The Fall Material Agencies course consists of two half-semester long sections and is supported by two aligned Core Technical Seminars of half-semester length each. Students will typically work in pairs. Section 1: Programmed Matter. Introduces students to a generative approach to digital design and robotic manufacturing with the goal of unifying design and production within one creative process. The studio will commence with students gaining first-hand experience programming and operating Penn’s industrial robots. 3d design models will be developed in parallel to fabrication experiments and digital simulations. The design brief will focus on a small scale design prototype that is explored at a micro-scale of resolution relative to normative architectural practice. Material placement and material affect will be considered intrinsic to design expression and integral to considerations of space, form, structure and production concerns. The brief will focus on a small scale object or architectural part design with ornamental features. The course introduces material dynamics, robot programming, 3d modelling and computer programming within design. Section 2: Manipulative Matter explores both robotic fabrication and the use of sensors and actuators within responsive fabricated objects or architectural elements. Design Prototyping involving manipulation-based Manufacture. Eg. Sheet metal folding. This will complement the first studio by requiring more pre-determined design intent, fabrication rationalization and robot sensor and electrical integration. A final design prototype will demonstrate embodied material intelligence - through an integrative approach to material organization, electronic circuitry, production and design. Electronic wiring and parts will be integrated within larger material prototypes through fabrication methods such as: inlays, additive manufacturing, casting, soldering, painting, laser-cutting, or milling.
Activity: Studio
2.0 Course Units
ARCH 802 Material Agencies: Robotics & Design Lab II
This course will leverage knowledge gained by students in the Fall and set an ambitious aim for the experimentation, development and demonstration of a robotically manufactured design prototype that is intrinsically related to a bespoke production process. The end product will involve a 1:1 part or whole, physically fabricated work that will be accompanied by a live demonstration or video production. During the first half of the semester students will engage in the development of bespoke robotic tooling, sensor and programming capabilities in order to create novel manufacturing processes that explore ideas of intelligent or autonomous manufacturing with an emphasis on responsive or manipulation based processes. Industry processes will be leveraged yet re-cast through creative engagement with manufacturing materials, tools and production operations. Participants will follow a brief that specifies a line of inquiry or scenario, whilst allowing some degree of self-direction. Projects will engage in a speculative and critical approach to architectural design, production and use while leveraging robotics platforms, methods for machine vision, sensing and learning, in addition to an engagement with material dynamics and computer programming within design research. A successful project is expected to: demonstrate a rigorously crafted design artifact; explore novel approaches to design, material fabrication and user engagement, questioning the role and nature of architecture's physical and cultural contribution; and explore novel forms of robotic production and representation. Some proposals will involve live or filmed demonstrator performances. All projects will require a computer simulation or animation that demonstrates a temporal consideration for design, manufacture or use. The course introduces robot tooling, sensor-feedback procedures, 1:1 material prototyping, and building design with tectonic considerations. Examples of potentially relevant industry processes include: sheet-metal bending, incremental metal forming, additive and subtractive manufacturing.
Activity: Studio
2.0 Course Units

ARCH 803 General Overview of Algorithmic Design and Robotic Fabrication
Directly supports ARCH 801 Material Agencies I: Section 1. This seminar will teach students computer and robot programming skills that will be utilized to deliver a complimentary and integral aspect of design-prototyping and fabrication work. Topics will vary in application to suit the studio brief. Participants will be introduced to the Robotics Lab, and will learn to set up ABB Industrial Robot tasks. Design algorithms will be developed that establish a conceptual relationship to the manufacturing process and attempt to leverage it for creative forms of design expression whilst addressing material and production performance constraints. Examples include computer programming that simulates a material placement and robotic manufacturing process such as additive manufacturing, filament winding or weaving, and utilizes these tasks in a generative design methodology, where design character, variation in material organization is evaluated relative to performance criteria such as material quantities, production time, etc. Submissions will be technical in nature and will also be implemented within ARCH 801 prototypes. The course provides a foundation for more specialist technical development in Semester 2.
Activity: Seminar
0.5 Course Units

ARCH 804 Advanced RAS Programming
This course will support ARCH 802 Material Agencies II with a greater level of technical competency and detail. More ambitious functionality will be developed that will enable student’s greater degrees of freedom and creativity in their engagement with design and production processes. While students will not engage in science/engineering development, research and software developed in such disciplines will be applied within design, fabrication and user occupation orientated scenarios. Topics will vary in application to suit studio briefs and shifting capabilities within industry and academia. Examples include mechanical and electrical design for bespoke robot tooling, use of Computer Vision for real-time sensing and live behavior-based adaptation, machine learning in design or fabrication applications, or deeper engagement in robot communication and control (E.g. Linux ROS Robot programming framework).
Activity: Seminar
1.0 Course Unit

ARCH 805 Introduction to Micro-controllers, Sensor and Actuator Systems
Directly supports ARCH 801 Material Agencies I: Section 2. This seminar will teach participants to design and assemble electronic circuits using sensors/actuators and micro-controllers, and to program digital and analogue means of data exchange. Students will develop a closed or open loop reactive system that consists of embedded sensor systems that will operate within the Design Studio project prototype, and utilizes feedback from sensors to drive designed affects (E.g. kinetic, lighting, variations in porosity). The course will consider degrees of control, feedback, energy and force in relation to interactions of matter, space and active bodies (human and non-human). Participants will learn how to design electric circuits, solder and weld these and to integrate circuits with micro-processors, sensors and actuators. Exact equipment and methods will vary over time as these technologies evolve rapidly. At present possible micro-controllers utilized include Arduino, Raspberri Pi, Odroid, Intel Nuc, Atom and others. Sensors such as flex, pressure and proximity sensors will be utilized. Possible forms of actuation include servo and stepper motors, linear actuators, NiTiNol muscle wire, pneumatic actuators. A Programming Language will be utilized to for the writing of simple control algorithms that clarify how input and output data is processed and acted upon, with a particular focus on leveraging physical world actions within a designed control loop where possible.
Activity: Seminar
0.5 Course Units

ARCH 806 Experimental Matter
This course aims to extend knowledge into state of the art materials, material applications and fabrication methods and contribute research and experimental results towards ARCH 802 Material Agencies II course prototypical projects. Operating predominantly through research and controlled physical experiments, students will develop a material strategy for their ARCH 802 Material Agencies II work, investigating scientific research papers, industry publications and precedent projects in order to develop know-how in materials and material applications. A material application method will be proposed and experimented with to evaluate and develop use within a robotic fabrication process. Submissions will incorporate experimental test results, methods and precedent research documentation.
Activity: Seminar
1.0 Course Unit
ARCH 807 RAS Theory
This seminar provides a theoretical context to the program, relating autonomous robotics and fabrication research to architectural discourse, philosophy, science and technology. The course commences with a historical overview of scientific topics including cybernetics, complexity theory, emergence/self-organization, evolution/developmental biology, behaviour-based robotics. The course also critically assesses present and future societal trajectories in relation to technology, exploring socio-political, ethical and philosophical arguments that concern a broader technological shift that has occurred during the last decade which has given rise to our unquestioned reliance on algorithms within our everyday lives (social media, shopping, navigation), and similar impact from Urban OS’s, Industry 4 and driverless car technologies. Readings cover philosophy, computer science, cybernetics, robotics, sociology, psychology, and will be discussed in relation to their consideration within the domain of architectural design and building technology. Examples include: Blaise Aguera y Arcas, Maurice Conti, Norbert Weiner, Kevin Kelly, Ray Kurzweil, Ed Finn, Donna Haraway, Andre Gorz, Bruce Sterling, Daniel Kahneman, Timothy Morton, Levi Bryant. A theoretical written statement related to ARCH 801 Material Agencies I Section 1 or 2 will be produced by participants within this core seminar.
Activity: Seminar
1.0 Course Unit

ARCH 808 Scientific Research and Writing
Following a framing of architectural design-research and theory in Semester 1, this course aims to provide students with knowledge of state of the art robotics and design taking place in the research community and to introduce methods to evaluate and demonstrate academic research that encompasses both creative and technical work. Submissions will include a technical written statement related ARCH 802 Material Agencies II work, which will be produced by participants under direction within this core seminar. This will train students for additional technical career opportunities and raise the level of discourse and prospects for further research from the program and its participants to a level suitable for continuation within PhD studies.
Activity: Seminar
1.0 Course Unit

ARCH 811 Theories of Architecture
The purpose of this course is to provide to students who are embarking on careers in teaching and scholarship in architecture a re-introduction to some of the principal issues and writings of the architectural theory, as they developed historically from antiquity to the present. In addition to introducing recurring themes and primary texts, this course aims to help students develop the practices that are typical of scholarship, the forms and habits of scholarly inquiry. It is a required course for all incoming Ph.D. and M.S. students.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

ARCH 812 Methods In Architectural Research
Methods in Architectural Research is a seminar aimed at first year, second semester PhD and MS students in Architecture who aim to develop their field definition (biblio + statement) and/or research proposal in pursuit of their advanced research degree. The course is also of interest to M.Arch students interested in advanced forms of academic research. The course will cover the full context of research methods in both the humanities and sciences attendant to architecture. Students will be tasked with identifying and naming a field of study, an initial research question to investigate, a methodology they will employ, and a value proposition for their work.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ARCH 813 Qualifying Research
This is an independent study course for first year Ph.D. and M.S. students, supervised by a member of the Graduate Group in Architecture. A course of readings and advisor sessions throughout the semester will result in an independent study paper, which will also be used as the student’s qualifying paper for the Qualifying Examination. This research paper will be prepared as if for scholarly publication.
Course usually offered in spring term
Activity: Independent Study
1.0 Course Unit

ARCH 814 The Concept of an Avant-Garde
No historian of architecture has written as intensely about the contradictions of architecture in late-modern society or reflected as deeply on the resulting problems and tasks of architectural historiography as Manfredo Tafuri (1935-1994). For many, the Italian historian’s dismissal of ‘hopes in design’ under conditions of advanced capitalism produced a disciplinary impasse. This in turn led to call to oublier Tafuri - to move beyond his pessimistic and lacerating stance. The seminar will undertake a close reading of one of Tafuri’s most complexly conceived and richly elaborated books, The Sphere and the Labyrinth: Avant-Gardes and Architecture form Piranesi to the 1970s. Initially published in Italian in 1980 and translated into English in 1987, the book represents the first effort to define and historicize the concept of an avant-garde specifically in architecture. Its content centers on the radical formal and urban experiments of the first three decades of the twentieth century. Yet Tafuri surprisingly begins his account with the eighteenth-century inventions of Piranesi, and he concludes with an examination of the ‘neo-avant-garde’ of his own day. In addition to traversing The Sphere and the Labyrinth chapter by chapter - starting with the extraordinary methodological introduction, ‘The Historical ‘Project’’-we shall also read a number of primary and secondary sources on the historical contexts under discussion and consider a number of important intertexts that shed light on Tafuri’s position. The objectives of the course are at once historical and historiographic: we shall we shall be concerned both with actual events and with how they have been written into history. Finally, we shall reassess the role of an avant-garde in architecture and compare Tafuri’s conception to that advanced in other disciplines. Is the concept of an avant-garde still viable today? Or should it be consigned to the dustbin of twentieth-century ideas? Assignment for first class: read the introduction to The Sphere and the Labyrinth, pp. 1-21, ‘The Historical ‘Project’”. A copy of the book is on reserve at the library. Note: the book is out of print. For future classes please make every effort to purchase a used copy or obtain one via interlibrary loan. Copies of individual chapters will also be made available on our class website.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
ARCH 815 Research Report
The candidate for the M.S. in Architecture degree shall prepare a research report in his or her subject of study. The topic of this report must be approved by an advisor. This report will be developed in the independent study courses, undertaken after the eight units of course work has been completed, normally in the summer semester. The purpose of these courses is to give the student an opportunity to synthesize their previous coursework at Penn. Course enrollment is by permit only. Please contact Sarah Lam (ARCH Dept) at sarahlam@design.upenn.edu.

Course usually offered in fall term
Activity: Independent Study
2.0 Course Units

ARCH 816 Advanced Topics in Architecture Culture from World War II through 2001
This seminar will be taught as an advanced section of ARCH 512. It is primarily for students who are in their first year of the PhD program in Architecture but it is open to other upper-level students with instructor permission. In addition to the weekly discussion-format seminar on Tuesday afternoons (1.5 hours), students are also expected to attend the lectures associated with ARCH 512 on Tuesday mornings (10:30-12). Assigned readings will go beyond those on the 512 syllabus to include more complex and sophisticated source material. The subject of both ARCH 512 and 812 is the evolution of the culture of architecture from World War II to the turn of the twenty-first century. Starting with the period of wartime planning and postwar reconstruction in the 1940s, we will move decade by decade up to the present century, considering the transformations of modernist culture under the impact of social, political, technological, and urban changes. We will address the challenges posed to architecture from inside as well as outside the discipline and from around the world, attending to material and ideological developments and to relations between individual protagonists and larger historical and institutional forces. Among the wide range of issues at stake are the impact of research and technology coming out of the world war; the intensifying critique of interwar functionalism and debates over monumental humanism, regionalism, history, aesthetics; the effects of suburbanization, expanded mobility, changing demographics, and environmental factors; the phenomena of consumer culture and mass media; the impact of the Cold War and decolonization; the emergence of a 'global village' and its intensifying cultural exchanges; the rise of a new architectural avant-garde in the 1960s and the advent of postmodernism; plus more recent ramifications. At the level of theory and methodology, the seminar will be especially concerned with issues of periodization and documentation. We will discuss and debate the question of how 'architecture culture' is produced and reproduced at particular moments in history. Seminar discussions will be focused around specific case studies, some to be determined by the instructor, the rest based on in-depth individual research products to be carried out by the members of the class. Each student will work on his or her case-study project over the course of the semester, leading to an in-class presentation and a term paper of 25 pages.

Course usually offered in spring term
Activity: Seminar

ARCH 851 Field Bibliography
This course is essentially an independent study, undertaken by doctoral students in preparation for the Candidacy Examination. This course should be taken in conjunction with ARCH 852 after all other courses have been completed. Normally a member of the student's Dissertation Committee supervises this course.

Two terms. student may enter either term.
Activity: Independent Study
1.0 Course Unit

ARCH 852 Dissertation Proposal
This course is essentially an independent study, undertaken by doctoral students in order to write the Proposal for the Dissertation. The Proposal is prepared before and defended during the Candidacy Examination.

This course should be taken in conjunction with ARCH 851 after all other courses have been completed. Normally a member of the student's Dissertation Committee supervises this course.

Two terms. student may enter either term.
Activity: Independent Study
1.0 Course Unit

ARCH 995 Dissertation
Two terms. student may enter either term.
Activity: Dissertation
1.0 Course Unit

ARCH 998 Independent Thesis Study
Activity: Independent Study
1.0 Course Unit

ARCH 999 Independent Study
This course enables students to undertake self-directed study on a topic in Architecture, under the supervision of a faculty member. Students are required to make a proposal for the study to the Department Chair, outlining the subject and method of investigation, and confirming the course supervisor at least two weeks prior to the beginning of the semester.

One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Art & Archaeology of Mediterranean World (AAMW)

AAMW 425 Late Antique Arts
What is 'Late Antiquity'? In 312 when Roman emperor Constantine inaugurated a Christian empire, 'Roman' culture was centuries old. The period ca. 200-650 CE saw profound transformations that launched Medieval, Byzantine and Islamic traditions. In this epoch of economic and political upheaval destruction was frequent but partial: Rome long survived, Constantine’s ‘new Rome,’ Constantinople flourished, and around the Empire both proto-global visual culture and local forms prospered. Roman cultural models authorized both innovation and passion for tradition, in forms and styles: we critique art-historical models for Late Antique ‘decline’, analyse habits of material reuse and curation, and look at new Christian and Jewish roles for Roman things as well as polytheist visual survival. Foreign allies and enemies, and new peoples invading an already polyethnic Empire, interacted with Greco-Roman Late Antiquity: we visit arts of Sasanian and Islamic empires east and south, and ‘barbarian’ domains in Africa, Europe, Britain. Media discussed, for sacred, courtly, domestic, funerary, political and civic spaces and structures include not just ‘monumental’ painting, mosaic, sculpture, but also objects of silver, ceramic, ivory, figural textile, glass; painted books; jewelry; mass-media artifacts like coins and pilgrimage tokens. We also study Late Antique texts on art, objects, space and viewership.
Taught by: Ann Kuttner
Course not offered every year
Also Offered As: ARTH 425, CLST 425
Activity: Lecture
1.0 Course Unit

AAMW 427 Roman Sculpture
Survey of the Republican origins and Imperial development of Roman sculpture - free-standing, relief, and architectural - from ca. 150 BC to 350 AD. We concentrate on sculpture in the capital city and on court and state arts, emphasizing commemorative public sculpture and Roman habits of decorative display; genres examined include relief, portraits, sarcophagi, luxury and minor arts (gems, metalwork, coinage). We evaluate the choice and evolution of styles with reference to the functions of sculptural representation in Roman culture and society.
Taught by: Kuttner, Rose
Course not offered every year
Also Offered As: ARTH 427, CLST 427
Activity: Lecture
1.0 Course Unit

AAMW 428 Hellenistic Art and Spectacle
Hellenistic usually names art in the age of Mediterranean culture from the 4th century BCE and the rise of Alexander the Great’s Macedon, and the Greco-Macedonian conquest of the Persian Empire, to Cleopatra of Egypt’s defeat by Rome at the end of the Republic. Our course looks also at the age of Augustus and his successors, 1st century CE. While Greek and Macedonian practice in city-states and kingdoms is our launching point, this course also looks at international culture and cultural interaction among peoples from North Africa and Etrusco-Roman Italy, Egypt, (Etrusco) Anatolia, the Mideast and Central Asia. We probe art, artifacts, and visual display from a range of settings, from sanctuary to house, palace and parade, and in all media, from marble monuments to pottery and jewelry. Our archaeology of Hellenistic visual culture also looks at the rich body of Hellenistic and Roman texts of art history, art criticism, and the description of objects and image, to better understand the Hellenistic maker, patron, and viewer. No prerequisites. It is desirable for undergraduates to have experience of research. Of interest to students in AAMW, ARTH, ANCH, CLST, VLST, NELC, RELS and ANTH.
Taught by: Kuttner
Course not offered every year
Also Offered As: ARTH 428
Activity: Lecture
1.0 Course Unit

AAMW 435 Medieval Islamic Art & Architecture
An introduction to the major architectural monuments and trends, as well as to the best-known objects of the medieval (seventh-to fourteenth-century) Islamic world. Attention is paid to such themes as the continuity of late antique themes, architecture as symbol of community and power, the importance of textiles and primacy of writing. Suitable for students of literature, history, anthropology as well as art history.
Taught by: Holod
Course not offered every year
Also Offered As: ARTH 435, NELC 489
Activity: Lecture
1.0 Course Unit

AAMW 509 Curatorial Seminar
Curatorial seminars expose students to the complexity of studying and working with objects in the context of public display. With the guidance of faculty and museum professionals, students learn what it means to curate an exhibition, create catalogues and gallery text, and/or develop programming for exhibitions of art and visual/material culture. Students in this curatorial seminar will participate in planning the exhibition of Japanese illustrated books from the Tress collection to be held in the Kislak Center in spring 2021. Japanese illustrated books are celebrated for their high technical and aesthetic achievements and the collection spans all genres and formats over more than three hundred years. In this course, students will be thinking through how we can tell the story of the illustrated book in Japan in the space of the exhibition. We will think through how these materials related to their broad and largely literate audiences, and we’ll pay close attention to artists, genres, technologies, and subjects. Students will conduct research, prepare didactic labels, write entries for the catalogue, and develop the website and symposium as part of their curatorial practice. There will be extensive hands-on engagement with examples from the Kislak collections as well as practical training in papermaking, materials, and binding. By permission only.
Course not offered every year
Also Offered As: ARTH 501, NELC 501
Activity: Seminar
1.0 Course Unit
AAMW 512 Petrography of Cultural Materials
Introduction to thin-section petrography of stone and ceramic archaeological materials. Using polarized light microscopy, the first half of this course will cover the basics of mineralogy and the petrography of igneous, metamorphic and sedimentary rocks. The second half will focus on the petrographic description of ceramic materials, mainly pottery, with emphasis on the interpretation of provenance and technology. As part of this course, students will characterize and analyze archaeological samples from various collections. Prior knowledge of geology is not required.
Course not offered every year
Also Offered As: ANTH 514, CLST 512
Activity: Seminar
1.0 Course Unit

AAMW 514 Kinship and Connectivity in the Roman World
An individual’s life course is often reflected, enhanced, and defined by their relations to other individuals. This course will investigate the concept of kinship in the Roman world through textual, visual, and archaeological evidence. We will explore relationships at all levels of society from the imperial family to the slaves and freedmen who were part of larger households, in order to understand how different relationships shaped and structured interactions in Roman society. Together, we will explore the following questions: how were relationships and bonds represented in the ancient world? What structures were in place for families to perpetuate themselves through biological or adoptive means? How could non-Roman citizens create family connections through formal and informal channels? How could relationships be celebrated in life and commemorated in death? We will use written evidence from ancient historians, visual evidence like the Altar of Peace, and archaeological evidence from cemeteries to examine how Roman notions of kinship shaped life and death in different social milieus.
Taught by: Brent
Also Offered As: ANCH 315, ANTH 315, CLST 315, CLST 515
Activity: Seminar
1.0 Course Unit

AAMW 519 Ancient Greek Colonies
This seminar examines the archaeology of Greek colonization from the Late Bronze Age to ca. 600 B.C. These colonies were highly diverse in their motivations, physical settings, and political and social structures, as well as their relationships with mother cities and the new worlds they inhabited. Emphasis is placed on the colonial experience as a cross-cultural and negotiated process. In addition to archaeological and epigraphic evidence, literary and historical traditions are examined. Colonies from the southern Balkan peninsula, Black Sea, Ionia, northern Africa, and Magna Graecia will be the focus of reading, reports, and discussion.
Taught by: Tartaron
Course not offered every year
Also Offered As: CLST 532
Activity: Seminar
1.0 Course Unit

AAMW 520 Topics in Aegean Bronze Age
Topic varies from semester to semester. This Fall 2019 seminar will discuss The Architecture of Akrotiri, Thera. Around 3,500 years ago a culture thrived on the small island of Thera in the Cycladic islands of Greece. Excavations have revealed a portion of a sophisticated town with multi-storied buildings decorated with elaborate fresco programs and equipped with all the necessities to support a cosmopolitan community with trade contacts reaching throughout the Mediterranean, Egypt, and the Ancient Near East. Due to the Bronze Age eruption of the volcano at the center of the island, Akrotiri is known as the best-preserved Late Cycladic site in the Aegean. In this class, we will examine the architecture and frescoes, or wall paintings, of Akrotiri and explore what they reveal to us about this unique group of people. Students will write and present two research papers to the class.
Course not offered every year
Also Offered As: ARTH 520
Activity: Seminar
1.0 Course Unit

AAMW 522 Topics in Ancient Iranian Art
Topic varies. Spring 2018: This seminar will focus on the environmental, archaeological and textual record for settlement in the Persian/Arabian Gulf region from the Neolithic to the pre-Islamic Late Antique. Emphasis will be on the settlement history and material culture. Special attention will be paid to the close interaction of the local communities on the Arabian side of the Gulf with those on the Iranian/Indus valley side. The patterns of sea faring trade and interaction from Mesopotamia, Iran, Indus Valley and beyond will be considered. It is possible that this class will take a site trip to the UAE during the spring break, if the logistics can be arranged. Instructors: Professors Holly Pittman (Penn), Peter Magee (Bryn Mawr College).
Taught by: Pittman
Course not offered every year
Also Offered As: ARTH 522
Activity: Seminar
1.0 Course Unit

AAMW 523 Narrative in Ancient Art
Art history, and its cousins in religious, social, political and literary studies, have long been fascinated with the question of narrative: how do images engage time, tell stories? These are fundamental questions for ancient Near Eastern, Egyptian and Mediterranean art history and archaeology, whose rich corpus of narrative images is rarely considered in the context of ‘Western’ art. Relations between words and things, texts and images, were as fundamental to the ancient cultures we examine as they are to modern studies. As we weigh classic modern descriptions of narrative and narratology, we will bring to bear recent debates about how (ancient) images, things, monuments, and designed spaces engage with time, space, and event, and interact with cultural memory. We will ask ‘who is the story for, and why?’ for public and private narratives ranging from political histories to mythological encounters. Our case studies will be drawn from the instructors’ expertise in Mesopotamian visual culture, and in the visual cultures of the larger Mediterranean world from early Greek antiquity to the Hellenistic, Roman, and Late Antique periods. One central and comparative question, for instance, is the nature of recording history in pictures and texts in the imperial projects of Assyria, Achaemenid Persia, the Hellenistic kingdoms, and Rome.
Taught by: Kuttner/Pittman
Also Offered As: ARTH 523, CLST 523, NELC 523
Activity: Seminar
1.0 Course Unit
AAMW 524 Penn Museum Curatorial Seminar: Reconfiguring the Classical World Galleries
The Greek galleries in the Penn Museum were opened in 1994, and the Etruscan and Roman galleries in 2003. The world was very different then, and many of the themes used to frame the artifacts in the galleries are not especially relevant to contemporary students, scholars, and visitors. In this course we will completely reorganize and reinstall the galleries digitally, creating a series of websites that will highlight the new layout and themes. We will work extensively with the Greek Etruscan, and Roman artifacts themselves to reconfigure the galleries, which will highlight the connections between antiquity and the contemporary world, focusing on themes such as armed conflict, trauma, migration, xenophobia, and wealth and poverty. Taught by: Rose
Also Offered As: CLST 524
Activity: Seminar
1.0 Course Unit

AAMW 525 Topics in Greek and Roman Art
Topics vary from semester to semester. For the Spring 2020 semester, the topic will be Violence and Ancient Mediterranean Art. The Greek and Roman world was fascinated by representing humans and beasts enduring physical and psychological pain, and images of violence inflicted by mortal and supernatural beings alike. These images occur in art of all kinds, consumed both privately and publicly, emerging in the domestic, religious, military and political sphere. They had a range of aims, from affording emotional catharsis, building political cohesion or enforcing social norms, to generating religious awe or confidence in empire – and giving entertainment. As we explore this corpus, we can ask: what might be the roots of such preoccupation with the art of violence and pain in the ‘Classical tradition’ and its post-antique legacy? Many modern cultures exhibit similar fascination: how far can modern reactions to and theories about such images be guides to reconstructing ancient viewership? How can ancient texts and histories help us in this interdisciplinary project? Taught by: Kuttner
Course not offered every year
Also Offered As: ARTH 525, CLST 521
Activity: Seminar
1.0 Course Unit

AAMW 526 Material & Methods in Mediterranean Archaeology
This course is intended to familiarize new graduate students with the collections of the University of Pennsylvania Museum of Archaeology and Anthropology and the wide range of scholarly interests and approaches used by faculty at Penn and neighboring institutions, as well as to provide an introduction to archaeological methods and theory in a Mediterranean context. Each week, invited lecturers will address the class on different aspects of archaeological methodology in their own research, emphasizing specific themes that will be highlighted in readings and subsequent discussion. The course is divided into five sections: Introduction to the Mediterranean Section; Collections; Method and Theory in Mediterranean Archaeology; Museum Work; and Ethics. The course is designed for new AAMW graduate students, though other graduate students or advanced undergraduate students may participate with the permission of the instructor. Taught by: Tartaron
Course usually offered in fall term
Also Offered As: CLST 526
Activity: Seminar
1.0 Course Unit

AAMW 529 Topics in Roman Architecture
Topic varies. Spring 2018: This seminar offers a critical assessment of digital Roman architecture studies. What has been accomplished and learned over the last generation since the Digital Turn, and where is the field of Roman architecture being taken? Points of focus include several landmark case studies, such as digital reconstructions of the city of ancient Rome, and threatened cultural heritage sites in Syria. The course will involve readings of significant texts, in class discussions and presentations lead by the seminar’s participants, and testing and critiquing of a limited set of digital tools. Taught by: Stinson
Course not offered every year
Also Offered As: ARTH 529
Activity: Seminar
1.0 Course Unit

AAMW 530 Topics in Byzantine Art
Topic varies from semester to semester. For the Fall 2020 semester, the topic will be: The Icon. This seminar explores the Byzantine icon and its legacy. Spanning nearly two millennia, from the emergence of Christian sacred portraiture to the reception of icon painting by the early twentieth-century Russian avant-garde, the seminar will introduce you to the history, historiography, and theories of the icon. While our focus will be on Byzantium and the wider world of Orthodox Christianity, especially in the Slavic Balkans and Eastern Europe, the seminar will also engage with fundamental questions concerning the nature, status, and agency of images across cultures. Topics to be addressed include iconoclasm and the problem of idolatry; the social and ritual lives of icons; authorship, originality, and replication; viewer response and the cultural construction of vision; the frontier between art and the sacred image; and the afterlife of the icon in modernity. Taught by: Drpic
Course not offered every year
Also Offered As: ARTH 532
Activity: Seminar
1.0 Course Unit

AAMW 533 Topography and Monuments of Ancient Rome
An intensive exploration of Rome’s urban topography during the Republican and Imperial periods (6th c. B.C. through 4th c. A.D.) Using archaeological and textual sources, including the Etruscan and Roman collections of the Penn Museum, the goal will be to reconstruct the built environment and decoration of Rome over the course of a millennium. Of interest to students of classics, archaeology, art history, and architecture. Some familiarity with Rome will be a plus, but is not required. Taught by: Rose
Course not offered every year
Also Offered As: CLST 328, CLST 533
Activity: Seminar
1.0 Course Unit
AAMW 534 Problems in Greek and Roman History: Archaic and Classical
This seminar is designed to introduce students to the major issues and problems in the early history of Ancient Greece, from approximately 776 BC until the reign of Alexander the Great nearly four hundred and fifty years later. A number of these issues have been the subject of academic investigation for decades: the historicity of Homeric society, the origins of democracy, the reforms of Kleisthenes, the population of Athens, for example. The investigation of many of these problems, however, has received fresh impetus from newer approaches: demographic studies of the Aegean islands, the dating of 5th century inscriptions, the study of Solons poetry have all yielded new insights and transformed our understanding of Greek culture and history. In this seminar we will explore many older questions from newer perspectives, with attention to such recent topics as gender, ethnicity and subaltern studies. The result is a view of Greece that is both more familiar and yet equally more alien.
Taught by: McInerney
Course not offered every year
Also Offered As: ANCH 535
Activity: Seminar
1.0 Course Unit

AAMW 536 Archaeology of Anatolia
This class is devoted to the archaeology and history of Anatolia (ancient Turkey) from the beginning of the Bronze Age (3000 BC) to the end of the Byzantine period (1453 AD). Emphasis will be placed on the great empires in Anatolia (Hittite, Phrygian, Lydian, Urartian, Persian, Roman, and Byzantine), and on the great cities (Troy, Sardis, Ephesus, Constantinople). The course is intended to complement the major exhibit on Gordion, the Phrygians, and Anatolian archaeology that will open at the Penn Museum in February of 2016 and run for 10 months.
Taught by: Brian Rose
Course not offered every year
Also Offered As: ARTH 421, CLST 336, NELC 121, NELC 521
Activity: Lecture
1.0 Course Unit

AAMW 539 Archaeobotany Seminar
In this course we will approach the relationship between plants and people from archaeological and anthropological perspectives in order to investigate diverse plant consumption, use, and management strategies. Topics will include: archaeological formation processes, archaeobotanical sampling and recovery, lab sorting and identification, quantification methods, and archaeobotany as a means of preserving cultural heritage. Students will learn both field procedures and laboratory methods of archaeobotany through a series of hands-on activities and lab-based experiments. The final research project will involve an original in-depth analysis and interpretation of archaeobotanical specimens. By the end of the course, students will feel comfortable reading and evaluating archaeobotanical literature and will have a solid understanding of how archaeobotanists interpret human activities of the past.
Taught by: Chantel White
Course not offered every year
Also Offered As: ANTH 533, CLST 543, NELC 585
Activity: Seminar
1.0 Course Unit

AAMW 540 Topics in Medieval Art
Topic varies from semester to semester. For the Fall 2020 semester, the topic will be Migrating Materiality: Ivory Carving Around the Mediterranean. The craft of ivory carving around the Mediterranean is contingent upon the availability of imported elephant tusks, from either South East Asia or, more frequently, from the African continent. The shifting winds of trade routes offer an interpretive paradigm with which to analyze ivory objects from a variety of different cultural groups: the lack or abundance of ivory and the resulting desire for or surfeit of the material shapes its meaning and use around the Mediterranean basin. The study of ivory objects as they migrate around the Mediterranean allows us to investigate the rich intercultural interactions between Eastern and Western Christians, and both of these with the Islamic world. This course focuses on an object-oriented knowledge of ivory artifacts, with a strong emphasis on the collections at the Penn Museum, the Philadelphia Museum of Art, and other area collections.
Taught by: Guerin
Course not offered every year
Also Offered As: AFRC 538, ARTH 540
Activity: Seminar
1.0 Course Unit

AAMW 542 Ancient Seafaring
This course explores ships, seafaring, and seafarers of the ancient Greek World from the Bronze Age (Minoans and Mycenaeans) to the Age of Alexander (Hellenistic period). Sources include shipwrecks and related artifacts, artistic representations, and ancient documents and literature. The emphasis is not so much on the technical aspects of shipbuilding and navigation as on the ways that seafaring shaped Greek history and connected the Greeks to a wider world through trade, warfare, colonization, and adventure.
Taught by: Tartaron
Course not offered every year
Also Offered As: CLST 340
Activity: Lecture
1.0 Course Unit

AAMW 546 Museum Internship
The Museum Internship in the spring consists of a research project with Penn Museum collections based on a proposal designed and approved during the fall AAMW Proseminar (AAMW 526). It is offered to, and is a requirement for, first-year AAMW graduate students only.
Course usually offered in spring term
Prerequisite: AAMW 526
Activity: Independent Study
1.0 Course Unit
AAMW 550 Archaeologies of Subalternity
This course addresses the various areas and approaches to ‘otherness’ in ancient Mediterranean archaeology, and the power dynamics of oppression. We'll not only examine disempowerment around cultural identity, class, gender and sexuality, and race/ethnicity, but we'll spend equal time pondering how those subjects have been studied - or ignored - by classical archaeologists. The power relationships both inherent in the subjugation of various kinds of people in the ancient world, and in the academic discourses around them, are the themes of the course. While this course will be focused on the Bronze Age through late antique Mediterranean, those with other period/interests are most welcome. Students will be asked to bring their own interests to the course, which help shape the course. Upper-level courses in archaeology, anthropology, or ancient history are recommended prior to enrollment.
Taught by: Bowes  
Course not offered every year  
Also Offered As: CLST 305, CLST 605  
Activity: Seminar  
1.0 Course Unit

AAMW 552 Archaeometallurgy Seminar
This course is designed to provide an in-depth analysis of archaeological metals. Topics to be discussed include: exploitation of ore and its transformation to metal in ancient times, distribution of metal as a raw materials, provenance studies, development and organization of early metallurgy, and interdisciplinary investigations of metals and related artifacts like slag and crucibles. Students will become familiar with the full spectrum of analytical procedures, ranging from microscopy for materials characterization to mass spectrometry for geochemical fingerprinting, and will work on individual research projects analyzing archaeological objects following the analytical methodology of archaeometallurgy.
Taught by: Moritz Jansen  
Also Offered As: ANTH 552, CLST 552, NELC 587  
Activity: Seminar  
1.0 Course Unit

AAMW 557 Seminar in Archaeological Theory and Method: Archaeology of Landscapes
Advanced seminar for potential professional archaeologists. Course will examine critically main past and present theoretical issues in archaeological research and interpretation, and consider various methodologies utilized towards these interpretive ends.
Taught by: Erickson  
Course not offered every year  
Also Offered As: ANTH 557, LALS 557  
Prerequisite: ANTH 241 OR ANTH 600  
Activity: Seminar  
1.0 Course Unit

AAMW 559 Myth Through Time and In Time
The textual and physical remains of Greek and Roman culture and belief as ‘myth’ entranced the post-antique European world and its neighbors. Makers, patrons and viewers manipulated those survivals to challenge and speak to a contemporary world. This course focuses on how and why artists and their patrons engaged the mythic and examines the various areas of political and religious life that sought animation through an evocation of narratives from the past. Readings and case studies will engage with very late antique, medieval, and early modern art, turning to the modern and contemporary as well. Moving to the modern lets us examine, among other things, how artists address the exclusionary histories of the past, to enable critiques of myths of supremacy by one gender, race, or culture over others.
Taught by: Kuttner, Brisman  
Also Offered As: ARTH 559, CLST 559, COML 559, GRMN 559  
Activity: Seminar  
1.0 Course Unit

AAMW 562 Intro to Digital Archaeology
Digital methodologies are an integral part of contemporary archaeological practice, and demand that archaeologists to hold a new set of skills and knowledge fundamentals. This course will expose students to a broad range of digital approaches through a review of relevant literature and through applied learning opportunities centered on a course project. The technological underpinnings, best practices, and influences on archaeological practice and theory will be discussed for each method covered in the course. Applied learning opportunities in digital data collection methods will include: aerial and satellite remote sensing, global navigation satellite system (GNSS) survey, 3D scanning methods, close-range photogrammetry, and near-surface geophysical prospection. Students will also have opportunities for practical experience in digital database design and management, geographic information science (GIS) and 3D modeling and visualization. Students will communicate the results of the course project in a digital story that will be presented at the end of the term. Prior archaeological classwork and/or experience preferred.
Taught by: Herrmann  
Also Offered As: ANTH 362, ANTH 562, CLST 362, CLST 562, NELC 362  
Activity: Lecture  
1.0 Course Unit
AAMW 572 Geophysical Prospection for Archaeology
Near-surface geophysical prospection methods are now widely used in archaeology as they allow archaeologists to rapidly map broad areas, minimize or avoid destructive excavation, and perceive physical dimensions of archaeological features that are outside of the range of human perception. This course will cover the theory of geophysical sensors commonly used in archaeological investigations and the methods for collecting, processing, and interpreting geophysical data from archaeological contexts. We will review the physical properties of common archaeological and paleoenvironmental targets, the processes that led to their deposition and formation, and how human activity is reflected in anomalies recorded through geophysical survey through lectures, readings, and discussion. Students will gain experience collecting data in the field with various sensors at archaeological sites in the region. A large proportion of the course will be computer-based as students work with data from geophysical sensors, focusing on the fundamentals of data processing, data fusion, and interpretation. Some familiarity with GIS is recommended.
Taught by: Herrmann
Course offered spring; even-numbered years
Also Offered As: ANTH 572, CLST 572, NELC 572
Activity: Laboratory
1.0 Course Unit

AAMW 604 Troy and Homer
An interdisciplinary seminar focusing on the city of Troy both as an archaeological site and as the setting of the legendary Trojan War. We will consider Homer’s Iliad (with selected sections read in Greek) together with the topography and archaeology of the site of Troy in order to address a series of interrelated questions: What are the points of continuity and discontinuity between the stories told by the literary tradition and the material record? How do both types of evidence contribute to our understanding of political relations and cultural interactions between Greece and Anatolia in the Bronze Age? How do Hittite sources bear on our reconstruction of the events behind the Troy legend? How have the site and the poem contributed to each other’s interpretation in the context of scholarly discovery and debate? We will give some attention to modern receptions of the Troy legend that deliberately combine material and textual elements, such as Cy Twombly’s ‘Fifty Days at Iliam’ and Alice Oswald’s ‘Memorial: An Excavation of Homer’s Iliad.’ The seminar will include a visit to the site of Troy during the Spring Break.
Taught by: Murnaghan
Also Offered As: CLST 604, GREK 604
Activity: Seminar
1.0 Course Unit

AAMW 606 Pastoral Nomadism in the Past and Present
Pastoral nomadism is a ‘third way’ of human subsistence separate from farming and foraging. It is a sustainable human adaptation to grassland and arid environments practiced through particular technologies and domesticated animals. This course begins by examining the human ecology and social organization that emerge from mobile ways of life, drawing on modern, ethnographic, and archaeological examples of pastoral nomadic groups in the Middle East and Central Asia. Academic readings and ethnographic films will form the basis of discussions about several larger themes, including: the origins of pastoral nomadism and horse riding; the development of dairy-based foods and human adaptations allowing the digestion of lactose; the historical relationship between mobile groups of pastoralists and territorial states; popular perceptions of nomads in various forms of historical and modern media; and the influence of ideas about nomads on modern senses of heritage and nationalism in the Middle East and Central Asia.
Taught by: Hammer
Also Offered As: ANTH 108, NELC 106, NELC 606
Activity: Seminar
1.0 Course Unit

AAMW 611 Greek Epigraphy
An introduction to the principles and practices of Greek Epigraphy. Study of selected Greek inscriptions.
Taught by: McInerney
Course not offered every year
Also Offered As: ANCH 611, CLST 611, GREK 611
Activity: Seminar
1.0 Course Unit

AAMW 613 Landscapes and Seascapes of the Ancient Mediterranean
The Mediterranean environment is both diverse and unique, and nurtured numerous complex societies along its shores in antiquity. This seminar offers a primer on theoretical and methodological approaches to studying landscapes and seascapes of the Mediterranean from the Bronze Age to the early modern era, at scales from local to international and on land and underwater. Concepts from processual, post-processual, and current archaeologies will be considered, and field techniques including excavation and surface survey, remote sensing and geophysics, GIS modeling, and ethnography/ethnoarchaeology are examined. Course content and discussion focus on case studies that illustrate how these tools are used to reconstruct the appearance and resources of the natural environment; overland and maritime routes; settlement location, size, function, and demography; social and economic networks; and agricultural, pastoral, and nomadic lifeways. Seminar participants will develop case studies of their own geographical and chronological interest.
Taught by: Tartaron
Course not offered every year
Also Offered As: CLST 313, CLST 613
Activity: Seminar
1.0 Course Unit

AAMW 618 Art and Architecture in Ancient Egypt
This course will be an introduction to the art, architecture and minor arts that were produced during the three thousand years of ancient Egyptian history. This material will be presented in its cultural and historical contexts through illustrated lectures and will include visits to the collection of the University Museum.
Taught by: Silverman
Also Offered As: ANCH 068, ARTH 218, ARTH 618, NELC 068, NELC 668
Activity: Lecture
1.0 Course Unit
AAMW 622 Art of Ancient Iran
This course offers a survey of ancient Iranian art and culture from the painted pottery cultures of the Neolithic era to the monuments of the Persian Empire. Particular emphasis is placed on the Early Bronze Age. Taught by: Pittman
Course not offered every year
Also Offered As: ARTH 222, ARTH 622, NELC 222, NELC 622
Activity: Lecture
1.0 Course Unit

AAMW 624 Art of Mesopotamia
The class presents a survey of the art and archaeology of Mesopotamian beginning with the appearance of the first cities and ending with the fall of the Assyrian Empire in the seventh century BCE. It presents the major artistic monuments of Mesopotamian culture, embedding them in their historical context. Focus is placed in particular on the interactions with surrounding cultures of Iran, Central Asia, the Caucasus, the Persian Gulf and Anatolia in order to decenter the discourse from a strictly Mesopotamian perspective. The format is lecture; assignments involve reading response papers; there are in class midterm and final exams. Taught by: Pittman
Course not offered every year
Also Offered As: ARTH 224, ARTH 624, NELC 224, NELC 624
Activity: Lecture
1.0 Course Unit

AAMW 625 Greek Art and Artifact
This course surveys Greek art and artifacts from Sicily to the Black Sea from the 10th century BCE to the 2nd century BCE, including the age of Alexander and the Hellenistic Kingdoms. Public sculpture and painting on and around grand buildings and gardens, domestic luxury arts of jewelry, cups and vases, mosaic floors, and cult artefacts are discussed. Also considered are the ways in which heroic epic, religious and political themes are used to engaged viewers' emotions and served both domestic and the public aims. We discuss the relationships of images and things to space and structure, along with ideas of invention and progress, and the role of monuments, makers and patrons in Greek society. Taught by: Kuttner
Course not offered every year
Also Offered As: ARTH 225, ARTH 625, CLST 220
Activity: Lecture
1.0 Course Unit

AAMW 626 Hellenistic and Roman Art and Artifacts
This course surveys the political, religious and domestic arts, patronage and display in Rome's Mediterranean, from the 2nd c. BCE to Constantine's 4th-c. Christianized empire. Our subjects are images and decorated objects in their cultural, political and socio-economic contexts (painting, mosaic, sculpture, luxury and mass-produced arts in many media). We start with the Hellenistic cosmopolitan culture of the Greek kingdoms and their neighbors, and late Etruscan and Republican Italy; next we map Imperial Roman art as developed around the capital city Rome, as well as in the provinces of the vast empire. Taught by: Kuttner
Course not offered every year
Also Offered As: ARTH 226, ARTH 626, CLST 221
Activity: Lecture
1.0 Course Unit

AAMW 628 Greek Architecture and Urbanism
Introduction to the art of building and city planning in the ancient Greek world, 7th-1st c. BC. Emphasis on concepts of organizing space, on issues of structure, materials, decoration, proportion, and the Mycenean and eastern heritage as well as on theory and practice of urbanism as reflected in ancient cities (Athens, Pergamon, Alexandria) and writings (Plato, Aristototle, and others). Excursions to the Penn Museum and Philadelphia. No prerequisites. Taught by: Zarmakoupi
Course not offered every year
Also Offered As: ARTH 228, ARTH 628, CLST 245
Activity: Lecture
1.0 Course Unit

AAMW 630 Etruscan Art & Archaeology in the Penn Museum
The Etruscan, who spoke a language unlike any others known, were cast by their Greek and Roman rivals as outsiders and enemies: pirates, lovers of luxury, loose women. Today we must rely on the archaeological evidence of painted tombs, decorated Tuscan temples and massive engineering works to correct the picture. The course will survey a millennium (1st millennium BCE) of Etruscan culture through archaeological sites, works of art and everyday material culture, especially illustrated with objects in the collection of the Penn Museum. An additional insight into Italic culture comes from tomb groups excavated for the Museum at the Faliscan settlement of Narce. Students will gain familiarity with the societies of pre-Roman Italy through close study of their vases, jewels, arms, armor, textiles and tools, and even their very bones, and discover a surprising amount of Etruscan heritage surviving today. Taught by: Turfa
Course not offered every year
Also Offered As: CLST 335, CLST 635
Activity: Lecture
1.0 Course Unit

AAMW 632 Byzantine Art and Architecture
This course offers a wide-ranging introduction to the art, architecture, and material culture of Byzantium—a Christian, predominantly Greek-speaking civilization that flourished in the Eastern Mediterranean for over a thousand years. Positioned between the Muslim East and the Latin West, Antiquity and the Early Modern era, Byzantium nurtured a vibrant and highly sophisticated artistic culture. With emphasis placed upon paradigmatic objects and monuments, we will examine an array of artistic media, from mosaic and panel painting to metalwork, ivory carving, book illumination, and embroidery. We will consider the making, consumption, and reception of Byzantine art in a variety of contexts: political, devotional, ritual, and domestic. Topics include the idea of empire and its visual articulation; court culture; the veneration of images and relics; patronage, piety, and self-representation; authorship and artistic agency; materiality and the sensory experience of art; the reception of the pagan Greco-Roman past, and the changing nature of Byzantium's interactions with neighboring cultures. Taught by: Drpic
Course not offered every year
Also Offered As: ARTH 232, ARTH 632
Activity: Lecture
1.0 Course Unit
AAMW 633 Eastern Medieval Architecture
This lecture course examines major architectural developments in the eastern Mediterranean between the 4th and 14th centuries CE. The focus is on the Byzantine Empire, with its capital at Constantinople. Lectures also devoted to related developments in the Caucasus (Armenia and Georgia), early Russia, the Balkans (Bulgaria and Serbia), Sicily and under the Normans, the Crusader states. Parallel developments in early Islamic architecture are used for comparative purposes. The course examines evidence for religious and secular buildings, as well as urbanism and settlement patterns.
Taught by: Ousterhout
Course not offered every year
Also Offered As: ARTH 233, ARTH 633
Activity: Lecture
1.0 Course Unit

AAMW 635 Introduction to Visual Culture of the Islamic World
A one-semester survey of Islamic art and architecture which examines visual culture as it functions within the larger sphere of Islamic culture in general. Particular attention will be given to relationships between visual culture and literature, using specific case studies, sites or objects which may be related to various branches of Islamic literature, including historical, didactic, philosophical writings, poetry and religious texts. All primary sources are available in English translation.
Course not offered every year
Also Offered As: ARTH 235, ARTH 635, NELC 285, NELC 685, VLST 235
Activity: Lecture
1.0 Course Unit

AAMW 640 Medieval Art
An introductory survey, this course investigates painting, sculpture, and the 'minor arts' of the Middle Ages. Students will become familiar with selected major monuments of the Late Antique, Byzantine, Carolingian, Romanesque, and Gothic periods, as well as primary textual sources. Analysis of works emphasizes the cultural context, the thematic content, and the function of objects. Discussions focus especially on several key themes: the aesthetic status of art and the theological role of images; the revival of classical models and visual modes; social rituals such as pilgrimage and crusading; the cult of the Virgin and the status of women in art; and, more generally, the ideology of visual culture across the political and urban landscapes.
Course not offered every year
Also Offered As: ARTH 240, ARTH 640
Activity: Lecture
1.0 Course Unit

AAMW 646 GIS for the Digital Humanities and Social Sciences
This course introduces students to theory and methodology of the geospatial humanities and social sciences, understood broadly as the application of Geographical Information Systems (GIS) and spatial analysis techniques to the study of social and cultural patterns in the past and present. By engaging with spatial theory, spatial analysis case studies, and technical methodologies, students will develop an understanding of the questions driving, and tools available for, humanistic and social science research projects that explore change over space and time. We will use ESRI's ArcGIS software to visualize, analyze, and integrate historical, anthropological, and environmental data. Techniques will be introduced through the discussion of case studies and through demonstration of software skills. During supervised laboratory sessions, the various techniques and analyses covered will be applied to sample data and also to data from a region/topic chosen by the student.
Taught by: Hammer
Course usually offered in fall term
Also Offered As: ANTH 346, NELC 346, NELC 646
Activity: Lecture
1.0 Course Unit

AAMW 647 Archaeological Fieldwork in Southern Iraq
After several decades of closure to foreign researchers, the heartland of the world's earliest cities (southern Iraq) has reopened for archaeological expeditions. This course is a seminar for graduate students who will conduct fieldwork in Spring 2019 at two major Mesopotamian cities, Ur (Tell al-Muqayyar) and Lagash (Tell al-Hiba), as part of Penn-led expeditions. This course should align with the student's interests and will further the research program of the archaeological teams at Ur and Lagash.
Taught by: Hammer
Course offered spring; odd-numbered years
Also Offered As: NELC 645
Activity: Seminar
1.0 Course Unit

AAMW 698 Prospectus Workshop
Designed to prepare graduates in any aspect of study in the ancient world to prepare for the dissertation prospectus. Course will be centered around individual presentations and group critique of prospectus' in process, as well the fundamentals of large-project research design and presentation.
Taught by: Wilker
Course usually offered in spring term
Also Offered As: CLST 698
Activity: Seminar
1.0 Course Unit
Notes: Graduate students in Classical Studies, Ancient History, and AAMW
AAMW 700 Geoarchaeology
In this course, students will learn the basic concepts of earth systems and explore the ways that archaeologists use various environmental sciences (e.g., geomorphology, limnology, palynology, and dendroclimatology) and paleoecological modeling in their research. The course will include lectures and laboratory activities on the basics of geology, including surficial geology, rock and mineral identification, geomorphology and soils, sedimentation and stratigraphy, as well as a systematic review of depositional environments and their archaeological potential. A series of archaeological case studies will illustrate the application of these concepts in real-world field archaeology.

Taught by: Tartaron and Magee
Also Offered As: CLST 700
Activity: Seminar
1.0 Course Unit

AAMW 701 Proseminar In Methods in the History of Art
The meanings we ascribe to art works of any culture or time period are a direct result of our own preoccupations and methods. This colloquium will give both a broad overview of contemporary debates in the history of art-including such issues as technologies of vision, feminism, gender and sexuality studies, globalization, the pictorial turn or material/vision culture-and locate these methods within art history's own intellectual history, as well as the history of aesthetics. The course will consist of wide-ranging weekly readings and discussion, and also clarify such key terms as iconography, formalism, connoisseurship, and the Frankfurt and Vienna Schools.

Course not offered every year
Also Offered As: ARTH 701
Activity: Seminar
1.0 Course Unit

AAMW 702 Greek Sanctuaries
Sanctuaries remain an important focal point for the study of Greek religion. Both as sites for worship, dedication, oracular activity and other cult activity and as sites for the mediation of elite and state competition sanctuaries are, along with the polis, the most essential structuring institutions of Greek life. This seminar takes a selection of larger and smaller extra-urban sanctuaries and examines their growth, articulation and function.

Taught by: McInerney
Course not offered every year
Also Offered As: ANCH 702, CLST 702
Activity: Seminar
1.0 Course Unit

AAMW 705 Ethnoarchaeology: Greece
Ethnoarchaeology involves distinctive theoretical and methodological approaches to the study of living societies for the explicit purpose of shedding light on archaeological questions. In this seminar, we will review the intellectual history of ethnoarchaeology in North America and Europe, and explore case studies from Greece, the wider Mediterranean, and beyond. Among the topics will be analogy, cross-cultural comparison, experimental archaeology, oral history research, and archaeologically oriented ethnographic fieldwork. Students will create a proposal for ethnoarchaeological fieldwork in their area of interest in NSF or Wenner-Gren format, to be critiqued by the instructor and their peers.

Course not offered every year
Also Offered As: CLST 705
Activity: Seminar
1.0 Course Unit

AAMW 706 Archaeology of the Hellenistic Period in Italy, Greece, and Asia Minor
A survey of the archaeology of the Hellenistic period (331-31 BCE) across the Mediterranean, with a focus on Rome, Magna Graecia, Greece, and western Asia Minor. The course will stress the interactions among cities and kingdoms during the Roman Republic and Greek Hellenistic periods, especially the second century B.C. Students will work with relevant objects in the Penn Museum's Mediterranean Section.

Taught by: Rose
Course not offered every year
Also Offered As: ARTH 706, CLST 706
Activity: Seminar
1.0 Course Unit

AAMW 715 Archaeology of Troy
An introduction to the archaeology of Troy, in northwestern Turkey.

The course will focus on the results of excavations at the site in 1988, although the earlier excavations of Schliemann, Dorpfeld, and Blegen will also be considered. The course will cover a broad chronological span—from the early Bronze age through the late Roman period, and will include Greek, Roman, and Medieval attitudes toward Troy and the Trojan legend.

Taught by: Rose
Course not offered every year
Also Offered As: CLST 715
Activity: Seminar
1.0 Course Unit

AAMW 720 Topics in Aegean Art
Topic varies. Fall 2018: The choices made by groups of people with regard to the treatment of their dead can be reflective of a society's beliefs and social structure. In this course, we will examine the burial traditions of the people of the Prehistoric Aegean from the Neolithic through the end of the Bronze Age, circa 7,000-1,100 BCE. We will focus on burial architecture, grave goods, burial rituals, mortuary variability, and the symbolic meaning of death and burial in Prehistoric Greece. Particular attention will be paid to recent discoveries on Crete, the Mainland, and the Cycladic islands. Students will write two papers, and these papers will be presented to the class. The first paper will be circa 15 pages long with footnotes, bibliography, and images (presented via powerpoint) and the second will be a 20-25 page paper with footnotes, bibliography, and images presented via powerpoint.

Taught by: Shank
Course not offered every year
Also Offered As: ARTH 720, CLST 720
Activity: Seminar
1.0 Course Unit

AAMW 723 Topics in the Art of the Ancient Near East
Topic varies. Fall 2019: During the short period of the Neo Sumerian Empire at the end of the third millennium BCE, Mesopotamian concepts of kingship were crystallized through images, buildings, and textual creations. This seminar will examine this central institution from many points of view that invite cross historical and cross-cultural consideration.

Taught by: Pittman

AAMW 726 The Archaeology of Greece and Asia Minor in the Archaic and Classical Periods
An examination of new discoveries and conflicting interpretations in the archaeology of Greece and Asia Minor between the seventh and fourth centuries B.C.E. Both sides of the Aegean will receive equal attention, and emphasis will be placed on sanctuaries, settlements, and cemeteries.
Taught by: Holod
Course not offered every year
Also Offered As: ARTH 726, CLST 711
Activity: Seminar
1.0 Course Unit

AAMW 732 Topics in Byzantine Art and Architecture
Topic varies. Spring 2018: The recent 'return' to the object across the humanities and social sciences has brought to the fore concerns with the nature of material things, their operation in the world, and their entanglement with humans. This seminar will introduce you to some of the key theoretical writings on the object and material culture and will ask you to interrogate their relevance for the discipline of art history. Our focus will be on the Middle Ages, but depending on the specific interests of the seminar's participants, we may venture into other historical periods and cultural domains. Topics to be addressed include the social life of things; agency; materiality; the relic; the gift; the miniature; and the question of the human/nonhuman divide.
Taught by: Drpic
Course not offered every year
Also Offered As: ARTH 732
Activity: Seminar
1.0 Course Unit

AAMW 737 Islamic Architecture
This seminar will address the problems of studying architecture in the Islamic world. Considered will be issues of architectural design, regional and trans-regional constructional traditions, structural know-how and innovation, patronage and use. The examples discussed will be mainly religious and social service complexes. Attention will be paid to the manner of transmission of architectural design knowledge and constructional skill.
Taught by: Holod
Also Offered As: ARTH 737
Activity: Seminar
1.0 Course Unit

AAMW 738 Topics in Islamic Archaeology
Topic varies. Spring 2017: This seminar will trace the development of the field from one that was centered largely on the recovery of major monuments to one in which issues of daily life, demography, chronology and the study of settlement patterns have come to play a major role. The seminar will review work in the major zones of the Islamic world: Central Asia, Iran, Iraq, Anatolia, Syria, Palestine, Egypt, North Africa I (Libya-Tunisia), North Africa II (Algeria-Morocco), Spain. Of special interest this semester will be the study of landscape archaeology and settlement patterns. The seminar will discuss changes in patterns of settlement, trade and material culture 650 - 1300 CE in different areas of the Islamic world, concentrating on sites in Iran, Syria and North Africa.
Taught by: Holod
Course not offered every year
Also Offered As: ARTH 738, NELC 731
Activity: Seminar
1.0 Course Unit

AAMW 740 Topics in Medieval Art
Topic varies. Spring 2015: Among the functional genres shaping religious imagery in the Middle Ages and Renaissance, the altarpiece is arguably the most important, and many of the most famous panel paintings that hang today in museums originated as components of altarpieces. The altarpiece in the Latin church bridged the divide between clergy and laypeople, between cult and devotion, between public acclaim and private interests. Such altarpieces developed into extraordinarily dynamic vehicles for staging the religious image, akin to mural painting (in its potential for narrative elaboration), and manuscript illumination (in its potential for interchanging and juxtaposing imagery). As an umbrella for diverse research projects in both medieval and Renaissance art, this seminar affords an overview of the origins, development and articulation of the altarpiece as a functional and pictorial genre in European art, on both sides of the Alps. It also seeks to provide students with the materials and practical training—technical, scholarly, interpretative—required to study altarpieces as visual, narrative, and material totalities.
Course not offered every year
Also Offered As: ARTH 740, RELS 702
Activity: Seminar
1.0 Course Unit

AAMW 751 Participation in Archaeological Excavations
Opportunities for qualified students to join in current expeditions. Credit allowed will depend on the length of time spent in the field.

Notes: May be repeated for credit

Art History (ARTH)

ARTH 070 Latina/o Literature and Culture
This course offers a broad introduction to the study of Latina/o/x culture. We will examine literature, theater, visual art, and popular cultural forms, including murals, poster art, graffiti, guerrilla urban interventions, novels, poetry, short stories, and film. In each instance, we will study this work within its historical context and with close attention to the ways it illuminates class formation, racialization, and ideologies of gender and sexuality as they shape Latino/a/xs' experience in the U.S.
Topics addressed in the course will include immigration and border policy, revolutionary nationalism and its critique, anti-imperialist thought, Latinx feminisms, queer Latinidades, ideology, identity formation, and social movements. While we will address key texts, historical events, and intellectual currents from the late 19th century and early 20th century, the course will focus primarily on literature and art from the 1960s to the present. All texts will be in English.
Taught by: Sternad Ponce de Leon
Course not offered every year
Also Offered As: COML 070, ENGL 070, GSWS 060, LALS 060
Activity: Lecture
1.0 Course Unit
**ARTH 100 Freshman Seminar**
The primary goal of the freshman seminar program is to provide every freshman the opportunity for a direct personal encounter with a faculty member in a small sitting devoted to a significant intellectual endeavor. Specific topics be posted at the beginning of each academic year. Please see the College Freshman seminar website for information on current course offerings https://www.college.upenn.edu/node/403.
One-term course offered either term
Also Offered As: CIMS 016, ENGL 017, URBS 106
Activity: Seminar
1.0 Course Unit
Notes: For Freshmen Only

**ARTH 101 World Art and Civilization Before 1400**
This course serves as a double introduction to the History of Art. First it is a survey of the ancient world that lays the foundation for the History of Art across the whole Eastern Hemisphere. Across this enormous timespan and geographical spread, an emphasis will be placed on moments of interaction, as well as analogies. Secondly, through this overview of the Ancient world up to around 1400, the basic skills that serve the student in the study of the History of Art will also be developed: close looking, understanding plans, the basics of iconography, questions of stylistic development, among others. This course fulfills Sector III: Arts and Letters and counts towards the History of Art major and minor requirements.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

**ARTH 102 World Art: 1400 to Now**
This course is an introduction to the visual arts in a global context over the period from the early 1400s to the present. The content of the class varies according to the expertise of the instructors but will introduce students to selected and significant moments in artistic production in both the Western and Eastern hemispheres. Offering a broad historical overview of key techniques, movements, and artists, this course will cover aspects of art production around the world during an era of increasing economic exchange, colonization, and industrialization. Looking at painting, sculpture, architecture, and prints, as well as new media such as photography and film, the course will respond to the following questions: How does artistic practice change in this period? Who owns art? What is the role of the artist in society, and where is art made, exhibited, and consumed? Other topics to be covered are art’s crucial role in the period’s political debates and social transformations, including modernization and technological advances, as well as art criticism’s import in forming public opinion. An introduction to art history, this course offers a wholly new perspective on the arts and cultures in this era of artistic innovation. This course fulfills Sector III: Arts and Letters and counts towards the History of Art major and minor requirements.
For BA Students: Arts and Letters Sector
Taught by: Dombrowski, Kim, Shaw, Davis
Course usually offered in spring term
Also Offered As: VLST 232
Activity: Lecture
1.0 Course Unit

**ARTH 103 Art and Civilization in East Asia**
Introduction to major artistic traditions of China and Japan and to the methodological practices of art history. Attention given to key cultural concepts and ways of looking, in such topics as: concepts of the afterlife and its representation; Buddhist arts and iconography; painting styles and subjects; and more broadly at the transmission of styles and cultural practices across East Asia. Serves as an introduction to upper level lecture courses in East Asian art history cultures. If size of class permits, certain sessions will be held in the Penn Museum or the Philadelphia Museum of Art.
For BA Students: Arts and Letters Sector
Taught by: Davis, Steinhardt
Course not offered every year
Also Offered As: EALC 013, VLST 233
Activity: Lecture
1.0 Course Unit

**ARTH 104 Introduction to Art in South Asia**
This course is a survey of sculpture, painting and architecture in the Indian sub-continent from 2300 B.C., touching on the present. It attempts to explore the role of tradition in the broader history of art in India, but not to see India as ‘traditional’ or unchanging. The Indian sub-continent is the source for multi-cultural civilizations that have lasted and evolved for several thousand years. Its art is as rich and complex as that of Europe and diverse. This course introduces the full range of artistic production in India in relation to the multiple strands that have made the cultural fabric of the sub-continent so rich and long lasting.
For BA Students: Arts and Letters Sector
Course not offered every year
Also Offered As: SAST 200, SAST 500, VLST 234
Activity: Lecture
1.0 Course Unit

**ARTH 106 Architect and History**
The built environment shapes our lives and this course tackles its underpinning design principles and qualities as well as social and cultural contexts. It is an interpretative look at the built environment or, more precisely, at the ways in which monuments and cities are designed, represented, perceived and construed over time. It introduces students to the interrelated fields of architecture, art history, and urbanism and explores great architectural monuments and cities from the modern to the ancient period, from the US across Europe and from the Mediterranean to Asia. We will assess the built environment as culturally meaningful form and examine a body of historical and cultural material relevant to its interpretation. In doing so, the course seeks to foster a critical understanding of the cultural and artistic processes that have influenced architectural and urban design. The focus will be on understanding these works as results of skilled workmanship as well as social and cultural products. We will tackle ancient and modern perceptions of these monuments and cities by analyzing form, design, structure and by addressing their perceptual qualities through 3D reconstructions and virtual environments, as well as sketchbook assignments. This course fulfills Sector IV, Humanities and Social Sciences. It cannot be taken pass/fail and must be taken for a regular grade. All assignments (6 sketchbook assignments and 2 papers) have to be completed and both exams attended, in order to pass the course.
For BA Students: Humanities and Social Science S
Taught by: Zarmakoupi
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
ARTH 127 The Material Past in a Digital World
The material remains of the human past -objects and spaces- provide tangible evidence of past people's lives. Today's information technologies improve our ability to document, study, and present these materials. But what does it mean to deal with material evidence in a virtual context? In this class, students will learn basic digital methods for studying the past while working with objects, including those in the collections of the Penn Museum. This class will teach relational database design and 3D object modeling. As we learn about acquiring and managing data, we will gain valuable experience in the evaluation and use of digital tools. The digital humanities are a platform both for learning the basic digital literacy students need to succeed in today's world and for discussing the human consequences of these new technologies and data. We will discuss information technology's impact on the study and presentation of the past, including topics such as public participation in archaeological projects, educational technologies in museum galleries, and the issues raised by digitizing and disseminating historic texts and objects. Finally, we will touch on technology's role in the preservation of the past in today's turbulent world. No prior technical experience is required, but we hope students will share an enthusiasm for the past.
Also Offered As: ANTH 127, CLST 127, HIST 127, NELC 187
Activity: Lecture
1.0 Course Unit

ARTH 212 Cities and Temples in Ancient India
The wooden architecture of ancient India's cities is represented in relief carvings from Buddhist religious monuments of the early centuries A.D. and replicated in remarkable excavated cave cathedrals. This course will trace that architectural tradition, its transformation into a symbolic vocabulary for a new structure, the Hindu temple, and the development of the temple in India from ca. 500-1500 A.D.
Taught by: Meister
Course not offered every year
Also Offered As: ARTH 612, SAST 201, SAST 501
Activity: Lecture
1.0 Course Unit

ARTH 213 Arts of Japan
This course introduces the major artistic traditions of Japan, from the Neolithic period to the present, and teaches the fundamental methods of the discipline of art history. Special attention will be given to the places of Shinto, the impact of Buddhism, and their related architectures and sculptures; the principles of narrative illustration; the changing roles of aristocratic, monastic, shogunal and merchant patronage; the formation of the concept of the artist over time; and the transformation of tradition in the modern age.
Taught by: Davis
Course not offered every year
Also Offered As: ARTH 613, EALC 157, EALC 557
Activity: Lecture
1.0 Course Unit

ARTH 214 Arts of China
A broad survey of Chinese architecture, sculpture, and painting from the Neolithic age through the nineteenth century. Topics include excavated material from China's Bronze Age, Chinese funerary arts, Buddhist caves and sculpture (including works in the University Museum), the Chinese city, the Chinese garden, and major masterpieces of Chinese painting. Prerequisite: Graduate students may take this course as EALC 527 and should see the instructor to discuss additional requirements for graduate credit.
Taught by: Steinhardt, Davis
One-term course offered either term
Also Offered As: ARTH 614, EALC 127, EALC 527
Activity: Lecture
1.0 Course Unit

ARTH 217 Chinese Painting
Study of Chinese painting and practice from the earliest pictorial representation through the late twentieth century. Painting style forms the basis of analysis, and themes such as landscape and narrative are considered with regard to larger social and cultural issues. The class pays particular attention to the construction of the concepts of the 'artist' and 'art criticism' and their impact on the field into the present. Visits to look at paintings at the University of Pennsylvania Museum, PMA and/or local collections.
Taught by: Steinhardt
Course not offered every year
Also Offered As: ARTH 617, EALC 227, EALC 627
Activity: Lecture
1.0 Course Unit
Notes: Also fulfills General Requirement in History & Tradition for Class of 2009 and prior.

ARTH 218 Art and Architecture in Ancient Egypt
This course will be an introduction to the art, architecture and minor arts that were produced during the three thousand years of ancient Egyptian history. This material will be presented in its cultural and historical contexts through illustrated lectures and will include visits to the collection of the University Museum.
Taught by: Silverman
Course not offered every year
Also Offered As: AAMW 618, ANCH 068, ARTH 618, NELC 068, NELC 668
Activity: Lecture
1.0 Course Unit
ARTH 220 The Ancient Maya: Integrating Material, Text, and Image
Ancient Maya studies is one of the most dynamic and innovative fields in world archaeology today. Emerging as a true historical archaeology only in the past three decades, the decipherment of Maya script now provides a powerful complement and counterpoint to both traditional excavation data and new remote sensing technologies. Equally, the reading of images, and their interaction with texts and artifacts, forms a vital part of our interest in the broader humanistic concerns of worldview and the transcendent—where our primary interest lies in gaining access to past mentalities. This course will provide a comprehensive introduction into current knowledge of the Ancient Maya, with a recurring methodological focus on how different types of evidence are integrated to assemble a persuasive ‘portrait of the past.’ This scope of this process is unique in the ancient Americas, since only the Maya offer us the opportunity to read their own descriptions of the world two millennia or more in the past. Geographically, we will be looking at the greater Yucatan Peninsula, which today covers parts of southeastern Mexico, the whole of Guatemala and Belize, and the western extremities of Honduras and El Salvador. Since archaic times (before 1200 BCE) this has been occupied by speakers of the Mayan language group, and millions of people identified as Maya by that means continue to do so today (despite popular notions to the contrary, they have never ‘disappeared’). No prior knowledge of archaeology or art history is necessary. The course structure is one 3-hour session per week, consisting of a lecture followed by group discussion in seminar-style. Additionally, in Week 6 there will be a virtual tour of the new Mexico and Central American Gallery at Penn Museum. This will introduce the class to the issues of disseminating scholarship and building narratives that are accessible to the wider public.
Taught by: Martin
Course not offered every year
Also Offered As: ANTH 215, LALS 215
Activity: Lecture
1.0 Course Unit

ARTH 225 Greek Art and Artifact
This course surveys Greek art and artifacts from Sicily to the Black Sea from the 10th century BCE to the 2nd century BCE, including the age of Alexander and the Hellenistic Kingdoms. Public sculpture and painting on and around grand buildings and gardens, domestic luxury arts of jewelry, cups and vases, mosaic floors, and cult artefacts are discussed. Also considered are the ways in which heroic epic, religious and political themes are used to engaged viewers’ emotions and served both domestic and the public aims. We discuss the relationships of images and things to space and structure, along with ideas of invention and progress, and the role of monuments, makers and patrons in Greek society.
Taught by: Kuttnner
Course not offered every year
Also Offered As: AAMW 625, ARTH 625, CLST 220
Activity: Lecture
1.0 Course Unit

ARTH 226 Hellenistic and Roman Art and Artifacts
This course surveys the political, religious and domestic arts, patronage and display in Rome’s Mediterranean, from the 2nd c. BCE to Constantine’s 4th-c. Christianized empire. Our subjects are images and decorated objects in their cultural, political and socio-economic contexts (painting, mosaic, sculpture, luxury and mass-produced arts in many media). We start with the Hellenistic cosmopolitan culture of the Greek kingdoms and their neighbors, and late Etruscan and Republican Italy; next we map Imperial Roman art as developed around the capital city Rome, as well as in the provinces of the vast empire.
Taught by: Kuttnner
Course not offered every year
Also Offered As: AAMW 626, ARTH 626, CLST 221
Activity: Lecture
1.0 Course Unit

ARTH 222 Art of Ancient Iran
This course offers a survey of ancient Iranian art and culture from the painted pottery cultures of the Neolithic era to the monuments of the Persian Empire. Particular emphasis is placed on the Early Bronze Age. Taught by: Pittman
Course not offered every year
Also Offered As: AAMW 622, ARTH 622, NELC 222, NELC 622
Activity: Lecture
1.0 Course Unit

ARTH 224 Art of Mesopotamia
The class presents a survey of the art and archaeology of Mesopotamia beginning with the appearance of the first cities and ending with the fall of the Assyrian Empire in the seventh century BCE. It presents the major artistic monuments of Mesopotamian culture, embedding them in their historical context. Focus is placed in particular on the interactions with surrounding cultures of Iran, Central Asia, the Caucasus, the Persian Gulf and Anatolia in order to decenter the discourse from a strictly Mesopotamian perspective. The format is lecture; assignments involve reading response papers; there are in class midterm and final exams.
Taught by: Pittman
Course not offered every year
Also Offered As: AAMW 624, ARTH 624, NELC 224, NELC 624
Activity: Lecture
1.0 Course Unit
**ARTH 233 Eastern Medieval Architecture**
This lecture course examines major architectural developments in the eastern Mediterranean between the 4th and 14th centuries CE. The focus is on the Byzantine Empire, with its capital at Constantinople. Lectures also devoted to related developments in the Caucasus (Armenia and Georgia), early Russia, the Balkans (Bulgaria and Serbia), Sicily and under the Normans, the Crusader states. Parallel developments in early Islamic architecture are used for comparative purposes. The course examines evidence for religious and secular buildings, as well as urbanism and settlement patterns.
Taught by: Ousterhout
Course not offered every year
Also Offered As: AAMW 633, ARTH 633
Activity: Lecture
1.0 Course Unit

**ARTH 235 Introduction to Visual Culture of the Islamic World**
A one-semester survey of Islamic art and architecture which examines visual culture as it functions within the larger sphere of Islamic culture in general. Particular attention will be given to relationships between visual culture and literature, using specific case studies, sites or objects which may be related to various branches of Islamic literature, including historical, didactic, philosophical writings, poetry and religious texts. All primary sources are available in English translation.

Activity: Lecture
1.0 Course Unit

**ARTH 237 Berlin: History, Politics, Culture**
What do you know about Berlin's history, architecture, culture, and political life? The present course will offer a survey of the history of Prussia, beginning with the seventeenth century, and the unification of the small towns of Berlin and Koelln to establish a new capital for this country. It will tell the story of Berlin's rising political prominence in the eighteenth century, and its position as a center of the German and Jewish Enlightenment. It will follow Berlin's transformation into an industrial city in the nineteenth century, its rise to metropolis in the early twentieth century, its history during the Third Reich, and the post-war Cold War period. The course will conclude its historical survey with a consideration of Berlin's position as a capital in reunified Germany.
The historical survey will be supplemented by a study of Berlin's urban structure, its significant architecture from the eighteenth century (i.e. Schinkel) to the nineteenth (new worker's housing, garden suburbs) and twentieth centuries (Bauhaus, Speer designs, postwar rebuilding, GDR housing projects, post-unification building boom). In addition, we will read literary texts about the city, and consider the visual art and music created in and about Berlin, and focus on Berlin's Jewish history. The course will be interdisciplinary with the fields of German Studies, history, history of art, urban studies, and German-Jewish studies. It is also designed as a preparation for undergraduate students who are considering spending a junior semester with the Penn Abroad Program in Berlin. All readings and lectures in English.
For BA Students: Humanities and Social Science S

Activity: Lecture
1.0 Course Unit
Notes: All readings and lectures in English.

