nervous System of the Ctenophore and The Nervous System and Mind of the Octopus, (9b) Animal intelligence, (10a) The History and Trajectory of AI, (10b) Superintelligence, Human Cognitive Fluidity and the Existence of a Global Network of Human Superintelligence.

Taught by: Di Rocco
Prerequisite: PSYC 109 OR PSYC 149
Activity: Seminar
1.0 Course Unit

**PSYC 551 Eye Movements in Perception, Language and Cognition**
In this course, we examine how the recording of eye movements can provide a moment-by-moment record of perceptual, cognitive and linguistic processes. Four areas of research will be discussed: (1) task-based scene perception; (2) language processing (in both reading and spoken language); (3) category learning, and (4) decision making. In all of these domains, eyetracking research has led to a greater understanding of how attention and information selection supports real-time cognitive processes. Students will have access to eyetracking systems, giving them hands-on experience in designing, running, and analyzing eyetracking experiments. By the end of the semester, students will have collected pilot eyetracking data. Projects will be done individually or within small research teams. Requirements: Weekly readings; class presentations and discussion; and a paper.

Taught by: Truewell
Course usually offered in fall term
Activity: Hybrid Course
1.0 Course Unit

**PSYC 557 Neuroscience, Ethics & Law**
How does the neuroscience of human decision-making and emotion impact our understanding of ethics and law? What can neuroscience tell us about why people find actions moral or immoral, worthy of praise or punishment? What, if anything, can it tell us normatively about morality, agency and responsibility? And what other insights might neuroscience offer regarding other morally and legally relevant phenomena such as stereotyping and bias, the causes of antisocial behavior and the detection of deception?

Taught by: Farah
Also Offered As: LAW 557
Activity: Seminar
1.0 Course Unit

**PSYC 562 Anxiety Disorders, OCD, and PTSD: Theory, Diagnosis, and Evade**
Anxiety disorders are among the most commonly occurring disorders in the United States. This course will provide a theoretical and empirical review of anxiety, obsessive compulsive, and trauma-related disorders. Theoretical approaches will be presented to conceptualize and understand the etiology and development of these disorders. After reviewing diagnosis and relevant theories, the course will review the concept of evidence based practice and how it applies to the treatment of anxiety, obsessive compulsive, and trauma-related disorders. We will then review the general concepts of cognitive behavior therapies with an emphasis on exposure-based therapies. Specifically, the following disorders will be covered: Obsessive Compulsive Disorder, Posttraumatic Stress Disorder, Generalized Anxiety Disorder, Social Anxiety Disorder, Specific Phobias, Panic Disorder.

Taught by: Tyler
Activity: Seminar
1.0 Course Unit

**PSYC 573 Seminar in Neuroeconomics**
This seminar will review recent research that combines economic, psychological, and neuroscientific approaches to study decision-making. The course will focus on our current state of knowledge regarding the neuroscience of decision-making, and how evidence concerning the neural processes associated with choices might be used to constrain or advance economic and psychological theories of decision-making. Topics covered will include decisions involving risk and uncertainty, decisions that involve learning from experience, decisions in strategic interactions and games, and social preferences.

Taught by: Kable
Course not offered every year
Activity: Seminar
1.0 Course Unit

**PSYC 577 Exp Methods Perception**
Activity: Lecture
1.0 Course Unit

**PSYC 600 Proseminar in General Psychology**
Choice of half or full course units each sem. covering a range of subjects and approaches in academic psychology. One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: Dept permission required
PSYC 609 Systems Neuroscience
This course provides an introduction to what is known about how neuronal circuits solve problems for the organism and to current research approaches to this question. Topics include: vision, audition, olfaction, motor systems, plasticity, and oscillations. In addition, the course aims to provide an overview of the structure of the central nervous system. A number of fundamental concepts are also discussed across topics, such as: lateral inhibition, integration, filtering, frames of reference, error signals, adaptation. The course format consists of lectures, discussions, readings of primary literature, supplemented by textbook chapters and review articles.
Taught by: Yale Cohen, Christopher Pierce
Course usually offered in spring term
Also Offered As: NGG 573
Activity: Lecture
1.0 Course Unit
Notes: Fulfills the Brain requirement

PSYC 611 Applied Regression and Analysis of Variance
An applied graduate level course in multiple regression and analysis of variance for students who have completed an undergraduate course in basic statistical methods. Emphasis is on practical methods of data analysis and their interpretation. Covers model building, general linear hypothesis, residual analysis, leverage and influence, one-way anova, two-way anova, factorial anova. Primarily for doctoral students in the managerial, behavioral, social and health sciences. Permission of instructor required to enroll.
Taught by: Rosenbaum
Course usually offered in fall term
Also Offered As: BSTA 550, STAT 500
Activity: Lecture
1.0 Course Unit
Notes: Graduate students only.

PSYC 612 Introduction to Nonparametric Methods and Log-linear Models
An applied graduate level course for students who have completed an undergraduate course in basic statistical methods. Covers two unrelated topics: log-linear and logit models for discrete data and nonparametric methods for nonnormal data. Emphasis is on practical methods of data analysis and their interpretation. Primarily for doctoral students in the managerial, behavioral, social and health sciences. Permission of instructor required to enroll.
Taught by: Rosenbaum
Course usually offered in spring term
Also Offered As: STAT 501
Activity: Lecture
1.0 Course Unit

PSYC 671 Violence: A Clinical Neuroscience Approach
Developed for both Psychology and Criminology graduate students, this interdisciplinary course outlines a clinical neuroscience approach to understanding violence in which the tools of neuroscience—neuroanatomy, neurophysiology, neurocognition, neuroendocrinology, neuropharmacology, molecular and behavioral genetics—are used to help inform the etiology and treatment of violence. Clinical components include psychopathy, proactive and reactive aggression, homicide domestic violence, conduct disorder, oppositional defiant disorder, antisocial personality disorder, crime, and delinquency as well as their comorbid conditions (schizophrenia, drug abuse, hyperactivity). The interaction between social, psychological, and neurobiological processes in predisposing to violence will be highlighted, together with neurodevelopmental perspectives on violence focusing on prospective longitudinal and brain imaging research. Key implications for the criminal justice system, neuroethics, forensics psychology, and intervention will also be outlined.
Taught by: Raine
Course usually offered in fall term
Also Offered As: CRIM 671
Activity: Lecture
1.0 Course Unit
Notes: Graduate students only.

PSYC 675 Language and Cognition
This is a seminar on how language relates to perception and cognition. The seminar pays particular attention to the question of whether and how language might affect (and be affected by) other mental processes, how different languages represent the mental and physical world, and how children acquire language-general and language-specific ways of encoding human experience. The course incorporates cross-linguistic, cognitive and developmental perspectives on a new and rapidly changing research area.
Taught by: Papafragou, Trueswell
Course usually offered in spring term
Also Offered As: LING 675
Activity: Seminar
1.0 Course Unit

PSYC 698 Laboratory Rotation
Lab rotation for psychology grad students.
One-term course offered either term
Activity: Lecture
3.0 Course Units
Notes: Dept permission required. Open only to psychology dept graduate students.

PSYC 699 Individual Research for First-Year Graduate Students
Two terms. student must enter first term.
Activity: Independent Study
3.0 Course Units

PSYC 703 Special Topics in Psychology
One-term course offered either term
Activity: Seminar
1.0 Course Unit
PSYC 704 Research Methods and Statistical Procedures for Social and Clinical Sciences
This course has three primary objectives: 1) developing criteria and strategies for strong inference of causal relationships in social and clinical psychology research; 2) examining the array of research designs employed in the social/clinical sciences together with the threats to internal and external validity associated with each; 3) learning and applying statistical analytical methods appropriate for questions in the social/clinical sciences. The course will employ a seminar format and a project-oriented approach to learning. Students will be encouraged to utilize examples from their own research programs in applying the design and analysis concepts covered in the course.

One-term course offered either term
Activity: Seminar
1.0 Course Unit

PSYC 705 Neuroethics
Neuroscience is increasingly affecting all aspects of human life, from the relatively familiar medical applications in neurology and psychiatry, to new applications in education, business, law, and the military. Today's neuroscience graduate students will be among the scientists, citizens, and policymakers who will lead society through the maze of decisions regarding the appropriate uses of neuroscience. This course provides a survey of the key ethical, legal, and social issues at the intersection of neuroscience and society. It will include a combination of traditional classroom lectures, discussion and debates, as well as an online component coordinated with a course at Wisconsin's Neuroscience and Public Policy graduate program.
Taught by: Farah
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: Dept permission required.

PSYC 709 Special Topics in Clinical Psychology
A developmental approach to the study of psychopathology focuses on how psychological processes from normal to abnormal developmental trajectories. In this seminar we will cover theory, methods, and key constructs in the study of developmental psychopathology. Readings will include seminal empirical papers and chapters.
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: Graduate students only.

PSYC 711 Basic Problems in Developmental II
One-term course offered either term
Activity: Seminar
1.0 Course Unit

PSYC 712 Regression & Anova II
One-term course offered either term
Activity: Seminar
1.0 Course Unit

PSYC 744 Brain Development & Society
Activity: Seminar
1.0 Course Unit

PSYC 745 Special Topics in Cognitive Neuroscience
One-term course offered either term
Activity: Seminar
1.0 Course Unit

PSYC 747 Contemporary Research Issues in Social, Cognitive and Affective Neuroscience
Activity: Seminar
1.0 Course Unit

PSYC 810 Psychodiagnostic Testing
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

PSYC 811 Psychodiagnostic Interviewing
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

PSYC 815 Introductory Practicum
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

PSYC 820 Advanced Practicum
Intensive studies of single individuals including interviews, tests, and experiments; also clinical experience at appropriate community agencies.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

PSYC 999 Individual Study and Research
One-term course offered either term
Activity: Independent Study
0.5 Course Units

Public Health Studies (PUBH)

PUBH 500 Foundations of Public Health
This course will provide a topical overview of the inter-disciplinary field of public health and provides grounding in the public health paradigm. Through a series of lectures and recitation sessions, students will learn about the history of public health and the core public health sciences including behavioral and social sciences, biostatistics, epidemiology, environmental health, and policy and management. Other topics include ethics in public health, context analyses (specifically sociographic mapping and urban health), community participation in research, public health promotion, and the prevention of chronic and infectious diseases.
Course usually offered in fall term
Also Offered As: NURS 570
Activity: Lecture
1.0 Course Unit

PUBH 501 Introduction to Biostatistics
Introduction to Biostatistics This course is designed to provide a broad overview of biostatistics methods as well as applications commonly used for public health research. Topics covered include measurement and categorizing variables, use and misuse of descriptive statistics, testing hypotheses, and applying commonly used statistical tests. An emphasis will be placed on the practical application of data to address public health issues, rather than theoretical and mathematical development. Students will learn how to choose and apply statistical tools to data sources, when and how statistical tools can be used to analyze data, and how to interpret others' quantitative studies. Students will gain experience using online datasets and the STATA statistical software package.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

2020-21 Catalog | Generated 09/18/20
PUBH 502 Introduction to the Principles and Methods of Epidemiology
This course will provide an introduction to the principles and methods of epidemiology as a research science. The course introduces the student designs applied to human populations, including randomized trials and observational studies (cohort, case-control, cross-sectional, ecological). Homework and in-class assignments focus on building skills in locating, assessing, and synthesizing evidence from the epidemiologic literature, with an emphasis on critical thinking, causal inference, and understanding bias and confounding.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

PUBH 503 Environmental and Occupational Health
This course will provide a broad introduction to the scientific basis of occupational and environmental health. Content will address issues in the ambient, occupational and global environments as well as the tools, concepts and methods used in environmental health.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

PUBH 504 Public Health Theories & Frameworks
This course provides students with a solid foundation in behavioral and social science theory, research, and interventions as they pertain to public health. Content will provide exposure to a broad range of theories, including the theoretical foundations of social science applications for help-seeking, gender, race, ethnicity and social class. These theories will be discussed using examples of their applications to numerous public health problems including HIV/AIDS, violence, cancer, cardiovascular diseases, obesity, and diabetes.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

PUBH 505 Public Health Policy and Administration
This course is an introduction to health policy and management. It examines both the historical and current state of health policy in America and integrates these concepts within the context of public health practice. We will examine key concepts in understanding US health care organization, financing and delivery, our current political and economic debate on health care reform, examining the role and management issues of public health departments, and case studies in public health policy and management.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

PUBH 506 Methods for Public Health Practice
This is a course designed around modules whose objective is to provide students with greater familiarity in a range of methods essential to public health practice. The course will be framed around an in-depth capacity and needs assessment and community public health planning in Philadelphia. Topics covered will include data collection and evaluation, both quantitative and qualitative, uses of informatics in public health, analysis of vital statistics, working with communities, methods for developing and facilitating solutions to public health problems, including concepts of advocacy and policy formation and development of interventions. The course demonstrates how core public health competency areas in data analysis and communication provide foundations for applications for both practice and practice-based research.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

PUBH 507 Public Health Law & Ethics
What is best - or, at least, seems best - for the public’s health is not always consistent with society’s view of what is legal, ethical, or good policy. This course introduces key concepts of legal, ethical, and policy analysis and attempts to demonstrate with current examples how these forces empower, guide, and constrain public health decision-making and actions. The course will combine lecture, Socratic dialogue, and group discussion in an informal setting. The course will feature guest lectures by several distinguished experts from Penn and from other universities.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

PUBH 508 Capstone Seminar I
The Capstone is a culminating experience required for graduation in the Master of Public Health Program. In two Capstone seminars, students will have an opportunity to synthesize the knowledge and public health competencies they have developed through their coursework. Capstone students will apply their knowledge and skills to public health problems in a chosen area of interest. They will engage their peers in scholarly discussion, drawing from relevant scientific literature and public health experience in order to begin to develop a common grounding and identity as public health professionals. The Capstone incorporates two semester-long seminars and a research project. over the course of the Capstone, students will develop, propose, revise, implement, and present their projects. As their projects successfully come to fruition they will also advise their junior colleagues still in the proposal stage.
Two terms. student may enter either term.
Activity: Lecture
1.0 Course Unit

PUBH 509 Capstone Seminar II
This course is the second of two Capstone courses related to the culminating project required for graduation in the Master of Public Health Program. MPH students apply their knowledge and skills to public health problems in a chosen area of interest under the guidance of a Capstone Mentor.
Two terms. student may enter either term.
Activity: Lecture
1.0 Course Unit
PUBH 514 Environmental and Occupational Health Experiences
This course seeks to develop students' ability to analyze and understand environmental and occupational health concepts, and identify and synthesize policy and practice solutions to the world's most pressing environmental and occupational health issues. This course provides an introduction to environmental and occupational health concepts, with a focus on current occupational health policy and practice at the local, state, and federal levels. In-class lecture content includes tools, concepts, and research methods to examine categories of environmental and occupational risks and associated health conditions, and identify and develop solutions. Out-of-class experiences provide the opportunity to learn directly from experts in a variety of related fields, and gain firsthand experience in environmental and occupational health practice.
Activity: Lecture
1.0 Course Unit

PUBH 517 Geography & Public Health
This course will provide an introduction to GIS in public health research and practice. Through a series of lectures and labs, students will explore theories linking health and the environment, spatial analysis and spatial epidemiology, and applications of GIS-related data collection and analysis.
Course usually offered in fall term
Also Offered As: EPID 518
Activity: Lecture
1.0 Course Unit

PUBH 519 Issues in Global Health
This course presents an overview of issues in global health from the viewpoint of many different disciplines, with emphasis on economically less developed countries. Subjects include: millennium goals; measures of disease burden; population projections and control; environmental health and safe water; demography of disease and mortality; zoonotic infectious diseases; AIDS and HIV prevention; vaccine utilization and impact; eradication of polio virus; chronic diseases; tobacco-associated disease and its control; nutritional challenges; social determinants of global health; harm reduction and behavioral modifications; women's reproductive rights; health economics and cost-effective interventions; health manpower and capacity development; bioethical issues in a global context. Undergraduates interested in taking this course should contact the program to request a permit; permits are only granted to students who have previously taken HSOC 010-401, and preference is given to juniors and seniors.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

PUBH 521 Program Evaluation in Public Health
There are many public health programs developed to promote change and improve individual and community health. The question most funders and organizations have for public health programs is: Did it work? And how do we know? This course is designed to review the practices of evaluation planning and methods of measurement. Students learn how evaluation can provide practical tools for identifying public health problems, program development, program implementation, including taking a reflective practice approach, ensuring equity and fairness in program delivery (i.e., combating disparities), and promoting public health through effective and efficient programmatic efforts. This course builds upon Methods for Public Health Practice and students will be allowed to design an evaluation of the program designed in this course or to choose another program. Note: This course satisfies the RTE requirement for the Generalist Track.
Taught by: Samantha Matlin
Course offered spring; odd-numbered years
Prerequisite: PUBH 506
Activity: Lecture
1.0 Course Unit

PUBH 523 Epidemics: Social causes and consequences of outbreaks, emergencies, threats
Public health demands both critical thinking and quick decision-making--often without the benefit of all the data we desire. Take this course to learn how other public health professionals (and lawyers/doctor/activists/educators/policymakers) have responded, both successfully and disastrously, to evolving health threats. Using a case-based method, the course will probe true public health emergencies, considering the (limits of) information available to scientists; the public response; political/economic considerations; media coverage; policy/programmatic response; and health/social outcomes. The course will tackle cases from infectious disease and social epidemiology, and will cover: outbreak investigation, lay epidemiology, surveillance and rapid response, and strategies to address the social determinants of health, including poverty/SES and racism. Students in the class will develop key skills in critical epidemiological reasoning and public health action. Note: This course satisfies the RTE requirement for the Environmental Health track.
Taught by: Carolyn Cannuscio
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

PUBH 525 Health & Human Rights
This course will explore the interplay between health and human rights and enable students to critically apply human rights to public health practice. We will explore the development of health as a human right and how public health research and policy can affect human rights. Students will learn about core human rights principles and mechanisms and the international development agenda. The class will examine topics at the intersection of global health and human rights including HIV/AIDS, harm reduction, migration, sexual and reproductive health, and climate change. Class material will primarily focus on public health challenges in the global south; however, we will also discuss health and human rights issues faced by vulnerable populations in the United States.
Activity: Lecture
1.0 Course Unit
PUBH 529 Public Health Perspectives on Sexual & Reproductive Health
This course will survey a range of key current and historic topics in reproductive and sexual health nationally and internationally with a particular emphasis on implications for public health. Policy, epidemiology, clinical practice, advocacy, and service delivery topics will be covered through presentations and conversations with leaders in the fields of reproductive and sexual health. The course will provide students with a broad general introduction to these topics which is appropriate for those interested in either public health or clinical aspects of the field. For students who wish to pursue a focused career in this area, this course is a necessary introduction. Students who will be working in related areas of public health will have exposure to a broad general understanding of reproductive and sexual health.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

PUBH 530 Environmental Toxicology: Risk Assessment and Health Effects
This course presents general principals of toxicology and the disposition of toxins in the body. Case studies of the effects of environmental and occupational toxins on individuals will be analyzed. This course is designed for students who desire a strong foundation in toxicological concepts and principals and provides an overview of major toxins in our environment and their association with human health. Prerequisite: Undergraduates needs permission
Taught by: Liu
Course not offered every year
Also Offered As: NURS 677
Activity: Lecture
1.0 Course Unit

PUBH 531 Public Health Nutrition
The course is designed to introduce students to the core concepts, policies and practice of public health nutrition. The course will draw upon real world examples of local, national, and global initiatives to decrease risk of chronic diseases related to the World Health Organization’s (WHO) major nutrition-related chronic diseases.
Activity: Lecture
1.0 Course Unit

PUBH 538 Qualitative Methods in Health Research
The purpose of this course is to expose students to a variety of qualitative approaches/methodologies that may be used in health services/policy research. In didactics we will discuss the pros and cons of a range of qualitative Methods, how the method is actually implemented (with multiple experts presenting approaches), and pair the presentation with a broader discussion in which students compare and contrast health oriented articles in which the method was used. Students will have the opportunity to apply the theoretical approaches to their own research interests with direct input from the faculty and their peers. Prerequisite: Permission needed from instructor.
Taught by: Drs. Frances barg and Judy Shea
Course usually offered summer term only
Also Offered As: HPR 503
Activity: Lecture
1.0 Course Unit

PUBH 539 Designing Interventions to Promote Health and Reduce Health Disparities
Advanced analysis, design and evaluation of interventions to promote health and reduce health disparities with a focus on underserved vulnerable minority or ethnic populations, through culturally competent research, education and clinical practice. Areas to be evaluated include:
-- Health disparities as it relates to health promotion and disease prevention behavioral intervention research in vulnerable communities
-- Concepts of marginalization, race, ethnicity, class, gender and culture as it relates to health disparities -- Social-psychological theoretical and research approaches related to developing culturally congruent health promotion interventions to reduce health disparities for vulnerable populations -- The use of elicitation, focus groups and ethnographic techniques to tailor health behavior theory to meet the needs of the population -- Culturally competent research methodologies, involving education and/or clinical practice, e.g. culturally competent measures, recruitment, retention, and informed consent in hard to reach populations
-- Community participatory research as a strategy for working with the community to build research partnership and build capacity for sustained health promotion initiatives -- Health promotion intervention strategies for reducing health disparities in vulnerable communities -- Strategies to evaluate the effectiveness of interventions using randomized controlled trials (RCTs) in community and clinical settings -- Strategies for tailoring successful evidenced-based health promotion interventions to a variety of different populations for use in clinical trials and community settings -- Examine approaches for the translating and disseminating evidenced-based intervention research
Prerequisite: PhD Students
Course offered spring; odd-numbered years
Also Offered As: NURS 823
Activity: Seminar
1.0 Course Unit

PUBH 540 Go Global
This course is designed to house a country-specific course with time in country to build partnerships and work through public health challenges. The country of focus rotates based on the year and current events.
Activity: Lecture
1.0 Course Unit

PUBH 541 Social Epidemiology
This class is designed to expand student knowledge about social factors that are known or suspected to influence population health. These factors include, among others, race, gender, socioeconomic status, and social support. Understanding how to talk and think about these social factors is essential to effective participation in public health research and practice. The course will focus on conceptual and theoretical basis of these social factors, exploring both their measurement in epidemiologic research, and the mechanisms by which they are thought to affect health. Potential strategies for ameliorating social determinants of disease and disability - and particularly those relying on legal and policy reform - will be discussed along with their associated political impediments. HIV/AIDS and aggressive policing will provide recurring topical examples.
Activity: Lecture
1.0 Course Unit
**PUBH 547 Public Health & the Criminal Justice System**
This class is designed to introduce students to the myriad ways that the criminal justice system influences individual and community health. The class begins by providing foundational knowledge about criminal justice processes. Deploying an epidemiological lens, the course introduces four criminal justice system exposures: policing and arrest, adjudication, incarceration, and community supervision (e.g., probation). For each exposure, class will explore (1) its legal status within the criminal justice process, (2) its incidence and distribution within one or more populations, and (3) its relationship to one or more health outcomes. The exploration of the incidence and distribution of the exposures will also consider measurement challenges. In exploring health effects, we will strive for depth and diversity of mechanism. Throughout the course, the instructors will refer to recent innovations in domestic criminal justice policies or alternate regulatory and enforcement approaches from other countries. Broadly speaking, this course aims to encourage and empower students to bring their public health training to bear on ongoing efforts to create a healthier criminal justice system through research, advocacy or practice.

Taught by: Evan Anderson  
Activity: Lecture  
1.0 Course Unit

**PUBH 551 Global Health Policy and Delivery**
This participatory interdisciplinary seminar course examines contemporary issues in global health policy and delivery. The overall organizing framework for the class is the social determinants of health. The class will consider evidence that inequalities in education, income, and occupation influence health status. Students will develop skills in policy analysis, policy brief development, and policy impact monitoring. The public policy process will be explored using a variety of contemporary global health case studies which focus on content areas such as maternal health, HIV policy, refugee health an global healthcare delivery. Finally, we will examine the global health workforce and the impact of widespread global migration of health professionals on receiving and sending countries.

Course usually offered in spring term  
Also Offered As: NURS 640, SWRK 793  
Activity: Lecture  
1.0 Course Unit

**PUBH 553 Science and Politics of Food**
This course provides an introduction to the many forces that shape what we eat. These include psychological, political, biological, legal, economic, and social influences. We will discuss and critically evaluate scientific research on food policies designed to improve the world’s diet. This course will have strong focus on the communication of health information and issues of health disparities as they relate to food environments and food policies. In addition, course assignments, activities, and lectures are designed to develop skills related to critiquing research and communicating evidence-based opinions in a clear and compelling manner.

Activity: Lecture  
1.0 Course Unit

**PUBH 554 Impact Evaluation of Global Health Programs**
This course will provide an introduction to impact evaluation, an important methodology for evidence-based health policies and programs. Impact evaluation comprises a set of approaches to generating robust evidence of program performance against desired objectives. A distinct type of broader monitoring and evaluation approaches, impact evaluation focuses on identifying a credible counterfactual (what would have happened in the absence of the program of interest?) to permit attribution of observed outcomes to interventions. In this course, we will cover the why, when, and how of impact evaluation, including basic econometric methods for study design, data collection, and analysis. Both experimental and quasi-experimental designs will be discussed. Case studies and exercises will draw on classic studies and the contemporary evaluation literature, and will allow students to ‘get their hands dirty’ with data manipulation and analysis.

Activity: Lecture  
1.0 Course Unit

**PUBH 555 A Public Health Approach to Behavioral Health**
This course is designed to focus on the public health issue of behavioral health, with a focus on mental health and its relation to substance use. The course will apply public health approaches beyond individual clinical treatment to take a population level approach to behavioral health. In addition to learning the prevalence and impact of behavioral health conditions, this course will also look at: the historical impact of mental health policy, including the Community Mental Health Services Act of 1963, on behavioral health services and public health issues like homelessness; strategies to address behavioral health taking a public health approach, e.g., widespread universal screening, community activation, community level interventions, and health promotion in addition to prevention; and local examples of community level interventions to address behavioral health including Mural Arts’ Porch Light Program, a partnership with the City of Philadelphia Department of Behavioral Health.

Taught by: Samantha Matlin  
Activity: Lecture  
1.0 Course Unit

**PUBH 565 Health Communication in the Digital Age**
Health communication spans activities from in-person communication to technology based interventions and mass media campaigns. Health communication interventions are applied across a variety of health promotion and disease prevention activities. In this course, we will explore a variety of approaches to using communication strategies to improve individual and population health. The course will provide an introduction to the theory, design, and evaluation of health communication programs. We will review and critique several health communication interventions. The course will also include a special emphasis on new media and technology, as well as developing practical skills for developing health communication programs.

Also Offered As: NURS 353, NURS 565  
Activity: Lecture  
1.0 Course Unit
PUBH 570 Evidence-Based Strategies to Improve Adolescent and Young Adult Health
This course examines the health and well-being of young people between 10 and 26 years of age in the United States, and the influence of evidence-based practice, programs, and policy on the health of this important age group. The course includes an examination of adolescent and young adult (AYA) health and well-being within a life-course framework; biological, psychological, gender and sexual development between 10 and 26 years of age including issues specific to sexual minority youth; nutritional health and health policy; and reproductive health and health policy. We will examine the influence of systems and policy on key AYA health issues using case studies in injury prevention, obesity prevention, HIV testing and care, and access to routine health care and reproductive health services. The impact of MCH/Title V, Title X, the ACA, and legislation related to child nutrition and school food programs on AYA health will be integrated throughout the course. Course usually offered in spring term Activity: Lecture 1.0 Course Unit

PUBH 573 Substance Use as a Public Health Issue
Over 70,000 people died from drug overdoses in the US in 2017 alone, exceeding the number of US soldiers who died in the twenty years of the Vietnam War. This course will provide an overview of the contemporary challenges in addressing substance use as a public health problem. Students will learn about the personal and environmental factors that often contribute to substance use, as well as the downstream consequences, including HIV and hepatitis C. Students will also learn public health strategies to address substance use, including primary prevention and harm reduction. Finally, issues around drug policy at the local, state, and federal level will be discussed. While this course will use opioids and the crisis in Philadelphia as the primary case study, other drugs will be touched upon as well. The course combines lecture, interactive class exercise, and group discussion. Activity: Lecture 1.0 Course Unit

PUBH 575 Intimate Partner Violence
Intimate partner violence (IPV), defined as physical, sexual or psychological harm imposed by a current or former intimate partner, is a public health problem leading to increased morbidity and mortality worldwide. The purpose of this course is to familiarize students with the definition, theories, dynamics, scope, consequences of, and interventions to prevent and address violence among intimate partners. Through this course, students will gain insight into the epidemiology of IPV across the life course, including risk and protective factors and examine unique considerations for vulnerable populations. The course will highlight current measurement issues in the field of IPV assessment and address IPV-related policies to address screening, prevention, and response to IPV. Using a social-ecological framework, we will examine the issue of IPV prevention and intervention from the individual, relationship, community, and society perspectives, and explore approaches to and need for screening, as well as primary, secondary, and tertiary levels of prevention. Taught by: Rachel Myers Also Offered As: SWRK 775 Activity: Lecture 1.0 Course Unit

PUBH 578 Housing Quality, Equity and Public Health
This course examines housing as a social determinant of health through the lens of environmental justice and health equity. The course examines the direct mental and physical impacts of housing quality and access, specifically for urban, low-income children and adults; the policies, social and economic factors that create inequities; and solutions to address these issues. Key concepts include: the public health impact of housing environmental quality and affordability; environmental justice; racial equity in housing policy. Course usually offered in spring term Activity: Lecture 1.0 Course Unit

PUBH 584 Health Messaging in Africa: Public Performance and Community Health Education
Health Messaging in Africa: Public Performance as Participatory Action Research®. This course asks, What about performance offers a unique opportunity to learn from and with communities? How might dramatic performance be used to share information while learning from an audience? This course examines the work and research of young artists from Liberia, West Africa who used street theatre to teach best practices for prevention during the Ebola crisis and considers how their use of dialogical performance contributed to critical knowledge which iteratively informed interventions throughout their awareness campaign. The visiting artists will share their firsthand experiences and guide the class through use of their playwriting model for community change. Students will design public performance projects around local-global community-based concerns using the tools they have learned. Students may choose from a variety of local organizations dedicated to serving immigrant communities and local communities of color in Philadelphia to develop performance-based public health messaging informed by a communications for development approach. Public health researchers who are looking for innovative ways to share their data will gain insights into this experimental ethnographic method and practitioners who want to offer their communities ways to connect best practices to lived experience will develop new pedagogical tools. Taught by: Jasmine Blanks Course not offered every year Activity: Lecture 1.0 Course Unit
PUBH 588 Advanced Leadership Skills in Community Health
Grounded in a social justice perspective, this course aims to provide the student with a foundational overview of the field of community health and leadership skills in public health advocacy. The course encourages critical thinking about health outcomes framed by the broad context of the political and social environment. This course analyzes the range of roles and functions carried out by leaders in healthcare advocacy for marginalized communities; integrates knowledge of health policy and the key influence of government and financing on health outcomes; explores community-based participatory research and interventions as tools for change; and discusses ways to develop respectful partnerships with community organizations. An assets-based approach that draws upon the strengths of communities and their leaders provides a foundation for community-engagement skill building. The course emphasizes the development of skills and techniques to lead effective, collaborative, health-focused interventions for disenfranchised groups, including residents of urban neighborhoods. Prerequisite: Undergraduates with permission of the instructor
Taught by: Klurasitz
Course usually offered in spring term
Also Offered As: HPR 588, NURS 587
Activity: Lecture
1.0 Course Unit

PUBH 589 The Public Health Challenges of Alzheimer's Disease and Cognitive Aging
Once upon a time, Alzheimer’s disease was a rare disease, and then it became common, but soon thereafter, it turned into a crisis. What happened, and what do we need to do? This course will lead students to find the answers to this question, answers that are at the intersections of medicine, ethics, public policy, culture and health care. Topics covered include the histories of Alzheimer’s disease and cognitive aging and their changing definitions, the concepts of cognition and function and how they are assessed, the contested science and practice of measuring the disease's prevalence and mortality, autonomy and capacity, risk and preventative factors for cognitive decline, the demography and economics of caregiving, and the creative public health initiatives and models of care that could reduce stigma, enhance cognition and maintain independence. Students will apply biostatistical and epidemiologic methods to critique papers, close textual analysis to understand concepts and their shifting meanings, and writing to clearly and succinctly frame a problem, its costs and solutions. The course will include lectures, readings from the literature, group discussions and in-class exercises, and interviews with guest experts. Evaluation will be based on participation, presentations, written assignments, and exam results.
Taught by: Jason Karlawish
Activity: Lecture
1.0 Course Unit

For BGS Public Health Certificate students only.
Taught by: H. Nelson
One-term course offered either term
Activity: Seminar
1.0 Course Unit

PUBH 604 Qualitative Research in Social Sciences
This course explores the theory, methods, ethics, and practicalities of qualitative research. Its central goal is to leave students prepared to lead their own qualitative projects, whether MPH capstones, other theses, or future research pursued after graduate education. Qualitative analysis has broad utility for the examination of experience, cognition, culture, language, and social interaction. Accordingly, we will progress through readings conveying insights of qualitative researchers from numerous disciplines. We will begin by clarifying the kinds of knowledge that qualitative methods generate. We will then seek to demystify the role of theory in qualitative research. Next, we will cover the major aspects of preparing a qualitative study: identifying appropriate sites and samples, communicating with stakeholders and facilitators, and cultivating a reflexive mindset attuned to ethical issues. We will subsequently examine the various methods for creating qualitative data (observation, interviewing, and their variants) before turning to the analysis of this data using an iterative coding process managed via software. Finally, we will work on developing explanatory theory from this analysis.
Taught by: Justin Clapp
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

PUBH 605 Epidemiology and Control of Infectious Diseases
This course will focus on the application of epidemiological methods to the discovery, detection, and evaluation of infectious disease threats together with an evidence based assessment of the value of public health interventions intended to reduce prevalence and severity of disease in people. In-class assignments are intended to build skills in location, interpreting, assessing, and synthesizing evidence from the epidemiologic literature, with an emphasis on critical thinking, causal inference, and understanding bias and confounding.
Activity: Lecture
1.0 Course Unit

PUBH 606 Interpreting Epi Literature to Inform and Influence
This course is designed for students interested in further exploration of epidemiologic methods and the challenge of establishing a causal relationship between exposure and outcome using an observational science. We will utilize case studies to address the application of epidemiologic data to specific issues of relevance to public health. The nature of observational data will be explored through these case studies and specific methodological challenges will be highlighted and examined.
Taught by: Amanda Bennett Palladino; Kate Wallis
Also Offered As: NURS 616
Activity: Lecture
1.0 Course Unit

PUBH 607 Adv Local Policymaking
This course is designed to provide the foundational context and practical skills necessary to effectively advocate for evidence-based policy change in furtherance of public health objectives. The class will be interactive in nature and will require participation in public health advocacy exercises in order to hone advocacy skills. There will also be a focus on persuasive communication, both oral and written. We will explore the entire advocacy process from the identification of a problem and evaluation of possible policy solutions to utilizing the full range of advocacy tools to promote policy change. We will be using real-time examples of public health challenges affecting the health, safety and well-being of children and families here in Philadelphia and in communities across the country.
Activity: Lecture
1.0 Course Unit
PUBH 608 Behavioral Economics and Health
This course will explore answers to pressing public health questions through the lens of behavioral economics. Behavioral economics, a field at the intersection of psychology and economics, suggests that humans rarely behave rationally when making health-related decisions. The course will take a very pragmatic, hands-on orientation to behavioral economics and health research and practice. It will also leverage the deep and rich expertise of Penn’s Center for Health Incentives and Behavioral Economics, a leading research organization in the field.

Activity: Lecture
1.0 Course Unit

PUBH 609 Management & Leadership in Public Health
The goal of this course is to build upon management and leadership skills, and learn and apply public health management and leadership tools (mlts) to effectively use in practice. This course uses pubh 506 to build a foundation, with increased emphasis on financial, administrative, operational, and human resource management and leadership in public health. Students will have the ability to apply key concepts and further develop their leadership and management skills and apply specific mlts tools. The course uses a case-based framework an dpulls from real life examples. The course is ideally designed for the student who will use the mph to advance in careers leading and managing public health initiatives across a variety of sectors.

Activity: Lecture
1.0 Course Unit

PUBH 610 Mathematical Models for the Control of Infectious Diseases
As infectious diseases are transmitted from one host to another, the dynamics of transmission in the population of hosts follow certain basic rules. If one knows and understands these rules, one can plan rational strategies to prevent or control infections. One of the principal tools of those interested in public health interventions to control or ameliorate infectious diseases is the mathematical model. A model is just a means of representing and manipulating something that would not otherwise be accessible. This course provides students with the opportunity to construct models of the transmission of infectious diseases and to use these models to plan or compare disease control strategies. The course is predicated upon the notion that the act of building a mathematical model of disease transmission is often the very best way of understanding what is going on. This understanding will be further refined by the examination of more complicated and sophisticated model structures as they appear in the recent published literature. Prerequisite: Permission of instructor A disproportionate number of emerging infectious diseases and recent disease outbreaks in the United States and elsewhere have shared a common characteristic— they affect veterinary as well as human populations. Many are also vector-borne, passing between different species of hosts through insects and other invertebrates. In some cases humans are only ‘spillover hosts’ whose infection is incidental to the transmission cycle. Interdisciplinary approaches are especially important to control such diseases. As a particular focus of the course, students will learn the tools needed for successful collaborations to address the growing problem of zoonotic and vector-borne diseases.

Activity: Lecture
1.0 Course Unit

PUBH 617 Glocalizing Health Security: The Local to Global Role of PH in Preparedness
This course provides an introduction to health security issues and its challenges. The course will introduce students to the historical development, structure, operation, and current and future directions of the major components of global, regional, national, and local health security systems. It examines the ways in which health security programs are organized and delivered, with attention to risks and vulnerabilities of special populations; roles of private- and public-sector actors, civil society organizations, and philanthropy in health security; the influences that impact health security policy decisions; factors that determine the allocation of health security resources and the establishment of priorities; and the relationship of costs to benefits (and how those are measured).

Activity: Lecture
1.0 Course Unit

PUBH 637 Advocacy & Public Health
This course is designed to provide the foundational context and practical skills necessary to effectively advocate for evidence-based policy change in furtherance of public health objectives. The class will be interactive in nature and will require participation in public health advocacy exercises in order to hone advocacy skills. there will also be a focus on persuasive communication, both oral and written. we will explore the entire advocacy process from the identification of a problem and evaluation of possible policy solutions to utilizing the full range of advocacy tools to promote policy change.

Activity: Lecture
1.0 Course Unit

Punjabi (PUNJ)
PUNJ 404 Beginning Punjabi Part I
This course emphasizes speaking and reading skills in Punjabi. Upon completion of this course, students should be able to interact meaningfully and in a socially acceptable manner in a variety of simple situations involving everyday conversational topics. Further, students should be able to read and understand the main idea and most details of simple connected texts. This course will utilize authentic printed, audio, and video materials and will provide opportunities for natural communication both within and outside the classroom.

Activity: Language Course
1.0 Course Unit
**PUNJ 405 Beginning Punjabi Part II**
This course emphasizes speaking and reading skills in Punjabi. Upon completion of the course, students should be able to interact meaningfully and in a socially acceptable manner in a variety of simple situations involving everyday conversational topics. Further, students should be able to read and understand the main idea and most details of simple connected texts. This course will utilize authentic printed, audio, and video materials and will provide opportunities for natural communication both within and outside the classroom.
For BA Students: Language Course
Taught by: Gahunia
Course usually offered in spring term
Prerequisite: PUNJ 404
Activity: Seminar
1.0 Course Unit

**PUNJ 424 Intermediate Punjabi I**
This course is designed as a continuation of Beginning Punjabi, but can also be taken by anyone who can demonstrate a similar level in proficiency of the language. The course objectives are to expand the mastery of sentence patterns and augment vocabulary and its usage through intensive grammar review and comprehension exercises. A special emphasis will also be placed on greater cultural awareness. Upon completion of this course students should be able to interact socially with added confidence and greater expressiveness. Students should also experience a great improvement in their comprehension of the spoken and written language.
For BA Students: Language Course
Taught by: Gahunia
Two terms. student must enter first term.
Activity: Lecture
1.0 Course Unit

**PUNJ 425 Intermediate Punjabi II**
This course is designed as a continuation of Beginning Punjabi, but can also be taken by anyone who can demonstrate a similar level in proficiency of the language. The course objectives are to expand the mastery of sentence patterns and augment vocabulary and its usage through intensive grammar review and comprehension exercises. A special emphasis will also be placed on greater cultural awareness. Upon completion of this course students should be able to interact socially with added confidence and greater expressiveness. Students should also experience a great improvement in their comprehension of the spoken and written language.
For BA Students: Last Language Course
Taught by: Gahunia
Course usually offered in spring term
Prerequisite: PUNJ 424
Activity: Seminar
1.0 Course Unit

**PUNJ 434 Advanced Punjabi**
The objective of the course is to improve proficiency in speaking, listening, reading and writing. Fall semester: Readings in Punjabi Literature - This course addresses the individual needs of learners. This is a one semester course. The focus of the course will be to study the interpretation of written and oral materials on social, political and contemporary cultural topics from modern literature, literary criticism, poetry and drama. Weekly written compositions and oral presentations will be assigned. Grading will be based on this. Spring semester: Punjabi Popular Culture - This course focuses on different aspects of popular Punjabi culture as they are represented in media - television, internet, magazines, newspapers, film, and music. This course aims at making the best use of class participation to improve all four language skills. This is also a one semester course. Prerequisite: This course is offered through the Penn Language Center.
For BA Students: Advanced Language Course
Taught by: Gahunia
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

**Quechua (QUEC)**

**QUEC 110 Elementary Quechua I**
Quechua, the language of the Inca Empire and still spoken by approximately 6 million people throughout the Andes, is the most popular indigenous language of South America. The program focuses on the development of written and oral communicative abilities in Quechua through an interactive activity-based approach. Course includes an introduction to Quechua and Andean culture. Students will participate in pair, small-group and whole-class activities. Assessment is based on both students ability to use the language in written and oral tasks and understanding the language and culture. This beginning level Quechua course is designed for students who have little or no previous knowledge of the language. Lectures will be delivered in English and Quechua
For BA Students: Language Course
Taught by: Mendoza-Mori, Americo
One-term course offered either term
Activity: Seminar
1.0 Course Unit

**QUEC 120 Elementary Quechua II**
Quechua, the language of the Inca Empire and still spoken by approximately 6 million people throughout the Andes, is the most popular indigenous language of South America. **Real Estate (REAL)**

**REAL 204 Real Estate Law**
This course examines the fundamentals of real estate finance and development from a legal and managerial perspective. The course serves as a foundation course for real estate majors and provides an introduction to real estate for other students. It attempts to develop skills in using legal concepts in a real estate transactional setting. The course will be of interest to students contemplating careers in accounting, real estate development, real estate finance, city planning, or banking. The main topics covered may include the following: land acquisition, finance; choice of entity; tax aspects; management (leasing, environmental); disposition of real property (sale of mortgaged property, foreclosures, wraparound mortgages, sale-leasebacks); and recent legal developments. Lectures and class discussion required.
One-term course offered either term
Also Offered As: LGST 204, LGST 804, REAL 804
Activity: Lecture
1.0 Course Unit

**REAL 205 Global Real Estate: Risk, Politics and Culture**
This is an introductory course to global real estate markets, with a focus on income-producing real estate assets. Globally, estimates suggest the value of investable real estate assets in the world exceeds $60 trillion. We will discuss the basics of valuation and risk management, emphasizing concepts that are salient in the global context, including political risk, currency risk, property rights and culture. The course will cover markets outside the United States, except for one special topic on international investors in the United States. We will focus more on the qualitative aspects of real estate investment analysis and less on quantitative aspects. As firms expand their ventures across borders, there is a growing emphasis on the ability to assess and manage risk in a global business environment. Many of these decisions have implications on real estate assets. In this class, we will discuss the real estate business decisions of global firms, such as Blackstone, Hilton, AirBNB, WeWork, Prologis, Walmart and Amazon. This is a full semester course, open to undergraduates and MBA’s. Lecture with discussion required.
Taught by: Maisy Wong
One-term course offered either term
Also Offered As: BEPP 208, BEPP 708, REAL 708
Prerequisite: BEPP 250
Activity: Lecture
1.0 Course Unit

**REAL 208 Housing Markets**
This course is designed for students interested in the economics and operations of housing markets. It is primarily a U.S. focused course, but does include a limited amount of international material for comparative purposes. The class is divided into four sections: (1) supply and demand for housing, including the operations of homebuilders and rental landlords; (2) house prices, including cycles and price dynamics; (3) international comparisons; and (4) public policy analysis applied to a current housing markets-related issue. This course presumes knowledge of intermediate economics, as we will apply that knowledge throughout the semester. For Wharton students, this means you must have passed BEPP 250 (undergrads) or MGEC 611 and 612 for MBA’s. Non-Wharton students should have taken the equivalent course in the College. Lecture with discussion required.
Taught by: Gyourko
Course usually offered in spring term
Also Offered As: BEPP 208, BEPP 708, REAL 708
Prerequisite: BEPP 250
Activity: Lecture
1.0 Course Unit

**REAL 209 Real Estate Investment: Analysis and Financing**
This course provides an introduction to real estate with a focus on investment and financing issues. Project evaluation, funding strategies, investment decision making and real estate capital markets are covered. No prior knowledge of the industry is required, but students are expected to rapidly acquire a working knowledge of real estate markets. Classes are conducted in a standard lecture format with discussion required. The course contains cases that help students evaluate the impact of more complex financing and capital markets tools used in real estate. There are case studies and two midterms, (depending on instructor).
Taught by: Ferreira, Handbury, Harari, Keys, Sinai, Wong
One-term course offered either term
Also Offered As: FNCE 209
Prerequisite: FNCE 100
Activity: Lecture
1.0 Course Unit

**REAL 215 Urban Real Estate Economics**
Urban Real Estate Economics uses economic concepts to analyze real estate markets, values, and trends. The course focuses on market dynamics in the U.S. and internationally, with an emphasis on how urban growth and local and federal government policies impact urban development and real estate pricing. A group development project gives hands on experience, and invited guest speakers bring industry knowledge. Besides the group project and presentation, problem sets are required along with a midterm and optional second exam. Lecture with discussion required.
Taught by: Wachter
One-term course offered either term
Also Offered As: REAL 724, REAL 945
Activity: Lecture
1.0 Course Unit
REAL 230 Urban Fiscal Policy
This course will examine the provision of public services for firms and people through cities. Why cities exist, when fiscal policy fails, investments in infrastructure, realities of local governments such as inequality, crime, corruption, high cost of living, congestion, and unfunded pensions and debt, will be covered. We will pay special attention to recent topics, such as partnerships with the private sector, enterprise zones, the role of technology, environmental challenges, and real estate policies that promote housing affordability, such as rent control and inclusionary zoning.
Taught by: Fernando Ferreira
Course usually offered in spring term
Also Offered As: BEPP 230, FNCE 230
Activity: Lecture
1.0 Course Unit

REAL 236 International Housing Comparisons
This course analyzes housing finance systems and housing market outcomes across the globe. In the US, the course focuses on the development of securitization markets and addresses the current challenges of housing finance reform, including the future of Fannie Mae and Freddie Mac. Internationally, the course covers issues of access to housing and housing informality in developing countries, financial crises arising out of the housing sector, and market-oriented and public policy solutions. The course features a wide array of speakers in finance, government and academia who contribute their perspectives to pressing issues of mortgage market design.
Taught by: Wachter
Course usually offered in spring term
Also Offered As: BEPP 236, BEPP 836, REAL 836
Activity: Lecture
1.0 Course Unit

REAL 240 Advanced Real Estate Investment and Analysis
This course is designed for majors in Real Estate, but is also open to finance-oriented students who wish a deeper analysis of real estate investment and investment analysis issues than that offered in REAL 209. The class will contain a mixture of lectures, guest speakers and case discussions. Academic research is paired with recent industry analysis of key issues in order to marry sound theory and empirical results with current events and practices. Several classes will include lectures outlining what economics and finance tell us about a number of topics. Generally, these will be followed by guest lectures from industry professionals who will focus on a specific application of the principles introduced in the lectures.
Taught by: Sinai
Course usually offered in spring term
Also Offered As: REAL 840
Prerequisite: REAL 209 OR FNCE 209
Activity: Lecture
1.0 Course Unit

REAL 260 Real Estate Disruptions
This course analyzes housing systems and housing market outcomes across the globe. In the US, the course focuses on the development of securitization markets and addresses the current challenges of housing finance reform, including the future of Fannie Mae and Freddie Mac. Internationally, the course covers issues of access to housing and housing informality in developing countries, financial crises arising out of the housing sector, and market-oriented and public policy solutions. The course features a wide array of speakers in finance, government and academia who contribute their perspectives to pressing issues of mortgage market design.
Taught by: Wachter
Course usually offered in spring term
Also Offered As: BEPP 236, BEPP 836, REAL 836
Activity: Lecture
1.0 Course Unit

REAL 280 Urban Process
This course will examine the provision of public services for firms and people through cities. Why cities exist, when fiscal policy fails, investments in infrastructure, realities of local governments such as inequality, crime, corruption, high cost of living, congestion, and unfunded pensions and debt, will be covered. We will pay special attention to recent topics, such as partnerships with the private sector, enterprise zones, the role of technology, environmental challenges, and real estate policies that promote housing affordability, such as rent control and inclusionary zoning.
Taught by: Sinai
Course usually offered in spring term
Also Offered As: REAL 840
Prerequisite: REAL 209 OR FNCE 209
Activity: Lecture
1.0 Course Unit
REAL 390 International Real Estate Comparisons
As a truly non-U.S. focused course, we explore the world of cross-border real estate development, with a focus on fast growing emerging market economies. Topics will emphasize the importance of strategy and implementation in cross-border real estate investment and include: the rationale, opportunities and risks of international real estate investing; the macro factors that influence the performance of real estate markets across countries; market specific factors that impact RE investment performance (property rights, taxes, transparency, planning procedures); the qualitative aspects of identifying and achieving successful projects; and the growing market for international RE securities and strategies for portfolio management. Classes will combine a lecture on specific aspects of global cross-border RE in the first half of the class and international case presentations in the second half. Cases will be presented by leading executives in charge of major international RE projects or funds. Cases have been selected to cover different types of RE development-residential, office, retail, hospitality and logistics-important emerging market countries/continents (East/South Asia, Latin America, Sub-Saharan Africa, the Middle East) and different development and investment strategies. This class is offered in the second half of the semester.
Course usually offered in fall term
Also Offered As: REAL 890
Prerequisite: REAL 209 OR FNCE 209
Activity: Seminar
0.5 Course Units

REAL 396 Real Estate Entrepreneurship
This half-semester course will focus on entrepreneurial aspects of the real estate investment business. The course structure is designed to track the life cycle of real estate investing with different units focusing on discrete stages of the deal process from sourcing and capital raising through asset management and property disposition. At each juncture, granular attention will be paid to real-life deal making skills, all from the perspective of an entrepreneur operating with limited resources in different economic environments. As part of the class, you will analyze deals, models and investment documentation that, once assembled, will arm you with a ‘deal tool kit’ that you can reference as you engage in real estate transactions throughout your career. At the end of the course, time will be allocated to discuss the trajectory of entrepreneurship and how it corresponds to careers in the real estate business.
Taught by: Ari Shalam
One-term course offered either term
Also Offered As: REAL 891
Activity: Lecture
0.5 Course Units

REAL 399 Independent Study
All independent studies must be arranged and approved by a Real Estate department faculty member.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

REAL 705 Global Real Estate: Risk, Politics and Culture
This is an introductory course to global real estate markets, with a focus on income-producing real estate assets. Globally, estimates suggest the value of investable real estate assets in the world exceeds $60 trillion. We will discuss the basics of valuation and risk management, emphasizing concepts that are salient in the global context, including political risk, currency risk, property rights, and culture. The course will cover markets outside the United States, except for one special topic on international investors in the United States. We will focus more on the qualitative aspects of real estate investment analysis and less on the quantitative aspects. As firms expand their ventures across borders, there is a growing emphasis on the ability to assess and manage risk in a global business environment. Many of these decisions have implications on real estate assets. In this class, we will discuss the real estate business decisions of global firms, such as Blackstone, Hilton, AirBNB, WeWork, Prologis, Walmart and Amazon. This is a full semester course, open to undergraduates and MBA’s. Lecture with discussion required.
Taught by: Maisy Wong
Course usually offered in fall term
Also Offered As: REAL 205
Activity: Lecture
1.0 Course Unit

REAL 708 Housing Markets
This course is designed for students interested in the economics and operations of housing markets. It is primarily a U.S. focused course, but does include a limited amount of international material for comparative purposes. The class is divided into four sections: (1) supply and demand for housing, including the operations of homebuilders and rental landlords; (2) house prices, including cycles and price dynamics; (3) international comparisons; and (4) public policy analysis applied to a current housing markets-related issue. This course presumes knowledge of intermediate economics, as we will apply that knowledge throughout the semester. For Wharton students, this means you must have passed BEPP 250 (undergrads) or MGEC 611 and 612 for MBA’s. Non-Wharton students should have taken the equivalent course in the College. Lecture with discussion required.
Taught by: Gyourko
Course usually offered in spring term
Also Offered As: BEPP 208, BEPP 708, REAL 208
Prerequisite: MGEC 611 AND MGEC 612
Activity: Lecture
1.0 Course Unit

REAL 721 Real Estate Investment: Analysis and Financing
This course provides an introduction to real estate with a focus on investment and financing issues. Project evaluation, financing strategies, investment decision making and capital markets are covered. No prior knowledge of the industry is required, but students are expected to rapidly acquire a working knowledge of real estate markets. Classes are conducted in a standard lecture format with discussion required. The course contains cases that help students evaluate the impact of more complex financing and capital markets tools used in real estate. Lecture with discussion required.
Taught by: Ferreira, Handbury, Harari, Keys, Sinai, Wong
One-term course offered either term
Also Offered As: FNCE 721
Prerequisite: FNCE 611
Activity: Lecture
0.5 Course Units
REAL 723 Introduction to Real Estate
The goal of this class is to help students become informed consumers of real estate advice. The class material breaks down into four major sections: 1) The financial risk and return of property level real estate investments. Be able to interpret, understand and evaluate a real estate property investment pro forma. 2) The legal landscape for investing in real estate and using legal structures to manage risk. 3) The economics of commercial real estate markets. Understanding the forces that will determine the value and income-producing potential of a real estate investment. 4) Important real estate issues of the day.
Taught by: Fernando Ferreira
One-term course offered either term
Activity: Lecture
0.5 Course Units

REAL 724 Urban Real Estate Economics
Urban Real Estate Economics uses economic concepts to analyze real estate markets, values, and trends. The course focuses on market dynamics in the U.S. and internationally, with an emphasis on how urban growth and local and federal government policies impact urban development and real estate pricing. A group development project gives hands on experience, and invited guest speakers bring industry knowledge. Besides the group project and presentation, problem sets are required along with a midterm and optional second exam. Lecture with discussion required.
Taught by: Wachter
One-term course offered either term
Also Offered As: REAL 215, REAL 945
Prerequisite: MGEC 611 AND MGEC 612
Activity: Lecture
1.0 Course Unit

REAL 730 Urban Fiscal Policy
This course will examine the provision of public services for firms and people through cities. Why cities exist, when fiscal policy fails, investments in infrastructure, realities of local governments such as inequality, crime, corruption, high cost of living, congestion, and unfunded pensions and debt, will be covered. We will pay special attention to recent topics, such as partnerships with the private sector, enterprise zones, the role of technology, environmental challenges, and real estate policies that promote housing affordability, such as rent control and inclusionary zoning.
Taught by: Fernando Ferreira
Course usually offered in fall term
Also Offered As: BEPP 773, FNCE 730
Activity: Lecture
1.0 Course Unit

REAL 804 Real Estate Law
This course examines the fundamentals of real estate finance and development from a legal and managerial perspective. The course serves as a foundation course for real estate majors and provides an introduction to real estate for other students. It attempts to develop skills in using legal concepts in a real estate transactional setting. The course will be of interest to students contemplating careers in accounting, real estate development, real estate finance, city planning, or banking. The main topics covered may include the following: land acquisition, finance; choice of entity; tax aspects; management (leasing, environmental); disposition of real property (sale of mortgaged property, foreclosures, wraparound mortgages, sale-leasebacks); and recent legal developments. Lectures and class discussion required.
One-term course offered either term
Also Offered As: LGST 204, LGST 804, REAL 204
Activity: Lecture
1.0 Course Unit

REAL 821 Real Estate Development
This course evaluates 'ground-up' development as well as re-hab, re-development, and acquisition investments. We examine raw and developed land and the similarities and differences of traditional real estate product types including office, R & D, retail, warehouses, single family and multi-family residential, mixed use, and land as well as 'speciality' uses like golf courses, assisted living, and fractional share ownership. Emphasis is on concise analysis and decision making. We discuss the development process with topics including market analysis, site acquisition, due diligence, zoning, entitlements, approvals, site planning, building design, construction, financing, leasing, and ongoing management and disposition. Special topics like workouts and running a development company are also discussed. Course lessons apply to all markets but the class discusses U.S. markets only. Throughout the course, we focus on risk management and leadership issues. Numerous guest lecturers who are leaders in the real estate industry participate in the learning process. Format: predominately case analysis and discussion, some lectures, project visits.
Taught by: Alan Feldman
One-term course offered either term
Also Offered As: ARCH 768, REAL 321
Prerequisite: REAL 721 OR FNCE 721
Activity: Lecture
1.0 Course Unit

REAL 836 International Housing Comparisons
This course analyzes housing finance systems and housing market outcomes across the globe. In the US, the course focuses on the development of securitization markets and addresses the current challenges of housing finance reform, including the future of Fannie Mae and Freddie Mac. Internationally, the course covers issues of access to housing and housing informality in developing countries, financial crises arising out of the housing sector, and market-oriented and public policy solutions. The course features a wide array of speakers in finance, government and academia who contribute their perspectives to pressing issues of mortgage market design.
Taught by: Susan Wachter
Course usually offered in spring term
Also Offered As: BEPP 236, BEPP 836, REAL 236
Prerequisite: FNCE 613
Activity: Lecture
1.0 Course Unit
REAL 840 Advanced Real Estate Investment and Analysis
This course, designed for majors in Real Estate, but also open to finance-oriented students, explores a deeper analysis of real estate investment and investment analysis issues than those offered in REAL/FNCE 721. The class will consist of a mixture of lectures, guest speakers, and case discussions. Academic research is paired with recent industry analysis of key issues to promote sound theory and empirical results with current events and practices. Several classes will include lectures outlining what economics and finance tell us about a number of topics. Generally, these will be followed by guest lecturers from industry professionals who will focus on a specific application of the principles introduced in the lectures. Format: Lecture, industry speakers.

Taught by: Duranton/Mack
Course usually offered in fall term
Also Offered As: REAL 240
Prerequisite: REAL 721 OR FNCE 721
Activity: Lecture
1.0 Course Unit

REAL 875 Real Estate Disruptions
Real Estate is changing dramatically for the first time in perhaps one hundred years. This class will examine how technology is changing in many facets (all) of the industry. This course will address how technology has already changed the demand for real estate, how it will likely change in the future the way real estate is used, designed, developed, constructed, managed, leased, maintained, and financed. Among many questions to consider: Can you crowd fund real estate development? Will the office business become a part of hospitality? Can we build new buildings like we assemble legos? How will autonomous vehicles affect the demand for space and property values? What is the future of new data analytics services? This is a team taught mini, half-credit course that will bring together a recognized industry leader and Wharton faculty. Included will be a group set of guest lecturers (Start-up entrepreneurs, incumbents, VC’s, non RE technology specialists, etc.). We believe there is no one single approach to gain insight into disruptions and change under uncertainty so we will propose a mix of approaches including in-depth case-studies, interactions with guest lecturers who handle those issues daily, learning from economic history and other industries, and drawing from core economic concepts.

Taught by: Duranton/Mack
Course usually offered in fall term
Also Offered As: REAL 375
Activity: Lecture
0.5 Course Units

REAL 890 International Real Estate Comparisons
As a truly non-U.S. focused course, we explore the world of cross-border real estate development, with a focus on fast-growing emerging market economies. Topics will emphasize the importance of strategy and implementation in cross-border real estate investment and include: the rationale, opportunities, and risks of international real estate investing; the macro factors that influence the performance of real estate markets across countries; market-specific factors that impact RE investment performance (property rights, taxes, transparency, planning procedures); the qualitative aspects of identifying and achieving successful projects; and the growing market for international real estate securities and strategies for portfolio management. Classes will combine a lecture on specific aspects of global cross-border RE in the first half of the class and international case presentations in the second half. Cases will be presented by leading executives in charge of major international RE projects or funds. Cases have been selected to cover different types of RE development-residential, office, retail, hospitality and logistics—important emerging market countries/continents (East/South Asia, Latin America, Sub-Saharan Africa, the Middle East) and different development and investment strategies. Prerequisite: This class is offered in the second half of the semester.

Course usually offered in fall term
Also Offered As: REAL 390
Prerequisite: REAL 721 OR FNCE 721
Activity: Seminar
0.5 Course Units

REAL 891 Real Estate Entrepreneurship
This half-semester course will focus on entrepreneurial aspects of the real estate investment business. The course structure is designed to track the life cycle of real estate investing with different units focusing on discrete stages of the deal process from sourcing and capital raising through asset management and property disposition. At each juncture, granular attention will be paid to real-life deal making skills, all from the perspective of an entrepreneur operating with limited resources in different economic environments. As part of the class, you will analyze deals, models and investment documentation that, once assembled, will arm you with a ‘deal tool kit’ that can reference as you engage in real estate transactions throughout your career. At the end of the course, time will be allocated to discuss the trajectory of entrepreneurship and how it corresponds to careers in the real estate business.

Prerequisite: MGEC 611 AND MGEC 612
Activity: Lecture
1.0 Course Unit

REAL 946 Advanced Topics in Urban Economics
This course addresses advanced topics in urban and real estate economics. The course will mix theory and empirics and will cover a broad range of topics including the modeling and estimation of agglomeration economies, land use and urban costs, transportation in cities, urban growth, migration between cities etc. The classes will mix formal presentations made by the instructor and student-led discussions of recent academic papers. In addition to presentations, students will be expected to complete a series of assignments including a short original research paper. PhD students will be expected to complete a research paper in addition to the successful completion of the course examination requirements. Prerequisites: The course assumes that students have familiarity with standard first year econometrics and microeconomics.
Taught by: FERREIRA, DURANTON
One-term course offered either term
Activity: Lecture
1.0 Course Unit

REAL 947 Advanced Real Estate and Urban Economics
This course covers fundamental and cutting-edge topics in urban economics and real estate as well as the most important econometric issues that arise in the estimation of urban economics and real estate models. The first part of the course focuses on the application of modern econometric methods to analyze empirical questions in the broad urban economics field, which includes topics from public economics and local finances, such as household sorting and valuation of public goods. This part of the course is especially concerned about dealing with non-experimental data, and also provides a guide for tools that are useful for applied research. The second and third parts of the course examine the economic modeling and intuition of a range of topics in urban economics and real estate, such as spacial equilibrium, supply and demand of space, housing prices and cycles. In addition, special emphasis is given to how the understanding of economic theory and institutions can help any empirical analysis. At the end of the course students should have a firm grasp of theory and econometric tools that lead to convincing empirical applications. Prerequisite: All Ph.D. students will be expected to complete a research paper in addition to the successful completion of the course examination requirements.
Taught by: Ferreira
One-term course offered either term
Activity: Lecture
1.0 Course Unit

REAL 962 Applied Economics Seminar
The goal of this course is to help doctoral students develop critical thinking skills through both seminar participation and writing of referee reports. To this end students will attend the Wharton Applied Economics each Wednesday at noon seminar when it meets; prepare two written referee reports on WAE papers per semester, due before the seminar is presented. After attending the seminar and the ensuing discussion of the paper, students will prepare follow-up evaluations of their referee report reports, due one week after the seminar.
Taught by: Gilles Duranton
Two terms. student may enter either term.

Regulation (REG)

REG 510 Introduction to Clinical and Translational Research
This introductory course lays the foundation for understanding practical aspects of conducting clinical research in an academic environment. The course is divided into two modules: Module 1: Research Methods & Protocol Development and Module 2: Regulatory Environment for Clinical Trials. The first module introduces clinical research, clinical protocols, study designs and biostatistics that underlie such studies. The second module covers ethical considerations in clinical research, study execution and oversight, and the regulatory environment for clinical research. Upon completion, students should have a strong foundation in the fundamentals of clinical research and should be able to apply contemporary research tools to clinically relevant areas of investigation. Prerequisite: This course requires permission to register. Please contact Bethany Germany at (bgermany@upenn.edu) to register.
Taught by: Emma Meagher, MD
Course usually offered in fall term
Also Offered As: MTR 510
Activity: Lecture
1.0 Course Unit
REG 590 Molecular Toxicology: Chemical and Biological Mechanisms
Course Goals: Exposures to foreign compounds (drugs, carcinogens, and pollutants) can disrupt normal cellular processes leading to toxicity. This course will focus on the molecular mechanisms by which environmental exposures lead to end-organ injury and to diseases of environmental etiology (neurodegenerative and lung diseases, reproduction disruption and cardiovascular injury). Students will learn the difficulties in modeling response to low-dose chronic exposures, how these exposures are influenced by metabolism and disposition, and how reactive intermediates alter the function of biomolecules. Mechanisms responsible for cellular damage, aberrant repair, and end-organ injury will be discussed. Students will learn about modern predictive molecular toxicology to classify toxicants, predict individual susceptibility and response to environmental triggers, and how to develop and validate biomarkers for diseases of environmental etiology. Students are expected to write a term paper on risk assessment on an environmental exposure using available TOXNET information. Pre-requisites: Must have taken or will take Fundamentals of Pharmacology concurrently. Undergraduate course work in biochemistry and chemistry essential. Exceptions allowed based on past course work. Please consult with students with required prerequisites; residents in in Environmental and Occupational Health, and professional masters students (MPH and MTR).
Taught by: Dr. Trevor M. Penning
Course usually offered in spring term
Also Offered As: PHRM 590
Activity: Lecture
1.0 Course Unit

REG 600 Introduction to Biostatistics
This course prepares students understand and apply the necessary statistical methods to their thesis project, critically assess the application of statistical methods in the literature, and collaborate with biostatisticians.
Taught by: Roger Vaughan, MS, DrPH
Course usually offered in fall term
Also Offered As: MTR 600
Activity: Lecture
1.0 Course Unit

REG 602 Proposal Development
Focuses on study design and proposal development as they relate to studies that probe the mechanism of disease. Discusses concepts such as writing a background section, asking a research question, designing a study, use of biomarkers, writing a research proposal, overview of study designs addressing feasibility issues. Development of thesis proposal starts during this course and concludes with each student submitting and presenting their proposal to the MTR faculty panel for critique and feedback.
Taught by: Anil Vachani, MD
Two terms. student must enter first term.
Also Offered As: MTR 602
Activity: Seminar
1.0 Course Unit

REG 610 Fundamentals of FDA Regulation
This introductory course provides an overview of Regulatory Affairs in relation to three key areas of development: Drugs, Biologics, and Medical Devices. The course will look at the rules governing prescription and over-the-counter drugs as well as the changes introduced by the influence of genetic engineering and biological product development. Throughout the course, practical issues facing regulatory specialists as they work with the FDA and other international regulatory bodies to secure and keep product approval will be addressed. Prerequisite: Permission is needed to register. Contact Bethany Germany at (bgermany@upenn.edu) to register.
Taught by: Monica Ferrante
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

REG 611 Clinical Study Management
This course will focus on the practical aspects of conducting clinical research in an academic environment. Upon course completion students will be able to apply scientific principles of research to the implementation and management of both investigator-initiated and industry-sponsored clinical research studies. Students will be guided through the operational aspects and regulatory processes for the three stages of study management: pre study start-up, ongoing study management and study close out. Students will learn strategies for navigating the complex regulatory/operational clinical research environment and for successful protocol development and approval, subject recruitment, data management and IRB clinical practices guiding research in humans is a critical concept that will be integrated throughout each of the lectures. Prerequisite: Permission is needed to register. Contact Bethany Germany at (bgermany@upenn.edu) to register.
Taught by: Megan Kasimatis Singleton, JD
Activity: Lecture
1.0 Course Unit

REG 612 Introduction to Drug Development
This introductory course lays the foundation for conducting pharmaceutical research in many ways. It begins with a brief review of the history of drug development and explains the phases of drug development in detail. The decision making process, drug development milestones and compound progression metrics are defined and explained with examples. At the conclusion of this course, students should have a working knowledge of the drug development process, understand the regulatory basis by which new chemical entities are evaluated and ultimately approved, and appreciate the time and expense of drug development. Undergraduates and graduate students from other departments are welcome. Please contact Bethany Germany at (bgermany@upenn.edu) to request permission to register.
Taught by: Eileen Doyle
One-term course offered either term
Activity: Lecture
1.0 Course Unit
REG 614 Biopharmaceutical Product Development, Manufacturing and Regulatory Affairs

Biopharmaceutical protein products have been successfully used to treat a number of diseases and currently represent a large segment of the product pipeline in most major pharmaceutical companies. More than half of the current top 20 blockbuster drugs are biopharmaceuticals. Drugs like Activase, Humira, and Avastin have revolutionized the drug industry in treating the unmet medical needs of many patients. With innovation at the heart of the biopharmaceutical industry, this course is aimed at developing the student's understanding of the application of basic research in molecular biology and genetics to the development of novel drugs for treating diseases. The course is designed to provide an overview of biopharmaceutical protein drug development and manufacturing processes with an emphasis on regulatory affairs activities. The class has been developed and is taught by a former VP of biopharmaceutical product development with over 30 years of experience in biotechnology and the biopharmaceutical industry. The course director will provide insights into the unique challenges and opportunities facing the biopharmaceutical industry and how they relate to regulatory affairs. Subject area experts from industry will also participate as guest lecturers. Prerequisite: Permission required to register. Please contact Bethany Garmany (bgermany@upenn.edu) to request a permit.

Taught by: Marcia Federici, PhD
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

REG 615 Post-Approval Maintenance of Drugs, Biologics, and Devices.

The FDA regulates prescription drugs, biologics and medical devices for utilization in the United States. The approval of a marketing application is a major accomplishment; however, it comes with significant responsibilities for a sponsor including numerous reporting requirements and activities to maintain a license as well as a need for lifecycle maintenance activities to stay competitive. The purpose of this course is to provide an overview of post-approval activities required for drugs, biologics and devices. Prerequisite: Contact Bethany Garmany (bgermany@upenn.edu) to request a permit for registration.

Taught by: Ajay Parashar, BPharm, MS, MDD, RAC
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

REG 616 Quality Assurance

Quality assurance (QA) plays a critical role in the reliability and reproducibility of product development and, manufacturing. As a component of the Quality Management System, quality assurance includes all activities performed by an organization for the prevention of errors and defects. This course intends to focus on QA principles, standards and requirements, with regard to the FDA-regulated product development lifecycle. Further, the course aims to offer examples of QA and quality control measures through auditing monitoring and risk management. Application of quality assurance and the interfaces between GLP, GTPGMP-and Pharmacovigilance regulatory regulated activities during product development and manufacturing will also be addressed.

Taught by: Dawn Lundin
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

REG 618 Introduction to Vaccine Development

Vaccine development is the process by which new vaccines are discovered, studied in laboratory and preclinical models and investigated clinically in patients to determine if they are safe and efficacious. Assuming the vaccine under investigation passes systematically defined milestones, submission of all documentation to regulatory authorities (e.g., US FDA and equivalent global regulatory authorities) can ensue and, pending a favorable review, market access can be granted. The process is highly regulated and there is significant cost involved for pharmaceutical sponsors to research and develop vaccines with the entire process averaging around 12 years once a product is discovered. This introductory course lays the foundation for conducting vaccine research in many ways. It begins with a brief review of the history of vaccine discovery and development and explains the phases of vaccine development in detail. Global Health history and impact of vaccines is described as well as the various stakeholders (e.g. WHO and World Bank) involved which distinguish vaccine from drug development. The decision-making process, vaccine development milestones and compound progression metrics are defined and explained with examples. At the conclusion of this course, students should have a working knowledge of the vaccine development process, understand the regulatory basis by which new vaccines are evaluated, ultimately approved and distributed around the world.

Taught by: Jeff Barrett
Activity: Lecture
1.0 Course Unit

REG 621 Cell and Gene Therapy

This course will provide students with a general overview of translational research in the area of gene and cell therapy. This includes technical considerations, translating preclinical investigation into therapeutics, the execution of gene and cell therapies clinical trials, and key regulatory issues. Entrepreneurial considerations will be discussed as well. By the end of this course, students will understand the basic technologies employed for gene and cell therapy along with approaches and pitfalls to translating these therapies into clinical applications including regulatory and commercial aspects of this emerging area. Prerequisite: At least one course in immunology.

Taught by: Michael C. Milone, MD, PhD, Elizabeth Hexner, MD, MSTR
Course usually offered in spring term
Also Offered As: CAMB 707, MTR 621
Activity: Lecture
1.0 Course Unit

REG 622 New Trends in Medicine and Vaccine Discovery

Modern drug discovery has evolved to include human genetic diagnosis and various biological approaches which has enabled progress in a variety of fields, including rare diseases, immuno-oncology, precision medicine, and biomarkers. The goal of this course is for students to understand newer treatment modalities and approaches beyond one size fits all small molecule drugs, as well as the technologies that empower them. Students will learn regulatory processes that govern medicine discovery and development and also consider business and societal aspects of medical progress. Students will be able to apply concepts directly to work in the healthcare industry. Students will be taught by experts in the field internal and external to Penn. Prerequisite: Permission required to register. Please contact Rachel McGarrigle (rmcg@upenn.edu) to request a permit.

Taught by: Claudine Bruck, PhD
Course usually offered in fall term
Also Offered As: MTR 622
Activity: Lecture
1.0 Course Unit
REG 623 Fundamentals of Pharmacology
This course is designed to introduce students to basic pharmacological concepts with special emphasis on the molecular actions of drugs. Subject matter includes use of microcomputers to analyze pharmacological data. Prerequisite: Permission of course director
Taught by: Dr. Jeffrey Field and staff
Course usually offered in fall term
Also Offered As: PHRM 623
Activity: Lecture
1.0 Course Unit

REG 630 Clinical Trials
This course is to serve as a general introduction to clinical trials, with emphasis on trial design issues. This is not a course on the biostatistics of clinical trials. It is expected that at the conclusion of the course, a student will be able to plan a clinical trial. Each class will consist of a two-hour lecture followed by a one hour discussion. Prerequisite: Permission of instructor.
Taught by: Farrar
Course usually offered in spring term
Also Offered As: EPID 630
Prerequisite: EPID 510 AND EPID 526

Religion and Culture (RELC)
The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates/).

RELC 101 Greek and Roman Mythology
Myths are traditional stories that have endured many years. Some of them have to do with events of great importance, such as the founding of a nation. Others tell the stories of great heroes and heroines and their exploits and courage in the face of adversity. Still others are simple tales about otherwise unremarkable people who get into trouble or do some great deed. What are we to make of all these tales, and why do people seem to like to hear them? This course will focus on the myths of ancient Greece and Rome, as well as a few contemporary American ones, as a way of exploring the nature of myth and the function it plays for individuals, societies, and nations. We will also pay some attention to the way the Greeks and Romans themselves understood their own myths. Are myths subtle codes that contain some universal truth? Are they a window on the deep recesses of a particular culture? Are they entertaining stories that people like to tell over and over? Are they a set of blinders that all of us wear, though we do not realize it? We investigate these questions through a variety of topics creation of the universe between gods and mortals, religion and family, sex, love, madness, and death.

RELC 200 Gods, Ghosts, Monsters
This course seeks to be a broad introduction. It introduces students to the diversity of doctrines held and practices performed, and art produced about 'the fantastic' from the earliest times to the present. The fantastic (the uncanny or supernatural) is a fundamental category in the scholarly study of religion, art, anthropology, and literature. This course focuses on both theoretical approaches to studying supernatural beings from a religious studies perspective while drawing examples from Buddhist, Shinto, Christian, Hindu, Jain, Zoroastrian, Egyptian, Central Asian, Native American, and Afro-Caribbean sources from earliest examples to the present--including mural, image, manuscript, film, codex, and even comic books. It also introduces students to related humanistic categories of study: material and visual culture, theodicy, cosmology, shamanism, transcendentualism, soteriology, eschatology, phantasmagoria, spiritualism, mysticism, theophany, and the historical power of rumor.

RELS 002 Religions of the West
This course surveys the intertwined histories of Judaism, Christianity, and Islam. We will focus on the shared stories which connect these three traditions, and the ways in which communities distinguished themselves in such shared spaces. We will mostly survey literature, but will also address material culture and ritual practice, to seek answers to the following questions: How do myths emerge? What do stories do? What is the relationship between religion and myth-making? What is scripture, and what is its function in creating religious communities? How do communities remember and forget the past? Through which lenses and with which tools do we define ‘the West’?

RELS 004 Art and Religion
What is religious art and what makes art religious? This course will survey a wide variety of artistic expressions from a number of religious traditions which draw on spiritual themes, are inspired by religious experiences or texts, and which serve an important role in religious practice and belief. Some of the themes which this course will explore are: visualization and action within the cosmos, passion and religious ecstasy, the material culture of personal devotion, icons and iconoclasm, depictions of the miraculous, and the relationship between word and image. Objects and images from Christianity, Islam, Judaism, and Buddhism and will be explored along with examples from other traditions.

RELS 005 Gender, Sexuality, & Religion
What does it mean to be a gendered individual in a Muslim, Hindu, Jewish, Christian, Buddhist, or Sikh religious tradition? How important are gender differences in deciding social roles, ritual activities, and spiritual vocations? This course tackles these questions, showing how gender - how it is taught, performed, and regulated - is central to understanding religion. In this course we will learn about gendered rituals, social roles, and mythologies in a range of religious traditions. We will also look at the central significance of gender to the field of religious studies generally. The first part of the course will be focused on building a foundation of knowledge about a range of religious traditions and the role of gender in those traditions. This course emphasizes religious traditions outside the West. Although it is beyond the scope of this class to offer comprehensive discussions of any one religious tradition, the aim is to provide entry points into the study of religious traditions through the lens of gender. This course will emphasize both historical perspectives and contemporary contexts. We will also read religion through feminist and queer lenses - we will explore the key characteristics of diverse feminist and queer studies approaches to religion, as well as limits of those approaches.

RELS 013 Gods, Ghosts, and Monsters
This course seeks to be a broad introduction. It introduces students to the diversity of doctrines held and practices performed, and art produced about ‘the fantastic’ from earliest times to the present. The fantastic (the uncanny or supernatural) is a fundamental category in the scholarly study of religion, art, anthropology, and literature. This course will fill both theoretical approaches to studying supernatural beings from a Religious Studies perspective while drawing examples from Buddhist, Shinto, Christian, Hindu, Jain, Zoroastrian, Egyptian, Central Asian, Native American, and Afro-Caribbean sources from earliest examples to the present including mural, image, manuscript, film, codex, and even comic books. It will also introduce students to related humanistic categories of study: material and visual culture, theodicy, cosmology, shamanism, transcendentalism, soteriology, eschatology, phantasmagoria, spiritualism, mysticism, theophany, and the historical power of rumor. It will serve as a gateway course into the study of Religion among numerous Asian, and East Asian Studies, as well as Visual Culture and Film Studies. It will include guest lectures from professors from several departments, as well as an extensive hands-on use of the collections of the Penn Museum of Archaeology and Anthropology and the manuscripts held in the Schoenberg Collection of Van Pelt Library. It aims to not only introduce students to major, approaches, and terms in the study of religion and the supernatural, but inspire them to take more advanced courses by Ilya Vinitsky, Liliane Weissberg, Projit Mukharji, Talya Fishman, Annette Reed, David Barnes, David Spafford, Frank Chance, Michael Meister, Paul Goldin, Renata Holod, Paul Rozin, among several others.

RELS 014 Myths and Religions of the Ancient World
This course will survey the religions of the ancient Middle East, situating each in its historical and socio-cultural context and focussing on the key issues of concern to humanity: creation, birth, the place of humans in the order of the universe, death and destruction. The course will cover not only the better known cultures from the area, such as Egypt and Mesopotamia, but also some lesser known traditions, such as those of the Hurrians, or of the ancient Mediterranean town of Ugarit. Religion will not be viewed merely as a separate, sealed-off element of the ancient societies, but rather as an element in various cultural contexts, for example the relationship between religion and magic, and the role of religion in politics will be recurring topics in the survey. Background readings for the lectures will be drawn not only from the modern scholarly literature, but also from the words of the ancients themselves in the form of their myths, rituals and liturgies.

RELS 027 Great Books of Judaism
The Babylonian Talmud, known simply as the Bavli, is the foundational legal and ethical document of rabbinic Judaism. It is one of the best read works of world literature, and it is the most widely disseminated and revered rabbinic work. It not only contains legal discussions and rulings but rather it also presents the worldview of the rabbis. This course will analyze and contextualize the perspectives of the Talmud towards the important phases of life. We will examine in-depth several Talmudic passages relating to the various stages of the human lifecycle: birth and naming of the child; circumcision, bar/bat mitzva and adulthood; earning a livelihood and choosing a career; marriage and divorce; procreation and raising children; death, burial, mourning and the belief in the resurrection of the dead among others. We will evaluate these teachings in light of other traditions and in their broader late antiquity and contemporary contexts. All texts will be read in their English translation but originals will be provided.

RELS 030 Gurus, Prophets & Aliens: Understanding New Religious Movements
This course offers a thematic introduction to the history of New Religious Movements (NRM) from the mid-19th century to the present day. Often labeled as ‘cults’ by the state and established religious institutions, new religions offer modern believers alternative spiritual and ideological solutions to age-old problems. In this class, students will be introduced to the teachings and practices of prominent NRMs in North America, Europe, Asia, and Australia, from wide-spread movements such as Scientology, Mormonism, and the Unification Church to lesser known groups such as the Church of the Almighty God, Neo-Paganism, and Raelism. We will explore the emergence of the anti-cult campaign in the second half of the 20th century, the relationship between apocalyptic sects such as the Peoples Temple and the Branch Davidians and political and social protest, and the role of Asian religions such as the Maharishi Mahesh Yogi’s Transcendental Meditation in the development of New Age religiosity. In addition, we will learn how new religious movements such as Wicca and the Children of God helped reshape gender roles and changed mainstream views about sexuality, and how developments in mass media and popular culture contributed to the creation of new groups such as the Star Wars inspired Temple of the Jedi Order (Jedism), the Church of the Latter-Day Dude (Dudeism), as well as UFO religions such as Heaven’s Gate. Throughout the semester, students will be exposed to a wide variety of primary and secondary sources, from academic articles and scholarly essays to documentaries, feature films, and TV shows. No previous knowledge in Religious Studies is required.

1.0 Course Unit

RELS 031 Religion and Violence
Perhaps nothing haunts modern politics more than religious violence. Killing sprees done in the name of God reveal the limits of political power. What space is left for the rule of law when appeals to dogma and the divine supersede reason? The causes and nature of divinely motivated violence are so mystifying that they are a constant topic of debate among academics, political parties, and news commentators. What really motivates religious violence? Is it just economic of class grievances in disguise? Are all religions prone to violence? Are some religions more violent than others? Or, are religions only violent when they go awry, denying their true messages? And does religion need to be quarantined and privatized, to keep us all safe? In this course, we’ll probe the dividing line separating religion from politics in an effort to better understand the causes and nature of religious violence. How do we know the difference between religious violence and political violence? What makes religion violent, and what makes violence religious?
Activity: Seminar
1.0 Course Unit

RELS 033 Modern Catholic Christianity
At the turn of the twentieth century, Sigmund Freud hypothesized that religion was a dead duck. Many other thinkers of ‘modernity’ have agreed with his thesis; and yet, over a century later, it is clear that religion is still a forceful presence in human culture. One religious tradition that has survived to the surprise (and even consternation) of some critics, is Roman Catholic Christianity. This Freshman Seminar will look closely at the Catholic Church in the twenty-first century, to explore the ways in which Catholicism has (and has not) adapted to modernity. We will begin with an investigation into the history of Roman Catholicism; how it is defined, and how it developed in relation to politics and culture in the Roman Empire, medieval and early modern Europe, and in the Americas; but most of the semester will focus on the Catholic Church of the past 200 years, especially as it appears in the United States. We will consider the relationship of Catholicism to many aspects of modern life, including science and technology, political systems and leaders, aesthetics (visual arts, music, literature and film), and understandings of gender and sexuality. There will be a midterm examination and a final paper of 6 to 10 pages.

RELS 066 Hindu Mythology
Premodern India produced some of the world’s greatest myths and stories: tales of gods, goddesses, heroes, princesses, kings and lovers that continue to capture the imaginations of millions of readers and hearers. In this course, we will look closely at some of these stories especially as found in Purana-s, great compendia composed in Sanskrit, including the chief stories of the central gods of Hinduism: Visnu, Siva, and the Goddess. We will also consider the relationship between these texts and the earlier myths of the Vedas and the Indian Epics, the diversity of the narrative and mythic materials within and across different texts, and the re-imagining of these stories in the modern world.

RELS 069 Love Sex and Death
This course focuses on important constants of human life as they are grappled with across religious traditions. Drawing on data across a range of religious traditions (such as Christianity, Hinduism, Judaism, Islam, Buddhism and Mesoamerican Religion), we will explore topics such as sexual identity, politics, religion and the individual in contemporary life; and eroticism, sex and love as they are reflected in religious literature, art and history. Divine love and religious devotion will be examined in relation to acts of violence, including human sacrifice and self-sacrifice in the past as well as the present. Other important questions considered in this course include: how does the body function as the locus in which religion is enacted? What is the conflict between our agency over our bodies and socioreligious claims over individual autonomy? Is violence an integral part of religion? What are religious understandings of the relationship between our agency over our bodies and socioreligious claims over individual autonomy? Is violence an integral part of religion? What are religious understandings of the relationship between love and sex? What does it mean for human beings to love God?

1.0 Course Unit

RELS 070 Meditation and Text
Meditation, so it seems, is everywhere. Walking across Locust Walk, numerous posters jump to the eye calling for engagement with all sorts of mindfulness and spiritual contemplations. We often associate with it: quiet, detachment, calm. Yet before meditation acquired this silent character, it was in fact rather ecstatic and voluble. Meditators used to employ text to tease an introspection and put their experience into extensive writing that documents their reaction to the text, allowing the meditator to construct and reveal his or her self through the engagement with the written word. To study the history of meditation is thus to great extent to study the history of reading, and maybe more importantly, the history of the self. The course offers a survey of the history of meditation in the West: Starting with the self-examination of the Roman emperor Marcus Aurelius and the medieval monastic traditions, going through some salient meditators of the early modern period (Montaigne, Ignacio of Loyola, Descartes), all the way to the invasion of Buddhist trends to the West in the 19th and 20th century. It also provides a window to major intellectual trends in the West, and to some key texts of various religions. Given the nature of the material, we will be interested in the ways in which texts affect us, considering the impact of timing, location, reading out loud vs. silently etc. The course involves weekly reading of primary and secondary sources, active in-class discussions and brief individual presentations by the students. Students will be encouraged to bring from their own national/religious/cultural background and to develop a personal project that will culminate in a final conference-like presentation. This is proposed as a Critical Speaking Seminar.
Taught by: Blumenzweig
Also Offered As: COML 110

1.0 Course Unit

RELS 071 Religion and Evolution
This class will explore encounters between religion and evolutionary sciences, from the 19th century to the present. We will consider the history of evolutionary biology’s entanglements with faith, from the initial explosion of interest in the wake of Darwin’s Origin of the Species in 1859 to contemporary debates about creationism and intelligent design here in Pennsylvania in the 21st century. In the first half of the class, we will look at how writers, philosophers, and theologians from around the world and a range of religious traditions have assessed the evolution-religion relationship --- some seeing conflict, others concord. In the second half, we will consider evolutionary approaches to the origins of religion, from late-19th century accounts to modern cognitive science and group selection theories. Topics covered will include scientific racism, sociobiology and the evolutionary origins of morality, primate religion, and the relationship between science, religion, and politics.

REL 102 Sacred Stuff: Religious Bodies, Places, and Objects
Does religion start with what’s in our heads? Or are religious commitments made, shaped and strengthened by the people, places, and things around us? This course will explore how religion happens in the material world. We’ll start with classical and contemporary theories on the relationship of religion to stuff. We’ll then consider examples of how religion is animated not just by texts, but through interactions with objects, spaces, bodies, monuments, color, design, architecture, and film. We’ll ask how these material expressions of religion move beyond private faith and connect religion to politics and identity.

1.0 Course Unit

REL 105 Virtual Religion: Religion in the Digital Age
How has religion responded and adapted to modern technology? How has the internet impacted our understanding of community, religion, morality, and embodiment? Can piety be digitized, can artificial intelligence be religious? In the new world in which we are discussing the advantages and perils of automation, humans vs. robots, advanced medical practices, and the like, where does religion fit in? How to understand the discussions around virtual religious gatherings during the global pandemic? This course explores the ways in which religion is expressed and experienced through digital media around the globe. We will read literature on philosophy of technology, environment, and material aspects of religion. In light of such theoretical frameworks, we will analyze media that have been changing the paradigms of religious practice, such as the internet, digitization of texts and objects, 3-d printing, virtual reality experiments, artificial intelligence, and the recent global health crisis. The course will draw examples from a variety of religious traditions and will study various conversations taking place between religion and technology. We will give special attention to the on-going debates about virtual religion in connection to the Covid-19 pandemic, and will speak about the future of religious communities and practice.

REL 109 Witchcraft and Possession
This course explores world witchcraft and possession from the persecutions of the early seventeenth century through the rise of Wicca in the twentieth century. The mere mention of these terms, or of such close cousins as demonology, sorcery, exorcism, magic, and the witches Sabbath, raises clear ethnographic and historical challenges. How can the analysis of witchcraft— including beliefs, patterns of accusation, the general social position of victims, the intensity and timing of witch hunts, and its relation to religious practice, law, language, gender, social marginalization, and property—lead us to a more humane understanding of belief and action? Films such as The Exorcist, The Blair Witch Project, The Crucible, and Three Sovereigns for Sarah will focus discussion.

RELS 121 Medieval and Early Modern Jewry
Follow the journey of one global diaspora over a millennium of cultural, intellectual, social, and religious change. From the rise of Islam in the seventh century to the separation of church and state in the seventeenth, Jewish people were intimate parts of, and at the same time utterly othered by, the many societies in which they lived. This basic duality is at the heart of this course, exploring how Jewish religion and culture evolved in relationship with Muslim and Christian majorities. Students will develop an understanding of the rich dynamism of premodern Judaism and Jewish life, with an emphasis on global diversity and internal differentiation as well as change over time. We will look for threads of continuity and moments of transformation, decode illustrative texts, images, and documents (in English), and ask how the Judaism that faced modernity had been shaped by a staggering array of different cultural circumstances after antiquity. The course includes attention to anti-Jewish phenomena like expulsion and blood libel, but also at coexistence and creative cultural synthesis, avoiding any simplistic narrative and asking about their legacy in the present day. It will look at the Jewish past from the inside, including less familiar dimensions including philosophy, magic, messianism, and family life.

RELS 128 Spirituality in Contemporary Israel
This course maps out spiritual and religious life in Israel today, ranging from state-supported orthodox communities to groups that practice alternative forms of spirituality. What role do tradition, custom and ritual practice play in the construction of contemporary Israeli identity? How does the State shape religious and spiritual life? What forms of spiritual life are emerging beyond orthodoxy? The course will explore these and other questions through the examination of various media including newspapers, movies, and online conversations with Israeli religious leaders and important figures in popular culture.

Also Offered As: JWST 128
Activity: Lecture
1.0 Course Unit

RELS 129 Themes Jewish Tradition
Course topics will vary; have included The Binding of Isaac, Responses to Catastrophies in Jewish History, Holy Men & Women (Ben-Amos); Rewriting the Bible (Dohrmann); Performing Judaism (Fishman); Jewish Political Thought (Fishman); Jewish Esotericism (Lorberbaum). Democratic culture assumes the democracy of knowledge - the accessibility of knowledge and its transparency. Should this always be the case? What of harmful knowledge? When are secrets necessary? In traditional Jewish thought, approaching the divine has often assumed an aura of danger. Theological knowledge was thought of as restricted. This seminar will explore the ‘open’ and ‘closed’ in theological knowledge, as presented in central texts of the rabbinic tradition: the Mishnah, Maimonides and the Kabbalah. Primary sources will be available in both Hebrew and English.

RELS 130 How to Read the Bible
The aim of this course is to explore what the Bible means, and why it means such different things to different people. Why do people find different kinds of meaning in the Bible. Who is right in the struggle over its meaning, and how does one go about deciphering that meaning in the first place? Focusing on the book of Genesis, this seminar seeks to help students answer these questions by introducing some of the many ways in which the Bible has been read over the ages. exploring its meaning as understood by ancient Jews and Christians, modern secular scholars, contemporary fiction writers, feminist activists, philosophers and other kinds of interpreter.
Taught by: WEITZMAN
Also Offered As: JWST 131, NELC 153
Activity: Seminar
1.0 Course Unit

RELS 132 The History of God
This course introduces the history of God as understood by modern scholars of religion. Why do people believe in gods in the first place? How did so many people come to believe that there was only one god, and how is that god different from earlier gods? How is the God of Judaism different from that venerated by Christians and Muslims. And what is the future of God in a world shaped by secularism, capitalism, and climate-change? This course will address these and other questions in light of anthropology, psychology, intellectual history, and other approaches that scholars uses to illumine religion.
Taught by: Weitzman

Also Offered As: ANCH 133, JWST 132
Activity: Seminar
1.0 Course Unit

RELS 135 Introduction to the New Testament
What can be known - from historical perspectives - about the life and teachings of Jesus and his earliest followers? Did Jesus see himself as a teacher and/or a revolutionary and/or the messiah? If Jesus and the apostles were all Jews, how did Christianity emerge as a distinct ‘religion’ distinct from Judaism? And how is that this small Galilean and Judean movement came to shape world history and Western culture even to this day? This course explores these questions through a focus on the formation of the New Testament - from the letters of Paul in the early first century CE, to the collection and closure of the canon of Christian Scriptures in the fourth century CE. In the process, we will explore the lived worlds of the first followers of Jesus through readings of texts within and outside the New Testament but also through art, artifacts, and manuscripts at Penn and in Philadelphia.