**ARTH 240 Medieval Art**
An introductory survey, this course investigates architecture, painting, sculpture, and the 'minor arts' of the Middle Ages. Students become familiar with selected major monuments of the Romanesque and Gothic periods, primarily in Western Europe as well as relevant sites around the Mediterranean. Analysis of works emphasizes the cultural context, the thematic content, and the function of objects and monuments. Discussions focus especially on several key themes: the role of luxury in the medieval west; the theological role of images; the revival of classical models and visual modes; social rituals such as pilgrimage and crusading; the cult of the Virgin and the status of women in art; and, more generally, the ideology of visual culture across the political and urban landscapes.
Taught by: Guerin
Course not offered every year
Also Offered As: AAMW 640, ARTH 640
Activity: Lecture
1.0 Course Unit

**ARTH 245 Gothic Architecture: Gold and Stone**
Key monuments of the Middle Ages, the Gothic cathedrals of Western Europe present a synthesis of the theological, economic, and social developments of the twelfth through fourteenth centuries. An harmonious marriage between technology and aesthetics, of political power and imagination, these immense and ingenious structures are as famous for their sculptural programs as they are for the liturgies that animated their spaces. Students will also be introduced to local uses of Gothic in Philadelphia architecture to better understand the lived experiences of these built manifestations of transcendence.
Taught by: Guerin
Course not offered every year
Also Offered As: AAMW 640, ARTH 640
Activity: Lecture
1.0 Course Unit

**ARTH 250 Michelangelo and the Art of the Italian Renaissance**
An introduction to the work of the Renaissance artist Michelangelo (1475-1564)-his sculptures, paintings, architecture, poetry, and artistic theory-in relation to his patrons, predecessors, and contemporaries, above all Leonardo and Raphael. Topics include artistic creativity and license, religious devotion, the revival of antiquity, observation of nature, art as problem-solving, the public reception and function of artworks, debates about style, artistic rivalry, and traveling artists. Rather than taking the form of a survey, this course selects works as paradigmatic case studies, and will analyze contemporary attitudes toward art of this period through study of primary sources.
Taught by: Kim
Course not offered every year
Also Offered As: ARTH 650
Activity: Lecture
1.0 Course Unit
ARTH 254 Global Renaissance and Baroque
An introduction to transcultural encounters within and beyond early modern Europe, 1450-1600. Topics include: the theory and historiography of global art; artistic relations between Venice, the Byzantine and Ottoman Empires, and islands in the Eastern Mediterranean; Portugal’s overseas mercantile network in Africa and Asia; and the Baroque in Latin America, with emphasis upon Brazil. Our discussions focus on these paradigmatic case studies so as to question the language and terms we use to characterize confrontations between native and foreign, the self and the other.
Taught by: Kim
Course not offered every year
Also Offered As: ARTH 654
Activity: Lecture
1.0 Course Unit

ARTH 258 Early Modern Japanese Art and the City of Edo
Study of the major art forms and architecture of Tokugawa (or Edo) period (1603-1868). In this course, we will consider how the arts of this era occur within an increasingly urban and modern culture, particularly with regard to the city of Edo. Issues of the articulation of authority in the built environment, the reinvention of classical styles, and patronage will be raised. May include some visits to PMA, Penn Museum, or other local collections.
Taught by: Davis
Course not offered every year
Also Offered As: ARTH 658, EALC 150, EALC 550
Activity: Lecture
1.0 Course Unit

ARTH 261 Northern Renaissance Art
This course critically examines concepts traditionally associated with the Renaissance by focusing on the exchange of artistic ideas throughout the Holy Roman Empire and across different media, such as the altarpieces of Jan van Eyck, the expressive drawings of Albrecht Dürer and Hans Baldung Grien, the peasant studies of Pieter Bruegel and the prints of satirists who wished to remain anonymous. The material is organized thematically around four topics: religious art as piety and politics; antiquity as a source of tradition and imagination; the formulation of a public discourse that exposed social threats; and the distinctiveness of artistic claims of individual achievement. A motif throughout the course is the question of how the survival of fragments may be presented in museum contexts as parts standing in for an absent whole. We will also consider how historians approach designs for works of art now lost or never completed. Encouraging encounters with art and artifacts around the city, assignments focus on objects in Philadelphia collections.
Taught by: Brisman
Course not offered every year
Also Offered As: ARTH 661
Activity: Lecture
1.0 Course Unit

ARTH 262 Netherlandish Art
Dutch and Flemish painting in the 15th and 16th centuries with special emphasis on the contributions of Robert Campin, Jan van Eyck and Roger van der Weyden, Bosch, and Bruegel. Also included are topics on the development of prints as well as the dialogue with Italian art.
Course not offered every year
Also Offered As: ARTH 662, DTCM 261
Activity: Lecture
1.0 Course Unit

ARTH 267 Latin American Art
The numerous traditions of Latin American art have been formed from the historical confluence of Indigenous, European, African, and Asian cultural traditions, each one impacting the others. This course serves as an introduction to these hybrid New World art forms and movements by both providing a large chronological sweep (1492-present) and focusing on several specific countries, including Brazil, Mexico, Cuba, Peru, and Argentina.
Taught by: Shaw, Kim
Course not offered every year
Also Offered As: ARTH 667, LALS 267, LALS 667
Activity: Lecture
1.0 Course Unit

ARTH 270 The Modern City
A study of the European and American city in the eighteenth, nineteenth, and twentieth centuries. Emphasis is placed on the history of architecture and urban design; political, sociological, and economic factors also receive attention. The class considers the development of London, St. Petersburg, Washington, Boston, Paris, Vienna and Philadelphia.
Taught by: Brownlee, D.
Course not offered every year
Also Offered As: ARTH 670, URBS 276
Activity: Lecture
1.0 Course Unit

ARTH 271 Modern Architecture, 1700-1900
The history of western architecture, ca. 1700-1900, when architecture was transformed to serve a world that had been reshaped by political and industrial revolutions. Topics to be considered include the Rococo, the English Garden, Palladianism, Romanticism, neo-classicism, the picturesque, the Greek and Gothic Revivals, and the search for a new style.
Taught by: Brownlee, D.
One-term course offered either term
Also Offered As: ARTH 671
Activity: Lecture
1.0 Course Unit

ARTH 273 History of Photography
A history of photography and theories of photography from 1839 to the present. Photography’s origins are rooted both in artistic desire and technological ingenuity. Some of photography’s inventors identified more as artists than engineers. At many points in the history of the medium, the question remains open whether new forms of artistic expression are driven by new technologies, or whether new technologies emerge to fulfill the desires of artistic imagination. This class will address photography’s relationship with painting, print, and drawing. It will examine the effect of photography on portraiture, landscape, depictions of motion, and abstraction. We will also investigate the changing cultural perception of photography as an artistic medium from the 19th to the 21st century.
Taught by: Vershbow
Course not offered every year
Also Offered As: ARTH 673, VLST 273
Activity: Lecture
1.0 Course Unit
**ARTH 274 Facing America**
This course explores the visual history of race in the United States as both self-fashioning and cultural mythology by examining the ways that conceptions of Native American, Latino, and Asian identity, alongside ideas of Blackness and Whiteness, have combined to create the various cultural ideologies of class, gender, and sexuality that remain evident in historical visual and material culture. We also investigate the ways that these creations have subsequently helped to launch new visual entertainments, including museum spectacles, blackface minstrelsy, and early film, from the colonial period through the 1940s.
Taught by: Shaw, Staff
Course not offered every year
Also Offered As: ARTH 681

**ARTH 276 Impressionism**
Impressionism opened the pictorial field to light, perception, science, modernity, bourgeoisie leisure and famously the material qualities of paint itself. This course will survey the movement's major contexts and proponents—Manet, Monet, Morisot, Cezanne, Gauguin, Van Gogh, Rodin—from its origins in the 1860's to its demise in the 1890's, as well as its subsequent adaptations throughout the world until World War I. Particular attention is paid to the artists' critical reception and the historical conditions which allowed one nation, France, to claim the emergence of early Modernism so firmly for itself. The course also analyzes the effects of the rapidly changing social and cultural fabric of Paris, and its affects on artistic developments. We also look outside of France's borders to Germany and Britain.
Taught by: Dombrowski
One-term course offered either term
Also Offered As: ARTH 676
Activity: Lecture
1.0 Course Unit

**ARTH 277 The Rise of Modernity: Arts of the 19th Century**
The nineteenth century is often considered as fast-paced, politically volatile and new-media obsessed as our own age. This course explores the nineteenth century's claim to have produced the first truly modern culture, focusing on the visual arts and metropolitan spaces of Europe and North America in their intellectual and social contexts. Stretching from the American and French Revolutions to the eve of World War I, topics to be covered include: the rise of capitalist and industrialist culture, art and revolutionary upheaval, global travel and empire, the origins of modernist art and architecture, and new media such as stereoscopes, iron and glass construction, and photography. Major artistic personalities of the age, from Jacques-Louis David and Gustave Courbet to Claude Monet and Vincent Van Gogh, and from Friedrich Schinkel and, Baron Haussmann to Frank Furness and Frank Lloyd Wright, are discussed. Each lecture will be followed by a brief period of discussion, and regular field trips take students to examine art and architecture first hand, in the museums and on the streets of Philadelphia.
Taught by: Brownlee, Dombrowski
Course not offered every year
Also Offered As: ARTH 677
Activity: Lecture
1.0 Course Unit

**ARTH 278 American Art**
This course surveys the most important and interesting art produced in the United States (or by American artists living abroad) up through the 1950s. This period encompasses the history of both early and modern art in the U.S., from its first appearances to its rise to prominence and institutionalization. While tracking this history, the course examines art's relation to historical processes of modernization (industrialization, the development of transportation and communications, the spread of corporate organization in business, urbanization, technological development, the rise of mass media and mass markets, etc.) and to the economic polarization, social fragmentation, political conflict, and the cultural changes these developments entailed. In these circumstances, art is drawn simultaneously toward truth and fraud, realism and artifice, science and spirituality, commodification and ephemerality, nationalism and cosmopolitanism, individualism and collectivity, the past and the future, professionalism and popularity, celebrating modern life and criticizing it.
Taught by: Leja, Shaw
One-term course offered either term
Also Offered As: ARTH 678
Activity: Lecture
1.0 Course Unit
Notes: Satisfies Cultural Diversity in the U.S. requirement

**ARTH 281 Modern Architecture,1900-Present**
The architecture of Europe and America from the late nineteenth century until the present is the central subject of this course, but some time is also devoted to Latin American and Asian architecture and to the important issues of modern city planning. Topics discussed include the Arts and Crafts movement, Art Nouveau, Expressionism, Art Deco, the International Style, and Post-modernism. The debate over the role of technology in modern life and art, the search for a universal language of architectural communication, and the insistent demand that architecture serve human society are themes that are traced throughout the course. Among the important figures to be considered are Frank Lloyd Wright, Walter Gropius, Le Corbusier, Louis Kahn, Robert Venturi, and Denise Scott Brown. The course includes weekly discussion sessions and several excursions to view architecture in Philadelphia.

ARTH 285 Modern Art
The history of modern art is closely tied to and largely unfolds from the history of Western Imperialism. While the technologies made possible by colonial resource extraction produced new ways of looking, modern conceptions of the self and how to represent it developed in dialogue with racialized notions of the other. This course focuses on encounters between the cultures of Africa and Europe, from 1880 to 1960, and on the visual practices that emerged on both continents as a result. Topics of special interest will include racial difference and the birth of photography, colonial masquerade, impressionism, symbols of power in royal arts, cubism, mass marketing and colonial self-fashioning, West African studio photography, world's fairs and the Musee de l'Homme, Dada and surrealism, Negritude and interwar Paris, anti-aesthetics, colonial arts education, National art schools in the age of African independence, humanism and South African photography under Apartheid.

ARTH 286 Modern Art: Picasso to Pollock
Early twentieth-century art in Europe is marked by a number of exciting transformations. This period witnessed the rise of abstraction in painting and sculpture, as well as the inventions of collage, photomontage, constructed sculpture, the ready made and found object, and performance art. Encounters with the arts of Africa, Oceania and other traditions unfamiliar in the West spurred innovations in media, technique, and subject matter. Artists began to respond to the challenge of photography, to organize themselves into movements, and in some cases, to challenge the norms of art through 'anti-art.' A new gallery system replaced traditional forms of exhibiting and selling art, and artists took on new roles as publicists, manifesto writers, and exhibition organizers. This course examines these developments, with attention to formal innovations as well as cultural and political contexts.

ARTH 289 Topics in Film Studies
This course is an exploration of multiple forces that explain the growth, global spread and institutionalization of international film festivals. The global boom in film industry has resulted in an incredible proliferation of film festivals taking place all around the world, and festivals have become one of the biggest growth industries. A dizzying convergence site of cinephilia, media spectacle, business agendas and geopolitical purposes, film festivals offer a fruitful ground on which to investigate the contemporary global cinema network. Film festivals will be approached as a site where numerous lines of the world cinema map come together, from culture and commerce, experimentation and entertainment, political interests and global business patterns. To analyze the network of film festivals, we will address a wide range of issues, including historical and geopolitical forces that shape the development of festivals, festivals as an alternative marketplace, festivals as a media event, programming/agenda setting, prizes, cinephilia, and city marketing. Individual case studies of international film festivals-Cannes, Berlin, Venice, Rotterdam, Karlovy Vary, Toronto, Sundance among others-will enable us to address all these diverse issues but also to establish a theoretical framework with which to approach the study of film festivals. For students planning to attend the Penn-in-Cannes program, this course provides an excellent foundation that will prepare you for the on-site experience of the King of all festivals.

ARTH 290 Post War Japanese Cinema
Mizoguchi Kenji, Ozu Yasujiro, and Kurosawa Akira are recognized today as three of the most important and influential directors in Japanese cinema. In their films of the late 1940s and 1950s, these directors focused upon issues surrounding the human condition and the perception of truth, history, beauty, death, and other issues of the postwar period. This course places their films in period context, and pays particular attention to the connections to other visual media, and to how 'art' and 'history' are being defined in the cinematic context. How other directors also took up these issues, and referred to the 'big three' is also be discussed.

ARTH 291 East Asian Cinema
This survey course introduces students to major trends, genres, directors, and issues in the cinemas of East Asian countries/regions, including Japan, Korea, China, Hong Kong, and Taiwan. Charting key developments over more than a hundred years from the early twentieth century to the present, this course examines films as aesthetic objects, asking questions about film form, narrative, and style. It also pays attention to the evolution of cinema as an institution (e.g. modes of production, circulation, and exhibition) in different cultural and political contexts. Weekly course materials will include both films (primary sources) and analytical readings (secondary sources). By the end of the course, students are expected to gain broad knowledge of East Asian cinema, develop skills of film analysis, and apply these skills to perform historically informed and culturally sensitive analysis of cinema. Prior knowledge of East Asian languages is NOT required.

Activity: Lecture
1.0 Course Unit

ARTH 292 Topics in Digital/New Media
Topic varies. Spring 2015: Documents are written texts, evidence, inscriptions, and much more. Documentary films have been used to tell stories, share experiences, spread propaganda, resist exploitation, invoke memories, and much more. How can we think of information and meaning in relation to the shared histories of document and documentary? Database management systems based on digital technologies have technically transformed ways of classifying, storing, and aggregating data, but have they really changed our experiences of mediating with our past, present, and future? Issues of agency, memory, representation, performativity, interactivity, and posthumanism are entangled in discussions of databases and archives and our engagement with them. In this course we will relate and juxtapose readings connecting documents, documentaries, and archives. We will read media and cultural theorists such as Lisa Gitelman, Akira Lippit, and Wendy Chun alongside novelists like Franz Kafka and Ismail Kadare. Assignments include one assigned/selected report from field visits to libraries and museums, one reading presentation and blogging assignment, and a final paper or practice-based art project.

ARTH 294 Art Now
One of the most striking features of today's art world is the conspicuous place occupied in it by the photographic image. Large-scale color photographs and time-based installations in projections are everywhere. Looking back, we can see that much of the art making of the past 60 years has also been defined by this medium, regardless of the form it takes. Photographic images have inspired countless paintings, appeared in combines and installations, morphed into sculptures, drawings and performances, and served both as the object and the vehicle of institutional critique. They are also an increasingly important exhibition site: where most of us go to see earthworks, happenings and body-art. This course is a three-part exploration of our photographic present.

Course usually offered in spring term
Also Offered As: ARTH 694, ENGL 063, GSWS 294, VLST 236
Activity: Lecture
1.0 Course Unit

ARTH 295 Cinema and Media
This course will provide an introduction to some of the most important film theory debates, and allow us to explore how writers and filmmakers from different countries and historical periods have attempted to make sense of the changing phenomenon known as 'cinema,' to think cinematically. Topics under consideration may include: spectatorship, authorship, the apparatus, sound, editing, realism, race, gender and sexuality, stardom, the culture industry, the nation and decolonization, what counts as film theory and what counts as cinema, and the challenges of considering film theory in a global context, including the challenge of working across languages. There will be a weekly film screening for this course. No knowledge of film theory is presumed.
Course requirements: attendance at lecture and participation in lecture and section discussions; canvas postings; 1 in-class mid-term; 1 final project.

Activity: Lecture
1.0 Course Unit

ARTH 296 Contemporary Art
Many people experience the art of our time as bewildering, shocking, too ordinary (my kid could do that), too intellectual (elitist), or simply not as art. Yet what makes this art engaging is that it raises the question of what art is or can be, employs a range of new materials and technologies, and addresses previously excluded audiences. It invades non-art spaces, blurs the boundaries between text and image, document and performance, asks questions about institutional frames (the museum, gallery, and art journal), and generates new forms of criticism. Much of the ‘canon’ of what counts as important is still in flux, especially for the last twenty years. And the stage is no longer centered only on the United States and Europe, but is becoming increasingly global. The course will introduce students to the major movements and artists of the post-war period, with emphasis on social and historical context, critical debates, new media, and the changing role of the spectator/participant.
Course not offered every year
Also Offered As: ARTH 696

1.0 Course Unit
ARTh 300 Undergraduate Methods Seminar
Topic varies. This course, required for history of art majors, acquaints students with a wide variety of historical and contemporary approaches to studying art, architecture, material culture, and visual culture.
Activity: Seminar
1.0 Course Unit

ARTh 302 Methods of Object Study
This seminar introduces students to methods of analyzing the material, physical, and visual aspects of objects in a museum, gallery, or library context. Students will receive training in curatorial practices, as well as close observation and precise descriptive terminology for materials and techniques, and examine essential tools of conservation and technical analysis. For the Spring 2020 semester, this immersive course will stress the importance of developing the visual literacy essential for connoisseurship of works of art on paper. Students will learn to use close observational skills to understand artist's choice, the subtle inherent characteristics of the material and physical aspects of works on paper, their context and significance. The focus will be on examination and discussion of works in the Philadelphia Museum of Art collection and the study of the materials and techniques used by artists from the fifteenth through twenty first centuries. We will begin by considering what questions to ask about a work of art on paper and approaches and tools for looking and informing our answers. Throughout the semester students will engage in direct examination, study, and discourse about the physical characteristics of papers, dry drawing materials, watercolors, inks, and print processes, and their implications for the completed artwork. Condition and other conservation considerations will be addressed. Most sessions will take place in the paper conservation laboratory at the Philadelphia Museum of Art. Brief readings for each session will be chosen to educate about the physical aspects of the materials and to stimulate discussion, which will be an important part of the course. Several trips to off-site workshops may be included. Each student will carry out technical examination of two works for written and class presentation. The instructors will be available before or after class or by appointment to continue the discussion and to discuss student projects.

ARTh 305 Spiegel-Wilks Seminar
Topic varies from semester to semester. For the Fall 2020 semester, the topic will be: Elijah Pierce's America: Barnes Foundation Curatorial Seminar This Spiegel-Wilks Curatorial Seminar is offered in collaboration with the Barnes Foundation. Students will be provided with an immersion in curatorial and museum studies and will have the opportunity to interact with curators, scholars, and staff at Penn and the museum, including Executive Director and President Thom Collins, who will co-teach the course. The course syllabus will engage the permanent collection at the museum, where the course will meet weekly. As part of the course, students will also conduct research and contribute to the temporary exhibition opening at the Barnes Foundation that semester, which will feature the work of Elijah Pierce (1892-1984), a self-taught woodcarver whose handcrafted works reacted to life in 20th-century America. One of the first generations of African Americans born into freedom, his remarkable narratives depict religious parables, autobiographical scenes, episodes from American politics, and figures from popular culture.

1.0 Course Unit

ARTh 313 Topics in East Asian Art
Topic varies from semester to semester. For the Fall 2020 semester, the topic will be: Arthur J. Vidich’s East Asia: Nationality, Identity, and Art World Seminar This seminar focuses on issues confronting artists from East Asia working in today's contemporary art world. We will begin by considering the terms that constitute the definition of the 'modern' and the 'contemporary,' asking how, by whom, and for whom these terms have been configured. By gaining a familiarity with the major styles, media, institutions, artists, and concepts over the twentieth century in East Asia, we will develop tools to analyze how contemporary artists are crossing boundaries, challenging the limits of nationalism, and dealing with shifting political and social grounds. We will take our analysis on site at the Venice Biennale, looking closely at how East Asian artists are participating in, as well as contesting, this influential international exposition. Students will make close studies of national pavilions as well as the international exhibition, generating analyses of these display spaces, and will produce a group website in response to the Biennale as an alternative virtual exhibition. By permission only

Activity: Seminar
1.0 Course Unit
ARTH 315 Topics in Japanese Art
Topics vary from semester to semester. For the Fall 2020 semester, the topic will be: From Edo to Tokyo. How did a fishing village with a ramshackle castle become an early modern megalopolis over the course of a century? How did that city modernize rapidly, rebuild, and rebuild again to become one of the most technologically advanced urban environments in the world? In this course we will study the development of the city of Edo and its transformation into Tokyo through its urban planning, architecture, and visual arts. Starting with the formation of the shogun’s city, Edo, we’ll look at castles, mausolea, paintings, and other works to track the uses of architecture and art in the service of political power. At the same time, the long-time imperial capital of Kyoto (Miyako) and other regions actively expanded artistic modes, making this one of the most dynamic eras in Japanese art history, and a new urban population supported other forms of architecture and visual arts, including gardens, paintings, ceramics, and prints. In the final weeks of the course, we will consider how Edo became Tokyo, and how the city was rebuilt through modernization and land reclamation as well as after the 1923 earthquake and the Allied firebombing of WWII. And how did the postwar boom once more transform Tokyo, while also retaining traces and spaces of this earlier part of the city? Finally, we’ll think about the ways in which the Olympics in 1964 and 2020 put the city on display.

ARTH 318 Topics in African Art
Topic varies. Spring 2017: The dynamic, multi-media character of African art makes it particularly compelling as part of new art historical methodologies. Digital media—photographs, music, video, global mapping systems and 3-D printing—is reshaping understandings of African art history. This seminar critically explores how African art history has been taking shape through digital means, particularly online among professional arts institutions and as employed by contemporary African and African diasporic artists. As we consider how the digital world is shaping African art history we will encounter important issues in regards to ethics, cultural studies, performance theory, race, gender and global definitions of modernity. We will cover a very broad geography and time scale in this course in order to consider different movements of African art through the lens of the digital humanities. Students should bring a laptop to class as we work with WordPress to create web-based galleries, timelines and related critical writing.

ARTH 320 Aegean Bronze Age Art
Topics vary from semester to semester. For the Fall 2020 semester, the topic will be ‘Luxury Items:’ Artifacts from the Aegean Bronze Age (3,000-1,100 BCE) such as gold jewelry and vessels, carved stone vases and seals of exotic materials as well as fine pottery and carved ivory are just some of the luxury items recovered from archaeological sites in Greece that clearly demonstrate the cosmopolitan nature of this society. In this class we will examine these luxury items and discuss how these masterpieces were made, the craftspeople who made them, what they may have meant in the context of Aegean society, and what they tell us about trade in this early period with Egypt and the Ancient Near East. From the Shaft Grave items recovered by Heinrich Schliemann at Mycenae to the artifacts from Akrotiri on the island of Thera, the so-called 'Pompeii of the Aegean,' it is obvious that luxury was a concept familiar to the prehistoric Greek people.

ARTH 323 Origins of Art / Origins of Writing
Each of the earliest systems of writing had intimate and enduring ties to pictorial traditions. This seminar addresses the fundamental relationship between texts and visual imagery in the Mesopotamian, Egyptian, Chinese, and Maya traditions. The class will take a comparative approach to examine the parallel development of scripts and images, extending from their earliest beginnings to their on-going lives as mature systems. As the individual scripts became more capable of representing speech, the subject matter, composition, and function of images changed, and one goal of this class is to identify these processes. Emphasis will be put on seeing text and image as collaborative and interactive constructions, in which parts of a single message can be encoded and presented in different ways. The class will make extensive use of the collections and the curatorial expertise of the Penn Museum.

ARTH 325 Topics in Greco-Roman Art
Topic varies. Fall 2017: The dwelling place – house, apartment, villa, palace - was central to Roman understanding of self and society. The domus was a major site of artifice - architecture, landscape architecture, fine objects, statuary and paintings. The very structure was often decorated with wall-paintings, stuccowork, or mosaics, like those which survive from sites like Pompeii and Antioch. Even modest establishments might aim to impress with a mythological painting or two: opening house to visitors was fundamental to social structures, business and politics. This course looks at Roman dwellings in city and country, and explores their arts in cultural and socio-political contexts. Besides evidence of archaeology, we can use the wealth of Roman texts about the arts of living. Since the Renaissance, graphic media have responded to interest in Roman house sites and their art; we consider how new tools of virtual reconstruction affect understanding of the Roman domus and villa, and the roles museums (like our own), exhibitions and curated sites still play in that understanding.

ARTH 329 Topics in Roman Art and Architecture

Topic varies from semester to semester. For the Fall 2020 semester, the topic will be "The Last Days of Pompeii." Pompeii is one of the most famous archaeological sites in the world. Not fully excavated and only partially understood, it seems to offer a tantalizing cross-section of Roman architecture, art and society, preserved as it was when the volcano Mount Vesuvius erupted on 24 August 79 CE. At the same time, the rediscovery of Pompeii since the eighteenth century has had a profound impact on western culture. This course will look at the discovery, reception and reinvention as well as 'original' character of Pompeii and other settlements around Vesuvius destroyed at the same time as Pompeii, such as Herculaneum and Stabiae. We will examine the evidence that these Campanian sites provide for Roman architecture, art and society, and the difficulties we face in trying to use it. The course will include a range of material, from the architecture of houses and public areas of the city, tackling the notions of public and private in Roman society, the wall painting in Pompeian houses, examining the forms and functions of Roman frescoes as well as the ways in which they have been viewed in antiquity and modern times, to the shops, workshops and taverns that populated the ancient city and provide evidence for its economy. The approach is thematic, addressing the urban planning and development of the city, the domestic spaces and activities, the public spaces and buildings, and economy of the city, concentrating on case studies, such as the Forum, the House of the Vettii, the textile industry and the Villa of the Papyri. No special prior knowledge of antiquity is assumed.

ARTH 332 Topics in Byzantine Art

Topic varies. Fall 2017: This undergraduate seminar explores the Byzantine icon and its legacy. Spanning nearly two millennia, from the emergence of Christian sacred portraiture to the reception of icon painting by the early twentieth-century Russian avant-garde, the seminar will introduce you to the history, historiography, and theories of the icon. While our focus will be on Byzantium and the wider world of Orthodox Christianity, especially in the Slavic Balkans and Eastern Europe, the seminar will also engage with fundamental questions concerning the nature, status, and agency of images across cultures. Topics to be addressed include iconoclasm and the problem of idolatry; the social and ritual lives of icons; authorship, originality, and replication; viewer response and the cultural construction of vision; the frontier between art and the sacred image; and the afterlife of the icon in modernity.

ARTH 339 Sacred Stuff: Religious Bodies, Places, and Objects

Does religion start with what’s in our heads? Or are religious commitments made, shaped and strengthened by the people, places, and things around us? This course will explore how religion happens in the material world. We’ll start with classical and contemporary theories on the relationship of religion to stuff. We’ll then consider examples of how religion is animated not just by texts, but through interactions with objects, spaces, bodies, monuments, color, design, architecture, and film. We’ll ask how these material expressions of religion move beyond private faith and connect religion to politics and identity.

Activity: Seminar
1.0 Course Unit

ARTH 340 Topics in Medieval Art

Topics vary from semester to semester. For the Spring 2021 semester, the topic will be: Art in the Time of Dante. 2021 marks the 700th anniversary of the death of Dante Alighieri (1265-1321). While his Divine Comedy is the pinnacle of medieval literary arts, Dante was himself interested in the masterpieces of visual arts of his own time — in Italy and abroad. Prominent artists like Cimabue and Giotto are mentioned in his texts, as well as such notorious figures linked to artistic production as the usurer Reginaldo degli Scrovegni or the mercenary Castruccio Castracani. Dante witnessed some of the most dramatic events of the Middle Ages, from the transfer of the papacy to Avignon to the salacious affair of the Tour de Nesle in France — together we will examine the visual culture of this tumultuous time.

Taught by: Guerin
Activity: Seminar
1.0 Course Unit

ARTH 343 Topics in Medieval Renaissance Art

Topics vary from semester to semester. In Fall 2019, this course will examine the commission, production, and display of art at the Valois courts from the start of the Hundred Years War with England 1330s to the death of Francis I in 1547. During these two centuries, conflict and conquest shaped the making of artwork in profound and sometimes unexpected ways: precarious dynastic claims could be substantiated through carefully crafted images, while foreign artists (including Rosso Fiorentino, Francesco Primaticcio, and Leonardo da Vinci) could be called upon to boost the monarch’s prestige. Investigating the role played by objects in cultural diplomacy and propaganda, this course will examine works in a wide variety of techniques including easel painting, manuscript illumination, tapestry, armor, and metalwork, without neglecting less tangible art forms such as feasting, chivalric tournaments, and royal processions. Topics will include the art of the gift, female patronage, the interaction between text and image, and the role of artists in shaping a royal visual identity. The course will include visits to the Philadelphia Museum of Art and an illuminated manuscript handling session at the Free Library of Philadelphia.

Taught by: Herman

1.0 Course Unit
**ARTH 350 Topics in Southern Renaissance Art**  
Topic varies from semester to semester. For the Spring 2021 semester, the topic will be: Chiaroscuro. In this seminar we will explore the artistic technique known as 'chiaroscuro,' the contrast between light and shadow so as to produce effects of volume and relief. While we will grapple with chiaroscuro as deployed in architecture, drawings, and prints, our focus will be all the tenebrist paintings of Caravaggio. If the lit bodies in Caravaggio’s paintings project out boldly in relief, does anything remain and speak in the surrounding darkness?  
Taught by: Kim  
Activity: Seminar  
1.0 Course Unit

**ARTH 351 Topics in Early Modern Art Theory**  
Topic varies. Spring 2016: What does it mean to write about art? What are the historical origins of this undertaking? How does language mediate the intellectual, somatic, and cultural rapport between the viewing self and the physical object? As an initial response to these questions we will examine the writings of the Tuscan artist and critic Giorgio Vasari (1511-1574), the biographer of such renowned artists as Leonardo, Raphael, Donatello, and Michelangelo. In addition to considering works of art described in Vasari’s accounts, we will pay close attention to his language and its relationship with other types of writing: saints lives, chronicles, legends, guidebooks, anecdotes, jokes, gossip, and sermons. Issues to be explored include: the process of craft and handwork, notions of genius and inspiration, and the relationship between the visual arts and natural environment.  
Taught by: Kim  
Course not offered every year  
Activity: Seminar  
1.0 Course Unit

**ARTH 362 Topics in Northern Baroque**  
Topic varies. Spring 2016: Undergraduate seminar focusing on all aspects of the life and works of Rembrandt van Rijn (1606-1669). Students will produce a research paper on any aspect of the artist's life and times, and course sessions will explore self-portraits, artistic development, specific painting types (figure studies, landscapes, portraits), case study individual works (the Paris Bathsheba and the Philadelphia Museum Head of Christ), mythologies, religious works, and the etchings of Rembrandt. Weekly discussions—one short analysis paper in addition to the term research paper.

**ARTH 373 Topics in American Art**  
Topic varies from semester to semester. For the Spring 2021 semester, the topic will be: Jackson Pollock and Abstract Expressionism. Jackson Pollock is widely considered one of the most important artists of the 20th century. This seminar will examine reasons why his paintings are held in such high regard. We will look closely at his work, study important primary documents - letters, statements, interviews, etc. - and discuss influential interpretations that emerged during his lifetime and since. We will also examine the larger artistic phenomenon that emerged in New York during the 1940s - Abstract Expressionism - in which Pollock's art was central. The paintings of other artists associated with this classification, including Mark Rothko, Barnett Newman, Willem de Kooning, Lee Krasner, and others, will be studied.  
Taught by: Leja  
Course not offered every year  
Activity: Seminar  
1.0 Course Unit

**ARTH 374 Material History of Photography**  
Photography is a young medium and yet its history can be traced through differing narratives. Was the medium born in a French patent office, when the sun burned a handprint in silver salt, or when human eyes saw an inverted image projected into a dark space? Does photography reflect the perspective and biases of its inventors and users, or does it re-invent how we see the world? This seminar will take theoretical and material approaches to understanding the histories of photography. In addition to lectures and readings, students will handle original materials and make photographs using historic chemical-processes and styles.  
Taught by: Vershbow

Also Offered As: VLST 237  
Activity: Seminar  
1.0 Course Unit
ARTH 379 Global Media
This course explores a broad media landscape through new critical and conceptual approaches. It is designated as a Benjamin Franklin Seminar. This course maps the footprints of television at a global scale. Adopting comparative approaches, we will be studying TV’s formation of national and global discourses, and thereby recognizing not only television’s impact on processes of globalization, but also the ability of television to matter globally. Working through concepts of ‘broadcasting,’ ‘flow,’ ‘circulation,’ and ‘circuitmvention,’ the course examines the movement of (and blocks encountered by) television programs and signals across national borders and cultures. The course particularly focuses on how global television cultures have been transformed due to shifts from broadcasting technologies to (Internet) streaming services? Navigating from United States and Cuba to India and Egypt, the readings in the course illuminate how particular televisiuos genres, institutions, and reception practices emerged in various countries during specific historical periods. We shall be addressing a range of questions: what kind of global phenomenon is television? Can we study television in countries where we do not know the existing local languages? In what different ways (through what platforms, interfaces, and screens) do people in different continents access televisual content? What explains the growing transnational exports of Turkish and Korean TV dramas? What is the need to historically trace the infrastructural systems like satellites (and optical fiber cables) that made (and continue to make) transmission of television programming possible across the world? How do fans circumvent geo-blocking to watch live sporting events? Assignments include submitting weekly discussion questions and a final paper. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

ARTH 383 Queer Modernisms
This course tracks the development of Modernism in America, Western Europe, and specific other locations around the globe, with particular emphasis as to how and why dissident sexualities so often found expression in and as aesthetic dissent. Creating new expressive forms and theories that often seem far removed from any traditional definition of sexuality, queer modernist artists often replaced dangerous forms of social dissent with more prudent forms of formal dissidence. In pursuing these questions, we will place art in its broader social context, seeking to answer such significant problems as how and why forms of artistic representation that were once transparent, eminently legible to all strata of society, increasingly became, under the avant garde, designed to speak only to an elect, to a select few in our culture. We will ask what happens when art deliberately narrows its audience, and how that narrowing is related to questions of sexual difference. What is the relationship between queerness and cultural elitism, a connection generally presumed in popular culture, but rarely examined academically? And finally we will ask about the utility of forms of queer political dissent if those forms remain illegible as queer to a wider audience. Throughout, new methods informed by queer, gender, and critical race theory will be utilized.
Taught by: Katz
Also Offered As: GSWS 315
Activity: Seminar
1.0 Course Unit

ARTH 384 Cuban Visual Culture
This course will focus on the urban history and cultural politics of contemporary Cuba with an emphasis on contemporary art and contemporary developments in the city of Havana. Students will learn about the Spanish influence on early colonial art, the development of formal academic art training and the changes to art instruction and the form and content of art created since the Revolution.
Taught by: Shaw, Schmenner
Course not offered every year
Also Offered As: AFRC 384, LALS 384
Activity: Seminar
1.0 Course Unit

ARTH 386 Topics in 20th Century Art
Topic Varies. Spring 2018: In 1913, Marcel Duchamp posed a nebulous question central to much of the art of the twentieth century. As a young painter in Paris, he wrote in a private note: ‘Is it possible to make works that are not of art?’ What are the possibilities of making in a modern world that has alienated labor from its products and commodified the work of art? What is the artist’s role amidst forces of rapid industrialization, mechanization, and automation? Duchamp would continuously explore these questions in a career that stretched into the 1960s, pushing painting, sculpture, and film in new directions through the use of objects not traditionally associated with art a porcelain urinal, a collection of settled dust, a tuft of human hair. This course examines issues of materiality and media in Duchamp’s art and in modernism more broadly. Meetings will include visits to the Duchamp collection at the Philadelphia Museum of Art. Readings will draw from art history, literature, and social and political theory.

Activity: Seminar
1.0 Course Unit

ARTH 388 Topics in Modern and Contemporary Art
Topic varies from semester to semester. For the Spring 2021 semester, the topic will be: Postmodern, Postcolonial, Post-Black. The end of the last century saw a shift in the way contemporary artistic practice was conceived. This class will consider the work and writings of key artists and thinkers of the last 50 years who have tackled issues of race, class, consumption, marginality, nationality, and modernism.

Specific course topics vary from year to year. See the Cinema Studies website at <http://cinemastudies.sas.upenn.edu/> for a description of the current offerings.
Course not offered every year
Also Offered As: CIMS 201, COML 201, ENGL 291
Activity: Seminar
1.0 Course Unit
ARTH 393 Topics in Film Studies
Topic varies. Spring 2017: This course will examine key moments in the history of civil rights through a cinematic lens. Over the course of the semester, we will explore how filmmakers have depicted the lives, aspirations, and strategies of those who have struggled for equal rights; how different struggles have intersected with each other; what aesthetic strategies have been adopted to represent freedom and the denial of it; and how effective cinematic efforts to contribute to increased freedom have been as well as what criteria we use to evaluate success or failure in the first place. Each week, we will watch a film and read a series of texts that will be drawn from a variety of arenas, including histories of civil rights; civil rights pamphlets and speeches; filmmaker interviews; film and media theory; memoirs; and theories of race, gender and sexuality. Course requirements: mutual respect; completion of all readings and screenings; participation in class discussion; weekly online responses; a final project that can be a research paper, film, art project, or community-based initiative.
Taught by: Redrobe

ARTH 425 Late Antique Arts
What is ‘Late Antiquity’? In 312 when Roman emperor Constantine inaugurated a Christian empire, ‘Roman’ culture was centuries old. The period ca. 200-650 CE saw profound transformations that launched Medieval, Byzantine and Islamic traditions. In this epoch of economic and political upheaval destruction was frequent but partial: Rome long survived, Constantine’s ‘new Rome’, Constantinople flourished, and around the Empire both proto-global visual culture and local forms prospered. Roman cultural models authorized both innovation and passion for tradition, in forms and styles: we critique art-historical models for Late Antique ‘decline’, analyse habits of material reuse and curation, and look at new Christian and Jewish roles for Roman things as well as polytheist visual survival. Foreign allies and enemies, and new peoples invading an already polyethnic Empire, interacted with Greco-Roman Late Antiquity; we visit arts of Sasanian and Islamic empires east and south, and ‘barbarian’ domains in Africa, Europe, Britain. Media discussed, for sacred, courtly, domestic, funerary, political and civic spaces and structures include not just ‘monumental’ painting, mosaic, sculpture, but also objects of silver, ceramic, ivory, figural textile, glass; painted books; jewelry; mass-media artifacts like coins and pilgrimage tokens. We also study Late Antique texts on art, objects, space and viewership.
Taught by: Ann Kuttner
Course not offered every year

1.0 Course Unit

ARTH 427 Roman Sculpture
Survey of the Republican origins and Imperial development of Roman sculpture - free-standing, relief, and architectural - from ca. 150 BC to 350 AD. We concentrate on sculpture in the capital city and on court and state arts, emphasizing commemorative public sculpture and Roman habits of decorative display; genres examined include relief, portraits, sarcophagi, luxury and minor arts (gems, metalwork, coinage). We evaluate the choice and evolution of styles with reference to the functions of sculptural representation in Roman culture and society.

Activity: Lecture
1.0 Course Unit

ARTH 428 Hellenistic Art and Spectacle
Hellenistic usually names art in the age of Mediterranean culture from the 4th century BCE and the rise of Alexander the Great’s Macedon, and the Greco-Macedonian conquest of the Persian Empire, to Cleopatra of Egypt’s defeat by Rome at the end of the Republic. Our course looks also at the age of Augustus and his successors, 1st century CE. While Greek and Macedonian practice in city-states and kingdoms is our launching point, this course also looks at international culture and cultural interaction among peoples from North Africa and Etrusco-Roman Italy, Egypt, Anatolia, the Mideast and Central Asia. We probe art, artifacts, and visual display from a range of settings, from sanctuary to house, palace and parade, and in all media, from marble monuments to pottery and jewelry. Our archaeology of Hellenistic visual culture also looks at the rich body of Hellenistic and Roman texts of art history, art criticism, and the description of objects and image, to better understand the Hellenistic maker, patron, and viewer. No prerequisites.
Taught by: Kuttner
Course not offered every year
Also Offered As: AAMW 428
Activity: Lecture
1.0 Course Unit

ARTH 435 Medieval Islamic Art & Architecture
An introduction to the major architectural monuments and trends, as well as to the best-known objects of the medieval (seventh-to fourteenth-century) Islamic world. Attention is paid to such themes as the continuity of late antique themes, architecture as symbol of community and power, the importance of textiles and primacy of writing. Suitable for students of literature, history, anthropology as well as art history.
Taught by: Holod
Course not offered every year
Also Offered As: AAMW 435, NELC 489
Activity: Lecture
1.0 Course Unit
ARHT 440 African Art, 600-1400
This course examines the flourishing civilizations of the African continent between the Fall of the Roman Empire and the dawn of the 'Age of Discovery.' Although material remains of the complex cultures that created exceptional works of art are rare, current archaeology is bringing much new information to the fore, allowing for the first time a preliminary survey of the burgeoning artistic production of the African continent while Europe was building its cathedrals. Bronze casting, gold work, terracotta and wood sculpture, and monumental architecture - the course takes a multi-media approach to understanding the rich foundations of African cultures and their deep interconnection with the rest of the world before the disruptive interventions of colonialism.
Taught by: Guerin
Also Offered As: AFRC 440
Activity: Lecture
1.0 Course Unit

ARHT 501 Curatorial Seminar
Curatorial seminars expose students to the complexity of studying and working with objects in the context of public display. With the guidance of faculty and museum professionals, students learn what it means to curate an exhibition, create catalogues and gallery text, and/or develop programming for exhibitions of art and visual/material culture. Students in this curatorial seminar will participate in planning the exhibition of Japanese illustrated books from the Tress collection to be held in the Kislak Center in spring 2021. Japanese illustrated books are celebrated for their high technical and aesthetic achievements and the collection spans all genres and formats over more than three hundred years. In this course, students will be thinking through how we can tell the story of the illustrated book in Japan in the space of the exhibition. We will think through how these materials related to their broad and largely literate audiences, and we'll pay close attention to artists, genres, technologies, and subjects. Students will conduct research, prepare didactic labels, write entries for the catalogue, and develop the website and symposium as part of their curatorial practice. There will be extensive hands-on engagement with examples from the Kislak collections as well as practical training in papermaking, materials, and binding. By permission only.
Course not offered every year

ARHT 507 MLA Proseminar
This MLA Proseminar course in the history of art explores an aspect of Art History and Theory; specific course topics vary. Proseminars are taught by Penn Standing Faculty and fulfill a core MLA Program requirement. Please see the College of Liberal and Professional Studies Course Guide for a description of current offerings.
Activity: Seminar
1.0 Course Unit

ARHT 511 Topics in Indian Art
Topic varies. Fall 2016: Important as texts have been to South Asia's history, perceptions of the physical world dominate experience within South Asian cultures. Seeing and being seen, vocalizing and hearing, contribute to the construction of meaning. This pro-seminar will approach South Asia's perceptual world as expressed and tested by art, and methods to frame art as a source of knowledge.
Course not offered every year
Also Offered As: SAST 505
Activity: Seminar
1.0 Course Unit

ARHT 513 Ukiyo-e: Beyond the Great Wave
In this seminar we will take a closer look at the prints, paintings, and illustrated books produced in the genre known as 'ukiyo-e,' the 'pictures of the floating world.' We'll begin by asking how the 'Great Wave' became a global icon and we'll bust the myth of prints being used as wrapping paper. As we learn the history of the genre, from 1600 to ca. 1850, we'll also make critical interventions into that narrative, asking how 'ukiyo-e' became a genre within a larger artistic sphere; how publishers collaborated with designers to construct artistic personae; how illustrated books contributed to knowledge formations; and how concepts of authenticity and authorship remain critical to its understanding. Taught online, this course will also consider how internet resources affect our understanding of the work of art. Students need not have any Japanese language skills, but should have taken related courses in art history or East Asian Studies. Advanced undergraduates and graduate students preferred.
Taught by: Davis
Course not offered every year
Also Offered As: EALC 553
Activity: Seminar
1.0 Course Unit

ARHT 514 Topics in East Asian Art
Topic varies. Spring 2017: In this seminar, led by Hiromi Kinoshita, The Hannah L. and J. Welles Henderson Associate Curator of Chinese Art, Philadelphia Museum of Art, students will learn about the considerations of a gallery reinstallation relating to the presentation of the Chinese collections at the Philadelphia Museum of Art. With more than 7,000 objects spanning from the Neolithic to the present, the reinstallation aims to display highlights and strengths of the collection that include early ceramics, porcelains, sculpture, furniture and architectural interiors with paintings and textiles. Students will study original objects of different media from the collection and learn about curatorial practices that include examination and analysis, connoisseurship, exhibition layout and label writing. Previous knowledge of Chinese art history and culture would be advantageous.
Taught by: Davis, Steinhardt
One-term course offered either term
Activity: Seminar
1.0 Course Unit
ARTh 515 Topics in Japanese Art
Topic varies. Fall 2018: This course will consider Japanese woodblock prints, illustrated books, and paintings from the seventeenth through the twentieth century. Topics include: the formation of ‘Ukiyo-e’ or ‘the pictures of the floating world’ as a genre; the development of the publishing system and its audience; specific artists and their works; the reception of Japanese prints in Europe and America; the modern reinvention of the woodblock print; and others. We will also make extensive use of the collections held in the Kislak Center, the Philadelphia Museum of Art, and in other local collections. Assignments may include: close study of a single work; web page development; research paper; regular participation in discussions. Taught by: Davis
Course not offered every year
Also Offered As: EALC 260, EALC 661
Activity: Seminar
1.0 Course Unit

ARTh 517 History of the Book in East Asia
Spring 2018: From handscrolls to manga, books play a vital role in East Asian societies. In this course we will introduce the spread of book cultures across East Asia and reconsider the role and impact of material texts on societies in China, Korea, and Japan. Among the questions we’ll engage are: What is a book, an author, or an edition? How do readers affect books? How do publishers decide when to use illustrations, woodblock printing, or movable type? How has the history of books differed in China, Japan, and Korea from the history of the book in the West? We will consider various media (bamboo, paper, silk, and the digital), formats (scrolls, folded books, bound books, small to oversize), and the tensions between handwritten manuscript and printed pages. Hands-on sessions may include paper-making, bookbinding, and printing. This is an Objects-Based Learning course, using materials from the Kislak Center for Special Collections, Rare Books and Manuscripts, and the Penn Museum, with visits to the Philadelphia Museum of Art and the Free Library of Philadelphia. Requires no knowledge of any Asian language. Taught by: Davis, Chance

ARTh 519 Archiving Jazz: Visuality And Materiality In The Phila Jazz Community 1945-2019
This seminar will be organized around three distinct pathways. First, it will serve as an introduction to Jazz Studies and thus be attentive to the ways that jazz music has sparked an interdisciplinary conversation that is wide-ranging and ongoing. Second, we will be partnering with the African American Museum of Philadelphia to consider jazz within the realm of visual art. In light of efforts to map the ‘black interior’, how have visual artists (e.g. painters, sculptors, filmmakers, and photographers) sought to represent jazz? Third, we will endeavor to develop partnerships with the Philadelphia (and beyond) jazz community, especially as it pertains to creating and sustaining an archive that serves as a way to understand jazz as an instrument of placemaking and also as a vehicle for jazz musicians to take ownership of their narratives. The seminar will meet at the African American Museum of Philadelphia and be taught with members of the Museum staff. The course will culminate with a virtual exhibit of visual works and archival materials centering on Philadelphia’s jazz community and (if funding is available) a free concert to be held at AAMP. Undergraduates are welcome to register for the course with permission of the instructor. Taught by: Beavers

ARTh 520 Topics in Aegean Bronze Age
Topic varies from semester to semester. This Fall 2019 seminar will discuss The Architecture of Akrotiri, Thera. Around 3,500 years ago a culture thrived on the small island of Thera in the Cycladic islands of Greece. Excavations have revealed a portion of a sophisticated town with multi-storied buildings decorated with elaborate fresco programs and equipped with all the necessities to support a cosmopolitan community with trade contacts reaching throughout the Mediterranean, Egypt, and the Ancient Near East. Due to the Bronze Age eruption of the volcano at the center of the island, Akrotiri is known as the best-preserved Late Cycladic site in the Aegean. In this class, we will examine the architecture and frescoes, or wall paintings, of Akrotiri and explore what they reveal to us about this unique group of people. Students will write and present two research papers to the class. Taught by: Davis
Course not offered every year
Also Offered As: AAMW 520
Activity: Seminar
1.0 Course Unit

ARTh 522 Topics in Ancient Iranian Art
Topic varies. Spring 2018: This seminar will focus on the environmental, archaeological and textual record for settlement in the Persian/Arabian Gulf region from the Neolithic to the pre-Islamic Late Antique. Emphasis will be on the settlement history and material culture. Special attention will be paid to the close interaction of the local communities on the Arabian side of the Gulf with those on the Iranian/Indus valley side. The patterns of sea faring trade and interaction from Mesopotamia, Iran, Indus Valley and beyond will be considered. It is possible that this class will take a site trip to the UAE during the spring break, if the logistics can be arranged. Instructors: Professors Holly Pittman (Penn), Peter Magee (Bryn Mawr College).

1.0 Course Unit
ARTH 523 Narrative in Ancient Art  
Art history, and its cousins in religious, social, political and literary studies, have long been fascinated with the question of narrative: how do images engage time, tell stories? These are fundamental questions for ancient Near Eastern, Egyptian and Mediterranean art history and archaeology, whose rich corpus of narrative images is rarely considered in the context of 'Western' art. Relations between words and things, texts and images, were as fundamental to the ancient cultures we examine as they are to modern studies. As we weigh classic modern descriptions of narrative and narratology, we will bring to bear recent debates about how (ancient) images, things, monuments, and designed spaces engage with time, space, and event, and interact with cultural memory. We will ask 'who is the story for, and why?' for public and private narratives ranging from political histories to mythological encounters. Our case studies will be drawn from the instructors' expertise in Mesopotamian visual culture, and in the visual cultures of the larger Mediterranean world from early Greek antiquity to the Hellenistic, Roman, and Late Antique periods. One central and comparative question, for instance, is the nature of recording history in pictures and texts in the imperial projects of Assyria, Achaemenid Persia, the Hellenistic kingdoms, and Rome.  
Taught by: Kuttner/Pittman  
Also Offered As: AAMW 523, CLST 523, NELC 523  
Activity: Seminar  
1.0 Course Unit

ARTH 525 Topics in Greek and Roman Art  
Topics vary from semester to semester. For the Spring 2020 semester, the topic will be Violence and Ancient Mediterranean Art. The Greek and Roman world was fascinated by representing humans and beasts enduring physical and psychological pain, and images of violence inflicted by mortal and supernatural beings alike. These images occur in art of all kinds, consumed both privately and publicly, emerging in the domestic, religious, military and political sphere. They had a range of aims, from affording emotional catharsis, building political cohesion or enforcing social norms, to generating religious awe or confidence in empire -- and giving entertainment. As we explore this corpus, we can ask: what might be the roots of such preoccupation with the art of violence and pain in the 'classical tradition' and its post-antique legacy? Many modern cultures exhibit similar fascination: how far can modern reactions to and theories about such images be guides to reconstructing ancient viewership? How can ancient texts and histories help us in this interdisciplinary project?  
Taught by: Kuttner  
Course not offered every year  
Also Offered As: AAMW 525, CLST 521  
Activity: Seminar  
1.0 Course Unit

ARTH 529 Topics in Roman Architecture  
Topic varies. Spring 2018: This seminar offers a critical assessment of digital Roman architecture studies. What has been accomplished and learned over the last generation since the Digital Turn, and where is the field of Roman architecture being taken? Points of focus include several landmark case studies, such as digital reconstructions of the city of ancient Rome, and threatened cultural heritage sites in Syria. The course will involve readings of significant texts, in class discussions and presentations lead by the seminar's participants, and testing and critiquing of a limited set of digital tools.

Also Offered As: AAMW 529  
Activity: Seminar  
1.0 Course Unit

ARTH 532 Topics in Byzantine Art  
Topic varies from semester to semester. For the Fall 2020 semester, the topic will be: The Icon. This seminar explores the Byzantine icon and its legacy. Spanning nearly two millennia, from the emergence of Christian sacred portraiture to the reception of icon painting by the early twentieth-century Russian avant-garde, the seminar will introduce you to the history, historiography, and theories of the icon. While our focus will be on Byzantium and the wider world of Orthodox Christianity, especially in the Slavic Balkans and Eastern Europe, the seminar will also engage with fundamental questions concerning the nature, status, and agency of images across cultures. Topics to be addressed include iconoclasm and the problem of idolatry; the social and ritual lives of icons; authorship, originality, and replication; viewer response and the cultural construction of vision; the frontier between art and the sacred image; and the afterlife of the icon in modernity.  
Taught by: Drpic  
Course not offered every year  
Also Offered As: AAMW 530  
Activity: Seminar  
1.0 Course Unit

ARTH 540 Topics in Medieval Art  
Topic varies from semester to semester. For the Fall 2020 semester, the topic will be Migrating Materiality: Ivory Carving Around the Mediterranean. The craft of ivory carving around the Mediterranean is contingent upon the availability of imported elephant tusks, from either South East Asia or, more frequently, from the African continent. The shifting winds of trade routes offer an interpretive paradigm with which to analyze ivory objects from a variety of different cultural groups: the lack or abundance of ivory and the resulting desire for or surfeit of the material shapes its meaning and use around the Mediterranean basin. The study of ivory objects as they migrate across the Mediterranean allows us to investigate the rich intercultural interactions between Eastern and Western Christians, and both of these with the Islamic world. This course focuses on an object-oriented knowledge of ivory artifacts, with a strong emphasis on the collections at the Penn Museum, the Philadelphia Museum of Art, and other area collections.

Activity: Seminar  
1.0 Course Unit

ARTH 550 Topics in Southern Renaissance Art  
Topic Varies. Spring 2019: This course explores the art of composition in two respects: first, composition as the arrangement of words and sentences into prose; second, composition as the organization of visual elements into a painting. Through the writings of key Renaissance writers, we will explore such issues as the mythical origins of the portrait, the role of precious materials in art, the relationship between figure and ground, and the mechanics of depicting a painting into words. Some knowledge of a Romance language (Italian, French, Spanish, or Portuguese) helpful though by no means required.  
Taught by: Kim, Staff  
Course not offered every year  
Activity: Seminar  
1.0 Course Unit
ARTH 552 High Renaissance
One Italian poet called his garden ‘the blending of art and nature.’ In a
garden, he claimed, ‘one cannot discern whether a thing is the work of
one or the other; whether it is a piece of natural artifice or artificial
nature.’ Around the same time, the Italian humanist Jacopo Bonfadio invented
the term, terza natura, for gardens seemed to be a ‘third nature’ somehow
in between wild first nature and the second built or man-manipulated world
of human endeavor. The history of landscape architecture is a history of
man’s sometimes misguided efforts to ‘improve’ his surroundings in the
search for a beauty that harnessed natural forms through the application
of human reason. This seminar will address changing tastes in garden
design in Early Modern Europe but will also extend our study further into
the past, beyond Europe and forward to the present day. The seminar will
introduce themes in garden design and examples from garden history
and, in the process, the course will ask the participants to consider
different cultural visions of the ‘beautiful’ or ‘appropriate’ landscape and
ultimately better understand the history of the gardener’s art.
Taught by: Pastore

1.0 Course Unit

ARTH 559 Myth Through Time and in Time
The textual and physical remains of Greek and Roman culture and belief
as ‘myth’ entranced the post-antique European world and its neighbors.
Makers, patrons and viewers manipulated those survivals to challenge
and speak to a contemporary world. This course focuses on how and why
artists and their patrons engaged the mythic and examines the various
areas of political and religious life that sought animation through an
evocation of narratives from the past. Readings and case studies will
engage with very late antique, medieval, and early modern art, turning
to the modern and contemporary as well. Moving to the modern lets
us examine, among other things, how artists address the exclusionary
histories of the past, to enable critiques of myths of supremacy by one
gender, race, or culture over others.

ARTH 560 Topics in Aesthetics
is a philosopher whose writings on art, literature, and politics have had
tremendous influence on many disciplines in the Humanities and Social
Studies. He has been variously described as one of the leading German-
Jewish thinkers, and a secular Marxist theorist. With the publication of a
four-volume collection of this works in English, many more of his writings
have been made accessible to a wider public. Our seminar will undertake
a survey of his work that begins with his studies on language and
allegory, and continues with his autobiographical work, his writings on
art and literature, and on the imaginary urban spaces of the nineteenth-
century.

Course not offered every year
Also Offered As: COML 582, GRMN 580, JWST 582, PHIL 480
Activity: Seminar
1.0 Course Unit

ARTH 561 Topics in Northern Renaissance
Topic varies from semester to semester. For the Fall 2020 semester, the
topic will be: Privacy and Society. Dutch Painting in the Seventeenth
Century. How do paintings offer occasions for personal reflection, and
how do they construct social bonds? This course will promote new
critical approaches to interrogate three areas of Dutch ‘Golden Age’
painting: the development of landscape tradition; the pictorialization
of interior domestic spaces; the concept of group portraiture. The
burgeoning art market of the seventeenth offered both new forms
of intimacy—inviting the beholder into domestic interiors to observe
the events of everyday life—and public statements about leadership,
social structures, and national identity. Freed from the patronage of
churches and courts, Dutch artists produced pictures that could be
purchased for the home—landscapes, moralizing genre scenes, still
lifes, and portraits. They also made paintings for public spaces such as
guild halls and charitable organizations, which map the relationships
between members of civic organizations. The aim of this course is to
develop a set of critical skills for analyzing the different ways in which
seventeenth-century Dutch paintings drew upon shared social values,
national identity and economic pride, how they appealed to individual
buyer tastes, and how they established ideologies of land rights and
concepts of gendered space that may today be critiqued as exclusionary.
We will use our current circumstance of ‘social distancing’ as a way to
look anew at the question of how paintings of this period used art to
construct social bonds. Online in format, this course will address these
matters by pairing recent interventions in art history with foundational
texts. Part of our ongoing collective work will be the construction of
a checklist of paintings, drawings, and prints in the Philadelphia area
and its environs in the hopes that we may eventually view these works
together or have a shared plan of which works to observe in person as
time and access permits. In writing assignments, we will attend to the
representation of space, considering domestic interiors, urban settings,
church architecture, imperial arenas, and the politicization of landscapes
both real and imagined.

together or have a shared plan of which works to observe in person as
time and access permits. In writing assignments, we will attend to the
representation of space, considering domestic interiors, urban settings,
church architecture, imperial arenas, and the politicization of landscapes
both real and imagined.
Taught by: Brisman
Course not offered every year
Also Offered As: GRMN 578
Activity: Seminar
1.0 Course Unit
ARTh 573 Topics in Criticism & Theory
Topic for Spring 2021: Cultures of Reading in Imperial Russia What did it mean to be a reader in imperial Russia? What did people read, and to what ends? How was literacy cultivated, and what were the social implications? In this course, students will read several canonical works of nineteenth-century Russian literature that thematize and foreground the act of reading: as a pursuit undertaken for the betterment of self, society, nation, and world; as a light pastime for the bored or underemployed; but also as an enterprise fraught with potential for moral or civic ruin. In addition to closely investigating allusions to the specific texts and authors read by literary characters, we will also examine the reading habits of our own authors as both consumers and producers of literary culture. We will consider these dynamics against a backdrop of constant fluctuations in educational policies, the book market, and the circulation of texts within and beyond Russia as we work together to develop an understanding of the imperial Russian reading public(s).

Activity: Seminar
1.0 Course Unit

ARTh 577 Ecological Thinking in Art and Architecture
This seminar will address the diverse narratives of ecological thinking in the history of art, architecture, and urban planning during the 20th century. The course will contextualize and interrogate contemporary disciplinary discourses as well as historical assumptions related to ecological thinking in art and architectural history and environmentally-conscious practices. By mapping received trajectories of Eco Art, Ecocritical Art History, and Ecological Histories of Architecture and Urban Planning, the course will work from a subtly hidden foundation of eco-historical knowledge that connects these fields of inquiry, while also critiquing these trajectories and seeking to provide more focused and robust alternatives for knowledge production in the present. It aims to attract students from the School of Arts and Sciences and the Weitzman School of Design in a discussion on the interconnected histories of art and architecture during the 20th century.
Taught by: Zarmakoupi
Also Offered As: ARCH 713
Activity: Seminar
1.0 Course Unit

ARTh 579 Topics in American Art
Topic varies from semester to semester. For the Spring 2021 semester, the topic will be: Arts & Crafts Decorative Arts, 1875-1900. This seminar will offer an overview of American decorative arts of the Arts & Crafts Movement, broadly conceived. It would explore the role of British antecedents, the Centennial Exposition as a catalyst for design reform, the growth of different regional centers (New England, the Midwest, the South, California), the movement’s relationship to modernism in the first decades of the 20th century, and its relationship to the Studio Craft movement of the post-World War II era. Issues to be addressed include the challenge of defining Arts & Crafts ‘style(s)’, disconnects between theory and practice, relationships between handicraft and factory production, roles of women and amateurs, and tensions between artistic elites and advocates for social and political reform. Major firms and figures to be highlighted include Rookwood Pottery, Louis Comfort Tiffany, Gustav Stickley, and Frank Lloyd Wright. Special attention will be paid to Arts & Crafts artists in the Philadelphia area: William L. Price and Rose Valley, Henry Chapman Mercer and the Moravian Tile Works, the New Hope School, and Wharton Esherick.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ARTh 580 The Sexuality of Postmodern Art
This course is fundamentally concerned with why so many of the defining artists of the postwar generation were queer, indeed such that one could plausibly claim that postmodernism in American art was a queer innovation. Centrally, most of these artists raise the problem, as the above quotes underscore, of authoriality and its discontents. Deploying a combination of social-historical and theoretical texts, we will approach the problem of the disclaiming of authoriality in post-war American art, focusing on the works of John Cage, Robert Rauschenberg, Jasper Johns, Cy Twombly, Robert Indiana, Louise Nevelson, Ellsworth Kelly, Agnes Martin, Leon Polk Smith and not least Andy Warhol. Central to this course will be the continuing salience of the ‘death of the author’ discourse, pioneered in literature by Barthes and Foucault, and in art by every one of the artists we will be examining. What, in short, is the relationship between the rise of an anti-biographical, anti-authorial theoretical framework, and the lived histories of so many queer authors? In asking this question, we are of course self-consciously violating the very premise of one key strand of postmodernist critique—and in so doing attempting to historicize a theoretical frame that is strikingly resistant to historical analysis. (Undergraduates interested in the course should contact Professor Katz.)

ARTh 582 Modern and Contemporary Design
This seminar will provide a brief overview of the history of modern and contemporary design, from the beginning of the Industrial Revolution to today, and engage students in the hands-on analysis of objects through the collections of the Philadelphia Museum of Art, the consideration of the presentation of objects in museums, and the discussion of several important contemporary topics in the study of material culture.
Taught by: Brownlee
Course not offered every year
Activity: Seminar
1.0 Course Unit
ARTH 583 Art, Sex and the Sixties
With a distinct emphasis on post World War II performance, film, sculpture and painting, this course explores the conjunction of the period's systematic revamping of our social/sexual schema with the equally revolutionary ascendency of an artistic postmodernity. And it seeks to explore this dynamic not only within the familiar confines of North America and Europe but towards Latin America and Asia, too, in what was a nearly simultaneous emergence of the erotic as a political force in the 60s. Reading a range of key voices from Brazilian theorist and poet Oswald de Andrade to Frankfurt School philosopher Herbert Marcuse, performance artists Carolee Schneemann, and Yoko Ono, Neo-Freudian theorist Norman O. Brown and lesbian feminist author Monique Wittig, we will examine how and why sex became a privileged form of politics at this historical juncture in a range of different contexts across the globe. Students interested in feminist, gender or queer theory, social revolution, performance studies, post war art and Frankfurt School thought should find the course particularly appealing, but it assumes no background in any of these fields.
Taught by: Katz
One-term course offered either term
Also Offered As: GSWS 520

1.0 Course Unit

ARTH 584 Topics in Cultural History
Topic for Spring 2016: Making and Marking Time. What is time? In the late 19th century, the questions of how to define time, how to slow down time, and, above all, how to accelerate movement have become focus of the work by many European philosophers who have tried to come to terms with what is now termed as the Industrial Revolution, and the idea of 'progress.' And can time be understood as something continuous, or is it fragmented, proceeding in fits and bursts? Such contemplations on time have deeply influenced writers. Marcel Proust was a reader of Henri Bergson and translated his theories of time into a concept of memory. Thomas Mann has tried to navigate timelessness in a novel set on a 'Magic Mountain.' Virginia Woolf and James Joyce have pictured an entire universe in a single day (Mrs. Dalloway, Ulysses) while early 20th century Italian Futurists made the contemplation of time part of their manifestos. With them, and with expressionist writers in Germany or writers from the DADA movement there elsewhere in Europe, a reckoning with time would also influence their choice of genre and form, writerly practice, and technique. Parallel to these literary experimentation, pictures were set into motion in scholarly studies by Eadweard Muybridge and finally in the new medium film; Impressionist painters insisted on picturing fleeting moments, and composers experimented with temporal sequences. We may be able to understand a reconsideration of time as driving force for the modern movement, or simply 'modernity.' In this seminar, we will study a selection of literary texts of the late 19th century and the modernist movement, consider the philosophical background and changes in historiography, and integrate a consideration of the visual arts and music.

ARTH 585 Topics in 19th Century Art
Topic Varies. Spring 2015: Birthplace of the nation, industrial metropolis-Philadelphia is the definitive American 'place.' This seminar will explore the visual history of the city as a symbolic site described and defined by painters, printmakers and photographers as well as politicians and capitalists and most importantly, its residents. How and why were certain sites selected and exploited within an evolving civic iconography? How did Philadelphia’s visual culture influence approaches to placemaking? And how did artists navigate the increasingly complex political and social as well as aesthetic conflicts between myth and reality?

ARTH 587 Topics in Cinema and Media
Spring 2016: Taking its title from a recent special issue in the journal Framework, this seminar will engage the where of film and media theory. At a moment when this discourse, often presumed to have roots in Anglo and Western European traditions, is purportedly undergoing a global turn, we will consider how some of film and media theory's key terms and preoccupations including realism, documentary, genre, identity, sound, spectatorship, nation, auteur, and screens are being inflected by expanded geographic, linguistic, aesthetic and cultural frames. We will grapple with some of the logistical challenges, motivations, resistances, and questions that scholars encounter as they attempt to shift film and media theory's borders; compare contemporary efforts to broaden the discourse's geographic horizon with earlier efforts to do the same; and consider what happens to the viewer's sense of space and place in different media environments. Course requirements: full participation in readings, screenings, discussion, and class presentations; 20-25 page research paper + annotated bibliography. Permission of instructor required for advanced undergraduates.

ARTH 596 Topics in Contemporary Art
Topic varies. Spring 2018: An experimental class for artists and scholars. Organized around a series of case studies of artists, collectives, infrastructures, and curatorial projects, the course includes: in-class discussion and viewing; workshops with class visitors; site visits; participation in small reading groups. In the first half of the class, students will complete some short assignments. In addition, students will produce a final project that is intentionally open in terms of form. The project, which can be collective or individual in nature, will enable an in-depth material investigation of one of the thematic areas of the class.

Activity: Lecture
1.0 Course Unit

ARTH 618 Art and Architecture in Ancient Egypt
This course will be an introduction to the art, architecture and minor arts that were produced during the three thousand years of ancient Egyptian history. This material will be presented in its cultural and historical contexts through illustrated lectures and will include visits to the collection of the University Museum.
Taught by: Silverman
Also Offered As: AAMW 618, ANCH 068, ARTH 218, NELC 068, NELC 668
Activity: Lecture
1.0 Course Unit

ARTH 622 Art of Ancient Iran
This course offers a survey of ancient Iranian art and culture from the painted pottery cultures of the Neolithic era to the monuments of the Persian Empire. Particular emphasis is placed on the Early Bronze Age.
Taught by: Pittman
Course not offered every year
Also Offered As: AAMW 622, ARTH 222, NELC 222, NELC 622
Activity: Lecture
1.0 Course Unit

ARTH 624 Art of Mesopotamia
The class presents a survey of the art and archaeology of Mesopotamia beginning with the appearance of the first cities and ending with the fall of the Assyrian Empire in the seventh century BCE. It presents the major artistic monuments of Mesopotamian culture, embedding them in their historical context. Focus is placed in particular on the interactions with surrounding cultures of Iran, Central Asia, the Caucasus, the Persian Gulf and Anatolia in order to decenter the discourse from a strictly Mesopotamian perspective. The format is lecture; assignments involve reading response papers; there are in class midterm and final exams.

Also Offered As: AAMW 624, ARTH 224, NELC 224, NELC 624
Activity: Lecture
1.0 Course Unit

ARTH 625 Greek Art and Artifact
This course surveys Greek art and artifacts from Sicily to the Black Sea from the 10th century BCE to the 2nd century BCE, including the age of Alexander and the Hellenistic Kingdoms. Public sculpture and painting on and around grand buildings and gardens, domestic luxury arts of jewelry, cups and vases, mosaic floors, and cult artefacts are discussed. Also considered are the ways in which heroic epic, religious and political themes are used to engaged viewers' emotions and served both domestic and the public aims. We discuss the relationships of images and things to space and structure, along with ideas of invention and progress, and the role of monuments, makers and patrons in Greek society.
Taught by: Kuttner
Course not offered every year
Also Offered As: AAMW 625, ARTH 225, CLST 220
Activity: Lecture
1.0 Course Unit
ARTH 626 Hellenistic and Roman Art and Artifacts
This course surveys the political, religious and domestic arts, patronage and display in Rome's Mediterranean, from the 2nd c. BCE to Constantine's 4th-c. Christianized empire. Our subjects are images and decorated objects in their cultural, political and socio-economic contexts (painting, mosaic, sculpture, luxury and mass-produced arts in many media). We will start with the Hellenistic cosmopolitan culture of the Greek kingdoms and their neighbors, and late Etruscan and Republican Italy; next we map Imperial Roman art as developed around the capital city Rome, as well as in the provinces of the vast empire.
Taught by: Kuttner
Course not offered every year
Also Offered As: AAMW 626, ARTH 226, CLST 221
Activity: Lecture
1.0 Course Unit

ARTH 632 Byzantine Art and Architecture
This course offers a wide-ranging introduction to the art, architecture, and material culture of Byzantium—a Christian, predominantly Greek-speaking civilization that flourished in the Eastern Mediterranean for over a thousand years. Positioned between the Muslim East and the Latin West, Antiquity and the Early Modern era, Byzantium nurtured a vibrant and highly sophisticated artistic culture. With emphasis placed upon paradigmatic objects and monuments, we will examine an array of artistic media, from mosaic and panel painting to metalwork, ivory carving, book illumination, and embroidery. We will consider the making, consumption, and reception of Byzantine art in a variety of contexts: political, devotional, ritual, and domestic. Topics include the idea of empire and its visual articulation; court culture; the veneration of images and relics; patronage, piety, and self-representation; authorship and artistic agency; materiality and the sensory experience of art; the reception of the pagan Greco-Roman past; and the changing nature of Byzantium's interactions with neighboring cultures.
Taught by: Drpic
One-term course offered either term
Also Offered As: AAMW 632, ARTH 232
Activity: Lecture
1.0 Course Unit

ARTH 633 Eastern Medieval Architecture
This lecture course examines major architectural developments in the eastern Mediterranean between the 4th and 14th centuries CE. The focus is on the Byzantine Empire, with its capital at Constantinople. Lectures also devoted to related developments in the Caucasus (Armenia and Georgia), early Russia, the Balkans (Bulgaria and Serbia), Sicily and under the Normans, the Crusader states. Parallel developments in early Islamic architecture are used for comparative purposes. The course examines evidence for religious and secular buildings, as well as urbanism and settlement patterns.
Taught by: Ousterhout

Also Offered As: AAMW 633, ARTH 233
Activity: Lecture
1.0 Course Unit

ARTH 635 Introduction to Visual Culture of the Islamic World
A one-semester survey of Islamic art and architecture which examines visual culture as it functions within the larger sphere of Islamic culture in general. Particular attention will be given to relationships between visual culture and literature, using specific case studies, sites or objects which may be related to various branches of Islamic literature, including historical, didactic, philosophical writings, poetry and religious texts. All primary sources are available in English translation.
Course not offered every year
Also Offered As: AAMW 635, ARTH 235, NELC 285, NELC 685, VLST 235
Activity: Lecture
1.0 Course Unit

ARTH 640 Medieval Art
An introductory survey, this course investigates painting, sculpture, and the 'minor arts' of the Middle Ages. Students become familiar with selected major monuments of the Late Antique, Byzantine, Carolingian, Romanesque, and Gothic periods, as well as primary textual sources. Analysis of works emphasizes the cultural context, the thematic content, and the function of objects. Discussions focus especially on several key themes: the aesthetic status of art and the theological role of images; the revival of classical models and visual modes; social rituals such as pilgrimage and crusading; the cult of the Virgin and the status of women in art; and, more generally, the ideology of visual culture across the political and urban landscapes.
Taught by: Guerin
Course not offered every year
Also Offered As: AAMW 640, ARTH 240
Activity: Lecture
1.0 Course Unit

ARTH 650 Michelangelo and the Art of the Italian Renaissance
An introduction to the work of the Renaissance artist Michelangelo (1475-1564) his sculptures, paintings, architecture, poetry, and artistic theory-in relation to his patrons, predecessors, and contemporaries, above all Leonardo and Raphael. Topics include artistic creativity and license, religious devotion, the revival of antiquity, observation of nature, art as problem-solving, the public reception and function of artworks, debates about style, artistic rivalry, and traveling artists. Rather than taking the form of a survey, this course selects works as paradigmatic case studies, and will analyze contemporary attitudes toward art of this period through study of primary sources.
Taught by: Kim
Course not offered every year
Also Offered As: ARTH 250
Activity: Lecture
1.0 Course Unit

ARTH 654 Global Renaissance and Baroque
An introduction to transcultural encounters within and beyond early modern Europe, 1450-1600. Topics include: the theory and historiography of global art; artistic relations between Venice, the Byzantine and Ottoman Empires, and islands in the Eastern Mediterranean; Portugal's overseas mercantile network in Africa and Asia; and the Baroque in Latin America, with emphasis upon Brazil. Our discussions focus on these paradigmatic case studies so as to question the language and terms we use to characterize confrontations between native and foreign, the self and the other.
Taught by: Kim
Course not offered every year
Also Offered As: ARTH 254
Activity: Lecture
1.0 Course Unit
ARTH 658 Early Modern Japanese Art and the City of Edo
Study of the major art forms and architecture of Tokugawa (or Edo) period (1603-1868). In this course, we will consider how the arts of this era occur within an increasingly urban and modern culture, particularly with regard to the city of Edo. Issues of the articulation of authority in the built environment, the reinvention of classical styles, and patronage will be raised. May include some visits to PMA, Penn Museum, or other local collections.
Taught by: Davis
Course not offered every year
Also Offered As: ARTH 258, EALC 150, EALC 550
Activity: Lecture
1.0 Course Unit

ARTH 661 Northern Renaissance Art
Survey of the principal developments in Northern Europe during the 'early modern' period, i.e. the transition from medieval to modern art-making during the fifteenth and sixteenth centuries. Principal attention to painting and graphics with additional consideration of developments in sculpture, particularly in the regions of the Netherlands and German-speaking Europe. Attention focused on the works of the following artists: Van Eyck, Bosch, Durer, Holbein, Bruegel, and on topics such as the rise of pictorial genres, urban art markets, Reformation art and art for the dynastic courts of emerging nation-states.
Course not offered every year
Also Offered As: ARTH 261
Activity: Lecture
1.0 Course Unit

ARTH 662 Netherlandish Art
Dutch and Flemish painting in the 15th and 16th centuries with special emphasis on the contributions of Robert Campin, Jan van Eyck and Roger van der Weyden, Bosch, and Bruegel.
Course not offered every year
Also Offered As: ARTH 262, DTCH 261
Activity: Lecture
1.0 Course Unit

ARTH 667 Latin American Art
The numerous traditions of Latin American art have been formed from the historical confluence of Indigenous, European, African, and Asian cultural traditions, each one impacting the others. This course serves as an introduction to these hybrid New World art forms and movements by both providing a large chronological sweep (1492-present) and focusing on several specific countries, including Brazil, Mexico, Cuba, Peru, and Argentina.
Taught by: Shaw, Kim
Course not offered every year

Activity: Lecture
1.0 Course Unit

ARTH 670 The Modern City
A study of the European and American city in the eighteenth, nineteenth, and twentieth centuries. Emphasis is placed on the history of architecture and urban design; political, sociological, and economic factors also receive attention. The class considers the development of London, St. Petersburg, Washington, Boston, Paris, Vienna and Philadelphia.
Taught by: Brownlee
Course not offered every year
Also Offered As: ARTH 270, URBS 276
Activity: Lecture
1.0 Course Unit

ARTH 671 Modern Architecture, 1700-1900
The history of western architecture, ca. 1700-1900, when architecture was transformed to serve a world that had been reshaped by political and industrial revolutions. Topics to be considered include the Rococo, the English Garden, Palladianism, Romanticism, neo-classicism, the picturesque, the Greek and Gothic Revivals, and the search for a new style.
Taught by: Brownlee
One-term course offered either term
Also Offered As: ARTH 271
Activity: Lecture
1.0 Course Unit

ARTH 673 History of Photography
A history of photography and theories of photography from 1839 to the present. Photography's origins are rooted both in artistic desire and technological ingenuity. Some of photography's inventors identified more as artists than engineers. At many points in the history of the medium, the question remains open whether new forms of artistic expression are driven by new technologies, or whether new technologies emerge to fulfill the desires of artistic imagination. This class will address photography's relationship with painting, print, and drawing. It will examine the effect of photography on portraiture, landscape, depictions of motion, and abstraction. We will also investigate the changing cultural perception of photography as an artistic medium from the 19th to the 21st century.
Taught by: Vershbow
Course not offered every year
Also Offered As: ARTH 273, VLST 273
Activity: Lecture
1.0 Course Unit

ARTH 674 Facing America
This course explores the visual history of race in the United States as both self-fashioning and cultural mythology by examining the ways that conceptions of Native American, Latino, and Asian identity, alongside ideas of Blackness and Whiteness, have combined to create the various cultural ideologies of class, gender, and sexuality that remain evident in historical visual and material culture. We also investigate the ways that these creations have subsequently helped to launch new visual entertainments, including museum spectacles, blackface minstrelsy, and early film, from the colonial period through the 1940s.
Taught by: Shaw, Staff
Course not offered every year

Activity: Lecture
1.0 Course Unit
**ARTH 676 Impressionism**

Impressionism opened the pictorial field to light, perception, science, modernity, bourgeois leisure and famously the material qualities of paint itself. This course will survey the movement's major contexts and proponents—Manet, Monet, Morisot, Cézanne, Gauguin, Van Gogh, Rodin—from its origins in the 1860’s to its demise in the 1890’s, as well as its subsequent adaptations throughout the world until World War I. Particular attention is paid to the artists’ critical reception and the historical conditions which allowed one nation, France, to claim the emergence of early Modernism so firmly for itself. The course also analyzes the effects of the rapidly changing social and cultural fabric of Paris, and its affects on artistic developments. We also look outside of France’s borders to Germany and Britain.

Taught by: Dombrowski

One-term course offered either term

Also Offered As: ARTH 276

Activity: Lecture

1.0 Course Unit

**ARTH 677 The Rise of Modernity: Arts of the 19th Century**

The nineteenth century is often considered as fast-paced, politically volatile and new-media obsessed as our own age. This course explores the nineteenth century’s claim to have produced the first truly modern culture, focusing on the visual arts and metropolitan spaces of Europe and North America in their intellectual and social contexts. Stretching from the American and French Revolutions to the eve of World War I, topics to be covered include: the rise of capitalist and industrialist culture, art and revolutionary upheaval, global travel and empire, the origins of modernist art and architecture, and new media such as stereoscopes, iron and glass construction, and photography. Major artistic personalities of the age, from Jacques-Louis David and Gustave Courbet to Claude Monet and Vincent Van Gogh, and from Friedrich Schinkel and, Baron Haussmann to Frank Furness and Frank Lloyd Wright, are discussed. Each lecture will be followed by a brief period of discussion, and regular field trips take students to examine art and architecture first hand, in the museums and on the streets of Philadelphia.

Taught by: Brownlee, Dombrowski

Course not offered every year

Also Offered As: ARTH 277

Activity: Lecture

1.0 Course Unit

**ARTH 678 American Art**

This course surveys the most important and interesting art produced in the United States (or by American artists living abroad) up through the 1950s. This period encompasses the history of both early and modern art in the U.S., from its first appearances to its rise to prominence and institutionalization. While tracking this history, the course examines art’s relation to historical processes of modernization (industrialization, the development of transportation and communications, the spread of corporate organization in business, urbanization, technological development, the rise of mass media and mass markets, etc.) and to the economic polarization, social fragmentation, political conflict, and the cultural changes these developments entailed. In these circumstances, art is drawn simultaneously toward truth and fraud, realism and artifice, science and spirituality, commodification and ephemerality, nationalism and cosmopolitanism, individualism and collectivity, the past and the future, professionalization and popularity, celebrating modern life and criticizing it.

Taught by: Leja, Shaw

One-term course offered either term

Also Offered As: ARTH 278

Activity: Lecture

1.0 Course Unit

**ARTH 681 Modern Architecture, 1900-Present**

The architecture of Europe and America from the late nineteenth century until the present is the central subject of this course, but some time is also devoted to Latin American and Asian architecture and to the important issues of modern city planning. Topics discussed include the Arts and Crafts movement, Art Nouveau, Expressionism, Art Deco, the International Style, and Post-modernism. The debate over the role of technology in modern life and art, the search for a universal language of architectural communication, and the insistent demand that architecture serve human society are themes that are traced throughout the course. Among the important figures to be considered are Frank Lloyd Wright, Walter Gropius, Le Corbusier, Louis Kahn, Robert Venturi, and Denise Scott Brown. The course includes weekly discussion sessions and several excursions to view architecture in Philadelphia.

Taught by: Brownlee

One-term course offered either term

Also Offered As: ARTH 281

Activity: Lecture

1.0 Course Unit

**ARTH 685 Modern Art**

The history of modern art is closely tied to and largely unfolds from the history of Western Imperialism. While the technologies made possible by colonial resource extraction produced new ways of looking, modern conceptions of the self and how to represent it developed in dialogue with racialized notions of the other. This course focuses on encounters between the cultures of Africa and Europe, from 1880 to 1960, and on the visual practices that emerged on both continents as a result. Topics of special interest will include racial difference and the birth of photography, colonial masquerade, impressionism, symbols of power in royal arts, cubism, mass marketing and colonial self-fashioning, West African studio photography, world’s fairs and the Musée de l’Homme, Dada and surrealism, Negritude and interwar Paris, anti-aesthetics, colonial arts education, National art schools in the age of African independence, humanism and South African photography under Apartheid.

1.0 Course Unit
ARTH 686 Modern Art: Picasso to Pollock
Early twentieth-century art in Europe is marked by a number of exciting transformations. This period witnessed the rise of abstraction in painting and sculpture, as well as the inventions of collage, photomontage, constructed sculpture, the ready made and found object, and performance art. Encounters with the arts of Africa, Oceania and other traditions unfamiliar in the West spurred innovations in media, technique, and subject matter. Artists began to respond to the challenge of photography, to organize themselves into movements, and in some cases, to challenge the norms of art through ‘anti-art.’ A new gallery system replaced traditional forms of exhibiting and selling art, and artists took on new roles as publicists, manifesto writers, and exhibition organizers. This course examines these developments, with attention to formal innovations as well as cultural and political contexts. This course requires permission from the instructor.