RELS 136 Death and the Afterlife in Ancient Judaism and Christianity
This course surveys the development of concepts about death and the afterlife in Judaism and Christianity, exploring the cultural and socio-historical contexts of the formation of beliefs about heaven and hell, the end of the world, martyrdom, immortality, resurrection, and the problem of evil. Readings cover a broad range of ancient sources, including selections from the Hebrew Bible and New Testament, as well as other Jewish and Christian writings (e.g., 'apocrypha,' 'pseudepigrapha,' Dead Sea Scrolls, classical rabbinc literature, Church Fathers, 'gnostic' and 'magical' materials). In the process, this course introduces students to formative eras and ideas in the history of Judaism, Christianity, and Western culture.

RELS 137 Religion and the Global Future
What role is religion playing in shaping the future of the globe? Has it made the world more or less dangerous? Can it help humanity address challenges like international conflict, climate change and poverty, or is it making those problems worse? The goal of this course is to help students think through these questions in light of the scholarship on religion and its intersections with international relations and public policy.

RELS 141 The Israeli Soul: Religion and Psychology in Modern Israel
This course aims to introduce what it means to be an Israeli today by exploring how Israeli identity relates to politics, religion, violence and trauma. Taught by an anthropologist, the course is focused on being Israeli not as a national identity but as a psychological experience, and aims to illumine the religious, cultural, social and political forces that are shaping that experience.

RELS 143 Introduction to Islam
This course is an introduction to Islam as a religion as it exists in societies of the past as well as the present. It explores the many ways in which Muslims have interpreted and put into practice the prophetic message of Muhammad through historical and social analyses of varying theological, philosophical, legal, political, mystical and literary writings, as well as through visual art and music. The aim of the course is to develop a framework for explaining the sources and symbols through which specific experiences and understandings have been signified as Islamic, both by Muslims and by other peoples with whom they have come into contact, with particular emphasis given to issues of gender, religious violence and changes in beliefs and behaviors which have special relevance for contemporary society.

RELS 144 From Jesus to Muhammad: History of Early Christianity
‘Jesus and Muhammad walk into a bar...’ We can think about multiple ways to complete the joke. They could talk about prophecy and prophetic succession, God’s word, women, pagans and Jews, state authority, among others. This course traces the long arc of religious history, from the Jesus movement to the rise of Islam. Through texts, objects, buildings, and artistic representations we will study the time period that connects these two significant developments that majorly changed world history. Lectures and discussions will consist of close reading, analysis, and discussion of primary sources, analysis of non-literary media, and engagement with modern scholarship. We will raise questions about ancient and modern perspectives on religious practice, representation, authority, gender, race/ethnicity, memory, and interreligious encounters.

RELS 155 Introduction to Indian Philosophy
This course will take the student through the major topics of Indian philosophy by first introducing the fundamental concepts and terms that are necessary for a deeper understanding of themes that pervade the philosophical literature of India – arguments for against the existence of God, for example, the ontological status of external objects, the means of valid knowledge, standards of proof, the discourse on the aims of life. The readings will emphasize classical Hindu, Buddhist, and Jain philosophical articulations (from 700 B.C.E. to 16th century C.E.) but we will also supplement our study of these materials with contemporary or relatively recent philosophical writings in modern India.

REL 163 Introduction to Hinduism
This course introduces students to the history, texts, philosophies and rituals of South Asia's oldest living religious traditions, represented today by the term 'Hinduism.' At the same time, it problematizes the idea of a monolithic 'Hindu Tradition,' in favor of an approach that recognizes several distinct, dynamic, yet symbiotic Hindu religious cultures. The course also places emphasis on the vitality of today's Hinduism(s), and the various historical, ritual, cultural, and social contexts that they represent and constitute. The course is organized around six modules: (1) Issues in the Academic Study of Hinduism; (2) Sanskrit (textual) tradition; (3) Philosophy; (4) Theology; (5) Ritual; (6) Modernity and Contemporary Politics.

REL 164 History, Culture, and Religion in Early India
This course surveys the culture, religion and history of India from 2500 BCE to 1200 CE. The course examines the major cultural, religious and social factors that shaped the course of early Indian history. The following themes will be covered: the rise and fall of Harappan civilization, the 'Aryan Invasion' and Vedic India, the rise of cities, states and the religions of Buddhism and Jainism, the historical context of the growth of classical Hinduism, including the Mahabharata, Ramayana and the development of the theistic temple cults of Saivism and Vaisnavism, processes of medieval agrarian expansion and cultic incorporation as well as the spread of early Indian cultural ideas in Southeast Asia. In addition to assigned secondary readings students will read select primary sources on the history of religion and culture of early India, including Vedic and Buddhist texts, Puranas and medieval temple inscriptions. Major objectives of the course will be to draw attention to India's early cultural and religious past and to assess contemporary concerns and ideologies in influencing our understanding and representation of that past.

REL 165 The Making of Scripture: From Revelation to Canon
The Bible as we know it is the product of a lengthy process of development, elaboration, contest, and debate. Rather than a foregone conclusion, the process by which the texts and traditions within the bible, and the status ascribed to them, was turbulent and uncertain. This course examines that process, examining the Bible, traditions and communities from the Second Temple Period - such as the Dead Sea Scrolls and Community - that rewrote, reconsidered, revised, or rejected now well-recognized figures and stories, and constructed distinct ideas of what was considered scripture and how it should be approached. Even as the bible began to resemble the corpus as we now know it, interpretive strategies rendered it entirely different, such as Hellenistic Allegorizers, working from the platonic tradition, rabbincic readers who had an entirely different set of hermeneutics, early Christians, who offered different strategies for reading the 'Old' and 'New' Testaments alongside one another (and employing categories like 'Old' and 'New,' themselves constituting a new attitude and relationship to and between these texts), and lastly early Muslim readers, who embraced many of the stories in the Bible, altered others, and debated the status of these corpuses under Islam.

REL 172 East Asian Religions
This course will introduce students to the diverse beliefs, ideas, and practices of East Asia's major religious traditions: Buddhism, Confucianism, Daoism, Shinto, Popular Religion, as well as Asian forms of Islam and Christianity. As religious identity in East Asia is often fluid and non-sectarian in nature, there religious traditions will not be investigated in isolation. Instead, the course will adopt a chronological and geographical approach, examining the spread of religious ideas and practices across East Asia and the ensuing results of these encounters. The course will be divided into three units. Unit one will cover the religions of China. We will begin by discussing early Chinese religion and its role in shaping the imperial state before turning to the arrival of Buddhism and its impact in the development of organized Daoism, as well as local religion. In the second unit, we will turn eastward into Korea and Japan. After examining the impact of Confucianism and Buddhism on the religious histories of these two regions, we will proceed to learn about the formation of new schools of Buddhism, as well as the rituals and beliefs associated with Japanese Shinto and Korean Shamanism. The third and final unit will focus on the modern and contemporary periods through an analysis of key themes such as religion and modernity, the global reception and interpretation of East Asian religions, and the relationship between religion and popular culture. The class will be conducted mainly in the form of a lecture, but some sessions will be partially devoted to a discussion of primary sources in translation. The course assignments are designed to evaluate the development of both of these areas. No previous knowledge of East Asian languages is necessary, and all readings will be available in English on the Canvas site in PDF form.
Taught by: Tavor
Course usually offered in fall term

Activity: Lecture
1.0 Course Unit
RELS 173 Introduction to Buddhism
This course seeks to introduce students to the diversity of doctrines held and practices performed by Buddhists in Asia. By focusing on how specific beliefs and practices are tied to particular locations and particular times, we will be able to explore in detail the religious institutions, artistic, architectural, and musical traditions, textual production and legal and doctrinal developments of Buddhism over time and within its socio-historical context. Religion is never divorced from its place and its time. Furthermore, by geographically and historically grounding the study of these religions we will be able to examine how their individual ethic, cosmological and soteriological systems effect local history, economics, politics, and material culture. We will concentrate first on the person of the Buddha, his many biographies and how he has been followed and worshipped in a variety of ways from Lhasa, Tibet to Phrae, Thailand. From there we touch on the foundational teachings of the Buddha with an eye to how they have evolved and transformed over time. Finally, we focus on the practice of Buddhist ritual, magic and ethics in monasteries and among the communities in Asia and even in the West. This section will confront the way Buddhists have thought of issues such as ‘Just-War’, Women’s Rights and Abortion. While no one quarter course could provide a detailed presentation of the beliefs and practices of Buddhism, my hope is that we will be able to look closely at certain aspects of these religions by focusing on how they are practiced in places like Nara, Japan or Vietnam, Laos.

RELS 184 What is Taoism?
This course introduces a wide variety of ideas and practices that have at one time or another been labeled as Daoist (or 'Taoist' in the Wade-Giles Romanization), in order to sort out the different senses of the term, and consider whether these ideas and practices have had any common features. We will begin with the two most famous Daoist works—the Zhuangzi and the Daodejing (or Laozi). We will also survey other bio-spiritual practices, such as the meditational techniques of Inner Alchemy and the self-cultivation regimens known today as Qigong and Tai-chi, as well as the theological and ritual foundations of organized Daoist lineages, many of which are still alive across East Asia. We will conclude with a critical review of the twentieth-century re-invention of 'Daoism,' the scientization of Inner Alchemy, and the new classification of 'religious' versus 'philosophical Daoism.' While familiarizing ourselves with the key concepts, practices, and organizations developed in the history of Daoism, this course emphasizes the specific socio-political context of each of them. Throughout the course, we will think critically about the label of 'Daoist' (as well as 'Confucian' and 'Buddhist') in Chinese history and in modern scholarship. We will also question modern demarcations between the fields of philosophy, religion, and science.

RELS 189 Islam and the West
How did Muslims and modern South Asia interact with the West? What Islamic idioms, orientations and movements emerged in the nineteenth and twentieth centuries? Was South Asia a prominent global center of Islam? What kinds of Islamic educational institutions developed in modern South Asia? How did Muslims appropriate technologies? What materials were printed by Muslims? Were Muslims part of the British army? What was jihad in modernity? How did Muslim ‘modernists’ and ‘traditionalists’ respond to the challenges of colonialism and modernity? What was the nature of Sufism in modern South Asia? What was the nature of political Islam in South Asia? How did some Muslims demand a Muslim State? What was the Partition? How has Muslim history been remembered in Bangladesh, India and Pakistan? This is an introductory course, and aims to introduce students to a facet of the long history of Islam, Muslims, and the West.

RELS 207 Jews, Race and Religion
Contemporary Jewish identity exists at an uneasy cross-section of race, religion and ethnicity. This course aims to expose students to the diversity of Jewish experience through the lenses of race and religion, examining the various ways these categories intersect and complicate each other. How can the study of race and religion help us to understand the present and future of Jewish life? How do Jews figure in the study of race and race relations in North America and Israel? Of what relevance is the category of whiteness for understanding Jewish identity, and what does their association in the U.S. mask about Jews and Jewish life today? And what are the roles of Jews in the continuing struggle for racial justice now underway in the world? This course aims to address these questions in light of a range of intellectual perspectives and disciplinary approaches. It will be built around a series of weekly guest lectures by leading scholars of Jews, race and/or religion, and will include among the questions and topics that it explores opportunities to explore connections among scholarship, personal experience and activism.

Activity: Lecture
1.0 Course Unit

RELS 212 Animals & Religion
Religion is full of animals—lions and lambs, monkeys and elephants, buffalo and snakes, even mythical beasts. The identity of the human being is explained, in many traditions, by contrast with the identity of other species. We know who we are because we know who they are, or do we? This course interrogates—through an exploration of sacred texts, art, film, and museum artifacts—the tension present in many traditions between an anthropocentric prioritization of the human being and religious resources that encourage a valuing of other animal species. We'll explore the way animals function both as religious objects and as religious subjects across diverse traditions, asking how human-animal relationships have shaped religion and how religion has shaped the way we think about and interact with other animals. We'll ask how religion has engaged with animals over time and across global cultures, understanding them as symbols, messengers, and manifestations of the divine; as material for ritual and sacrifice; as kin and subordinates; as food and as filth; as helpmeets and as tempters. How have these perspectives shaped animal ethics, influencing the treatment, use, and consumption of animals and their bodies? Finally, we'll ask what it means that we ourselves are evolved animals. How does our own animality factor into the practice of human religion? Is our religious capacity part of what sets us apart from other animals or is religiosity a trait we might expect to find in other species? To what extent is religion a function of the animal?

RELS 215 Satan: History, Poetics, and Politics of the Archenemy
This course explores the oldest and the most powerful antagonist of human history. Satan, the Devil, referred with many other names in different religious traditions, has a rich history from ancient dualist cosmologies, through the monotheistic traditions, up to the modern day. In this course, we will survey the many expressions of human creativity that underlies the emergence and development of this character. We will study mythology, scripture, philosophy, medicine, material culture, ritual practice, and iconographic representations to discover the many dimensions of the archenemy over the course of two millennia. Through an extensive study of Satan, we will see the ways in which people answered some perennial questions, such as: What is a human? How do we relate to the cosmos and nature? How do we make meaning of suffering? What is morality?

RELS 218 Saints and Devils in Russian Literature and Tradition
This course is about Russian literature, which is populated with saints and devils, believers and religious rebels, holy men and sinners. In Russia, where peoples frame of mind had been formed by a mix of Eastern Orthodox Christianity and earlier pagan beliefs, the quest for faith, spirituality and the meaning of life has invariably been connected with religious matters. How can one find the right path in life? Is humility the way to salvation? Should one live for God or for the people? Does God even exist? In Saints and Devils, we will examine Russian literature concerning the holy and the demonic as representations of good and evil, and we will learn about the historic trends that have filled Russias national character with religious and supernatural spirit. In the course of this semester we will talk about ancient cultural traditions, remarkable works of art and the great artists who created them. All readings and films are in English. Our primary focus will be on works by Pushkin, Gogol, Lermontov, Dostoevsky, Chekhov, Tolstoy, and Bulgakov.

RELS 235 Eastern Christianities
The history of Christianity is often told from the perspective of its spread westward from Israel to Rome. Yet, in the first millennium, there were more Christians living in the East, in places as far away as Persia, Yemen, India, China, and Mongolia, than in the West. Spread across the Asian continent, these Christians were actively involved in local and imperial politics, composed theological literature, and were deeply embedded in the cultural fabric of their host societies. This course traces the spread of Christianity eastward, paying particular attention to its regional developments, its negotiations with local political powers, and its contact with other religions, including Buddhism, Manichaeism, and Islam. Readings will cover a broad range of sources, including selections from classical Syriac literature, Mesopotamian magic bowls, the so-called 'Jesus Sutras,' and the Quran.
Taught by: Durmaz

Also Offered As: NELC 385, SAST 245
Activity: Lecture
1.0 Course Unit

RELS 237 Gender, Religion, and China
This course examines the interrelationship among 'gender,' 'religion,' and 'China' as conceptual and historical categories. We ask, for example, how gender plays critical and constitutive roles in Chinese religious traditions, how religion can be used both to reinforce and to challenge gender norms, how religious women impact Chinese society and culture, and what the construction of 'China' as a cultural identity and as a nation-state has to do with women, gender, and religion. We will also think about what assumptions we have when speaking of gender, religion, and China, and the infinite possibilities when we strive to think beyond. We will read three kinds of materials: (1) scholarship on gender and religion in historical and contemporary China as well as the Chinese-speaking world, (2) scholarship concerning theories and methodology of gender and religious studies not necessarily focused on China, and (3) historical record of religious women in English translation.

Activity: Seminar
1.0 Course Unit
RELS 239 Death, Disease & Demons in the Medieval World
How did life end for people in the medieval world? For most, death was not considered an end point because the soul journeyed on after the end of the body. But to where did it journey? And how would it be re-united with the body in the future? Between the classical period and the High Middle Ages, death shifted from a moment of quiet release to a frightening struggle in which angels and demons lay in wait for a soul as soon as it exited the body. This course will examine these changing beliefs about dying, focusing primarily on Christian medieval Europe but drawing comparative examples from Judaism, the Roman world, and Byzantine Christianity. Other topics we’ll consider include martyrdom and fears of bodily dismemberment; the emergence of purgatory and depictions of the afterworld; and the development of Christian rites for the dead. We’ll also investigate beliefs about the invisible powers of demons and the apocalyptic end of times. The course will also explore not only the process by which people entered the afterlife in the Middle Ages but also the causes of their deaths—what kinds of disease primarily afflicted medieval society, and how did age, class and gender intersect with disease to affect certain populations? We will end the semester by examining that most apocalyptic of Medieval events—the Black Death—in light of recent scientific discoveries, medieval medical explanations, and social changes brought on by this demographic catastrophe. Students will be exposed to a range of primary sources as well as evidence from tombstone inscriptions, architecture and manuscript illuminations, and archaeology. No prior knowledge of Medieval history is necessary. Taught by: Leja

RELS 244 From Miracles to Mindfulness
In 1902, the most famous philosopher in America, William James, revolutionized the study of religion by analyzing religion as an experience rather than as a set of doctrines or scriptures. In this course, we will pick up the inquiry that James and scholars such as Sigmund Freud began by exploring new approaches to the science and philosophy of religious experience. We will invite a series of experts from a wide range of fields—neuroscience, psychoanalysis, phenomenology, psychology, anthropology—to name only a few—to present their cutting-edge research on the nature of religious experience. How can religious experience be studied? What does the research reveal about religious experience? And what can we learn from such experiences about the workings of the human mind and human society? The course has two components: 1) a discussion-centered mini-seminar from 3:30-5:00 will open consideration of the subject with help from relevant readings 2) a guest lecture series every Tuesday from 5:00-6:30, featuring leading scholars who approach religious experience from different disciplinary angles or in light of different questions.
Taught by: Steve Weitzman
Also Offered As: JWST 244
Activity: Lecture
1.0 Course Unit

RELS 245 Sufism
This course is a survey of the large complex of Islamic intellectual and social perspectives subsumed under the term Sufism. Sufi philosophies, beliefs, practices, and social organizations have been a major part of the Islamic tradition in all historical periods and Sufism has also served as a primary muse behind Islamic aesthetic expression in poetry, music, and the visual arts. In this course, we will attempt to understand the nature and importance of Sufism by addressing both the world of ideas and socio-cultural practices. We will trace the development of Sufism as a form of Muslim piety linked to key notions in the Quran as well as living practices of venerating the Prophet Muhammad. We will then immerse ourselves in Sufi theoretical writings through a select list of primary sources introducing foundational Sufi concepts concerning the annihilation of oneself in God, and the various stages of the Sufi quest for spiritual union. From there, we will shift to a discussion of the interactions between Sufism and philosophy by looking at the writings of two of the most influential Sufi thinkers, Al-Ghazali and Ibn al-Arabi. We will also study the important role of Sufi poetry through a close reading of a selection of Rumi’s works. In our discussion of the social and political dimensions of Sufism, we will explore the relations between Sufi movements and religious and political authority, focusing on antinomianism and patronage in the Ottoman Empire, and on Sufi responses to colonial rule. The last part of the course will look at the roles of Sufis and Sufism in contemporary societies from South Asia to North America.

RELS 246 Spirituality in the Age of Global Warming: Designing a Digital Mapping Project in Scalar
We are living in the midst of one of the most severe crises in the Earth’s history. Science confirms the glaciers are melting, hurricanes are growing more intense, and the oceans are rising. But there is also a deeply spiritual dimension to global warming that does not factor into the scientific explanations of the Anthropocene. ‘Spirituality’ will be defined not in terms of one particular religion, but in relationship to a passionate study of the environment and nature. Readings will include materials from both the sciences and the humanities such as Donella Meadows’s Thinking in Systems, Elizabeth Kolbert’s The Sixth Extinction, Barbara Kingsolver’s Flight Behavior, and films such as Black Fish and Wale Rider. The theoretical focus of the course will be how ‘multispecies partnerships’ can help us better understand and mitigate the effects of Climate Change. This class will work collaboratively on a digital archive with an interactive mapping interface designed in Scalar. This newly developed platform allows for the creation of multimedia exhibits that will document how Global Warming is affecting coral reefs in the tropics, glaciers in the Arctic and Antarctic, rainforests in the Amazon and rivers of Philadelphia. Students will also work individually to design interactive maps on the Scalar platform documenting their own more personal interactions with the environment.

**RELS 248 Introduction to Islamic Law**

This course will introduce students to classical Islamic law, the all-embracing sacred law of Islam. Among the world's various legal systems, Islamic law may be the most widely misunderstood and even misrepresented; certainly, misconceptions about it abound. Islamic law is, however, the amazing product of a rich, fascinating and diverse cultural and intellectual tradition. Most of the readings in this course will be taken from primary sources in translation. Areas covered will include criminal law, family law, law in the Quran, gender and sexuality, the modern application of Islamic law, Islamic government and other selected topics.

**RELS 249 Re-enchanting Modernity: A Guide to Sufism in South Asia**

This undergraduate level course introduces students to Sufism in modern South Asia, with a particular focus on how Muslim 'mystics' and their 'mystical' methods interacted with modernity, colonialism, technological developments and globalization. This course is divided into three parts. In the first part of this course, students are provided with an overview of the theological and historical background of the dominant expression of Islam that came to be identified as 'Sufism' of 'Islamic mysticism', the historical development of Sufi institutions and spaces in South Asia, and the historical emergence of South Asia as a prominent global center of Sufism. The second and main part of this course introduces students to a range of anthropological and historical works that are revelatory about how Sufi in modern South Asia were and remain intimately connected to modern political and technological developments. Providing students with an overview of Sufi re-enchantments of modernity from the 19th to 21st century, this section of the course focuses upon Sufi movements and masters who perpetuated or defended customary Islam through sophisticated appropriations of technologies and print networks, and negotiations with non-Muslim rulers and societies. Moreover, students will be introduced to anthropological and historical scholarship on religious worlds in modern South Asia that were and remain steeped in 'customary Islam' and Sufi performances and interpretations of Islam. These sources reveal how 'mystical' methods of performing Islam through ecstasy and spiritual restoration, and interpretations of dreams and visions, have regularly interacted with contemporaneous technologies. The third part of this course introduces students to the globalization of South Asian Sufism in North America, Europe and Southeast Asia. Herein, students will be encouraged to engage with anthropological and literary works pertaining to itinerant South Asian Sufi masters and their devotional cults, and introduced to active South Asian Sufi centers in Philadelphia.

**RELS 251 History of Hinduism**

This course will explore the history of the religion(s) designated by the term 'Hinduism' from their earliest articulations down to the rise of modern reforms in the nineteenth century. The study of Hinduism is perhaps unique among the scholarly traditions on world religions in that it has to date had no serious connected account of its historical development, as scholars have preferred to take structural, sociological, phenomenological, and doctrinal approaches to the religion. The course, after a brief review of scholarly approaches to Hinduism and their interpretative legacies, will seek to develop a historical sense of the religion through attention to shifts in liturgy, ritual, theology, doctrine, sacraments, and soteriology. The course will include the reading of primary sources relevant to understanding these changes a well as highlight both modern and premodern traditions of their interpretation. It will also consider and assess some of the key interpretive ideas in the study of Hinduism, including, Sanskritization, Great and Little Traditions, cult formation, regional and popular religious movements, and canon formation. There will also be sustained consideration of the question of religion and socio-political power as well as relations between Hinduism and other religions like Buddhism and Islam.

1.0 Course Unit

**RELS 254 Violence, Tolerance, Freedom**

This seminar examines how the adjective 'religious' has been used to modify the nouns 'violence', 'tolerance', and 'freedom'. It traces the historical development of liberal ideas of tolerance and human rights, interrogates the common assumption that religion exerts a pervasive influence on politics and vice versa, critically examines the concept of terrorism, and connects the neoliberal ideal of unfettered free markets to the idea of being 'spiritual but not religious.' Previous courses in RELS or ANTH recommended.

**RELS 256 Existential Despair**

This is an experimental course that seeks to combine creative pedagogical methods and alternative scheduling to encourage intellectual reflection and emotional vulnerability through an in-depth study of the way people cope with existential despair. Through a reading of memoirs, novels, poetry, and essays in an atmosphere conducive to close-reading and full-participation students will explore a wide-range of ways of coping with, describing, and comprehending moments of great despair. Lectures will explain the ritual, liturgical, homiletic, meditative, reflective, self-destructive, psycho-somatic, and ascetic ways despair is both conditioned and mitigated by different thinkers from various traditions over time. Format: This course is different from most others in that there is no homework, no outside reading, and no research papers. There will be no work given to students or expected of them outside of class. All work is done in class and class is very long (8 hours straight, once a week, from four PM to midnight). Students will eat together in class, there will be three bathroom breaks, but there will be no internet, no phones, no computers, and no auditors. Each student must be fully committed to the class and 75% of the grade will be determined by class participation. Permission needed from instructor to enroll.

RELS 259 Ultimate Meanings
Does life have some ultimate meaning? In their search for an answer to this question, people tell stories—stories about the creation of the world, about great human beings confronted with the mysteries of existence, about what happens to people after death. To explore the role of stories in finding meaning in life, we will focus on some of the most meaningful stories ever composed: the biblical stories of Adam and Eve, Abraham and his family, the Exodus, Job and his friends, and the life and death of Jesus. One of our goals is to try to retrieve the original meaning of these narratives, what their authors intended, but we will also explore what they have come to mean for readers in our own day for believers and skeptics, scientists and artists, fundamentalists and feminists.

RELS 261 Ancient Iranian Empires
Iran—a landmass and a political entity—was central to the ancient world in a variety of ways. Ancient Iranian Empires were of central importance to—and centrally located in—the ancient world. It was the successor kingdom to the Assyrians and Babylonians; the power against which Greece and Rome defined themselves; and the crucible in which various communities and models of rule developed. This course offers a survey of the history of the ancient Persianate world, focusing in particular on the political and imperial entities that rose to power, the cultural, political, mercantile, and other contacts they shared with their neighbors to the East and West, and the communities and religious groups that arose and flourished within their lands. Ancient Iranian empires rivaled the Greek and Roman Empires to their West, and the central and eastern Asian Empires to their east, and the ongoing history of diplomacy, cultural contact, and war between these regions was formative to each and to the ancient world as a whole. Iran was home to and similarly formative for a variety of religions, including Zoroastrianism, Judaism, Christianity, Manichaeanism, and Islam, and a central question Ancient Iranian political powers sought to address was how to negotiate and address the variety of populations under their control. The course will conclude by studying how, rather than a simplistic story of decline, the strategies, policies, institutions, and memory of the Iranian Empires continued to shape early Islam, medieval imagination, and modern political regimes.

RELS 270 Topics in East Asian Religions
This course examines the relationship between religious institutions and the state in East Asia. Focusing on China and Japan, we will learn about the impact of religious ideas, practices, and organizations on social, political and economic processes and inspect the role of religion in the consolidation of individual, communal, and national identity. Adopting a comparative and transnational approach, we will examine the impact of Asian religious traditions: Confucianism, Daoism, Buddhism, and Shinto, as well as global religions such as Islam and Christianity, on the states and their role in shaping power relations on the international level.

RELS 271 The Politics of Shinto
Shinto-derived images and ideas frequently appear in Japanese anime and film, and journalists and academics frequently mobilize the term Shinto as a way of explaining Japan's past or envisioning its future. The environmentalist left champions a green Shinto while Shinto-derived ideas serve as red meat for politicians pandering to Japan's nationalist right. While the influential position Shinto occupies in Japanese sociopolitical life is therefore clear, the term Shinto itself is actually not. Depending on who one asks, Shinto is either the venerable indigenous religion of the Japanese archipelago, the irreducible core of Japanese culture, a tiny subset of Japanese Buddhism, an environmentalist ethic, or some combination of these. This course investigates the multifarious types of Shinto envisioned by these competing interest groups.

RELS 278 Religion and Society in Africa
In recent decades, many African countries have perennially ranked very high among the most religious. This course serves as an introduction to major forms of religiosity in sub-Saharan Africa. Emphasis will be devoted to the indigenous religious traditions, Christianity and Islam, as they are practiced on the continent. We will examine how these religious traditions intersect with various aspects of life on the continent. The aim of this class is to help students to better understand various aspects of African cultures by dismantling stereotypes and assumptions that have long characterized the study of religions in Africa. The readings and lectures will be drawn from historical and a few anthropological, and literary sources.

RELS 303 Power and Peril: The Paradox of Monarchy among Ancient Greeks, Romans, and Jews
We imagine ancient Greece and Rome as the cradles of democracy and republicanism, early Judea as a pious theocracy, but monarchy was the most common and prevalent form of government in antiquity (and the premodern world in general). In this class, we will take a special look at kinship among the Jews, Greeks, and Romans to assess and discuss similarities, differences, and mutual influences. In all these cultures, the king was a polarizing figure in reality and in conception. On the one hand, some revered the monarch as ideal leader, and monarchy provided the language with which to describe and even imagine the very gods. On the other, monarchs were widely reviled in both theory and practice, from the Greek tyrants to biblical Saul. The Emperor Augustus loudly denied his own affinity to the office of king, even as he ruled alone and was revered as a god. In other words, kings stood both for the ideal and the worst form of government. This class confronts the paradox of monarchical rule and will, through the lens of the king, explore ideas of god, government, human frailty, and utopianism.

RELS 311 Muslims, Christians, and Jews in the Middle East: Historical Perspectives
A reading- and discussion-intensive seminar that addresses several recurring questions with regard to the Middle East and North Africa. How have Islam, Judaism, and Christianity influenced each other in these regions historically? How have Jews, Christians, and Muslims fared as religious minorities? To what extent have communal relations been characterized by harmony and cooperation, or by strife and discord, and how have these relations changed in different contexts over time? To what extent and under what circumstances have members of these communities converted, intermarried, formed business alliances, and adopted or developed similar customs? How has the emergence of the modern nation-state system affected communal relations as well as the legal or social status of religious minorities in particular countries? How important has religion been as one variable in social identity (along with sect, ethnicity, class, gender, etc.), and to what extent has religious identity figured into regional conflicts and wars? The focus of the class will be on the modern period (c. 1800-present) although we will read about some relevant trends in the early and middle Islamic periods as well. Students will also pursue individually tailored research to produce final papers. Prior background in Islamic studies and Middle Eastern History is required. This class is intended for juniors, seniors, and graduate students.

RELS 356 Living Deliberately: Monks, Saints, and the Contemplative Life
Students who are not Religious Studies Majors and are not honors students must gain permission from instructor to enroll in this course. Prerequisite: Students must complete an interview with instructor before acquiring a permit. This is an experimental course in which students will experience monastic and ascetic ways of living. There will be no examinations, no formal papers, and very little required reading. However, each participant will need to be fully committed intellectually and participate in the monastic rules in the course involving restrictions on dress, technology, verbal communication, and food. The course subject matter is about ways in which nuns, monks, shamans, and swamis in various religious traditions (Buddhist, Muslim, Catholic, Jain, Taoist, Hindu, Animist, among others) have used poetry, meditation, mind-altering chemicals, exercise, magic, and self-torture to cope with pain and suffering, as well as struggle with spiritual, ethical, and metaphysical questions concerning the nature of the soul, the afterlife, and reality. Through monastic and spiritual practice, this course hopes to provide students with an opportunity to struggle with these questions themselves.

RELS 401 Sacred Stuff in Medieval & Early Modern Europe
During devotional activities people engage with various objects and believe that they are imbued with religious significance. In this seminar, we will explore the material culture of religion across medieval and early modern Europe. From rosary beads and crucifixes to devotional books, prints, and paintings, a range of ‘sacred stuff’ populated the lives of medieval and early modern Europeans. We will consider objects associated with daily life as well as rites of passage. We will study objects of Christian devotion and will consider how the advent of Protestantism and the Catholic Reformation influenced the types of objects devotees used for their devotion. In this seminar, we will discuss the material culture of Judaism and Islam, religions also practiced in medieval and early modern Europe. We will engage with ‘sacred stuff’ from a variety of disciplinary perspectives, including art history, literature, archaeology, social history, and cultural history. We will then hone these skills with visits to local museums and libraries where we will view medieval and early modern books, objects and images. Course assignments will include an in-depth analysis of a devotional object from medieval or early modern Europe chosen by the student.

RELS 434 Christian Thought From 1000-1800
This course will trace the development of Christian thought (including philosophy, theology, spirituality and mysticism) from the early Scholastic period to early Methodism. Readings will be from both primary and secondary sources. A research paper will be required of each student.

Spring 2014: This course will give an overview of the main currents of Western Christian thought from the first age of reform (that is, the Central Middle Ages) through the Reformations of the sixteenth century, to the eve of the Enlightenment. In these centuries, ‘Christendom’ underwent an almost constant process of internal and external self-definition. The most striking results of this process were the definitive separation of eastern and western Christianity and the division of the western church into what became known as Protestant and Catholic Christianity. Our focus will be on the changing definitions of Christian culture, including theological formulations (definitions of orthodoxy and heterodoxy), trends of spirituality and mysticism, forms of worship, and gender roles and definitions. Attention will also be given to institutional questions such as ecclesiastical hierarchy, monasticism, scholasticism and the rise of universities, and the changing relationship between the secular and religious worlds. Readings will be from both original and secondary sources. Additional primary sources will be available online, attached to the course Blackboard page. I will supply copies of other readings. Students will write two papers. The first (due Feb. 8) is a 5-7 pp. analysis of a primary source from the class, for which another text may be substituted by permission of the instructor. The second paper, due at the end of the course, should be a more ambitious research paper (at least 10 pp. for undergraduates, longer for graduate students) that includes some aspect of this history we did not directly study in the class. Prerequisite: Some background in European history is helpful.

RELS 438 Topics in Medieval History
This course introduces students to the development of Christian biblical interpretation by focusing on ancient, medieval, and modern interpretations of the Sermon on the Mount. Students will encounter a variety of important interpreters (including Origen, Tertullian, Gregory of Nyssa, John Chrysostom, Augustine, Thomas Aquinas, Luther, Leo Tolstoy, Albert Schweitzer, Dietrich Bonhoeffer, and Hans Dieter Betz), guided by appropriate secondary materials. The Sermon on the Mount is part of the Gospel of Matthew and is often considered to summarize the essential teachings of Jesus of Nazareth. This course has no prerequisites. Readings will be made available in English. Students will be encouraged to do original research in the primary sources.

RELS 439 Religion, Social Justice & Urban Development
Urban development has been influenced by religious conceptions of social and economic justice. Progressive traditions within Judaism, Christianity, Islam, Buddhism, Hinduism, Jainism, Baha’i, Humanism and other religions and systems of moral thought have yielded powerful critiques of oppression and hierarchy as well as alternative economic frameworks for ownership, governance, production, labor, and community. Historical and contemporary case studies from the Americas, Europe, Africa, Asia, and the Middle East will be considered, as we examine the ways in which religious responses to poverty, inequality, and ecological destruction have generated new forms of resistance and development.

RELS 471 Religion in Eleven Objects
This advanced course for Religious Studies majors and minors approaches the study of religion through material objects. By looking at both sacred and everyday objects like rosaries melted in atomic blasts, magical amulets used in healing rituals, temple murals defaced by invading armies, manuscript stained by hold water, we will explore the many ways people express their spiritual aspirations and existential fears through objects. Not only will a different object from a variety of religious traditions be examined each week (eleven in total), but we will also explore different methodological and theoretical approaches to the study of religion. Psychological, phenomenological, bio-genetic, sociological, art historical, discursive, post-modern, and narrative approaches will be discussed.

RELS 500 Theory and Method in the Study of Religion
This graduate seminar will map the theories and methods underpinning the contemporary study of religion. To draw this map, we will consider the history of the field. We'll proceed by examining how problems within religious studies have been resolved in different ways at different times, constructing a web of dialogs and debates between different figures across history. Specific topics to be considered will include experience, discourse, embodiment, feminism, postcolonialism, science, and materiality.

RELS 509 Teaching Religion
The aim of this course is to help graduate students from within and beyond the field of Religious Studies develop their ability to teach about religion in a secular academic setting. The course has a practical dimension as a chance to develop one's teaching skills but it also aims to explore theoretical questions in the study of religion that come into focus when one has to help others learn about it.
Taught by: Weitzman
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

RELS 510 Civil Religion
In the first half of the course, we will examine the theoretical question of whether modern liberal societies need a civil religion - an idea first proposed in the late eighteenth century by writer who feared that without some unifying ideal or principle the centrifugal forces at work in modern societies would lead them to disintegrate. We will examine various authors who have defended the idea of civil religion in these terms (including J.J. Rousseau, J.G. Herder, and G.W.F. Hegel) as well as several who (implicitly or explicitly) have rejected the argument (Max Weber, Michael Oakeshott, Daniel Bell, and Niklas Luhmann). In the second half of the class, we will turn to the American context and explore the way these arguments have played themselves out from the time of the constitutional frames to today. In this part of the class, we will read and discuss excerpts from the Federalist Papers and Tocqueville's Democracy in America, selected presidential speeches, nineteenth- and twentieth-century debates surrounding Manifest Destiny and American Exceptionalism, John Dewey/Richard Rorty's proposal for a religion of democratic 'common faith,' and the neoconservative case for a civil religion of 'national greatness.' Along the way we will also have occasion to examine sociological treatments of civil religion by such authors as Emile Durkheim, Robert Bellah, and Seymour Martin Lipset.
Taught by: Butler

RELS 515 Syriac Christianity Past and Present
This course surveys the long and diverse history of Syriac-speaking Christianity, from the 4th century CE to the modern era. Syriac Christianity refers to the individuals and groups that identify with the linguistic, liturgical, and cultural traditions of the Syriac language, a dialect of Aramaic that has been spoken in Mesopotamia, Syria and beyond in late antiquity, through the Middle Ages until today. We will study the literature, material culture, ritual practice, theology, and other aspects of the Syriac Church, as well as its encounters with other religious communities. While we will explore the key figures and formative events that are remembered as foundational, we will incorporate the understudied elements of Syriac Christianity, such as gender, non-elite forms of piety and devotion, and music and aesthetics. Through the lens of Syriac Christianity, we will analyze the relationships between religion and language, scripture, myth-making, human body, race, state, geography, and movement. Knowledge of the Syriac language is not required for this course.

RELS 520 Spirit and Law
While accepting 'the yoke of the commandments', Jewish thinkers from antiquity onward have perennially sought to make the teachings of revelation more meaningful in their own lives. Additional impetus for this quest has come from overtly polemical challenges to the law, such as those leveled by Paul, medieval Aristotelians, Spinoza and Kant. This course explores both the critiques of Jewish Law, and Jewish reflections on the Law's meaning and purpose, by examining a range of primary sources within their intellectual and historical contexts. Texts (in English translation) include selections from Midrash, Talmud, medieval Jewish philosophy and biblical exegesis, kabbalah, Hasidic homilies, Jewish responses to the Enlightenment, and contemporary attempts to re-value and invent Jewish rituals.

RELS 541 Religion and the Visual Image: Seeing is Believing
Seeing is Believing engages in a historical, theoretical, and cross-cultural analysis of the place of visuality in religion and of religion in visual culture. We will examine images, buildings, places, objects, performances and events. The geographical, cultural and historical scope of the material is broad, including subjects from Europe, the Islamic World, non-Muslim South Asia, the US and Latin America from the medieval period until the present. Theoretical works will be read in conjunction with representative examples to invite intellectual engagement in a socially and historically grounded way. Important issues to be covered include the relationship of visual to material culture; visual theories versus theories of vision; locating religion in human sensory experience; perception at individual and collective levels; authentices, fakes and simulacra; iconoclasm and image veneration; aesthetics, use and utility, and things.

Course not offered every year
Also Offered As: NELC 589, SAST 541
Activity: Seminar
1.0 Course Unit

RELS 545 Sufi Thought & Literature
This course is an intensive survey of the rich variety of Islamic intellectual, literary and cultural phenomena subsumed under the term Sufism. Sufi philosophies, liturgical practices, and social organizations have been a major part of the Islamic tradition in all historical periods, and Sufism has also served as a primary muse behind Islamic aesthetic expression in poetry, music, and the visual arts. In this course, we will explore the various significations of Sufism by addressing both the world of ideas and socio-cultural practices. The course is divided into three broad sections: central themes and concepts going back to the earliest individuals who identified themselves as Sufis; Sufi metaphysics and epistemology as exemplified in the work of Ibn al-'Arabi and his school, and literary expressions as exemplified in the epic poem Layla and Majnun by Nizami, The Conference of the Birds by Attar, and in the life and poetry of Mawlana Jalaluddin Rumi. In studying this material, we will be concerned equally with establishing common patterns and seeing how being a Sufi has meant different things to various people over the course of history.

Also Offered As: COML 555, GSWS 554
Activity: Seminar
1.0 Course Unit

RELS 571 Advanced Topics in Buddhism
This is an advanced course for upper level undergraduates and graduate students on various issues in the study of Buddhist texts, art, and history. Each semester the theme of the course changes. In recent years themes have included: Magic and Ritual, Art and Material Culture, Texts and Contexts, Manuscript Studies. Fall 2013 Topic: Buddhist repertoires (idiosyncratic and personal assemblages of beliefs, reflections, wonders, possessions, and practices) for a large part, material and sensual. Buddhists are often sustained by their collection, production, and trading of stuff amulets, images, posters, protective drawings, CDs, calendars, films, comic books, and even Buddhist-themed pillow cases, umbrellas, and coffee mugs. Aspirations are interconnected with objects. Beliefs are articulated through objects. Objects are not empty signifiers onto which meaning is placed. The followers and the objects, the collectors and their stuff, are overlooked in the study of religion, even in many studies in the growing field of material culture and religion. What is striking is that these objects of everyday religiosity are often overlooked by art historians as well. Art historians often remove (through photography or physical movement to museums or shops) images and ritual implements from their ritual context and are seen as objets d’art. While art historians influenced by Alfred Gell, Arjun Appadurai, and Daniel Miller have brought the study of ritual objects into the forefront of art historical studies, in terms of methodologies of studying Buddhist art, art historians have generally relegated themselves to the study of either the old and valuable or the static and the curated. This course aims to 1) bring a discussion of art into the study of living Buddhism. Art historians have primarily concentrated on the study of images, stupas, manuscripts, and murals produced by the elite, and primarily made before the twentieth century; 2) study art as it exists and operates in dynamic ritual activities and highly complex synchronic and diachronic relationships; 3) focus on the historical and material turn in the study of images, amulets, and murals in Buddhist monasteries and shrines.

RELS 586 History of Islam in Asia
This class is designed to structure reflection on Islam and Islamic culture in South Asia--Indonesia, Pakistan, India, and Bangladesh. Contrary to the popular perception that the Middle East defines Islam, Asian countries not only host the most Muslims in the world but have been the source of some of Islam's most important social and reform movements in the last three hundred years. This class looks at the history of Muslim societies across Asia not just as a religious community but also as a social and cultural bloc (a distinctive part of what Marshall Hodgson called the 'Islamicate' world, but also an area that challenges some of Hodgson's assumptions about the Islamicate world). This course allows for the study of the Muslim world between the years 1700 to present. The class will allow students to compare and contrast Muslim societies over the last three centuries, examine points of confluence for geographically- or culturally-distinct Muslim peoples in the last three centuries, and in their writing assignments focus on the history of one society in a wider Islamicate context. In the process students will gain a more nuanced awareness of how Islam has made an impact in Asian countries, and how Asian countries have in turn impacted Islam.

RELS 632 Hinduism & Colonial Modernity
This seminar deals with the question of modernity in South Asia, with a specific focus on the construction, dissemination, and politicization of Hinduism in nineteenth and twentieth century India. It focuses on three central heuristic lenses—namely those of European imperialism, Orientalism, and nationalism—to study modernity and its discontents. What was at stake in the encounter between colonial modernity and India’s religions in nineteenth and early twentieth centuries? How did colonial and native discourses on ‘reform’ and ‘revival’ shape Indian religions as we understand them today? How is modern ‘Hinduism’ inextricably hinged to early forms of cultural transnationalism, Orientalism, and incipient forms of nationalism? This seminar approaches questions such as these and others, with an eye to understanding how nineteenth and early twentieth century discourses continue to shape contemporary understandings of Hinduism in deep and highly politicized ways.

RELS 644 Religion in Modern South Asia
Taught by: Soneji
Course not offered every year
Also Offered As: SAST 645
Activity: Seminar
1.0 Course Unit

RELS 658 Asian Religions in the Global Imagination
This seminar critically examines the missionary impulses, colonial exploits, and translation endeavors that contributed to the rise of Asian studies and the emergence of the scholarly notion of Asian religions. It shows the crucial roles played by Asian agents and their European counterparts in the formation of modern conceptions of ‘religion’; it also engages reflexive questions regarding theory, method, and the geopolitical underpinnings of both Asian studies and the non-confessional academic study of religion. Students will conduct sustained research projects on the country or region of their choice.

RELS 701 Readings in African American Religion History
Traditional narratives of African American Religion go from slavery to civil rights to ‘freedom’ without taking into account the complex religious lives and intellectual production of people of African descent in the Americas. This course will focus on African American Religion and the historical and theoretical frameworks that have shaped the study of this field. Readings will cover religious studies, anthropology, history, and African American studies in order to provide an understanding of the varieties of religion and religious experiences with this particular segment of the African Diaspora.

Activity: Seminar
1.0 Course Unit

RELS 702 Topics in Medieval Art
Spring 2017: For the Christians of Middle Europe, pilgrimages were one of the key embodied experiences of faith. Reliquaries, churches with their welcoming portals, manuscripts and music: all were crafted to augment the corporeal experience of the divine. This seminar will take the material culture surrounding the relic and its veneration as a lens for exploring the Middle Ages, from the Early Christian to the High Gothic. Cross-disciplinary methodologies and cross-cultural examples will be considered to advance our understanding of these phenomena. While proceeding chronologically, each week will focus on a distinct strategy for shaping the interaction between faith and matter.

RELS 671 The Politics of Shinto
Shinto-derived images and ideas frequently appear in Japanese anime and film, and journalists and academics frequently mobilize the term Shinto as a way of explaining Japan’s past or envisioning its future. The environmentalist left champions a green Shinto while Shinto-derived ideas serve as red meat for politicians pandering to Japan’s nationalist right. While the influential position Shinto occupies in Japanese sociopolitical life is therefore clear, the term Shinto itself is actually not. Depending on who one asks, Shinto is either the venerable indigenous religion of the Japanese archipelago, the irreducible core of Japanese culture, a tiny subset of Japanese Buddhism, an oppressive political ideology linked to the emperor system, an environmentalist ethic, or some combination of these. This course investigates the multifarious types of Shinto envisioned by these competing interest groups.

Students arrange with a faculty member to pursue a program of reading and writing on a suitable topic. One-term course offered either term
Activity: Independent Study
1.0 Course Unit

Romance Languages (ROML)

ROML 113 Beginning Haitian Creole
This course serves as an introduction to communicating in the Haitian Creole language (‘kreyol,’ for short), which we will use to explore the complex narrative of Haiti and its people. The class is designed for students with no prior knowledge of Haitian Creole and draws on a variety of methods and media utilizing the Penn Language Center’s innovative online learning platform. Using these tools, students will develop their abilities in oral and written communication throughout the semester, establishing a firm foundation for further study of the language. Students with research, professional, or personal interests in Haiti or the Haitian Diaspora are encouraged to enroll. Haitian Creole is spoken by over 12 million people around the world (including many in cities across the Eastern seaboard) and serves as a wholly developed language with a complete orthography capable of fulfilling the full range of expressive and communicative needs of its speakers. It is also a language with a relatively recent history, dating back to the French colonization of Haiti (then called ‘Saint-Domingue’) in 1697, and has thus been shaped by the same cultural and social forces that define Haiti’s situation today. Students should, therefore, expect our immersive study of Haitian Creole to extend to historical examination of the economic, political, sociological, and spiritual spheres within which the language was born. This course is intended for students with no past exposure to Haitian Creole. While prior experience with French, the language from which Haitian Creole derives most of its lexicon, may be advantageous, it is neither assumed nor preferred. Taught by: Cuneo
Course not offered every year

ROML 250 The Rise and Fall of the Spanish Empire 1450-1700
This course will provide students with a solid knowledge of the history of early modern Spain (1450-1700). Through readings of primary and secondary texts that offer a complex vision of the cultural, religious, intellectual, and economic contexts and processes, students will be able to appreciate the intricacies of Spain’s historical evolution. The course focuses on the rise and decline of the Spanish monarchy: the conditions that enabled Spain to become the most powerful monarchy in early modern times, and the conditions that led to its decline. This course also touches upon other important aspects critical to understanding early modern Spain: relationships among Christians, Muslims, and Jews in the Iberian Peninsula; the conquest and colonization of the New World; and early modern debates about Spain’s rights to occupy America and the so-called ‘destruction of the Indies.’ For BA Students: History and Tradition Sector

**Russian (RUSS)**

**RUSS 001 Elementary Russian I**
This course develops elementary skills in reading, speaking, understanding and writing the Russian language. We will work with an exciting range of authentic written materials, the Internet, videos and recordings relating to the dynamic scene of Russia today. At the end of the course students will be comfortable with the Russian alphabet and will be able to read simplified literary, commercial, and other types of texts (signs, menus, short news articles, short stories) and participate in elementary conversations about daily life (who you are, what you do every day, where you are from, likes and dislikes).
For BA Students: Language Course
Course usually offered in fall term
Also Offered As: RUSS 501
Activity: Lecture
1.0 Course Unit

**RUSS 002 Elementary Russian II**
Continuation of RUSS001. Further work developing basic language skills using exciting authentic materials about life in present-day Russia. At the conclusion of the course, students will be prepared to negotiate most basic communication needs in Russia (getting around town, ordering a meal, buying goods and services, polite conversation about topics of interest) and to comprehend most texts and spoken material at a basic level.
For BA Students: Language Course
Taught by: Peeney/Alley
Course usually offered in spring term
Also Offered As: RUSS 502
Prerequisite: RUSS 001
Activity: Lecture
1.0 Course Unit

**RUSS 003 Intermediate Russian I**
This course will develop your ability to use the Russian language in the context of typical everyday situations, including university life, family, shopping, entertainment, etc. Role-playing, skits, short readings from literature and the current press, and video clips will be used to help students improve their language skills and their understanding of Russian culture. At the end of the semester you will be able to read and write short texts about your daily schedule and interests, to understand brief newspaper articles, films and short literary texts, and to express your opinions in Russian. In combination with RUSS 004, this course prepares students to satisfy the language competency requirement.
For BA Students: Language Course
Taught by: Peeney/Alley
Course usually offered in fall term
Also Offered As: RUSS 503
Prerequisite: RUSS 002 OR RUSS 502 OR RUSS 105
Activity: Lecture
1.0 Course Unit

**RUSS 004 Intermediate Russian II**
A continuation of RUSS003. This course will further develop your ability to use the Russian language in the context of everyday situations (including relationships, travel and geography, leisure activities) and also through reading and discussion of elementary facts about Russian history, excerpts from classic literature and the contemporary press and film excerpts. At the end of the course you will be able to negotiate most daily situations, to comprehend most spoken and written Russian, to state and defend your point of view. Successful completion of the course prepares students to satisfy the language competency requirement.
For BA Students: Last Language Course
Taught by: Peeney/Alley
Course usually offered in spring term
Also Offered As: RUSS 504
Prerequisite: RUSS 003
Activity: Lecture
1.0 Course Unit

**RUSS 105 Accelerated Elementary Russian**
TWO IN ONE: This is an intensive two-credit course covering two semesters of the first-year sequence (RUSS001 and 002). The course is designed for students with no background in Russian and develops language competence in speaking, reading, writing and understanding contemporary Russian. Class work emphasizes development of communication skills and cultural awareness. Together with RUSS003 and 004 fulfills Penn Language Requirement.
For BA Students: Language Course
Course not offered every year
Activity: Lecture
2.0 Course Units
RUSS 311 Advanced Russian Conversation and Composition I
This course develops students' skills in speaking and writing about topics in Russian literature, contemporary society, politics, and everyday life. Topics include women, work and family; sexuality; the economic situation; environmental problems; and life values. Materials include selected short stories by 19th and 20th century Russian authors, video-clips of interviews, excerpts from films, and articles from the Russian media. Continued work on grammar and vocabulary building.
For BA Students: Advanced Language Course
Course usually offered in fall term
Also Offered As: RUSS 511
Prerequisite: RUSS 004 OR RUSS 504
Activity: Lecture
1.0 Course Unit

RUSS 312 Advanced Russian Conversation and Composition II
Primary emphasis on speaking, writing, and listening. Development of advanced conversational skills needed to carry a discussion or to deliver a complex narrative. This course will be based on a wide variety of topics from everyday life to the discussion of political and cultural events. Russian culture and history surveyed briefly. Materials include Russian TV broadcast, newspapers, Internet, selected short stories by contemporary Russian writers. Offered each spring.
For BA Students: Advanced Language Course
Course usually offered in spring term
Also Offered As: RUSS 512
Prerequisite: RUSS 311
Activity: Lecture
1.0 Course Unit

RUSS 360 Russian for Heritage Speakers I
This course is intended for students who have spoken Russian at home and seek to achieve proficiency in the language. Topics will include an intensive introduction to the Russian writing system and grammar, focusing on exciting materials and examples drawn from classic and contemporary Russian culture and social life. Students who complete this course in combination with RUSS361 satisfy the Penn Language Requirement. Prerequisite: Previous language experience required.
For BA Students: Advanced Language Course
Taught by: Nazyrova
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Previous language experience required

RUSS 361 Russian for Heritage Speakers II
This course is a continuation of RUSS360. In some cases, students who did not take RUSS360 but have basic reading and writing skills may be permitted to enroll with the instructor's permission. Students who complete RUSS361 with a passing grade will satisfy the Penn Language Requirement.
For BA Students: Last Language Course
Taught by: Nazyrova
Course usually offered in spring term
Prerequisite: RUSS 360
Activity: Lecture
1.0 Course Unit

RUSS 508 Advanced Russian for Business
This advanced language course focuses on developing effective oral and written communication skills for working in a Russian-speaking business environment. Students will discuss major aspects of Russian business today and learn about various Russian companies using material from the current Russian business press. In addition, students will be engaged in a number of creative projects, such as business negotiation simulations, and simulation of creating a company in Russia.
Prerequisite: At least one RUSS 400-level course or comparable language competence.
For BA Students: Advanced Language Course
Taught by: Bourlatskaya
Course not offered every year
Activity: Seminar
1.0 Course Unit

Sanskrit (SKRT)

SKRT 460 Sanskrit 1st Year, Part I
During the first semester of beginning Sanskrit, students will be introduced to the script, phonetics, and grammar of the Sanskrit language. By the end of the semester they will be able to begin to read Sanskrit texts and compose Sanskrit sentences in addition to carrying out simple conversation. They will build the requisite skills to read, by the second semester, simple inscriptions and sections from texts like the Ramayana, the Mahabharata, the Bhagavad Gita, Panchatantra, and Yoga Sutra. Students will also be introduced to many features of Sanskrit culture.
For BA Students: Language Course
Taught by: Obrock
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Contact professor to discuss actual class times that work for all students.

SKRT 461 Sanskrit 1st Year Part II
During the first semester of beginning Sanskrit, students will be introduced to the script, phonetics, and grammar of the Sanskrit language. By the end of the semester they will be able to begin to read Sanskrit texts and compose Sanskrit sentences in addition to carrying out simple conversation. They will build the requisite skills to read, by the second semester, simple inscriptions and sections from texts like the Ramayana, the Mahabharata, the Bhagavad Gita, Panchatantra, and Yoga Sutra. 1.0 Course Unit

SKRT 480 Readings in Sanskrit Literature
This course is for advanced students of Sanskrit. Designed as a seminar, the course aims to take students through the primary and secondary sources of Sanskrit literary and philosophical production. Each semester will focus on a different genre: epic, belles-lettres, lyric poetry, drama, philosophy, shastra, advanced grammar, history, poetics, and epigraphy. We will focus on original sources, secondary scholarship, and theoretical approaches toward the translation and study of Sanskrit texts.
One-term course offered either term
Prerequisite: SKRT 470 AND SKRT 471
Activity: Seminar
1.0 Course Unit

Science, Technology & Society (STSC)

STSC 001 Emergence of Modern Science
During the last 500 years, science has emerged as a central and transformative force that continues to reshape everyday life in countless ways. This introductory course will survey the emergence of the scientific world view from the Renaissance through the end of the 20th century. By focusing on the life, work, and cultural contexts of those who created modern science, we will explore their core ideas and techniques, where they came from, what problems they solved, what made them controversial and exciting and how they relate to contemporary religious beliefs, politics, art, literature, and music. The course is organized chronologically and thematically. In short, this is a 'Western Civ' course with a difference, open to students at all levels.
For BA Students: Hum/Soc Sci or Nat Sci/Math Sector
Taught by: Kucuk
Course usually offered in fall term
Also Offered As: HSOC 001
Activity: Lecture
1.0 Course Unit

STSC 002 Medicine in History
This course surveys the history of medical knowledge and practice from antiquity to the present. No prior background in the history of science or medicine is required. The course has two principal goals: (1)to give students a practical introduction to the fundamental questions and methods of the history of medicine, and (2)to foster a nuanced, critical understanding of medicine's complex role in contemporary society. The course takes a broadly chronological approach, blending the perspectives of the patient, the physician, and society as a whole—recognizing that medicine has always aspired to 'treat' healthy people as well as the sick and infirm. Rather than history 'from the top down' or 'from the bottom up,' this course sets its sights on history from the inside out. This means, first, that medical knowledge and practice is understood through the personal experiences of patients and caregivers. It also means that lectures and discussions will take the long-discredited knowledge and treatments of the past seriously, on their own terms, rather than judging them by today's standards. Required readings consist largely of primary sources, from elite medical texts to patient diaries. Short research assignments will encourage students to adopt the perspectives of a range of actors in various historical eras.
For BA Students: History and Tradition Sector
Taught by: Barnes
Course usually offered in fall term
Also Offered As: HIST 036, HSOC 002
Activity: Lecture
1.0 Course Unit

Scandinavian (SCND)

SCND 000 Study Abroad
Activity: Lecture
1.0 Course Unit
**STSC 003 Technology & Society**
Technology plays an increasing role in our understandings of ourselves, our communities, and our societies, in how we think about politics and war, science and religion, work and play. Humans have made and used technologies, though, for thousands if not millions of years. In this course, we will use this history as a resource to understand how technologies affect social relations, and conversely how the culture of a society shapes the technologies it produces. Do different technologies produce or result from different economic systems like feudalism, capitalism and communism? Can specific technologies promote democratic or authoritarian politics? Do they suggest or enforce different patterns of race, class or gender relations? Among the technologies we'll consider will be large objects like cathedrals, bridges, and airplanes; small ones like guns, clocks and birth control pills; and networks like the electrical grid, the highway system and the internet.

For BA Students: Society Sector
Taught by: Benson
Course usually offered in spring term
Also Offered As: HSOC 003, SOCI 033
Activity: Lecture
1.0 Course Unit

**STSC 026 Philosophy of Space and Time**
This course provides an introduction to the philosophy and intellectual history of space-time and cosmological models from ancient to modern times with special emphasis on paradigm shifts, leading to Einstein's theories of special and general relativity and cosmology. Other topics include Big Bang, black holes stellar structure, the metaphysics of substance, particles, fields, and superstrings, unification and grand unification of modern physical theories. No philosophy of physics background is presupposed.

For BA Students: Natural Science and Math Sector
Taught by: Skillings
One-term course offered either term
Also Offered As: PHIL 026
Activity: Lecture
1.0 Course Unit

**STSC 028 Medicine, Magic and Miracles**
This course explores the nature of disease and the history of medical practice and healing in the medieval period, using methods from intellectual, cultural, and social history, as well as the life sciences, and incorporating material from Indonesia to England. The themes of this course include: 1) the diversity of healing practices and beliefs in this period; 2) specific rationalities of different methods of healing; 3) views of the human body and disease; 4) the wide array of practitioners that people turned to for medical care, including physicians, midwives, family members, herbalists, snake handlers, saints, and surgeons; 5) institutions of medicine, such as the hospital. Students will have their minds blown as they learn to question everything they thought they knew about how science and medicine work.

Course usually offered in fall term
Also Offered As: HSOC 028
Activity: Seminar
1.0 Course Unit

**STSC 041 Cane and Able: Disability in America**
Disability is a near universal experience, and yet it remains on the margins of most discussions concerning identity, politics, and popular culture. Using the latest works in historical scholarship, this seminar focuses on how disability has been experienced and defined in the past. We will explore various disabilities including those acquired at birth and those sustained by war, those visible to others and those that are invisible. For our purposes, disability will be treated as a cultural and historical phenomenon that has shaped American constructions of race, class, and gender, attitudes toward reproduction and immigration, ideals of technological progress, and notions of the natural and the normal.

Taught by: Linker
Course usually offered in fall term
Also Offered As: HSOC 041
Activity: Seminar
1.0 Course Unit

**STSC 048 Epidemics in History**
The twenty-first century has seen a proliferation of new pandemic threats, including SARS, MERS, Ebola, Zika, and most recently the novel coronavirus called COVID-19. Our responses to these diseases are conditioned by historical experience. From the Black Death to cholera to AIDS, epidemics have wrought profound demographic, social, political, and cultural change all over the world. Through a detailed analysis of selected historical outbreaks, this seminar examines the ways in which different societies in different eras have responded in times of crisis. The class also analyzes present-day pandemic preparedness policy and responses to health threats ranging from influenza to bioterrorism.

Taught by: Barnes
Course usually offered in fall term
Also Offered As: HSOC 048
Activity: Seminar
1.0 Course Unit

**STSC 082 Sport Science in the World**
This seminar is designed for first-year students who are interested in some big questions related to the topic of ‘sport science.’ Sport science may seem to be just a niche field where teams of physiologists, psychologists, geneticists, engineers and others work to make already very athletic people go ‘faster, higher, stronger.’ On the other hand, the work of sport scientists intersects everyday with far-reaching questions about how categories of sex, age, race, disability, and nationality are defined, measured, challenged, or maintained. Sport scientists weigh in on debates over what kinds of physical activity or bodies are ‘clean,’ what kinds of performance are ‘natural’ or even human, and what kinds of sporting spaces or equipment are fair. In this class we'll read and discuss historical and contemporary accounts of sport science in the world. My hope is that students will enter the class interested in sports and leave interested in sports and in gendered science, objectivity and standardization, the politics of big data and more.

Taught by: Johnson
Course usually offered in fall term
Also Offered As: HSOC 082

STSC 118 Advanced Journalistic Writing
A workshop in creative writing devoted to original student work in journalism. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Also Offered As: ENGL 158
Activity: Seminar
1.0 Course Unit

STSC 123 Darwin’s Legacy: The Evolution of Evolution
Darwin’s conceptions of evolution have become a central organizing principle of modern biology. This lecture course will explore the origins and emergence of his ideas, the scientific work they provoked, and their subsequent re-emergence into modern evolutionary theory. In order to understand the living world, students will have the opportunity to read and engage with various classic primary sources by Darwin, Mendel, and others. The course will conclude with guest lectures on evolutionary biology today, emphasizing current issues, new methods, and recent discoveries. In short, this is a lecture course on the emergence of modern evolutionary biology—its central ideas, their historical development and their implications for the human future.
For BA Students: Living World Sector
Taught by: Gil-Riano
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

STSC 135 Modern Biology and Social Implications
This course covers the history of biology in the 19th and 20th centuries, giving equal consideration to three dominant themes: evolutionary biology, classical genetics, and molecular biology. The course is intended for students with some background in the history of science as well as in biology, although no specific knowledge of either subject is required. We will have three main goals: first, to delineate the content of the leading biological theories and experimental practices of the past two centuries; second, to situate these theories and practices in their historical context, noting the complex interplay between them and the dominant social, political, and economic trends; and, third, to critically evaluate various methodological approaches to the history of science.
For BA Students: Natural Science and Math Sector

One-term course offered either term
Also Offered As: HIST 035
Activity: Seminar
1.0 Course Unit

STSC 140 Histories of Race and Science in Philadelphia
The history of race and science has its American epicenter in Philadelphia. Throughout this Academically-Based Community Service (ABCS) course, we will interrogate the past and legacy of racial science in the United States; the broad themes we broach will be met concretely in direct engagement with Penn and the Philadelphia community. As an extended case study, students will undertake independent research projects using primary source documents from local archives, tracing the global history of hundreds of human skulls in the 19th century Samuel G. Morton cranial collection at the Penn Museum, a foundational and controversial anthropological collection in the scientific study of race. These projects will be formed through an ongoing partnership with a Philadelphia high school in which Penn students will collaborate with high school students on the research and design of a public-facing website on the Morton collection and the legacy of race and science in America. In our seminar, we will read foundational texts on the study of racial difference and discuss anti-racist responses and resistance to racial science from the 19th century to the present. Throughout, we will work directly with both primary and secondary sources, critically interrogating how both science and histories of science and its impacts on society are constructed. Throughout this course, we will explore interrelated questions about Penn and Philadelphia's outsized role in the history of racial science, about decolonization and ethics in scholarly and scientific practice, about the politics of knowledge and public-facing scholarship, and about enduring legacies of racial science and racial ideologies. All students are welcome and there are no prerequisites, save for intellectual curiosity and commitment to the course. This course will be of particular interest to those interested in race, American history and the history of science, anthropology, museum studies, education, and social justice.
Taught by: Mitchell
Also Offered As: AFRC 141, ANTH 140, HIST 154
Activity: Seminar
1.0 Course Unit

STSC 145 Comparative Medicine
This course explores the medical consequences of the interaction between Europe and the 'non-West.' It focuses on three parts of the world Europeans colonized: Africa, South Asia, and Latin America. Today's healing practices in these regions grew out of the interaction between the medical traditions of the colonized and those of the European colonizers. We therefore explore the nature of the interactions. What was the history of therapeutic practices that originated in Africa or South Asia? How did European medical practices change in the colonies? What were the effects of colonial racial and gender hierarchies on medical practice? How did practitioners of 'non-Western' medicine carve out places for themselves? How did they redefine ancient traditions? How did patients find their way among multiple therapeutic traditions? How does biomedicine take a different shape when it is practiced under conditions of poverty, or of inequalities in power? How do today’s medical problems grow out of this history? This is a fascinating history of race and gender, of pathogens and conquerors, of science and the body. It tells about the historical and regional roots of today's problems in international medicine.

STSC 160 The History of the Information Age
Certain new technologies are greeted with claims that, for good or ill, they must transform our society. The two most recent: the computer and the Internet. But the series of social, economic and technological developments that underlie what is often called the Information Revolution include much more than just the computer. In this course, we explore the history of information technology and its role in contemporary society. We will explore both the technologies themselves—calculating machines, punched card tabulators, telegraph and telephone networks, differential analyzers, digital computers, and many others—and their larger social, economic and political contexts. To understand the roots of these ideas we look at the prehistory of the computer, at the idea of the post-industrial or information society, at parallels with earlier technologies and at broad historical currents in the United States and the world.

1.0 Course Unit

STSC 162 Technology and Medicine in Modern America
Medicine as it exists in contemporary America is profoundly technological; we regard it as perfectly normal to be examined with instruments, to expose our bodies to many different machines; and to have knowledge produced by those machines mechanically/electronically processed, interpreted and stored. We are billed technologically, prompted to attend appointments technologically, and often buy technologies to protect, diagnose, or improve our health: consider, for example, HEPA-filtering vacuum cleaners; air-purifiers; fat-reducing grills; bathroom scales; blood pressure cuffs; pregnancy testing kits; blood-sugar monitoring tests; and thermometers. Yet even at the beginning to the twentieth century, medical technologies were scarce and infrequently used by physicians and medical consumers alike. Over the course of this semester, we will examine how technology came to medicine's center-stage, and what impact this change has had on medical practice, medical institutions and medical consumers - on all of us!
Taught by: Johnson
Course usually offered summer term only
Also Offered As: HSOC 152
Activity: Seminar
1.0 Course Unit

STSC 168 Environment and Society
This course examines contemporary environmental issues such as energy, waste, pollution, health, population, biodiversity and climate through a historical and critical lens. All of these issues have important material, natural and technical aspects; they are also inextricably entangled with human history and culture. To understand the nature of this entanglement, the course will introduce key concepts and theoretical frameworks from science and technology studies and the environmental humanities and social sciences.

Taught by: Benson
Course not offered every year
Activity: Lecture
1.0 Course Unit

STSC 178 Everyday Technologies and the Making of the Modern World
Long before iPhones and Fitbits, personal technologies - small(ish), portable, purchasable - had a tremendous impact on the lives of people around the globe. Items such as wristwatches, bicycles, sewing machines, cars and radios could empower their users (or sometimes constrain them), creating economic, educational or recreational opportunities while also being associated with grander ideas and ideologies. This course will explore such everyday technologies across the nineteenth and twentieth centuries, in locations spanning the Americas, Europe, Africa and Asia. We will consider how the use and significance of particular technologies varied according to time and place; how these everyday items contributed to imperial and national identities and 'self-fashioning' for individuals; and how, through use and modification, consumers themselves could become part of the story of technological change. In addition to reading a variety of classic and recent scholarship, students will work with a wide array of primary sources (newspapers, photographs, patent records, trade cards) and use digital tools to present their own research projects.
Taught by: Petrie
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

STSC 179 Environmental History
This course provides an introduction to environmental history—the history of the interrelationship between humans and the rest of nature. In the words of historian J.R. McNeill, 'Human history has always and will always unfold within a larger biological and physical context, and that context evolves in its own right. Especially in recent millennia, that context has co-evolved with humankind.' In this course we will study this co-evolution between human actors and non-human actors in global history, analyzing political, social, cultural and economic factors that affect ideas about nature and material effects on nature. We will consider the concept of the Anthropocene and study current environmental changes and challenges.
Taught by: Greene, A
Course not offered every year
Also Offered As: HSOC 179
Activity: Lecture
1.0 Course Unit

STSC 207 Agriculture & Science in the Pacific World
This course examines how agricultural science has shaped the modern world. It focuses on the lands touching the Pacific Ocean during the industrial era—from the late eighteenth century to the late twentieth century—to highlight how scientific knowledge of the natural world and regimes of agricultural production interacted to change spatial relations of power between distant places. We will explore the history of botany, chemistry, and entomology in the context of European and Euro-American exploration incursions into the Pacific. We will also explore the history of once-exotic but now commonplace things that sustain our existence, from sugar, rice, and palm oil to guano. In short, this course examines how ideas about nature, methods of converting nature into commodities, and nature itself all influence each other. Students will work throughout the semester to gain knowledge about the intersection of agriculture, science, and empire in the Pacific, while also developing and strengthening their ability to conduct historical research and produce original arguments.
Taught by: Kessler
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
STSC 208 Science and Religion: Global Perspectives
This course provides a thematic overview of science and religion from antiquity to the present. We will treat well-known historical episodes, such as the emergence of Muslim theology, the Galileo Affair and Darwinism, but also look beyond them. This course is designed to cover all major faith traditions across the globe as well as non-traditional belief systems such as the New Age movement and modern Atheism.
Taught by: Dorsch
Course not offered every year
Activity: Seminar
1.0 Course Unit

STSC 209 Race and Gender in Global Science
This course critically examines the creation of scientific conceptions of 'race' and 'sex' in the modern era and their global impact. How did 'race' and 'sex' come to be the primary categories through which human variation has been classified in the modern West? What concepts of 'race' and 'sex' did colonial scientists, doctors, naturalists, and other experts invent, and how and why did they do this? How have scientific conceptions of 'race' and 'sex' been adapted to fit the sociopolitical projects of formerly colonized regions? And how have recent developments in genomic science sought to re-invent these categories? With these questions in mind, this course challenges us to think critically about the political contexts in which conceptions of 'race' and 'sex' have been crafted as well as how they have been contested and re-defined.
Taught by: Gil-Riano
Course usually offered in spring term
Also Offered As: HSOC 209
Activity: Seminar
1.0 Course Unit

STSC 212 Science Technology and War
In this survey we explore the relationships between technical knowledge and war in the nineteenth and twentieth centuries. We will treat particularly to the centrality of bodily injury in the history of war. Topics include changing interpretations of the machine gun as inhumane or acceptable; the cult of the battleship; banned weaponry; submarines and masculinity; industrialized war and total war; trench warfare and mental breakdown; the atomic bomb and Cold War; chemical warfare in Viet Nam; and 'television war' in the 1990s.

1.0 Course Unit

STSC 218 Climate Change: Science, Technology and Society
Climate change is a sign that humans have become a force with planet-altering power. We need to understand how human societies work if we hope to respond to its dangers effectively. This course will use history to help students see climate change's social and political aspects. We'll examine how previous societies have responded to episodes of non-anthropogenic climate change, exploring market-based policies, power imbalances, and vulnerability. Through the history of science, we will investigate and critique how the growth of scientific knowledge often led climate change to be framed as a techno-scientific problem, best addressed through research and technological innovation. Students will learn how climate politics have been pushed by environmental and social justice activists, as well as by anti-communist scientists and corporate-sponsored cultivation of public doubt. Assignments will help students learn how to translate scholarly insights into engaging media that can reach various publics.
Taught by: Turner
One-term course offered either term
Activity: Seminar
1.0 Course Unit

STSC 219 Race, Science, and Globalization
This course examines how the practice of sorting humans into distinct races is connected to the rise of modern science and to the economic globalization sparked by Columbus' arrival in the Americas in 1492. By examining the trajectory of race in science from the Iberian conquest of the Americas until the present, we will examine the ways in which colonial logics and structures persist into the present and the ways they've been disrupted by various revolutionary, anti-colonial, and anti-racist movements. Along the way, we will observe how cultural ideas about race have been woven into the conceptual fabric of modern scientific disciplines such as anthropology, biology, psychology, and sociology and how these disciplines have sought to redeem themselves from their racist pasts.

STSC 231 Insect Epidemiology: Pests, Pollinators and Disease Vectors
Malaria, Chagas disease, the Plague--some of the most deadly and widespread infectious diseases are carried by insects. The insects are also pernicious pests; bed bugs have returned from obscurity to wreak havoc on communities, invasive species decimate agricultural production and threaten forests across the United States. At the same time declines among the insects on which we depend--the honeybees and other pollinators--threaten our food security, while general declines of insects threaten ecosystems. We will study the areas where the insects and humans cross paths and explore how our interactions with insects can be cause, consequence or symptom of much broader issues. This course is not an entomology course but will cover a lot about insects. It is not a traditional epidemiology course but will explore the approaches and study designs that epidemiologists use to uncover associations and evaluate interventions. It is not a history course but will cover past epidemics and infestations that have changed the course of the history and reversed advancing armies.
Taught by: Levy
Course usually offered in spring term
Also Offered As: HSOC 231
Activity: Seminar
1.0 Course Unit
STSC 252 Data and Death
Digital tools and data-driven technologies increasingly permeate twenty-first century life. But how have they affected death? Do we conceive of death differently in a digitally mediated world? How do we mourn in the age of Facebook? How is ‘big data’ put to work in the medical world that seeks to diagnose and treat fatal illness? What new forms of death and violence have been imagined or developed with digital technologies in hand? And what of those who believe that they could live forever, defying death, by uploading ‘themselves’ into some new digital form?
This course offers a historical exploration of these questions, looking at different intersections between data and death. We will work with a range of different sources ranging from science fiction to medical journals to the often-controversial death counts that follow natural and political disasters. Our goal will be to map the many contours of death in a digital world, but also to recognize the longer histories of counting, mourning, diagnosing, dreaming, and dying that have shaped them.

1.0 Course Unit

STSC 260 Cyberculture
Computers and the internet have become critical parts of our lives and culture. In this course, we will explore how people use these new technologies to develop new conceptions of identity, build virtual communities and affect political change. Each week we'll see what we can learn by thinking about the internet in a different way, focusing successively on hackers, virtuality, community, sovereignty, interfaces, algorithms and infrastructure. We'll read books, articles, and blogs about historical and contemporary cultures of computing, from Spacewar players and phone phreaks in the 1970s to Google, Facebook, World of Warcraft, WikiLeaks, and Anonymous today. In addition, we'll explore some of these online communities and projects ourselves and develop our own analyses of them.

One-term course offered either term
Activity: Seminar
1.0 Course Unit

STSC 270 Digital Democracy
Technological infrastructure shapes what forms of political life are possible within a society. Political campaigns, investigative journalism, public engagement, protest, government - all unfold on different time scales, in different forms, and with different consequences depending on what machines mediate them. This course explores the forms of American political life that have taken shape in and through modern digital computing. We will investigate especially a perceived tension at the heart of computing technologies - from artificial intelligence to social media - as they have been introduced to so many corners of American political life: Are computing technologies agents of liberation, or of control? The internet, for example, was embraced by some as an inherently democratizing and liberating force, giving users equal access to voice and information. On the other hand, many feared the internet as an unprecedented platform for corporate and government surveillance and manipulation. This course will analyze and historicize this tension, looking to unpack the complex and controversial role of computers in American political life from the Cold War to @POTUS.

1.0 Course Unit

STSC 278 Prove It: Mathematics and Certainty
Mathematical knowledge is often held up as our most reliable and certain knowledge. The truths of mathematics serve as exemplars of certainty that are not tied to any specific time and place. Yet, throughout history, mathematics has been understood and practiced in quite different ways, for quite different reasons, and by quite different people. Mathematical certainty has been shaped by different beliefs and practices. Mathematicians and their work have been shaped by rich interactions with different dimensions of social life from religion and politics to architecture and war. Mathematics is not simply surrounded by a society external to it, it is an integral and complex part of it. What concerns have motivated mathematical research through history? How has mathematics been put to work in different domains of culture? What does it mean to be a mathematician in different times and places? Does mathematical knowledge bear traces of the conditions in which it was produced? What counts as proof and to whom? How do we reconcile the changing character of mathematical research with the traditional understanding of mathematical knowledge as time and place independent? This course takes up these questions by looking to different worlds in which mathematics and mathematical certainty have taken shape.

STSC 279 Nature's Nation: Americans and Their Environment
The United States is 'nature's nation.' Blessed with an enormous, resource-rich geographically diverse and sparsely settled territory, Americans have long seen 'nature' as central to their identity, prosperity, politics and power, and have transformed their natural environment accordingly. But what does it mean to be 'nature's nation?' This course describes and explores how American 'nature' has changed over time. How and why has American nature changed over the last four centuries? What have Americans believed about the nation's nature, what have they known about the environment, how did they know it and how have they acted on beliefs and knowledge? What didn’t or don’t they know? How have political institutions, economic arrangements, social groups and cultural values shaped attitudes and policies? How have natural actors (such landscape features, weather events, plants, animals, microorganisms) played roles in national history? In addition to exploring the history of American nature, we will look for the nature in American history. Where is 'nature' in some of the key events of American history that may not, on the surface, appear to be 'environmental?'

STSC 289 Technologies of Self and Society
As European empires expanded in the late eighteenth century, ‘social science’ began to emerge in the lexicons of Western societies. Since these early beginnings in European imperialism, the social sciences have sought to represent, alter, and govern human existence while struggling to define ‘society’ as something separate from ‘nature’. This course examines how questions concerning the proper management of self and society are central to the ambitions and dilemmas of modern social sciences. We begin by tracing the origins of social science in late-eighteenth century thought and their professionalization in the nineteenth century. Continuing through to the twentieth century, we will observe how core social science disciplines like sociology, anthropology, and psychology attempted - in the name of anti-racism - to carve out distinct niches in opposition to biology and genetics. The course also examines the dramatic growth of the social sciences during the cold war period thanks to military funds. Our examination of cold war social science will focus on how social scientists began carving up the world into different ‘areas’ of study and how they became increasingly oriented towards re-making individual psyches and societies in the ‘third world’ to fit the image of an industrialized ‘West’. The course will conclude by examining calls from indigenous scholars and scholars in the global South to decolonize social science.

STSC 308 Science and Spectacle: Seeing is Believing
In the 10th century, the Byzantine emperor received visitors on a levitating throne, surrounded by robotic animals. In the 17th century, Galileo gave public demonstrations to prove the existence of the moons of Jupiter (and the power of the telescope). In the 20th century, an estimated 650 million people watched the Apollo 11 moon landing. These are only a few examples of the ways that scientific and technological knowledge have been displayed for large numbers of people who are not themselves also involved in making scientific or technological knowledge. If seeing is believing, what do performances of scientific or technological virtuosity or discovery depict, and to what ends? This course explores the relationship between scientific and technological knowledge and public display, using examples taken from the medieval period to the 20th century.

1.0 Course Unit

STSC 309 Rifle and Compass
This course looks at the scientific and technological aspects of warfare during what is often called the Military Revolution. The main focus will be navigation and gunpowder warfare. The first part of this course will focus on magnetism, military drilling, architecture, geography and physics. The second part of the course will turn to case studies: the fall of Constantinople in 1453, the Ottoman-Austrian War of 1663-4 and the expansion of Russia in the early eighteenth century. Our goal generally is to interrogate the widespread belief that science and warfare are inextricably linked.

STSC 313 The Universe: Historical Inquiries in Physics, Philosophy and Religious Belief
The National Science Foundation’s decadal review states that ‘Today, astronomy expands knowledge and understanding, inspiring new generations to ask, How did the universe form and the stars first come into being? Is there life beyond Earth? What natural forces control our universal destiny? Because of the remarkable scientific progress in recent decades, in particular the explosion over the last decade of interest in and urgency to understand several key areas in astronomy and astrophysics, scientists are now poised to address these and many other equally profound questions in substantive ways. The opportunities for the future fill us with awe, enrich our culture, and frame our view of the human condition.’ Undergraduates today encounter some of the most profound discoveries about the physical universe -- discoveries of dark energy, quantum theory, exoplanets. These discoveries also prompt some of the most profound philosophical and theological questions. This course interrogates the astrophysical sciences and traditions of philosophy and religious belief in order to explore the universe, its nature, origins and destiny. It serves as an introductory course for undergraduates who are seeking a historical and philosophical context to scientific studies, especially in physics, and/or to develop their interdisciplinary skills of global thinking. This course does not attempt to resolve perennial questions about the universe, but rather to expose historical and scientific ways of reflecting on them.

1.0 Course Unit

STSC 316 The Atomic Bomb: Science, Art, History
In this Penn Global Seminar students will learn about the culture and religion of Japan, read novels and poetry engaging with the atomic bombings, meet survivors and scientists, and come to understand the impact of the bombs in world history, the global arms race, the rise of nuclear energy, and the continuing legacies of radiation exposure today. Our work will explore the development and use of the atomic bomb in 1945, engaging with Japan as a site of nuclear disasters, at Hiroshima and Nagasaki in 1945, and also in Fukushima Prefecture in 2011 (the so-called ‘third atomic bombing of Japan’). It will end with a trip to Japan to visit Hiroshima, Nagasaki, and sites in Tokyo, in May 2021.
Taught by: Lindee
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
STSC 317 Images in Science
Pictures, diagrams, graphs, and (more recently) computer images are ubiquitous in modern science. Visualizations are crucial in the process of research; for communicating evidence, theories, and experiments to other scientists; and for transmitting scientific ideas to the public. But serious questions about the validity of using images to convey knowledge about nature have been raised from the earliest natural philosophers onwards, and understanding precisely what any particular scientific image does can be surprisingly difficult. In this class we will investigate, as historical and cultural artifacts, images related to the generation or transmission of knowledge about nature, knowledge that has claims to a privileged epistemological status. The focus will be on three kinds of visual depictions: images of the macrocosm (the universe as a whole), images of the microcosm (the body and its parts), and the visualization of theories and data. What are the material and technological conditions underlying these images? What can the images we examine tell us about the communities and societies, including our own, in which they were created? What do they reveal about the nature of the scientific enterprise, about the relationship between the sensible world and the mind, and about ideals concerning truth, objectivity, and morality?
Taught by: Baker
Course usually offered in spring term
Also Offered As: VLST 213
Activity: Seminar
1.0 Course Unit

STSC 318 Profit and Knowledge
The goal of capitalism is profit; the goal of science is knowledge. These pursuits may seem different on the surface, but they often overlap in surprising ways. This course uses the tools of science and technology studies to explore the relationship between capitalism and science. By examining how people have pursued both profit and knowledge in different times and places, we’ll look at how financial interests have shaped the practice of science and how science has shaped the pursuit of wealth. We’ll also consider efforts to imagine new possibilities for economic and knowledge systems that have generated both rewards and risks, both pleasures and pains. Topics include the public goals and values of capitalism and science; case studies such as global trade and logistics, biotechnology, and the service economy; and challenges such as white supremacy, violence, and climate change.
Taught by: Smith
One-term course offered either term
Activity: Seminar
1.0 Course Unit

STSC 321 Weird Science
What do we mean by 'science'? How did we come to agree on a common definition? Do we agree on a common definition? What about when we don’t? This course explores histories of heterodox science and the construction of sciences and pseudosciences. In doing so, we will focus on expertise, authority, and legitimacy in science, as well as public consumption of science. This course will also introduce students to fundamental questions in the philosophy of science, as well as offering instruction in reading and methods of historiography. Topics include: phrenology, parapsychology, cryptozoology, UFOs, climate change denial.
Taught by: Dorsch
Activity: Seminar
1.0 Course Unit

STSC 328 What is Prediction?
This course is an investigation into the notion of prediction from antiquity to the present. By looking closely at key practices from Homeric divination to modern actuarial science and from early modern astrology to contemporary climate models, the course seeks to historicize the way we engage with the future. As part of the course, students also explore the role that methodology, models, causation and big data have played in predictive practices. The readings include a mixture of primary sources, modern scholarship and journalism.
Taught by: Kucuk
Course not offered every year
Activity: Seminar
1.0 Course Unit

STSC 329 CSI Global: History of Forensic Science
Genetics may have transformed criminal detection, but it has built upon a long history of many different types of forensic science. The use of science in the pursuit of criminals has a long, complex and global history, involving diverse forms of knowledge and types of professionals. A range of skills and techniques ranging from trackers who followed traces in the mud to recover stolen cattle to criminal physiognomists who sought to read bodily signs of criminals, from Sherlock Holmes’ analysis of types of cigar ash in Victorian Britain to Charles Hardless’ chemical analysis of different types of ink in colonial India, have informed and influenced the development of our contemporary forensic modernity. This course will explore a range of different forensic techniques and their histories along with the rich cultural history, in the form of detective fiction and films from across the world.

STSC 338 Hybrid Science: Nature, health, and society in Latin America
What role did science and medicine play in the creation and growth of the Spanish and Portuguese empires? And why was the creation of science and health institutions crucial to the revolutionary movements for independence in Latin America? This course examines science and medicine in Latin America by attending to the ways that knowledge of nature and health has been central to the political struggles of the countries in this region. A crucial dynamic shaping the history and culture of this region is the interplay between the healing practices and cosmologies of European settlers, indigenous Americans, and the descendants of African slaves. Bearing this interplay in mind, this course explores how Latin America has been a fertile site of scientific creativity. It also examines the ways in which Latin American scientists and medical experts have refashioned concepts and practices from Europe and North America to fit local circumstances.
Taught by: Gil-Riano
Course usually offered in spring term
Also Offered As: HSOC 338
Activity: Seminar
1.0 Course Unit
STSC 360 Data Dreams
The idea of solving problems by collecting as much data as possible about them is an old dream that has recently been revitalized. This course examines the hunger for data from a historical and social perspective, seeking to understand when, why, and how the collection of vast amounts of data has come to seem valuable and desirable, sometimes in ways that exceed any reasonable expectation of utility or feasibility. Topics include state surveillance, online tracking, the quantified self, citizen science, civic hacking, human genomics, bioinformatics, and climate science.
Taught by: Benson
One-term course offered either term
Activity: Seminar
1.0 Course Unit

STSC 362 Waters, Roads and Wires
This course studies infrastructures: how and why they develop, how they are maintained, how they reshape environments, and how they interconnect with other infrastructures. We begin by reading about infrastructure and about large technological systems, then explore some specific American structures. Possible topics: the electrical grid, the interstate highway system, hydroelectric dams, Amtrak, urban mass transit systems, disasters and infrastructure (Katrina, Harvey, etc.). As the semester progresses, students will spend more time in class on individual research topics of their choice, and in working groups producing a group project.
Taught by: Greene
One-term course offered either term
Activity: Seminar
1.0 Course Unit

STSC 363 Technology & Democracy
What is the relationship between technology and politics in global democracies? This course explores various forms of technology, its artifacts and experts in relation to government and political decision-making. Does technology ‘rule’ or ‘run’ society, or should it? How do democratic societies balance the need for specialized technological expertise with rule by elected representatives? Topics will include: industrial revolutions, factory production and consumer society, technological utopias, the Cold War, state policy, colonial and post-colonial rule, and engineers’ political visions.
Taught by: Voskuhl
Course not offered every year
Activity: Seminar
1.0 Course Unit

STSC 370 The Many Lives of Data: Population, Environment, and Planning in the United States
This is a class about the live(s) and afterlives of information from 1850 to the present. Not only can information be reproduced (in a variety of material conditions); it can be repurposed and funneled through a variety of different applications, some of them serving radically different purposes than the first purpose of gathering it. Thoreau’s journals of plant flowering, for instance, have become important indicators of climate change. More controversial is the sale of biomedical information by personal genomics services for drug discovery, or the construction of forensic databases consisting of the DNA of suspects arrested as a result of racial profiling. We will study the ways in which data has become a way for us to understand and define change, stability, place, and time, beginning in the mid-nineteenth century, a period of accelerated and increasingly systematic gathering of data, particularly medical, forensic, and environmental data. The class will proceed both chronologically and thematically in three units, from the gathering and use of biomedical data as a way to make patient populations ‘legible’ (to borrow from James Scott), to data as a way to make the environment understandable, and finally to data as a tool for producing and reproducing social relations. As a final project, students will trace a particular data set from its original gathering to its latest usage. Students will also have an opportunity to create their own course content in the final three weeks of class.
Taught by: Bergman
One-term course offered either term
Also Offered As: HSOC 370
Activity: Seminar
1.0 Course Unit
STSC 372 Animals and America
This course looks at animals in the American past, to find out what a focus on an individual animal, a species, or a kind of animal (such as work animals, food animals, wildlife, zoo animals, pets and pests) can reveal by exposing the inner workings of different periods and events. When we make animals the focus of how we look at the past, things change. Making animals visible makes other things visible; hidden, surprising or even shocking aspects of the past appear. Americans have always lived with and employed animals. They also have ‘thought with’ animals, using animals to work out their understandings of society, nature and power. How Americans perceived, named, classified, behaved toward and worked with animals bares the workings of race, class and gender, uncovers power structures, and reveals environmental and legal choices. If we want to understand how the current world came to be, taking a critter approach to history provides a way to explain how we got to now. Changing our view of the past can change our ideas of what the present can be. Though animals are everywhere in the past, they are often hidden from view. We will embark on a hunt for animals, foraging through historical writing, political documents, literature, and primary sources. We will watch movies, examine photographs and study cartoons. We will draw on knowledge from the fields of science, technology, health and environments, and employ the classifications of race, class, gender, nature and culture. We’ll talk about evolution, domestication and wildlife. We will look at zoomorphism, when people or things are labeled as animals (calling people pigs or snakes, or talking about bull or bear stock markets), and anthropomorphism, when animals are thought of or portrayed as people. In this seminar, we’ll begin with case studies from the nineteenth century, then start seeking the animals of the twentieth and twenty-first centuries. Writing, much of it informal, will be a regular part of this course, as will research exercises. There will be different options for writing and for research projects. Course materials will focus on American history and society but projects and exercises may look at places and times from around the globe and across the centuries.
Taught by: Greene
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

STSC 379 Animals in Science Medicine Technology
This course explores human-animal relationships: the wide range of these relationships, why they originated and how they have changed over time. How have humans classified, valued, utilized, consumed, behaved toward and understood animals? Where is the boundary between humans and other animals, and how do we know, since humans are also animals? How is that boundary been maintained and redefined? Are humans part of the animal 'natural' world- or apart from it? How are humans similar to and different from other kinds of animals? How do we know about animals and what is it we know? To what extent are questions about animals really questions about humans? How has the meaning of animal changed over time? The course focuses in particular to the roles and relationships of animals within science and medicine, and as biotechnologies.

One-term course offered either term
Also Offered As: HSOC 379
Activity: Seminar
1.0 Course Unit

STSC 381 Toxicity in Context
We live amidst a constant stream of messages, practices, and regulations about things, behaviors, or relationships deemed 'toxic.' Within environmental health in particular, all sorts of actors grapple with complex decisions about what it means to live with materials and anticipate the ways they can interact with human health and the environment - at present through the distant future. What exactly do we mean when we categorize some substances as toxic, and by extension others as safe? Are there other ways of managing uncertainty or conceptualizing harm? How are these concepts built into broader social structures, economics, and regulations? What other work are they used to do? In this course, we will explore major social science approaches to toxicity and apply these theories to our own analysis of examples from the contemporary United States, and in particular, to a robust oral history collection with residents, developers, and government scientists grappling with these questions just outside of Philadelphia. This course grows out of scholarship in the history and anthropology of environmental risk, and health, as well as direct ethnographic, historical, and oral history research at a site outside of Philadelphia grappling with the meaning of materials that remain on site after past industrial manufacturing. In this course, students will gain an introduction to oral history and analysis of in-depth interviews, and introduction to key approaches in theorizing toxicity. By connecting life experiences of residents, government scientists and others, at an actual site, with the literatures we read in class, students will think critically about the ways the literatures we engage do and do not fully encompass the experiences and concerns that are intertwined with toxicity for actual people grappling with making sense of uncertain harms amidst urban planning.
Taught by: Dahlberg

STSC 391 Bioethics and National Security
At least since Augustine proposed a theory of ‘just war,’ armed conflict has been recognized as raising ethical issues. These issues have intensified along with the power and sophistication of weapons of war, and especially with increasing engineering capabilities and basic knowledge of the physical world. The life sciences have had their place in these developments as well, perhaps most vividly with the revelations of horrific experiments conducted by the Nazi and Imperial Japanese militaries, but with much greater intensity due to developments in fields like genetics, neuroscience and information science, and the widely recognized convergence of physics, chemistry, biology and engineering. The fields of bioethics and national security studies both developed in the decades following World War II. During the cold war little thought was given to the fact that many national security issues entail bioethical questions, but this intersection has been increasingly evident over the past two decades. In spite of the overlapping domains of bioethics and national security, there has been remarkable little systematic, institutional response to the challenges presented by these kinds of questions: - What rules should govern the conduct of human experiments when national security is threatened? - Is it permissible to study ways that viruses may be genetically modified in order to defeat available vaccines, even for defensive purposes? - What role may physicians or other health care professionals play in interrogation of suspected terrorists? - Must warfighters accept any and all drugs or devices that are believed to render them more fit for combat, including those that may alter cognition or personality? - What responsibilities does the scientific community have to anticipate possible ‘dual purpose’ uses or other unintended consequences of its work? Deploying the resources of ethics, philosophy, history, sociology and theory, this course will address these and other problems.
Taught by: Moreno
Course usually offered in spring term
Also Offered As: HSOC 391
Activity: Seminar
1.0 Course Unit

STSC 409 Science and Disability
How have ideas about ability and disability shaped the questions we ask about the world and the methods we use to answer them? How do assumptions about who can and ought to be a scientist, engineer, or physician intersect with constructions of disability and difference? How might studying the lived experiences of people with disabilities in the context of STEM(Medicine) help us begin to answer these questions? This course explores the exciting intersection between disability studies and the history and sociology of science and medicine through weekly readings, discussions, and original research. Using materials ranging from archival and online sources to oral history interviews and museum collections, students in this course will learn how scientific ideas and institutions have helped shape 20th- and 21st-century categories and experiences of disability as an embodied and socio-political identity. At the same time, students will learn how to use disability as a critical theoretical lens for investigating the cultures, tools, and institutions behind the creation and application of modern scientific and medical knowledge. Collaborative and analytical writing work throughout the course will build towards the completion of a final original research project.
Taught by: Martucci
One-term course offered either term
Also Offered As: HSOC 409
Activity: Seminar
1.0 Course Unit

STSC 411 Sports Science Medicine Technology
Why did Lance Armstrong get caught? Why do Kenyans win marathons? Does Gatorade really work? In this course, we won’t answer these questions ourselves but will rely upon the methods of history, sociology, and anthropology to explore the world of the sport scientists who do. Sport scientists produce knowledge about how human bodies work and the intricacies of human performance. They bring elite (world-class) athletes to their laboratories or their labs to the athletes. Through readings, discussions, and original research, we will find out how these scientists determine the boundary between ‘natural’ and ‘performance-enhanced,’ work to conquer the problem of fatigue, and establish the limits and potential of human beings. Course themes include: technology in science and sport, the lab vs. the field, genetics and race, the politics of the body, and doping. Course goals include: 1) reading scientific and medical texts critically, and assessing their social, cultural, and political origins and ramifications; 2) pursuing an in-depth The course fulfills the Capstone requirement for the HSOC/STSC majors. Semester-long research projects will focus on ‘un-black-boxing’ the metrics sport scientists and physicians use to categorize athletes’ bodies as ‘normal’ or ‘abnormal.’ For example, you may investigate the test(s) used to define whether an athlete is male or female, establish whether an athlete’s blood is ‘too’ oxygenated, or assess whether an athlete is ‘too’ fast (false start). Requirements therefore include: weekly readings and participation in online and in-class discussions; sequenced research assignments; peer review; and a final 20+ page original research paper and presentation.

Course not offered every year
Also Offered As: HSOC 411
Activity: Seminar
1.0 Course Unit
STSC 418 Sound in Science, Medicine and Technology
How do listening and knowing relate? This capstone will analyze sound as an object, an instrument, a product and a process of research in science, technology, and medicine. From anthropological field recordings to experiments in acoustics, readings will address the ways in which researchers have isolated and investigated sonic phenomena during the modern period. We will consider sound as a tool for knowing about other phenomena as well: bodily functions, seismic events, animal communication, and the like. Technologies of sound production, reproduction, storage, manipulation, and analysis will be front and center in this course. What can you do with magnetic tape that phonography does not allow? How might the hospital soundscape inform clinical decision-making? Why is Amazon's Alexa female? How has scientific communication changed over time? In addition to wrestling with questions like these, the course will provide undergraduate majors with the opportunity to research and execute an original paper of significant length in the humanistic social sciences. Students must be in their last three semesters for it to fulfill the capstone requirement, but any student may enroll.

STSC 436 Biopiracy: Medicinal Plants and Global Power
Biopiracy has emerged as the name of conflict between multinational pharmaceutical companies attempting to get genetic patents on medicinal plants and indigenous communities in the Global South who have long known and used these plants for medicinal purposes. Today the story of Biopiracy is an unfolding story of plants, patents and power. The extraction and commercial exploitation of plants and knowledge about them from the Global South however is not new. It has been happening at increasing pace for at least the last two centuries. Both the anti-malarial drug quinine and the cancer drug vincristine for instance have their plant-origins in the Global South where local communities used them medicinally long before their discovery by biomedicine. This course will put the current debates around Biopiracy in context and explore how the entanglements of plants and power have changed or not changed.

STSC 482 Invisible Labor in the Human Sciences
This course looks at those disciplines that take people as their subjects of research—including biology and biomedicine as well as anthropology, linguistics, and sociology—to explore the contributions of a wide range of research participants. We will focus on the sciences of human behavior, information, and medicine to analyze the labors of behind-the-scenes actors including tissue donors, survey respondents, student subjects, patients, translators, activists, ethics review boards, data curators, and archivists. Our job will be to analyze the experiences of these technoscientific laborers with a view to systems of knowledge and power in the production and maintenance of Knowledge about humans and their bodies.

Scientific Computing (SCMP)

SCMP 559 Multiscale Modeling of Chemical Systems
This course provides theoretical, conceptual, and hands-on modeling experience on three different length and time scales - (1) electronic structure (A, ps); (2) molecular mechanics (100A, ns); and (3) deterministic and stochastic approaches for microscale systems (um, sec). Students will gain hands-on experience, i.e., running codes on real applications together with the following theoretical formalisms: molecular dynamics, Monte Carlo, free energy methods, deterministic and stochastic modeling. Prerequisite: Undergraduate courses in numerical analysis and statistical mechanics.
Course not offered every year
Also Offered As: BE 559, CBE 559
Activity: Lecture
1.0 Course Unit

SCMP 597 Master's Thesis Research
For students working on advanced research leading to the completion of a master's thesis.
One-term course offered either term
Activity: Masters Thesis
1.0 Course Unit

SCMP 599 Master's Independent Study
For Scientific Computing master's students. Involves coursework and class presentations. The project will invariably include formally gradable work comparable to that of a CIS 500 level course. Students should discuss with the faculty supervisor the scope of the independent study, expectations, work involved, etc.
One-term course offered either term
Activity: Independent Study

**Scientific Processes (SPRO)**

**SPRO 100 Scientific Reasoning**
Whether you are preparing for a degree concentration in the sciences or planning to specialize in creative pursuits, every course of study benefits from knowledge of scientific reasoning and logic. This introductory course provides an overview of the sources, tools, and history of scientific knowledge. Contextualizing products of scientific research such as theories, models, and laws of nature, the course examines the methods of producing scientific knowledge and explores how science is affected by questions of values, religion, objectivity, and public opinion. You also learn and practice the tools used to generate knowledge, including logic and probability.
Activity: Online Course
1.0 Course Unit

**Social Work (SWRK)**

**SWRK 593 Design Thinking for Social Impact**
Thinking like a designer can transform the way people and organizations develop products, services, processes, and strategy. This approach, called design thinking, brings together what is desirable from a human point of view with what is technologically feasible and economically viable. It also allows people who aren’t trained as designers to use creative tools to address a vast range of challenges. Design thinking is a deeply human process that taps into abilities we all have but get overlooked by more conventional problem-solving practices. It relies on our ability to be intuitive, to recognize patterns, to construct ideas that are emotionally meaningful as well as functional, and to express ourselves through means beyond words or symbols. Design thinking is something you can learn only by doing, so we’ll get out into the world and tackle a design challenge of our own together. We’ll learn how to research by researching, learn how to prototype by prototyping and learn how to communicate our ideas by pitching to a group of experts. At the end of the class you should feel confident in your abilities to apply design thinking to any challenges you’re facing and to come up with new ideas and solutions as a result.
Course usually offered summer term only
Also Offered As: NPLD 593
Activity: Online Course

**SWRK 595 Effective Communication and Storytelling**
Great leaders are storytellers. They are able to engage and entertain their communities, and tell a compelling narrative about how the world works. They use language powerfully and communicate in ways that uplift and inspire others. In this class, we will explore the power of telling great stories, and learn how to do it most effectively when promoting your campaigns to make the world a better place. We will also look at the skills of framing language in ways that will win over an audience. Finally, we will look at other key skills of effective communication, including the best strategies for persuasion, negotiation, and conflict resolution.
Taught by: Sherman
Course usually offered summer term only
Also Offered As: NPLD 595
Activity: Lecture
1.0 Course Unit

**SWRK 596 Design and Incorporation of High Impact Nonprofits**
Design and Incorporation of High Impact Not-For-Profits is designed for those who have a practitioner’s interest in the design, governance, leadership, and management of high impact not-for-profit organizations. This course is taught through learning best practice theory, applying this theory to a simulation experience, and providing students the opportunity to apply their new knowledge and experience in an interview with a current not-for-profit leader. Students, through the combination of theory and practice, are provided with the essential competencies and tools to design and incorporate a not-for-profit, conduct in-depth analysis of a not-for-profit’s effectiveness including, but not limited to, governance, leadership, social impact, financial sustainability, and systems and policy influence. Through the mock simulation process of designing, incorporating, and governing, students will leave with a ‘best practice’ for not-for-profit manual that includes articles of incorporation, bylaws, governance deliverables, strategic business plan, organizational scorecard, 3-5 year budget, development plan and public policy strategy.
The knowledge and tools gained through readings and the mock simulation experience, will be applied, in the form of a thorough analysis, to the governance, leadership, strategic and/or business model, financial sustainability, social impact, marketing and communication, and public policy influence of an existing organization.
Course usually offered summer term only
Also Offered As: NPLD 596
Activity: Lecture
1.0 Course Unit

**SWRK 600 The Penn Experience: Racism, Reconciliation, and Engagement**
This new non-credit asynchronous course, consisting of six Modules, aims to establish common basic language and concepts for incoming graduate and professional students to facilitate subsequent difficult conversations about race, racism and difference in the classroom and beyond. Using video interviews, presentations, short readings and podcasts, the course highlights the significance of Penn and Philadelphia’s history of racism and other forms of oppression, Penn’s evolving relationship to West Philadelphia, and Penn’s efforts toward greater engagement and inclusion. Modules also focus on implicit bias, intercultural communication gender identity and disparities in healthcare. A final module was designed primarily to address the antiracist work that must be done to dismantle white supremacy. All incoming SP2 master’s students are expected to spend 20 or more hours reviewing the six modules and completing short assessments prior to starting the fall semester. Other graduate and professional schools will assign modules to be completed based on their schools requirements.

Course offered summer, fall and spring terms
Activity: Online Course
0.0 Course Units
SWRK 601 History and Philosophy of Social Work and Social Welfare
This course traces the development of social welfare policy in the United States and its relationship to social work. It analyzes the values and assumptions that form the foundation of existing welfare programs and institutions and explores the social, economic, political and cultural contexts in which they have developed. The course examines the development of cash assistance and social services programs in light of the enduring legacy of poverty, racism, and sexism. The view of ‘outsiders’ in U.S. society - low-income persons, people of color, gays and lesbians - allows us to gain perspective on the source of conflict and consensus in American history, which augments material about institutional racism learned in SWRK 603 and content about behavioral responses learned in SWRK 602. The course traces, as well, the roles that social workers have played in the formulation and implementation of social welfare policy and links these historical examples to contemporary policy practice.
Taught by: Malitta Engstrom
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

SWRK 602 Human Behavior in the Social Environment
This course introduces the student to the individual and family components of social interaction in a variety of different milieus. Theories of self and personality are studied, along with theories related to traditional and non-traditional family styles, different social and ethnic groups, and of assimilation and acculturation. Emphasis is given to the impact of different cultures and traditions on individual functioning. Additional attention is given to selected social characteristics of the larger society, such as factors of socio-economic class which influence individual and family behavior and functioning.
Taught by: Jerri Bourjolly
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

SWRK 603 American Racism and Social Work Practice
This course explores racism in America as an historical and contemporary phenomenon. It emphasizes the development of evidence-based knowledge about institutional systems of racism, analytical skill in understanding the complexity of institutional racism and other forms of oppression more broadly defined, self-awareness, and the implications of racism for social work services and practices.
Taught by: Amy Hillier
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

SWRK 604 Foundations of Social Work Practice I
This is a first of a four-course sequence designed to help students develop a professional stance and evidence-based framework for social work services to individuals, groups, families, and communities. It integrates the student’s theoretical learning with the experience in the field placement agency. The student is introduced to a holistic process-oriented approach to social work practice and to methods for implementation. The course emphasizes the social context for practice with special attention to agency purpose, functions and structure; the client system and its perceptions of need; goals and resources and the social worker as a facilitator of change.
Taught by: Malitta Engstrom
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

SWRK 605 Foundations of Social Work Practice II
This is the second in a four-course sequence and continues to examine varied practice frameworks and methods for service delivery in working with individuals, groups, families and communities. It emphasizes the eradication of institutional racism and other forms of oppression along with the integration of a culturally-sensitive approach to social work practice. Attention is given to understanding client problems in the context of different social work practice approaches and service requirements and to increased use of professional values to guide and inform practice.
Course usually offered in spring term
Prerequisite: SWRK 604
Activity: Lecture
1.0 Course Unit

SWRK 615 Introduction to Social Work Research
This course presents the broad range of research tools that social workers can use to improve the effectiveness and efficiency of their practice. The course emphasizes the process of theory development, conceptualization, and hypothesis formulation across a broad spectrum of social work practice situations. The course includes methodological considerations relating to concept operationalization; research design (experimental, survey, and field), sampling instrumentation, methods of data collection and analysis, and report preparation and dissemination. The course also emphasizes how social work research can help professionals better understand and more effectively impact problems of racism and sexism in contemporary American society.

1.0 Course Unit

SWRK 620 Integrative Seminar
All Advanced Standing students are required to take this non-credit Integrative Seminar in the summer upon beginning the program. The seminar meets weekly during the second summer session and supports students as they begin their field placement. In order to enroll in the fall, students must achieve satisfactory performance in the Integrative Practice Seminar and summer field placement. Advanced Standing MSW students only.
Taught by: Jennifer Plumb
Course usually offered summer term only
Activity: Seminar
0.0 Course Units
SWRK 626 Health and Social Justice
This course considers various theoretical approaches to justice and health, motivated by the idea that a moral framework is needed to address the ethical challenges posed by inequalities in access, quality, financial burdens, and resource priorities, as well as rising health care costs. The course includes four parts. The first part examines ethical frameworks that involve various approaches to medical and public health ethics. The second part presents an alternative theory of justice and health, the health capability paradigm (HCP), grounded in human flourishing. The third part explores domestic health policy applications of HCP, including equal access, equitable and efficient health financing and insurance, rising costs and allocating resources. The fourth and final part of the course investigates domestic health reform, particularly a normative theory of health policy decision making grounded in political and moral legitimacy. The course scrutinizes the relevance of health justice for governing health at the domestic level, that is within countries, offers a new theory of health and social justice, the health capability paradigm, and of health governance, shared health governance, evaluating current domestic health systems and proposals for reforming them in light of these alternative theoretical frameworks.
Taught by: Jennifer Prah Ruger
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

SWRK 627 Global Health Justice and Governance
This course considers various theoretical approaches to global justice and global governance and analyzes their implications for global health. The course includes two parts. The first part examines accounts of cosmopolitanism, nationalism and other theories of global justice, critically assessing duties ascribed by each that may be owed universally to all persons or confined within associative boundaries of communities or nations. The second part explores applications to global health governance encompassing consideration of human rights and the operation and accountability of global institutions such as the United Nations, the World Bank, and the World Health Organization and national health systems. The course scrutinizes the relevance of global justice for governing the global health realm, proposes a new theory of global health justice, provincial globalism, and of global health governance, shared health governance, evaluating the current global health system and proposals for reforming it in light of these alternative theoretical frameworks.
Taught by: Jennifer Prah Ruger
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

SWRK 668 Economics for Social Policy
Economics allows us to determine the costs and benefits of social policies like cash benefits, unemployment insurance, health insurance, pensions, education, etc. Policies typically affect the behavior of agents like individuals, families and firms, and we have to take these reactions into account when analyzing policy. Economics allows us to predict how policy is likely to affect behavior by understanding how the policy changes individuals’ decisions, and what collective outcomes these myriad individual decisions bring about. For example, a universal basic income allows individuals to sustain themselves and their families when they are not working. At the same time, such guaranteed income has the potential to discourage people from looking for a job. If enough people are discouraged from looking for a job, employment in the economy will decrease, leading to lower production and lower tax revenues for the government. Policy makers have to take these phenomena into account in order to design a good income support system.
Taught by: Ioana Marinescu
Course usually offered in fall term
Also Offered As: MSSP 668
Activity: Lecture
1.0 Course Unit

SWRK 701 Health and Mental Health Policy
This course provides an overview of the historical, social and economic dimensions of the health care delivery system: how health policies are developed and implemented, and how such policies influence social work practice, program planning, and research. Key health policy issues such as financing, cost, access, and the allocation of resources are explored in the context of health reform proposals. Students investigate how health policy affects specific population groups such as women and children, persons with chronic mental illnesses, persons with AIDS, older adults, and minorities.
Course not offered every year
Activity: Lecture
1.0 Course Unit

SWRK 702 Social Work Practice in Health Care
This course focuses on key issues in social work practice in health care settings. Social aspects of health and illness, including cultural variations, health beliefs and behavior, and the impact of illness on the patient and the family, are examined and their relevance for practice is discussed. Appropriate theoretical models for practice are identified and applied to practice in the areas of prevention, primary care, chronic and long-term care. New roles for social work in varied health delivery systems and inter-professional collaboration are explored.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
SWRK 703 Impacting Government: Policy Analysis & Coalition Building
This course focuses on developing a theoretical foundation for actionable skills in policy analysis and coalition building across a wide range of constituencies. The material begins with a structured focus on the ideological underpinnings of social welfare in the United States and the ways in which these perspectives shape our conception of equity, equality, and allocation of resources along the lines of race, class, gender, immigration status, and other identities. We will then utilize this basis for developing analysis frameworks, policy briefs, and media messaging that students will utilize when working with legislative bodies to advocate for and with the populations they serve. Distinct emphasis is placed on becoming conversant across differential systems, ideas, values, and assumptions while remaining grounded in relevant research and empirical approaches.
Course not offered every year
Activity: Lecture
1.0 Course Unit

SWRK 704 Advanced Clinical Social Work Practice I
Clinical Social Work Practice I and Field Practice builds on the generalist model of practice established in the foundation social work practice courses. The course work and assignments are closely linked to the students' learning objectives and experiences in the field. This course has students critically examine and deepen their understanding of advanced theoretical frameworks and specific skills applied in clinical practice with children, adolescents, adults, and families. Students begin with classic and modern formulations of psychodynamic work and use this as a foundation for understanding theoretically and empirically drive models of family intervention. In addition, use of self and social work values and ethics and working with diverse clients are addressed at an advanced level.
Taught by: Jacqueline Corcoran
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

SWRK 706 Policies for Children and Their Families
This course examines policies for children and their families with a specific focus on child welfare policy. The course examines the interrelationship between: the knowledge base on child abuse and neglect; evaluations of interventions; programs and policies designed to protect maltreated children; and child welfare policy at the state and national level. The course also examines federal and state laws that govern the funding and operation of child welfare systems; the history of child welfare policies; the operation of child welfare systems; and the legal, political and social forces that influence the structure and function of child welfare systems in the United States.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

SWRK 708 Advanced Macro Social Work Practice I
Advanced Macro Social Work Practice I and Field builds on the foundation social work practice courses and focuses on three areas: (1) context of macro practice; (2) organizational structure with a focus on nonprofits; and (3) program design and development. The course begins with providing theoretical frameworks for macro practice and then moves to focus on delivery of services at the community level. Knowledge and skill development focuses primarily on social work practice within communities and organizations. Students learn how to organize and build relationships with communities and develop, plan, manage, fund and assess/evaluate community-based programs. Specific skill development includes learning how to research, develop, write, and pitch a grant proposal. Course content is integrated with fieldwork and is specific to the service needs of the populations with whom students are working in their field agencies.
Taught by: Ghose
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

SWRK 710 Supervision Seminar
Students in the Employed Practitioners Program are required to take this non-credit seminar in the fall and spring terms of their second year of study. The class meets every other week. In a limited number of cases, advanced-year students may be placed in agencies where there is no available MSW field instructor. In such instances, the student is required to attend the Clinical or Macro Supervision Seminar (depending on their concentration), which meets every other week during the academic year. Students who are required to participate in the clinical or macro supervision seminars will be given 1.5 hours of compensatory time off from their field placement every other week.
Taught by: Malitta Engstrom
Activity: Seminar
0.0 Course Units

SWRK 711 Contemporary Social Policy
This course introduces students to the analysis of contemporary social welfare policy. Several social welfare policy areas, including social inequality, poverty, health care, and housing are examined. Each topic area is also used to illustrate a component of the policy analysis process, including the analysis of ideologies and values as they shape policy formulation, the process by which legislation is proposed and enacted, the roles of advocacy and lobbying organizations, and the challenges of policy implementation and evaluation.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

SWRK 713 Understanding Social Change: Issues of Race and Gender
This course builds upon the foundation of historical, psychological, sociological, economic, political, and personal knowledge about institutionalized forms of racism and discrimination developed in SWRK 603, American Racism and Social Work Practice. The course uses understanding elements of oppression to critically examine strategies for addressing racism and sexism in organizations and communities through systematic assessment and planning for social change. The course examines change at three levels: organizations, communities, and social movements.
Course usually offered in spring term
Prerequisite: SWRK 603
Activity: Lecture
1.0 Course Unit
SWRK 714 Advanced Clinical Social Work Practice II
The focus of learning in this semester is theories and skills related to clinical practice with individuals and groups, differential intervention, and the broadening of the professional role and repertoire. The course content and assignments are closely linked with the students' learning objectives and experiences in the field. Students extend and refine their practice knowledge and skills and learn to intervene with cognitive, behavioral, and narrative modalities. This semester focuses also on work with complex trauma across systems and populations. Students consolidate their identification as professionals and learn to constructively use the environment to effect systems changes.
Course usually offered in spring term
Prerequisite: SWRK 704
Activity: Lecture
1.0 Course Unit

SWRK 717 Art and Social Work: Art and the Ecology of Justice
How can the arts help us build a more just society? How can the arts transform social structures and systems? Public health crises involving clean water (Flint), police violence (Baltimore), and a lack of economic and educational opportunity following reentry (Philadelphia) make legible the need for a new visual language that critiques these conditions and challenges entrenched structural inequalities. We will engage the work of creative practitioners who are mapping new relationships between art and social justice and directly impacting individual and communal well-being. In so doing, the course seeks to challenge traditional constructions of public health, which often isolate individual histories from their social life and their relation to families, communities, and geographies. Readings will build upon disciplinary perspectives in the arts, humanities, and social policy. Requirements include weekly readings, class participation, and a collaborative final project. The course will meet in the Health Ecologies Lab at Slought Foundation, an arts organization on campus.
Taught by: Neff, Levy and Ghose
Course usually offered in spring term
Also Offered As: FNAR 316, FNAR 616
Activity: Seminar
1.0 Course Unit

SWRK 718 Advanced Macro Social Work Practice II
Advanced Macro Social Work Practice II and Field helps students broaden and deepen the specific knowledge and skills required to become an effective and creative social work practitioner. The course focuses on five areas of macro practice: (1) community assessment and practice; (2) policy advocacy; (3) fiscal management and fundraising; (4) global human rights; and (5) emerging areas of macro practice. Students learn how to conduct a community practice analysis, engage in policy advocacy, develop an idea for a social enterprise, write an agency fundraising plan, and conduct an agency fiscal evaluation. Students learn to utilize administrative skills to promote social change within a variety of systems that influence the lives of client populations. Course content is integrated with fieldwork and is specific to the service needs of the populations with whom students are working in their field agencies. Course usually offered in spring term
Prerequisite: SWRK 708
Activity: Lecture
1.0 Course Unit

SWRK 721 Social Work Healthcare Proseminar
This is a mandatory, year long, bi-monthly, non-credit course for all students enrolled in the Social Work in Health Care Specialization (SWIHCS). SWIHCs aims to prepare students for successful careers across practice settings and with diverse populations and conditions. Grounded in the tenets of biopsychosocial approaches to direct practice, the specialization bridges systems of practice and introduces students to inter-professional collaboration and leadership skills. This proseminar will serve two functions for students in the specialization. First, the cohort will meet together monthly for case conceptualization, and consideration of challenges unique to health-related placements in both macro and direct practice settings. Second, students will meet monthly for special learning opportunities, guest lectures, and professional development. Topics may include, but are not limited to: direct practice work with children, families, the elderly, and communities coping with chronic and terminal illness, palliative and end of life care, health care advocacy, policy development and evaluation, and interdisciplinary collaboration.
Taught by: Allison Werner-Lin
Two terms. student must enter first term.
Activity: Seminar
0.0 Course Units

SWRK 722 Practice with Children and Adolescents
This course provides a foundation for social work practice with children and adolescents. Beginning with an overview of normative child and adolescent development and psychosocial developmental theory, the course covers various methods for helping at-risk children and adolescents and their families. Emphasizing the complex interplay between children and adolescents and their social environments, consideration will be given to biological, temperamental, and developmental status; the familial/cultural context; the school context; and other aspects of the physical and social environment. Particular attention is paid to working with socially, emotionally, financially, and physically challenged and deprived children and adolescents and their families.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

SWRK 723 LGBTQ Certificate Proseminar
This is a monthly, non-credit course for all students enrolled in the LGBTQ Certificate. The LGBTQ Certificate provides supplemental content and skills to existing professional master's degrees at Penn with specialized courses and fieldwork addressing the legal, physical and mental health care, social service, and educational needs of LGBTQ communities and issues of gender and sexuality, more generally, across the lifespan. Because students can enroll in a variety of courses across schools to meet the certificate requirements, the proseminar is designed to serve as a shared community building and peer mentorship experience for each certificate cohort. The instructor will also provide an additional layer of mentorship for integrating field placement into the academic social work experience. The proseminar will take on different formats over the course of the semester including case review, guest lectures, and in-depth discussion of issues relating to ethics, identity, and cross-professional collaboration.
Taught by: Rebecca Alvarez
Course usually offered in spring term
Activity: Seminar
0.0 Course Units
SWRK 724 Developmental Disabilities
This course enhances the students’ ability to practice social work with and on behalf of people with developmental disabilities and their families. The course provides a base of knowledge about developmental disabilities and differences, their causes and characteristics. Students learn how disabilities and learning differences impact personal, familial, educational, social, and economic dimensions for the individual, family and society, with attention to the person’s special life cycle needs and characteristics. The course also emphasizes legislative, programmatic, political, economic, and theoretical formulations fundamental to service delivery.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

SWRK 726 Brief Treatment and Crisis Intervention
This course focuses on theory and practice of planned brief treatment in social work practice, primarily with individuals but with attention to couples, families and other groupings. The course covers the history of and different approaches to brief treatment. Topics include treatment issues such as criteria for selection of clients, understanding the importance of time in the treatment relationship, the use of history; the importance of focusing, the process of termination and other issues related to brief interventions. Particular attention will be paid to the use of brief treatment approaches in crisis situations. The course presents various methods of assessing an individual’s crisis and of helping clients mobilize their strengths to utilize customary methods of coping and learn newer ways of coping.
Taught by: Emily Treat Atwell
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

SWRK 727 Practice with Families
This course provides students with assessment and intervention skills for social work practice with varied family/partner configurations. The course begins with a grounding in family systems theory and proceeds to explore patterns of interaction in terms of the wide range of problems that families and partners bring to social agencies. Emphasis is given to exploring ways of supporting change in interaction patterns. Readings are augmented by videotapes of family sessions and simulations of clinical situations from students’ field practice.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

SWRK 729 Social Statistics
This course provides students with a broad range of statistical methods and applications. It introduces social work students to the use of quantitative data for planning and evaluating social programs and social policy. Course topics include conceptualization and measurement of variables and basic techniques and concepts for exploring and categorizing data, for generalizing research findings and testing hypotheses, and for statistical data processing. Students will gain experience in using a Windows-based statistical software package on personal computers. Emphasis is placed on the practical application of data to address social policy and social work practice issues. Students have the opportunity to critique the application of data analysis and presentation in technical reports and professional journals.
Taught by: Yin Ling Irene Wong
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

SWRK 730 Community Mapping
Geographic space is important to family and community well-being, as we know. Community Mapping introduces students to geographic information systems (GIS), computer software for making maps and analyzing spatial data. Students will learn how maps have been used in social welfare history as well as how GIS can be used for needs assessments, asset mapping, program evaluation, and program planning. The course builds on research skills developed in SWRK 615. For the final project, students have an opportunity to apply their GIS skills to creating maps related to their field placement. The use of such maps may lead to both program and policy change in neighborhoods and communities.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

SWRK 731 Clinical and Macro Child Welfare Practice
Students enrolled in this course will learn about the various contexts in which child welfare practice and policy services take place and the skills and modalities that are used with children, youth, and families who are the focus of child welfare intervention. Students learn about the social conditions and unmet needs that have typically precipitated child welfare policy and ideological debates informing child welfare policy. How to structure organizations and implement planning in support of strengthening front-line practice is also addressed. Taking stock of these policies and organizational factors, students gain a firm understanding of how they influence, shape, and govern direct clinical practice in child protection and casework. Particular attention will be devoted to developing students’ practice skills in safety assessment and safety planning, risk assessment, and permanency planning. Implementation of evidence-based, trauma-informed interventions to promote positive developmental outcomes among the racially/ethnically diverse pool of children and adolescents placed in out-of-home care will also be a focus of attention. Other topics include separation, loss, and identity development; disproportionality and disparity; and self-care in child welfare practice. In the spirit of bridging connections between macro and clinical practice, course content will delve into how direct casework services influence dependency actions in the juvenile courts. How these direct practices or interventions influence case outcomes as reported by a number of federal data reporting systems will also be discussed. A social justice framework will be applied to understand how child welfare policies and organizational services sustain child and family inequalities, especially for historically oppressed and marginalized populations who are disproportionally represented in the child welfare system.
Taught by: Johanna Greeson
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
SWRK 732 Integrative Seminar in Child Welfare
This capstone course in the Child Well-Being and Child Welfare specialization will integrate direct/micro and macro levels of practice; research in child welfare and related fields, as the research relates to all levels of practice; the relationship of child maltreatment and other social problems; and perspectives from several disciplines, specifically social work, other mental health professions, law, and medicine, as these disciplines address problems of child maltreatment and child welfare. The seminar will highlight issues of social justice, disproportionality - particularly the over-representation of children and families of color in the child welfare system, and disadvantaged populations, including children in general and poor children in particular. Faculty from other disciplines will be features as guest speakers throughout the course.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

SWRK 736 Building Community Capacity
This course provides an introduction to community organization and community capacity building. The course encompasses strategies, models, and techniques for the creation of organizations; the formation of federations of existing organizations; and coalition-building, all designed to address problems requiring institutional or policy changes or reallocation of resources to shift power and responsibility to those most negatively affected by current socio-economic and cultural arrangements. The course emphasizes development of strategies and techniques to organize low-income minority residents of urban neighborhoods, and to organize disenfranchised groups across geographic boundaries as the first required steps in an empowerment process.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

SWRK 737 Bioethics in Social Work in Diverse Healthcare Settings
As medical technology develops and evolves, ethical dilemmas are occurring more frequently in many diverse healthcare settings. Social workers play an integral and unique role in bioethics; primarily as patient advocates but also as guardians of autonomy and dignity. This can come into direct conflict with decisions patients, families, and healthcare teams are asked to make on a daily basis in healthcare settings. This course will explore many of the major ethical challenges confronting medicine, social work, and biomedical sciences. We will examine legal, institutional and personal positions, beliefs, and values as we consider and debate opposing arguments. You will be challenged to think and write critically, utilizing philosophical, bioethical, and social work frameworks to structure your arguments and ethical decision making. This course will prepare students to actively participate in ethics committees, mediation, patient/family conferences with diverse populations and interdisciplinary collaborative discussions regarding ethical issues in medical settings.
Activity: Lecture
1.0 Course Unit

SWRK 738 Anxiety and Depression
Anxiety and depression are two of the most common mental disorders seen in social work clients, and frequently they occur concurrently. This course describes the medical and 'physical' concomitants and psychosocial factors associated with both conditions and introduces diagnostic and assessment procedures and methods of intervention that social workers use in working with clients with these conditions. The course also considers how culture, social class, gender, and other social differences affect the expression of these disorders and their concomitant treatment.
Taught by: Sarah Trotta
One-term course offered either term
Activity: Lecture
1.0 Course Unit

SWRK 739 Illness and Family Caregiving
This course focuses on social work practice in medicine and the relationships between physical health, social environments, and psychosocial functioning. Student learning will be grounded in the biopsychosocial-spiritual model, and will address a number of domains, including the impact of illness on families over the life course, the impact of a diagnosis on family functioning, medical decision making, coping, health beliefs and spirituality, culture and social class. Classroom content will include conceptualization of illness challenges from the presentation/prevention of symptoms to the end of life, in addition to writing case material, building self-awareness and identifying clinical interface issues, and the compilation of a 'clinician's toolbox' for direct practice on the front lines. Activities will include the unique opportunity to participate in hands-on, interdisciplinary training at the Simulation Center in the School of Nursing.
Taught by: Allison Werner-Lin
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

SWRK 740 Strategic Planning & Resource Development for Public & Nonprofit Organizations
Resilient organizations engage in a continuous process of self-review and refocusing. Referred to as 'strategic planning,' this process requires the active participation of a broad range of agency 'stakeholders' who, in their work together, seek to realign the organization's goals, structures, and programs to make them more responsive to the changing needs of their service populations. Building on the content of foundation practice foundation courses, 'Strategic Planning and Resource Development' has been designed to strengthen the the student's leadership capacity for engaging in strategic planning and resource development practice across a broad range of governmental (GOs) and civil society organizations (CSOs). The importance of organizational flexibility, innovation, and the creation of cooperative public-private partnerships is emphasized throughout the course.
Taught by: Patricia Inacker
One-term course offered either term
Activity: Lecture
1.0 Course Unit
SWRK 741 Gender & Social Policy
Gender and Social Policy develops an advanced understanding of social policies through a focus on social issues and conditions through the lens of gender, economic and critical theory. The specialized focus on gender and social policy provides students with the opportunity to develop more specialized knowledge about how market dynamics and government policies respond to the needs and risks faced by women. Specific emphasis is placed on utilizing theoretical frameworks to evaluate the intersection between social policy, history and social science in relationship to gender issues. Students are also expected to conduct a policy analysis that includes an evaluation of how current and former social movements surrounding gender issues shaped their policy of interest.
Taught by: Baker
Course usually offered in spring term
Also Offered As: MSSP 741
Activity: Lecture
1.0 Course Unit

SWRK 742 Practice with Youth Who are Marginalized
The discourse on juvenile justice in the United States, once driven by themes of treatment and rehabilitation, has been dominated in recent years by vocabularies of punishment and incapacitation. The juvenile court, an enterprise founded by social reformers and the social work profession at the turn of the century to 'save children,' is now under severe political and legislative pressure to impose harsher penalties on younger and younger offenders who are increasingly portrayed as violent 'super-predators,' while its most vulnerable segments, children and youth, stand in greatest need of what a social service system can offer. Not surprisingly, those most likely to wind up under supervision are economically poor, under-educated, disproportionately of color and disproportionately at-risk to become victims of violent crimes. How does the profession situate itself in this discourse and what are individual social workers to do?
Taught by: Jennifer A. Fulton
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

SWRK 743 Action Research
Action research is a form of social research that combines research with intervention. It is characterized by a collaborative relationship between the researcher and a client organization that is in an immediate problematic situation. The research process is directed toward addressing the problem situation and producing knowledge that contributes to the goals of social science. Action research is compatible with many of the values and principles of social work. This course also addresses issues of social work ethics and values encountered by the action researcher.
Taught by: David Koppish
One-term course offered either term
Prerequisite: SWRK 615
Activity: Lecture
1.0 Course Unit

SWRK 744 Direct Practice Research
This course provides graduate social work students with research knowledge and skills aimed at enhancing their direct practice with clients. The course examines methods of assessment, methods for choosing and evaluating techniques of intervention, methods for determining the effectiveness of practice and the use of research in social work decision-making. A successful outcome of the course will be that students perceive a more positive relationship between research and social work practice and possess a set of tools that they will be able to utilize in their future careers as social workers. The course starts from an assumption that students have some familiarity with research and are primarily engaged in direct practice with individuals, families or groups.
Taught by: Zvi Gellis
Course usually offered in fall term
Prerequisite: SWRK 615
Activity: Lecture
1.0 Course Unit

SWRK 746 Political Social Work
This course focuses on the role of social workers and the social work profession in advocacy and the political arena. It examines the methods of advocacy (e.g., case, class, and legislative) and political action through which social workers can influence social policy development and community and institutional change. The course also analyzes selected strategies and tactics of change and seeks to develop alternative social work roles in the facilitation of purposive change efforts. Topics include individual and group advocacy, lobbying, public education and public relations, electoral politics, coalition building, and legal and ethical dilemmas in political action.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

SWRK 748 Microfinance and Women's Empowerment in India
This course examines microfinance and its engagement with marginalized communities such as those in India. It is designed to provide students with an understanding of the phenomena of microfinance and its role in poverty alleviation. By studying the use of self-help groups with NGO facilitation, their impact on women's empowerment will be examined and understood through interaction with women engaged in microfinance activities.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

SWRK 749 Civil Society Addressing Conflict in Israel/Palestine
This course offers a unique opportunity to experience the challenges and complexities of coexistence in Israel, the Holy Land for Christians, Jews and Muslims; a key point of interest and dispute for the international community, and the homeland shared and claimed by both Israelis and Palestinians. The course will focus on activities carried out by nonprofit organizations operating within the Israeli civil society, dealing with issues related to coexistence and to the protection and advancement of the civil and social rights of different populations, with special emphasis on the Arab-Palestinian population in Israel. These activities include educational and social services programs, community work and advocacy activities, aimed at creating dialogues and building coexistence among the different populations in the Israeli society and Palestine.
Course usually offered summer term only
Activity: Seminar
1.0 Course Unit
**SWRK 755 International Social Policy & Practice: Perspectives from the Global South**
This interdisciplinary course will introduce students to social policy and practice perspectives from outside the U.S. and especially from communities in the Global South. The course will familiarize them with global professions and help prepare them for overseas/cross-cultural practice. Through the course students will identify numerous strategies and skills professionals have used to collaboratively build interventions within human rights, social policy, social welfare, education, healthcare and sustainable development arenas.

Taught by: Anastasia Shown
Course usually offered in fall term
Also Offered As: MSSP 755
Activity: Lecture
1.0 Course Unit

**SWRK 756 Human Sexuality**
The aim of this course is to increase students’ ability to deal more comfortably with the sexual aspect of human functioning. Readings, written assignments, and classroom presentations are directed to realizing the diversity, complexity, and range of human sexual expression. Current information about sexuality from the biological and physiological sciences is reviewed to increase comfort and skill in discussion and handling of sex-related behavior, personal and societal attitudes will be explored. A variety of sex-related social problems encountered by social workers in family, education, health, and criminal justice settings are discussed. Diagnostic interviewing and treatment methods are presented in role play, group exercises and case studies.

Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

**SWRK 757 Loss through the Life Cycle**
This course considers loss as a central theme throughout the life cycle. Content focuses on the physical, psychosocial, spiritual, and cultural aspects of loss, dying and bereavement processes and the interaction among individuals, families and professionals. Students examine historical trends of family, community, and institutional support for the terminally ill and those experiencing traumatic loss and learn ways to advocate for a system of services that supports full decision-making on the part of the client. Course materials, journals, and special projects identify how self and other factors impact service delivery to individuals, families, and communities experiencing loss, including ethical considerations prompted by cost, technology, and end of life issues.

Taught by: Laura Krawchuk
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

**SWRK 759 Substance Use Interventions**
This course addresses intervention approaches used in social work practice with individuals, families, and groups who misuse addictive substances themselves or are affected by another’s misuse. Students learn about addictive substances, models of intervention, how to engage and assess clients, and how to intervene and evaluate the effectiveness of their interventions. The course incorporates theory and research findings on various strategies of intervention.

Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

**SWRK 760 Mental Health Diagnostics**
This course familiarizes students with mental health and mental disorders within the context of the life cycle, viewed from a biopsychosocial perspective. Prevalent categories of psychiatric disorders are considered with respect to their differentiating characteristics, explanatory theories, and relevance for social work practice, according to the DSM and other diagnostic tools. The course includes biological information and addresses the impact of race, ethnicity, social class, age, gender, and other sociocultural variables on diagnostic processes.

Course offered summer, fall and spring terms
Activity: Lecture
1.0 Course Unit

**SWRK 763 Global Human Rights & US Immigration: Implications for Policy & Practice**
This course will begin with the history of migration to the US, as well as legal definitions of newcomers, including obtaining documents for lawful permanent residence, refugee status, as well as grounds for exclusion and deportation, and paths to naturalized citizenship. We will then review how a framework of cultural competence, and a strength or asset-based approach can inform service to immigrant clients. The core portion of the course will then focus first on the intersection of immigrants and health, mental health, employment, crimes, public entitlements, and public education. The course will conclude with family issues relevant to immigrant families: women, children, lesbian and gay, and elderly immigrants. Public policy issues will be integrated throughout, and the course will end with specific suggestions on systems change at various levels. By the end of the course students should be able to identify strategies for individual clients advocacy (micro); agency and community strategies (mezzo), and government advocacy (macro) to empower immigrant clients to become full community participants.

Taught by: Chany-Muy
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

**SWRK 765 Supervision and Leadership in Human Services Organizations**
This course builds on social work knowledge, values, and skills gained in foundation practice courses and links them to the roles and functions of social workers as supervisors and managers in human service organizations. Course focus is on providing students with an overview of basic supervisory and human resource development concepts so they may be better prepared as professional social workers to enter agencies and provide direct reports (supervisees) with meaningful and appropriate direction, support, and motivation.

Taught by: Heather Bense
Course not offered every year
Activity: Lecture
1.0 Course Unit
SWRK 766 Group Dynamics and Organizational Politics
This is one of the courses referred to as ‘The Power Lab at Penn.’ This intensely experiential course is designed for those providing group and institutional leadership at any level of a human enterprise, managing work groups, chairing committees, serving on special task forces, conducting support groups, offering legal services, teaching in classrooms, facilitating groups in clinical settings, etc. Participants will focus on two topics: (1) an in-depth understanding of group dynamics while they are in action, and (2) the organizational relationships between groups that are in a powerful position, groups locked in a powerless state and those caught in the middle between the powerful and the powerless. Prerequisite: Permit required; all potential participants are required to attend a Primer class which consists of one evening session AND an all day session. Permits are granted only after students have completed the primer classes. Course Structure: This course has six components: (1) A pre-course discerning process, which consists of a one evening plus one full day Primer workshop; (2) Module 1 which is focused on group dynamics; (3) reading an assigned book and writing a paper based on Module 1 experiences; (4) Module 2 which addresses power relationships among groups with differential resources; (5) reading two assigned books and writing a paper based on Module 2 experiences; and (6) a post-course debriefing. The Primer provides all potential participants with a common conceptual base for engaging in the essential learning and lays out the intellectual foundations of the course. Taught by: Kenwyn Smith

SWRK 768 Social Policy Through Literature
Also Offered As: MSSP 768
Activity: Lecture
1.0 Course Unit

SWRK 769 Aging: The Intersection of Policy and Practice
This course examines a variety of social welfare policies that affect the rights and interests of older adults. These include policies related to economic security, health, long term care, and civil rights. In addition, the course reviews the policy-making process with a discussion of the influence of legislative sanctions and case law in establishing aging policy in the U.S. The focus of the course is on critical analysis of the key assumptions driving policy and policy change, e.g. social responsibility vs. individual responsibility. Finally, the course includes a critical examination of the intersection between policy and practice, that is, the influence that policy has on the design of interventions and service delivery practices at the state and local level and the impact of changing policies on communities, providers, and older adults.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

SWRK 772 Postcolonial Social Work Practice: International Social Welfare in India
In this course, students examine the global welfare system and its engagement with marginalized communities. This six-week course in Kolkata, India, centers around a sex workers’ collaborative in Sonagachi, one of Asia’s largest red light districts. Interviews with the collaborative’s workers and study of their grassroots movement are combined with class discussions and research projects in which students engage with texts on HIV, sex work, feminist postcolonial theory and international social work.
Taught by: Ghose
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

SWRK 773 Mental Health Challenges in Childhood and Adolescence
This course will be an opportunity for the student and the instructor to explore the concept 'psychopathology' as it has been and is applied to childhood and adolescence. There are some psychopathological challenges that are unique to childhood and some which can manifest themselves throughout childhood into adolescence and adulthood. The social worker/practitioner will encounter a wide range of symptomatic presentations among his/her clients. At this time in the fields of clinical social work, psychology, psychiatry, and psychotherapy there are numerous frameworks available to the practitioner to aid in an understanding of symptoms in children and adolescents. During the next several weeks three conceptual frameworks will be articulated. These three frameworks will elucidate the possible meaning, origin, and/or function of the symptoms and offer to the student a vocabulary with which to engage the situation. At the turn of the 19th century into the 20th century, psychoanalysis emerged in Europe as a method of understanding symptoms from the point of view of internal conflict within the child or adolescent. After World War II in the U.S.A., a model of understanding symptoms from a systemic/cybernetic point of view revolutionized the diagnostic processes involved in working with children and adolescents. Since the late 1980’s, postmodern ideas, primarily from Europe and Australia, have greatly influenced and informed the understanding of psychopathology in children and adolescents. Narrative, social constructivist, and linguistic usage patterns have become a common vocabulary in the discourse on psychopathology. This course is not intended to be a reading of the history of child psychopathology. It is intended to expose the student to the most influential paradigms in the field of child psychopathology. This MSW elective builds on knowledge of human behavior over the life cycle and the foundation practice courses SWRK 602 and SWRK 614. It continues to sensitize students to populations at risk and those affected by racism, sexism, and other forms of oppression learned across the foundation curriculum. It informs social work practice with children and adolescents in a variety of settings and practice roles.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
SWRK 774 Program Evaluation
This course introduces students to theoretical and practical aspects of social service program evaluation. Students learn about the design and implementation of all phases of an evaluation, from needs assessment to analysis of findings. Skills such as survey construction and budgeting are introduced. Intensive analysis of existing studies illustrates how evaluations are designed and how findings affect social programs and policy.
Taught by: Josephine Russo
One-term course offered either term
Prerequisite: SWRK 615
Activity: Lecture
1.0 Course Unit

SWRK 775 Intimate Partner Violence
Intimate partner violence (IPV), defined as physical, sexual or psychological harm imposed by a current or former intimate partner, is a public health problem leading to increased morbidity and mortality worldwide. The purpose of this course is to familiarize students with the definition, theories, dynamics, scope, consequences of, and interventions to prevent and address violence among intimate partners. Through this course, students will gain insight into the epidemiology of IPV across the life course, including risk and protective factors and examine unique considerations for vulnerable populations. The course will highlight current measurement issues in the field of IPV assessment and address IPV-related policies to address screening, prevention, and response to IPV. Using a social-ecological framework, we will examine the issue of IPV prevention and intervention from the individual, relationship, community, and society perspectives, and explore approaches to and need for screening, as well as primary, secondary, and tertiary levels of prevention.
Taught by: Rachel Myers
Also Offered As: PUBH 575
Activity: Lecture
1.0 Course Unit

SWRK 777 Cognitive Behavioral Therapy
CBT is offered in both a one-week intensive and semester-long format, with the two formats usually offered in various terms throughout the year. The one-week format requires students to start a pre-course assignment approximately 2 months prior to the first day of the course. Students will receive an information request from the instructor during course registration and must reply in a timely fashion. Cognitive Behavioral Therapy (CBT) is the world’s most effective, empirically-based psychotherapy with strong scientific evidence. CBT is a collaborative and empowering psychotherapy that educates and helps clients to motivate themselves, set goals, develop, and implement treatment plans to reach those goals. This experiential/didactic advanced clinical skills course will present a CBT model to evidence-based practice that can serve as a conceptual framework for clinical applications to a wide variety of presenting problems and populations. The purpose of this course is to introduce graduate students to the theory of CBT and to begin to apply the basic principles through the stages of a self-directed case.

SWRK 778 Dialectical Behavioral Therapy
In this course we will examine the underlying theories, empirical foundations, and fundamental skill sets associated with dialectical behavioral therapy (DBT). Students will be expected to participate in role plays, lead mindfulness exercises, and carry out chain analyses.
Taught by: Matthew Ditty
One-term course offered either term
Activity: Lecture
1.0 Course Unit

SWRK 780 Policy and ‘Difference’ in Postmodernity
Social constructions of ‘difference’ permeate the institutions, spaces, and assumptions of our society. These social constructions include but are not limited to the racialized, gendered, sexed, classed, and dis/abled constructions of the body. By leaning on postmodern thinkers such as Iris Marion Young, Pierre Bourdieu, Judith Butler, Jacques Derrida, Ernesto Laclau, and Michel Foucault, this seminar course will begin by engaging the questions of what is ‘difference’ and how is ‘difference’ discursively constructed and reproduced in society. Using a postmodern lens, the remainder of the course will engage various social science texts that deal with the varieties of ‘difference’ (i.e. race, gender, class, sexuality) and the explicit and/or implicit policy implications of these works. Thus, we will critically engage policies such as welfare, affirmative action, economic policies of taxation, and same-gender marriage, among others. The underlying questions throughout the course will be to what extent does social policy enable the possibilities of freedom, justice, and democracy for the ‘Other’, the deviant, the abject, the marginalized, those of assumed ‘difference’? And, to what extent does policy constrain those possibilities at the same time? This course does assume familiarity with social theory and is an introduction to postmodern thought on the law, the political, and policy.
Taught by: Dixon-Roman
Course usually offered in spring term
Also Offered As: MSSP 780
Activity: Seminar
1.0 Course Unit

SWRK 781 Qualitative Research
Qualitative research encompasses a variety of methods that enable the researcher to enter into the ‘lived experience’ of research participants. These methods are particularly sensitive to the voices of populations whose perspectives are silenced by dominant societal discourses. The course begins by giving attention to underlying philosophical issues and traditions of qualitative research and proceeds to examine qualitative research design, methods of data collection, strategies to ensure rigor, data analysis, and presentation of findings. Students will learn about research interviewing, focus groups, and participant observation and ways in which qualitative research can be used to inform and evaluate social work practice and programs. Students will have the opportunity to apply qualitative research methods to in-class activities and individual or group projects.
Taught by: Michelle Evans-Chase
Course usually offered in fall term

1.0 Course Unit
SWRK 783 Advanced Mental Health Practice with U.S. Veterans
Although this course is open to all students, it is designed for students in the clinical concentration and is required for students in the Cohen Veterans Network Scholars program. The course will focus on clinical knowledge and evidence-based practice skills for common mental health problems in veteran settings. The course will introduce students to the assessment and treatment of Post-Traumatic Stress Disorder (PTSD), Depression and Anxiety Disorders, Substance Abuse, Military Sexual Trauma (MST) and Suicide Assessment and Management among veteran populations. Other topics may include cultural competency, homelessness, and combat stress disorders. Since this is a seminar course, some classes will be taught by social workers/psychologists from the Veterans Hospital in Philadelphia and the Cohen Veterans Outpatient Clinic.
Taught by: PETER FREUDENBERGER
Course usually offered in fall term
Activity: Lecture

SWRK 785 Criminal Justice Policies: Implications for Social Work
The United States prison population has risen more than three hundred percent in the last three decades. More people are currently incarcerated than at any other point in the history of the United States, and that of the world. This unprecedented period of incarceration has gone largely invisible although it represents one of the greatest social epidemics in the history of the United States. This course provides a critical analysis of the criminal justice system in the United States from a historical and contemporary perspective. It examines the implications of significant criminal justice policies such as the Rockefeller Drug Laws, 3-Strike Legislations, and Mandatory Minimums on the current state of incarceration, and the phenomenon of 'Reentry' and 'Recidivism'. The intersections of criminal justice and social work practice are unmistakable when examining staples of social work practice such as homelessness, mental health and substance abuse, thus the course is intended to facilitate a more informed/holistic practice for all social work students.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

SWRK 786 Addressing Trauma in Practice
This course integrates trauma theory and practice and expands practice knowledge to include the treatment and assessment of the survivors of trauma. Emphasis is placed on differentiating PTSD from Complex Trauma in order to identify appropriate, evidence-based intervention strategies. Topics covered in the course include an historical overview of the development of our understanding of trauma and the exploration of various types of trauma including war trauma, domestic violence, childhood sexual and physical abuse, natural disasters, the experiences of political refugees and organizational trauma. Among the interventions covered in this course are CBT, EMDR, group and psychodynamic treatment. Students will consider issues that affect those treating the survivors of trauma, such as vicarious trauma, and will explore approaches to self-care. This is an advanced clinical course. Through assignments and class discussions, students are encouraged to use their experiences in the field to deepen their understanding of the material covered in the course.

SWRK 787 Social Impact Strategy, Analysis, and Leadership
Around the world, new types of organizations are emerging, advances in technology and access to information continue, and there is a growing recognition that all sectors - business, public, and private nonprofit - have a role to play in creating social impact. While the desire to create social impact is clear, the field is just beginning to grapple with ways to translate these aspirations into real and meaningful change. Since 2006, Penn's Center for High Impact Philanthropy has been a pioneer in developing approaches for identifying, assessing, and growing opportunities for social impact. Team-taught by the center for High Impact Philanthropy, the course will be directed by the Center's founding executive director, Katherine 'Kat' Rosqueta, and will include guest lectures from other leading faculty and social impact innovators working in Philadelphia and around the world. Through hands-on practice, team projects, and highly interactive case-based discussions, students will gain the skills needed to: analyze opportunities for impact and potential for impact, including how to determine the scale and scope of an opportunity and how to use the tools of social impact economics to determine the cost implications of the opportunity; confidently address the strategic issues and key tasks faced by managers/leaders with a social impact mandate; influence others towards social impact by leveraging relevant research and real-world examples of effective communication and stakeholder management; and apply their research and effective storytelling skill to present their impact analysis in projects using different formats (e.g. video short, venture capitalist/donor pitch, policy brief). SWRK 788 Harm Reduction on the Borders: Substance Use and HIV Treatment in Puerto Rico
This course examines the U.S.-based substance use and HIV treatment systems, and its engagement with injection drug users in Fajardo, Puerto Rico. It is designed to provide the students with an understanding of the political economy of harm reduction initiatives, and the manner in which it is shaped by the complicated relationship between Puerto Rico and the U.S. Students are expected to gain an understanding of Puerto Rico's welfare environment, the role of social welfare and social workers in such a context, and the interweaving of social control and social change embedded in welfare initiatives in 'borderlands' such as Fajardo. During the four week course in Fajardo, students will complete a placement in a needle exchange program, and engage with texts on HIV, substance use, postcolonial theory and international social work.
Course usually offered summer term only
Activity: Seminar
1.0 Course Unit
SWRK 792 Psychodynamic Theory
The purpose of this course is to review the evolution of psychodynamic theory and consider key concepts in psychoanalysis, ego psychology, object relations theory, self-psychology, attachment theory, relational and intersubjective theories and current findings in cognitive neuroscience. Participants will explore human psychological functioning as explained by these various psychodynamic theories and through the biopsychosocial lens that informs social work practice. Students will examine how external factors such as race, class, gender, culture and biology are interwoven with often unconscious, internal psychological determinants, creating the complexities of human behavior that challenge us in our clinical work. Case presentations by students, the instructor and guest lecturers will demonstrate how concepts from psychodynamic theory can be applied to social work practice with diverse clients in varied settings.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

SWRK 793 Global Health Policy and Delivery
This participatory interdisciplinary seminar course examines contemporary issues in global health policy and delivery. The overall organizing framework for the class is the social determinants of health. The class will consider evidence that inequalities in education, income, and occupation influence health status. Students will develop skills in policy analysis, policy brief development, and policy impact monitoring. The public policy process will be explored using a variety of contemporary global health case studies which focus on content areas such as maternal health, HIV policy, refugee health and global healthcare delivery. Finally, we will examine the global health workforce and the impact of widespread global migration of health professionals on receiving and sending countries.
Course usually offered in spring term
Also Offered As: NURS 640, PUBH 551
Activity: Lecture
1.0 Course Unit

SWRK 794 Practice with Older Adults and Families
This course focuses on practice with older adults and families within a life course and resiliency perspective. It examines the nature of the aging process, needs and life issues, the ways in which persons adapt to changes, and the ways in which interventions may assist with these adaptations. Students learn assessment, case management, and intervention skills, including the use of rapid assessment and diagnostic tools, needed to work effectively with older populations and family caregivers in a variety of community-based and institutional settings. The course emphasizes evidence-based practices that enhance quality of life, dignity, respect for differences, and maximum independent functioning.
Taught by: Zvi Gellis
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

SWRK 796 Family Economic Mobility: Problems and Policies
The experiences and voices of mothers, fathers, children, employers, children’s teachers, human service workers, job training providers, policymakers and others in cities across America graphically show us the ‘real life’ challenges to economic mobility facing today’s families and organizations. These voices particularly illustrate how economic, social, and cultural policies, practices, and beliefs intersect to perpetuate economic inequality for low-income and many middle-income working families alike. The labor market, welfare and workforce programs, public schools and government are some of the institutions implicated in this intersection. In the course we deconstruct concepts such as the ‘work ethic,’ ‘family-friendly workplace,’ and ‘good jobs’ in terms of economic, racial and cultural inequalities and, more broadly, in terms of their meaning, aims and rhetoric. At base, this course examines occupational mobility in America within the broad framework of capitalism, democracy, race, ethnicity and gender. Students from GSE, SAS, City Planning, and Communications often join SP2 students to read and critique classic and contemporary literature from multiple disciplines and explore generative roles for ‘meso-oriented’ social change professionals.
Taught by: Roberta Iversen
One-term course offered either term
Also Offered As: MSSP 796
Activity: Seminar
1.0 Course Unit

SWRK 798 Advanced Topics
Titles and Topics vary. See department website for descriptions: https://www.sp2.upenn.edu/academics/master-of-social-work/academics/course-descriptions/
Taught by: SP2 Faculty
One-term course offered either term
Activity: Lecture
1.0 Course Unit

SWRK 799 Independent Study
Independent studies provide a flexible opportunity for standing faculty and students to work together in pursuing a topic of special interest that is not sufficiently covered by other courses in the curriculum. The content of independent studies is highly specialized and, as such, requires a plan of study developed jointly by the student(s) and the supervising standing faculty member. Part-time faculty members are not eligible to offer independent studies.
Activity: Independent Study
1.0 Course Unit

SWRK 803 History and Philosophy of Social Welfare
This seminar traces the evolution of social welfare from ancient to modern times focusing on its implications for the development of contemporary social welfare in the United States. The course examines the development of social welfare systems and the underlying philosophies in the context of the social, economic, political, and cultural environments in which they emerged. Topics include the evolution of modern conceptions of the ‘welfare state,’ the role of public, private and voluntary sectors in the social services, trends in social and family history and their relationship to social welfare, the professionalization of social work, and methods of historical and social policy analysis.
Taught by: Mark Stern
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
SWRK 804 Methods of Inquiry: Quantitative Research Methods
The purpose of this course is to teach the basics of practice research, with an emphasis on intervention research. This course will focus on research ethics, building a conceptual framework, source credibility, question and hypothesis formulation, design, sampling, measurement, and scale construction and selection. Special emphasis will be placed on the development of designing feasible and practical research studies to answer questions of importance to social work practice. The course will emphasize the selection and development of outcome measures, intervention manuals, and fidelity measures. It will closely examine the use and development of practice guidelines, evidence-based practice and meta-analytic procedures. Registration restricted to majors only.
Course usually offered in fall term
Activity: Online Course
1.0 Course Unit

SWRK 805 Methods of Inquiry: Qualitative Research Methods
This course will cover the essentials of qualitative research. Students will learn how to ‘situate themselves’ in the research process so as to best capture the lived experience of the subjects under investigation. The course will explore the appropriate use of intensive interviews, grounded theory and ethnography. Mixed methods that employ both qualitative and quantitative approaches, will also be covered. Registration restricted to majors only.
Course usually offered in spring term
Prerequisite: SWRK 804
Activity: Online Course
1.0 Course Unit

SWRK 806 Systematic Reviews: Meta-Analysis and Meta-Synthesis
Systematic reviews and the synthesis of their primary studies (meta-analysis for quantitative studies and meta-synthesis for qualitative studies) are proliferating, and emerging scholars need to be conversant in the methodology, so they can contribute this type of valuable evidence to their knowledge areas. Through this course, students will learn how to locate, understand, and critically appraise systematic reviews. They will also learn how to write a protocol for an original systematic review and carry one out within a small student group. At the completion of the course, students will have a finished systematic review.
Taught by: Jacqueline Corcoran
Course usually offered in spring term
Also Offered As: MSSP 806
Activity: Lecture
1.0 Course Unit

SWRK 811 Social Theory
Course reading consists of the original works of theorists who offer classical, contemporary and postmodern perspectives on social thought, social interaction and issues germane to social welfare. Through intensive examination of multiple theoretical frameworks, students are expected to increase their analytical and critical orientation to theory. This ore nuanced understanding about epistemology, underlying assumptions, and theory construction can then be used to inform the student’s substantive field of study and methodological orientation to research. This course is conducted in mixed lecture-seminar format.
Students have the opportunity to practice pedagogical techniques and exercise class leadership.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

SWRK 812 Clinical Theory I
The purpose of this course is to broaden and deepen participants’ mastery of several theories of development, personality, and behavior that have contributed to social work’s knowledge base across the decades and continue to inform clinical social work epistemology today. Drawing primarily from original sources, we will consider key assumptions, constructs, and propositions of each theory in terms of its congruence with social work’s principles, values, and mission and in relation to the profession’s person-in-environment perspective. In this first semester, we will study the evolution of theories central to psychodynamic thought, from Freud’s early biological model of the mind, through various relational perspectives, to contemporary work in the fields of attachment and interpersonal neurobiology. This examination will constitute a case study of the manner in which theories are socially constructed and will lay the foundation for critical inquiry into the social and political biases inherent in the Western European intellectual tradition from which most theories of human behavior have emerged. Registration restricted to majors only.
Course usually offered in fall term
Activity: Online Course
1.0 Course Unit

SWRK 813 Clinical Theory II
The purpose of Clinical Theory II is two-fold: to broaden and deepen students’ mastery of theories of behavior and cognition and to develop understanding of psychotherapy integration. We will begin by establishing a clear rationale for the two-fold nature of the course. Then, we will review the history and fundamentals of behavioral theory, and its iterations, to ground students firmly in a tradition that emphasizes empirical research. Students will have opportunities to expand their knowledge base of these theories through application to clinical practice with case conceptualizations and choice of focus in assignments. This process will involve critically examining the empirical support and indications for the use of various cognitive-behavioral therapy (CBT) approaches, including culturally adapted CBT. We will consider key assumptions, constructs, and propositions of behavioral and cognitive theories from the lens of social work’s principles, values, and mission with oppressed and marginalized people. Finally, we will focus on psychotherapy integration approaches which involve the flexible application of various theories and techniques for a diverse range of people and concerns based on the strengths and needs of each client.
Taught by: Melanie Masin-Moyer
Course usually offered in fall term
Prerequisite: SWRK 812
Activity: Online Course
1.0 Course Unit

SWRK 814 Applied Statistics
This course is designed to provide students with a range of statistical methods and applications used for research in human services and clinical practice settings. Topics covered include types of measurement and variables, and basic concepts and techniques for exploring and categorizing data, for generalizing data from sample to population and tests of significance. An emphasis will be placed on the practical applications of data to address social work practice issues. Students will learn how to choose and apply statistical tools to data sources, when and how statistical tools can be used to analyze data, and how to interpret others’ quantitative studies. Students will gain hands-on experience in using windows-based statistical software to manage and analyze quantitative data. Registration restricted to majors only.
Course usually offered in spring term
Activity: Online Course
0.5 Course Units
SWRK 815 Dissertation Seminar I
This seminar is designed to prepare participants for dissertation proposal writing and defense. Each component of this workshop moves the student closer to the two culminating assignments: a concisely crafted and well-supported 15-25 page written draft of the dissertation proposal and a presentation of the proposal with accompanying Powerpoint. Activity: Online Course
1.0 Course Unit

SWRK 816 Dissertation Seminar II
This seminar continues the student's dissertation work beyond the proposal. Under the direction of the dissertation chair and committee, the student begins the process of collecting and analyzing data in preparation for the final write-up and defense of the dissertation. Registration restricted to majors only.
Prerequisite: SWRK 815
Activity: Online Course
1.0 Course Unit

SWRK 852 Social Work Research
This is the foundation course in social work research. It deals with the nature of scientific inquiry; theory and its relation to research design and hypothesis testing; and various models of data collection, sampling, and analysis of research and is supported in following personal interests within the structure of ethical scientific research. Each student prepares an original study which demonstrates integration of the semester's work. Students learn to work on their own. Students completing this class are prepared for more advanced coursework in research. Completion of concurrent enrollment in a course on introductory Social Statistics is required.
Taught by: Phyllis Solomon
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

SWRK 855 Advanced Research Methods
The methodology of accountability research in human service programs is studied. Emphasis is placed on social program evaluation, idiographic research, and secondary data analysis in policy research as specialized methods of social work research. Students undertake a laboratory experience in an ongoing program evaluation project.
Course usually offered in spring term
Prerequisite: SWRK 852
Activity: Lecture
1.0 Course Unit

SWRK 861 Policy Analysis
This course examines alternative models of policy development and applies them to current issues in social welfare. It emphasizes frameworks for policy research and secondary analysis of governmental data. Topics include: race, class, and sex in policy outcomes; major social welfare programs; and the design, implementation, and evaluation of social service systems. Must have successfully completed a course in multivariate statistics as a prerequisite.
Taught by: Dennis Culhane
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

SWRK 900 Clinical DSW
Topics vary; see department for current course descriptions. Registration restricted to majors only.
Course offered summer, fall and spring terms
Activity: Online Course
0.25 Course Units

SWRK 901 Proseminar
This course is a weekly, 90-minute (.5 course unit) proseminar. The course contains two main components: a research seminar (i.e., faculty and student presentations of their in-progress research) and skills training (e.g., how to write an abstract, software demonstrations). The two are interwoven throughout the academic year (e.g., 2 weeks of the month devoted to the research seminar and 2 weeks of the month devoted to skills training). The proseminar is required of all students until they successfully defend their dissertation proposal.
Taught by: Johanna Greeson
One-term course offered either term
Activity: Seminar
0.5 Course Units

SWRK 902 Trauma-informed Social Work Practice
The majority of clients who present to a wide variety of social services have been exposed to adversity and trauma, often beginning in childhood. As a result, the current standard of care requires that human service delivery systems of all kinds need to be ‘trauma-informed.’ This course will explore what that actually means, since administering ‘trauma-specific treatment’ alone is not sufficient to encompass the complexity of the multigenerational, widespread problems that confront us in the world around us. Based on an understanding that our organizations are living systems, students will draw parallels between the individual experience of trauma and the organizational aspects of trauma and loss. Using these parallel processes as a basis, students will explore a trauma-informed, parallel process of organizational recovery called the ‘Sanctuary Model.’ Registration restricted to majors only.
Course usually offered in spring term
Activity: Online Course
0.5 Course Units

SWRK 903 Relational Theory
This course will introduce the relational turn in theories of developments and psychotherapy. Relational theory emerged in the epistemological shift to postmodernism and social constructionism, characterized by concepts of knowledge as perspectival, constructed increased skill in developing a literature search, 3) developing a capacity to create operational hypotheses or questions, 4) developing a research design, and 5) designing a data analysis and interpretation plan. The aim of this course is to identify the shared principles of relational theories and apply these principles to clinical social work practice. Students will critically evaluate and compare and contrast relational psychoanalysis with relational-cultural theory. Students will evaluate the viability of relational theory in the field of clinical social work and consider the application of relational theory beyond the therapy room to the supervisory, agency and teaching contexts. The focus on case studies as examples will be key to understanding the clinical applications of the various medications we will discuss.
Registration restricted to majors only.
Activity: Online Course
1.0 Course Unit
SWRK 904 Teaching
This class will focus on classroom dynamics, class culture and instructor skills using an organismic model in which the class has a life of its own and is capable of growth and development. In addition, students will learn underlying theories, research, practice wisdom, etc. that we need to communicate to our students. The course should be helpful in thinking about issues that are central to effective teaching regardless of the practice models you present to your students or the content of courses including policy, research, etc. Students will have an opportunity to share their current or past teaching with a particular emphasis on those difficult moments when they had second thought about classroom teaching as a career. Examples will be used to help illustrate the theoretical content and the readings and bring the ideas to life as they address the real day-to-day issues we all face in teaching. Registration restricted to majors only.
Activity: Online Course
1.0 Course Unit

SWRK 905 Family-Based Interventions
This advanced-level course focuses on social work interentions with children, couples and families. Theories and research that ground family-based interventions are explored and interrogated. Through case conceptualizations, role plays and other in-vivo exercises, students will practice techniques for assessment and treatment of family systems. Registration restricted to majors only.
Activity: Online Course

Sociology (SOCI)

SOCI 001 Introduction to Sociology
Sociology provides a unique way to look at human behavior and social interaction. Sociology is the systematic study of the groups and societies in which people live. In this introductory course, we analyze how social structures and cultures are created, maintained, and changed, and how they affect the lives of individuals. We will consider what theory and research can tell us about our social world.
For BA Students: Society Sector
Taught by: Imaagene, Jacobs, Lareau, Wilde, Zuberi
One-term course offered either term
Also Offered As: AFRC 002
Activity: Lecture
1.0 Course Unit

SOCI 002 Social Problems and Public Policy
This course approaches some of today's important social and political issues from a sociological vantage point. The course begins by asking where social problems come from. The main sociological perspectives of Marx, Weber and Durkheim are developed in connection with the issues of inequality, social conflict and community. We then turn to the social construction of social problems by examining how various issues become defined as social problems. This involves a consideration of the role of the media, social experts and social movements. The last section of the course considers how social problems are addressed. Here we discuss the relative strengths and weaknesses of government programs and regulations versus market-based approached. We also discuss the role of philanthropy and volunteerism. Finally, we consider the risk of unanticipated consequences of reforms. Along the way, we will consider a variety of social issues and social problems, including poverty, immigration, crime, global warming, and education.
Taught by: Bosk, Jacobs
Course not offered every year
Activity: Seminar
1.0 Course Unit

SOCI 003 Deviance and Social Control
A sociological analysis of the origins, development, and reactions surrounding deviance in contemporary society. Topics include labeling theory, stigma, social organization, tradition, social power, crime, sexual deviance, drug use, and racism. Theoretical and methodological issues will be discussed and evaluated.
For BA Students: Society Sector
Taught by: Bosk
One-term course offered either term
Activity: Lecture
1.0 Course Unit
**SOCI 004 The Family**

Family life is deeply personal but at the same time is dramatically impacted by social forces outside of the family. In this course we will examine how families are organized along the lines of gender, sexuality, social class, and race and how these affect family life. We will consider how family life is continually changing while at the same time traditional gender roles persist. For example, how ‘greedy’ workplaces, which require long work hours, create work-family conflicts for mothers and fathers. We will also examine diverse family forms including single-parent families, blended families, families headed by same-gender parents, and families headed by gender non-conforming parents. The lectures will also examine how economic inequality shapes family life. Students will have the opportunity to apply key concepts to daily life.

For BA Students: Society Sector
Taught by: Lareau
One-term course offered either term
Also Offered As: GSWS 004, SOCI 524
Activity: Seminar
1.0 Course Unit

**SOCI 005 American Society**

What is American Society? The literary critic, Leslie Fielder once wrote...to be an American...precisely to imagine a destiny rather than to inherit one; since we have always been, insofar as we are Americans at all, inhabitants of myth rather than history...' In this course we will explore the elements of the myth that form the basis of the civil religion as well as the facts on the ground that contradict our conceptions of American Society. Examples of mythic elements and their contradiction that we will explore are: A nation founded to pursue liberty and freedom yet allowed slavery, equality of opportunity and persistent structural inequality, and a welcoming of the Immigrant coupled with a suspicion of the outsider.

Notes: Also fulfills General Requirement in Society for Class of 2009 and prior

**SOCI 006 Race and Ethnic Relations**

The course will focus on race and ethnicity in the United States. We begin with a brief history of racial categorization and immigration to the U.S. The course continues by examining a number of topics including racial and ethnic identity, inter racial and interethnic friendships and marriage, racial attitudes, mass media images, residential segregation, educational stratification, and labor market outcomes. The course will include discussions of African Americans, Whites, Hispanics, Asian Americans and multiracials.

For BA Students: Society Sector
Taught by: Charles, Zuberi
One-term course offered either term
Also Offered As: AFRC 006, ASAM 006, URBS 160
Activity: Lecture
1.0 Course Unit

**SOCI 007 Population and Society**

The course serves as an introduction to the study of population and demography, including issues pertaining to fertility, mortality, migration, and family formation and structure. Within these broad areas we consider the social, economic, and political implications of current trends, including: population explosion, baby bust, the impact of international migration on receiving societies, population aging, racial classification, growing diversity in household composition and family structure, population and environmental degradation, and the link between population and development/poverty.

For BA Students: Society Sector

Course not offered every year
Also Offered As: AFRC 011, URBS 112
Activity: Seminar
1.0 Course Unit
SOCI 012 Globalization
This course analyses the current state of globalization and sets it in historical perspective. It applies the concepts and methods of anthropology, history, political economy and sociology to the analysis and interpretation of what is actually happening in the course of the semester that relates to the progress of globalization. We focus on a series of questions not only about what is happening but about the growing awareness of it and the consequences of the increasing awareness. In answering these questions we distinguish between active campaigns to cover the world (e.g. Christian and Muslim proselytism, free-trade agreements, democratization) and the unplanned diffusion of new ways of organizing trade, capital flows, tourism and remote interaction via the Internet. The body of the course deals with particular dimensions of globalization, reviewing both the early and recent history of each. The overall approach is historical and comparative, setting globalization on the larger stage of the economic, political and cultural development of various parts of the modern world. The course is taught collaboratively by an anthropologist, an historian, and a sociologist, offering the opportunity to compare and contrast distinct disciplinary approaches. It seeks to develop a general social-science-based theoretical understanding of the various historical dimensions of globalization: economic, political, social and cultural.

SOCI 030 Outsider Within: Unpacking Intersectionality in Everyday Life
Who belongs within the fabric of American society? Put another way, who is protected by social and political structures and institutions and who is targeted? In what ways do social categories such as race, class, and gender render or reduce equal access to socio-political structures and institutions? Black feminist scholars have uncovered the ways in which social categories such as race and gender augment one’s social standing in American society, including the provision of equality, opportunity, and outcomes. Legal scholar Kimberle Crenshaw coined the term ‘intersectionality’ to describe the interlocking oppressions that black women uniquely faced as occupants of two social identity categories: ‘black’ and ‘woman’, not one or the other. Since then, critical scholars have greatly expanded the concept to include non-black women and other groups. Further, there has been a call to examine marginalized social groups beyond their oppressed status, but as agents of change. In this course, we will develop theoretical and practical knowledge of intersectionality in contemporary American society that goes beyond the original formulation of the theory. This is a critical speaking seminar with a focus on improving and evaluating oral communication skills. We will discuss the theoretical tenets of intersectionality and its uses for analyzing pressing social problems. Each week, we will analyze a contemporary sociological issue, drawing from popular culture, visual mediums, multi-media, and new media to understand and apply intersectionality theory. There will be written and spoken communication assignments due weekly. In addition to in-class assignments, our work will culminate in two major oral communication projects: an individual and group oral communication project, both with a multitude of creative possibilities. Come prepared to engage yourself as an orator, collaborator, and sociological thinker.

SOCI 033 Technology & Society
Technology plays an increasing role in our understandings of ourselves, our communities, and our societies, in how we think about politics and war, science and religion, work and play. Humans have made and used technologies, though, for thousands if not millions of years. In this course, we will use this history as a resource to understand how technologies affect social relations, and conversely how the culture of a society shapes the technologies it produces. Do different technologies produce or result from different economic systems like feudalism, capitalism and communism? Can specific technologies promote democratic or authoritarian politics? Do they suggest or enforce different patterns of race, class or gender relations? Among the technologies we’ll consider will be large objects like cathedrals, bridges, and airplanes; small ones like guns, clocks and birth control pills; and networks like the electrical grid, the highway system and the internet.

SOCI 100 Sociological Research Methods
One of the defining characteristics of all the social sciences, including sociology, is a commitment to empirical research as the basis for knowledge. This course is designed to provide you with a basic understanding of research in the social sciences and to enable you to think like a social scientist. Through this course students will learn both the logic of sociological inquiry and the nuts and bolts of doing empirical research. We will focus on such issues as the relationship between theory and research, the logic of research design, issues of conceptualization and measurement, basic methods of data collection, and what social scientists do with data once they have collected them. By the end of the course, students will have completed sociological research projects utilizing different empirical methods, be able to evaluate the strengths and weaknesses of various research strategies, and read (with understanding) published accounts of social science research.

Taught by: Wilde, Baker, Roth
One-term course offered either term
Also Offered As: HSOC 100
Activity: Lecture
1.0 Course Unit
**SOCI 101 Bioethics**
This course will take an historical approach to the development of modern bioethics, which is the study of ethical issues in medicine and the life sciences. The first part of the course will be devoted to an introduction to the standard principles of academic bioethics and the way they have structured the field over the last 35 years. We will then consider topics to which the principles have long been applied, such as the care of gravely ill newborns, death and dying, and the ethics of research involving human subjects. The last part of the course will address more recent life sciences policy areas including genetics, cloning, stem cells, biodefense, and neuroscience in relation to national security. Throughout the course I will emphasize the interplay between the development of bioethics and its cultural context.
Taught by: Moreno
Course not offered every year
Also Offered As: HSOC 102
Activity: Lecture
1.0 Course Unit

**SOCI 103 Asian Americans In Contemporary Society**
This class will introduce you to sociological research of Asian Americans and engage in the ‘model minority’ stereotype. We begin by a brief introduction to U.S. immigration history and sociological theories about assimilation and racial stratification. The class will also cover research on racial and ethnic identity, educational stratification, mass media images, interracial marriage, multiracial, transracial adoption, and the viability of an Asian American panethnic identity. We will also examine the similarities and differences of Asian Americans relative to other minority groups.
For BA Students: Society Sector
Course not offered every year
Also Offered As: ASAM 001
Activity: Lecture

**SOCI 110 The Rich and The Poor**
Who is rich? Who is poor? This course examines how wealth and income are distributed in the United States, and how its distribution affects individuals, groups, institutions, and society. We will gain a fuller understanding of what social class is and discuss how it affects all aspects of life, including: quality of schooling, access to employment, child rearing, and even tastes, preferences, and identity.
Taught by: Armenta, Lareau, Staff
Course not offered every year
Activity: Lecture
0.0 Course Units

**SOCI 111 Health of Populations**
This course is designed to introduce students to the quantitative study of factors that influence the health of populations. Topics to be addressed include methods for characterizing levels of health in populations, comparative and historical perspectives on population health, health disparities, health policy issues and the effectiveness of interventions for enhancing the health of populations. These topics will be addressed both for developed and developing world populations. The course will focus on specific areas of health and some of the major issues and conclusions pertaining to those domains. Areas singled out for attention include chronic diseases and their major risk factors, such as smoking, physical activity, dietary factors and obesity. Throughout the course, the focus will be on determining the quality of evidence for health policy and understanding the manner in which it was generated.

**SOCI 112 Discrimination: Sexual and Racial Conflict**
This course is concerned with the structure, the causes and correlates, and the government policies to alleviate discrimination by race and gender in the United States. The central focus of the course is on employment differences by race and gender and the extent to which they arise from labor market discrimination versus other causes, although racial discrimination in housing is also considered. After a comprehensive overview of the structures of labor and housing markets and of nondiscriminatory reasons (that is, the cumulative effects of past discrimination and/or experiences) for the existence of group differentials in employment, wages and residential locations, various theories of the sources of current discrimination are reviewed and evaluated. Actual government policies and alternatives policies are evaluated in light of both the empirical evidence on group differences and the alternative theories of discrimination.

**SOCI 113 Economic Inequality, Advantage and the Rich**
This class explores key issues of inequality from the perspective of advantage. While social scientists studying inequality have more traditionally focused on poverty and disadvantage, we will read and discuss issues of capital, riches, and economic advantage, paying attention to intersections of economic advantage and riches with gender, 'race' and class. We will address inequalities in the labour as well as capital markets, debate how we can conceptually and measure those who are 'rich', and look at the relationship between riches, whiteness, masculinity and privilege. Students are encouraged to bring their ideas of riches and advantage to class.

**SOCI 117 Work in a Changing World**
The material world is shaped and maintained through work, but so is the social world. How work is organized, allocated, and rewarded determines the opportunities people have for developing their own capacities, the kinds of ties they will have with others, and how much control they will have over their own lives. We will consider various sociological perspectives on work and compare alternative ways of organizing work, with a focus on the contemporary United States.

**SOCI 120 Social Statistics**
This course offers a basic introduction to the application/interpretation of statistical analysis in sociology. Upon completion, you should be familiar with a variety of basic statistical techniques that allow examination of interesting social questions. We begin by learning to describe the characteristics of groups, followed by a discussion of how to examine and generalize about relationships between the characteristics of groups. Emphasis is placed on the understanding/interpretation of statistics used to describe and make generalizations about group characteristics. In addition to hand calculations, you will also become familiar with using PCs to run statistical tests.

**SOCI 122 The Sociology of Gender**
Gender is an organizing principle of society, shaping social structures, cultural understandings, processes of interaction, and identities in ways that have profound consequences. It affects every aspect of people's lives, from their intimate relationships to their participation in work, family, government, and other social institutions and their place in the stratification system. Yet gender is such a taken for granted basis for differences among people that it can be hard to see the underlying social structures and cultural forces that reinforce or weaken the social boundaries that define gender. Differences in behavior, power, and experience are often seen as the result of biological imperatives or of individual choice. A sociological view of gender, in contrast, emphasizes how gender is socially constructed and how structural constraints limit choice. This course examines how differences based on gender are created and sustained, with particular attention to how other important bases of personal identity and social inequality—race and class—interact with patterns of gender relations. We will also seek to understand how social change happens and how gender inequality might be reduced.

**SOCI 125 Classical Sociological Theory**
This course will cover the founding classics of the sociological tradition including works of Toqueville, Marx and Engels, Weber, Durkheim, Mauss, Simmel, and G.H.Mead. We will also examine how the major traditions have continued and transformed into theories of conflict, domination, resistance and social change; social solidarity, ritual and symbolism; symbolic interactionist and phenomenological theory of discourse, self and mind. This course satisfies the theory requirement for sociology majors.

One-term course offered either term

**SOCI 126 Contemporary Sociological Theory**
This course will explore contemporary social theory with an emphasis on theories and theoretical orientations related to social interaction, identity, culture, and inequality. For example, we will discuss sociological theories from the last half century about race and racism, gender, social class, education, emotion, and violence. Importantly, we will consider theory in the context of its application to empirical social science research and real world concerns. The course fulfills the theory requirement for sociology minors and all sociology majors.

One-term course offered either term

**SOCI 128 Basic Demographic Methods**
This course provides an introduction to basic demographic concepts, data, indicators, and techniques. The course emphasizes hands-on applications of techniques in the analysis of population dynamics in the U.S. and elsewhere. Students will learn about the main sources of demographic data, including censuses, surveys, and vital statistics, and methods to estimate demographic processes (e.g. mortality, fertility).

Students will leave the course with a solid grounding in a) the sources and limitations of demographic data; b) the construction of basic demographic indicators; and c) appropriate use of basic demographic techniques to answer questions about human populations.

**SOCI 135 Law and Society**
After introducing students to the major theoretical concepts concerning law and society, significant controversial societal issues that deal with law and the legal systems both domestically and internationally will be examined. Class discussions will focus on issues involving civil liberties, the organization of courts, legislatures, the legal profession and administrative agencies. Although the focus will be on law in the United States, law and society in other countries of Africa, Asia, Europe and Latin America will be covered in a comparative context. Readings included research reports, statutes and cases.

SOCI 143 Modern Social Movements
Throughout modern times groups of people have come together in an attempt to change their social world. Their successes and failures teach us about society, organizations, and individuals. This course will examine case studies of historical and contemporary social movements. Using these case studies, this course will evaluate different approaches to understanding social movements, and investigate what these different approaches suggest about individuals, the society in which they live, and the potential for social change.

SOCI 152 American Health Policy
This lecture course will introduce students to a broad range of topics that fall under the heading of American health policy. Its main emphasis will be on the history of health care in America from the U.S. Civil War to Obamacare. The primary objective of the course will be to consider why the U.S., until very recently, remained one of the only industrialized nations to have a private, non-nationalized health care system. Some of the themes addressed include: private health insurance(such as Blue Cross/Blue Shield), industrial health and workmen's compensation, the welfare state (in Europe, Canada, and the U.S.), women's health, especially maternal and infant care programs, Medicare/Medicaid, the Clinton Health Plan of 1993, injured soldiers and the Veterans Administration.

SOCI 154 Afro-Latinos in the U.S.
This course will explore the arrival, establishment and contributions of free and enslaved Africans in Ibero-America, the region presently known as Latin America, and the Spanish Speaking Caribbean. It will look at how these actors and their descendants known today as Afro-Latinos, shaped and built the foundations of Latin American society and culture throughout the centuries from colonial period to present. The course will seek to understand Afro-Latinos’ agency and negotiations as intellectual contributors to the ideologies that led to independence and the creation of Latin American nations. Likewise, the course will also explore the accomplishments, controversies and tensions in race dynamics and politics, gender relations, socioeconomic issues, among others factors that look and continue to take place as people of African descent negotiate their identity and struggle to uphold their space in Latin America and the U.S.A. today.
Course usually offered in fall term

Activity: Lecture
1.0 Course Unit

SOCI 159 Population and Public Health in Eastern Europe
Since the collapse of communism in 1989 in Eastern Europe (and 1991 in the Soviet Union), many of the countries in the region have experienced public health crises and demographic catastrophe. Below replacement fertility rates and massive out migration have decimated the populations of these countries even as populations age and place unsustainable strains on pension systems and medical services. The demographic collapse has also been accompanied by falling male life expectancy and the rise of alcoholism, depression, domestic violence, and suicide. The economic exigencies of the transition from communism to capitalism dismantled welfare states at the exact moment when health services were most needed, leaving charities and nongovernmental organization to try to fill in the gaps. Through a combination of readings from the fields of epidemiology, demography, and medical anthropology, this course examines the public health implications of poverty and social dislocation in post-communist states. All readings and assignments are in English.

SOCI 161 The History of the Information Age
Certain new technologies are greeted with claims that, for good or ill, they must transform our society. The two most recent: the computer and the Internet. But the series of social, economic and technological developments that underlie what is often called the Information Revolution include much more than just the computer. In this course, we will explore the history of information technology and its role in contemporary society. We will explore both the technologies themselves—calculating machines, punched card tabulators, telegraph and telephone networks, differential analyzers, digital computers, and many others—and their larger social, economic and political contexts. To understand the roots of these ideas we look at the prehistory of the computer, at the idea of the post-industrial or information society, at parallels with earlier technologies and at broad historical currents in the United States and the world.

**SOCI 175 Medical Sociology**
This course will give the student an introduction to the sociological study of medicine. Medical sociology is a broad field, covering topics as diverse as the institution and profession of medicine, the practice of medical care, and the social factors that contribute to sickness and well-being. Although we will not explore everything, we will attempt to cover as much of the field as possible through four thematic units: (1) the organization and development of the profession of medicine, (2) the delivery of healthcare, especially doctor-patient interaction, (3) the social and cultural factors that affect how illness is defined, and (4) the social causes of illness. The class will emphasize empirical research especially but not only quantitative research.
For BA Students: Society Sector

Activity: Lecture
1.0 Course Unit

**SOCI 200 Criminal Justice**
This course examines how the criminal justice system responds to crime in society. The course reviews the historical development of criminal justice agencies in the United States and Europe and the available scientific evidence on the effect these agencies have on controlling crime. The course places an emphasis on the functional creation of criminal justice agencies and the discretionary role decision makers in these agencies have in deciding how to enforce criminal laws and whom to punish. Evidence on how society measures crime and the role that each major criminal justice agency plays in controlling crime is examined from the perspective of crime victims, police, prosecutors, jurors, judges, prison officials, probation officers and parole board members. Using the model of social policy evaluation, the course asks students to consider how the results of criminal justice could be more effectively delivered to reduce the social and economic costs of crime.
For BA Students: Society Sector

**SOCI 221 Sample Survey Methods**
This course provides an introduction to survey data collection. In meeting this objective, we examine the major planning tasks necessary for conducting surveys, including problem formulation, study design, questionnaire and interview design, pretesting, sampling, interviewer training and field management, code development and coding of data, and data cleaning and management. We critically explore the design of surveys and collection of data from epistemological and ethical perspectives. Students will leave the class with a solid understanding of the basic process of survey data collection and a familiarity with its strengths and weaknesses as a method of inquiry into human behavior.
Taught by: Hannum, Parrado
Course not offered every year
Activity: Seminar
1.0 Course Unit

**SOCI 222 Ethnography**
This course is designed to introduce students to field methods in sociological research, with a focus on participant-observation and interviewing. During this course, students will read original research based on field methods and discuss their strengths, limitations, and ethical dilemmas. Most importantly, students will design their own research projects and become ethnographers and interviewers. Students will be guided through the fieldwork process from data collection to analysis, and will turn in multiple assignments and original research paper.
Taught by: Lareau
Course not offered every year

**SOCI 235 Law and Social Change**
Beginning with discussion of various perspectives on social change and law, this course then examines in detail the interdependent relationship between changes in legal and societal institutions. Emphasis will be placed on (1) how and when law can be an instrument for social change, and (2) how and when social change can cause legal change. In the assessment of this relationship, emphasis will be on the laws of the United States. However, laws of other countries and international law relevant to civil liberties, economic, social and political progress will be studied. Throughout the course, discussions will include legal controversies relevant to social change such as issues of race, gender and the law. Other issues relevant to State-Building and development will be discussed. A comparative framework will be used in the analysis of this interdependent relationship between law and social change.

Activity: Lecture
1.0 Course Unit
**SOCI 239 Sociology of Religion**
How do the many religious institutions in our society differ, and what common qualities do they share? Why do some religious institutions adapt to modernity while others do not? In particular, why are the politics of sex and gender so fundamental to the current organization of the American religious landscape? These questions will be the central motivating questions for the semester. The course will begin with an introduction to current theories in the sociology of religion. We will then apply and critique those theories as we learn more about the histories, members, practices and beliefs of all the major religious groups in the US today, including Mainline, Fundamentalist and Evangelical Protestantism, Roman Catholicism, Judaism, and other groups such as the Seventh Day Adventists, Jehovah’s Witnesses and Mormons. Students will pick two religious groups (one liberal and one conservative) to observe over the course of the semester and will write papers comparing and contrasting the two groups.
Taught by: Wilde
Course not offered every year
Activity: Seminar
1.0 Course Unit

**SOCI 240 Global Health**
Combining lectures, discussions and documentaries, the course will help students develop a sociological perspective on global public health (GPH). This will include exploring the relationship between the discipline of sociology and field of public health; difference between sociology in and sociology of global public health; sociological critique of public health interventions and finally, proposing socio-medical model to the understanding global public health movement. It will also familiarize students with the key global public health concepts, patterns and trends of global burden of disease, central actors in global health, and policy interventions and implementation. Of particular importance are health-related millennium and sustainable development goals to address key global health threats and solutions, and recent reformulations for post-2015 health-related agenda. Furthermore, as the focus on the global dimension of public health does not override the concerns and consequences for micro and meso-levels, students will become aware of mechanisms and challenges involved in incorporating World Health Organization’s commitment to primary healthcare in 1978 with that of global public health principles that currently dominate the agenda of public health. Selected case studies will serve as illustrative material.
Taught by: Kulkarni

**SOCI 249 Work, Love, and Independence: Coming of Age in East Asia**
How do millennials in East Asia make transition to adulthood? What does it mean to become an adult in East Asia? Under the contexts of rapid educational expansion, growing economic inequality, and shifting cultural norms, Chinese, Japanese, Korean, and Taiwanese young people are facing various challenges in coming of age. The dim outlook for landing a full-time, stable, and good job, for instance, had led many Korean millennials to ‘give up’ dating, marriage, and parenting, considered as major milestones of adulthood. More and more young millennials delay departure from their parental home. At the same time, East Asian millennials are highly educated, tech-savvy, and culturally diverse, distinguishing themselves from older generations. This course first offers an overall view of changing patterns and timing of transition to adulthood in East Asia (particularly compared to experiences of young adults in the United States and Europe). In the class, students will be able to identify demographic, cultural and economic factors that shape specific pathways to adulthood in East Asia. The course highlights diversity and heterogeneity in stories of coming of age among East Asian millennials from different socioeconomic, cultural, and demographic backgrounds. Diverse narratives and perceptions of adulthood in East Asia are discussed.