ARTH 690 Post War Japanese Cinema
Mizoguchi Kenji, Ozu Yasujiro, and Kurosawa Akira are recognized today as three of the most important and influential directors in Japanese cinema. In their films of the late 1940s and 1950s, these directors focused upon issues surrounding the human condition and the perception of truth, history, beauty, death, and other issues of the postwar period. This course places their films in period context, and pays particular attention to the connections to other visual media, and to how ‘art’ and ‘history’ are being defined in the cinematic context. How other directors also took up these issues, and referred to the ‘big three’ is also be discussed.

ARTH 694 Art Now
One of the most striking features of today's art world is the conspicuous place occupied in it by the photographic image. Large-scale color photographs and time-based installations in projections are everywhere. Looking back, we can see that much of the art making of the past 60 years has also been defined by this medium, regardless of the form it takes. Photographic images have inspired countless paintings, appeared in combines and installations, morphed into sculptures, drawings and performances, and served both as the object and the vehicle of institutional critique. They are also an increasingly important exhibition site: where most of us go to see earthworks, happenings and body-art. This course is a three-part exploration of our photographic present.
Taught by: Silverman
Course usually offered in spring term

ARTH 695 Cinema and Media
This course will provide an introduction to some of the most important film theory debates, and allow us to explore how writers and filmmakers from different countries and historical periods have attempted to make sense of the changing phenomenon known as ‘cinema,’ to think cinematically. Topics under consideration may include: spectatorship, authorship, the apparatus, sound, editing, realism, race, gender and sexuality, stardom, the culture industry, the nation and decolonization, what counts as film theory and what counts as cinema, and the challenges of considering film theory in a global context, including the challenge of working across languages. There will be no screenings for this course. No knowledge of film theory is presumed. Course requirements: attendance at lecture and participation in lecture and section discussions; canvas postings; 1 in-class midterm; 1 take-home final.

ARTH 696 Contemporary Art
Many people experience the art of our time as bewildering, shocking, too ordinary (my kid could do that), too intellectual (elitist), or simply not as art. Yet what makes this art engaging is that it raises the question of what art is or can be, employs a range of new materials and technologies, and addresses previously excluded audiences. It invades non-art spaces, blurs the boundaries between text and image, document and performance, asks questions about institutional frames (the museum, gallery, and art journal), and generates new forms of criticism. Much of the ‘canon’ of what counts as important is still in flux, especially for the last twenty years. And the stage is no longer centered only on the United States and Europe, but is becoming increasingly global. The course will introduce students to the major movements and artists of the post-war period, with emphasis on social and historical context, critical debates, new media, and the changing role of the spectator/participant.

ARTH 701 Proseminar in Methods in the History of Art  
Spring 2019: This course introduces theories and methods of the history of art and architecture, as well as classical archaeology, that have played a major role in the formation of these disciplines from the later eighteenth century to the present day. Classical archaeology is usually said to begin as art history with J.J. Winckelmann (1717-68) and the course will map the intellectual geographies of these disciplines. Our aim will be to shed light on the epistemological underpinning of Winckelmann’s History of Art of Antiquity, the shackling of subsequent understandings of historical processes but foremost to consider other approaches. The seminar will give a broad overview of theories and methods in relation to relevant developments in other disciplines, such as philosophy, aesthetics, history, and anthropology. Topics include antiquarianism, idealism, formalism, iconography and iconology, semiotics, technologies of vision and the period eye, theories of space and place, gender and sexuality studies, the social history of art, and neuroaesthetics among others. Readings include key texts by major art and architecture theorists and historians and tackle approaches that range from early connoisseurship and the Frankfurt and Vienna Schools to recent questions of ‘affect’ and discourses of eco-aesthetics.

ARTH 714 Topics in East Asian Art  
Curatorial Seminar Spring 2015: This course will be offered in association with the exhibition, Representing Place: Landscape and Imagination in Modern Japanese Prints, to be held at the Arthur Ross Gallery in spring 2015. The seminar proposes to expand our discussion of landscape as a larger theme in the visual arts, with examples drawn from Europe, America, East Asia, and other locations. We will further consider how some sites became known as famous places, and how that act is tied up to issues of local, regional and national identity and often implicated in the promotion of specific places. This course will feature the opportunity to study works in the PMA collection, travel to ‘famous sites’ around Philadelphia, and participate in the final preparations and installation of the exhibition.

ARTH 720 Topics in Aegean Art  
Topic varies. Fall 2018: The choices made by groups of people with regard to the treatment of their dead can be reflective of a society’s beliefs and social structure. In this course, we will examine the burial traditions of the people of the Prehistoric Aegean from the Neolithic through the end of the Bronze Age, circa 7,000-1,100 BCE. We will focus on burial architecture, grave goods, burial rituals, mortuary variability, and the symbolic meaning of death and burial in Prehistoric Greece. Particular attention will be paid to recent discoveries on Crete, the Mainland, and the Cycladic islands. Students will write two papers, and these papers will be presented to the class. The first paper will be circa 15 pages long with footnotes, bibliography, and images (presented via powerpoint) and the second will be a 20-25 page paper with footnotes, bibliography, and images presented via powerpoint.

ARTH 732 Topics in Byzantine Art and Architecture  
Topic varies. Spring 2018: The recent ‘return’ to the object across the humanities and social sciences has brought to the fore concerns with the nature of material things, their operation in the world, and their entanglement with humans. This seminar will introduce you to some of the key theoretical writings on the object and material culture and will ask you to interrogate their relevance for the discipline of art history. Our focus will be on the Middle Ages, but depending on the specific interests of the seminar’s participants, we may venture into other historical periods and cultural domains. Topics to be addressed include the social life of things; agency; materiality; the relic; the gift; the miniature; and the question of the human/nonhuman divide.

1.0 Course Unit

ARTH 750 Topics in Southern Renaissance Art
Topic varies from semester to semester. For the Fall 2020 semester, the topic will be ‘Figure and Ground.’ We owe the Renaissance picture more than the idealized human figure. For figure, depends on ground, here defined in at least three senses: 1) the ground as the material preparation of the support; 2) the plane where figures anchor their place in the pictorial world; and 3) the field in and against which figuration occurs, namely the background. In this graduate seminar, we will attempt to discuss, debate, and formulate ideas and methods to interpret the Renaissance picture according to these three semantic areas of ground. We will begin with gold grounds in the fourteenth century and conclude with the darkened grounds of tenebrist painters such as Caravaggio. In addition to reading current art historical scholarship grappling with several ‘turns’ (material, global, ecocritical) as well as Anne Cheng’s notion of ‘ornamentalism’ that draws from critical race and gender theory, we will also focus our attention on those Renaissance writers who described and prescribed the look of the picture in ways not usually accommodated by standard art historical approaches. Rather than recuperating the ground as an integral category, we will instead consider the acute dilemma of the ground’s theoretical exception.

1.0 Course Unit

ARTH 761 Topics in Northern Renaissance Art
Topic varies from semester to semester. Fall 2019: One of the primary concerns of those who study works of art is who made it. In the early modern period, artists were also concerned with this question, and found innovative ways to assert authorship by stamping their works with monograms and signatures, securing rights to intellectual property, and launching lawsuits against each other. While the death of the author has long been asserted in literary theory and has consequently urged art historical approaches to think beyond concepts of artistic genius and authorial voice, questions of authorship and workshop practice are still necessary to the establishment of the basic biographies of objects. This seminar explores how these various approaches may work together by combining close readings of primary-source documents, theoretical approaches to concepts of authorship, and object-based studies in different media represented in the Philadelphia Museum of Art: paintings, prints, drawings, textiles, architecture, decorative arts, and armor.

ARTH 775 Topics in 19th Century European Art  
Topic varies from semester to semester. For Spring 2020, this course will cover 'Cezanne, Alienation, and Modern Portraiture.' In the process of advancing modern art, Cezanne is often said to have subjugated the modern individual to the painting. Lost in conspicuous brushwork and vibrant coloration, the sitter had a difficult time making their presence felt in his work (not least his wife, Hortense Fiquet, who he portrayed most frequently). With the help of new scholarship on the artist and the period, this course will reassess this old saw of modernist art history, and instead place Cezanne’s innovations carefully within the contemporary emergence of psychology and modern urban consciousness. We will discuss the various ways in which the birth of modernist representation coincided with the birth of the modern subject, and develop new means to analyze modernist portraiture more broadly. Along the way, this seminar will look carefully at Cezanne’s entire career and oeuvre (and that of several of his colleagues as well), and we will study in particular the ways in which writers, philosophers and art historians—from Zola, Rilke, Heidegger and Merleau-Ponty to Jonathan Crary, Tamar Garb and T. J. Clark more recently—have used the artist to write their histories of modernism and modernity since the turn of the last century.

1.0 Course Unit

ARTH 777 The Long Nineteenth Century: Literature, Philosophy, Culture  
The present course will discuss German literature and thought from the period of the French Revolution to the turn of the twentieth century, and put it into a European context. In regard to German literature, this is the period that leads from the Storm and Stress and Romanticism to the political period of the Vormarz, Realism, and finally Expressionism; in philosophy, it moves from German Idealism to the philosophy of Schopenhauer, Nietzsche, and neo-Kantian thought. It is also the period that saw the rise of the novel, and new forms of dramatic works. Painting moved out of the studio into plein air; the invention of photography made an imprint on all arts, and the rise of the newspaper led to new literary genres such as the feuilleton. Economically, Germany experienced the industrial revolution; politically, it was striving for a unification that was finally achieved in 1871. The nineteenth century saw the establishment of the bourgeoisie, the emergence of the German working class, and the idea of the nation state; it also saw Jewish emancipation, and the call for women’s rights. Readings will focus on a variety of literary, political, and philosophical texts; and consider a selection of art works.

ARTH 791 African Film and Media Pedagogy
This graduate seminar offers an intensive, critical, and collaborative study of contemporary African film and media production. The past three decades have seen an unprecedented shift in the African media landscape. Not only has the wide availability of satellite media across the continent made international film and television programming part of African popular culture, but moreover the growing film industries within the continent, most notably Nollywood, have altered how Africans are carving an image of themselves on the big and small screens. In partnership with local, regional, and international film and media centers, we will study a range of films—features, shorts, documentaries, and television shows—paying close attention to the means and sites of production as well as the formal qualities that distinguish these works. Many of the films we will analyze stand out both for their exceptional aesthetic quality as well as their remarkable ability to confront pressing political and social themes. But we will also think about trash: what counts as trashy media, and for whom? Who watches it, where, and why? Other questions we will ask include: What particular indigenous modes of storytelling do African films employ? What categories begin to emerge under the umbrella category of ‘African film and media;’ and where do diasporan film and media practitioners and critics fit in this landscape? How are these films tackling some of the urgent questions of our times, including migration and globalization; ethnic, political, and economic polarization; gender and sexuality; and massive urbanization and industrialization sweeping Africa and other parts of the Global South? What role do festivals in various countries play in shaping media production and distribution? How important is the concept of authorship in this context? And how do these films challenge the dominant western trope of Africa as a spectacle, instead offering novel ways of picturing everyday African experiences that we rarely glimpse in western media?
To explore these questions, we will visit multiple sites of film production, distribution, exhibition, and education, including Scribe Video Center in Philadelphia, Sankofa Films in Washington, D.C., and the College of Performing and Visual Art at Addis Ababa University in Ethiopia. Location and knowledge production are inextricably connected, and by considering African media production from these multiple sites, and collaborating with multiple stakeholders, this course offers a directly engaged pedagogy of the complex artistic, cultural, social, and political dynamics of African audiovisual creation. The travel component of this course entails a day trip to Washington, D.C. during the semester (tentative date: April 2, 2020) and a week-long trip to Addis Ababa at the end of the spring term (students applying for this course should be prepared to travel to Addis Ababa May 30, 2020-June 7, 2020). All expenses for travel, accommodation, and food will be covered, but students will need to hold a passport. Ultimately, this course aims to use film and media production to intervene in a larger discourse on how Africa is figured in the global humanities, not as an absent or passive actor but one actively engaged in producing art and humanistic knowledge that has much to teach us and the world. Admission to the course will be by permission only and students are required to submit a short statement of interest (max. 250 words) to dagw@english.upenn.edu and redkaren@sas.upenn.edu.
Students must be prepared to travel to Addis Ababa and Washington D.C. as described in the syllabus, and must hold a passport.

Activity: Seminar
1.0 Course Unit

ARTH 792 Reading Against Racism
This course takes as its starting point Audre Lorde’s 1981 Keynote presentation at the National Women’s Studies Association Conference, ‘The Uses of Anger: Women Responding to Racism.’ Lorde, criticizing white feminists, states, ‘I cannot hide my anger to spare you guilt, nor hurt feelings, nor answering anger; for to do so insults and trivializes all our efforts. Guilt is not a response to anger, it is a response to one’s own actions or lack of action. If it leads to change then it can be useful, since it is then no longer guilt but the beginning of knowledge. Yet all too often, guilt is just another name for impotence, for defensiveness destructive of communication; it becomes a device to protect ignorance and the continuation of things the way they are, the ultimate protection for changelessness.’ Eschewing defensiveness, ignorance, and innocence, and opening to meaningful change by engaging the writings of anti-racist and anti-imperialist thinkers, including those focused on the transformation of higher education, this course examines the responsibilities scholars take on when we affirm that ‘Black Lives Matter,’ and acknowledges that higher education, including the humanities, is actively implicated in the structures and operations of white privilege and anti-black racism as well as in other intersectional modes of exclusion, including all forms of discrimination based on race, ethnicity, national original, ability, class, sexuality, gender, and beliefs. The course aims to approach these urgent but longstanding issues in ways that help us to understand some of the complexities, practicalities, and temporalities of the work of change; to grapple with what Rosalyn Deutsche in Hiroshima After Iraq (2011) describes as ‘the inseparability of the social and the psychic;’ and to seek out effective alternatives to the tendency of politicized academic writing in time of conflict to regress to what Deutsche calls ‘heroic masculinism.’ ‘Reading Against Racism’ is imagined as a way of catalyzing active, collective, and long-term anti-racist, anti-imperialist intellectual work. It seeks to participate in the development of more just and inclusive academic modes and spaces by fostering time and structure for thought and self-reflection, by generating ideas for implementation, and by learning from our readings as well as from each other. All students, white and BIPOC, are welcome to participate, but we will begin this course by working together to establish a community agreement that takes account of the different ways in which such a course is likely to be experienced by white and BIPOC people. For example, recognizing that discussions about race and racism require immense emotional labor from BIPOC people in particular, BIPOC students should not be asked to use their personal experiences to frame questions under discussion or to represent any group. We will establish together other guidelines to create as safe and supportive a space (or spaces) for reading, thinking, and acting against racism as we can muster, including deciding how we would like to include in our process tools like trigger warnings, opt-out mechanisms, smaller subgroups, etc.
Requirements: Weekly reading; weekly journal for self-reflection (required, but not for submission); participation in discussion; design a syllabus for an introductory course in your field. Thanks to all the students who have generously participated in developing this course and to the scholars who have written the materials we will read.

### Asian American Studies (ASAM)

#### ASAM 001 Asian Americans in Contemporary Society

This class will introduce you to sociological research of Asian Americans and engage in the 'model minority' stereotype. We begin by a brief introduction to U.S. immigration history and sociological theories about assimilation and racial stratification. The class will also cover research on racial and ethnic identity, educational stratification, mass media images, interracial marriage, multiracial, transracial adoption, and the viability of an Asian American panethnic identity. We will also examine the similarities and differences of Asian Americans relative to other minority groups.  
For BA Students: Society Sector  
One-term course offered either term  
Also Offered As: SOCI 103  
Activity: Lecture  
1.0 Course Unit

#### ASAM 002 Asian American Literature

An overview of Asian American literature from its beginnings at the turn of the twentieth century to the present. This course covers a wide range of Asian American novels, plays, and poems, situating them in the contexts of Asian American history and minority communities and considering the variety of formal strategies these different texts take.  
For BA Students: Arts and Letters Sector  
Course not offered every year  
Also Offered As: ENGL 072  
Activity: Lecture  
1.0 Course Unit

#### ASAM 003 Introduction to Asian American History

This course provides an introduction to the history of Asian/Pacific Americans, focusing on the wide diversity of migrant experiences, as well as the continuing legacies of Orientalism on American-born APA's. Issues of race, class, gender, and sexuality will also be examined.  
For BA Students: History and Tradition Sector  
Taught by: Azuma  
One-term course offered either term  
Also Offered As: HIST 155  
Activity: Lecture  
1.0 Course Unit

#### ASAM 006 Race and Ethnic Relations

This course will focus on race and ethnicity in the United States. We begin with a brief history of racial categorization and immigration to the U.S. The course continues by examining a number of topics including racial and ethnic identity, interracial and interethnic friendships and marriage, racial attitudes, mass media images, residential segregation, educational stratification, and labor market outcomes. The course will include discussions of African Americans, Whites, Hispanics, Asian Americans, and multiracial.  
One-term course offered either term  
Also Offered As: AFRC 006, SOCI 006, URBS 160  
Activity: Lecture  
1.0 Course Unit

#### ASAM 100 Introduction to Asian American Studies

According to the U.S. Census, there are approximately 21 million Asian residents in the U.S. that comprise almost 6 percent of the total population. This relatively small number disguises the critical experiences Asian American communities face in both the local and transnational context. Yet, Asian Americans constitute one of the most heterogeneous racial groups within the U.S. Over the course of this semester we will read about and actively discuss the history of Asian immigration to the U.S., the social construction and experience of race in the U.S., and the political, economic, and cultural contributions of Asian Americans. We will also examine how Asian Americans negotiate/deploy their culture and ethnicity to achieve recognition in multicultural America and how the construction of Asian American identity intersects with class, gender, and sexuality.  
Taught by: Pillai  
Course usually offered in fall term  
Activity: Lecture  
1.0 Course Unit

#### ASAM 104 Asian American Communities

Who is Asian American and how and where do we recognize Asian America? This interdisciplinary course explores the multiple factors that define Asian American identity and community. In order to provide a sketch of the multifaceted experience of this growing minority group, we will discuss a wide variety of texts from scholarly, artistic, and popular (film, cinematic) sources that mark key moments in the cultural history of Asia America. The course will address major themes of community life including migration history, Asian American as model minority, race, class, and transnational scope of Asian America. In combination with the readings, this class will foster and promote independent research based on site visits to various Asian American communities in Philadelphia and will host community leaders as guest lecturers.  
Taught by: Khan  
One-term course offered either term

ASAM 120 Asian American Popular Culture
This course will examine the ways in which Asian Americans have
constituted and positioned their identities through various mediums of
popular culture, community building and activism. First, students will
become familiar with major concepts relating to Popular Culture, Cultural
Studies, and Asian American Cultural Studies. Second, students will have
deeper understanding of the Asian American Movement. Third, students
will make connections between representations and dominant images of
Asian Americans within various mediums.
Taught by: Van Do
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ASAM 160 South Asians in the United States
This course investigates the everyday practices and customs of South
Asians in America. Every immigrant group has its own history, customs,
beliefs and values, making each unique while simultaneously a part of
the ‘melting pot’ or salad bowl’ of American society. Yet how do people
define themselves and their ethnicities living in a diasporic context? By
taking into account the burgeoning South Asian American population
as our model, this course will explore the basic themes surrounding the
lives that immigrants are living in America, and more specifically the
identity which the second generation, born and/or raised in American, is
developing. South Asians in the U.S. will be divided thematically covering
the topics of ethnicity, marriage, gender, religion, and pop culture. Reading
and assignments will discuss a variety of issues and viewpoints that are
a part of the fabric of South Asia, but will focus on the interpretation of
such expressive culture in the United States.
Taught by: Khan
Course usually offered in fall term
Also Offered As: SAST 290
Activity: Seminar
1.0 Course Unit

ASAM 165 The Asian Caribbean
This course complicates prevailing understandings of the Caribbean
and extends the boundaries of Asian America by exploring the histories,
experiences, and contributions of Asians in the Caribbean. In particular,
we will focus on the migrations of Chinese and Indian individuals to Cuba,
Trinidad, and Guyana as well as how their descendants are immigrating
to the United States. We will examine the legal and social debates
surrounding their labor in the 19th century, how they participated in the
decolonization of the region, and how their migration to the United States
complicates our understandings of ethnicity and race. Ultimately, through
our comparative race approach, we will appreciate that the Caribbean is
more than the Black Caribbean, it is also the Asian Caribbean.
Taught by: Pillai
Course usually offered in spring term
Also Offered As: GSWS 165, SAST 166
Activity: Lecture
1.0 Course Unit

ASAM 170 Psych of Asian Americans
Using a cultural perspective, this course is intended to provide knowledge
of Asian American personality, identity, and its relationship to mental
well being; analyze psycho-social research pertinent to Asian Americans;
and develop critical thinking skills on Asian American issues through
experiential learning/discussions.
Course usually offered in spring term
Also Offered As: SAST 170
Activity: Seminar
1.0 Course Unit

ASAM 175 Asian American Race Relations: Comparative Case Studies and Theories
This course provides an introduction to comparative racial frameworks
and case studies in Asian American Studies. In line with an emergent
body of work that considers the relational nature of racializations,
we will examine how Asian American racial constructions are not
only formed in relation to whiteness but also to other groups of color.
Starting from the premise that the US is dynamically multiracial, we
will consider how Asian Americans have been both ‘lumped together’
with and ‘counterpointed’ to other racially marginalized communities
across historical time. Moreover, we will explore how Asian Americans
themselves have articulated racial positions both in solidarity with and
opposition to other people of color. Lastly, we will survey the different
comparative racial frameworks Asian American Studies scholars have
developed to understand the shifting terrain of race relations. The
course places a particular emphasis on Asian-Black relations and
Afro Asian political theory, given the unique juxtaposition of these
groups in US racial discourse, the significance of ‘Blackness’ to Asian
American political and cultural identities, and the seminal place of these
discussions in Comparative Ethnic Studies. Course materials include
primary and scholarly readings, media, and material collaboratively
gathered by members of the class. We will focus on developing diverse
research methods for understanding the relational nature of Asian
American racialization and community formation, culminating in
individual research projects on case studies chosen by students in
consultation with the instructor.
Taught by: Daniel Woo
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ASAM 180 Asian American Food
You are what you eat. Asian American Food explores the history, politics,
and ethnic identity of food through a cultural lens. Growing food, eating,
and sharing meals serve as intimate expressions of self and community.
By examining the production and consumption of food, the course
investigates the ways that Asian Americans navigate traditions, gender
norms, religious dietary laws, food habits, and employment as they create
lives in the United States. The course overviews the history of Asian
American foodways, but has a particular focus on Philadelphia’s Asian
American communities.
Taught by: Khan, F
Course usually offered in spring term
Also Offered As: SAST 180, URBS 180
Activity: Seminar
1.0 Course Unit

ASAM 201 Topics in Asian American Sociology
Topics vary. Please see our website for more current information:
asam.sas.upenn.edu
One-term course offered either term
Also Offered As: SOCI 150, URBS 215
Activity: Lecture
1.0 Course Unit

ASAM 202 Topics In Asian American Literature
Topics vary. Please see our website for more current information:
asam.sas.upenn.edu
One-term course offered either term
Also Offered As: CIMS 272, ENGL 272
Activity: Seminar
1.0 Course Unit
ASAM 203 Topics in Asian American History
Topics vary. Please see our website for more current information: asam.sas.upenn.edu
One-term course offered either term
Also Offered As: AFRC 229, HIST 231
Activity: Seminar
1.0 Course Unit

ASAM 208 Asian American Cinema Movement: Fighting For Representation
Providing a broad introduction to the history of persons of Asian descent living in the United States, this course will specifically examine the Asian American & Pacific Islander American experience as told through the cinematic lens. Equal parts socio-political history and media studies, this course will comprehensively assess factors contributing to the historical under representation of AAPIs in mainstream American media. By contrast, the media texts that we study will reveal a cinematic history that runs parallel to the mainstream, consisting of independently produced films created by and/or starring AAPIs that feature authentic portrayals of the community they represent. Topics will include economics of film production, broadcast television ratings, film festivals as a mechanism of distribution, negative stereotyping, Hollywood whitewashing, cultural appropriation, and media activism. The course will take place once a week and will consist of a brief discussion of the previous week’s readings, followed by a lecture, and ending with a full or partial film screening relating to the current week’s topic. Additional out of class assignments will be given that involve attending the Philadelphia Asian American Film Festival, tentatively scheduled November 8-18, 2018. Students will have the opportunity to engage with and learn from AAPI filmmakers in attendance at the festival, with additional volunteer opportunities available for extra credit.
Taught by: Buscher
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ASAM 210 Asian Am Religions
This course examines the changing religious landscape of the United States through a focus on the religious life of Asian Americans. Through interdisciplinary texts and ethnographic field assignments, students will consider how religion and race intersect to inform notions of cultural and political citizenship, community, and culture. Topics to be explored include the impact of 9/11, religious political activism, and the appropriation and commodification of ‘Asian’ religious practices.
Taught by: Rupa Pillai
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

ASAM 215 Asian American Gender and Sexualities
This course explores the intersection of gender, sexuality, and race in Asian America. Through interdisciplinary and cultural texts, students will consider how Asian American genders and sexualities are constructed in relation to racism while learning theories on and methods to study gender, sex, and race. We will discuss masculinities, femininities, race-conscious feminisms, LGBTQ+ identities, interracial and intraracial relationships, and kinship structures.
Taught by: Rupa Pillai
Course usually offered in spring term
Also Offered As: GSWS 215, SAST 215
Activity: Seminar
1.0 Course Unit

ASAM 220 Asian American Women: Nation, Self and Identity
This course examines the literary constructions of Asian American Women’s identity in relation to the U.S. nation state. How have the figures of the tiger mother, the Asian nerd, the rice queen, the trafficked woman, the geisha, the war bride, emerged to represent Asian American women, and how have Asian American feminists responded to these problematic racial stereotypes? How does the scholarship on such racialized representations illuminate historical and contemporary configurations of gender, sexuality, race, class, nation, citizenship, migration, empire, war, neoliberalism and globalization as they relate to the lives of Asian American women? In exploring these questions, this course examines Asian American histories, bodies, identities, diasporic communities, representations, and politics through multi- and interdisciplinary approaches, including social science research, literature, popular representations, film, poetry and art.
Taught by: Roy
Course usually offered in spring term
Also Offered As: GSWS 220, SAST 221
Activity: Seminar
1.0 Course Unit

ASAM 294 Facing America
This course explores the visual history of race in the United States as both self-fashioning and cultural mythology by examining the ways that conceptions of Native American, Latino, and Asian identity, alongside ideas of Blackness and Whiteness, have combined to create the various cultural ideologies of class, gender, and sexuality that remain evident in historical visual and material culture. We also investigate the ways that these creations have subsequently helped to launch new visual entertainments, including museum spectacles, blackface minstrelsy, and early film, from the colonial period through the 1940s.
Taught by: Shaw, Staff
Course not offered every year
Also Offered As: AFRC 294, ARTH 274, ARTH 674, CIMS 293, LALS 274
Activity: Lecture
1.0 Course Unit
ASAM 313 The Chinese Body and Spatial Consumption in Chinatown
This course looks at representations of the Chinese (and Asian body) since the Limehouse district in East London and the advent of Chinese contract laborers to the Americas in the 19th century. The localization of the Chinese throughout the Americas within Chinatown precincts were also subject to representational imaginings that were negotiated through the lens of civic planning, literature and later in cinema. Chinatowns are ultimately a product of racism. They were created as a political and social support system for newly arrived Chinese immigrants. While Chinese laborers arrived into the United States in 1840 and in significant numbers into Canada about 1860, Chinese contract workers were encouraged to immigrate to the Americas as an inexpensive source of labor, especially after the end of the American Civil War. Industrial leaders in America, Canada and elsewhere in the Americas (Mexico, Cuba, Peru, etc) saw the arrival of Chinese workers as a victory for commercial interests. However, the celebration was short-lived, as anti-Chinese sentiment quickly transformed into anti-Chinese hysteria. Rather than attacking the vested interests that exploit foreign labor as embodied by the Chinese worker, racist unions with the cooperation of civic leaders and the police deemed it safer to burn Chinatowns than capitalist property. Deeply under-studied to this day is the number of mass murders of Chinese workers in the 19th century by anti-Chinese thugs. This seminar will focus in on how the body of the Chinese (and Asian) was imagined and reimagined multiple times from the middle of the 19th century to today. Taught by: Lum/Yang
Also Offered As: ENGL 273, FNAR 313, FNAR 613
Activity: Seminar
1.0 Course Unit

ASAM 354 American Expansion in the Pacific
This class will focus on America’s expansion into the Pacific around the turn of the century with the acquisition of Hawaii and the Philippines. It can deal with various issues, including the meaning of ‘frontier,’ colonialism, development of capitalist economies in the region, diplomacy, racism, migration, an American brand of Orientalism in encountering the ‘natives’ and ‘heathens,’ and histories of the West and the Pacific Islands in general. Taught by: Azuma
One-term course offered either term
Also Offered As: HIST 354
Activity: Lecture
1.0 Course Unit

Asian Languages (ALAN)

ALAN 240 Intermediate Mongolian I
Mongolian is the national language of the independent State of Mongolia and the language of the nomadic warriors Genghis Khan (known to the Mongolians themselves as Chinggis Khan). It is also spoken in China and Siberia. Today Mongolian musical styles like throat singing (khoomii), products like cashmere (nooluur), and tourism to visit Mongolia’s nomadic herders (malchid) are making a mark on the world stage. In this class the students will continue with the basics of modern Mongolian language, as spoken in Ulaanbaatar ‘Red Hero,’ the country’s capital. They will learn in the phonetic Cyrillic script, which was adapted to Mongolian language from Russian in 1945, with a few additional letters. Intermediate and more advanced grammar will be taught through communicative methodology. Students will also have opportunity to experience Mongolian arts, culture, and cooking in and out of class. This is the first semester of Intermediate Mongolian. By the end of two semesters intermediate Mongolian, students will have learned all the noun forms, and all the major verb forms and will be able to form complex, multi-clause sentences, telling stories, expressing their feelings, and making arguments and explanations. They should be able to interact in all basic ‘survival’ situations in Mongolia. Taught by: Tseveendulam
Course usually offered in fall term
Prerequisite: ALAN 141
Activity: Lecture
1.0 Course Unit

ALAN 241 Intermediate Mongolian II
This course is a continuation of Intermediate Mongolian I. Mongolian is the national language of the independent State of Mongolia and the language of the nomadic warriors Genghis Khan (known to the Mongolians themselves as Chinggis Khan). It is also spoken in China and Siberia. Today Mongolian musical styles like throat singing (khoomii), products like cashmere (nooluur), and tourism to visit Mongolia’s nomadic herders (malchid) are making a mark on the world stage. In this class the students will continue with the basics of modern Mongolian language, as spoken in Ulaanbaatar ‘Red Hero,’ the country’s capital. They will learn in the phonetic Cyrillic script, which was adapted to Mongolian language from Russian in 1945, with a few additional letters. Intermediate and more advanced grammar will be taught through communicative methodology. Students will also have opportunity to experience Mongolian arts, culture, and cooking in and out of class. This is the first semester of Intermediate Mongolian. By the end of two semesters intermediate Mongolian, students will have learned all the noun forms, and all the major verb forms and will be able to form complex, multi-clause sentences, telling stories, expressing their feelings, and making arguments and explanations. They should be able to interact in all basic ‘survival’ situations in Mongolia. Taught by: Tseveendulam
Activity: Lecture
1.0 Course Unit
Astronomy (ASTR)

ASTR 001 A Survey of the Universe
A general survey, designed for the non-major, of the facts and theories of the astronomical universe, from solar system, to stars, to galaxies and cosmology. Topics include planets, satellites, small objects in the solar system, and extraterrestrial life; stars, their evolution, and their final state as white dwarfs, neutron stars, or black holes; galaxies, quasars, large structures, background radiation, and big bang cosmology. Elementary algebra and geometry will be used. This course is not recommended for physical-science majors or engineering students. Engineering students receive no credit for this course.
For BA Students: Physical World Sector
Course offered summer, fall and spring terms
Activity: Lecture
1.0 Course Unit
Notes: Only one ASTR course below ASTR 211 may be taken for credit. Engineering students receive no credit for this course.

ASTR 006 The Solar System, Exoplanets, and Life
A survey course on planets and life covering our own Solar System and exoplanets orbiting other stars. Topics include the latest results and theories about: the origin and evolution of planetary systems around our Sun and other stars; the detection of exoplanets; the implications of planetary atmospheres for life; and the search for life on other planets in our Solar System. This course is designed for the non-major and elementary algebra and geometry will be used. Physical science majors and engineering students should prefer ASTR 211 to this course.
For BA Students: Natural Science and Math Sector
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Also fulfills General Requirement in Physical World for Class of 2009 and prior. Only one ASTR course below ASTR 211 may be taken for credit. Fulfills quantitative data analysis requirement.

ASTR 007 The Big Bang and Beyond
An introductory course for students who do not intend to major in a physical science or engineering, covering theories of the Universe ranging from the ancient perspective to the contemporary hot big bang model, including some notions of Einstein’s special and general theories of relativity. Topics will include the solar system, stars, black holes, galaxies, and the structure, origin and future of the Universe itself. Elementary algebra is used. Fulfills quantitative data analysis requirement.
For BA Students: Natural Science and Math Sector
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Also fulfills General Requirement in Physical World for Class of 2009 and prior. Only one ASTR course below ASTR 211 may be taken for credit.

ASTR 211 Introduction to Astrophysics I
A basic course for majors in physical sciences and engineering; required for the astrophysics concentration. The course provides fundamental knowledge of Newtonian gravity and the properties of light and matter as they are relevant for understanding astrophysical objects. Application is made to the observed features of planetary motion, the atmospheres and stars and planets, and the structure and evolution of stars.
For BA Students: Physical World Sector
Course usually offered in fall term
Prerequisite: MATH 104 OR PHYS 150
Activity: Lecture
1.0 Course Unit

ASTR 212 Introduction to Astrophysics II
A basic course for majors in physical sciences and engineering; require for the astrophysics concentration. The course covers fundamental knowledge of Einstein’s gravity, the contents of the universe, and the structure and distribution of galaxies. Emphasis is on the key elements of modern cosmology: the mathematical model of the expanding universe, the cosmic microwave background, the early universe and the emergence of large-scale structure in the present universe.
For BA Students: Physical World Sector
Course usually offered in spring term
Prerequisite: MATH 114 OR PHYS 151
Activity: Lecture
1.0 Course Unit

ASTR 250 Astronomical Techniques
A laboratory course in astronomical observations and data reduction. This course satisfies one of the requirements for the astrophysics concentration. Topics vary, but include spherical astronomy, timekeeping and coordinate systems, astro-statistics, telescopes, CCD’s, signal processing, imaging, spectroscopy, radio astronomy and data reduction techniques using custom software. Attendance at observatory sessions outside of the scheduled class time is required, but times are uncertain due to weather conditions. The course requires small-group work in-class, and substantial out-of-class time. Notes: Course not offered every year. The observatories at DRL are used for experimental and observational practice.
Course offered spring; even-numbered years
Prerequisite: (ASTR 001 AND MATH 240 AND MATH 241) OR (ASTR 007 AND MATH 240 AND MATH 241) OR ASTR 211 OR ASTR 212
Activity: Lecture
1.0 Course Unit
Notes: The observatories at DRL are used for experimental and observational practice.

ASTR 392 Life and Death of Stars
This is an advanced undergraduate course on the life and death of stars. The course will cover the structure of stellar interiors, nuclear reactions and the formation of elements, stellar evolution, supernovae, and the physics of white dwarfs, neutron stars, and black holes. We will approach these topics from both theoretical and observational perspectives.
Course offered spring; odd-numbered years
Activity: Lecture
1.0 Course Unit
Behavioral & Decision Sciences (BDS)

BDS 501 Behavioral Science: Theory and Application of Experimental Methods
Permits offered to non-MBDS students if space is available. Request a permit here: www.sas.upenn.edu/lps/graduate/mbds/permit-request. Our understanding of different mechanisms and (economic) relationships is hampered by a lack of data and - more often than not - either the observation or the data is not reliable. In recent decades, through the work of pioneers in the behavioral and experimental economics fields, such as Daniel Kahneman and Vernon Smith, economics experiments have become a vital part of the scientific discourse, facilitating our understanding of the world we live in (much like in biology, chemistry, physics, etc.). In this course, we will explore economic behavior by developing a research idea, designing an experiment, then carrying out the experiment under controlled conditions. Essentially, you will learn how to think about ideas, generate ideas, and use economic experiments to test them.
Taught by: Dimant
Activity: Lecture
1.0 Course Unit

BDS 502 Norms and Nudges
Social norms are the rules we live by, and we encounter them in any area of our life. Social norms often guarantee the smooth functioning of a group or organization. Sometimes, however, these norms are inefficient or do not benefit society at large. What can we do to change these harmful collective behaviors? Social psychology, philosophy, sociology, rational-choice, legal theory, and even economics, are investigating and theorizing pro-social behavior, justice motivation, and moral and social norms. In this course, we will examine the latest and best in this emerging multidisciplinary field. Students will be encouraged to apply its findings and methods to their area of interest.
Taught by: Bicchieri
Also Offered As: PHIL 428
Activity: Lecture
1.0 Course Unit

BDS 503 Behavioral Public Policy
A core MBDS program course requirement, this course addresses methodological issues that apply to each of the policies currently provided by governmental and non-governmental institutions worldwide. We will discuss the conditions that must be satisfied to make policies effective and the behavioral incentives that policy actors face. The course relies on the main theoretical and empirical findings of modern policy analysis and upon an extensive set of case studies. Students are required to master the conceptual material and to confront and solve practical cases in public policy.
Activity: Lecture
1.0 Course Unit

BDS 505 Research Methods for Behavioral Science
The course is a survey of methods of research in behavioral and decision sciences. We will cover principles of scientific thinking, operationalizing research questions into testable ideas, and the ethics of behavioral research. A significant portion of the class will be devoted to study designs. We will cover basics of experimental design, quasi-experiments, and observational surveys. The class will also provide an introduction to qualitative research methods, including focus groups, unstructured and semi-structured interviews, and ethnographies. We will conclude the semester with the methods of communicating our findings to different types of audiences. We will analyze research processes and results from the perspective of the information consumer. The class will be useful for those interested in learning how to read and write behavioral science publications and how to design one's own studies. For practical skills in using software to analyze data, see BDS522 and BDSS16.
Taught by: Alex Shpenev
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

BDS 511 Negotiation Behavior
We negotiate every day-with merchants, service providers, employers, coworkers, friends, and family-determining the price we will pay, the amount of our compensation, where to go to dinner, who will clean the kitchen, etc. Although negotiations are a ubiquitous part of our everyday lives, many of us know little about the strategy and psychology of effective negotiations. Why do we sometimes get our way, while other times we walk away feeling frustrated by our inability to achieve the agreement we desire? Over the past few decades, research in social psychology and decision science has sought the answer to this question and created a rich body of knowledge on bargaining behavior, leading to a well-validated prescription on how to negotiate. In this course, you will learn both the how and the why of negotiation behavior. Through role-playing exercises, you will be able to evaluate your own negotiation behavior as well as that of your classmates and receive advice on how to optimize it to achieve your desired outcomes. Importantly, you will also read and discuss research articles that have led to such practical advice. Non-MBDS students may request a permit to register at www.sas.upenn.edu/lps/graduate/mbds/permit-request.
Activity: Lecture
1.0 Course Unit

ASTR 503 Astronomical Methods and Instrumentation
Techniques of modern astronomical observations, including: detection of light from the radio through gamma rays; sources of noise in astronomical measurements; image analysis and reduction techniques; telescope optics and adaptive optics; spectroscopic measurements; radio interferometry and spectroscopy.
Course offered spring; even-numbered years
Activity: Lecture
1.0 Course Unit

ASTR 533 Galaxies: Structure, Dynamics and Formation
Galactic structure and dynamics. Observed scaling relations. Models and observations of galaxy formation and evolution. Enrollment restricted to graduate students.
Course offered fall; odd-numbered years
Activity: Lecture
1.0 Course Unit
BDS 512 Power, Persuasion and Influence
For permits please see: https://www.sas.upenn.edu/lps/graduate/mbds/permit-request
Power and influence are fundamental for taking action in personal relationships, professional contexts and in society in general. To be able to use them effectively, however, we need to understand the nature, sources, uses and development of power and influence in these various contexts. To accomplish this goal, this course will survey theories of power, persuasion and influence from multiple disciplines and discuss their application to everyday actions.
Activity: Lecture
1.0 Course Unit

BDS 516 Data Science and Quantitative Modeling
(This course fulfills the MBDS program's quantitative course requirement.) Increasingly, decision-makers and systems rely on intelligent technology to analyze data systematically to improve decision-making. Data science is opening new pathways to improve decision-making in private and public organizations. Through lectures and real-world examples, this course will present a practical understanding of the fundamental methods used by data scientists including data management techniques, quantitative modeling, and data visualization. The primary emphasis is on understanding the fundamental concepts and applications of data science in the context of behavioral and decision sciences. We will cover several algorithms though this is not an algorithms course. We will examine real-world examples and cases to place data science techniques in context, to develop data-analytic thinking, and to illustrate that proper application is as much an art as it is a science. Non-MBDS students may request a permit to register at https://www.sas.upenn.edu/lps/graduate/mbds/permit-request.
Activity: Lecture
1.0 Course Unit

BDS 521 Judgments & Decisions
This course addresses the ideal standards of judging and deciding, and the ways in which people fall short of these standards, with emphasis on the latter. We will discuss heuristics and other intuitive strategies that people may use in day-to-day thinking, and the biases that result from this use. We will apply this approach to shed light on faulty analyses in medicine, law, and everyday thinking. Understanding the ideals of good thinking and causes of our failure to conform to these ideals may ultimately help improve the decisions we make in private and professional lives. A limited number of seats in this class are reserved for upper level LPS undergraduate students who may be allowed to register with special permission from the instructor. Non-MBDS students should request a permit to register at https://www.sas.upenn.edu/lps/graduate/mbds/permit-request.
Activity: Lecture
1.0 Course Unit

BDS 522 Statistical Reasoning for Behavioral Science
For permits please see: https://www.sas.upenn.edu/lps/graduate/mbds/permit-request
The complexity of human behavior exceeds that of most phenomena studied in the natural sciences. Any inference about human behavior and decision-making has to rely on statistical methods rather than on deterministic modeling. In this class, students will learn the methods of descriptive and inferential statistics used in behavioral science from the basics to those more commonly used. In this sense, this is a class on theoretical statistics, but we will go beyond theory to apply these methods to answer our own research questions. As such, this is also a class on applied statistics. We will rely heavily on statistical programming languages (namely, R) and version control systems (Git) to create statistical reports. Finally, we will work with new research in the field and learn to critically assess the statistical methods used therein. After completing this class, students will be competent in reading cutting-edge scientific literature, producing their own results using the more commonly used methods, and able to critically assess the limitations of their own and other people’s research. Non-MBDS students must complete a permit request.
Activity: Lecture
1.0 Course Unit

BDS 585 Consulting in Behavioral Science
In this course, students will gain a better understanding of applied behavioral science. The course will emphasize oral and written communications and the development of client deliverables, client relations, team work, client presentation, and peer review. There will be a mix of in-person and online course meetings. This course is for MBDS students and by permission only. MBDS students: To apply to take this course, please complete this course application: https://upenn.co1.qualtrics.com/jfe/form/SV_beGKCGR6puftiVT
Taught by: Zarak Khan
Activity: Lecture
1.0 Course Unit

BDS 990 Master’s Continuation
Activity: Masters Thesis
1.0 Course Unit

Bengali (BENG)

BENG 403 Beginning Bengali Part I
This course introduces students to colloquial Bengali. It gives equal emphasis to each of the four skills, reading, writing, listening, and speaking. Language will be studied in the context of socio-cultural aspects of West Bengal and Bangladesh. Besides lessons from the text, a major portion of the syllabus will be based on topics drawn from films, cultural events, festivals, food, and religion.
For BA Students: Language Course
Taught by: Banerjee, H
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
BENG 404 Beginning Bengali Part II
This course introduces students to colloquial Bengali. It gives equal emphasis to each of the four skills, reading, writing, listening, and speaking. Language will be studied in the context of socio-cultural aspects of West Bengal and Bangladesh. Besides lessons from the text, a major portion of the syllabus will be based on topics drawn from films, cultural events, festivals, food, and religion.
For BA Students: Language Course
Taught by: Banerjee, H
Course usually offered in spring term
Prerequisite: BENG 403
Activity: Seminar
1.0 Course Unit

BENG 423 Intermediate Bengali Part I
This course develops the student’s prior knowledge of Bengali. An attempt is made to gear the syllabus to meet the specific needs of students. The focus of the course is to develop the oral and aural skills of the learner as well as improve writing skills and reading strategies. Emphasis is also laid on increasing the sociolinguistic and strategic competence of the learners so that they will be able to function in the target culture. Besides discussions on various aspects of Bengali life, students read some short literary texts in the original Bengali version.
For BA Students: Language Course
Taught by: Banerjee, H
Two terms. student must enter first term.
Activity: Lecture
1.0 Course Unit

BENG 424 Intermediate Bengali Part II
This course develops the student’s prior knowledge of Bengali. An attempt is made to gear the syllabus to meet the specific needs of students. The focus of the course is to develop the oral and aural skills of the learner as well as improve writing skills and reading strategies. Emphasis is also laid on increasing the sociolinguistic and strategic competence of the learners so that they will be able to function in the target culture. Besides discussions on various aspects of Bengali life, students read some short literary texts in the original Bengali version.
For BA Students: Last Language Course
Taught by: Banerjee, H
Course usually offered in spring term
Prerequisite: BENG 423
Activity: Seminar
1.0 Course Unit

BENG 433 Advanced Bengali
The objective of this course is to develop the proficiency level of the students in all the four skills by using different genres of Bengali literature (West Bengal and Bangladesh) as its course content. Reading comprehension will be enhanced as students learn to understand authentic texts at the linguistic and cultural level while discussion (description, narration, supporting opinion) on issues related to these texts aim to hone the oral and written skills. Students will be allowed to work on individual texts & topics (with the instructors permission) for their final project. This is a one semester course. Spring: Bengali Popular Culture - This course aims to use as its content, different aspects of popular Bengali culture as they are represented in media (film, television, magazines, newspapers) and arts (fashion, local and regional art, music). Students will be expected to develop their linguistic skills (description, narration, supporting opinion) and socio-cultural awareness while interacting with these varied types of texts. Students will be allowed to work on individual texts & topics (with the instructors permission) for their final project. This is a one semester course.
For BA Students: Advanced Language Course
Taught by: Banerjee, H
Course not offered every year
Activity: Lecture
1.0 Course Unit

Biochemistry & Molecular Biophysics

BMB 508 Macromolecular Biophysics: Principles and Methods
This course introduces students to the physical and chemical properties of biological macromolecules, including proteins and nucleic acids. It surveys the biophysical techniques used to study the structure and thermodynamics of macromolecules. It is intended to be a first course for graduate students with an undergraduate background in either physics, chemistry or biology, and no necessary background in biochemistry. Prerequisite: Senior undergraduate or graduate level biochemistry of biophysics.
Taught by: Sharp
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

BMB 509 Structural and Mechanistic Biochemistry
The course will focus on the key biochemical task areas of living cells. The course progresses from primarily molecular level events, such as storage and translation of genetic information, creation, control and removal of proteins, to higher organization levels such as metabolic pathways, signaling pathways, regulation and homeostasis. Each section will cover structure details of the relevant molecules, appropriate binding/catalysis events, regulatory aspects, and how they fit into the relevant pathway(s) and cell function. Material will be covered with a combination of formal lectures and student presentations. Prerequisite: If course requirements not met, permission of course director required.
Taught by: Van Duyne
Course usually offered in spring term
Prerequisite: BMB 508 AND BIOM 600
Activity: Lecture
1.0 Course Unit
BMB 510 Data Analysis and Scientific Inference
An introductory course in the analysis of data and scientific inference for graduate students in Biochemistry, Molecular Biophysics, and related quantitative biomedical research areas. The course will stress fundamental principles of data analysis, best practice in presenting data, and how to draw sound scientific inferences from the data. The overall goal is to provide students the tools to carry out rigorous and reproducible scientific research.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

BMB 518 Protein Conformation Diseases
Protein misfolding and aggregation has been associated with over 40 human diseases, including Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis, prion diseases, alpha (1)-antitrypsin deficiency, inclusion body myopathy, and systemic amyloidoses. This course will include lectures, directed readings and student presentations to cover seminal and current papers on the cell biology of protein conformational diseases including topics such as protein folding and misfolding, protein degradation pathways, effects of protein aggregation on cell function, model systems to study protein aggregation and novel approaches to prevent protein aggregation. Target audience is primarily 1st year CAMB, other BGS graduate students, or students interested in acquiring a cell biological perspective on the topic. MD/PhDs and Postdoc are welcome. MS and undergraduate students must obtain permission from course directors. Class size is limited to 14 students.
Taught by: Yair Argon
Course usually offered in fall term
Also Offered As: CAMB 615, NGG 615
Prerequisite: BIOM 600
Activity: Lecture
1.0 Course Unit

BMB 554 Macromolecular Crystallography: Methods and Applications
This is an introductory course on methods and applications of macromolecular structure determination using X-ray crystallography. The course will be broken up into three parts: 1) Principles of X-ray crystallography involving didactic lectures on the technique with weekly problem sets; 2) Workshops on macromolecular structure determination involving hands-on experience with the technology; 3) Student 'journal club' presentations on current high impact publications involving X-ray crystal structure determination. Prerequisite: Undergraduate calculus and trigonometry.
Taught by: Marmorstein and Skordalakes
Course usually offered in fall term
Also Offered As: CHEM 555
Activity: Lecture
1.0 Course Unit

BMB 558 Biomolecular Spectroscopy and Microscopy
Chem 558 covers basic fluorescence spectroscopy and microscopy, as well as advanced topics such as single molecule spectroscopy and non-linear and super-resolution microscopies. In addition to lectures, the course includes hands-on laboratory 'field trips' where students will collect and analyze data relevant to course topics. There are weekly homework assignments that include problems based on the lectures as well as reading of primary literature.
Taught by: Rhoades
Course usually offered in fall term
Also Offered As: CHEM 558
Activity: Lecture
1.0 Course Unit

BMB 567 Bioinorganic Chemistry
This course covers selected topics in bioinorganic chemistry. Special emphasis is placed on dioxygen chemistry and electron transfer processes. Course topics include: 1) oxygen uptake and utilization; 2) oxygen transport; 3) oxygen and O atom incorporation into substrates; 4) metalloenzyme-catalyzed C-C bond formation; 5) the metallobiochemistry of DNA; 6) metal-sulfide proteins; 7) manganese containing metalloproteins; 8) photosystem II, light-driven electron transfer and the biological water-splitting reaction; 9) biological electron transfer; 10) electron transfer theory; 11) mechanisms of energy storage and release; and 12) long-distance electron transfer reactions.
Taught by: Dmochowski
One-term course offered either term
Also Offered As: CHEM 567
Activity: Lecture
1.0 Course Unit

BMB 581 Techniques of Magnetic Resonance Imaging
Detailed introduction to the physics and engineering of magnetic resonance imaging as applied to medical diagnosis. Covered are magnetism spatial encoding principles, Fourier analysis, spin relaxation, imaging pulse sequences and pulse design, contrast mechanisms, chemical shift, flow encoding, diffusion and perfusion, and a discussion of the most relevant clinical applications.
Taught by: Song and Wehrli
Course offered spring; odd-numbered years
Also Offered As: BE 581
Activity: Lecture
1.0 Course Unit

BMB 585 Wistar Institute Cancer Biology Course: Signaling Pathways in Cancer
This course is intended to provide foundational information about the molecular basis of cancer. When necessary the significance of this information for clinical aspects of cancer is also discussed. The main theme centers around cell cycle checkpoints with specific emphasis on the biochemistry and genetics of DNA damage signaling pathways, DNA damage checkpoints, mitotic checkpoints and their relevance to human cancer. The course is taught by the organizers and guest lecturers from universities and research institutions in the Northeast. Following every lecture, students present a research paper related to the topic of that lecture. The course is intended for first and second year graduate students but all graduate students are welcome to attend. Prerequisite: Undergraduates and Master's degree candidates require permission from the course directors.
Taught by: Skordalakes and Murphy
Course usually offered in fall term
Also Offered As: GCB 585
Activity: Lecture
1.0 Course Unit
BMB 598 Tutorial
The tutorial course is designed for in-depth study of a specific topic through one-on-one meetings and discussions between the student and a selected BMB faculty member. The intent of the course is to broaden the students knowledge, thus the tutorial may not be taken with the student’s current rotation advisor or thesis advisor. Choice of faculty member and topic is by prior mutual agreement between the student and faculty member, subject to approval by the course director. Student and faculty member will typically meet for an hour or so 2 - 3 times per week. The course may take the form of literature study, or where appropriate, a mini-project (typically computer-based) A tutorial can be used by students to become more deeply acquainted with the literature related to their thesis project or to help prepare students for their Candidacy Exam. Upon completion of the tutorial, students must prepare a written description of the area studied (5-10 typewritten pages)
Taught by: Kim Sharp and staff
Course offered summer, fall and spring terms
Activity: Independent Study
1.0 Course Unit

BMB 601 Fundamentals of Magnetic Resonance
This course introduces basic theoretical and experimental concepts of magnetic resonance and its applications in biochemistry, biology and medicine. Topics covered include description of the phenomenon of magnetic resonance, and classical and quantum strategies to compute nuclear spin responses in liquids, solids and biological tissues, polarization transfer and multiple quantum effects and their applications in biomedicine. Nuclear spin relaxation in solid-state materials and in biological systems will be discussed. Concepts of magnetic resonance imaging, imaging strategies, image contrast, and diagnostic applications are discussed. The course includes several practicals dealing with the demonstration of NMR hardware and experiments to compute basic NMR parameters on high resolution and clinical MRI scanners. For further details of this course, visit www.mmrcc.upenn.edu
Taught by: Reddy
Course offered fall; odd-numbered years
Activity: Lecture
0.5 Course Units

BMB 605 Drug Discovery and Development
This course will expose graduate-level students to the process of drug discovery and development. The course will be structured to cover topics from the identification of a disease-relevant target through to Phase III Clinical Trials. The course will be lecture based and there will also be student-led journal club presentations as part of the course. There will also be a writing project consisting of a 3 page proposal of how to advance one of the areas of Drug Discovery & Development covered in the course.
Taught by: Dr. Ben E. Black, UPenn and Dr. Craig A. Leach, GlaxoSmithKline
Course usually offered in spring term
Also Offered As: CAMB 710, PHRM 605
Activity: Lecture
1.0 Course Unit
Notes: 2 X 1.5 hr sessions per week.

BMB 618 Applications of High Resolution NMR Spectroscopy to Problems in Structural Biology
A lecture-based course designed to introduce graduate students to applications of modern high-resolution multinuclear and multidimensional NMR spectroscopy to problems in structural biology. The course will first introduce classical definitions and descriptions of nuclear magnetic resonance and a convenient formalism for the analysis of advanced NMR experiments. Concepts and applications of multidimensional homonuclear 1H NMR and multidimensional heteronuclear spectroscopy of proteins and nucleic acids will be described. Resonance assignment strategies including analysis of triple resonance spectroscopy will be covered. The origin, measurement and extraction of structural restraints and their use in structure determination will be surveyed and illustrated with recent examples. Undergraduate biochemistry and physical chemistry background required.
Taught by: Wand
Course offered fall; odd-numbered years
Prerequisite: BMB 601
Activity: Lecture
0.5 Course Units

BMB 622 Physical Principles of Mechano-Enzymes
This course will provide an introduction to the biochemical, structural, and mechanical properties of energy-transducing enzymes. We will emphasize the relationships of mechanical, thermal, and chemical forces in mechano-enzyme function.
Taught by: Dominguez, Goldman, Grishchuk and Ostap
Course offered spring; even-numbered years
Activity: Lecture
0.5 Course Units

BMB 624 Molecular and Physical Basis of Ion Channels
The course is a journal club format, targeted to graduate and MD/PhD students interested in ion channels from graduate programs in Physiology, Pathology, Neuroscience, Pharmacology, Biochemistry & Molecular Biophysics. It meets for two hours on alternate weeks and is coupled to the Ion Channel Journal Club, which also meets for one hour on the same alternate weeks A faculty member meets with students to discuss and review the contents of each selected article earlier in the week in preparation for the subsequent Journal Club presentation. The day following the Journal Club the person who discussed the paper meets with the students to answer questions and to discuss the research that goes on in his lab. This elective course is meant to introduce students to the latest advances in ion channel research and includes topics extending from biophysics, structure, and physiology to cell biology and medical applications.
Taught by: Kallen
Course offered spring; odd-numbered years
Activity: Lecture
0.5 Course Units
BMB 626 Mass Spectrometry and Proteomics
This course will provide a detailed introduction to proteomics and mass spectrometry. The role of mass spectrometry in both characterizing proteins for traditional protein structure-function studies and identification of proteins in proteome studies will be emphasized. Targeted and global proteomes, quantitative protein profiling and compositional proteomics, and applications of proteome studies will be discussed. Intended for first and second year graduate students and others with an interest in proteomics and mass spectrometry.
Taught by: Speicher and Garcia
Course offered spring; even-numbered years
Activity: Lecture
0.5 Course Units

BMB 627 Computer Programming for Biochemists and Biophysicists
An introductory course on programming and algorithms for scientists with an emphasis on applications to biophysics. Students will learn to write, debug, and execute basic programs through lectures, in-class workshops, and programming projects outside of class. Prerequisite: Permission of instructor for nonBMB students.
Taught by: Sharp and Van Duyne
Activity: Lecture
0.5 Course Units

BMB 632 Probing Structure and Function of Complex RNA-Protein Machines
RNA-Protein complexes or RNPs can range from simple assemblies to megadalton enzymatic machines. The latter include two of the most abundant and essential enzymatic complexes for converting genes to functional protein - the ribosome and the spliceosome. Understanding the molecular interactions that hold these RNPs together and how these complexes function has required the development of new techniques and pushed the boundaries of quantitative biochemistry. In this course we will take an in-depth look at general concepts common to many RNA binding proteins, the methods used to study protein-RNA and RNA-RNA interactions, and how the complex nature of large RNPs uniquely allow them to achieve their precise functions. The course will be a combination of both lectures and student-lead discussion of recent literature. Students will be evaluated based on their presentations of primary literature and their participation in class discussion.
Taught by: Lynch
Course offered fall; even-numbered years
Activity: Lecture
1.0 Course Unit

BMB 634 Cryo-Em
This is an introductory course on methods and applications of cryo-EM single-particle analysis and tomography. The course will be broken up into three parts: 1) Principles of single-particle reconstruction including hands-on experience with the technology; 2) Principles of cryo-EM tomography including data analysis; 3) Student presentations of their 3D reconstructions and research article
Taught by: Co-Directors Kenji Murakami, Ph.D., Yi-Wei Chang, Ph.D., Sudheer Kumar Molugu, Ph.D
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

BMB 635 Computational Structural
Activity: Lecture
1.0 Course Unit

BMB 650 Current Biochemical Topics
Participation in the 'Dr. George W. Raiziss Biochemical Rounds', a weekly seminar program sponsored by the Department of Biochemistry and Biophysics. Program deals with a wide range of modern biochemical and biophysical topics presented by established investigators selected from our faculty, and by leading scientists from other institutions. Prerequisite: Permission needed from Department
Taught by: Black and Shorter
Course offered summer, fall and spring terms
Also Offered As: CAMB 702, PHRM 650
Activity: Seminar
1.0 Course Unit

BMB 699 Laboratory Rotation
Supervised 'mini-projects' for graduate students in Biochemistry and Molecular Biophysics. End of the semester requirements are 1) poster presentations; 2) written rotation summaries; or 3) talks. Course is offered fall, winter, spring, and summer semesters.
Taught by: Kohli
Course offered summer, fall and spring terms
Activity: Laboratory
1.0 Course Unit

BMB 704 Structural Biology Tg
Activity: Lecture
1.0 Course Unit

BMB 705 Candidacy Exam Preparation Course
This course is designed for second year BMB students to prepare them for the Candidacy Examination, which must be completed in the spring semester of the second year.
Taught by: Marmorstein, Lynch and Nelson
Course usually offered in spring term
Activity: Seminar
0.5 Course Units

BMB 751 Chemical Biology
This course focuses on current topics in Chemical Biology, particularly experiments in which 1) chemical synthesis enables one to probe or control biological systems, or 2) manipulation of biological systems facilitates novel chemical syntheses. The course is broadly divided into two sections, one dealing with the study of individual proteins and nucleic acids, and one dealing with complex cellular systems. As the goal of the course is to familiarize students with innovative recent experimental approaches and to stimulate them to conceive of their own new methodology, students will be responsible for delivering presentations on topics selected from the literature, designing experiments to address currently unsolved problems in Chemical Biology (in take-home examinations), and generating several novel research proposal ideas, one of which will be elaborated into a full proposal.
Taught by: EJ Petersson
One-term course offered either term
Also Offered As: CHEM 751
Activity: Lecture
1.0 Course Unit

BMB 799 Independent Study (Yrs 1 - 2)
Activity: Independent Study
1.0 Course Unit

BMB 899 Pre-Dissertation Research
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Biochemistry (BCHE)

BCHE 280 Physical Models of Biological Systems
Classic case studies of successful reductionistic models of complex phenomena, emphasizing the key steps of making estimates, using them to figure out which physical variables and phenomena will be most relevant to a given system, finding analogies to purely physical systems whose behavior is already known, and embodying those in a mathematical model, which is often implemented in computer code. Topics may include bacterial genetics, genetic switches and oscillators; systems that sense or utilize light, superresolution and other new microscopy methods; and vision and other modes of sensory transduction.
Course usually offered in fall term
Also Offered As: PHYS 280
Prerequisite: (PHYS 101 OR MATH 104) AND (MATH 114 OR MATH 104) AND (MATH 115 OR MATH 116)
Activity: Lecture
1.0 Course Unit

BCHE 299 Undergraduate Research Projects
Independent Research.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: 10-20 h., 1-2 c.u., admission by permission of the biochemistry undergraduate chairman.

BCHE 300 Senior Research Projects
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: 10-20 h., 1-2 c.u., admission by permission of the biochemistry undergraduate chairman.

BCHE 404 Biochemistry Laboratory
Participation in research projects in the laboratories of individual faculty members. A list of possible research supervisors is available in the Biochemistry office (351 Chemistry). In addition to their laboratory projects, students will attend a weekly seminar in which their own and related work will be discussed. Year long course—initial registration must occur in Fall term, 0 c.u. for first term and 2 c.u. for second term, 15h.
Prerequisite: If course requirement not met, permission of instructor required.
Two terms. student must enter first term.
Prerequisite: CHEM 451
Activity: Seminar
1.0 Course Unit
Notes: Year long course—initial registration must occur in Fall term, 0 c.u. for first term and 2 c.u. for second term, 15h. CHEM 451 or permission of instructor required.

Bioengineering (BE)

BE 100 Introduction to Bioengineering
Survey course introducing students to the breadth of bioengineering. Course consists of introductory lectures, guest speakers/panelists, and a series of small assignments that allow students to explore different facets of bioengineering and the Penn Bioengineering program.
Course usually offered in fall term
Corequisite: MATH 104 AND PHYS 140
Activity: Lecture
0.5 Course Units
Notes: Freshmen only

BE 200 Introduction to Biomechanics
This course investigates the application of statics and strength of materials to soft and hard biologic tissues. The course will cover simple force analyses of the musculoskeletal system and introduces the fundamentals of the mechanics of materials including axial loading, torsion and bending and their application to biomechanics. The lecture and recitation will be complemented with hands-on examples emphasizing connections between theoretical principles and practical applications.
Course usually offered in fall term
Prerequisite: MATH 114 OR PHYS 140 OR PHYS 150
Corequisite: MATH 240
Activity: Lecture
1.0 Course Unit

BE 220 Biomaterials
This course investigates the application of materials science and engineering to biomedical applications, with a focus on polymers, ceramics, and metals. The course will cover concepts related to basic material fabrication and synthesis, structure and property characterization, as well as applications of biomaterials. The lecture and recitation will be complemented with laboratory examples of material assessment and characterization.
Course usually offered in spring term
Prerequisites: BE 200, CHEM 102
Activity: Lecture
1.0 Course Unit

BE 225 Technology and Engineering in Medicine
The course is appropriate for engineering and natural science majors including premeds. The prerequisites will not be waived. This course will provide an examination of technology with emphasis on engineering design and its impact on medicine and health. Planned topics change from year to year and include, for example, cochlear implants and visual sensory rehabilitative devices. The course includes homework and reading assignments. Every student presents a paper on a relevant biomedical technology and the underlying science and engineering design.
One-term course offered either term
Prerequisites: MATH 114, PHYS 140 and 141 or PHYS 150 and 151 or PHYS 170 and 171
Activity: Seminar
1.0 Course Unit
BE 270 Bioengineering Laboratory Principles
This course will cover a variety of bioengineering laboratory principles and techniques including data collection, analysis and reporting. Students will explore tools related to mechanics, materials and electronics with applications in the bioengineering field.
Taught by: Dourete/Burdick
Course usually offered in spring term
Activity: Laboratory
1.0 Course Unit

BE 301 Bioengineering Signals and Systems
Properties of signals and systems; Examples of biological and biomedical signal and systems; Signal operations, continuous and discrete signals; Linear, time invariant systems; Time domain analysis; Systems characterized by linear constant-coefficient differential equations; Fourier analysis with applications to biomedical signals and systems; Introduction to filtering; Sampling and the sampling theorem. Examples vary from year to year, but usually include signals such as the ECG and blood pressure wave, principles of signal coding in the auditory system and cochlear implants, and simple applications in biomedical imaging. One-term course offered either term
Prerequisites: MATH 241, PHYS 141 OR 151, ENGR 105
Activity: Lecture
1.0 Course Unit

BE 305 Engineering Principles of Human Physiology
This course presents a quantitative, biophysical approach to physiology, focusing on the nervous, cardiovascular, and pulmonary systems. We will also emphasize computational modeling and analysis of physiological systems.
Course usually offered in spring term
Prerequisite: MATH 240 AND ENGR 105
Activity: Lecture
1.0 Course Unit

BE 306 Cellular Engineering
The biological cell is a complex machine and its function is at the root of all physiology and many pathologies. Recent advances in molecular and cell biology enable the redesign of cell function. This course aims to develop a quantitative understanding of cell function, and how we might go about changing cell function through intelligent redesign. The course covers topics ranging from receptor binding and endocytosis, cell adhesion and motility, cell function in the immune system, systems and synthetic biology, genetic knockdown and manipulation using CRISPR and gene therapy, and strategies for immunotherapy including chimeric antigen receptor therapy (carT).
Taught by: Hammer
Course usually offered in fall term
Prerequisites: CHEM 102, MATH 241, PHYS 140, 141, BIOL 121
Activity: Lecture
1.0 Course Unit

BE 309 Bioengineering Modeling, Analysis and Design Laboratory I
BE 309 is a one course-unit laboratory course with a focus on combining experimental and mathematical approaches to understand biological systems and solve bioengineering problems. The course content integrates concepts from mathematics, physics, signal analysis, control engineering, mass transport, and heat transfer with applications in physiology and pharmacology. Areas of emphasis are model development and validation, statistical analysis, experimental design, error analysis and uncertainty, and scientific writing.
Course usually offered in fall term
Prerequisites: ENGR 105, PHYS 141, 151, MATH 240, BE 200, 220, ENM 375
Activity: Lecture
1.0 Course Unit

BE 310 Bioengineering Modeling, Analysis and Design Laboratory II
BE 310 is a one course-unit laboratory course on the design of technology to measure and control biological systems. The course is divided into four modules: (i) microfluidics for point of care diagnostics, (ii) synthetic biology for predicting cellular behavior, (iii) electronics and signal analysis of bioelectrical signals, and (iv) bioanalytical spectroscopy for low-cost diagnostics. Each module will have two components: (i) a series of structured learning exercises to teach key concepts and methods of the topic that we are studying, and (ii) a design challenge, in which the understanding gained in the first component is used to design a solution to an open ended bioengineering challenge.
Course usually offered in spring term
Prerequisites: ENGR 105, PHYS 141, 151, BE 220, BIOL 121, 123, MATH 240, ENM 375
Corequisite: MATH 241 AND BE 301
Activity: Laboratory
1.0 Course Unit

BE 330 Self-Assembly of Soft Materials
Soft matter is found in diverse applications including sports (helmets & cloths); food (chocolate, egg); consumer products (e.g., lotions and shampoo); and devices (displays, electronics). Whereas solids and liquids are typically hard and crystalline or soft and fluid, respectively, soft matter can exhibit both solid and liquid like behavior. In this class, we investigate the thermodynamic and dynamic principles common to soft matter as well as soft (weak) forces, self-assembly and phase behavior. Classes of matter include colloidal particles, polymers, liquid crystalline molecules, amphiphilic molecules, biomacromolecules/membranes, and food. Active learning activities will be included.
Course usually offered in fall term
Also Offered As: MSE 330
Prerequisite: CHEM 102 OR MSE 220 OR BE 220
Activity: Lecture
1.0 Course Unit

BE 350 Introduction to Biotransport Processes
Introduction to basic principles of fluid mechanics and of energy and mass transport with emphasis on applications to living systems and biomedical devices.
Course usually offered in spring term
Prerequisites: MATH 240, PHYS 140 or 150, BE 200
Activity: Lecture
1.0 Course Unit
**BE 400 Preceptorship in Clinical Bioengineering**
Introduction to the integration of biomedical engineering in clinical medicine through lectures and a preceptorship with clinical faculty. This course is for BE majors ONLY, with preference given to BSE students. Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Junior and Senior BE majors only

**BE 470 Medical Devices**
Lab-based course where students learn the fundamentals of medical device design through hands-on projects using microcontrollers. Students first learn basic design building blocks regularly employed in microcontroller-based medical devices, and then carry out a small design project using those building blocks. Projects are informed by reverse-engineering of competing products, FDA regulations, and marketplace considerations. Prerequisite: Junior or Senior BE Majors only. Students who have taken ESE 350 or a similar course may not enroll. Permission of instructor required if course prerequisites not met.
Course usually offered in spring term
Activity: Laboratory
1.0 Course Unit

**BE 472 Medical Device Development**
Students will learn the process of developing medical devices that fulfill unmet patient needs. Students will be equipped with an understanding of what is required to lead a startup venture in medical devices including regulatory, legal, fundraising, team building and leadership. In lab, students will develop a proof-of-concept prototype device. Students will pitch their ideas to real med tech investors. The successful student will leave the class with the knowledge, skills and confidence to lead a startup venture in medical devices. If desired by the student, the proof-of-concept device can be used as the basis for their senior design project. Junior standing in Bioengineering or permission of the instructor if course prerequisite is not met.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

**BE 480 Introduction to Biomedical Imaging**
Introduction to the mathematical, physical and engineering design principles underlying modern medical imaging systems including x-ray computed tomography, ultrasonic imaging, and magnetic resonance imaging. Mathematical tools including Fourier analysis and the sampling theorem. The Radon transform and related transforms. Filtered backprojection and other reconstruction algorithms. Bloch equations, free induction decay, spin echoes and gradient echoes. Applications include one-dimensional Fourier magnetic resonance imaging, three-dimensional magnetic resonance imaging and slice excitation.
Course usually offered in spring term
Prerequisite: BE 301 OR ESE 325
Activity: Lecture
1.0 Course Unit

**BE 483 Molecular Imaging**
This course will provide a comprehensive survey of modern medical imaging modalities and the emerging field of molecular imaging. The basic principles of X-ray, ultrasound, nuclear imaging, and magnetic resonance imaging will be reviewed. The course will also cover concepts related to contrast media and targeted molecular imaging. Topics to be covered include the chemistry and mechanisms of various contrast agents, approaches to identifying molecular markers of disease, ligand screening strategies, and the basic principles of toxicology and pharmacology relevant to imaging agents.
Course usually offered in fall term
Also Offered As: BE 583, MPH 602
Prerequisite: MATH 241 OR BIOL 215 OR BE 305
Activity: Lecture
1.0 Course Unit

**BE 490 Independent Project in Bioengineering**
An intensive independent study experience on an engineering or biological science problem related to bioengineering. Requires preparation of a proposal, literature evaluation, and preparation of a paper and presentation. Regular progress reports and meetings with faculty advisor are required. Sophomore, Junior and Senior BE majors only.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

**BE 492 Independent Project in Bioengineering**
Second semester of an independent project. Sophomore, Junior and Senior BE majors only.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

**BE 495 Senior Design Project**
Group design projects in various areas of bioengineering. Project ideas are proposed by the students in the Spring semester of the Junior year and refined during the Fall semester. The course guides the students through choosing and understanding an impactful biomedical problem, defining characteristics of a successful design solution to eliminate or mitigate a problem or fulfill a need, identifying and prioritizing constraints, creatively developing potential design solutions, iteratively refining design options, defining and implementing an optimal solution, and evaluating how well the solution fulfills the need. Final oral and written reports are required. Also emphasized are teamwork, project management, time management, regulations/standards, and effective communication.
Seniors in BE or Department Permission.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

**BE 496 Senior Design Project**
Second semester of a two semester design project. Seniors in BE or Department Permission.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
BE 497 Senior Thesis in Biomedical Science
An intensive independent project experience incorporating both technical and non-technical aspects of the student’s chosen career path. Chosen topic should incorporate elements from the student’s career path electives, and may involve advisors for both technical and non-technical elements. Topics may range from biomedical research to societal, technological and business aspects of Bioengineering. A proposal, regular progress reports and meetings with a faculty advisor, a written thesis, and a presentation are required. Seniors in BAS or Department Permission. Course usually offered in fall term Activity: Lecture 1.0 Course Unit

BE 498 Senior Thesis in Biomedical Science
Second semester of a year-long project. Seniors in BAS or Department Permission. Course usually offered in spring term Activity: Lecture 1.0 Course Unit

BE 502 From Biomedical Science to the Marketplace
This course explores, through own work (this is, own discovery) the transition from fundamental knowledge to its ultimate application in a clinical device or drug. Emphasis is placed upon factors that influence this transition and upon the integrative requirements across many fields necessary to achieve commercial success. Special emphasis is placed upon entrepreneurial strategies, intellectual property, and the FDA process of proving safety and efficacy. Graduate students or permission of the instructor. Course usually offered in fall term Activity: Lecture 1.0 Course Unit

BE 504 Biological Data Science II: Data Mining Principles for Epigenomics
This course will teach upper level undergraduates and graduate students how to answer biological questions by harnessing the wealth of genomic and epigenomic data sets generated by high-throughput sequencing technologies. Graduate students or permission of the instructor Course usually offered in spring term Activity: Lecture 1.0 Course Unit

BE 510 Biomechanics and Biotransport
The course is intended as an introduction to continuum mechanics in both solid and fluid media, with special emphasis on the application to biomedical engineering. Once basic principles are established, the course will cover more advanced concepts in biosolid mechanics that include computational mechanics and bio-constitutive theory. Applications of these advanced concepts to current research problems will be emphasized. Course usually offered in spring term Prerequisites: MATH 241, BE 200, 350 Activity: Lecture 1.0 Course Unit

BE 512 Bioengineering III: Biomaterials
This course provides a comprehensive background in biomaterials. It covers surface properties, mechanical behavior and tissue response of ceramics, polymers and metals used in the body. It also builds on this knowledge to address aspects of tissue engineering, particularly the substrate component of engineering tissue and organs. General Chemistry, basic biomechanics. Course usually offered in fall term Activity: Lecture 1.0 Course Unit

BE 514 Rehab Engineering and Design
Students will learn about problems faced by disabled persons and medical rehabilitation specialists, and how engineering design can be used to solve and ameliorate those problems. The course combines lectures, multiple design projects and exercises, and field trips to clinical rehabilitation facilities. Students will have substantial interaction with clinical faculty, as well as with patients. Prerequisite: Graduate students or permission of the instructor. Course usually offered in fall term Also Offered As: IPD 504 Activity: Lecture 1.0 Course Unit

BE 515 Bioengineering Case Studies
This course has the unofficial title 'What Makes Medical Technology Work?' We will examine biomedical devices and technologies with significant engineering components for use in breast cancer detection, for minimally invasive treatment of cancer and other disease, and applied neuroscience technologies for rehabilitation. Various factors that determine the success of particular medical systems will be discussed, including the 'fit' of the technology with a medical need, testing for safety and efficacy, FDA premarket approval requirements, clinical studies used to assess the technology for evidence-based medicine. The class will examine successful and unsuccessful examples of these technologies. The course will require extensive reading of papers from the professional literature, group presentations and papers. BE seniors and graduate students are encouraged to enroll. Graduate students or permission of the instructor. Course usually offered in fall term Activity: Lecture 1.0 Course Unit
BE 516 Introduction to High-Performance Scientific Computing
Research problems in the domain of physical, biological and biomedical sciences and engineering often span multiple time and length-scales from the molecular to the organ/organism, owing to the complexity of information transfer underlying biological mechanisms. Multiscale modeling (MSM) and high-performance scientific computing (HPC) have emerged as indispensable tools for tackling such complex problems. However, a paradigm shift in training is now necessary to leverage the rapid advances, and emerging paradigms in HPC — GPU, cloud, exascale supercomputing, quantum computing — that will define the 21st century. This course is a collaboration between Penn, UC Berkeley, and the Extreme Science and Engineering Discovery Environment (XSEDE) which administers several of the federally funded research purpose supercomputing centers in the US. It will be taught as a regular 1 CU course at Penn by adopting a flip-classroom/active learning format. The course is designed to teach students how to program parallel architectures to efficiently solve challenging problems in science and engineering, where very fast computers are required either to perform complex simulations or to analyze enormous datasets. The course is intended to be useful for students from many departments and with different backgrounds, e.g., scholar of Penn Institute for Computational Science, although we will assume reasonable programming skills in a conventional (non-parallel) language, as well as enough mathematical skills to understand the problems and algorithmic solutions presented. Taught by: Ravi Radhakrishnan
One-term course offered either term
Activity: Lecture
1.0 Course Unit

BE 518 Optical Microscopy
An introduction to the fundamental concepts of optics and microscopy. Geometrical optics: ray tracing, optical elements, imaging systems, optical aberrations. Physical optics: the electromagnetic spectrum, the wave equation, diffraction, interference and interferometers, optical resolution limits, optical coherence, lasers. Microscopy methods: phase contrast, differential interference contrast, fluorescence microscopy, confocal microscopy, multiphoton microscopy, optical coherence tomography, superresolution microscopy. Course usually offered in fall term
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit

BE 521 Brain-Computer Interfaces
The course is geared to advanced undergraduate and graduate students interested in understanding the basics of implantable neuro-devices, their design, practical implementation, approval, and use. Reading will cover the basics of neuro signals, recording, analysis, classification, modulation, and fundamental principles of Brain-Machine Interfaces. The course will be based upon twice weekly lectures and 'hands-on' weekly assignments that teach basic signal recording, feature extraction, classification and practical implementation in clinical systems. Assignments will build incrementally toward constructing a complete, functional BMI system. Fundamental concepts in neurosignals, hardware and software will be reinforced by practical examples and in-depth study. Guest lecturers and demonstrations will supplement regular lectures. BE 301 (Signals and Systems) or equivalent, computer programming experience, preferably MATLAB (e.g., as used the BE labs, BE 310). Some basic neuroscience background (e.g. BIOL 215, BE 305, INSC core course), or independent study in neuroscience, is required. This requirement may be waived based upon practical experience on a case by case basis by the instructor.
Course usually offered in spring term
Also Offered As: NGG 521
Activity: Lecture
1.0 Course Unit

BE 530 Theoretical Neuroscience.
This course will develop theoretical and computational approaches to structural and functional organization in the brain. The course will cover: (i) the basic biophysics of neural responses, (ii) neural coding and decoding with an emphasis on sensory systems, (iii) approaches to the study of networks of neurons, (iv) models of adaptation, learning and memory, (v) models of decision making, and (vi) ideas that address why the brain is organized the way that it is. The course will be appropriate for advanced undergraduates and beginning graduate students. Knowledge of multivariable calculus, linear algebra and differential equations is required (except by permission of the instructor). Prior exposure to neuroscience and/or Matlab programming will be helpful.
Taught by: Vijay Balasubramanian
Course usually offered in spring term
Also Offered As: BIBB 585, NGG 594, PHYS 585, PSYC 539
Activity: Lecture
1.0 Course Unit

BE 537 Biomedical Image Analysis
This course covers the fundamentals of advanced quantitative image analysis that apply to all of the major and emerging modalities in biological/biomedical imaging and in vivo biomedical imaging. While traditional image processing techniques will be discussed to provide context, the emphasis will be on cutting edge aspects of all areas of image analysis (including registration, segmentation, and high-dimensional statistical analysis). Significant coverage of state-of-the-art biomedical research and clinical applications will be incorporated to reinforce the theoretical basis of the analysis methods. Prerequisite: Mathematics through multivariate calculus (MATH 241), programming experience, as well as some familiarity with linear algebra, basic physics, and statistics.
One-term course offered either term
Also Offered As: CIS 537
Activity: Lecture
1.0 Course Unit
BE 540 Biomolecular and Cellular Engineering
This course will introduce concepts and methods for the quantitative understanding of molecular and cellular phenomena. Topics include molecular recognition, receptor-ligand binding, viral infection, signal transduction, cell adhesion, motility, and cytoskeletal dynamics. The course requires mathematics at the level of differential equations, and some knowledge of Matlab programming. A basic knowledge of cell biology is suggested, although not required.
One-term course offered either term
Also Offered As: CBE 540
Activity: Lecture
1.0 Course Unit

BE 541 Engineering and Biological Principles in Cancer
This course provides an integrative framework and provides a quantitative foundation for understanding molecular and cellular mechanisms in cancer. The topics are divided into three classes: (1) the biological basis of cancer; (2) cancer systems biology; and (3) multiscale cancer modeling. Emphasis is placed on quantitative models and paradigms and on integrating bioengineering principles with cancer biology. Prerequisite: Seniors in BE or permission of the instructor.
Course usually offered in spring term
Also Offered As: CBE 541
Activity: Lecture
1.0 Course Unit

BE 546 Fundamental Techniques of Imaging I
This course covers the fundamentals of modern techniques in biological and in vivo biomedical imaging. This practical course consists of a series of hands-on lab exercises, covering major imaging modalities, but also extends to non-radiology modalities of interest in biological, pathological or animal imaging (e.g., optical imaging). Topics include x-ray, mammography, CT, proton therapy, radiation safety and brachytherapy. The emphasis will be on hands-on aspects of all areas of imaging and imaging analysis. Small groups of students will be led by a faculty member with technical assistance as appropriate. Graduate students or permission of the instructor.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

BE 547 Fundamental Techniques of Imaging 2 (BE 483/583 or MMP 507 preferred).
This laboratory course covers the fundamentals of modern medical imaging techniques. Students will participate in a series of hands-on exercises, covering the principals of X-ray imaging, CT imaging, photoacoustic imaging, diffusion tensor imaging, localized magnetic resonance (MR) spectroscopy, MR contrast agents, diffuse optical spectroscopy, and bioluminescence imaging. Each lab is designed to reinforce and expand upon material taught in BE483/583 Molecular Imaging and MMP507 Physics of Medical Imaging Graduate students or permission of the instructor.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

BE 550 Continuum Tissue Mechanics
This course introduces tensor calculus and continuum mechanics, with a focus on finite-deformation behavior of biological tissues including skin, tendon/ligament, cartilage, bone, blood vessels, nerves. Senior/Graduate Student in Bioengineering or permission of the instructor.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

BE 551 Biomicrofluidics
The focus of this course is on microfluidics for biomedical applications. Topics to be covered in the first half of this course include microscale phenomena, small-scale fabrication techniques, and sensing technologies that are often leveraged in the development of microfluidic systems for the study of biomolecules, cells, tissues, and organs in living biological systems. In the second half of this course, strong emphasis will be placed on the application of microfluidics in cell biology, bioanalytical chemistry, molecular biology, tissue engineering, and drug discovery. Prerequisite: Experience with an undergraduate level fluid mechanics course is preferred. Examples of relevant SEAS courses include BE 350 (Biotransport), CBE 350 (Fluid Mechanics), and MEAM 302 Fluid Mechanics).
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

BE 553 Principles, Methods, and Applications of Tissue Engineering
Tissue engineering demonstrates enormous potential for improving human health. This course explores principles of tissue engineering, drawing upon diverse fields such as developmental biology, cell biology, physiology, transport phenomena, material science, and polymer chemistry. Current and developing methods of tissue engineering, as well as specific applications will be discussed in the context of these principles. A significant component of the course will involve review of current literature within this developing field. Graduate Standing or instructor’s permission.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

BE 554 Engineering Biotechnology
Advanced study of re DNA techniques; bioreactor design for bacteria, mammalian and insect culture; separation methods; chromatography; drug and cell delivery systems; gene therapy; and diagnostics.
Course usually offered in spring term
Also Offered As: CBE 554
Activity: Lecture
1.0 Course Unit
**BE 555 Nanoscale Systems Biology**

Nano-science and engineering approaches to systems in biology are of growing importance. They extend from novel methods, especially microscopies that invite innovation to mathematical and/or computational modeling which incorporates the physics and chemistry of small scale biology. Proteins and RNA, for example, are highly specialized polymers that interact, catalyze, stretch and bend, move, and/or store information. Membranes are also used extensively by cells to isolate, adhere, deform, and regulate reactions. In this course, students will become familiar with cell & molecular biology and nano-biotechnology through an emphasis on nano-methods, membranes, molecular machines, and ‘polymers’ - from the quantitative perspectives of thermodynamics, statistical physics, and mechanics. We specifically elaborate ideas of energetics, fluctuations and noise, force, kinetics, diffusion, etc. on the nano-thru micro-scale, drawing from very recent examples in the literature. Laboratory experiments will provide hands-on exposure to microscopies in a biological context (eg. fluorescence down to nano-scale, AFM), physical methods (eg. micromanipulation, tracking virus-scale particles or quantum dots), and numerical problems in applied biophysics, chemistry, and engineering.