1.0 Course Unit

**SOCI 250 Minorities And The Media**
This course considers the theory and practice of minority representation in the public domain: film, theater, television, music, advertising and museums. How has ‘minority’ been defined - who is included and why? How have notions of ‘minority’ status been constructed in our public languages and what may be the impact of those images on both minority and non-minority populations? Our focus will be on representation and how it may work to marginalize or empower members of minority populations. While we will concentrate primarily on ethnic minorities, we will also consider how these same issues might affect sexual minorities. Our discussions will be supplemented by film and video examples. While the course will be theoretically situated in communication, it will consider how the perspectives of anthropology, feminism, and literary and ethnic studies have affected our understanding of public representations.

Also Offered As: AFRC 249
Activity: Lecture
1.0 Course Unit

**SOCI 254 Cities, Suburbs, Regions**
This course will explore the political, economic, social, and demographic forces impacting development patterns in metropolitan areas, with a particular focus on Philadelphia. We will examine the government policies, economic forces, and social attitudes that affect the way a region grows, and the impact of these forces on poverty, equity and segregation. Specific topics to be discussed include the factors that make a region competitive, the city’s changing role in the region, the impact place has on opportunity, and approaches to revitalizing and improving communities.
Taught by: Black
Course offered spring; even-numbered years
Also Offered As: URBS 253
Activity: Seminar
1.0 Course Unit
SOCI 258 Global Urban Education
This course examines the demographic, social, and economic trends impacting the growth of global cities—providing the context for global urban education. Through the dual lens of globalization and local urban culture, we explore relationships between urban education and economic development, democratic citizenship, social movements, social inclusion, equity, and quality of urban life. We consider key historical legacies (e.g., Colonialism), informal settlements and ‘slums,’ the rise of the ‘knowledge economy,’ and the role of international aid. Additional topics include: early childhood; gender equity; youth culture; impacts of crisis and war; urban refugees; teacher training and identity; accountability & governance; information & computer technology; religion, indigenous cultures, and language identity; & the role of the private sector and school choice. We focus on cities like Sao Paolo, Mexico City, Shanghai, Hong Kong, Ho Chi Minh City, Johannesburg, Lagos, Nairobi, Jakarta, Mumbai, Lahore, Tehran, and Cairo, and draw comparisons to cities like New York, London, Paris and Tokyo.
Taught by: Gershberg
Course not offered every year
Also Offered As: URBS 258
Activity: Seminar
1.0 Course Unit

SOCI 259 Social Determinants of Health
Over the last century, we have witnessed dramatic historical change in population incidence and mortality, e.g. rising numbers of women diagnosed with breast cancer and dramatic declines in death from stomach cancer. There has also been a highly visible social patterning of health and disease, such as socio-economic disparities in AIDS, substance abuse, and asthma in the U.S. today or the association of breast cancer with affluence globally. This course will explore the way researchers, activists, politicians and others in different eras have made sense of these changes and patterns and have responded to them. The course is historical and sociological. At the same time that we examine evidence and theories about the way poverty, affluence, and other social factors influence individual and population health, we will try to understand how social and historical forces have shaped how health and disease have been understood and categorized. In examining our current obesity ‘epidemic,’ for example, we will not only consider evidence and claims made about the causal role of market forces and changes in the built environment, but ask why (besides the fact that we are heavier) obesity has become such a visible and important medical and public health issue in the U.S. today.
Taught by: Aronowitz
Course not offered every year
Also Offered As: HSOC 260

SOCI 266 Latinos in United States
This course presents a broad overview of the Latino population in the United States that focuses on the economic and sociological aspects of Latino immigration and assimilation. Topics to be covered include: construction of Latino identity, the history of U.S. Latino immigration, Latino family patterns and household structure, Latino educational attainment. Latino incorporation into the U.S. labor force, earnings and economic well-being among Latino-origin groups, assimilation and the second generation. The course will stress the importance of understanding Latinos within the overall system of race and ethnic relations in the U.S., as well as in comparison with previous immigration flows, particularly from Europe. We will pay particular attention to the economic impact of Latino immigration on both the U.S. receiving and Latin American sending communities, and the efficacy and future possibilities of U.S. immigration policy. Within all of these diverse topics, we will stress the heterogeneity of the Latino population according to national origin groups (i.e. Mexican, Puerto Rican, Cuban, and other Latinos), as well as generational differences between immigrants and the native born.

One-term course offered either term
Also Offered As: LALS 235
Activity: Lecture
1.0 Course Unit

SOCI 268 Contemporary Issues in African Society
This course will deal with law and society in Africa. After surveying the various legal systems in Africa, the focus will be on how and to what extent the countries of Africa ‘re-Africanized’ their legal systems by reconciling their indigenous law with western law and other legal traditions to create unified legal systems that are used as instruments of social change and development. Toward this end, the experiences of various African countries covering the various legal traditions will be included. Specific focus will be on laws covering both economic and social relations. This emphasis includes laws of contracts and civil wrongs, land law, law of succession, marriage and divorce and Africa’s laws of International Relations, among other laws. Throughout this course a comparative analysis with non-African countries will be stressed.
Taught by: Omoagene, Zuberi
Also Offered As: AFRC 268
Activity: Lecture
1.0 Course Unit
SOCI 270 The Immigrant City
This course focuses on immigrant communities in United States cities and suburbs. We survey migration and community experiences among a broad range of ethnic groups in different city and suburban neighborhoods. Class readings, discussions, and visits to Philadelphia neighborhoods explore themes including labor markets, commerce, housing, civil society, racial and ethnic relations, integration, refugee resettlement, and local, state, and national immigration policies. The class introduces students to a variety of social science approaches to studying social groups and neighborhoods, including readings in sociology, geography, anthropology, social history, and political science. Ultimately, the class aims to help students develop: 1) a broad knowledge of immigration and its impacts on U.S. cities and regions; 2) a comparative understanding of diverse migrant and receiving communities; and 3) familiarity with policies and institutions that seek to influence immigration and immigrant communities.

Activity: Seminar
1.0 Course Unit

SOCI 277 Mental Illness
This course is designed to give a general overview of how sociologists study mental illness. We will be concerned with describing the contributions of sociological research and exploring how these contributions differ from those of psychology, psychiatry, and social work. This overview will be done in three parts: we will discuss (i) what ‘mental illness’ is, (ii) precisely how many Americans are mentally ill, (iii) how social factors (e.g. race, gender, class) and social arrangements (e.g. social networks) lead to mental illness, and (iv) how we as a society respond to and treat the mentally ill. Throughout the course, we will be concerned with uncovering the assumptions behind different definitions of mental health and exploring their political, social, and legal implications.

1.0 Course Unit

SOCI 300 Thesis Workshop
The purpose of this course is to guide senior sociology majors in writing a research proposal for a senior honors thesis. Students will learn about various research approaches, how to write a focused literature review, and kinds of data necessary to answer a wide variety of research questions, including their own. Throughout the course, students will work on designing a research question, generation researchable hypotheses, and coming up with a design for their proposed study. The final paper for this course will be a research proposal that is the basis for students’ independent research project. This course satisfies the research requirement for sociology majors and is designed primarily for seniors who are planning to write an honors thesis.
One-term course offered either term

SOCI 303 Social Inequality and Health
Eat well. Exercise regularly. Get 7-9 hours of sleep. We have all been bombarded with this type of advice for achieving and maintaining optimal health. But how are our health behaviors and outcomes shaped, influenced, and constrained by social factors? How does where we live influence how we and how long do we live? And how do racism, gender inequality, and other forms of social exclusion, oppression, and domination impact health and well-being? This course provides an introduction into how social forces, broadly, and social inequality, specifically, impact individual and population health. We will begin by learning about how health is more than the product of individual lifestyle choices and genetic factors by exploring the social determinants of health. We will then examine how social inequality - particularly along lines of race, immigration status, social class, and gender - contributes to population health differences. We will analyze how racism, gender inequality, and other forms of social stratification both shape access to health-promoting resources and opportunities such as well-paying jobs and healthy and affordable foods and also pattern exposure to harmful stressors and toxins such as discrimination and violence. Finally, we will discuss and debate policy and programmatic approaches aimed at reducing population health disparities. In this course, we will examine concepts related to social inequality and health through a process called 'active learning,' which involves activities such as watching and reacting to films, reading about and responding to current events, and active dialogues and debates with classmates.
Taught by: Boen
Activity: Seminar
1.0 Course Unit
SOCI 304 The Future of Work
This course draws on sociological and social scientific research and theorizing to conceptualize the complex and dynamic relationship between work and technology. Rather than viewing technology as an immutable force that sweeps across societies and leaves social change in its wake, we will examine how the design, implementation, and outcomes of technological change are imbricated in political, economic, and social forces. We will mostly, though not exclusively, focus on developments in and case studies of work and technology in the United States. We will begin by examining theoretical perspectives on the historical interplay between work and technology. Then, we will consider contemporary issues, building dialogues between our theoretical groundwork and empirical evidence to trace continuities and disjunctions. By the end of the course, you will be equipped to interrogate the role of technology in capitalism's past, understand its relation to our present age of digital disruption, and imagine the possibilities for our uncertain future.

SOCI 305 Sociology of Immigration
TBD
Taught by: Roth
Activity: Seminar
1.0 Course Unit

SOCI 306 Families and Capitalism
Despite highly romanticized and idealized views about family life, families play a crucial role in sustaining and organizing capitalist societies and inequalities by race, gender, and class. This course reviews classic and contemporary social theory to understand how family norms and behaviors shape and are shaped by political and economic structures. Students will learn about capitalism, racism, heteronormativity, and patriarchy, and engage with questions that connect these to family norms and behaviors. This includes questions like: why has gay marriage been outlawed until recently? Why were slaves denied marriage and family life? Why is caring for others disproportionately done by women and often unpaid? Why is poverty related to unstable family lives? Through engaging with this class material students will learn how to sociologically and critically rethink current family issues and the future of family life. Class structure and goals: This class requires carefully reading social theory texts (many of these texts might be dense, we will learn how to read them efficiently) and active participation in class discussion. Students will prepare short presentations, discussion questions, and write a research paper analyzing one policy related to family life (analyzing its politics and its relation to the social structures covered in class).

SOCI 338 Exhibiting Black Bodies
This course concerns the exhibiting of Black Bodies in Museums and gallery spaces. We will trace the evolution of public history from the 'Cabinets of Curiosity' in 18th and 19th Century Europe, through to the current institutional confirmation of the vindications traditions represented by Museu Afro Brasil (Sao Paulo, Brazil), National Museum of African American History and Culture (Washington,D.C.), and the Museum of Black Civilization (Dakar, Senegal). We will give particular attention to 'why these representations at these times in these places?'. In the process of addressing these questions we will give voice to the figures who conceived the curatorial content from those with the colonial mentality, to those with the abolitionist and nationalist and Pan-African visions.
Taught by: Zuberi
Also Offered As: AFRC 338, AFRC 620, SOCI 660
Activity: Seminar
1.0 Course Unit

SOCI 339 Demography of Race
This course will examine demographic and statistical methods used to capture the impact of racial stratification in society. This course covers the skills and insights used by demographers and social statisticians in the study of racial data. A key challenge facing researchers is the interpretation of the vast amount of racial data generated by society. As these data do not directly answer important social questions, data analysis and statistics must be used to interpret them. The course will examine the logic used to communicate statistical results from racial data in various societies. We will question the scientific claims of social science methodology by extending the critical perspective to biases that may underlie research methods. We will discuss good and bad practices within the context of the historical developments of the methods.
Taught by: Zuberi
Also Offered As: SOCI 632
Activity: Seminar
1.0 Course Unit

SOCI 344 Sociology of the Climate Emergency
We're in the midst of a climate emergency, with climate change the most pressing problem. We need to transform our social and economic system to avoid the worst. There's still time to do this, while establishing the conditions for us, and our descendants, to live brilliant, stimulating lives. To move forward, we need to supplement natural science with social science. In the course, will ask, how did we get into this ecological crisis? How does climate figure in contemporary politics? How do the climate and water crises intersect with inequalities around the world? How does an ongoing revolution in the energy sector reflect these tendencies, and what is its promise? What are the big competing paradigms for positive, transformative change today? This seminar will tackle these vast questions by introducing students to a range of novel social perspectives on the contemporary global environmental crisis - a crisis that is usually otherwise represented in coldly scientific terms or according to cliches about environmentalists.
Taught by: Cohen
Also Offered As: SOCI 544
Activity: Seminar
1.0 Course Unit
SOCI 377 International Migration
A comprehensive review of theories and research on international migration. The course introduces the basic precepts of neoclassical economics, the new economics of labor migration, segmented labor market theory, world systems theory, social capital theory and the theory of cumulative causation. Readings examine patterns and processes of global migration during the classic age from 1800-1914 as well as during the postwar period from 1945 to the present. The course also covers a history and evaluation of immigration policies around the world, and devotes significant attention to theoretical and empirical perspectives on immigrant adaptation. Within this larger topic, we will also discuss internal migration and urbanization; the relationship between gender and migration; the spatial distribution of immigrants within the United States, immigrant communities, and ethnic enclaves; and the undocumented population in the United States.
Taught by: Flippens
Also Offered As: DEMG 677, SOCI 677
Activity: Seminar
1.0 Course Unit

SOCI 398 Senior Research
Senior Research is for senior sociology majors only. Students are assigned Sociology advisors with assistance from Undergraduate Chair.
Taught by: Sociology Faculty
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

SOCI 399 Independent Study
Independent study section for senior Sociology majors working on an honors thesis. Students are assigned an advisor by the undergraduate chair.
Taught by: Sociology Faculty
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

SOCI 420 Perspectives on Urban Poverty
This course provides an interdisciplinary introduction to 20th century urban poverty, and 20th century urban poverty knowledge. In addition to providing an historical overview of American poverty, the course is primarily concerned with the ways in which historical, cultural, political, racial, social, spatial/geographical, and economic forces have either shaped or been left out of contemporary debates on urban poverty. Of great importance, the course will evaluate competing analytic trends in the social sciences and their respective implications in terms of the question of what can be known about urban poverty in the contexts of social policy and practice, academic research, and the broader social imaginary. We will critically analyze a wide body of literature that theorizes and explains urban poverty. Course readings span the disciplines of sociology, anthropology, urban studies, history, and social welfare. Primacy will be granted to critical analysis and deconstruction of course texts, particularly with regard to the ways in which poverty knowledge creates, sustains, and constricts meaningful channels of action in urban poverty policy and practice interventions.
Taught by: Fairbanks
Course usually offered in fall term
Also Offered As: HIST 440, URBS 420
Activity: Seminar
1.0 Course Unit

SOCI 424 Latinx Communities and the Role of CBO's in Social Change
The purpose of this course to create a Latino Studies/Service Learning ABCS course that cultivates dialogue and knowledge about the social, political, cultural and historical complexities of the Latinx experience in the United States (Philadelphia in particular) and the roles Latinx CBO's play in meeting the needs of Latinx communities and in impacting social change.
Taught by: Irizarry
Course usually offered in fall term
Also Offered As: LALS 424
Activity: Seminar
1.0 Course Unit

SOCI 434 Designing a Green New Deal: From Concept to Program
This advanced social science and design seminar is about mobilizing expert knowledge to develop transformative policy ideas to make the Green New Deal come alive. We'll look at cutting edge social science and design scholarship on the problems we're trying to solve, and the successes and failures of past efforts at transformative policy. And we'll focus in particular on the built environment. How might a Green New Deal make the physical changes to our infrastructures, homes, energy landscapes, transportation systems, public recreation amenities, care facilities, and more, in ways that slash carbon emissions, increase resiliency, and abolish inequalities of race, class, gender, and nation? That's not a rhetorical question: in this class, we'll assemble knowledge, get into teams, and come up with concrete proposals.
Taught by: Cohen, Fleming
Also Offered As: LARP 734
Activity: Seminar
1.0 Course Unit

SOCI 435 Globalization & The City: Global Urbanization
In 2008, the UN estimated that the worlds population had become primarily urban, for the first time in history. According to the OECD, by the end of the century, close to 85% of the projected population will live in cities. The transition towards an urban planet is likely to have far-reaching economic, environmental, social, political, and cultural impacts on our species, many of which we cannot yet predict. But what is urbanization? Will it lead to more inequality, exploitation, conflict, resource consumption, and exposure to natural disasters and climate change, or is it an opportunity to move the world in a more sustainable and equitable direction? Taught by Chandan Deuskar and Patricio Zambrano Barragan, this course aims to explore these questions. In the first half of the semester, we will discuss various challenges associated with global urbanization and its impacts. In the second half, we will focus on responses to these challenges. The assignments will allow students to explore some of the most salient debates around global urbanization. By the end of the semester, students will be better able to understand the context for any future academic research, professional work, or business activities in the cities of the ‘developing world’. The course will help provide a foundation for any students considering graduate studies or professional work in the fields of urban planning or international development.
Taught by: Chandan Deuskar and Patricio Zambrano Barragan
Course not offered every year
Also Offered As: URBS 457
Activity: Seminar
1.0 Course Unit
**SOCI 453 Metropolitan Growth and Poverty**
This course analyzes the role of metropolitan regions in the U.S. and global economies, including the sources of metropolitan productivity, the ways that metropolitan structures affect residents, and analyses of public policy in metropolitan areas. The economic, political, and social forces that have shaped World War II urban and regional development are explored, including technology, demography, and government. Special attention is paid to how economic change affects residents by income and race. Topics include: gentrification, schools, suburbanization, sprawl, metropolitan fragmentation, concentration of poverty, race, and various economic revitalization initiatives.
Taught by: Madden
One-term course offered either term
Also Offered As: URBS 453
Activity: Seminar
1.0 Course Unit

**SOCI 460 Advanced Topics in Africana Studies**
Topics vary. See the Africana Studies Department’s course list at https://africana.sas.upenn.edu for a description of the current offering. After an examination of the philosophical, legal, and political perspectives on Human Rights, this course will focus on US policies and practices relevant to Human Rights. Toward that end, emphasis will be placed on both the domestic and the international aspects of Human Rights as reflected in US policies and practices. Domestically, the course will discuss (1) the process of incorporating the International Bill of Human Rights into the American legal system and (2) the US position on and practices regarding the political, civil, economic, social, and cultural rights of minorities and various other groups within the US. Internationally, the course will examine US Human Rights policies toward Africa. Specific cases of Rwanda, Kenya, South Africa and Egypt, as well as other cases from the continent, will be presented in the assessment of US successes and failures in the pursuit of its Human Rights strategy in Africa. Readings will include research papers, reports, statutes, treaties, and cases.
Taught by: Charles, Hanchard, Fetni, Zuberi
One-term course offered either term
Also Offered As: AFRC 420, LALS 420
Activity: Lecture
1.0 Course Unit

**SOCI 473 The History & Theory of Community Organizing**
'Power concedes nothing without a demand.'—Frederick Douglass.
'Workers of the world, unite!'—Karl Marx. 'Don’t mourn. Organize.'—Joe Hill. 'Strong people do not need strong leaders.'—Ella Baker. 'Freedom is a constant struggle.'—Angela Davis. We will review the history and theory of critique, resistance, and solidarity, as we consider old and new social movements and freedom struggles around the world (Africa, the Americas, Europe, Asia)—from encampments for indigenous sovereignty of tribal lands to demonstrations by poor and working people seeking 'the right to the city,' from sit-ins and strikes to occupations and takeovers, from uprisings and insurrections to revolutions and counterrevolutions, from anti-capitalist, anti-colonial, anti-caste, and anti-racist insurgencies to mobilizations for racial and gender justice and solidarity economy; from civil rights, labor rights, student rights, human rights, animal rights, and environmental organizing to movements for peace, democracy, equality, and liberation—and more (based on student interests and commitments). Strategies and techniques will be reviewed. Successes and failures will be registered. Limitations and possibilities will be debated. Source material will be drawn from mainstream and radical traditions within popular praxis and numerous fields, including urban studies, philosophy and critical theory, religion, history, art and culture, anthropology, politics, development economics, social psychology, sociology, organizational development, and law. Note: Attendance at the first class is mandatory (for those already enrolled and for those considering enrollment in the course). Enrolled students who miss the first class must drop the course. Those who were not able to enroll but who attend the first class will be permitted to enroll.
Taught by: Lamas
Course not offered every year
Also Offered As: URBS 473
Activity: Seminar
1.0 Course Unit

**SOCI 488 Topics: Culture, Sexuality and Global Health**
What, if anything, is global in ‘global health’? Whatever this field might be, it is more often than not actively produced through a range of conflicting ethical commitments of multiple expert cultures, social movements and laypersons. This course explores critical themes in the historical and sociocultural study of global health. Students will engage a number of disciplinary perspectives within the social sciences including the history, sociology, and anthropology of science, and we will pay particular attention to feminist, queer, and postcolonial science studies perspectives. Throughout, we will consider how both global and local cultural transformations have shaped the emergence of this multidisciplinary field of study. To understand the complexity of global health, students will engage with a number of theoretical and ethnographic texts while questioning its stability and coherence as a self-same object given its interdisciplinary character. In doing so, we will explore the ways in which diverse sets of interests converge to constitute as well as contest the ever-shifting boundaries of global health.
Taught by: Fiereck
Course usually offered in fall term
Also Offered As: AFRC 488, ANTH 488, GSWS 488
Activity: Seminar
1.0 Course Unit
SOCI 524 The Family
Family life is deeply personal but at the same time is dramatically impacted by social forces outside of the family. In this course we will examine how families are organized along the lines of gender, sexuality, social class, and race and how these affect family life. We will consider how family life is continually changing while at the same time traditional gender roles persist. For example, how ‘greedy’ workplaces, which require long work hours, create work-family conflicts for mothers and fathers. We will also examine diverse family forms including single-parent families, blended families, families headed by same-gender parents, and families headed by gender non-conforming parents. The lectures will also examine how economic inequality shapes family life. Students will have the opportunity to apply key concepts to daily life.
Taught by: Lareau
Also Offered As: GSWS 004, SOCI 004
Activity: Seminar
1.0 Course Unit

SOCI 533 Sociology of Race and Ethnicity
Race and ethnicity are, above all, both converge as system of ideas by which men and women imagine the human body and their relationships within society. In this course we will question the concept of race and ethnicity and their place in modern society (1500 - 2020). While the course reviews the pre-1500 literature our focus will be on the last 500 years. This course reviews the research that has contributed to the ideas about ethnicity and race in human society. The review covers the discourse on race in political propaganda, religious doctrine, philosophy, history, biology and other human sciences.
Taught by: Zuberi
Also Offered As: AFRC 535
Activity: Seminar
1.0 Course Unit

SOCI 535 Quantitative Methods in Sociology I
This course is an introduction to the practice of statistics in social and behavioral sciences. It is open to beginning graduate students and--with the permission of the instructor--advanced undergraduates. Topics covered include the description of social science data, in graphical and non-graphical form; correlation and other forms of association, including cross-tabulation; bivariate regression; an introduction to probability theory; the logic of sampling; the logic of statistical inference and significance tests. There is a lecture twice weekly and a mandatory ‘lab.’
Taught by: Allison, Smith
Course usually offered in fall term
Also Offered As: CRIM 536, DEMG 535
Activity: Lecture
1.0 Course Unit

SOCI 536 Quantitative Methods in Sociology II
As the second part of a two-semester sequence, this graduate course focuses on regression analysis as used in social science research. In particular, we discuss features and assumptions of linear regression and logistic regression models. We learn how to apply regression models to real social science data using Stata and how to interpret the results.
Taught by: Allison, Kohler, Park, Schnittker, Smith
Course usually offered in spring term
Also Offered As: DEMG 536
Prerequisite: SOCI 535
Activity: Lecture
1.0 Course Unit

SOCI 544 Sociology of the Climate Emergency
We’re in the midst of a climate emergency, with climate change the most pressing problem. We need to transform our social and economic system to avoid the worst. There’s still time to do this, while establishing the conditions for us, and our descendants, to live brilliant, stimulating lives. To move forward, we need to supplement natural science with social science. In the course, will ask, how did we get into this ecological crisis? How does climate figure in contemporary politics? How do the climate and water crises intersect with inequalities around the world? How does an ongoing revolution in the energy sector reflect these tendencies, and what is its promise? What are the big competing paradigms for positive, transformative change today? This seminar will tackle these vast questions by introducing students to a range of novel social perspectives on the contemporary global environmental crisis—a crisis that is usually otherwise represented in coldly scientific terms or according to clichés about environmentalists.
Taught by: Cohen
One-term course offered either term
Also Offered As: SOCI 344
Activity: Seminar
1.0 Course Unit

SOCI 553 Field Methods in Qualitative Research
This course is designed to introduce graduate students to basic skills and concepts in ethnographic field research, including participant observation, interviewing, field documentation, and the scholarly presentation of qualitative data. Students will learn to apply these skills and concepts through an assigned set of exercises in concert with a semester-long project based on intensive fieldwork at a research site of their choosing. In addition, we will examine exemplars of published fieldwork in both classical and contemporary sociology. Students outside of the Department of Sociology need permission of the instructor to enroll.
Taught by: Bosk, Grazian, Lareau
One-term course offered either term
Activity: Seminar
1.0 Course Unit

SOCI 555 Pro-Seminar in Sociological Research
In the non-credit seminar students will be introduce to key areas in sociological research, and a set of professional skills necessary to navigate graduate school and a successful academic career. Students will also be introduced to faculty and resources available at Penn. This course is required for all first-year graduate students in Sociology.
Taught by: Hannum, Jacob, Kao, Leidner, Smith
Course usually offered in fall term
Activity: Seminar
0.0 Course Units

SOCI 556 Pro-Seminar in Sociological Research II
This graduate seminar for first-year graduate students will be a two-semester course covering the major subfields of sociology – their classical and contemporary theories, current methods and substance. Taught by: Collins, Grazian, Hannum, Park, Schnittker, Smith, Wilde
One-term course offered either term
Activity: Seminar
1.0 Course Unit
SOCI 561 Class Cultures and Historical Change
Studies culture as values, scripts, practice, performance, and style in the contexts of everyday life, social class, and status groups, social movements, and changes of communication technologies. Approaches politics, society, institutions, identities, and social change as dynamic processes and complex interactions at both micro/meso and meso/macro levels. Examines the production, reception, circulation and effects of signs, symbols, and stories. Readings include both classic authors (Elias, Simmel, Bakhtin, Goffman, Foucault, Bourdieu, Raymond Williams, etc.) and contemporary works from sociology and communication studies.
Taught by: Yang
Course not offered every year
Also Offered As: COMM 889
Activity: Seminar
1.0 Course Unit

SOCI 562 Soci Movements & Poli Sc
Activity: Lecture
1.0 Course Unit

SOCI 563 Mechanisms for Perpetuating or Reducing Inequality by Class, Race and Gender
TBD
Taught by: Lareau
Activity: Seminar
1.0 Course Unit

SOCI 564 Poverty, Race and Health
This course is designed to introduce students to current literature on race/ethnic difference in health and mortality in the United States, covering such topics as explanations for why some race/ethnic groups fare better than others, how inner city poverty and residential segregation may contribute to racial/ethnic differences in health outcomes, and health of immigrants versus native-born populations. Current policy debated and recent policy developments related to health are also briefly discussed. The course is organized as a seminar with a combination of lectures and class discussions.
Taught by: Boen
Also Offered As: SOCI 264, URBS 264
Activity: Seminar
1.0 Course Unit

SOCI 596 Sociology of Education
This graduate seminar will introduce students to some of the key theoretical and empirical work in the sociology of education. We will examine how schools work to maintain or alleviate inequality, and focus on differences in educational achievement and attainment by race, ethnicity, immigrant status, class, and gender. We will review work on the educational experiences of youth from early childhood to young adulthood.
Course not offered every year
Activity: Seminar
1.0 Course Unit

SOCI 601 Contemporary Social Theory
This is a graduate-level seminar structured around the main theoretical debates of contemporary sociology, including the interplay of rationality and emotion, the relationship between structure and agency, the nature of power, and the role of chance and contingency. In considering alternative positions on these debates, we will encounter the major theorists of the past fifty years, including Parsons, Merton, Goffman, Homans, Schutz, Coleman, Bourdieu, Luhmann, Habermas, Collins, and Giddens. Requirements include intensive primary source reading, writing, and participation. The course assumes, and does not provide, prior familiarity with the main theoretical perspectives, and thus does not substitute for the undergraduate theory course (SOCI 126)
Course not offered every year
Activity: Seminar
1.0 Course Unit

SOCI 602 Proseminar in Classical Sociology
This course is designed to introduce graduate students to the classical foundations of sociology by drawing on canonical readings by Marx, Engels, Durkheim, Weber, Du Bois, Addams, Simmel, Park, and Goffman, among others. We will read these texts in the context of three major sociological themes: work and social inequality, culture and social structure, and urban interaction and culture in the city. Final papers will require students to draw on classical sociological works in their analyses of contemporary empirical research in sociology.
Taught by: Grazian
One-term course offered either term
Activity: Seminar
1.0 Course Unit

SOCI 603 Master's Research in Sociology
This graduate course is intended to be helpful to students as they produce an MA thesis. The course is structured to provide social support and feedback as students move through the stages in the development of a project (i.e. data analysis, review of the literature, development of a thesis, and revision). Students should begin the semester with a data set in hand; additional data analysis will occur during the term. (In some cases, students may be finishing their data collection.) In addition, the course is intended to provided professional development opportunities for students by providing 'insider' information about the publication process. Students will be given examples of journal review (including reviews that reject a paper), copies of papers as they move through the revision process, and guidelines for producing a publishable piece of work. The goal is for students to produce a manuscript that can be submitted for publication in the near future. This is a required course for second year graduate students in Sociology.
Taught by: Bosk, Grazian, Jacobs, Kao, Lareau, Leidner, Park, Schnittker
One-term course offered either term
Activity: Seminar
1.0 Course Unit
SOCI 604 Methodology of Social Research
This course will give students familiarity with the common research methods social scientists use to conduct research. Ethnographic, interview, survey, experimental and historical/comparative research methods will be covered. Four themes will be explored: 1) the basics of solid research design, 2) the various advantages and disadvantages of each method, 3) when the use of a method is appropriate or inappropriate for the research question, and 4) how to evaluate researchers' claims on the basis of the evidence they present. These themes will be explored by reading examples of and conducting exercises designed to give students hands-on experience in each of the methods. Students will conduct the exercises on a topic of their choice, which together will culminate in their final paper. The course is required and restricted to second year students in sociology and demography.
Taught by: Smith, Wilde, Zuberi
One-term course offered either term
Also Offered As: DEMG 604
Activity: Lecture
1.0 Course Unit

SOCI 605 Criminal Justice Data Analytics
This course covers the tools and techniques to acquire, organize, link and visualize complex data in order to answer questions about crime and the criminal justice system. The course is organized around key questions about police shootings, victimization rates, identifying crime hotspots, calculating the cost of crime, and finding out what happens to crime when it rains. On the way to answer these questions, the course will cover topics including data sources, basic programming techniques, SQL, regular expressions, webscraping, and working with geographic data. The course will use R, an open-source, object oriented scripting language with a large set of available add-on packages.
Taught by: Ridgeway
Course usually offered in fall term
Also Offered As: CRIM 402, CRIM 602
Activity: Lecture
1.0 Course Unit

SOCI 607 Introduction to Demography
A nontechnical introduction to fertility, mortality and migration and the interrelations of population with other social and economic factors.
Course usually offered in fall term
Also Offered As: DEMG 607
Activity: Lecture
1.0 Course Unit

SOCI 609 Basic Demographic Methods
This course provides an introduction to basic demographic concepts, data, indicators, and techniques. The course emphasizes hands-on applications of techniques in the analysis of population dynamics in the U.S. and elsewhere. Students will learn about the main sources of demographic data, including censuses, surveys, and vital statistics, and methods to estimate demographic processes (e.g. mortality, fertility). Students will leave the course with a solid grounding in a) the sources and limitations of demographic data; b) the construction of basic demographic indicators; and c) appropriate use of basic demographic techniques to answer questions about human populations.
Taught by: Guillot
One-term course offered either term
Also Offered As: DEMG 609, SOCI 128
Activity: Lecture
1.0 Course Unit

SOCI 611 Structural Equation Models
Statistical modeling with multiple equations and latent variables. The first part of the course will focus on linear models that could be estimated with any of the well-known SEM programs (e.g., LISREL, EQS, or Amos). Both Mplus and SAS will be used exclusively in this part of the course. The second part will focus on Mplus models for variables that are categorical, count, or censored. Maximum likelihood methods for missing data will also be covered.
Taught by: Allison
Course not offered every year
Also Offered As: DEMG 611
Activity: Lecture
1.0 Course Unit

SOCI 612 Categorical Data Analysis
This course deals with techniques for analyzing multivariate data which the dependent variable is a set of categories (a dichotomy or polytomy). Topics will include linear probability models, logit (logistic) regression models, probit models, logit analysis of contingency tables, cumulative logit and probit (for ordinal data), multinomial logit, conditional logit (discrete choice), unobserved heterogeneity, log-linear models, square tables, response-based sampling, and repeated measures. Methods will be illustrated using the Stata System. There will be several assignments using Stata to analyze data provided by the instructor.
Taught by: Allison, Smith
Course not offered every year
Also Offered As: DEMG 612
Activity: Lecture
1.0 Course Unit

SOCI 613 Event History
An applications-oriented course on statistical methods for the analysis of longitudinal data on the occurrence of events, also known as survival analysis, failure-time analysis, hazard analysis or duration analysis. Emphasis on regression-like models in which the risk of event occurrence is a function of a set of explanatory variables. Topics include accelerated failure-time models, hazard models, censoring, Cox regression models, time-dependent covariates, competing risks, repeated events, unobserved heterogeneity, discrete-time methods.
Taught by: Allison
Course not offered every year
Also Offered As: DEMG 613
Prerequisite: SOCI 536
Activity: Lecture
1.0 Course Unit
**SOCI 620 Doctoral Seminar in Sociological Research II**

This course is intended to aid in the selection, framing, writing and revising of sociological dissertation proposals. It is also intended to provide a forum for the presentation of dissertation research in progress. The goal is to provide a forum for the acquisition of professional socialization in sociology. We will discuss the framing of research questions, the design of research strategies, and the writing of dissertation proposals. We will discuss the process of submitting manuscripts for conferences and journals, preparing a curriculum vitae, job search strategies, and preparing for effective colloquium presentations. We will also review articles currently under review at the American Sociological Review. It is expected that third-year graduate students in Sociology will enroll in this class. Open to third-year graduate students.

Taught by: Grazian, Hannum, Jacobs, Schnittker, Wilde

One-term course offered either term

Activity: Seminar

1.0 Course Unit

**SOCI 621 Mortality**

The course focuses on the description and explanation of health and mortality in human populations and their variability across several dimensions such as age, time, place, social class, race, etc. The course includes general theories of health, mortality and morbidity, investigations of mortality and related processes in developing and developed countries, and discussions of future mortality trends and their implications for individual lives and the society at large.

Taught by: Elo, Kohler

Course not offered every year

Also Offered As: DEMG 621

Activity: Lecture

1.0 Course Unit

**SOCI 622 Fertility**

The biological, social and demographic factors explaining the levels, trends and differentials in human fertility. Data, measures, and methods used in the context of the more and the less developed countries, with an emphasis on the historical and current course of the fertility transition.

Taught by: Kohler, Smith

Course not offered every year

Also Offered As: DEMG 622

Activity: Seminar

1.0 Course Unit

**SOCI 632 Demography of Race**

This course will examine demographic and statistical methods used to capture the impact of racial stratification in society. This course covers the skills and insights used by demographers and social statisticians in the study of racial data. A key challenge facing researchers is the interpretation of the vast amount of racial data generated by society. As these data do not directly answer important social questions, data analysis and statistics must be used to interpret them. The course will examine the logic used to communicate statistical results from racial data in various societies. We will question the scientific claims of social science methodology by extending the critical perspective to biases that may underlie research methods. We will discuss good and bad practices within the context of the historical developments of the methods.

Taught by: Zuberi

Also Offered As: SOCI 339

Activity: Seminar

1.0 Course Unit

**SOCI 634 Population Processes II**

Population Processes II is part of a two-course sequence designed to introduce students to the core areas of demography (fertility, mortality, and migration) and recent developments in the field. PP II is divided into two parts. The first focuses on family demography and the biological, social and demographic factors explaining levels, trends, and differentials in human fertility transition with an emphasis on the historical and current course of fertility transition in developed and developing countries. The second part of the course provides a comprehensive review of theories and research on international migration. Readings examine patterns and processes of global migration during the classic age from 1800-1914 as well as during the postwar period from 1945 to the present. The course also covers a history and evaluation of immigration policies around the world, and devotes significant attention to theoretical and empirical perspectives on immigrant adaptation, including the relationship between gender and migration.

Taught by: Flippen, Kohler, Parrado, Smith

Course usually offered in spring term

Also Offered As: DEMG 634

Activity: Seminar

1.0 Course Unit

**SOCI 643 Social Stratification**

In this course we study the current levels and historical trends of inequality in the United States especially in cross-national comparative perspective. We discuss causes and consequences of inequality as well as various policy efforts to deal with inequality. Topics include intergenerational social mobility, income inequality, education, gender, race and ethnicity among others.

Taught by: Song

Course not offered every year

Also Offered As: DEMG 643, SOCI 010

Activity: Lecture

1.0 Course Unit

**SOCI 649 A Course on Elites**

Most of the studies of inequality look at poverty and the impact of poverty. This course will be a study of those at the top of the social stratification system. We will take a broad vision of elites of to include the upper-middle-class as well as those in the top 1%. The course will examine the concentration of wealth in American society. It will examine elite families. It will also look at elite education. There will be a unit on the financial industry, the 2008 debacle, and the failure of the government to regulate this important industry. We will also study the influence of race by comparing the black upper-middle-class with white upper-middle-class families. Thus, we will also look at the power of elites in a number of spheres. Finally, we will also read theoretical perspectives including the work of C. Wright Mills, Marx, and Bourdieu. Thus, in addition to the focus on social stratification, this course cuts across sociology of the family, economic sociology, cultural sociology, and race and ethnic relations.

Taught by: Lareau

Activity: Seminar

1.0 Course Unit
SOCI 660 Exhibiting Black Bodies
This course concerns the exhibiting of Black Bodies in Museums and gallery spaces. We will trace the evolution of public history from the ‘Cabinets of Curiosity’ in 18th and 19th Century Europe, through to the current institutional confirmation of the vindications traditions represented by Museu Afro Brasil (Sao Paulo, Brazil), National Museum of African American History and Culture (Washington, D.C.), and the Museum of Black Civilization (Dakar, Senegal). We will give particular attention to ‘why these representations at these times in these places?’ In the process of addressing these questions we will give voice to the figures who conceived the curatorial content from those with the colonial mentality, to those with the abolitionist and nationalist and Pan-African visions.
Taught by: Zuberi
One-term course offered either term
Also Offered As: AFRC 338, AFRC 620, SOCI 338
Activity: Seminar
1.0 Course Unit

SOCI 662 Panel Data Analysis
This course focuses on the ability to use, analyze, and understand panel data. Panel data contain repeated measurements of the dependent variable for the same individuals, and possibly repeated measurements of the predictor variables as well. Panel data offer important opportunities for controlling unobserved variables and for answering questions about causal ordering.
Taught by: Song
Also Offered As: CRIM 662, DEMG 662
Activity: Lecture
1.0 Course Unit

SOCI 667 Social Interaction
The dynamics of interpersonal interaction, especially in face-to-face encounters during limited short periods of time. Topics include: the theory of interaction rituals deriving from Durkheim, Goffman and their contemporary followers; conversation analysis; micro-ethnographic studies of non-verbal behavior and embodied interaction; sociology of emotions; symbolic interactionist theory and the social nature of mind, self, and inner dialogue; electronically mediated interaction and its effects on social ties; and the relationship between micro and macro sociology.
Course not offered every year
Activity: Seminar
1.0 Course Unit

SOCI 677 International Migration
A comprehensive review of theories and research on international migration. The course introduces the basic precepts of neoclassical economics, the new economics of labor migration, segmented labor market theory, world systems theory, social capital theory and the theory of cumulative causation. Readings examine patterns and processes of global migration during the classic age from 1800-1914 as well as during the postwar period from 1945 to the present. The course also covers a history and evaluation of immigration policies around the world, and devotes signification attention to theoretical and empirical perspectives on immigrant adaptation. Within this larger topic, we will also discuss internal migration and urbanization; the relationship between gender and migration; the spatial distribution of immigrants within the United States, immigrant communities, and ethnic enclaves; and the undocumented population in the United States.
Taught by: Flippen
Course not offered every year
Also Offered As: DEMG 677, SOCI 377
Activity: Seminar
1.0 Course Unit

SOCI 707 Second-Year Research Seminar I
This course is intended to hone the skills and judgment in order to conduct independent research in sociology and demography. We will discuss the selection of intellectually strategic research questions and practical research designs. Students will get experience with proposal writing, the process of editing successive drafts of manuscripts, and the oral presentation of work in progress as well as finished research projects. The course is designed to be the context in which master’s papers and second year research papers are written. This is a required course for second year graduate students in Demography. Others interested in enrolling in only one of the courses may do so with the permission of the Chair of the Graduate Group in Demography.
Course usually offered in fall term
Also Offered As: DEMG 707
Activity: Seminar
1.0 Course Unit

SOCI 708 Seminar: Demographic Research II
Demography 708 is the second part of a two-course sequence designed to introduce and familiarize second year students with current norms for academic research, presentation and publishing in the field of Demography. In Demg708 students are expected to finalize the analyses and to complete their second year research paper. This is a required course for second year demography students. Others interested in enrolling in the course may do so with the permission of the Chair of the Graduate Group in Demography.
Course usually offered in spring term
Also Offered As: DEMG 708
Activity: Seminar
1.0 Course Unit
SOCI 731 Advanced Demographic Methods
This course considers a variety of procedures for measuring and modeling demographic processes. We will consider both deterministic (drawn from classic demographic methods, stable population theory, and the like) and stochastic (drawn from statistics) perspectives and methods, including their integration. Pre-requisites: DEMG 609 and SOCI 536 (or its equivalent).
Taught by: Smith
Course not offered every year
Prerequisite: DEMG 609 AND SOCI 536
Activity: Seminar
1.0 Course Unit

SOCI 796 Demographic, Economic, and Social Interrelations
The course investigates economic and social determinants of fertility, mortality, and migration, and it discusses the effects of population variables on economic and social conditions, including economic and social development. Topics discussed in the course include: How do economic changes affect marriage, divorce, and child bearing decisions? How do households make decisions about transfers and requests? How can economic and sociological approaches be combined in explanatory models of demography change? How does immigration to the US affect the ethnic composition of the population, the earnings of native workers, taxes on natives, and the macro-economy? What causes the aging of populations, and how will population aging affect the economies of industrial nations, and in particular, pension programs like Social Security? What accounts for the rise in women’s participation in the wage labor force over the past century? How are family composition and poverty interrelated? Does rapid population growth slow economic development with low income countries? In addition to these topics, the course also covers selected methods not included in DEMG/ SOCI 535/536 and 609
Taught by: Madden, Kohler
Course not offered every year
Also Offered As: DEMG 796
Activity: Lecture
1.0 Course Unit

SOCI 881 The Performance Society: Readings in Social and Media Theories
Social action has a performative character - people act as if on a stage in response to audience expectations, whether offline or online. This seminar traces the history of this line of critical thought from Weber and Bakhtin through Goftman and Victor Turner to contemporary authors such as Judith Butler, Byung-Chul Han, Jon McKenzie, and Charles Tilly. Special attention will be devoted to the relationship between media and performance, examined through recent work by media scholars and sociologists such as Ben Agger, Jeffrey Alexander, Jeffrey Berry, Danah Boyd, Alice Marwick, and Sarah Sobieraj. A central issue concerns the will to perform. Why are individuals in modern society compelled to perform? What are the manifestations and forms of performance in institutional and non-institutional politics (such as revolutions and social movements)? How are performances related to emotion? How do the internet and digital media shape the forms and meanings of performance? What are the consequences of the performance imperative? A term paper is required.
Taught by: Yang G

South Asia Studies (SAST)

SAST 001 Introduction to Modern India
This introductory course will provide an outline of major events and themes in Indian history, from the Mughal Empire in the 16th century to the re-emergence of India as a global player in the 21st century. The course will discuss the following themes: society and economy in Mughal India; global trade between India and the West in the 17th century; the rise of the English East India Company’s control over Indian subcontinent in the 18th century; its emergence and transformation of India into a colonial economy; social and religious reform movements in the 19th century; the emergence of elite and popular anti-colonial nationalisms; independence and the partition of the subcontinent; the emergence of the world’s largest democracy; the making of an Indian middle class; and the nuclearization of South Asia.

SAST 002 The City in South Asia
This interdisciplinary social science course examines key topics, themes, and analytic methods in the study of South Asia by focusing on significant South Asian cities. With one-fifth of the world's population, South Asia and its urban centers are playing an increasingly important role in recent global economic transformations, resulting in fundamental changes within both the subcontinent and the larger world. Drawing primarily on ethnographic studies of South Asia in the context of rapid historical change, the course also incorporates research drawn from urban studies, architecture, political science, and history, as well as fiction and film. Topics include globalization and new economic dynamics in South Asia; the formation of a new urban middle class; consumption and consumer culture; urban political formations, democratic institutions, and practices; criminality & the underworld; population growth, changes in the built environment, and demographic shifts; everyday life in South Asia and ethnic, cultural, and linguistic identities, differences, and violence in South Asia's urban environments. This is an introductory level course appropriate for students with no background in South Asia or for those seeking to better understand South Asia's urban environments in the context of recent globalization and rapid historical changes. No prerequisites. Fulfills College sector requirement in Society and foundational approach in Cross-Cultural Analysis.

1.0 Course Unit

SAST 003 History, Culture, and Religion in Early India
This course surveys the culture, religion and history of India from 2500 BCE to 1200 CE. The course examines the major cultural, religious and social factors that shaped the course of early Indian history. The following themes will be covered: the rise and fall of Harappan civilization, the 'Aryan Invasion' and Vedic India, the rise of cities, states and the religions of Buddhism and Jainism, the historical context of the growth of classical Hinduism, including the Mahabharata, Ramayana and the development of the theistic temple cults of Saivism and Vaisnavism, processes of medieval agrarian expansion and cultic incorporation as well as the spread of early Indian cultural ideas in Southeast Asia. In addition to assigned secondary readings students will read select primary sources on the history of religion and culture of early India, including Vedic and Buddhist texts, Puranas and medieval temple inscriptions. Major objectives of the course will be to draw attention to India's early cultural and religious past and to assess contemporary concerns and ideologies in influencing our understanding and representation of that past.

SAST 005 Performing Arts in South Asia
This course is a survey of selected traditions of theater, music, and dance in India and surrounding regions. Topics include ritual practices, theater, classical dance, classical music, devotional music, regional genres, and contemporary popular musics. Readings and lectures are supplemented by audio and visual materials and live performances. The aim of the course is to expose students to a variety of performance practices from this part of the world and to situate the performing arts in their social and cultural contexts. The course has no prerequisites.
For BA Students: Arts and Letters Sector

Activity: Lecture
1.0 Course Unit

SAST 006 Hindu Mythology
Premodern India produced some of the world's greatest myths and stories: tales of gods, goddesses, heroes, princesses, kings and lovers that continue to capture the imaginations of millions of readers and hearers. In this course, we will look closely at some of these stories especially as found in Purana-s great compendia composed in Sanskrit, including the chief stories of the central gods of Hinduism: Visnu, Siva, and the Goddess. We will also consider the relationship between these texts and the earlier myths of the Vedas and the Indian Epics, the diversity of the narrative and mythic materials within and across different texts, and the re-imagining of these stories in the modern world.
For BA Students: Arts and Letters Sector

SAST 007 Introduction to Modern South Asian Literatures
This course will provide a wide-ranging introduction to the literatures of South Asia from roughly 1500 to the present, as well as an exploration of their histories and impact on South Asian society today. How are literary movements and individual works - along with the attitudes towards religion, society, and culture associated with them - still influential in literature, film, and popular culture? How have writers across time and language engaged with questions of caste, gender, and identity? We will read from the rich archive of South Asian writing in translation - from languages that include Braj, Urdu, Bangla, and Tamil - to consider how these literatures depict their own society while continuing to resonate across time and space. Topics of discusision will include the Bhakti poetries of personal devotion, the literature of Dalits - formerly referred to as the Untouchables - and the ways in which literature addresses contemporary political and social problems. Students will leave this course with a sense of the contours of the literatures of South Asia as well as ways of exploring the role of these literatures in the larger world. No prior knowledge of South Asia is required; this course fulfills the cross-cultural analysis requirement.

Activity: Lecture
1.0 Course Unit

SAST 009 Introduction to Hinduism
This course introduces students to the history, texts, philosophies and rituals of South Asia’s oldest living religious traditions, represented today by the term ‘Hinduism.’ At the same time, it problematizes the idea of a monolithic ‘Hindu Tradition’, in favor of an approach that recognizes several distinct, dynamic, yet symbiotic Hindu religious cultures. The course also places emphasis on the vitality of today’s Hinduism(s), and the various historical, ritual, cultural, and social contexts that they represent and constitute. The course is organized around six modules: (1) Issues in the Academic Study of Hinduism; (2) Sanskrit (textual) tradition; (3) Philosophy; (4) Theology; (5) Ritual; and (6) Modernity and Contemporary Politics.
Taught by: Soneji

SAST 012 Spices, Gunpowder, and Pagodas: A History of Southeast Asia
This undergraduate course introduces students to the history of Southeast Asia from the earliest centuries of the Common Era to c.1950. It introduces students to Southeast Asia as religion, constituent historical societies of the region, and to the major academic literature and debates pertaining to the historical development of Southeast Asian societies and the region. Key themes explored include the origins and character of early civilizations, ideas and ideology about power and prowess, material culture, the transformation of ethnic, class, and gender relations, the impact of the arrival of world religions and early European expansion, and the nature of indigenous responses to the diffusion of new beliefs and ideas and intercultural contact.
Taught by: Sevea
Course not offered every year

1.0 Course Unit

SAST 050 Introduction to Indian Philosophy
This course will take the student through the major topics of Indian philosophy by first introducing the fundamental concepts and terms that are necessary for a deeper understanding of themes that pervade the philosophical literature of India -- arguments for and against the existence of God, for example, the ontological status of external objects, the means of valid knowledge, standards of proof, the discourse on the aims of life. The readings will emphasize classical Hindu, Buddhist, and Jain philosophical articulations (from 700 B.C.E to 16th century CE) but we will also supplement our study of these materials with contemporary or relatively recent philosophical writings in modern India.

SAST 054 Religion and Resistance in South Asia
In this course, we focus on various medieval and contemporary devotional forms of Hinduism, Buddhism and Islam in South Asia. Several definitions try to tie the idea of devotion to classicism and traditionalism with a set of conservative ideas. However, this course introduces the students to a diverse and pluralistic understanding of Hinduism, Buddhism and Islam that also has a history of resistance and protest beginning with poets such as Kabir and others from the Bhakti movement, and Sufi devotional contexts in South Asia. We read about the histories of these rebellious poets and their interventions into the traditional practices of devotion. We also discuss about how these medieval trends find their way into contemporary times enriching the discourses of Dalit, Muslim and Feminist movements.

SAST 057 Planning to be Off-shore?
Freshman Seminar. In this course we will trace the economic development of India from 1947 to the present. Independent India started out as a centrally planned economy in 1949 but in 1991 decided to reduce its public sector and allow, indeed encourage, foreign investors to come in. The Planning Commission of India still exists but has lost much of its power. Many in the U.S. complain of American jobs draining off to India, call centers in India taking care of American customer complaints, American patient histories being documented in India, etc. At the same time, the U.S. government encourages highly trained Indians to be in the U.S. Students are expected to write four one-page response papers and one final paper. Twenty percent of the final grade will be based on class participation, 20 percent on the four response papers and 60 percent on the final paper.
Taught by: Gangule
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

SAST 058 Freshman Seminar
This interdisciplinary course introduces students to qualitative research methods and frameworks in the social sciences and humanities. The goals of the semester will be for each student to develop their own research proposal for a specific project that they could imagine pursuing over the summer or later in their undergraduate career, and to develop a web-based exhibit of one Penn-based research collection of interest. Students will be introduced to a range of textual, archival and media collections and databases available at Penn, with particular attention to South Asia and other specific regions of interest to course participants. The class will visit the Penn Museum object collections and archives, the Art library, the Kislak Center for Rare Books and Manuscripts, Film Archives, and other special collections on campus, and meet with a representative from the Center for Undergraduate Research Funding (CURF). Students will learn how to frame an effective research question, situate it in relation to existing research, select the most appropriate methods for addressing the question, and develop an effective research plan. Each week students will be introduced to a new set of frameworks for analysis, see specific examples of their application drawn from anthropological, historical, and related scholarship and have opportunities to practice applying and evaluating the strengths and weaknesses of specific methodological tools. Students will also have the opportunity to identify sources of funding for summer research projects and prepare applications for these opportunities as part of the course. The course is ideal as an introduction to both the excellent libraries and research collections housed at Penn, and to a wide range of intellectual frameworks for engaging with these collections - a great way to kick off your undergraduate experience at Penn! Prerequisite: Topic varies by semester, see subtitle and Professor.

1.0 Course Unit
Notes: Topic varies by semester, see subtitle and Professor

Sugar and Spices. Tea and Coffee. Opium and Cocaine. Hop aboard the Indian Ocean dhows, Chinese junks, Dutch schooners, and British and American clipper ships that made possible the rise of global capitalism, new colonial relationships, and the intensified forms of cultural change. How have the desires to possess and consume particular commodities shaped cultures and the course of modern history? This class introduces students to the cultural history of the modern world through an interdisciplinary analysis of connections between East and West, South and North. Following the circulation of commodities and the development of modern capitalism, the course examines the impact of global exchange on interactions and relationships between regions, nations, cultures, and peoples and the influences on cultural practices and meanings. The role of slavery and labor migrations, colonial and imperial relations, and struggles for economic and political independence are also considered. From the role of spices in the formation of European joint stock companies circa 1600 to the contemporary cocaine trade, the course’s use of both original primary sources and secondary readings written by historians and anthropologists will enable particular attention to the ways that global trade has impacted social, cultural, and political formations and practices throughout the world.

SAST 104 Beginning Tabla I
An introduction to the tabla, the premier drum of north Indian and Pakistani classical music traditions.
Taught by: Bhatti
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

SAST 105 Beginning Tabla II
A continuation of Tabla I, also open to beginning students.
Taught by: Bhatti
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

SAST 106 Beginning Sitar I
This course is an introduction to the repertoire and performance practices of the North Indian sitar. Fundamentals of sitar technique, composition, and improvisation are presented and practiced in class. Class lectures and discussions, audio and video material, and reading and listening assignments on selected topics supplement practice, to provide an overview of the social and historical context and the formal structures of North Indian music in general. There are no prerequisites for the course, but some experience with instrumental or vocal music is suggested. Each student is expected to put in two hours of individual practice per week, and complete reading, audio, and written assignments. The class gives a group performance at the end of the semester.
Taught by: Bhatti
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
SAST 107 Beginning Sitar II
This is the second semester of a performance course in the North Indian sitar. Students who have not taken the first semester but play any musical instrument are permitted to join. Principles of composition and improvisation will be explored in practice and supplemented by readings and listening. The class gives a group performance at the end of the semester.
Taught by: Bhatti
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

SAST 108 Intermediate Sitar I
This is a performance course open to students who have completed both semesters of Beginning Sitar, or to others by permission from the instructor. Students will work with right and left-hand techniques, study three ragas in depth, learn the contours of several other ragas, and work with concepts of tala, composition, and improvisation. Assigned readings and listenings will complement the performed material. A group performance will be given at the end of the semester.
Taught by: Bhatti
One-term course offered either term

SAST 112 Religion and Cinema in India
This seminar examines key themes in the study of religion and Indian cinema. The aim of the seminar is to foreground discussions of performativity, visual culture, representation, and politics in the study of modern South Asian religions. Themes include mythological cinema, gender and sexuality, censorship and the state, and communalism and secularism. The films we will be deploying as case studies will be limited to those produced in Hindi, Telugu and Tamil (the three largest cinema cultures of India). No knowledge of any South Asian language is needed for this course however.
Taught by: Soneji
Course not offered every year
Also Offered As: CIMS 113, RELS 118
Activity: Lecture
1.0 Course Unit

SAST 113 Asian American Communities
Who is Asian American and how and where do we recognize Asian America? This interdisciplinary course explores the multiple factors that define Asian American identity and community. In order to provide a sketch of the multifaceted experience of this growing minority group, we will discuss a wide variety of texts from scholarly, artistic, and popular (film, cinematic) sources that mark key moments in the cultural history of Asia America. The course will address major themes of community life including migration history, Asian American as model minority, race, class, and transnational scope of Asian America. In combination with the readings, this class will foster and promote independent research based on site visits to various Asian American communities in Philadelphia and will host community leaders as guest lecturers.

Activity: Lecture
1.0 Course Unit

SAST 116 Music Cultures of North India and Pakistan
A great variety of song and instrumental genres have thrived in the Hindu and Muslim milieus of North India and Pakistan. In this course we examine a selection of urban and rural musics, such as instrumental music in Baluchistan, qawwali in Delhi, the garba of Gujarat, ballad singing of Rajasthan and the urban music of Calcutta. We will explore the sounds, poetry, historical, and social contexts of chosen genres and trace aspects of continuity and adaptation in the changing environment of contemporary South Asia. Readings are supplemented by audio-visual material and live performances.
Taught by: Soneji
Course not offered every year
Activity: Lecture
1.0 Course Unit
SAST 120 Literature of the South Asian City: Space, Culture, Politics
The South Asian city as a way of organizing space and social relations, as a symbol, as a memories the subject of this course. Through primarily, though by no means exclusively, readings of literature in translation, we will gain a sense for the history of the city and the ways in which it is a setting for protest and nostalgia, social transformation and solitary yearning. We will see reflections of the city in poetry recited in its homes, detective novels sold in its train stations, stories scribbled in its cafes, plays staged in its theaters, and films produced in its backlots. Readings will attempt to address urban spaces across South Asia, and will include works by writers such as Mirza Ghalib, Rabindranath Tagore, Saadat Hasan Manto, and Vijay Tendulkar. We will examine these works in the context of secondary readings, including histories and ethnological works that take up life in the modern city. Students will finish this course prepared to pursue projects dealing with the urban from multiple disciplinary perspectives. This course is suitable for anyone interested in the culture, society, or literature of South Asia, and assumes no background in South Asian languages.

1.0 Course Unit

SAST 124 Narrative Across Cultures
The purpose of this course is to present a variety of narrative genres and to discuss and illustrate the modes whereby they can be analyzed. We will be looking at shorter types of narrative: short stories, novellas, and fables, and also some extracts from longer works such as autobiographies. While some works will come from the Anglo-American tradition, a larger number will be selected from European and non-Western cultural traditions and from earlier time-periods. The course will thus offer ample opportunity for the exploration of the translation of cultural values in a comparative perspective.

Activity: Lecture
1.0 Course Unit

SAST 139 Introduction to Islam
This course is an introduction to Islam as a religion as it exists in societies of the past as well as the present. It explores the many ways in which Muslims have interpreted and put into practice the prophetic message of Muhammad through historical and social analyses of varying theological, philosophical, legal, political, mystical and literary writings, as well as through visual art and music. The aim of the course is to develop a framework for explaining the sources and symbols through which specific experiences and understandings have been signified as Islamic, both by Muslims and by other peoples with whom they have come into contact, with particular emphasis given to issues of gender, religious violence and changes in beliefs and behaviors which have special relevance for contemporary society.
Taught by: Elias
One-term course offered either term
Also Offered As: NELC 136, RELS 143
Activity: Lecture
1.0 Course Unit

SAST 142 Introduction to Buddhism
This course seeks to introduce students to the diversity of doctrines held and practices performed by Buddhists in Asia. By focusing on how specific beliefs and practices are tied to particular locations and particular times, we will be able to explore in detail the religious institutions, artistic, architectural, and musical traditions, textual production and legal and doctrinal developments of Buddhism over time and within its socio-historical context. Religion is never divorced from its place and its time. Furthermore, by geographically and historically grounding the study of these religions we will be able to examine how their individual ethic, cosmological and soteriological systems effect local history, economics, politics, and material culture. We will concentrate first on the person of the Buddha, his many biographies and how he has been followed and worshipped in a variety of ways from Lhasa, Tibet to Phrae, Thailand. From there we touch on the foundational teachings of the Buddha with an eye to how they have evolved and transformed over time. Finally, we focus on the practice of Buddhist ritual, magic and ethics in monasteries and among amongly communities in Asia and even in the West. This section will confront the way Buddhists have thought of issues such as 'Just-War,' Women's Rights and Abortion. While no one quarter course could provide a detailed presentation of the beliefs and practices of Buddhism, my hope is that we will be able to look closely at certain aspects of these religions by focusing on how they are practiced in places like Nara, Japan or Vietnam, Laos.
Taught by: McDaniel
One-term course offered either term
Also Offered As: EALC 015, RELS 173
Activity: Lecture
1.0 Course Unit

SAST 144 Modern Islam and Poetry
This course focuses on a basic question: How and why a modern poem turns into a narrative device to debate contemporary Islamic discourses? We begin exploring this question by taking note of how a 12th-century Persian poet Rumi became - as described by Time magazine - 'the best-selling poet in the US today,' and then introduces students to poems and various social, cultural and religious moments that were key in the making of modern Islam. Although the course primarily emphasizes the study of poetry produced and circulated among various Muslim communities world-wide, it also covers covers a diverse set of secondary readings from the field of religious studies, anthropology and literature to outline more clearly the contours of contemporary Islam. Readings begin with internationally famous Rumi and then include poets emerging from Arabic, Persian, Urdu, and several vernacular literary cultures in both Muslim and non-Muslim countries.
Course not offered every year
Activity: Seminar
1.0 Course Unit
SAST 146 Islam in Modern World
This course key issues facing Muslims in the modern world with an emphasis on understanding how Muslims view themselves and the world in which they live. Beginning with a discussion of the impact of colonialism, we will examine Islamic ideas and trends from the late colonial period until the present. Readings include religious, political and literary writings by important Muslim figures and focus on pressing issues in the Islamic world an beyond: the place of religion in modern national politics; the changing status of women; constructions of sexuality (including masculinity); pressing issues in biotics; Islam, race and immigration in America; the role of violence; and the manifestations of religion in popular culture.

SAST 147 Love, Sex & Power
This course explores the ways in which some of the biggest issues in human life are dealt with across religious traditions. Beginning with important questions of sexual identity, politics, religion and the individual in contemporary life, we will examine questions of eroticism, sex and love as they are reflected in religious literature, art and history. The concept of divine love and religious devotion will be explored in relation to acts of violence, including human sacrifice and self-sacrifice in the form of martyrdom seen in pre-modern concepts of saintly martyrdom and religious chivalry as well as the religious legitimacy of modern self-sacrifice of soldiers in war and terrorist suicides. The course focuses in particular on examples drawn from Christianity, Hinduism, Islam and Mesoamerican Religion, although discussions of contemporary issues will be conducted with a broader sweep. Important questions considered in this course include: how does the body function as the locus in which religion is enacted? What is the conflict between our agency over our bodies and socioreligious claims over the individual? Is violence an integral part of religion? What are religious understandings of the relationship between love and sex? How can a human being love gods erotically?

SAST 166 The Asian Caribbean
This course complicates prevailing understandings of the Caribbean and extends the boundaries of Asian America by exploring the histories, experiences, and contributions of Asians in the Caribbean. In particular, we will focus on the migrations of Chinese and Indian individuals to Cuba, Trinidad, and Guyana as well as how their descendants are immigrating to the United States. We will examine the legal and social debates surrounding their labor in the 19th century, how they participated in the decolonization of the region, and how their migration to the United States complicates our understandings of ethnicity and race. Ultimately, through our comparative race approach, we will appreciate that the Caribbean is more than the Black Caribbean, it is also the Asian Caribbean.

SAST 169 Merchants, Saints, Slaves and Sojourners: the Worlds of the Indian Ocean
Do oceans serve to divide and demarcate distinct cultures and regions? Or do they facilitate exchange, connection and cosmopolitanism? This course will explore the manner in which the Indian Ocean has played both roles throughout history, and how the nature of those divisions and connections has changed over time from the ancient to the modern world. We will reconstruct the intertwined mercantile, religious and kinship networks that spanned the Indian Ocean world, across the Middle East, East Africa, South Asia, Southeast Asia and China, illuminating the histories of Hinduism, Buddhism and Islam, while also considering the role of successive imperial political formations, from Rome to Britain. Throughout the semester we will seek to understand the Indian Ocean through the people who lived and worked in its milieu - from consuls and military commanders, to traders, brokers, sailors, prisoners and slaves. Course materials will draw on a variety of disciplines (anthropology, archaeology, material culture, religious studies) to construct the cultural, economic, and environmental history of the Indian Ocean.

SAST 171 Devotion's New Market: Religion, Economics, and the City
This graduate and undergraduate level course introduces students to the new forms of devotion as circulated in various urban centers in South Asia with a focus on growing market economy and urbanization. This course will particularly discuss case studies of how different modes of Hinduism, Islam, Christianity and other minor religions operate in an urbanized middle-class and educated communities. We will read theoretical and ethnographical works of contemporary research in religious studies and anthropology that deal with the questions of modernity, reformism and economic developmentalism. Throughout the semester, we focus on 1) how does religious forms such as sainthood practices, private and public rituals, narrative modes and everyday life evolve in the background of growing politics of development; 2) we discuss the tensions between classical notions of devotion and their new transformations in the city life, and finally 3) theoretically, we analyze concepts such as reformism, fundamentalism, recent discourses on identity politics and gender implications as connected to urban religious life.

SAST 180 Asian American Food
You are what you eat. Asian American Food explores the history, politics, and ethnic identity of food through a cultural lens. Growing food, eating, and sharing meals serve as intimate expressions of self and community. By examining the production and consumption of food, the course investigates the ways that Asian Americans navigate traditions, gender norms, religious dietary laws, food habits, and employment as they create lives in the United States. The course overviews the history of Asian American foodways, but has a particular focus on Philadelphia’s Asian American communities.

SAST 189 Islam and the West
How did Muslims and modern South Asia interact with the West? What Islamic idioms, orientations and movements emerged in the nineteenth and twentieth centuries? Was South Asia a prominent global center of Islam? What kinds of Islamic educational institutions developed in modern South Asia? How did Muslims appropriate technologies? What materials were printed by Muslims? Were Muslims part of the British army? What was jihad in modernity? How did Muslim ‘modernists’ and ‘traditionalists’ respond to the challenges of colonialism and modernity? What was the nature of Sufism in modern South Asia? What was the nature of political Islam in South Asia? How did some Muslims demand a Muslim State? What was the Partition? How has Muslim history been remembered in Bangladesh, India and Pakistan? This is an introductory course, and aims to introduce students to a facet of the long history of Islam, Muslims, and the West.

SAST 200 Introduction to Art in South Asia
This course is a survey of sculpture, painting and architecture in the Indian sub-continent from 2300 B.C., touching on the present. It attempts to explore the role of tradition in the broader history of art in India, but not to see India as ‘traditional’ or unchanging. The Indian sub-continent is the source for multi-cultural civilizations that have lasted and evolved for several thousand years. Its art is as rich and complex as that of Europe, and as diverse. This course attempts to introduce the full range of artistic production in India in relation to the multiple strands that have made the cultural fabric of the sub-continent so rich and long lasting.

SAST 208 Doing Research: Qualitative Methods and Research Design
This interdisciplinary course introduces students to qualitative research methods and frameworks in the social sciences and humanities. Students will learn how to frame an effective research question, situate it in relation to existing research, select the most appropriate methods for addressing the question, and develop an effective research plan. Each week students will be introduced to a new set of frameworks for analysis, see specific examples of their application drawn from anthropological, historical, and related scholarship and have opportunities to practice applying and evaluating the strengths and weaknesses of specific methodological tools. The goals of the semester will be for each student to develop their own research proposal for a specific project. Students will be introduced to a range of textual, archival and media collections and databases available at Penn, with particular attention to South Asia and other specific regions of interest to course participants. Students will also have the opportunity to identify sources of funding for summer and/or thesis research projects, and submit applications for these opportunities as part of the course. The course is ideal for students considering summer research, an undergraduate thesis, or an application to the Fulbright or other research program. It may be taken by itself as a freestanding course, or may be sequenced with SAST 209, Writing Research, the following fall semester.

1.0 Course Unit

SAST 220 Creating New Worlds: The Modern Indian Novel
Lonely bureaucrats and love-struck students, Bollywood stars and wayward revolutionaries: this course introduces students to the worlds of the Indian novel. From the moment of its emergence in the 19th century, the novel in India grappled with issues of class and caste, colonialism and its aftermath, gender, and the family. Although the novel has a historical origin in early modern Europe, it developed as a unique form in colonial and post-colonial India, influenced by local literary and folk genres. How did the novel in India--and in its successor states after 1947--transform and shift in order to depict its world? How are novels shaped by the many languages in which they are written, including English? And how do we, as readers, engage with the Indian novel in its diversity? This course surveys works major and minor from the past 200 years of novel-writing in India--with surveys both into predecessors of the Indian novel and parallel forms such as the short story. Readings will include works in translation from languages such as Hindi, Bangla, Urdu, Telugu, and Malayalam, as well as works written originally in English. Students will leave this course with an understanding of the Indian novel, along with the social conditions underlaying it, especially those relating to caste and gender.

1.0 Course Unit

SAST 221 Asian American Women: Nation, Self and Identity
This course examines the literary constructions of Asian American Women's identity in relation to the U.S. nation state. How have the figures of the tiger mother, the Asian nerd, the rice queen, the trafficked woman, the geisha, the war bride, emerged to represent Asian American women, and how have Asian American feminists responded to these problematic racial stereotypes? How does the scholarship on such racialized representations illuminate historical and contemporary configurations of gender, sexuality, race, class, nation, citizenship, migration, empire, war, neoliberalism and globalization as they relate to the lives of Asian American women? In exploring these questions, this course examines Asian American histories, bodies, identities, diasporic communities, representations, and politics through multi- and interdisciplinary approaches, including social science research, literature, popular representations, film, poetry and art.

SAST 245 Eastern Christianities
The history of Christianity is often told from the perspective of its spread westward from Israel to Rome. Yet, in the first millennium, there were more Christians living in the East, in places as far away as Persia, Yemen, India, China, and Mongolia, than in the West. Spread across the Asian continent, these Christians were actively involved in local and imperial politics, composed theological literature, and were deeply embedded in the cultural fabric of their host societies. This course traces the spread of Christianity eastward, paying particular attention to its regional developments, its negotiations with local political powers, and its contact with other religions, including Buddhism, Manichaeism, and Islam. Readings will cover a broad range of sources, including selections from classical Syriac literature, Mesopotamian magic bowls, the so-called 'Jesus Sutras,' and the Quran.

1.0 Course Unit
SAST 249 Re-enchanting Modernity: A Guide to Sufism in South Asia
This undergraduate level course introduces students to Sufism in modern South Asia, with a particular focus on how Muslim 'mystics' and their 'mystical' methods interacted with modernity, colonialism, technological developments and globalization. This course is divided into three parts. In the first part of this course, students are provided with an overview of the theological and historical background of the dominant expression of Islam that came to be identified as 'Sufism' or 'Islamic mysticism', the historical development of Sufi institutions and spaces in South Asia, and the historical emergence of South Asia as a prominent global center of Sufism. The second and main part of this course introduces students to a range of anthropological and historical works that are revelatory about how Sufi in modern South Asia were and remain intimately connected to modern political and technological developments. Providing students with an overview of Sufi re-enchantments of modernity from the 19th to 21st century, this section of the course focuses upon Sufi movements and masters who perpetuated or defended customary Islam through sophisticated appropriations of technologies and print networks, and negotiations with non-Muslim rulers and societies. Moreover, students will be introduced to anthropological and historical scholarship on religious worlds in modern South Asia that were and remain steeped in 'customary Islam' and Sufi performances and interpretations of Islam. These sources reveal how 'mystical' methods of performing Islam through ecstasy and spiritual restoration, and interpretations of dreams and visions, have regularly interacted with contemporaneous technologies. The third part of this course introduces students to the globalization of South Asian Sufism in North America, Europe and Southeast Asia. Herein, students will be encouraged to engage with anthropological and literary works pertaining to itinerant South Asian Sufi masters and their devotional cults, and introduced to active South Asian Sufi centers in Philadelphia.

SAST 250 History of Hinduism
This course will explore the history of the religion(s) designated by the term 'Hinduism' from their earliest articulations down to the rise of modern reforms in the nineteenth century. The study of Hinduism is perhaps unique among the scholarly traditions on world religions in that it has to date had no serious connected account of its historical development, as scholars have preferred to take structural, sociological, phenomenological, and doctrinal approaches to the religion. The course, after a brief review of scholarly approaches to Hinduism and their interpretive legacies, will seek to develop a historical sense of the religion through attention to shifts in liturgy, ritual, theology, doctrine, sacral kingship, and soteriology. The course will include the reading of primary sources relevant to understanding these changes as well as highlight both modern and premodern traditions of their interpretation. It will also consider and assess some of the key interpretive ideas in the study of Hinduism, including, Sanskritization, Great and Little Traditions, cult formation, regional and popular religious movements, and canon formation. There will also be sustained consideration of the question of religion and socio-political power as well as relations between Hinduism and other religions like Buddhism and Islam.

SAST 251 Muslim Sainthood Practices
This course aims at introducing various classical, popular and modern Muslim saints in South Asia. We will read the life stories of these saints and focus on their contribution to various religions in South Asia. We will read the life stories of these saints and focus on their contribution to various religions in South Asia. We will learn about the major concepts initiated and circulated by these saints and their distinctive ways of dealing with spiritual aspects. While focusing on these sainthood practices, we also study the nature of the dialogue which addresses the questions such as pluralism, localism, and a new paradigm of spirituality that continually interacts with diverse modes of everyday life in South Asia. In order to understand their impact on visual and media cultures, we also watch two documentaries and compare these visual sources with sainthood literature and practices.

SAST 252 Music, Religion, Ritual in South and Southeast Asia.
What role does music play in articulating religious identities and spaces? What is the importance of ritual musics as they persist and change in the modern world? How does music reflect and articulate religious ways of thinking and acting? In this course, we explore these and other questions about the interrelations between music, religion, and ritual in South and Southeast Asia. Focusing on India, Sri Lanka, Malaysia, and Indonesia, the course emphasizes musics from Hindu, Buddhist, Muslim and Christian traditions; nevertheless, it draws widely to touch upon sacred musics in Pakistan, Nepal, Burma, Thailand, Vietnam, and among some indigenous peoples in the region. Throughout, we explore ontologies of sound; sonic occurrences in religious structures, public processions, and pilgrimage sites; the construction of religion and ritual as ideas forged through colonial encounter and modern scholarship on religion; the politics of sacred sounds in today's public spaces and contemporary media, such as television and online; and the surprising fluidity between popular and sacred musical genres.

SAST 261 A People's History of Pakistan
This course asks what Pakistan's history would look like when told from the perspective of the most marginalized groups in the country. Such an approach would demand that we jettison state-centered narratives and geopolitical frameworks. Instead, the course prioritizes the ethical imperative to tell the history of a place by including the voices and experiences of its people. It explores questions about how the state might appear differently in such narratives, as also about the impact of colonialism on the nation-state and its oppressed. Over the semester, we will investigate the responses, resistances, and revolts of marginalized groups that are facing intensified and intersecting oppression in a global and national context of surveillance, militarization, and capitalist exploitation. This course explores these urgent questions about the forces shaping the global present through the histories of the region, women, peasants, displaced persons, labor, and students in Pakistan.
Taught by: Rajani
Also Offered As: HIST 261
Activity: Seminar
1.0 Course Unit
SAST 262 The Making of Medieval India
This course will provide an in-depth understanding of South Asia in what is often called its 'medieval' period—from the rise of the great temple kingdoms until the end of the Delhi Sultanate in the sixteenth century (c. 500 CE - c. 1500 CE). This millennium is arguably one of the most transformative in South Asia's history, a period when many of its most distinctive social and cultural features evolved. The course will provide both an overview of the period as well as an introduction to major interpretations and types of sources (textual, visual, and archaeological). The focus throughout the course will be on the heterogeneous development of states, societies and cultures with special attention to long-term processes of transformation. One set of themes explored will be largely social and economic, focusing on the development of agrarian and peasant societies, aristocracies and intellectuals, as well as the role of mercantile, pastoralist, nomadic and forest-living groups. Another set of themes will explore cultural transformation, including the development, transformation and interaction of religious practices, the emergence of cosmopolitan and regional literary cultures, and the rise of distinctive urban, courtly, and rural world views. Special themes of discussion may include violence and manners, material cultures, religious conflict, devotional religion and gender relations. Taught by: Ali Course not offered every year Also Offered As: SAST 562 Activity: Lecture 1.0 Course Unit

SAST 266 Modern Southeast Asia
This freshman-friendly course provides a broad introductory overview of modern Southeast Asia, surveying the region's extraordinary diversity and ongoing social, economic, and political transformations. Centering on the nation-states that have emerged following the second World War, we will assess elements of Southeast Asian geography, history, language and literature, cosmologies, kinship systems, music, art and architecture, agriculture, industrialization and urbanization, politics, and economic change. We will remain particularly attentive to the ways Southeast Asians negotiate and contend with ongoing challenges with modernization, development, and globalization. Taught by: Carruthers Also Offered As: ANTH 255 Activity: Lecture 1.0 Course Unit

SAST 269 Migration and the Middle East
This reading and discussion-intensive seminar examines the phenomenon of migration into, out of, within, and across the Middle East and North Africa. We will focus on the period from the late nineteenth century to the present, and will emphasize the cultural (rather than economic) consequences of migration. Along the way we will trace connections between the Middle East and other regions— notably the Americas, sub-Saharan Africa, South Asia, the Caucasus, and Western Europe. Readings are interdisciplinary and include works of history, anthropology, sociology, medical research, literature, political science, geography, and human rights advocacy. As students develop final projects on topics of their choice, we will spend time throughout the semester discussing tactics for research and writing. Taught by: Sharkey Course not offered every year Also Offered As: ASAM 239, NELC 239, NELC 539 Activity: Seminar 1.0 Course Unit Notes: This is a topics course and will vary from year to year.

SAST 290 South Asians in the United States
This course investigates the everyday practices and customs of South Asians in America. Every immigrant group has its own story, customs, beliefs and values, making each unique while simultaneously a part of the ‘melting pot’ or salad bowl of American society. Yet how do people define themselves and their ethnicities living in a diasporic context? By taking into account the burgeoning South Asian American population as our model, this course will explore the basic themes surrounding the lives that immigrants are living in America, and more specifically the identity which the second generation, born and/or raised in American, is developing. South Asians in the U.S. will be divided thematically covering the topics of ethnicity, marriage, gender, religion, and pop culture. Reading and assignments will discuss a variety of issues and viewpoints that are a part of the fabric of South Asia, but will focus on the interpretation of such expressive culture in the United States. Taught by: Khan Course usually offered in fall term Also Offered As: ASAM 160 Activity: Seminar 1.0 Course Unit

SAST 293 Caste & Class in South Asia
This course will explore the reality of caste and class in South Asian society, and the theories, classical and modern, that attempt to explain it. We shall survey a wide sweep of sources, from the earliest evidence for a division into caste-classes in the Rig-Veda to reports in modern media of caste-related social problems; from orthodox Hindu normative texts justifying and upholding a rigid hierarchical division of society to voices, in Sanskrit and in vernaculars, criticizing the caste system. Our goal is to gain a nuanced and many-sided insight into a deeply pervasive phenomenon that has shaped South Asian society, culture, and religion in general (Muslim, Sikh, and Christian castes) from ancient times up to the twentieth century. Taught by: Sreenivasan Course not offered every year Also Offered As: SAST 593 Activity: Seminar 1.0 Course Unit

SAST 300 Directed Study
This course is required for all senior honors majors, and open to senior majors. Honors majors must, in addition, prepare a research paper. One-term course offered either term Activity: Independent Study 1.0 Course Unit
SAST 305 Spiegel-Wilks Seminar
Topic varies from semester to semester. For the Fall 2020 semester, the topic will be: Elijah Pierce's America. Barnes Foundation Curatorial Seminar This Spiegel-Wilks Curatorial Seminar is offered in collaboration with the Barnes Foundation. Students will be provided with an immersion in curatorial and museum studies and will have the opportunity to interact with curators, scholars, and staff at Penn and the museum, including Executive Director and President Thom Collins, who will co-teach the course. The course syllabus will engage the permanent collection at the museum, where the course will meet weekly. As part of the course, students will also conduct research and contribute to the temporary exhibition opening at the Barnes Foundation that semester, which will feature the work of Elijah Pierce (1892-1984), a self-taught woodcarver whose handcrafted works reacted to life in 20th-century America. One of the first generations of African Americans born into freedom, his remarkable narratives depict religious parables, autobiographical scenes, episodes from American politics, and figures from popular culture.

SAST 400 Beginning Hindi-Urdu Online (Startalk)
This introductory, proficiency-based course covers the core content of first-year Hindi-Urdu. It is designed for students with little or no prior exposure to Hindi or Urdu. The course covers all four language skills (speaking, listening, reading, and writing), but there is a special focus on developing speaking and listening skills. Students will also develop literacy skills in one script of their choice (Hindi or Urdu script). All written materials will be provided in both scripts. All classes are interactive and students acquire the language by using it in realistic contexts. Culture is introduced through various authentic materials including Bollywood songs. This program has a special application process. Please visit our website (https://www.southasiacenter.upenn.edu/startalk) for more information on the program and how to apply. Prerequisite: This is a summer online course known also as Startalk.

SAST 503 Historical Transitions in Early India
This course will focus on major historical transitions in the South Asian subcontinent until approximately AD 1200. It will focus on particularly on political, social and liturgical philosophical change. It will also introduce students to the major narratives and interpretations of the ancient and early medieval periods as they bear on these questions and will also familiarize students with the sources upon which this history has been based. It will review debates, critical perspectives and recent trends in this historiography with a view toward developing a sensitivity to the theoretical problems that attend the study of pre-modern India. Its persistent themes will be historical continuity and disjuncture in the history of religious practices and ideas, the emergence of political forms and the nature of the 'state' in precolonial India, transformations of society and economy, and the relationship between discursive production and relations of power. It will be of interest to students of history, literature, religion and archaeology.

SAST 541 Religion and the Visual Image: Seeing is Believing
Seeing is Believing engages in a historical, theoretical, and cross-cultural analysis of the place of visuality in religion and of religion in visual culture. We will examine images, buildings, places, objects, performances and events. The geographical, cultural and historical scope of the material is broad, including subjects from Europe, the Islamic World, non-Muslim South Asia, the US and Latin America from the medieval period until the present. Theological works will be read in conjunction with representative examples to invite intellectual engagement in a socially and historically grounded way. Important issues to be covered include the relationship of visual to material culture; visual theories versus theories of vision; locating religion in human sensory experience; perception at individual and collective levels; authentics, fakes and simulacra; iconoclasm and image veneration; aesthetics, use and utility, and things.

SAST 550 History of Hinduism
This course will explore the history of the religion(s) designated by the term 'Hinduism' from their earliest articulations down to the rise of modern reforms in the nineteenth century. The study of Hinduism is perhaps unique among the scholarly traditions on world religions in that it has to date had no serious connected account of its historical development, as scholars have preferred to take structural, sociological, phenomenological, and doctrinal approaches to the religion. The course, after a brief review of scholarly approaches to Hinduism and their interpretive legacies, will seek to develop a historical sense of the religion through attention to shifts in liturgy, ritual, theology, doctrine, sacrality, kingship, and soteriology. The course will include the reading of primary sources relevant to understanding these changes as well as highlight both modern and premodern traditions of their interpretation. It will also consider and assess some of the key interpretive ideas in the study of Hinduism, including, Sanskritization, Great and Little Traditions, cult formation, regional and popular religious movements, and canon formation. There will also be sustained consideration of the question of religion and socio-political power as well as relations between Hinduism and other religions like Buddhism and Islam.

SAST 551 Muslim Sainthood Practices
This course aims at introducing various classical, popular and modern Muslim saints in South Asia. We will read the life stories of these saints and focus on their contribution to various religions in South Asia. We will read the life stories of these saints and focus on their contribution to various religions in South Asia. We will learn about the major concepts initiated and circulated by these saints and their distinctive ways of dealing with spiritual aspects. While focusing on this sainthood practices, we also study the nature of the dialogue which addresses the questions such as pluralism, localism, and a new paradigm of spirituality that continually interacts with diverse modes of everyday life in South Asia. In order to understand their impact on visual and media cultures, we also watch two documentaries and compare these visual sources with sainthood literature and practices.

SAST 552 MLA Proseminar: Philosophy East and West: An Introduction to Indian and Chinese
This course will take the student through the major topics of Indian philosophy by first introducing the fundamental concepts and terms that are necessary for a deeper understanding of themes that pervade the philosophical literature of India – arguments for and against the existence of God, for example, the ontological status of external objects, the means of valid knowledge, standards of proof, the discourse on the aims of life. The readings will emphasize classical Hindu, Buddhist, and Jain philosophical articulations (from 700 B.C.E. to 16th century CE) but we will also supplement our study of these materials with contemporary or relatively recent philosophical writings in modern India.

SAST 554 Religion and Resistance in South Asia
In this course, we focus on various medieval and contemporary devotional forms of Hinduism, Buddhism and Islam in South Asia. Several definitions try to tie the idea of devotion to classicism and traditionalism with a set of conservative ideas. However, this course introduces the students to a diverse and pluralistic understanding of Hinduism, Buddhism and Islam that also has a history of resistance and protest beginning with poets such as Kabir and others from the Bhakti movement, and Sufi devotional contexts in South Asia. We read about the histories of these rebellious poets and their interventions into the traditional practices of devotion. We also discuss about how these medieval trends find their way into contemporary times enriching the discourses of Dalit, Muslim and Feminist movements.

1.0 Course Unit

SAST 560 Modern History of Pakistan
This course is designed as an introduction to the contemporary history of Afghanistan and Pakistan, with an emphasis on the intertwined history of both countries; their other regional neighbors; and global politics. The course focuses on global trends such as empire, nationalism, the Cold War, superpower competition, and transnational Islamism. At the same time, participants will explore how local people viewed their lives amidst these trends, and how local dynamics on this northwestern fringe of the Subcontinent changed the face of global politics. The readings supplement political and economic history with primary sources drawn from popular poetry, oral narrative, and memoir. Finally, we'll be following current events in the region, and placing them in their sociohistorical context. Therefore, there are two main goals for this course: (1) to introduce the specific history of Afghanistan and Pakistan up to present, and (2) to introduce typologies of social institutions and events, assisting class participants to develop their own frameworks for interpreting current events in the region after the end of the course.
Course not offered every year

1.0 Course Unit

SAST 562 The Making of Medieval India
This course will provide an in-depth understanding of South Asia in what is often called its ‘medieval’ period—from the rise of the great temple kingdoms until the end of the Delhi Sultanate in the sixteenth century (c. 500 CE - c. 1500 CE). This millennium is arguably one of the most transformative in South Asia’s history, a period when many of its most distinctive social and cultural features evolved. The course will provide both an overview of the period as well as an introduction to major interpretations and types of sources (textual, visual, and archaeological). The focus throughout the course will be on the heterogeneous development of states, societies and cultures with special attention to long-term processes of transformation. One set of themes explored will be largely social and economic, focusing on the development of agrarian and peasant societies, aristocracies and intellectuals, as well as the role of mercantile, pastoralist, nomadic and forest-living groups. Another set of themes will explore cultural transformation, including the development, transformation and interaction of religious practices, the emergence of cosmopolitan and regional literary cultures, and the rise of distinctive urban, courtly, and rural worldviews. Special themes of discussion may include violence and manners, material cultures, religious conflict, devotional religion and gender relations.

SAST 571 Devotion's New Market: Religion, Economics, and the City
This graduate and undergraduate level course introduces students to the new forms of devotion as circulated in various urban centers in South Asia with a focus on growing market economy and urbanization. This course will particularly discuss case studies of how different modes of Hinduism, Islam, Christianity and other minor religions operate in an urbanized middle-class and educated communities. We will read theoretical and ethnographical works of contemporary research in religious studies and anthropology that deal with the questions of modernity, reformism and economic developmentalism. Throughout the semester, we focus on 1) how does religious forms such as sainthood practices, private and public rituals, narrative modes and everyday life evolve in the background of growing politics of development; 2) we discuss the tensions between classical notions of devotion and their new transformations in the city life, and finally 3) theoretically, we analyze concepts such as reformism, fundamentalism, recent discourses on identity politics and gender implications as connected to urban religious life. SAST 589 Islam and the West
This course introduces students to Islam in modern South Asia, with a particular focus on the development of 'new' Muslim religious idioms, orientations, pedagogies and movements in 19th and 20th century South Asia. This course is divided into three parts. In the first part of this course, students are provided with an overview of: Muslim institutions and spaces in pre-colonial South Asia, the historical emergence of South Asia as a prominent global center of Islam, and the development of Urdu as an Islamic idiom. The second and main part of this course introduces students to academic literature concerning sophisticated encounters between the Muslim elite in north India and modern political and technological developments. The intimate interactions of the 'Mullah' and the 'Englishman' from the 19th to 20th century will thus be revealed to students. This part focuses upon, on the one hand, the role of Islam and pious Muslims in the colonial army, and on the other hand, Muslim initiatives to educate an Islamic 'modernism', 'traditionalism', 'fundamentalism' and 'Sufism', and appropriate print technologies for the creation of public spheres. Students will be introduced to historical scholarship revelatory of how these Muslim pedagogies and print initiatives were based upon sophisticated transcultural networks and exchange. In the third part of this course, students will be encouraged to engage with contemporary literature on South Asian Muslim political philosophy and nationalism, and the transcultural intellectual exchanges that produced key Muslim political ideologies. Taught by: Sevea

SAST 590 Silk Road: From the Mediterranean to the Pacific
A journey along the overland and sea routes that connected China, India, Iran, and Rome from 200-1000 CE and served as conduits for cultural exchange. Precursor and successor routes will also be taken into consideration. The lives of merchants, envoys, pilgrims, and travelers interacting in cosmopolitan communities will be examined. Exploration of long-known and newly discovered archaeological ruins, along with primary sources in translation, will be studied. Taught by: Mair
Also Offered As: EALC 190, EALC 590, SAST 190
Activity: Lecture
1.0 Course Unit

SAST 593 Caste & Class in South Asia
This course will explore the historiography and theory of caste and class in South Asia. While we will survey the evidence from the pre-modern period briefly, the primary focus of the course will be on the period between the eighteenth and twentieth centuries. We will examine the degree to which colonial rule triggered particular kinds of class-oriented and caste-oriented 'reform', and the extent to which South Asian actors themselves shaped the nature of such change. The course will also provide an introduction to the work of the Subaltern school historians who have engaged with such questions, and situate them within the wider field of South Asian historiography. SAST 604 Neoliberalism and the City
Over fifty percent of the world's population now lives in cities. Neoliberalism—the ideology and accompanying policies and practices that champion the shifting of political decision making from the public sector to the private sector—has been widely recognized as having shown dramatic growth worldwide since the 1970s. It has also been widely regarded as a product of globalization. This course traces the history of neo-liberalism in global context with particular attention to neoliberalism's relationship to cities, and the role that urban growth has played in spurring neoliberal policies and practices. It asks how policy makers, voters, and private interest worldwide have responded to the growth of urban poverty and slums, the challenges with urban public education, unequal resource distribution, environmental pressures experienced within urban sanitation and waste disposal systems, and increased demands for municipal services like water, electricity, and transport infrastructures, and examined the rise of public-private partnerships, gated communities, initiatives to privatized education and municipal services, and efforts to relocate slum dwellers and beautify cities as explicit strategies for attracting 'global capital'. The course also asks how the recent rise of neoliberal policies and practices differ from earlier market-driven and private sector led forms of political governance.

SAST 617 Readings in Modern Indian History
This course will introduce students to the major themes and debates of modern Indian historiography. Though the course will not provide a survey outline of events, it will be organized around themes that have a broad chronological sequence. It will touch on key topical themes like the transition to colonialism, the development of the colonial economy, the evolution and significance of colonial knowledge systems, the impact and shape of religious and social reform, the rise of nationalism and communalism, and peasant, labour and subaltern history. The goal of the course will be to provide students with an understanding of the significance of debates around key themes in modern Indian history and a familiarity with the different ‘schools’ or ‘traditions’ of historical interpretation, including Nationalist, Marxist, the so-called ‘Chicago’, and ‘Cambridge’ schools, as well as the Subaltern collective and post-Subaltern historiography.

SAST 623 Literary History and Aesthetics in South Asia
This seminar surveys the multiple components of literary culture in South Asia. Students will engage critically with selected studies of literary history and aesthetics from the past two millennia. In order to introduce students to specific literary cultures (classical, regional, contemporary) and to the scholarly practices that situate literature in broader contexts of culture and society, the course will focus both on the literary theories—especially from the nineteenth and twentieth centuries—that position South Asia's literary cultures within broader disciplinary frameworks that use literary documents to inform social, historical and cultural research projects. The aim is to open up contexts whereby students can develop their own research projects using literary sources.

SAST 625 Philology and History: Reading South Asian Texts
Taught by: Patel, D
Activity: Seminar
1.0 Course Unit
SAST 627 South Asia Literature as Comparative Literature
This course takes up the question of reading South Asian Literature both as a collection of diverse literary cultures, as well as the basis for a methodology of reading that takes language, region, and history into account. It takes as a starting point recent work that foregrounds the importance of South Asian language literatures, and their complex interactions, to an understanding of South Asian literary history, as well as critiques of the concept of world literature that question its underlying assumptions and frequent reliance on cosmopolitan languages such as English. In what ways can we describe the many complex interactions between literary cultures in South Asia, rooted in specific historical contexts, reading practices, and cultural expectations, while maintaining attention to language and literary form? How, in turn, can we begin to think of these literatures in interaction with larger conversations in the world? With these considerations in mind, we will examine works of criticism dealing with both modern and pre-modern literatures, primarily but not exclusively focused on South Asia. Topics will include the concept of the cosmopolis in literary and cultural history, the role of translation, the transformations of literature under colonialism, and twentieth century literary movements such as realism and Dalit literature. Readings may include works by Erich Auerbach, Frederic Jameson, Aijaz Ahmad, Gayatri Spivak, Aamir Mufti, Sheldon Pollack, David Shulman, Yigal Bronner, Shamshur Rahman Faruqi, Francesca Orsini, Subramanian Shankar, Sharankumar Kimbale, and Torlae Jatin Gajarawala. We will also examine selected works, in English and in translation, as case studies for discussion. This course is intended both for students who intend to specialize in the study of South Asia, as well as for those who focus on questions of comparative literature more broadly.

SAST 631 The Sanskrit Epics
Ancient India’s two epic poems, composed in Sanskrit and received in dozens of languages over the span of two thousand years, continue to shape the psychic, social, and emotional worlds of millions of people around the world. The epic Mahabharata, which roughly translates to The Great Story of the Descendants of the Legendary King Bharata, is the longest single poem in the world (100,000 lines of Sanskrit verse) and tells the mythic history of dynastic power struggles in ancient India. An apocalyptic meditation on time, death, and the utter devastation brought upon the individual and the family unit through social disintegration, the epic also houses one of the great religious works of the world, The Bhagavad Gita (translation: The Song of God), which offers a buoy of hope and possibility in the dark ocean of the epic’s violent narrative. The other great epic, The Ramayana (Rama’s Journey), though essentially tragic, offers a brighter vision of human life, how it might be possible to live happily in an otherwise hopeless situation. It too is about struggles for power in ancient India but it offers characters—especially Rama—that serve as ideals for how human beings might successfully negotiate life’s great challenges. It also provides a model of human social order that contrasts with dystopic polities governed by animals and demons. Our course will engage in close reading of selections from both of these epic poems (in English translation, of course) and thus learn about the epic genre, its oral and textual forms in South Asia, and the numerous modes for interpreting the epic. We will also look at the reception of these ancient works in modern forms of media, such as the novel, television, theater, cinema and the comic book/anime. In the process, through selected essays and reflections, we will pay special attention to the ways in which the ancient epics remain deeply relevant in the modern world, reflecting on topics such as the aesthetics of war, the psychic life of social ideals, and creative responses to ethical conflicts.

SAST 632 Hinduism and Colonial Modernity
This seminar deals with the question of modernity in South Asia, with a specific focus on the construction, dissemination, and politicization of Hinduism in nineteenth and twentieth century India. It focuses on three central heuristic lenses–namely those of European imperialism, Orientalism, and nationalism—to study modernity and its discontents. What was at stake in the encounter between colonial modernity and India’s religions in nineteenth and early twentieth centuries? How did colonial and native discourses on ‘reform’ and ‘revival’ shape Indian religions as we understand them today? How is modern ‘Hinduism’ inextricably hinged to early forms of cultural transnationalism, Orientalism, and incipient forms of nationalism? This seminar approaches questions such as these and others, with an eye to understanding how nineteenth and early twentieth century discourses continue to shape contemporary understandings of Hinduism in deep and highly politicized ways.

Activity: Seminar
1.0 Course Unit
SAST 634 Realism and South Asian Literature
This course examines problems of realism as a concept in relation to South Asian literature in the 19th and 20th centuries. Realism, both in its broadest sense as mimetic depictions in literature, as well as specific instantiations in art history, literature, and politics, has had a decisive impact on South Asian literary history. Yet as a topic realism presents several unique challenges, not unlike its twin in twentieth-century literature, the equally-protein modernism. In part this may stem from its conceptual and disciplinary range, pulling together problems in the history of science, the politics of art, and aesthetics. With these caveats in mind, we will examine a range of texts, both those specifically dealing with South Asian literature, as well as those considered foundational to understandings of realism at play. Readings in criticism may include Hegel, Marx, Ian Watt, Rabindranath Tagore, Gyorgy Lukacs, Bertold Brecht, Raymond Williams, Frederic Jameson, Theodor Adorno Walter Benjamin, Namwar Singh, Ram Vilas Sharma, WReC, Michael Lowy, and Meenakshi Mukherjee, along with fiction and poetry by Nazeer Ahmed, Tagore, Munshi Premchand, Sa’adat Hasan Manto, Ismat Chughtai, O.V. Vijayan, and Uday Prakash. We will also discuss, when relevant topics relating to art history and cinema studies. This course will be suitable both for those students who wish to investigate realism in South Asian history, as well as those who want a thorough grounding in the theory and literary historiography of realism more generally.

SAST 713 Literature in Translation: South Asia and the World
This course primarily introduces how to critically read literature in light of major global developments in contemporary literary theory and aesthetics from the past century (including structuralism, semiotics, reception theory, deconstruction, Marxist approaches to literature, feminist readings of texts, translation theory, etc.). It also draws attention to scholastic practices of textual criticism, paleography, and the preparation of critical editions. In doing so, the course emphasizes specific texts and essays related to South Asian literature, literary theory, and aesthetics from the past two millennia as case studies in order to:
a) supplement students’ knowledge of South Asian cultural production, b) frame social and historical questions related to art and aesthetics in contexts that have been otherwise under-explored, and c) to inspire debate about the extent to which analytical models and approaches developed within a given cultural setting are translatable to literary materials produced elsewhere. Students will develop their own projects, workshop what they have already begun, or explore new directions for studying literature and literary culture. Comparative approaches with other literary traditions are welcome and no background in South Asian languages or history is required.

SAST 762 Women in South Asia
This course on women in South Asian history has several objectives. To comprehend the genres of narratives in which South Asian women between the sixteenth and twentieth centuries have spoken and have been spoken about. To gain an understanding of evolving institutions and practices shaping women’s lives, such as the family, law and religious traditions. To understand the impact of historical processes — the formation and breakdown of empire, colonialism, nationalism and decolonization — upon South Asian women between the sixteenth and twentieth centuries. We will read primary sources in addition to familiarizing ourselves with the historiography of women in South Asia.

SAST 769 Feminist Theory
Specific topic varies. Dissent is a key word in our world today—from the Arab Spring to the American Fall, we have seen expressions of political disobedience and protest around the world. It is more urgent than ever to consider what dissent might mean, what shapes it has taken historically, what connection might exist between it and literature, and what futures are possible. We will read key critical and theoretical work alongside some powerful, tender and controversial writings and films (largely but not exclusively produced in the postcolonial world), to inquire into the politics and poetics of governance and dissent. Students are invited to make connections with other historical and geographical contexts, and explore the different forms of dissent individual, collective, urban, rural, nationalist, pan-nationalist, religious, marxist, or feminist, to name but a few. We will pay special attention to different performances of dissent at a popular, mass or individual level. We will think about the social and cultural channels attention to different performances of dissent at a popular, mass or See the English Department's website at www.english.upenn.edu for a complete description of the current offerings. Students are invited to make connections with other historical and geographical contexts, as we explore the different forms of dissent individual, collective, urban, rural, nationalist, pan-nationalist, religious, marxist, or feminist, to name but a few. We will pay special attention to different performances of dissent at a popular, mass, or individual level. We will think about the social and cultural channels through which dissent is expressed, spread or quelled, how it might morph, or become obsolete, or give rise to new forms of disobedience.

SPAN 092 Corona Capitalism: Crisis and Inequality Across the Americas
The coronavirus pandemic has exacerbated existing social inequalities. It has also accelerated the pace of history so sharply that the course of events has become nearly impossible to predict. This CWIC critical speaking seminar takes as its starting point our shared participation in the experience of uncertainty. At the same time, in looking to Latin America and the US, it articulates the fact that COVID-19 is anything but a ‘great equalizer’: its impact varies widely and decisively across race, class, and gender. As the world confronts multiple layers of wreckage, not only biological but also ecological and economic, how can we frame and communicate both uncertainty and truth in a thoughtful way? We will examine social problems that have been laid bare by the pandemic and have since become sites of ethical and political reevaluation, namely health disparities, ecological racism, the distribution of labor, and criminal justice. This seminar’s aim is to collaboratively assess one fundamental question: How can we understand COVID-19 not as an exceptional moment in history, but as a crisis of racial capitalism? By studying media, activism, policy, and scholarship produced during the pandemic alongside foundational critical theory, students will gain the analytical tools to contextualize its disproportionate global impact on poor communities and people of color, and to envision a just post-pandemic recovery. We will engage Marxist, feminist, and anti-racist theoretical approaches, and while familiarity with these methods is not necessary, an openness to them is. Self-examination is crucial to the success of the course, which requires students reflect on their own political, intellectual, and emotional investments in racialized inequality. This is a speaking intensive seminar intended to improve students’ oral communication and listening skills through class discussions, prepared presentations, and mixed-media communication projects. Conducted in English.

SPAN 110 Elementary Spanish I
Spanish 110 is a first-semester language course that emphasizes the development of foundational listening, speaking, reading and writing skills while exploring the rich cultural mosaic of the Spanish-speaking world. Through listening activities and videotaped interviews with native speakers, your aural and oral abilities will improve at the same time that you will become familiarized with different varieties of standard spoken Spanish. You will be given ample opportunities to practice orally and in writing so that you can reinforce newly acquired vocabulary and grammatical structures. Reading strategies will facilitate your comprehension of the texts included in the course syllabus. Readings focused on a specific country or region, visual items (such as maps, photos, films) and a class project will advance your knowledge of Hispanic cultural practices and products while increasing your intercultural competence. Conducted entirely in Spanish, this class will provide you with guided practice before moving to more independent and spontaneous language production. Working in small groups and in pairs, you will participate in class activities that simulate real-life situations that will help you gain confidence communicating in Spanish. Goals: By the end of this course you can expect to handle a variety of day-to-day situations in a Spanish-speaking setting: 1) Greet and introduce people, invite people to events, accept or reject invitations, ask for directions, tell time, shop and order meals in a restaurant. 2) Talk about yourself, family, and friends regarding physical and emotional states, daily routines, leisure, preferences and plans. 3) Use the cultural information learned in class as an icebreaker to find common ground with a wide variety of Spanish speakers. Pre-requisite: Score below 380 on the SAT II or; below 285 on the online placement examination.
For BA Students: Language Course
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

SPAN 112 Elementary Spanish I and II: Accelerated
Spanish 112 is an intensive course designed for students who have already satisfied the language requirement in another language and have not previously studied Spanish. By combining the curriculum of Spanish 110 and 120, Spanish 112 seeks to develop students’ foundational listening, speaking, reading, and writing skills while exploring the rich cultural mosaic of the Spanish-speaking world. Through listening activities and mini documentaries shown in class, students will develop their aural and oral skills at the same time that they will become familiarized with different varieties of standard spoken Spanish. Students will be given ample opportunities to practice orally and in writing so that they can reinforce newly acquired vocabulary and linguistic structures. Readings focused on a specific country or region, visual items (such as maps, photos, and films) and a class project will advance students’ knowledge of Hispanic cultural practices and products while increasing their intercultural competence. Goals: By the end of this course students can expect to handle a variety of day-to-day situations in a Spanish-speaking setting such as: 1) Introduce themselves, use greetings, describe people, places and things, give instructions, tell time, go shopping, order meals in a restaurant, and make travel plans. 2) Talk about themselves, families, and friends regarding academic life, daily routines, health, work, leisure, and preferences (using the present and past tenses). 3) Use the cultural information learned in class as an icebreaker to find common ground with a wide variety of Spanish speakers. Permit required from the course coordinator.

SPAN 115 Spanish for the Medical Professions, Elementary I
Spanish 115 is a first-semester elementary Medical Spanish Language course and the first in the Spanish for Medical Professions sequence. It is designed for students with no prior coursework in Spanish. This course teaches beginning students the fundamentals of practical Spanish with an emphasis on medical situations and basic medical terminology. In this course, particular attention will be given to developing speaking and listening skills, as well as cultural awareness. It incorporates activities, vocabulary, and readings of particular interest to healthcare practitioners, while adhering to the goals and scope of Spanish 110, the first-semester Spanish language course. Students who have already taken Spanish 110 will not receive credit for Spanish 115. Although these courses have different numbers, they are at the same level. Students who have already fulfilled the language requirement (AP, SAT II, etc.) or have taken courses at the 200- and 300-level may not take basic level language courses (100-level courses) in the same language. They will not receive credit for this course (Spanish 115). Prerequisite: Offered through the Penn Language Center. Non-course prerequisite: A score below 380 on the SAT II or below 285 on the online placement examination.
For BA Students: Language Course

1.0 Course Unit

SPAN 120 Elementary Spanish II
The continuation of Spanish 110, Spanish 120 is a second-semester elementary language course. See the description of Spanish 110.
For BA Students: Language Course
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
SPAN 121 Elementary Spanish I and II: Advanced Beginners
Spanish 121 is designed for students who have some prior experience in Spanish. It is an intensive elementary-level language course that in one semester covers the material studied over two semesters in our Spanish 110 and Spanish 120. The course provides a quick-paced review of material normally covered in a first-semester Spanish course and then proceeds to introduce new material so students will be prepared to take Spanish 130 during the subsequent semester. As in other Spanish courses, Spanish 121 emphasizes the development of foundational listening, speaking, reading, and writing skills while exploring the rich cultural mosaic of the Spanish-speaking world. Through listening activities and mini documentaries shown in class, students will develop their aural and oral skills at the same time that they will become familiarized with different varieties of standard spoken Spanish. Students will be given ample opportunities to practice orally and in writing so that they can reinforce newly acquired vocabulary and linguistic structures. Readings focused on a specific country or region, visual items (such as maps, photos and films) and a class project will advance students’ knowledge of Hispanic cultural practices and products while increasing their intercultural competence. Conducted entirely in Spanish, this class will provide you with guided practice before moving to more independent and spontaneous language production. You will participate in paired, small-group and whole-class activities that simulate real-life situations that will help you gain confidence communicating in Spanish. Goals: By the end of this course students can expect to handle a variety of day-to-day situations in a Spanish-speaking setting such as: 1) Introduce themselves, use greetings, describe people, places and things, give instructions, tell time, go shopping, order meals in a restaurant, and make travel plans. 2) Talk about themselves, families, and friends regarding academic life, daily routines, health, work, leisure, and preferences (using the present and past tenses). 3) Use the cultural information learned in class as an icebreaker to find common ground with a wide variety of Spanish speakers. Non-course prerequisite: A score of 380-440 on the SAT II or 285-383 on the online placement examination.

SPAN 125 Spanish for the Medical Professions, Elementary II
The continuation of Spanish 115, Spanish 125 is a second-semester elementary medical Spanish Spanish 115. Note: course offered through the Penn Language Center. Pre-requisite: successful completion of Spanish 110 or 115 or a score of 380-440 on the SAT II or 285-383 on the online placement examination.
For BA Students: Language Course
One-term course offered either term
Activity: Seminar
1.0 Course Unit

SPAN 130 Intermediate Spanish I
Spanish 130, a first-semester intermediate-level course, emphasizes students’ acquisition of new vocabulary and linguistic structures in a cultural and communicative context while building on their previous speaking, reading, listening and writing skills. A substantial amount of the course is devoted to learning and using the past tenses. As in other Spanish courses, students will take part in a wide range of activities, including video blogging, role-plays, film viewings, listening to music and class discussions of current social and cultural topics. Unique to this course is the creation of a ‘cultural journal’ throughout the semester in which students pursue their own interests in the Spanish-speaking world while taking advantage of some of the rich resources within Philadelphia’s own Hispanic community. Goals: By the end of this course students can expect to handle a variety of common situations in a Spanish-speaking setting such as: 1) Narrate past actions, ranging from personal anecdotes to historical events 2) Give advice, recommendations, and commands to people 3) Express their feelings and doubts when reacting to what others have said 4) Talk about their future expectations and wishes 5) Demonstrate their knowledge and understanding of Hispanic cultural practices and products.
For BA Students: Language Course
One-term course offered either term
Prerequisites: SPAN 112, 120, 121, or 125; or a score of 450-540 on the SAT II or 384-453 on the online placement examination.
Activity: Seminar
1.0 Course Unit

SPAN 134 Intermediate Spanish I and II: Accelerated
During the spring semester, Spanish 134 is limited to those students who have satisfied the language requirement in another language. During the summer, (at the Penn campus and the Penn-in-Buenos Aires Summer Abroad Program), Spanish 134 is open to all students. Spanish 134 is an intensive intermediate-level language course that covers the material presented in Spanish 130 and Spanish 140. The course emphasizes the development of the four canonical skills (reading, writing, listening and speaking) within a culturally based context. Class time will focus on communicative activities that combine grammatical concepts, relevant vocabulary, and cultural themes. Students will participate in pair, small-group and whole-class activities to practice linguistics skills in a meaningful context. Major course goals include: the acquisition of intermediate-level vocabulary, the controlled use of the past tense and major uses of the subjunctive, and the development of writing skills. Students who have previously studied Spanish must take the online placement examination. Students who have already fulfilled the language requirement in Spanish may not take basic level languages courses (110-145) in the same language. Any questions about placement should be addressed to the Director of the Spanish Language Program. Spring semester prerequisites: Permit required from the course coordinator.
Summer prerequisites: Successful completion of Spanish 112, 120, 121 or 125 or a score of 450-540 on the SAT II or 384-453 on the online placement examination.
For BA Students: Last Language Course
Course usually offered in spring term
Activity: Seminar
2.0 Course Units
SPAN 135 Spanish for the Medical Professions, Intermediate I
Spanish 135 is a first-term intermediate-level language course that emphasizes the development of the four basic skills (reading, writing, listening, and speaking), and the acquisition of medical terminology. Students will be expected to participate in classroom activities such as role-plays based on everyday situations that they may encounter at work settings such as doctors' offices, clinics, hospitals, and emergency rooms in order to develop meaningful and accurate communication skills in the target language. Students will also review and acquire other essential tools of communication in the target language applicable both within and outside the medical field. Major course goals include: the acquisition of intermediate-level vocabulary, the controlled use of the past tense, and the development of writing skills at a paragraph level with transitions. Students who have already taken Spanish 130 will not receive credit for Spanish 135. Although these courses have different numbers, they are at the same level. Students who have already fulfilled the language requirement (AP, SAT II, etc.) or have taken courses at the 200- and 300-level may not take basic-level language courses (100-level courses) in the same language. They will not receive credit for this course (Spanish 135). Note: Offered through the Penn Language Center. Pre-requisite: successful completion of Spanish 112, 120, 121 or 125 or a score of 450-540 on the SAT II or 384-453 on the online placement examination. For BA Students: Language Course One-term course offered either term Activity: Seminar 1.0 Course Unit

SPAN 140 Intermediate Spanish II
Spanish 140 is a fourth-term language course that both reinforces and enhances the communicative skills (listening, speaking, reading and writing) previously acquired while exploring the rich cultural mosaic of the Spanish-speaking world. Class activities are designed so that students can build up these four skills in order to function at an intermediate language level. Readings focused on contemporary social and political issues of the Hispanic world will advance your knowledge of Hispanic and cultural practices while increasing your intercultural competence. Unique to this course is the preparation of an oral presentation on a topic related to the Hispanic world throughout the semester and presented during the last days of classes. The purpose of this task is to help students develop their presentational competence in Spanish. Conducted entirely in Spanish, this class will provide students with ample opportunities to work in small groups and in pairs while gaining confidence communicating in Spanish. This course satisfies the language requirement at Penn. Goals: By the end of this course, students can expect to handle a variety of situations in a Spanish-speaking setting, such as: 1) Express their opinions on a variety of contemporary events and issues 2) Defend their position when presented with a hypothetical situation 3) Deliver short presentations on a chosen subject after thorough preparation 4) Demonstrate their knowledge and understanding of Hispanic cultural practices and products. For BA Students: Last Language Course One-term course offered either term Prerequisite: Spanish 130, 135, or a score of 550-640 on the SAT II or 454-546 on the online placement examination. Activity: Seminar 1.0 Course Unit

SPAN 145 Spanish for the Medical Professions, Intermediate II
Spanish 145, the continuation of Spanish 135, is an intermediate-level integrated skills language course. It emphasizes the development of reading, writing, listening, and speaking abilities. Students will be expected to participate actively in classroom activities such as communicative activities, role-playing based on typical doctor/patient interactions as well as other medical situations. Students will also review and learn other essential tools of communication applicable both inside and outside the medical field. Students who have already taken Spanish 140 will not receive credit for Spanish 145. Although these courses have different numbers, they are at the same level. Students who have already fulfilled the language requirement (AP, SAT II, etc.) or have taken courses at the 200- and 300-level may not take basic level language courses (100-level courses) in the same language. They will not receive credit for this course (Spanish 145). This course satisfies the language requirement in Spanish. Note: Course is offered through the Penn Language Center. Pre-requisite: successful completion of Spanish 130 or 135 or a score of 550-640 on the SAT II or 454-546 on the online placement examination. For BA Students: Last Language Course One-term course offered either term Activity: Seminar 1.0 Course Unit

SPAN 180 Spanish Conversation
Must be a resident of the Modern Language College House. Prerequisite: Residence in Modern Language House Two terms. student must enter first term. Activity: Seminar 0.5 Course Units

SPAN 202 Advanced Spanish
The purpose of this course is twofold: (a) to develop students’ communicative abilities in Spanish, that is, speaking, listening, reading and writing, and (b) to increase their awareness and understanding of Hispanic cultures and societies. Homework and classroom activities are designed to help students build their oral proficiency, expand and perfect their knowledge of vocabulary and grammatical structures, improve their reading and writing skills, and develop their critical thinking abilities. The material for this class includes short stories, newspaper articles, poems, songs, cartoons, video clips and a novel, such as Cesar Aira’s La villa. At the completion of this course, students will feel confident discussing and debating a variety of contemporary issues (cultural and religious practices, family relationships, gender stereotypes, political events, immigration to the USA, etc.). Any questions about placement should be addressed to the Director of the Spanish Language Program. For BA Students: Advanced Language Course One-term course offered either term Prerequisite: SPAN 140 Activity: Seminar 1.0 Course Unit
SPAN 205 Advanced Spanish for the Medical Professions
The goal of this course is to provide advanced practice in Spanish to those students who are interested in pursuing careers in the medical and health care fields. Through readings and authentic materials on contemporary health issues, for example, i.e., H1N1 influenza, comparative healthcare systems, obesity, ‘chagas’ disease, etc., students will acquire the vocabulary and grammatical structures needed to discuss a wide array of topics pertaining to the health-related professions. Students will also gain awareness of those health care issues affecting the Hispanic/Latino patient. Oral and written presentations will complement topics covered in class.
For BA Students: Advanced Language Course
One-term course offered either term
Prerequisite: SPAN 140 OR SPAN 145
Activity: Seminar
1.0 Course Unit

SPAN 208 Business Spanish I
Spanish for Business I provides advanced-level language students with technical vocabulary and communicative skills covering business concepts as they apply to the corporate dynamics of the Spanish-speaking world, with a special emphasis on Latin America. Through readings, presentations, discussions, and video materials, we shall analyze those cultural aspects that characterize the business environment in the region as well as focus on economies and markets in light of their history, politics, resources and pressing international concerns.
For BA Students: Advanced Language Course
One-term course offered either term
Prerequisite: SPAN 140
Activity: Seminar
1.0 Course Unit

SPAN 209 Business Spanish II
This course is specifically designed for advanced speakers of Spanish (e.g., native speakers, high-level heritage speakers, and students who have studied in a Spanish-speaking country for at least one semester). Students will take an in-depth look at the corporate dynamics of a number of countries in Latin America, focusing on their economies and markets, as well as on the cultural and business protocols of each region. Through the creation of an entrepreneurial project and the writing of a business plan, students will enhance their business and language skills.
Any questions about placement should be addressed to the Director of the Spanish Language Program. Must obtain permission from instructor to enroll.
For BA Students: Advanced Language Course
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

SPAN 212 Advanced Spanish II: Grammar and Composition
Spanish 212 focuses on the acquisition of the tools necessary for successful written expression in Spanish. These tools include a solid knowledge of the grammar, an ample vocabulary, control of the mechanics of the language (spelling, punctuation, etc.), and a thorough understanding of the writing process. Throughout the semester students sharpen their skills as they analyze thought-provoking texts (short stories, essays, articles, interviews, reviews, podcasts, and films) and produce a variety of written assignments. By the end of the course they will have developed their awareness of the norms of standard Spanish and learned to incorporate these features into their own writing. Spanish 212 prepares students for the writing requirements of upper-level courses and study abroad. The class will be conducted in Spanish, and students will be expected to use Spanish at all times.
Taught by: Knight
One-term course offered either term
Prerequisite: SPAN 202
Activity: Seminar
1.0 Course Unit

SPAN 215 Spanish for the Professions
Spanish for the Professions is designed to provide advanced-level language students with a wide-ranging technical vocabulary and the enhancement of solid communicative skills within the cultural context of several developing Latin American countries. Focusing on topics such as politics, economy, society, health, environment, education, science and technology, the class will explore the realities and underlying challenges facing Latin America. Through essays, papers, articles, research, discussions, case studies, and videotapes, we shall take an in-depth look at the dynamics of Latin American societies. The course will focus on—but not be restricted to—Mexico, Cuba and Argentina. Any questions about placement should be addressed to the Director of the Spanish Language Program.
For BA Students: Advanced Language Course
Course usually offered in spring term
Prerequisite: SPAN 202
Activity: Seminar
1.0 Course Unit

SPAN 219 Hispanic Texts and Contexts
The primary aim of this course is to develop students’ knowledge of the geographical, historical and cultural contexts in those regions where Spanish is used. At the same time that they are introduced to research techniques and materials available in Spanish, students strengthen their language skills through readings, class discussions, and frequent writing assignments. This course is designed to give students a broad understanding of Hispanic culture that will prepare them for upper-level course work and study abroad.
For BA Students: Humanities and Social Science S
One-term course offered either term
Prerequisite: SPAN 219 OR SPAN 223
Activity: Seminar
1.0 Course Unit
SPAN 223 Introduction to Literary Analysis
By helping students develop skills to carefully read and analyze Spanish literary works, Spanish 223 prepares them for upper-level courses and study abroad. After reviewing the main elements and conventions of the most popular genres (narrative, poetry, theater and essay), students become familiarized with current theoretical approaches to the study of literature with the purpose of applying them to their own analytical writing. The last weeks of the semester are devoted to the reading of a well-crafted detective novel and the examination of both its formal features and its ideological underpinnings. Throughout the course, students will have ample opportunities to hone their skills through the close reading and class discussion of varied and stimulating literary works produced by canonical and non-canonical Hispanic authors.
For BA Students: Arts and Letters Sector
One-term course offered either term
Prerequisite: SPAN 219 OR SPAN 223
Activity: Seminar
1.0 Course Unit

SPAN 226 Spanish Culture and Civilization
A general introduction to the study of Spanish culture, this course is designed to help students understand the historical foundations of contemporary Spanish society, its values and its institutions. The focus is on the main events of Spanish history and the origins and continuity of social and political institutions from pre-modern Spain up to the beginning of the modern era. This course is offered in the Penn-in-Madrid summer program.
Course usually offered summer term only
Activity: Seminar
1.0 Course Unit

SPAN 317 Spanish Phonetics and Morphology
This course is an introduction to Hispanic linguistics, with special emphasis on the Spanish sound system (phonetics and phonology) and Spanish word-formation (morphology). Topics to be covered include articulatory phonetics, use of the phonetic alphabet, English and Spanish contrastive phonology, regional and social variations of Spanish pronunciation, word formation (derivation and composition), and the structure of the Spanish verb (inflection). Evaluation will be based on participation and homework, periodic quizzes, mid-term exam, and a final examination during finals week. Students will be required to write a linguistic autobiography.
Course not offered every year
Prerequisite: SPAN 219 OR SPAN 223
Activity: Seminar
1.0 Course Unit

SPAN 319 History of the Spanish Language
A survey treatment of the development of Latin to modern Spanish, with emphasis on relations between external history and the development of grammatical structure and vocabulary, and major sound shifts. Lectures and discussions of reading.
Course not offered every year
Prerequisite: SPAN 219 OR SPAN 223
Activity: Seminar
1.0 Course Unit

SPAN 325 Spanish-English Translation
This course is designed for students who already have a solid foundation in Spanish and English grammar. It provides an introduction to the theory and practice of translating between English and Spanish, addressing important topics such as discourse strategies, register and mood, dialect, genre, and cultural norms linked to written and oral communication. This is a very writing-intensive class, both in and out of the classroom. There are assigned readings from the textbooks and/or assignments online for every class meeting, which will be used to discuss both the practicalities and the cultural implications of translation. Class meetings will consist of class discussions about translation in general, and critiques of your own translation efforts in particular, combined with small group or pair work on translation exercises. While there will necessarily be some use of English, the class is conducted primarily in Spanish.
Course not offered every year

SPAN 391 Sustainable Development And Culture in Latin America
This interdisciplinary course exposes students to the three dimensions of sustainable development -environmental, economic, and social- through an examination of three products -peyote, coca, and coffee- that are crucial in shaping modern identity in areas of Latin America. The course integrates this analysis of sustainable development in relation to cultural sustainability and cultural practices associated with peyote, coca, and coffee and their rich, traditional heritage and place in literature, film, and the arts. This is an upper level seminar open to majors and minors of Spanish and those who have completed Pre-requisite SPAN 219 or SPAN 223 or permission of the Undergraduate Chair.

SPAN 606 Pedagogy Across the Spanish Curriculum
The aim of this seminar is to prepare graduate students in Hispanic Studies to teach a wide range of courses typically offered at North American universities and colleges—from the elementary Spanish language level to upper-division seminars—while familiarizing themselves with current approaches and methodological trends in foreign language instruction. By designing a content-based syllabus, including selecting and sequencing of reading materials and choosing the appropriate learning outcomes and assessment methods, graduate students will gain a greater awareness of curricular planning and development and acquire skills that will significantly ease their future teaching endeavors such as using a backward design model, incorporating their own research interests into their lessons and courses, or taking advantage of the resources available to language learners on campus. By the end of the course, graduate students will be able to talk about and reflect on their teaching in an effective and professional manner.

SPAN 698 Workshop on Scholarly Writing
This course aims to develop awareness about what constitutes effective scholarly prose in Spanish. It proposes to hone the student's handling of writing as a vehicle for the expression of intellectual thought, but also to develop a consciousness of the rhetorical strategies that can be used to advance a critical argument effectively. Extensive writing exercises will be assigned; these will be followed by intense and multiple redactions of the work originally produced. The ultimate goal is for students to develop precision, correctness, and elegance in their written work. Students will also work on a class paper written previously, with a view to learning the process of transforming a short, limited expression of an argument into a publishable article. Course by permission of instructor.

Statistics (STAT)

STAT 101 Introductory Business Statistics
Data summaries and descriptive statistics; introduction to a statistical computer package; Probability: distributions, expectation, variance, covariance, portfolios, central limit theorem; statistical inference of univariate data; Statistical inference for bivariate data: inference for intrinsically linear simple regression models. This course will have a business focus, but is not inappropriate for students in the college. This course may be taken concurrently with the prerequisite with instructor permission.
One-term course offered either term
Prerequisite: MATH 104 OR MATH 110
Activity: Lecture
1.0 Course Unit

STAT 102 Introductory Business Statistics
Continuation of STAT 101. A thorough treatment of multiple regression, model selection, analysis of variance, linear logistic regression; introduction to time series. Business applications. This course may be taken concurrently with the prerequisite with instructor permission.
One-term course offered either term
Prerequisite: STAT 101
Activity: Lecture
1.0 Course Unit

STAT 111 Introductory Statistics
Introduction to concepts in probability. Basic statistical inference procedures of estimation, confidence intervals and hypothesis testing directed towards applications in science and medicine. The use of the JMP statistical package. Knowledge of high school algebra is required for this course.
One-term course offered either term
Activity: Recitation
1.0 Course Unit

STAT 112 Introductory Statistics
Further development of the material in STAT 111, in particular the analysis of variance, multiple regression, non-parametric procedures and the analysis of categorical data. Data analysis via statistical packages. This course may be taken concurrently with the prerequisite with instructor permission.
One-term course offered either term
Prerequisite: STAT 111
Activity: Lecture
1.0 Course Unit

STAT 399 Independent Study
Written permission of instructor and the department course coordinator required to enroll in this course.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

STAT 401 Sports Analytics: A Capstone Course
This course would introduce undergraduate students to the growing field of sports analytics, while allowing them to implement and integrate their knowledge base by exploring real sports data sets to solve real problems. While the context will be sports related, the skills and techniques gained will be widely applicable and generalizable with applications in diverse areas. Prerequisites: Must be a declared Statistics Concentrator or Business Analytics Concentrator or Statistics Minor or Data Science Minor. Permission from the Instructor is required.
Taught by: Abraham J. Wyner
Activity: Lecture
0.5 Course Units

STAT 405 Statistical Computing with R
The goal of this course is to introduce students to the R programming language and related eco-system. This course will provide a skill-set that is in demand in both the research and business environments. In addition, R is a platform that is used and required in other advanced classes taught at Wharton, so that this class will prepare students for these higher level classes and electives.
Taught by: Su, Waterman
One-term course offered either term
Also Offered As: STAT 705
Prerequisite: STAT 102 OR STAT 112 OR STAT 430
Activity: Lecture
0.5 Course Units
STAT 422 Predictive Analytics for Business
This course follows from the introductory regression classes, STAT 102, STAT 112, and STAT 431 for undergraduates and STAT 613 for MBAs. It extends the ideas from regression modeling, focusing on the core business task of predictive analytics as applied to realistic business related data sets. In particular it introduces automated model selection tools, such as stepwise regression and various current model selection criteria such as AIC and BIC. It delves into classification methodologies such as logistic regression. It also introduces classification and regression trees (CART) and the popular predictive methodology known as the random forest. By the end of the course the student will be familiar with and have applied all these tools and will be ready to use them in a work setting. The methodologies can all be implemented in either the JMP or R software packages. This course may be taken concurrently with the prerequisite with instructor permission.
One-term course offered either term
Also Offered As: STAT 722
Prerequisite: STAT 102 OR STAT 112 OR STAT 431
Activity: Lecture
0.5 Course Units

STAT 424 Text Analytics
This course introduces methods for the analysis of unstructured data, focusing on statistical models for text. Techniques include those for sentiment analysis, topic models, and predictive analytics. Course includes topics from natural language processing (NLP), such as identifying parts of speech, parsing sentences (e.g., subject and predicate), and named entity recognition (people and places). Unsupervised techniques suited to feature creation provide variables suited to traditional statistical models (regression) and more recent approaches (regression trees). Examples that span the course illustrate the success of text analytics. Hierarchical generating models often associated with nonparametric Bayesian analysis supply theoretical foundations. Students should be familiar with regression models at the level of STAT 102 and the R statistics language at the level of STAT 405. Familiarity with the R-Studio development environment is presumed, as well as common R packages such as stringr, dplyr and ggplot. Those with more knowledge of Statistics, such as from STAT 422, or computing skills will benefit. The predominant software used in the course is R, with bits of JMP when helpful for interactive illustration. Familiarity with basic probability models is helpful but not presumed.
Taught by: Stine
One-term course offered either term
Also Offered As: STAT 724
Activity: Lecture
0.5 Course Units

STAT 430 Probability
Discrete and continuous sample spaces and probability; random variables, distributions, independence; expectation and generating functions; Markov chains and recurrence theory.
One-term course offered either term
Also Offered As: STAT 510
Prerequisite: MATH 114 OR MATH 115
Activity: Lecture
1.0 Course Unit

STAT 431 Statistical Inference
Graphical displays; one- and two-sample confidence intervals; one- and two-sample hypothesis tests; one- and two-way ANOVA; simple and multiple linear least-squares regression; nonlinear regression; variable selection; logistic regression; categorical data analysis; goodness-of-fit tests. A methodology course. This course does not have business applications but has significant overlap with STAT 101 and 102. This course may be taken concurrently with the prerequisite with instructor permission.
One-term course offered either term
Also Offered As: STAT 511
Prerequisite: STAT 430
Activity: Lecture
1.0 Course Unit

STAT 432 Mathematical Statistics
An introduction to the mathematical theory of statistics. Estimation, with a focus on properties of sufficient statistics and maximum likelihood estimators. Hypothesis testing, with a focus on likelihood ratio tests and the consequent development of ‘t’ tests and hypothesis tests in regression and ANOVA. Nonparametric procedures. This course may be taken concurrently with the prerequisite with instructor permission.
Course usually offered in spring term
Also Offered As: STAT 512
Prerequisite: STAT 430 OR STAT 510
Activity: Lecture
1.0 Course Unit

STAT 433 Stochastic Processes
This course introduces methods for the analysis of unstructured data, focusing on statistical models for text. Techniques include those for sentiment analysis, topic models, and predictive analytics. Course includes topics from natural language processing (NLP), such as identifying parts of speech, parsing sentences (e.g., subject and predicate), and named entity recognition (people and places). Unsupervised techniques suited to feature creation provide variables suited to traditional statistical models (regression) and more recent approaches (regression trees). Examples that span the course illustrate the success of text analytics. Hierarchical generating models often associated with nonparametric Bayesian analysis supply theoretical foundations. Students should be familiar with regression models at the level of STAT 102 and the R statistics language at the level of STAT 405. Familiarity with the R-Studio development environment is presumed, as well as common R packages such as stringr, dplyr and ggplot. Those with more knowledge of Statistics, such as from STAT 422, or computing skills will benefit. The predominant software used in the course is R, with bits of JMP when helpful for interactive illustration. Familiarity with basic probability models is helpful but not presumed.
Taught by: Stine
One-term course offered either term
Also Offered As: STAT 724
Activity: Lecture
0.5 Course Units

STAT 435 Forecasting Methods for Management
This course provides an introduction to the wide range of techniques available for statistical forecasting. Qualitative techniques, smoothing and decomposition of time series, regression, adaptive methods, autoregressive-moving average modeling, and ARCH and GARCH formulations will be surveyed. The emphasis will be on applications, rather than technical foundations and derivations. The techniques will be studied critically, with examination of their usefulness and limitations. This course may be taken concurrently with the prerequisite with instructor permission.
Taught by: Shaman
One-term course offered either term
Also Offered As: STAT 711
Prerequisite: STAT 102 OR STAT 112 OR STAT 431
Activity: Lecture
1.0 Course Unit
STAT 442 Introduction to Bayesian Data Analysis
The course will introduce data analysis from the Bayesian perspective to undergraduate students. We will cover important concepts in Bayesian probability modeling as well as estimation using both optimization and simulation-based strategies. Key topics covered in the course include hierarchical models, mixture models, hidden Markov models and Markov Chain Monte Carlo. A course in probability (STAT 430 or equivalent); a course in statistical inference (STAT 102, STAT 112, STAT 431 or equivalent); and experience with the statistical software R (at the level of STAT 405 or STAT 470) are recommended.
Taught by: Jensen
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

STAT 451 Fundamentals of Actuarial Science I
This course is the usual entry point in the actuarial science program. It is required for students who plan to concentrate or minor in actuarial science. It can also be taken by others interested in the mathematics of personal finance and the use of mortality tables. For future actuaries, it provides the necessary knowledge of compound interest and its applications, and basic life contingencies definition to be used throughout their studies. Non-actuaries will be introduced to practical applications of finance mathematics, such as loan amortization and bond pricing, and premium calculation of typical life insurance contracts. Main topics include annuities, loans and bonds; basic principles of life contingencies and determination of annuity and insurance benefits and premiums. This course may be taken concurrently with the prerequisite with instructor permission.
Taught by: Lemaire
Course usually offered in fall term
Also Offered As: BEPP 451, BEPP 851, STAT 851
Prerequisite: MATH 104 AND STAT 430
Activity: Lecture
1.0 Course Unit

STAT 452 Fundamentals of Actuarial Science II
This specialized course is usually only taken by Wharton students who plan to concentrate in actuarial science and Penn students who plan to minor in actuarial mathematics. It provides a comprehensive analysis of advanced life contingencies problems such as reserving, multiple life functions, multiple decrement theory with application to the valuation of pension plans. This course may be taken concurrently with the prerequisite with instructor permission.
Taught by: Lemaire
Course usually offered in spring term
Also Offered As: BEPP 452, BEPP 852, STAT 852
Prerequisite: STAT 451 OR BEPP 451
Activity: Lecture
1.0 Course Unit

STAT 453 Actuarial Statistics
This course covers models for insurer's losses, and applications of Markov chains. Poisson processes, including extensions such as non-homogeneous, compound, and mixed Poisson processes are studied in detail. The compound model is then used to establish the distribution of losses. An extensive section on Markov chains provides the theory to forecast future states of the process, as well as numerous applications of Markov chains to insurance, finance, and genetics. The course is abundantly illustrated by examples from the insurance and finance literature. While most of the students taking the course are future actuaries, other students interested in applications of statistics may discover in class many fascinating applications of stochastic processes and Markov chains. This course may be taken concurrently with the prerequisite with instructor permission.
Taught by: Lemaire
Course usually offered in spring term
Also Offered As: BEPP 453, BEPP 853, STAT 853
Prerequisite: STAT 430
Activity: Lecture
1.0 Course Unit

STAT 457 Modern Data Mining: Statistics or Data Science
Modern Data Mining: Statistics or Data Science has been evolving rapidly to keep up with the modern world. While classical multiple regression and logistic regression technique continue to be the major tools we go beyond to include methods built on top of linear models such as LASSO and Ridge regression. Contemporary methods such as KNN (K nearest neighbor), Random Forest, Support Vector Machines, Principal Component Analyses (PCA), the bootstrap and others are also covered. Text mining especially through PCA is another topic of the course. While learning all the techniques, we keep in mind that our goal is to tackle real problems. Not only do we go through a large collection of interesting, challenging real-life data sets but we also learn how to use the free, powerful software 'R' in connection with each of the methods exposed in the class. This course may be taken concurrently with the prerequisite with instructor permission.
Taught by: Zhao
One-term course offered either term
Also Offered As: STAT 571, STAT 701
Prerequisite: STAT 102 OR STAT 112 OR STAT 431
Activity: Lecture
1.0 Course Unit
STAT 474 Modern Regression for the Social, Behavioral and Biological Sciences
Function estimation and data exploration using extensions of regression analysis: smoothers, semiparametric and nonparametric regression, and supervised machine learning. Conceptual foundations are addressed as well as hands-on use for data analysis. This course may be taken concurrently with the prerequisite with instructor permission.
Taught by: Berk
Course usually offered in spring term
Also Offered As: CRIM 474, STAT 974
Prerequisite: STAT 102 OR STAT 112
Activity: Lecture
1.0 Course Unit

STAT 475 Sample Survey Design
This course will cover the design and analysis of sample surveys. Topics include simple sampling, stratified sampling, cluster sampling, graphics, regression analysis using complex surveys and methods for handling nonresponse bias. This course may be taken concurrently with the prerequisite with instructor permission.
Course not offered every year
Prerequisite: STAT 102 OR STAT 112 OR STAT 431
Activity: Lecture
1.0 Course Unit

STAT 476 Applied Probability Models in Marketing
This course will expose students to the theoretical and empirical ‘building blocks’ that will allow them to construct, estimate, and interpret powerful models of consumer behavior. Over the years, researchers and practitioners have used these models for a wide variety of applications, such as new product sales, forecasting, analyses of media usage, and targeted marketing programs. Other disciplines have seen equally broad utilization of these techniques. The course will be entirely lecture-based with a strong emphasis on real-time problem solving. Most sessions will feature sophisticated numerical investigations using Microsoft Excel.
Much of the material is highly technical.
Taught by: Fader
Course usually offered in spring term
Also Offered As: MKTG 476, MKTG 776, STAT 776
Activity: Lecture
1.0 Course Unit

STAT 477 Introduction to Python for Data Science
The goal of this course is to introduce the Python programming language within the context of the closely related areas of statistics and data science. Students will develop a solid grasp of Python programming basics, as they are exposed to the entire data science workflow, starting from interacting with SQL databases to query and retrieve data, through data wrangling, reshaping, summarizing, analyzing and ultimately reporting their results. Competency in Python is a critical skill for students interested in data science. Prerequisites: No prior programming experience is expected, but statistics, through the level of multiple regression is required. This requirement may be fulfilled with Undergraduate courses such as Stat 102, Stat 112.
Taught by: Richard Waterman
Also Offered As: OIDD 477, OIDD 777, STAT 777
Activity: Lecture
0.5 Course Units

STAT 480 Advanced Statistical Computing
This course will build on the fundamental concepts introduced in the prerequisite courses to allow students to acquire knowledge and programming skills in large-scale data analysis, data visualization, and stochastic simulation. Prerequisite: STAT 770 or 705 or equivalent background acquired through a combination of online courses that teach the R language and practical experience. This course may be taken concurrently with the prerequisite with instructor permission.
Taught by: Buja
Course usually offered in spring term
Also Offered As: STAT 580, STAT 780
Prerequisite: STAT 405 OR STAT 470
Activity: Lecture
1.0 Course Unit

STAT 490 Causal Inference
Questions about cause are at the heart of many everyday decisions and public policies. Does eating an egg every day cause people to live longer or shorter or have no effect? Do gun control laws cause more or less murders or have no effect? Causal inference is the subfield of statistics that considers how we should make inferences about such questions. This course will cover the key concepts and methods of causal inference rigorously. The course is intended for statistics concentrators and minors. Knowledge of R such as that covered in STAT 405 or STAT 470 is recommended.
Taught by: Small
Course usually offered in spring term
Also Offered As: STAT 590
Prerequisite: STAT 430 AND (STAT 102 OR STAT 112 OR STAT 431)
Activity: Lecture
1.0 Course Unit

STAT 500 Applied Regression and Analysis of Variance
An applied graduate level course in multiple regression and analysis of variance for students who have completed an undergraduate course in basic statistical methods. Emphasis is on practical methods of data analysis and their interpretation. Covers model building, general linear hypothesis, residual analysis, leverage and influence, one-way anova, two-way anova, factorial anova. Primarily for doctoral students in the managerial, behavioral, social and health sciences. Permission of instructor required to enroll.
Taught by: Rosenbaum
Course usually offered in fall term
Also Offered As: BSTA 550, PSYC 611
Activity: Lecture
1.0 Course Unit

STAT 501 Introduction to Nonparametric Methods and Log-linear Models
An applied graduate level course for students who have completed an undergraduate course in basic statistical methods. Covers two unrelated topics: loglinear and logit models for discrete data and nonparametric methods for nonnormal data. Emphasis is on practical methods of data analysis and their interpretation. Primarily for doctoral students in the managerial, behavioral, social and health sciences. Permission of instructor required to enroll.
Taught by: Rosenbaum
Course usually offered in spring term
Also Offered As: PSYC 612
Activity: Lecture
1.0 Course Unit
STAT 503 Data Analytics and Statistical Computing
This course will introduce a high-level programming language, called R, that is widely used for statistical data analysis. Using R, we will study and practice the following methodologies: data cleaning, feature extraction; web scrubbing, text analysis; data visualization; fitting statistical models; simulation of probability distributions and statistical models; statistical inference methods that use simulations (bootstrap, permutation tests).
Prerequisite: Two courses at the statistics 400 or 500 level.
Taught by: Buja
One-term course offered either term
Also Offered As: STAT 470, STAT 770
Activity: Lecture
1.0 Course Unit

STAT 510 Probability
One-term course offered either term
Also Offered As: STAT 430
Activity: Lecture
1.0 Course Unit

STAT 511 Statistical Inference
Graphical displays; one- and two-sample confidence intervals; one- and two-sample hypothesis tests; one- and two-way ANOVA; simple and multiple linear least-squares regression; nonlinear regression; variable selection; logistic regression; categorical data analysis; goodness-of-fit tests. A methodology course.
One-term course offered either term
Also Offered As: STAT 431
Prerequisite: STAT 510
Activity: Lecture
1.0 Course Unit

STAT 512 Mathematical Statistics
An introduction to the mathematical theory of statistics. Estimation, with a focus on properties of sufficient statistics and maximum likelihood estimators. Hypothesis testing, with a focus on likelihood ratio tests and the consequent development of 't' tests and hypothesis tests in regression and ANOVA. Nonparametric procedures.
Course usually offered in spring term
Also Offered As: STAT 432
Prerequisite: STAT 430 OR STAT 510
Activity: Lecture
1.0 Course Unit

STAT 513 Advanced Statistical Inference I
STAT 513 is aimed at first-year Ph.D. students and builds a good foundation in statistical inference from the first principles of probability.
Taught by: Krieger
Course usually offered in fall term
Prerequisite: STAT 430 AND STAT 431 AND MATH 114 AND MATH 240
Activity: Lecture
1.0 Course Unit

STAT 514 Advanced Statistical Inference II
STAT 514 is a natural continuation of STAT 513, and the main focus is on asymptotic evaluations and regression models. Time permitting, it also discusses some basic nonparametric statistical methods.
Taught by: Low
Course usually offered in spring term
Prerequisite: STAT 515
Activity: Lecture
1.0 Course Unit

STAT 515 Advanced Statistical Inference I
STAT 515 is aimed at first-year Ph.D. students and builds a good foundation in statistical inference from the first principles of probability.
Taught by: Krieger
Course usually offered in fall term
Prerequisite: STAT 430 AND STAT 431 AND MATH 114 AND MATH 240
Activity: Lecture
1.0 Course Unit

STAT 516 Advanced Statistical Inference II
STAT 516 is a natural continuation of STAT 515, and the main focus is on asymptotic evaluations and regression models. Time permitting, it also discusses some basic nonparametric statistical methods.
Taught by: Low
Course usually offered in spring term
Prerequisite: STAT 515
Activity: Lecture
1.0 Course Unit

STAT 520 Applied Econometrics I
This is a course in econometrics for graduate students. The goal is to prepare students for empirical research by studying econometric methodology and its theoretical foundations. Students taking the course should be familiar with elementary statistical methodology and basic linear algebra, and should have some programming experience. Topics include conditional expectation and linear projection, asymptotic statistical theory, ordinary least squares estimation, the bootstrap and jackknife, instrumental variables and two-stage least squares, specification tests, systems of equations, generalized least squares, and introduction to use of linear panel data models.
Taught by: Shaman
Course usually offered in fall term
Prerequisite: MATH 114 AND MATH 312
Activity: Lecture
1.0 Course Unit

STAT 521 Applied Econometrics II
Topics include system estimation with instrumental variables, fixed effects and random effects estimation, M-estimation, nonlinear regression, quantile regression, maximum likelihood estimation, generalized method of moments estimation, minimum distance estimation, and binary and multinomial response models. Both theory and applications will be stressed.
Taught by: Shaman
Course usually offered in spring term
Prerequisite: STAT 520
Activity: Lecture
1.0 Course Unit

STAT 522 Applied Econometrics III
This is a course in econometrics for graduate students. The goal is to prepare students for empirical research by studying econometric methodology and its theoretical foundations. Students taking the course should be familiar with elementary statistical methodology and basic linear algebra, and should have some programming experience. Topics include conditional expectation and linear projection, asymptotic statistical theory, ordinary least squares estimation, the bootstrap and jackknife, instrumental variables and two-stage least squares, specification tests, systems of equations, generalized least squares, and introduction to use of linear panel data models.
Taught by: Shaman
Course usually offered in fall term
Prerequisite: MATH 114 AND MATH 312
Activity: Lecture
1.0 Course Unit

STAT 523 Applied Econometrics IV
This is a course in econometrics for graduate students. The goal is to prepare students for empirical research by studying econometric methodology and its theoretical foundations. Students taking the course should be familiar with elementary statistical methodology and basic linear algebra, and should have some programming experience. Topics include conditional expectation and linear projection, asymptotic statistical theory, ordinary least squares estimation, the bootstrap and jackknife, instrumental variables and two-stage least squares, specification tests, systems of equations, generalized least squares, and introduction to use of linear panel data models.
Taught by: Shaman
Course usually offered in spring term
Prerequisite: STAT 521
Activity: Lecture
1.0 Course Unit

STAT 524 Applied Econometrics V
This is a course in econometrics for graduate students. The goal is to prepare students for empirical research by studying econometric methodology and its theoretical foundations. Students taking the course should be familiar with elementary statistical methodology and basic linear algebra, and should have some programming experience. Topics include conditional expectation and linear projection, asymptotic statistical theory, ordinary least squares estimation, the bootstrap and jackknife, instrumental variables and two-stage least squares, specification tests, systems of equations, generalized least squares, and introduction to use of linear panel data models.
Taught by: Shaman
Course usually offered in fall term
Prerequisite: MATH 114 AND MATH 312
Activity: Lecture
1.0 Course Unit

STAT 525 Applied Econometrics VI
This is a course in econometrics for graduate students. The goal is to prepare students for empirical research by studying econometric methodology and its theoretical foundations. Students taking the course should be familiar with elementary statistical methodology and basic linear algebra, and should have some programming experience. Topics include conditional expectation and linear projection, asymptotic statistical theory, ordinary least squares estimation, the bootstrap and jackknife, instrumental variables and two-stage least squares, specification tests, systems of equations, generalized least squares, and introduction to use of linear panel data models.
Taught by: Shaman
Course usually offered in spring term
Prerequisite: STAT 522
Activity: Lecture
1.0 Course Unit

STAT 526 Advanced Econometrics I
This is a course in econometrics for graduate students. The goal is to prepare students for empirical research by studying econometric methodology and its theoretical foundations. Students taking the course should be familiar with elementary statistical methodology and basic linear algebra, and should have some programming experience. Topics include conditional expectation and linear projection, asymptotic statistical theory, ordinary least squares estimation, the bootstrap and jackknife, instrumental variables and two-stage least squares, specification tests, systems of equations, generalized least squares, and introduction to use of linear panel data models.
Taught by: Shaman
Course usually offered in fall term
Prerequisite: MATH 114 AND MATH 312
Activity: Lecture
1.0 Course Unit

STAT 527 Advanced Econometrics II
This is a course in econometrics for graduate students. The goal is to prepare students for empirical research by studying econometric methodology and its theoretical foundations. Students taking the course should be familiar with elementary statistical methodology and basic linear algebra, and should have some programming experience. Topics include conditional expectation and linear projection, asymptotic statistical theory, ordinary least squares estimation, the bootstrap and jackknife, instrumental variables and two-stage least squares, specification tests, systems of equations, generalized least squares, and introduction to use of linear panel data models.
Taught by: Shaman
Course usually offered in spring term
Prerequisite: STAT 526
Activity: Lecture
1.0 Course Unit
STAT 571 Modern Data Mining
Modern Data Mining: Statistics or Data Science has been evolving rapidly to keep up with the modern world. While classical multiple regression and logistic regression techniques continue to be the major tools we go beyond to include methods built on top of linear models such as LASSO and Ridge regression. Contemporary methods such as KNN (K nearest neighbor), Random Forest, Support Vector Machines, Principal Component Analyses (PCA), the bootstrap and others are also covered. Text mining especially through PCA is another topic of the course. While learning all the techniques, we keep in mind that our goal is to tackle real problems. Not only do we go through a large collection of interesting, challenging real-life data sets but we also learn how to use the free, powerful software ‘R’ in connection with each of the methods exposed in the class. Prerequisite: two courses at the statistics 400 or 500 level or permission from instructor.
Taught by: Zhao
One-term course offered either term
Also Offered As: STAT 471, STAT 701
Activity: Lecture
1.0 Course Unit

STAT 580 Advanced Statistical Computing
This course will build on the fundamental concepts introduced in the prerequisite courses to allow students to acquire knowledge and programming skills in large-scale data analysis, data visualization, and stochastic simulation. Prerequisite: STAT 503, 705, or 770 or equivalent background acquired through a combination of online courses that teach the R language and practical experience.
Taught by: Buja
Course usually offered in spring term
Also Offered As: STAT 480, STAT 780
Prerequisite: STAT 503 OR STAT 705 OR STAT 770
Activity: Lecture
1.0 Course Unit

STAT 590 Causal Inference
Questions about cause are at the heart of many everyday decisions and public policies. Does eating an egg every day cause people to live longer or shorter or have no effect? Do gun control laws cause more or less murders or have no effect? Causal inference is the subfield of statistics that considers how we should make inferences about such questions.
This course will cover the key concepts and methods of causal inference rigorously. Background in probability and statistics; some knowledge of R is recommended.
Taught by: Small
Course usually offered in spring term
Also Offered As: STAT 490
Activity: Lecture
1.0 Course Unit

STAT 613 Regression Analysis for Business
This course provides the fundamental methods of statistical analysis, the art and science of extracting information from data. The course will begin with a focus on the basic elements of exploratory data analysis, probability theory and statistical inference. With this as a foundation, it will proceed to explore the use of the key statistical methodology known as regression analysis for solving business problems, such as the prediction of future sales and the response of the market to price changes. The use of regression diagnostics and various graphical displays supplement the basic numerical summaries and provides insight into the validity of the models. Specific important topics covered include least squares estimation, residuals and outliers, tests and confidence intervals, correlation and autocorrelation, collinearity, and randomization. The presentation relies upon computer software for most of the needed calculations, and the resulting style focuses on construction of models, interpretation of results, and critical evaluation of assumptions.
Course usually offered in fall term
Prerequisite: STAT 611
Activity: Lecture
1.0 Course Unit

STAT 621 Accelerated Regression Analysis for Business
STAT 621 is intended for students with recent, practical knowledge of the use of regression analysis in the context of business applications. This course covers the material of STAT 613, but omits the foundations to focus on regression modeling. The course reviews statistical hypothesis testing and confidence intervals for the sake of standardizing terminology and introducing software, and then moves into regression modeling. The pace presumes recent exposure to both the theory and practice of regression and will not be accommodating to students who have not seen or used these methods previously. The interpretation of regression models within the context of applications will be stressed, presuming knowledge of the underlying assumptions and derivations. The scope of regression modeling that is covered includes multiple regression analysis with categorical effects, regression diagnostic procedures, interactions, and time series structure. The presentation of the course relies on computer software that will be introduced in the initial lectures. Recent exposure to the theory and practice of regression modeling is recommended.
Taught by: George
Course usually offered in fall term
Activity: Lecture
0.5 Course Units
STAT 701 Modern Data Mining
Modern Data Mining: Statistics or Data Science has been evolving rapidly to keep up with the modern world. While classical multiple regression and logistic regression technique continue to be the major tools we go beyond to include methods built on top of linear models such as LASSO and Ridge regression. Contemporary methods such as KNN (K nearest neighbor), Random Forest, Support Vector Machines, Principal Component Analyses (PCA), the bootstrap and others are also covered. Text mining especially through PCA is another topic of the course. While learning all the techniques, we keep in mind that our goal is to tackle real problems. Not only do we go through a large collection of interesting, challenging real-life data sets but we also learn how to use the free, powerful software ‘R’ in connection with each of the methods exposed in the class. Prerequisite: two courses at the statistics 400 or 500 level or permission from instructor.
Taught by: Zhao
One-term course offered either term
Also Offered As: STAT 471, STAT 571
Activity: Lecture
1.0 Course Unit

STAT 705 Statistical Computing with R
The goal of this course is to introduce students to the R programming language and related eco-system. This course will provide a skill-set that is in demand in both the research and business environments. In addition, R is a platform that is used and required in other advanced classes taught at Wharton, so that this class will prepare students for these higher level classes and electives.
Taught by: Su, Waterman
One-term course offered either term
Also Offered As: STAT 405
Prerequisite: STAT 613 OR STAT 621
Activity: Lecture
0.5 Course Units

STAT 711 Forecasting Methods for Management
This course provides an introduction to the wide range of techniques available for statistical forecasting. Qualitative techniques, smoothing and decomposition of time series, regression, adaptive methods, autoregressive-moving average modeling, and ARCH and GARCH formulations will be surveyed. The emphasis will be on applications, rather than technical foundations and derivations. The techniques will be studied critically, with examination of their usefulness and limitations.
Taught by: Shaman
One-term course offered either term
Also Offered As: STAT 435
Prerequisite: STAT 613 OR STAT 621
Activity: Lecture
1.0 Course Unit

STAT 722 Predictive Analytics for Business (formerly STAT 622)
This course follows from the introductory regression classes, STAT 102, STAT 112, and STAT 431 for undergraduates and STAT 613 for MBAs. It extends the ideas from regression modeling, focusing on the core business task of predictive analytics as applied to realistic business related data sets. In particular it introduces automated model selection tools, such as stepwise regression and various current model selection criteria such as AIC and BIC. It delves into classification methodologies such as logistic regression. It also introduces classification and regression trees (CART) and the popular predictive methodology known as the random forest. By the end of the course the student will be familiar with and have applied all these tools and will be ready to use them in a work setting. The methodologies can all be implemented in either the JMP or R software packages.
One-term course offered either term
Also Offered As: STAT 422
Prerequisite: STAT 613 OR STAT 621
Activity: Lecture
0.5 Course Units

STAT 724 Text Analytics
This course introduces methods for the analysis of unstructured data, focusing on statistical models for text. Techniques include those for sentiment analysis, topic models, and predictive analytics. Course includes topics from natural language processing (NLP), such as identifying parts of speech, parsing sentences (e.g., subject and predicate), and named entity recognition (people and places). Unsupervised techniques suited to feature creation provide variables suited to traditional statistical models (regression) and more recent approaches (regression trees). Examples that span the course illustrate the success of text analytics. Hierarchical generating models often associated with nonparametric Bayesian analysis supply theoretical foundations. Students should be familiar with regression models at the level of STAT 613 and the R statistics language at the level of STAT 705. Familiarity with the R-Studio development environment is presumed, as well as common R packages such as stringr, dplyr and ggplot. Those with more knowledge of Statistics, such as from STAT 722, or computing skills will benefit. The predominant software used in the course is R, with bits of JMP when helpful for interactive illustration. Familiarity with basic probability models is helpful but not presumed.
Taught by: Stine
One-term course offered either term
Also Offered As: STAT 424
Activity: Lecture
0.5 Course Units

STAT 770 Data Analytics and Statistical Computing
This course will introduce a high-level programming language, called R, that is widely used for statistical data analysis. Using R, we will study and practice the following methodologies: data cleaning, feature extraction; web scrubbing, text analysis; data visualization; fitting statistical models; simulation of probability distributions and statistical models; statistical inference methods that use simulations (bootstrap, permutation tests). Prerequisite: Two courses at the statistics 400 or 500 level.
Taught by: Buja
One-term course offered either term
Also Offered As: STAT 470, STAT 503
Activity: Lecture
1.0 Course Unit

2020-21 Catalog | Generated 09/18/20
STAT 776 Applied Probability Models in Marketing
This course will expose students to the theoretical and empirical ‘building blocks’ that will allow them to construct, estimate, and interpret powerful models of consumer behavior. Over the years, researchers and practitioners have used these models for a wide variety of applications, such as new product sales, forecasting, analyses of media usage, and targeted marketing programs. Other disciplines have seen equally broad utilization of these techniques. The course will be entirely lecture-based with a strong emphasis on real-time problem solving. Most sessions will feature sophisticated numerical investigations using Microsoft Excel. Much of the material is highly technical.
Taught by: Fader
Course usually offered in spring term
Also Offered As: MKTG 476, MKTG 776, STAT 476
Activity: Lecture
1.0 Course Unit
Notes: Format: Lecture, real-time problem solving

STAT 777 Introduction to Python for Data Science
The goal of this course is to introduce the Python programming language within the context of the closely related areas of statistics and data science. Students will develop a solid grasp of Python programming basics, as they are exposed to the entire data science workflow, starting from interacting with SQL databases to query and retrieve data, through data wrangling, reshaping, summarizing, analyzing and ultimately reporting their results. Competency in Python is a critical skill for students interested in data science. Prerequisites: No prior programming experience is expected, but statistics, through the level of multiple regression is required. This requirement may be fulfilled with MBA courses such as STAT 613/621; or by waiving MBA statistics.
Taught by: Richard Waterman
Also Offered As: OIDD 477, OIDD 777, STAT 477
Activity: Lecture
0.5 Course Units

STAT 780 Advanced Statistical Computing
This course will build on the fundamental concepts introduced in the prerequisite courses to allow students to acquire knowledge and programming skills in large-scale data analysis, data visualization, and stochastic simulation. Prerequisite: STAT 503, 705, or 770 or equivalent background acquired through a combination of online courses that teach the R language and practical experience.
Taught by: Buja
Course usually offered in spring term
Also Offered As: STAT 480, STAT 580
Prerequisite: STAT 503 OR STAT 705 OR STAT 770
Activity: Lecture
1.0 Course Unit

STAT 851 Fundamentals of Actuarial Science I
This course is the usual entry point in the actuarial science program. It is required for students who plan to concentrate or minor in actuarial science. It can also be taken by others interested in the mathematics of personal finance and the use of mortality tables. For future actuaries, it provides the necessary knowledge of compound interest and its applications, and basic life contingencies definition to be used throughout their studies. Non-actuaries will be introduced to practical applications of finance mathematics, such as loan amortization and bond pricing, and premium calculation of typical life insurance contracts. Main topics include annuities, loans and bonds; basic principles of life contingencies and determination of annuity and insurance benefits and premiums. Prerequisite: One semester of calculus.
Taught by: Lemaire
Course usually offered in fall term
Also Offered As: BEPP 451, BEPP 851, STAT 451
Activity: Lecture
1.0 Course Unit

STAT 852 Fundamentals of Actuarial Science II
This specialized course is usually only taken by Wharton students who plan to concentrate in actuarial science and Penn students who plan to minor in actuarial mathematics. It provides a comprehensive analysis of advanced life contingencies problems such as reserving, multiple life functions, multiple decrement theory with application to the valuation of pension plans.
Taught by: Lemaire
Course usually offered in spring term
Also Offered As: BEPP 452, BEPP 852, STAT 452
Prerequisite: STAT 851 OR BEPP 851
Activity: Lecture
1.0 Course Unit

STAT 853 Actuarial Statistics
This course covers models for insurer’s losses, and applications of Markov chains. Poisson processes, including extensions such as non-homogeneous, compound, and mixed Poisson processes are studied in detail. The compound model is then used to establish the distribution of losses. An extensive section on Markov chains provides the theory to forecast future states of the process, as well as numerous applications of Markov chains to insurance, finance, and genetics. The course is abundantly illustrated by examples from the insurance and finance literature. While most of the students taking the course are future actuaries, other students interested in applications of statistics may discover in class many fascinating applications of stochastic processes and Markov chains. Prerequisite: Two semesters of statistics.
Taught by: Lemaire
Course usually offered in fall term
Also Offered As: BEPP 453, BEPP 853, STAT 453
Activity: Lecture
1.0 Course Unit

STAT 859 Independent Study
Written permission of instructor, the department MBA advisor and course coordinator required to enroll.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
STAT 915 Nonparametric Inference
Statistical inference when the functional form of the distribution is not specified. Nonparametric function estimation, density estimation, survival analysis, contingency tables, association, and efficiency. Course not offered every year
Prerequisite: STAT 520
Activity: Lecture
1.0 Course Unit

STAT 920 Sample Survey Methods
This course will cover the design and analysis of sample surveys. Topics include simple random sampling, stratified sampling, cluster sampling, graphics, regression analysis using complex surveys and methods for handling nonresponse bias.
Taught by: Small
Course not offered every year
Prerequisite: STAT 520 OR STAT 961 OR STAT 970
Activity: Lecture
1.0 Course Unit

STAT 921 Observational Studies
This course will cover statistical methods for the design and analysis of observational studies. Topics will include the potential outcomes framework for causal inference; randomized experiments; matching and propensity score methods for controlling confounding in observational studies; tests of hidden bias; sensitivity analysis; and instrumental variables.
Taught by: Small
One-term course offered either term
Prerequisite: STAT 520 OR STAT 961 OR STAT 970
Activity: Lecture
1.0 Course Unit

STAT 925 Multivariate Analysis: Theory
This course prepares PhD students in statistics for research in multivariate statistics and high dimensional statistical inference. Topics from classical multivariate statistics include the multivariate normal distribution and the Wishart distribution; estimation and hypothesis testing of mean vectors and covariance matrices; principal component analysis, canonical correlation analysis and discriminant analysis; etc. Topics from modern multivariate statistics include the Marcenko-Pastur law, the Tracy-Widom law, nonparametric estimation and hypothesis testing of high-dimensional covariance matrices, high-dimensional principal component analysis, etc.
Taught by: Ma
Course not offered every year
Prerequisite: STAT 930 OR STAT 970 OR STAT 972
Activity: Lecture
1.0 Course Unit

STAT 926 Multivariate Analysis: Methodology
This is a course that prepares PhD students in statistics for research in multivariate statistics and data visualization. The emphasis will be on a deep conceptual understanding of multivariate methods to the point where students will propose variations and extensions to existing methods or whole new approaches to problems previously solved by classical methods. Topics include: principal component analysis, canonical correlation analysis, generalized canonical analysis; nonlinear extensions of multivariate methods based on optimal transformations of quantitative variables and optimal scaling of categorical variables; shrinkage- and sparsity-based extensions to classical methods; clustering methods of the k-means and hierarchical varieties; multidimensional scaling, graph drawing, and manifold estimation.
Taught by: Buja
Course not offered every year
Prerequisite: STAT 961
Activity: Lecture
1.0 Course Unit

STAT 927 Bayesian Statistical Theory and Methods
This graduate course will cover the modeling and computation required to perform advanced data analysis from the Bayesian perspective. We will cover fundamental topics in Bayesian probability modeling and implementation, including recent advances in both optimization and simulation-based estimation strategies. Key topics covered in the course include hierarchical and mixture models, Markov Chain Monte Carlo, hidden Markov and dynamic linear models, tree models, Gaussian processes and nonparametric Bayesian strategies.
Taught by: Jensen
Course not offered every year
Prerequisite: STAT 430 OR STAT 510
Activity: Lecture
1.0 Course Unit

STAT 928 Statistical Learning Theory
Statistical learning theory studies the statistical aspects of machine learning and automated reasoning, through the use of (sampled) data. In particular, the focus is on characterizing the generalization ability of learning algorithms in terms of how well they perform on ‘new’ data when trained on some given data set. The focus of the course is on: providing the fundamental tools used in this analysis; understanding the performance of widely used learning algorithms; understanding the ‘art’ of designing good algorithms, both in terms of statistical and computational properties. Potential topics include: empirical process theory; online learning; stochastic optimization; margin based algorithms; feature selection; concentration of measure. Background in probability and linear algebra recommended.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

STAT 930 Probability Theory
Taught by: Pemantle
Course usually offered in fall term
Also Offered As: MATH 648
Prerequisite: STAT 430 OR STAT 510 OR MATH 608
Activity: Lecture
1.0 Course Unit
STAT 931 Stochastic Processes
Course not offered every year
Also Offered As: MATH 547, MATH 649
Prerequisite: MATH 546 OR STAT 930
Activity: Lecture
1.0 Course Unit

STAT 955 Stochastic Calculus and Financial Applications
Selected topics in the theory of probability and stochastic processes.
Course usually offered in fall term
Prerequisite: STAT 930
Activity: Lecture
1.0 Course Unit

STAT 961 Statistical Methodology
This is a course that prepares 1st year PhD students in statistics for a research career. This is not an applied statistics course. Topics covered include: linear models and their high-dimensional geometry, statistical inference illustrated with linear models, diagnostics for linear models, bootstrap and permutation inference, principal component analysis, smoothing and cross-validation.
Taught by: Buja
Course usually offered in fall term
Prerequisite: STAT 431 OR STAT 520
Activity: Lecture
1.0 Course Unit

STAT 962 Advanced Methods for Applied Statistics
This course is designed for Ph.D. students in statistics and will cover various advanced methods and models that are useful in applied statistics. Topics for the course will include missing data, measurement error, nonlinear and generalized linear regression models, survival analysis, experimental design, longitudinal studies, building R packages and reproducible research.
Taught by: Small
Course usually offered in spring term
Prerequisite: STAT 961
Activity: Lecture
1.0 Course Unit

STAT 970 Mathematical Statistics
Decision theory and statistical optimality criteria, sufficiency, point estimation and hypothesis testing methods and theory.
Taught by: Small
Course usually offered in fall term
Prerequisite: STAT 431 OR STAT 520
Activity: Lecture
1.0 Course Unit

STAT 971 Introduction to Linear Statistical Models
Taught by: Ma
Course usually offered in spring term
Prerequisite: STAT 970
Activity: Lecture
1.0 Course Unit

STAT 972 Advanced Topics in Mathematical Statistics
A continuation of STAT 970.
Taught by: Cai
One-term course offered either term
Prerequisite: STAT 970 AND STAT 971
Activity: Lecture
1.0 Course Unit

STAT 974 Modern Regression for the Social, Behavioral and Biological Sciences
Function estimation and data exploration using extensions of regression analysis: smoothers, semiparametric and nonparametric regression, and supervised machine learning. Conceptual foundations are addressed as well as hands-on use for data analysis.
Taught by: Berk
Course usually offered in spring term
Also Offered As: CRIM 474, STAT 474
Prerequisite: STAT 102 OR STAT 112
Activity: Lecture
1.0 Course Unit

STAT 991 Seminar in Advanced Application of Statistics
This seminar will be taken by doctoral candidates after the completion of most of their coursework. Topics vary from year to year and are chosen from advance probability, statistical inference, robust methods, and decision theory with principal emphasis on applications.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

STAT 995 Dissertation
One-term course offered either term
Activity: Dissertation
1.0 Course Unit

STAT 999 Independent Study
Written permission of instructor and the department course coordinator required to enroll.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
**Sudanese Arabic (SARB)**

**SARB 548 Sudanese Arabic**

Sudan is a country with a rich history and diverse cultures and people. Sudan is surrounded by nine countries. Two of Sudan’s neighbors have Arabic as their official language (Egypt & Libya). While in neighboring Chad and Eritrea, Arabic is widely spoken. The only barrier that divides Sudan from Arabia is the Red Sea. Arabic is the official language of the Sudan, and Sudanese pidgin Arabic (Juba Arabic) is widely used in the southern part of the country. Sudanese colloquial Arabic has close resemblance to Egyptian Colloquial Arabic and to Classical Arabic. Sudanese colloquial Arabic is also spoken and is intelligible in Eritrea, Chad, Nigeria and many places in West Africa. This course will focus on speaking, listening, reading, & writing Sudanese Arabic through the followings: 1- Speaking: Conversing in Sudanese Arabic in various settings. 2- Reading & Writing: Reading and writing of Sudanese Arabic Texts. 3- Listening: Listening to various audio recordings of Sudanese Arabic in different forms and settings. Prerequisite: Knowledge of Arabic equivalent to intermediate level and higher is required for this course.

For BA Students: Language Course

Taught by: Ali B Ali-Dinar

Course not offered every year

Activity: Lecture

1.0 Course Unit

**SARB 559 Sudanese Arabic II**

Course usually offered in spring term

Activity: Lecture

1.0 Course Unit

**Swahili (SWAH)**

**SWAH 180 Elementary Swahili I**

The Elementary Swahili I course can be taken to fulfill a language requirement, or for linguistic preparation to do research on East Africa/Africa-related topics. The course emphasizes communicative competence to enable the students to acquire linguistic and extra-linguistic skills in Swahili. The content of the course is selected from various everyday life situations to enable the students to communicate in predictable common daily settings. Culture, as it relates to language use, is also part of the course content. Students will acquire the speaking, listening, reading, and writing skills at the mid-high novice level, based on the ACTFL scale. The mid-high level proficiency skills that the students will acquire constitute threshold capabilities of the second semester range of proficiency to prepare students for Elementary Swahili II course materials. Prerequisite: Offered through the Penn Language Center.

For BA Students: Language Course

Taught by: Mshomba

Course usually offered in fall term

Activity: Lecture

1.0 Course Unit

**SWAH 181 Elementary Swahili II**

This course continues to introduce basic grammar, vocabulary, and the reading and writing of Swahili to new speakers. During this term, folktales, other texts, and film selections are used to help introduce important aspects of Swahili culture and the use of the language in wide areas of Africa. Prerequisite: Offered through the Penn Language Center.

For BA Students: Language Course

Taught by: Mshomba

Course usually offered in spring term

Prerequisite: SWAH 180

Activity: Lecture

1.0 Course Unit

**SWAH 280 Intermediate Swahili I**

The objectives of this course are: to strengthen students’ knowledge of speaking, listening, reading, and writing Swahili and to compare it with the language of the students; to learn more about the cultures of East Africa and to compare it with the culture(s) of the students; to consider the relationship between that knowledge and the knowledge of other disciplines; and using that knowledge, to unite students with communities outside of class. Prerequisite: Offered through Penn Language Center.

For BA Students: Language Course

Taught by: Mshomba

Course usually offered in fall term

Also Offered As: SWAH 580

Activity: Lecture

1.0 Course Unit

**SWAH 281 Intermediate Swahili II**

At the end of the course students will be at Level 2 on the ILR (Interagency Language Roundtable) scale. Prerequisite: Offered through the Penn Language Center

For BA Students: Last Language Course

Taught by: Mshomba

Course usually offered in spring term

Prerequisite: SWAH 280

Activity: Lecture

1.0 Course Unit

**SWAH 284 Advanced Swahili I**

This is an advanced Kiswahili course which will engage learners in extended spoken and written discourse. Advanced learners of Kiswahili will listen to, read about, write and speak on authentic video materials, contemporary novels, and newspapers. They will also participate in various discussions on cultural and political issues. Prerequisite: Offered through Penn Language Center.

For BA Students: Advanced Language Course

Taught by: Mshomba

Course usually offered in fall term

Prerequisite: SWAH 280

Activity: Lecture

1.0 Course Unit
**SWAH 285 Advanced Swahili II**
The objectives are to continue to strengthen students' knowledge of speaking, listening, reading, and writing Swahili and to compare it with the language of the students; to continue learning about the cultures of East Africa and to continue making comparisons with the culture(s) of the students; to continue to consider the relationship between that knowledge and the knowledge of other disciplines; and using that knowledge, to continue to unite students with communities outside of class. Level 3 on the ILR (Interagency Language Roundtable) scale. Prerequisite: Offered through Penn Language Center.

For BA Students: Advanced Language Course
Taught by: Mshomba
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

**SWAH 484 Swahili Lang/Culture I**
This course taught in Swahili will focus on reading/writing skills and speaking/listening skills as well as structural and cultural information. The course will be structured around three thematic units: History, Politics, and Education. The course will provide background on the Swahili-speaking world: Who were the first Swahili speakers and what varieties of the language did they speak? How did Swahili spread from the coast to other Swahili-speaking areas as far inland as Uganda, Rwanda, and Congo? Swahili is a lingua franca and has importance in the spread of religion and trade movements. Influences of other languages on Swahili and influences of Swahili on local languages will be discussed. Political and educational systems will be discussed as well.

For BA Students: Advanced Language Course
Taught by: Mshomba
Course not offered every year
Prerequisite: SWAH 284 AND SWAH 285
Activity: Lecture
1.0 Course Unit

**SWAH 485 Swahili Lang/Culture II**
Continuation of Swahili Language & Culture I. Course is taught in Swahili and focuses on reading/writing skills and speaking/listening skills, as well as structural and cultural information. The course is structured around three thematic units: History, Politics, and Education.

Taught by: Mshomba
Course not offered every year
Activity: Lecture
1.0 Course Unit

**SWAH 580 Intermediate Swahili I**
The objectives of this course are: to strengthen students' knowledge of speaking, listening, reading, and writing Swahili and to compare it with the language of the students; to learn more about the cultures of East Africa and to compare it with the culture(s) of the students; to consider the relationship between that knowledge and the knowledge of other disciplines; and using that knowledge, to unite students with communities outside of class. **Swedish (SWED)**

**SWED 101 Elementary Swedish I**
Elementary Swedish I
Taught by: TBD
Also Offered As: SWED 501
Activity: Lecture
1.0 Course Unit

**SWED 102 Elementary Swedish II**
Part two of the elementary level Swedish course. Authentic texts and media will be introduced, as well as opportunities to communicate with native speakers. By the end of the spring semester you will be able to handle a range of practical situations, such as ordering in restaurants and cafes, shopping, talking about family, holidays, plans, daily routines, health, sports/hobbies, jobs and studies. You will work on expressing your opinions and intentions, likes and dislikes, and understanding basic authentic source media, spoken language, etc. You will also learn about Sweden in an international context.

Taught by: Aahren
Course offered spring; odd-numbered years
Also Offered As: SWED 502
Prerequisite: SWED 101
Activity: Lecture
1.0 Course Unit

**SWED 103 Intermediate Swedish I**
In part one of the intermediate year, students will research and explore a broad range of topics using authentic sources and course materials to gain greater fluency and familiarity with language and culture. You will meet native Swedish speakers and visit Swedish organizations in the Philadelphia area. Projects and assignments will give you ample opportunity to explore areas that are of special interest to you from academic, professional, and personal perspectives. We will learn about Swedish innovation, business, socio-economic and political structures, geography, tourism, migration, history, and about what it is like to live in Sweden today.

For BA Students: Language Course
Taught by: Aahren
Course offered fall; even-numbered years
Also Offered As: SWED 503
Prerequisite: SWED 102
Activity: Lecture
1.0 Course Unit

**SWED 104 Intermediate Swedish II**
Part two of the intermediate level Swedish course. Through in- and out-of-class interactions, you will continue to engage with your peers and native or fluent Swedish speakers. We will look at Swedish products, media, society, and culture and adapting to a rapidly changing world. We will complement the course literature with relevant authentic sources, such as online media, films, newspapers, etc. With a small class size, we have the flexibility to adapt the content to individual interests, and you will have plenty of opportunity to contribute to the total learning experience while elevating your Swedish vocabulary, grammar and communication skills.

For BA Students: Language Course
Taught by: Aahren
Course offered spring; odd-numbered years
Also Offered As: SWED 504
Prerequisite: SWED 103
Activity: Lecture
1.0 Course Unit
SWED 501 Elementary Swedish I
Elementary Swedish I
Taught by: TBD

Tamil (TAML)

TAML 406 Beginning Tamil Part I
This course introduces students to colloquial Tamil and formal written Tamil. A balance between production skills, namely writing and speaking, and comprehension skills, namely reading and listening, will be maintained throughout the course. Reading materials will introduce students to customs and habits of the Tamil speakers in Tamil Nadu, Sri Lanka, Malaysia, and Singapore. Lessons in the class will be based on a set of Tamil learning lessons and videos made available at http://www.southasia.upenn.edu/tamil and the book by the Instructor titled 'Tamil Language in Context', information available at http://www.thetamillanguage.com. By the end of the semester, students will have a working knowledge in reading Tamil text with a basic skill to write and speak the language at ACTFL's Beginner mid level.
For BA Students: Language Course
Taught by: Renganathan
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

TAML 407 Beginning Tamil Part II
This course is a continuation of the Beginner Tamil TAML406. It continues to teach grammar and spoken sill from semester I. Lessons in the class will be based on a set of Tamil learning lessons and videos made available at http://www.southasia.upenn.edu/tamil and the book by the Instructor titled 'Tamil Language in Context', information available at http://www.thetamillanguage.com. By the end of the semester, students will have a working knowledge in reading Tamil text with a basic skill to write and speak the language at ACTFL's Beginner High level.
For BA Students: Language Course
Taught by: Renganathan
Course usually offered in spring term
Prerequisite: TAML 406
Activity: Seminar
1.0 Course Unit

TAML 426 Intermediate Tamil Part I
This course develops the skills obtained either from the Beginning Tamil course or from students' prior exposure to Tamil by some other means. Basic knowledge of Tamil script, reading and writing in Tamil is required to take this course. Heavy emphasis will be made on using the language in actual environments both in spoken medium and in written medium. Multimedia materials such as audio and video facilities from the book and the website Tamil Language in Context (http://www.southasia.upenn.edu/tamil) will be used extensively to provide students an exposure to the Tamil culture and customs as followed in Tamil Nadu, India. Besides improving their speech and writing, students will also be introduced gradually to the Tamil literature, which has a two thousand years of literary history. The learning process in this course will be facilitated by the lessons and videos as provided in the website and the book. By the end of this course, students will have ACTFL's Intermediate mid level proficiency in Tamil.
For BA Students: Language Course
Taught by: Renganathan
Two terms. student must enter first term.
Activity: Lecture
1.0 Course Unit
TAML 427 Intermediate Tamil Part II
This course is a continuation of Intermediate Tamil I (TAMIL426) and it continue to develop the skills obtained either from the Beginning Tamil course or from students' prior exposure to Tamil by other means. The emphasis will be on using the language in actual environments both in spoken medium and in written medium. Multimedia materials such as audio and videos as provided in the website http://www.southasia.upenn.edu/tamil or http://www.thetamillanguage.com will be extensively used to provide students an exposure to the Tamil culture and customs as authentic as possible. Besides improving their speech and writing, students will also be introduced gradually to Tamil literature, which has two thousand years of literary history. By the end of this course, students will have ACTFL's intermediate high proficiency level.

For BA Students: Last Language Course
Taught by: Renganathan
Course usually offered in spring term
Prerequisite: TAML 427
Activity: Seminar
1.0 Course Unit

TAML 446 Advanced Tamil
This course is a continuation of the Advanced Tamil Course I and its primary focus is to concentrate particularly on any one of the genres of the Tamil language namely Sangam, medieval or modern Tamil, which span a vast variety of texts from Aham, Puram, religious poems along with a whole array of Tamil inscriptions. The familiarity from Advanced Tamil I course will be adequately used to master in any aspect of these three genres of the Tamil language. Based on the general interests of the students who are enrolled in this course specific variety of the text to concentrate upon will be selected. In the past, we have read poems from the Sangam genre Purananuru, Ahananuru, Silappatikaram, Manimekalai etc., along with the parallel religious poems from Tirumurai, Nalayira Divyaprabandam and so on. We have also read as part of this course texts from Islam literature, Tamil inscriptions and other related kinds. Text from the instructor's book (to be published), 'Ilakkiyap payaNangkaL' will be used to give a birds eye view to students about Tamil literature and the transitions that took place from Sangam, medieval and modern period. This course will train students to have a near-native proficiency in Tamil along with a professional skill in any particular variety of the Tamil language.

For BA Students: Advanced Language Course
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

Telugu (TELU)

TELU 409 Beginning Telugu Part I
This course introduces students to the basic Telugu language skills, with an emphasis on practice for listening comprehension, and speaking Telugu. Combined with exposure to Andhra culture, the classroom and online work in this course will enable interested students to pursue further language study in Telugu at the intermediate level, to carry out field research in Andhra Pradesh, or to prepare them to advanced work in Telugu Studies. An introduction to Telugu like this will also be useful for students who just want to acquire basic Telugu language skills for learning a new language or being able to communicate with Telugu speaking family and friends or to enjoy Telugu music and films.

For BA Students: Language Course
Taught by: Magier
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

TELU 410 Beginning Telugu Part II
This course continues students to the basic Telugu language skills, with an emphasis on practice for listening comprehension, and speaking Telugu. Combined with exposure to Andhra culture, the classroom and online work in this course will enable interested students to pursue further language study in Telugu at the intermediate level, to carry out field research in Andhra Pradesh, or to prepare them to advanced work in Telugu Studies. An introduction to Telugu like this will also be useful for students who just want to acquire basic Telugu language skills for learning a new language or being able to communicate with Telugu speaking family and friends or to enjoy Telugu music and films.

For BA Students: Language Course
Taught by: Magier
Course usually offered in spring term
Prerequisite: TELU 409
Activity: Lecture
1.0 Course Unit

TELU 429 Intermediate Telugu Part I
This course is designed to expand the students’ basic language skills in Telugu in order to allow them to function adequately in a Telugu-speaking environment, to immerse themselves in the rich Andhra culture, and to accomplish a more advanced competency in an interesting foreign language. This course is also aimed at students planning to conduct scholarly research in Telugu history, literature or society, or humanities or social science fieldwork in Telugu speaking areas.

For BA Students: Language Course
Taught by: Magier
Two terms. student must enter first term.
Prerequisite: TELU 410
Activity: Lecture
1.0 Course Unit
TELU 430 Intermediate Telugu Part II
This course is designed to expand the students' basic language skills in Telugu in order to allow them to function adequately in a Telugu-speaking environment, to immerse themselves in the rich Andhra culture, and to accomplish a more advanced competency in an interesting foreign language. This course is also aimed at students planning to conduct scholarly research in Telugu history, literature or society, or humanities or social science fieldwork in Telugu speaking areas.
For BA Students: Last Language Course
Taught by: Sundaram
Prerequisite: TELU 429
Activity: Seminar
1.0 Course Unit

Thai (THAI)

THAI 130 Beginning Thai I & II
An introduction to the spoken and written Thai language. Beginning Tibetan will explain the fundamentals of the modern Tibetan language in its literary and spoken forms. Students will develop the ability to read the Tibetan script and identify and analyze Tibetan grammatical forms. Students will also learn conversational Tibetan, and be introduced to the structure of spoken grammar and its pronunciation. This class will provide a foundation for reading Tibetan literature, both classical and modern, and for speaking Tibetan. Prerequisite: Offered through the Penn Language Center.
For BA Students: Language Course
Two terms. student must enter first term.
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center.