A key goal of the course is to familiarize students with the concepts and technology (plus their limitations) as being employed in current research problems in nanoscale systems biology, extending to nanobiotechnology.

Prerequisite: Background in Biology, Physics, Chemistry or Engineering

Course usually offered in fall term

Also Offered As: CBE 555, MEAM 555

Activity: Lecture

1.0 Course Unit

**BE 558 Principles of Biological Fabrication**

BE 558 introduces methodological approaches that are currently used for the de novo construction of biological molecules - primarily, nucleic acids and proteins - and how to use these molecules to engineer the properties of cells and intact tissue. By the end of the semester, students should (i) possess a molecular-scale understanding of key biological synthesis (ii) and assembly processes, (ii) gain an intuition for how to create novel (iii) methodologies based on these existing processes, and (iii) appreciate (iv) the drivers of technology adoption (e.g. cost, time, ease, and (v) reproducibility). Throughout the course, we will place the material in context of applications in bioengineering and human health, including: protein engineering, drug discovery, synthetic biology & optogenetics, bio-inspired materials, and bio-electronic devices. Graduate standing or permission of the instructor. Undergraduate level biology, physics and chemistry.

Course offered fall; odd-numbered years

Activity: Lecture

1.0 Course Unit

**BE 559 Multiscale Modeling of Chemical Systems**

This course provides theoretical, conceptual, and hands-on modeling experience on three different length and time scales - (1) electronic structure (Å, ps); (2) molecular mechanics (100A, ns); and (3) deterministic and stochastic approaches for microscale systems (μm, sec). Students will gain hands-on experience, i.e., running codes on real applications together with the following theoretical formalisms: molecular dynamics, Monte Carlo, free energy methods, deterministic and stochastic modeling.

Prerequisite: Undergraduate courses in numerical analysis and statistical mechanics.

Course not offered every year

Also Offered As: CBE 559, SCMP 559

Activity: Lecture

1.0 Course Unit

**BE 561 Musculoskeletal Biology and Bioengineering**

The goal of this course is to educate students in core principles and expose them to cutting-edge research in musculoskeletal biology and bioengineering through (1) lectures covering the basic engineering principles, biological fundamentals, and clinical practices involved in the function, repair, and regeneration of the musculoskeletal tissues; (2) critical review and presentation by student groups of recent and seminal publications in the field related to the basic science, translation, and clinical practice of musculoskeletal biology and bioengineering, with discussion input by faculty members with relevant expertise. This course will place an emphasis on delivering multidisciplinary knowledge of cell and molecular biology, mechanics, material science, imaging, and clinical medicine as it relates to the field of musculoskeletal bioengineering and science.

Graduate student standing in Engineering and/or CAMB.

Undergraduate students with permission of the instructor.

Course offered fall; odd-numbered years

Activity: Lecture

1.0 Course Unit

**BE 562 Drug Discovery and Development**

Intro to Drug Discovery; Overview of Pharmaceutical Industry and Drug Development Costs, Timelines; High Throughput Screening (HTS): Assay Design and Sensitivity Solid Phase Synthesis and Combinatorial Chemistry; Enzyme Kinetics; Fluorescence, Linearity, Inner-filter effect, quenching; Time dynamics of a Michaelis-Menten Reaction; Competitive Inhibitor; FLINT, FRET, TRF, FP; SPA, alpha-screen; Enzyme HTS (protease); Cell based screening; Fura-2 ratio, loading signaling; Gfpcalmodulin-gfp integrated calcium response; Estrogen/ERE-Luc HTS; Problems with cell based screening (toxicity, permeability, nonspecificity); Instrumentation, Robotics/Automation; Z-factor; SAR, Positioning Scanning; Microarray HTS; IC50, % Conversion in HTS and IC50, Assay Optimization.

Course usually offered in fall term

Also Offered As: CBE 562

Activity: Lecture

1.0 Course Unit

**BE 565 Developmental Engineering of Tissues**

This course discusses systems biology approaches to understanding tissue development, homeostasis, and organogenesis. Emphasis is placed on modern technologies, models, and approaches to understanding collective cell behaviors that sculpt tissue form and function, placing developmental principles within an engineering framework. We will consider morphogenetic, mechanobiology, and micro-engineering/sensing analyses. Senior Standing in Bioengineering or permission of the instructor.

Course usually offered in fall term

Activity: Lecture

1.0 Course Unit
BE 566 Networked Neuroscience
The human brain produces complex functions using a range of system components over varying temporal and spatial scales. These components are couples together by heterogeneous interactions, forming an intricate information-processing network. In this course, we will cover the use of network science in understanding such large-scale and neuronal-level brain circuitry. Prerequisite: Graduate standing or permission of the instructor. Experience with Linear Algebra and MATLAB.
Course usually offered in spring term
Also Offered As: ESE 566
Activity: Lecture
1.0 Course Unit

BE 567 Mathematical Computation Methods for Modeling Biological Systems
This course will cover topics in systems biology at the molecular/cellular scale. The emphasis will be on quantitative aspects of molecular biology, with possible subjects including probabilistic aspects of DNA replication, transcription, translation, as well as gene regulatory networks and signaling. The class will involve analyzing and simulating models of biological behavior using MATLAB. Prerequisite: Graduate standing or permission of the instructor.
One-term course offered either term
Also Offered As: AMCS 567, GCB 567
Activity: Lecture
1.0 Course Unit

BE 568 Causality for Medicine and Biology
The goal of this course is to introduce students to the analysis of data which aims at understanding causal relations. Within biomedical research there are randomized experiments that effortlessly get at certain kinds of causality but generally only allow low-dimensional probing. There are also observational studies that generally do not meaningfully get at causality. The field of econometrics has worked out a great deal of approaches that meaningfully allow the estimation of causality without randomized experiments. This set of techniques is largely unknown in much of biology and medicine. We will thus review the econometric approaches with an eye towards applications to biology and medical problems. We will also review ways of infusing these techniques with machine learning approaches to obtain more meaningful estimates.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

BE 569 Systems Biology of Cell Signaling Behavior
This course discusses the principles of cell signaling and cell decisions. We start from a molecular description of cell signaling components. The course builds towards understanding how their interactions govern cell and tissue behavior and how these processes can breakdown in disease. We conclude with a survey of modern approaches to analyze and manipulate signaling networks to study and control biological systems. Graduate, Junior or Senior standing in Bioengineering or permission of the instructor.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

BE 570 Biomechatronics
Mechatronics is the combination of mechanical, electrical and computer engineering principles in the design of electromechanical systems. Biomechatronics is the application of these principles to human biology and includes orthopaedic, hearing, respiratory, vision and cardiovascular applications. In this hands-on, project-based course, these biomechatronic systems will be explored. Students will learn the basic mechanical and electrical elements needed to complete a biomechatronic design challenge including basic circuits, design considerations, material fabrication, microcontrollers and mechanisms (e.g. converting rotational motion into linear motion). Students will carry out a final design project utilizing these building blocks. A first course in programming (Matlab and/or C++ preferred), Senior standing in BE or permission of the instructor
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

BE 571 The Goals of Scientific Inquiry
A key skill needed for a successful career in engineering and applied science is the ability to capitalize on current advances in technology (e.g., big data, data science, machine learning) to solve important problems. To gain this ability a student must go beyond an understanding of the technology itself, and instead must achieve the more challenging capacity to identify tractable problems, to formulate good questions, to initiate big ideas, to guide the advancement of science. In this course, we provide a broad and rich perspective on science as a field, laying the critical groundwork for just such achievements. Prerequisites: The course is open to all graduate students. Undergraduates must have passed Math 241, ENM 375 or equivalent, CIS 120 or higher, and PHYS 141. PHIL 025 or similar is beneficial but not required.
Taught by: Bassett, D
Course offered spring; even-numbered years
Activity: Lecture
1.0 Course Unit

BE 573 Special Topics in Bioengineering - 1
This special topics course will focus on emerging topics in Bioengineering at the molecular and cellular level covering genomics, epigenetics, molecular and cellular systems with focus on immunology, cancer, neuroscience, biomechanics, and other facets of bioengineering
Taught by: BE Staff
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

BE 574 Special Topics in Bioengineering - 2
This special topics course will focus on emerging topics in Bioengineering at the macroscale from organ to population level covering genomics, epigenetics, molecular and cellular systems with focus on immunology, cancer, neuroscience, biomechanics, and other facets of bioengineering
Taught by: BE Staff
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
BE 576 The Cell as a Machine
The course is a general survey of cell mechanics, emphasizing problem-based and hypothesis-testing approaches. It is based on the concept that the cell is a complex machine, and that the cell can therefore be understood by first understanding principles of complex functions in robust machines, and then understanding the design and operation of complex functions specifically in cells. The course has been offered internationally for many years using a reverse-classroom format. Lectures, which are given primarily by Michael Sheetz, former director of the Mechanobiology Institute at the National University of Singapore, are pre-recorded and viewed independently by students, who also do outside reading and prepare questions in advance of a live, remote, 2 hour question/discussion session with Dr. Sheetz. The Penn course directors are present at all question/discussion sections, and lead tutorials on site. Homework and exams are graded, and Penn course directors will review them for consistency. Other sites that will be involved in the course in the coming year include Columbia, MIT, and Berkeley. Graduate Standing or permission of the instructor.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Auditors not permitted

BE 578 Principles of Controlled Release Systems
This course provides a basic understanding of the engineering of controlled release systems specifically geared towards the development of formulations for drug delivery, which stands as a 114 billion dollar industry. The course focuses on topics at the interface between engineering and medicine, such as biomaterials, pharmacokinetics, polymer chemistry, reaction kinetics, and transport phenomena. Design of controlled release systems for transdermal, aerosol, oral, gene, and targeted cellular delivery are discussed with emphasis placed on fabrication, US FDA regulatory considerations, and the relevant physiological milieu. The course comprises (1) foundational lectures that provide the basic tools for the student to elaborate a controlled delivery system, (2) an overview of key current research on biomedical controlled release systems for different pathologies and body compartments, (3) an elevator pitch competition for original ideas that use controlled release systems, and (4) a project; plan and presentation to implement the pitched controlled release; system idea to practice design and problem-solving skills and practice basic elements of business proposal.
Graduate students and senior standing in Bioengineering, Chemical and Biomolecular Engineering, or permission of the instructor.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

BE 581 Techniques of Magnetic Resonance Imaging
Detailed introduction to the physics and engineering of magnetic resonance imaging as applied to medical diagnosis. Covered are magnetism spatial encoding principles, Fourier analysis, spin relaxation, imaging pulse sequences and pulse design, contrast mechanisms, chemical shift, flow encoding, diffusion and perfusion, and a discussion of the most relevant clinical applications.
Taught by: Song and Wehrli
Course offered spring; odd-numbered years
Also Offered As: BMB 581
Activity: Lecture
1.0 Course Unit

BE 583 Physics of Medical / Molecular Imaging
Physical principles of diagnostic radiology, fluoroscopy, computed tomography; principles of ultrasound and magnetic resonance imaging; radioisotope production, gamma cameras, SPECT systems, PET systems; diagnostic and nuclear medicine facilities and regulations. The course includes a component emphasizing the emerging field of molecular imaging.
Course usually offered in fall term
Also Offered As: BE 483, MPH 602
Prerequisite: MATH 241 AND BIOL 215 AND BE 305
Activity: Lecture
1.0 Course Unit

BE 584 Mathematics of Medical Imaging and Measurements
In the last 25 years there has been a revolution in image reconstruction techniques in fields from astrophysics to electron microscopy and most notably in medical imaging. In each of these fields one would like to have a precise picture of a 2 or 3 dimensional object which cannot be obtained directly. The data which is accessible is typically some collection of averages. The problem of image reconstruction is to build an object out of the averaged data and then estimate how close the reconstruction is to the actual object. In this course we introduce the mathematical techniques used to model measurements and reconstruct images. As a simple representative case we study transmission X-ray tomography (CT). In this context we cover the basic principles of mathematical analysis, the Fourier transform, interpolation and approximation of functions, sampling theory, digital filtering and noise analysis.
Course not offered every year
Also Offered As: AMCS 584, MATH 584
Prerequisite: MATH 114 AND MATH 360 OR MATH 508 AND MATH 361 OR MATH 509
Activity: Lecture
1.0 Course Unit

BE 597 Master's Thesis Research
For students working on an advanced research program leading to the completion of master's thesis.
One-term course offered either term
Activity: Masters Thesis
1.0 Course Unit

BE 599 Master's Independent Study
The purpose of BE 599 is to allow a student to create a customized curriculum to study material beyond or outside the scope of our standard BE course offerings. Independent study is NOT a research or design project, it is a one-on-one or small-group course with a professor. The course should require an effort comparable to that of a regular course, about 10-12 hours per week. A paper or presentation is required
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
BE 608 Commercializing Translational Therapeutics
To provide an in-depth view of the process by which scientific discoveries are commercialized. This course covers discovery in the laboratory, technology transfer, regulatory, financial, and managerial issues involved in moving a technology from the lab into the market place. The course contents fall into three broad categories: (1) examples of scientific discoveries that are candidates for commercialization, (2) fundamental elements of technology transfer, such as intellectual property protection and licensing, and (3) aspects of commercialization, such as regulatory approval, financing, and startup formation. In using this structure, the course provides parallel coverage of both the science and the commercialization process, in such a way that the elements of one contribute to the student's experience in learning the other. Prerequisite: Undergraduates and graduate students in other departments are welcome. Please contact mmaxwell@upenn.edu to request permission to request permission to register.
Taught by: Nalaka Gooneratne, MD
Also Offered As: MTR 620
Activity: Lecture
1.0 Course Unit

BE 640 The Extracellular Matrix
This course is geared towards first and second year graduate students in BGS/CAMB and SEAS/BE with an interest in the interface of extracellular matrix (ECM) cell biology and biomechanics. Students will learn about the ECM and adhesion receptors and their impact on the cytoskeleton and signaling, as well as fundamental concepts in biomechanics and engineered materials. We will discuss how these topics can inform the study of cell biology, physiology and disease. An additional objective of the course is to give students experience in leading critical discussions and writing manuscript reviews. Invited outside speakers will complement the strengths of the Penn faculty.
Taught by: R. Mauck, R. Wells.
Course offered spring; even-numbered years
Also Offered As: CAMB 703
Prerequisite: BIOM 600
Activity: Lecture
1.0 Course Unit

BE 650 Advanced Biomedical Imaging Applications
The course will cover a broad range of biomedical imaging technologies including Xray, MRI, US, molecular and optical imaging. The curriculum will focus on the design of biomedical imaging based research studies spanning from basic technology development through clinical trials. This discussion oriented course is expected prepare students for integrating imaging technology and biomedical concepts to answer biological and medical questions.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

BE 660 Advanced Molecular Thermodynamics
This course begins with a brief review of classical thermodynamics, including the development of Maxwell relationships and stability analysis. The remainder of the course develops the fundamental framework of statistical mechanics, then reviews various related topics including ideal and interacting gases, Einstein and Debye models of crystals, lattice models of liquids, and the basis of distribution function theory.
Course usually offered in fall term
Also Offered As: CBE 618, MEAM 662
Activity: Lecture
1.0 Course Unit

BE 662 Advanced Molecular Thermodynamics
This is a required course for BE PhD candidates and involves attendance at seminars related to bioengineering topics, which can be either within the departmental seminar series or through other relevant seminar series on campus. The goal is to expose students to a breadth of bioengineering topics beyond their specific dissertation work. Students are required to submit summaries of the attended seminars to receive course credit.
One-term course offered either term
Activity: Seminar
0.5 Course Units

BE 711 Integrative plant and animal mechanobiology
This course aims to provide students with an understanding of biomechanics that spans the plant and animal kingdoms, with the goal of emphasizing principles common to both. Major concepts include 1) Plant and Animal Cell Biology; 2) Solid, Fluid, and Transport Mechanics; and 3) Integrating Biology and Mechanics - Big Questions. In addition to lectures, there will be two journal article discussion sections. Most lectures will be given by Penn faculty, although selected topics (particularly in plant biology and mechanics) will be covered by faculty at other sites through lectures broadcast remotely. The Penn director will be present at all sessions of the class. Undergraduates require special permission from the director.
Taught by: Rebecca Wells
Course usually offered in fall term
Also Offered As: CAMB 711
Activity: Lecture
1.0 Course Unit

BE 899 PhD Independent Study
The purpose of BE 899 is to allow a student to create a customized curriculum to study material beyond or outside the scope of our standard BE course offerings. Rather than a research or design project, BE 899 is a one-on-one or small-group course with a professor. Students must submit a proposal outlining the study area along with the professor's approval. A paper or presentation is required.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: Graduate Students Only

BE 990 Masters Thesis
For Master's students who have completed the course requirements for the Master's degree and are strictly working to complete the Master’s Thesis leading to the completion of a Master's degree. Permission Required.
One-term course offered either term
Activity: Masters Thesis
1.0 Course Unit

BE 995 Doctoral Dissertation Status
Ph.D. Students register for Doctoral Dissertation Status after they have advanced to Ph.D. candidacy by completing the Candidacy Exam which consists of the Dissertation Proposal Defense.. Permission required. For PhD candidates only.
One-term course offered either term
Prerequisites: For Ph.D. Candidates only
Activity: Dissertation
1.0 Course Unit
Bioethics (BIOE)

BE 999 Thesis/Dissertation Research
For students working on an advanced research program leading to the completion of master's thesis or Ph.D. dissertation requirements.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

Bioethics (BIOE)

BIOE 282 Lying, Cheating, Stealing, and Killing: How to Think About Professional Ethic
Professionals - in business, medicine, law, and politics - face myriad ethical dilemmas in their daily work life that challenge, and sometimes conflict with, the moral commitments that guide their everyday life. This course systematically examines the ethical dimensions of these four professional roles, asking questions such as: Are there limits to what we should sell? How far should competitors go to ‘win’? Who should get ventilators in a flu pandemic? Is it morally permissible for physicians to assist in suicide? Should lawyers represent terrorists or child killers? How far does attorney-client privilege go? Is it morally justifiable to torture enemy combatants? Should politicians lie?
Taught by: Allen/Emanuel/Hirschmann/Strudler
Also Offered As: PSCI 282
Activity: Lecture
1.0 Course Unit

BIOE 401 Introduction to Bioethics
Course usually offered in fall term
Also Offered As: BIOE 601
Activity: Lecture
1.0 Course Unit

BIOE 402 Foundations of Bioethics
This course examines the various theoretical approaches to bioethics and critically assesses their underpinnings. Topics to be covered include an examination of various versions of deontological theories, utilitarianism, virtue ethics, principism, casuistry, feminist ethics, narrative theory, and pragmatism.
Also Offered As: BIOE 602
Activity: Lecture
1.0 Course Unit

BIOE 505 Sex and Bioethics
While the topics of sex and sexuality have a long and storied history in medical culture, they have been especially complex and problematic in the past century. With the creation of distinct sexually-minded medical fields since the late 19th-century including sexology, psychiatry, and hormonal studies, medicine has also occasioned the very categories and labels of the homosexual, the hermaphrodite, the invert, and the nymphomaniac, to name a few. While medical historians and queer theorists have paid almost obsessive attention to these subjects, bioethicists have intervened to a lesser degree and on only a handful of relevant subjects. In this course, we will address the range of historical and theoretical matters that speak to this intersection of bioethics and sex, paying special attention to the health concerns of lesbian, gay, bisexual, trans, queer, and intersex (LGBTQI) persons. Who has sex with whom? What does it mean to pathologize or diagnose such desires? How do we raise the stakes when considering persons who question their sex or who are in sexual transition? And how do such questions reveal the dilemmas of bioethicists at large, not just those related to matters of sex and sexuality? Accordingly, this course will consider a range of historical and contemporary topics which speak to the bioethical dilemmas of the intersection of medicine, sex, and sexuality, including: the gay adolescent, the intersex person, gay-conversion therapies, the prospect of gay gene studies, sex addiction, and blood/organ donation policies in wake of the HIV/AIDS pandemic. Specifically, we will focus on literary sources (poetry, memoirs, diaries, and films) as well as on non-literary accounts (medical texts, bioethical scholarship, legal cases, and historical records) that explore the emotional and somatic aspects of matters related to sex and bioethics.
Activity: Lecture
1.0 Course Unit

BIOE 540 Challenging Clinical Ethics: Managing patient/caregiver conflicts through mediation.
The contemporary healthcare system in which patients, families, institutions and a multiplicity of caregivers interact over matters of life and death with legal, ethical, emotional and scientific complexities inherently gives rise to a variety of disputes. Such disputes are frequently highly charged and are often emergent in nature. In recent years, mediation has grown exponentially as a dispute resolution mechanism of choice. Not surprisingly, the success of mediation and a wider understanding of the process, has led to its application in the realm of healthcare disputes with encouraging results. This course will initially provide an overview of classical mediation theory and practice. Students will be introduced to negotiation fundamentals critical to the practice of mediation. Similarities and differences between mediation in the healthcare field, as distinct from other contexts, will be examined. All class members will participate in mediation role-plays designed to simulate disputes of the kind prevalent in healthcare landscape
Taught by: Bergman
Course not offered every year
Activity: Lecture
1.0 Course Unit
**BIOE 545 Mediation Intensive I**
Students will be placed in a variety of clinical situations in which they will play the roles of disputants and mediators, with ongoing discussions and critiques of mediator performance. Each student will be videotaped during their mediation to elicit feedback from the group and to catalyze self-criticism. As distinct from the course, BIOE 540: Challenging Clinical Ethics, in which negotiation and mediation theory are taught as a prelude to clinical simulations, this course references the literature solely in relation to problems encountered in the hands-on mediation of specific cases. Students may take the mediation intensives in any order; they do not need to be taken from I to IV. Students may take all 4 intensive courses, as the material will not be repeated.

Taught by: Edward J. Bergman, Autumn Fiester, Lance Wahlert
Activity: Seminar
1.0 Course Unit

**BIOE 546 Mediation Intensive II**
Students will have an immersion experience, learning mediation through role-playing simulations. Note that the format is similar to Mediation Intensive I, but the Mediation Intensive II will NOT duplicate simulations. Students in this course will: learn to effectively manage clinical disputes among and between caregivers, patients, and surrogates through mediation; discover how to define problems and assess underlying interests to generate mutually acceptable options; role play in a variety of clinical situations as both disputants and mediators; practice mediation with professional actors; and receive constructive feedback in a supportive environment. Students will also be required to complete a written research paper. Students may take the mediation intensives in any order; they do not need to be taken from I to IV. Students may take all 4 intensive courses, as the material will not be repeated.

Taught by: Edward J. Bergman, Autumn Fiester, Lance Wahlert
Activity: Seminar
1.0 Course Unit

**BIOE 547 Mediation Intensive III**
Students will have an immersion experience, learning mediation through role-playing simulations. Note that the format is similar to Mediation Intensive I and II, but med. intensive III will NOT duplicate simulations. Students in this course will: learn to effectively manage clinical disputes among and between caregivers, patients, and surrogates through mediation; discover how to define problems and assess underlying interests to generate mutually acceptable options; role play in a variety of clinical situations as both disputants and mediators; practice mediation with professional actors; and receive constructive feedback in a supportive environment. Students will also be required to complete a written research paper. Students may take the mediation intensives in any order; they do not need to be taken from I to IV. Students may take all 4 intensive courses, as the material will not be repeated.

Taught by: Edward J. Bergman, Autumn Fiester, Lance Wahlert
Activity: Seminar
1.0 Course Unit

**BIOE 548 Mediation Intensive IV**
Students will have an immersion experience, learning mediation through role-playing simulations. Note that the format is similar to earlier mediation intensives but the mediation intensive IV will NOT duplicate simulations. Students in this course will: learn to effectively manage clinical disputes among and between caregivers, patients, and surrogates through mediation; discover how to define problems and assess underlying interests to generate mutually acceptable options; role play in a variety of clinical situations as both disputants and mediators; practice mediation with professional actors; use video-tapes of simulations to improve mediation techniques and strengthen interpersonal skills; receive constructive feedback in a supportive environment. Students may take the mediation intensives in any order; they do not need to be taken from I to IV. Students may take all 4 intensive courses, as the material will not be repeated.

Taught by: Edward J. Bergman, Autumn Fiester, Lance Wahlert
Activity: Seminar
1.0 Course Unit

**BIOE 550 Bioethics and Society**
This set of courses will deal with bioethical issues in popular culture addressed from a social science perspective. Courses to be offered include: 'Sociology of Bioethics,' and 'Media and the Doctor-Patient Relationship.' This is a topics course - for information on the topic currently being offered, please go to the course listing on the Bioethics website: http://www.med.upenn.edu/mbe.

Taught by: MERZ,JON
Course not offered every year
Activity: Lecture
1.0 Course Unit

**BIOE 551 Sociological Topics in Bioethics**
This set of courses provides a rigorous introduction to the use of sociological methods and perspective to address bioethical topics and issues. Past courses have included the 'Sociology of Medicine,' Medical Errors,' and 'Sociology of Jewish Bioethics.' This is a topics course - for information on the topic currently being offered, please go to the course listing on the Bioethics website: http://www.med.upenn.edu/mbe.

Course not offered every year
Activity: Lecture
1.0 Course Unit

**BIOE 552 Anthropological Topics in Bioethics**
This set of courses provides an introduction to the use of anthropological methods and approaches to address bioethical issues. Courses might include cross-cultural studies of medicine and doctoring, diversity and the culture of medicine, cross-cultural bioethics. This is a topics course - for information on the topics currently being offered, please go to the course listing on the Bioethics website: https://www.med.upenn.edu/mbe.

Course not offered every year
Activity: Lecture
1.0 Course Unit

**BIOE 553 Historical Topics in Bioethics**
This set of courses provides a historical perspective on the field of bioethics and/or key issues or areas within the field. Courses that might be offered include the history of medicine and the history of science. This is a topics course - for information on the topics currently being offered, please go to the course listing on the Bioethics website: http://www.med.upenn.edu/mbe.

Course not offered every year
Activity: Seminar
1.0 Course Unit
BIOE 554 Religious Topics in Bioethics
This set of courses examine the role of spirituality in the field of bioethics. Courses may be taught from a single religious perspective or provide an overview of many different perspectives. Past courses have included 'Spirituality and Bioethics.' This is a topics course - for information on the topics currently being offered, please go to the course on the Bioethics website: http://www.med.upenn.edu/mbc.
Course not offered every year
Activity: Lecture
1.0 Course Unit

BIOE 555 Bioethics and Technology
Activity: Lecture
1.0 Course Unit

BIOE 556 Evidence in Bioethics and Health Policy
The ability to critically appraise scholarly work is a necessary skill to effectively contribute to bioethics and health policy debates, and for development and implementation of health interventions. The object of this course is to provide students with the skills needed to become fluent in reading and assessment of empirical bioethics and health service research. The course will review and evaluate a wide range of qualitative and quantitative methods utilized in bioethics, health policy, and medical research. Specifically, students will learn the conceptual rational for standard qualitative and quantitative methods, their strengths and weakness. At course completion, students should be able to critically evaluate empirical research published in top bioethics, health policy, and medical journals.
Taught by: Maclean
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

BIOE 557 Disability Bioethics
Activity: Lecture
1.0 Course Unit

BIOE 558 Reproductive Health
Whether dealing with personal decisions or public policy, reproductive health matters are almost always controversial and often intractable. It is almost 50 years since the Supreme Court decision Griswold v Connecticut 'settled' the right to contraceptives yet the last several years have been marked by increasing legislative action and judicial review of this right. This course will explore the ethical dimensions of reproductive health controversies including: 1) the moral and legal status of the human embryo and fetus in the context of assisted reproduction, embryonic stem cell research and abortion; 2) contraception, including over-the-counter provision of emergency contraception and contraceptives and legislation challenges to contraceptive insurance coverage in the Affordable Care Act; 3) attempts to restrict access to abortion by restricting later term abortion, mandating informed consent and waiting periods, and regulating abortion clinics; 4) maternal-fetal relationship including prenatal testing and the regulation of women's behavior while pregnant; 5) assisted reproduction and 6) global concerns such as sex selective abortion, forced abortion and sterilization and reproductive rights in relation to population dynamics and environmental concerns.
Activity: Lecture
1.0 Course Unit

BIOE 559 Speaking For Patients: Ethical Issues in Patient Advocacy
This course examines the role that activism and advocacy play in shaping health care in the United States and abroad. The course combines in-depth exploration of particular case studies--AIDS activism in the 1980s, the billion-dollar breast cancer movement, the anti-vaccine movement--with an analysis of cross-cutting questions and themes. We consider how health advocates contribute to forming personal identities around certain illnesses and conditions, how they mobilize constituents and recruit allies, and how they influence decisions about health policy, research, and practice. We also consider the implications of an increasingly professionalized health advocacy industry and ask how corporate sponsorship has changed the landscape of health activism. In addition, we examine the ethical issues involved in speaking on behalf of others, particularly those (e.g., young children, persons with intellectual disabilities) who cannot speak for themselves.
Taught by: Matthew McCoy
Activity: Lecture
1.0 Course Unit

BIOE 560 Clinical Approaches to Bioethics
This set of courses examines issues in bioethics from the perspective of the practicing clinician, physician, nurse, or other health care professional. These courses will often use case studies or clinical experience to analyze or understand contemporary problems in bioethics. An example of such a course is 'Clinical Dilemmas Through the Life Cycle.' This is a topics course - for information on the topics currently being offered, please go to the course listing on the Bioethics website: http://www.med.upenn.edu/mbc.
Course not offered every year
Activity: Lecture
1.0 Course Unit

BIOE 561 Ethics of Science
This Bioethics course will examine ethics as it relates to science.
Taught by: Steve Joffe
Course not offered every year
Activity: Lecture
1.0 Course Unit

BIOE 562 Propaganda
A Bioethics examination of truth and persuasion in health and pandemics.
Taught by: Jon Merz
Course not offered every year
Activity: Lecture
1.0 Course Unit

BIOE 564 Social Media, Healthcare, and Medical Ethics
In this course, students will examine the conceptual and ethical challenges posed by the use of artificial intelligence, social media, and the 'internet of things' in healthcare contexts. The course will combine both didactics and discussion to engage students on these issues.
Taught by: Dominic Sisti
Course not offered every year
Activity: Lecture
1.0 Course Unit
BIOE 565 Rationing
You have one liver but three patients awaiting a liver transplant. Who should get the liver? What criteria should be used to select the recipient? Is it fair to give it to an alcoholic? These are some of the questions that arise in the context of rationing and allocating scarce health care resources among particular individuals, what is called micro-allocation decisions. There are also macro-allocation decisions that focus on how health care systems distributes resources across populations. Using the cases of organs for transplantation, the rationing for vaccines in a flu pandemic, and oncology drug shortages, the course will critically examine alternative theories for allocating scarce resources among individuals. Using both the need to establish priorities for global health aid and to define an essential benefit package for health insurance, the course will critically examine diverse theories for macro-allocation from cost-effectiveness analysis to age-based rationing to accountability for reasonableness.

Taught by: Ezekiel Emanuel, Harald Schmidt
Activity: Lecture
1.0 Course Unit

BIOE 566 Personal Responsibility
Activity: Lecture
1.0 Course Unit

BIOE 570 Bioethics and Policy
This set of courses will look at bioethical topics from either a legal or public policy perspective. Past courses have included: Ethics of Managed Care, Law, Medicine and Policy, and Legal Aspects of Healthcare in America. This is a topics course - for information on the topic currently being offered, please go to the course listing on the Bioethics website: http://www.med.upenn.edu/mbc.

Course not offered every year
Activity: Lecture
1.0 Course Unit

BIOE 571 Global Health Policy
This course considers various theoretical approaches to global justice and global governance and analyzes their implications for global health. The course includes two parts. The first part examines accounts of cosmopolitanism, nationalism and other theories of global justice, critically assessing duties ascribed by each that may be owed universally to all persons or confined within associative boundaries of communities or nations. The second part explores applications to global health governance encompassing consideration of human rights and the operation and accountability of global institutions such as the United Nations, the International Monetary Fund, the World Bank, and the World Health Organization. The course scrutinizes the relevance of global justice for governing the global health realm, evaluating the current global health system and proposals for reforming it.

Activity: Lecture
1.0 Course Unit

BIOE 572 Global Bioethics
According to the WHO, around 30 million people with HIV/AIDS should receive anti-retroviral treatment. But only 10 million do. Drugs containing tenofovir—the standard of care in developed countries are expensive. Stavudine-based treatments are much cheaper but have worse side-effects. Is it ethical to use stavudine-based rather than tenofovir-based treatments in sub-Saharan Africa? Smoking rates have decreased drastically in most developed countries. But they are increasing in many developing countries. Established public health measures are not implemented, and the tobacco industry pursues a range of marketing activities that would be unacceptable in developed countries. As a consequence, global deaths from smoking are expected to increase to 1bn by the end of the 21st century, with 80% of deaths in developing countries. Is industry’s behavior immoral or normal in a global market? ARDS is a disease of premature newborns. Is it ethical to test a new ARDS drug in Bolivia if the drug—if proven to be effective—will be very expensive and accessible only to the richest people in Bolivia and other developing countries? An overarching question that these different cases raise is whether there are universal ethical standards that should apply to all people, or whether regional variations should be acceptable.

Universalists typically argue that there must be no double standards, and that people should be treated the same regardless of where they live. Pragmatists raise concerns about moral imperialism, neo-colonialism, or insufficient respect for cultural or other differences. Increasing globalization fuels debates about which of competing sets of moral standards is the right one. Looking at a range of diverse cases including healthcare research, health policy, flu pandemics, family planning, smoking and obesity policy, and genetically modified crops, this course explores controversies in the cross winds of market forces, politics and ethics, and examines the roles and responsibilities of key actors and international policy guidance.

Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

BIOE 575 Health Care Reform and the Future of the American Health Care System
Under stress from COVID-19, this course provides students with a rigorous understanding of the current American health care system and how it is likely to evolve over the next decade. The course will focus on six topics: 1) the development of the current health care system; 2) challenges of health care costs, quality, and access; 3) lessons of previous attempts to reform the system including the Affordable Care Act (ACA); 4) analysis of current policies regarding provider payment, technology, and electronic health records and how various sectors (e.g. public health and hospitals) are evolving in the current system; 5) impact of COVID-19 on health care delivery and finance, and 6) future megatrends in American health care system. Throughout the course, lessons will integrate basic health economics, history, health policy, and politics to elucidate key principles for understanding the health care system. The course will also examine at least one other country’s health system for comparison. The course will end with a consideration of the long-term outlook for the structure of the US health system and potential reforms.

Taught by: Emanuel, Schwartz
Course usually offered in fall term
Also Offered As: HCMG 250, HCMG 850
Activity: Lecture
1.0 Course Unit

BIOE 578 Bioethics and Human Rights
Activity: Lecture
1.0 Course Unit
BIOE 580 Research Ethics
This class is intended to give students a broad overview of research ethics and regulation. The students will come out of the class with an understanding of the moral bases of scientific ethics and the historical evolution of biomedical research ethics. Students will be fully conversant with the development, implementation, and limitation of US human subjects regulation. The course will include reading assignments and lectures addressing the following topics: ethics and morality in science, science in society, scientific integrity, misconduct: from FFP to MIM; conflicts of interests; collegiality, publication, and authorship; ethics codes and regulation; research with human subjects; historical review of human experimentation; human subjects regulation (HHS, FDA), Institutional Review Boards; informed consent, waivers, vulnerable populations, privacy and the confidentiality of records; and research on animals.
Taught by: Merz
Course not offered every year
Activity: Lecture
1.0 Course Unit

BIOE 590 Philosophical Topics in Bioethics
This set of courses provides a philosophical perspective on bioethical topics and issues. This can include courses that integrate ethical theory with concern for particular applications of theory or conceptual issues in medicine, health care, and the life sciences. Past courses have included Philosophy of Death and Dying, Genetics and Ethics, Philosophy of Medicine, Pragmatic Bioethics, and Feminism and Bioethics. This is a topics course - for information on the topics currently being offered, please go to the course listing on the Bioethics website: http://www.med.upenn.edu/mbi.
Course not offered every year
Activity: Lecture
1.0 Course Unit

BIOE 601 Introduction to Clinical Bioethics
This course is intended to serve as a broad introduction to the field of bioethics. The course will focus on three of the most important areas in bioethics: Genetics & Reproduction, Human Experimentation, and End-of-Life. Each module of the course will cover essential bioethics concepts, relevant legal cases, and classical readings of that theme. Each module will include one guest lecture from our distinguished bioethics faculty.
Taught by: Fiester
Course usually offered in fall term
Also Offered As: BIOE 401
Activity: Lecture
1.0 Course Unit

BIOE 602 Conceptual Foundations in Bioethics
This course examines the various theoretical approaches to bioethics and critically assesses their underpinnings. Topics to be covered include an examination of various versions of deontological theories, utilitarianism, virtue ethics, principlism, casuistry, feminist ethics, narrative theory, and pragmatism. Course usually offered in spring term
Also Offered As: BIOE 402
Activity: Lecture
1.0 Course Unit

BIOE 603 Clinical Ethics
This course will familiarize participants with the basic modes and styles of ethics in clinical medical settings. Participants will read the major philosophical and sociological discussions on the scope and meaning of clinical ethics. Issues of particular concern will include, but are not limited to, the meaning of professional moral expertise and its professional roots, the range of possible kinds of moral intervention in clinical settings, the meaning of responsibility for the clinical ethicist, the arguments against formalized or certified clinical consultation, and significant concepts in clinical ethics, including end-of-life issues. Students will be required to complete an introductory clinical experience, rounding in units of HUP or CHOP. This seminar is open to graduate students in the Master of Bioethics program and in the health care professions. Please contact the Department of Medical Ethics for permission to register.
Course not offered every year
Activity: Lecture
1.0 Course Unit

BIOE 605 Mentored Research I
Activity: Masters Thesis
1.0 Course Unit

BIOE 606 Mentored Research II
Activity: Masters Thesis
1.0 Course Unit

BIOE 607 Mentored Research III
Activity: Masters Thesis
1.0 Course Unit

BIOE 608 Mentored Research IV
Activity: Masters Thesis
1.0 Course Unit

BIOE 996 Master of Bioethics Capstone
This course serves the final MBE project. This course requires students to work with faculty to produce original research that is of publishable quality. Past students have published in Nature, Science, and other prominent journals. This course is only open to students in the Master of Bioethics program.
Taught by: Lance Wahlert
Course offered summer, fall and spring terms
Activity: Masters Thesis
1.0 Course Unit

BIOE 999 Independent Study
This course is only open to students in the Master of Bioethics program. One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Biological Basis of Behavior (BIBB)

BIBB 030 Neurobiology of Brain Disorders
The human brain is clearly the most complicated and magical organ in the body. We don't completely understand how it works, but we do know, unfortunately, fora variety of reasons, the human brain is prone to failure, either by acute injury, chronic degeneration, genetic flaws in its composition, or unknown disturbances in its behavior. Diseases of the brain can take many forms but are all uniformly devastating for individuals, families, and our society, and are also very costly. This course will explore the ways in which various brain disorders (both neurological and psychiatric) manifest themselves and discuss their underlying neurobiological mechanisms. In addition, the social and economic impact of these diseases in society will be considered, as well as some well publicized political issues surrounding many of these brain disorders.
Taught by: Dichter
Activity: Seminar
1.0 Course Unit

BIBB 050 Forensic Neuroscience
Progress in behavioral neuroscience and brain imaging techniques, such as functional and structural Magnetic Resonance Imaging (MRI) and Positron Emission Tomography (PET) has forced the courts to reconsider the role of behavioral sciences in courtroom decision-making. The goal of this course is to enable students to understand and interpret the use of behavioral neuro evidence in the justice system. The course will introduce the students to the relevant behavioral neuroscience constructs, principles of brain imaging and rules of scientific evidence. Students will be asked to use this introductory knowledge to critically evaluate the use of brain imaging and other behavioral neuroscience techniques as evidence in representative legal cases. For each case, students will serve as neuroscience experts for the defense or prosecution and prepare, present and defend their testimony against the opposing team. Through this course, students will develop the ability to critically evaluate brain imaging and other neuroscience data in forensic and legal settings.
Taught by: Langleben
Activity: Seminar
1.0 Course Unit

BiBB 060 Music and the Brain
Every human culture that has ever been described makes some form of music. The musics of different cultures cover a wide range of styles, but also display fascinating similarities, and a number of features are shared by even the most disparate musical traditions. Within our own culture, music is inescapable—there are very few individuals who do not listen to some form of music every day and far more who listen to music virtually all day long. Appreciation of music comes very early: newborns prefer music to normal speech and mothers all over the world sing to their babies in a fundamentally similar way. And yet, despite this seeming ubiquity, the real origin and purpose of music remains unknown. Music is obviously related to language, but how? Why do so many cultures make music in such fundamentally similar ways? What goes into the formation of music ‘taste’ and preferences? Does music have survival value, or is it merely ‘auditory cheesecake’, a superfluous byproduct of evolution as some critics have maintained? What is the nature of musical ability and how do musicians differ from non-musicians? In this course, we will look for answers by looking at the brain. Almost 200 years of scientific research into brain mechanisms underlying the production and appreciation of music is beginning to shed light on these and other questions. Although the sciences and the arts are often seen as entirely separate or even in opposition, studying the brain is actually telling us a lot about music, and studying music is telling us just as much about the brain.
Taught by: Kaplan
Activity: Seminar
1.0 Course Unit

BIBB 090 Your Brain on Food
What motivates us to eat? Why do many of us eat even in the absence of hunger? How do our food preferences and habits form? And how can eating transition from regulated to dysregulated? This seminar class investigates these questions and many others, with a focus on how our brains regulate food intake. We will explore the neuroscience behind eating, as well as the genetic, psychological, social, cultural, and societal influences that shape our behavior. Through readings, assignments, and class discussions, we will navigate the biological forces behind normal eating, as well as how eating becomes disordered in diseases like obesity and eating disorders. Through this course, students will learn about behavioral neuroscience research from human and animal studies and will develop critical thinking, reading, and writing skills. There are no prerequisites except for a love of food.
Taught by: Alhadeff
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

BIBB 109 Introduction to Brain and Behavior
Introduction to the structure and function of the vertebrate nervous system. We begin with the cellular basis of neuronal activities, then discuss the physiological bases of motor control, sensory systems, motivated behaviors, and higher mental processes. This course is intended for students interested in the neurobiology of behavior, ranging from animal behaviors to clinical disorders.
For BA Students: Living World Sector
Taught by: Kane and McLean
One-term course offered either term
Also Offered As: BIOL 109, PSYC 109
Activity: Lecture
1.0 Course Unit
BIBB 159 Memory
This course presents an integrative treatment of the cognitive and neural processes involved in learning and memory, primarily in humans. We will survey the major findings and theories on how the brain gives rise to different kinds of memory, considering evidence from behavioral experiments, neuroscientific experiments, and computational models.
Taught by: Schapiro
Also Offered As: PSYC 159
Activity: Lecture
1.0 Course Unit

BIBB 160 ABCS of Everyday Neuroscience
This course is an opportunity for undergraduates to share their interest and enthusiasm for neuroscience with students in grades 9-12 attending urban public schools in West Philadelphia. The course will allow Penn students to develop their science communication and teaching skills. Students will prepare neuroscience demonstrations, hands-on activities, and assessment tools. In parallel, the course aims to engage local high school students, increasing their interest and knowledge in science, and ultimately promoting lifelong science literacy.
Taught by: Lori Flanagan-Cato
Prerequisite: BIBB 109
Activity: Lecture
1.0 Course Unit
Notes: Enrollment by application only - apply via the link in ‘Additional Course Information’ above.

BIBB 217 Visual Neuroscience
An introduction to the scientific study of vision, with an emphasis on the biological substrate and its relation to behavior. Topics will typically include physiological optics, transduction of light, visual thresholds, color vision, anatomy and physiology of the visual pathways, and the cognitive neuroscience of vision.
Taught by: Stocker
Course usually offered in spring term
Also Offered As: PSYC 217, VLST 217
Prerequisite: PSYC 109
Activity: Lecture
1.0 Course Unit

BIBB 227 Physiology of Motivated Behaviors
This course focuses on evaluating the experiments that have sought to establish links between brain structure (the activity of specific brain circuits) and behavioral function (the control of particular motivated and emotional behaviors). Students are exposed to concepts from regulatory physiology, systems neuroscience, pharmacology, and endocrinology and read textbooks as well as original source materials. The course focuses on the following behaviors: feeding, sex, fear, anxiety, the appetite for salt, and food aversion. The course also considers the neurochemical control of responses with an eye towards evaluating the development of drug treatments for: obesity, anorexia/cachexia, vomiting, sexual dysfunction, anxiety disorders, and depression.
Taught by: Grill
One-term course offered either term
Also Offered As: PSYC 127
Prerequisite: PSYC 001
Activity: Lecture
1.0 Course Unit

BIBB 231 Evolution of Behavior: Animal Behavior
The evolution of social behavior in animals, with special emphasis on group formation, cooperation among kin, mating systems, territoriality and communication.
Taught by: Seyfarth/Cheney
Course not offered every year
Also Offered As: BIOL 231, PSYC 231
Prerequisite: BIOL 102 OR BIOL 121 OR PSYC 001
Activity: Lecture
1.0 Course Unit

BIBB 233 Neuroethology
In course, students will learn how neurobiologists study the relationship between neural circuitry and behavior. Behaviors such as bat echolocation, birdsong, insect olfaction, spatial navigation, eye movement and others will be used to explore fundamental principles of brain function that include brain oscillations, population codes, efference copy, sensorimotor maps and sleep replay. The course will also discuss the various methodologies that are used to address these questions. The reading material will be derived mostly from the primary literature.
Taught by: McLean
Course usually offered in spring term
Also Offered As: PSYC 233
Prerequisite: BIBB 109
Activity: Lecture
1.0 Course Unit

BIBB 240 Chronobiology and Sleep
Topics to be covered include basic principles of chronobiology; neuroscience mechanisms of circadian rhythms and sleep; phylogeny and ontogeny of sleep; human sleep and sleep disorders; circadian dysfunction; circadian and sleep homeostatic influences in human health and safety. Students may not receive credit for both BIBB 240 and BIBB 040.
Taught by: Dinges
Course usually offered in spring term
Prerequisite: BIBB 109
Activity: Lecture
1.0 Course Unit
Notes: Students may not receive credit for both BIBB240 and BIBB040

BIBB 249 Cognitive Neuroscience
The study of the neuronal systems that underlie human perception, memory and language; and of the pathological syndromes that result from damage to these systems.
Taught by: Epstein or Mackey
One-term course offered either term
Also Offered As: PSYC 149
Prerequisite: PSYC 001 OR COGS 001
Activity: Lecture
1.0 Course Unit
BIBB 251 Molecular and Cellular Neurobiology
Cellular physiology of neurons and excitable cells; molecular neurobiology and development. Topics include: action potential generation; synaptic transmission; molecular and physiological studies of ion channels; second messengers; simple neural circuits; synaptic plasticity; learning and memory; and neural development. Prerequisite: PHYS 105 or 151 strongly recommended
Taught by: Schmidt
Course usually offered in fall term
Also Offered As: BIOL 251
Prerequisite: (BIOL 101 AND BIOL 102) OR BIOL 121
Activity: Lecture
1.0 Course Unit
Notes: (3hrs. lec., 3hrs. lab, 1.5 c.u.)

BIBB 260 Neuroendocrinology
This course is designed to examine the various roles played by the nervous and endocrine systems in controlling both physiological processes and behavior. First, the course will build a foundation in the concepts of neural and endocrine system function. Then, we will discuss how these mechanisms form the biological underpinnings of various behaviors and their relevant physiological correlates. We will focus on sexual and parental behaviors, stress, metabolism, neuroendocrine-immune interactions, and mental health.
Taught by: Flanagan-Cato
One-term course offered either term
Also Offered As: PSYC 239
Prerequisite: BIBB 109
Activity: Lecture
1.0 Course Unit

BIBB 269 Autonomic Physiology
This course will introduce the student to the functioning of the autonomic nervous system (ANS), which is critically involved in the maintenance of body homeostasis through regulation of behavior and physiology. The course will begin with a review of the basic anatomy and physiology of the ANS including the sympathetic, parasympathetic and enteric divisions. The mechanisms by which the ANS regulates peripheral tissues will be discussed, including reflex and regulatory functions, as will the effect of drugs which modulate ANS activity. The role of the ANS in regulating behavior will be addressed in the context of thirst, salt appetite and food intake.
Taught by: Heerding
Course usually offered in spring term
Prerequisite: BIBB 109
Activity: Lecture
1.0 Course Unit

BIBB 270 Drugs, Brain and Mind
The course will begin with a review of basic concepts in pharmacology including: routes of drug administration, drug metabolism, the dose response curve, tolerance and sensitization. Following a brief overview of cellular foundations of neuropharmacology (neuronal biology, synaptic and receptor function), the course will focus on several neurotransmitter systems and the molecular and behavioral mechanisms mediating the mind-altering, additive and neuropsychiatric disorders, including depression, schizophrenia and anxiety with an emphasis on their underlying neurobiological causes, as well as the pharmacological approaches for treatment.
Taught by: Kane
Course usually offered in fall term
Also Offered As: PSYC 225
Prerequisite: BIBB 109 OR PSYC 109
Activity: Lecture
1.0 Course Unit

BIBB 273 Neuroeconomics
This course will introduce students to neuroeconomics, a field of research that combines economic, psychological, and neuroscientific approaches to study decision-making. The course will focus on our current understanding of how our brains give rise to decisions, and how this knowledge might be used to constrain or advance economic and psychological theories of decision-making. Topics covered will include how individuals make decisions under conditions of uncertainty, how groups of individuals decide to cooperate or compete, and how decisions are shaped by social context, memories, and past experience.
Taught by: Kable
Course not offered every year
Also Offered As: PSYC 273
Activity: Lecture
1.0 Course Unit

BIBB 310 Functional Neuroanatomy Laboratory
A laboratory course designed to familiarize the student with the fundamental gross and histological organization of the brain. The mammalian brain will be dissected and its microscopic anatomy examined using standard slide sets. Comparative brain material will be introduced, where appropriate, to demonstrate basic structural-functional correlations.
Taught by: McLean
One-term course offered either term
Also Offered As: PSYC 210
Prerequisite: BIBB 109
Activity: Laboratory
1.0 Course Unit
BIBB 334 Computational Neuroscience Lab
This course will focus on computational neuroscience from the combined perspective of data collection, data analysis, and computational modeling. These issues will be explored through lectures as well as Matlab-based tutorials and exercises. The course requires no prior knowledge of computer programming and a limited math background, but familiarity with some basic statistical concepts will be assumed. The course is an ideal preparation for students interested in participating in a more independent research experience in one of the labs on campus. For the Spring 2019 semester, the course will focus on the topic of visual memory.
Taught by: Nicole Rust
Course usually offered in spring term
Also Offered As: PSYC 434
Prerequisite: BIBB 109
Activity: Laboratory
1.0 Course Unit

BIBB 350 Developmental Neurobiology
This course will focus on cellular and molecular mechanisms of the organogenesis of the central nervous system. A goal of the course will be to understand the form, function and pathology of the adult nervous system in terms of antecedent developmental processes.
Taught by: Julie McGurk
One-term course offered either term
Prerequisite: BIBB 109 AND BIOL 101
Activity: Lecture
1.0 Course Unit

BIBB 375 Laboratory in Animal Behavior
This course will allow students to understand the variety, function, and evolution of complex behaviors in simple animals and how the genes governing these behaviors can be used to provide insight into human behavior and brain disease. The course is structured to allow students to experience what it is like to work in a neuroscience research laboratory. We will use the fruit fly (Drosophila melanogaster) as our model organism (with one class dedicated to song birds). Over the course of the semester, we will examine the underlying neurobiology, physiology, and genetics of a variety of fly behaviors to understand aggression, taste, learning and memory, courtship, neurodegenerative diseases, and circadian rhythms. We will review both current and historical research advances in detail by focusing on primary literature. Students will be expected to design, analyze and interpret the behavioral experiments that are employed. Students will learn how to conduct animal behavior research, enhance their ability to critically read scientific literature, and improve their written and oral communication skills through paper presentations and written reports.
Taught by: Kane
Course usually offered in spring term
Prerequisite: BIBB 109 AND (BIOL 101 OR BIOL 102) OR (BIOL 123 OR BIOL 124)
Activity: Laboratory
1.0 Course Unit

BIBB 399 Independent Research
Individual research of an experimental nature with a member of the standing faculty leading to a written paper. The grade is based primarily on a serious term paper describing original research carried out by the student. Students must submit a proposal prior to registering. During the semester, students must attend two seminars to discuss planning and independent research project, ethical concerns in research and writing a scientific paper. Attendance at the meetings is mandatory. Students doing more than one credit of independent study will be required to present a poster at the annual BBB Symposium.
Taught by: Standing Faculty
One-term course offered either term
Prerequisite: BIBB 109
Activity: Independent Study
1.0 Course Unit

BIBB 420 Smell and Taste
All organisms respond to chemicals in their environment. This chemosensation guides diverse behaviors such as a feeding, avoiding predators, sex, and social interactions. This course will provide a broad survey of our current understanding of taste and smell, focusing on insect and rodent model systems as well as studies in humans. The course will begin with a review of chemical signal transduction mechanisms, and build to an exploration of the cortical integration of chemical signals and chemical guided behaviors. Class time will emphasize primary literature, discussion, and student presentations. The goal is to reach an integrated understanding of the physiology and psychology of chemical sensory systems. In the process, students will learn to read and critically evaluate data from primary research articles.
Taught by: Lewandowski
Course not offered every year
Activity: Seminar
1.0 Course Unit

BIBB 421 Functional Imaging of the Human Brain
The course will provide a detailed overview of functional brain imaging and its potential uses. Issues regarding advantages and disadvantages of different modalities, study design image analysis & interpretation and how these relate to various neurological & psychological phenomena will be discussed. Class will cover the following specific topics in this general time frame: Introduction to functional brain function, basics of nuclear medicine imaging (including instrumentation, image acquisition, and radiopharmaceuticals for positron emission tomography and single photon emission computed tomography), imaging of neurological disorders, imaging of psychological disorders, introduction to activation studies, image analysis and statistical problems, study design, literature review, journal article presentation, tour of Penn imaging facilities, interpretation of imaging studies, implications for clinical and research, and implications for understanding the human mind and consciousness.
Taught by: Newberg
Course usually offered in spring term
Prerequisite: BIBB 109
Activity: Seminar
1.0 Course Unit
BIBB 429 Big Data, Memory, and the Human Brain
Advances in brain recording methods over the last decade have generated vastly more brain data than had been collected by neuroscientists during the previous century. To understand the human brain, scientists must now use computational methods that exploit the power of these huge data sets. This course will introduce you to the use of big data analytics in the study of human memory and its neural basis. Through hands-on programming projects, we will analyze multi-terabyte data sets both to replicate existing phenomena and to make new discoveries. Although the course has no formal neuroscience or psychology prerequisites, it does require CIS 121 and Python experience. Because of the heavy computing resources required to perform the assignment enrollment is limited to 15 students and there is a required course application. https://frms.gle/CfeogYQm5mwUBk3x7
Taught by: Kahana
Also Offered As: PSYC 429
Prerequisite: CIS 121
Activity: Seminar
1.0 Course Unit
Notes: Course taught in English. Course Materials in English. There are no prerequisites for this course.

BIBB 430 Neurobiological Basis of Autism
This course examines the neurobiological processes underlying autism spectrum disorders. In this seminar course, we will first examine the brain phenotypes associated with Autism Spectrum Disorders (ASD), in addition to investigating the genetic and environmental contributions to the etiology and pathophysiology of ASD. After an initial examination of the clinical literature and research, we will focus on animal models of ASD, including those of syndromic causes of autism (Rett Syndrome, Tuberous Sclerosis, Fragile X) and investigate changes in neurotransmitter systems and synaptic dysfunctions in the brain of these models.
Taught by: Herrington
One-term course offered either term
Prerequisite: BIBB 109
Activity: Lecture
1.0 Course Unit

BIBB 440 The Neuroscience behind the Addiction to Chocolate, Wine, Coffee and Tobacco
Both clinical observations and popular culture support the idea that food might have addictive properties. Similar to the narrative for addictive drugs, individuals and the media use terms like ‘food addict’ and ‘chocoholic’, and refer to cravings, symptoms of withdrawal, and escalating patterns of eating that might be viewed as evidence of tolerance. The class will discuss chocolate and coffee as examples of so-called ‘additive’ food and compare their effects and mechanisms with those of alcohol and nicotine, two substances with well-characterized addictive properties. Furthermore, we will discuss why some forms of overeating are thought to reflect an addictive behavior. Considering the social dimension of alcohol, coffee, and tobacco consumption and the fact that large numbers of the population consume them together, we will also discuss the possible interactive effects of combinations of these psychoactive substances on mood and disease state. At the end of the course the student will become familiar with the diagnostic criteria for substance dependence, the anatomy and physiology of the brain circuits involved in reward processing and drug depenence, and the neurotransmitter systems involved.
Taught by: Mariella De Biasi, PhD
One-term course offered either term
Activity: Lecture
1.0 Course Unit

BIBB 442 Neurobiology of Learning and Memory
This course focuses on the current state of our knowledge about the neurobiological basis of learning and memory. A combination of lectures and student seminars will explore the molecular and cellular basis of learning in invertebrates and vertebrates from a behavioral and neural perspective.
Taught by: Abel
Course usually offered in fall term
Also Offered As: BIOL 442, NGG 575, PSYC 421
Prerequisite: BIBB 251 OR BIOL 251
Activity: Seminar
1.0 Course Unit

BIBB 460 Neuroendocrinology Seminar
This course is an upper-level seminar, designed to examine the various roles played by the nervous and endocrine systems in controlling both physiological processes and behavior. We will focus on sexual and parental behaviors, stress, metabolism, neuroendocrine-immune interactions, and mental health. The format will be a mixture of lectures and journal club discussions based on recent primary literature in the field of neuroendocrinology. Students will also write several short papers based on the clinical neuroendocrinology.
Taught by: Flanagan-Cato
One-term course offered either term
Also Offered As: PSYC 439
Prerequisite: BIBB 109
Activity: Seminar
1.0 Course Unit

BIBB 466 Molecular Genetics of Neurological Disease
This course will focus on the molecular basis of neurological diseases, exploring in detail key papers that cover topics including defining the disease genes, development of animal models that provide mechanistic insight, and seminal findings that reveal molecular understanding. Diseases covered will include neurological diseases of great focus today such as Alzheimer’s, Fragile-X and autism, dementia, motor neuron degeneration, and microsatellite repeat expansion disorders. The course will provide a perspective from initial molecular determination through current status. Students will gain an understanding of how the molecular basis of a disease is discovered (from classical genetics to modern genomics) and how such diseases can be modeled in simple genetic systems for mechanistic insight. The course will be comprised of lectures with detailed analysis of primary literature and in-class activities. Grading will be based on class participation, exams, and written papers.
Prerequisite: BIOL 251 and BIOL 41 are recommended.
Taught by: Bonini
Course usually offered in fall term
Also Offered As: BIOL 466
Prerequisite: BIOL 221
Activity: Lecture
1.0 Course Unit
BIBB 469 Stress Neuroscience
Stress can be caused by a variety of conditions, ranging from low-level noise in the workplace to life-threatening situations and these stressors can cause changes in the physiology and behavior of individuals. This course will examine the neural mechanisms underlying physiological and emotional responses to stress in a journal club format. Topics to be covered include anxiety disorders, depression and other mood disorders, the differential effects of stress on males and females, the physiological effects of stress on the immune system and feeding behavior, the effects of maternal stress on offspring as well as strategies to mitigate the effects of stress.
Taught by: Heerding
One-term course offered either term
Prerequisite: BIBB 109
Activity: Seminar
1.0 Course Unit

BIBB 470 Animal Models of Neuropsychiatric Disorders
This seminar will focus on the significant role of animal models in the investigation of the pathophysiology of a variety of human neuropsychiatric disorders as well as in the development of treatments for these disorders. The course will focus on the use of genetically modified mice in the investigation of Autistic Spectrum Disorders (ASD), anxiety and affective disorders, schizophrenia and obsessive-compulsive disorder (OCD), with an emphasis on the limitations of such models. Class time will consist of short lectures and open discussions via student-led presentations. Emphasis will be placed on the critical analysis of primary literature.
Taught by: Kane
Course not offered every year
Prerequisite: BIBB 109
Activity: Seminar
1.0 Course Unit

BIBB 473 Neuroeconomics
This course will review recent research that combines psychological, economic and neuroscientific approaches to study human and animal decision-making. A particular focus will be on how evidence about the neural processes associated with choices might be used to constrain economic and psychological theories of decision-making. Topics covered will include decisions involving risk and uncertainty, reinforcement learning, strategic interactions and games, and social preferences.
Taught by: Joseph Kable
One-term course offered either term
Also Offered As: NGG 706, PSYC 473
Prerequisite: PSYC 149 OR PSYC 253 OR PSYC 265
Activity: Seminar
1.0 Course Unit

BIBB 474 Behavioral Pharmacology
This seminar course reviews the behavioral effects of drugs in animals, the general biological and psychological principles of drug action, and the relationship between drugs that affect brain monoamine and opiate systems and their behavioral effects. Introductory lectures on general topics will be followed by advanced discussion of specific topics in a journal club format through student presentations.
Taught by: Heerding
Course not offered every year
Prerequisite: BIBB 109
Activity: Seminar
1.0 Course Unit

BIBB 475 Neurodegenerative Diseases
This course will familiarize students with advances in our understanding of the clinical features and pathogenesis of a wide range of neurodegenerative diseases, including Alzheimer's disease and other dementias, prion diseases, Parkinson's disease and atypical parkinsonisms, neurodegenerative ataxias, motoneuron diseases, degenerative diseases with chorea, iron and copper disorders, and mitochondrial diseases. Students will analyze original research reports on a range of proposed pathological cellular processes that may represent steps in cell death pathways leading to neuron loss seen in these diseases. Significant emphasis will be placed on the fast-expanding field exploring genetic contributions to neurodegenerative disease, as identification of genetic mutations pathogenic for familial neurodegenerative diseases has been a major driving force in neurodegenerative research and pointed researchers towards essential molecular process that may underlie these disorders. Strategies for therapeutic intervention in the management, prevention, and cure of neurodegenerative disease will be addressed.
Taught by: Lexow
One-term course offered either term
Prerequisite: BIBB 109
Activity: Seminar
1.0 Course Unit

BIBB 476 Biological Basis of Psychiatric Disorders
The contributions of basic sciences (neuroanatomy, neurophysiology, neurochemistry, and neuropharmacology) to an understanding of behavior and behavioral disorders will be covered and important psychiatric disorders will be discussed, primarily from the viewpoint of their biological aspects. Emphasis will be placed on critical evaluation of research strategies and hypotheses.
Taught by: Schmidt, M./Medina
Course usually offered in spring term
Also Offered As: BIOL 451, PSYC 479
Prerequisite: BIOL 251 OR BIBB 251
Activity: Lecture
1.0 Course Unit

BIBB 477 Behavioral Neuroscience
This course will investigate neural processing at the systems level. Principles of how brains encode information will be explored in both sensory (e.g. visual, auditory, olfactory, etc.) and motor systems. Neural encoding strategies will be discussed in relation to the specific behavioral needs of the animal. Examples will be drawn from a variety of different model systems.
Taught by: Schmidt, M./Medina
Course usually offered in spring term
Also Offered As: BIOL 451, PSYC 479
Prerequisite: BIOL 251 OR BIBB 251
Activity: Lecture
1.0 Course Unit

BIBB 478 Behavioral Pharmacology
This seminar course reviews the behavioral effects of drugs in animals, the general biological and psychological principles of drug action, and the relationship between drugs that affect brain monoamine and opiate systems and their behavioral effects. Introductory lectures on general topics will be followed by advanced discussion of specific topics in a journal club format through student presentations.
Taught by: Heerding
Course not offered every year
Prerequisite: BIBB 109
Activity: Seminar
1.0 Course Unit

BIBB 479 Neural Systems and Behavior
Principles of how brains encode information will be explored in both sensory (e.g. visual, auditory, olfactory, etc.) and motor systems. Neural encoding strategies will be discussed in relation to the specific behavioral needs of the animal. Examples will be drawn from a variety of different model systems.
**BIBB 482 Clinical Psychopharmacology**
This course examines the history, rationale and putative mechanism of action of drugs used in the treatment of psychiatric disorders. Emphasis is placed on neurobiological processes underlying psychopathology and pharmacological intervention. Drugs currently in use as well as new drugs in development will be covered. Strategies, techniques, issues and challenges of clinical psychopharmacological research will be addressed and new approaches to drug discovery, including the use of pharmacogenomics and proteomics to understand variability in drug response and identify new molecular drug targets, will be covered in depth. Specific drug classes to be considered include antidepressants, anxiolytics, typical and atypical antipsychotics, narcotic analgesics, sedative hypnotics, and antiepileptic medications. A contrasting theme throughout the course will be the use of drugs as probes to identify neural substrates of behavior.
Taught by: Lexow
Course not offered every year
Prerequisite: BIBB 109
Activity: Seminar
1.0 Course Unit

**BIBB 485 Nerve and Muscle in Health and Disease**
In this seminar course, we will deepen our understanding about excitability in the nervous system and in skeletal and cardiac muscle. A particular focus of the course will be the roles which calcium ions play as second messengers in nerve, muscle and synapse. We will study disease processes involving excitability and calcium handling, such as Long QT syndrome and hyperkalemic periodic paralysis. The later part of the course will have a journal club format, based on the reading and presentation of original papers, including papers about non-opioid analgesia and malignant hyperthermia. We will learn about the techniques used to study intracellular calcium and about how calcium is handled in nerve and muscle. Classical, physiological experiments will be interpreted in terms of modern molecular knowledge.
Taught by: Hollingworth
Course usually offered in spring term
Prerequisite: BIBB 251
Activity: Seminar
1.0 Course Unit

**BIBB 492 Experimental Methods in Synaptic Physiology**
In this lab course, a small number of students meet once per week to discuss topics in synaptic physiology and to become proficient at sharp electrode techniques for intracellular recording, using isolated ganglia from the snail Heliosoma. The first part of each class will consist of discussion of weekly reading from the primary literature, with the remainder of the class devoted to hands-on experiments. After learning to record from and characterize single neurons, students will study synaptic transmission by stimulating incoming nerve trunks or by recording from pairs of interconnected neurons. As a midterm assignment, students will prepare and present a short research proposal using this model system, to be evaluated by the class. For the last half of the course, the class will work together on one or two of these proposals, meeting at the end of each class to pool our data, analyze the results and discuss their significance. Lab Fee: $100.
Taught by: Kaplan
One-term course offered either term
Prerequisite: BIBB 251
Activity: Laboratory
1.0 Course Unit

**BIBB 499 Advanced Independent Research**
Continuation of BIBB 399 research. Students will be required to give an oral presentation of their research at the annual BBB symposium Honors Seminar and attend weekly seminars.
Taught by: McLean
One-term course offered either term
Prerequisite: BIBB 399
Activity: Independent Study
1.0 Course Unit

**BIBB 585 Theoretical and Computational Neuroscience**
This course will develop theoretical and computational approaches to structural and functional organization in the brain. The course will cover: (i) the basic biophysics of neural responses, (ii) neural coding and decoding with an emphasis on sensory systems, (iii) approaches to the study of networks of neurons, (iv) models of adaptation, learning and memory, (v) models of decision making, and (vi) ideas that address why the brain is organized the way that it is. The course will be appropriate for advanced undergraduates and beginning graduate students. Knowledge of multi-variable calculus, linear algebra and differential equations is required (except by permission of the instructor). Prior exposure to neuroscience and/or Matlab programming will be helpful.
Taught by: Vijay Balasubramanian
Course usually offered in spring term
Also Offered As: BE 530, NGG 594, PHYS 585, PSYC 539
Activity: Lecture
1.0 Course Unit

**Biology (BIOL)**

**BIOL 005 The Genomic Revolution: A First Year Seminar**
The goal of this course is to convey a basic understanding of human genome science and in so doing, to learn of its impact on treatment of human disease and discernment of aspects of human identity. Our current understanding of the structure and function of genes will allow a personalized treatment for many diseases, but just how such advances are applied will involve ethical as well as scientific considerations. We will discuss how the field of genetics has been changed dramatically by the ability to clone and sequence genes, and then to be further transformed by massive sequencing of whole genomes. A major part of the course will be devoted to how these advances have led to understanding and treatment of genetic disease and cancer. We will also discuss the tremendous potential (and dangers) of gene editing advances. Finally, we will explore how genomics has allowed an understanding of deep human history, as well as the ability to decipher one's more immediate ancestry. Readings will be from a number of books written for an informed general audience rather than from a textbook. The seminar should be of interest to those who would like to fulfill their Living World General Education requirement, and particularly also to those who eventually might be interested in taking courses in the Life Sciences but initially would like an introductory seminar-type approach within a focused area.
Taught by: Weinberg
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
BIOL 006 Evaluating Medical Treatment: How Do We (and the FDA) Know What Works?
The development of new medical treatments typically culminates in one or more clinical trials - experiments in which the effects of the new treatment are compared with the effects of another treatment or no treatment. A great many considerations go into the design of these medical experiments. In this seminar, we will discuss the basic structure of the clinical trial, the varying types of designs that may be used, the scientific and ethical issues that arise, and the regulatory process that ultimately determines whether medical products are effective and safe and whether they can be made available to the public. May not be counted toward the Biology major or minor. Taught by: Ellenberg
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: May not be counted toward the Biology major or minor.

BIOL 010 Ecological Consequences of Climate Change
Students will read and discuss seminal papers on a number of major topics in the ecology of climate change and the long-term consequences of the effects of climate change on ecological systems. Some of the topics include: effects of climate change on species distributions, disruption of plant pollinator systems and the consequences for ecosystem composition and stability, changes in the distribution and epidemiology of insect-borne infectious diseases, and the consequences of sea level rise and the increased intensity and frequency of severe weather events. Other topics may be covered. Grading will be based on participation in discussions, a paper on an approved topic, a presentation on the topic of the student's paper and 1 exam. Taught by: Dunham
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

BIOL 011 Humans in a Microbial World
Microbes are a fundamental part of life on this planet. This course will explore the causes and consequences of the distribution and abundance of microbes (microbial ecology) as well as microbial evolution on human health and disease risk. We will address the interplay between human society and microbial ecology and evolution in shaping disease risk and directing scientific study. This course will apply concepts from basic biology, ecology, and evolution to study infectious microbes as living creatures. May not be toward the Biology major or minor. Taught by: Brisson
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: May not be counted toward the Biology major or minor.

BIOL 014 Descent with Modification: An introduction to the science of evolution
Evolution provides the unifying framework for the biological sciences and has been confirmed by a huge and diverse body of evidence. Public opinion polls show, however, that evolution continues to be socially and politically controversial in the United States. In this freshman seminar, we will explore the scientific basis for evolution by reading and discussing historical sources, a current nonspecialist text on evolution, and selected papers and articles from the scientific and popular literature. With our knowledge of evolutionary fact and theory as background, we will also discuss social and political opposition to the teaching of evolution. Grading will be based on participation in class discussions and on performance in several brief writing assignments. There is no course prerequisite, but high school introductory biology would be helpful. May not be counted toward the Biology major or minor. Prerequisite: General biology background preferred but not required. Taught by: Poethig
Course offered fall; even-numbered years
Activity: Lecture
1.0 Course Unit
Notes: May not be counted toward the Biology major or minor. General biology background preferred but not required.

BIOL 017 The Biology of Food
This course will examine the ways in which humans manipulate - and have been manipulated by - the organisms we depend on for food, with particular emphasis on the biological factors that influence this interaction. The first part of the course will cover the biology, genetics, evolution, and breeding of cultivated plants and animals; the second part will concern the ecological, economic, and political factors that influence food production. May not be counted toward the Biology major or minor. Taught by: Poethig
Course offered spring; odd-numbered years
Activity: Lecture
1.0 Course Unit
Notes: May not be counted toward the Biology major or minor.

BIOL 019 Biological Science and Public Policy
This course will examine the scientific basis of public policy decision making in areas of human health, the environment, energy, and agriculture. A general understanding of the science involved in these areas - predominantly genetics, cell biology, physiology, and ecology - will be applied to topics such as drug and hericide resistance, endangered species, regulation of biotechnology, microbial sources of energy, control of toxic substances, and the war against cancer. No formal background in biology or policy is required. The course should be particularly useful for non-science students who would like to gain insight into areas of biology of importance to public decision making and to students of public policy who would like a better background on biological issues. May not be counted toward the Biology major or minor. Only offered through the College of Liberal and Professional Studies. Prerequisite: High school biology recommended
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: May not be counted toward the Biology major or minor. Only offered through the College of Liberal and Professional Studies.
**BIOL 101 Introduction to Biology A**
General principles of biology focusing on the basic chemistry of life, cell biology, molecular biology, and genetics in all types of living organisms. Particular emphasis will be given to links between the fundamental processes covered and current challenges of humankind in the areas of energy, food, and health. (3 hrs. lec., 3 hrs. lab, 1.5 c.u.) Biology majors and pre-medical students should take either BIOL 101 or 121. BIOL 101 is the companion course to BIOL 102 and should be taken before BIOL 102. For BA Students: Living World Sector
One-term course offered either term
Activity: Lecture
1.5 Course Unit
Notes: (3 hrs. lec., 3 hrs. lab, 1.5 c.u.) Biology majors and pre-medical students should take either BIOL 101 or 121. BIOL 101 is the companion course to BIOL 102 and should be taken before BIOL 102.

**BIOL 102 Introduction to Biology B**
General principles of biology focusing on evolution, physiology, development, and ecology in all types of living organisms. (3 hrs. lec., 3 hrs. lab, 1.5 c.u.) BIOL 102 is the companion course to BIOL 101 and should be taken after BIOL 101. For BA Students: Living World Sector
One-term course offered either term
Prerequisite: BIOL 101
Activity: Lecture
1.5 Course Unit
Notes: (3 hrs. lec., 3 hrs. lab, 1.5 c.u.) BIOL 102 is the companion course to BIOL 101 and should be taken after BIOL 101.

**BIOL 109 Introduction to Brain and Behavior**
Introduction to the structure and function of the vertebrate nervous system. We begin with the cellular basis of neuronal activities, then discuss the physiological basis of motor control, sensory systems, motivated behaviors, and higher mental processes. This course is intended for students interested in the neurobiology of behavior, ranging from animal behaviors to clinical disorders. For BA Students: Living World Sector
Taught by: Kane and McLean
One-term course offered either term
Also Offered As: BIBB 109, PSYC 109
Activity: Lecture
1.0 Course Unit

**BIOL 121 Introduction to Biology - The Molecular Biology of Life**
An intensive introductory lecture course covering the cell, molecular biology, biochemistry, and the genetics of animals, bacteria, and viruses. This course is comparable to Biology 101, but places greater emphasis on molecular mechanisms and experimental approaches. Particular attention is given to the ways in which modern cell biological and molecular genetic methods contribute to our understanding of evolutionary processes, the mechanistic basis of human disease, and recent biotechnological innovations. Students are encouraged to take BIOL 121 and 123 concurrently. Biology majors and pre-medical students should take either BIOL 101 or 121. BIOL 121 is the companion course to BIOL 124 and may be taken before or after BIOL 124. Solid high school biology and strong high school chemistry or CHEM 101
For BA Students: Living World Sector
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Biology majors and pre-medical students should take either BIOL 101 or 121. BIOL 121 is the companion course to BIOL 124 and may be taken before or after BIOL 124. Solid high school biology and strong high school chemistry.