THAI 131 Beginning Thai II
Beginning Tibetan II will develop fundamentals of the modern Tibetan language in its literary and spoken forms. Students will continue learning to read Tibetan and analyze Tibetan grammatical forms. Students will also continue learning conversational Tibetan, and increase familiarity with the structures of spoken grammar and pronunciation. This course will provide a foundation for reading Tibetan literature, both classical and modern, and for speaking Tibetan. Rich and colorful culture of Tibet will be part of the curriculum.
Two terms. student must enter first term.
Prerequisite: THAI 130
Activity: Lecture
1.0 Course Unit

THAI 230 Intermediate Thai I & II
A continuation of ALAN 130, the spoken and written Thai language. Prerequisite: Offered through the Penn Language Center.
For BA Students: Language Course
Two terms. student must enter first term.
Prerequisite: THAI 131
Activity: Lecture
1.0 Course Unit

THAI 231 Intermediate Thai II
Activity: Lecture
1.0 Course Unit

Theatre Arts (THAR)

THAR 066 African American Drama: From the 1920's to the present
This course will introduce students to Pulitzer-prize winning plays such as Lynn Nottage's Sweat, groundbreaking plays such as Ntozake Shange's For Colored Girls, as well as less known plays that show the wide range of form and themes in 20th and 21st century African American drama. We will focus on performance as a mode of interpreting a script and performance as a way of understanding the intersections of race, class, and gender. In-class viewings of selected scenes in recorded productions of the plays will energize our analysis of the scripts. Short creative, performance-oriented writing assignments will produce the questions explored in the two critical essays. In addition to Sweat and For Colored Girls, our line-up may include Zora Neale Hurston's Color Struck, Anna Deavere Smith's Twilight: Los Angeles, 1992, Suzan-Lori Parks' 100 Plays for the First Hundred Days, August Wilson's Radio Golf, Lydia Diamond's Harriet Jacobs, Amiri Baraka's The Slave, and Claudia Rankine's The White Card.
Taught by: Crawford
One-term course offered either term
Also Offered As: AFRC 066, ENGL 066
Activity: Lecture
1.0 Course Unit

THAR 073 Literature and the Visual Art
Also Offered As: ARTH 299, CIMS 073, COML 073, ENGL 073, LALS 073
Activity: Lecture
1.0 Course Unit

THAR 076 Theatre in Philadelphia
This course will investigate the state of the contemporary, non-profit theatre culture of Philadelphia by examining the history, artistic mission, and current production work of selected city theatre companies. This course will also explore the creative process of theatre-making as undertaken by these theatres through the reading of plays being produced by them this fall, through an analysis of the collaborative contribution of the playwright, director, actors, and designers to the creation of a production, and, finally, through attendance at those productions mounted by the theatre companies under investigation. The members of the class will write individual essays responding to these productions, do research and give group presentations on other Philadelphia theatre companies, and participate daily in a spirited dialogue about the vitality, level of artistic accomplishment, and cultural/social value of contemporary theatre in Philadelphia.
Taught by: Malague and Schlatter
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Frequently offered as a Freshmen Seminar

THAR 100 Introduction to Theatre Arts
An introduction to different approaches to understanding and analyzing performance, representational theatre, and non-representational theatre, using as test cases both dramatic scripts and live performance. Different aspects of theatre art and theatrical process (acting, design, audience, musical theatre) will be taught by guest lecturers drawn from the Theatre Arts faculty and local professionals.
For BA Students: Arts and Letters Sector
Taught by: Malague and Schlatter
One-term course offered either term
Activity: Lecture
1.0 Course Unit
THAR 101 Theatre, History, Culture I: From Classical to the Middle Classes
This course investigates the history of theatre practice in Europe and Asia from Fifth-Century Athens to roughly the end of the Eighteenth Century. In addition to analyzing major dramatic works, this course examines the evolution of production methods - scenography, acting, costuming, theatre architecture - across cultures and key socio-historical moments. Readings will be drawn from historical research, theatrical writings, plays and contemporary social documents. A particular focus will be on the integral role that the theatre plays as a cultural institution in the ongoing civic life of major cities. The course approaches theatre as broadly interdisciplinary and examines its intersection with religious practice, political developments, national identity, geography, the visual arts and the urban landscape.
For BA Students: Arts and Letters Sector
Also Offered As: ENGL 087
Activity: Lecture
1.0 Course Unit

THAR 102 Theatre, History, Culture II: Romantics, Realists and Revolutionaries
This course investigates the history of theatre practice from the end of the Eighteenth-Century to the present, with an emphasis on interplay of mainstream practices with the newly emerging aesthetics of acting, scenography, and theatrical theory, and the interplay of popular entertainment and audiences with the self-defined aesthetic elitism of the Avant Garde. Among the aesthetics and phenomena we will examine are romanticism and melodrama; bourgeois realism and revolutionary naturalism; emotional-realist acting; the reaction against realism; political theatre; physical theatre; theatre and media; non-dramatic theatre; and theatre that challenges long-standing categories of national identity, empire, gender, and sexuality.
For BA Students: Arts and Letters Sector
Also Offered As: ENGL 097
Activity: Lecture
1.0 Course Unit

THAR 105 Narrative Across Cultures
The purpose of this course is to present a variety of narrative genres and to discuss and illustrate the modes whereby they can be analyzed. We will be looking at shorter types of narrative: short stories, novellas, and fables, and also some extracts from longer works such as autobiographies. While some works will come from the Anglo-American tradition, a larger number will be selected from European and non-Western cultural traditions and from earlier time-periods. The course will thus offer ample opportunity for the exploration of the translation of cultural values in a comparative perspective.
Taught by: Loomba
One-term course offered either term
Also Offered As: COML 125, ENGL 103, NELC 180, SAST 124
Activity: Lecture
1.0 Course Unit

THAR 104 Playwriting Workshop
This course is designed as a hands-on workshop in the art and craft of dramatic writing. It involves the study of new plays, the systematic exploration of such elements as storymaking, plot, structure, theme, character, dialogue, setting, etc., and most importantly, the development of students’ own short plays through a series of written assignments and in-class exercises. Since a great deal of this work takes place in class - through lectures, discussions, spontaneous writing exercises, and the reading of student work - weekly attendance and active participation is crucial. At the end of the semester, students' plays are read in a staged reading environment by professional actors.
Course usually offered in spring term
Also Offered As: ENGL 114
Activity: Seminar
1.0 Course Unit

THAR 115 Self-Scripting: Writing through Body and Space
In Self-Scripting, students will write through a variety of exercises and activities that put text into play with the body and space. Over the course of the semester, students will actively engage space and composition as they develop and explore scriptwriting for performance. We will explore exercises in an active laboratory setting. This course aims to expand on techniques for writing plays, poetry, and experimental biography.
Taught by: O'Karra
Course not offered every year
Also Offered As: ENGL 133
Activity: Studio
1.0 Course Unit
Notes: Required of all Theatre Arts Majors, (Pending approval 115 will become 215)

THAR 120 Introduction to Acting
Rooted in the system devised by Constantine Stanislavsky, but incorporating a wide variety of approaches, including improvisation, this course takes students step by step through the practical work an actor must do to live and behave truthfully on-stage. Beginning with relaxation and physical exercise, interactive games, and ensemble building, students then learn and put into practice basic acting techniques, including sensory work, the principles of action, objectives, given circumstances, etc. The semester culminates in the performance of a scene or scenes, most often from a play from the Realist tradition. This course strongly stresses a commitment to actor work and responsibility to one's fellow actors. Practical work is supplemented by readings from Stanislavsky and a variety of other acting theorists that may include Uta Hagen, Robert Cohen, Stella Adler, among others. Students are required to submit short essays over the course of the semester in response to the readings and in preparation for their final scene project. Prerequisite: Required of all Theatre Arts Majors
Taught by: Ferguson,Malague,Schlatter, and Staff
One-term course offered either term
Activity: Seminar
1.0 Course Unit
**THAR 121 Introduction to Directing**
This class will introduce the basic principals of stage directing, beginning with the fundamentals of three-dimensional storytelling in script and character analysis. The aim of this course is to provide students with a basic knowledge of directing through an introduction to the functional tools of the craft. Classes provide lectures and practical work in dealing with topics such as the function of the director, analyzing a script, visual composition, blocking, stage business, and working with actors. This course is a prerequisite for Advanced Directing. Prerequisite: Required of all Theatre Arts Majors
Taught by: Ferguson, Malague, Mazer, Schlatter and O’Harra
One-term course offered either term
Activity: Seminar
1.0 Course Unit

**THAR 125 The Play: Structure, Style, Meaning**
How does one read a play? Theatre, as a discipline, focuses on the traditions of live performance. In those traditions, a play text must be read not only as a piece of literature, but as a kind of ‘blueprint’ from which productions are built. This course will introduce students to a variety of approaches to reading plays and performance pieces. Drawing on a wide range of dramatic texts from different periods and places, we will examine how plays are made, considering issues such as structure, genre, style, character, and language, as well as the use of time, space, and theatrical effects. Although the course is devoted to the reading and analysis of plays, we will also view selected live and/or filmed versions of several of the scripts we study, assessing their translation from page to stage.
Taught by: Malague and Schlatter
One-term course offered either term
Also Offered As: ENGL 056
Activity: Lecture
1.0 Course Unit

**THAR 130 Introduction to Light, Set, and Costume Design**
Design for theatre (and all of the performing arts) is a dynamic, collaborative process that engages both intellect and emotion in staging the dramatic moment. The personal vision of the designer must navigate the often-uncharted waters of the production process, from the earliest, personal moments of design inspiration to the opening night performance. Design flows from creativity, is structured by research and theory, and is realized in living form by collaboration in the dynamic process of theatre-making. This class will integrate history, theory and practice of stage design in the interactive setting of the Collaborative Classroom in Van Pelt Library in this special interdisciplinary, active-learning course offering open to all Penn students. Group and individual projects, field visits, practical projects and guest speakers will be featured in this newly-revised course. Prerequisite: Required of all Theatre Arts Majors
Taught by: Baratta
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: Required of all Theatre Arts Majors

**THAR 131 Concepts of Lighting**
In this course we will cover the basic concepts of the art and craft of Stage Lighting Design. As a craft we will examine mechanics and technology of lighting design including light sources, power distribution, optics, and control. As an art we will explore how lighting ties together all the visual elements of a production and helps create an appropriate atmosphere that heightens the audience’s understanding and enjoyment of the play. Topics include: what light is, what it does, and how light influences our perception and understanding of what we see. Exercises will help the student learn how to see and to understand how light shapes and affects the appearance people and objects on stage and in everyday life. Projects work will emphasize design theory and practice (design methods, script analysis, and drafting skills). Lighting design has its roots in the theatre. The theatre continues to be a prime training ground for lighting designers, no matter what their field.
Taught by: Whinnery
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

**THAR 132 Costume**
Costume history and design provides a framework for organized study and practice in this particular facet of theatre production. It is a one-semester course, scheduled to meet once a week for a three hour session.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

**THAR 133 Concepts of Stage Design**
In this course we will cover the basic concepts of Scenic Design for the stage. Stage Design is about the look or physical appearance of the stage for a play. It reflects the way that the stage is composed artistically in regard to props, actors, shapes and color. We will explore Scene Design and the Theatre (story telling, place and local, time and period, society and culture), Scene Design as a Visual Art (principals of design and composition, style, use of space, expression of concept) and examine how it ties together all the visual elements of a production to create an appropriate atmosphere that heightens the audience’s understanding and enjoyment of the play. Topics will include: Script Analysis, Technical Production, Period Decor and Ornament; Drawing, Drafting, Model Making, and Scene Painting.
Taught by: Whinnery
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
THAR 170 Voice for the Actor
This introductory course is designed to help the actor find new freedom and range of expression with their voice and to connect their voice to their impulse. Our focus on relaxation, sensitivity and awareness, using Fitzmaurice Voicework techniques inspired by yoga and meditation, help the student access and develop their own authentic sound. They will learn how to support their voice in a healthy way, with a view to longevity, spontaneity and flexibility of use. In this course, these kinds of vocal exercises will be applied to short, character monologues, in order to foster sensitivity to our voices and breath and to the habits and tensions we have formed around speaking in public. For an actor, reconnecting with their authentic voice is essential for an honest, connected and compelling performance. This training is also useful for anyone who wants to speak in public with confidence, sincerity and ease.
Taught by: Doherty
Course usually offered in fall term
Prerequisite: THAR 120
Activity: Seminar
1.0 Course Unit

THAR 171 Movement for the Actor
The study of the art of bodily expression throughout history in theory and practice, from Classical and Oriential, African and Latin forms of dance and movement theater to the contemporary dance and theater, including mime, modern dance, post modern dance, physical theater, film, and performance art.
Taught by: Fischbeck
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
Notes: Primarily for majors. Non-majors need permission of the instructor

THAR 214 Advanced Playwriting
This course is intended to reinforce and build upon the areas covered in Level 1 Playwriting (THAR-114) so that students can refine the skills they've acquired and take them to the next level. Topics covered will include techniques for approaching the first draft, in-depth characterization, dramatic structure, conflict, shaping the action, language/dialogue (incl. subtext, rhythm, imagery, exposition etc), how to analyse your own work as a playwright, dealing with feedback, the drafting process, techniques for rewriting, collaboration (with directors, actors etc) and the 'business of the art' - working with theatres, agents, dramaturgs etc. Students will undertake to write their own one-act plays over the course. The classes will be a mixture of lecture, discussion, study of dramatic texts, writing exercises and in-class analysis of students' work.
Course not offered every year
Also Offered As: ENGL 236
Prerequisite: THAR 120 OR THAR 121
Activity: Lecture
1.0 Course Unit

THAR 220 Advanced Acting
This course continues the work begun in the Introduction to Acting class. The specific focus of the course will be on helping students to connect more deeply and truthfully with each other on stage, freeing up the body of the actor to fulfill the physical demands of characterization, and analyzing the dramatic text to clarify objectives and focus action through unit breakdown. Attention will also be given to helping students work through specific problems and personal, creative obstacles. The basis of the course will be scene work taken from the twentieth-century repertoire (realist and non-realist plays), a classical monologue, and exercises taken from a variety of performance traditions. The course also includes readings from modern theorists and practitioners.
Taught by: Ferguson, Malague, Schlatter and O'Harra
Course not offered every year
Prerequisite: THAR 120
Activity: Seminar
1.0 Course Unit

THAR 236 Topics in Renaissance Drama: Acting Shakespeare
This is a hands-on studio course designed to empower actors (and directors, designers and dramaturgs) to use the structure of Shakespeare's language and the conventions of Shakespeare's stage to build performance, using the skills and method of the contemporary actor. After the class works collectively on sonnets and speeches, all of the speech- and scene-work will be drawn from a single Shakespeare play (to be determined), with two reciprocal goals: to use the script to build the performance, and to use what we discover through performance to build an interpretation of the script. NOTE: the normal prerequisite for this course is THAR 120 or THAR 121 or their equivalents; but exceptions will be made by permission of he instructor.
Taught by: Mazer
Course not offered every year
Also Offered As: ENGL 236
Prerequisite: THAR 120 OR THAR 121
Activity: Seminar
1.0 Course Unit
Notes: This course is not open to freshmen. Instructor permission is required.

THAR 240 Advanced Topics in Theatre History
The purpose of this course is to introduce students to the basic materials and methods of theatre history and historiography, as applied to a particular topic, organized around a specific period, national group, or aesthetic issue. This course is concerned with methodological questions: how the history of theatre can be documented; how primary documents, secondary accounts, and historical and critical analyses can be synthesized; how the various components of the theatrical event—acting, scenography, playhouse architecture, audience composition, the financial and structural organization of the theatre industry, etc.—relate to one another; and how the theatre is socially and culturally constructed as an art form in relation to the politics and culture of a society in a particular time and place. Prerequisite: This class is the next level up from THAR 140 - Topics in Theatre History.
Taught by: Mazer
One-term course offered either term
Activity: Seminar
1.0 Course Unit
**THAR 250 Theatre Workshop**

This course will examine a specific aspect of theatrical practice, taught by a visiting professional theatre artist. The course, with different topics, may be repeated for credit. Recent topics have included performance art, Jacques LeCoq technique, Suzuki, and Viewpoints. Prerequisite: Crosslistings are contingent upon topics offered. For the current topics, contact the Theatre Arts office.

Taught by: Various Theatre Professionals
Course not offered every year
Activity: Seminar
1.0 Course Unit

**THAR 271 American Musical Theatre**

The American musical is an unapologetically popular art form, but many of the works that come from this tradition have advanced and contributed to the canon of theatre as a whole. In this course we will focus on both music and texts to explore ways in which the musical builds on existing theatrical traditions, as well as alters and reshapes them. Finally, it is precisely because the musical is a popular theatrical form that we can discuss changing public tastes, and the financial pressures inherent in mounting a production. Beginning with early roots in operetta, we will survey the works of prominent writers in the American musical theatre, including Kern, Berlin, Gershwin, Porter, Rodgers, Hart, Hammerstein, Bernstein, Sondheim and others. Class lecture/discussions will be illustrated with recorded examples.

Taught by: Fox
Course not offered every year
Also Offered As: CIMS 271, ENGL 285
Activity: Seminar
1.0 Course Unit

**THAR 272 American Theatre and Performance**

This course examines the development of the modern American theatre from the turn of the century to the present day. Progressing decade by decade the course investigates the work of playwrights such as Eugene O’Neil, Arthur Miller, Tennessee Williams, Edward Albee, David Mamet, August Wilson and Tony Kushner, theatre companies such as the Provincetown Players and the Group Theatre, directors, actors, and designers. Some focus will also be given to major theatrical movements such as the Federal Theatre Project, Off-Broadway, regional theatre, experimental theatre of the Sixties, and feminist theatre.

Taught by: Schlatter and Malague
Course not offered every year
Also Offered As: CIMS 273, ENGL 067
Activity: Lecture
1.0 Course Unit

**THAR 273 Dark Comedy in Theatre and Film**

This course will examine the ‘troublesome genre’ of dark comedy by looking at the ways in which theatre and film use comic and tragic structures and traditions to explore concepts and stories seemingly at odds with those traditions. Although not always organized chronologically in time, we will examine the formal and structural characteristics of tragicomedy by tracing its development, from some of its earliest roots in Roman comedy, to its manifestation in contemporary films and plays. Aside from close readings of plays and analysis of films, we will read selected critical essays and theory to enhance our understanding of how dark comedies subvert categories and expectations. We will look at how dark comedies affect audiences and read sections of plays aloud in class. Issues to be considered include comparing the way the genre translates across theatre and film (adaptation) and examining the unique placement of the genre at the heart of contemporary American culture. Students will have the opportunity to experiment with creating tragicomic effect through performance in their presentations. The class is a seminar, with required participation in discussions. Other assignments include an 8-10 page paper and a presentation. We will read plays by authors as diverse as Plautus, Anton Chekhov, and Lynn Nottage, and filmmakers including Charlie Chaplin, Sofia Coppola, and Bong Joon-ho.

Taught by: Ferguson
Also Offered As: CIMS 274, ENGL 014
Activity: Seminar
1.0 Course Unit

**THAR 274 Dramaturgy**

This course will examine the functions and methods of the dramaturg—the person in the theatrical process who advises the artistic collaborators on (among other things) new play development, the structure of the script, the playwright’s biography and other writings, the play’s first production and its subsequent production history, and the historical and regional details of the period depicted in the plays action. We will study the history of the dramaturg in the American theatre and discuss contemporary issues relating to the dramaturg’s contribution to the theatrical production (including the legal debates about the dramaturg’s contribution to the creation of RENT). And, in creative teams, the class will create dramaturgical portfolios for a season of imaginary (and, potentially, a few actual) theatrical productions.

Taught by: Mazer
Course not offered every year
Also Offered As: ENGL 256
Activity: Seminar
1.0 Course Unit

**THAR 275 Advanced Topics in Theatre**

This course will combine an intensive practical and intellectual investigation of some area of the making of theatre: performance techniques, theatrical styles, a particular period of theatre history. Please visit the Theatre Arts Program website for current topics for Thar 275 and other Theatre Arts Courses and special topics: https://theatre.sas.upenn.edu. Please visit the Theatre Arts Program website each semester for information on the available THAR 275 special topics courses: https://theatre.sas.upenn.edu. Prerequisite: This course, which may with different topics, be repeated for credit, will examine a specific aspect of theatrical practice. Recent topics have included performance art, Jacques Lecoq technique, improvisation, and puppetry.

Taught by: Fox, Ferguson, Malague, Mazer, O’Harra & Schlatter
Course not offered every year
Also Offered As: CIMS 225, ENGL 276, URBS 274
Activity: Seminar
1.0 Course Unit
THAR 279 Women in Theatre and Performance
What is feminist theatre? How do artists use live performance to provoke not only thought and feeling, but also social, personal, and political change? This course will examine a wide array of plays and performances by and about women; these pieces are, in turn, serious, hilarious, outrageous, poignant—and always provocative. Our focus will be on English-language works from the late 20th century to the present (#metoo) moment. We will read these performance texts and/or view them on stage/screen; we will also read essays that provide contextual background on feminist theatre theory and history. Throughout the semester, we will engage diverse perspectives on women and race, ethnicity, class, sexuality, and gender identity; the issues we encounter will also include marriage and motherhood, career and community, feminism and friendship, and patriarchy and power. The class will take full advantage of any related events occurring on campus or in the city, and will feature visits with guest speakers. Students will have the opportunity to pursue research on their own areas of interest (some recent examples are 'women in comedy,' trans performance, drag kings, feminist directing, etc.).
Taught by: Malague
Course not offered every year
Also Offered As: ENGL 303, GSWS 279
Activity: Seminar
1.0 Course Unit

THAR 281 Arts and Research Studio: Queer Archives, Aesthetics, and Performance
This course focuses on questions of how to represent the queer past, which it approaches from several angles: through training in archival methods and in scholarly debates about historiographical ethics (or, in the words of David Halperin, 'how to do the history of homosexuality'); through engagement with the work of artists who make archives central to their practice; and through lab-based training that aims to represent encounters with queer history through embodied performance. Expectations: This course meeting weekly for 3 hours. But as you will see listed below (these activities and dates are not confirmed for this draft syllabus) the course includes and require that you attend a series of off-campus trips both in Philadelphia and to NYC that occur outside of the class schedule. Below is a list of archives we will visit, performances we will attend, and artists' studios we will visit for in-depth conversation with artist about their practice. The course will address both practical and theoretical issues raised by research in LGBT archives. We will take advantage of local resources in Philadelphia, including the John J. Wilcox Archives at the William Way Center (http://www.waygay.org/archives/). But we will also visit the Lesbian Herstory Archives (http://www.lesbianherstoryarchives.org/) and The Downtown Collection at the Fales Library at NYU (https://guides.nyu.edu/downtown-collection) and the Franklin Furnace Performance Archives (http://www.franklinfurnace.org), all in New York City. We will also bring artists to campus to work directly with students, and will meet with artists in New York. We will take advantage of the staging of Killjoy Kastle in Philadelphia in Fall 2019. This site-specific art installation, the work of Toronto artists Allyson Mitchell and Dierdre Logue, is a haunted house that addresses the difficult history of lesbian feminism, as well as its potential for contemporary LGBT politics. Since the Haunted House will include materials related to the history of feminist and LGBT activism in Philadelphia, students in the course can actively contribute to the research for this project.
Taught by: Love
Course offered fall; odd-numbered years
Also Offered As: ENGL 280
Activity: Studio
1.0 Course Unit

THAR 282 Theatre and Politics
This course will examine the relationship between theatre and politics in the twentieth and twenty-first centuries. How do theatre artists navigate their artistic and political aims? How do we distinguish between art and propaganda? Throughout the semester we will ask how the unique components of theatre—its poetic structure, engagement with spectators, aesthetics of representation, relationship to reality, and rehearsal process—contribute to its political capacity. Students will read a variety of plays drawn from late twentieth century and contemporary global theatre practice alongside political and aesthetic theory to interrogate the relationship between artistic production, power, and resistance. We will conclude with a consideration of the ways politics is itself a performance, considering how power is supported by theatrical means and how performance functions in resistance movements.
Taught by: Thompson
Also Offered As: COML 285, ENGL 287
Activity: Seminar
1.0 Course Unit
THAR 320 Scene Study
Scene Study is an advanced acting class that combines intensive script analysis with performance of scenes; material to be explored will be chosen specifically for the members enrolled in class. Open to students who have successfully completed Introduction to Acting, this course continues with greater emphasis on the actor’s work with the text. We will study several plays together as a group, conducting Stanislavskian table work. We will then workshop and perform scenes from these plays in subsequent class sessions. In consultation with the instructor, students will identify individual goals, building on discoveries made in other Theatre Arts courses and/or prior stage work, exploring roles and plays that present actors with new challenges and expand their range. Depending on the number of students enrolled in the class, we are likely to perform at least three scenes and a monologue. Plays will be read alongside key theoretical texts, and class work will be complemented by attendance at selected live productions on campus and in Philadelphia.
Taught by: Malague
Course usually offered in fall term
Prerequisite: THAR 120
Activity: Seminar
1.0 Course Unit

THAR 321 Acting & Directing Lab
This course operates as a continuation of both Introduction to Acting (THAR120) and Introduction to Directing (THAR121). Students can take the course as actors, directors, or both. Each semester the course covers a unique topic of exploration for actors and directors. This is a studio class with a focus on scene work within various genres, styles and concentrations of theatrical practices. Some special topics might include: Japanese Theatre, Theatre as Event, Experimental Theatre, and Feminism and Form.
Taught by: O’Harra
Course usually offered in spring term
Prerequisite: THAR 120 OR THAR 121
Activity: Lecture
1.0 Course Unit

THAR 350 Rehearsal and Performance
Theatre Rehearsal and Performance provides students with deep intellectual and artistic immersion in the theatrical process through intensive research, rehearsal, and performance of a full-length stage piece. Students may enroll in this course as actors (by audition only) or as assistant directors, stage managers, dramaturgs, or designers (by permission of the instructor). Each semester, the play will be featured in the Theatre Arts Program production season; the class meeting times will vary, but will typically consist of 16-20 hours per week in the evening hours.
Taught by: Ferguson, Fox, Malague, Mazer and Schlatter
One-term course offered either term
Activity: Studio
1.0 Course Unit

THAR 485 Japanese Theater
Japan has an enormously rich and varied theatrical tradition. In this course, we will examine Japanese theatre in historical and comparative contexts.
Taught by: Kano
One-term course offered either term

Tibetan (TIBT)

TIBT 030 Beginning Tibetan I
Beginning Tibetan will explain the fundamentals of the modern Tibetan language in its literary and spoken forms. Students will develop the ability to read the Tibetan script and identify and analyze Tibetan grammatical forms. Students will also learn conversational Tibetan, and be introduced to the structure of spoken grammar and its pronunciation. This class will provide a foundation for reading Tibetan literature, both classical and modern, and for speaking Tibetan, a language that lives in Tibet and in diaspora communities around the globe. Learning the fundamentals of Tibetan language in this class will open a window into a rich and colorful culture, the unique culture of Tibet.
For BA Students: Language Course
Course not offered every year
Activity: Lecture
1.0 Course Unit

TIBT 031 Beginning Tibetan II
Beginning Tibetan II will develop the fundamentals of the modern Tibetan language in its literary and spoken forms. Students will continue learning to read Tibetan and analyze Tibetan grammatical forms. Students will also continue learning conversational Tibetan, and increase familiarity with the structures of spoken grammar and its pronunciation. This class will provide a foundation for reading Tibetan literature, both classical and modern, and for speaking Tibetan, a language that lives in Tibet and in diaspora communities around the globe. Learning the fundamentals of Tibetan language in this class will open a window into a rich and colorful culture, the unique culture of Tibet.
For BA Students: Language Course
Course not offered every year
Activity: Lecture

Twi (TWI)

TWI 160 Elementary Twi I
The Elementary Twi I course can be taken to fulfill a language requirement, or for linguistic preparation to do research on Ghana/Africa-related topics. The course emphasizes communicative competence to enable the students to acquire linguistic and extra-linguistic skills in Twi. The content of the course is selected from various everyday life situations to enable the students to communicate in predictable common daily settings. Culture, as it relates to language use, is also a part of the course content. Students will acquire the speaking, listening, reading and writing skills at the mid-high novice level, based on the ACTFL scale. The mid-high novice level proficiency skills that the students will acquire constitute threshold capabilities of the second semester range of proficiency to prepare students for Elementary Twi II course materials.

Ukrainian (UKRN)

UKRN 590 Elementary Ukrainian I
An introduction to the fundamentals of the Ukrainian language, acquisition of conversational, reading and writing skills. This course is designed for students who have no or little background in studying Ukrainian. Students will be able to develop the base for the further study of the Ukrainian language. This course provides a comprehensive introduction to modern Ukrainian language and culture for those who would like to speak Ukrainian or use the language for reading and research. The course stresses all four major communicative skills (speaking, listening comprehension, reading, writing). Prerequisite: Offered through the Penn Language Center.
For BA Students: Language Course
Taught by: Rudnytzky
Two terms. student may enter either term.
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center
UKRN 591 Elementary Ukrainian II
Continuation of SLAV 590. During the second semester, the students will study the grammar part of the course in detail. The grammar part of the course will be mostly focused on the Ukrainian nouns and the cases, students will learn and practice each case in the context of the real-life situations. In addition, students will become acquainted with various aspects of Ukrainian culture and traditions, with the special focus on the festive customs (i.e., Christmas and Easter culture in Ukraine). The course stresses all four major communicative skills (speaking, listening comprehension, reading, writing) and is a solid foundation for learning Ukrainian in future. Prerequisite: Offered through the Penn Language Center.
For BA Students: Language Course
Taught by: Rudnytzky
Two terms. student may enter either term.
Prerequisite: SLAV 590
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

UKRN 592 Intermediate Ukrainian I
This is a first-semester intermediate-level Ukrainian language course which is designed to make students practice reading, speaking and writing in Ukrainian. Current issues of Ukrainian newspapers, especially the weekly, will serve as the basic source for the study of the contemporary Ukrainian idiom. Reading, translation and discussion of featured articles on such topics as business, education, politics, science, sports et al. including advertising and horoscope style and terminology will not only be used to hone the language skills and build up vocabulary but also to acquaint the student with the latest linguistic developments in Ukraine, such as the loan-words and loan-translations, abbreviations and acronyms, ancient folk proverbs and sayings as well as contemporary technical terms. Prerequisite: Offered through the Penn Language Center.
For BA Students: Language Course
Taught by: Rudnytzky
Two terms. student may enter either term.
Prerequisite: SLAV 591
Activity: Lecture
1.0 Course Unit

UKRN 593 Intermediate Ukrainian II
This second-semester intermediate-level Ukrainian language is the continuation of the SLAV 592. Students will be able to practice reading, listening, writing and speaking Ukrainian more in the context of Ukrainian history, politics, and culture. Students will be provided with the newspapers in Ukrainian and other authentic materials that will be the basis of both the classroom discussions and homework. Prerequisite: Offered through the Penn Language Center.
For BA Students: Last Language Course
Taught by: Rudnytzky
Two terms. student may enter either term.
Prerequisite: SLAV 592
Activity: Lecture
1.0 Course Unit

UKRN 594 Advanced Ukrainian I
This advanced Ukrainian course is addressed to the students who have taken SLAV592 and SLAV593 or can already speak and read Ukrainian. The course emphasizes on the advanced vocabulary building, conversation and reading skills. It also includes the advanced grammar review with the use of Ukrainian grammar terms. Students will learn more about Ukrainian literature, history, and modern life through the authentic materials, poems and parts literature extracts. Prerequisite: Offered through the Penn Language Center.
For BA Students: Advanced Language Course
Taught by: Rudnytzky
Two terms. student may enter either term.
Prerequisite: SLAV 593
Activity: Lecture
1.0 Course Unit

UKRN 595 Advanced Ukrainian II
Continuation of SLAV 594. The course focuses on all the language skills (reading, writing, speaking, listening) on the level with the use of the authentic materials mostly from Ukrainian literature and newspapers. Students will work on reading one of the modern Ukrainian plays to be able to perform it at the end of the course. This course is a good foundation for doing the research in Ukrainian or working or studying in Ukraine. Prerequisite: Offered through the Penn Language Center
For BA Students: Advanced Language Course
Taught by: Rudnytzky
Two terms. student may enter either term.
Prerequisite: SLAV 594
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

Urban Studies (URBS)

URBS 010 Homelessness & Urban Inequality
This freshman seminar examines the homelessness problem from a variety of scientific and policy perspectives. Contemporary homelessness differs significantly from related conditions of destitute poverty during other eras of our nation’s history. Advocates, researchers and policymakers have all played key roles in defining the current problem, measuring its prevalence, and designing interventions to reduce it. The first section of this course examines the definitional and measurement issues, and how they affect our understanding of the scale and composition of the problem. Explanations for homelessness have also been varied, and the second part of the course focuses on examining the merits of some of those explanations, and in particular, the role of the affordable housing crisis. The third section of the course focuses on the dynamics of homelessness, combining evidence from ethnographic studies of how people become homeless and experience homelessness, with quantitative research on the patterns of entry and exit from the condition. The final section of the course turns to the approaches taken by policymakers and advocates to address the problem, and considers the efficacy and quandaries associated with various policy strategies. The course concludes by contemplating the future of homelessness research and public policy.
Taught by: Culhane
Course usually offered in fall term
Also Offered As: AFRC 041, SOCI 013
Activity: Seminar
1.0 Course Unit
URBS 018 Freshman Seminar
The primary goal of the freshman seminar program is to provide every freshman the opportunity for a direct personal encounter with a faculty member in a small sitting devoted to a significant intellectual endeavor. Specific topics be posted at the beginning of each academic year. Please see the College Freshman seminar website for information on course offerings: http://www.college.upenn.edu/requirements-courses.

1.0 Course Unit

URBS 050 Womanism and Identity Politics in the Realm of Hip-Hop
This course centers on the intersections of womanism, woman of color identity development, and agency within hip-hop culture. We will touch on several topics that uncover the condition of minoritized women in hip-hop media, including creating/owning space, lyrical assault, defining womanhood, sexuality, and fetishes. In exploring music, literature, advertisements, film, and television, we will discuss the ways women of color construct understandings of self, while navigating and reimagining reality within hip-hop contexts.
Taught by: Patterson
Also Offered As: GSWS 040
Activity: Seminar
1.0 Course Unit

URBS 103 Industrial Metropolis
Although we no longer think of most U.S. cities as industrial cities, metropolitan areas today are all products of industrial economies, technologies, and social systems. This course explores the industrialization and deindustrialization of American cities within their evolving global context from the era of European colonization to the present. It includes weekly readings and discussion, regular response papers and walking tours, in-class exercises, and a research paper using primary sources. Themes include energy and ecology, labor and production, inner city and suburban development, globalization, and economic restructuring. Ultimately, the class aims to give students a broad knowledge of 1) the history of industrial capitalism, 2) its effects on cities and regions over the past three centuries, and 3) analytical tools for understanding the past, present, and future of metropolitan economies, geography, and society.
For BA Students: History and Tradition Sector
Taught by: Sidorick
Course usually offered in fall term
Also Offered As: HIST 209
Activity: Seminar
1.0 Course Unit
Notes: Course is available to freshmen and sophomores

URBS 104 Transformations of Urban America: Making the Unequal Metropolis, 1945 to Today
The course traces the economic, social, and political history of American cities after World War II. It focuses on how the economic problems of the industrial city were compounded by the racial conflicts of the 1950s and 1960s and the fiscal crises of the 1970s. The last part of the course examines the forces that have led to the revitalization and stark inequality of cities in recent years.
For BA Students: Society Sector
Taught by: Cebul
One-term course offered either term
Also Offered As: HIST 153
Activity: Lecture
1.0 Course Unit

URBS 106 Freshman Seminar
The primary goal of the freshman seminar program is to provide every freshman the opportunity for a direct personal encounter with a faculty member in a small sitting devoted to a significant intellectual endeavor. Specific topics be posted at the beginning of each academic year. Please see the College Freshman seminar website for information on current course offerings http://www.college.upenn.edu/courses/seminars/freshman.php.

Notes: For Freshmen Only

URBS 112 Urban Sociology
This course is a comprehensive introduction to the sociological study of urban areas. This includes more general topics as the rise of cities and theories urbanism, as well as more specific areas of inquiry, including American urbanism, segregation, urban poverty, suburbanization and sprawl, neighborhoods and crime, and immigrant ghettos. The course will also devote significant attention to globalization and the process of urbanization in less developed counties.

URBS 120 Literature of the South Asian City: Space, Culture, Politics
The South Asian city as a way of organizing space and social relations, as a symbol, as a memoryis the subject of this course. Through primarily, though by no means exclusively, readings of literature in translation, we will gain a sense for the history of the city and the ways in which it is a setting for protest and nostalgia, social transformation and solitary flaneurie. We will see reflections of the city in poetry recited in its homes, detective novels sold in its train stations, stories scribbled in its cafes, plays staged in its theaters, and films produced in its backlots.
Readings will attempt to address urban spaces across South Asia, and will include works by writers such as Mirza Ghalib, Rabindranath Tagore, Saadat Hasan Manto, and Vijay Tendulkar. We will examine these works in the context of secondary readings, including histories and ethnological works that take up life in the modern city. Students will finish this course prepared to pursue projects dealing with the urban from multiple disciplinary perspectives. This course is suitable for anyone interested in the culture, society, or literature of South Asia, and assumes no background in South Asian languages.
Taught by: Goulding
One-term course offered either term
Also Offered As: COML 114, SAST 120
Activity: Lecture
1.0 Course Unit
URBS 121 Origin and Culture of Cities
The UN estimates that 2.9 of the world’s 6.1 billion people live in cities and that this percentage is rapidly increasing in many parts of the world. This course examines urban life and urban problems by providing anthropological perspectives on this distinctive form of human association and land use. First we will examine the ‘origin’ of cities, focusing on several of the places where cities first developed, including Mesopotamia and the Valley of Mexico. We will then examine the internal structure of non-industrial cities by looking at case studies from around the world and from connections between the cities of the past and the city in which we live and work today.
For BA Students: History and Tradition Sector
Taught by: Zettler
Course usually offered in fall term
Also Offered As: ANTH 121, NELC 103
Activity: Lecture
1.0 Course Unit

URBS 122 The City in South Asia
This interdisciplinary social science course examines key topics, themes, and analytic methods in the study of South Asia by focusing on significant South Asian cities. With one-fifth of the world’s population, South Asia and its urban centers are playing an increasingly important role in recent global economic transformations, resulting in fundamental changes within both the subcontinent and the larger world. Drawing primarily on ethnographic studies of South Asia in the context of rapid historical change, the course also incorporates research drawn from urban studies, architecture, political science, and history, as well as fiction and film. Topics include globalization and new economic dynamics in South Asia; the formation of a new urban middle class; consumption and consumer culture; urban political formations, democratic institutions, and practices; criminality & the underworld; population growth, changes in the built environment, and demographic shifts; everyday life in South Asia and ethnic, and ethnic, cultural, and linguistic identities, differences, and violence in South Asia’s urban environments. This is an introductory level course appropriate for students with no background in South Asia or for those seeking to better understand South Asia’s urban environments in the context of recent globalization and rapid historical changes.
No prerequisites. Fulfills College sector requirement in Society and in the context of recent globalization and rapid historical changes.
URBS 131 Small Business Anthropology
With a focus on minority-owned small businesses in the City of Philadelphia, this class will introduce students to the work of anthropologists who have made their careers in the business world using the tools they acquired through training in anthropology. By bringing anthropological perspectives into the workplace, business anthropologists seek to promote well-being for employees and owners, as well as consumers and the communities in which businesses operate. The class will also introduce students to Philadelphia from the point of view of minority owned small businesses. One of the two class days each week will focus on business anthropology as a profession and include readings on organizational culture, design anthropology, and the role of anthropologists in marketing and advertising, as well as in globalization processes and entrepreneurship. The second of the two days each week will focus on the city of Philadelphia and the role of small businesses within it. We will study the spatial layout of the city, the kinds of small businesses that are operative within the city and where they are located, the relationship of business to ethnicity, gentrification and its impact on small business, and the role of government and community groups in relationship to small businesses and their owners and employees. As part of the class, students will engage in guided research on specific small businesses, with the aim of developing an ethnographic understanding of the experiences of owners and employees, the opportunities they have seized upon and the problems they have confronted. We hope in the course of the semester to provide an ethnographic profile of a sampling of small businesses from different industries, which can in turn contribute to understanding larger social and cultural patterns within Philadelphia. Through a class blog or other means, we hope as well to contribute to the ability of minority small business owners to voice their experiences, as well as their fears and hopes for the future, to members of the University community and beyond.
Taught by: Urban
Also Offered As: ANTH 131
Activity: Seminar
1.0 Course Unit

URBS 135 Creative Non-Fiction Writing
A workshop course in the writing of creative nonfiction. Topics may include memoir, family history, travel writing, documentary, and other genres in which literary structures are brought to bear on the writing of nonfiction prose. May be repeated for credit with a different instructor.
One-term course offered either term
Also Offered As: AFRC 134, ENGL 135, GSWS 135
Activity: Seminar
1.0 Course Unit

URBS 136 Urban Politics in the United States
This course focuses on political responses to urbanization in the United States. Topics include local government, national urban politics, and the changing nature of cities.
For BA Students: Society Sector
Taught by: Reed
Course usually offered in spring term
Also Offered As: AFRC 136, PSCI 136
Activity: Lecture
1.0 Course Unit
URBS 137 The Sociology of Media and Popular Culture
This course relies on a variety of sociological perspectives to examine the role of media and popular culture in society, with a particular emphasis on the power of the mass media industry, the relationship between cultural consumption and status, and the social organization of leisure activities from sports to shopping.
For BA Students: Society Sector
Taught by: Grazian
One-term course offered either term
Also Offered As: SOCI 137
Activity. Lecture
1.0 Course Unit

URBS 139 Ancient Civilizations of the World
This course explores the archaeology (material culture) of early complex societies or civilizations in Egypt, Mesopotamia, and the Aegean. According to the traditional paradigm, civilization first emerged during the fourth millennium BCE in Egypt and Mesopotamia. In the Mediterranean, state-level societies first appeared in Crete and mainland Greece in the early second millennium BCE. This course investigates how and why these civilizations developed, as well as their appearance and structure in the early historic (or literate) phases of their existence. A comparative perspective will illustrate what these early civilizations have in common and the ways in which they are unique. This course will consist largely of lectures which will outline classic archaeological and anthropological theories on state formation, before turning to examine the available archaeological (and textual) data on emerging complexity in Egypt, Mesopotamia, and the Aegean. This course does not presuppose any knowledge of archaeology or ancient languages; the instructor will provide any background necessary. Because this is a course on material culture, some of the class periods will be spent at the Penn Museum of Archaeology and Anthropology. These will consist of a guided tour of a relevant gallery, as well as a hands-on object-based lab with archaeological materials selected by the instructor. This course meets the General Education Curriculums Cross Cultural Analysis foundational approach, whose aim is to help students understand and interpret the cultures of peoples (even long-dead peoples) with histories different from their own; it also fulfills the History and Tradition Sector breadth requirement.
For BA Students: History and Tradition Sector
Taught by: Zettler
Course not offered every year
Also Offered As: ANTH 139, NELC 182
Activity. Lecture

URBS 140 Inequity and Empowerment: Urban Financial Literacy
A central premise of the 'American Dream' is economic freedom, implying opportunity, security, and in the minds of many, wealth. The statistical and experiential reality, vividly evident throughout the nation’s urban cities, is a staggering inequitable distribution of resources and growing economic instability for scores of households, including those identified as middle class. Educational policy makers and organizations working to address national poverty often rally that ‘destiny shouldn't be defined by one’s zip code’ yet, due to numerous factors, it is remarkably difficult for this not to be the case. Place matters. As does history. And race. Through an analysis of ethnographic and historical texts, policy reports, academic studies, and popular media pieces, URBS 140 will help students explore the hidden factors that have formed and sustain inequities in American cities. By studying the roots and contemporary manifestations of policy decisions and practices such as discriminatory housing, predatory lending, unbanking, and deindustrialization, and contextualizing the vast (and growing) wealth gaps in America and the critical importance of intergenerational wealth, URBS 140 will shed new light on how our current economic reality has been shaped. At the same time, the course will also introduce comparative approaches to understanding personal finance. Students will assess their own present and future financial decisions alongside the broader policies and histories that have framed their choices. As an ABCS-optional course, students will share their knowledge about inequity and financial empowerment with area high school students. Students will also generate a policy analysis and/or program proposal as part of their final project that addresses an inequity theme studied in the course.
Taught by: Peterson
Course usually offered in fall term
Activity. Seminar
1.0 Course Unit
Notes: This course is co-designed and co-taught by New York Jets linebacker Brandon Copeland (W'13)

URBS 160 Race and Ethnic Relations
The course will focus on race and ethnicity in the United States. We begin with a brief history of racial categorization and immigration to the U.S. The course continues by examining a number of topics including racial and ethnic identity, interracial and interethnic friendships and marriage, racial attitudes, mass media images, residential segregation, educational stratification, and labor market outcomes. The course will include discussions of African Americans, Whites, Hispanics, Asian Americans and multiracials.

URBS 177 Faculty-Student Collaborative Action Seminar in Urban University-Community Rlt
This seminar helps students develop their capacity to solve strategic, real-world problems by working collaboratively in the classroom, on campus, and in the West Philadelphia community. Students develop proposals that demonstrate how a Penn undergraduate education might better empower students to produce, not simply ‘consume,’ societally-useful knowledge, as well as to function as caring, contributing citizens of a democratic society. Their proposals help contribute to the improvement of education on campus and in the community, as well as to the improvement of university-community relations. Additionally, students provide college access support at Paul Robeson High School for one hour each week.
Taught by: Harkavy
One-term course offered either term
Also Offered As: AFRC 078, HIST 173

1.0 Course Unit

URBS 180 Asian American Food
You are what you eat. Asian American Food explores the history, politics, and ethnic identity of food through a cultural lens. Growing food, eating, and sharing meals serve as intimate expressions of self and community. By examining the production and consumption of food, the course investigates the ways that Asian Americans navigate traditions, gender norms, religious dietary laws, food habits, and employment as they create lives in the United States. The course overviews the history of Asian American foodways, but has a particular focus on Philadelphia’s Asian American communities.

URBS 200 Urban Research Methods
This course will examine different ways of undertaking urban research. The goal will be to link substantive research questions to appropriate data and research methods. Computer-based quantitative methods, demographic techniques, mapping / GIS and qualitative approaches will be covered in this course. Student assignments will focus on constructing a neighborhood case study of a community experiencing rapid neighborhood change.
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: Fulfills Quantitative Data Analysis Requirement

URBS 202 Urban Education
This seminar focuses on two main questions: 1) How have US schools and urban ones in particular continued to reproduce inequalities rather than ameliorating them? 2) In the informational age, how do the systems and urban ones in particular continued to reproduce inequalities rather than ameliorating them? 2) In the informational age, how do the systems affect education need to change to create more successful and equitable outcomes? The course is designed to bridge the divide between theory and practice. Each class session looks at issues of equity in relation to an area of practice (e.g. lesson design, curriculum planning, fostering positive student identities, classroom management, school funding, policy planning...), while bringing theoretical frames to bear from the fields of education, sociology, anthropology and psychology.

URBS 204 Urban Law
This course will focus on selected aspects of urban law that are particularly relevant to areas of high population density. After an introduction to the American judicial system, it will examine the legal issues that arise in the management of land development and use, with special attention to constitutional questions involving equal protection, due process, and the 'takings' clause, and routine run-of-the-mill zoning challenges. This course meets the Cultural Diversity requirement.
Taught by: Keene
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

URBS 205 People and Design
The built environment of a city is more than a mere backdrop; the design can actually affect people's experiences. Environmental design primarily focuses on the relationship between people and the built environment. It also looks at how the built environment interacts with the natural one (and the potential for greater sustainability). This course will allow students to gain a deeper understanding of how people create, perceive, and use the designed environment. We'll approach these concepts by analyzing design at a variety of scales, from products to interior design to architecture. Finally, using that knowledge, we'll conclude by analyzing urban spaces of the city.
Taught by: Berman
Course usually offered in spring term
Activity: Seminar

URBS 206 Public Environment of Cities: An Introduction to the Urban Landscape
This course will explore the role of public spaces - streets, boulevards, parks and squares - in cities and their social uses. With the University of Pennsylvania campus and the City of Philadelphia serving as our laboratory, we will critically examine the evolution of the movement of corridors, open space and buildings of the urban landscape and their changing uses. Following the flaneur tradition of Baudelaire and Benjamin, we will walk the city to experience and understand the myriad environments and neighborhoods that comprise it.
Taught by: Nairn
Course usually offered in spring term
Also Offered As: URBS 506
Activity: Seminar
1.0 Course Unit

URBS 207 Asian American Communities
Who is Asian American and how and where do we recognize Asian America? This interdisciplinary course explores the multiple factors that define Asian American identity and community. In order to provide a sketch of the multifaceted experience of this growing minority group, we will discuss a wide variety of texts from scholarly, artistic, and popular (film, cinematic) sources that mark key moments in the cultural history of Asia America. The course will address major themes of community life including migration history, Asian American as model minority, race, class, and transnational scope of Asia America. In combination with the readings, this class will foster and promote independent research based on site visits to various Asian American communities in Philadelphia and will host community leaders as guest lecturers.
Taught by: Khan

URBS 216 Social Entrepreneurship
Amidst perceptions that public sector and philanthropic support for local communities is increasingly scarce, many community development practitioners are turning to social enterprise as a means to improve social and economic conditions in their neighborhoods. This course will do a deep dive into the segment of social enterprises addressing workforce development and job creation challenges, especially as they relate to returning citizens and other vulnerable adults, including several planned field visits. Building on their understanding of these fields, students will then divide into groups for a hands-on course project.
Taught by: Mandujano
Course not offered every year
Activity: Seminar
1.0 Course Unit

URBS 219 The Heart of Social Change
The Heart of Social Change: Experiments in Urban Development, Activism, and Social Entrepreneurship will seek to challenge those who desire to work for social change to consider how they may not only employ their heads and their hands, but also their hearts as they work to improve the aspects of contemporary society that mean the most to them. This seminar-based class will examine past and contemporary examples of heart-based activism, urban development and social entrepreneurship yet it will also be a space where students will be asked to experiment with ways that they too may be change agents.
Taught by: Charles Howard
Course not offered every year
Activity: Seminar

URBS 220 Jews and the City: Advanced Benjamin Franklin Seminar
Jews have always been an extraordinarily urban people. This seminar explores various aspects of the Jewish encounter with the city, examining the ways that Jewish culture has been shaped by and has helped to shape urban culture. We will examine European and American cities as well as some in Palestine/Israel, covering an expansive view of urban culture. We will consider Jewish involvement in political and cultural life, the various neighborhoods in which Jews have lived, relations with other ethnic groups, as well as many other topics. We will read some classic works in the field along with contemporary scholarship. No prior background in Jewish history is required. *This course may be applied toward the US, European, or Middle East requirements for the History Major or Minor, depending upon the research paper topic. Students must consult with the instructor to determine which geographic requirement will be fulfilled.*

URBS 236 Iraq: Ancient Cities and Empires
This course consists of an analytical survey of civilization in the ancient Mesopotamia from prehistoric periods to the middle centuries of the first millennium B.C. A strong focus is placed on Mesopotamia (Iraq, eastern Syria) proper, but it occasionally covers its adjacent regions, including Anatolia (Turkey), north-central Syria, and the Levantine coast. As we chronologically examine the origin and development of civilization in the region, various social, political, economic, and ideological topics will be explored, including subsistence, cosmology, writing, trade, technology, war, private life, burial custom, and empire. Based on both archaeological and historical evidence, these topics will be examined from archaeological, anthropological, historical and art historical perspectives. Students will be exposed to a variety of theoretical approaches and types of relevant evidence, including settlement survey data, excavated architectural remains and artifacts, and written documents. The course aims to provide students with a strong foundation for further study in Near Eastern civilization.
Taught by: Zettler
Course not offered every year
Also Offered As: ANTH 236, ANTH 636, NELC 241, NELC 641
Activity: Lecture
1.0 Course Unit

URBS 237 Berlin: History, Politics, Culture
What do you know about Berlin's history, architecture, culture, and political life? The present course will offer a survey of the history of Prussia, beginning with the seventeenth century, and the unification of the small towns of Berlin and Koelln to establish a new capital for this country. It will tell the story of Berlin's rising political prominence in the eighteenth century, and its position as a center of the German and Jewish Enlightenment. It will follow Berlin's transformation into an industrial city in the nineteenth century, its rise to metropolis in the early twentieth century, its history during the Third Reich, and the post-war cold war period. The course will conclude its historical survey with a consideration of Berlin's position as a capital in reunified Germany.
The historical survey will be supplemented by a study of Berlin's urban structure, its significant architecture from the eighteenth century (i.e. Schinkel) to the nineteenth (new worker's housing, garden suburbs) and twentieth centuries (Bauhaus, Speer designs, postwar rebuilding, GDR housing projects, post-unification building boom). In addition, we will read literary texts about the city, and consider the visual art and music created in and about Berlin, and focus on Berlin's Jewish history. The course will be interdisciplinary with the fields of German Studies, history, history of art, urban studies, and German-Jewish studies. It is also designed as a preparation for undergraduate students who are considering spending a junior semester with the Penn Abroad Program in Berlin. All readings and lectures in English.

URBS 248 The Urban Food Chain
This class explores the social, economic, ecological, and cultural dynamics of metropolitan and community food systems in U.S. cities. Field trips and assignments immerse students in various forms of experiential learning - including farming and gardening, cooking, eating, and more. After a broad introduction to global, regional, and urban food systems in our first three weeks, across most of the semester we follow the food chain (or cycle), from production to processing, distribution, cooking, consumption, and waste. Specific topics include urban agriculture, community kitchens, grocery, hunger and food assistance, restaurants, neighborhoods, food cultures, food justice, and community food security. Students will gain broad literacies in: metropolitan and neighborhood food environments; food production, processing, distribution, access, and preparation; and the relationships between food, culture, and society. Students taking this class should be open to trying new things, getting hands dirty, and working with others in various settings and activities.
For BA Students: Humanities and Social Science S
Taught by: Vitiello
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

URBS 250 Urban Public Policy: Philadelphia -- A Case Study
An introduction to a broad range of substantive policy areas affecting the city, and an exploration into the complexities of policy formulation and implementation in a large and pluralistic metropolitan setting. The course subtitle, 'Philadelphia -- A Case Study,' describes our approach. Donna Cooper leads the region's foremost child advocacy organization focused on poverty, child welfare and education issues, she formerly served as the Deputy Mayor for Policy for the City of Philadelphia, and Secretary of Policy of the Commonwealth of Pennsylvania.
Taught by: Donna Cooper
One-term course offered either term
Activity: Seminar
1.0 Course Unit

URBS 252 Urban Journalism
This course will examine the state of urban journalism today with special emphasis on how large newspapers are redefining themselves, and the news, in an era of dwindling readership and growing financial pressures. The course will look at online journalism, ethics, and alternative sources of news, and will explore the techniques journalists use in reporting the news. Students will report and write four pieces of their own about Philadelphia and its environs. The course is taught by Dan Biddle, the Philadelphia Inquirer's former politics editor, an award-winning journalist for 40 years.
Taught by: Biddle
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

URBS 253 Cities, Suburbs, Regions
This course will explore the political, economic, social, and demographic forces impacting development patterns in metropolitan areas, with a particular focus on Philadelphia. We will examine the government policies, economic forces, and social attitudes that affect the way a region grows, and the impact of these forces on poverty, equity and segregation. Specific topics to be discussed include the factors that make a region competitive, the city's changing role in the region, the impact place has on opportunity, and approaches to revitalizing and improving communities.
Taught by: Black
Course offered spring; even-numbered years
Also Offered As: SOCI 254
Activity: Seminar
1.0 Course Unit

URBS 258 Global Urban Education
This course examines the demographic, social, and economic trends impacting the growth of global cities--providing the context for global urban education. Through the dual lens of globalization and local urban culture, we explore relationships between urban education and economic development, democratic citizenship, social movements, social inclusion, equity, and quality of urban life. We consider key historical legacies (e.g., Colonialism), informal settlements and 'slums,' the rise of the 'knowledge economy,' and the role of international aid. Additional topics include: early childhood; gender equity; youth culture; impacts of crisis and war; urban refugees; teacher training and identity; accountability & governance; information & computer technology; religion, indigenous cultures, and language identity; & the role of the private sector and school choice. We focus on cities like Sao Paolo, Mexico City, Shanghai, Hong Kong, Ho Chi Minh City, Johannesburg, Lagos, Nairobi, Jakarta, Mumbai, Lahore, Tehran, and Cairo, and draw comparisons to cities like New York, London, Paris and Tokyo.
Taught by: Gershberg
Course not offered every year
Also Offered As: SOCI 258
Activity: Seminar
1.0 Course Unit

URBS 264 Poverty, Race and Health
This course is designed to introduce students to current literature on race/ethnic difference in health and mortality in the United States, covering such topics as explanations for why some race/ethnic groups fare better than others, how inner city poverty and residential segregation may contribute to racial/ethnic differences in health outcomes, and health of immigrants versus native-born populations. Current policy debated and recent policy developments related to health are also briefly discussed. The course is organized as a seminar with a combination of lectures and class discussions.
Taught by: Boen
Course not offered every year
Also Offered As: SOCI 264, SOCI 564
Activity: Seminar
1.0 Course Unit
URBS 270 The Immigrant City
This course focuses on immigrant communities in United States cities and suburbs. We study migration and community experiences among a broad range of ethnic groups in different city and suburban neighborhoods. Class readings, discussions, and visits to Philadelphia neighborhoods explore themes including labor markets, commerce, housing, civil society, racial and ethnic relations, integration, refugee resettlement, and local, state, and national immigration policies. The class introduces students to a variety of social science approaches to studying social groups and neighborhoods, including readings in sociology, geography, anthropology, social history, and political science. Ultimately, the class aims to help students develop: 1) a broad knowledge of immigration and its impacts on U.S. cities and regions; 2) a comparative understanding of diverse migrant and receiving communities; and 3) familiarity with policies and institutions that seek to influence immigration and immigrant communities.
For BA Students: Society Sector

Course not offered every year
Also Offered As: CIMS 225, ENGL 276, THAR 275
Activity: Seminar
1.0 Course Unit
Notes: This course, which may with different topics, be repeated for credit, will examine a specific aspect of theatrical practice. Recent topics have included performance art, Jacques Lecoq technique, improvisation, and puppetry.

URBS 276 The Modern City
A study of the European and American city in the eighteenth, nineteenth, and twentieth centuries. Emphasis is placed on the history of architecture and urban design; political, sociological, and economic factors also receive attention. The class considers the development of London, St. Petersburg, Washington, Boston, Paris, Vienna and Philadelphia.
Taught by: Brownlee, D.
Course not offered every year
Also Offered As: ARTH 270, ARTH 670
Activity: Lecture
1.0 Course Unit

URBS 277 Gender, Sex & Urban Life
Is urban space gendered? Do we change how it is gendered as we move through it? Does it change us? This course explores gender and sexuality in the contemporary global city through the study of urban spaces. We will consider feminist, queer, and transgender theories of the city, as we investigate how practices of using and making space are gendered and sexualized. Each week of the course will be organized around a type of space, including subway, school, and birthing center, nightclub, suburb, and park. Assignments will include an auto-ethnography, a short critical essay, and a final assignment that asks you to propose an additional type of space in which to study the intersections of sex, gender, and the urban built environment. In each space, we will conduct an interdisciplinary exploration, drawing from sociology, anthropology, geography, city planning history, feminist and queer theory, as well as from fiction, poetry, music videos, photography, and documentary film.
Taught by: Knittle
Course usually offered in spring term
Also Offered As: GSWS 277
Activity: Seminar
1.0 Course Unit

URBS 280 Neighborhood Dynamics of Crime
Crime varies in time, space and populations as it reflects ecological structures and the routine social interactions that occur in daily life. Concentrations of crime can be found among locations, with antisocial activities like assaults and theft occurring at higher rates because of the demographic make-up of people (e.g. adolescents) or conflicts (e.g. competing gangs), for reasons examined by ecological criminology. Variation in socio-demographic structures (age, education ratios, and the concentration of poverty) and the physical environment (housing segregation, density of bars, street lighting) predicts variations between neighborhoods in the level of crime and disorder. Both ethnographic and quantitative research methods are used to explore the connections between the social and physical environment of areas and antisocial behavior.
Taught by: Loeffler

Also Offered As: CRIM 280
Activity: Seminar
1.0 Course Unit

URBS 281 The US Criminal Justice System in Urban Context
With over two million Americans behind bars and over seven million under some form of state supervision, the United States leads the world in incarceration. From an interdisciplinary perspective, this course will examine the special attention given to how penal issues—including the recent prison boom and the privatization of prison, white supremacy and the racial disparity of the inmate population, juvenile criminal justice, alternative sentencing, prisoner health, and the punishment of military veterans, immigrants, and women in prisons–impact urban communities and contexts. Students will hear from guest speakers who were formerly incarcerated, and attend a field trip to a facility to see first-hand examples of the criminal justice system.
Taught by: Smith
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
URBS 285 Health on the Urban Margins: The Experience of Health in American Cities
In this course we will investigate the social and spatial determinants of health in contemporary urban American. We will study how cities are impacted by healthcare delivery systems and social policy in the United States, with special attention toward understanding the relationship between health disparities and structures of urban inequality related to racial discrimination, extreme poverty, and the stigma of a criminal record. We will also explore how a variety of marginalized populations from war veterans to parolees to the homeless cope with mental illness and violence-related trauma in the urban environment.
Taught by: Tyson
Course not offered every year
Activity: Seminar
1.0 Course Unit

URBS 290 Metropolitan Nature
In order to understand the complex and often skewed relationship between the built and natural systems, we must think in processes and examine different scales simultaneously. The course explores urban sustainability and resilience. At its core, sustainability is a radical concept that integrates the economy, equity (social justice), and the environment. Co-opted by marketing slogans, stripped of meaning and context, it has become vague and pliable. Sustainability and resilience demand a holistic systems view of the world. The course focuses on communities such as New Orleans and Eastwick where urban development has focused on economic concerns at the expense of the environment and equity resulting in unintended, and sometimes, catastrophic consequences.
Students will have the opportunity to interact with community residents who have organized to develop strategies to address these ongoing issues.
Taught by: Nairn
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

URBS 294 Global Cities: Urbanization in the Global South
This course examines the futures of urbanization in most of the world. With cities in ‘developing’ countries set to absorb 95% of urban population growth in the next generation, the course explores the plans, spaces and social experiences of this dramatic urban century. How do proliferating urban populations sustain themselves in the cities of Latin America, Africa and Asia? What kinds of social and political claims do these populations make more just and sustainable cities? The course investigates the ongoing experiences in urban planning, infrastructure development and environmental governance in cities of the Global South. In so doing, it imagines new forms of citizenship, development and sustainability that are currently unfolding in these cities of the future.
Taught by: Anand
Course not offered every year
Also Offered As: ANTH 294
Activity: Seminar
1.0 Course Unit

URBS 299 Independent Study
Specialized topics in Urban Studies. This course may be taken by permit only, once a faculty advisor has agreed to be the professor of record, and the scope of work has been approved in advance by the department.
Activity: Independent Study
1.0 Course Unit

URBS 300 Fieldwork Seminar
Students work 15 hours per week in field placement and meet weekly with class and instructors. The class is intended to help students reflect from a variety of perspectives on the work that they are doing in their placement organizations. The class format is primarily discussion. Students are required to complete assigned readings, prepare written and oral presentations, and submit a final project.
Course usually offered in spring term
Activity: Seminar
2.0 Course Units
Notes: Urban Studies majors and minors only.

URBS 320 Who Gets Elected and Why? The Science of Politics
What does it take to get elected to office? What are the key elements of a successful political campaign? What are the crucial issues guiding campaigns and elections in the U.S. at the beginning of the 21st century? This class will address the process and results of electoral politics at the local, state, and federal levels. Course participants will study the stages and strategies of running for public office and will discuss the various influences on getting elected, including: Campaign finance and fundraising, demographics, polling, the media, staffing, economics, and party organization. Each week we will be joined by guest speakers who are nationally recognized professionals, with expertise in different areas of the campaign and election process. Students will also analyze campaign case studies and the career of the instructor himself. Edward G. Rendell is the former Mayor of Philadelphia, former Chair of the Democratic National Committee, and former Governor of Pennsylvania.
A note if you are not able to gain a seat in this course: Please write to urbs@sas.upenn.edu to be added to a waitlist. Waitlisted students are encouraged not to miss the first class. The professors will be able to register many waitlisted students in the first week of the semester, but only after the first class session on Monday, Sept. 14th, 6-9pm.
Taught by: Rendell
Course usually offered in fall term
Also Offered As: GAFL 509, PSCI 320
Activity: Lecture

URBS 322 The Big Picture: Mural Arts in Philadelphia
The history and practice of the contemporary mural movement couples step by step analysis of the process of designing with painting a mural. In addition students will learn to see mural art as a tool for social change. This course combines theory with practice. Students will design and paint a large outdoor mural in West Philadelphia in collaboration with Philadelphia high school students and community groups. The class is co-taught by Jane Golden, director of the Mural Arts Program in Philadelphia, and Shira Walinsky, a mural arts painter and founder of Southeast by Southeast project, a community center for Burmese refugees in South Philadelphia.
One-term course offered either term
Also Offered As: FNAR 222, FNAR 622
Activity: Seminar
1.0 Course Unit
URBS 323 Tutoring School: Theory and Practice
This course represents an opportunity for students to participate in academically-based community service involving tutoring in a West Phila. public school. This course will serve a need for those students who are already tutoring through the West Phila. Tutoring Project or other campus tutoring. It will also be available to individuals who are interested in tutoring for the first time.
Course usually offered in spring term
Also Offered As: EDUC 323
Activity: Seminar
1.0 Course Unit

URBS 326 Tutoring in Urban Public Elementary Schools: A Child Development Perspective
The course provides an opportunity for undergraduate students to participate in academically based community service learning. Student will be studying early childhood development and learning while providing direct, one-to-one tutoring services to young students in Philadelphia public elementary schools. The course will cover foundational dimensions of the cognitive and social development of preschool and elementary school students from a multicultural perspective. The course will place a special emphasis on the multiple contexts that influence children's development and learning and how aspects of classroom environment (i.e., curriculum and classroom management strategies) can impact children's achievement. Also, student will consider a range of larger issues impacting urban education embedded in American society. The course structure has three major components: (1) lecture related directly to readings on early childhood development and key observation and listening skills necessary for effective tutoring, (2) weekly contact with a preschool or elementary school student as a volunteer tutor and active consideration of how to enhance the student learning, and (3) discussion and reflection of personal and societal issues related to being a volunteer tutor in a large urban public school.
Taught by: Fantuzzo

Notes: Fulfills the Qualitative Data Analysis Requirement

URBS 333 Urban Life in the Middle East and North Africa
With rapid urbanization, most people in the Middle East and North Africa are living now in cities and towns, rather than in rural areas. This seminar introduces the complex realities of living in the major cities of the region, in terms of globalization, social class, politics, gender and sexuality, culture, religion, communal identities, communal networks, and more. Through intensive engagement with the various readings and films, both documentaries and feature films, we will explore how those realities and processes shape the urban space, or express themselves in it. In addition, we will explore the basic premises of such disciplines as anthropology, cultural studies, history, or sociology, and learn how they can help us research and understand the realities of urban life in the modern and contemporary Middle East and North Africa. We will use Cairo, Egypt, as our main case study, while looking at a range of other cities, such as Istanbul, Turkey, and Marrakesh, Morocco, for further insights.
Taught by: Tam
Also Offered As: NELC 333
Activity: Seminar
1.0 Course Unit

URBS 344 Documentary Experiments in Urban Research
What can video art, experimental documentary, and sensory ethnography teach us about the practice of urban research? How can we build on the traditions of first person and essay cinema to produce compelling documents of our own questions and findings? This course surveys a range of film and video works on themes such as the production of space, urban nature, infrastructure, and collective memory. Taken as a genre, these time-based works provide a powerful model for training scholars' observational skills, conceptualizing scales of analysis, and engaging broader publics in urban research. In this course, we will explore this audiovisual genre in dialogue with selected theoretical, ethnographic, and case study readings in urban studies. As an advanced theory-practice course, it combines seminar readings and discussion with regular screenings and a series of workshops on photo, video, audio, and postproduction skills. The course will provide a general fluency in contemporary urban research, with particular emphasis on urban political ecology. In dialogue with this scholarship, students will develop and situate their own experimental documentary research projects.
Taught by: Mendelsohn
Course not offered every year
Also Offered As: ANTH 344, CIMS 344
Activity: Seminar
1.0 Course Unit
URBS 359 Nutritional Anthropology
The course is an introduction to nutritional anthropology, an area of anthropology concerned with human nutrition and food systems in social, cultural and historical contexts. On the one hand, nutritional anthropologists study the significance of the food quest in terms of survival and health. On the other hand, they also know that people eat food for a variety of reasons that may have little, if anything, to do with nutrition, health, or survival. While the availability of food is dependent upon the physical environment, food production systems, and economic resources, food choice and the strategies human groups employ to gain access to and distribute food are deeply embedded in specific cultural patterns, social relationships, and political and economic systems. Thus, nutritional anthropology represents the interface between anthropology and the nutritional sciences, and as such, can provide powerful insights into the interactions of social and biological factors in the context of the nutritional health of individuals and populations. Because food and nutrition are quintessential biocultural issues, the course takes a biocultural approach drawing on perspectives from biological, socio-cultural and political-economic anthropology. Course content will include: a discussion of approaches to nutritional anthropology; basics of human nutrition; food systems, food behaviors and ideas; methods of dietary and nutritional assessment; and a series of case studies addressing causes and consequences to nutritional problems across the world.

Taught by: Hoke
Course not offered every year

URBS 400 Senior Seminar
Urban Studies senior research project It is strongly recommended that students take URBS 200 and 300 before the Senior Seminar Seminar. Please contact your URBS advisor to help you with this course planning. Taught by: Grossman/McGloine/Simon
Course usually offered in fall term
Prerequisite: URBS 200 AND URBS 300
Activity: Seminar
1.0 Course Unit

URBS 401 Urban Studies Honors
Students in the fall Urban Studies Senior Seminar (URBS400) whose papers are exceptional and show promise for publication will be invited to participate in the spring honors seminar. If they choose to participate, honors seminar participants will revise and refine their research/papers with the goal of their work for publication in an academic journal relevant to the topic. The seminar meets periodically during the semester, structured around a set of assignments geared to facilitate the process of revision. Students will be assigned to read each other's work and meetings take the form of a workshop with students reporting on progress and providing feedback to improve and develop each other's papers. In addition to completing the revised paper for a grade, participants in the honors seminar are required to present their work to a wider Urban Studies audience in a special session at the end of the semester and to provide documentation that they have submitted their papers for publication. Students who successfully complete the honors seminar will graduate with distinction in the major, noted on their transcripts and in the graduation materials.

Taught by: Simon
Course usually offered in spring term
Prerequisite: URBS 400
Activity: Seminar
1.0 Course Unit

URBS 404 Philanthropy and the City
This course will focus on how urban communities are shaped by the nonprofit sector and the billions of philanthropic dollars that fuel their work. By bridging theory and practice, the class explores what dynamics are at play to deliver vital services or programs in healthcare, education, the arts, community development, and other issues. The course will also focus on these important questions: (1) Whose responsibility is the public good? How is that responsibility shared by the public, private, and nonprofit sectors? and (2) Given that responsibility for the public good, which individuals and groups make the decisions about how to serve the public good? How are these decisions made, and who benefits from these decisions? Students will consider these questions in an interdisciplinary context that will bring a historical and philosophical perspective to the examination of the values and institutions that characterize the contemporary philanthropy and the nonprofit sector.

Taught by: Bauer/Goldman
Course usually offered in fall term
Also Offered As: NPLD 797
Activity: Seminar
1.0 Course Unit

URBS 405 Religion, Social Justice & Urban Development
Urban development has been influenced by religious conceptions of social and economic justice. Progressive traditions within Judaism, Christianity, Islam, Buddhism, Hinduism, Jainism, Baha’i, Humanism and other religions and systems of moral thought have yielded powerful critiques of oppression and hierarchy as well as alternative economic frameworks for ownership, governance, production, labor, and community. Historical and contemporary case studies from the Americas, Europe, Africa, Asia, and the Middle East will be considered, as we examine the ways in which religious responses to poverty, inequality, and ecological destruction have generated new forms of resistance and development.

Taught by: Lamas

Also Offered As: AFRC 405, RELS 439
Activity: Seminar
1.0 Course Unit
URBS 410 Urban Communities and the Arts
Urban Communities and the Arts concerns itself with Arts, Music and Activism in Philadelphia. We investigate the social, economic and cultural fabric from which activism in the arts arises. To do so, we will investigate the histories and artistic reactions to oppression in Philadelphia by drawing on specific examples from various sections of the city and through the media of music, visual art, theater, and dance. The long history of systemic and individual oppression in the US manifests itself in different ways in various urban neighborhoods in Philly and artists of various genres and inclinations participate in activism in many different ways. Examples of artistic and musical responses to the various forms of oppression will be offered and class participants will be asked to bring their own examples to share and analyze. By visiting significant arts practitioners and organizations that provide access to arts education and justice work, participants will have a hands-on experience to unpack the dynamics of artistic production in city life. In addition to art as an outlet for exposing oppression, we will also consider the ways that art and music become markers of the uniqueness of a neighborhood or city, which further complicates the idea of art as a tool for activism. Participants in Urban Communities and the Arts will unpack the role of music and art in defining city or neighborhood cultures by considering a few key sectors that reveal the ways in which cities fail to provide equal access to resources or participate in outright discrimination. At the same time, cities continue to cultivate creative spaces and socio-economic opportunities for economic gain and social understanding through art and music. It is the contradictions that this course will concern itself with and out of our study we will invite course participants to respond creatively. Participants will create either an original work of art, music or intellectual response like a visually interesting research poster as part of a final art/music show. Ultimately students will be asked to reflect back on the role of art in social and political activism to better understand the successes and failures of such movements as they come to define the ethos of city life and its limits.
Taught by: McGlone
Course not offered every year
Also Offered As: FNAR 410
Activity: Seminar

URBS 412 Building Non-Profits: The Business of a Mission-Driven Organization
This course will cover the basic elements of building and growing a non-profit organization, including the development of the mission and the board; needs assessment, program design, development, and management; financial management, contract compliance and understanding an audit; fundraising, public, foundation, corporate, and individual; communication and marketing: organizational administration (including staff and volunteer selection, management and development); public policy, research and advocacy. Students will make site visits and engage role play, in addition to research and writing.
Taught by: Goldman
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

URBS 415 Urban Real Estate Markets
Cities evolve over time, comprised of various inputs of different sizes at different stages of urban evolution. However, as cities continue to densify and navigate real estate market cycles, opportunities to redefine the urban context, while promoting the individual brand, become ever more sensitive. Projects are increasingly complex, often involving multiple partnerships among private developers, public agencies, non-profits, and community groups. Today's development professionals need to be well-versed across a variety of disciplines and property types to effectively execute in an urban environment. As an introductory course in real estate development, this course will provide the underpinnings for critical decision-making in markets that change frequently and often unevenly - whether for financing, investing, development, public policy formulation, or asset management/disposition.
Taught by: Packard
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

URBS 417 Cities and Sustainability
A good idea is not enough - developing innovative and sustainable projects in cities requires understanding 'how to get things done.' Developing projects to promote sustainability in major US cities requires sensitivity to the political and operational context within which cities implement innovative initiatives. Cities and Sustainability uses Philadelphia as a case study to explore the issues confronting modern American metropolises as they look to manage their resources and promote environmentally friendly policies. URBS 417 will introduce students to leading Philadelphia practitioners of sustainability and municipal projects. Students will be given the tools to politically, economically and critically analyze various sustainable policy initiatives across the United States.
Taught by: Ben-Amos
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

URBS 419 Urban Transportation in Flux
Transportation systems and networks impact everything from the literal shape of American cities to their economic vitality and the well-being of their citizens. Urban Infrastructure in Flux provides students with an overview of the political, business, and policy concerns and processes that inform how Americans get around by foot, transit, and car. URBS 419 explores the use and reuse of legacy infrastructure, and roots innovations such as driverless cars, and scooters, in a historical conflict over the right-of-way (ROW). Students will have the opportunity to meet professionals in the field and engage in primary source research and data analysis.
Taught by: Ben-Amos
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
URBS 420 Perspectives on Urban Poverty
This course provides an interdisciplinary introduction to 20th century urban poverty, and 20th century urban poverty knowledge. In addition to providing a historical overview of American poverty, the course is primarily concerned with the ways in which historical, cultural, political, racial, social, spatial/geographical, and economic forces have either shaped or been left out of contemporary debates on urban poverty. Of great importance, the course will evaluate competing analytic trends in the social sciences and their respective implications in terms of the question of what can be known about urban poverty in the contexts of social policy and practice, academic research, and the broader social imaginary. We will critically analyze a wide body of literature that theorizes and explains urban poverty. Course readings span the disciplines of sociology, anthropology, urban studies, history, and social welfare. Primacy will be granted to critical analysis and deconstruction of course texts, particularly with regard to the ways in which poverty knowledge creates, sustains, and consecrates meaningful channels of action in urban poverty policy and practice interventions.
Taught by: Fairbanks
Course usually offered in fall term
Also Offered As: HIST 440, SOCI 420
Activity: Seminar
1.0 Course Unit

URBS 424 Political Ecologies of the City
Cities have been centres of aspiration for much of human history. They have provided a limited yet critical locus for social mobility, both in political and economic terms. As large agglomerations of political and economic power, urban residents have also consumed growing proportions of the earth’s mineral, food and water resources from the national (and international) body. The contradictory aspects of urban aspiration frame this course. Drawing on the frameworks of political ecology, in this course we think through the cities of the global south to understand how cities are made. To do this, we will first focus on the construction on the liberal city and how it has been occupied, both formally and informally, by urban subjects in most of the world. Next, we will learn about projects through which natural resources have been directed to and through the city. Finally we will conclude with a particular attention to how urban resources are claimed by marginalized migrants, and the particular sorts of governance institutions these practices engender.
Taught by: Anand
Course not offered every year
Also Offered As: ANTH 424
Activity: Seminar
1.0 Course Unit

URBS 428 Undergraduate Urban Research Colloquium
A seminar run in conjunction with the Institute for Urban Research at Penn, students will learn about the range of cutting-edge topics in urbanism that Penn faculty are working on and work closely with a faculty member on current research. Students will learn about new topics and methods in interdisciplinary urban research, and get first hand experience collecting urban data under the close supervision of an experienced researcher. Students and faculty jointly will present their findings for discussion. This course is a good introduction for how to frame and conduct an urban research project.
Course usually offered in spring term
Also Offered As: CPLN 528
Activity: Seminar
1.0 Course Unit

URBS 435 The Political Economy of Urban Development
This course provides an introduction to the economic and political theories that have come to shape, for better or for worse, the spatial characteristics of late 20th century urbanism. It is intended to offer a range of analytical approaches to understanding the urban structures and processes that strategies of community-based organizations and urban policy planners seek to influence. The course focuses on postwar U.S. cities (Chicago and other Midwestern/ Northeast rust belt cities in particular), though a number of readings explore these issues in broader contexts. As a way to further understand postwar US urbanism, we will expand our focus briefly to the geopolitical/international scale during the weeks on neoliberalism and microfinance. Urban political economy refers to different theoretical traditions within the social sciences that explain urban development in terms of the relationship between markets, states, and community actors (or, civil society).
Part I of the course covers four different theories of modern political economy. Neoclassical, Keynesian, Marxian, and Neoliberal. Our purpose is to provide a framework for political economic analysis and an historical foundation for understanding postwar transformation. Part II of the course grounds the foundational material of Part I by tracing the economic and political forces that have shaped post-war urban development trends in Northeastern and Midwestern cities (especially Chicago, Detroit, Philadelphia and NY). Particular attention will be given to issues such as race, suburbanization, deindustrialization, welfare state retrenchment, gentrification, and public housing transformation. Part III examines a range of contemporary (post 1970) approaches to urban development, focusing on processes of neoliberalization, neo-clientalism, urban informality, sub prime mortgage lending, and microfinance.
Taught by: Fairbanks
Course not offered every year
Activity: Seminar
1.0 Course Unit

URBS 440 Introduction to City Planning: Past, Present and Future
Orientation to the profession, tracing the evolution of city and regional planning from its late nineteenth century roots to its twentieth century expression. Field trips included.

Course usually offered in fall term
Also Offered As: CPLN 500
Activity: Lecture
1.0 Course Unit

URBS 448 Neighborhood Displacement and Community Power
This course uses the history of black displacement to examine community power and advocacy. It examines the methods of advocacy (e.g. case, class, and legislative) and political action through which community activists can influence social policy development and community and institutional change. The course also analyzes selected strategies and tactics of change and seeks to develop alternative roles in the group advocacy, lobbying, public education and public relations, electoral politics, coalition building, and legal and ethical dilemmas in political action. Case studies of neighborhood displacement serve as central means of examining course topics.
Taught by: Palmer
Course usually offered in spring term
Also Offered As: AFRC 448
Activity: Seminar
1.0 Course Unit
URBS 450 Urban Redevelopment
This course will consider urban redevelopment from the early 20th century to the present day, looking at ways the economic, political, and social underpinnings of redevelopment practice have changed over that time. From the City Beautiful movement to Transit Oriented Development, the course will look at why and how the public, private, and non-profit sectors have intervened in urban neighborhoods, and will contemplate consequences - positive and negative - of those interventions. Students will be introduced to some of the technical aspects of redevelopment, including architecture/design, planning, and financing. The class will be in seminar format, mixing lecture, discussion, and guest speakers. The course requirements include a mid-term paper, an in-class charrette, and a final development project.
Taught by: Rachlin, Andrew
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

URBS 451 The Politics of Housing and Community Development
This course offers an exploration of how legislative action, government policymaking, and citizen advocacy influence plans for the investment of public capital in distressed urban neighborhoods. The course will include an evaluation of policies undertaken by Philadelphia Mayor James F. Kenney and his predecessors to reduce poverty and promote equitable development in the city's most distressed neighborhoods. In conversations with individuals who are currently engaged in implementing public- and private-sector development plans, students will discuss land banks, code enforcement, eviction prevention, and homeless housing initiatives, as well as recent and current reinvestment proposals for Camden's waterfront and downtown-area neighborhoods.
Taught by: Kromer
Course usually offered in fall term
Also Offered As: CPLN 625, GAFL 569
Activity: Lecture
1.0 Course Unit

URBS 452 Community Economic Development
Community economic development concerns the revitalization of impoverished communities. As with all things economic, poor and working people may be the subjects or the objects of development. We will utilize case studies from Philadelphia and around the world in an exploration of various models of economic justice and sustainable development. Note: Attendance at the first class is mandatory (for those already enrolled and for those considering enrollment in the course). Enrolled students who miss the first class must drop the course. Those who were not able to enroll but who attend the first class will be permitted to enroll.
Taught by: Lamas
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

URBS 453 Metropolitan Growth and Poverty
This course analyzes the role of metropolitan regions in the U.S. and global economies, including the sources of metropolitan productivity, the ways that metropolitan structures affect residents, and analyses of public policy in metropolitan areas. The economic, political, and social forces that have shaped World War II urban and regional development are explored, including technology, demography, and government. Special attention is paid to how metropolitan change affects residents by income and race. Topics include: gentrification, schools, suburbanization, sprawl, metropolitan fragmentation, concentration of poverty, race, and various economic revitalization initiatives.
Taught by: Madden
Course not offered every year
Also Offered As: SOCI 453
Activity: Seminar
1.0 Course Unit

URBS 454 City Limits: The Impact of Urban Policy
This course assesses the changing role of public policy in American cities. In the past, government often believed that it could direct urban development. New realities - the rise of an informal labor market, global capital and labor flows, the flight of businesses and the middle class to the suburbs - have demonstrated that government must see itself as one - but only one - 'player' in a more complete, transactional process of policy making that crosses political boundaries and involves business, organized interest groups, and citizens. This seminar uses a case-study method to study how public policy can make a difference in the revitalization of distressed American cities. The seminar is designed for advanced undergraduates and graduate students. Seminar readings and projects will be organized around three themes: 1) history and vision, 2) data and analysis, and 3) policy and implementation. Students will be divided into project teams assigned to work on current development issues that will be reviewed by both public and private-sector experts. Extensive use will be made of real estate, economic development, and social indicator data to understand the complex forces at work in both large and small cities. Students will learn to access, analyze, and map information; to frame and interpret these data within a regional perspective; and to construct profiles of cities and neighborhoods. Students will study recent urban redevelopment initiatives in the Philadelphia region, including Philadelphia's Neighborhood Transformations Initiative and New Jersey's Camden Revitalization plans. Prerequisite: Student must have taken an introduction to research methods course.
Taught by: Goldstein, Stern
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
URBS 457 Globalization & The City: Global Urbanization
In 2008, the UN estimated that the world’s population had become primarily urban, for the first time in history. According to the OECD, by the end of the century, close to 85% of the projected population will live in cities. The transition towards an urban planet is likely to have far-reaching economic, environmental, social, political, and cultural impacts on our species, many of which we cannot yet predict. But what is urbanization? Will it lead to more inequality, exploitation, conflict, resource consumption, and exposure to natural disasters and climate change, or is it an opportunity to move the world in a more sustainable and equitable direction? Taught by Chandan Deuskar and Patricio Zambrano Barragan, this course aims to explore these questions. In the first half of the semester, we will discuss various challenges associated with global urbanization and its impacts. In the second half, we will focus on responses to these challenges. The assignments will allow students to explore some of the most salient debates around global urbanization. By the end of the semester, students will be better able to understand the context for any future academic research, professional work, or business activities in the cities of the ‘developing world.’ The course will help provide a foundation for any students considering graduate studies or professional work in the fields of urban planning or international development.
Taught by: Chandan Deuskar and Patricio Zambrano Barragan
Course not offered every year
Also Offered As: SOCI 435
Activity: Seminar
1.0 Course Unit

URBS 473 The History & Theory of Community Organizing
"Power concedes nothing without a demand."--Frederick Douglass.
"Workers of the world, unite!"--Karl Marx. "Don’t mourn. Organize."--Joe Hill. "Strong people do not need strong leaders."--Ella Baker. "Freedom is a constant struggle."--Angela Davis. We will review the history and theory of critique, resistance, and solidarity, as we consider old and new social movements and freedom struggles around the world (Africa, the Americas, Europe, Asia)--from encampments for indigenous sovereignty of tribal lands to demonstrations by poor and working people seeking ‘the right to the city,’ from sit-ins and strikes to occupations and takeovers, from uprisings and insurrections to revolutions and counterrevolutions, from anti-capitalist, anti-colonial, anti-caste, and anti-racist insurgencies to mobilizations for racial and gender justice and solidarity economy; from civil rights, labor rights, student rights, human rights, animal rights, and environmental organizing to movements for peace, democracy, equality, and liberation--and more (based on student interests and commitments). Strategies and techniques will be reviewed. Successes and failures will be registered. Limitations and possibilities will be debated. Source material will be drawn from mainstream and radical traditions within popular praxis and numerous fields, including urban studies, philosophy and critical theory, religion, history, art and culture, anthropology, politics, development economics, social psychology, sociology, organizational development, and law. Note: Attendance at the first class is mandatory (for those already enrolled and for those considering enrollment in the course). Enrolled students who miss the first class must drop the course. Those who were not able to enroll but who attend the first class will be permitted to enroll.
Taught by: Lamas
Course not offered every year
Also Offered As: SOCI 473
Activity: Seminar
1.0 Course Unit

URBS 476 Urban Housing & Community Development Policy in America
This course examines how public policy influences housing markets and how markets influence public policy. The course reviews the development of housing policy since World War II and how shifts in policy have influenced people’s ability to find suitable shelter. Topics include: poverty and affordability, residential segregation / civil rights in housing, the financial crisis of 2008, mortgage foreclosure, affordable housing, and homelessness. The course focuses on the changing roles of different levels of government in housing policy and how the financial sector, the construction industry, and non-governmental organizations influence Americans housing options.
Taught by: Stern, Goldstein
Course not offered every year
Activity: Seminar
1.0 Course Unit

URBS 480 Liberation and Ownership
Who is going to own what we all have a part of creating? The history of the Americas, and of all peoples everywhere, is an evolving answer to the question of ownership. Ownership is about: the ties that bind and those that separate; production, participation, and control; the creation of community and the imposition of hierarchies--racial, sexual, and others; dreams of possessing and the burdens of debt and ecological despoliation; dependency and the slave yearning to breathe free. Of all the issues relevant to democracy, oppression, injustice, and inequality, ownership is arguably the most important and least understood. Utilizing a variety of disciplinary perspectives--with a particular emphasis on radical and critical theories of liberation, and by focusing on particular global sites and processes of capitalism, students will assess and refine their views regarding ownership and liberation in light of their own social, political, religious, aesthetic, and ethical commitments.
Taught by: Lamas
Course usually offered in fall term
Also Offered As: AFRC 480
Activity: Seminar
1.0 Course Unit

URBS 499 Independent Study
Specialized topics in Urban Studies. This course may be taken by permit only, once a faculty advisor has agreed to be the professor of record, and the scope of work has been approved in advance by the department.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

URBS 506 Public Environment of Cities: An Introduction to the Urban Landscape
This course will explore the role of public spaces - streets, boulevards, parks and squares - in cities and their social uses. With the University of Pennsylvania campus and the City of Philadelphia serving as our laboratory, we will critically examine the evolution of the movement of corridors, open space and buildings of the urban landscape and their changing uses. Following the flaneur tradition of Baudelaire and Benjamin, we will walk the city to experience and understand the myriad environments and neighborhoods that comprise it.
Taught by: Nairn
Course not offered every year
Also Offered As: URBS 206
Activity: Seminar
1.0 Course Unit
URBS 513 Urban Ethnography: Capturing the Cultures of Cities
Using Philadelphia as the site of students' praxis, this course explores the symbolic meanings and social production of urban life and culture in the nation's fifth largest city. This course is structured as a seminar with ethnographic background readings from Philadelphia and other urban settings to introduce students to the study of the city as a site of everyday practice, as well as training in conducting an ethnographic fieldwork project. The urban landscape provides an intensification of macro processes such as globalization. Such processes and how humans experience them are more easily studied and understood in an urban setting. The class will explore social relational and cultural themes such as the ethnic city, the gendered city, the contested city, the sacred city, the global city, and the aesthetic and expressive city. A diverse range of reading assignments, images, and videos will augment our understandings of urban life. Students will design and execute their own ethnographic fieldwork projects on an urban topic that interests them. Through step-by-step instruction throughout the semester, students will learn qualitative research techniques such as field notes, participant-observation, interviewing, and how to interpret their own data, so that they will be able to complete their semester project.
Taught by: Saverino
Course not offered every year
Also Offered As: FOLK 513, URBS 427
Activity: Seminar
1.0 Course Unit

URBS 516 Public Interest Workshop
This is a Public Interest Ethnography workshop (originally created by Peggy Reeves Sanday - Department of Anthropology) that incorporates an interdisciplinary approach to exploring social issues. Open to graduate and advanced undergraduate students, the workshop is a response to Amy Gutmann's call for interdisciplinary cooperation across the University and to the Department of Anthropology's commitment to developing public interest research and practice as a disciplinary theme. Rooted in the rubric of public interest social science, the course focuses on: 1) merging problem solving with theory and analysis in the interest of change motivated by a commitment to social justice, racial harmony, equality, and human rights; and 2) engaging in public debate on human issues to make the research results accessible to a broad audience. The workshop brings in guest speakers and will incorporate original ethnographic research to merge theory with action. Students are encouraged to apply the framing model to a public interest research and action topic of their choice. This is an academically-based-community-service (ABCS) course that partners directly with Penn's Netter Center Community Partnerships.
Taught by: Suess
Course usually offered in fall term
Also Offered As: ANTH 516, GSWS 516
Activity: Seminar
1.0 Course Unit

URBS 530 GIS Applications in Social Science
This course will introduce students to the principles behind Geographic Information Science and applications of (GIS) in the social sciences. Examples of GIS applications in social services, public health, criminology, real estate, environmental justice, education, history, and urban studies will be used to illustrate how GIS integrates, displays, and facilitates analysis of spatial data through maps and descriptive statistics. Students will learn to create data sets through primary and secondary data collection, map their own data, and create maps to answer research questions. The course will consist of a combination of lecture and lab.
Taught by: Hillier
Course usually offered in fall term
Also Offered As: URBS 330
Activity: Seminar
1.0 Course Unit

URBS 532 Mapping Philadelphia
Philadelphia is a city that was mapped before it was built, inhabited before it was developed. Founder William Penn's original concept for the gridded city continues to inform the historical evolution of Philadelphia, even as city planners, architects, artists, and social justice activists work to transform the layers of our built environment. This class will study the city through a variety of archival maps, historical mapping practices, and emergent digital approaches to representing space and time. We will explore public history projects that seek approaches to place-making and place-keeping at neighborhood intersections, share dialogue with social practice artists who produce site-specific works, and visualize civic data through platforms such as OpenDataPhilly. Each student will pursue a final research project resulting in a close study of a particular street or intersection in the city. This is an MLA course open primarily to MLA students, Urban Studies undergraduate seniors, and Urban Studies graduate certificate program students. If you would like to register for the course, please contact Urban Studies Coordinator Vicky Karkov.
Taught by: Farber
Course usually offered in spring term

1.0 Course Unit
URBS 542 Archiving Jazz: Visuality And Materiality In The Phila Jazz Community 1945-2019
This seminar will be organized around three distinct pathways. First, it will serve as an introduction to Jazz Studies and thus be attentive to the ways that jazz music has sparked an interdisciplinary conversation that is wide-ranging and ongoing. Second, we will be partnering with the African American Museum of Philadelphia to consider jazz within the realm of visual art. In light of efforts to map the ‘black interior’, how have visual artists (e.g. painters, sculptors, filmmakers, and photographers) sought to represent jazz? Third, we will endeavor to develop partnerships with the Philadelphia (and beyond) jazz community, especially as it pertains to creating and sustaining an archive that serves as way to understand jazz as an instrument of placemaking and also as a vehicle for jazz musicians to take ownership of their narratives. The seminar will meet at the African American Museum of Philadelphia and be team taught with members of the Museum staff. The course will culminate with a virtual exhibit of visual works and archival materials centering on Philadelphia’s jazz community and (if funding is available) a free concert to be held at AAMP. Undergraduates are welcome to register for the course with permission of the instructor.
Taught by: Beavers

URBS 544 Public Environmental Humanities
This broadly interdisciplinary course is designed for Graduate and Undergraduate Fellows in the Penn Program in Environmental Humanities (PPEH) who hail from departments across Arts and Sciences as well as other schools at the university. The course is also open to others with permission of the instructors. Work in environmental humanities by necessity spans academic disciplines. By design, it can also address and engage publics beyond traditional academic settings. This seminar, with limited enrollment, explores best practices in public environmental humanities. Students receive close mentoring to develop and execute cross-disciplinary, public engagement projects on the environment.
Taught by: Wiggin
Course not offered every year
Also Offered As: ANTH 543, COML 562, ENVS 544, GRMN 544
Activity: Seminar
1.0 Course Unit

URBS 546 Global Citizenship
This course examines the possibilities and limitations of conceiving of and realizing citizenship on a global scale. Readings, guest lecturers, and discussions will focus on dilemmas associated with addressing issues that transcend national boundaries. In particular, the course compares global/local dynamics that emerge across different types of improvement efforts focusing on distinctive institutions and social domains, including: educational development; human rights; humanitarian aid; free trade; micro-finance initiatives; and the global environmental movement. The course has two objectives: to explore research and theoretical work related to global citizenship, social engagement, and international development; and to discuss ethical and practical issues that emerge in the local contexts where development initiatives are implemented.
Taught by: Hall
Course usually offered in spring term
Also Offered As: ANTH 546, EDUC 503
Activity: Seminar
1.0 Course Unit

URBS 547 Anthropology and Education
An introduction to the intent, approach, and contribution of anthropology to the study of socialization and schooling in cross-cultural perspective. Education is examined in traditional, colonial, and complex industrial societies.
Taught by: Hall or Posecznick
Course offered summer, fall and spring terms
Also Offered As: ANTH 547, EDUC 547
Activity: Lecture
1.0 Course Unit

URBS 599 Independent Study
Specialized topics in Urban Studies. This course may be taken by permit only, once a faculty advisor has agreed to be the professor of record, and the scope of work has been approved in advance by the department.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

URBS 608 Urban Studies Proseminar
Open to PhD students, this scholar-oriented seminar explores how academic researchers from different disciplines define researchable questions, craft research designs, and contribute to knowledge through an examination of important and/or recently published books and monographs with an urban focus. Required of all doctoral students enrolled in the Urban Studies Graduate Certificate Program. Enrollment is limited to 15 students. Other doctoral students may enroll on a space available basis. Course requirements include completion of a major research paper on a topic selected in consultation with the instructor.
Taught by: Stern
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

URBS 614 Weimar Landscapes
This new course is designed for students of literature, landscape architecture and urban planning, and cultural history in general. It will explore the ideas of, and attitudes towards, landscape in selected works by Wolfgang Goethe, and consider his own considerable practical involvement in reshaping the town and gardens of Weimar. The course will provide the larger context of German literature, aesthetics and landscape taste, and politics of the later 18th and early 19th centuries. We will consider the development of new gardens and parks in a ‘new’ style (e.g. Worlitz); they were regarded to be less formal and more ‘natural’ than their French predecessors. We will study the English models for this movement, and offer and particular attention to the major German theorist, C.C.L. Hirschfeld, who would soon become famous outside Germany as well.
Taught by: Weissberg/Hunt
Course not offered every year
Also Offered As: ARTH 782, COML 615, ENGL 584, GRMN 614
Activity: Seminar
1.0 Course Unit

URBS 699 Independent Study
Specialized topics in Urban Studies. This course may be taken by permit only, once a faculty advisor has agreed to be the professor of record, and the scope of work has been approved in advance by the department.
Taught by: Simon
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
URBS 706 Culture/Power/Subjectivities
This doctoral level course will introduce students to a conceptual language and theoretical tools for analyzing and explaining the complex intersection of racialized, ethnic, gendered, sexual, and classed differences and asymmetrical social relations. The students will examine critically the interrelationships between culture, power, and subjectivity through a close reading of classical and contemporary social theory. Emphasis will be given to assessing the power of various theories for conceptualizing and explaining mechanisms of social stratification as well as the basis of social order and processes of social change.
Taught by: Hall
Course not offered every year
Also Offered As: ANTH 704, EDUC 706
Prerequisite: EDUC 547
Activity: Lecture
1.0 Course Unit

URBS 799 Independent Study
Specialized topics in Urban Studies. This course may be taken by permit only, once a faculty advisor has agreed to be the professor of record, and the scope of work has been approved in advance by the department.

Urdu (URDU)

URDU 401 Beginning Hindi-Urdu Part I
This introductory course core proficiency in Hindi-Urdu up to the intermediate level. It is designed for students with little or no prior exposure to Hindi or Urdu. The course covers all four language skills (speaking, listening, reading, and writing) and all three models of communication (interpersonal, presentational, interpretive). Students will develop literacy skills in the primary script of their choice (Hindi or Urdu script). All written materials will be provided in both scripts. All meetings are interactive and students acquire the language by using it in realistic contexts. Culture is embedded in the activities and is also introduced through various authentic materials.
For BA Students: Language Course
Taught by: Pien
Two terms. student must enter first term.
Also Offered As: HIND 401, NELC 402
Prerequisite: HIND 400
Activity: Lecture
1.0 Course Unit

URDU 402 Beginning Hindi-Urdu Part II
This introductory course core proficiency in Hindi-Urdu up to the intermediate level. It is designed for students with little or no prior exposure to Hindi or Urdu. The course covers all four language skills (speaking, listening, reading, and writing) and all three models of communication (interpersonal, presentational, interpretive). Students will develop literacy skills in the primary script of their choice (Hindi or Urdu script). All written materials will be provided in both scripts. URDU 421 Intermediate Urdu Part I
This course allows students to continue improving their Urdu proficiency while also gaining a broad foundational understanding of Urdu society and culture throughout South Asia. The course provides students the tools needed to handle a variety of authentic written and spoken Urdu sources including film, music, media reports, folk tales, and simple literature. Student will also continue to increase their speaking and writing proficiency to be able to discuss a broad range of concrete, real-world topics. The course is designed for students with one year previous Urdu or Hindi study or the equivalent proficiency. Students with speaking ability in Urdu or Hindi but without reading/writing skills are encouraged to contact the instructor for placement.
For BA Students: Language Course
Taught by: Menai
Two terms. student must enter first term.
Prerequisite: URDU 401
Activity: Lecture
1.0 Course Unit

URDU 422 Intermediate Urdu Part II
This continuing second-year course allows students to continue improving their Urdu proficiency while also gaining a broad foundational understanding of Urdu society and culture throughout South Asia. The course provides students the tools needed to handle a variety of authentic written and spoken Urdu sources including film, music, media reports, folk tales, and simple literature. Students will also continue to increase their speaking and writing proficiency to be able to discuss a broad range of concrete, real-world topics. The course is designed for students with one year previous Urdu or Hindi study or the equivalent proficiency.
For BA Students: Last Language Course
Taught by: Menai
Two terms. student must enter first term.
Also Offered As: NELC 422
Activity: Seminar
1.0 Course Unit
URDU 431 Advanced Urdu: Language and Literature
This course is designed to give in-depth exposure to some of the finest works of classical and modern Urdu prose and poetry along with the historical and socio-political trends they represent. Figures covered range from Ghalib (b.1797) to Faiz, Fehmida Riaz, and post 9/11 Urdu prose and poetry. The course is open to both undergraduates and graduate students, subject to having intermediate level proficiency. The course is repeatable, and the content changes every semester. Multi-media content such as music, videos, blogs etc. will be actively incorporated. Every effort will be made to accommodate individual interests. Students are encouraged to contact the instructor with any questions, or if they are unsure about eligibility. Prerequisite: Intermediate reading, writing and speaking skills in Urdu are recommended but contact the instructor if you are unsure of your eligibility and want to discuss further. Topic changes each semester. For BA Students: Advanced Language Course Taught by: Menai Course usually offered in fall term Also Offered As: NELC 431 Prerequisite: URDU 421 Activity: Lecture 1.0 Course Unit

URDU 452 Urdu Literature in Translation
This course will look at Urdu-Hindi expressions of resistance to militant fundamentalism trends, as well as literature resisting the influence of liberal progressive thought. Through comparisons of these divergent trends, we will explore the real intersections, comfortable comprises and contradictions that are internalized by people on the ground in developing societies. The historical and linguistic roots of resistance poetry will be studied, contrasting South Asian Urdu-Hindi poetry and prose (original and translated) with resistance movements from other parts of the world. This course provides students with the opportunity to deepen their knowledge of Urdu culture, literature, and society while expanding and refining their Urdu language skills. We will explore various social, political, and cultural issues through authentic sources such as journalism and media, prose literature and poetry, and film and music. The course is designed to be flexible to address students’ needs and interests. It targets students with two years of Urdu study or the equivalent proficiency. Prerequisite: Intermediate reading, writing and speaking skills in Urdu are recommended but contact the instructor if you are unsure of your eligibility and want to discuss further. Taught by: Menai Course not offered every year Activity: Seminar 1.0 Course Unit

Veterinary & Biomedical Science (VBMS)

VBMS 601 Gross Anatomy - Structural Adaptations to Function
This course is an intensive study by dissection of the gross anatomy of the dog, cat, horse, and goat. In addition, there is one laboratory session dedicated to the chicken. Functional and clinical considerations are intercalated throughout the laboratories. The lectures elucidate selected aspects of specific organ systems under study in the laboratory, stressing theoretical, functional or comparative rather than descriptive aspects of anatomy. Radiographic anatomy is also presented in the course with the assistance of the radiology residents. All first-year students will have free access to the Easy Anatomy program, an interactive 3-D anatomy study guide for the complete canine, through the course page on Learn.vet. Taught by: Drs. Grandstaff, Orsini and Staff Two terms. student must enter first term Activity: Lecture 11.0 Credit Hours

VBMS 602 Histological Basis of Pathology
This course covers microscopic anatomy of tissues and organ systems of mammals important in veterinary medicine, e.g. dog, cat, mouse, rat, horse and cow. The central thread in the course is light microscopic structure as observed in standard stains, but this picture is amplified by electron microscopy, special stains and histochemistry. The material is presented, through lecture and laboratory, from the point of view of experimental biology, cell function, and disease. The course reveals that the structure or histology of the tissues of an animals body is not an arbitrary assemblage of cells but rather the structural expression of the diverse cell types that interact to carry out the functions of the body. Thus, through the microscopic study of the structure of tissues (histology) the functions of the tissues of the body may be inferred. Taught by: Drs. M. May and O. Jacenko and Staff Activity: Lecture 5.0 Credit Hours

VBMS 603 Developmental Biology
The course examines classic and modern concepts in embryonic development as they relate to veterinary medicine. The lectures are designed to cover recent advances in the field with special emphasis on stem cells, specification of cell fate, manipulation of the genome and organogenesis. Examples of pathologies associated with aberrant development of major organ systems will be presented and discussed in the context of veterinary medicine. Taught by: Drs. J. Wang and Staff Activity: Lecture 3.0 Credit Hours

VBMS 604 Introduction to the Neurosciences
This is an introductory course to the neurosciences and assumes a basic background in anatomy, cell biology, histology and biochemistry. At the cell/molecular level the course covers neurocytology, membrane bioelectrical events and their channel protein basis, neurotransmitters and their actions at the synapse. It also covers aspects of neuropsychology and focuses on neuroanatomy and function of neural systems. The latter include the somatic and autonomic components of the peripheral nervous system, the spinal cord and reflexes, primary sensory systems, motor pathways and limbic systems of the brain. Taught by: Dr. T. Bale and Staff Activity: Lecture 5.0 Credit Hours
VBMS 605 Cellular and Biochemical Foundation of Disease
This course teaches the principles of biological chemistry as applied to metabolic relationships underlying cellular and physiological processes and the molecular mechanisms of disease. The first third of the course covers the basic biochemistry of amino acids, proteins (e.g., enzymes), nucleic acids, vitamins and coenzymes, carbohydrates and lipids. Normal as well as disease-related pathways for the processing of these biological materials are discussed. Species differences in metabolic pathways and clinical relevance are pointed out, wherever pertinent. The latter part of the course includes discussions of molecular genetics, and the physiological-biochemical functioning and regulation of cellular structures, tissues and organs: membranes, endocrine glands and hormones, blood, bone and connective tissue, liver, muscle, etc. Diseases specific to these structures are discussed in the context of veterinary medicine. Also included are such topics as prostaglandins, biochemistry of growth regulation, vision, taste, cell cycle and cancer. Laboratories include clinically relevant problem-based and library research projects that relate biochemistry to veterinary medicine, and identification of reproductive and endocrine conditions by diagnostic problem solving using student generated biochemical data.
Taught by: Dr. A. Kashina and Staff
Activity: Lecture
10.0 Credit Hours

VBMS 606 Animal Physiology
A strong training in animal physiology is crucial for veterinary education. Extensive and profound knowledge of normal processes that maintain animal life and enable animals to cope with a changing environment provide the crucial foundation for the understanding of breakdowns in homeostasis and disease states, and of key principles underlying diagnostics and treatment of animal diseases. The course provides a brief review of relevant molecular and cell biology concepts that enhance the comprehension of physiology (including metabolism, cell membrane permeability, bioelectric potentials, active transport, etc.) and a detailed study of the functional processes in the circulatory, respiratory, digestive, endocrine, muscular, renal and reproductive systems. This course primarily focuses on normal physiologic mechanisms in mammals yet includes comparative physiology material pertinent to other vertebrates of veterinary interest. Furthermore, pathophysiologic alterations of normal function and physiological principles of diagnostics and therapy are amply illustrated by clinical case examples.
Taught by: Drs. Serge Fuchs, Elizabeth Woodward and Staff
Activity: Lecture
10.0 Credit Hours

VBMS 607 Pharmacology & Toxicology
The major objective of this course is to help veterinary students learn the principles of pharmacokinetics, the mechanisms of drug action, the sites at which drugs act, and how drugs may interact with, and alter the activity of, various organ systems. The material will also include properties, mechanisms of action, and biological effects of various chemical substances (drugs, environmental pollutants, toxins of plant origin, etc.) that interfere with normal cell and organ function. The course is intended to deal chiefly with basic Pharmacology and Toxicology rather than clinical therapeutics, although some therapeutics and clinical material will be discussed in relevant areas.
Taught by: Dr. F. Luca and Staff
Activity: Lecture
10.0 Credit Hours

Veterinary Clinical Studies - Medicine Courses (VMED)

VMED 600 Introduction to Clinical Veterinary Medicine I
This course provides an introduction to clinical veterinary medicine for first year veterinary students, and includes sessions on management, restraint and physical examination of small animal patients. Laboratory sessions provide the opportunity for practicing physical examination and restraint of animals in supervised small groups. This course will be graded P/F.
Taught by: Dr. L. Waddell and Staff
Two terms. student must enter first term.
Activity: Lecture
2.0 Credit Hours

VMED 601 Introduction to Clinical Veterinary Medicine II
Using a case-based organ/system approach, this course provides an introduction to the practice of clinical veterinary medicine in companion animals, and provides an introduction to special species companion animal, laboratory animal, and captive and wild animal veterinary practice. The course also introduces the concept of evidence-based medicine. Laboratory sessions provide exposure to auscultation, behavior abnormalities, clinical rounds discussion, grief management, nursing techniques and special species companion animal and laboratory animal examination.
Taught by: Dr. D. Clarke and Staff
Activity: Lecture
4.0 Credit Hours

VMED 602 Introduction to Clinical Veterinary Medicine III
This course provides an introduction to equine and production animal veterinary medicine for first year veterinary students, and includes sessions on management, restraint and physical examination of large animal patients. Laboratory sessions provide the opportunity for practicing physical examination and diagnostic procedures on horses and production animal species.
Taught by: Dr. E. Davidson and Staff
Activity: Lecture
4.0 Credit Hours

VMED 603 Introduction to Radiology
This lecture course is designed to provide the fundamental principles of clinical imaging in veterinary medicine as they pertain to physics and instrumentation. The emphasis is on radiography, but principles of ultrasonography, computerized tomography, magnetic resonance imaging and nuclear medicine are also discussed. Topics include production of diagnostic images, radiation safety, differences between the various imaging modalities and some features of normal radiographic anatomy of small animals (thorax and abdomen). The course includes a two-hour mandatory laboratory, focusing on case presentations with emphasis on thoracic and abdominal radiography.
Taught by: Dr. W. Mai and Staff
Activity: Lecture
2.0 Credit Hours
VMED 604 Veterinary Medical Genetics
The objective of this course is to provide a background for understanding the underlying mechanisms, distribution, and control of genetic disease in domestic animals. Emphasis will be on concepts and information useful on a clinical level. Problem-based learning exercises integrate the concepts presented in the course.
Taught by: Dr. P. Henthorn and Staff
Activity: Lecture
2.0 Credit Hours

VMED 605 Nutrition
Fundamental principles of nutrition are the background of recommendations for feeding various classes of animals. Types of foodstuffs and their nutrient composition are evaluated in relation to nutrient requirements, voluntary intake and food preferences of domestic species. Feeding programs for nutritional management of animal classes commonly encountered in veterinary medicine are discussed, and examples of clinical nutrition applications are presented.
Taught by: Dr. D. Pitta and Staff
Activity: Lecture
3.0 Credit Hours

VMED 606 Principles of Epidemiology
The fundamentals of descriptive, analytic, and clinical epidemiology will be covered as they relate to both population and individual animal problems in veterinary medicine. The major aims of the course are to provide an analytic basis for clinical decision making and the ability to interpret the veterinary literature for application in a practice setting. These aims will be accomplished by using examples to illustrate the epidemiologic approach to studying infectious and non-infectious disease, and in clinical decision-making.
Taught by: Dr. Gary Smith and Staff
Activity: Lecture
2.0 Credit Hours

VMED 607 Veterinary Public Health
This course examines the nature and scope of animal-human interactions with emphasis on the consequences of this relationship from an epidemiologic viewpoint. Included are the zoonotic diseases, those naturally transmitted from animals to man, and the role of pets in society. The traditional involvement of veterinarians in prevention and control of food borne diseases and in public health practice will also be discussed.
Taught by: Dr. Gary Smith and Staff
Activity: Lecture
3.0 Credit Hours

VMED 608 Introduction to Poultry, Swine, and Dairy Medicine
This course will cover clinical problem solving for disease diagnosis, treatment and control. In addition, current topics of interest in food animal medicine will be discussed. These include food safety, regulatory medicine, environmental impact, welfare issues and opportunities for food animal veterinarians. Class time will be used for both lecture and discussion. All material for quizzes will be presented in class. The grade for the course will be based on weekly quizzes.
Taught by: Dr. S. Davison and Staff
Activity: Lecture
2.0 Credit Hours

VMED 609 Infectious & Metabolic Diseases
A core course of lectures on infectious and metabolic diseases of domestic animals. The topics in this course include: Rabies, Lymphosarcoma, Blue Tongue, Parturient Paresis, Listeriosis, Anthrax, Botulism, Leptospirosis, Canine Distemper, and many other polysystemic diseases.
Taught by: Dr. R. Sweeney and Staff
Activity: Lecture
7.0 Credit Hours

VMED 610 Clinical Reproduction
Course covers reproduction in large and small domestic species, and includes the estrous cycle, heat detection, pregnancy, pregnancy loss, obstetrics, parturition, the postpartum period, male and female reproductive physiology, behavior, breeding soundness examination, and fertility problems. A two-hour problem solving session with the class divided into small groups will be held to discuss clinical cases. Grades will be based on a mid-term and a cumulative final examination.
Taught by: Dr. R. Turner and Staff
Activity: Lecture
5.0 Credit Hours

VMED 611 Veterinary Medicine/Surgery I
Principles of diagnosis, including radiology, and medical and surgical management of infectious and noninfectious diseases of the head, neck and chest, including diseases of the oral structures, eye, ear, nose and throat, esophagus, lung, heart, pleura and chest wall. Course material is broken down in 4 sections covering ophthalmology, cardiology, diseases of the head and neck and non-cardiac intrathoracic diseases. An examination covering the lecture material is administered after each section.
Taught by: Dr. V. Thawley and Staff
Activity: Lecture
9.0 Credit Hours

VMED 612 Veterinary Medicine/Surgery II
This portion of the Medicine/Surgery core course deals with the pathophysiology, clinical features, and medical and surgical treatment of hematologic, endocrine, nephrologic, urogenital and oncologic disorders. Taught by: Dr. B. Callan and Staff
Activity: Lecture
9.0 Credit Hours

VMED 613 Veterinary Medicine/Surgery III
This core course covers the important medical and surgical diseases of the gastrointestinal system and the medical aspects of neurological diseases. Specific disease topics will include noninfectious gastrointestinal disorders; hepatobiliary, pancreatic and splenic disorders; and central and peripheral neurological diseases of domestic animals.
Taught by: Dr. M. Rondeau and Staff
Activity: Lecture
8.0 Credit Hours

VMED 615 Dermatology
A core course of lectures discussing the infectious, ectoparasitic, allergic, autoimmune and metabolic cutaneous disorders of small animals, exotics and horses. Diseases are discussed with particular emphasis on pathogenesis, clinical recognition and treatment. Methods of diagnosis also are stressed so that the student is prepared to recognize and treat the various dermatoses met in the clinical year.
Taught by: Dr. D. Morris and Staff
Activity: Lecture
3.0 Credit Hours
VMED 616 Clinical Animal Behavior
Behavior problems are among the most frequent reasons for surrender and euthanasia of pets. In this course we will discuss the most common behavior problems of dogs and cats, with an emphasis on diagnosis and treatment using both behavior modification and drug therapy. Prognosis and safety issues will also be discussed. Attention will be paid to the thought process used in working up and/or preventing behavioral disorders.
Taught by: Dr. C. Siracusa and Staff
Activity: Lecture
1.0 Credit Hour

VMED 617 Veterinary Ethical Issues
The course goal is to enhance students overall ethical literacy. The course involves a combination of lectures on ethical theory and methodology, and group discussions of ethical case studies drawn from various branches of veterinary practice. The course will be graded as Pass/Fail and full attendance by all students is required unless otherwise pre-authorized by the course organizer.
Taught by: Dr. J. Serpell and Staff
Activity: Lecture
1.0 Credit Hour

VMED 618 Introduction to Clinical Veterinary Medicine IV
This year-long course for second year veterinary students is designed as a reinforcement of the first year introduction to clinical veterinary medicine series (VMED 600, 601, 602) and as a transition to the clinical year rotations. The emphasis is on practical experiences in our hospitals that will increase your clinical and technical skills as you familiarize yourselves with the hospitals facilities, policies and operations. The course will include approximately 11 hours of lecture; 32 hours of small-group practical clinical sessions per student (NBC) and 29 hours of small-group practical clinical sessions per student (MJR-VHUP). This will be a graded course - A, B, C or F.
Taught by: Dr. C. Dougherty, Dr. L. Southwood and Staff
Two terms. Student must enter first term.
Activity: Lecture
4.0 Credit Hours

VMED 619 Emerging and Exotic Diseases
This course will be offered on the internet through the Association of American Veterinary Medical Colleges web site. The Center for Food Security and Public Health at Iowa State University maintains the course and operates the learning management system. The course is part of a larger effort by US Department of Agriculture to improve awareness of and preparedness for foreign animal disease incursions among veterinarians and veterinary students. The ability of a veterinarian to suspect and assist in the diagnosis of a foreign animal disease in livestock or companion animals is crucial to safeguarding Americas animals and agricultural sector and to protecting public health. In addition, the course also aims to convey a more comprehensive understanding of the role of accredited veterinarians in world agriculture. Parts of this course will be required training for subsequent USDA veterinary accreditation of new graduates. There will be a mandatory one hour session to introduce the course site, objectives, materials and requirements. The course site comprises six overview topics; four accreditation modules; nineteen case scenarios and twenty infectious disease inquiries. There are short tests associated with the various sections and students are required to score at least an 80% on each test. Students can take the test multiple times if needed to achieve that score. In addition to the course per se, there are numerous links to supplementary materials. The only other requirement is that a course evaluation must be completed. Students will have five weeks to complete the course requirements:
1. complete overviews 1-4 and 6 in their entirety and 10 out of 13 disease incursion examples in overview 5;
2. complete four accreditation modules;
3. complete nine required and three elective case scenarios;
4. complete five of the 20 infectious disease inquiries representing at least three species. If requested by students, a second session will be held one week prior to the deadline for completion of the online portion of the course to answer any questions and ensure students are able to complete all of the requirements.
Otherwise, students with questions or concerns may contact the course organizer, Dr. Aceto, by email or telephone at any time during the course period.
Taught by: Dr. H. Aceto
Activity: Lecture
3.0 Credit Hours
VMED 620 Introduction to Clinical Veterinary Medicine V
This course will comprise 8 hours of lecture/classroom exercises and discussion per student in addition to a series of online tutorials. Two of the 8 hours of lecture time will be devoted to orientation and trouble-shooting sessions to help students access and complete the online tutorials. Students are expected to complete the online tutorials outside of the classroom setting. The online tutorials will demonstrate how to navigate the hospital computer systems at both campuses so that students will be familiar with them prior to entering the clinics in their fourth year. The material presented in this course will build upon principles learned in previous ICVM courses, specifically by providing further instruction on and practice of written and verbal communication skills and by building upon the orientation to the teaching hospitals provided in ICVM IV. After completing this course, students should be able to: - Describe and use key aspects of client communication skills that are essential in the veterinary medical setting. - Recognize and interpret common aspects of non verbal communication and understand how their non verbal communication can be used to improve their encounters with clients. - Understand and demonstrate the basic elements of a written discharge summary. - Navigate and utilize the electronic hospital systems on both campuses. The course will be pass/fail based upon attendance, completion of the on-line tutorials and completion of a discharge summary by each student for the dog that s/he spayed in the Clinical Exercises course.
Taught by: Dr. E. Krick and Staff
Course usually offered in fall term
Activity: Lecture
2.0 Credit Hours

Veterinary Clinical Studies - New Bolton Center (VCSN)

VCSN 630 Equine Neonatology & Intensive Care Medicine
The objectives of this course are to: (1) Introduce students to neonatal physiology and behavior as it applies to the foal; (2) Acquaint students with the clinical signs and pathophysiologic mechanisms of diseases in neonates; and (3) Provide students experience in the neonatal intensive care unit learning monitoring techniques (e.g. noninvasive blood pressure measurements, PCV, TP, stall side blood glucose, etc.) Observing normal and abnormal neonatal behavior and neonatal/maternal interactions, learning techniques of neonatal restraint, and assisting with diagnostic and therapeutic procedures as well as general nursing. Lectures will focus on foal diseases, intensive care therapies, periparturient problems, ventilatory support, musculoskeletal disorders, pharmacology and the neonate. Seminars will be used to apply lecture and reading material to clinical case discussions. A set of clinically-oriented problems covering case presentations, blood gas analysis, nutrition formulations, fluid therapy, nursing care protocols and periparturient events will be completed during the fourth quarter. The course grade will be based upon evaluation of clinical case problems, seminar participation, and mastering clinical skills (monitoring techniques, etc.) learned during foal-sitting. Enrollment requires approval of the course organizer and satisfactory academic standing. Note: This course will commence in the Spring term and conclude during the summer as foal-sitting nursing shifts can extend into the early summer months.
Taught by: Dr. M. Linton and Staff
Prerequisites: Satisfactory acad. performance through Q2/2nd yr.
Activity: Lecture
4.0 Credit Hours
Notes: Limitations: 70 students max. for foal-sitting nursing shifts. Note: YOU MUST PROVIDE YOUR OWN TRANSPORTATION TO AND FROM NEW BOLTON CENTER

VCSN 632 Diseases & Management of Sheep & Goats
This course is an introduction to small ruminant medicine and surgery. Flock and herd health programs involve control of infectious, parasitic, reproductive and metabolic disorders and provision of proper housing, feeding and reproductive management systems. Prevalent diseases and management systems of the Eastern U.S. will receive emphasis.
Taught by: Dr. M. Fecteau
Activity: Lecture
3.0 Credit Hours

VCSN 633 Animal Health Economics
An introduction to a variety of economic concepts and decision making techniques that relate to the business of an agricultural enterprise and to the impact of veterinary services on that enterprise. Discussion of the role of production medicine in the overall profitability of animal agriculture.
Taught by: Dr. D. Galligan and Staff
Activity: Lecture
2.0 Credit Hours
Notes: Conflict: Scheduled concurrently with Clinical Exercises in Quarter 1
VCSN 634 Clinical Biostatistics
This course presents a unified approach to the analysis and interpretation of clinical data. We start with a discussion of general linear models and show the types of problems to which they apply, and then move to generalized linear models, survival models, and finally to general estimating equations. Our goal is to acquaint participants with a fairly comprehensive array of approaches to data analysis and, most particularly, to circumstances to which they apply. The objective is to prepare students for research activities, either as a career, or as a step towards 'Board Certification' enabling them to plan studies, analyze data ensuing from studies, and to critically read articles in their area of interest.

Taught by: Dr. D. Stefanovski and Staff
Activity: Lecture
2.0 Credit Hours
Notes: Limitations: Min: 6 students/Max: 16 students

VCSN 635 Equine & Farm Animal Anesthesia
This course will discuss sedation and intravenous or inhalant anesthesia of equine, food animal and camelid patients. The lectures will review the clinical pharmacology of the commonly used anesthetic drugs and the anatomic and physiologic differences among the species and their relevance to anesthetic management. Patient preparation, drug selection, induction and intubation techniques, intra-operative monitoring and management of cardiovascular and respiratory abnormalities, post-operative analgesia and recovery complications will also be discussed. Three case-based problems with multiple questions related to various aspects of anesthesia care will be distributed during the course. The problems are take-home, open-book and students may work alone or in pairs. Time will be spent discussing the cases after the written answers are turned in.

Taught by: Dr. K. Olson and Staff
Prerequisite: VSUR 604
Activity: Lecture
2.0 Credit Hours
Notes: Note: This course is a prerequisite for VCSN 815 and VCSN 875 Large Animal Anesthesia Rotation - NBC. This course is required for Equine Majors

VCSN 636 Clinical Applications of Pharmacology
This course is focused on the clinical pharmacological management of the major problems in veterinary practice. The vast majority of lectures directly apply to companion animals but when necessary, to emphasize a drug group or specific clinical problem, there are also several large animal lectures. This is an extension of core pharmacology and not an expanded version. The lectures will be given by the clinical and basic sciences faculty in their areas of expertise. Emphasis will be on the clinical aspects of drug therapy such as dosage range, duration of therapy, evaluation of therapy, and problems encountered with current drug therapy. Pharmacological therapy in the following areas of medicine and surgery are covered: antibiotics, cardiovascular, neurology, respiratory, urinary, gastrointestinal, endocrine, emergency medicine, ophthalmology, chemotherapeutic agents, fluid therapy, anti-inflammatory, pain medications and other topics as needed for the most comprehensive clinical overview. Emphasis is on case-based approaches to drug therapy. The major objectives of this course are: (1) Provide practical information on rational drug therapy before entering the clinics and the real world of veterinary practice. (2) Provide a sound basis for rationally evaluating the presently available drugs and the drugs of the future. The course grade is based on a weekly quiz and/or mid-term/final.

Taught by: Dr. J. Orsini and Staff
Prerequisite: VBMS 607 AND VPTH 605 AND VPTH 604
Activity: Lecture
4.0 Credit Hours

VCSN 637 Animal Production Systems
This elective course provides an overview of: (i) management and operational basics of food animal production systems (dairy, beef, swine, poultry, and aquaculture), (ii) contemporary issues concerning current practice and sustainable future of animal production systems, e.g., food safety & biosecurity, antibiotics & antimicrobial resistance, nutrient management & environmental regulations, and animal welfare & public concerns. Students will work in teams on debates from pre-arranged topics, and will complete periodic assignments. Course grades will be based on class participation (40%), homework assignments (30%), and team debate performance (30%).

Taught by: Dr. Z. Dou and Staff
Activity: Lecture
2.0 Credit Hours
Notes: Limitations: Capacity of classroom
VCSN 638 Introduction to Animal Welfare
This course will cover the basic principles, history, and application of animal welfare science for multiple species. Over a series of lectures, the complex issue of assessing good versus poor welfare will be addressed. The first few lectures will provide students with the background of this field, as well as key terms which define the assessment methods of animal welfare science. The multifaceted issue of poor versus good welfare will be addressed in a lecture on ethics and sociology. The background lectures will also cover the disparity in the assessment of pain, pleasure, stress, and suffering based on applying physiological versus behavioral measurements. Given the tools provided by the background lectures, the students will then learn about species-specific welfare issues in the subsequent lectures to include swine, poultry, bovine, equine, aquaculture, exotic/zoo animals, lab animals, shelter animals, companion animals and current events. Following each one-hour lecture, the students will engage in an hour of hands-on activities, and debates concerning that week’s topic. Students will also participate in one wet lab where they will have the opportunity to apply methods of welfare assessment that they have learned in class.
Taught by: Dr. M. Pierdon and Staff
Activity: Lecture
4.0 Credit Hours
Notes: Limitations: Permission of instructor since class is capped at 25 participants

VCSN 639 Animal Welfare Science
This course is a foundational course for students enrolling in the Animal Welfare Certificate Program. This course covers the basic principles, history, and application of animal welfare science. Over a series of video modules, online discussions, assignments, and quizzes, this course will teach students to assess the welfare of animals in a variety of settings using science-based methods and reasoning. Students will learn current welfare issues by species. This class will engage in activities that build the skills to find and assess scientific sources of information. Finally, the link between science and ethics will be explored such that students understand various ethical frameworks and how they relate to animal welfare. The objective of the course is to provide students with the background and tools to apply animal welfare science in order to facilitate students’ ability to successfully engage in welfare deliberations and welfare science in a variety of fields.
Taught by: Dr. Meghann Pierdon and Staff
Prerequisites: Any student accepted for enrollment in the Animal Welfare and Behavior Certificate Program (a Bachelor’s Degree is required and a background in biology or animal science is preferred.)
Activity: Online Course
6.0 Credit Hours
Notes: Limitations: 20-25 students. At present, this online course will not be offered to UPenn VMD students.

VCSN 640 Large Animal Medicine - NBC
The course is comprised of advanced lectures and discussions on medical diseases of large domestic animals. Laboratory sessions will include ‘hands-on’ experience in performing the more common diagnostic procedures in large animal medicine, including: urethral catheterization of horses; rectal examination; ophthalmic examinations; epidural anesthesia (bovine); nasolacrimal duct flushing; cardiovascular examinations; use of ultrasound equipment; venipuncture in cattle and horses; intravenous injections in cattle, bailing gun procedure for cattle; TB testing in cattle and endoscopy of the horse. Two in-course Progressive examinations and a course Final examination will be given.
Taught by: Dr. R. Nolen-Walston and Staff
Prerequisite: Core Medicine Courses
Activity: Lecture
7.0 Credit Hours

VCSN 641 Advanced Poultry Medicine - NBC
This lecture/laboratory course is designed to provide students with a working knowledge of the recognition and diagnosis of selected diseases of poultry. Lectures will include discussion of the clinical, post-mortem and technical aspects of the diagnosis of selected avian diseases. The laboratory will provide each student with an opportunity to necropsy birds. Field visits to local poultry farms may be taken. The course grade will be based on weekly quizzes and a group project.
Taught by: Dr. S. Davison and Staff
Prerequisite: VPTH 602 AND VMED 608
Activity: Lecture
2.0 Credit Hours
Notes: Limitations: Maximum of 40 students. CONFLICT: VCSN 648 Equine Sports Medicine

VCSN 642 Dairy Cattle Nutrition - NBC
The complexity of evaluating and balancing rations requires computer models. CPM-Dairy - developed at Cornell University, The University of Pennsylvania and The William H. Miner Agricultural Research Institute - evaluates and formulates rations according to a modified National Research Council (NRC) model and according to The Cornell Net Carbohydrate and Protein System (CNCPs). CPM-Dairy will be used to describe nutrient requirements, supplies and utilization. Environmental effects on nutritional requirements will be demonstrated. The dynamics of ruminal fermentation and microbial growth will be illustrated in terms of how they affect nutrient supply. ‘Hands on Computer Sessions’ will lead participants through ration formulation.
Taught by: Dr. L. Baker and Staff
Prerequisite: VMED 605
Activity: Lecture
3.0 Credit Hours
Notes: CONFLICTS: Mon. 8-10 am conflicts with VCSN646 Equine Lameness; Thurs. 4-6 pm conflicts with VCSN 647 Equine Orthopedics
**VCSN 643 Large Animal Reproduction - NBC**
This course covers in-depth reproductive management of cattle, horses, swine and small ruminants. Emphasis is placed on the herd or flock as a unit rather than on the individual animal. This course is the same as VCSN 644 but with one-half of the laboratory time. The course is intended for those students who intend to pursue a career that will be exclusively or predominantly companion animal. A three-hour canine reproduction laboratory is included. The Laboratories include demonstrations by clinicians and hands-on practical experience for students in evaluating the male and the female reproductive status:
- PATH F - female pathology, PATH M - male pathology, OB1 - obstetrics, B&R - bull and ram breeding soundness examination, DOG - dog breeding soundness examination, vaginal cytology of the bitch, MARE1 - palpation of the genital tract per rectum of mare, COW1 - physical exam of the bovine genital tract, ULTRA - ultrasonography of the genital tract of animals. Therapeutic information will be covered in problem-based cases that will be solved and formally presented by small student groups. Grades will be based on the therapeutic presentations, laboratory participation, mid-term exam and a comprehensive final examination.
  Taught by: Dr. P. Sertich and Staff  
  Prerequisite: VMED 610  
  Activity: Lecture  
  3.0 Credit Hours  
  Notes: Limitations: No Drop/Add

**VCSN 644 Large Animal Reproduction - NBC**
The course covers in-depth reproductive management of cattle, horses, swine, sheep and small ruminants. Emphasis is placed on the herd or flock as a unit rather than on the individual animal. Laboratories include demonstrations by clinicians and hands-on practical experience for students in evaluating the male and the female reproductive status of dogs and large domestic animals. Therapeutic information will be covered in problem-based cases that will be solved and formally presented by small student groups. Grades will be based on the therapeutic presentations, laboratory participation, mid-term exam and a comprehensive final examination.
  Taught by: Dr. P. Sertich and Staff  
  Prerequisite: VMED 610  
  Activity: Lecture  
  4.0 Credit Hours  
  Notes: Limitations: No Drop/Add

**VCSN 645 Large Animal Surgery & Surgical Exercises - NBC**
Lectures given in this course will cover common surgical problems of the respiratory, the gastrointestinal, the musculoskeletal, and the urogenital systems of horses and of the gastrointestinal system of domestic ruminants. Lecture material will cover the procedures to be done in each laboratory beforehand so that ample opportunity is allowed for preoperative preparation. Lectures are given on anesthesia with special emphasis on drugs to be used during the laboratory sessions. The surgical exercises and related laboratory procedures are designed to teach surgical techniques and principles, surgical anatomy, and basic surgical procedures in horses and domestic ruminants. Students will administer general anesthetics and apply the principles and techniques of physiologic monitoring of anesthetized large animals. The importance and the application of preoperative and postoperative management will be emphasized and students take full responsibility for their patient's progress throughout the course. The course grade is derived from performance in the laboratories, quality of patient care, participation in conferences, and one final exam. Ponies that fulfill all University Laboratory Animal Resources (ULAR) guidelines may be purchased at the end of the course. Post-requisite: must sign up for VCSN 870 Large Animal Surgery Clinical Rotation 7 Conference Hrs.  
  Taught by: Dr. E. Parente and Staff  
  Prerequisite: Core Surgery Courses  
  Activity: Lecture  
  4.0 Credit Hours  
  Notes: Limitations: No Drop/Add; Maximum of 30 students

**VCSN 646 Equine Lameness - NBC**
This course covers the principles of lameness diagnosis and treatment in horses. The course features didactic lectures, actual lameness examinations, video tape viewing, computer aided learning and a diagnostic nerve block laboratory using cadaver specimens.
  Taught by: Drs. M. Ross, D. Levine and Staff  
  Prerequisites: Core Surgery and Anatomy Courses  
  Activity: Lecture  
  4.0 Credit Hours  
  Notes: CONFLICT: Mon. 8-10 am conflicts with VCSN 642 Dairy Cattle Nutrition  
  Notes: This course is a prerequisite for the following clinical rotations: VCSN 642 Dairy Cattle Nutrition  

**VCSN 647 Equine Orthopedics - NBC**
The course reviews specific techniques in equine orthopedics, and emphasizes understanding orthopaedic principles that are applicable to all species. Topics include more detailed information on internal fixation, relevant first-aid techniques, osteochondrosis and orthopedic sepsis.
  Taught by: Dr. D. Richardson and Staff  
  Activity: Lecture  
  1.0 Credit Hour  
  Notes: CONFLICT: VCSN 642 Dairy Cattle Nutrition

---

*University of Pennsylvania Graduate Catalog*  
*2020-21 Catalog | Generated 09/18/20*
VCSN 648 Equine Sports Medicine - NBC
This seminar course concerns the clinical application of basic physiologic and pathologic principles as they relate to the diagnosis and management of exercise-related diseases in the horse. Material will be presented in light of the demands of specific types of athletic activity. Laboratory demonstrations using the high-speed treadmill will be provided. Hands-on sessions are also provided to demonstrate the collection of arterial blood gas samples and upper airway endoscopy. Paper or oral presentation required.
Taught by: Dr. J. Slack and Staff
Prerequisite: VBMS 601 AND VBMS 605 AND VBMS 606
Activity: Lecture
3.0 Credit Hours
Notes: CONFLICT: VCSN 641 Advanced Poultry Medicine

VCSN 649 Large Animal Diagnostic Imaging - NBC
The course consists of a series of lectures, a radiographic positioning laboratory and an ultrasound/anatomy laboratory. Plain film radiography comprises the majority of the lectures but ultrasound, scintigraphy and prepurchase examination are included. A brief introduction to CT & MRI is also presented. Strong emphasis is placed on the equine species but incorporates radiography of other large animals. The course is designed to cover the basic principles of the different imaging techniques, radiographic and sonographic anatomy, and the basic interpretation of the imaging modalities.
Taught by: Dr. V. Reef and Staff
Prerequisites: Core Medicine, Surgery and Radiology Courses
Activity: Lecture
3.0 Credit Hours
Notes: This course is a prerequisite for the following clinical rotations: VCSN 812,872 Sports Medicine/Imaging and VCSN 814,874 Large Animal Radiology

VCSN 650 Applied Animal Welfare and Behavior
This course aims to provide students with practical skills helpful in the study of animal welfare and in the future offer a bridge to our proposed master’s program. Students will be exposed to critical reading of the scientific literature, development and testing of hypothesis as well as examining experimental paradigms used commonly to probe animal welfare and behavior. The goal of the course is for each student to conceive, develop, write, and present a research proposal on a question of interest in animal welfare that could provide the foundation for a future capstone project. Student assignments will include selected readings, synchronous and asynchronous online discussion of relevant course materials, and an oral presentation and written description of their research proposal.
Taught by: Dr. Thomas Parsons
Prerequisite: Student enrolled in the Animal Welfare Certificate Program who has taken the Animal Welfare Science and/or Animal Behavior course
Activity: Online Course
6.0 Credit Hours
Notes: Limitations: 20-25 students. This course will not be offered to VMD students.

VCSN 652 Regulations and Animal Welfare
This course will focus on regulations in the United States that have an impact on animal welfare. It will also look at oversight of research, clinical trials and informed consent in veterinary medicine. Over a series of video modules, online discussions, assignments and quizzes, this course will teach students the history and tenets of the current regulatory framework. Each week a synchronous session will explore the implications of regulations on animal welfare.
Taught by: Meghann Pierdon
Activity: Online Course
3.0 Credit Hours

VCSN 657 One Health & Global Food Security
By 2050 can the world sustain a population of over 9 billion people in the face of climate change, limited water and other natural resources, pollution, urbanization, political and income inequality, conflict, changing diets and patterns of disease? An interdisciplinary group of faculty will explore this complex question through six broad trends that affect global food sustainability and environmental health; 1) nutritional needs; 2) changing patterns of communicable and non-communicable diseases of humans and all types of animals; 3) natural resource inventory and management; 4) production technologies (intensive/extensive systems); 5) societal changes impacting production and food demand; 6) food distribution systems and access to food. The course is open to graduate and undergraduate students and will involve student participation and research.
Taught by: Drs. D. Galligan, A. Kelly and Staff
Course usually offered in spring term
Also Offered As: ANTH 361, ANTH 661
Activity: Lecture
4.0 Credit Hours

VCSN 658 Evolution of Animal Welfare
This course addresses how changing societal expectations about animal use impact animal welfare expectations.
Taught by: Thomas Parsons
Activity: Online Course
3.0 Credit Hours

VCSN 659 Contemporary Issues in Animal Welfare
This course covers contemporary animal welfare issues and some of their ethical implications
Taught by: Thomas Parsons
Activity: Online Course
3.0 Credit Hours
VCSN 660 Animal Welfare Assessment
This course is intended to cover the animal welfare assessment requirements as outlined in the ACAW guidelines for board certification but also allows any students pursuing the master's program to improve their welfare assessment abilities. Students must participate in assessment of Companion animals, Poultry production, Hooved stock production, Equids, Laboratory animals and Zoo animals. They must also choose at least 2 to assess from the following: Aquatic animals, aquaculture/fisheries, Wildlife/exotic animals, Animals in exhibitions/entertainment, Animals in education, and Working/assistant animals. Students will work on 3 assessments per week for a total of 9 assessments. The final week of the course will be dedicated to working on case studies from the student's own experience. This will include identification of a situation where welfare would need to be assessed, determination of how to assess the welfare of the animal(s) and a written report of the assessment, including recommendations for steps that could be instituted so that the welfare could be improved. Each week a video and reading assignments will familiarize students with assessment techniques and tools.
Taught by: Meghann Pierdon
Activity: Online Course
3.0 Credit Hours

VCSN 661 Swine Neonatology - NBC
This is an introductory course for students who want to learn more about swine production and swine medicine. It aims to familiarize 2nd and 3rd year veterinary students with several important aspects of swine neonatology/farrowing room management that includes periparturient physiology and behavior of both the sow and the piglet, baby pig processing, and sow dystocia. All students will be required to attend the four hours of lecture, and four laboratory shifts. Each laboratory shift is 7 hours and available nights and weekends. Students will be required to monitor the farrowing house for sows in labor and attend the farrowings as needed to critically assess animal well-being. Students will be expected to provide appropriate sow or piglet interventions when indicated. Students will also assist with any routine management tasks such as piglet processing and vaccination. Students will be graded on their participation and success in meeting the course objectives.
Taught by: Dr. T. Parsons and Staff
Activity: Lecture
1.0 Credit Hour
Notes: Limitations: Permission of the Instructor. May be repeated once

VCSN 662 Swine Neonatology - NBC
This course is similar to VCSN 661, but provides students with a more intensive experience and the opportunity to pursue a higher level of proficiency in swine husbandry. This course aims to familiarize 2nd and 3rd year veterinary students with several other aspects of swine husbandry and health management. All students will be required to attend eight laboratory shifts, and write a short report on some aspect of mutual interest related to swine management or disease. Each laboratory shift is 7 hours and is available nights and weekends. Students will be required to participate in all aspects of swine husbandry with special emphasis given to herd health, reproductive and nutritional management. Students will be graded on their participation and success in meeting the course objectives.
Taught by: Dr. T. Parsons and Staff
Prerequisite: VCSN 661 OR VCSN 662
Activity: Lecture
2.0 Credit Hours
Notes: Limitations: Permission of the Instructor; can be repeated once

VCSN 663 Swine Husbandry - NBC
This is the second introductory course for students who want to learn more about swine production and swine medicine. It aims to familiarize 2nd and 3rd year veterinary students with several other aspects of swine husbandry and health management. All students will be required to attend four laboratory shifts, and write a short report on an aspect of mutual interest related to swine management or disease. Each laboratory shift is 7 hours and is available nights and weekends. Students will be required to participate in all aspects of swine husbandry with special emphasis given to herd health, reproductive and nutritional management. Students will be graded on their participation and success in meeting the course objectives.
Taught by: Dr. T. Parsons and Staff
Prerequisite: VCSN 661 OR VCSN 662
Activity: Lecture
1.0 Credit Hour
Notes: Limitations: Permission of the Instructor; can be repeated once

VCSN 664 Swine Husbandry - NBC
This course is similar to VCSN 663, but provides students with a more intensive experience and the opportunity to pursue a higher level of proficiency in swine husbandry. This course aims to familiarize 2nd and 3rd year veterinary students with several other aspects of swine husbandry and health management. All students will be required to attend eight laboratory shifts, and write a short report on some aspect of mutual interest related to swine management or disease. Each laboratory shift is 7 hours and is available nights and weekends. Students will be required to participate in all aspects of swine husbandry with special emphasis given to herd health, reproductive and nutritional management. Students will be graded on their participation and success in meeting the course objectives.
Taught by: Dr. T. Parsons and Staff
Prerequisite: VCSN 661 OR VCSN 662
Activity: Lecture
2.0 Credit Hours
Notes: Limitations: Permission of the Instructor; can be repeated once

VCSN 700 Large Animal Medicine -Foundation - NBC
Students in this rotation will assist clinicians in history taking, examinations and the medical management of large animal patients presented to the hospital at New Bolton Center. Students will participate in daily ward and Medicine teaching rounds, Radiology rounds and Pathology rounds. All students, whether in core or elective, will be expected to participate in night and weekend duty on a rotating basis. All students will prepare and present one clinical case discussion for Grand Rounds. Time commitment: at least 8 hours per day plus night and weekend duty.
Taught by: Dr. R. Sweeney and Staff
Also Offered As: VCSN 770
Activity: Clinical Rotation Dental & Vet school
6.0 Credit Hours
VCSN 701 Large Animal Emergency/Critical Care - Foundation Rotation - NBC
This rotation is designed to teach students basic principles of large animal emergency medicine and surgery as well as the daily management of critically ill equine patients. Students will be involved in a variety of large animal emergency admissions including diagnostic procedures and surgery as well as post-operative or post-admission case management of horses with gastrointestinal disease. Students will attend regular 8 am morning rounds (see course description for Large Animal Surgery, VCSN 800), followed by morning case-based discussion rounds. The day will be spent either on emergency admissions or procedures and management of in-house patients. Daily afternoon rounds will be topic-based, and may be selected from the following topics: Laceration Repair, Emergency Stabilization of Fractures, Acute Abdomen (colic), Diarrhea, Fluid Therapy, Respiratory Distress, Acute Blood Loss/Hemorrhagic Shock, Food Animal Emergencies, Blood Gas Interpretation, Acute Neurologic Patient, Monitoring the Critically Ill Patient, Reproductive Emergencies, Management of Rectal Tears, Critical Care Journal Club. There will be one emergency student assigned to be on-call. On-call shifts are from 6 am to 6 pm (day) and 6 pm to 6 am (night). During the after hours shifts (night and weekends) all emergencies will be received by the emergency student with back up from students in the Medicine and Surgery rotations. During the day time shifts, emergency students will receive equine surgical emergencies and isolation cases. Students will also be assigned treatment duties. Three students will also be required to complete a case-based Grand Rounds presentation of approximately 15 minutes. The Emergency / Critical Care faculty and staff will provide primary coverage for the rotation, with assistance from Medicine and Surgery sections.
Taught by: Dr. L. Southwood and Staff
Also Offered As: VCSN 873
Activity: Clinical Rotation Dental & Vet school
6.0 Credit Hours

VCSN 712 Food Animal Reproduction - NBC
The course is designed for those students anticipating entering large animal or mixed practice. Students will participate in the diagnosis and treatment of clinical reproductive cases in the hospital. Students will be responsible for the daily treatment and examination of all hospitalized cases at the Hofmann Center. Students will also assist in the management of reproductive problems of Widener Hospital patients. Exposure will vary due to fluctuations in case load. Additional 'hands-on' practice of reproductive procedures will occur by the use of teaching animals. Organized laboratories will allow the student to become comfortable with diagnostic techniques of large animal species. On-call, weekend, and night duty are required. Students will be required to give a 15 minute presentation during the rotation and prepare two case letters/discharge instructions on animals they evaluated during the rotation. If student interest and time permit, students may go on field trips to breeding farms.
Taught by Dr. T. Dobbie and Staff
Also Offered As: VCSN 772
Prerequisite: VCSN 644
Activity: Clinical Rotation Dental & Vet school
3.0 Credit Hours
Notes: Satisfies requirement for: EQ, FA, LA. Limitations: 2-6 students/rotation. Priority: FA

VCSN 713 Field Service - NBC
Students in this rotation will assist staff doctors in history taking, physical examinations, and the medical management of patients seen on the Field Service activities of the School's large animal practice. The student is required to attend the appropriate 8:00 a.m. daily rounds at New Bolton Center. The remainder of the day will be spent on field calls. The student will be required to be on night and weekend duty. Night duty will be divided equally among field service students in the rotation. Students on emergency duty are required to be within 15 minutes from New Bolton Center while on duty. Case presentations will be given by students on the second Wednesday of the rotation. Boots and coveralls are essential for this rotation.
Taught by: Dr. B. Smith and Staff
Also Offered As: VCSN 773
Activity: Clinical Rotation Dental & Vet school
6.0 Credit Hours
Notes: Required: SALA

VCSN 715 Diagnostic Ultrasound in Large Animals - NBC
This rotation will provide students with experience in the diagnosis and treatment of large animal cardiac diseases and the use of M-mode, 2-dimensional real-time, pulsed wave, color flow and continuous wave Doppler echocardiography and exercising electrocardiography. Students will also gain experience in the use of diagnostic ultrasonography in the evaluation of tendon and ligament injuries, diseases of the thorax and abdomen, and the evaluation of masses, swellings, neonates and high-risk pregnancies. Students will also gain experience in patient preparation; obtaining a quality ultrasonographic or echocardiographic image and cardiac Doppler studies; and in interpretation of these images and studies with staff and faculty supervision. Students will be responsible for patient care of animals presented to the Heart Station/ Ultrasound Service during the rotation. Prerequisite: Core Medicine and Surgery
Taught by: Dr. V. Reef and Staff
Also Offered As: VCSN 775
Activity: Clinical Rotation Dental & Vet school
5.0 Credit Hours
Notes: Limitations: 2 students/week in VCSN 776, VCSN 773 combined. Satisfies imaging requirement: EQ, FA, LA. Satisfies cardiology requirement: SALA. Notes: Not offered during VCSN 812,872 Sports Medicine/Imaging

VCSN 716 Ultrasonography in Large Animals - NBC
For full course description see VCSN 715. Prerequisite: Core Medicine and Surgery
Taught by: Dr. V. Reef and Staff
Also Offered As: VCSN 776
Activity: Clinical Rotation Dental & Vet school
2.0 Credit Hours
Notes: Limitations: 2 students/week in VCSN 106,776, VCSN 715,775 combined. Satisfies requirement for: EQ, FA, LA. Note: Not offered during VCSN 812,872 Sports Medicine/Imaging
VCSN 770 Large Animal Medicine -Foundation - NBC
Students in this rotation will assist clinicians in history taking, examinations and the medical management of large animal patients presented to the hospital at New Bolton Center. Students will participate in daily ward and Medicine teaching rounds, Radiology rounds and Pathology rounds. All students, whether in core or elective, will be expected to participate in night and weekend duty on a rotating basis. All students will prepare and present one clinical case discussion for Grand Rounds. Time commitment: at least 8 hours per day plus night and weekend duty.
Taught by: Dr. R. Sweeney and Staff
Also Offered As: VCSN 700
Activity: Clinical Rotation Dental & Vet school
6.0 Credit Hours
Notes: Limitations: Based on Hospital Needs

VCSN 772 Food Animal Reproduction - NBC
The course is designed for those students anticipating entering large animal or mixed practice. Students will participate in the diagnosis and treatment of clinical reproductive cases in the hospital. Students will be responsible for the daily treatment and examination of all hospitalized cases at the Hofmann Center. Students will also assist in the management of reproductive problems of Widener Hospital patients. Exposure will vary due to fluctuations in case load. Additional ‘hands-on’ practice of reproductive procedures will occur by the use of teaching animals. Organized laboratories will allow the student to become comfortable with diagnostic techniques of large animal species. On-call, weekend, and night duty are required. Students will be required to give a 15 minute presentation during the rotation and prepare two case letters/discharge instructions on animals they evaluated during the rotation. If student interest and time permit, students may go on field trips to breeding farms.
Taught by: Dr. T. Dobbie and Staff
Also Offered As: VCSN 712
Prerequisite: VCSN 644
Activity: Clinical Rotation Dental & Vet school
3.0 Credit Hours
Notes: Limitations: 2-5 students/rotation. Priority: EQ, FA, LA Majors

VCSN 776 Ultrasonography in Large Animals - NBC
This rotation will provide students with experience in the diagnosis and treatment of large animal cardiac diseases and the use of M-mode, 2-dimensional real-time, pulsed wave, color flow and continuous wave Doppler echocardiography and exercising electrocardiography. Students will also gain experience in the use of diagnostic ultrasonography in the evaluation of tendon and ligament injuries, diseases of the thorax and abdomen, and the evaluation of masses, swellings, neonates and high-risk pregnancies. Students will also gain experience in patient preparation; obtaining a quality ultrasonographic or echocardiographic image and cardiac Doppler studies; and in interpretation of these images and studies with staff and faculty supervision. Students will be responsible for patient care of animals presented to the Heart Station/Ultrasound Service during the rotation. Prerequisite: Core Medicine and Surgery
Taught by: Dr. V. Reef and Staff
Also Offered As: VCSN 715
Activity: Clinical Rotation Dental & Vet school
5.0 Credit Hours
Notes: Limitations: 2 students/week in VCSN 776,VCSN 775 combined. Note: Not offered during VCSN 872 Sports Medicine/Imaging

VCSN 777 Diagnostic Ultrasound in Large Animals - NBC
This rotation will provide students with experience in the diagnosis and treatment of large animal cardiac diseases and the use of M-mode, 2-dimensional real-time, pulsed wave, color flow and continuous wave Doppler echocardiography and exercising electrocardiography. Students will also gain experience in the use of diagnostic ultrasonography in the evaluation of tendon and ligament injuries, diseases of the thorax and abdomen, and the evaluation of masses, swellings, neonates and high-risk pregnancies. Students will also gain experience in patient preparation; obtaining a quality ultrasonographic or echocardiographic image and cardiac Doppler studies; and in interpretation of these images and studies with staff and faculty supervision. Students will be responsible for patient care of animals presented to the Heart Station/Ultrasound Service during the rotation. Prerequisite: Core Medicine and Surgery
Taught by: Dr. V. Reef and Staff
Also Offered As: VCSN 716
Activity: Clinical Rotation Dental & Vet school
2.0 Credit Hours
Notes: Limitations: 2 students/week in VCSN 776, VCSN 775 combined. Note: Not offered during VCSN 872 Sports Medicine/Imaging
VCSN 777 Large Animal Neonatal Intensive Care Rotation - NBC
This elective provides students with experience in the management of critically ill large animal neonates and dams with periparturient complications. Daily rounds emphasize the use of monitoring techniques (e.g. capnography, ECG, BP monitor, fetal and neonatal ultrasonography), and various treatment modalities (e.g. parenteral nutrition, positive pressure ventilation, and fluid therapy) required in the management of critically ill neonatal foals and late-term pregnant mares. Students will have the opportunity to master the following manual and theoretical skills: arterial puncture and arterial blood gas analysis, calculation and application of parenteral and enteral nutrition formulations, catheterization techniques for veins and bladder, principles of fluid therapy as applied to patients with septic shock and patients requiring maintenance fluids, radiographic interpretation of neonatal thoracic and musculoskeletal disease, interpretation of fetal and neonatal sonograms, familiarity with different types of respiratory support and resuscitation protocols, and a working knowledge of a wide variety of pharmacologic agents including antibiotics, anticonvulsives, sedatives, analgesics, pressors and inotropic agents. Student responsibilities include presentation of NICU cases at rounds, performing patient treatments with assistance from the NICU nursing staff, morning SOAPs on all assigned cases, and assistance with the diagnosis, treatment and monitoring of neonates admitted to the NICU during their shifts, and assistance with monitoring and parturition in pregnant dams. Students are scheduled to assist with treatments in the intensive care unit every evening from 6 p.m. to 12 midnight and 6 a.m. to 12 midnight on weekends. Emergency duty is assigned equitably among the students on the rotation. Care of the NICU case population is a team effort shared by fourth year students, NICU clinicians, nursing staff, and foal sitters (second year students and volunteers).
Taught by: Dr. J. Palmer and Staff
Activity: Clinical Rotation Dental & Vet school
6.0 Credit Hours
Notes: Limitations: 4 students min; 8 students maximum

VCSN 778 Equine Welfare Clinical Elective
This 2-week clinical elective would be open to all fourth year veterinary students, and would be offered once per year, in rotation 1. The enrollment limit is 6 students, and is limited to students who have taken either of the two welfare courses (Applied Animal Welfare and Behavior, Dr. Parsons; Animal Welfare Science, Dr. Pierdon), and then to equine majors if there are any remaining places. Course goals: To provide a comprehensive and nuanced examination of the issues and concerns regarding equine welfare in the US.
Taught by: Rose Nolen-Walston
Activity: Clinical Rotation Dental & Vet school
5.0 Credit Hours

VCSN 780 Ration Evaluation and Formulation - NBC
This course is intended to provide students with practical experience in evaluating dairy feeding programs and formulation of rations. Students will visit dairy farms, inspect feed storage and delivery systems, obtain representative samples of feedstuffs for analysis, examine production records, and assess animal body condition. Students will then evaluate the nutritional and economic adequacy of the whole feeding program, suggest recommendations for its improvement and prepare producer reports for discussion with faculty prior to implementation.
Taught by: Dr. L. Baker and Staff
Prerequisite: VCSN 642
Activity: Clinical Rotation Dental & Vet school
6.0 Credit Hours
Notes: Limitations: Minimum of 3 students
VCSN 812 Sports Medicine/Imaging - NBC

Goals of this rotation are to provide the students with the opportunity to obtain diagnostic skills through the use of different modalities and to incorporate these techniques into the decision-making process during the diagnosis and treatment of horses with performance problems. Students in this rotation will take more responsibility for their cases and follow them through the different specialties without being drawn away to the next case in their assigned area. Each student will spend his/her time in the following areas: 1 week - Ultrasound/Cardiology. 1 week - Nuclear Scintigraphy/Radiology/MRI. 1 week - Treadmill/Podology. 1 week - Poor performance clinic (lameness) Students will be responsible for in house patient care of their designated area plus weekends. All students attend daily afternoon rounds, which demonstrate the concepts behind the different diagnostic techniques and allow students hands on experience so they can be more involved in the clinical cases over the period of the rotation. In the last week the students will each be responsible for an oral presentation of a case on which they have worked during the rotation.

Taught by: Dr. E. Davidson and Staff

Also Offered As: VCSN 872
Prerequisite: VCSN 649 AND VCSN 646
Activity: Clinical Rotation Dental & Vet school
10.0 Credit Hours
Notes: Limitations: Maximum of 4 students per rotation Notes: Offered Rotations 1-8, possibly 9-10; Individual rotations in Sports Medicine Clinic, LA Radiology, LA Ultrasound and Podology are not offered during this time period. Satisfies imaging requirement: EQ, LA, FA

VCSN 814 Large Animal Radiology - NBC

In this rotation, students will gain experience in making and interpreting large animal radiographic examinations. They will assist the radiology technicians in taking and processing routine radiographs, attend film reading sessions, daily hospital rounds and review large animal radiographs independently and under supervision. Students will be required to write radiology reports.

Taught by: Dr. K. Wulster and Staff

Also Offered As: VCSN 874
Prerequisite: VCSN 649
Activity: Clinical Rotation Dental & Vet school
5.0 Credit Hours
Notes: Limitations: 2 students/rotation. Satisfies imaging requirement: EQ, FA, LA, SALA. Note: Not offered during VCSN 812,872 Sports Medicine/Imaging

VCSN 815 Large Animal Anesthesiology Service - NBC

During the Large Animal Anesthesiology Service Rotation, students will gain experience in: (1) anesthetizing equine and other farm animals for elective and emergency procedures; (2) alleviating pain in animals; (3) maintaining adequate vital functions during anesthesia and (4) managing fluid, electrolyte and acid-base disturbances in the perioperative period. In addition, the course offers the opportunity to apply the clinical pharmacology of tranquilizers in various farm animal species. Students are requested to attend Anesthesia Service rounds on Mondays and Fridays (8:00 am) during their clinical rotation, which will also offer the opportunity to discuss anesthesia cases. Night and weekend emergency duty is mandatory and shared with veterinary technician students. The maximum emergency duty is 4 weekday nights and one 24-hour weekend day. Students are expected to report to the Sports Medicine Conference Room or Anesthesia Office promptly at 8:00 am on the first Monday morning of the 2-week rotation with scrubs, stethoscope and calculator. Students are requested to review the information contained in the class notes of the following courses for appropriate sections prior to entering the rotation: General Pharmacology and Toxicology (VBMS 607), Animal Physiology (VBMS 606), Anesthesia (VSUR 604), and the Equine and Farm Animal Anesthesia Elective (VCSN 635). Students should also be familiar with dosages of commonly used drugs and their clinical pharmacology and technical aspects of the practice of large animal anesthesia. Students may consult the learn.vet web site to find out more about Student Evaluation & Clinical Skill Assessment in this rotation. Suggested texts: Mui, W.W., Hubbel, JAE. (eds) Equine Anesthesia: Monitoring and Emergency Therapy, 2nd edn, Saunders Elsevier, St. Louis, 2009; Tranquili, W.J.,Thurmon, J.C., Grimm, K.A. (Eds) Lumb and Jones Veterinary Anesthesia, 4th edn, Blackwell, Ames, 2007; Doherty, T., Valverde, A. (Eds.) Manual of Equine Anesthesia and Analgesia, Blackwell, Ames, 2006.

Taught by: Dr. B. Driesen and Staff

Also Offered As: VCSN 875
Prerequisite: VCSN 635
Activity: Clinical Rotation Dental & Vet school
6.0 Credit Hours
Notes: Limitations: 2 students/rotation, not Early Entry. Required: EQ. Satisfies anesthesia/pain management requirement: FA, LA, SALA

VCSN 816 Food Animal Anesthesiology Service - NBC

In this rotation, students will gain experience in planning and performing sedation and anesthesia in small ruminants, swine and camels. Specific clinical objectives during the five-day rotation include physical and chemical restraint, regional and general anesthesia techniques in various food and fiber producing animals, and operation and use of various anesthetic monitoring devices. Emphasis is on techniques and drugs commonly used in the field. Students will formulate plans for sedation and/or short term anesthesia in sheep/goats, pigs and camels and will then carry them out on teaching animals. Techniques for regional anesthesia for flank surgery in the bovine will be performed at Marshak Dairy.

Taught by: Dr. K. Olson and Staff

Also Offered As: VCSN 876
Activity: Clinical Rotation Dental & Vet school
3.0 Credit Hours
Notes: Limitations: 2-4 students/rotation, not Early Entry. Priority: Food Animal Majors. Satisfies anesthesia/pain management requirement: FA, LA
VCSN 870 Large Animal Surgery-Foundation - NBC
Students rotating through Large Animal Surgery at NBC will participate in all aspects of examination and diagnosis, including lameness evaluation and endoscopy, medical and surgical treatment and daily patient care of large animals. During one week of the two-week rotation, each student will be assigned to treat cattle, other domestic farm animals and horses, and during the other week, horses only. Night, weekend and holiday assignments, including treatments and emergency service, will be made according to the requirements of the overall hospital operation during a given session. Students usually are exposed to various surgical procedures (general soft tissue, abdominal, orthopedic, etc.) during any one rotation. During the rotation, students may gain experience with horses being examined on the High Speed Treadmill or undergoing imaging in the Nuclear Scintigraphy Unit. Students will also participate in a variety of didactic teaching rounds, barn rounds and teaching laboratories as described: Monday, Tuesday, Wednesday, Friday 4-5 pm - Surgery Teaching Rounds. Thursday 3-5 pm - Surgery Teaching Laboratory (Wet labs). Monday 8-9 am Radiology Rounds (case-based discussion led by surgery faculty). Tuesday 8-9 am - Lameness Rounds (case-based discussion led by Sports Medicine faculty). Wednesday 8-9 am - Radiology Rounds (case-based discussion led by radiology faculty). Thursday 8-9 am - Grand Rounds (Student case presentations). Friday 8-9 am - Medicine Teaching Rounds (case-based discussion with Medicine faculty and house officers). Nursing staff performs treatments between 9am and 5pm, Monday through Friday and 6pm to 6am Monday through Thursday to allow daily student participation in surgical cases. On Fridays, students perform treatments 6am - 8am, at 6 pm and midnight. On Saturdays, students do treatments from 6am through midnight and on Sundays, from 6am through 10pm. On the last day of a rotation, students do midnight treatments. To facilitate a smooth transition to your next rotation, nursing does 6am and 8am treatments on the first day of each new rotation.
Taught by: Dr. D. Richardson and Staff
Also Offered As: VCSN 800
Activity: Clinical Rotation Dental & Vet school
6.0 Credit Hours
Notes: Limitations: Based on Hospital Needs. Note: This rotation is a postrequirement of VCSN645 Large Animal Surgery and Surgical Exercises

VCSN 871 Equine Surgery Clinic - NBC
This elective is specifically designed to provide students interested in equine practice after graduation with additional exposure to a variety of orthopedic and soft tissue surgical problems of horses. Students will actively participate in all aspects of lameness and soft tissue diagnosis, treatment, surgery and patient care. Teaching rounds will involve daily barn rounds, daily didactic presentations and/or wet labs covering surgical topics. Laboratories include internal fixation of fractures, wound repair, arthroscopy, intestinal surgical techniques, laser surgery, head and neck surgery, video analysis of lameness and field anesthesia. Every effort is made to have students in this course perform field castrations with local veterinarians. Students will be expected to participate in after-hours treatments and surgical emergencies of horses; however, students will not be assigned to food animal patients during this rotation.
Taught by: Dr. D. Richardson and Staff
Prerequisite: VCSN 800
Activity: Clinical Rotation Dental & Vet school
6.0 Credit Hours
Notes: Limitations: 6-10 students. Priority: Equine Majors

VCSN 872 Sports Medicine/Imaging - NBC
Goals of this rotation are to provide the students with the opportunity to obtain diagnostic skills through the use of different modalities and to incorporate these techniques into the decision-making process during the diagnosis and treatment of horses with performance problems. Students in this rotation will take more responsibility for their cases and follow them through the different specialties without being drawn away to the next case in their assigned area. Each student will spend his/her time in the following areas: 1 week - Ultrasound/Cardiology. 1 week - Nuclear Scintigraphy/Radiology/MRI. 1 week - Treadmill/Podology. 1 week - Poor performance clinic (lameness) Students will be responsible for in house patient care of their designated area plus weekends. All students attend daily afternoon rounds, which demonstrate the concepts behind the different diagnostic techniques and allow students hands on experience so they can be more involved in the clinical cases over the period of the rotation. In the last week the students will each be responsible for an oral presentation of a case on which they have worked during the rotation.
Taught by: Dr. E. Davidson and Staff
Also Offered As: VCSN 812
Prerequisite: VCSN 649 AND VCSN 646
Activity: Clinical Rotation Dental & Vet school
10.0 Credit Hours
Notes: Limitations: Maximum of 4 students per rotation Notes: Offered Rotations 1-8, possibly 9-10; Individual rotations in Sports Medicine Clinic, LA Radiology, LA Ultrasound and Podology are not offered during this time period

VCSN 873 Large Animal Emergency/Critical Care - Foundation Rotation - NBC
This rotation is designed to teach students basic principles of large animal emergency medicine and surgery as well as the daily management of critically ill equine patients. Students will be involved in a variety of large animal emergency admissions including diagnostic procedures and surgery as well as post-operative or post-admission case management of horses with gastrointestinal disease. Students will attend regular 8 am morning rounds (see course description for Large Animal Surgery, VCSN 800), followed by morning case-based discussion rounds. The day will be split between emergency admissions or procedures and management of in-house patients. Daily afternoon rounds will be topic-based, and may be selected from the following: Laceration Repair, Emergency Stabilization of Fractures, Acute Abdomen (colic), Diarrhea, Fluid Therapy, Respiratory Distress, Acute Blood Loss/Hemorrhagic Shock, Food Animal Emergencies, Blood Gas Interpretation, Acute Neurologic Patient, Monitoring the Critically Ill Patient, Reproductive Emergencies, Management of Rectal Tears, Critical Care Journal Club. There will be one emergency student assigned to be on-call. On-call shifts are from 6 am to 6 pm (day) and 6 pm to 6 am (night). During the after hours shifts (night and weekends) all emergencies will be received by the emergency student with back up from students in the Medicine and Surgery rotations. During the day time shifts, emergency students will receive equine surgical emergencies and isolation cases. Students will also be assigned treatment duties. Three students will also be required to complete a case-based Grand Rounds presentation of approximately 15 minutes duration. The Emergency / Critical Care faculty and staff will provide primary coverage for the rotation, with assistance from Medicine and Surgery sections.
Taught by: Dr. L. Southwood and Staff
Also Offered As: VCSN 701
Activity: Clinical Rotation Dental & Vet school
6.0 Credit Hours
VCSN 874 Large Animal Radiology - NBC

In this rotation, students will gain experience in making and interpreting large animal radiographic examinations. They will assist the radiology technicians in taking and processing routine radiographs, attend film reading sessions, daily hospital rounds and review large animal radiographs independently and under supervision. Students will be required to write radiology reports.

Taught by: Dr. K. Wulster and Staff

Also Offered As: VCSN 814

Prerequisite: VCSN 649

Activity: Clinical Rotation Dental & Vet school

5.0 Credit Hours

Notes: Limitations: 2 students/rotation. Note: Not offered during VCSN 812, 872 SportsMedicine/Imaging

VCSN 875 Large Animal Anesthesiology Service - NBC

During the Large Animal Anesthesia Service Rotation, students will gain experience in: (1) anesthetizing equine and other farm animal patients for elective and emergency procedures; (2) alleviating pain in animals; (3) maintaining adequate vital functions during anesthesia and (4) managing fluid, electrolyte and acid-base disturbances in the perioperative period. In addition, the course offers the opportunity to apply the clinical pharmacology of perianesthetic drugs in various farm animal species. Students are requested to attend Anesthesia Service rounds on Mondays and Fridays (8:00 am) during their clinical rotation, which will also offer the opportunity to discuss anesthesia cases. Night and weekend emergency duty is mandatory and shared with veterinary technician students. The maximum emergency duty is 4 weekday nights and one 24-hour weekend day. Students are expected to report to the Sports Medicine Conference Room or Anesthesia Office promptly at 8:00 am on the first Monday morning of the 2-week rotation with scrubs, stethoscope and calculator. Students are requested to review the information contained in the class notes of the following courses for appropriate sections prior to entering the rotation: General Pharmacology and Toxicology (VBMS 607), Animal Physiology (VBMS 606), Anesthesia (VSUR 604), and the Equine and Farm Animal Anesthesia Elective (VCSN 635). Students should also be familiar with dosages of commonly used drugs and their clinical pharmacology and technical aspects of the practice of large animal anesthesia. Students may consult the learn.vet web site to find out more about Student Evaluation & Clinical Skill Assessment in this rotation. Suggested texts: Muir, W.W., Hubbel, JAE. (eds) Equine Anesthesia: Monitoring and Emergency Therapy. 2nd edn, Saunders Elsevier, St. Louis, 2009; Tranquili, W.J., Thurmon, J.C., Grimm, K.A. (Eds) Lumb and Jones Veterinary Anesthesia, 4th edn, Blackwell, Ames, 200 7; Doherty, T., Valverde, A. (Eds.) Manual of Equine Anesthesia and Analgesia, Blackwell, Ames, 2006.

Taught by: Dr. B. Driessen and Staff

Also Offered As: VCSN 815

Prerequisite: VCSN 635

Activity: Clinical Rotation Dental & Vet school

6.0 Credit Hours

Notes: Limitations: 2 students/rotation, not Early Entry

VCSN 876 Food Animal Anesthesiology Service - NBC

In this rotation, students will gain experience in planning and performing sedation and anesthesia in small ruminants, swine and camelids. Specific clinical objectives during the five-day rotation include physical and chemical restraint, regional and general anesthesia techniques in various food and fiber producing animals, and operation and use of various anesthetic monitoring devices. Emphasis is on techniques and drugs commonly used in the field. Students will formulate plans for sedation and/or short term anesthesia in sheep/goats, pigs and camelids and will then carry them out on teaching animals. Techniques for regional anesthesia for flank surgery in the bovine will be performed at Marshak Dairy.

Taught by: Dr. K. Olson and Staff

Also Offered As: VCSN 816

Activity: Clinical Rotation Dental & Vet school

3.0 Credit Hours

Notes: Limitations: 2-4 students/rotation, not Early Entry. Priority: FA Majors

VCSN 877 Food Animal Medicine and Surgery Clinic - NBC

This elective rotation is designed to provide additional experience in food animal medicine and surgery to students who are likely to pursue bovine practice following graduation. Students will participate in the diagnosis and treatment of food animal (primarily dairy cattle) medical and surgical diseases. Teaching rounds will involve daily barn rounds, didactic presentations and wet labs covering medical and surgical topics. The emphasis will be on individual animal (as opposed to herd health) problems. Students will be responsible for after-hours treatments and emergencies of food animals only; students will not work with equine patients during this rotation. Each student will have three weeknights and one 24-hour weekend shift during the rotation (based on 8 students enrolled). Note: students that desire further experience in medical or surgical problems of all large animal species should elect either VCSN 770 or VCSN 870.

Taught by: Dr. R. Sweeney and Staff

Prerequisites: Large Animal Medicine and Surgery Rotations. Additional prerequisites for non-food animal majors: VCSN 640 Large Animal Medicine, VCSN 645 Large Animal Surgery and Surgical Exercises, and VCSN 644 Large Animal Reproduction

Activity: Clinical Rotation Dental & Vet school

6.0 Credit Hours

Notes: Limitations: Maximum of 8 students, not Early Entry Priority: FA Majors. First priority to students who are taking VCSN 810,880 Dairy Production Medicine Clinic
VCSN 878 Sports Medicine Clinic - NBC
The Sports Medicine Clinic provides exposure to many types of problems facing the equine practitioner, concentrating on lameness and performance evaluations. While part of the course stresses traditional lameness evaluation and clinical diagnoses, high-speed treadmill evaluations and nuclear scintigraphy enable the student to participate in more intricate problems affecting sport horses. The course will provide students with the opportunity to develop techniques of examination and diagnosis, and permit direct contact with clients. Students are expected to perform in all areas and participate to the maximum of their ability. Duties may include care and SOAPs of in patients and may include care over a weekend. There is NO emergency duty. In order to participate students are required to have satisfactorily completed the prerequisite courses.

Taught by: Dr. E. Davidson and Staff
Prerequisite: VCSN 646 AND VCSN 649
Activity: Clinical Rotation Dental & Vet school
5.0 Credit Hours
Notes: Limitations: 2 students/rotation. Notes: Not offered during VCSN 812,872 Sports Medicine/Imaging

VCSN 879 Equine Podology - NBC
This course covers the principles of both normal and corrective shoeing as well as examining the current theories of hoofcare. The student will: attend surgery rounds beginning in radiology each morning; and work with the resident farrier and equine clinicians on the various lameness problems presented to the clinic. Foot anatomy and physiology will be stressed. While the students will not be required or expected to manually make or nail on a shoe, they will be required to participate in and observe the procedures utilized. Procedures expected of Equine veterinarians such as removing shoes and debriding the sole will be covered in detail. Additional specialties such as the application of extensions to foal hooves can be incorporated into the rotation if requested.

Taught by: P. Reilly and Staff
Activity: Clinical Rotation Dental & Vet school
2.0 Credit Hours
Notes: Limitations: 2 students/rotation. Note: Not offered during VCSN 812,872 Sports Medicine/Imaging

VCSN 880 Dairy Production Medicine Clinic - NBC
This program is an integrated curriculum sponsored by the Sections of CAHP, Field Service and Reproduction as a part of the Food Animal Majors Program of the School of Veterinary Medicine. Curriculum begins with an overview of the 'Economic Reality' of dairy production progressing through 'Quantitative Skills' - T test, Chi Square, and Proportions; 'Semen Selection' - visit stud, concepts in genetics semen selection and allocation and linear programming approaches; 'Heifer Rearing' - systems view of heifer rearing, evaluation of heifer weight gain and evaluation of heifer reproduction; 'Dairy Herd' - vaccination programs through body condition scoring; 'Milk Quality' - principles of milking machine, procedures evaluation, mastitis control programs, DHIA, SCC monitoring programs, microbiology and quality assurance Reproduction - traditional programs, new programs and evaluation and interpretation of infertility and pregnancy loss; 'Monitoring Reproduction' - current measures, heat detection, breeding intervals, developing a heat detection program; 'Record Systems' - DHIA records, paper records, DAIRY COMP 305 (down loading data); 'Dairy Nutrition' - ration evaluation using Spantan, interaction with reproduction, MUN interpretations; 'Culling' - basic economic concepts and sample applications; 'Facilities Evaluation' - ventilation and free stalls; 'Computer Data Bases' - DairyL, AABPL, Merck Diagnostic Program, Cornell Diagnostic Program and Internet sites; 'Laboratories' - abortions/fetotomy, special procedures, follow the estrus cycle in a cow (2 students/cow), milk progesterone kits and breeding soundness examination; 'Herd visits with private practitioners' Students will spend 2 weeks with private practitioners participating in on-farm investigations.

Taught by: Dr. D. Galligan, M. Kristula and Staff
Activity: Clinical Rotation Dental & Vet school
24.0 Credit Hours
Notes: Limitations: 10 students. Priority: FA Majors

VCSN 881 Food Safety and Quality Assurance - NBC
The purpose of this course is to prepare the student to: 1) Identify human health hazards in food of animal origin. 2) Define some of the roles of the veterinarian in preventing/reducing the introduction of biohazards into the food chain. 3) Discuss the principles of safe food practices for both animals and humans. 4) Recognize and describe where laboratory studies (microbiology, toxicology, chemistry) would help define real or potential problems. 5) Define the appropriate times to utilize laboratory evaluations and become familiar with interpretive criteria. 6) Participate in field trips to learn about different practices and processes. Assess sites in terms of HACCP criteria. 7) Interact with representatives from local and federal agencies concerning policies, application of technology and recommendations concerning problem solving issues. 8) Discuss intervention actions that can be initiated during acts of bioagroterrorism and/or naturally-occurring disasters (using recent events as models for discussion). Case studies will be introduced as problem solving activities.

Taught by: Dr. C. Benson and Staff
Activity: Clinical Rotation Dental & Vet school
5.0 Credit Hours
Notes: Limitations: Maximum of 10 Students. NOT OFFERED UNTIL FURTHER NOTICE
VCSN 882 Swine Production Medicine - NBC
On-farm problem solving and client communications will be emphasized in this course. Students will be required to interact with producers. Students will write a follow-up report describing the findings and recommendations from the farm visit. Each student will also be assigned a case that will require collation of careful history taking, judicious performance of diagnostic tests and critical analysis of computerized production records to reach their diagnosis. Students will visit farms and other allied industries to survey production systems and collect data to be analyzed in the course. Various production systems and cycles will be reviewed, performance targets will be explained, and their elasticity and economic prioritization will be discussed. Records and data will be analyzed and students will learn how to identify significant production deficiencies and associate these with disease processes - either non-infectious, management-related, or infectious. Strategies for dealing with specific deficiencies will be outlined and the benefits of intervening to improve productivity will be compared to the costs of disease and used in developing a recommendation for action by the producer.
Taught by: Dr. M. Pierdon and Staff
Activity: Clinical Rotation Dental & Vet school
6.0 Credit Hours
Notes: Limitations: 2-6 students. Note: Students are required to have no other contact with swine for the duration of the course.

VCSN 883 Advanced Swine Production Medicine - NBC
A new role for swine veterinarians is emerging in large scale swine production. So-called ‘corporate veterinarians’ are employed by a single company and have the challenge of overseeing the production and health care concerns of the animals owned or managed by their employer. This course provides students with the opportunity to gain exposure to this emerging discipline in swine veterinary medicine. Principles of epidemiology, economics and health care delivery systems and their application to optimizing swine health and production will be provided. Students will work closely with selected professionals who are in a leading role in defining the veterinarians place in large scale, vertically integrated swine production. This course extends the offerings in VCSN 882. Students will be expected to complete a small project or investigation during their visit.
Taught by: Dr. G. Althouse and Staff
Prerequisite: VCSN 882
Activity: Clinical Rotation Dental & Vet school
6.0 Credit Hours
Notes: Note: Students are required to have no other contact with swine for the duration of the course.

VCSN 884 Swine Production - NBC
Veterinarians today cannot make useful contributions to the swine industry without an intimate understanding of swine production. The successful practice of modern swine production medicine depends on the ability of the veterinarian to interweave their traditional training in medicine with the intricacies of swine husbandry. This course provides students with the opportunity to gain hands-on experience in modern swine production systems and/or swine production medicine practices. Students will learn through immersion the basic management, husbandry and/or production medicine practice by working with a practice or a farm in specific phases of swine production at a few selected, nationally recognized swine companies. Permission of instructors required.
Taught by: Dr. G. Althouse and Staff
Prerequisite: VCSN 882
Activity: Clinical Rotation Dental & Vet school
6.0 Credit Hours
Notes: Note: Students are required to have no other contact with swine for the duration of the course.

VCSN 885 Equine Ophthalmology - NBC
This course is designed to provide students with ophthalmology experience to supplement what they obtain in the Large Animal Medicine foundation rotation, and, if taken, the Small Animal Ophthalmology elective. It is intended both for students with a special interest in ophthalmology, to broaden their exposure to include equine ophthalmology, and for equine students, to provide them with ophthalmology training that will benefit their equine patients in either general or specialty practice. This latter is particularly important given that most equine students do not take the Small Animal Ophthalmology elective and so graduate without clinical ophthalmology experience. Students will participate in the diagnosis and treatment of clinical ophthalmology cases in the hospital. Students will assist with evaluation of new cases, both inpatient and outpatient, and will be responsible for the daily treatment and examination of all hospitalized ophthalmology cases. Students will handle communication with clients and construct discharge summaries when appropriate. Exposure will vary due to fluctuations in case load. Organized laboratories in slit-lamp biomicroscopy, indirect ophthalmoscopy, and tonometry will allow the student to become comfortable with ophthalmic diagnostic techniques. If time permits, cadaver labs on lid laceration repair, supalpebral lavage placement and enucleation will be available. On-call, weekend, and night duty are required. Students will be required to give a 15 minute presentation during the rotation on a topic relevant to equine ophthalmology, such as corneal stromal abscesses, eosinophilic keratitis, equine cataract, equine glaucoma, or Equine Recurrent Uveitis.
Taught by: Dr. N. Scherrer and Staff
Prerequisite: Completion of Large Animal Medicine rotation
Activity: Lecture
6.0 Credit Hours
Notes: Limitations: This rotation offered two times throughout the year, with a maximum of three students per rotation. No minimum. Priority: The course is open to any student wishing to obtain more ophthalmology experience. A lottery may be necessary if interest exceeds availability.

VCSN 890 Large Animal Medicine and Surgery Holiday Emergency Rotation - NBC
Students will assist emergency clinicians and house officers in history taking, examinations, and the medical and surgical management of large animal patients presented on an emergency basis to the hospital at New Bolton Center. Students will also be responsible for the care and treatment of medical and surgical patients hospitalized at New Bolton Center. This rotation will consist of two 12-hour shifts per day including the weekends and any holidays (example Christmas and New Years Day). All students will be expected to participate in night, weekend, and holiday duty on a rotating basis. Students in this rotation will be responsible for five 12-hour shifts each during the one-week rotation. Students are expected to be on the premises during their duty shifts. Rounds to acquaint students with the hospitalized patients will be held daily during each shift with the emergency clinician/house officer/nursing staff on duty; but no formal teaching or Grand Rounds will occur during this rotation.
Taught by: Dr. B. Dallap Schaer and Staff
Activity: Clinical Rotation Dental & Vet school
3.0 Credit Hours
Notes: Limitations: preferred minimum 14 students / rotation
Veterinary Clinical Studies - Surgery Courses (VSUR)

VSUR 601 Surgical Principles
This Core lecture/laboratory/computer course emphasizes the basic principles of surgery and the application to surgical diseases of domestic animals. Attendance at laboratories for this course is mandatory. Missed laboratories will result in the grade of Incomplete for the course. Missed laboratories will be made up during the next time the missed laboratory becomes available. Clinical Exercises, Course VSUR 602, in Quarter 1 cannot be taken until all course requirements for Surgical Principles have been completed.
Taught by: Drs. M. Ross, Ortved and Staff
Activity: Lecture
4.0 Credit Hours

VSUR 602 Clinical Exercises
Taught by: Dr. D. Holt & Dr. G. Gianotti and Staff
Prerequisite: VSUR 601 AND VSUR 604
Activity: Lecture
1.0 Credit Hour

VSUR 603 Clinical Orthopedics
This course presents the basic principles of orthopedic surgery and orthopedic disease. Course material includes small animal orthopedics, large animal orthopedics and orthopedic radiology. Laboratories include two radiograph reading sessions, one splint lab, and a lab pining and wiring plastic bones.
Taught by: Dr. K. Agnello and Staff
Activity: Lecture
4.0 Credit Hours

VSUR 604 Anesthesia
This course reviews basic physiologic and pharmacologic aspects and their relationship to clinical application of general anesthesia. Uptake of anesthetic agents and distribution to various organ systems are discussed as are the changes in acid-base balance produced by the state of anesthesia. Effects of anesthesia on pulmonary gas exchange and cardiovascular function are emphasized. The clinical aspects of pre-anesthetic medications, the choice of anesthesia, equipment and techniques, cardiopulmonary resuscitation, and the management of specialized cases are discussed. One progressive examination is given, and the final exam is comprehensive.
Taught by: Dr. J. Pavez and Staff
Activity: Lecture
5.0 Credit Hours

Veterinary Clinical Studies and Advanced Medicine - Philadelphia (VCSP)

VCSP 632 Diagnosis of Common Veterinary Intoxications
The diagnosis of poisoning in small animals has become an important part of Veterinary Medicine. All parts of Veterinary education are used in making diagnoses and formulating treatment of the poisoned animal patient. Thus, the course involves the integration of preclinical and clinical subjects, rather than simply the study of toxicology. The instructors will provide detailed descriptions of cases from the Emergency Service files, integrated with the more typically academic aspects of toxicology. A variety of common toxins will be discussed including ethylene glycol, lead, zinc, organophosphates, rodenticide anticoagulants, cholecalciferol and non-steroidal anti-inflammatory drugs. The format for this course will be creative and include interactive lectures and discussions. The major emphasis of the course will be the clinical diagnosis and clinical management of intoxicated patients utilizing basic physiological and pharmacologic principles.
Taught by: Dr. K. Drobatz and Staff
Activity: Lecture
2.0 Credit Hours
Notes: Limitations: Minimum of 10 students

VCSP 633 Fundamentals of Animal Behavior
This course is foundational for students enrolling in the Animal Welfare and Behavior Certificate Program and provides students with the fundamental tools to interpret the behavior of small (companion) and large (farm) animals, poultry, and laboratory animals. Specifically, the course will cover: The anatomy and physiology that regulate behavior, its modification through learning, and animal cognition. The evolution and individual development of a behavior, including the analysis of its mechanism, adaptive value, ontogeny, and phylogeny. The ecology of domestic and laboratory animals: environmental needs, body care, locomotion and exploration. The social behavior of domestic and laboratory animals: affiliative and aggressive behavior, body language. The ingestive (feeding and drinking) behavior of domestic and laboratory animals. The reproductive and maternal behavior of domestic and laboratory animals.
Taught by: Dr. Carlo Siracusa and Staff
Prerequisites: Any student accepted for enrollment in the Animal Welfare and Behavior Certificate Program (a Bachelor's degree is required and a background in biology or animal science is preferred.)
Activity: Online Course
6.0 Credit Hours
Notes: Limitations: 20-25 students. At present this online course will not be formally offered to UPenn VMD students.
VCSP 635 Introduction to Companion Avian Medicine
This course is designed to provide the future veterinarian with the tools to evaluate, diagnose, and treat captive parrots and psittacines in clinics and private practice, zoological institutions, and herpetological collections. This course will focus on the more common species kept as pets. Topics covered will include parrot husbandry, basic avian medicine, nutrition, clinical examination, common infectious and noninfectious diseases, surgery and anesthesia, diagnostic and treatment techniques. The final grade is based on attendance (students with 3 unexcused absences will receive a penalty to their grade) and completion of an in-class final examination. Submission of a course evaluation at the end of the course is required for a grade.
Taught by: Dr. N. Wyre and Staff
Prerequisites: 1st and 2nd Year Core Courses
Activity: Lecture
2.0 Credit Hours

VCSP 636 Introduction to Reptile and Amphibian Medicine
This course is designed to provide the future veterinarian with the tools to evaluate, diagnose, and treat captive reptiles and amphibians in clinics and private practice, zoological institutions, and herpetological collections. This course will focus on the more common species kept as pets. Topics covered will include captive husbandry, basic herpetology, nutrition, clinical examination, common infectious and noninfectious diseases, surgery and anesthesia, diagnostic and treatment techniques. The final grade is based on attendance (students with 3 unexcused absences will receive a penalty to their grade) and completion of an in-class final examination. Submission of a course evaluation at the end of the course is required for a grade.
Taught by: Dr. L. Latney and Staff
Prerequisites: 1st and 2nd Year Core Courses
Activity: Lecture
2.0 Credit Hours

VCSP 637 Professional Foundations
Includes: 1) making the transition from student to employed veterinarian (resumes, cover letters/letters of intent, interviews, and job selection); 2) personal finance and investment strategies; 3) negotiation skills; 4) stress management; 5) evaluating disability insurance and understanding basic retirement planning options to know what to ask in an interview as part of your benefit plan; 6) time management & goal planning and 7) workshops on obtaining internship or a residency, and (b) Interview Role-Playing/Communication skills. Students are required to submit detailed personal budgets for their first year after graduation and a typewritten resume or curriculum vitae. To receive an ‘A’ students also must submit a 3-year personal, professional, and financial plan. Course notes will be distributed at the first class session.
Taught by: Dr. M. Bryant and Staff
Activity: Lecture
2.0 Credit Hours

VCSP 638 Legal Issues for Veterinarians
Course is a broad overview of the legal issues veterinarians face on a daily basis, including legal constraints on practice; overview of laws regulating animals (including laws specific to Pennsylvania); divorce and custody battles; illegal drug compounding; internet pharmacies; lemon laws; pet health insurance; vaccination and liability; negotiating and understanding the employment relationship; veterinary malpractice and state board investigations; responding to client complaints; importance of medical records/informed consents; and, applied professional ethics with clients and colleagues including study of social media. A course hand-out will be provided. Testing of students will be through the use of 2 homework assignments. Attendance mandatory.
Taught by: Dr. C. Lacroix and Staff
Activity: Lecture
2.0 Credit Hours

VCSP 639 Animals & Society
This course is a foundational course for students enrolling in the Animal Welfare Certificate Program. It will describe the changing roles and status of animals in society, and examine the history of human-animal relationships through the lens of subsistence hunting, animal domestication, farming and pastoralism, animal research, and pet keeping. The historical development of ambivalent/oppositional attitudes to animal exploitation will also be described and discussed, and the remarkable diversity of contemporary human-animal relationships and their impacts on animal welfare will be explored across cultures and contexts. The influence of science, government, business, and non-governmental organizations in defining and influencing animal-related laws and policies will also be addressed.
Taught by: Dr. James A. Serpell and Staff
Prerequisites: Any student accepted for enrollment in the Animal Welfare and Behavior Certificate Program (a Bachelor’s degree is required and a background in biology or animal science is preferred).
Activity: Online Course
6.0 Credit Hours
Notes: Limitations: 20-25 students. At present this online course will not be offered to UPenn VMD students.