**BIOL 123 Introductory Molecular Biology Laboratory**
An intensive introductory laboratory course emphasizing how molecular biology has revolutionized our understanding of cell and organism functions. BIOL 121 and 123 should be taken concurrently. Taught by: Hogan
Course usually offered in fall term
Prerequisite: BIOL 121
Activity: Lecture
0.5 Course Units
Notes: (1 hr. lec., 3 hrs. lab, 0.5 c.u.) Students may not take both BIOL 101 and 123 for credit. Prerequisite: Solid high school biology or credit by exam for BIOL 102.

**BIOL 124 Introductory Organismal Biology Lab**
An intensive introductory laboratory course in organismal biology. Solid high school biology or credit by exam for BIOL 102. (1 hr. lec., 3 hrs. lab, 0.5 c.u.) BIOL 124 is the companion course to BIOL 121 and may be taken before or after BIOL 121. Students may not take both BIOL 102 and 214 for credit. Taught by: Robinson/Hogan
Course usually offered in spring term
Activity: Lecture
0.5 Course Units
Notes: (1 hr. lec., 3 hrs. lab, 0.5 c.u.) BIOL 124 is the companion course to BIOL 121 and may be taken before or after BIOL 121. Students may not take both BIOL 102 and 124 for credit.
BIOL 138 Energy Transformations and Living Off-the-Grid
The course will examine major sources of energy on earth: sunlight, mechanical, chemical and biological, and how this energy is transformed into useful energy for humans - typically electrical energy or food. Considerable emphasis will be on forms of regenerative energy that can be used when living off-the-grid. As a case study, we will examine some approaches taken by the US military to provide energy capability for dismounted Marines operating on foot in austere environments. Faculty lectures will be supplemented by guest lectures from leaders in government and industry. Prerequisite: High school biology and math No scientific knowledge is assumed beyond high school biology, chemistry and physics. Energy is necessarily a quantitative subject so students should be comfortable with quantitative approaches. A major goal of this course is for students to develop an awareness for the amounts of energy they use in their daily lives, and how they might reduce them. As an exercise, students will measure how much energy their smart phones and laptops use in a day and try to generate a comparable amount of energy through physical effort.
Taught by: Rome
Course offered fall; odd-numbered years
Activity: Seminar
1.0 Course Unit

BIOL 140 Humans and the Environment
Intensive exposure to current issues and solutions in contemporary human interactions with the environment. Global in scope, but focused on case histories. Emphasis on providing biological and sociological background for a given major environment-human interaction, and state-of-the-art suggested solutions. Biology background recommended. Sophomore standing or greater.
For BA Students: Natural Science and Math Sector
Taught by: Janzen
Course usually offered in fall term
Also Offered As: BIOL 440
Activity: Lecture
1.0 Course Unit

BIOL 145 Field Studies in Tropical Biodiversity and Conservation
We will use the Área de Conservación Guanacaste (AGC) in Costa Rica as a living laboratory and case study in how to effectively foster community based environmental stewardship of natural ecosystems. This is an immersion course that broadly covers four major themes including: 1, biodiversity; 2, conservation philosophies and practices; 3, primary ecosystems within the Costa Rican AGC and their major species composition; and 4, fundamentals of field ecology (terrestrial and marine) including the practice and implementation of the scientific method. Students will learn how to develop and conduct research experiments via field-based activities, and will gain familiarity with a diversity of terrestrial and marine organisms including insects, endemic and invasive species of terrestrial flora and megafauna, corals, algae, invertebrates, fish, sea turtles and marine mammals. Additional topics covered will include fundamentals of oceanography, ecological and evolutionary principles as applied to ecosystem structure, function, and biodiversity, and environmental and management challenges of the Costa Rican AGC and tropical ecosystems globally. Application required through Penn Global: https://global.upenn.edu/pennabroad/pgs
Taught by: Sherwood
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
Notes: Application required through Penn Global: <a href='https://global.upenn.edu/pennabroad/pgs'>https://global.upenn.edu/pennabroad/pgs</a>

BIOL 199 Clinical & Translational Research
Independent study for students doing research based on data that is generated in a clinical setting. Projects must be sponsored by standing faculty of the University of Pennsylvania and co-sponsored by a faculty member in the Department of Biology. The project must be of biological interest and must use appropriate quantitative or statistical methods. A final paper is required. Apply at the Academic Office, 102 Leidy Labs.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

BIOL 201 Essentials of Cell Biology
An intermediate level exploration of cell structure and function including membrane structure, intracellular organelles, membrane trafficking, surface receptors and signal transduction, the cytoskeleton, cell motility and communication, and the cell cycle. This course is open to students in the College of Liberal and Professional Studies only.
One-term course offered either term
Prerequisite: (BIOL 101 AND BIOL 102) OR BIOL 121
Activity: Lecture
1.0 Course Unit

BIOL 203 Essentials of Biochemistry
Intermediate level course covering principles of modern biochemistry. Topics include protein structure, protein purification and characterization, proteomics, enzyme kinetics and mechanisms, membrane structure and function, metabolism, and cellular energy transduction. Emphasis will be on biochemical problem solving, experimental design, and application of quantitative methods in a biological and clinical context. This course is open to students in the College of Liberal and Professional Studies only.
Prerequisite: BIOL 101 and BIOL 102 or BIOL 121 and CHEM 241, the latter of which may be taken concurrently. CHEM 242 is recommended and may also be taken concurrently.
One-term course offered either term
Prerequisite: (BIOL 101 AND BIOL 102) OR BIOL 121) AND CHEM 241
Activity: Lecture
1.0 Course Unit

BIOL 204 Biochemistry
BIOL 204 examines the basic principles of protein structure, protein purification and characterization, proteomics, enzyme kinetics and mechanism, membrane structure and function, metabolism, and cellular energy transduction. The primary objective is to provide life scientists with an appreciation of basic principles of modern biochemistry, and of how the current conceptual and technical framework arose. Emphasis is placed on the experimental approaches and reasoning behind the dissection and reconstitution of these processes in a biological and, in some cases, clinical context. Discussions directed at biochemical problem solving, experimental design and the application of quantitative methods are integral to the course. Prerequisite: BIOL 101 and BIOL 102 or BIOL 121 and CHEM 241 the latter of which may be taken concurrently. CHEM 242 is recommended and may also be taken concurrently.
Taught by: Rea
Course usually offered in spring term
Prerequisite: (BIOL 101 AND BIOL 102) OR BIOL 121) AND CHEM 241
Activity: Lecture
1.0 Course Unit
BIOL 205 Cell Biology
A conceptual view of cell structure and function including membrane structure, intracellular organelles, membrane trafficking, surface receptors and signal transduction, the cytoskeleton, cell motility and communication, and the cell cycle. Cell biology is a dynamic field and recent research discoveries will be included in the lectures.
Taught by: Guo and Svitkina
Course usually offered in fall term
Prerequisite: (BIOL 101 AND BIOL 102) OR BIOL 121
Activity: Lecture
1.0 Course Unit

BIOL 211 Essentials of Molecular Biology and Genetics
This course will survey the discipline of molecular genetics. Mendelian and molecular genetics will be discussed as well as the use of genetic analysis to address questions in all areas of biology. The processes of DNA replication, transcription, and translation will be discussed at the molecular level. Other topics include the regulation of gene expression and genomics. This course is open to students in the College of Liberal and Professional Studies only.
One-term course offered either term
Prerequisite: (BIOL 101 AND BIOL 102) OR BIOL 121
Activity: Lecture
1.0 Course Unit

BIOL 213 Essentials of Vertebrate Physiology
A comparative and quantitative approach to the physiological function of vertebrates. Topics include muscles, nervous system, cardiovascular system, respiration, and renal function. This course is open to students in the College of Liberal and Professional Studies only.
One-term course offered either term
Prerequisite: (BIOL 101 AND BIOL 102) OR (BIOL 121 AND BIOL 124)
Activity: Lecture
1.0 Course Unit

BIOL 215 Vertebrate Physiology
The course will focus on integrative aspects of physiological function of vertebrates. Comparative, environmental and quantitative approaches will be used. Major topics include muscle, the cardiovascular system, respiration, renal function and the nervous system.
Taught by: Woodward
One-term course offered either term
Prerequisite: BIOL 102 OR BIOL 121 OR BIOL 124
Activity: Lecture
1.0 Course Unit

BIOL 221 Molecular Biology and Genetics
This course will survey the discipline of molecular genetics. Two broad areas will be considered 1) Molecular Biology: DNA replication, transcription, translation, regulation of gene expression in both prokaryotic and eukaryotic systems, and genomics and 2) Genetics: basic Mendelian & molecular genetics.
Taught by: Bonini/Gallagher/Guild/Levine
One-term course offered either term
Also Offered As: BIOL 527
Prerequisite: BIOL 101 OR BIOL 121
Activity: Lecture
1.0 Course Unit

BIOL 230 Evolutionary Biology
Theories and mechanisms of evolution, with emphasis on the genetic basis of evolutionary change.
Taught by: Schmidt, P
Course usually offered in spring term
Prerequisite: (BIOL 101 AND BIOL 102) OR BIOL 121
Activity: Lecture
1.0 Course Unit

BIOL 231 Evolution of Behavior: Animal Behavior
The evolution of social behavior in animals, with special emphasis on group formation, cooperation among kin, mating systems, territoriality and communication.
Course not offered every year
Also Offered As: BIBB 231, PSYC 231
Prerequisite: BIOL 102 OR BIOL 121 OR PSYC 001
Activity: Lecture
1.0 Course Unit

BIOL 240 Ecology: From individuals to ecosystems
The study of living organisms in their natural environment, spanning the ecological physiology of individuals, the structure of populations, and interactions among species, including the organization of communities and ecosystem function.
Taught by: Helliker/Akcay
Course usually offered in fall term
Prerequisite: BIOL 102 OR BIOL 121
Activity: Lecture
1.0 Course Unit

BIOL 251 Molecular and Cellular Neurobiology
Cellular physiology of neurons and excitable cells; molecular neurobiology and development. Topics include: action potential generation; synaptic transmission; molecular and physiological studies of ion channels; second messengers; simple neural circuits; synaptic plasticity; learning and memory; and neural development. Prerequisite: PHYS 105 or 151 strongly recommended
Taught by: Schmidt
Course usually offered in fall term
Also Offered As: BIBB 251
Prerequisite: (BIOL 101 AND BIOL 102) OR BIOL 121
Activity: Lecture
1.0 Course Unit
Notes: (3hrs. lec., 3hrs. lab, 1.5 c.u.)

BIOL 275 Elements of Microbiology
Microbiology plays a central role in diverse areas of human life such as infectious disease, ecology, and biotechnology. This course will cover aspects of modern microbiology with an emphasis on prokaryotic organisms. The topics will include basic aspects of microbial diversity, genetics, and pathogenesis as well as examples of applied microbiology. This course is open to students in the College of Liberal and Professional Studies only.
One-term course offered either term
Prerequisite: (BIOL 101 OR BIOL 121) AND (BIOL 211 OR BIOL 221)
Activity: Lecture
1.0 Course Unit
Notes: Combined lecture and lab course.
BIOL 304 Infectious Disease Biology
This course focuses on selected topics concerning infectious agents, the diseases they cause in humans, and the social and scientific challenges they pose. The first section addresses the principles of epidemiology and microbial pathogenesis, as well as pathophysiology of infectious diseases. In the second section, tools and techniques of diagnosis, tracking, and control of infectious diseases will be discussed. To develop a broad understanding of the many different aspects of infectious processes, selected viral, fungal, protozoan, and helminthic pathogens and related infectious diseases will be presented. This course is open to students in the College of Liberal and Professional Studies only.
Course usually offered in spring term
Prerequisite: (BIOL 211 OR BIOL 221) AND BIOL 275 AND BIOL 404 Activity: Lecture
1.0 Course Unit

BIOL 306 Histology
This course is designed to introduce the undergraduate student to the structure of tissues at the cellular level and to the way in which those tissues are assembled into organs. This knowledge of structure will be the basis for discussion of tissue and organ function. This course is open to students in the College of Liberal and Professional Studies only.
One-term course offered either term
Prerequisite: ((BIOL 101 AND BIOL 102) OR BIOL 121) AND (BIOL 201 OR BIOL 205)
Activity: Lecture
1.0 Course Unit

BIOL 325 Marine Biology
An introduction to marine biology and oceanography. Topics will include chemical and physical oceanography, a survey of form, function and phylogeny of algae, invertebrates and vertebrates, and an examination of ecological and evolutionary principles as applied to marine organisms and ecosystems.
Taught by: Barott
Course usually offered in fall term
Prerequisite: BIOL 102 OR BIOL 121
Activity: Lecture
1.0 Course Unit

BIOL 330 Comparative Vertebrate Anatomy and Evolution
This course will survey the phylogeny and anatomy of vertebrate organisms from a comparative evolutionary perspective. The lecture will concentrate on the history, diversity, structure and function of vertebrates. A companion lab course, BIOL 336, is available for those students interested in a more complete understanding of vertebrate anatomy.
Taught by: Dunham
Course usually offered in spring term
Prerequisite: BIOL 102 OR BIOL 121
Activity: Lecture
1.0 Course Unit

BIOL 336 Comparative Vertebrate Anatomy Lab
Laboratory portion of BIOL 330 Comparative Vertebrate Anatomy and Evolution. Students will learn comparative anatomy through dissection of representative vertebrates. Students taking the lab must have credit or register for the lecture course, BIOL 330.
Taught by: Dunham
Course usually offered in spring term
Prerequisite: BIOL 330
Activity: Laboratory
0.5 Course Units
Notes: (3 hrs lab., 0.5 c.u.)

BIOL 354 Developmental Biology
A view of how an animal embryo is specified to develop and differentiate into a wide spectrum of cell types, and how the spatial patterns and axes of embryos are determined. The course will focus on genetic and molecular approaches, but will also cover the comparative anatomy of developing embryos to the extent necessary to understand the conserved aspects of embryonic patterning. Special emphasis will be placed on organisms with particular advantages for the study of embryonic development: e.g., mouse, frog, zebrafish, and Drosophila. The first half of the course will cover cell fate restrictions, cloning animals using nuclear transfer, stem cell biology, formation of the embryonic axes in vertebrates and Drosophila, and patterning of the neural tube and mesodermal tissues. The second half of the course will focus on emerging ideas and findings in the field, with emphasis on analysis of original literature.
Taught by: Wagner J
Course usually offered in spring term
Prerequisite: BIOL 205 OR BIOL 221
Activity: Lecture
1.0 Course Unit

BIOL 375 Microbial Diversity and Pathogenesis
Microbiology plays a central role in diverse areas of human life such as infectious disease, ecology, and biotechnology. This course will cover aspects of modern microbiology with an emphasis on prokaryotic organisms. The topics will include basic aspects of microbial diversity, genetics, virology, and pathogenesis as well as examples of applied microbiology.
Taught by: Pohlschroder
Course usually offered in spring term
Also Offered As: BIOL 575
Prerequisite: ((BIOL 101 AND BIOL 102) OR BIOL 121) AND BIOL 221
Activity: Lecture
1.0 Course Unit

BIOL 376 Microbial Diversity and Pathogenesis Lab
The importance of microbiology in complex issues, such as the impact of the microbiome in human health or as alternative energy sources, is being appreciated more and more each day. This upper level laboratory course provides students with a robust technical skill set while also giving them an opportunity to participate in an authentic research project that may lead to novel discoveries. Students will generate research questions, formulate hypotheses, design experiments, analyze data, and present their research findings to the class. In each project, students will use the cutting edge approach of metagenomics to evaluate the microbial diversity of their environment via Next Generation Sequencing. Students will also examine the function of microbial species within their communities. Potential projects include the isolation of novel antibiotic producers and the antibiotic they produce, designing and optimizing microbial fuel cells that can be used to generate electricity, or isolating antibiotic resistant bacteria and attempting novel approaches to inhibit or prevent their growth. Prerequisite: BIOL 375 previously or concurrently is recommended but not required.
Taught by: Pohlschroder and Hogan
Course usually offered in spring term
Also Offered As: BIOL 576
Prerequisite: BIOL 375
Activity: Laboratory
1.0 Course Unit
Notes: (3 hrs lab., 0.5 c.u. or 6 hrs lab., 1.0 c.u. in some years)
BIOL 399 Independent Study
Laboratory research with a faculty member in the Department of Biology. Research may also be conducted elsewhere on campus but co-sponsored by a faculty member in Biology. A final paper is required. Apply at the Biology Academic Office, 102 Leidy Labs.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

BIOL 400 Field Botany
This course focuses on teaching students the Pennsylvania flora, both native and naturalized. Through weekly field trips, students will gain an appreciation for the diversity of plant species and plant communities in PA, and observe and discuss ecological and historical forces that influence plant species occurrences and plant communities. The ability to quickly and accurately identify plants in the field, through both sight identification and the use of a dichotomous key, is the major thrust of this course. Students will also learn how to appropriately collect plant materials for further study/identification in the laboratory and for archiving in an herbarium collection.
Taught by: Block and Skema
Course usually offered in fall term
Prerequisite: (BIOL 101 AND BIOL 102) OR BIOL 124
Activity: Laboratory
1.0 Course Unit

BIOL 401 Prokaryotic Microbiology: A Pragmatic View
This interactive course is intended for a small group of students aspiring to pursue research in microbiology, preferably using prokaryotes. Students will study selected papers and will attend the Prokaryotic Microbiology Seminars on Fridays. Specific problems of importance to a given field at a particular time will be critically analyzed and discussed:
- How were cutting edge techniques of the time used to address these problems?
- How would the same problems be approached using current techniques?
The emphasis of the course will be on learning to become a thoughtful experimentalist rather than acquiring the hottest emerging knowledge. Prerequisite: BIOL 375 is recommended but not required.
Taught by: Daldal
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

BIOL 404 Immunobiology
Early development of microbiology, pathology, and immunobiology; molecular and cellular bases of immune phenomena including: immunity to pathogens, immune diseases, autoimmunity, and hypersensitivity. This course is open to students in the College of Liberal and Professional Studies only.
One-term course offered either term
Prerequisite: (BIOL 201 OR BIOL 205) AND (BIOL 211 OR BIOL 221)
Activity: Lecture
1.0 Course Unit

BIOL 405 First Line of Defense: The Role of Innate Immunity in Disease
All organisms, from bacteria to humans, rely on innate, non-specific defense systems to protect against infection and mediate damage. Even in organisms that can generate highly specific and efficient adaptive responses, such as humans, defects in innate immune system components can be fatal. In this course, we will examine the cellular and molecular mechanisms of the components of the innate immune system through discussion of primary literature. We will explore how the innate immune system influences the course of infections and cancer, as well as autoinflammatory disorders that lead to host tissue damage. Though our focus will be on mammalian immunity, we will also explore the evolutionary development of innate immunity through comparison of systems in different organisms.
Taught by: Elliott
Course usually offered in fall term
Prerequisite: BIOL 205
Activity: Seminar
1.0 Course Unit

BIOL 406 Molecular Mechanisms of Infectious Disease Biology
This course is designed for advanced undergraduates and beginning graduate students with a particular interest in infectious disease biology. Note that this course is not a comprehensive survey of the field and is not appropriate for students seeking a lecture course on disease. The primary objective of this course is to teach students considering a career in the biomedical sciences how to read, discuss, and question research papers effectively. Intensive classroom discussions focus on the experimental methods used, results obtained, interpretation of these results in the context of pathogen interactions with host cells and organisms, and implications for basic research and therapeutic development. Prerequisite: BIOL 221 recommended.
Taught by: Roos
Course usually offered in spring term
Prerequisite: BIOL 205
Activity: Seminar
1.0 Course Unit

BIOL 407 Cancer Cell Biology
This course will focus on the molecular mechanisms by which fundamental cellular processes are disrupted in the development of cancer.
Taught by: Keith
Course usually offered in fall term
Prerequisite: BIOL 205 AND 221
Activity: Seminar
1.0 Course Unit

BIOL 410 Advanced Evolution
Mechanisms of evolution at the genetic and populational levels. Empirical and theoretical approaches to natural selection, population structure, gene flow, and quantitative genetics will be emphasized.
Taught by: Sniegoski/Plotkin
Course offered fall; odd-numbered years
Prerequisite: BIOL 230
Activity: Lecture
1.0 Course Unit
BIOL 411 Evolutionary Ecology
This course will focus on topics at the intersection of evolutionary biology and ecology, including the evolution of cooperation and conflict from genes to societies to ecological communities, life history evolution, and the evolution of interspecific interactions and ecological communities. The course will use a combination of lectures and discussion of readings from the primary literature.
Taught by: Linksveyer
Course usually offered in spring term
Prerequisite: BIOL 221 OR BIOL 231 OR BIOL 240
Activity: Seminar
1.0 Course Unit

BIOL 412 Animal Physiological and Population Ecology
This course explores the interactions of environmental variables, such as temperature, with the physiology of vertebrate animals and the mechanistic links of those interactions with population dynamics.
Taught by: Dunham
Course offered spring; even-numbered years
Prerequisite: BIOL 240
Activity: Seminar
1.0 Course Unit

BIOL 415 Freshwater Ecology
Survey of the physical, chemical and biological properties of freshwater ecosystems, both riverine and lentic, natural and polluted. Prerequisite: One semester of college chemistry.
Taught by: Arscott
Course usually offered in spring term
Also Offered As: ENVS 416
Prerequisite: BIOL 101 OR BIOL 121
Activity: Lecture
1.0 Course Unit

BIOL 417 Theoretical Population Biology
Introduction to basic theoretical tools to study the evolutionary and ecological dynamics of populations. Topics to be discussed include: basic population dynamics and population genetics theory, evolutionary game theory/adaptive dynamics, social evolution (kin selection/multilevel selection), life-history evolution, and stochastic models. Other topics may be added based on the specific interests of students in the class.
Taught by: Akcay
Course usually offered in spring term
Prerequisite: BIOL 230 AND MATH 104
Activity: Seminar
1.0 Course Unit

BIOL 421 Molecular Genetics
A detailed analysis of gene structure and expression in both prokaryotic and eukaryotic organisms. Rapid advances in DNA technology and genomics will be emphasized. The application of these advances to the molecular genetic analysis of development, cell function and disease will be discussed.
Taught by: Weinberg
Course usually offered in fall term
Prerequisite: BIOL 221
Activity: Lecture
1.0 Course Unit

BIOL 423 Plant Ecology
The course consists of both lecture material and hands on research involving questions in plant population or community ecology. Quantitative information from published studies will be discussed and students, working in teams, will summarize and analyze data from class experiments. Prerequisite: A year of introductory biology or equivalent.
Taught by: Casper
Course not offered every year
Activity: Lecture
1.0 Course Unit

BIOL 425 Biochemistry and Molecular Genetics Superlab
Intensive laboratory class where open-ended, interesting biological problems are explored using modern lab techniques. Topics may include protein structure/function studies; genetic screens, genomics and gene expression studies; proteomics and protein purification techniques; and molecular cloning and DNA manipulation. The course emphasizes developing scientific communication and independent research skills.
Course topics reflect the interests of individual Biology faculty members. This course is recommended for students considering independent research.
Taught by: Wagner J
One-term course offered either term
Prerequisite: BIOL 204 OR BIOL 205 OR BIOL 221
Activity: Laboratory
1.0 Course Unit

BIOL 430 Evolution and Ecology of Infectious Diseases
This course will focus on fundamental topics related to the ecological and evolutionary processes driving the transmission of pathogenic microbes among hosts including life-history strategies; evolution of pathogenic traits; the impacts of temporal, spatial and host-trait heterogeneity; and factors causing the emergence of an infectious pathogen. Examples will be drawn from human, wildlife, and plant pathogens to illustrate these ecological and evolutionary topics. Students will learn to develop and apply current ecological and evolutionary theory to infectious microbe research and gain practical experience accessing, interpreting and synthesizing the peer-reviewed scientific literature through a combination of popular and scientific readings, discussion, and lecture.
Taught by: Brisson
Course not offered every year
Prerequisite: BIOL 230 OR BIOL 240
Activity: Seminar
1.0 Course Unit

BIOL 431 Genome Science and Genomic Medicine
This course will be a focused study of genomes, genomics techniques, and how these approaches are and will be used in diagnosing and treating human disease. Topics will include genome sequencing, analysis of sequences and microarrays, and new techniques including high-throughput sequencing and reverse genetic analysis with a focus on genome-wide mutant collections. Prerequisite: BIOL 421 strongly recommended.
Taught by: Gregory
Course usually offered in spring term
Also Offered As: CAMB 431
Prerequisite: BIOL 221
Activity: Lecture
1.0 Course Unit
**BIOL 433 The Genetics of Adaptation: How sex, conflict, and pathogens shape modern genomes**
In this course we explore the genetic basis of adaptation. We will investigate the forces that drive adaptation (e.g., environmental stress, pathogens, conflict, sex), the genetic mechanisms of adaptation (protein sequence changes, expression divergence, gene duplication, etc.), and the consequences of adaptation for contemporary cellular functions, developmental processes, and ecological interactions. The class meetings will be structured around both lectures and student-led discussions of the primary literature.
Taught by: Levine
Course usually offered in spring term
Prerequisite: BIOL 221 OR BIOL 230
Activity: Seminar
1.0 Course Unit

**BIOL 436 Molecular Physiology**
This course is designed for advanced undergraduate and graduate students who are interested in molecular physiology of sensory signal transduction. The major topics to cover will be signal transduction mechanisms used by membrane ion channels and receptors that detect the sensory stimuli (light, sound, temperature and taste, for example) and transmit the signals to the nervous system. Modern molecular/structural techniques (patch clamp, protein crystallization, molecular genetics, expression cloning and protein purification) will be introduced along with each topic. References will be primary research articles. Students will critically evaluate research discoveries by reading and presenting one to two original research papers. Each student is required to write a 10-page research proposal and to critique proposals written by fellow students.
Taught by: Ren
Course usually offered in fall term
Prerequisite: (BIOL 101 AND BIOL 102) OR BIOL 121
Activity: Seminar
1.0 Course Unit

**BIOL 437 Introduction to Computational Biology & Biological Modeling**
The goal of this course is to develop a deeper understanding of techniques and concepts used in Computational Biology. The course will strive to focus on a small set of approaches to gain both theoretical and practical understanding of the methods. We will aim to cover practical issues such as programming and the use of programs, as well as theoretical issues such as algorithm design, statistical data analysis, theory of algorithms and statistics. This course WILL NOT provide a broad survey of the field nor teach specific tools but focus on a deep understanding of a small set of topics. We will discuss string algorithms, hidden markov models, dimension reduction, and machine learning (or phylogeny estimation) for biomedical problems. Prerequisite: Probability theory and linear algebra are highly recommended.
Taught by: Kim
Course usually offered in fall term
Also Offered As: CIS 436
Prerequisite: BIOL 446 AND MATH 104
Activity: Lecture
1.0 Course Unit

**BIOL 438 Systems Biology: Integrative physiology and biomechanics of the muscular system**
The course will focus on muscle function from the level of molecules to whole animal locomotion. At each level of organization, muscle function will be explored from mechanical and energetic viewpoints. The course will include lectures, demonstrations, and several guest expert lectures. Students will also be introduced to realistic musculo-skeletal modelling and forward dynamic simulations to explore integrated function.
Taught by: Rome
Course usually offered in spring term
Prerequisite: BIOL 215 OR BIOL 251
Activity: Lecture
1.0 Course Unit

**BIOL 440 Advanced Analysis of Humans and the Environment**
Advanced version of BIOL 140: Humans and the Environment. Additional readings and course work as directed. Permission of instructor required to enroll.
For BA Students: Natural Science and Math Sector
Taught by: Janzen
Course usually offered in fall term
Also Offered As: BIOL 140
Activity: Lecture
1.0 Course Unit

**BIOL 442 Neurobiology of Learning and Memory**
This course focuses on the current state of our knowledge about the neurobiological basis of learning and memory. A combination of lectures and student seminars will explore the molecular and cellular basis of learning in invertebrates and vertebrates from a behavioral and neural perspective.
Course usually offered in fall term
Also Offered As: BIBB 442, NGG 575, PSYC 421
Prerequisite: BIBB 251 OR BIOL 251
Activity: Seminar
1.0 Course Unit

**BIOL 444 Molecular Evolution of Physiological Functions**
This course is designed for students who are interested in understanding how physiological functions are achieved. Taking advantage of the recent explosion in genetic data and high-resolution protein structure analysis across organisms, the course focuses on the evolution of physiological functions at the genetic, structural, circuit and organismal levels. Examples include the co-evolution of toxins and toxin resistance between hunter and prey, the evolution of substance transport across cell membranes, intracellular signaling cascades, intercellular communication, distributed and centralized nervous systems, neural circuits controlling physiological functions such as feeding, locomotion and visual information processing. Students are expected to learn 1) basic physiological processes, their origin and adaptation, 2) modern genetic, structural and physiological techniques, 3) to critically evaluate research findings, 4) to present scientific papers, and 5) to write a research report.
Taught by: Ren
Course usually offered in fall term
Prerequisite: BIOL 109 OR BIOL 215 OR BIOL 221 OR BIOL 251
Activity: Seminar
1.0 Course Unit
BIOL 446 Statistics for Biologists
Introductory probability theory. Principles of statistical methods. Problems of estimation and hypothesis testing in biology and related areas.
Taught by: Plotkin
Course usually offered in fall term
Prerequisite: MATH 104
Activity: Lecture
1.0 Course Unit

BIOL 448 Principles of Drug Action
Principles of Drug Action covers the concepts of pharmacological sciences as they relate to biochemistry, cell biology, and drug therapy. The intent of the course is to provide a solid grounding in targets of drug action, dose-response relationships, pharmacodynamics, and pharmacokinetics. The grounding is achieved by a discussion of these concepts explicitly and, through selected examples, implicitly. The first part of the course covers each of the concepts. Emphasis is placed on the integration with principles of cell biology and biochemistry. The second part of the course covers selected therapeutic applications. The applications chosen fall within four areas: cardiovascular, brain and behavior, antipyretic and anti-inflammatory, and antimicrobial. They are used to recapitulate important concepts and provide insight into the interplay between pharmacology and human physiology. The applications and the areas they represent are by no means comprehensive, but students will be able to pursue additional interests through papers.
Prerequisite: BIOL 204 is recommended.
Taught by: Manning
Course usually offered in fall term
Prerequisite: BIOL 205
Activity: Lecture
1.0 Course Unit

BIOL 451 Neural Systems and Behavior
This course will investigate neural processing at the systems level. Principles of how brains encode information will be explored in both sensory (e.g. visual, auditory, olfactory, etc.) and motor systems. Neural encoding strategies will be discussed in relation to the specific behavioral needs of the animal. Examples will be drawn from a variety of different model systems.
Taught by: Schmidt, M.
Course usually offered in spring term
Also Offered As: BIBB 479, PSYC 479
Prerequisite: BIOL 251 OR BIBB 251
Activity: Lecture
1.0 Course Unit

BIOL 456 Neural Circuits for Survival
A fundamental goal of neuroscience is to understand how neural circuits in the brain function to influence behavior. The aim of this course is to highlight the neural basis of behavior and discuss modern approaches and novel methods to study the neuronal control of classically studied aspects of behavior. Through a combination of discussions, student presentations, and interactive lectures, we will explore the neural systems that regulate the interactions an animal has with the external world. We will explore sensory systems (such as vision, taste, and olfaction), motor systems, and survival behaviors (such as feeding, drinking, mating, and aggression). The course evaluation will be based largely on written work, participation, and presentations.
Taught by: Betley
Course usually offered in spring term
Prerequisite: BIOL 251
Activity: Seminar
1.0 Course Unit

BIOL 464 Field Studies in Aquatic Microbial Ecology
This is a field and laboratory-based course that involves students in hands-on research methods in aquatic microbial ecology. Students will gain familiarity with experimental design, field measurements of environmental parameters (physical, chemical, and biological), sample collection techniques, and laboratory analyses required to assess the activity, health, and community composition of aquatic microbial ecosystems in an urban environment. We will compare and contrast various watersheds in and around the greater Philadelphia area, and students will design and conduct original independent research as a final course project. Enrollment preference given to students who have completed BIOL 240.
Taught by: Sherwood
Course usually offered in spring term
Prerequisite: BIOL 101 OR BIOL 121
Activity: Laboratory
1.0 Course Unit

BIOL 466 Molecular Genetics of Neurological Disease
This course will focus on the molecular basis of neurological diseases, exploring in detail key papers that cover topics including defining the disease genes, development of animal models that provide mechanistic insight, and seminal findings that reveal molecular understanding. Diseases covered will include neurological diseases of great focus today such as Alzheimer's, Fragile-X and autism, dementia, motor neuron degeneration, and microsatellite repeat expansion disorders. The course will provide a perspective from initial molecular determination through current status. Students will gain an understanding of how the molecular basis of a disease is discovered (from classical genetics to modern genomics) and how such diseases can be modeled in simple genetic systems for mechanistic insight. The course will be comprised of lectures with detailed analysis of primary literature and in-class activities. Grading will be based on class participation, exams, and written papers.
Prerequisite: BIOL 251 and BIOL 421 are recommended.
Taught by: Bonini
Course usually offered in fall term
Also Offered As: BIBB 466
Prerequisite: BIOL 221
Activity: Lecture
1.0 Course Unit
BIOL 469 Plant Physiology Through Space and Time
This course is a lab/lecture/seminar hybrid that will meet once per week for three hours. Each session will consist of mini-lecture/lab, paper discussions/lab, or solely lab efforts. All reading assignments will be available on Canvas (no textbook fees). We will examine various aspects of photosynthesis, water relations and nutrient acquisition in the context of the evolutionary progression of higher plants. With each subject, we will consider, measure, and in some cases model whole-plant physiology while examining sub-cellular-level controls and ecosystem-to-global-level consequences. This course is designed to give molecular biologists through earth-system scientists the tools to measure and understand whole-plant physiological responses to molecular manipulation and environmental variability. All students will learn to appreciate the context of their work on both micro and macro scales.
Taught by: Helliker
Course usually offered in spring term
Prerequisite: BIOL 240
Activity: Seminar
1.0 Course Unit

BIOL 475 Topics in Prokaryotic Biology: From Molecules to Microbiomes
This course will cover research articles from both the classic and contemporary literature on the genetics, cell biology, and physiology of prokaryotes. The material will focus on a small number of subjects in depth, with an emphasis on how the field has arrived at its current state of knowledge and on exciting new research directions. Possible topics include: stress responses, cell signaling, subcellular organization, bacteriophages, microbial communities, and host-microbe interactions.
Taught by: Goulian
Course offered spring; even-numbered years
Prerequisite: BIOL 221 OR BIOL 375
Activity: Seminar
1.0 Course Unit

BIOL 477 The Science and Art of Biotechnology
Biotechnology transforms basic biological research into pharmaceutical therapies. This course will examine some explanations for American biotechnology vitality by studying case histories in which fundamental biological observations were subsequently developed, successfully and unsuccessfully, for therapeutic applications. Along the way, we will also seek to understand the interactions among academic research institutions, biotechnology companies, large pharmaceutical companies, the Food and Drug Administration, financial institutions, venture groups, and the Patent and Trademark Office. Classes will be highly interactive. Students will present case histories in a critical fashion. Ultimately, students will conduct mock negotiations focused on university technology transfers, clinical trial design, financing, and intellectual property.
Taught by: Roth
Course usually offered in fall term
Prerequisite: BIOL 204 OR BIOL 205 OR BIOL 221
Activity: Seminar
1.0 Course Unit

BIOL 480 Advanced Cell Biology
This course is designed for beginning graduate students and advanced undergraduates with a particular enthusiasm for cell biology. Biology 480 does not attempt to cover all aspects of cell biology, and is therefore not appropriate for students seeking a lecture course which provides a comprehensive survey of the field. Rather, the primary objective of this course is to teach those students considering a career in the biomedical sciences how to read, discuss, and question original research papers effectively. Intensive classroom discussions focus on the experimental methods used, results obtained, interpretation of these results in the context of cell structure and function, and implications for further studies. There is no assigned text; students learn to critically evaluate current literature by reading original papers on selected topics in modern cell biology. Accordingly, class participation/discussion is essential and the grade will be determined significantly by that. In addition, there will be two exams including answering short questions and an essay critiquing an original paper that is selected on a topic in Cell Biology.
Taught by: Guo
Course usually offered in fall term
Also Offered As: CAMB 480
Prerequisite: BIOL 201 AND BIOL 205
Activity: Lecture
1.0 Course Unit

BIOL 482 Cell Signaling
The evolution of multicellularity required that cells be able to both send and receive signals from their neighbors. The development of organs and differentiation of cells and tissues requires reliable and continuous communication between cells. Consequences of inappropriate or anomalous signaling include development abnormalities and cancer. This class will examine mechanisms of cell-to-cell signaling between cells in plants and animals with an emphasis on the cell biology of development.
Taught by: Gallagher
Course usually offered in fall term
Prerequisite: BIOL 205
Activity: Seminar
1.0 Course Unit

BIOL 483 Epigenetics
This course investigates epigenetic phenomena: heritable alternate states of gene activity that do not result from an alteration in nucleotide composition (mutations). Epigenetic mechanisms regulate genome accessibility and cell differentiation. They play a key role in normal development and in oncogenesis. For example both mammalian X-chromosome inactivation and nuclear transfer (cloning) are subject to epigenetic regulation. Amongst the epigenetic mechanisms we will discuss in this course are chromatin organization, histone modification, DNA methylation and non-coding RNAs. The course is geared toward advanced undergraduate and beginning graduate students and is a combination of lectures, student presentations and research presentations by guest speakers. Students will work with the current scientific literature.
Taught by: Wagner D
Course usually offered in fall term
Also Offered As: CAMB 483
Prerequisite: BIOL 221
Activity: Lecture
1.0 Course Unit
BIOL 484 Cell Motility and the Cytoskeleton
Cytoskeleton and cell motility play a crucial role in many aspects of normal and pathological physiology of individual cells, tissues, and whole organisms, including morphogenesis, immune response, wound healing, oncogenesis, and infection. This course will cover current topics in cell biology with emphasis on cytoskeleton and cell motility and their roles in these processes. Lectures, student presentations, and discussions in the class will be based on primary scientific literature.
Taught by: Svitkina
Course usually offered in fall term
Prerequisite: BIOL 205
Activity: Seminar
1.0 Course Unit

BIOL 485 The RNA World: A functional and computational analysis
A focused study of genomic, biochemical, cellular, and molecular aspects of RNA. Topics of study will include RNA structure, RNA processing and turnover, splicing, ribozymes and riboswitches, RNA editing and modification, RNA interference, endogenous eukaryotic RNA silencing pathways, small RNA biology, computational methodologies for studying RNA biology, and RNA viruses. Lectures, students presentations, and discussions will be based on readings from the primary literature.
Prerequisite: BIOL 421 strongly recommended
Taught by: Gregory
Course offered spring; even-numbered years
Also Offered As: CAMB 485
Prerequisite: BIOL 221
Activity: Seminar
1.0 Course Unit

BIOL 486 Chromosomes and the Cell Cycle
Life depends on the propagation of genetic material from one generation to the next through cycles of genome replication and cell division. The genome is copied by the parent, and one exact copy is inherited by each daughter cell. We will treat chromosomes as discrete entities, rather than collections of genes, that are replicated and divided with high fidelity to ensure that the genome remains stable over many generations. By reading selected primary literature covering several decades, we will build an understanding of the cell cycle by focusing on chromosomes and the associated molecular machinery. We will explore mechanisms that underlie replication and division, particularly control mechanisms that maintain genome integrity and are critical to prevent disease. The goal of the course is to develop a picture of the cell cycle by examining some of the key experiments and insights that have led to our current understanding.
Taught by: Lampson
Course offered spring; even-numbered years
Also Offered As: CAMB 486
Prerequisite: BIOL 205
Activity: Seminar
1.0 Course Unit

BIOL 493 Epigenetics of Human Health and Disease
Epigenetic alterations encompass heritable, non-genetic changes to chromatin (the polymer of DNA plus histone proteins) that influence cellular and organismal processes. This course will examine epigenetic mechanisms in directing development from the earliest stages of growth, and in maintaining normal cellular homeostasis during life. We will also explore how diverse epigenetic processes are at the heart of numerous human disease states. We will review topics ranging from an historical perspective of the discovery of epigenetic mechanisms to the use of modern technology and drug development to target epigenetic mechanisms to increase healthy lifespan and combat human disease. The course will involve a combination of didactic lectures, primary scientific literature and research lectures, and student-led presentations.
Prerequisite: BIOL 483 recommended
Taught by: Berger
Course offered spring; odd-numbered years
Also Offered As: CAMB 493, GCB 493
Prerequisite: BIOL 221
Activity: Seminar
1.0 Course Unit

BIOL 499 Advanced Independent Study
A second semester of independent study, in most cases extending the research undertaken for the BIOL 399. Apply at the Biology Academic Office, 102 Leidy Labs.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

BIOL 522 Human Evolutionary Genomics
Advanced seminar on current topics in human genomics and human evolution. Topics include the methods used for mapping and sequencing genomes; phylogenetic and population genetic analysis; and detecting variation in the human genome. This course is designed for graduate students but advanced undergraduates with a strong background in genetics are also welcome.
Taught by: Tishkoff
Course offered spring; even-numbered years
Also Offered As: CAMB 522
Activity: Seminar
1.0 Course Unit

BIOL 527 Genetics for Computational Biology
This course will survey the discipline of molecular genetics. Two broad areas will be considered: 1) Molecular biology: DNA replication, transcription, translation, and the regulation of gene expression in both prokaryotic and eukaryotic systems and genomics and 2) Genetics: basic Mendelian & molecular genetics.
Taught by: Bonini/Gallagher/Guild/Keith
One-term course offered either term
Also Offered As: BIOL 221
Prerequisite: BIOL 101 OR 121
Activity: Lecture
1.0 Course Unit
BIOL 536 Fundamentals of Computational Biology
Introductory computational biology course designed for both biology students and computer science, engineering students. The course will cover fundamentals of algorithms, statistics, and mathematics as applied to biological problems. In particular, emphasis will be given to biological problem modeling and understanding the algorithms and mathematical procedures at the ‘pencil and paper’ level. That is, practical implementation of the algorithms is not taught but principles of the algorithms are covered using small sized examples. Topics to be covered are: genome annotation and string algorithms, pattern search and statistical learning, molecular evolution and phylogenetics, functional genomics and systems level analysis. Prerequisite: College level introductory biology required; undergraduate or graduate level statistics taken previously or concurrently required; molecular biology and/or genetics encouraged; programming experience encouraged
Taught by: Kim
Course usually offered in fall term
Also Offered As: CIS 536, GCB 536
Prerequisite: ([BIOL 101 AND BIOL 102] OR BIOL 121) AND STAT 111 AND STAT 112
Activity: Lecture
1.0 Course Unit

BIOL 540 Genetic Analysis
The logic and methodology of genetic analysis in plants and animals. This lecture course will focus on the use of mutations to study gene function and higher order biological processes, methods for reporting and manipulating gene expression, and analysis of the genetic basis of natural variation.
Taught by: Poethig
Course not offered every year
Prerequisite: BIOL 221
Activity: Lecture
1.0 Course Unit

BIOL 571 Topics in Computational Biology
Course for graduate students planning research in computational biology and genomics. Assigned readings will cover algorithms and data analysis techniques in computational biology. The course will include presentations and discussion of research problems involving computational analysis and there. Active group participation is required. Topics could include string algorithms, probability theory, multivariate statistics, molecular evolution, Markov Models, phylogenetic trees, and machine learning.
Taught by: Kim
Course not offered every year
Activity: Seminar
1.0 Course Unit

BIOL 575 Microbial Diversity and Pathogenesis
Advanced version of BIOL 375: Microbial Diversity and Pathogenesis for graduate students only. Additional readings and course work as directed.
Taught by: Pohlschroder
Course usually offered in spring term
Also Offered As: BIOL 375
Prerequisite: BIOL 221
Activity: Lecture
1.0 Course Unit

BIOL 576 Microbial Diversity and Pathogenesis Lab
Advanced version of BIOL 376: Microbial Diversity and Pathogenesis Lab for graduate students only. Additional readings and course work as directed. Permission of instructor. BIOL 575 previously or concurrently is recommended but not required.
Taught by: Pohlschroder and Hogan
Course usually offered in spring term
Also Offered As: BIOL 376
Activity: Laboratory
1.0 Course Unit

BIOL 586 Topics in Mathematical Biology
This course will cover various mathematical models and tools that are used to study modern biological problems. The specific emphasis will vary from year to year, but typically will include an introduction to stochastic processes and computational methods that arise in evolutionary biology and population genetics. No prior knowledge of biology is needed to take this course, but a strong background in probability and familiarity with algorithms and combinatorics will be assumed. Prerequisite: MATH 241 and 340 are recommended
Course not offered every year
Also Offered As: MATH 586
Prerequisite: MATH 430
Activity: Lecture
1.0 Course Unit

BIOL 599 Master's Independent Study
Laboratory research for the Master’s of Science in Biology submatriculation program. Apply at the Academic Office, 102 Leidy Labs.
One-term course offered either term
Activity: Independent Study
1.5 Course Unit

BIOL 608 Communication for Biologists
Basic science writing and presentation skills for PhD students in Biology. Designed for second year graduate students preparing for qualifying exams. In the first half of the course, students will produce weekly writing assignments and critique writing submitted by others. In the second half, students will learn techniques for effective research presentations in both seminar style environments and chalk-talk settings.
Taught by: Schmidt/Plotkin
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

BIOL 700 Advanced Topics in Current Biological Research
Integrative seminar on current biological research for first-year PhD students.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
Notes: Course open to PhD students in Biology only.

BIOL 999 Independent Study and Research
Advanced laboratory research with a member of the Biology Graduate Group. May be taken for multiple course unit credit
One-term course offered either term
Activity: Independent Study
0.5 Course Units
Notes: May be taken for multiple course unit credit
**Biomedical Graduate Studies (BIOM)**

**BIOM 502 Molecular Basis of Disease**
BIOM 502 introduces students to basic mechanisms of disease and examines a different disease each week. The focus of the course will be on understanding the pathophysiology of the diseases and how research has enhanced not only our knowledge of disease mechanisms but has also led to improved therapy for patients with these diseases. This course is reserved for BGS students only. Prerequisite: Permission of course director.

Taught by: Dr. Jonathan Katz and Dr. Jennifer Punt
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

**BIOM 510 Case Studies in Translational Research (CSTR) (Open to MD/PhD and VMD/PhD students only)**
This course is open to MD/PhD, VMD/PhD and Biomedical Graduate Studies PhD students. All second year combined degree students are expected to take this course unless excused by Dr. Brass. Enrollment is limited to 24 students but interested VMD/PhD and BGS students are welcome as space permits. Prerequisite: Must be in the MD/PhD or VMD/PhD program and have completes the first year of training. CSTR is a seminar style course where groups of students work with selected Penn faculty to prepare a discussion and literature review on disease topics. Topics will include gene therapy for hemophilia, retinal disease and wound healing, cytokine therapies for immune disorders, genetic sleep disturbances and vaccine delopement. Most of the course will focus on the analysis of successful translational research projects that are taking place here at Penn.

Taught by: Drs. Mitch Weiss, Emma Meagher and Skip Brass
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

**BIOM 555 Regulation of the Genome**
Regulation of gene expression including chromatin structure, transcription, DNA modification, RNA processing, translation, control of gene expression via microRNAs and post-translational processing. Prerequisite: Permission of instructors.

Taught by: Drs. Zhaolan Zhou and Ben Black
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

**BIOM 600 Cell Biology**
BIOM 600 is a beginning-to-intermediate-level graduate school course designed to introduce students to the molecular components and physiological mechanisms that underlie the structure and function of eukaryotic cells. The course emphasizes core cell biology concepts by describing both landmark experiments and methods as well as current scientific research questions and technical approaches. Lectures will focus on discoveries involving: (i) molecular mechanisms of cellular communication; (ii) intracellular compartmentalization, protein-vesicle targeting, and organelle biogenesis; (iii) mechanisms of membrane transport and excitability; (iv) cytoskeletal architecture, cell adhesion, and cell motility; and (v) cell fate. The main goal of the course is to provide a strong foundational basis for the biomedical student's graduate education especially in the practice of solving research problems in the context of cell biology. The format and content of the course conveys to students not only how scientists what they know but also the tremendous excitement that has paralleled rapid advances in understanding cell structure, organization, and function in recent years. Permission of instructor required to enroll.

Taught by: Dr. Kurt Engleka, Course Director
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

**BIOM 611 Statistics in Experimental Design and Analysis**
BIOM 611 is an introductory course providing an overview of fundamental concepts in biostatistics as they relate to experimental design and analysis. It introduces the student as well to the related concepts of premise and reproducibility. The first unit introduces the scientific method as a series of six steps. In the first unit we explore the strength of evidence supporting a particular research hypothesis, consider the generalizability of our conclusion and estimate the magnitude of the effect. The second unit specifically introduces methods for comparing means and proportions between groups, and the analysis of paired data. We conclude by considering differences in means and proportions between multiple groups and associations between quantitative variables. Analysis of variance (ANOVA), correlation and linear regression are explored. Statistical methods will be implemented using the software package R (in Rstudio). Students will have an opportunity to code directly in R or to use the graphical user interface, Rcmdr to facilitate work with R. This course is NOT recommended for students with a strong quantitative background. Those of you with a strong background should take a statistics course with more rigorous mathematical underpinnings and or with exposure to more advanced statistical methods. Discuss with advisor or see the following page for detailed instructions. www.med.upenn.edu/bgs/documents/BGSStatisticsRequirements10-6-16.pdf

Taught by: J. Richard Landis, PhD
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Biomedical Informatics (BMIN)

BMIN 501 Introduction to Biomedical and Health Informatics
This course is designed to provide a survey of the major topic areas in medical informatics, especially as they apply to clinical research. Through a series of lectures and demonstrations, students will learn about topics such as databases, natural language, clinical information systems, networks, artificial intelligence and machine learning applications, decision support, imaging and graphics, and the use of computers in education.
Taught by: Holmes
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

BMIN 502 Databases in Biomedical Research
This course is intended to provide in-depth, practical exposure to the design, implementation, and use of databases in biomedical research, and to provide students with the skills needed to design and conduct a research project using primary and secondary data. Topics to be covered include: database architectures, data normalization, database implementation, client-server databases, concurrency, validation, Structured-Query Language (SQL) programming, reporting, maintenance, and security. All examples will use problems or data from biomedical domains. MySQL will be used as the database platform for the course, although the principles apply generally to biomedical research and other relational databases.
Taught by: Holmes
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

BMIN 503 Data Science for Biomedical Informatics
In this course, we will use R and other freely available software to learn fundamental data science applied to a range of biomedical informatics topics, including those making use of health and genomic data. After completing this course, students will be able to retrieve and clean data, perform explanatory analyses, build models to answer scientific questions, and present visually appealing results to accompany data analyses; be familiar with various biomedical data types and resources related to them; and know how to create reproducible and easily shareable results with R and github. Prerequisite: Familiarity with basic statistical (e.g., EPID 526, 527 or other first-year graduate level stats course) concepts is expected, as this course will not cover basic concepts in depth.
Taught by: Himes
Course usually offered in fall term
Also Offered As: EPID 600
Activity: Lecture
1.0 Course Unit

BMIN 504 Topics in Biom/Hlth Info
Also Offered As: EPID 602
Activity: Lecture
1.0 Course Unit

BMIN 505 Precision Medicine and Health Policy
Through a series of lectures, readings, and response papers, students will learn about topics such as medical ethics, unintended consequences of medicine/research, genetics, genetic interpretation, hospital performance, and informatic methods to assess these factors. The informatics topics covered in this course include: decision support, genetic database, clinical interpretation of genetics, detection of bias in EMRs, detection of bias in guidelines, methods to ameliorate bias, mapping clinical guidelines to computable standards, performance assessment, machine learning, and artificial intelligence applications in this space.
Taught by: Boland
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

BMIN 506 Standards and Clinical Terminologies
This survey course is designed to provide an overview of health information standards and clinical terminologies. Through a series of lectures, demonstrations, and hands-on exercises, students will learn about topics such as standards, interoperability, data modeling, vocabularies, and health information exchange.
Taught by: Michael Padula
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

BMIN 507 Human Factors
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

BMIN 509 Telehealth and mHealth Systems and Applications
This course is designed to develop intelligent consumers, managers, and researchers of telehealth and mHealth systems through guided exploration into the components of such systems. The course is designed to introduce many of the challenges facing designers and managers of telehealth/ mHealth and remote health care delivery networks. The spectrum of activity ranging from research into implications of system design for applications that bridge geographic distance to the development of practical applications is considered in both historical context and in case studies. The current status and future trends of this emerging domain are reviewed.
Taught by: Demiris, George
Also Offered As: NURS 529
Activity: Lecture
1.0 Course Unit

BMIN 520 AI I: Intro To AI
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Biostatistics (BSTA)

**BMIN 521 AI III: Advanced Methods and Health Applications in Machine Learning**

Machine learning studies how computers learn from data and has enormous potential to impact biomedical research and applications. This course will cover fundamental topics in machine learning with an application focus on biomedical informatics. Specifically, the course will cover supervised learning methods such as linear regression, logistic regression, nearest neighbors, support vector machines, decision trees and random forests; -unsupervised learning topics such as clustering, dimensionality reduction and association rules; -neural networks and deep learning methods for supervised or unsupervised learning tasks; and -the applications of these machine learning techniques to various biomedical informatics problems via analyzing imaging, biomarker, electronic health record, clinical and / or other biomedical data. The precise topics may vary from year to year based on student interest and developments in the field.

Taught by: Li Shen, PhD
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

**BMIN 522 AI II: Introduction to Machine Learning and Health Language Processing**

The growing volume of unstructured health-related data presents unparalleled challenges and opportunities for informaticians that seek to mine the rich information hidden in plain sight - clinical records, social media, published literature, all sources designed for human eyes, but not necessarily for automatic processing. In this class, we will survey the most recent natural language processing methods used for information extraction, taking a 'hands-on' approach at how they are currently applied in the biomedical domain. Emphasis will be placed on lexical and syntactic methods, as well as covering different approaches to classification for content discovery - including deep learning and unsupervised approaches.

Taught by: Graciela Gonzalez-Hernandez, PhD
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

**BMIN 523 Informatics Prec Med**

Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

**BMIN 525 Intro To Python Prog**

Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

**BMIN 990 Capstone**

With mentorship from their Capstone Advisor, students will develop and present the results of a clinical informatics project relevant to their interests. During this semester-long course, students will attend a weekly seminar in which they develop, propose, implement, and present their capstone project. Students meet with regularly with their Capstone Advisor, who is also invited to attend the seminars. The seminar affords both students and advisors the opportunity for cross-fertilization of ideas and skills, and ultimately the honing of projects to a high level of value for the students and the clinical environments in which they conduct their projects.

Taught by: Holmes, John H
Activity: Independent Study
1.0 Course Unit
BSTA 622 Statistical Inference II
This class will cover the fundamental concepts of statistical inference. Topics include sufficiency, consistency, finding and evaluating point estimators, finding and evaluating interval estimators, hypothesis testing, and asymptotic evaluations for point and interval estimation.
Course usually offered in fall term
Prerequisite: BSTA 621
Activity: Lecture
1.0 Course Unit

BSTA 630 Statistical Methods and Data Analysis I
This first course in statistical methods for data analysis is aimed at first-year Biostatistics students. It focuses on the analysis of continuous data. Topics include descriptive statistics (measures of central tendency and dispersion, shapes of distributions, graphical representations of distributions, transformations, and testing for goodness of fit); populations and sampling (hypotheses of differences and equivalence, statistical errors); one- and two-sample t tests; analysis of variance; correlation; nonparametric tests on means and correlations; estimation (confidence intervals and robust methods); categorical data analysis (proportions; statistics and test for comparing proportions; test for matched samples; study design); and regression modeling (simple linear regression, multiple regression, model fitting and testing, partial correlation, residuals, multicollinearity). Examples of medical and biologic data will be used throughout the course, and use of computer software demonstrated. Multivariable calculus and linear algebra and permission of instructor required to enroll.
Course usually offered in fall term
Prerequisite: BSTA 620
Activity: Lecture
1.0 Course Unit

BSTA 632 Statistical Methods for Categorical and Survival Data
This is the second half of the methods sequence, where the focus shifts to methods for categorical and survival data. Topics in categorical include defining rates; incidence and prevalence; the chi-squared test; Fisher’s exact test and its extension; relative risk and odds-ratio; sensitivity; specificity; predictive values; logistic regression with goodness of fit tests; ROC curves; the Mantel-Haenszel test; McNemar’s test; the Poisson model; and the Kappa statistic. Survival analysis will include defining the survival curve, censoring, and the hazard function; the Kaplan-Meier estimate, Greenwood’s formula and confidence bands; the log rank test; and Cox’s proportional hazards regression model. Examples of medical and biologic data will be used throughout the course, and use of computer software demonstrated.
Course usually offered in spring term
Prerequisite: BSTA 620 AND BSTA 621 AND BSTA 630
Activity: Lecture
1.0 Course Unit

BSTA 651 Introduction to Linear Models and Generalized Linear Models
This course extends the content on linear models in BSTA 630 and BSTA 632 to more advanced concepts and applications of linear models. Topics include the matrix approach to linear models including regression and analysis of variance, general linear hypothesis, estimability, polynomial, piecewise, ridge, and weighted regression, regression and collinearity diagnostics, multiple comparisons, fitting strategies, simple experimental designs (block designs, split plot), random effects models, Best Linear Unbiased Prediction. In addition, generalized linear models will be introduced with emphasis on the binomial, logit and Poisson log-linear models. Applications of methods to example data sets will be emphasized.
Course usually offered in spring term
Prerequisite: BSTA 620 AND BSTA 630 AND BSTA 621 AND BSTA 632
Activity: Lecture
1.0 Course Unit

BSTA 656 Longitudinal Data Analysis
This course covers both the applied aspects and methods developments in longitudinal data analysis. In the first part, we review the properties of the multivariate normal distribution and cover basic methods in longitudinal data analysis, such as exploratory data analysis, two-stage analysis and mixed-effects models. Focus is on the linear mixed-effects models, where we cover restricted maximum likelihood estimation, estimation and inference for fixed and random effects and models for serial correlations. We will also cover Bayesian inference for linear mixed-effects models. The second part covers advanced topics, including nonlinear mixed-effects models, GEE, generalized linear mixed-effects models, nonparametric longitudinal models, functional mixed-effects models, and joint modeling of longitudinal data and the dropout mechanism. If course requirements are not met, permission of instructor required.
Taught by: Wensheng Guo
Prerequisite: BSTA 621 AND (BSTA 631 OR BSTA 632) AND BSTA 651 AND (BSTA 653 OR BSTA 754)
Activity: Lecture
0.5 Course Units

BSTA 660 Design of Observational Studies
This course will cover statistical methods for the design and analysis of observational studies. Topics for the course will include epidemiologic study designs, issues of confounding and hidden bias, matching methods, propensity score methods, sensitivity analysis, and instrumental variables. Case studies in biomedical research will be presented as illustrations. Prerequisite: If course requirements not met, permission of instructor required.
Taught by: Rebecca Hubbard
Activity: Lecture
0.5 Course Units

BSTA 661 Design of Interventional Studies
This course is designed for graduate students in statistics or biostatistics interested in the statistical methodology underlying the design, conduct, and analysis of clinical trials and related interventional studies. General topics include designs for various types of clinical trials (Phase I, II, III), endpoints and control groups, sample size determination, and sequential methods and adaptive design. Regulatory and ethical issues will also be covered. Prerequisite: If course requirement not met, permission of instructor required.
Taught by: Alisa Stephens Shields
Activity: Lecture
0.5 Course Units
**BSTA 670 Statistical Computing**
This course concentrates on computational tools, which are useful for statistical research and for computationally intensive statistics. Through this course you will develop a knowledge base and skill set of a wide range of computational tools needed for statistical research. Topics include computer storage, architecture and arithmetic; random number generation; numerical optimization methods; spline smoothing and penalized likelihood; numerical integration; simulation design; Gibbs sampling; bootstrap methods; and the EM algorithm. Prerequisite: If course requirements not met, permission of instructor required.
Taught by: Kristin Linn
Prerequisite: BSTA 651 AND BSTA 620 AND BSTA 621
Activity: Lecture
1.0 Course Unit

**BSTA 699 Lab Rotation**
Activity: Laboratory
0.33 Course Units

**BSTA 750 Statistical Methods for Risk Prediction and Precision Medicine**
This is an advanced elective course for graduate students in Biostatistics, Statistics, Epidemiology, and other BGS disciplines. It will cover various topics for evaluating the performance of biomarkers to predict risk of clinical or disease outcomes, specifically including relative, absolute and competing risks for binary and time-to-disease outcomes; statistical inference for quantifying predictive accuracy with binary and time-to-event outcomes; statistical methods and inference for case-control study designs; Efficient study design issues for biomarker evaluation. This course is designed to help students 1) understand various concepts of risk in the medical literature; 2) understand various statistical methods for evaluating prediction performance of biomarkers and diagnostic tests and for designing efficient biomarker studies; 3) improve the ability to read critically papers published in statistical and medical journals on related topics; and 4) develop research ideas for risk prediction. Upon successfully completing this course, students will be able to: 1) Conduct statistical analysis for evaluating prediction performance of biomarkers and diagnostic tests; 2) Have a better ability to read and understand papers published in statistical and medical journals on related topics; and 3) Be well prepared to work on related topics for dissertation.
Taught by: Jinbo Chen
Course usually offered in fall term
Prerequisite: BSTA 630 AND BSTA 632
Activity: Lecture
0.5 Course Units

**BSTA 751 Statistical Methods for Neuroimaging**
This course is intended for students interested in both statistical methodology, and the process of developing this methodology, for the field of neuroimaging. This will include quantitative techniques that allow for inference and prediction from ultra-high dimensional and complex images. In this course, basics of imaging neuroscience and preprocessing will be covered to provide students with requisite knowledge to develop the next generation of statistical approaches for imaging studies. High-performance computational neuroscience tools and approaches for voxel- and region-level analyses will be studied. The multiple testing problem will be discussed, and the state-of-the-art in the area will be examined. Finally, the course will end with a detailed study of multivariate pattern analysis, which aims to harness patterns in images to identify disease effects and provide sensitive and specific biomarkers. The student will be evaluated based on 3 homework assignments and a final in-class presentation. Prerequisite: If course requirement not met, permission of instructor required.
Taught by: Doug Schaubel
Course usually offered in fall term
Prerequisite: BSTA 622
Activity: Lecture
0.5 Course Units

**BSTA 777 Statistical Methods for Meta-Analyses**
This graduate-level Biostatistics course will introduce the fundamentals of statistical methods for meta-analyses. It will cover key principles of meta-analysis and the statistical rationales behind the analytic models, including univariate meta-analysis, multivariate meta-analysis, meta-analysis of diagnostic test accuracy, network meta-analysis, and multivariate network meta-analysis. Beyond these commonly used models, the course will cover statistical methods and software that investigate and correct for biases in systematic reviews such as publication bias, outcome reporting bias. Advanced statistical inferential tools such as publication bias, outcome reporting bias. Advanced statistical inferential tools such as composite likelihood, pseudolikelihood, integrated likelihood methods, EM algorithms will be introduced. In addition, the course will also cover some practical steps in systematic review including search strategies, data abstraction methods; quality assessment; and writing a meta-analysis report. The course is composed of a series of weekly lectures and small group discussions. Students will be expected to attend weekly lectures, participate in class discussions, review assigned readings, complete homework assignments, and conduct a real-world meta-analysis with a clinically meaningful problem. Fundamentals of Biostatistics background or permission of instructor required to enroll.
Activity: Lecture
1.0 Course Unit
BSTA 782 Stat Meth/Incomplete Data
Taught by: Qi Long
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

BSTA 787 Methods for Statistical Genetics and Genomics in Complex Human Disease
This is an advanced elective course for graduate students in Biostatistics, Statistics, Epidemiology, Bioinformatics, Computational Biology, and other BGS disciplines. This course will cover statistical methods for the analysis of genetics and genomics data. Topics covered will include genetic linkage and association analysis, analysis of next-generation sequencing data, including those generated from DNA sequencing and RNA sequencing experiments. Students will be exposed to the latest statistical methodology and computer tools on genetic and genomic data analysis. They will also read and evaluate current statistical genetics and genomics literature. Prerequisite: If course requirements not met, permission of instructor required.
Taught by: Mingyao Li
Prerequisite: (BSTA 630 AND BSTA 632) OR (EPID 520 AND EPID 521)
Activity: Lecture
1.0 Course Unit

BSTA 789 Big Data
Selected topics from public health and biomedical research where ‘Big data’ are being collected and methods are being developed and applied, together with some core statistical methods in high dimensional data analysis. Topics include dimension reduction, detection of novel association in large datasets, regularization and high dimensional regression, ensemble learning and prediction, kernel methods, deep learning and network analysis. R programs will be used throughout the course, other standalone programs will also be used. Prerequisite: If course requirement not met, permission of instructor required.
Taught by: Hongzhe Lee
Prerequisite: BSTA 621 AND BSTA 622
Activity: Lecture
1.0 Course Unit

BSTA 790 Causal Inference in Biomedical Research
This course considers approaches to defining and estimating causal effects in various settings. The potential-outcomes approach provides the framework for the concepts of causality developed here, although we will briefly consider alternatives. Topics considered include: the definition of effects of scalar or point treatments; nonparametric bounds on effects; identifying assumptions and estimation in simple randomized trials and observational studies; alternative methods of inference and controlling confounding; propensity scores; sensitivity analysis for unmeasured confounding; graphical models; instrumental variables estimation; joint effects of multiple treatments; direct and indirect effects; intermediate variables and effect modification; randomized trials with simple noncompliance; principal stratification; effects of time-varying treatments; time-varying confounding in observational studies and randomized trials; nonparametric inference for joint effects of treatments; marginal structural models; and structural nested models. Prerequisite: If course requirement not met, permission of instructor required.
Taught by: Nandita Mitra
Course not offered every year
Prerequisite: BSTA 620 AND BSTA 621 AND BSTA 622 AND BSTA 630 AND BSTA 631
Activity: Lecture

Business Economics & Public Policy (BEPP)

BEPP 201 Public Finance and Policy.
This course explores the economics and politics of public policy to provide an analytic framework for considering why, how, and with what success/failure government intervenes in a variety of policy areas. Particular attention will be paid to important policy issues relating to taxation, social security, low-income assistance, health insurance, education (both K-12 and higher ed), the environment, and government deficits. The costs and benefits of alternative policies will be explored along with the distribution of responsibilities between the federal, state and local governments. While the course will focus primarily on U.S. policies, the topics covered (e.g. tax reform, deficits versus austerity, etc.) are currently at the center of the policy debate in many other industrialized countries as well.
Taught by: Deniz Selman
One-term course offered either term
Also Offered As: BEPP 770
Activity: Lecture
1.0 Course Unit

BEPP 202 Consumer Financial Decision Making
Research shows that many individuals are profoundly underinformed about important financial facts and financial products, which frequently lead them to make mistakes and lose money. Moreover, consumer finance comprises an enormous sector of the economy, including products like credit cards, student loans, mortgages, retail banking, insurance, and a wide variety of retirement savings vehicles and investment alternatives. Additionally, recent breakthroughs in the FinTech arena are integrating innovative approaches to help consumers. Though virtually all people use these products, many find financial decisions to be confusing and complex, rendering them susceptible to fraud and deception. As a result, government regulation plays a major role in these markets. This course intended for Penn undergraduates considers economic models of household decisions and examines evidence on how consumers are managing (and mismanaging) their finances. Although academic research has historically placed more attention on corporate finance, household finance is receiving a brighter spotlight now—partly due to its role in the recent financial crisis. Thus the course is geared toward those seeking to take charge of their own financial futures, and future FinTech entrepreneurs.
Taught by: Olivia Mitchell/Nicholas Roussanov
One-term course offered either term
Also Offered As: FNCE 202
Activity: Lecture
1.0 Course Unit

BEPP 203 Business in the Global Political Environment.
This course examines the non-market components of business and the broader political, regulatory, and civil context in which companies function. This course addresses how businesses interact with political and regulatory institutions, as well as the general public, with a focus on the global economy. The first portion examines the realities associated with political economy and the actual making of laws and regulations by imperfect politicians and regulators. The second portion analyzes the economic rationale for legislation and regulation in the presence of market failures. The course covers specific market failures and potential solutions including government regulation.
Taught by: Santosh Anagol/Shing-yi Wang
One-term course offered either term
Prerequisite: BEPP 250 OR ECON 001 OR ECON 010
Activity: Lecture
1.0 Course Unit

BEPP 207 Economics for the Next Hundred Years
Taught by: Eduardo Azevedo
Activity: Lecture
0.5 Course Units

BEPP 208 Housing Markets
This course is designed for students interested in the economics and operations of housing markets. It is primarily a U.S. focused course, but does include a limited amount of international material for comparative purposes. The class is divided into four sections: (1) supply and demand for housing, including the operations of homebuilders and rental landlords; (2) house prices, including cycles and price dynamics; (3) international comparisons; and (4) public policy analysis applied to a current housing markets-related issue. This course presumes knowledge of intermediate economics, as we will apply that knowledge throughout the semester. For Wharton students, this means you must have passed BEPP 250 (undergrad) or MGEC 611 and 612 for MBA's. Non-Wharton students should have taken the equivalent course in the College. Lecture with discussion required.
Taught by: Gyourko
Course usually offered in spring term
Also Offered As: BEPP 708, REAL 208, REAL 708
Prerequisite: BEPP 250
Activity: Lecture
1.0 Course Unit
Notes: Lecture with discussion required.
**BEPP 210 Firms, Markets and Public Policy.**
Many dimensions of firms' strategies, including agreements with suppliers and competitors, mergers and acquisitions, pricing, and technology standards development, among others, are subject to the oversight of regulatory bodies and governmental agencies. This course studies how public policy impacts firms' strategic choices in a host of economic environments. We will analyze pricing strategies including versioning and bundling; product standardization decisions; the management of complementarities between products; the role of network effects and platform competition; and how firms can take advantage of the regulatory environment they operate in when making such decisions. We will study, for example, why Sony won the Blu-Ray format war against the widely supported HD-DVD format, how the FCC plans to incentivize television broadcasters to return spectrum holdings for auction to wireless broadband providers; and how contracts with content providers affect firms' strategic interactions in the e-reader market. To understand how firm strategy and public policy interact, the course will rely on a mix of simple but rigorous analytical models and case studies.

Taught by: Katja Seim.
One-term course offered either term
Also Offered As: BEPP 250
Prerequisite: BEPP 250
Activity: Lecture
1.0 Course Unit

**BEPP 212 Economic Analysis of Law**
This course provides an introduction to the economic analysis of law and legal institutions. Our goal is develop intuitions about the ways law simultaneously shapes and responds to private behavioral incentives. In the first half of the course, we will survey the application of key economic concepts to basic features of the Anglo-American common law of property, contract, and tort. In the second half of the course, we will use the tools developed in our survey to focus in depth on the law of intellectual property.

Taught by: Buccola
One-term course offered either term
Also Offered As: LGST 212
Activity: Lecture
1.0 Course Unit

**BEPP 214 Nonprofit Sector: Economic Challenges and Strategic Responses.**
The nonprofit sector plays a key role in the provision of many goods and services which are fundamental in our society and which may be difficult to provide using market mechanisms alone. Education, health care, charitable services, and the arts are some primary examples of these. Nonprofit organizations operate in service of specific social missions rather than profit maximization, but in order to serve those missions effectively while ensuring their own survival, they must also make many of the decisions typically associated with private firms. That is, they must compete for funding, human resources, and consumers of their services, they must manage and invest their resources efficiently, and they must innovate new products and services over time. Importantly, the latter requirements may at times come in conflict with the organizations’ social values. As a result, nonprofit organizations as economic decision-makers confront a number of unique challenges to their success and growth. The goal of this course is to give students a broad overview of the economic, organizational, and strategic concerns facing the non-profit sector. Our objective is to characterize the unique economic environment, identify effective strategic governance, and management approaches, and explore how appropriate measurement techniques can can inform the policy treatment of nonprofits. This course is organized around a number of lectures, readings and outside speakers, a midterm exam and a required project.

Taught by: Ashley Swanson.
Activity: Lecture
1.0 Course Unit

**BEPP 220 Behavioral Economics, Markets, and Public Policy**
Behavioral economics has revealed a variety of systematic ways in which people deviate from being perfectly selfish, rational, optimizing agents. These findings have important implications for government policy and firm behavior. This course will explore these implications by answering two main questions: (1) what does behavioral economics imply for when and how the government should intervene in markets? (2) What does behavioral economics imply for firms’ pricing and production decisions? The course will present the standard economic approaches to answering these questions and then explore how answers change when we consider that people act in behavioral ways. Towards the end of the course, we will investigate specific policy questions, allowing us to debate solutions while hearing from policy makers operating in a world of behavioral agents.

Taught by: Judd Kessler.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

**BEPP 230 Urban Fiscal Policy**
This course will examine the provision of public services for firms and people through cities. Why cities exist, when fiscal policy fails, investments in infrastructure, realities of local governments such as inequality, crime, corruption, high cost of living, congestion, and unfunded pensions and debt, will be covered. We will pay special attention to recent topics, such as partnerships with the private sector, enterprise zones, the role of technology, environmental challenges, and real estate policies that promote housing affordability, such as rent control and inclusionary zoning.

Taught by: Fernando Ferreira
Course usually offered in spring term
Also Offered As: FNCE 230, REAL 230
Activity: Lecture
1.0 Course Unit
BEPP 233 Consumers, Firms and Markets in Developing Countries
Nearly four-fifths of the world’s population lives in low income or developing countries. Though currently far behind the U.S., the 15 fastest growing economies/markets in the world are all developing countries. And developing countries already account for 6 of the world’s 15 largest economies. This course will examine economic life, including consumers, firms and markets, in low income countries. We will apply both economic theory and empirical analysis for analyzing the roles of both business and government in consumption, production and market equilibria.
Taught by: Robert Jensen
One-term course offered either term
Activity: Lecture
1.0 Course Unit

BEPP 236 International Housing Comparisons
This course analyzes housing finance systems and housing market outcomes across the globe. In the US, the course focuses on the development of securitization markets and addresses the current challenges of housing finance reform, including the future of Fannie Mae and Freddie Mac. Internationally, the course covers issues of access to housing and housing informality in developing countries, financial crises arising out of the housing sector, and market-oriented and public policy solutions. The course features a wide array of speakers in finance, government and academia who contribute their perspectives to pressing issues of mortgage market design.
Taught by: Wachter
Course usually offered in spring term
Also Offered As: BEPP 836, REAL 236, REAL 836
Activity: Lecture
1.0 Course Unit

BEPP 250 Managerial Economics
This course will introduce you to ‘managerial economics’ which is the application of microeconomic theory to managerial decision-making. Microeconomic theory is a remarkably useful body of ideas for understanding and analyzing the behavior of individuals and firms in a variety of economic settings. The goal of the course is for you to understand this body of theory well enough so that you can effectively analyze managerial (and other) problems in an economic framework. While this is a ‘tools’ course, we will cover many real-world applications, particularly business applications, so that you can witness the usefulness of these tools and acquire the skills to use them yourself. We will depart from the usual microeconomic theory course by giving more emphasis to prescription: What should a manager do in order to achieve some objective? That course deliverable is to compare with description: Why do firms and consumers act the way they do? The latter will still be quite prominent in this course because only by understanding how other firms and customers behave can a manager determine what is best for him or her to do. Strategic interaction is explored both in product markets and auctions. Finally, the challenges created by asymmetric information - both in the market and within the firm - are investigated.
One-term course offered either term
Also Offered As: BEPP 950
Prerequisite: ECON 001 AND MATH 103
Activity: Lecture
1.0 Course Unit

BEPP 261 Risk Analysis and Environmental Management
This course is designed to introduce students to the role of risk assessment, risk perception and risk management in dealing with uncertain health, safety and environmental risks including the threat of terrorism. It explores the role of decision analysis as well as the use of scenarios for dealing with these problems. The course will evaluate the role of policy tools such as risk communication, economic incentives, insurance, regulation and private-public partnerships in developing strategies for managing these risks. A project will enable students to apply the concepts discussed in the course to a concrete problem.
Taught by: Kunreuther
One-term course offered either term
Also Offered As: BEPP 761, BEPP 961, ESE 567, OID 261, OID 761
Activity: Lecture
1.0 Course Unit

BEPP 263 Environmental & Energy Economics and Policy
This course examines environmental and energy issues from an economist’s perspective. Over the last several decades, energy markets have become some of the most dynamic markets of the world economy, as they experienced a shift from heavy regulation to market-driven incentives. First, we look at scarcity pricing and market power in electricity and gasoline markets. We then study oil and gas markets, with an emphasis on optimal extraction and pricing, and geopolitical risks that investors in hydrocarbon resources face. We then shift gears to the sources of environmental problems, and how policy makers can intervene to solve some of these problems. We talk about the economic rationale for a broad range of possible policies: environmental taxes, subsidies, performance standards and cap-and-trade. In doing so, we discuss fundamental concepts in environmental economics, such as externalities, valuation of the environment and the challenge of designing international agreements. At the end of the course, there will be special attention for the economics and finance of renewable energy and policies to foster its growth. Finally, we discuss the transportation sector, and analyze heavily debated policies such as fuel-economy standards and subsidies for green vehicles. Prerequisites: An introductory microeconomics course (ECON1, or another course approved by the instructor) will be sufficient in most cases; BEPP 250 or an equivalent intermediate microeconomics course is recommended.
Taught by: Arthur van Benthem
Also Offered As: OID 263
Activity: Lecture
1.0 Course Unit
**BEPP 280 Applied Data Analysis.**
This course will examine how and when data can be used specifically to infer whether there is a causal relationship between two variables. We will emphasize (a) the critical role of an underlying economic theory of behavior in interpreting data and guiding analysis, as well as (b) a range of advanced techniques for inferring causality from data, such as randomized controlled trials, regression discontinuity, difference-in-difference, audit study (mystery shopping) approaches and stock-market event studies. The issue of causality, and the relevance of thinking about models and methods for inferring causality, is just as central and important for 'Big Data' as it is when working with traditional data sets in business and public policy. The emphasis will not be on proofs and derivations but rather on understanding the underlying concepts, the practical use, implications and limitations of techniques. Students will work intensively with data, drawing from examples in business and public policy, to develop the skills to use data analysis to make better decisions. All analysis will be conducted using R. The goals of the course are for students to become expert consumers able to interpret and evaluate empirical studies as well as expert producers of convincing empirical analysis themselves.
Taught by: Santosh Anagol.
One-term course offered either term
Also Offered As: BEPP 780
Prerequisite: STAT 102 OR STAT 112 OR STAT 431 OR ECON 104
Activity: Lecture
1.0 Course Unit

**BEPP 284 Game Theory for Business and Life**
The objective of this course is to make you more skilled in the art and science of strategic reasoning. Strategic situations permeate our lives and we will examine many such situations through the lens of game theory. The course is composed of game-theoretic concepts, applications, and experiential learning. The bulk of the applications are to business situations including investment and entry, bargaining, managerial incentive contracts, network effects, product location, and two-sided markets. However, given the ubiquitous presence of strategic situations in human societies, applications will extend to politics, war, sports, history, crime, theology, and every day life, and cover the existence of God, steroid use in sports, racial discrimination, land conflict, trench warfare in World War I, and the Medieval Law Merchant. Students will regularly participate in experiments involving strategic reasoning, and form teams to compete in a simulated industry environment.
Taught by: Joseph Harrington
One-term course offered either term
Activity: Lecture
1.0 Course Unit

**BEPP 289 Nations, Politics, and Market**
This course is intended to deepen understanding of the major contemporary issues in the world economy. The focus is on the 'big picture' of global economic developments and the evolution of economic thought over the last one hundred years. The topics include: financial market booms and busts; business cycles; monetary and fiscal policies; inequality; the social welfare state; technological change and economic growth; and international trade and financial arrangements. The time period covers: the Roaring Twenties; the Great Depression, the post war Golden Age (1945-1973); the stagflation of the 1970s; the Washington Consensus era of the market liberalization (1980-2007); and the 2008 financial crisis and Great Recession of 2007-2010 and its aftermath. The course also explores different schools of thought. The course will chronicle and compare economic policy and performance of the United States, Europe, Japan and emerging markets (Asia, Latin America, Africa). Taught by: Stephen Golub
Course usually offered in spring term

Prerequisite: ECON 102
Activity: Lecture
1.0 Course Unit

**BEPP 299 Independent Study**
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

**BEPP 305 Risk Management**
The last financial crisis and subsequent recession provide ample evidence that failure to properly manage risk can result in disaster. Individuals and firms confront risk in nearly all decisions they make. People face uncertainty in their choice of careers, spending and saving decisions, family choices and many other facets of life. Similarly, the value that firms create by designing and marketing good products is at risk from a variety of sources. The bankruptcy of a key supplier, sharp rise in cost of financing, destruction of an important asset, impact of global warming, or a liability suit can quickly squander the value created by firms. In extreme cases, risky outcomes can bankrupt a firm, as has happened recently to manufacturers of automobile parts and a variety of financial service firms. The events since the Global Financial Crisis also offer stark reminders that risk can impose significant costs on individuals, firms, governments, and society as a whole. This course explores how individuals and firms assess and evaluate risk, examines the tolls available to successfully manage risk and discusses real-world phenomena that limit the desired amount of risk-sharing. Our focus is primarily on explaining the products and institutions that will serve you better when making decisions in your future careers and lives.
One-term course offered either term
Also Offered As: BEPP 805
Prerequisite: BEPP 250 AND FNCE 100 AND STAT 100
Activity: Lecture
1.0 Course Unit
BEPP 322 Business Insurance and Estate Planning.
This course presents an analysis of overall private wealth management. This includes planning for disposition of closely-held business interests; the impact of income taxes and other transfer costs on business interests and other assets; integration of life insurance, disability insurance, medical benefits, and long-term care insurance in the financial plan; planning for concentrated asset (e.g. common stock) positions, diversification techniques, and asset allocation strategies; distribution of retirement assets; lifetime giving and estate planning; and analysis of current developments in the creation, conservation, and distribution of estates. Attention also is given to various executive compensation techniques (including restricted stock and stock options) and planning for various employee benefits. The course also covers sophisticated charitable giving techniques and methods for financing education expenses. Reading consist of textbooks, case studies, and bulk pack articles.
Taught by: Victor Hallman.