VCSP 641 Small Animal Pediatrics
The objective of this course is to further familiarize the student with the small animal pediatric patient and the proper approach to clinical diagnosis. Lectures are complemented with case reports which serve as a basis for small group discussions. Emphasis is placed on integration of new and previously acquired knowledge to construct differential diagnoses when presented with appropriate historical data and physical as well as laboratory findings. Diagnostic tests and therapeutic regimes for various conditions are discussed in the context of these cases. Grading is based upon attendance, participation in case discussions and performance at a final take home exam.
Taught by: Dr. M. Casal and Staff
Prerequisite: 1st-3rd Year Core Medicine Courses
Activity: Lecture
2.0 Credit Hours
Notes: Limitations: 40 Students
VCSP 642 Topics in Neurology
This seminar series will stress broad topics, the majority to be selected by the students, which relate to clinical neurology or neuroscience in general. Seminar topics will be selected and presented by students. The course grade (Pass/Fail) is based on class participation.
Taught by: Dr. C. Vite and Staff
Prerequisites: 1st, 2nd, 3rd Year Core Medicine Courses
Activity: Lecture
2.0 Credit Hours
Notes: Limitations: Min. 8 students; Max. 20 students. CONFLICT: Possible conflict with VPTH641 Laboratory Animal Medicine

VCSP 643 Small Animal Clinical Nutrition
The first half of the small animal nutrition course will be devoted to: (1) information on feeding normal dogs and cats for maintenance and the prevention of disease and (2) the pet food industry, including labeling, regulation and laboratory on the evaluation of pet foods. The second half of the course will examine the role of dietary manipulation in the management of a wide variety of canine and feline diseases. The course format utilizes a combination of individual and group exercises, discussion, cases, and lectures some of which will require preparation outside of scheduled class time. Grading will be pass/fail and based on attendance, class participation and an individual take-home project.
Taught by: Dr. K. Michel and Staff
Prerequisite: Core Nutrition Course
Activity: Lecture
2.0 Credit Hours

VCSP 646 Small Animal Surgery
This course will cover selected topics of advanced surgical procedures in dogs and cats. Emphasis will be given to diseases and conditions where treatment usually requires elaborate procedures. Material presented will involve most major organ systems such as the gastrointestinal tract, the respiratory tract and the urogenital tract. Furthermore, the skin, the endocrine system, and the peritoneal and pleural cavities will be given special consideration. Minimally invasive surgery as well as advanced surgical tools and equipment will also be discussed. The course will be restricted to what is generally understood as soft tissue surgery.
Taught by: Dr. L. Aronson and Staff
Activity: Lecture
3.0 Credit Hours

VCSP 647 Small Animal Surgery/Anesthesia Laboratory
The class is divided into 2 groups. Building on the Core Anesthesia and Surgery laboratory course, this course provides the student with experience as assistant surgeon, surgeon and anesthetist while performing exploratory laparotomy and hysterectomy in cats. The cats are provided by an animal shelter and are returned to the shelter for adoption following surgery. Students enrolled in the course, working in teams of three, are responsible for examination and veterinary care (under supervision) at least daily while the cats are at the Veterinary School. There are two additional laboratory sessions. One is a session during which enterotomy, intestinal anastomosis and other soft-tissue procedures will be performed by each student on tissues. The other is an orthopedic procedure session during which pinning and plating techniques are performed by each student on models. There is a mandatory orientation session on the Wednesday prior to the first laboratory session. Students cannot advertise any Spay or Neuter teaching animal used in this course on any website or any social network as this is considered as a violation of the School's Honor Code. Post-requisites: Students taking this course must take Small Animal Orthopedic Surgery Rotation VCSP 811 or VCSP 871.
Taught by: Dr. J. Runge and Staff
Prerequisites: Passing grade in Core Surgery and Anesthesia Courses
Activity: Lecture
2.0 Credit Hours
Notes: Limitations: No Add/Drop period; max. of 24 students

VCSP 648 Small Animal Anesthesia
This lecture and discussion course will stress the application of physiology, pharmacology, clinical pharmacology, and economics to the problems encountered during the clinical administration of anesthesia.
Taught by: Dr. Juan Pavez and Staff
Prerequisite: VSUR 604
Activity: Lecture
1.0 Credit Hour

VCSP 649 Emergency/Critical Care Medicine
Small group case-based discussions pertain to the clinical evaluation and management of small animal emergency and critical care patients. Life-threatening abnormalities of the nervous, cardiovascular, respiratory, endocrine, gastrointestinal, and urinary systems are presented in a problem-oriented manner. Actual clinical case material is used to illustrate principles with emphasis placed on the physiology and pathophysiology of the presenting problem. Monitoring and therapeutic procedures (both conservative and non-conservative) will be presented. The grade will be based on a final examination given to small groups at the end of the course. The examination will be a clinical problem similar to all the other clinical problems presented in the course. Everyone in the same group will receive the same grade.
Taught by: Dr. E. Reineke and Staff
Prerequisites: 1st, 2nd and 3rd Year Core Courses
Activity: Lecture
3.0 Credit Hours
VCSP 650 Small Animal Dentistry and Oral Surgery
Building on the dentistry and oral surgery information presented in VMED611, Med/Surg I, the lectures cover the spectrum of dental and oral diseases and procedures seen and practiced in small animals. The course is integrated with oral surgery lectures presented in VCSP 648, Small Animal Surgery elective. Although there are normally no laboratory practice sessions included in this course, laboratory practice sessions based on material in this course are included in the Small Animal Dentistry and Oral Surgery clinical rotation (VCSP 817, VCSP 877).
Taught by: Dr. A. Reiter and Staff
Prerequisites: Core Medicine and Surgery Courses
Activity: Lecture
2.0 Credit Hours

VCSP 651 Practice Management
Includes establishing a realistic fee schedule; effectively marketing veterinary services; determining how much income a practice owner really makes; the veterinary client's perception of value; establishing a small or mixed animal practice; medical records as a legal defense and to generate income; understanding the vet-pet-client relationship to develop a bond-centered practice; introduction to personnel management and employment law; understanding the Internal Revenue Code, the payment of taxes, and the need for a schedule C to reduce one's tax liability; successfully organizing one's basic business management strategies; and marketing veterinary services. A 300-page notebook and 150-page hard cover book entitled The Art of Veterinary Practice Management will accompany this course and be provided at no charge by a corporate sponsor. The final examination consists of a group project to be completed by 2-4 people using a typical practice management 'headache' as the problem to be resolved. Four guest speakers will participate in this course.
Taught by: Dr. D. Eigner and Staff
Activity: Lecture
3.0 Credit Hours

VCSP 652 Introduction to Shelter Animal Medicine
This course is designed to complement the senior year Shelter Animal Medicine rotation by introducing students to some of the particular problems and issues facing veterinarians who work with animal shelters and animal control facilities. The course will combine lectures and discussion periods, and will involve significant out-of-course reading assignments. Topics covered will include: Husbandry and disease management, pet population dynamics and control, behavior and behavior problems, feral cats, and animal cruelty & neglect. Course grades will be determined by attendance, participation in discussions and a final take home exam.
Taught by: Dr. B. Watson and Staff
Activity: Lecture
2.0 Credit Hours
Notes: CONFLICT: VPTH 635 Introduction to Fish Diseases

VCSP 654 Small Animal Critical Care Medicine
This course offers a comprehensive overview of several key aspects of critical care medicine. Lectures will primarily use a 'case-based' approach with discussion of the physiology of organ function and the pathophysiology of disease, and will highlight state-of-the-art concepts for these exciting patients. The final session will be a 'hands-on' laboratory in which the students will work with the monitoring instruments that have been discussed during the course. Evaluation will be based on a take home examination.
Taught by: Dr. D. Silverstein and Staff
Prerequisites: Core Medicine and Surgery Courses
Activity: Lecture
2.0 Credit Hours

VCSP 655 Introduction to Wildlife Medicine I
This course is designed to provide an overview of the field of wildlife medicine for first year veterinary students through lectures from veterinarians working in various aspects in wildlife medicine. Wildlife Medicine I will present current issues in environmental monitoring, emerging diseases and public health, disease surveillance and prevention, disease outbreaks and control, captive propagation and species re-introduction, disaster medicine, and wildlife rehabilitation. The format will consist of eight lectures, each approximately one hour in length, and a required two-hour wet lab held at Tri-States facility, the Frink Center for Wildlife, in Newark, DE. Optional lectures may be scheduled during the semester based on student interest and speaker availability. Students are expected to attend all required lectures and participate in the wet lab to receive credit for the course. Grades will be based on attendance (50%) and on three worksheets (50%); a five-page paper may be substituted with the approval of the instructor. Opportunities for clinical experience at the Frink Center for Wildlife will be scheduled during the semester; students are expected to sign up in advance and are responsible for their own transportation.
Taught by: Dr. S. Welte and Staff
Activity: Lecture
1.0 Credit Hour
Notes: Note: This course is a prerequisite for Course VCSP 656

VCSP 656 Introduction to Wildlife Medicine II
This course is designed to provide an introduction to the clinical aspects of wildlife medicine for first year veterinary students through a lecture and wet lab format. Lecture and/or laboratory topics will include zoonotic diseases, diseases of native mammals, marine mammals, reptiles and birds, pathology, physical examination techniques, and introductions to necropsy techniques, fracture immobilization, and emergency care. The format will consist of six lectures, each approximately one hour in length, and three two-hour wet labs. Optional lectures may be scheduled during the semester based on student interest and speaker availability. Students are expected to attend all lectures and participate in the wet labs to receive credit for the course. Grades will be based on attendance (50%) and on three worksheets (50%); a five-page paper may be substituted with approval of the instructor. Opportunities for clinical experience at the Frink Center for Wildlife will be scheduled during the semester; students are expected to sign up in advance and are responsible for their own transportation.
Taught by: Dr. S. Welte and Staff
Activity: Lecture
1.0 Credit Hour
Notes: Limitations: Maximum of 72 students. This course is graded pass/fail.
Note: In case of over enrollment, permission of course organizer is required
VCSP 657 Case Studies in Exotic Companion Animals
This course is designed to allow the student to use what they have learned about special species and put all of the information together to work through a clinical case. The first three weeks will be spent discussing topics in special species medicine. Week one will include ethical dilemmas in special species medicine. The second and third week will be reviewing and critiquing journal articles in special species medicine. Thereafter, each week a case history will be posted on the courses website and the students will come to class to discuss that case. The course instructor will lead the discussions including how to ask the correct history questions and how to interpret the physical examination findings. The class will decide on rule outs, diagnostic testing, and treatment options. During the second to last class, the students will be divided into groups and will be given an unknown case to work on their own. At the last class meeting, each group will present their findings. Attendance is mandatory since this is a case-discussion class. Missed classes cannot be made up; for each missed class the grade will be lowered. Grades will be based on attendance and participation in the unknown case presentation.
Taught by: Dr. N. Wyre and Staff
Prerequisites: 1st and 2nd Year Core Courses
Activity: Lecture
2.0 Credit Hours
Notes: Limitations: Limited to 20 students

VCSP 658 Pet Small Mammal Med/Surg
This introductory course will mainly cover pet rabbits and ferrets with some discussion of rodents and other small mammals seen in veterinary practice. Husbandry, physical examination, diagnostic testing, and treatment techniques of these animals will be presented. The most common health problems and surgeries will be discussed. After this course, the student should be better prepared to see these patients during their clinical rotations and in practice. Student evaluation will be based on a final exam.
Taught by: Dr. L. Latney and Staff
Prerequisites: 1st and 2nd Year Core Courses
Activity: Lecture
2.0 Credit Hours

VCSP 659 Small Animal Advanced Cardiology
This course will build on the core cardiology curriculum by introducing a wider range of topics involving cardiovascular disease, treatment, and research in small animals. In-depth topics include diagnosis and treatment of cardiac arrhythmias, correction of congenital heart defects using minimally invasive catheter-based therapies, echocardiography of feline cardiomyopathy, clinical pathophysiology of degenerative mitral valve disease, and a review of the clinical trial evidence that forms the basis of standard treatment recommendations for congestive heart failure. The course is designed for a relatively small number of students so that discussion and interaction with the instructor(s) is facilitated. The course is suitable for students that might be interested in cardiology specialization or research careers as well as for future general practice veterinarians that wish to provide a high level of cardiac care for their patients.
Taught by: Dr. M. Oyama and Staff
Activity: Lecture
1.0 Credit Hour
Notes: Maximum enrollment 20 students

VCSP 660 Advanced Small Animal Electrocardiography and Arrhythmias
This course will build on the core cardiology curriculum by providing practical experience involving electrocardiographic (ECG) interpretation and the diagnosis and treatment of cardiac arrhythmias in small animals. Specific topics include diagnosis of both supraventricular and ventricular arrhythmias as well as proper selection of antiarrhythmic therapy and a introduction to artificial pacemaker implantation. The course is designed for a relatively small number of students so that discussion and interaction with the instructor(s) is facilitated. The course includes 6 hours of laboratory where students will work through ECG cases in a small group setting. The course is suitable for students that might be interested in cardiology specialization as well as for future general practice veterinarians that wish to provide a high level of cardiac care for their patients.
Taught by: Dr. M. Oyama and Staff
Activity: Lecture
2.0 Credit Hours

VCSP 664 Student Shelter Opportunities
This course is an introduction to High Quality High Volume (HQHV) surgery in the shelter environment and consists of 17 online lecture hours and 3 hours of in-person lecture hours of material that utilizes the Association of Shelter Veterinarians’ Veterinary Medical Care Guidelines for Spay-Neuter Programs. Lecture topics, assignments, and pre/post tests are delivered online and include an overview of HQHV surgery, patient handling, anesthesia and pain management in the shelter environment, partner protocols, patient monitoring, patient pre-surgical preparation, basic surgical principles, sterilization of the male and female cat, and sterilization of the male and female dog. In-person lecture and discussion sessions will complement and expand upon online material. The lab component of this course consists of four hours of skills lab and 16 hours in a clinical setting with shelter medicine faculty participating in perioperative activities, which include physical exam, induction, patient preparation, surgery, and recovery. Emphasis in this course is a holistic approach to HQHV spay/neuter including pre-clinical skill acquisition that also introduces some concepts of shelter medicine and community programming. Grading is pass/fail. Purchase of an online webtext is required. Curriculum/course to cover high-quality, high-volume surgical and anesthetic principles to properly prepare students for not only these experiences, but give them a better foundation for learning life-long skills and enhancing their surgical experience at Penn via authentic learning experiences. Students will have to complete extensive online learning, assessments, and skills labs for this course.
Taught by: Dr. Brittany Watson and Dr. Chelsea Reinhard
Activity: Lecture
3.0 Credit Hours
VCSP 667 Student Shelter Opportunities II
This course is designed to be a continuation of Shelter Surgical Opportunities I and consists of six hours of online lectures/exam that cover inhalant anesthesia, more advanced knots and suture patterns, sterilization of the female cat, special sterilization cases, emergency procedures in the shelter environment and surgical instruments and pack preparation. Eighteen hours of on-site work at a partner shelter will be devoted to learning to spay and participation in peri-operative activities. Lecture topics, assignments, and pre/post tests are delivered online. Emphasis in this course is a holistic approach to HQHV spay-neuter including pre-clinical skill acquisition that also introduces some concepts of shelter medicine and community programming. To be eligible to spay, students must reach an appropriate level of competency at performing feline castration and clinical skills as determined by course instructors. This course can be taken any time, including the summer, after passing Student Shelter Opportunities II. Students must complete VSUR601 Surgical Principles (offered as part of the core curriculum in the first quarter of second year) before attending the skills lab. Grading is pass/fail and must be completed by end of core.
Taught by: Dr. Brittany Watson
Prerequisite: VSUR 601
Activity: Lecture
1.0 Credit Hour
Notes: Ongoing (must be completed before end of core)

VCSP 668 Student Shelter Opportunities III
This course is designed to be a continuation of Student Shelter Opportunities II and is an advanced elective that consists of four hours of didactic instruction that will be offered online covering sterilization surgeries of adult and pediatric dogs as well as specialty surgeries such as enucleation, amputation, wound repair and mass removal. Twenty hours of a skills lab and on-site work at a partner shelter will be devoted to learning to spay, neuter, and participate in perioperative activities. Lecture topics, assignments, and pre/post tests are delivered online. Emphasis in this course is a holistic approach to HQHV spay-neuter including clinical skill acquisition that also introduces some concepts of shelter medicine and community programming. To be eligible to spay and neuter dogs or do specialty procedures, students must reach an appropriate level of competency in performing the feline spay, feline castration, and clinical skills as determined by course instructors. Every effort will be made to allow students to meaningfully participate in non-sterilization surgeries such as mass removal, enucleation, amputation and wound repair after they are spay certified, although achievement of this goal may require an on-call option depending on caseload and individual student interest. This course can be taken any time, including the Summer, after passing Student Shelter Opportunities II and grading is pass/fail.
Taught by: Dr. Brittany Watson
Prerequisites: Student Shelter Opportunities II, VSUR601 Surgical Principles
Activity: Lecture
1.0 Credit Hour
Notes: Ongoing (must be completed before the end of core)

VCSP 700 Small Animal Internal Medicine-Foundation
The Internal Medicine rotation involves clinical training in all core medicine disciplines including endocrinology, gastroenterology, hematology, infectious disease, nephrology, oncology and pulmonary medicine. Fourth year students will assist doctors in history taking, physical examinations and the medical management of patients presented to the Matthew J. Ryan Veterinary Hospital of the University of Pennsylvania. Students will also have directed supervision on nutritional aspects of internal medicine cases by a board-certified clinical nutritionist. Emphasis will be placed on problem solving, understanding of pathophysiology and integration and utilization of principles of medicine. As experience is gained, students will assume more responsibility in patient management. Students and staff will participate in daily rounds and conferences.
Taught by: Dr. M. Rondeau and Staff
Activity: Clinical Rotation Dental & Vet school
12.0 Credit Hours

VCSP 710 Small Animal Intensive Care Medicine Service
The ICU rotation provides a good medical approach to the management of critical and often very unstable patients. Since these cases are often very challenging diagnostically, and also very dynamic, they provide an excellent learning experience, with ample opportunity for one-on-one discussion with the clinician, and for background reading. Students have an opportunity to become familiar with use and interpretation of the advanced technical equipment available in the ICU, and are also encouraged to perform and perfect technical skills such as catheterization of blood vessels and urinary bladder, obtaining arterial blood samples, etc. During the rotation, we encourage integration and a team approach among the students, the ICU clinicians, and the nursing staff. Students on the ICU service start daily at or before 7:00 a.m. and stay until their cases are stable and all of the proposed diagnostics have been completed (usually 6-7 p.m.). Students are expected to SOAP the cases daily including weekends, to be closely involved in decision-making, diagnostics and therapeutics, and to present and discuss the cases at daily rounds. Students are internally scheduled to assist in treatments in the Intensive Care Unit; patient care shifts may include evening and overnight responsibilities. Weekend duties are distributed equitably among all assigned students. Cage rounds are held daily at approximately 2 P.M. Student teaching rounds are held most weekdays at approximately 2:30 P.M.
Taught by: Dr. D. Silverstein and Staff
Also Offered As: VCSP 772
Activity: Clinical Rotation Dental & Vet school
6.0 Credit Hours
Notes: Limitations: 3-4 students per rotation. Required: SA
VCSP 715 Small Animal Cardiology Service
Students will participate in outpatient and inpatient cardiovascular examinations and treatments. Cardiology Clinic days are currently Wednesday/Thursday/Friday, but are subject to change. Cardiology invasive procedures are performed on Tuesdays. Cardiology also provides consultation to other services and accepts transfer of Cardiology cases for primary care. Student responsibilities include obtaining a complete medical history and performing a thorough physical examination with emphasis on the cardiovascular system. After an orientation period on the first day, students are responsible for recording and interpreting electrocardiograms as well as interpreting thoracic radiographs and pertinent clinical laboratory data. Students assist with recording echocardiograms and are expected to become familiar with echo image recognition and common measurement techniques. Students are also expected to summarize pertinent findings in cases under their care at daily rounds and be able to discuss their significance. Completion of the medical case record for review by the attending cardiologist is required. The group captain will develop a schedule for the daily examination and morning treatments (seven days/week) of all hospitalized cases for which the cardiology service is responsible. A quiz is administered the final day of the rotation and determines 15% of the students grade for the rotation. Taught by: Dr. M. Oyama and Staff
Also Offered As: VCSP 775
Activity: Clinical Rotation Dental & Vet school
5.0 Credit Hours
Notes: Note: satisfies requirement: SALA. Required: SA

VCSP 717 Comprehensive Cancer Care Service
This rotation will expose students to a comprehensive approach to clinical oncology in small animals, including cancer diagnosis, staging, treatment, and palliative care. This service is primarily comprised of faculty and staff from Medical Oncology, Surgery, and Radiation Oncology. Other services, such as Interventional Radiology and Dentistry and Oral Surgery, will also be involved. Students are expected to participate in the care of outpatient and hospitalized cases (including pre and post-operative care for Surgical Oncology patients) and in patient care rounds in the morning and afternoon. Weekend duties include morning and afternoon treatments for hospitalized patients. Each student will present and discuss a journal article or relevant tumor topic once during the rotation. Taught by: Dr. J. Mahoney and Staff
Also Offered As: VCSP 777
Activity: Clinical Rotation Dental & Vet school
6.0 Credit Hours
Notes: Limitations: Maximum 5-6 students per rotation

VCSP 716 Dermatology & Allergy Service
This course exposes the student to case material presented to the Dermatology and Allergy Clinic at the small animal hospital, and may include case material presented to the large animal hospital at New Bolton Center. Special emphasis is given in the discussion of each patient to the etio-pathogenesis, diagnosis, and treatment of disease. Attendance during receiving of large animal cases at NBC may be required on one Wednesday of each block, although volunteers will be sought first. Taught by: Dr. C. Cain and Staff
Also Offered As: VCSP 776
Activity: Clinical Rotation Dental & Vet school
5.0 Credit Hours
Notes: Required: SALA; SA

VCSP 721 Primary Care Services
This rotation will offer students the opportunity to evaluate cases scheduled with the Primary Care Service (PCS). The Primary Care Service is designed to give students first-hand experience in dealing with common general practice clinical cases and with client communication. The main objective is for students to have the opportunity to be the vet while working under the guidance and supervision of a PCS veterinarian. Aside from annual wellness exams, which include routine vaccinations, endo- and ectoparasite screening and prevention protocols; patients with minor injury, lameness, or illnesses such as mild respiratory, eye, gastrointestinal, skin/ear, urinary tract, and other disease will be seen and evaluated through the Primary Care Service. Students are expected to gain experience in diagnosing and treating these common ailments under the supervision of the PCS veterinarian. Taught by: Dr. G. Mengel
Also Offered As: VCSP 781
Activity: Clinical Rotation Dental & Vet school
5.0 Credit Hours
Notes: Limitations: Minimum of 3 and maximum of 5 students per rotation. Required for: SA, SALA
VCSP 722 Small Animal Pediatrics/Genetics/Reproduction
The Small Animal Pediatrics-Genetics-Reproduction Clinic is run under the supervision of two board-certified faculty and two residents and emphasizes the unique care of pediatric patients, the approach and management of hereditary diseases, and reproductive problems. Pediatric and genetics clinics are held on Mondays and Tuesdays, and reproduction appointments are seen any day of the week. In addition to the clinical appointments, there is opportunity to see several unique genetic diseases in dogs and cats and handle the youngest of pediatric patients in the animal colonies, as well as get an appreciation for the specialty diagnostic laboratories. The clinical rotation deals with the initial yet crucial pediatric wellness visits including nutrition, socialization and preventive care and disease issues specific to this age group. The clinic highlights the evaluation of normal development and diagnosis of diseases of puppies and kittens (<1 year). Moreover, kittens and puppies with known or suspected inherited disorders are examined for which genetic counseling or special diagnostic studies are required. It provides experience with routine immunizations, treatment and prevention of parasitism, and nutritional and spay/neuter counseling. The reproductive clinic involves the evaluation of healthy and infertile animals, as well as breeding management and counseling. Clinical activities include breeding timing, planned and emergency Cesarean sections and neonatal resuscitation, transcervical and surgical inseminations, diagnostic imaging studies of both male and female animals, which includes pregnancy determination, and semen freezing and banking. While the rotation officially only runs on Mondays and Tuesdays, students are welcome and encouraged to assist with the reproductive clinic during the rest of the week.
Taught by: Dr. M. Casal and Staff
Also Offered As: VCSP 782
Activity: Clinical Rotation Dental & Vet school
2.0 Credit Hours
Notes: Required for: SA; Recommended for SALA

VCSP 770 Small Animal Internal Medicine
The elective rotation in small animal internal medicine will provide further contact and experience in problems of internal medicine (diseases of the endocrine, gastrointestinal, hematologic, pulmonary, and urogenital systems). Students in the elective rotation will be assigned more complex cases, and they will be expected to assume more responsibility for patient management and decision-making.
Taught by: Dr. M. Rondeau and Staff
Also Offered As: VCSP 710
Prerequisite: VCSP 700
Activity: Clinical Rotation Dental & Vet school
6.0 Credit Hours
Notes: Limitations: Based on Hospital Needs

VCSP 775 Small Animal Cardiology Service
The ICU rotation provides a good medical approach to the management of critical and often very unstable patients. Since these cases are often very challenging diagnostically, and also very dynamic, they provide an excellent learning experience, with ample opportunity for one-on-one discussion with the clinician, and for background reading. Students have an opportunity to become familiar with use and interpretation of the advanced technical equipment available in the ICU, and are also encouraged to perform and perfect technical skills such as catheterization of blood vessels and urinary bladder, obtaining arterial blood samples, etc. During the rotation, we encourage integration and a team approach among the students, the ICU clinicians, and the nursing staff. Notes: Limitations: Minimum of 3 and maximum of 4 students per rotation. Required: SA

VCSP 790 Small Animal Medicine Holiday Rotation
The holiday internal medicine rotation will be a ‘learning on your feet’ experience. Students will have similar responsibilities as during the core medicine rotations. Clinic appointments will be scheduled only for the first part of week one. Students will be assigned out patients and ES transfers and will evaluate these patients, formulate problem lists and appropriate diagnostic plans, participate in diagnostic procedures (e.g., bone marrow aspirate, tracheal wash), and perform treatments. Formal teaching rounds may not be held, but students will discuss patients on an individual basis with clinicians. The hours of the rotation shifts will be 6AM to 6PM and 12 noon to 12 midnight. Each student will be assigned to five shifts and will likely cover four 6AM to 6 PM shifts and one noon to midnight shift.
Taught by: Dr. M. Rondeau and Staff
Prerequisite: VCSP 700
Activity: Clinical Rotation Dental & Vet school
3.0 Credit Hours
Notes: Limitations: preferred minimum 7 students, preferred maximum 10 students/rotation. (Maximum may vary between H1 and H2)
VCSP 798 Small Animal Neurology Holiday Rotation
Two one-week rotations will be offered during the Holiday period, each for 3 credits. Each rotation will consist of half of the Holiday period. This holiday rotation will have similar responsibilities as during the core neurology rotation. Clinic appointments will be scheduled for the first week only. Students will be assigned out patients, ES transfers, and will participate in neurology consultations for other services. Students will evaluate these patients, formulate problem lists and appropriate diagnostic plans, participate in diagnostic procedures (electrodiagnostic testing, CSF taps, imaging), and perform treatments that may include surgery. Formal teaching rounds may not be held, but students will discuss patients on an individual basis with clinicians.
Taught by: Dr. E. Galban and Staff
Prerequisite: VCSP 778
Activity: Clinical Rotation Dental & Vet school
3.0 Credit Hours
Notes: Limitations: preferred minimum of 2 students; preferred maximum of 3 students per rotation. (Maximum may vary between H1 and H2)

VCSP 800 Small Animal Soft Tissue Surgery
This is an elective clinical rotation equivalent to courses VCSP 800.
Prerequisites: Core Surgery Courses CONFERENCE HOURS: 3 hrs/day of clinics (5) = 15 hours. 2-4 hrs/day of surgery (5) = 10-20 hours. 1 hr/weekend morning (4) = 4 hour. TOTAL 29-39 hours.
Taught by: Dr. M. Mison and Staff
Also Offered As: VCSP 870
Activity: Clinical Rotation Dental & Vet school
6.0 Credit Hours
Notes: Limitations: Based on Hospital Needs

VCSP 811 Small Animal Orthopedics
This is an elective rotation equivalent to SA Orthopedic Surgery
VCSP 811. Prerequisite: Core Surgery Courses
Taught by: Dr. M. Mison and Staff
Also Offered As: VCSP 871
Activity: Clinical Rotation Dental & Vet school
6.0 Credit Hours
Notes: Limitations: Based on Hospital Needs

VCSP 813 Small Animal Emergency Service
Students are assigned to a busy 24-hour, 7-day per week emergency service on a shift system. The students are responsible for diagnosis and management of animals presented to the service under the supervision of Emergency Service staff. Emergency Service rounds are held Monday through Thursday inclusive, and include topics related to emergency medicine and surgery centered around case discussion.
Taught by: Dr. K. Drobatz and Staff
Also Offered As: VCSP 873
Activity: Clinical Rotation Dental & Vet school
6.0 Credit Hours
Notes: Note: Satisfies SA requirement. Required: SALA; SA

VCSP 814 Small Animal Radiology Service
This course primarily offers experience in small animal diagnostic radiology with some exposure to diagnostic ultrasound. Principles of radiographic interpretation teaching rounds are held daily. Students will assist in the positioning of animals and taking of routine and special procedure radiographic examinations and will observe and assist with ultrasonographic examinations of Ryan Hospital clinic cases. Students will also interact with the radiologist or radiology resident during their interpretation of the clinic cases. A 2-hour examination is given on the last day of the rotation. See Learn.vet for information on clinical competencies to be assessed in this rotation and to access additional study materials.
Taught by: Dr. J. Suran and Staff
Also Offered As: VCSP 874
Activity: Clinical Rotation Dental & Vet school
6.0 Credit Hours
Notes: Required: SA. Satisfies SALA Imaging Requirement

VCSP 815 Small Animal Anesthesiology Service
Students are responsible for anesthetizing animals presented to the anesthesia service under the supervision of the Anesthesiology staff. During the day, students will work closely with either the anesthesiologist on duty or a senior technician. Students will be scheduled with a technician for ‘on-call’ night and weekend duty. On-call duties begin the first Tuesday (or second day) of the rotation and continue through to the last Sunday (or last day before the next rotation). The anesthesia service provides on-call services from 8 pm until 8 am during weekdays, and from Friday 8 pm until Monday 8 am over the weekend. In general, students schedule themselves for the on-call duties. Most rotations assign one student on-call per night during weekdays and split the weekend into 8 or 12-hour shifts. Anesthesia student rounds are conducted Mondays, Wednesdays, Thursdays, and Fridays. The first rounds on the first day of the rotation (usually a Monday) will occur at 9 am. Rounds on Wednesdays are at 8 am. Rounds on Thursdays and Fridays are at 7:30 am. Students are expected to attend grand rounds on Tuesdays. It is highly recommended that students prepare for their rotation by reviewing the course notes from the anesthesia core course and student surgery labs. The anesthesia handout will be given to students on the first day of the rotation. The rounds schedule and topics will be presented in more detail then. During the rotation, students will be evaluated on the following clinical competencies: 1) Intubate an anesthetized animal; 2) Select & administer an appropriate sedative drug regime, 3) Score pain & devise an appropriate analgesic plan, 4) Select and administer an appropriate anesthetic protocol for an animal of ASA status I, II, or III.
Taught by: Dr. G. Gianotti and Staff
Also Offered As: VCSP 875
Activity: Clinical Rotation Dental & Vet school
6.0 Credit Hours
Notes: Required: SA. Satisfies anesthesia/pain management requirement: SALA
VCSP 817 Small Animal Dentistry and Oral Surgery
Students participate in the client communication (including assessment of medical history), clinical examination, diagnostic testing (including patient restraint for intravenous catheter placement), treatment planning and treatment of animals presented with dental and oral diseases, including periodontal, endodontic, restorative and occlusal problems and oral and maxillofacial inflammation, infection, malformation, trauma and cancer. Mondays and Wednesdays are clinic appointment days, with rounds and a teaching laboratory or treatment procedures in the afternoons. Tuesdays, Thursdays and Fridays are treatment days. Occasionally, cases are hospitalized into Saturdays, and emergency cases may be referred from ES on Saturdays and Sundays. Responsibility for Saturday and Sunday patient care will be one to maximum two weekend days per student during the two-week rotation, and will most often consist of being on-call. Typically, Mondays and Wednesdays run from 8.30am-5.30pm (only rarely are there cases to SOAP on these mornings), and Tuesdays and Thursdays from 7am- 6.30pm. One student will be assigned to early-call (7am) on Fridays (other students will have an 8.30am start); Friday responsibilities typically extend to 4pm, except for one late-call student. Prerequisite: Core surgery lecture courses. Taught by: Dr. A. Reiter and Staff
Also Offered As: VCSP 877
Activity: Clinical Rotation Dental & Vet school
5.0 Credit Hours
Notes: Limitations: 2-4 students/rotation in VCSP 817, VCSP 877 combined. Required: SA

VCSP 870 Small Animal Soft Tissue Surgery
This is an elective clinical rotation equivalent to courses VCSP 800. Prerequisite: Core Surgery Courses CONFERENCE HOURS: 3 hrs/day of clinics (5) = 15 hours. 2-4 hrs/day of surgery (5) = 10-20 hours. 1 hr/weekend morning (4) = 4 hour. TOTAL 29-39 hours.
Taught by: Dr. M. Mison and Staff
Also Offered As: VCSP 800
Activity: Clinical Rotation Dental & Vet school
6.0 Credit Hours
Notes: Limitations: Based on Hospital Needs

VCSP 871 Small Animal Orthopedics
This is an elective rotation equivalent to SA Orthopedic Surgery VCSP 811. Prerequisite: Core Surgery Courses
Taught by: Dr. M. Mison and Staff
Also Offered As: VCSP 811
Activity: Clinical Rotation Dental & Vet school
6.0 Credit Hours
Notes: Limitations: Based on Hospital Needs

VCSP 872 Small Animal Ophthalmology
The goals of this clinical rotation are to ensure that students achieve proficiency in performing a complete ophthalmic examination and become familiar with recognizing and treating common problems in small animal ophthalmology practice. All students are required to meet at 7:30 am the first day, and then at 8:00 am on subsequent days of the rotation. Attendance is not required on Friday of each week but the free time is expected to be dedicated to independent study in ophthalmology. An introduction to the service will be given on the first day of the rotation which will include a graded, short quiz. It is recommended that students prepare for the clinical rotation by reviewing their course notes in ophthalmology. Clinical rounds will take place several times weekly. Topic rounds and a cadaver (pig eye), surgery wet lab will be included if time permits. Outpatient service (each day of the rotation): Students are responsible for history taking, clinical examination, treatment planning, preparation of client discharge instructions and some client communication. Surgery patients (each day of the rotation): Students assigned a patient for surgery will be responsible for helping with the patients admission (7:30am the day of surgery). In preparation for surgery, the student must have reviewed the surgical technique, performed a complete physical examination and reviewed pertinent bloodwork. SOAPs, a surgical report and client communication following the procedure are also expected. There will be an opportunity to assist with some of the surgical procedures. After-hours and weekend emergencies: The rotation captain will schedule students for on-call duties Monday through Sunday of each week of the rotation. There are occasional transfers from the emergency service which require surgery and these patients may be hospitalized overnight or at the at the weekend in preparation for or following the procedure. In-patients: Infrequently, there are hospitalized patients. Students are responsible for the daily treatments, SOAPs and client communication for these patients. The ophthalmology residents are responsible for the directing the day-to-day activities of the students on rotation.
Taught by: Dr. Elaine Holt and Staff
Activity: Clinical Rotation Dental & Vet school
6.0 Credit Hours
Notes: Limitation: maximum 3 students per rotation; minimum two students

VCSP 873 Small Animal Emergency Service
Students are assigned to a busy 24-hour, 7-day per week emergency service on a shift system. The students are responsible for diagnosis and management of animals presented to the service under the supervision of Emergency Service staff. Emergency Service rounds are held Monday through Thursday inclusive, and include topics related to emergency medicine and surgery centered around case discussion.
Taught by Dr. K. Drobatz and Staff
Also Offered As: VCSP 813
Activity: Clinical Rotation Dental & Vet school
6.0 Credit Hours
Notes: Limitations: Based on Hospital Needs
VCSP 874 Small Animal Radiology Service
This course primarily offers experience in small animal diagnostic radiology with some exposure to diagnostic ultrasound. Principles of radiographic interpretation teaching rounds are held daily. Students will assist in the positioning of animals and taking of routine and special procedure radiographic examinations and will observe and assist with ultrasonographic examinations of Ryan Hospital clinic cases. Students will also interact with the radiologist or radiology resident during their interpretation of the clinic cases. A 2-hour examination is given on the last day of the rotation. See Learn.vet for information on clinical competencies to be assessed in this rotation and to access additional study materials.
Taught by: Dr. J. Suran and Staff
Also Offered As: VCSP 814
Activity: Clinical Rotation Dental & Vet school
6.0 Credit Hours
Notes: Limitations: Based on Hospital Needs

VCSP 875 Small Animal Anesthesiology Service
Students are responsible for anesthetizing animals presented to the anesthesia service under the supervision of the Anesthesia staff. During the day, students will work closely with either the anesthesiologist on duty or a senior technician. Students will be scheduled with a technician for ‘on-call’ night and weekend duty. On-call duties begin the first Tuesday (or second day) of the rotation and continue through to the last Sunday (or last day before the next rotation). The anesthesia service provides on-call services from 8 pm until 8 am during weekdays, and from Friday 8 pm until Monday 8 am over the weekend. In general, students schedule themselves for the on-call duties. Most rotations assign one student on-call per night during weekdays and split the weekend into 8 or 12-hour shifts. Anesthesia student rounds are conducted Mondays, Wednesdays, Thursdays, and Fridays. The first rounds on the first day of the rotation (usually a Monday) will occur at 9 am. Rounds on Wednesdays are at 8 am. Rounds on Thursdays and Fridays are at 7:30 am. Students are expected to attend grand rounds on Tuesdays. It is highly recommended that students prepare for their rotation by reviewing the course notes from the anesthesia core course and student surgery labs. The anesthesia handout will be given to students on the first day of the rotation. The rounds schedule and topics will be presented in more detail then. During the rotation, students will be evaluated on the following clinical competencies: 1) Intubate an anesthetized animal; 2) Select & administer an appropriate sedative drug regime; 3) Score pain & devise an appropriate analgesic plan, 4) Select and administer an appropriate anesthetic protocol for an animal of ASA status I, II, or III.
Taught by: Dr. G. Gianotti and Staff
Also Offered As: VCSP 815
Activity: Clinical Rotation Dental & Vet school
6.0 Credit Hours
Notes: Limitations: Based on Hospital Needs

VCSP 876 Small Animal Behavior Clinic
This is an elective clinical rotation in small animal behavioral medicine. Clinics are Wednesday and Thursday. Appointments are also seen on Fridays, and students are invited, but not required, to join us. Out-patient behavior clinic appointments are scheduled at approximately 3-4 hour intervals. Each student is responsible for reviewing behavior notes from VMED 616 (9005), prior to their first scheduled clinic. Students are required to attend all case rounds (twice per day), review records before rounds, and be prepared to present all cases. Students will assist with medical and behavioral history-taking, physical examination and diagnosis, and are responsible for a selecting handouts and writing discharge letters summarizing the recommendations made. Behavioral topics and volunteer training sessions are offered, when possible, between afternoon appointments and rounds.
Taught by: Dr. C. Siracusa and Staff
Prerequisite: VMED 616
Activity: Clinical Rotation Dental & Vet school
5.0 Credit Hours
Notes: Limitations: Based on hospital needs. Note: Not offered every rotation

VCSP 877 Small Animal Dentistry and Oral Surgery
Students participate in the client communication (including assessment of medical history), clinical examination, diagnostic testing (including patient restraint for intravenous catheter placement), treatment planning and treatment of animals presented with dental and oral diseases, including periodontal, endodontic, restorative and occlusal problems and oral and maxillofacial inflammation, infection, malformation, trauma and cancer. Mondays and Wednesdays are clinic appointment days, with rounds and a teaching laboratory or treatment procedures in the afternoons. Tuesdays, Thursdays and Fridays are treatment days. Occasionally, cases are hospitalized into Saturdays, and emergency cases may be referred from ES on Saturdays and Sundays. Responsibility for Saturday and Sunday patient care will be one to maximum two weekend days per student during the two-week rotation, and will most often consist of being on-call. Typically, Mondays and Wednesdays run from 8.30am-5.30pm (only rarely are there cases to SOAP on these mornings), and Tuesdays and Thursdays from 7am- 6.30pm. One student will be assigned to early-call (7am) on Fridays (other students will have an 8.30am start); Friday responsibilities typically extend to 4pm, except for one late-call student. Prerequisite: Core surgery lecture courses.
Taught by: Dr. A. Reiter and Staff
Also Offered As: VCSP 817
Activity: Clinical Rotation Dental & Vet school
5.0 Credit Hours
Notes: Limitations: 2-4 students/rotation in VCSP 817, VCSP 877 combined. Required: SA
VCSP 878 Exotic Companion Animal Medicine/Surgery
The purpose of this rotation is to introduce the student to exotic companion animal medicine and surgery. Students will gain knowledge of these animals by hands-on experience and participation in rounds. The student will be expected to obtain histories, develop a rule-out list and a diagnostic plan on all appointments. Students will participate in patient management and assist with various diagnostic and treatment procedures for all scheduled appointments and exotic animal emergencies transferred from the emergency service. There will be a Monday through Sunday clinic schedule as appointments are seen 7 days a week. Additionally, students are expected to be ‘on-call’ for night and daytime emergencies with a clinician. Students should expect the typical day to run from 8:00 AM - 7:00 PM. Rounds will include husbandry and medical and surgical diseases of exotic companion animals. Students will be encouraged to read handouts and use audio-visual material to supplement the rounds presentations and discussions.
Taught by: Dr. L. Latney and Staff
Activity: Clinical Rotation Dental & Vet school
6.0 Credit Hours
Recommended - VCSP 635 Introduction to Companion Avian Medicine, VPTH 641 Laboratory Animal Medicine, VCSP 636 Introduction to Reptile and Amphibian Medicine, VCSP 657 Case Studies in Exotic Companion Animal Medicine/Surgery, VCSP 658 Pet Small Mammal Med/Surg

VCSP 879 Working Dog Medicine
To gain experience with all aspects of working dog medicine: Students will handle working dogs to perform general physical examinations as well as specialized assessments including but not limited to breeding soundness exams to assess dogs value in reproduction, dental examinations, and fitness evaluations. Students will be incorporated into behavioral training of dogs to being handled and touched on all areas of their body. Students will participate in routine preventive care and assess and treat injuries or illnesses that occur in the WDC working dogs. Students will gain experience in behavior and sports medicine through participation in impulse control, search work, fitness and conditioning exercises. Students may incorporate other aspects of working dog medicine into their rotations depending on their interests. These areas include sports nutrition, dentistry, and various aspects of research.
Taught by: Dr. C. Otto and Staff
Activity: Clinical Rotation Dental & Vet school
6.0 Credit Hours
Notes: Limitations: permission of instructor required. Note: Not offered every rotation. Location: Penn Vet Working Dog Center, 3401 Grays Ferry Ave, Philadelphia PA 19146

VCSP 880 Shelter Animal Medicine
This rotation gives a complex overview of the field of shelter medicine and community outreach by partnering via a service-learning model with open and closed admission shelters, HQHV surgical clinics, schools, and outreach organizations like Pets for Life. A typical rotation focuses on authentic hands-on learning including four surgical days, mentored primary case management of medical cases and shelter population rounds, public clinical outreach, herd health management, training and behavioral assessment, and providing veterinary CE for shelter staff. Rounds and tour topics include cruelty investigation and humane law enforcement, behavior, ethics, exotics, and risk analysis. Dentistry, necropsies, consults, special procedures, and outreach to local middle schools can also be included as part of the rotation depending on the week. Because Penn Vet works with outside organizations keep in mind the schedule can change as our partner’s needs change. This course occurs off-campus and students must coordinate their own transportation.
Taught by: Dr. B. Watson and Staff
Activity: Clinical Rotation Dental & Vet school
5.0 Credit Hours
Notes: Limitations: 4 students

VCSP 890 Small Animal Surgery Holiday Rotation
This rotation will be similar to a regular surgery rotation with some modifications dictated by the holiday schedule. Students will assist surgery faculty and house officers in history taking, examinations, and the surgical management of small animal patients presented on an emergency basis to the Veterinary Hospital of the University of Pennsylvania. Students will be responsible for the daily care of surgical patients hospitalized at Ryan Hospital. They will also assist in surgery and perform treatments. All students will be expected to participate in night, weekend, and holiday duty on a rotating basis. Two students will be assigned to On Call duty each night and will perform treatments until midnight and assist with cases needing surgery in the night and evening hours. Assignments will be made the first day of the rotation. Two students will be assigned to On Call duty each night and will perform treatments until midnight and assist with cases needing surgery in the night and evening hours. Assignments will be made the first day of the rotation. Rounds to acquaint students with the hospitalized patients will be held each morning and as time permits with the emergency clinician/house officer/nursing staff on duty, but formal teaching or rounds will occur as time permits during this rotation.
Taught by: Dr. L. Aronson and Staff
Prerequisite: Satisfactory completion of the Small Animal Soft Tissue or Orthopedics rotation
Activity: Clinical Rotation Dental & Vet school
3.0 Credit Hours
Notes: Limitations: preferred minimum 6 students, preferred maximum 10 students / rotation. (Maximum may vary between H1 and H2)
VCSP 893 Small Animal Emergency Service Holiday Rotation
This rotation will be very similar to the Emergency Medicine clinical rotation elective course. Students will be involved in triage, patient stabilization, history and physical examination, diagnostic workup and treatment of patients seen in the emergency room. (We want students who have an interest in learning more about emergency medicine!) Specific time will not be set aside during the rotation for student rounds; however, teaching on a case-to-case basis will be stressed. Rotation shifts will be 8 AM to 8 PM and 8 PM to 8 AM. Each student will be assigned to 5 shifts during the rotation. There will be at least two students assigned to each shift. Taught by: Dr. Drobatz and Staff
Prerequisite: Satisfactory completion of the Small Animal Emergency Medicine rotation
Activity: Clinical Rotation Dental & Vet school
3.0 Credit Hours
Notes: Limitations: preferred minimum 6 students, preferred maximum 9 students / rotation. (Maximum may vary between H1 and H2)

VCSP 894 Small Animal Radiology Service
Taught by: Dr. J. Suran and Staff
Prerequisite: VCSP 814 AND VCSP 841
Activity: Clinical Rotation Dental & Vet school
3.0 Credit Hours
Notes: Limitation: 0 - 2 students per 1 week rotation

Veterinary Independent Study & Research (VISR)

VISR 648 Computer-Aided Learning
Independent study working on computer assisted learning (CAL) projects for the summer. Students work with Linda Lewis and various faculty members depending on the projects available. CAL students must be self-motivated and self-disciplined and able stay on task with minimal supervision. Students will need their own laptop and internet access or can work on either campus. Students should be comfortable working with computers, using Microsoft office, and browsing the web. Experience editing images, videos, and websites are helpful. Students may need to travel to NBC occasionally through the summer. Students work individually and as part of a team and typically work 40 hours/week for 10 weeks. Taught by: L. Lewis
Activity: Lecture
5.0 Credit Hours

VISR 699 Independent Study and Research
This course enables student to undertake a self-directed study on a topic in Veterinary Medicine, under the supervision of a faculty member. Students are required to submit an Independent Study & Research (ISR) application to the Registrar Manager in the Office for Students. Credit may vary. Taught by: Instructors Vary
Activity: Seminar
1.0 Credit Hour

Veterinary Pathobiology (VPTH)

VPTH 550 One Health Study Design Seminar
This seminar course will introduce students to One Health approaches that address critical local, regional and global health problems. Students will work in interdisciplinary teams to review case studies and analyze past and current literature where One Health approaches have been applied. The course is specifically designed to foster the development of skills that allow students to think and communicate across professional disciplines. It will also help students develop transdisciplinary connections that might serve them in their professional futures. Students will be assigned a transdisciplinary team. Grading will be based on team-led presentations and analysis of literature, participation in discussion, and a final capstone project (One Health in Practice Plan) in the form of both a paper and presentation. Taught by: Drs. S. Rankin, S. Cole, and J. Punt
Also Offered As: VPTH 650
Activity: Lecture
3.0 Credit Hours
Notes: Limitations: 10 students

VPTH 602 General and Systemic Pathology
This course includes general pathology and systemic pathology. The general principles and mechanisms of disease are discussed through the basic principles of cell and tissue reactions to injury, including degeneration, necrosis, pathological pigmentation, disturbances of circulation, disturbances of growth, inflammation and neoplasia. This course completes the systemic pathology of domestic animals with emphasis on the etiology, pathogenesis, gross and microscopic lesions, and diagnosis of diseases of the organ systems in the body. Formal classroom lectures are complemented with laboratory classes, gross pathology demonstrations and Moodle-based exercises all aimed at interpretation of gross and microscopic lesions. Taught by: Dr. A. Durham and Staff
Activity: Lecture
16.0 Credit Hours

VPTH 603 Parasitology
This core course is concerned with fundamentals of parasitology. The developmental cycles of helminth, arthropod and protozoan parasites of animals and those that are transmissible from animals to man. The epidemiology and control of the infections are stressed along with pathogenesis, pathology and immunology. Lectures are supplemented by demonstrations of living and fixed materials and by exercises in identification and diagnosis. Laboratory exercises are supplemented by independent work on case studies of clinical parasitisms. Taught by: Dr. J. Farrell and Staff
Activity: Lecture
8.0 Credit Hours

VPTH 604 Immunology
This course aims to educate students in Veterinary Medicine on fundamental aspects of immunology, including functional anatomy of the immune system, mechanisms of innate and adaptive immunity, immunological mechanisms of disease, and principles of vaccination. Taught by: Dr. C. Lopez and Staff
Activity: Lecture
4.0 Credit Hours
VPTH 605 Microbiology
This course presents the fundamentals of medical microbiology (bacteriology, mycology, virology) and the applied art of diagnostic bacteriology. Emphasis is placed on the microbial agents of veterinary disease, their biology, mode of pathogenesis, and control with some introductory material concerning treatment and recognition. This course is presented as prerequisite to a later study of infectious disease.
Taught by: Dr. R. Harty and Staff
Activity: Lecture
7.0 Credit Hours

VPTH 606 Clinical Pathology
Appropriate test selection and interpretation are essential to diagnostic evaluation. This course is an introduction to Clinical Pathology presented via case-based learning. Topics include hematology, serum chemistries, urinalysis, cytopathology, clinical endocrinology and blood banking. Within each topic, discussion will cover indications, limitations and interpretation of specific tests, but the emphasis will focus on integrating this information in the context of laboratory panels. Laboratory exercises provide the opportunity to perform and demonstrate basic competency in urinalysis, blood smear preparation and evaluation, and blood banking, as well as to evaluate clinical cases individually and in groups. A microscope is needed for the laboratories.
Taught by: Dr. N. Weinstein and Staff
Activity: Lecture
6.0 Credit Hours

VPTH 615 Introduction to Comparative Medical Research
This course will review the broad scope of animal involvement in contemporary biomedical and veterinary research, with specific discussions of unique species (rodents, nonhuman primates) and laboratory animal medicine and science. Goals for the course are to gain a strong appreciation for the role of research in furthering the practice of veterinary and human medicine, as well as for importance of the humane care, welfare and responsible use of laboratory animals. Completion of this course will permit students to readily participate in biomedical research opportunities available at the University. Grades will be determined by attendance, completion of compliance training, an out-of-class writing exercise and a final exam.
Taught by: Dr. J. Marx and Staff
Activity: Lecture
2.0 Credit Hours

VPTH 633 Ecotoxicology for Veterinarians
The major goal of this course is to provide an introduction to ecotoxicology, the science of assessing the effects of toxic substances on ecosystems with the goal of protecting entire ecosystems. The course will present lectures about various research and career opportunities involving ecotoxicology, such as measuring the effects of pollutants on ecosystems, wildlife serving as monitors of environmental quality, important environmental pollutants such as insecticides, petroleum hydrocarbons and metals, and approaches to rehabilitating damaged ecosystems. Students will research, plan, and present a PowerPoint presentation on a topic relevant to ecotoxicology. The course grade will be based on attendance, the group presentation, and student participation in class discussions.
Taught by: Dr. L. Murphy and Staff
Activity: Lecture
2.0 Credit Hours

VPTH 634 Microbial Pathogenesis
The goal of this course is to provide the student with a conceptual framework regarding the mechanisms of microbial pathogenesis. A range of host-microbe interactions will be studied to illustrate how different microbes breach host lines of defense and lead to infections. Transmission, etiological diagnosis, as well as prophylactic and therapeutic approaches against infectious agents will be discussed with examples related to viral and bacterial pathogens, including zoonotic and Category A select agents.
Taught by: Dr. D. Schifferli and Staff
Prerequisite: VPTH 604 AND VPTH 605
Activity: Lecture
2.0 Credit Hours
Notes: Limitations: Maximum of 20 students

VPTH 635 Introduction to Fish Diseases
This course is intended to introduce veterinary students to the biology and medicine of teleost fish. The first few lectures will provide a foundation in the classification, gross anatomy and immunology of fish, including practical laboratory classes. The remainder of the course will be more clinically oriented, and will present the most prevalent diseases of fish, emphasizing both the pathology and etiology of the diseases. In addition, the course will also focus on health maintenance through the control of water quality and treatment of diseases in fish. This part of the course will include some practical laboratory demonstrations. Grades will be determined on the basis of class participation and a 5-6 page research paper on a topic of the students choice.
Taught by: Dr.O.Sunyer and Staff
Prerequisites: 1st and 2nd Year Core Courses
Activity: Lecture
2.0 Credit Hours

VPTH 637 Capstone Proseminar in Animal Welfare and Behavior
This semester long (6 credit) online course for students enrolled in the MSc in Animal Welfare and Behavior is designed to guide students in their development of their capstone Master’s project. It will provide students with the skills to refine and communicate their research questions and goals, engage in scholarly discussion in an interdisciplinary setting and the opportunity to deepen their knowledge of cutting edge research in their area of interest. Through structured synchronous meetings with mentors and peers and opportunities to attend virtual seminars across campuses, the Proseminar course also exposes students to a network of future mentors and colleagues who may play important roles in their career development. The course culminates in a written proposal describing a research question and hypothesis with a scholarly introduction to the topic and an annotated bibliography.
Taught by: Jennifer Punt
Activity: Online Course
6.0 Credit Hours
VPTH 640 Large Animal Pathology & Toxicology
The first goal of this course is to introduce large animal autopsy techniques for the purposes of identification of common postmortem lesions and review of clinical-oriented anatomy. The second goal is to provide a systems-based approach to domestic and global diseases commonly encountered large animal species, including horses, cattle and small ruminants, swine, camels and cervids. The course requires students to recognize pertinent gross and microscopic lesions correlated with clinical history in order to formulate appropriate differential diagnoses and promote in-depth knowledge of non-infectious and infectious etiopathogenesis, including zoonoses and domestic and foreign reportable diseases. Components of this course include lecture, gross autopsy demonstration and laboratories that involve inspection of fresh gross specimens, and interactive small group seminars pertaining to toxicology and species-specific lesions. Grades will be determined by two homework assignments, one final exam, and attendance to laboratories and small group seminars.
Taught by: Dr. J. Engiles and Staff
Prerequisite: VPTH 602
Activity: Lecture
3.0 Credit Hours
Notes: Limitations: Maximum of 75 students

VPTH 641 Laboratory Animal Medicine
Note: This course is encouraged as a prerequisite for VPTH 789 ULAR - Laboratory Animal Medicine Clinical Rotation. This course is designed to provide further information about laboratory animal medicine to those students with a potential interest in the field. Issues of pain and distress, facility design, regulatory issues, and special procedures involving rodents and rabbits are addressed. Students will also be introduced to the mechanism of an Institutional Animal Care and Use Committee and will be primary participants in a ‘mock’ meeting with visiting members of the committee here at Penn and actual research protocols. Grades will be determined by class participation and a short paper on a topic relevant to laboratory animal medicine.
Taught by: Dr. J. Marx and Staff
Activity: Lecture
2.0 Credit Hours
Notes: Limitations: Allergies to lab animals

VPTH 650 One Health Study Design Seminar
This seminar course will introduce students to One Health approaches that address critical local, regional and global health problems. Students will work in interdisciplinary teams to review case studies and analyze past and current literature where One Health approaches have been applied. The course is specifically designed to foster the development of skills that allow students to think and communicate across professional disciplines. It will also help students develop transdisciplinary connections that might serve them in their professional futures. Students will be assigned a transdisciplinary team. Grading will be based on team-led presentations and analysis of literature, participation in discussion, and a final capstone project (One Health in Practice Plan) in the form of both a paper and presentation.
Taught by: Drs. S. Rankin, S. Cole, and J. Punt
Also Offered As: VPTH 550
Activity: Lecture
3.0 Credit Hours
Notes: Limitations: 10 students

VPTH 710 Small Animal Diagnostic Services
The course in the Small Animal Section consists of exposure to the Diagnostic Services of MJR-VHUP, namely clinical pathology, anatomic pathology (necropsy service), parasitology and microbiology. The course is focused on development of clinical pathology and necropsy skills and will include a practicum of necropsy technique. A portion of the rotation is also focused on biopsy, parasitology and microbiology. Furthermore, students will be exposed large animal necropsy by spending time at PADLS at New Bolton Center. The bioanalytical pathology portion, which comprises clinical pathology, parasitology and microbiology, will be divided into microscopy, discussion, and online interactive lesson sections. During the microscopy section, students will work with the supervising clinical pathologist or resident in the evaluation, interpretation, and reporting of cytologic specimens and blood film reviews. Discussions involving parasitology and microbiology will also include treatment options and best practices. Online lessons include work in parasitology, clinical pathology and microbiology. Students are also required to perform necropsies, write necropsy reports and to familiarize themselves with the pathophysiology, histopathology and the clinical manifestations of various disorders encountered. Participation of students in presentation and discussion of cases is required. Students will be evaluated based upon enthusiasm, effort, ambition, and advancement in pathology knowledge as evaluated through the directed group discussions, necropsies, microscopy sessions and clinical competency outcomes assessments. A short paper is required. There is a web-based introduction to VPTH710 Diagnostic Services and VPTH770 Diagnostic Services Elective, which students must review prior to the start of their rotation. Students may find this introduction by logging in to https://learn.vet.upenn.edu with their Penn Key and Vet Domain password. Please note that it will take approximately 3 hours to review the video and written materials on the website.
Taught by: Dr. C. Bradley and Staff
Also Offered As: VPTH 770
Activity: Clinical Rotation Dental & Vet school
6.0 Credit Hours
Notes: Limitations: 4 students/rotation - Required: SA - Satisfies pathology requirement: SALA
**VPTh 711 Farm Animal Pathology-NBC**
The course will provide students with experience in farm animal and companion animal autopsies and biopsies including interpretation of gross and microscopic lesions in the context of clinical history, and proper collection of samples for histology and ancillary diagnostics (e.g. microbiology, parasitology, cytology and toxicology). Students will participate in the diagnostic services provided by the Pennsylvania Animal Diagnostic Laboratory System (PADLS) at New Bolton Center. Multiple species commonly encountered at our diagnostic laboratory (horses, cattle and small ruminants, swine, camelids and cervids, small animals and exotics) will be utilized to illustrate the pathogenesis of infectious and non-infectious disease, and the principles of gross and microscopic description with formulation of morphologic diagnoses. Students will be evaluated based upon enthusiasm, effort, ambition, and advancement in pathology knowledge as evaluated through diagnostic autopsy technique, directed group discussions, microscopy sessions and clinical competency outcomes assessments. A short paper providing a succinct scientific review of a select topic pertaining to large animal pathology is required. Although gross pathology will be emphasized, exposure to histopathology and occasionally cytology will be included. Although there is no lecture component to this course, there is a web-based introduction to VPTH 711 Diagnostic Services and VPTH 771 Diagnostic Services Elective, which students must review prior to the start of their rotation. Students may find this introduction by logging in to https://learn.vet.upenn.edu with their Penn Key and Vet Domain password.

**Taught by:** Dr. J. Engiles and Staff
**Also Offered As:** VPTH 771
**Activity:** Clinical Rotation Dental & Vet school
**6.0 Credit Hours**
**Notes:** Required: EQ - Satisfies pathology requirement: SALA, LA, FA

**VPTh 718 Poultry Production Medicine-NBC**
This course is designed to provide students with a working knowledge of the management and production of poultry from hatchery to processing. The course will involve multiple field trips to a hatchery, grow out pullet house, layer house, breeder house, processing plant and a feed mill. There will also conduct necropsies on cases submitted to the diagnostic laboratory and learn the diagnostic procedures such as serology, virology and PCR testing.

**Taught by:** Drs. S. Davison and Staff
**Also Offered As:** VPTH 780
**Prerequisite:** VMED 608
**Activity:** Clinical Rotation Dental & Vet school
**5.0 Credit Hours**
**Notes:** Limitations: 1 student/rotation - Satisfies pathology requirement: FA, LA

5.0 Credit Hours
Notes: Limitations: 1 student/rotation - Satisfies pathology requirement: FA, LA

VPTH 789 ULAR-Laboratory Animal Medicine
This rotation will provide an opportunity to work with the wide variety of animal species used in biomedical research at the University of Pennsylvania, including nonhuman primates, small rodents, guinea pigs, rabbits, dogs, cats, pigs, and sheep. The students will participate in all aspects of the care and treatment of these animals across the facilities at the University of Pennsylvania. Participation may include handling, husbandry, diagnosis, treatment, anesthesia, and assistance with surgery. Students will perform daily rounds with the clinical veterinarians and other staff members. The student may have the opportunity to observe on-going interdisciplinary research programs including cardiopulmonary bypass, organ transplantation, gene therapy, device implantations, and metabolic disease progression. Students will participate in clinical rounds, didactic training classes, and related seminars and journal clubs as scheduled. Participation in necropsies of clinical cases, sentinel animals, and study animals is expected. A brief assignment on aspects of lab animal medicine will be required prior to completion of the rotation. Depending upon scheduling, the students will have an opportunity to attend a meeting of the Institutional Animal Care and Use Committee. A recent (within 6 months) negative skin test against tuberculosis is required by the first day of the rotation.
Taught by: Dr. J. Marx and Staff
Prerequisite: Successful completion of VPTH 641 Laboratory Animal Medicine is encouraged but not required
Activity: Clinical Rotation Dental & Vet school
5.0 Credit Hours
Notes: Limitations: Maximum 2 students/rotation - Notes: The focus of this rotation is the humane care and use of animals in biomedical research. Students should have interest in the specialty of Laboratory Animal Medicine

VPTH 790 Small Animal Pathology Holiday Rotation
This is an elective rotation similar to the necropsy component of the Diagnostic Services Rotation, VPTH 710,770. The rotation consists of practice spent in performing necropsies and interpreting findings. Students are required to perform necropsies, write necropsy reports and to familiarize themselves with the pathophysiology, histopathology and the clinical manifestations of various disorders encountered. There will be two one-week rotations over the Holiday period, each for 2 credits. Each rotation will consist of half of the Holiday period and will not meet on either Christmas Day (week one) or New Years Day (week two). There is no clinical pathology, parasitology or microbiology component to this rotation. No paper is required for this rotation.
Activity: Clinical Rotation Dental & Vet school
2.0 Credit Hours
Notes: Limitations: 2 students/rotation

Vietnamese (VIET)
VIET 110 Elementary Vietnamese I & II
An introduction to the language of North and South Vietnam. Instruction includes reading, writing, speaking and listening. Prerequisite: For the second semester, completion of the first semester or permission of the instructor. Course offered through Penn Language Center
For BA Students: Language Course
Taught by: Nguyen
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center.
VIET 111 Elementary Vietnamese II
This is the continuation course to ALAN 110-680 Elementary Vietnamese I. It is intended for learners who want to achieve an elementary-level in Vietnamese. Based on an interactive communication approach, its goal is to train students speaking, listening, reading and writing skills in Vietnamese. Learners are thoroughly involved in communicative activities such as conversations, performance simulations, drills, role-plays, games, etc. there are task-based activities in open communication settings where students can practice Vietnamese, make mistakes, and learn from them. Learners improve their reading and writing abilities by developing their grammar and meaning-based vocabulary.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

VIET 210 Intermediate Vietnamese I & II
A continuation of ALAN 110, the written and spoken language of Vietnam. Prerequisite: Offered through the Penn Language Center
For BA Students: Language Course
Taught by: Nguyen
One-term course offered either term
Prerequisite: ALAN 110
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center.

VIET 211 Intermediate Vietnamese II
This is the continuation course to ALAN 210-680 Interim Vietnamese I. Instruction includes reading, writing, speaking and listening through the use of Conversational Vietnamese textbook, other media, and through students participation in various classroom activities. Learners will also acquaint themselves with Vietnamese culture through lesson content and supplementary course materials. By the end of the course students should be able to further their knowledge of reading and writing skills, enhance their conversation skills, and read and write short narratives.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

VIET 310 Advanced Vietnamese I
For BA Students: Last Language Course
Taught by: Cang Luu
Course not offered every year
Prerequisite: ALAN 210 OR ALAN 211
Activity: Lecture
1.0 Course Unit

VIET 311 Advanced Vietnamese II
Activity: Lecture
1.0 Course Unit

Visual Studies (VLST)

VLST 101 Eye, Mind, and Image
Visual Studies 101 provides an introduction to the collaboration of eye, mind, and image that produces our experience of a visual world. How and what do we see? How do we perceive color, space, and motion? What is an image? Does seeing vary across cultures and time? What can art tell us about vision? Is there a 21st-century form of seeing? This course combines different approaches to the study of vision, drawing from psychology, cognitive science, philosophy, history of art, and fine art. Professors representing two or three disciplines present lectures that demonstrate the methods of their disciplines and draw connections across fields. This course combines different approaches to the study of vision, drawing from psychology, cognitive science, philosophy, history of art, and fine art. Professors representing two or three disciplines present lectures that demonstrate the methods of their disciplines and draw connections across fields. Prerequisite: This course is required of all Visual Studies Majors (stage 1).
For BA Students: Hum/Soc Sci or Nat Sci/Math Sector
Taught by: Hatfield/Leja
One-term course offered either term
Activity: Lecture
1.0 Course Unit
VLST 102 Form and Meaning
This course will introduce students to the theory and practice of image making, focusing on the development of observational skills and analytical thinking. We will look at conventions of artistic representation across time and cultures; discuss types of visual information and modes of formal language; explore visual narrative techniques; and seek to expand our understanding of the role images play in our culture. We will look at conventions of pictorial representation across time and cultures; discuss types of visual information and modes of formal language; explore visual narrative techniques; and seek to expand our understanding of the role images play in our culture. Prerequisite: This course is required of all Visual Studies Majors (stage 1 or 2).
Taught by: Bendtsen/Hyland
One-term course offered either term
Activity: Studio
1.0 Course Unit

VLST 103 3 Dimensions: Time and Space
Through studio projects, readings and class discussion, this class will begin to address, both conceptually and physically, basic 3D structures and translations between 3D and 2D, as well as materiality, experiential phenomena, light and time-based processes. The interconnection between mediums in our cultural climate employs a wide range of tools, processes, and ideas. It is imperative that visual studies students recognize and think through these connections. The work produced and ideas confronted in this class will facilitate discussions and constructive criticism on the fundamentals of space and time via the experiential, conceptual, and the formal as essential elements of meaning. The interconnection between mediums in our cultural climate employs a wide range of tools, processes, and ideas. It is imperative that visual studies students recognize and think through these connections. The work produced and ideas confronted in this class will facilitate discussions and constructive criticism on the fundamentals of space and time via the experiential, conceptual, and the formal as essential elements of meaning. Prerequisite: This course is required of all Visual Studies Majors (stage 1 or 2).
Taught by: Freedman/Neighbor
One-term course offered either term
Activity: Studio
1.0 Course Unit
Notes: This course is required of all Visual Studies Majors (stage 1 or 2).

VLST 211 Perception
How the individual acquires and is guided by knowledge about objects and events in their environment.
One-term course offered either term
Also Offered As: PSYC 111
Activity: Lecture
1.0 Course Unit
Notes: Topics for this course vary each semester. Dept permission required. This course can count toward Sector A, (Stage 2 or 3) of the Visual Studies Major.

VLST 212 Research Experience in Perception
In this research course, students will begin by first replicating earlier experiments to measure human visual memory capacity. After several class discussions to discuss ideas, each student will design and conduct their own experiment to further investigate visual and/or familiarity memory. Prerequisite: One semester of Statistics, and one of the following: PSYC 111 or 149 or 151 or 217, or permission of instructor.
Taught by: Rust
One-term course offered either term
Also Offered As: PSYC 311
Activity: Seminar
1.0 Course Unit
Notes: Dept permission required. Undergraduates only.

VLST 213 Images in Science
Pictures, diagrams, graphs, and (more recently) computer images are ubiquitous in modern science. Visualizations are crucial in the process of research; for communicating evidence, theories, and experiments to other scientists; and for transmitting scientific ideas to the public. But serious questions about the validity of using images to convey knowledge about nature have been raised from the earliest natural philosophers onwards, and understanding precisely what any particular scientific image does can be surprisingly difficult. In this class we will investigate, as historical and cultural artifacts, images related to the generation or transmission of knowledge about nature, knowledge that has claims to a privileged epistemological status. The focus will be on three kinds of visual depictions: images of the macrocosm (the universe as a whole), images of the microcosm (the body and its parts), and the visualization of theories and data. What are the material and technological conditions underlying these images? What can the images we examine tell us about the communities and societies, including our own, in which they were created? What do they reveal about the nature of the scientific enterprise, about the relationship between the sensible world and the mind, and about ideals concerning truth, objectivity, and morality?
Taught by: Baker
Course usually offered in spring term
Also Offered As: STSC 317
Activity: Seminar
1.0 Course Unit

VLST 217 Visual Neuroscience
An introduction to the scientific study of vision, with an emphasis on the biological substrate and its relation to behavior. Topics will typically include physiological optics, transduction of light, visual thresholds, color vision, anatomy and physiology of the visual pathways, and the cognitive neuroscience of vision.
Taught by: Stocker
Course usually offered in spring term
Also Offered As: BIBB 217, PSYC 217
Prerequisite: PSYC 109
Activity: Lecture
1.0 Course Unit
VLST 221 Introduction to Philosophy of Mind
In this course, we will explore philosophical questions concerning the nature of minds. In seeking to understand the nature of minds, philosophers and psychologists often have used metaphors drawn from the forms of technology available to them. Leibniz once described the mind as a mill, while Freud compared the mind to a hydrolytic and electromagnetic system. In our own time, many have followed Alan Turing’s proposal and have viewed the mind as a special kind of computer; indeed, this ‘Computational Theory of Mind’ forms the foundation for much work in contemporary cognitive science. In this class, we will explore the extent to which the computational theory of mind can adequately characterize the distinctive capacities involved in representing an external environment and having conscious experiences that is displayed by minds in general and human minds in particular. Although an introductory class in philosophy or logic will aid students’ understanding, no prior familiarity with the philosophy of mind or cognitive science will be presumed.
Taught by: Domotor, Miracchi
Also Offered As: PHIL 244, PPE 244
Activity: Lecture
1.0 Course Unit
Notes: This course can count toward Sector A, (Stage 2 or 3) of the Visual Studies Major.

VLST 223 Philosophy and Visual Perception
Central issues in the philosophy of perception from the modern period, including: what we perceive, the meaningful content of perception, and its relation to a mind-independent external world. Additional topics may include: (1) color perception and color metaphysics; (2) object perception in its interplay between Gestalt organizational factors and background knowledge; (3) the role of ecological regularities in the formation of our visual system and in the ongoing tuning of the system to the environment; (4) the geometry of visual space and the phenomenology of visual appearances of size and shape; (5) the problem of how visual scenes are experienced by means of images. Readings from authors such as Bertrand Russell, R. W. Sellars, Tim Crane, Evan Thompson, Robert Swartz, Wolfgang Metzger, Nelson Goodman, Richard Wollheim, and William Hopp, among others.
Taught by: Hatfield, Connolly
One-term course offered either term
Also Offered As: PHIL 223
Activity: Seminar
1.0 Course Unit
Notes: This course can count toward Sector A, (Stage 2 or 3) of the Visual Studies Major.

VLST 232 World Art: 1400 to Now
This course is an introduction to the visual arts in a global context over the period from the early 1400s to the present. The content of the class varies according to the expertise of the instructors but will introduce students to selected and significant moments in artistic production in both the Western and Eastern hemispheres. Offering a broad historical overview of key techniques, movements, and artists, this course will cover aspects of art production around the world during an era of increasing economic exchange, colonization, and industrialization. Looking at painting, sculpture, architecture, and prints, as well as new media such as photography and film, the course will respond to the following questions: How does artistic practice change in this period? Who owns art? What is the role of the artist in society, and where is art made, exhibited, and consumed? Other topics to be covered are art’s crucial role in the period’s political debates and social transformations, including modernization and technological advances, as well as art criticism’s import in forming public opinion. An introduction to art history, this course offers a wholly new perspective on the arts and cultures in this era of artistic innovation. This course fulfills Sector III: Arts and Letters and counts towards the History of Art major and minor requirements.
For BA Students: Arts and Letters Sector
Taught by: Dombrowski, Kim, Shaw, Davis
Course usually offered in spring term
Also Offered As: ARTH 102
Activity: Lecture
1.0 Course Unit

VLST 233 Art and Civilization in East Asia
Introduction to major artistic traditions of China and Japan and to the methodological practices of art history. Attention given to key cultural concepts and ways of looking, in such topics as: concepts of the afterlife and its representation; Buddhist arts and iconography; painting styles and subjects; and more broadly at the transmission of styles and cultural practices across East Asia. Serves as an introduction to upper level lecture courses in East Asian art history cultures. If size of class permits, certain sessions will be held in the University Museum or the Philadelphia Museum of Art.
For BA Students: Arts and Letters Sector
Taught by: Davis/Steinhardt
Course not offered every year
Also Offered As: ARTH 103, EALC 013
Activity: Lecture
1.0 Course Unit
Notes: This course can count toward Sector B, (Stage 2 or 3) of the Visual Studies Major.

VLST 234 Introduction to Art in South Asia
This course is a survey of sculpture, painting and architecture in the Indian sub-continent from 2300 B.C., touching on the present. It attempts to explore the role of tradition in the broader history of art in India, but not to see India as ‘traditional’ or unchanging. The Indian sub-continent is the source for multi-cultural civilizations that have lasted and evolved for several thousand years. Its art is as rich and complex as that of Europe and diverse. This course introduces the full range of artistic production in India in relation to the multiple strands that have made the cultural fabric of the sub-continent so rich and long lasting.
For BA Students: Arts and Letters Sector
One-term course offered either term
Also Offered As: ARTH 104, SAST 200, SAST 500
Activity: Lecture
1.0 Course Unit
Notes: This course can count toward Sector B, (Stage 2 or 3) of the Visual Studies Major.
VLST 235 Introduction to Visual Culture of the Islamic World
A one-semester survey of Islamic art and architecture which examines visual culture as it functions within the larger sphere of Islamic culture in general. Particular attention will be given to relationships between visual culture and literature, using specific case studies, sites or objects which may be related to various branches of Islamic literature, including historical, didactic, philosophical writings, poetry and religious texts. All primary sources are available in English translation.
For BA Students: Humanities and Social Science S
Course not offered every year
Also Offered As: AAMW 635, ARTH 235, ARTH 635, NELC 285, NELC 685
Activity: Lecture
1.0 Course Unit
Notes: This course can count toward Sector B, (Stage 2 or 3) of the Visual Studies Major.

VLST 236 Art Now
One of the most striking features of today's art world is the conspicuous place occupied in it by the photographic image. Large-scale color photographs and time-based installations in projections are everywhere. Looking back, we can see that much of the art making of the past 60 years has also been defined by this medium, regardless of the form it takes. Photographic images have inspired countless paintings, appeared in combines and installations, morphed into sculptures, drawings and performances, and served both as the object and the vehicle of institutional critique. They are also an increasingly important exhibition site: where most of us go to see earthworks, happenings and body-art.
This course is a three-part exploration of our photographic present.
Taught by: Silverman
Course not offered every year
Also Offered As: ARTH 294, ARTH 694, ENGL 063, GSWS 294
Activity: Lecture
1.0 Course Unit
Notes: This course can count toward Sector B, (Stage 2 or 3) of the Visual Studies Major.

VLST 237 Material History of Photography
Photography is a young medium and yet its history can be traced through differing narratives. Was the medium born in a French patent office, when the sun burned a handprint in sliver salt, or when human eyes saw an inverted image projected into a dark space? Does photography reflect the perspective and biases of its inventors and users, or does it re-invent how we see the world? This seminar will take theoretical and material approaches to understanding the histories of photography. In addition to lectures and readings, students will handle original materials and make photographs using historic chemical-processes and styles.
Taught by: Vershbow
Course offered fall, even-numbered years
Also Offered As: ARTH 374
Activity: Seminar
1.0 Course Unit

VLST 250 Introduction to Printmaking
The course offers an introduction to several forms of printmaking including: intaglio, screen printing, relief, and monoprinting. Through in-class demonstrations students are introduced to various approaches to making and printing in each medium. The course enhances a student's capacity for developing images through two-dimensional design and conceptual processes. Technical and conceptual skills are developed through discussions and critiques.
Course usually offered in spring term
Also Offered As: FNAR 250, FNAR 550
Activity: Studio
1.0 Course Unit

VLST 251 Introduction to Photography
This course is an introduction to the basic processes and techniques of black & white photography. Students will learn how to expose and process 35mm film, SLR camera operation, darkroom procedures & printing, basic lighting and controlled applications. It begins with an emphasis on understanding and mastering technical procedures and evolves into an investigation of the creative and expressive possibilities of making images. This is a project-based course, where students will begin to develop their personal vision, their understanding of aesthetic issues and photographic history. Assignments, ideas and important examples of contemporary art will be presented via a series of slide lectures, critiques and discussion. No previous experience necessary. 35mm SLR cameras will be available throughout the semester for reservation and checkout from the photography equipment room. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
One-term course offered either term
Also Offered As: FNAR 271, FNAR 571
Activity: Studio
1.0 Course Unit

VLST 252 Sculpture Practices
As an introduction to traditional and contemporary three-dimensional practice, this course is concerned with the concepts and methodologies surrounding three-dimensional art making in our time. Students experiment with a variety of modes of production, and develop some of the fundamental techniques used in sculpture. In addition to these investigations, assignments relative to the history and social impact of these practices are reinforced through readings and group discussion. Processes covered include use of the Fab Lab, wood construction, clay, paper, mixed media, and more.
One-term course offered either term
Also Offered As: FNAR 145, FNAR 545
Activity: Studio
1.0 Course Unit
VLST 253 Drawing I
This course is designed to develop visual awareness and perceptual acuity through the process of drawing. Students learn to sharpen perceptual skills through observational drawing, and to explore the expressive potential of drawing. A variety of problems and media will be presented in order to familiarize students with various methods of working and ways of communicating ideas visually. Subject matter will include object study, still life, interior and exterior space, self-portrait and the figure. Different techniques and materials (charcoal, graphite, ink, collage) are explored in order to understand the relationship between means, material and concept. Critical thinking skills are developed through frequent class critiques and through the presentation of and research into historical and contemporary precedent in drawing.
One-term course offered either term
Also Offered As: FNAR 123, FNAR 523
Activity: Studio
1.0 Course Unit

VLST 260 Photography Practices
This course is an introduction to the basic principles, strategies and processes of photographic practice. It is designed to broaden the student’s aesthetic explorations and to help the student develop a visual language based on cross-disciplinary artistic practice. Through a series of projects and exercises students will be exposed to a range of camera formats, techniques and encouraged to experiment with the multiple modes and roles of photography - both analogue and digital. Attention will also be given to developing an understanding of critical aesthetic and historical issues in photography. Students will examine a range of historical and contemporary photowork as an essential part of understanding the possibilities of image making. This course is primarily for freshman and sophomores.
One-term course offered either term
Also Offered As: FNAR 150
Activity: Studio
1.0 Course Unit

VLST 261 Video I
In this studio based course, students are introduced to video production and postproduction as well as to selected historical and theoretical texts addressing the medium of video. Students will be taught basic camera operation, sound recording and lighting, as well as basic video and sound editing and exporting using various screening and installation formats. In addition to a range of short assignment-based exercises, students will be expected to complete three short projects over the course of the semester. Critiques of these projects are crucial to the course as students are expected to speak at length about the formal, technical, critical and historical dimensions of their works. Weekly readings in philosophy, critical theory, artist statements and literature are assigned. The course will also include weekly screenings of films and videos, introducing students to the history of video art as well as to other contemporary practices.
For BA Students: Humanities and Social Science S
One-term course offered either term
Also Offered As: CIMS 061, FNAR 061, FNAR 661
Activity: Seminar
1.0 Course Unit

VLST 264 Art, Design and Digital Culture
This course is an introduction to the fundamental perception, representation, aesthetics, and design that shape today's visual culture. It addresses the way artists and designers create images; design with analog and digital tools; communicate, exchange, and express meaning over a broad range of media; and find their voices within the fabric of contemporary art, design, and visual culture. Emphasis is placed on building an extended form of visual literacy by studying and making images using a variety of representation techniques; learning to organize and structure two-dimensional and three-dimensional space, and designing with time-based and procedural media. Students learn to develop an individual style of idea-generation, experimentation, iteration, and critique as part of their creative and critical responses to visual culture. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
For BA Students: Humanities and Social Science S
One-term course offered either term
Also Offered As: DSGN 264, DSGN 636, FNAR 264, FNAR 636
Activity: Studio
1.0 Course Unit

VLST 265 Digital Photography
This class offers an in-depth technical and conceptual foundation in digital imagery and the opportunity to explore the creative, expressive possibilities of photography. Students will become proficient with the basic use of the camera, techniques of digital capture, color management and color correction. They will also develop competency in scanning, retouching, printing and a variety of manipulation techniques in Photoshop. Through weekly lectures and critiques, students will become familiar with some of the most critical issues of representation, consider examples from photo history, analyze the impact of new technologies and social media. With an emphasis on structured shooting assignments, students are encouraged to experiment, expand their visual vocabulary while refining their technical skills. No previous experience is necessary. Although it is beneficial for students to have their own Digital SLR camera, registered students may reserve and checkout Digital SLR cameras and other high-end equipment from the department. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
One-term course offered either term
Also Offered As: FNAR 340, FNAR 640
Activity: Studio
1.0 Course Unit

VLST 273 History of Photography
A history of photography and theories of photography from 1839 to the present. Photography’s origins are rooted both in artistic desire and technological ingenuity. Some of photography’s inventors identified more as artists than engineers. At many points in the history of the medium, the question remains open whether new forms of artistic expression are driven by new technologies, or whether new technologies emerge to fulfill the desires of artistic imagination. This class will address photography’s relationship with painting, print, and drawing. It will examine the effect of photography on portraiture, landscape, depictions of motion, and abstraction. We will also investigate the changing cultural perception of photography as an artistic medium from the 19th to the 21st century.
Taught by: Vershbow
Course not offered every year
Also Offered As: ARTH 273, ARTH 673
Activity: Lecture
1.0 Course Unit
VLST 301 What is Visual Studies?
Visual Studies 301 is a seminar-format course that challenges students to develop independent ideas about how the eye, the mind and the image that is created therein, all work together to inform our conception of the world at large. Rather than present a unified viewpoint, the course asks the question, 'What is visual studies?' by examining parallel and sometimes antagonistic approaches to the ways that human beings understand sight and the concept of visuality. Over the course of the semester, students will discuss and write about various approaches to vision, examining this contested field through the lenses of several disciplines – including psychology, philosophy, and art history. By parsing and assimilating diverse ideas, students will decide for themselves what are the most pertinent and relevant approaches to the various avenues of research that present themselves in the emerging interdisciplinary field of Visual Studies. Prerequisite: This course is required of all Visual Studies Majors (stage 2).
One-term course offered either term
Prerequisite: VLST 101
Activity: Seminar
1.0 Course Unit

VLST 303 The Rise of Image Culture: History and Theories
Today images are ubiquitous; two centuries ago they were rare. This seminar considers key historical and theoretical contexts for this change and its social consequences. With the help of some of the strongest critics and theorists of image culture, we will consider five interrelated aspects of the rise of image culture. First, we will explore how new media and mechanical reproduction has changed the idea of the image over the past three centuries in an socio-economic context. Second, we will explore how images operate through the psyche and gaze and how that operation is tied to power. Third, we will examine how representations make meaning and form identity in coded systems. Fourth, we will consider the relationship between visual space and concepts of reality. And finally, we will interrogate aspects of materiality and meaning in visual things and images of the body.
Taught by: Leja
Course not offered every year
Activity: Seminar
1.0 Course Unit

VLST 305 What is an Image?
The course explores various concepts of images. It considers natural images (as in optics), images as artifacts, virtual images, images as representations, and works of art as images. Themes to include: the image controversy in cognitive science, which asks whether some cognitive representations are irreducibly imagistic; the question of whether some images resemble what they represent; the development of the concept of the virtual image and of three-dimensional images; the notions of pictorial representation and non-representational images in art. Readings from C. S. Peirce, Nelson Goodman, Robert Hopkins, Dominic Lopes, W. J. T. Mitchell, John Kulvicki, and Mark Rollins, among others. Prerequisite: This course can count toward Sector Sector A, (Stage 2 or 3) of the Visual Studies Major.
Taught by: Verstegen
Also Offered As: VLST 505
Activity: Seminar
1.0 Course Unit

VLST 309 Photography for Scientists and Artists
Artists and scientists are likeminded when they make an image in pursuit of new insights. Pictures can reveal the composition of a specimen, expose a person's character, capture a place's distinctiveness, or produce a new occasion for intimacy. Rosalind Franklin's famous 'Photograph 51' of DNA resulted from a desire to see the physical shape of heredity. The artist Shimpei Takeda places film directly on the ground in Fukushima to create a blind measurement of the radioactivity that remains in the earth. This course will introduce photography as an investigative medium for art and science. We will begin with learning the fundamentals of photography while considering ways in which photographs have changed and continue to change the way we perceive space and time. As the class progresses, students from the arts and sciences will work together to learn specialized photographic techniques and complete assignments that explore photography as an investigative medium. Students must have access to a digital camera and a computer with imaging software. Taught by: Vershbow
Course usually offered in spring term
Activity: Seminar

Wharton Undergraduate (WH)

WH 101 Business and You
WH 101 is the first step of the Leadership Journey at Wharton. The course is designed to fuel students’ unique interests in academic, research, and professional pursuits; to raise awareness of the complexity of business; and to increase understanding of the interrelatedness of business disciplines. Students will also acquire greater awareness of their strengths and leadership potential as members of the Wharton community and as future professionals. Students will come to appreciate that leadership is an act and best developed through study, feedback from trusted colleagues and peers, and stretch experiences that stimulate growth and development. Students will also begin to hone skills essential to the pursuit of personal, academic, and professional goals: thinking creatively, analyzing problems, applying what you have learned, and reflecting on learnings. A case-analysis project will engage students with the community through helping local agencies examine business challenges that they face. This course is for Wharton students only.
Taught by: Robertson; Greenhalgh; Romeika
Course usually offered in fall term
Activity: Recitation
0.5 Course Units

WH 150 Evaluating Evidence
WH 150 provides an introduction to all stages of the research process for business topics. In the first third of the course, we discuss theory building, hypothesis development, and research design choices particularly in casual research. In the second third, we discuss data collection methods (e.g., surveys, experiments, case studies and fieldwork) and the use of archival databases. This part of the course emphasizes the interplay between research design and sampling/data collection methods. In the final third of the course, we introduce data analysis and interpretation, including methods for converting raw data into measurable constructs suited to statistical analysis.

1.0 Course Unit

WH 201 Business Communication for Impact
The objective of WH 201 is to prepare you to communicate effectively as you pursue your educational, professional, and personal goals over the next few years. We have incorporated input from employers, employees, alumni and past WH 201 students to create a course that will prepare you to succeed at all types of communication: spoken and written, formal and informal, prepared and spontaneous. Communication is a skill that requires repeated practice to master. The class size is limited to eight students to allow you the opportunity to practice communicating every week. Class will meet for 80 minutes once a week for fourteen weeks. Please note that we are piloting different approaches to teaching this year in different sections of the course. The logistical details of some sections may differ from others, but everyone will be taught the same material and complete the same assignments.
One-term course offered either term
Activity: Lecture
0.5 Course Units

Notes: You must have taken WH 101 prior to this class unless you are a sophomore transfer student. Freshmen and non-Wharton students are not permitted to enroll. This class may not be audited.

WH 213 Global Modular Course B

WH 297 Wharton Industry Exploration Program
WIEP features short-term courses that focus on various industries and feature visits to businesses, lectures, extracurricular activities, and networking opportunities with alumni. Students must apply online: https://undergrad-inside.wharton.upenn.edu/wiep/
Activity: Seminar
0.5 Course Units

WH 298 Wharton International Program
This short-term international business course gives undergraduate students an amazing global opportunity featuring business-site visits, lectures at partner schools, cultural excursions, and networking opportunities with undergraduate students and business contacts from the destination countries. In addition to learning about another country’s business environment and culture, students earn 0.5 course units that can be used towards business-breadth or elective credits.
Activity: Seminar
0.5 Course Units

WH 299 Honors Thesis
This seminar takes place over two semesters and provides students with the skills to perform their own research under the guidance of a Wharton faculty member. At the conclusion of the fall semester, students will produce a thesis proposal including literature review, significance of the research, methodology, and exploratory data if relevant. Throughout the fall semester faculty guests from a range of disciplines will present on their research in class, highlighting aspects that are relevant to the work students are engaging in at that point. During the second semester, students will collect and analyze data and write up the results in close collaboration with their faculty mentor. At the end of the spring semester, each student will present their research in a video presentation. Throughout the course, students will work individually, in small groups, and under the mentorship of a Wharton faculty member. The goal is to become capable independent researchers who incorporate feedback and critical (self-) analysis to take their research to the next level.
Two terms. student must enter first term.

1.0 Course Unit

YDSH 509 Topics in Yiddish Literature
One version of this seminar considers works by Jewish women who wrote in Yiddish, Hebrew, English, and other languages in the late 19th through the 20th century. The texts, poetry and prose, will include both belles lettres and popular writings, such as journalism, as well as private works (letters and diaries) and devotional works. The course will attempt to define ‘Jewish writing,’ in terms of language and gender, and will consider each writer in the context of the aesthetic, religious, and national ideologies that prevailed in this period. Because students will come with proficiency in various languages, all primary texts and critical and theoretical materials will be taught in English translation. However, those students who can, will work on the original texts and share with the class their expertise to foster a comparative perspective. Because we will be discussing translated works, a secondary focus of the course will, in fact, be on literary translation’s process and products. Another version of this seminar presents Jewish modernism as an international phenomenon of the early 20th century. The course will attempt to define ‘Jewish modernism’ through the prism of poetry, which inevitably, given the historical events in Europe and America during this time, grapples with aesthetic, religious, and national ideologies and methods. The syllabus will focus mainly on poetry written in Yiddish and English, and will also include German, Russian, and Hebrew verse. All poetry, critical, and theoretical materials will be taught in English translation, although students who know the languages will work on the original texts and bring to the table a comparative perspective. Because we will be discussing translated poems, a secondary focus of the course will, in fact, be on literary translation’s process and products. Prerequisite: ‘Jewish Women Writers’ is a graduate seminar also open to advanced undergraduates. Based in the Department of Germanic Languages and Literatures, this course will be cross-listed with Comparative Literature, English, Gender, Sexuality & Women’s Studies, and Jewish Studies. Topics vary annually.
Taught by: Hellerstein
Course not offered every year
Also Offered As: COML 509, GRMN 509, GSWS 509, JWST 509
Activity: Seminar
1.0 Course Unit
Yoruba (YORB)

YORB 170 Elementary Yoruba I
The Elementary Yoruba I course can be taken to fulfill a language requirement, or for linguistic preparation to do research on Nigeria and the diaspora/Africa-related topics. The course emphasizes communicative competence to enable the students to acquire linguistic and extra-linguistic skills in Yoruba. The content of the course is selected from various everyday life situations to enable the students to communicate in predictable common daily settings. Culture, as it relates to language use, is also part of the course content. Students will acquire the speaking, listening, reading, and writing skills at the mid-high novice level, based on the ACTFL scale. The mid-high novice level proficiency skills that the students will acquire constitute threshold capabilities of the second semester range of proficiency to prepare students for Elementary Yoruba II course materials. Prerequisite: Offered through Penn Language Center
For BA Students: Language Course
Taught by: Awoyale
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

YORB 171 Elementary Yoruba II
The main objective of this course is to further sharpen the Yoruba linguistic knowledge that the student acquired in level I. By the end of the course, the student should be able to (1) read, write, and understand simple to moderately complex sentences in Yoruba; and, (2) advance in the knowledge of the Yoruba culture. Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course
Taught by: Awoyale
Course usually offered in spring term
Prerequisite: YORB 170
Activity: Lecture
1.0 Course Unit

YORB 270 Intermediate Yoruba I
Prerequisite: Offered through Penn Language Center
For BA Students: Language Course
Taught by: Awoyale
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

YORB 271 Intermediate Yoruba II
For BA Students: Last Language Course
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

YORB 370 Advanced Yoruba I
Prerequisite: Offered through Penn Language Center
For BA Students: Advanced Language Course
Taught by: Awoyale
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

YORB 371 Advanced Yoruba II
Prerequisite: Offered through Penn Language Center
For BA Students: Advanced Language Course
Taught by: Awoyale
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

YORB 486 Yoruba Language and Culture
Prerequisite: Offered through Penn Language Center
Taught by: Awoyale
Course not offered every year
Prerequisite: YORB 370 AND 371
Activity: Lecture
1.0 Course Unit

YORB 487 Yoruba Language & Culture II
Taught by: Awoyale
One-term course offered either term
Prerequisite: YORB 370 AND 371
Activity: Lecture
1.0 Course Unit

Zulu (ZULU)

ZULU 140 Elementary Zulu I in Residence
This elementary course is for beginners and it requires no prior knowledge of Zulu. The course will expose students to the Zulu language and culture and will be based in the National Standards for Foreign Language Learning. Students will be engaged in communicative language learning through interpersonal, interpretive and presentational modes of language learning techniques. They will gain knowledge and understanding of the Zulu culture. They will use their Zulu language and culture learning experience to connect with other disciplines and further their knowledge of these disciplines through perspectives acquired from their Zulu class. They will also develop insight into the nature of language and culture through comparisons of the Zulu language and culture and their own. Through movies, songs, and other cultural activities online students will acquire the natural use of the language which will enable them to acquire linguistic and cultural skill to become life-long learners who can participate in Zulu communities in the U.S. and overseas. Prerequisite: Objective: Attainment of Level 1 (ceiling in speaking, listening, reading, and writing skills on the interagency Language Roundtable (IRL) scale.
Taught by: Mbeje
One-term course offered either term
Activity: Lecture
0.5 Course Units
ZULU 149 Elementary Zulu: Accelerated
The Accelerated Elementary Zulu course is intensive, and can be taken to fulfill a language requirement, or for linguistic preparation to do research on South Africa, Southern Africa/Africa-related topics. The course emphasizes communicative competence to enable the students to acquire linguistic and extra-linguistic skills in Zulu. The content of the course is selected from various everyday life situations to enable the students to communicate in predictable common daily settings. Culture, as it relates to language use, is also part of the course content. Students will acquire the speaking, listening, reading, and writing skills at the ceiling of low intermediate level and floor of high novice level, based on the ACTFL scale. The low intermediate level proficiency skills that the students will acquire constitute threshold capabilities of the third semester range of proficiency to prepare students for Intermediate Zulu I course materials.
For BA Students: Language Course
Taught by: Mbeje
One-term course offered either term
Activity: Lecture