Also Offered As: BEPP 823
Activity: Lecture
1.0 Course Unit

BEPP 401 Public Policy Analysis
BEPP 401 fulfills the Wharton capstone requirement with a hands-on approach to addressing a key public policy question. We will partner with the City of Philadelphia, state government, federal agency or other key influencer group to address an important and topical public policy question each year. At the city level, potential questions include the economic and distributional impact of raising the minimum wage, implementing a soda tax, providing universal pre-K, mandating paid sick leave, and other issues related to urban policy and planning. At the state level, potential questions include the implementation of a national electric grid for automobile charging, restructuring. At the national level, potential questions include changes in occupational licensing requirements, business regulations, and Medicaid cost share restructuring. At the national level, potential questions include the implementation of a national electric grid for automobile charging, reforms to disaster preparedness systems, and immigration reform. Students will be provided with a ‘core’ data set appropriate for addressing the defining question to the capstone course.
Taught by: Robert Inman
Course not offered every year
Prerequisite: BEPP 250
Activity: Lecture
0.5 Course Units

BEPP 451 Fundamentals of Actuarial Science I
This course is the usual entry point in the actuarial science program. It is required for students who plan to concentrate in actuarial science and Penn students planning to minor in actuarial mathematics. It provides a comprehensive analysis of advanced life contingencies problems such as reserving, multiple life functions, multiple decrement theory with application to the valuation of pension plans. This course may be taken concurrently with the prerequisite with instructor permission.
Taught by: Lemaire
Course usually offered in fall term
Also Offered As: BEPP 851, STAT 451, STAT 851
Prerequisite: MATH 104 AND STAT 430
Activity: Lecture
1.0 Course Unit

BEPP 452 Fundamentals of Actuarial Science II
This specialized course is usually only taken by Wharton students who plan to concentrate in actuarial science and Penn students who plan to minor in actuarial mathematics. It provides a comprehensive analysis of advanced life contingencies problems such as reserving, multiple life functions, multiple decrement theory with application to the valuation of pension plans. This course may be taken concurrently with the prerequisite with instructor permission.
Taught by: Lemaire
Course usually offered in spring term
Also Offered As: BEPP 852, STAT 452, STAT 852
Prerequisite: STAT 451 OR BEPP 451
Activity: Lecture
1.0 Course Unit

BEPP 453 Actuarial Statistics
This course covers models for insurer’s losses, and applications of Markov chains. Poisson processes, including extensions such as non-homogeneous, compound, and mixed Poisson processes are studied in detail. The compound model is then used to establish the distribution of losses. An extensive section on Markov chains provides the theory to forecast future states of the process, as well as numerous applications of Markov chains to insurance, finance, and genetics. The course is abundantly illustrated by examples from the insurance and finance literature. While most of the students taking the course are future actuaries, other students interested in applications of statistics may discover in class many fascinating applications of stochastic processes and Markov chains. This course may be taken concurrently with the prerequisite with instructor permission.
Taught by: Lemaire
Course usually offered in fall term
Also Offered As: BEPP 853, STAT 453, STAT 853
Prerequisite: STAT 430
Activity: Lecture
1.0 Course Unit

Prerequisite: MGEC 611 AND MGEC 612
Activity: Lecture
1.0 Course Unit

BEPP 761 Risk Analysis and Environmental Management
This course will introduce students to concepts in risk governance. We will delve into the three pillars of risk analysis: risk assessment, risk management, and risk communication. The course will spend time on risk financing, including insurance markets. There will be particular emphasis on climate risk management, including both physical impact risk and transition risk, although the course will also discuss several other examples, including management of environmental risks, terrorism, and cyber-security, among other examples. The course will cover how people perceive risks and the impact this has on risk management. We will explore public policy surrounding risk management and how the public and private sector can successfully work together to build resilience, particularly to changing risks.

1.0 Course Unit
BEPP 763 Energy Markets & Policy
Over the last several decades, energy markets have become some of the most dynamic markets of the world economy. Traditional fossil fuel and electricity markets have been seen a partial shift from heavy regulation to market-driven incentives, while rising environmental concerns have led to a wide array of new regulations and ‘environmental markets’. The growth of renewable energy could be another source of rapid change, but brings with it a whole new set of technological and policy challenges. This changing energy landscape requires quick adaptation from energy companies, but also offers opportunities to turn regulations into new business. The objective of this course is to provide students with the economist’s perspective on a broad range of topics that professionals in the energy industry will encounter. Topics include the effect of competition, market power and scarcity on energy prices, the impact of deregulation on electricity and fossil fuel markets, extraction and pricing of oil and gas, geopolitical uncertainty and risk in hydrocarbon investments, the environmental impact and policies related to the energy sector, environmental cap-and-trade markets, energy efficiency, the economics and finance of renewable energy, and recent developments in the transportation sector.
Taught by: Arthur Van Benthem
Also Offered As: OIDD 763
Activity: Lecture
1.0 Course Unit

BEPP 770 Public Finance and Policy
This course explores the economics and politics of public policy to provide an analytic framework for considering why, how, and with what success/failure government intervenes in a variety of policy areas. Particular attention will be paid to important policy issues relating to taxation, social security, low-income assistance, health insurance, education (both K-12 and higher ed), the environment, and government deficits. The costs and benefits of alternative policies will be explored along with the distribution of responsibilities between the federal, state, and local governments. While the course will focus primarily on U.S. policies, the topics covered (e.g. tax reform, deficits versus austerity, etc.) are currently at the center of the policy debate in many other industrialized countries as well.
Taught by: Deniz Selman
Two terms. student may enter either term.

BEPP 780 APPLIED DATA ANALYSIS
This course will examine how and when data can be used specifically to infer whether there is a causal relationship between two variables. We will emphasize (a) the critical role of an underlying economic theory of behavior in interpreting data and guiding analysis, as well as (b) a range of advanced techniques for inferring causality from data, such as randomized controlled trials, regression discontinuity, difference-in-difference, audit study (mystery shopping) approaches and stock-market event studies. The issue of causality, and the relevance of thinking about models and methods for inferring causality, is just as central and important for ‘Big Data’ as it is when working with traditional data sets in business and public policy. The emphasis will not be on proofs and derivations but rather on understanding the underlying concepts, the practical use, implications and limitations of techniques. Students will work intensively with data, drawing from examples in business and public policy, to develop the skills to use data analysis to make better decisions. All analysis will be conducted using R. The goals of the course are for students to become expert consumers able to interpret and evaluate empirical studies as well as expert producers of convincing empirical analysis themselves.
Taught by: Staff.
Also Offered As: BEPP 280
Activity: Lecture
1.0 Course Unit

BEPP 789 Nations, Politics, and Markets.
This course is intended to deepen understanding of the major contemporary issues in the world economy. The focus is on the ‘big picture’ of global economic developments and the evolution of economic thought over the last one hundred years. The topics include: financial market booms and busts; business cycles; monetary and fiscal policies; inequality; the social welfare state; technological change and economic growth; and international trade and financial arrangements. The time period covers: the Roaring Twenties; the Great Depression, the post war Golden Age (1945-1973); the stagflation of the 1970s; the Washington Consensus era of the market liberalization (1980-2007); and the 2008 financial crisis and ensuing Great Recession; and the recent rise of populism. This course also explores different schools of thought. The course will chronicle and compare economic policy and performance of the United States, Europe, Japan and emerging markets (Asia, Latin America, Africa).
Taught by: Steve Golub.
One-term course offered either term
Also Offered As: BEPP 289
Prerequisite: MGEC 611 AND MGEC 612
Activity: Lecture
1.0 Course Unit
BEPP 805 Risk Management
The last financial crisis and subsequent recession provide ample evidence that failure to properly manage risk can result in disaster. Individuals and firms confront risk in nearly all decisions they make. People face uncertainty in their choice of careers, spending and saving decisions, family choices, and many other facets of life. Similarly, the value that firms create by designing and marketing good products is at risk from a variety of sources. The bankruptcy of a key supplier, sharp rise in cost of financing, destruction of an important asset, impact of global warming, or a liability suit can quickly squander the value created by firms. In extreme cases, risky outcomes can bankrupt a firm, as has happened recently to manufacturers of automobile parts and a variety of financial service firms. The events since the Global Financial Crisis also offer stark reminders that risk can impose significant costs on individuals, firms, governments, and society as a whole. This course explores how individuals and firms assess and evaluate risk, examines the tools available to successfully manage risk, and discusses real-world phenomena that limit the desired amount of risk-sharing. Our focus is primarily on explaining the products and institutions that will serve you better when making decisions in your future careers and lives.
One-term course offered either term
Also Offered As: BEPP 305
Activity: Lecture
1.0 Course Unit

BEPP 811 Risk and Crisis Management.
The growing connectivity of global economies and financial markets has produced widespread risk contagion, resulting in increased volatility and an ever-increasing demand for risk capital. This course focuses on understanding the drivers of risk contagion and ways to restore confidence in worldwide markets for pure and financial risk. The class begins with an evaluation of recent financial and pure risk events: for example, the sovereign debt crisis, Japanese earthquake, and BP Deepwater Horizon. We explore how these events are being financed in innovative ways via the capital and insurance markets. Next we emphasize the role of risk management in the preservation and creation of value, helping firms identify, measure, monitor and manage/finance risk. Doing so results in risk-adjusted returns (or return on risk-adjusted capital) that exceed the cost of capital. We devote substantial focus on the practical implementation of effective risk management/financing, given evolving regulatory and governance standards. In addition, we explore opportunities for corporate growth as well as public/private partnerships. The course will conclude with a discussion of emerging markets and the role of risk management in developing a middle class needing new forms of risk transfer/financing.
One-term course offered either term
Activity: Lecture
0.5 Course Units

BEPP 812 Markets for Pure Risk
The increased frequency and severity of pure risk events hinders corporations’ abilities to execute strategy and deliver sustainable financial results to stakeholders. Prominent recent examples include disruptions from Hurricane Katrina, Japan’s earthquake/nuclear disaster/supply chain breakdowns, Thai floods, U.S. wildfires, and global terrorist attacks. At the same time, both industrialized and emerging economies understand that the management and financing of pure risk is critical to the success of their economies. Consequently, the rising demand for risk capital has ushered in several capital market innovations and public/private partnerships necessary for managing and financing pure risk.
This course investigates these issues, beginning with an introduction to pure risks, their centers of gravity and global consequences for corporations, consumers, and the macroeconomies. Next we move on to traditional sources of risk capital provided to corporations and governments via insurance and reinsurance mechanisms. The course concludes with a discussion of new sources of risk capital provided by capital markets including catastrophic risk bonds, securitization of mortality and liability risk, and other forms of insurance-linked securities. Our focus is on the supply of risk capital to corporations and economies, recognizing the unique position of emerging economies in this nexus. Throughout, the class emphasizes current real-world cases to illustrate the competitive differences in strategies taken by hedge funds, private equity pools, and insurers, as they address the increasing need for risk capital around the world. This course complements BEPP 811, Risk and Crisis Management, which focuses on how firms can use various types of hedging instruments to manage pure risks (that is BEPP 811’s emphasis is primarily on the demand side of markets for pure risks whereas BEPP 812 examines the supply side of these markets).
However, BEPP 811 is not required as a prerequisite. Format: Lecture and discussion, midterm and final.
One-term course offered either term
Activity: Lecture
0.5 Course Units

BEPP 823 Business Insurance and Estate Planning.
This course presents an analysis of overall private wealth management. This includes planning for disposition of closely-held business interests; the impact of income taxes and other transfer costs on business interests and other assets; integration of life insurance, disability insurance, medical benefits, and long-term care insurance in the financial plan; planning for concentrated asset (e.g., common stock) positions, diversification techniques, and asset allocation strategies; distribution of retirement assets; lifetime giving and estate planning; and analysis of current developments in the creation, conservation, and distribution of estates. Attention also is given to various executive compensation techniques (including restricted stock and stock options) and planning for various employee benefits. The course also covers sophisticated charitable giving techniques and methods for financing education expenses. Readings consist of textbook, case studies, and bulk pack articles. This course should be attractive to most students to help them plan for their own or their families’ financial affairs. It also should be particularly attractive to students specializing in entrepreneurship, wealth management finance, and law.
Taught by: Victor Hallman.
One-term course offered either term
Also Offered As: BEPP 322
Activity: Lecture
1.0 Course Unit
BEPP 836 International Housing Comparisons
This course analyzes housing finance systems and housing market outcomes across the globe. In the US, the course focuses on the development of securitization markets and addresses the current challenges of housing finance reform, including the future of Fannie Mae and Freddie Mac. Internationally, the course covers issues of access to housing and housing informality in developing countries, financial crises arising out of the housing sector, and market-oriented and public policy solutions. The course features a wide array of speakers in finance, government and academia who contribute their perspectives to pressing issues of mortgage market design.
Taught by: Susan Wachter
Course usually offered in spring term
Also Offered As: BEPP 236, REAL 236, REAL 836
Prerequisite: FNCE 613
Activity: Lecture
1.0 Course Unit

BEPP 851 Fundamentals of Actuarial Science I
This course is the usual entry point in the actuarial science program. It is required for students who plan to concentrate in actuarial science. It can also be taken by others interested in the mathematics of personal finance and the use of mortality tables. For future actuaries, it provides the necessary knowledge of compound interest and its applications, and basic life contingencies definition to be used throughout their studies. Non-actuaries will be introduced to practical applications of finance mathematics, such as loan amortization and bond pricing, and premium calculation of typical life insurance contracts. Main topics include annuities, loans and bonds; basic principles of life contingencies and determination of annuity and insurance benefits and premiums. Prerequisite: One semester of calculus.
Taught by: Lemaire
Course usually offered in fall term
Also Offered As: BEPP 451, STAT 451, STAT 851
Activity: Lecture
1.0 Course Unit

BEPP 852 Fundamentals of Actuarial Science II
This specialized course is usually only taken by Wharton students who plan to concentrate in actuarial science and Penn students who plan to minor in actuarial mathematics. It provides a comprehensive analysis of advanced life contingencies problems such as reserving, multiple life functions, multiple decrement theory with application to the valuation of pension plans.
Taught by: Lemaire
Course usually offered in spring term
Also Offered As: BEPP 452, STAT 452, STAT 852
Prerequisite: STAT 851 OR BEPP 851
Activity: Lecture
1.0 Course Unit

BEPP 853 Actuarial Statistics
This course covers models for insurer's losses, and applications of Markov chains. Poisson processes, including extensions such as non-homogeneous, compound, and mixed Poisson processes are studied in detail. The compound model is then used to establish the distribution of losses. An extensive section on Markov chains provides the theory to forecast future states of the process, as well as numerous applications of Markov chains to insurance, finance, and genetics. The course is abundantly illustrated by examples from the insurance and finance literature. While most of the students taking the course are future actuaries, other students interested in applications of statistics may discover in class many fascinating applications of stochastic processes and Markov chains. Prerequisite: Two semesters of statistics.
Taught by: Lemaire
Course usually offered in fall term
Also Offered As: BEPP 453, STAT 453, STAT 853
Activity: Lecture
1.0 Course Unit

BEPP 893 Advanced Study Projects
The ASP is intended to generate an interchange of ideas and perspectives and to provide the student with an opportunity to pursue a narrow topic in depth. ASP topics will be chosen by the student with advice from the instructor. The seminar instructor will act as coordinator for the projects. Other members of the department will serve as unofficial advisers to students according to expertise and interests.
Taught by: Bailey
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

BEPP 900 Research Seminar
Of the many ways that doctoral students typically learn how to do research, two that are important are watching others give seminar presentations (as in Applied Economics Seminars) and presenting one's own research. The BEPP 900 course provides a venue for the latter. Wharton doctoral students enrolled in this course present applied economics research. Presentations both of papers assigned for other classes and of research leading toward a dissertation are appropriate in BEPP 900. This course aims to help students further develop a hands-on understanding of the research process. All doctoral students with applied microeconomic interests are encouraged to attend and present. Second and third year Applied Economic Ph.D. students are required to enroll in BEPP 900 and receive one-semester credit per year of participation.
Taught by: Shing-yi Wang and Corinne Low
Two terms. student may enter either term.
Activity: Seminar
0.5 Course Units
Notes: Permission of instructor required.
BEPP 904 Experimental Economics
This course will help prepare you to run your own economics laboratory and field experiments. Experimental methods have been widely adopted by economists to develop new insights, and some economic theories and hypotheses are uniquely well-suited for testing with experimental tools and data. Achieving high internal and external validity requires careful experimental design. Substantive areas of application in the course will include market equilibrium, asset bubbles, learning in games, public good provision, and labor market relationships. Additional topics may include biases in individual decision-making, field experiments in development economics; and happiness, neuroeconomics, and behavioral/experimental welfare economics. Economists’ typical interests in strategic and market-based interactions raise particular methodological challenges and opportunities.
Course not offered every year
Also Offered As: OIDD 904
Activity: Lecture
1.0 Course Unit

BEPP 911 Empirical Public Policy
This course examines econometric research on a variety of topics related to public policy, with the goal of preparing students to undertake academic-caliber research. The course is not an econometrics or statistics course per se; rather, it focuses on research designs with observational data and how econometric techniques are applied in practice. The course aims to train students to do applied economic research that involves measuring effects of theoretical or practical interest. It proceeds in two major parts. The first part examines endogeneity and inference about causal relationships, instrumental variables methods and critiques, and panel data methods. The second part of the course addresses ‘structural’ econometric modeling. Topics covered in this part include sorting and selection, entry models, and counterfactual analyses of policy changes. The course proceeds by analyzing, in detail, approximately 24 well-known empirical research papers in applied economics or related fields. These include public economics and tax policy, labor economics, law and economics, health care policy, industrial organization and competition, transportation demand and policy, and others.
Taught by: Ulrich Doraszelski
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

BEPP 915 Behavioral Economics and Policy Analysis
In this course we will be surveying the ways in which behavioral economics ideas are influencing economic analysis in different ‘applied micro’ fields. A guiding focus of the course will be studying the role of behavioral economics when conducting welfare or policy analysis. The course will begin with a high-level overview of the common themes seen across all the fields we will discuss, and then we will proceed through a series of modules in which we examine the specifics in different applications. Over the course of the semester, we will dive into public finance, health economics, market design, labor economics, and industrial organization.
Taught by: Alex Rees-Jones
One-term course offered either term
Activity: Lecture
1.0 Course Unit

BEPP 931 Numerical Methods in Economics
The objective of this course is to introduce graduate students to computational approaches for solving economic models. We will formulate economic problems in computationally tractable form and use techniques from numerical analysis to solve them. Examples of computational techniques in the current economics literature as well as discuss areas where these techniques may be useful in future research will be disclosed. We will pay particular attention to methods for solving dynamic optimization problems and computing equilibria of games. The substantive applications will cover a wide range of problems including industrial organization, game theory, macroeconomics, finance, and econometrics.
Taught by: Ulrich Doraszelski
One-term course offered either term
Activity: Lecture
1.0 Course Unit

BEPP 932 Contract Theory and Applications
The course provides an advanced introduction to the theory of contracts and its mixture of foundational theories and applications to fields such as labor, reguindustrial organization.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

BEPP 933 Public Economics: Social Insurance and Government Expenditures
The first part of this course will examine the rationale for and economic impact (e.g. on saving, labor supply, etc.) of social insurance programs such as social security, unemployment insurance and disability insurance. The next major part of the course will explore these same issues for government interventions in health insurance markets. The course will then cover research on public goods, externalities, fiscal federalism, and economic stimulus (including the government’s recent response to the ‘Great Recession’ before proceeding to an exploration of the government’s role in K-12 and high education. Both theoretical and empirical evidence will be covered along with a mix of classic studies and more cutting-edge research. Throughout the course we will discuss the tradeoffs - for example between the protection and distortion of social insurance programs – that influence government’s optional role. While the focus will be on evidence from the U.S., some research from other industrialized and developing countries will also be covered.
Activity: Lecture
0.5 Course Units

BEPP 941 Development Economics
This course will cover current microeconomic issues of developing countries including poverty, risk, savings, human capital, and institutions. We will also explore the causes and consequences of market failures that are common in many developing countries with a focus on credit, land, and labor markets. The course is designed to introduce recent research with focus on empirical methods and testing theories with data.
Taught by: Shing-yi Wang/Robert Jensen
One-term course offered either term
Activity: Lecture
1.0 Course Unit
BEPP 950 Managerial Economics
Public goods, externalities, uncertainty, and income redistribution as sources of market failures; private market and collective choice models as possible correcting mechanisms. Microeconomic theories of taxation and public sector expenditures. The administration and organization of the public sector.
Taught by: Postlewaite
One-term course offered either term
Also Offered As: BEPP 250
Prerequisite: MGEC 611 AND MGEC 612 OR (ECON 701 AND ECON 703)
Activity: Lecture
1.0 Course Unit

BEPP 952 Economics and Law
Activity: Lecture
1.0 Course Unit

BEPP 961 Risk Analysis and Environmental Management
This course will introduce students to concepts in risk governance. We will delve into the three pillars of risk analysis: risk assessment, risk management, and risk communication. The course will spend time on risk financing, including insurance markets. There will be particular emphasis on climate risk management, including both physical impact risk and transition risk, although the course will also discuss several other examples, including management of environmental risks, terrorism, and cyber-security, among other examples. The course will cover how people perceive risks and the impact this has on risk management. We will explore public policy surrounding risk management and how the public and private sector can successfully work together to build resilience, particularly to changing risks.
One-term course offered either term
Also Offered As: BEPP 261, BEPP 761, ESE 567, OIDD 261, OIDD 761
Activity: Lecture
1.0 Course Unit

BEPP 962 Applied Economics Seminar
The goal of this course is to help doctoral students develop critical thinking skills through both seminar participation and writing of referee reports. To this end students will attend the Wharton Applied Economics each Wednesday at noon seminar when it meets; prepare two written referee reports on WAE papers per semester, due before the seminar is presented. After attending the seminar and the ensuing discussion of the paper, students will prepare follow-up evaluations of their referee report reports, due one week after the seminar.
Taught by: Gilles Duranton
Two terms. student may enter either term.
Also Offered As: REAL 962
Activity: Seminar
0.5 Course Units

BEPP 971 Market Design
The course covers Market Design, the analysis and engineering of market rules and institutions. In the last 60 years practitioners and academics have deliberately engineered the rules of an increasing number of markets, with classic examples including medical resident matching (e.g., NRMP), spectrum auctions (e.g., FCC auctions), and organ donation exchanges. In the last few years, very large markets have been created from scratch, such as eBay, Adwords, and smaller markets like odesk.com and sittercity.com. These designs use a broad set of tools, including economic theory, empirical analysis and experiments (and a fair dose of trial-and-error). With this experience, useful principles have emerged, on what market failures typically have to be addressed, and on which rules work and which do not.
Taught by: Eduardo Azevedo
Activity: Lecture
1.0 Course Unit

BEPP 987 Industrial Organization and Competition Policy
This course focuses on empirical methods and applications of research topics in Industrial Organization. Although not exclusively, the course will focus mostly on the application of econometric techniques used to study specific markets and antitrust policies. The topics that will be covered include the evaluation of market power and mergers, product differentiation, investment and innovation, collusion, price discrimination, vertical relations, entry and product positioning, and the dynamics of industries. The course will also discuss research methodologies related to microeconomic theory, computational methods, and econometric analysis. The applicability of the techniques goes beyond the field of Industrial Organization, and include the Labor, Health, Trade and Public economics.
One-term course offered either term
Prerequisite: (ECON 701 AND ECON 703) OR (ECON 681 AND ECON 682)
Activity: Lecture
1.0 Course Unit

Cell and Molecular Biology (CAMB)

CAMB 431 Genome Science and Genomic Medicine
This course will be a focused study of genomes, genomic techniques, and how these approaches are and will be used in diagnosing and treating human disease. Topics will include genome sequencing, analysis of sequences and microarrays, and new techniques including high-throughput sequencing and reverse genetic analysis with a focus on genome-wide mutant collections. Prerequisite: BIOL 421 strongly recommended.
Taught by: B. Gregory
Course usually offered in spring term
Also Offered As: BIOL 431
Prerequisite: BIOL 221
Activity: Lecture
1.0 Course Unit
CAMB 480 Advanced Cell Biology
This course is designed for beginning graduate students and advanced undergraduates with a particular enthusiasm for cell biology. Biology 480 does not attempt to cover all aspects of cell biology, and is therefore not appropriate for students seeking a lecture course which provides a comprehensive survey of the field. Rather, the primary objective of this course is to teach those students considering a career in the biomedical sciences how to read, discuss, and question original research papers effectively. Intensive classroom discussions focus on the experimental methods used, results obtained, interpretation of these results in the context of cell structure and function, and implications for further studies. There is no assigned text; students learn to critically evaluate current literature by reading original papers on selected topics in modern cell biology. Accordingly, class participation/discussion is essential and the grade will be determined significantly by that. In addition, there will be two exams including answering short questions and an essay critiquing an original paper that is selected on a topic in Cell Biology.
Taught by: Guo
Course usually offered in fall term
Also Offered As: BIOL 480
Prerequisite: BIOL 201 AND BIOL 205
Activity: Lecture
1.0 Course Unit

CAMB 483 Epigenetics
This course investigates epigenetic phenomena: heritable alternate states of gene activity that do not result from alteration in nucleotide composition (mutations). Epigenetic mechanisms regulate genome accessibility and cell differentiation. They play a key role in normal development and in oncogenesis. For example both mammalian X-chromosome inactivation and nuclear transfer (cloning) are subject to epigenetic regulation. Amongst the epigenetic mechanisms we will discuss in this course are chromatin organization, histone modification, DNA methylation and non-coding RNAs. The course is geared toward advanced undergraduate and beginning graduate students and is a combination of lectures, student presentations and research presentations by guest speakers. Students will work with the current scientific literature.
Taught by: Wagner
Course usually offered in fall term
Also Offered As: BIOL 483
Prerequisite: BIOL 221
Activity: Lecture
1.0 Course Unit

CAMB 485 The RNA World: A Functional and Computational Analysis
A focused study of genomic, biochemical, cellular, and molecular aspects of RNA. Topics of study will include RNA structure, RNA processing and turnover, splicing, ribozymes and riboswitches, RNA editing and modification, RNA interference, endogenous eukaryotic RNA silencing pathways, small RNA biology, computational methodologies for studying RNA biology, and RNA viruses. Lectures, student presentations, and discussions will be based on readings from the primary literature.
Prerequisite: BIOL 421 strongly recommended
Taught by: B. Gregory
Course offered spring; even-numbered years
Also Offered As: BIOL 485
Prerequisite: BIOL 221
Activity: Seminar
1.0 Course Unit

CAMB 486 Chromosomes and the Cell Cycle
Life depends on the propagation of genetic material from one generation to next through cycles of genome replication and cell division. The genome is copied by the parent, and one exact copy is inherited by each daughter cell. We will treat chromosomes as discrete entities, rather than collections of genes, that are replicated and divided with high fidelity to ensure that the genome remains stable over many generations. By reading selected primary literature covering several decades, we will build an understanding of the cell cycle by focusing on chromosomes and the associated molecular machinery. We will explore mechanisms that underlie replication and division, particularly control mechanisms that maintain genome integrity and are critical to prevent disease. The goal of the course is to develop a picture of the cell cycle by examining some of the key experiments and insights that have led to our current understanding. There is no textbook for the course. Readings from the primary literature will be assigned for each meeting and provided as pdf files. Presentations of these papers and class participation, including questions and critical evaluation, are an essential part of the course.
Grading will be based on a final paper in the form of a research proposal (50%) and on class participation (50%).
Taught by: Lampson, M.
Course offered spring; odd-numbered years
Also Offered As: BIOL 486
Prerequisite: BIOL 205
Activity: Seminar
1.0 Course Unit

CAMB 493 Epigenetics of Human Health and Disease
Epigenetic alterations encompass heritable, non-genetic changes to chromatin (the polymer of DNA plus histone proteins) that influence cellular and organismal processes. This course will examine epigenetic mechanisms in directing development from the earliest stages of growth, and in maintaining normal cellular homeostasis during life. We will also explore how diverse epigenetic processes are at the heart of numerous human disease states. We will review topics ranging from an historical perspective of the discovery of epigenetic mechanisms to the use of modern technology and drug development to target epigenetic mechanisms to increase healthy lifespan and combat human disease. The course will involve a combination of didactic lectures, primary scientific literature and research lectures, and student-led presentations.
Prerequisite: BIOL 483 recommended
Taught by: Berger
Course offered spring; odd-numbered years
Also Offered As: BIOL 493, GCB 493
Prerequisite: BIOL 221

CAMB 510 Immunology for CAMB
The purpose of this course is to provide a thorough grounding in immunology to Cell and Molecular Biology graduate students, with an emphasis on the role of the immune system in combating infectious diseases. This is a required course for CAMB students in the Microbiology, Virology and Parasitology program and the Vaccine and Gene Therapy program, replacing IMMU 506 (Immune Mechanisms). It may also be used as an elective by CAMB students in other programs such as those from the Cancer Biology program and Cell Biology, Physiology and Metabolism program. Prerequisite: If course requirements not met, permission of instructor required. The course is divided into two parts. The first deals with innate immune response with a focus on pattern recognition and subsequent signaling in infection by bacteria, viruses, and parasites. The second half will focus on adaptive immune mechanisms, the structure, function, and molecular biology of antigen receptors and major histocompatibility complex molecules, and the development, activation, and differentiation of lymphocytes and other hematopoietic cells involved in immunity. The course is comprised of two 1.5-hour lectures per week, with Friday journal club on selected weeks.
EXAMS: There will be two exams. The first will be taken after part I, and the second after part II of the course. Both will be open book, in-class exams. The exam will consist of essay or brief answer questions based on experimental design and/or data. Each exam is weighed equally in determining the final letter grades of students. The grades are based solely on the exams.
Taught by: G. Scott Worthen
Course usually offered in spring term
Prerequisite: BIOM 600
Activity: Lecture
1.0 Course Unit

CAMB 511 Principles of Development
This graduate course, which will include lectures and readings from the literature, is designed to provide a foundation in the principles of developmental biology. Topics covered will include: the germ line and piRNA, signaling pathways in development, pattern formation and cell specification, gastrulation, tissue differentiation, morphogenesis, cell polarity, epigenetics in development, organogenesis, stem cell biology, regeneration, and developmental evolution. The use of molecular biology, biochemistry, genomics and genetics, cell biology, and embryological manipulations will be discussed in the context of the analysis of developmental mechanisms. Undergraduate background in cell biology and molecular biology required. Non-BGS students require permission from course director to enroll.
Taught by: M. Mullins & P. Seale
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
CAMB 512 Cancer Biology and Genetics
The course objective is to introduce the students to important and current concepts in Cancer Biology and Cancer Genetics. The lectures are organized into 4 broad thematic groups: A) Intro to Cancer Biology and Signal Transduction (e.g., tumor suppressor and oncogene function, DNA repair pathways, senescence, apoptosis); B) Intrinsic and Extrinsic Drivers (e.g., tumor microenvironment, hypoxia, angiogenesis); C) Genome regulation and in Primary and Metastatic Tumors and D) Evading Cell Death. The organizers, along with faculty from the School of Medicine, the Wistar Institute and CHOP with expertise in the corresponding areas provide lectures for the course. The students are expected to present, and participate in discussions of one or more key recent papers. This is a year - long course. Non-CAMB students must contact the course director prior to registration. Students must have taken the fall CAMB 512 course to participate in the spring semester.
Taught by: Karin Eisinger, Todd Ridky, Kathrin Bernt & Kathryn Hamilton
Two terms. student may enter either term.
Activity: Lecture
0.5 Course Units

CAMB 518 Current Topics in Ion Channels
The course is a seminar format, specifically a journal club format, targeted to graduate students and MD/PhD students interested in ion channels. It meets for one hour, once a week for graduate students and once every other week for the entire group with formal presentation. On alternate weeks a faculty member meets with students to discuss and review the contents of each selected article for the subsequent week’s presentation. This is an elective course meant to excite and intellectually enlighten students regarding the latest advances in ion channel research. It includes a wide range of ion channel topics from basic biophysics, structure, and physiology to cell biology and clinical applications. It is attended by faculty, students, and postdocs from the departments of Physiology, Pathology, Neuroscience, Pharmacology, Biochemistry & Biophysics, Psychiatry. We require a written critique of each paper presented by other participants during the semester, submitted prior to the formal presentation of the paper. This critique will be graded by a faculty member, as will the student’s participation in both the preparatory sessions and formal presentation sessions. A final grade would be based on both of these components.
Taught by: Deutsch, C.
One-term course offered either term
Prerequisite: BIOM 600
Activity: Seminar
1.0 Course Unit

CAMB 522 Human Evolutionary Genomics
Advanced seminar on current topics in human genomics and human evolution. Topics include the methods used for mapping and sequencing genomes; phylogenetic and population genetic analysis; and detecting variation in the human genome. This course is designed for graduate students but advanced undergraduates with a strong background in genetics are also welcome. Permission of director required to enroll.
Taught by: S. Tishkoff
Course offered spring; even-numbered years
Also Offered As: BIOL 522
Activity: Seminar
1.0 Course Unit

CAMB 530 The Cell Cycle, Genome Integrity and Cancer
This seminar course focuses on molecular and biochemical events that regulate cell cycle progression and genome maintenance, and explores how these processes influence cancer etiology and treatment. Specific topics will familiarize students with the key principles and recent developments within these areas. These topics include CDK-Cyclins and their inhibitors, regulation of G1-S and G2-M phase cell cycle transitions, DNA damage checkpoints and repair, the impact of chromatin regulation on DNA repair, and how each of these processes affects cancer etiology and treatment. In depth reading and evaluation of research literature will be primarily used to accomplish these aims, as well as provide instruction on rigorous experimental design and data interpretation. If course requirements not met, permission of instructor required. Preferential registration of Cancer Biology and CAMB students up to the maximum of 12 students applies. Permission to register is required upon exceeding the 12 student limit.
Taught by: Asangani, Irfan and Greenberg, Roger
Course usually offered in fall term
Prerequisite: BIOM 555 AND BIOM 600
Activity: Seminar
1.0 Course Unit

CAMB 532 Human Physiology
This course will present a survey of the physiology of most of the major organ systems. It will integrate knowledge of cellular and molecular mechanisms into an understanding of function at the tissue, organ, and organism levels. It will begin with a brief review of membrane physiology, followed by electrophysiology and signaling in nerve. Then, after a brief outline of neural control systems and their role in homeostasis, it will present motility and muscle, the cardiovascular system, respiration, the renal and gastrointestinal systems, and selected topics from the endocrine system, the reproductive systems, environmental and exercise physiology. As well as providing a basis of integrative physiology for students in fields such as physiology, bioengineering and pharmacology, it should be of interest to students of cellular and molecular biology and genetic engineering who will need to appreciate the roles of specific systems and molecules at higher levels of organization. Prerequisite: Although not a formal prerequisite, a good foundation in cell bio level of BIOM/CAMB 600 (or an equivalent upper level undergraduat strongly recommended. A general understanding of the chemistry a biochemistry of macromolecules, and of basic molecular biology wi assumed. This course is primarily designed for 2nd year BGS stud year students in BGS or other programs will require the permissio instructor. This course is not open to undergraduates.
Taught by: Tejvir Khurana, Ben Prosser, and Paul Titchenell
Course usually offered in fall term
Also Offered As: PHRM 532
Activity: Lecture
1.0 Course Unit
CAMB 534 Seminar on current genetic research: Human Disease Modeling in Experimental Sys
An advanced seminar course emphasizing genetic research in model organisms and how it informs modern medicine. Each week a student will present background on a specific human disease. This is followed by an intense discussion by the entire class of 2 recent papers in which model organisms have been used to address the disease mechanism and/or treatment. As a final assignment, students will have the opportunity to write, edit, and publish a 'News & Views' style article in the journal 'Disease Models and Mechanisms'. Offered spring semester. Prerequisite: If course requirements not met, permission of instructor required.
Taught by: T. Jongens
Course usually offered in spring term
Also Offered As: NGG 534
Prerequisite: CAMB 542 OR CAMB 605
Activity: Seminar
1.0 Course Unit

CAMB 542 Topics in Molecular Medicine
TiMM is planned as a once-weekly seminar course whose goal is to introduce students to the ways in which biomedical research can provide new insights into clinical medicine and, conversely, how knowledge of clinical disease impacts scientific discovery. There are two sections for the course -- 401 and 402. Section 401 is for first year MD/PhD students only and section 402 is for VMD/PhD and PhD students.
Taught by: Section 401: Johnson, Kohli Section 402: Atchison, Mason
Course usually offered in fall term
Also Offered As: PHRM 542
Activity: Seminar
1.0 Course Unit

CAMB 550 Genetic Principles
This is a required course of the Genetics and Epigenetics Program and is designed to provide students with a comprehensive overview of genetic concepts and methodology. The course is organized into three parts: I Fundamental genetic concepts and tools; II Genetics of model organisms (with focus on worms, flies, zebrafish and mice); III Human genetics and disease. Each week there will be two lectures and one associated discussion/problem-solving session. Discussions emphasize practical aspects of generating and interpreting genetic data. Offered spring semester.
Taught by: Grant, S. & Joyce, E.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CAMB 577 Advanced Epigenetics Technology
Second year students in GCB, CAMB (G&E), or IGG programs using genomics methods to measure transcriptomics and epigenomics changes in their experimental systems. The goal is to familiarize students with the latest cutting-edge genomics tools and cover solutions to major experimental and computational challenges in the investigation of genome-wide epigenetic data sets. Students will develop competence in (i) variations of experimental techniques improving resolution and throughput, (ii) issues related to the computational analyses closely related to the various genome-wide assays used to probe epigenetic processes and signals, (iii) computational approaches useful to overcome pitfalls associated to the analysis of a given epigenetic data modality, (iv) methods, techniques and studies on the integration of multi-layer epigenetic data sets.
Taught by: Golnaz Vahedi
Course usually offered in spring term
Also Offered As: GCB 577, IMUN 577
Prerequisite: (BIOL 483 OR BIOL 493) AND GCB 534 AND (GCB 535 OR GCB 536)
Activity: Lecture
1.0 Course Unit

CAMB 597 Neural Development, Regeneration and Repair
General Description: The goals of this course are to examine the principles underlying the nervous system development and to learn how understanding developmental mechanisms can inform strategies to promote regeneration and repair. This is not a survey course. Rather, the course will focus on selected topics, for which we will discuss the genetic, molecular and cellular strategies employed to study these problems in different model organisms. Emphasis is on how to interpret and critically evaluate experimental data. Students who are not in one of the BGS graduate programs need instructor permission to enroll.
Taught by: Wenqin Luo, Jonathan Raper
Course usually offered in fall term
Also Offered As: NGG 597
Prerequisite: BIOM 600
Activity: Lecture
1.0 Course Unit

CAMB 601 Advanced Virology Seminar
This seminar course covers current topics and important concepts in virology. Students will read selected papers on various topics in virology. Each subject will be illustrated by ground-breaking classic papers and innovative recent articles. Students will present a seminar under the guidance of a faculty member. Grades will be based on the guidance of a faculty member. Grades will be based on the quality of the seminar(s) and participation in discussion. Prerequisite: Non-CAMB students must obtain instructor approval.
Taught by: S. Weiss, P. Bates
Course usually offered in spring term
Prerequisite: CAMB 706
Activity: Seminar
1.0 Course Unit
CAMB 605 CAMB First Year Seminar
Topics are selected by course instructors and student participants. Course instructors vary yearly. The goal of this course is to provide students with an opportunity to analyze, present, and discuss significant research papers in the field of cell and molecular biology in small group settings. The sections are taught by faculty from the different programs within the Graduate Group. This is a required course for CAMB PhD students. Other BGS students are eligible, space permitting.
Taught by: John Seykora
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

CAMB 608 Regulation of Eukaryotic Gene Transcription
An advanced seminar course emphasizing current topics in gene regulatory mechanisms in eukaryotes. Based on the current literature, presentations and in depth discussions will familiarize the student with recent innovations and developing principles of genome regulation. Students are expected to bring their laptops to class. Non-CAMB students need approval from course directors. MD/PhD students do not need to take BIOM 555 as prerequisite.
Taught by: D. Epstein
Course usually offered in fall term
Prerequisite: BIOM 555
Activity: Seminar
1.0 Course Unit

CAMB 609 Vaccines and Immune Therapeutics
Vaccination is perhaps the most successful medical technological intervention. The goal of this course is to expand on students’ general understanding of the immune system and to focus this understanding towards the application of modern vaccines and immune therapies in the 21st century. The course will provide the student with a sense of how these principles are applied to a vaccine and immune therapeutic development. The course covers basic vaccine science and describes how this science is translated through clinical, regulatory, ethical, and political issues to result in a final vaccine product. The courses’ goal is to leave the student with an understanding of the implications of modern vaccines /immunotherapies and their impact on world health. Initial lectures review immune mechanisms believed to be responsible for vaccine-induced protection from disease. Subsequent lectures build on this background to explore the science of vaccines for diverse pathogens, including agents of bioterrorism, as well as vaccines and immunotherapies for cancer. An appreciation for the application of laboratory science to the clinical development and clinical trials of vaccines are provided. An important focus on the regulatory, safety, and ethical implications of vaccines in different world situations based on true world examples are presented. The financial implications of specific vaccines with these implications for global health is a focus of the course. The course is presented in a lecture-style consisting of multiple distinguished guest lecturers who are experts in their particular area of vaccine development. There are required readings to provide the student context and background for the diverse lectures. Students are graded on course participation and a final project/exam which the students will present. The project is to design a vaccine strategy for a current disease or pathogen of importance that does not as yet have an effective vaccine or immune therapy and present this to the class. Strategies used should build on the material presented in the class lectures. The course is intended for graduate students or medical students in various MS, Ph.D., or MD/Ph.D. programs on the campus, as well as local scientists and professionals in the community. As a prerequisite, students should have taken biology, biochemistry, or immunology courses at the advanced college level. This course is offered in the fall semester. Prerequisite: Biology, Biochemistry at the advanced college level, college-level immunology is recommended. Not limited to CAMB students, however first options are to CAMB students, the permission of the instructors via email.
Taught by: David Weiner, Paul Offit, Stanley Plotkin
Course usually offered in fall term
Also Offered As: IMUN 609
Activity: Lecture
1.0 Course Unit
CAMB 610 Molecular Basis of Gene Therapy and Genome Editing
This is a team-taught, survey course that focuses on the basic science relevant to achieving efficient and effective gene transfer and genome editing in animal models and humans for the treatment of disease. The course includes units devoted to a variety of vectors useful for gene transfer, the fundamentals of genome editing, and current therapeutic approaches using specific diseases as models. Prior background in biochemistry, cell biology, and molecular biology is essential. Aspects of organ system anatomy and physiology, virology, and immunology that are relevant to the course material are included in the course. Because of rapid movement in this field, specific topics vary somewhat from year to year. Offered every fall. Prerequisites: Background in biochemistry, cell biology, and molecular biology. Students not enrolled in a BGS graduate program who wish to take this course must get permission in advance from Dr. Musunuru. Students should send their undergraduate and graduate transcripts (including spring semester) along with their request to Dr. Musunuru via email: kiranmusunuru@gmail.com. This class is not accepting non-BGS masters students.
Taught by: Kiran Musunuru
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CAMB 615 Protein Conformation Diseases
Protein misfolding and aggregation has been associated with over 40 human diseases, including Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis, prion diseases, alpha (1)-antitrypsin deficiency, inclusion body myopathy, and systemic amyloidoses. This course will include lectures, directed readings and student presentations to cover seminal and current papers on the cell biology of protein conformational diseases including topics such as protein folding and misfolding, protein degradation pathways, effects of protein aggregation on cell function, model systems to study protein aggregation and novel approaches to prevent protein aggregation. Target audience is primarily 1st year CAMB, other BGS graduate students, or students interested in acquiring a cell biological perspective on the topic. MD/PhDs and Postdoc are welcome. MS and undergraduate students must obtain permission from course directors. Class size is limited to 14 students.
Taught by: Yair Argon
Course usually offered in fall term
Also Offered As: BMB 518, NGG 615
Prerequisite: BIOM 600
Activity: Lecture
1.0 Course Unit

CAMB 617 Emerging Infectious Diseases
A physician from just 25 years ago would not recognize two of today's most pressing public health problems, AIDS and Hepatitis C, nor be familiar with many other infectious diseases or agents including MERS, Ebola virus, Hantaanvirus, HTLV-1, HHV-8 and Borrelia burgdorferi. Such a physician might also be dismayed to learn that old enemies such as tuberculosis, malaria, diphtheria, West Nile virus, meningococcal meningitis, Yellow fever, and Dengue have become more (or rather less) prevalent due to antibiotic resistance and other factors. In addition, bioterrorism, long a theoretical possibility, is now part of today's reality and could result in the deliberate introduction of anthrax or other biological agents into the civilian population or the food supply. Thus, with the beginning of the new millennium, the medical profession, the veterinary profession, and the biomedical research establishment are faced with the triple-threat of emerging infectious diseases, reemerging infectious diseases, and bioterrorism. These topics are covered in this course, with an emphasis on student's participation in the discussion. Course open to graduate students only. Other students may petition the course director for permission to enroll. Emerging Infectious Diseases will cover emerging viral, bacterial and parasitic organisms, with lectures being given by faculty from the Schools of Medicine, Veterinary Medicine, Dental Medicine, and Arts and Sciences, and outside lecturers. Epidemiology, immune responses to infection, vaccine and antimicrobial agents, and pathogenesis all will be discussed. The course format will include short lectures by various faculty members to provide background information on each topic, followed by extensive discussion by students. Classes will run from 10am to 11:30AM on Mondays and Wednesdays in Johnson 207. Evaluation will be based on presentations of a research manuscript from the literature and participation in discussion sessions.
Taught by: S. Hensley, P. Bates
Prerequisite: BIOM 600 AND CAMB 706
Activity: Lecture
1.0 Course Unit
CAMB 632 Cell Control by Signal Transduction Pathways
This course, 'Targeting the cancer cell: from mechanism to precision medicine', will examine how various signal transduction mechanisms influence cell functions including replication, growth, transcription, translation and intracellular trafficking. We will also consider how non-cell autonomous mechanisms, such as the tumor microenvironment and the immune system influence cancer cell signaling. We will consider how important signaling pathways, such as Ras, Raf, Notch, Wnt, TGF beta, and various kinases/phosphatases become dysregulated in cancer, as well as delve into how the DNA damage response, immune system, and tumor microenvironment exert important influences on oncogenic signaling. In the first half of the course, invited faculty members will pick 2 relatively recent papers from their field that highlight important areas. Each paper will be assigned to a student, who will meet with the faculty mentor prior to the class to discuss the paper and their presentation. During the class, students will present each paper for approximately 45 minutes with time for discussion. Students will present the important background, break down the paper, look for strengths and weakness and come up with a plan of what the next set of experiments could or should be. In the second half of the course, students will independently pick a relevant paper for in class presentation and will also write a short 'News and Views' style article based on the paper they have chosen. The goal of the course is to provide students with a view of the cancer cell that integrates both cell autonomous and non-cell autonomous signals and to use this information to consider how to successfully treat cancer.

Taught by: X. Hua, J. Field, A. Resnick, and W. Pear
Course usually offered in spring term
Also Offered As: PHRM 632
Prerequisite: BIOM 600
Activity: Seminar
1.0 Course Unit

CAMB 633 Advanced Seminar in Gene Therapy
Class: Each class will involve a review of a manuscript in the field of gene therapy selected by course faculty (Drs. Kurre, Pardi, Melenhorst or Rivella). Two weeks prior to their lecture, faculty will assign one primary research paper plus review articles that provides relevant background. Before the session, each paper will be assigned to a student presenter, who will prepare slides and meet with the faculty lecturers ahead of time. Two faculty will be present for each class. The student leader will introduce the paper and ask the group to each cover a portion of the result section in order to promote discussion, interaction and participation. Each session will last 1 hour, including presentation of the manuscript and Q&A. Each session will cover one paper on a weekly base, alternating these classes with lectures (see below). Each presentation will be utilized to grade the students (70%). Lectures: during each lecture, a faculty or external speakers will lecture for 40 minutes followed by a 15 minutes breakout discussion. The student will attend and ask questions during or at the end of the lecture. These lectures will happen independently from the paper discussion. Dr. Rivella, or a substitute, will also be present at each lecture. Prerequisites: Second year students, who already have notions of cell manipulation, immunotherapy and vector biology.

Taught by: Stefano Rivella, Professor of Pediatrics
Course offered spring; even-numbered years
Activity: Seminar
1.0 Course Unit

CAMB 637 Gene Therapy: Vectors, Immunology, and Disease
This seminar course is designed to provide students with a cohesive understanding of virology and immunology of gene therapy. Three major themes will be covered: vectors, vector immunology and gene therapy of genetic and acquired diseases. The topics to be covered are viewed as an extension of topics covered in CAMB 610 (Molecular Basis of Gene Therapy), although CAMB 610 is not an absolute prerequisite for this seminar. Each class will consist of a brief introduction by an instructor, reviewing background information related to the theme discussion. The topics are explored through discussions, led by assigned students, of seminal research articles. Students are expected to have thoroughly reviewed the assigned articles and be able to present and discuss various aspects of the papers. Regular attendance and active participation in the discussions, which focus on critical evaluation of experimental design, data presentation and interpretation, is essential. Student evaluation will be based on attendance, in-class presentation (for 50% of the letter grade), and a take-home exam (for another 50% of the grade).

Prerequisite: BGS Students only
Taught by: J. Riley
Course offered spring; even-numbered years
Activity Seminar
1.0 Course Unit

CAMB 691 Advanced Topics in Cell Biology & Physiology
This course, together with its companion CAMB 692, offers an advanced, in depth analysis of selected topics in cell biology and physiology. CAMB 691 and 692 are complementary courses that focus on different aspects of cell biology; these courses are offered on an alternating basis in the spring semester. The courses can be taken in either order, but require BIOM 600 or an equivalent background in basic cell biology. CAMB 691 will focus on key issues at the forefront of research in the areas of (1) Channels and transporters, (2) Vesicular and viral trafficking, (3) Tissue mechanics, (4) Heart and muscle physiology, (5) Cytoskeletal dynamics and cell division. The course format pairs faculty presentations with student-led discussion sessions highlighting important papers from the primary literature. Students will be evaluated on their presentations, their participation in class discussions, and weekly problem sets. Offered alternately in the spring semester with CAMB 692. Permission needed for all non-CAMB students. Advanced undergrads must contact instructor to confirm qualifications.

Taught by: M. Marks, C. Deutsch
Course offered spring; even-numbered years
Prerequisite: BIOM 600
Activity: Seminar
1.0 Course Unit
CAMB 692 Advanced Topics in Cell Biology and Physiology II: Cell Signaling and Metabolism

Cells in complex organisms are required to adapt rapidly in a changing environment. Maintaining homeostasis while performing specialized functions requires that cells respond to extracellular signals as well as fluctuations in a host of intracellular metabolites. This course will cover selected topics and general principles related to signal transduction and the control of metabolic flux in living cells. The course format will include student-led discussion sessions both providing an overview of a topic as well as focusing on important papers from the primary literature. Students will be evaluated on their presentations and participation, as well as problem sets. Offered alternately in the spring semester with CAMB 691.

Taught by: J. Baur & R. Lee
Course offered spring; odd-numbered years
Prerequisite: BIOM 600
Activity: Seminar
1.0 Course Unit

CAMB 695 Scientific Writing

This 7-week course is designed to introduce students to basic scientific writing skills and is based upon the premise that clear writing, giving feedback, and receiving feedback are all essential tools for professional development. While this is not strictly a prelim preparatory course, applying the principles of this course will help improve your prelim writing and your scientific writing in general. Structure: An initial introductory lecture for the entire class is followed by 6 weekly small group sessions. These sessions are conducted as workshops designed to enhance student and faculty engagement to improve scientific writing. During the course, participants review the principles of clear, persuasive writing, and apply these principles to writing for a scientific audience. Particular emphasis is placed on conveying the significance of your research, outlining your aims, and discussing your results. Classes are highly interactive, and the majority of class time will be spent discussing student scientific writing. In order to focus on the techniques of scientific writing, in-class discussion and critiques will not address scientific methodology or interpretations of results. Evaluations: One of the goals of the course is to encourage active and open interaction among students, and grading will be predominantly based on class attendance, participation, and timely submission of assignments, not on the quality of the writing itself. Offered spring semester.

Taught by: J. Katz, J. Lok
Course usually offered in spring term
Prerequisite: (BIOM 555 AND BIOM 600) AND CAMB 605
Activity: Lecture
0.5 Course Units

CAMB 697 Biology of Stem Cells

The goal of this course is to introduce graduate students to the field of stem cell biology through lectures and reviews of important contributions from the literature. Topics include embryonic stem cells, epigenetics and reprogramming, tissue specific stem cells such as hematopoietic, neuronal and epithelial stem cells, tissue regeneration, and tissue engineering. The future potential and challenges in stem cell and regeneration biology will be discussed. Important aspects of stem cell identification and characterization utilizing multiple model systems will also be a focus. Offered Fall Semester.

Taught by: P. Gadue, P. Rompolas
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

CAMB 698 Elective Tutorials in Cell and Molecular Biology

Interested students must contact Dr. Lee (rjl@penmedicine.upenn.edu) in the fall semester or Dr. Stanger (bstanger@upenn.edu) in the spring semester before enrolling in the course. Students will meet weekly with a faculty mentor to focus in-depth on a biomedical topic of their choice. Prior to each semester in which the course is offered, students are encouraged to make arrangements with faculty on their own and contact mentors directly to set up an individualized plan. Student should submit proposed mentors/topics to the course director before enrolling. The course director must approve the plan prior to beginning the independent study. This tutorial course is designed to provide students with an in-depth knowledge of a specific topic in Cell and Molecular biology. The tutorial can be used to enable students to become more deeply acquainted with the literature related to their field of interest or to expand on a topic that the student found interesting in one of their basic courses. Final student grades will be based on mentor evaluations as well as a written review-style paper and brief (15 min) presentation to all students enrolled in the course.

Taught by: Lee, Robert (Fall semester) and Ben Stanger (Spring Semester)
One-term course offered either term
Prerequisite: CELL 600
Activity: Seminar
1.0 Course Unit

CAMB 699 Lab Rotation

Two terms. student may enter either term.
Activity: Laboratory
0.5 Course Units

CAMB 700 Topics in Microbiology

This course is designed for second year students in the MVP program, and focuses on pathogen-host interactions. Students make a presentation designed for 30 minutes on a topic of their choice. The topic can be something that they are working on, or simply something that they are interested in. They are requested to provide sufficient background, discuss what is known and what is not known about the topic, and then frame two to three Specific Aims. The success of the course rests entirely upon the quality of the faculty and students involved. In past years, the class have been very interactive, with each class lasting about 1.5 hours. The discussions are deliberately wide-ranging, and review recent literature, techniques, and how to construct a grant. Generally, two faculty will be in attendance. Permission of instructor required to enroll. Students must have taken Immunology and two MVP pathogen classes.

Taught by: M. Betts, J. Riley
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
CAMB 701 Tumor Microenvironment
This course is designed for second year (and up) graduate students interested in learning about the tumor microenvironment. The course will cover the main players of the tumor microenvironment field (stroma, vasculature and immune cells) and emphasize the connections between the basic biology of the tumor microenvironment to potential therapeutic intervention. The goals of this course are to enrich scientific culture, train for clear and concise oral presentations, improve grant-writing skills, and develop critical thinking, professional composition, and discussion skills. The course will be divided into 4 broad topic areas. The course will begin with didactic lectures presented with overviews of Immunology, Stromal cells and extracellular matrix, and Angiogenesis/Endothelial cells. After that each session will be student run and consist of one hour of presentation of a didactic background lecture regarding the salient points of that week's topic, followed in the second hour by a discussion of a primary research paper(s) to be read in advance of the session by all class participants. Discussions will include specific technical background needed for the paper, presentation of the key data in the paper, leading discussion on the data and conclusions drawn from the paper and putting them in the context of the state of the field. Specific requirements for students include: - One to two presentations throughout the course. Students will be guided in choosing the appropriate depth of background nd topic area and ingiving formal presentations and constructive criticism of scientific data. - Submission of a discussion point each week that a student is not presenting, due the night before class. - A Specific Aims Page for a grant using one of his or her two presentations as ‘preliminary data’ or their own research project provided it is related to the tumor microenvironment and is approved by one of the course directors. Evaluation: Students will be evaluated on their participation in class (30%), their presentations (30%), their discussion points (15%) and their Specific Aims Page (25%). Students will be given feedback immediately after their presentations. Prerequisite: First year CAMB core courses must be completed. Course is for 2nd year graduate students and beyond. CB students get first priority followed by other CAMB students.
Taught by: Sandra Ryeom and Ellen Pure
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

CAMB 702 Current Biochemical Topics
Participation in the ‘Dr. George W. Raiziss Biochemical Rounds’, a weekly seminar program sponsored by the Department of Biochemistry and Biophysics. Program deals with a wide range of modern biochemical and biophysical topics presented by established investigators selected from our faculty, and by leading scientists from other institutions. Prerequisite: Permission needed from Department
Taught by: Black and Shorter
Course offered summer, fall and spring terms
Also Offered As: BMB 650, PHRM 650
Activity: Seminar
1.0 Course Unit

CAMB 703 The ECM, adhesion receptor signaling, and translational biomechanics
This course is geared towards first and second year graduate students in BGS/CAMB and SEAS/BE with an interest in the interface of extracellular matrix (ECM) cell biology and biomechanics. Students will learn about the ECM and adhesion receptors and their impact on the cytoskeleton and signaling, as well as fundamental concepts in biomechanics and engineered materials. We will discuss how these topics can inform the study of cell biology, physiology and disease. An additional objective of the course is to give students experience in leading critical discussions and writing manuscript reviews. Invited outside speakers will complement the strengths of the Penn faculty.
Taught by: R. Mauck, R. Wells.
Course offered spring; even-numbered years
Also Offered As: BE 640
Prerequisite: BIOM 600
Activity: Lecture
1.0 Course Unit

CAMB 704 Stress Responses in Metabolism and Cancer
The course meets once a week for student presentations and lectures. The first 2-3 weeks encompasses lectures on state-of-the-art metabolic labeling, metabolomics, and other related methodologies. Subsequently, both ‘historical’ and more recent papers in the field of cancer metabolism are reviewed with individual faculty experts in each chosen area. The overall goal of the course is to give students a better understanding of the abrogation of normal cellular metabolism and stress during cancer, and how these interplay with each other to create/retain a malignant state. Grades are dependent on 2 presentations per semester, class participation, and weekly answers to 2-3 questions on the assigned papers. Must have completed first-year CAMB courses to enroll.
Taught by: C. Simon, Z. Arany, and K. Wellen
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CAMB 705 Advanced Topics in Bacterial-Host Interactions
This course will delve into specific topics in general area of bacterial pathogenesis and bacteria-host interactions. We will be exploring key historical and current papers on topics related to bacterial invasion of and replication within host cells, bacterial interference with host cell signaling pathways, bacterial interactions with host mucosal tissues, and the role of bacterial colonization in shaping and instructing host immune responses. Each week, a student will lead the class in the discussion of published papers on a specific topic. The format of each class will be a 10-15 minute introduction of the key background and underlying questions to be presented by the student, followed by an in-depth analysis by all members of the class of one to two articles. Students will be graded based on their introductory presentation and active participation in the paper discussions. Recommended strong background in cell biology, immunology and/or bacteriology fulfilled by 1st year CAMB (previous BGS) courses. Course is limited to 2nd - 3rd year graduate students or advanced undergraduates with course directors permission.
Taught by: Igor Brodsky and Sunny Shin
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
CAMB 706 MVP Core
This is a year-long course for the incoming CAMB-MVP students and others wishing to gain a broad overview of pathogens and their interactions with hosts. The course will provide students with key fundamental knowledge of Microbiology, Virology and Parasitology. The course starts with introductory lectures on Concepts of Host-Pathogen interactions. The rest of the course is divided into sections on Bacteriology, Virology and Parasitology. Each week there are three 1 hour class slots that are either lectures on a specific topic or discussions of a relevant paper presented by students. Classes are led by faculty from across the campus and are highly interactive. Evaluation is based on mid and final take home essay topics for each of the three sections. Regular attendance and active participation in the discussions is also part of the evaluation.

Taught by: M. Weitzman and S. Shin
Activity: Seminar
1.0 Course Unit

CAMB 707 Cell and Gene Therapy
This course will provide students with a general overview of translational research in the area of gene and cell therapy. This includes technical considerations, translating preclinical investigation into therapeutics, the execution of gene and cell therapies clinical trials, and key regulatory issues. Entrepreneurial considerations will be discussed as well. By the end of this course, students will understand the basic technologies employed for gene and cell therapy along with approaches and pitfalls to translating these therapies into clinical applications including regulatory and commercial aspects of this emerging area. Prerequisite: At least one course in immunology.

Taught by: Michael C. Milone, MD, PhD, Elizabeth Hexner, MD, MSTR
Course usually offered in spring term
Also Offered As: MTR 621, REG 621
Activity: Lecture
1.0 Course Unit

CAMB 708 HIV Virology/Pathogenesis/Cure Seminar/Journal Club
This will be a year-long class, held every other week, that is paper-based utilizing the current literature in HIV virology, pathogenesis and cure research. The class will have a journal club format with attendance and participation open to the full Penn student & postdoc community (teach-your-peers). Enrolled students will be responsible for approximately 4-5 presentations over the duration of the course, as well as for bi-weekly paper selection in conjunction with the instructors and coordinating the presentations by other participants. Prerequisites: Strong background in cell biology, immunology or virology fulfilled by 1st yr CAMB Courses. Course is limited to graduate students. Instructor permission required for non-CAMB graduate students.

Taught by: Ronald Collman and Katharine Bar
Activity: Seminar
1.0 Course Unit

CAMB 709 Quantitative Imaging and Analysis for Biologists (QIAB)
This course will provide an introduction to the fundamentals of modern light microscopy and image analysis using the free software package, Fiji, as a guide. Topics include fundamentals of basic and advanced light microscopy, image data optimization, and commonly used processing and analysis tools such as filters, segmentation, tracking, and simple macro programming. The goal is to provide students with the background and confidence required to pursue more advanced quantitative imaging methods as the need arises in their research. Students will be graded based on their active participation in class, completion of hands-on Fiji exercises, and a final presentation describing an application of at least one of the analysis methods covered in class to their own image data. CAMB 709 is limited to 2nd - 4th-year graduate students who have previous/current experience with light microscopy. Permission to enroll from course directors is required for all students.

Taught by: M. Lakadamyali and A. Stout
Activity: Lecture
0.5 Course Units

CAMB 710 Drug Discovery and Development
This course will expose graduate-level students to the process of drug discovery and development. The course will be structured to cover topics from the identification of a disease-relevant target through to Phase III Clinical Trials. The course will be lecture based and there will also be student-led journal club presentations as part of the course. There will also be a writing project consisting of a 3 page proposal of how to advance one of the areas of Drug Discovery & Development covered in the course.

Taught by: Dr.Ben E.Black, UPenn and Dr.Craig A.Leach, GlaxoSmithKline
Course usually offered in spring term
Also Offered As: BMB 605, PHRM 605
Activity: Lecture
1.0 Course Unit

CAMB 711 Integrative plant and animal mechanobiology
This course aims to provide students with an understanding of biomechanics that spans the plant and animal kingdoms, with the goal of emphasizing principles common to both. Major concepts include 1) Plant and Animal Cell Biology; 2) Solid, Fluid, and Transport Mechanics; and 3) Integrating Biology and Mechanics - Big Questions. In addition to lectures, there will be two journal article discussion sections. Most lectures will be given by Penn faculty, although selected topics (particularly in plant biology and mechanics) will be covered by faculty at other sites through lectures broadcast remotely. The Penn director will be present at all sessions of the class. Undergraduates require special permission from the director.

Taught by: Rebecca Wells
Course usually offered in fall term
Also Offered As: BE 711
Activity: Lecture
1.0 Course Unit
CAMB 712 Topics in Cancer Biology
This course is an elective course for 2nd year Cancer Biology Students on a range of cancer-related topics. The course is designed to expose students to a range of topics in cancer biology, improve writing skills, train students to give clear and concise oral presentations, develop active listening and critical thinking skills as well as discussion skills. The course will also teach students about rigor and reproducibility in experimental design. The course will interface with Cancer Biology WIP talks (which are only given by 3rd year and up students) and complement journal club and prelim preparation. Completion of first-year CAMB courses required to enroll. Course is designed for second-year CAMB students.
Taught by: Sandra Ryeom
Two terms. student may enter either term.
Activity: Seminar
1.0 Course Unit

CAMB 713 Neuroepigenetics
This is a course intended to bring students up to date concerning our understanding of Neural Epigenetics. It is based on assigned neural and readings covering a variety of experimental systems and concepts in the field of Neuroepigenetics, formal presentations by individual students, critical evaluation of primary data, and in-depth discussion of potential issues and future directions, with goals to: 1) Review basic concepts of epigenetics in the context of neuroscience, 2) Learn to critically evaluate a topic (not a single paper) and set the premise, 3) Improve experimental design and enhance rigor and reproducibility, 4) Catch up with the most recent development in neuroepigenetics, 5) Develop professional presentation skills - be a story teller. Each week will focus on a specific topic of Neuroepigenetics via a 'seminar' style presentation by a class member. Prerequisite: If course requirement not met, permission of instructor is required.
Taught by: Zhaoalan Zhou, Elizabeth Heller, and Hao Wu
Course usually offered in fall term
Also Offered As: NGG 713
Prerequisite: BIOM 555
Activity: Lecture
1.0 Course Unit

CAMB 714 DIYtranscriptomics
As access to high-throughput sequencing technology increases, the bottleneck in biomedical research has shifted from generating data, to analyzing and integrating diverse data types. Addressing these needs requires that students and postdocs equip themselves with a toolkit for data mining and interrogation. This course focuses specifically on studying global gene expression (transcriptomics) through the use of the R programming environment and the Bioconductor suite of software packages - a versatile and robust collection of tools for bioinformatics, statistics, and plotting. During this semester-long course students participate in a mix of lectures and guided code review, all while working with real datasets directly on their laptop. Students will learn to analyze RNAseq data using a lightweight and reusable set of modular scripts that leverage open-source software. In addition, students will learn best practices in data science for working in R/Bioconductor, including creating interactive data visualizations, making their analyses transparent and reproducible, and identifying experimental bias in large datasets. Students are encouraged, but not required, to bring their own RNAseq data to the course.
Taught by: Dan Beiting
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CAMB 752 Genomics
Recent advances in molecular biology, computer science, and engineering have opened up new possibilities for studying the biology of organisms. Biologists now have access to the complete genomic sequence and set of cellular instructions encoded in the DNA of specific organisms, including homo sapiens, dozens of bacterial species, the yeast Saccharomyces cerevisiae, the nematode C. elegans, and the fruit fly Drosophila melanogaster. The goals of the course include the following: 1) introduce the basic principles involved in sequencing genomes, 2) familiarize the students with new instrumentation, informative tools, and laboratory automation technologies related to genomics, 3) teach the students how to access the information and biological materials that are being developed in genomics and 4) examine how these new tools and resources are being applied to basic and translational research. This will be accomplished through in depth discussion of classic and recent papers. Prerequisite: Permission of Instructor.
Taught by: S Dishin
Course usually offered in spring term
Also Offered As: GCB 752
Prerequisite: GCB 534
Activity: Seminar
1.0 Course Unit

CAMB 899 Pre-dissertation Research
Activity: Laboratory
1.0 Course Unit

CAMB 995 Dissertation
Activity: Dissertation
1.0 Course Unit

Chemical & Biomolecular Engineering (CBE)

CBE 099 Undergraduate Research and Independent Study
An opportunity for the student to work closely with a professor in a project to develop skills and technique in research and development. To register for this course, the student writes a one-page proposal that is approved by the professor supervising the research and submitted to the undergraduate curriculum chairman during the first week of the term. One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: A maximum of 2 c.u. of CBE 099 may be applied toward the B.S.E degree requirements

CBE 150 Introduction to Biotechnology
The goal of this course is to teach you the fundamentals of biotechnology and introduce you to concepts in Chemical Engineering along the way. Concepts in Biotechnology that will be covered include, DNA, RNA, the Central Dogma, proteins, recombinant technology, RNA silencing, electrophoresis, chromatography, synthetic biology, pull down assays, PCR, hybridization, array technology, DNA machines, DNA sequencing, and forensics. Concepts in Chemical Engineering that will be covered include the mass balance, scaling laws and the Buckingham-Pi theorem, kinetics of enzyme reactions, thermodynamics of molecular binding, the Langmuir isotherm, separations via chromatography. Reserved for Freshmen only.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
CBE 160 Introduction to Chemical Engineering
Students will learn to read and understand a process flow sheet. There is a focus on drawing a process flow sheet, and formulating and solving the material balances for the chemical processes involving chemical reactions (some with recycle streams, some with purge streams, and some with bypass streams). Additionally, students will understand the limits of the ideal gas law, and have a working knowledge of the cubic equations of state and the concept of a compressibility factor. The class will study the basic concepts of gas-liquid phase equilibrium and apply Raoult's Law to solve phase equilibrium problems. A final objective is to design flow sheets and solve material balances for simple chemical processes using ASPEN (chemical engineering simulation program).
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CBE 230 Material and Energy Balances of Chemical Processes
This course introduces the principles of material and energy balances and their applications to the analysis of single- and multi-phase processes used in the chemical, pharmaceutical, and environmental industries. The course focuses on the conceptual understanding of properties of pure fluids, equations of state, and heat effects accompanying phase changes and chemical reactions, and problem-solving skills needed to solve a wide range of realistic, process-related problems.
Course usually offered in fall term
Prerequisite: CBE 160
Activity: Lecture
1.0 Course Unit

CBE 231 Thermodynamics of Fluids
Students will understand, evaluate, and apply different equations of state relating pressure, temperature, and volume for both ideal and non-ideal systems. The course will focus on calculating and applying residual properties and departure functions for thermodynamic analysis of non-ideal gases. Students will apply and describe simple models of vapor-liquid equilibrium in multi-component systems (e.g. Raoult's Law, modified Raoult's Law, Henry's Law). Additionally, the class will analyze and describe properties of non-ideal mixtures and their component species. We will also model and predict reaction equilibria (including non-ideal fluid systems), as well as solve problems related to complex phase equilibria of multi-component systems (find equilibrium compositions for non-ideal phases).
Taught by: Amish Patel
Course usually offered in spring term
Prerequisite: CBE 230
Activity: Lecture
1.0 Course Unit

CBE 297 Study Abroad
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CBE 325 Renewable Energy
This course covers engineering concepts for renewable energy processes. Fundamental engineering calculations for solar, wind, biofuel, geothermal, and hydroelectric energy production in comparison to oil and gas will be covered. Electric vehicles and energy storage will be discussed. Students will consider the specific needs of public health, safety and welfare in addition to global, cultural, social, environmental and economic factors will be in a particular country for a group project.
Taught by: Miriam Wattenbarger
Course usually offered in spring term
Prerequisite: CHEM 101 AND PHYS 141
Activity: Lecture
1.0 Course Unit

CBE 350 Fluid Mechanics
This course is designed for students to understand the fundamental characteristics of fluids. We will develop, starting from first principles, the basic equations for fluid statics, and use them to assess buoyancy forces and determine the pressure variations in fluids with rigid body rotation. Students will understand in detail the basic types of fluid flow line patterns (e.g. streamlines and streamtubes) and the different types of interchangeable energy forms (e.g. kinetic, potential, and pressure). It is also important to develop, starting from first principles, the formulations for inviscid and viscous flow problems. These include the discussion of a control system and system boundaries, the detailed construction of conservations equations of mass, energy, and momentum for Newtonian fluids, the derivation of the Navier-Stokes equations, and the determination of appropriate initial and boundary conditions. A final objective of the course is to solve various fluid mechanics problems using control systems, dimensional analysis, and developed equations. Such problems include, but are not limited to, the terminal velocity of a falling sphere, Stokes flow, the relation between the friction factor and the Reynolds number, and flow profiles in numerous geometries.
Taught by: John Crocker
Course usually offered in fall term
Prerequisite: CBE 231
Activity: Lecture
1.0 Course Unit

CBE 351 Heat and Mass Transport
Course usually offered in spring term
Prerequisite: CBE 350
Activity: Lecture
1.0 Course Unit

CBE 353 Molecular Thermodynamics and Chemical Kinetics
Taught by: Aleksandra Vojvodic
Course usually offered in fall term
Prerequisite: CBE 231
Activity: Lecture
1.0 Course Unit
CBE 360 Chemical Process Control
Course usually offered in spring term
Prerequisite: CBE 230
Activity: Lecture
1.0 Course Unit

CBE 371 Separation Processes
The design of industrial methods for separating mixtures. Distillation; liquid-liquid extraction; membranes; absorption. Computer simulations of the processes. Course usually offered in spring term
Prerequisite: CBE 231
Activity: Lecture
1.0 Course Unit

CBE 375 Engineering and the Environment
The course will introduce emerging environmental issues, relevant engineering solutions, and problem-solving techniques to students. The case study approach will be used to assist students to develop and apply the fundamental engineering skills and scientific insights needed to recognize a variety of environmental problems that have profound impacts on all aspects of modern society. Sophomore standing required to enroll. Course usually offered in spring term
Prerequisite: Sophomore Standing
Activity: Lecture
1.0 Course Unit

CBE 400 Introduction to Product and Process Design
Introduction to product design, process synthesis, steady-state and batch process simulation, synthesis of separation trains, second-law analysis, heat integration, heat-exchanger design, equipment sizing, and capital cost estimation. Course usually offered in fall term
Prerequisites: CBE 351, 371
Corequisite: CBE 451
Activity: Lecture
1.0 Course Unit

CBE 410 Chemical Engineering Laboratory
Experimental studies in heat and mass transfer, separations and chemical reactors to verify theoretical concepts and learn laboratory techniques. Methods for analyzing and presenting data. Report preparation and the presentation of an oral technical report. Course usually offered in fall term
Prerequisites: CBE 351, 371
Activity: Laboratory
1.0 Course Unit

CBE 430 Introduction to Polymers
Polymer is one of the most widely used materials in our daily life, from the rubber tires to clothes, from photoresists in chip manufacturing to flexible electronics and smart sensors, from Scotch tapes to artificial tissues. This course teaches entry-level knowledge in polymer synthesis, characterization, thermodynamics, and structure-property relationship. Emphasis will be on understanding both chemical and physical aspects of polymers, polymer chain size and molecular interactions that drive the microscopic and macroscopic structures and the resulting physical properties. We will discuss how to apply polymer designs to advance nanotechnology, electronics, energy and biotechnology. Case studies include thermodynamics of block copolymer thin films and their applications in nanolithography, shape memory polymers, hydrogels, and elastomeric deformation and applications. Course usually offered in fall term
Also Offered As: CBE 510, MSE 430, MSE 580
Prerequisites: CBE 260 or CBE 231, CHEM 221, MEAM 203
Activity: Lecture
1.0 Course Unit

CBE 451 Chemical Reactor Design
Prerequisite: CBE 231 AND 351
Activity: Lecture
1.0 Course Unit

CBE 459 Product and Process Design Projects
Design of chemical, biochemical, and materials products and processes based on recent advances in chemical and bioengineering technology. Design group weekly meetings with faculty advisor and industrial consultants. Comprehensive design report and formal oral presentation. Heat exchanger design and profitability analysis. Course usually offered in spring term
Prerequisite: CBE 400
Activity: Lecture
1.0 Course Unit

CBE 460 Chemical Process Control
Prerequisite: CBE 230
Activity: Lecture
1.0 Course Unit
**CBE 479 Biotechnology and Biochemical Engineering**

An overview of biotechnology from a chemical engineering perspective: DNA, enzymes, proteins, molecular genetics, genetic engineering, cell growth kinetics, bioreactors, transport processes, protein recovery and protein separations. Group projects include a MATLAB kinetics project and a biotechnology company profile. Applications to current practices in biopharmaceuticals, biofuels, and bioremediation are discussed.

Junior/Senior Standing in Engineering and CBE 150 or Permission of the Instructor.

Course usually offered in fall term

Activity: Lecture

1.0 Course Unit

**CBE 480 Laboratory in Biotechnology and Genetic Engineering**

The laboratory methods covered include molecular cloning techniques, cell transformation, DNA gel electrophoresis, ImageJ, PCR, DNA sequencing, SDS-PAGE, mammalian cell culture and enzyme assays. Culture techniques for bacteria, yeast and mammalian cells are taught and practiced. The students write several individual lab reports and keep a weekly lab notebook during the semester. A group presentation and report on a proposal for a new lab experiment is the final assignment for the lab.

Course usually offered in spring term

Prerequisite: CBE 479

Activity: Laboratory

1.0 Course Unit

**CBE 508 Probability and Statistics for Biotechnology**

The course covers topics in probability theories and statistical techniques, with emphases placed on the practical problems relevant to the subject areas of biotechnology. The course provides a rigorous introduction to such topics as elements of probability, random variables and probability functions, random samples, parameter estimations, hypothesis testing, regression, analysis of variance, lifetime testing, and nonparametric tests.

Course usually offered summer term only

Activity: Lecture

1.0 Course Unit

**CBE 510 Introduction to Polymers**

Polymer is one of the most widely used materials in our daily life, from the rubber tires to clothes, from photoresists in chip manufacturing to flexible electronics and smart sensors, from Scotch tapes to artificial tissues. This course teaches entry-level knowledge in polymer synthesis, characterization, thermodynamics, and structure-property relationship. Emphasis will be on understanding both chemical and physical aspects of polymers, polymer chain size and molecular interactions that drive the microscopic and macroscopic structures and the resulting physical properties. We will discuss how to apply polymer designs to advance nanotechnology, electronics, energy and biotechnology. Case studies include thermodynamics of block copolymer thin films and their applications in nanolithography, shape memory polymers, hydrogels, and elastomeric deformation and applications.

Course usually offered in fall term

Also Offered As: CBE 430, MSE 430, MSE 580

Prerequisites: MSE 260 or CBE 231, CHEM 221, MEAM 203

Activity: Lecture

1.0 Course Unit

**CBE 511 Physical Chemistry of Polymers and Amphiphiles**

This course deals with static and dynamic properties of two important classes of soft materials: polymers and amphiphiles. Examples of these materials include DNA, proteins, diblock copolymers, surfactants and phospholipids. The fundamental theories of these materials are critical for understanding polymer processing, nanotechnology, biomembranes and biophysics. Special emphasis will be placed on understanding the chain conformation of polymer chains, thermodynamics of polymer chains, thermodynamics of polymer solutions and melts, dynamics of polymer and statistical thermodynamic principles of self-assembly.

Course usually offered in fall term

Activity: Lecture

1.0 Course Unit

**CBE 515 Chemical Product Design**

Introduction to product design, molecular and mixture design, functional and formulated product design, design of device products, pharmaceutical product and process design, optimal batch process design strategies, batch process simulation, six-sigma design

Taught by: Warren D. Seider

Activity: Lecture

1.0 Course Unit

**CBE 517 Principles of Genome Engineering**

This course covers up-to-date techniques in genome engineering and its application in basic research and translational medicine. Genetic engineering techniques including site-directed DNA recombination (Cre-Lox, Phi31 integrase), genome editing (TALEN, CRISPR/Cas-9), next generation sequencing, and molecular imaging will be covered. Key concepts in genomics, epigenetics, gene regulation will be introduced, and application of genetic engineering techniques in the field of developmental biology, stem cell biology, and synthetic biology will be discussed.

Course usually offered in spring term

Activity: Lecture

1.0 Course Unit

**CBE 522 Polymer Rheology and Processing**

This course focuses on applications of rheology to polymer process technologies. It includes a general review of rheological concepts, including viscoelasticity and the influence of shear rate, temperature and pressure on polymer flow properties. The course covers the elementary processing steps common in various types of polymer manufacturing operations including handling of particulate solids, melting, pressurizing and pumping, mixing and devolatilization. Specific polymer processing operations including extrusion, injection molding, compression molding, fiber spinning and wire coating are covered. Emerging polymer processing applications in microelectronics, biomedical devices and recycling are also discussed.

One-term course offered either term

Prerequisites: MEAM 302 and 333 or CBE 350 and 351

Activity: Lecture

1.0 Course Unit
CBE 525 Molecular Modeling and Simulations
Students will explore current topics in thermodynamics through molecular simulations and molecular modeling. The requisite statistical mechanics will be conveyed as well as the essential simulation techniques (molecular dynamics, Monte Carlo, etc.). Various approaches for calculating experimentally measurable properties will be presented and used in student projects.
Course usually offered in fall term
Prerequisite: CBE 231 OR CBE 618
Activity: Lecture
1.0 Course Unit

CBE 535 Interfacial Phenomena
This course provides an overview of fundamental concepts in colloid and interface science. Topics include the thermodynamics of interfaces, interfacial interactions (e.g. van der Waal's interactions, electrostatics, steric interactions), adsorption, the hydrodynamics and stability of interfacial systems, self assembly, etc. Connections to self-assembly and directed assembly of nanomaterials and emerging topics are explored.
Prerequisites: undergraduate thermodynamics, some familiarity with concepts of transport phenomena (including fluid flow and mass transfer) and differential equations
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CBE 540 Biomolecular and Cellular Engineering
This course will introduce concepts and methods for the quantitative understanding of molecular and cellular phenomena. Topics include molecular recognition, receptor-ligand binding, viral infection, signal transduction, cell adhesion, motility, and cytoskeletal dynamics. The course requires mathematics at the level of differential equations, and some knowledge of Matlab programming. A basic knowledge of cell biology is suggested, although not required.
One-term course offered either term
Also Offered As: BE 540
Activity: Lecture
1.0 Course Unit

CBE 541 Engineering and Biological Principles in Cancer
This course provides an integrative framework and provides a quantitative foundation for understanding molecular and cellular mechanisms in cancer. The topics are divided into three classes: (1) the biological basis of cancer; (2) cancer systems biology; and (3) multiscale cancer modeling. Emphasis is placed on quantitative models and paradigms and on integrating bioengineering principles with cancer biology. Prerequisite: Seniors in BE or permission of the instructor.
Course usually offered in spring term
Also Offered As: BE 541
Activity: Lecture
1.0 Course Unit

CBE 544 Computational Science of Energy and Chemical Transformations
Our theoretical and computational capabilities have reached a point where we can do predictions of materials on the computer. This course will introduce students to fundamental concepts and techniques of atomic scale computational modeling. The material will cover electronic structure theory and chemical kinetics. Several well-chosen applications in energy and chemical transformations including study and prediction of properties of chemical systems (heterogeneous, molecular, and biological catalysts) and physical properties of materials will be considered.
This course will have modules that will include hands-on computer lab experience and teach the student how to perform electronic structure calculations of energetics which form the basis for the development of a kinetic model for a particular problem, which will be part of a project at the end of the course. Thermodynamics, Kinetics, Physical Chemistry, Quantum Mechanics. Undergraduates should consult and be given permission by the instructor.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CBE 545 Electrochemical Energy Conversion and Storage
Fuel cells, electrolysis cells, and batteries are all electrochemical devices for the interconversion between chemical and electrical energy. These devices have inherently high efficiencies and are playing increasingly important roles in both large and small scale electrical power generation, transportation (e.g. hybrid and electric vehicles), and energy storage (e.g. production of H2 via electrolysis). This course will cover the basic electrochemistry and materials science that is needed in order to understand the operation of these devices, their principles of operation, and how they are used in modern applications. Prerequisite: Introductory chemistry and an undergraduate course in thermodynamics (e.g. CBE 231, MEAM, 203)
One-term course offered either term
Prerequisites: CBE 231, MEAM 203
Activity: Lecture
1.0 Course Unit

CBE 546 Fundamentals of Industrial Catalytic Processes
A survey of heterogeneous catalysis as applied to some of the most important industrial processes. The tools used to synthesize and characterize practical catalysts will be discussed, along with the industrial processes that use them.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CBE 554 Engineering Biotechnology
Advanced study of re DNA techniques; bioreactor design for bacteria, mammalian and insect culture; separation methods; chromatography; drug and cell delivery systems; gene therapy; and diagnostics.
Course usually offered in spring term
Also Offered As: BE 554
Activity: Lecture
1.0 Course Unit
CBE 555 Nanoscale Systems Biology
Nanoscience and engineering approaches to systems in biology are of growing importance. They extend from novel methods, especially microscopies that invite innovation to mathematical and/or computational modeling which incorporates the physics and chemistry of small scale biology. Proteins and DNA, for example, are highly specialized polymers that interact, catalyze, stretch and bend, move, and/or store information. Membranes are also used extensively by cells to isolate, adhere, deform, and regulate reactions. In this course, students will become familiar with cell & molecular biology and nanobiotechnology through an emphasis on nano-methods, membranes, molecular machines, and ‘polymers’ - from the quantitative perspectives of thermodynamics, statistical physics, and mechanics. We specifically elaborate ideas of energetics, fluctuations and noise, force, kinetics, diffusion, etc. on the nano- thru micro- scale, drawing from very recent examples in the literature. Laboratory experiments will provide hands-on exposure to microscopies in a biological context (eg. fluorescence down to nano-scale, AFM), physical methods (eg. micromanipulation, tracking virus-scale particles or quantum dots), and numerical problems in applied biophysics, chemistry, and engineering. A key goal of the course is to familiarize students with the concepts and technology (plus their limitations) as being employed in current research problems in nanoscale systems biology, extending to nanobiotechnology.
Prerequisite: Background in Biology, Physics, Chemistry or Engineering with coursework in Thermodynamics or permission of the instructor.
Taught by: Discher
Course usually offered in fall term
Also Offered As: BE 555, MEAM 555
Activity: Lecture
1.0 Course Unit

CBE 556 The Biochemical Engineering of Wine
This course surveys the biochemistry and biochemical unit operations involved in the commercial production of modern wines. Topics will include grape growing, pressing, fermentation, filtration, and packaging/aging. Emphasis will also be placed on yeast microbiology and wine biochemistry. Lectures will be supported by wine tasting sessions to highlight the important characteristics of different wine types.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: This course can only be used as a Technical Elective in SEAS

CBE 557 Stem Cells, Proteomics and Drug Delivery - Soft Matter Fundamentals
Lectures on modern topics and methods in cell and molecular biology and biomedicine from the perspective of soft matter science and engineering. Discussions and homeworks will cover soft matter related tools and concepts used to 1) isolate, grow, and physically characterize stem cells, 2) quantify biomolecular profiles, 3) deliver drugs to these cells and other sites (such as tumors with cancer stem cells) will be discussed. Skills in analytical and professiona presentations, papers and laboratory work will be developed. Background in Biology, Physics, Chemistry or Engineering.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CBE 559 Multiscale Modeling of Chemical Systems
This course provides theoretical, conceptual, and hands-on modeling experience on three different length and time scales - (1) electronic structure (A, ps); (2) molecular mechanics (100A, ns); and (3) deterministic and stochastic approaches for microscale systems (um, sec). Students will gain hands-on experience, i.e., running codes on real applications together with the following theoretical formalisms: molecular dynamics, Monte Carlo, free energy methods, deterministic and stochastic modeling. Prerequisite: Undergraduate courses in numeral analysis and statistical mechanics.
Course not offered every year
Also Offered As: BE 559, SCMP 559
Activity: Lecture
1.0 Course Unit

CBE 562 Drug Discovery and Development
Intro to Drug Discovery; Overview of Pharmaceutical Industry and Drug Development Costs, Timelines; High Throughput Screening (HTS); Assay Design and Sensitivity Solid Phase Synthesis and Combinatorial Chemistry; Enzyme Kinetics; Fluorescence, Linearity, Inner-filter effect, quenching; Time dynamics of a Michaelis-Menton Reaction; Competitive Inhibitor; FLINT, FRET, TRF, FP, SPA, alpha-screen; Enzyme HTS (protease); Cell based screening; Fura-2 ratio, loading signaling; Gfpcalcmodulin-gfp integrated calcium response; Estrogen/ERE-Luc HTS; Problems with cell based screening (toxicity, permeability, nonspecificity); Instrumentation, Robotics/Automation; 2-factor; SAR, Positioning Scanning; Microarray HTS; IC50, % Conversion in HTS and IC50, Assay Optimization.
Course usually offered in fall term
Also Offered As: BE 562
Activity: Lecture
1.0 Course Unit

CBE 564 Drug Delivery
The topics include drug transport, distribution and interactions in the body, specific challenges for biotherapeutics, pharmacokinetics, drug delivery systems and nanocarriers, gene delivery systems, targeted drug delivery, and translational aspects of new drug delivery systems. Faculty from engineering and medicine will give lectures related to their research interests. The students read current journal articles on drug delivery systems. The major group assignment for the course is a written and oral group proposal on a new drug delivery system.
One-term course offered either term
Also Offered As: PHRM 564
Activity: Lecture
1.0 Course Unit
CBE 570 Experimental Methods for Polymer Science and Soft Matter - Theory and Practice
This course covers the relevant theory and practical application of experimental methods used to study the structure, dynamics and physico-chemical properties of soft matter and macromolecular materials. Systems of interest include self-assembled polymers and (macro)molecular materials, liquid crystals, colloidal suspensions, biological materials, gels, and other complex fluids. Particular emphasis is placed on the development of kinematic theory for X-ray scattering, methods of structure determination by (x-ray/electron) diffraction, microscopy (optical; atomic force; electron), dynamic scattering (light/ optical; x-ray, neutron) and rheology (bulk and microrheology). Thermomechanical, electronic and optical property characterization are also addressed. Lectures are complemented by lab exercises and projects. The subject matter is particularly relevant for students conducting experimental research on macromolecular materials, soft matter and complex fluids. Senior standing or permission of the instructor. Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CBE 580 Masters Biotech Lab.
The laboratory methods covered include molecular cloning techniques, cell transformation, DNA gel electrophoresis, ImageJ, PCR, DNA sequencing, SDS-PAGE, mammalian cell culture, and enzyme assays. Culture techniques for bacteria, yeast and animal cells are taught and practiced. The students write several individual lab reports and keep a lab notebook during the semester. A group presentation and report on a proposal for a new lab experiment is the final assignment for the lab. One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: Reserved for students in the Master of Biotechnology Program. Not open to SEAS undergraduates.

CBE 597 Master's Thesis Research
One-term course offered either term
Activity: Masters Thesis
1.0 Course Unit

CBE 599 Master's Indep Study
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

CBE 602 Statistical Mechanics of Liquids
The course will focus on advanced concepts and methods in statistical mechanics with a particular emphasis on the liquid state, e.g. aqueous solutions, capillarity, polymers, colloids, glasses, amphiphilic self-assembly, etc. Principles of both equilibrium and nonequilibrium statistical mechanics will be discussed and connections to experimentally measurable quantities will be made wherever possible. One-term course offered either term
Prerequisites: CBE 618, MSE 575, BE 619, BMB 604, PHYS 581, CHEM 521 and PHYS 611 and CHEM 522
Activity: Lecture
1.0 Course Unit

CBE 618 Advanced Molecular Thermodynamics
This course begins with a brief review of classical thermodynamics, including the development of Maxwell relationships and stability analysis. The remainder of the course develops the fundamental framework of statistical mechanics, then reviews various related topics including ideal and interacting gases, Einstein and Debye models of crystals, lattice models of liquids, and the basis of distribution function theory. Course usually offered in fall term
Also Offered As: BE 662, MEAM 662
Activity: Lecture
1.0 Course Unit

CBE 621 Advanced Chemical Kinetics and Reactor Design
Activity: Lecture
1.0 Course Unit

CBE 640 Transport Processes I
This course provides a unified introduction to momentum, energy (heat), and mass transport processes. The basic mechanisms and constitutive laws for the various transport processes will be delineated, and the conservation equations will be derived and applied to internal and external flows. Examples from mechanical, chemical, and biological systems will be used to illustrate fundamental concepts and mathematical methods. Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CBE 641 Transport Processes II (Nanoscale Transport)
A continuation of CBE 640, with additional emphasis on heat and mass transport. This course aims to teach transport concepts and methods useful in many current CBE laboratory settings. The emphasis will be on microscopic dynamics and transport in both hard and soft systems (e.g. colloids and polymers), of relevance to a variety of biological and biomolecular systems. Wherever possible, will make connections between classical, macroscopic transport, and what is happening microscopically. Will make use of a comination of analytic and algorithmic/numerical methods to facilitate understanding of the material. Physical topics will include stochastic, ‘single-molecule’, non-ideal, hard sphere and frustrated systems, phase transitions, nonequilibrium statistical mechanics and optics. Concepts will include properties of stochastic functions (Gaussian statistics, correlation functions and power spectra), Fourier methods, Convolution, the Central Limit theorem, anomalous diffusion, percolation, and the Fluctuation/Dissipation theorem. Computational methods will concentrate on Monte Carlo simulations of ‘toy’ models. Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
CBE 895 Teaching Practicum
This course provides training in the practical aspects of teaching. The students will work with a faculty member to learn and develop teaching and communication skills. As part of the course, students will participate in a range of activities that may include: giving lectures, leading recitations, supervising laboratory experiments, developing instructional laboratories, developing instructional material, preparing and grading homework assignments and solution sets, and preparing examinations. Feedback on the recitations will be provided to the student by the faculty responsible for the course. The course is graded on a Satisfactory/Unsatisfactory basis. The evaluation will be based on comments of the students taking the course and the impressions of the faculty.
Taught by: John Crocker
One-term course offered either term
Activity: Teacher Education
0.0 Course Units

CBE 899 Independent Study
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

CBE 990 Masters Thesis
For Master's students who have completed the course requirements for the Master's degree and are strictly working to complete the Master's Thesis leading to the completion of a Master's degree. Permission Required.
One-term course offered either term
Activity: Masters Thesis
1.0 Course Unit

CBE 995 Dissertation
One-term course offered either term
Activity: Dissertation
1.0 Course Unit

CBE 999 Thesis/Dissertation Research
For students working on an advanced research program leading to the completion of master's thesis or Ph.D. dissertation requirements. One-term course offered either term
Activity: Independent Study
1.0 Course Unit

Chemistry (CHEM)

CHEM 010 Academic Based Community Service-Chemistry Outreach
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CHEM 012 Environmental Chemistry
The course aims to teach chemical content and principles in the context of significant environmental issues. Topics to be covered include: composition of the atmosphere; protecting the ozone layer; chemistry of global warming; traditional hydrocarbon fuels and energy utilization; water supply, its contaminants, and waste water treatment; acid rain; nuclear energy; and new energy sources. Students will develop critical thinking ability, competence to better assess risks and benefits, and skills that will lead them to be able to make informed decisions about technology-based matters. Prerequisite: The course requires math literacy at the high school algebra level (2 years) and a willingness to learn Excel. Student must also have taken one year of high school chemistry.
For BA Students: Physical World Sector
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: The course requires math literacy at the high school algebra level (2 years) and a willingness to learn Excel. Students also must have taken one year of high school chemistry.

CHEM 022 Structural Biology
This course will explain in non-mathematical terms how essentially all biological properties are determined by the microscopic chemical properties of proteins. It will also explain how research results, especially those of structural biology, are presented to its various audiences.
For BA Students: Natural Science and Math Sector
One-term course offered either term
Activity: Seminar
0.5 Course Units
Notes: Freshman Seminar

CHEM 025 Freshman Seminar: From Alchemy to Nanoscience
The imperative to transform matter, find its roots in alchemy and the search for the Philosopher's Stone, which was thought to contain the secret of turning base metals into gold and also the secret of immortality. We will examine the evolution of the way in which people have thought about matter and its transformations; from the manufacturing of explosives to dyestuffs to pharmaceuticals and perfumes. We will do some simple experiments that demonstrate some of these principles. We will follow the development of the chemical sciences from the works of early alchemists to Renaissance (Newton and Boyle) scientists and modern thinkers (Priestly, Lavoisier, Dalton, Mendeleev and others). This class, which is designed for non-science as well as potential science majors, will involve discussions on readings, as well as field trips to some Philadelphia locations that are notable in the history of chemistry.
Taught by: Jeffrey Winkler
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

CHEM 053 General Chemistry Laboratory I
A general laboratory course covering aspects of qualitative and quantitative analysis, determination of chemical and physical properties, and chemical synthesis. Lab fee $150.
One-term course offered either term
Activity: Laboratory
0.5 Course Units

CHEM 054 General Chemistry Laboratory II
Continuation of CHEM 053. Lab fee $150
One-term course offered either term
Activity: Laboratory
0.5 Course Units
CHEM 100 Introduction to General Chemistry
This course is equivalent to Chemistry 101 but is intended for students with less preparation in high school chemistry and mathematics, and moves more methodically through the introductory chapters. The course covers most of the same topics as Chem101 and is designed to provide students with the skills needed to succeed in Chem102. In Chem100 there is a strong emphasis on problem-solving that is fundamental to all physical science. Topics will include: introduction to fundamental chemical ideas and their application to chemical reactions, stoichiometry and ideal gases. Also provided is an overview of the periodic table and classical ideas of chemical bonding using Lewis structures. Quantum theory will be introduced - focusing on its role in understanding atomic structure, the periodic table, and chemical bonding. Topics from mathematics and physics that are necessary to chemical problem-solving will be included as needed. Prerequisite: Students with credit for CHEM 101 may not enroll in CHEM 100. Credit will not be awarded for both CHEM 100 and 101.
For BA Students: Physical World Sector
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Students with credit for CHEM 101 may not enroll in CHEM 100. Credit will not be awarded for both CHEM 100 and 101.

CHEM 101 General Chemistry I
Basic concepts and principles of chemistry and their applications in chemistry and closely-related fields. The first term emphasizes the understanding of chemical reactions through atomic and molecular structure. This is a university level course, treating the material in sufficient depth so that students can solve chemical problems and can understand the principles involved in their solution. It includes an introduction to condensed matter. This course is suitable for majors or non-majors and is recommended to satisfy either major or pre-professional requirements for general chemistry. This course is presented for students with high school chemistry and calculus. Students with a lesser background than this should take CHEM 100. Prerequisite: Students with credit for CHEM 100 may not enroll in CHEM 101. Credit is not awarded for both CHEM 101 and 100.
For BA Students: Physical World Sector
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: Students with credit for CHEM 100 may not enroll in CHEM 101. Credit is not awarded for both CHEM 101 and 100.

CHEM 102 General Chemistry II
Continuation of Chemistry 101. The second term stresses the thermodynamic approach to chemical reactions, electrochemical processes, and reaction rates and mechanisms. It includes special topics in chemistry.
For BA Students: Physical World Sector
One-term course offered either term
Prerequisite: CHEM 101 AND MATH 104
Activity: Lecture
1.0 Course Unit

CHEM 102 Introduction to General Chemistry
This course is equivalent to Chemistry 101 but is intended for students with less preparation in high school chemistry and mathematics, and moves more methodically through the introductory chapters. One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: Students with credit for CHEM 100 may not enroll in CHEM 101. Credit is not awarded for both CHEM 101 and 100.

CHEM 102 General Chemistry II
Continuation of Chemistry 101. The second term stresses the thermodynamic approach to chemical reactions, electrochemical processes, and reaction rates and mechanisms. It includes special topics in chemistry.
For BA Students: Physical World Sector
One-term course offered either term
Prerequisite: CHEM 101 AND MATH 104
Activity: Lecture
1.0 Course Unit

CHEM 115 Honors Chemistry I
This course will focus on introducing students to the following topics: the nature of the chemical bond (forces, potentials, and quantum mechanics), covalent and non-covalent interactions, properties of gasses, liquids, and solids. Students in section 001 will be introduced to modern computational chemistry methods and section 002 introduces students to modern experimental techniques. Prerequisite: AP Chemistry exam score of 5.
For BA Students: Physical World Sector
Corequisite: MATH 114
Activity: Lecture
1.0 Course Unit
Notes: Freshman only.

CHEM 116 Honors Chemistry II
An advanced course for students who have had very strong background in Chemistry in High School (AP, IB, or equivalent). Advanced material from the general chemistry curriculum will be covered in the context topics selected from current research areas. A continuation of Honors Chemistry I, Honors Chemistry II will focus on topics in biochemistry and biophysical chemistry relating to thermodynamics, equilibrium, kinetics, and electrochemistry. Prerequisite: Advanced High School Chemistry (AP or equivalent).
For BA Students: Physical World Sector
Taught by: Subotnik
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CHEM 221 Physical Chemistry I
Introductory quantum mechanics, atomic and molecular structure, chemical bonding, and microscopic understanding of physical and chemical properties of molecules.
Course usually offered in fall term
Prerequisite: CHEM 102 AND MATH 114 AND PHYS 150
Activity: Lecture
1.0 Course Unit

CHEM 222 Physical Chemistry II
Continuation of Physical Chemistry I. Principles and applications of thermodynamics, and a molecular-based understanding of macroscopic properties.
Taught by: Gai
Course usually offered in spring term
Prerequisite: CHEM 221 AND PHYS 151
Activity: Lecture
1.0 Course Unit

CHEM 223 Experimental Physical Chemistry I
Important methods, skills, and apparatus used for the acquisition and interpretation of quantitative information about chemical systems will be discussed in principle and used in the laboratory. Lab fee $300.
Course usually offered in spring term
Prerequisite: CHEM 221
Activity: Laboratory
1.0 Course Unit

CHEM 241 Principles of Organic Chemistry
Fundamental course in organic chemistry based upon the modern concepts of structure and mechanism of reactions.
One-term course offered either term
Prerequisite: CHEM 102
Activity: Lecture
1.0 Course Unit
CHEM 242 Principles of Organic Chemistry II
Continuation of CHEM 241.
One-term course offered either term
Prerequisite: CHEM 241
Activity: Lecture
1.0 Course Unit

This course is functionally equivalent to Organic Chemistry II as the second term of introductory Organic Chemistry, placing the content in the context of biology and medicine. Topics include: 1) alkyl compounds, ethers, epoxides and sulfides in lipids; 2) carboxylic acids and amines in amino acids; 3) aromatic compounds and heterocycles in nucleic acids; and 4) ketones and aldehydes in carbohydrates. The synthesis and mechanism of action of pharmaceuticals that feature these functional groups will also be discussed. Additionally, this course makes use of 3D structure tutorials, recitation sections and visits from biomedical scientists who make use of chemistry in their work.
Taught by: Chenoweth, Petersson
Course usually offered in spring term
Prerequisite: CHEM 241
Activity: Lecture
1.0 Course Unit

CHEM 244 Experimental Organic Chemistry Lab I
A basic laboratory course where modern chromatographic, instrumental, and spectroscopic techniques are applied to experimental organic chemistry. Course must be taken concurrently with Organic Chemistry I.
Taught by: Hall
Corequisite: CHEM 241
Activity: Laboratory
0.5 Course Units

CHEM 245 Experimental Organic Chemistry
A basic laboratory course in which both the theoretical and practical aspects of a variety of organic reactions and multistep syntheses are emphasized. Modern chromatographic, instrumental, and spectroscopic techniques are applied to experimental organic chemistry. Course should be taken concurrently with Organic Chemistry II or in the semester immediately following. PLEASE NOTE THE FOLLOWING: For the Summer and LPS offering of Organic Chemistry Lab., it is a 2-semester course. Part 1 is taken in the first term for 0.5 CU and then Part 2 is taken in the second term immediately following the first for 0.5 CU.
Taught by: Hall
One-term course offered either term
Prerequisite: CHEM 241
Corequisite: CHEM 243
Activity: Laboratory
1.0 Course Unit

CHEM 246 Advanced Synthesis and Spectroscopy Laboratory
Advanced laboratory work on the synthesis, structure, and properties of organic and inorganic compounds. Infrared, ultraviolet, and nuclear magnetic resonance spectroscopy. Lectures cover the theoretical basis and applications of modern spectroscopic methods. Lab fee $300.
Course usually offered in fall term
Prerequisite: (CHEM 242 OR CHEM 243) AND CHEM 245
Corequisite: CHEM 261
Activity: Laboratory
1.0 Course Unit

CHEM 249 Experimental Organic Chemistry Laboratory II
A continuation of CHEM 244, where the techniques introduced and practiced in Experimental Organic Chemistry I are applied to a variety of organic reactions and multistep syntheses. Course must be taken concurrently with Organic Chemistry II lecture.
Taught by: Rutherford
Corequisite: CHEM 242 OR CHEM 243
Activity: Laboratory
0.5 Course Units

CHEM 251 Principles of Biological Chemistry
Fundamentals of biological chemistry, including the structure of biological macromolecules and their mechanism of action, intermediary metabolism, and the chemical basis of information transfer. Course can be taken concurrently with CHEM 242 or CHEM 243.
One-term course offered either term
Prerequisite: CHEM 102 AND CHEM 241
Corequisite: CHEM 242 OR CHEM 243
Activity: Lecture
1.0 Course Unit

CHEM 256 Inorganic Chemistry I
An introductory survey of the bonding, structure, and reactions of important metal and nonmetal compounds.
Course usually offered in fall term
Prerequisite: CHEM 242 or CHEM 243
Activity: Lecture
1.0 Course Unit

CHEM 299 Directed Study and Seminar
Independent project under the direction of a faculty member conducting chemistry research. Prerequisite: Permission of undergraduate chairman.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

CHEM 399 Independent Research
Independent project under the direction of a faculty member conducting chemistry research. Prerequisite: Permission of undergraduate chairman; a B average in Chemistry, Mathematics, and Physics.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

CHEM 441 Organic Reaction Mechanisms
Study of important types of reactions and functional groups, with emphasis on synthetic usefulness, mechanisms, and stereoelectronic principles.
Course usually offered in fall term
Prerequisite: CHEM 242
Activity: Lecture
1.0 Course Unit

CHEM 443 Modern Organic Synthesis
Introduction to advanced organic synthesis. Study of important synthetic reactions including: oxidations, reductions, and methods for the formation of carbon-carbon bonds, with an emphasis in chemoselectivity, stereoselectivity and asymmetric synthesis. Survey of modern methods for the synthesis of small, medium and large ring systems. Analysis of modern synthetic strategies, with illustrative examples from total synthesis of natural and unnatural products.
Course usually offered in fall term
Prerequisite: CHEM 441
Activity: Lecture
1.0 Course Unit
CHEM 451 Biological Chemistry I
Structure, dynamics, and function of biological macromolecules. Properties of macromolecular assemblies, membranes and their compartments. (Formerly, CHEM 450-I).
Course usually offered in fall term
Prerequisite: (CHEM 242 OR CHEM 243) AND CHEM 221 AND CHEM 251
Activity: Lecture
1.0 Course Unit

CHEM 452 Biological Chemistry II
Physical and chemical description of macromolecular information transfer. Gene organization, replication, recombination, regulation and expression. (Formerly, CHEM 450-II)
Course usually offered in spring term
Prerequisite: (CHEM 242 OR CHEM 243) AND CHEM 222 AND CHEM 251
Activity: Lecture
1.0 Course Unit

CHEM 462 Inorganic Chemistry II
A detailed treatment of the theory and application of modern physical methods for the elucidation of structure and mechanism in inorganic and organometallic chemistry. An introduction to symmetry and group theory is followed by the application of these concepts to vibrational and electronic spectroscopy of inorganic complexes. Magnetic resonance is discussed in detail, including topics such as EPR, fourier transform methods, dynamic systems, and 2-dimensional NMR.
One-term course offered either term
Prerequisite: CHEM 261
Activity: Lecture
1.0 Course Unit

CHEM 495 High Throughput Discovery: A Multidisciplinary Approach to Cancer.
The newly developed massively parallel technologies have enabled the simultaneous analysis of many pathways. There are several large scale international efforts to probe the genetics and drug sensitivity of cancer cell lines. However, there are some rare cancers that have not been analyzed in depth. One of these rare cancers is malignant peripheral nerve sheet tumors (MPNST). MPNST, although a rare cancer, are common in patients with neurofibromatosis type. In the course, students will take part in a high throughput discovery effort in two phases. Phase 1 is a training phase, which will consist of quantitative profiling the sensitivity of MPNST cell lines to a library of >120 common and experimental cancer drugs. These will be conducted in the UPenn High Throughput Screening Core. (http://www.med.upenn.edu/cores/High-ThroughputScreeningCore.shtml). While we call this a training phase, the data from this will be subject to rigorous quality control for eventual publication and development of a public database for rare tumors. Phase 2 is an independent research project. Examples of projects include, but are not limited to: Combinatorial screens (synthetic lethal); siRNA screens; novel compound screens; determining mechanisms of cell death; developing tools for data analysis and database development. During phase 2, students will also modify compounds of interest using the Penn Chemistry Upenn/Merck High Throughput Experimentation Laboratory (https://www.chem.upenn.edu/content/penn-chemistry-upennmerck-high-throughput-experimentation-laboratory), and then retest them for activity to determine structure activity relationships. We will sponsor phase 2 projects relevant to neurofibromatosis. However, in phase two students can also research other areas if they develop sponsorships from professors. We expect the course to be a hypothesis engine that generates ideas for further research. Prerequisites include a strong foundation in biology and chemistry. Students will prepare an abstract proposal by week four on their phase 2 projects, and a report in scientific paper style, due on the last day of the semester. In addition to attending the class lecture, an estimated 10 hours a week Independent Laboratory Research is expected.
Taught by: Dr.'s Jeffrey Field, David Schultz, and Simon Berritt
Course usually offered in spring term
Also Offered As: PHRM 495
Activity: Laboratory
1.0 Course Unit

CHEM 521 Statistical Mechanics I
Principles of statistical mechanics with applications to systems of chemical interest.
Course usually offered in fall term
Prerequisite: CHEM 222
Activity: Lecture
1.0 Course Unit

CHEM 522 Statistical Mechanics II
A continuation of CHEM 521. The course will emphasize the statistical mechanical description of systems in condensed phases.
Course usually offered in spring term
Prerequisite: CHEM 521
Activity: Lecture
1.0 Course Unit

CHEM 523 Quantum Chemistry I
The principles of quantum theory and applications to atomic systems.
Course usually offered in fall term
Prerequisite: CHEM 221
Activity: Lecture
1.0 Course Unit
CHEM 524 Quantum Chemistry II
Approximate methods in quantum theory and applications to molecular systems.
Course usually offered in spring term
Prerequisite: CHEM 523
Activity: Lecture
0.5 Course Units

CHEM 525 Molecular Spectroscopy
This course is broken into two sections: (1) optics, and (2) theory of spectroscopy including the discussion of techniques and examples. In the first section you will be introduced to both linear and nonlinear optics, through thinking about how to design optical components in the laboratory setting. The second part of the course is a more traditional spectroscopy course, where different spectroscopies in the visible and infrared spectral region will be discussed. This part of the course will focus on understanding what we can learn from using spectroscopy and what sort of dynamical processes can be observed with different spectroscopic techniques. Topics to be covered include, but are not limited to: optics, time-dependent perturbation theory, lineshapes, density matrix, group theory, selection rules.
One-term course offered either term
Activity: Lecture
0.5 Course Units

CHEM 526 Chemical Dynamics
Theoretical and experimental aspects of important rate processes in chemistry.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CHEM 541 Physical Organic Chemistry
This course a high level overview of methods for the study of organic, organometallic, and inorganic reaction mechanism. Chem 441 (Mechanisms) or Chem 564 (Organometallics) is required. The course will survey thermodynamic and kinetic measurements used in understanding chemical reactions. Topics include kinetic measurements and interpretation, Arrhenius theory, Eyring theory, kinetic isotope effects, Hammett analyses, and electronic structure calculations. Articles discussing these techniques in delineating the reaction mechanisms for problems of current interest will be analyzed. The focus will be on experiments that can be accomplished with readily available analytical tools (NMR, IR, UV, GC, HPLC) and how an understanding of mechanism can be used to optimize reaction yields and selectivities.
Taught by: Kozlowski
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

CHEM 551 Methods for in vivo biochemical discovery
One-term course offered either term
Activity: Lecture
0.5 Course Units

CHEM 555 Macromolecular Crystallography: Methods and Applications
This is an introductory course on methods and applications of macromolecular structure determination using X-ray crystallography. The course will be broken up into three parts: 1) Principles of X-ray crystallography involving didactic lectures on the technique with weekly problem sets; 2) Workshops on macromolecular structure determination involving hands-on experience with the technology; 3) Student 'journal club' presentations on current high impact publications involving X-ray crystal structure determination. Prerequisite: Undergraduate calculus and trigonometry.
Taught by: Marmorstein and Skordalakes
Course usually offered in fall term
Also Offered As: BMB 554
Activity: Lecture
1.0 Course Unit

CHEM 557 Mechanisms of Biological Catalysis
Reaction mechanisms in biological (enzymes, abzymes, ribozymes) and biomimetic systems with emphasis on principles of catalysis, role of coenzymes, kinetics, and allosteric control.
One-term course offered either term
Prerequisite: CHEM 242 AND (CHEM 251 OR BIOL 204)
Activity: Lecture
1.0 Course Unit

CHEM 558 Biomolecular Spectroscopy and Microscopy
Chem 558 covers basic fluorescence spectroscopy and microscopy, as well as advanced topics such as single molecule spectroscopy and non-linear and super-resolution microscopies. In addition to lectures, the course includes hands-on laboratory 'field trips' where students will collect and analyze data relevant to course topics. There are weekly homework assignments that include problems based on the lectures as well as reading of primary literature.
Taught by: Rhoades
Course usually offered in fall term
Also Offered As: BMB 558
Activity: Lecture
1.0 Course Unit

CHEM 561 Organometallics
This course is focused on molecular species that contain metal-carbon bonds, and the role of these compounds in catalytic processes and organic synthesis. Aspects of the synthesis, structure and reactivity of important classes of organometallic compounds such as metallo alkyl, aryl, alkene, alkylidene and alkylidyne complexes are surveyed for the d and f block metals. Emphasis is placed on general patterns of reactivity and recurring themes for reaction mechanisms.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CHEM 564 Organometallics
This course is focused on molecular species that contain metal-carbon bonds, and the role of these compounds in catalytic processes and organic synthesis. Aspects of the synthesis, structure and reactivity of important classes of organometallic compounds such as metallo alkyl, aryl, alkene, alkylidene and alkylidyne complexes are surveyed for the d and f block metals. Emphasis is placed on general patterns of reactivity and recurring themes for reaction mechanisms.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CHEM 565 Main Group Chemistry
This course encompasses a comprehensive survey of the chemistry and properties of the p-block elements of the periodic table. Topics include syntheses, structures and reactivities of important compounds. In addition, alternative bonding theories which have been used to explain the unique properties of these compounds are critically examined.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
CHEM 567 Bio-inorganic Chemistry
The course covers selected topics in bioinorganic chemistry; special emphasis is placed on dioxygen chemistry and electron transfer processes. Course topics include: (i) oxygen uptake and utilization; (ii) diatomic oxygen transport; (iii) diatomic and monoatomic oxygen incorporation into substrates; (iv) metalloenzyme-catalyzed C-C bond formation; (v) the metallocobiochemistry of DNA; (vi) metal-sulfide proteins; (vii) manganese-containing metalloproteins; (viii) Photosystem II: light-driven electron transfer and the biological water-splitting reaction; (ix) biological electron transfer; (x) electron transfer theory; (xi) mechanisms of energy storage and release; and (xii) long-distance electron transfer reactions.
One-term course offered either term
Also Offered As: BMB 567
Activity: Lecture
1.0 Course Unit

CHEM 601 Chemical Information
This course examines the structure and organization of the chemical literature and introduces techniques of searching this literature, focusing on the logic and thought processes necessary for effective information retrieval. Each technique is illustrated using information tools available at the University of Pennsylvania, and we take an ‘under the hood’ look at the organization and functionality of each tool introduced. Students should choose a course section based on their preferred area of chemistry research: organic, inorganic, biological, and physical chemistry; all four sections are taught at a level appropriate for graduate students and advanced undergraduates. Topics vary by section, but all students learn the basics of subject, author, structure, and reaction searching, and a unit on ethics in publication and scholarly communication completes the course.
Taught by: Judith Currano
One-term course offered either term
Activity: Lecture
0.5 Course Units

CHEM 652 Proposal Writing for Biological and Physical Chemists
Students will learn the key components in proposal writing and develop the skills needed to prepare a compelling and original graduate research proposal. The course involves significant writing, in-class discussions and presentations.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

CHEM 662 Proposal Writing for Inorganic and Organic Chemists
The ability to communicate original, written research proposals is essential to the modern chemist. This course, for graduate students in the organic and inorganic divisions, will promote development of proposal writing skills. Students will develop original ideas, practice written work, graphic design and peer review. Outcomes of the course will include writing (and submission, when eligible) of an NSF GRFP application and a ‘proposed work’ section of a candidacy exam report.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

CHEM 721 Mathematics for Chemistry
This course examines the basic mathematics needed for physical chemistry, including (but not limited to) a brief review of linear algebra, Fourier transforms, delta functions, optimization, and the residue theorem. Depending on the year, selected other topics will also be included.
One-term course offered either term
Activity: Lecture
0.5 Course Units

CHEM 723 Dynamics of Polymers
This course discussed the structure of polymers from a statistical physics point of view as well as dynamical response of polymeric systems such as mechanical response of polymer melts, polymer glass transition, properties of polymers in solutions, and properties of block copolymers and ionomers.
One-term course offered either term
Activity: Lecture
0.5 Course Units

CHEM 741 Spectroscopy
The course will cover Nuclear Magnetic Resonance (NMR) theory at a level appropriate for graduate students in Organic Chemistry. It will also provide hands-on practical training in the correct use of high-field NMR spectrometers. Organic Spectroscopic methods for the determination of structure using NMR will be stressed. Permission of instructor required.
Taught by: Dailey
Course usually offered in spring term
Prerequisite: CHEM 441 AND CHEM 541
Activity: Lecture
0.5 Course Units

CHEM 742 Medicinal Chemistry and Drug Design
This course focuses on concepts and strategies in medicinal chemistry, and how it is applied to modern drug discovery and development. Topics include the drug discovery process, drug targets (GRCR?s, enzymes, channels etc.), physical chemistry of molecular interactions between drug and target, drug design, methods for hit and lead identification, lead optimization, chemical biology, natural products chemistry and combinatorial and diversity oriented synthesis. This course is geared to upper level undergraduate students in chemistry or biochemistry, and first year chemistry graduate students. A strong understanding of organic chemistry is required.
Taught by: Donna Huryn
One-term course offered either term
Activity: Lecture
0.5 Course Units

CHEM 743 Heterocyclic Chemistry
The course deals with topics in Heterocyclic Chemistry. It covers nitrogen-containing monocyclic hetero rings, examining the most recent syntheses, the reactions and their mechanisms. The course will focus on recent variations and improvements of known heterocycles as well as their synthetic utility. Students will be expected to read critically a recent article on heterocyclic chemistry and do a presentation to the class.
Taught by: M. Joullie
One-term course offered either term
Activity: Lecture
0.5 Course Units
CHEM 744 Bioinspired Synthesis. Methods, Tactics, and Strategies. This class will discuss selected topics related to Bioinspired synthesis, methods, tactics and strategies. Target molecules, methods and strategies are designed by using biological systems as models.
Taught by: Virgil Percec
One-term course offered either term
Activity: Lecture
0.5 Course Units

CHEM 745 Total Synthesis
The focus of this course comprise the development of two synthetic strategies to access architecturally complex natural products of biological significance exploiting innovative chemistry. Lectures towards this end are given. As a project, each student is given a different complex natural product and expected at the end of the course to develop two strategies, one based on asymmetric induction to provide the absolute stereochemical structure, the second where the absolute stereochemistry derives from commercially available starting materials.
Taught by: Amos B. Smith III
One-term course offered either term
Activity: Lecture
0.5 Course Units

CHEM 746 Intermediate Organic Chemistry
This course will include a review of basic reaction mechanisms, stereoelectronic effects, functional groups and acid-base chemistry. The course will emphasize the writing of mechanisms using the curved-arrow notation and organic reactions. Bonding and electronic structure theories and more involved mechanisms will be discussed. Students are expected to have a good working knowledge of reactions, functional groups, stereochemistry and mechanisms from undergraduate organic chemistry. Students will be expected to review basic concepts in Organic Chemistry and spectroscopy. The course will include lectures and recitations, and students are expected to attend and participate.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: MCS and PhD students only.

CHEM 751 Chemical Biology
This course focuses on current topics in Chemical Biology, particularly experiments in which 1) chemical synthesis enables one to probe or control biological systems, or 2) manipulation of biological systems facilitates novel chemical syntheses. The course is broadly divided into two sections, one dealing with the study of individual proteins and nucleic acids, and one dealing with complex cellular systems. As the goal of the course is to familiarize students with innovative recent experimental approaches and to stimulate them to conceive of their own new methodology, students will be responsible for delivering presentations on topics selected from the literature, designing experiments to address currently unsolved problems in Chemical Biology (in take-home examinations), and generating several novel research proposal ideas, one of which will be elaborated into a full proposal.
Taught by: EJ Petersson
One-term course offered either term
Also Offered As: BMB 751
Activity: Lecture
1.0 Course Unit

CHEM 761 Coordination Chemistry
Ligands have a remarkable ability to alter the properties of metal ions, and the study of this coordination chemistry underlies many modern advances in science, including energy harvesting and storage, chemical catalysis, and sustainability. This course explores the relationships between the identities of ligands and the physical manifestations that result from their binding to metal centers. Topics to be covered include: symmetry and chirality in molecular complexes, variations in coordination number, ligand field effects, recent advances in bonding theory, and inorganic reaction mechanisms.
Taught by: Neil Tomson
One-term course offered either term
Activity: Lecture
0.5 Course Units

CHEM 762 X-ray I
An introduction to the theory and practice of structure determination by X-ray crystallography. Topics discussed include point group and space group symmetry, structure factor theory, data collection methods and a survey of solution methods. The course culminates with a series of real-world structure determinations worked through in-class using the XSeed program package.
Taught by: P.Carroll
One-term course offered either term
Activity: Lecture
0.5 Course Units

CHEM 763 X-ray II
Continuation of X-ray I course, CHEM 741
Taught by: P.Carroll
One-term course offered either term
Prerequisite: CHEM 762
Activity: Lecture
0.5 Course Units

CHEM 764 Materials Chemistry
This course will focus on the structure-property relationships in materials chemistry on length scales from atomic dimension up to the microscale and then core concepts to Chemical design that underpins future, 'Energy and Environmental Sustainability'. We will introduce the '12 Principles of Green Chemistry' and '12 Principles of Green Engineering' as a guide to modern materials chemistry design and then follow a trajectory that proceeds with increasing length scales of ordering in the solid state. We will introduce techniques of x-ray, neutron, electron, and ion beam based scattering, real space imaging and spectroscopies and use these to explore non-crystalline materials (amorphous, glasses, and time permitting quasicrystals and aperiodic systems) and crystalline solids. Studies will proceed from atomic scales through nanoscale, mesoscale, and micro-scale discussing the emergence of band structure and delocalized electronic and optical properties that emerge due to the finite scale of ordering and influence of the surface. We will then focus on how these foundations of materials chemistry are shaping advances in solar energy utilization with photochemistry and photoelectrochemistry and materials for photovoltaic and enabling advances electrochemical energy conversion and storage.
Taught by: C.Murray
One-term course offered either term
Activity: Lecture
1.0 Course Unit
CHEM 765 Chemistry of the f-Block Elements
The course encompasses the descriptive chemistry, and topics related to, the f-block including the rare earth metals and actinides. Coverage includes coordination chemistry and periodic trends, electronic structure and magnetism, and modern applications of f-block chemistry including lanthanide ions as spectroscopic probes, separations chemistry, materials chemistry and applications, organo-f-element chemistry, the chemistry of the actinides and transactinides, and reactivity/catalysis with f-block compounds.
Taught by: E.Schelter
One-term course offered either term
Activity: Lecture
0.5 Course Units

CHEM 766 Electrochemistry: Methods and Chemical Applications
The goal of this course is for students to gain an understanding of the principles of electrochemistry along with some practical experience. Potentiometric methods will be discussed in the context of electrochemical equilibrium. Amperometric analytical methods – chronoamperometry, chronocoulometry, stripping voltammetry, cyclic voltammetry, pulse polarography, AC impedance, and hydrodynamic methods – will be described from the perspective of mathematical models of mass transport and electrode kinetics. As time permits, special topics and applications, such as electrochemical energy conversion, spectroelectrochemistry, photoelectrochemistry, ultramicroelectrodes, microfluidics, corrosion, electrochemical synthesis, and scanning electrochemical microscopy, will be covered. To complement and reinforce the material learned in class, students will fabricate electrodes, perform cyclic voltammetry and other experiments, and analyze electrochemical data. Equipment will be available in the instructor's research laboratory to do these experiments in small groups on students' own time outside of class. The instructor will provide out-of-class assistance to students who are not yet familiar with the use of electrochemical equipment.
Taught by: Mallouk
Activity: Lecture
1.0 Course Unit

CHEM 767 Applications of Group Theory
This course will provide a fundamental understanding of symmetry, the character tables, how to derive these, and apply them in spectroscopy, and molecular orbital diagrams. The course will require some fundamental understanding of matrix algebra, and apply concepts of symmetry to derive character tables, predict spectroscopic properties of molecules, and derive molecular orbitals diagrams including hybridized orbitals.
Taught by: Mindiola
Activity: Lecture
0.5 Course Units

CHEM 999 Independent Study and Research
(1) Advanced study and research in various branches of chemistry. (2) Seminar in current chemical research. (3) Individual tutorial in advanced selected topics. May be taken for multiple course unit credit.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: May be taken for multiple course unit credit

Chichewa (CHIC)

CHIC 490 Elementary Chichewa I
The main objective of this course is to allow students to study an African language of their choice, depending on the availability of the instructor.
The course will provide students with linguistic tools which will facilitate their research work in the target country. Cultural aspects of the language will be introduced and reinforced. Offered through Penn Language Center
For BA Students: Language Course
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

CHIC 491 Elementary Chichewa II
Continuation of AFST 490. Offered through Penn Language Center
For BA Students: Language Course
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

CHIC 492 Intermediate Chichewa I
Intermediate level courses in a variety of African languages: Igbo, Shona, Wolof, Malagasy, Chichewa, Setswana, Manding, Afrikaans, Setswana. Focus on oral proficiency and productive language skills. All course are language specific and follow ACTFL proficiency guidelines. Offered through Penn Language Center
For BA Students: Language Course
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

CHIC 493 Intermediate Chichewa II
Continuation of AFST 492. Offered through Penn Language Center
For BA Students: Last Language Course
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center
Chinese (CHIN)

**CHIN 001 First Year Spoken Chinese I**
This course is designed for students who have little or no previous exposure to Chinese. The main objective of the course is to help students develop their listening and speaking skills. The emphasis is on correct pronunciation, accurate tones and mastery of basic grammatical structures. By the end of the second semester, students will be able to manage many situations that have immediate concern to them, such as relating one's personal life and experiences, expressing preferences and feelings, ordering meals, purchasing goods, asking for directions. Chinese characters will not be taught. See LPS Course Guide. **This course fulfills LPS language requirement only. It does not fulfill the language requirement for other colleges only.**

For BA Students: Language Course
Taught by: Dietrich
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: See LPS Course Guide. **This course fulfills LPS language requirement only. It does not fulfill the language requirement for other colleges only.**

**CHIN 002 First Year Spoken Chinese II**
A continuation of CHIN 001. This course is to help students develop their listening and speaking skills. The emphasis is on correct pronunciation, accurate tones and mastery of basic grammatical structures. By the end of the semester, students will be able to manage many situations that have immediate concern to them, such as relating one's personal life and experiences, expressing preferences and feelings, ordering meals, purchasing goods, asking for directions. To achieve this goal, the class is to be conducted in Chinese as much as possible. Chinese characters will also be introduced, but will not be the focus of the class. See LPS Course Guide. **This course fulfills LPS language requirement only. It does not fulfill the language requirement for other colleges only.**

For BA Students: Language Course
Taught by: Dietrich
Course usually offered in spring term
Prerequisite: CHIN 001
Activity: Lecture
1.0 Course Unit
Notes: See LPS Course Guide. **This course fulfills LPS language requirement only. It does not fulfill the language requirement for other colleges.**

**CHIN 003 Second Year Spoken Chinese I**
This course is designed for students who have completed one year of college level Chinese classes or equivalent. The main objective of the course is to improve students' conversational ability in Chinese in order to accomplish day-to-day tasks. These tasks include relating one's personal life and experiences, expressing preference, feeling and opinion, ordering a meal, purchasing goods, asking for directions, making travel plans, visiting a doctor, attending a social function etc. Short Chinese movies or television shows will be integrated into the course curriculum. Chinese characters will not be taught.

For BA Students: Language Course
Taught by: Dietrich
Course usually offered in fall term
Prerequisite: CHIN 002
Activity: Lecture
1.0 Course Unit
Notes: See LPS Course Guide. **This course fulfills LPS language requirement only. It does not fulfill the language requirement for other colleges.**

**CHIN 004 2nd Year Spoken Chinese II**
This course is the continuation of Spoken Chinese III. The primary goal of the course is to improve students' conversational ability in Chinese. By the end of the semester, students will reach the survival level, namely, they can accomplish basic day to day tasks. These tasks include relating one's personal life and experiences, expressing preference, feeling and opinion, ordering a meal, purchasing goods, asking directions, making travel plans, visiting a doctor, attending a social function, etc. Short Chinese movies or television shows will be integrated into the course curriculum. Chinese characters will not be taught.

Taught by: Dietrich
Course usually offered in spring term
Prerequisite: CHIN 003
Activity: Lecture
1.0 Course Unit
Notes: See LPS Course Guide. **This course fulfills LPS language requirement only. It does not fulfill the language requirement for other colleges.**

**CHIN 011 Beginning Modern Chinese I**
Along with Beginning Modern Chinese II, Beginning Chinese III (Non-Intensive) and Beginning Chinese IV, this is the first course of a four-semester sequence. By completing all four semesters, students fulfill the College language requirement. The sequence starts each fall. Students cannot begin their study in the spring. This course is designed primarily for students who have little or no prior exposure to Chinese. The objective of the course is to help students build a solid foundation of the four basic skills—listening, speaking, reading, and writing in an interactive and communicative learning environment. The emphasis is on correct pronunciation, accurate tones, and mastery of basic grammatical structures, laying the foundation needed to be able to manage social situations such as relating one's personal life and experiences, expressing preferences and feelings, ordering meals, purchasing goods, and asking for directions. In order to achieve these goals, students are expected to thoroughly preview and review the materials according to the weekly lesson plan (on course website) prior to attending class. Regular attendance is mandatory and strictly monitored.

For BA Students: Language Course
Taught by: Dietrich
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
**CHIN 012 Beginning Modern Chinese II**
This course is the continuation of CHIN 011. The objective of the course is to help students build a solid foundation of the four basic skills—listening, speaking, reading, and writing in an interactive and communicative learning environment. The emphasis is on correct pronunciation, accurate tones and mastery of basic grammatical structures. By the end of the second semester, students will be able to manage many situations that have immediate concern to them, such as relating one’s personal life and experiences, expressing preferences and feelings, ordering meals, purchasing goods and asking for directions. Prerequisite: Along with CHIN 011 and CHIN 112, this is the second course in a four-semester sequence. By completing all four semester, students fulfill the College language requirement.
For BA Students: Language Course
Taught by: Dietrich
Course usually offered in spring term
Prerequisite: CHIN 011 AND CHIN 111 AND CHIN 112
Activity: Lecture
1.0 Course Unit
Notes: Along with CHIN011, CHIN111 and CHIN112, this is the second course in a four-semester sequence. By completing all four semester, students fulfill the College language requirement.

**CHIN 021 Intensive Beginning Modern Chinese I & II**
This is a two-semester course covering the same material as CHIN011, CHIN012, CHIN111 and CHIN112. The main objective of the course is to help students build a solid foundation of the four basic skills–listening, speaking, reading, and writing Chinese. By the end of this course and CHIN022, students should achieve the following goals: 1) pronounce all the sounds in Mandarin Chinese accurately and comfortably with a good command of the 4 tones; 2) carry out basic conversations in daily activities; 3) recognize and reproduce approximately 600-650 characters; and 4) read edited simple stories and write short notes or letters. Grammatical and cultural related issues are discussed during lecture hours. Oral communication tasks are given every week. Designed for students who have had limited prior exposure to some form of Chinese (Mandarin or other dialects), but inadequate to advance to the intermediate level.
For BA Students: Language Course
Course usually offered in fall term
Activity: Lecture
2.0 Course Units
Notes: Designed for students who have had limited prior exposure to some form of Chinese (Mandarin or other dialects), but inadequate to advance to the intermediate level.

**CHIN 022 Intensive Beginning Modern Chinese III & IV**
Designed for students who have had limited prior exposure to some form of Chinese (Mandarin or other dialects), but inadequate to advance to the intermediate level. The language practiced in Chin 022 will be more formal and written style than that of Chin 021, including more authentic materials reading, listening and viewing.
For BA Students: Last Language Course
Course usually offered in spring term
Prerequisite: CHIN 021
Activity: Lecture
2.0 Course Units
Notes: Designed for students who have had limited prior exposure to some form of Chinese (Mandarin or other dialects), but inadequate to advance to the intermediate level.

**CHIN 031 Beginning Reading and Writing in Chinese I (for Fluent Speakers)**
The course is designed for students who can speak Chinese but cannot read and write in Chinese characters. The major purpose of this course is to help students develop the ability to use written Mandarin Chinese in linguistically and socially appropriate ways. The literacy goal is to master 350 to 1000 Chinese characters and to reach an intermediate-low level of ACTFL literacy proficiency. The key teaching approach is to holistically read a prodigious amount of materials. Students’ reading abilities will be developed through reading short stories under instructions, and eventually through reading long stories and news independently.
For BA Students: Language Course
Taught by: Wu
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

**CHIN 032 Beginning Reading and Writing in Chinese II (for Fluent Speakers)**
CHIN 032 is designed for students who can speak Chinese and have reading ability of about 1000 Chinese characters. This Chinese reading and writing course is specifically designed for students at the ACTFL intermediate-low reading and writing level. The literacy goal is to master 1000 to 2000 Chinese words and reach the intermediate-mid proficiency level. Reading material covers topics that are meaningful to students not only to increase engagement and confidence in their Chinese reading skills, but also foster students’ apprehension and understanding of the Chinese deep culture.
For BA Students: Last Language Course
Taught by: Wu
Course usually offered in spring term
Prerequisite: CHIN 031
Activity: Lecture
1.0 Course Unit

**CHIN 041 Beginning Cantonese I**
Beginning Cantonese is a preliminary course for spoken Cantonese. The course provides fundamental aspects of the dialect as experienced in daily life situations and lays the foundation which will enable students to communicate in Cantonese for daily life needs, such as making phone calls, making purchases, getting around by various ways of transportation, seeing a doctor, being a guest or a host at dinner, talking about the weather, talking about sports and entertainment, etc. It is strongly recommended that students continue to Beginning Cantonese II to become conversational.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center. This course does not fulfill the College of Arts & Sciences’ language requirement.
CHIN 042 Beginning Cantonese II
A continuation of Beginning Cantonese I, this class is a preliminary course for spoken Cantonese. The course provides fundamental aspects of the dialect as experienced in daily life situations and will enable students to communicate in Cantonese for daily life needs, such as making phone calls, making purchases, getting around by various means of transportation, seeing a doctor, being a guest or a host at dinner, talking about the weather, talking about sports and entertainment, etc. 
Course usually offered in spring term
Prerequisite: CHIN 041
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center. This course does not count toward the language requirement in the College of Arts and Sciences.

CHIN 051 Beginning Taiwanese I
Beginning Taiwanese I is designed to help students learn enough to enable them to handle basic social interactions when visiting Taiwan, such as greeting others, introducing yourself, ordering food, asking directions, etc. You will also learn to listen and understand the oral language typically heard in locations such as the grocery store, train station, bus stop, and restaurants.
Taught by: Wu
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

CHIN 052 Beginning Taiwanese II
A continuation of Beginning Taiwanese I, this course will cover language training as well as cultural topics including history and political aspects of Taiwan. Conversation topics range from daily conversation to professional and formal situations.
For BA Students: Language Course
Taught by: Wu
Course usually offered in spring term
Prerequisite: CHIN 051
Activity: Lecture
1.0 Course Unit

CHIN 081 Beginning Business Chinese I
The course is designed for juniors and seniors, and Penn working professionals who have no prior exposure to Chinese, and are interested in learning basic Chinese language and culture for the preparation of a business trip to China. The objective of this course is to build a foundation of basic Chinese in the business context, with a main focus on speaking and listening, and minimal reading. Upon completion, students are expected to be able to converse and interact with people in a variety of traveling settings and in company visits. Topics include meeting people, talking about family, introducing companies, making inquiries and appointments, visiting companies, introducing products, initiating dining invitations, and practicing dining etiquette.
For BA Students: Language Course
Course not offered every year
Activity: Lecture
1.0 Course Unit

CHIN 082 Beginning Business Chinese II
As a continuation of CHIN081, this course is to help students develop their listening and speaking skills as well as understanding of Chinese social development since 1976. The emphasis is on current China business development, correct pronunciation, accurate tones and mastery of basic grammatical structures.
Course usually offered in spring term
Prerequisite: CHIN 081
Activity: Lecture
0.0 Course Units

CHIN 111 Beginning Chinese III (Non-Intensive)
Along with CHIN011, CHIN012 and CHIN112, this is the third course in a four-semester sequence. The objective of the course is to continue building a solid foundation of the four basic skills—listening, speaking, reading and writing. By the end of this course, students should achieve the following goals: 1) pronounce all the sounds in Mandarin accurately and comfortably with a good command of the four tones; 2) carry out simple dialogues of familiar topics; 3) recognize and reproduce approximately 450-500 characters; and 4) read short textbook stories and write simple notes. In order to develop students' listening and speaking ability, oral communication tasks are given on each lesson.
For BA Students: Language Course
Course usually offered in fall term
Prerequisite: CHIN 012
Activity: Lecture
1.0 Course Unit

CHIN 112 Beginning Chinese IV
Along with CHIN011, CHIN012 and CHIN111, this is the fourth course in a four-semester sequence. The objective of the course is to continue building a solid foundation of the four basic skills—listening, speaking, reading and writing. By the end of this course, students should achieve the following goals: 1) pronounce all the sounds in Mandarin accurately and comfortably with a good command of the four tones; 2) carry out simple dialogues of familiar topics; 3) recognize and reproduce approximately 600-650 characters; and 4) read short textbook stories and write simple notes. In order to develop students' listening and speaking ability, oral communication tasks are given every other week.
For BA Students: Last Language Course
Course usually offered in spring term
Prerequisite: CHIN 111
Activity: Lecture
1.0 Course Unit

CHIN 141 Intermediate Cantonese I
Intermediate Cantonese is a course for students who are able to communicate in the dialect in basic survival situations. Through this course, the students will acquire a better understanding of Cantonese and its related culture, and can confidently cope with a wide range of situations. Classes will be conducted through Cantonese textbooks, discussions of various topics, and composition and presentation of students' own dialogues so that in time they may express more complex ideas and feelings. Continuation to Intermediate Cantonese II is strongly encouraged.
Course usually offered in fall term
Prerequisite: CHIN 042
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center
CHIN 142 Intermediate Cantonese II
A continuation of Intermediate Cantonese I. Intermediate Cantonese is a course for students who are able to communicate in the dialect in basic survival situations. Through this course, the students will acquire a better understanding of Cantonese and its related culture, and can confidently cope with a wide range of situations. Classes will be conducted through Cantonese textbooks, discussions of various topics, and composition and presentation of students' own dialogues so that in time they may express more complex ideas and feelings.
Course usually offered in spring term
Prerequisite: CHIN 141
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

CHIN 151 Intermediate Taiwanese I
Students will further develop their speaking and listening skills and will be able to communicate with ease and confidence when dealing with everyday routine tasks. Students will also gain skills to process and seek information in Taiwanese. Conversation topics include New Year, folk songs, and Tang poetry. Authentic materials are used for enhancing reading, listening, and speaking practices.
Taught by: Wu
Course usually offered in fall term
Prerequisite: CHIN 052
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center.

CHIN 152 Intermediate Taiwanese II
This is a continuation of Intermediate Taiwanese I. Students will further develop their speaking and listening skills and will be able to communicate with ease and confidence when dealing with everyday routine tasks. Students will also gain skills to process and seek information in Taiwanese. Conversation topics include the New Year, folk songs and Tang poetry. Authentic materials are used for enhancing reading, listening, and speaking practices.
Course usually offered in spring term
Prerequisite: CHIN 151
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

CHIN 211 Intermediate Modern Chinese I
This is an intermediate language course. It aims to develop students’ overall linguistic skills in listening, speaking, reading, and writing Chinese. The specially designed textbook gives introduction to various topics on Chinese culture. Students can expect to gain knowledge about China while they are learning the language. By completion of the course, students are expected to be able to master 1200 most frequently used characters in common reading materials, and to communicate with Chinese on
Taught by: Lee
Course usually offered in fall term
Prerequisite: CHIN 112
Activity: Lecture
1.0 Course Unit

CHIN 212 Intermediate Modern Chinese II
This course is the continuation of CHIN 211. It aims to further develop students' overall language skills. The textbook will introduce various topics related to Chinese culture, society, economy, people and their everyday life as well as China's development since Deng Xiaoping's reform and opening-up policies in 1978. In class, current issues in China will be integrated to provide a new perspective for discussion. The emphasis is not only to consolidate students’ foundation, but also enhance their understanding and distinguish different levels of language.
Over the semester, students will have many opportunities to express and share their opinions on various topics related to China via communicative activities, presentations, and written assignments.
Taught by: Lee
Course usually offered in spring term
Prerequisite: CHIN 211
Activity: Lecture
1.0 Course Unit

CHIN 231 Intermediate Reading and Writing Chinese I (for Fluent Speakers)
CHIN 231 is an intermediate reading and writing course designed for students at the ACTFL intermediate-mid reading and writing proficiency. The goal of this course is to reach the intermediate-high level of proficiency. This course concentrates on writing of multi-paragraph essays through the use of conventional rhetorical modes and standard grammatical structures. Students will be given ample time to think and to discuss (the crucial 'brainstorming' phase) before writing. The course stresses content, culture and comparison and draws its content from assigned readings and evidence-based argument from texts and other stimuli such as Internet, newspapers and films. Restricted to fluent speakers who have only limited reading and writing ability.
Taught by: Wu
Course usually offered in fall term
Prerequisite: CHIN 032
Activity: Lecture
1.0 Course Unit
Notes: Restricted to fluent speakers who have only limited reading and writing abilities.

CHIN 232 Intermediate Reading and Writing Chinese II (for Fluent Speakers)
This is an intermediate language class presuming basic fluency in speaking and listening and focusing on reading and writing abilities. By the end of the semester students are expected to have mastered the 1200 most commonly used characters and to have the ability to read basic Chinese texts. Students will be prepared for Advanced Modern Chinese, Media Chinese and Business Chinese.
Taught by: Wu
Course usually offered in spring term
Prerequisite: CHIN 231
Activity: Lecture
1.0 Course Unit
CHIN 311 Advanced Modern Chinese I
Students learn to work on materials which were written or produced for native speakers, instead of the classroom materials that were written for the non-native speakers. The reading materials include a larger vocabulary with more idioms. Students will also learn how to understand and use certain oral expressions in conversation. They will learn ways to narrate, to describe, and to comment in native Chinese ways. Reading and audio materials are provided and discussed in the classes. Writing and oral presentations in Chinese are required in classroom under instruction. Students will be encouraged to practice oral communication with each other.
For BA Students: Advanced Language Course
Course usually offered in fall term
Prerequisite: CHIN 212
Activity: Lecture
1.0 Course Unit

CHIN 312 Advanced Modern Chinese II
Chin 312 is a continuation of Chinese 311, training speaking, listening, reading and writing skills so to reach the advanced-low or advanced-mid level of proficiency. Major topics of the course include Chinese food culture, Chinese architecture, Confucianism in modern China, ‘educated youth’, democracy, and cross-Taiwan Strait relations.
For BA Students: Advanced Language Course
Taught by: Jiao
Course usually offered in spring term
Prerequisite: CHIN 311
Activity: Lecture
1.0 Course Unit

CHIN 331 CHINESE SHORT STORIES
Designed for students with advanced level Chinese language training but who need some further refinements on pronunciation, grammar, and vocabulary usage, this course stresses oral discussion, composition, and accuracy of language performance. By reading texts written by contemporary writers, students will also gain knowledge of China from an analytical and comparative perspective.
Taught by: Chiang
One-term course offered either term
Prerequisite: CHIN 312
Activity: Lecture
1.0 Course Unit

CHIN 361 Media Chinese
Chin 361 will help students improving their language skills, and enlarge vocabulary through reading online news on Chinese internet. The students will learn formal vocabulary and enhance their grammatical accuracy in the semester. Students are encouraged to explore Chinese government and company websites and Baidu Baike, so to conduct their own online search for both professional and academic purposes. Linguistic features in news headlines, accuracy of online translation tools, media censorship, social media usage will also be discussed in this class. The course goal is to help students gain Chinese media literacy by reading, browsing, and viewing online materials.
Taught by: Chiang
One-term course offered either term
Prerequisite: CHIN 232 AND CHIN 311 AND CHIN 331
Activity: Lecture
1.0 Course Unit

CHIN 371 Advanced Spoken Mandarin I
This course is designed for students who have completed at least the intermediate level Chinese language course, or have studied the language for at least three years. The objective of this course is to consolidate the knowledge and skills students have acquired from their previous Mandarin Chinese classes and to enhance their oral expressive skills. By the end of the semester, students are expected to be able to carry on a conversation with a native Mandarin speaker on various common topics, including the current issues in China about its education, society, politics, culture, and history. Students will also learn how to gather information necessary for conducting oral presentations and speeches.
For BA Students: Advanced Language Course
Course usually offered in fall term
Prerequisite: CHIN 212
Activity: Lecture
1.0 Course Unit

CHIN 372 Advanced Spoken Mandarin II
Following the format of Advanced Spoken Mandarin I with more discussions on current issues in both China and the US, including topics ranging from race, religion, gender issues to internet, cinema and pop cultures. The objective of this course is to consolidate the knowledge and skills students have acquired from their previous Mandarin Chinese classes and to enhance their oral expressive skills. By the end of the semester, students are expected to be able to carry on a conversation with a native Mandarin speaker on various common topics, and to gather information necessary for conducting oral presentations and speeches.
For BA Students: Advanced Language Course
Course usually offered in spring term
Prerequisite: CHIN 212
Activity: Lecture
1.0 Course Unit

CHIN 381 Business Chinese I
This course is aimed to enhance students’ language skills in a business context and to promote their understanding about business environment and culture in contemporary China. The text is developed from real business cases from real multinational companies that have successfully embarked on the Chinese market. The forms of classes include lectures, drills on vocabulary and sentence patterns, and discussions. Class will be conducted in Chinese. In addition to the course textbook, students will learn to read business news in Chinese selected from Wall Street Journal.
For BA Students: Advanced Language Course
Taught by: Wang
Course usually offered in fall term
Prerequisite: CHIN 212
Activity: Lecture
1.0 Course Unit
CHIN 382 Business Chinese II
This course is the second half of a one-year course for business oriented subjects. This course will provide an overview of China's changing macro-environment, while real business cases let us look into individual Chinese companies and their development in the new millennium. By the end of the semester, students are expected to 1) enhance the cultural awareness of contemporary China and the Chinese business world; 2) gain vocabulary and fluency in Chinese to function more confidently and comfortably in real business settings; 3) access business news and information in Chinese; 4) give business presentation in Chinese.
Taught by: Wang
Course usually offered in spring term
Prerequisite: CHIN 312 AND CHIN 361 AND CHIN 381
Activity: Lecture
1.0 Course Unit

CHIN 411 Readings in Modern Chinese: Literature
This course is designed for students who have completed three years of college level Mandarin classes or equivalent. This course may be used to fulfill language or elective requirement for Chinese major or minor.
The objectives of the course are 1) to help students gain an in-depth, multi-faceted and critical understanding of Chinese people, Chinese society and Chinese culture; 2) to facilitate students' acquisition of formal or written language; and 3) to develop students' analytical and critical thinking skills. These objectives are achieved primarily through 1) close reading and discussion of original literary texts by 20th -century Chinese writers; and 2) regular writing exercises. Students will also view several Chinese films that are related to the topics of the reading text. The class is to be conducted exclusively in Chinese.
Taught by: Dietrich
Course usually offered in fall term
Prerequisite: CHIN 331 AND CHIN 361 AND CHIN 381
Activity: Lecture
1.0 Course Unit

CHIN 412 Readings Modern Chinese II: Literature
The main difference between this course and CHIN411 is the reading materials and topics. This course is designed for students who have completed a minimum of three years of college level Mandarin classes or equivalent. This course may be used to fulfill language or elective requirement for Chinese major or minor.
The objectives of the course are 1) to help students gain an in-depth, multi-faceted and critical understanding of Chinese people, Chinese society and Chinese culture; 2) to facilitate students' acquisition of formal or written language; and 3) to develop students' analytical and critical thinking skills. These objectives are achieved primarily through 1) close reading and discussion of original literary texts by 20th-century Chinese writers; and 2) regular writing exercises. Students will also view several Chinese films that are related to the topics of the reading text. The class is to be conducted exclusively in Chinese.
Taught by: Dietrich
Course usually offered in spring term
Prerequisite: CHIN 331 AND CHIN 361 AND CHIN 382
Activity: Lecture
1.0 Course Unit

CHIN 415 Readings Modern Chinese Documents
The main purpose of this content-based course is to promote advanced-level language proficiency in reading, writing, speaking and listening. Through the use of modern Chinese documents, the secondary purpose of this course is to facilitate your understanding of the changes of Chinese society in the 20th century. Topics will include the Constitution of China, China's legal system, speeches by Mao Zedong, Deng Xiaoping, Sun Yet-san and Qiu Jin.
Taught by: Chiang
Course not offered every year
Prerequisite: CHIN 361 AND CHIN 381 AND CHIN 411
Activity: Lecture
1.0 Course Unit

CHIN 481 Advanced Business Chinese I
This content-based course provides students with the conceptual framework to understand issues China has been facing since its economic reform in 1978. Topics include WTO principles, the change of China's state-owned enterprises, China's economy in Mao's period, and the pros and cons of globalization. Students will be trained in reading financial articles, discussing international trades, conducting online research and giving business presentations. After the course, students will become more sophisticated in their understanding of China's economic development and in using Chinese business terminology at professional settings. The course assumes basic background in business and advanced level proficiency in Chinese language. The course is NOT open to freshman with no undergraduate business course. Course may be offered through Penn Language Center.
For BA Students: Advanced Language Course
Taught by: Chiang
Course usually offered in spring term
Prerequisite: CHIN 382
Activity: Lecture
1.0 Course Unit
Notes: May be offered through Penn Language Center.

CHIN 482 Advanced Business Chinese II
Chin 482 is a continuation of Chin 481. Following the format of Chin 481, this course covers topics on Eastern and Western management styles, the global financial market, China's financial market reforms, and mergers and acquisitions in China. At the end of the semester, students will submit a business proposal for the final project.
For BA Students: Advanced Language Course
Taught by: Chiang
Course usually offered in spring term
Prerequisite: CHIN 381
Activity: Lecture
1.0 Course Unit

CHIN 481 First Year Classical Chinese I
Introduction to the classical written language, beginning with Shadick, First Course in Literary Chinese. Students with a background in Japanese, Korean, Cantonese, Taiwanese, and other East Asian languages are welcome; it is not necessary to know Mandarin. The course begins from scratch, and swiftly but rigorously develops the ability to read a wide variety of classical and semi-classical styles. Original texts from the 6th century BC to the 20th century AD are studied. This course is taught in English and there are no prerequisites.
Taught by: Mair
Course usually offered in fall term
Also Offered As: EALC 221, EALC 621
Activity: Lecture
1.0 Course Unit
CHIN 492 1st Year Classical Chin II
Continuation of CHIN491 EALC221/621, which is the only prerequisite for this course. Upon completion of Shadick, readings in a wide selection of texts with Chinese commentaries may be taken up. These readings are in part chosen to reflect student interest. This is the second half of a year-long course. Those who enroll must take both semesters.
Taught by: Mair
Course usually offered in spring term
Also Offered As: EALC 222, EALC 622
Prerequisite: CHIN 491
Activity: Lecture
1.0 Course Unit

CHIN 510 Topics in Chinese Culture
The objective of this superior level content-based course is to extend and refine students’ language and analytical skills while enhancing the appreciation of Chinese culture. The course is for students with native-like competence in Mandarin. Each class will proceed from reading, reflection, and interpretation, to the exchange of ideas. All reading materials are in Chinese with no glossary and all are written by scholars whose expertise are wither in contemporary and traditional culture of China, or in comparative study of Chinese and Western thoughts. Topics include: (1) the shared beliefs and behaviors of Chinese people; (2) traditional values and new values in the technological and business society; (3) how affection and love are manifested in Chinese culture; (4) what influenced the surge of popularity of Chinese wuxia fiction; (5) what it meant to be descendants of Chinese (huayi) living outside China. The class is conducted exclusively in Mandarin Chinese.
Taught by: Chiang
Course usually offered in spring term
Prerequisite: CHIN 411 AND CHIN 481
Activity: Lecture
1.0 Course Unit

CHIN 515 Topics in Chinese Literature
This course surveys the literary movements of the post-Cultural Revolution era (1978-present). The reading consists of fictional works representative of each literary movement. Students will write four short (1-2 pages, double space) ‘responding’ papers and two longer critical essays (5-7 pages double spaced). Each student will also give one oral presentation to the class on an assigned story. This course is designed for students who have achieved native or near native level of reading and writing proficiency in Chinese. The class is conducted exclusively in Chinese.

Cinema and Media Studies (CIMS)

CIMS 005 In Dark Times: The Dystopian Imagination in Literature and Film
This CWiC course will offer a guided introduction to the one of the most resilient genres of the human imagination: dystopian and apocalyptic fiction. Like a group of survivors huddled around a campfire, we will turn to literature and cinema to debate some of the big questions about the future of science, technology, religion, and capitalism. This course is designed as a Critical Speaking Seminar, and the majority of class assignments will be devoted to oral presentations: including a Parliamentary-style debate and a video essay. We will begin by reading some of the early, influential works in the dystopian genre by authors like Mary Shelley, H.G. Wells, and Aldous Huxley. Next, we will explore the paranoid, schizophrenic world of Cold-War-era dystopias by J.G Ballard, Philip K. Dick and Octavia Butler. We will conclude by reading contemporary climate fiction by the likes of Margaret Atwood and Kim Stanley Robinson. Alongside the literary material, we will also track the changing nature of dystopian cinema— from classics like Metropolis (1927) and La Jetee (1962) to the latest Zombie film. By the end of course, students will have a firm grasp of the history of the genre and will be able to draw on this knowledge to effectively debate issues related to privacy, big business, animal rights, climate change, migration etc.
Taught by: Dadawala
Also Offered As: ENGL 005
Activity: Seminar
1.0 Course Unit

CIMS 009 Introduction to Digital Humanities
This course provides an introduction to foundational skills common in digital humanities (DH). It covers a range of new technologies and methods and will empower scholars in literary studies and across humanities disciplines to take advantage of established and emerging digital research tools. Students will learn basic coding techniques that will enable them to work with a range data including literary texts and utilize techniques such as text mining, network analysis, and other computational approaches.

CIMS 036 The Middle East through Many Lenses
This freshman seminar introduces the contemporary Middle East by drawing upon cutting-edge studies written from a variety of disciplinary perspectives. These include history, political science, and anthropology, as well as studies of mass media, sexuality, religion, urban life, and the environment. We will spend the first few weeks of the semester surveying major trends in modern Middle Eastern history. We will spend subsequent weeks intensively discussing assigned readings along with documentary films that we will watch in class. The semester will leave students with both a foundation in Middle Eastern studies and a sense of current directions in the field.

CIMS 039 Perspectives on International Cinema (Cannes Film Festival)
Penn-in-Cannes is designed for students interested in the film industry and international cinema. Using the Cannes Film Festival as its focal point, the program examines the ways in which international film functions in the context of celebrity, marketing, and festivals. The scope and substance of the festival provide a unique opportunity, not only for students of cinema, but also for liberal arts students studying cultural diversity and international relations. In preparation for fieldwork at the Cannes Film Festival in May, two three-hours introductory lectures will be held in late March and April on Penn's campus to enable students to establish a critical vocabulary for film study. The lectures and subsequent discussions will examine: a) The Business and Art of the Film Festival; b) Contemporary International Cinema. Those introductory lectures will be coordinated with the Philadelphia Film Festival, which is held on April 5-18, 2007. During both the Philadelphia Film Festival and the Cannes Film Festival, students attend screenings of current international films, applying the critical tools and knowledge of the film industry gained from their earlier work. Students research and critique both the artistic aspects and the commercial p

CIMS 061 Video I
In this studio based course, students are introduced to video production and postproduction as well as to selected historical and theoretical texts addressing the medium of video. Students will be taught basic camera operation, sound recording and lighting, as well as basic video and sound editing and exporting using various screening and installation formats. In addition to a range of short assignment-based exercises, students will be expected to complete three short projects over the course of the semester. Critiques of these projects are crucial to the course as students are expected to speak at length about the formal, technical, critical and historical dimensions of their works. Weekly readings in philosophy, critical theory, artist statements and literature are assigned. The course will also include weekly screenings of films and videos, introducing students to the history of video art as well as to other contemporary practices.
For BA Students: Humanities and Social Science S

Activity: Seminar
1.0 Course Unit

CIMS 062 Video II
Video II offers opportunities to further explore the role of cinematic narrative technique, non-narrative forms, digital video cinematography, editing, and screen aesthetics. Through a series of several video projects and a variety of technical exercises, students will refine their ability to articulate technically and conceptually complex creative projects in digital cinema. In addition, one presentation on a contemporary issue related to the application of cinematic storytelling and/or the cultural context of digital video is required.
Taught by: Reynolds/Novack
One-term course offered either term
Also Offered As: FNAR 062, FNAR 662
Prerequisite: FNAR 061
Activity: Seminar
1.0 Course Unit

CIMS 063 Documentary Video
Documentary Video is an intensive production course involving the exploration of concepts, techniques, concerns, and aesthetics of the short form documentary. Building on camera, sound, and editing skills acquired in Video I, students will produce a portfolio of short videos and one longer project over the course of the semester using advanced level camera and sound equipment. One short presentation on a genre, technique, maker, or contemporary concern selected by the student is required.
Taught by: Reynolds
Course usually offered in fall term
Also Offered As: FNAR 063, FNAR 663
Prerequisite: FNAR 061
Activity: Seminar
1.0 Course Unit
CIMS 065 Cinema Production
This course focuses on the practices and theory of producing narrative based cinema. Members of the course will become the film crew and produce a short digital film. Workshops on producing, directing, lighting, camera, sound and editing will build skills necessary for the hands-on production shoots. Visiting lecturers will critically discuss the individual roles of production in the context of the history of film.

Activity: Lecture
1.0 Course Unit

CIMS 074 Contemporary American Literature
The readings for this course expose the student to a wide range of American fiction and poetry since World War II, giving considerable attention to recent work. Works may include All The King’s Men by Robert Penn Warren, Herzog by Saul Bellow, On The Road by Jack Kerouac, V by Thomas Pynchon, Of Love and Dust by Ernest J. Gaines, A Flag For Sunrise by Robert Stone, The Killing Ground by Mary Lee Settle, and selected poem by Ginsberg, Plath, and Walcott. Readings vary from term to term.
Course not offered every year
Also Offered As: AFRC 085, ENGL 074
Activity: Lecture
1.0 Course Unit

CIMS 075 Image and Sound Editing
This course presents an in-depth look at the storytelling power of image and sound in both narrative and documentary motion pictures. Students apply a theoretical framework in ongoing workshops, exploring practical approaches to picture editing and sound design. Students edit scenes with a variety of aesthetic approaches, and create story-driven soundtracks with the use of sound FX, dialogue replacement, foleys, music and mixing. Students not only learn critical skills that expand creative possibilities, but also broaden their understanding of the critical relationship between image and sound.
Taught by: Novack/Novack
Course usually offered in spring term

CIMS 081 Film Music in Post 1950 Italy: Nino Rota and Ennio Morricone
An exploration of cinematic sound through the lens of specific composer/director collaborations in post-1950 Italy, examining scores, soundtracks, and the interaction of diegetic and non-diegetic music with larger soundscapes. Composers Nino Rota and Ennio Morricone serve as case studies, in partnership with directors Fellini, Visconti, Leone, Pontecorve, Pasolini, and Coppola. Highlights include several excerpts from the Fellini/Rota collaboration, including The White Sheik, I vitelloni, The Road, Nights of Cabiria, La dolce vita, 8 1/2, Juliet of the Spirits, Satyricon, The Clowns, Roma, Amarcord, Casanova, and Orchestra Rehearsal. Rota’s music for Visconti will be examined in Senso, the Leopard, and Rocco and his Brothers, along with his Transatlantic collaboration for The Godfather. Morricone’s work with various directors will be discussed in The Good, the Bad, and the Ugly, The Battle of Algiers, and Teorema, as well as for American films such as Malick’s Days of Heaven and Tarantino’s The Hateful Eight. Weekly screenings required. Open to all: music majors, minors, and non-majors; will count toward requirements for music minor. Knowledge of music and Italian helpful but not required. All readings and lectures in English.

CIMS 101 World Film History to 1945
This course surveys the history of world film from cinema’s precursors to 1945. We will develop methods for analyzing film while examining the growth of film as an art, an industry, a technology, and a political instrument. Topics include the emergence of film technology and early film audiences, the rise of narrative film and birth of Hollywood, national film industries and movements, African-American independent film, the emergence of the genre film (the western, film noir, and romantic comedies), ethnographic and documentary film, animated films, censorship, the MPPDA and Hays Code, and the introduction of sound. We will conclude with the transformation of several film industries into propaganda tools during World War II (including the Nazi, Soviet, and US film industries). In addition to contemporary theories that investigate the development of cinema and visual culture during the first half of the 20th century, we will read key texts that contributed to the emergence of film theory. There are no prerequisites. Students are required to attend screenings or watch films on their own.

Notes: Fulfills the Arts and Letters Sector (All Classes)
**CIMS 102 World Film History 1945-Present**
Focusing on movies made after 1945, this course allows students to learn and to sharpen methods, terminologies, and tools needed for the critical analysis of film. Beginning with the cinematic revolution signaled by the Italian Neo-Realism (of Rossellini and De Sica), we will follow the evolution of postwar cinema through the French New Wave (of Godard, Resnais, and Varda), American movies of the 1950s and 1960s (including the New Hollywood cinema of Coppola and Scorsese), and the various other new wave movements of the 1960s, 1970s and 1980s (such as the New German Cinema). We will then selectively examine some of the most important films of the last two decades, including those of U.S. independent film movement and movies from Iran, China, and elsewhere in an expanding global cinema culture. There will be precise attention paid to formal and stylistic techniques in editing, mise-en-scene, and sound, as well as to the narrative, non-narrative, and generic organizations of film. At the same time, those formal features will be closely linked to historical and cultural distinctions and changes, ranging from the Paramount Decision of 1948 to the digital convergences that are defining screen culture today. There are no prequisites. Requirements will include readings in film history and film analysis, an analytical essay, a research paper, a final exam, and active participation.

**CIMS 103 Television and New Media**
How and when do media become digital? What does digitization afford and what is lost as television and cinema become digitized? As lots of things around us turn digital, have we started telling stories, sharing experiences, and replaying memories differently? What has happened to television and life after New Media? How have television audiences been transformed by algorithmic cultures of Netflix and Hulu? How have (social) media transformed socialities as ephemeral snaps and swiped intimacies become part of the ‘new’ digital/phone cultures? This is an introductory survey course where we discuss a wide variety of media technologies and phenomena that include: cloud computing, Internet of Things, trolls, distribution platforms, optical fiber cables, surveillance tactics, social media, and race in cyberspace. We also examine emerging mobile phone cultures in the Global South and the environmental impact of digitization. Course activities include Tumblr blog posts and Instagram curations. The final project could take the form of either a critical essay (of 2000 words) or a media project.

**CIMS 109 New Korean Cinema**
In 2019, Bong Joon-ho’s Parasite won the Palme d’Or at the 72nd Cannes Film Festival. This event marked the apex of South Korean cinematic renaissance, having steadily become a tour de force in the international film festival scene since 1997 onwards. This course explores the major auteurs, styles, themes, and currents of the so-called ‘New Korean Cinema’ that emerged in the mid-to-late 1990s to continue to this day. Drawing from texts on critical film and Korean studies, we will pay particular attention to how the selected works re-present, resist, and interweave the sociopolitical climate they concern and are born out of. Using cinema as a lens with which to see the society, we will touch upon major events of the twentieth century including national division, military dictatorship and democratization movements, IMF economic crisis, youth culture, hallyu (the Korean wave), and damunhwa (multiculturalism initiative). In so doing, we will closely examine how each cinematic medium addresses the societal power structure and the role of the ‘Other’ it represents in terms of class, race, gender, and sexuality in the construction of contemporary Korean society. We will also briefly survey the history of South Korean cinema that has evolved hand-in-hand with the history of modern Korea itself, walking through its five different phases (1945-Korean War era; 1955-1972 ‘Golden Age’; 1973-1979 censorship era; 1980-1996 democratization era; and 1997 onwards). No prior experience of Korean studies courses necessary; all films will be screened with English subtitles. IMPORTANT: This class has TWELVE total Monday evening film screenings, of which you are required to attend AT LEAST SEVEN. Screening times are Mondays 5:20-7:30 PM, Williams Hall 440.

CIMS 116 Screenwriting Workshop
This is a workshop-style course for those who have thought they had a terrific idea for a movie but didn’t know where to begin. The class will focus on learning the basic tenets of classical dramatic structure and how this (ideally) will serve as the backbone for the screenplay of the aforementioned terrific idea. Each student should, by the end of the semester, have at least thirty pages of a screenplay completed. Classic and not-so-classic screenplays will be required reading for every class, and students will also become acquainted with how the business of selling and producing one’s screenplay actually happens. Students will be admitted on the basis of an application by email briefly describing their interest in the course to the instructor.
Taught by: Kathy DeMarco Van Cleve
One-term course offered either term

Activity: Seminar
1.0 Course Unit

CIMS 118 Iranian Cinema: Gender, Politics and Religion
This seminar explores Iranian culture, art, history and politics through film in the contemporary era. We will examine a variety of works that represent the social, political, economic and cultural circumstances of post-revolutionary Iran. Along the way, we will discuss issues pertaining to gender, religion, nationalism, ethnicity, and the function of cinema in present day Iranian society. Films to be discussed will be by internationally acclaimed filmmakers, such as Abbas Kiarostami, Mohsen Makhmalbaf, Rakhshan Bani-Etemad, Tahmineh Milani, Jafar Panahi, Bahman Ghobadi, among others.

Course not offered every year
Also Offered As: COML 120, GSWS 118, NELC 118, NELC 618
Activity: Seminar
1.0 Course Unit

CIMS 125 Sex and Representation
This course is a literature based seminar that explores normative categories of gender and sexuality. By focusing on figures writing from the margins, we will explore how radical approaches to narrative form and subject-matter invite us to think in new ways about desire and identity. We will read texts that blur the boundaries between fact and fiction, hybridizing the genres of poetry, drama, and autobiography to produce new forms of expression, such as the graphic novel, auto-fiction, and prose poetry. From Virginia Woolf’s gender-bending epic, Orlando, to Tony Kushner’s Angels in America, this course traces how non-normative desire is produced and policed by social and literary contexts - and how those contexts can be re-imagined and transformed.
Taught by: Halstead
One-term course offered either term
Also Offered As: COML 127, GSWS 125
Activity: Seminar
1.0 Course Unit
Notes: All readings and discussions in English.

CIMS 130 Advanced Screenwriting
This is a workshop style course for students who have completed a screenwriting class, or have drafted a screenplay they wish to improve or want to learn everything in one shot and are ready to do a lot of writing, and even more rewriting.
Taught by: Kathleen DeMarco Van Cleve
One-term course offered either term
Also Offered As: ENGL 130
Activity: Seminar
1.0 Course Unit

CIMS 142 Duchamp is My Lawyer
This course examines the impact of copyright law on artists and creative industries. Looking at publishing, music, film, and software, we will ask how the law drives the adoption of new media, and we will consider how regulation influences artistic decisions. A mix of the theoretical with the practical, we will be using UbuWeb (the largest and oldest site dedicated to the free distribution of the avant-garde) as our main case study. The course will cover both the history of copyright law and current debates, legislation, and cases. We will also follow major copyright stories in the news. Readings cover such diverse topics as the player piano, Disney films, YouTube, video game consuls, hip hop, the Grateful Dead, file sharing, The Catcher in the Rye, and many more. We will also examine the critical role of ‘shadow libraries,’ (free culture hubs) in regards how the cultural artifact is produced and distributed in the digital age, alongside today's gatekeepers of algorithmic culture, such as Netflix, Amazon, and Spotify.
Taught by: Decherney
Course usually offered in spring term
Also Offered As: ENGL 142
Activity: Seminar
1.0 Course Unit

CIMS 150 Water Worlds: Cultural Responses to Sea Level Rise & Catastrophic Flooding
As a result of climate change, the world that will take shape in the course of this century will be decidedly more inundated with water than we’re accustomed to. The polar ice caps are melting, glaciers are retreating, ocean levels are rising, polar bear habitat is disappearing, countries are jockeying for control over a new Arctic passage, while low-lying cities and small island nations are confronting the possibility of their own demise. Catastrophic flooding events are increasing in frequency, as are extreme droughts. Hurricane-related storm surges, tsunamis, and raging rivers have devastated regions on a local and global scale. In this seminar we will turn to the narratives and images that the human imagination has produced in response to the experience of overwhelming watery invasion, from Noah to New Orleans. Objects of analysis will include mythology, ancient and early modern diluvialism, literature, art, film, and commemorative practice. The basic question we’ll be asking is: What can we learn from the humanities that will be helpful for confronting the problems and challenges caused by climate change and sea level rise?

CIMS 151 Contemporary Fiction & Film in Japan
This course will explore fiction and film in contemporary Japan, from 1945 to the present. Topics will include literary and cinematic representation of Japan’s war experience and post-war reconstruction, negotiation with Japanese classics, confrontation with the state, and changing ideas of gender and sexuality. We will explore these and other questions by analyzing texts of various genres, including film and film scripts, novels, short stories, manga, and academic essays. Class sessions will combine lectures, discussion, audio-visual materials, and creative as well as analytical writing exercises. The course is taught in English, although Japanese materials will be made available upon request. No prior coursework in Japanese literature, culture, or film is required or expected; additional secondary materials will be available for students taking the course at the 600 level. Writers and film directors examined may include: Kawabata Yasunari, Hayashi Fumiko, Abe Kobo, Mishima Yukio, Oe Kenzaburo, Yoshimoto Banana, Ozu Yasujirō, Naruse Mikio, Kurosawa Akira, Imamura Shohei, Koreeda Hirokazu, and Beat Takeshi.

CIMS 152 Forest Worlds: Mapping the Arboreal Imaginary in Literature and Film
Can the humanities help us think differently about the forest? What happens if we imagine forests as the agents of their stories? At a time when humans seem unable to curb the destructive practices that place themselves, biodiversity, and the forests at risk, the humanities give us access to a record of the complex inter-relationship between forests and humanity. The course places a wide range of literature and film in which forests are strongly featured in relation to environmental history and current environmental issues.

CIMS 156 Queer German Cinema
Taught in English. This course offers an introduction into the history of German-language cinema with an emphasis on depictions of lesbian, gay, bisexual, trans and queer themes. The course provides a chronological survey of Queer German Cinema from its beginnings in the Weimar Republic to its most recent and current representatives, accompanied throughout by a discussion of the cultural-political history of gay rights in the German-speaking world. Over the course of the semester, students will learn not only cinematic history but how to write about and close-read film. No knowledge of German or previous knowledge required.
Taught by: Fleishman
Course not offered every year
Also Offered As: COML 156, GRMN 156, GSWS 156
Activity: Lecture
1.0 Course Unit

CIMS 159 Modern Hebrew Literature and Film in Translation: Autobiography
This course examines cinematic and literary portrayals of childhood. While Israeli works constitute more than half of the course’s material, European film and fiction play comparative roles. Many of the works are placed, and therefore discussed, against a backdrop of national or historical conflicts. Nonetheless, private traumas (such as madness, abuse, or loss) or an adult’s longing for an idealized time are often the central foci of the stories. These issues and the nature of individual and collective memory will be discussed from a psychological point of view. Additionally, the course analyzes how film, poetry and prose use their respective languages to reconstruct the image of childhood; it discusses the authors and directors struggle to penetrate the psyche of a child and to retrieve fragments of past events.
For BA Students: Arts and Letters Sector

CIMS 164 Russian and East European Film from the October Revolution to World War II
This course presents the Russian contribution to world cinema before WWII - nationalization of the film industry in post revolutionary Russia, the creation of institutions of higher education in filmmaking, film theory, experimentation with the cinematic language, and the social and political reflex of cinema. Major themes and issues involve: the invention of montage, Kuleshov effect, the means of visual propaganda and the cinematic component to the communist cultural revolutions, party ideology and practices of social-engineering, cinematic response to the emergence of the totalitarian state. Great filmmaker and theorist in discussion include Vertov, Kuleshov, Eisenstein, Pudovkin, Medvedkin and others.

CIMS 200 Virtual Reality Lab
In this collaboration between Penn and the Philadelphia Museum of Art (PMA), students will work with curators to create virtual reality projects connected to the museum's collections. This course mixes virtual reality theory, history, and practice. We will read a wide range of scholarship, manifestos, and memoirs that examine virtual reality and other immersive technologies, stretching from the 18th century to today. We will explore virtual reality projects, including narrative and documentary films, commercial applications, and games. We will work with many different virtual reality systems. And we will learn the basics of creating virtual reality, making fully immersive 3-D, 360-degree films with geospatial soundscapes. Finally, we will take what we have learned out of the classroom, working with the Philadelphia Museum of Art curators to create virtual reality experiences based around the museum's objects and exhibits. Students will gain an understanding of the unique approaches needed to appeal to museum visitors in a public setting, so we can make viable experiences for them. No previous knowledge of VR or experience is necessary. Interested students should email Prof. Peter Decherney to obtain a permit for the course.

CIMS 204 Sicily on Page and Screen
What images do we have when we think of Sicily and Sicilians? Often our thoughts range from scenic vacation spots, delicious seafood and cannoli, and sweet grandmothers dressed in black, to mafia violence, vendettas, and the deep-rooted code of silence, omerta. But, how did these ideas get to us? Is there truth in them? Is there more to this island and its people? Through careful analysis of literary and cinematic representations of this Italian region, and those that do and have inhabited it, we will trace and analyze how Sicilians have represented themselves, how mainland Italians have interpreted Sicilian culture, how outsiders have understood these symbols, how our own perceptions shaped what we thought we knew about this place and, finally, how our own observations will have evolved throughout our studies. We will watch films such as Tornatore's Cinema paradiso and Coppola's The Godfather II, and read texts such as Lampedusa's The Leopard and Maraini's Bagheria. This course aims to increase students' understanding and knowledge of the Sicilian socio-cultural system. It will help students develop their ability to understand and interpret Sicilian culture through close analysis of its history, values, attitudes, and experiences, thereby allowing them to better recognize and examine the values and practices that define their own, as well as others', cultural frameworks.
Taught by: Brocia
Course usually offered summer term only

Notes: Course taught in English. Course Materials in English. There are no prerequisites of this course.

CIMS 206 Italian History on Screen: How Movies Tell the Story of Italy
How has our image of Italy arrived to us? Where does the story begin and who has recounted, rewritten, and rearranged it over the centuries? In this course, we will study Italy’s rich and complex past and present. We will carefully read literary and historical texts and thoughtfully watch films in order to attain an understanding of Italy that is as varied and multifaceted as the country itself. Group work, discussions and readings will allow us to examine the problems and trends in the political, cultural and social history from ancient Rome to today. We will focus on: the Roman Empire, Middle Ages, Renaissance, Unification, Turn of the Century, Fascist era, World War II, post-war and contemporary Italy.

**CIMS 244 French Cinema**
This course will introduce students to key films of the French film canon, selected over a period ranging from the origins of French cinema to the present. Students will also be introduced to the key critical concepts (such as the notion of the 'auteur' film genre) informing the discussion of films in France. The films will be studied in both a historical and theoretical context, related to their period styles (e.g. 'le realisme poeitique', 'la Nouvelle Vague', etc.), their 'auteurs,' the nature of the French star system, the role of the other arts, as well to the critical debated they have sparked among critics and historians. Students will acquire the analytical tools in French to discuss films as artistic and as cultural texts.
For BA Students: Arts and Letters Sector

Course usually offered in fall term
Also Offered As: FREN 230
Activity: Lecture
1.0 Course Unit

**CIMS 245 Andrei Tarkovsky: Cinema, Spirit and the Art of the Long Take**
Andrei Tarkovsky is universally acknowledged to be the greatest Soviet filmmaker of the last half of the twentieth century. Kurosawa claimed that Tarkovsky had 'no equal among film directors alive now.' Bergman called his work 'a miracle.' His films are beautiful, intellectually challenging, and spiritually profound. They also represent a prolonged exploration of the potential of the long take - unusually extended, continuous shots. Tarkovsky's works range from 'Ivan's Childhood,' a study of wartime experience through the eyes of a child; to 'Solaris,' a philosophical essay in the form of a science-fiction thriller; to 'Andrei Rublev,' an investigation of the power of art and spirituality. In this course, we will study Tarkovsky's films and life, with attention to his formal and artistic accomplishments, his thought and writings, and the cultural and political contexts of his work. Each student will learn to analyze film form and content and write two short and one longer paper on some longstanding aspect of Tarkovsky's work of the student's choice.

**CIMS 247 Fascist Cinemas**
Cinema played a crucial role in the cultural life of Nazi Germany and other fascist states. As cinema enthusiasts, Goebbels and Hitler were among the first to realize the important ideological potential of film as a mass medium and saw to it that Germany remained a cinema powerhouse producing more than 1000 films during the Nazi era. In Italy, Mussolini, too, declared cinema 'the strongest weapon.' This course explores the world of 'fascist' cinemas ranging from infamous propaganda pieces such as The Triumph of the Will to popular entertainments such as musicals and melodramas. It examines the strange and mutually defining kinship between fascism more broadly and film. We will consider what elements mobilize and connect the film industries of the Axis Powers: style, genre, the aestheticization of politics, the creation of racialized others. More than seventy years later, fascist cinemas challenge us to grapple with issues of more subtle ideological insinuation than we might think. Weekly screenings with subtitles. All readings and discussions in English.

CIMS 270 American Musical Theatre
The American musical is an unapologetically popular art form, but many of the works that come from this tradition have advanced and contributed to the canon of theatre as a whole. In this course we will focus on both music and texts to explore ways in which the musical builds on existing theatrical traditions, as well as alters and reshapes them. Finally, it is precisely because the musical is a popular theatrical form that we can discuss changing public tastes, and the financial pressures inherent in mounting a production. Beginning with early roots in operetta, we will survey the works of prominent writers in the American musical theatre, including Kern, Berlin, Gershwin, Porter, Rodgers, Hart, Hammerstein, Bernstein, Sondheim and others. Class lecture/discussions will be illustrated with recorded examples.
Taught by: Fox
Course not offered every year

CIMS 273 American Theatre and Performance
This course examines the development of the modern American theatre from the turn of the century to the present day. Progressing decade by decade the course investigates the work of playwrights such as Eugene O'Neil, Arthur Miller, Tennessee Williams, Edward Albee, David Mamet, August Wilson and Tony Kushner, theatre companies such as the Provincetown Players and the Group Theatre, directors, actors, and designers. Some focus will also be given to major theatrical movements such as the Federal Theatre Project, Off-Broadway, regional theatre, experimental theatre of the Sixties, and feminist theatre.
Taught by: Schlatter and Malague
Course not offered every year
Also Offered As: ENGL 067, THAR 272
Activity: Lecture
1.0 Course Unit
CIMS 274 Dark Comedy in Theatre and Film
This course will examine the 'troublesome genre' of dark comedy by looking at the ways in which theatre and film use comic and tragic structures and traditions to explore concepts and stories seemingly at odds with those traditions. Although not always organized chronologically in time, we will examine the formal and structural characteristics of tragicomedy by tracing its development, from some of its earliest roots in Roman comedy, to its manifestation in contemporary films and plays. Aside from close readings of plays and analysis of films, we will read selected critical essays and theory to enhance our understanding of how dark comedies subvert categories and expectations. We will look at how dark comedies affect audiences and read sections of plays aloud in class. Issues to be considered include comparing the way the genre translates across theatre and film (adaptation) and examining the unique placement of the genre at the heart of contemporary American culture. Students will have the opportunity to experiment with creating tragicomic effect through performance in their presentations. The class is a seminar, with required participation in discussions. Other assignments include an 8-10 page paper and a presentation. We will read plays by authors as diverse as Plautus, Anton Chekhov, and Lynn Nottage, and filmmakers including Charlie Chaplin, Sofia Coppola, and Bong Joon-ho.
Taught by: Ferguson
Also Offered As: ENGL 014, THAR 273
Activity: Seminar
1.0 Course Unit

CIMS 275 Russian History in Film
This course draws on fictional, dramatic and cinematic representations of Russian history based on Russian as well as non-Russian sources and interpretations. The analysis targets major modes of imagining, such as narrating, showing and reenacting historical events, personae and epochs justified by different, historically mutating ideological postulates and forms of national self-consciousness. Common stereotypes of picturing Russia from 'foreign' perspectives draw special attention. The discussion involves the following themes and outstanding figures: the mighty autocrats Ivan the Terrible, Peter the Great, and Catherine the Great; the tragic ruler Boris Godunov; the brazen rebel and royal impostor Pugachev; the notorious Rasputin, his uncanny powers, sex-appeal, and court machinations; Lenin and the October Revolution; images of war; times of construction and times of collapse of the Soviet Colossus.
Taught by: Todorov
Course not offered every year
Also Offered As: REES 275
Activity: Lecture
1.0 Course Unit

CIMS 279 Jewish Films and Literature
From the 1922 silent film 'Hungry Hearts' through the first 'talkie,' 'The JazzSinger,' produced in 1927, and beyond 'Schindler's List,' Jewish characters have confronted the problems of their Jewishness on the silver screen for a general American audience. Alongside this Hollywood tradition of Jewish film, Yiddish film blossomed from independent producers between 1911 and 1939, and interpreted literary masterpieces, from Shakespeare's 'King Lear' to Sholom Aleichem's 'Teyve the Dairyman,' primarily for an immigrant, urban Jewish audience. In this course, we will study a number of films and their literary sources (in fiction and drama), focusing on English language and Yiddish films within the framework of three dilemmas of interpretation: a) the different ways we 'read' literature and film, b) the various ways that the media of fiction, drama, and film 'translate' Jewish culture, and c) how these translations of Jewish culture affect and are affected by their implied audience. All readings and lectures in English.
For BA Students: Arts and Letters Sector
Taught by: Hellerstein
Course not offered every year
Also Offered As: COML 265, ENGL 279, GRMN 261, JWST 263
Activity: Lecture
1.0 Course Unit

CIMS 285 Art and Business of Film
The course will explore how a screenplay is conceptualized and developed, the role of agency relationships in the film business, and - casting as wide a net as possible - the financing, production, direction, distribution, exhibition and marketing of both independent and studio films. A combination of lectures by instructors and practitioners, case studies, film screenings, and consulting projects with independent and Hollywood creators, packagers, financiers, exhibitors, distributors and publicists will illustrate the relationship between the art of film and the business of film. Guests will include screenwriters, agents, producers, directors, distributors, film festival curators and film critics. In short, we will try to cover all aspects of making a film, and explore that often-tricky intersection of art and commerce.
Taught by: DeMarco & Van Cleve
One-term course offered either term
Activity: Seminar
1.0 Course Unit

CIMS 289 Mixed Media Animation
Mixed Media Animation is a contemporary survey of stop-motion animation concepts and techniques. Students use digital SLR cameras, scanners and digital compositing software to produce works in hand-drawn animation, puppet and clay animation, sand animation, and multiplane collage animation. Screenings and discussions in the course introduce key historical examples of animation demonstrating how these techniques have been used in meaningful ways. Students then learn how to composite two or more of these methods with matte painting, computer animation or video.
One-term course offered either term
Also Offered As: FNAR 289, FNAR 589
Prerequisite: FNAR 123 AND FNAR 264
Activity: Studio
1.0 Course Unit
CIMS 291 East Asian Cinema
This survey course introduces students to major trends, genres, directors, and issues in the cinemas of East Asian countries/regions, including Japan, Korea, China, Hong Kong, and Taiwan. Charting key developments over more than a hundred years from the early twentieth century to the present, this course examines films as aesthetic objects, asking questions about film form, narrative, and style. It also pays attention to the evolution of cinema as an institution (e.g., modes of production, circulation, and exhibition) in different cultural and political contexts. Weekly course materials will include both films (primary sources) and analytical readings (secondary sources). By the end of the course, students are expected to gain broad knowledge of East Asian cinema, develop skills of film analysis, and apply these skills to perform historically informed and culturally sensitive analysis of cinema. Prior knowledge of East Asian languages is NOT required.
Taught by: Zhou
Also Offered As: ARTH 291, EALC 106, EALC 506
Activity: Lecture
1.0 Course Unit

CIMS 293 Facing America
This course explores the visual history of race in the United States as both self-fashioning and cultural mythology by examining the ways that conceptions of Native American, Latino, and Asian identity, alongside ideas of Blackness and Whiteness, have combined to create the various cultural ideologies of class, gender, and sexuality that remain evident in historical visual and material culture. We also investigate the ways that these creations have subsequently helped to launch new visual entertainments, including museum spectacles, blackface minstrelsy, and early film, from the colonial period through the 1940s.

CIMS 304 Japanese Cinema
This course is a survey of Japanese cinema from the silent period to the present. Students will learn about different Japanese film genres and histories, including (but not limited to) the benshi tradition, jidaigeki (period films), yakuza films, Pink Film, experimental/arthouse, J-horror, and anime. Although the course will introduce several key Japanese auteurs (Mizoguchi, Ozu, Kurosawa, Oshima, Suzuki, etc), it will emphasize lesser known directors and movements in the history of Japanese film, especially in the experimental, arthouse, and documentary productions of the 1960s and 1970s. Finally, in addition to providing background knowledge in the history of Japanese cinema, one of the central goals of the course will be to interrogate the concept of ‘national’ cinema, and to place Japanese film history within a international context.
Taught by: Alekseyeva
One-term course offered either term
Also Offered As: EALC 268, ENGL 304
Activity: Seminar
1.0 Course Unit

CIMS 305 Cinema and Media
This course will provide an introduction to some of the most important film theory debates, and allow us to explore how writers and filmmakers from different countries and historical periods have attempted to make sense of the changing phenomenon known as ‘cinema,’ to think cinematically. Topics under consideration may include: spectatorship, authorship, the apparatus, sound, editing, realism, race, gender and sexuality, stardom, the culture industry, the nation and decolonization, what counts as film theory and what counts as cinema, and the challenges of considering film theory in a global context, including the challenge of working across languages. There will be no screenings for this course. No knowledge of film theory is presumed. Course requirements: attendance at lecture and participation in lecture and section discussions; canvas postings; 1 in-class midterm; 1 take-home final.
Taught by: Redrobe

CIMS 344 Documentary Experiments in Urban Research
What can video art, experimental documentary, and sensory ethnography teach us about the practice of urban research? How can we build on the traditions of first person and essay cinema to produce compelling documents of our own questions and findings? This course surveys a range of film and video works on themes such as the production of space, urban nature, infrastructure, and collective memory. Taken as a genre, these time-based works provide a powerful model for training scholars’ observational skills, conceptualizing scales of analysis, and engaging broader publics in urban research. In this course, we will explore this audiovisual genre in dialogue with selected theoretical, ethnographic, and case study readings in urban studies. As an advanced theory-practice course, it combines seminar readings and discussion with regular screenings and a series of workshops on photo, video, audio, and postproduction skills. The course will provide a general fluency in contemporary urban research, with particular emphasis on urban political ecology. In dialogue with this scholarship, students will develop and situate their own experimental documentary research projects.
Taught by: Mendelsohn
Course not offered every year
Also Offered As: ANTH 344, URBS 344
Activity: Seminar
1.0 Course Unit

CIMS 370 Blacks in American Film and Television
An examination and analysis of the changing images and achievements of African Americans in motion pictures and television. The first half of the course focuses on African-American film images from the early years of D.W. Griffith’s ‘renegade bucks’ in The Birth of a Nation (1915); to the comic servants played by Steppin Fetchit, Hattie McDaniel, and others during the Depression era; to the post-World War II New Negro heroes and heroines of Pinky (1949) and The Defiant Ones (1958); to the rise of the new movement of African American directors such as Spike Lee (Do the Right Thing), Julie Dash (Daughters of the Dust), Charles Burnett, (To Sleep With Anger) and John Singleton (Boyz N the Hood). The second half explores television images from the early sitcoms ‘Amos ’n Andy’ and ‘Beulah’ to the ‘Cosby Show,’ ‘Fresh Prince of Bel Air,’ and ‘Martin.’ Foremost this course will examine Black stereotypes in American films and television—and the manner in which those stereotypes have reflected national attitudes and outlooks during various historical periods. This course will also explore the unique ‘personal statements’ and the sometimes controversial ‘star personas’ of such screen artists as Sidney Poitier, Dorothy Dandridge, Paul Robeson, Richard Pryor, Oscar Micheaux, Spike Lee, Bill Cosby, Eddie Murphy, and Whoopi Goldberg. The in-class screenings and discussions will include such films as Show Boat (1936), the independently produced ‘race movies’ of the 1930s and 1940s, Cabin in the Sky (1943), The Defiant Ones (1958), Imitation of Life (the 1959 remake), Super Fly (1972), and She’s Gotta Have It (1986) and such television series as ‘I Spy,’ ‘Julia,’ ‘Good Times,’ ‘The Jeffersons,’ ‘Roots,’ ‘A Different World,’ ‘I’ll Fly Away,’ ‘LA Law,’ and ‘Hangin’ With Mr. Cooper.’

CIMS 347 Gender History and American Film
More than any other medium, the motion pictures fostered new ideals and images of modern womanhood and manhood in the United States. Throughout the twentieth century, gender representations on the screen bore a complex relationship to the social, economic, and political transformations marking the lives and consciousness of American men and women. This course explores the history of American gender through film. It treats the motion pictures as a primary source that, juxtaposed with other kinds of historical evidence, opens a window onto gendered work, leisure, sexuality, family life, and politics. We will view a wide range of Hollywood motion pictures since 1900, as well as films by blacklisted artists, feminists, and independent producers.

1.0 Course Unit

CIMS 365 Russian Cinema and Culture
What’s so funny, Mr. Chekhov? This question is often asked by critics and directors who still are puzzled with Chekhovs definition of his four major plays as comedies. Traditionally, all of them are staged and directed as dramas, melodramas, or tragedies. Should we cry or should we laugh at Chekhovian characters who commit suicide, or are killed, or simply cannot move to a better place of living? Is the laughable synonymous to comedy and the comic? Should any fatal outcome be considered tragic? All these and other questions will be discussed during the course. The course is intended to provide the participants with a concept of dramatic genre that will assist them in approaching Chekhovs plays as comedies. In addition to reading Chekhovs works, Russian and western productions and film adaptations of Chekhovs works will be screened. Among them are, Vanya on 42nd Street with Andre Gregory, and Four Funny Families. Those who are interested will be welcome to perform and/or direct excerpts from Chekhovs works.

CIMS 378 Global Media
This course explores a broad media landscape through new critical and conceptual approaches. It is designated as a Benjamin Franklin Seminar. This course maps the footprints of television at a global scale. Adopting comparative approaches, we will be studying TV's formation of national and global discourses, and thereby recognizing not only television's impact on processes of globalization, but also the ability of television to matter globally. Working through concepts of 'broadcasting,' 'flow,' 'circulation,' and 'circumvention,' the course examines the movement of (and blocks encountered by) television programs and signals across national borders and cultures. The course particularly focuses on how global television cultures have been transformed due to shifts from broadcasting technologies to (Internet) streaming services? Navigating from United States and Cuba to India and Egypt, the readings in the course illuminate how particular televisural genres, institutions, and reception practices emerged in various countries during specific historical periods. We shall be addressing a range of questions: what kind of global phenomenon is television? Can we study television in countries where we do not know the existing local languages? In what different ways (through what platforms, interfaces, and screens) do people in different continents access televisural content? What explains the growing transnational exports of Turkish and Korean TV dramas? What is the need to historically trace the infrastructural systems like satellites (and optical fiber cables) that made (and continue to make) transmission of television programming possible across the world? How do fans circumvent geo-blocking to watch live sporting events? Assignments include submitting weekly discussion questions and a final paper. See the English Department's website at www.english.upenn.edu for a description of the current offerings.

CIMS 382 Horror Cinema
The purpose of this course is to provide an introduction to the history and main themes of the supernatural/horror film from a comparative perspective. Films considered will include: the German expressionists masterworks of the silent era, the Universal classics of the 30's and the low-budget horror films produced by Val Lewton in the 40's for RKO in the US, the 1950's color films of sex and violence by Hammer studios in England, Italian Gothic horror or giallo (Mario Brava) and French lyrical macabre (Georges Franju) in the 60's, and on to contemporary gore. In an effort to better understand how the horror film makes us confront our worst fears and our most secret desires alike, we will look at the genre's main iconic figures (Frankenstein, Dracula, Dr. Jekyll and Mr. Hyde, etc.) as well as issues of ethics, gender, sexuality, violence, spectatorship through a variety of critical lenses (psychoanalysis, socio-historial and cultural context, aesthetics...). Prerequisite: Two 200-level French courses taken at Penn or equivalent are required for FREN 382. There are no pre-requisites for CIMS 382. This course will be taught in English.

CIMS 386 Paris in Film
Latter-day examples like Christophe Honore's Dans Paris, Cedric Klapisch's Paris or the international omnibus Paris, je t'aime (with each director paying homage to a distinctive 'arrondissement' of the capital), not to mention American blockbusters like The Da Vinci Code and Inception or Woody Allen's Midnight in Paris, are there to remind us that there is something special -- indeed, a special kind of magic -- about Paris in and on film. Despite the extreme polarization between Paris and provincial France in both cultural and socio-economic terms, cultural historians have argued that Paris is a symbol of France (as a centralized nation), more than Rome is of Italy and much more than Madrid is of Spain or Berlin of Germany, for example. The prevalence of the City of Lights on our screens, Gallic and otherwise, should therefore come as no surprise, be it as a mere backdrop or as a character in its own right. But how exactly are the French capital and its variegated people captured on celluloid? Can we find significant differences between French and non-French approaches, or between films shot on location that have the ring of 'authenticity' and studio-bound productions using reconstructed sets? Do these representations vary through time and perhaps reflect specific historical periods or zeitgeists? Course usually offered in spring term

CIMS 501 Nationalism and Ethnic Conflict in Film
This course studies political violence, terrorism, civil wars, ethnic conflicts, and genocidal policies as represented in the social media, cable news, documentaries, feature films. We discuss various techniques and strategies of the propaganda wars, post-truth media environment, etc. The regions of interest are Former Soviet Union, Russia, the Caucasus, and the Balkans, US homegrown political violence, and the Middle East. The students are expected to develop and demonstrate a critical approach to different aspects of the cinematic, news, and social media representation of ethnic conflict. We focus on the violent developments that took place in Russia and the Balkans after the collapse of the Soviet Bloc, conditioned by the geopolitical dynamics that the fall of communism had created. We study media broadcasts, documentaries, feature films representing both, the Eastern and the Western perspective.

CIMS 515 Topics in Criticism & Theory
Topic for Spring 2021: Cultures of Reading in Imperial Russia What did it mean to be a reader in imperial Russia? What did people read, and to what ends? How was literacy cultivated, and what were the social implications? In this course, students will read several canonical works of nineteenth-century Russian literature that thematize and foreground the act of reading: as a pursuit undertaken for the betterment of self, society, nation, and world; as a light pastime for the bored or underemployed; but also as an enterprise fraught with potential for moral or civic ruin. In addition to closely investigating allusions to the specific texts and authors read by literary characters, we will also examine the reading habits of our own authors as both consumers and producers of literary culture. We will consider these dynamics against a backdrop of constant fluctuations in educational policies, the book market, and the circulation of texts within and beyond Russia as we work together to develop an understanding of the imperial Russian reading public(s).

CIMS 555 Terrorism
This course studies the emergence of organized terrorism in nineteenth-century Russia and its impact on public life in the West, the Balkans, and America. We investigate the political and cultural origins of terrorism, its conspiratorial routine, structures, methods, manuals, and manifestoes. Historical and cultural approaches converge in the discussion of intellectual movements that forged the formula of terrorism and influenced the professionalization of the underground, such as nihilism, anarchism, and populism. We discuss the stern terrorist personality, self-denial, revolutionary martyrdom, and conspiratorial militancy. The theatricals of terrorism are of particular interest, its bombastic acts, mystification, and techniques of spreading disorganizing fear in the global media environment. We trace the creation of counterterrorism police in late imperial Russia and its methods to infiltrate, demoralize, and dismantle the terrorist networks, and reengineer their social base. First Red Scare and the formation of the FBI constitutes a unique case of managing rampant political violence and countering the asymmetrical threat of terrorism.

CIMS 582 Fantastic Literature 19th/20th Centuries
This course will explore fantasy and the fantastic in short tales of 19th- and 20th-century French literature. A variety of approaches – thematic, psychoanalytic, cultural, narratological – will be used in an attempt to test their viability and define the subversive force of a literary mode that contributes to shedding light on the dark side of the human psyche by interrogating the ‘real,’ making visible the unseen and articulating the unsaid. Such broad categories as distortions of space and time, reason and madness, order and disorder, sexual transgressions, self and other will be considered. Readings will include ‘recits fantastiques’ by Merimee, Gautier, Nerval, Maupassant, Breton, Pieyre de Mandiargues, Jean Ray and others.

CIMS 694 Mexican Cinema
This seminar will address the specificity and uniqueness of Spanish America's cultural production, that is, those elements that make the Spanish American case differ from the paradigmatic postcolonial situation, and which make recent developments in postcolonial studies not fully applicable to it. We will explore these issues in the context of the literary production of the twentieth century in Spanish America from roughly the twenties to the present, that is, the epoch encompassing the larger metropolitan cultural phenomena of Modernism and Postmodernism.
Course not offered every year
Also Offered As: LALS 694, SPAN 694
Activity: Seminar
1.0 Course Unit
CIMS 791 African Film and Media Pedagogy
This graduate seminar offers an intensive, critical, and collaborative study of contemporary African film and media production. The past three decades have seen an unprecedented shift in the African media landscape. Not only has the wide availability of satellite media across the continent made international film and television programming part of African popular culture, but moreover the growing film industries within the continent, most notably Nollywood, have altered how Africans are carving an image of themselves on the big and small screens. In partnership with local, regional, and international film and media centers, we will study a range of films—features, shorts, documentaries, and television shows—paying close attention to the means and sites of production as well as the formal qualities that distinguish these works. Many of the films we will analyze stand out both for their exceptional aesthetic quality as well as their remarkable ability to confront pressing political and social themes. But we will also think about trash: what counts as trashy media, and for whom? Who watches it, where, and why? Other questions we will ask include: What particular indigenous modes of storytelling do African films employ? What categories begin to emerge under the umbrella category of 'African film and media' and where do diasporan film and media practitioners and critics fit in this landscape? How are these films tackling some of the urgent questions of our times, including migration and globalization; ethnic, political, and economic polarization; gender and sexuality; and massive urbanization and industrialization sweeping Africa and other parts of the Global South? What role do festivals in various countries play in shaping media production and distribution? How important is the concept of authorship in this context? And how do these films challenge the dominant western trope of Africa as a spectacle, instead offering novel ways of picturing everyday African experiences that we rarely glimpse in western media? To explore these questions, we will visit multiple sites of film production, distribution, exhibition, and education, including Scribe Video Center in Philadelphia, Sankofa Films in Washington, D.C., and the College of Performing and Visual Art at Addis Ababa University in Ethiopia. Location and knowledge production are inextricably connected, and by considering African media production from these multiple sites, and collaborating with multiple stakeholders, this course offers a directly engaged pedagogy of the complex artistic, cultural, social, and political dynamics of African audiovisual creation. The travel component of this course entails a day trip to Washington, D.C., during the semester (tentative date: April 2, 2020) and a week-long trip to Addis Ababa at the end of the spring term (students applying for this course should be prepared to travel to Addis Ababa May 30, 2020–June 7, 2020). All expenses for travel, accommodation, and food will be covered, but students will need to hold a passport. Ultimately, this course aims to use film and media production to intervene in a larger discourse on how Africa is figured in the global humanities, not as an absent or passive actor but one actively engaged in producing art and humanistic knowledge that has much to teach us and the world. Admission to the course will be by permission only and students are required to submit a short statement of interest (max. 250 words) to dagw@english.upenn.edu and redkaren@sas.upenn.edu. Students must be prepared to travel to Addis Ababa and Washington D.C. as described in the syllabus, and must hold a passport. Taught by: Redrobe/Woubshet

1.0 Course Unit

CIMS 792 Reading Against Racism
This course takes as its starting point Audre Lorde’s 1981 Keynote presentation at the National Women’s Studies Association Conference, ‘The Uses of Anger: Women Responding to Racism.’ Lorde, critiquing white feminists, states, ‘I cannot hide my anger to spare you guilt, nor hurt feelings, nor answering anger; for to do so insults and trivializes all our efforts. Guilt is not a response to anger; it is a response to one’s own actions or lack of action. If it leads to change then it can be useful, since it is then no longer guilt but the beginning of knowledge. Yet all too often, guilt is just another name for impotence, for defensiveness destructive of communication; it becomes a device to protect ignorance and the continuation of things the way they are, the ultimate protection for changelessness.’ Eschewing defensiveness, ignorance, and innocence, and opening to meaningful change by engaging the writings of anti-racist and anti-imperialist thinkers, including those focused on the transformation of higher education, this course examines the responsibilities scholars take on when we affirm that ‘Black Lives Matter,’ and acknowledges that higher education, including the humanities, is actively implicated in the structures and operations of white privilege and anti-black racism as well as in other intersectional modes of exclusion, including all forms of discrimination based on race, ethnicity, national original, ability, class, sexuality, gender, and beliefs. The course aims to approach these urgent but longstanding issues in ways that help us to understand some of the complexities, practicalities, and temporalities of the work of change; to grapple with what Rosalyn Deutsche in Hiroshima After Iraq (2011) describes as ‘the inseparability of the social and the psychic,’ and to seek out effective alternatives to the tendency of politicized academic writing in time of conflict to regress to what Deutsche calls ‘heroic masculinism.’ ‘Reading Against Racism’ is imagined as a way of catalyzing active, collective, and long-term anti-racist, anti-imperialist intellectual work. It seeks to participate in the development of more just and inclusive academic modes and spaces by fostering time and structure for thought and self-reflection, by generating ideas for implementation, and by learning from our readings as well as from each other. All students, white and BIPOC, are welcome to participate, but we will begin this course by working together to establish a community agreement that takes account of the different ways in which such a course is likely to be experienced by white and BIPOC people. For example, recognizing that discussions about race and racism require immense emotional labor from BIPOC people in particular, BIPOC students should not be asked to use their personal experiences to frame questions under discussion or to represent any group. We will establish together other guidelines to create as safe and supportive a space (or spaces) for reading, thinking, and acting against racism as we can muster, including deciding how we would like to include in our process tools like trigger warnings, opt-out mechanisms, smaller subgroups, etc. Requirements: Weekly reading; weekly journal for self-reflection (required, but not for submission); participation in discussion; design a syllabus for an introductory course in your field. Thanks to all the students who have generously participated in developing this course and to the scholars who have written the materials we will read. Taught by: Redrobe

City and Regional Planning (CPLN)

CPLN 500 Introduction to City Planning: Past, Present and Future
Orientation to the profession, tracing the evolution of city and regional planning from its late nineteenth-century roots to its twentieth century expression. Field trips included.
Taught by: Ammon or Drake Rodriguez
Course usually offered in fall term
Also Offered As: URBS 440
Activity: Lecture
1.0 Course Unit

CPLN 501 Quantitative Planning Analysis Methods
Introduction of methods in analyzing demographic conditions, land use and housing trends, employment and business changes, community and neighborhood development. Focus on using spreadsheet models and data analysis for local and neighborhood planning.
Taught by: Faculty
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CPLN 502 Public Finance and Public Policy
This course deals with how governments tax and spend. Students become familiar with the theoretical, empirical, and practical tools and methods used to create and analyze government budgets, as well as the flow of public resources. The course examines public revenues and expenditures within the context of fiscal federalism, in addition to budgeting and resource management and the social, economic, and political forces that shape the fiscal environment within which governments (particularly state and local governments) operate. Significant attention is paid to tax policy analysis and the fiscal crises confronting many large cities and states. Additional special topics covered include health care & social security, public education finance, public finance and the environment, bond markets & municipal finance, and public pensions.
Taught by: Gershberg
Course usually offered in spring term
Also Offered As: GAFL 651
Activity: Lecture
1.0 Course Unit

CPLN 503 Modeling Geographical Objects
This course offers a broad and practical introduction to the acquisition, storage, retrieval, maintenance, use, and presentation of digital cartographic data with vector-oriented (i.e. drawing-based) geographic information systems (GIS) for a variety of environmental science, planning, and management applications. Previous experience in GIS is not required.
Taught by: Tomlin or O'Neil
Course usually offered in fall term
Also Offered As: MUSA 503
Activity: Lecture
1.0 Course Unit

CPLN 504 Site Planning
This course introduces students to the practice of site planning. Skills and methods examined in the course include observation of the physical and community environment; physical and environmental site inventorying and analysis; analysis of alternative site programming and uses; site design processes and strategy; and the creation of site plans and development standards. Methods of community participation and collaboration with other disciplines will be explored. The spring version of this course differs from the fall version in its orientation toward urban designers and/or those with prior design backgrounds and skills.
Taught by: Page
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CPLN 505 Planning by Numbers
This class emphasizes the theory, practice, and use of statistics as applied to planning and policy problems and data. Starting with a review of basic descriptive statistics and measures of association, this course will introduce students to the regression techniques, including multiple regression analysis and logistical and probabilistic models for categorical data; data mining techniques, measures of spatial autocorrelation, and time-series modeling; and causal inference techniques, including structural equation modeling (SEM). A basic familiarity with descriptive and inferential statistics at the upper-division undergraduate level is expected at the beginning of the class. This course uses the popular, free, and open source statistical software R. Meets methods breadth requirement.
Taught by: Ryerson
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
CPLN 506 Negotiation and Conflict Resolution
This course is designed to introduce graduate students to the theory and practice of negotiation, conflict resolution and community engagement. We will start by looking at basic approaches to interpersonal negotiation and then move to considering contemporary approaches to understanding and addressing public disputes using negotiation, facilitation and public involvement. Design professionals - architects, construction managers, planners and others - face a variety of kinds of problems and challenges in their work. Some problems and challenges, whether simple or complex, are amenable to technical solutions based solely on the expertise of planners, managers, architects and others. There are, however, other problems and challenges that require adaptive work, primarily because technical expertise alone is insufficient to address the problems or challenges being faced. In this course, we’ll focus on perspectives and methods for working through those later sorts of problems and challenges. Meets methods breadth requirement.
Taught by: Sokoloff
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CPLN 508 Urban Research Methods
This new course will introduce students to the practice of conducting original social, policy, and planning research in an urban context, and through a series of applied exercises, cover the following topics: research conceptualization and design, logic models, survey and ethnographic research, urban policy analysis and evaluation.
Taught by: Drake Rodriguez, Akira
Activity: Lecture
1.0 Course Unit

CPLN 509 Law of Planning and Urban Development
The central focus will be on selected aspects of the field of the law of planning and development, a field that embraces a range of legal doctrines that are particularly relevant to cities and suburbs. We will study the principles that govern the regulation of land use and management of urban growth (through land use controls and other techniques for regulating new development) and, to a limited extent, environmental planning laws.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CPLN 520 Introduction to Community and Economic Development
Introduction to the theories and practices of urban economic and community development with a focus on improving opportunity and quality of life in low-income communities. Provides foundation for advanced courses in real estate and economic development finance, housing policy, downtown and neighborhood revitalization, workforce development and metropolitan regional development.
Taught by: Servon, Lisa
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CPLN 528 Research Seminar 21st Century Urbanism
Course usually offered in spring term
Also Offered As: URBS 428
Activity: Seminar
1.0 Course Unit

CPLN 530 Introduction to Land Use Planning
Exploration of the methods and tools for managing land use and shaping the built environment. Presents how to create a successful Comprehensive Plan, Zoning Ordinance, Subdivision Regulations, Capital Improvements Program, and design guidelines. Also, presents functional area, regional, and state-level plans.
Taught by: Daniels
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CPLN 531 Introduction to Environmental Planning & Policy
Overview of federal programs for protecting air quality, water quality, and endangered species along with managing climate change, solid waste, toxics, energy, transportation, and remediating brownfields in an overall sustainability framework. State-level, local government, and NGO efforts to protect the environment are also explored as are green infrastructure and green cities.
Taught by: Daniels
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CPLN 535 Topics in Energy Policy
This seminar will explore a collection of ideas influencing energy policy development in the U.S. and around the world. Our platform for this exploration will be seven recent books to be discussed during the semester. These books each contribute important insights to seven ideas that influence energy policy: Narrative, Transition, Measurement, Systems, Subsidiarity, Disruption, Attachment. Books for 2018 will be chosen over the summer; the 2017 books are listed here as examples: Policy Paradox (2011) by Stone, Climate Shock (2015) by Wagner and Weitzman, Power Density (2015) by Smil, Connectography (2016) by Khanna, Climate of Hope (2017) by Bloomberg and Pope, Utility of the Future (2016) by MIT Energy Initiative, Retreat from a Rising Sea (2016) by Pilkey, Pilkey-Jarvis, Pilkey.
Course usually offered in spring term
Also Offered As: ENMG 503
Activity: Seminar
1.0 Course Unit

CPLN 540 Introduction to Property Development
This course is designed to acquaint students with the fundamental skills and techniques of real estate property development. It is designed as a first course for anyone interested in how to be a developer, and as a foundation for further courses in urban development and real estate.
Taught by: Reina, Vincent
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CPLN 550 Introduction to Transportation Planning
Survey of the technological and design aspects of urban transportation systems and land use patterns. Covers facilities operations, congestion, environmental concerns and policy debates revolving around mobility issues at the federal, state, and metropolitan levels.
Taught by: Guerra
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
CPLN 551 Transport Justice
This course will explore the concept of transport justice and how this idea can inform changes to public transit infrastructure. The first half of the course will set theoretical foundations through close reading and discussion of spatial and social justice theories, emphasizing questions of transportation and mobility. The second half of the course will feature a project-based application of these theories. Students will develop analyses to inform a proposed extension to the Southeastern Pennsylvania Transportation Authority's (SEPTA) bus Route 52, which serves a corridor between the Kingsessing and Overbrook sections of West Philadelphia. Students will be encouraged to explore multiple analytic approaches including: interviews and qualitative data collection; GIS and spatial analysis; quantitative analysis and predictive modeling, and more. The course will culminate in written and oral presentations given to partners from SEPTA and other planning agencies in Philadelphia.
Taught by: Joshua Davidson
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CPLN 560 Introduction to Graphics for Urban Design
This course introduces students to visual literacy and the use of a variety of software packages. Through a series of assignments and in class discussions participants develop a visual vocabulary and skills to function in and between AutoCAD, Adobe Creative Suite, and 3D modeling software.
Taught by: Fogelson
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

CPLN 571 Sensing the City
This course will teach you to design and build sensing installations that engage with real-time urban environmental stimuli. Using the Arduino microcontroller as a prototyping platform, you will write code and wire circuits, learn to select and implement available sensors, and generate raw environmental data. You will populate databases and interpret data streams, and then create responsive urban interventions. Following the model of hackerspaces around the globe, we will collaboratively pose problems and find solutions, teaching and learning from one another. No background in coding or electronics is required, but a desire to learn is absolutely necessary. Also, this course is hands-on. You are a maker! Be prepared to build, design, and create.
Taught by: Lassiter
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CPLN 572 Modern Architectural Theory
A survey of architectural theory from the mid-eighteenth century to the present. The discussion of original writings will be emphasized.
Taught by: Brownlee
Course not offered every year
Also Offered As: ARTH 571
Activity: Seminar
1.0 Course Unit

CPLN 577 Introduction to International Development Finance for Cities
With the world's population growth exploding - 2050 will see the addition of some 2 billion inhabitants, primarily in cities in low and middle income countries - decision-makers are pressed to meet basic infrastructure needs (transportation, water and sanitation, public space, electricity, social service facilities and others) while responding to such large global issues as climate change. This course will review the history, theory, and current practice of international development finance with special attention to urban places. It will examine the challenges of the planning and financing projects, explore innovation and best practices in the field and suggest needed regulatory and governance reforms. Student research undertaken in the course will contribute to the 'Cities Investment and Financing Initiative,' an important project being incubated at the University of Pennsylvania through the Perry World House and Penn Institute for Urban Research with support from the World Economic Forum (WEF), the Chicago Council on Global Affairs, United Cities and Governments (UCLG) and C-40. Guest speakers will be invited.
Taught by: Eugenie Birch
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

CPLN 581 Issues in Global Sustainable Development: Adapting in Rapidly Urbanizing Places
The world is beset by interconnected economic, social, and environmental challenges of a magnitude difficult to grasp, much less address. Population growth and urbanization are at the heart of these challenges, with 2.5 billion additional people expected to be living in urban places by 2050. Poverty (3 billion people live on less than $2.50 a day), environmental deprivation (75% of the earth's land is degraded) and low productivity (global productivity has increased only .5% in the past decade) are key issues. To have a sense of the magnitude of today's urbanization, realize that accommodating the increased population will require the construction of a city of a million every week for the next forty years - mainly in Asia and Africa. The speed with which city growth is occurring is overwhelming places' abilities to provide formal employment and core services both necessary to achieve sustainable urban development. Dealing with mounting concerns will be a central task that city and regional planners will confront in the next decades. Between 2015 and 2016, the 193 members of the United Nations approved five global agreements to deal with development issues that are of great importance to city and regional planners. These agreements, Sendai Framework for Disaster Risk Reduction (2015), Addis Ababa Action Agenda (2015), Transforming Our World, Agenda 2030 (2015), Paris Agreement (2015), and New Urban Agenda (2016), represent a worldwide consensus to frame current and future development policies over the next decades. Each will require significant efforts in aligning national and subnational programs and their financing. In fact, estimates for the achievement of the UN's Sustainable Development Goals (a proxy for core service provision) calls for some $4.5 trillion/year in investment for the next 15 years. In this class, students will explore the agreements, their underlying theoretical concepts, their evolution, and their implementation. They will focus on the explicit and implicit urban implications and the challenges faced by subnational governments in coming to grips with integrating aspirational goals with political and economic realities of their specific contexts.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
CPLN 582 Place, Taste and Neighborhood Change: Frameworks for Integrating Aesthetics, Equity and Creativity
Places provide a sense of identity and orientation to the world for its users in ways that go beyond the traditional practice areas that urbanists are trained to understand (i.e. housing, economic development, transportation). The popularization of artistic, cultural, and ‘creative interventions’ in redevelopment has added to that complexity in hybrid ways require new tools, languages, and frameworks to meaningfully participate in the development process. By taking a humanistic and scientific views of the longstanding arts-based community development field now known as ‘creative placemaking’, the class will help learners formulate critical, evaluative answers pressing, emergent questions for urban practitioners. In particular, learners will explore the various state-sponsored meanings of creative placemaking, artistic excellence, and artistic merit. During the course we will interrogate, compare, and articulate the power dynamics embedded in those definitions with new, alternate, and stakeholder-centric definitions. The course aims to invite conversation, reflection, and sharing of best practices alongside community-based leaders with the promise that learners will be able to apply equity-based frameworks to these debates. Learners will emerge from this guided journey with a sharpened ability to identify, generate, and extend authentic, inclusive arts-based neighborhood change.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CPLN 591 INTRODUCTION TO SMART CITIES
This course reviews the infrastructure, databases, deployment, and development of emerging digital technologies in cities. We review existing initiatives, discuss challenges and opportunities, and critically evaluate what technology has and has not been able to offer cities. We contrast utopian visions of teaching with the possible realities. Finally, we ask; what makes a city smart?
Taught by: Lassiter
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CPLN 592 Public Policy Analytics
Data scientists convert data into actionable intelligence. While most private sector data scientists optimize for profit, their public sector counterparts must address multiple complex bottom lines including economics, equity, politics, bureaucracy and social cohesion. This course teaches students how to wrangle government data; how to mine it for descriptive and predictive intelligence and how to communicate results to non-technical decision-makers. Broadly, coursework is focused on spatial analysis and geospatial machine learning and taught 70/30 in R and ArcGIS. Use cases include home price prediction, forecasting in criminal justice, land use modeling, transportation modeling and real estate site suitability. Prerequisites include vector and raster GIS and introductory statistics.
Taught by: Ken Steif
Course usually offered in fall term
Also Offered As: MUSA 508
Activity: Lecture
1.0 Course Unit

CPLN 600 Planning Workshop
Application of planning skills (including community inventorying and reconnaissance, goal articulation; alternatives creation and analysis, and plan development and implementation) to community plan creation. Students work in groups of seven to eight students each. Juried presentation required.
Taught by: Landis
Course usually offered in spring term
Activity: Studio
2.0 Course Units

CPLN 620 Techniques of Urban Economic Development
This course is about how planners act to catalyze and support economic well-being in cities and regions. Students in the course examine the effectiveness of alternative strategies and approaches to economic development and practice a variety of specific economic development policy and finance techniques. The semester is divided into three modules. In part one, students build knowledge about how theories of growth, specialization, agglomeration and innovation inform (and fail to inform) economic development strategies. In part two, they develop a working understanding of economic development finance, completing exercises on tax increment finance, tax-credit financed development and ‘double bottom line’ lending and equity investment. In part three, they review best practices in the formulation and negotiation of location incentives and subsidies, examine ‘growth with equity’ policies, and explore the technical and political details of economic impact analysis.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CPLN 621 Metropolitan Food System
This course introduces students to the planning and development of metropolitan food systems. Major topics include regional planning and policy; sustainable agriculture; food access and distribution; and markets. The class includes a mix of lectures, discussion, and field trips; and students will work on real-world projects in Philadelphia. Ultimately, the course aims to develop students’ broad knowledge of food systems planning in the global North and South, with an emphasis on community and economic development strategies for sustainable food systems and food security.
Taught by: Vitiello
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
**CPLN 624 Race, Poverty and Place**

In recent years, long-disinvested cities have become the site of renewed investment, population growth, and economic development in a phenomenon often described as gentrification. Nonetheless, socioeconomic inequality between races, ethnicities, genders, and places within the larger metropolitan area continue to persist, suggesting that a rising tide does not raise all boats. Planners must grapple with these issues of inequality and inequity, particularly the implementation of plans and policies that may in theory provide benefits to all, but in practice continue to accumulate benefits for a select few. This course examines the construction of race, the making of a place, and the persistence of poverty in racialized places in the city. This course will engage in a critical discussion of the aforementioned themes, such that the normative notions of race, capitalism, urbanism, gender, power, and space are upended to privilege more marginalized perspectives of these processes. Taught by: Kromer

Course usually offered in fall term

**Activity:** Lecture

**Also Offered As:** GAFL 569, URBS 451

1.0 Course Unit

---

**CPLN 625 Politics of Housing and Community Development**

This course offers an exploration of how legislative action, government policy making, and citizen advocacy influence plans for the investment of public capital in distressed urban neighborhoods. Course topics this semester will include an evaluation of the results of City of Philadelphia development policies under the administration of former Mayor Michael A. Nutter, as well as consideration of plans being undertaken by the administration of Mayor James F. Kenney, who took office in January. The course will also include an assessment of a large-scale property acquisition and development strategy being implemented by the Philadelphia Housing Authority in North Philadelphia and a review of recent and current reinvestment proposals for Camden’s waterfront and downtown-area neighborhoods. Taught by: Kromer

Course usually offered in fall term

**Also Offered As:**

1.0 Course Unit

---

**CPLN 627 Social Impact in Practice**

The course will be an opportunity for students across PennDesign (and other schools) to meaningfully engage with community partners and practitioners working in Philadelphia and the surrounding region, and to grapple with the complex issues necessary for understanding community perspective, thereby influencing the approach when planning and designing as professionals. The course intends to reverse common perceptions and practices of community engagement (‘beyond the theater of engagement’) and discuss how to productively and sensitively work with communities of all types, on projects of all scales, to work towards common goals and high aspirations. The organization of the course will be a combination of readings and discussions, guest lecturers, and tours in the immediate community. The primary assignments will be reflection pieces, case studies, a collaborative group project, and a implementation project proposal. The group project(s) would partner students with a current, ongoing, or new community project that is funded and actionable. Students will work together, with the partner, and with community members to complete a project (could be built, a printed deliverable, evaluation, or other). The final assignment would ask students to brainstorm and present a potential ‘Phase II’ implementation project, thinking through the mechanics of funding partnerships, academic research, etc, that could carry forward the work. Taught by: Donofrio, Julie / Gould, David

Course usually offered in fall term

1.0 Course Unit

---

**CPLN 628 Migration and Development**

Human migration is one of the most important phenomena driving urban, social community and economic development. This course focuses on the ways that migrants and community, government, and private institutions work to influence development around the world. We explore a range of large- and small-scale economic development, social and community development. After a brief introduction to histories and theories of migration and development, our major themes include: Local revitalization, labor and housing markets, workforce and enterprise development; Diaspora-led transnational development, including remittances, hometown and country associations, and transnational advocacy and community organizing. The work of institutions, governments, and private sector firms in sending and receiving nations that influence migration and development. Readings are drawn from a variety of social sciences, planning and development studies, including from academic and practice. Guests from local and transnational development organizations will visit the class. Assignments include short papers on the readings and a research paper or project designed by each student in consultation with the instructor. Ultimately, the course aims to help students develop: 1) a broad knowledge of migration and development in geographic and institutional settings around the world; 2) an in-depth understanding of community and economic development practices in migrant sending and receiving communities; and 3) familiarity with social science approaches to evaluating the dynamics and impacts of migration and development. Taught by: Vitiello, Domenic

Course usually offered in spring term

**Activity:** Seminar

1.0 Course Unit
CPLN 630 Innovations in Growth Management
The US population is expected to grow by more than 85 million from now to 2050. This course evaluates the tools and techniques for managing growth in America, especially to control sprawl in metropolitan regions. The course analyzes the form and functions of the central cities, suburbs, edge cities, ex-urbs, and megaregions. Federal, state, and local programs that influence metro change are evaluated. Regional planning approaches are analyzed in case studies.
Taught by: Daniels, Thomas
Course usually offered in spring term
Prerequisite: CPLN 530 OR CPLN 531
Activity: Lecture
1.0 Course Unit

CPLN 631 Planning for Land Conservation
Land preservation is one of the most powerful, yet least understood planning tools for managing growth and protecting the environment. This course provides an introduction to the tools and methods for preserving private lands by government agencies and private non-profit organizations (e.g., land trusts). Topics include purchase and donation of development rights (also known as conservation easements), transfer of development rights, land acquisition, limited development, and the preservation of urban greenways, trails, and parks. Preservation examples analyzed: open space and scenic areas, farmland, forestland, battlefields, and natural areas.
Taught by: Daniels
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CPLN 632 Modeling Geographic Space
This course explores the nature and use of raster-oriented (i.e., image-based) Geographic Information Systems (GIS) for the analysis and synthesis of spatial patterns and processes. Previous experience in GIS is not required.
Taught by: Tomlin
Course usually offered in spring term
Also Offered As: LARP 741
Activity: Lecture
1.0 Course Unit

CPLN 635 Water Policy
Aging infrastructure, urbanization, climate change, and limited public funds are contributing to urban water management crises in cities around the globe. This course examines the systems and policies that comprise urban water. We begin with the infrastructures that underlie drinking water, wastewater, and stormwater services. Then, we review innovative management technologies and strategies, focusing on case studies of infrastructure shifts in Philadelphia and Melbourne. Finally, we undertake a global investigation of water management challenges and opportunities.
Taught by: Lassiter
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CPLN 641 Progressive Development
Using a lecture/guest lecture/case study approach, this course will teach students how to plan, develop, and finance a variety of progressive real estate development forms including affordable housing; infill, mixed-use and brownfield development transit-oriented development; green and LEED-certified office and housing development; historic preservation projects; public-private partnerships; and suburban retrofit and master-planned community development. In each case, we will consider site acquisition, entitlement, market and marketing conditions, financing options, ownership and deal structures, ongoing operation and asset management issues; and connections to the community. Sessions will include lectures as well as case study presentations by guest developers and students.
Course usually offered in spring term
Prerequisite: CPLN 540 OR REAL 821
Activity: Lecture
1.0 Course Unit

CPLN 642 Downtown Development
The course will provide an overview of the changing role of downtowns and commercial centers, how and why they have evolved, diversified and been redeveloped and who are the various public and private actors that are helping them reposition themselves in a new regional and global context. There will be a strong focus on implementation, on how things get done, on the role of business improvement districts, not-for-profit development corporations and local government in the United States, Canada and a few international cities.
Taught by: Levy
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CPLN 643 Design and Development
This newly reconstituted course will introduce designers and planners to practical methods of design and development for major real estate product types. Topics will include product archetypes, site selection and obtaining entitlements, basic site planning, programming, and conceptual and basic design principles. Project types will include, among others; infill and suburban office parks, all retail forms, campus and institutional projects. Two-person teams of developers and architects will present and discuss actual development projects.
Course usually offered in spring term
Also Offered As: ARCH 762
Activity: Lecture
1.0 Course Unit
CPLN 644 Housing Policy
The government intervenes in housing markets in different ways and for different reasons. This course is designed to explore why the federal and local government in the U.S. intervene in housing markets and what forms these interventions take. Specifically, students will learn about: the mechanisms that drive both the supply and demand for housing; how U.S. housing policy has changed over time; factors that affect the production, distribution, and location of housing; the social and economic impact of housing on households and neighborhoods; the equity implications of housing policies. This course will place particular emphasis on low-income rental housing. By the end of this class students will have a firm understanding of U.S. housing policy and be able to engage in a meaningful debate about future challenges and opportunities in the U.S. housing market and the implications of different policy interventions. Ultimately, this course will provide students the conceptual tools necessary to evaluate, formulate, and implement housing policy.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

CPLN 650 Transportation Planning Methods
This course introduces students to the development and uses of the 4-step urban transportation model (trip generation-trip distribution-mode choice-traffic assignment) for community and metropolitan mobility planning. Using the VISUM transportation desktop planning package, students will learn how to build and test their own models, apply them to real projects, and critique the results. Prerequisite: CPLN 505 or other planning statistics course.
Taught by: Ryerson
Course usually offered in spring term
Also Offered As: ESE 548
Prerequisite: CPLN 505
Activity: Lecture
1.0 Course Unit

CPLN 652 Topics in Infrastructure
Course examines current trends and topics pertaining to the nation’s infrastructure.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

CPLN 653 Global Challenges in International Development
An investigation of how international organizations, national, subnational government and non-governmental groups are responding to recent global agreements addressing major economic, social and environmental issues, this course will focus on the Sendai Framework, Addis Ababa Action Agenda, 2030 Framework for Sustainable Development, Paris Agreement and New Urban Agenda. It will cover selected topics related to poverty reduction, health, food security, disaster risk reduction, climate change, and urbanization. Course objectives: 1. to provide a sophisticated understanding of the fundamental assumptions, definitions, current state, and proposed paths toward a global sustainable development to students of city and regional planning; 2. to outline the role of city and regional planners as members of multi-disciplinary teams in participating in these agreements at the global, national, regional and local levels; 3. to highlight innovations in the models, tools and approaches to the field. Requirements: team project, midterm examination and final paper.
Taught by: Eugenie Birch
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

CPLN 654 The Practice of Trans.Plng:Crafting Policies & Bldg. Infrastructure
As the first woman and planner to serve as Secretary of the Pennsylvania Department of Transportation (PennDOT), Leslie Richards has over 20 years of leadership experience working on the planning and delivery of transportation projects, including overseeing one of the largest and most innovative transportation agencies in the U.S. She is recognized for her ability to find common ground among bi-partisan boards, as well as her commitment to engage local communities before the implementation of transportation projects to incorporate quality of life issues in all decisions. Her experience gives her a unique perspective on understanding operational, financial and stakeholder issues of transportation planning. In this seminar-style course, Leslie Richards will explore the planning, development and delivery of multimodal projects and policies at the state and regional level, including national influences and an awareness of the many actors and processes involved. Topics to be discussed include: funding and implementation processes through the levels of government (municipal, county, region, state, national); challenges and opportunities working with different sectors, politics, and contexts; current issues and emerging technologies (e.g. Pennsylvania’s policies and advocacy related to Automated Vehicles); and best practices for individuals pursuing careers in planning or public administration. Presentations and lectures will be supplemented by guest presentations from transportation leaders, policymakers, and planning consultants offering local, regional, and state perspectives. Students will have the opportunity to learn directly from leaders in the field and develop the skills and knowledge to work effectively with federal, state, and local entities.
Taught by: Richards, Leslie
Activity: Lecture
1.0 Course Unit

CPLN 655 Multimodal Transport
The purpose of this course is to explore contemporary multimodal transportation systems, policy, planning, and practice through a series of comparative international case studies. Topics include innovative parking management in San Francisco, congestion charging in London, Metro investments in Mexico City, informal transportation in Indonesia, Bus Rapid Transit in Bogota, and bicycle infrastructure investments in Copenhagen. The course will also include one or more site visits to innovative multimodal transportation projects in the Philadelphia or New York City regions. By analyzing contemporary planning challenges and best practices, students will develop a better understanding of how the transportation system works and how to design and employ specific multimodal interventions and policies effectively.
Taught by: Guerra
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
CPLN 656 Life Cycle Assessment in Residential Land Use and Transportation
This course explores the benefits and limitations of life cycle assessment (LCA) as a methodological approach for thoroughly assessing energy use associated with residential land use and transportation. This interdisciplinary class brings together designers and planners to conduct a comprehensive examination of GHG emissions of design proposals. Energy assessment in residential land use is particularly complex because, in addition to construction of buildings and the daily energy use, city planning factors, such as the spatial location of buildings, shapes the extent to which people consume fossil fuels to commute to job-rich areas. Therefore, energy assessment of residential land use should be based on comprehensive understanding of design quality, use of buildings, and transportation.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CPLN 660 Fundamentals of Urban Design
This course is a requirement for students enrolled in Certificate in Urban Design and for Master of City Planning students enrolled in the Urban Design concentration. How should urban designers give shape to the city? What urban design methods could they apply? This course helps students acquire the principles that can inform urban design practice. It has three major pedagogical objectives. First, it helps students understand the contemporary city through a series urban design tools. Second, it covers both historical and modern urban design principles. Finally, it includes all the scales in which urban designers operate, ranging from the fundamentals of social interaction in public space, to the sustainability of the region. This course is open to other interested PennDesign students if there is space and with permission of the instructor.
Taught by: Lin, Zhongjie
Course usually offered in spring term
Also Offered As: LARP 660
Activity: Studio
2.0 Course Units

CPLN 662 Design and the City
'The rumor of a great city goes out beyond its borders to all the latitudes of the known earth.' Metropolis and her Children, the Federal Writers; Project Guide, 1938. Great cities are both real and legendary. They have economies and cultures, identity and brand, pattern and chaos, inclusion and exclusion. They are made by men (and women) who either reap the benefits of their labors or are excluded from them. They are dynamic, or they are dead. Constant change is essential to the city. This seminar will explore the ways in which design - including architecture, urban design, and landscape design - is a constructive force in the creation of cities. What are the various scales of the operation of design? What are its elements? With whom do urban designers collaborate? How does design make 'place'? How is the city experienced? How does it cultivate identity, inclusion and equity? Each class will be a wide-ranging discussion about a series of open questions regarding the city and design. Each student will be expected to bring examples, quotes, readings, and news clips to support his/her answers. In alternating weeks, we will introduce a design problem to be addressed by teams of two or three students.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

CPLN 666 Advanced Statistics for the Social Sciences
This course is an introduction to advanced univariate and multivariate statistics, with a strong focus on the principles and underlying theory. Typically, students will learn to use R for data analysis. The course will cover topics such as regression analysis, ANOVA, and non-parametric tests. Students will gain hands-on experience with data analysis and interpretation.
Course usually offered in fall term
Taught by: Eugene Brusilovskiy
Activity: Lecture
1.0 Course Unit

CPLN 670 Geospatial Software Design
The purpose of this course is to equip students with a selected set of advanced tools and techniques for the development and customization of geospatial data-processing capabilities. It is open to any student with experience equivalent to that of an entry-level class on GIS.
Taught by: Tomlin
Course usually offered in fall term
Also Offered As: LARP 743
Activity: Seminar
1.0 Course Unit

CPLN 671 Spatial Statistics and Data Analysis
This hands-on course will provide an introduction to statistical methods and will serve as a prequel to ESE502. Topics covered will include exploratory univariate analysis, correlation and Chi-square analysis, t-tests and ANOVA. Non-parametric alternatives to the standard tests will be discussed. OLS regression, including assumptions and diagnostics, will be covered in detail. Heavy emphasis will be placed on the application of each method covered. The course will conclude with an introduction to spatial statistical methods and a brief overview of linear algebra and matrix notation for OLS and spatial regression. Students will learn to use JMP-IN, ArcGIS and GeoDa for data analysis.
Taught by: Eugene Brusilovskiy
Course usually offered in fall term
Also Offered As: MUSA 500
Activity: Lecture
1.0 Course Unit

CPLN 672 Geospatial Data Science in Python
This course will provide students with the knowledge and tools to turn data into meaningful insights, with a focus on real-world case studies in the urban planning and public policy realm. Focusing on the latest Python software tools, the course will outline the 'pipeline' approach to data science. It will teach students the tools to gather, visualize, and analyze datasets, providing the skills to effectively explore large datasets and transform results into understandable and compelling narratives. The course is organized into five main sections: Exploratory Data Science; Introduction to Geospatial Data Science; Data Ingestion & Big Data; Geospatial Machine Learning; Data Visualization & Storytelling.
Taught by: Nick Hand
Course usually offered in fall term
Also Offered As: MUSA 550
Activity: Seminar
1.0 Course Unit
CPLN 673 Contemporary Urbanism
This course will expose students to a wide array of case studies in planning, urban design, and landscape architecture including notions of sustainable development, the interplay between open space and built form, the rehabilitation of existing areas as historic districts, commercial corridors, and the improvement of squatter settlements. Also, it will focus on city expansions and new towns, housing, mix-use developments, and areas of new centrality. The program will also address territorial planning, the improvement of open space systems, and site specific interventions of parks, plazas, streetscape and gardens. Cases will provide the proper ground for analysis and interpretation of issues related to the design and implementation of ‘good’ landscape and urban form. Class discussions will be complemented with short design exercises. We will also enjoy the presence of outstanding visiting lecturers who will share with us cutting-edge information, derived from their professional practice and research. Registration is limited to MLA students in the LARP 602 studio and to students in the Urban Design Certificate program. 
Taught by: Weller/Gouverneur
Course usually offered in spring term
Also Offered As: LARP 781
Activity: Lecture
1.0 Course Unit

CPLN 675 Land Use and Environmental Modeling
Planners at every scale and of every type are increasingly using spatial data and models to analyze existing patterns, identify and parameterize key trends and urban processes, visualize alternative futures, and evaluate development impacts. This course will introduce students to various GIS-based land use and environmental planning models, including, among others: TR55 for analyzing parcel-level stormwater runoff; BASINS for analyzing watershed-level stream volumes, runoff, and water quality; HAZUS for analyzing the potential damage impacts of floods, earthquakes, and hurricanes; UPlan and CUF/CURBA for developing detailed urban growth projections; CommunityViz for analyzing, simulating, and visualizing the impacts of proposed development projects; and other packages as available. A basic familiarity with ArcGIS is required.
Taught by: Landis
Course usually offered in spring term
Activity: Laboratory
1.0 Course Unit

CPLN 676 The Immigrant City
Immigration is among the most important phenomena shaping neighborhoods, cities, and regions. Understanding migration is fundamental to understanding urbanization, community development, and urban society today. This course examines the development of immigrant communities in United States cities and suburbs. Class readings, discussions, and visits to a variety of Philadelphia immigrant neighborhoods explore themes including labor markets, commerce, housing, civil society, racial and ethnic relations, integration, and the public sphere. We study the diverse dynamics and impacts of immigration through foundational readings and close observation of various newcomer and receiving communities. The first part of the course surveys migration and community formation among a broad range of ethnic groups in different sorts of city and suburban neighborhoods, mainly through history, sociology, and geography. The second part focuses on public policy and community and economic development practices related to migration at the local, regional, national, and transnational scales.
Taught by: Vitiello
Course usually offered in spring term

CPLN 678 Informal Housing in the North: Learning from the Global South
After decades of rapid urbanization, informal settlements account for the largest proportion of urban areas in Latin American cities. Given this reality, a consensus is emerging that housing policy in the Global South should focus on upgrading informal settlements. More specifically, participatory approaches to slum upgrading policy (PSUP) are found to offer the most effective solutions to improving self-help housing (Bredenoord 2010; Amoako et al., 2017; Brown-Luthango et al., 2017; De Indranil 2017). Participatory approaches foster productive partnerships between residents and community-based organizations, local governments, and non-governmental organizations to facilitate effective solutions for housing upgrading. However, despite the efforts of the PSUP and its emphasis on participatory approaches, upgrading projects may fail if residents in informal communities are poorly organized, as reported by Newton (2013) and Brown-Luthango et al., (2017) in Africa, by De Indranil (2017) in Asia, and by Ward (2015) in Latin America. Another challenge is the continuity of housing policy, which depends on the capacity of governments to provide adequate economic and technical resources. This reveals the key roles of community-based organizations in enabling the delivery of policy resources, as well as the importance of participatory approaches to empower the inclusion of all stakeholders to sustain comprehensive slum upgrading projects over time. Drawing on self-help housing literature, you will study the characteristics of informal settlements in the Global South and analyze the challenges of housing upgrading. This review will serve as a reference for a more inclusive understanding of informal housing in the North. You will examine forms of informal housing emerging in the United States, from Texas colonies along the United States-Mexico border to illegal conversions of apartments in New York City. You will select a case study, either in the Global South or in the United States, and propose solutions for enabling participatory housing upgrading. By solutions, I refer to integrated proposals for housing upgrades to address deficiencies of self-help housing through the use of technological innovations. Alternatively, you may propose a project to empower residents, particularly women and the youth, residents' engagement in housing upgrading.
Activity: Seminar
1.0 Course Unit
CPLN 679 The City in Crisis & Recovery
The seminar is designed to be a discussion of goals of cities and alternative strategies on how to achieve them. Through readings, guest critic conversations, and open idea exchange, we will learn to effectively share our views and priorities for taking on the multiple risks to cities and households, the infrastructures that are necessary, and the policies that support diversity and equality as the keys to uplifting disadvantaged places and communities.
Taught by: Taylor, Marilyn

CPLN 680 Advanced Topics in GIS
This course offers students an opportunity to work closely with faculty, staff, local practitioners, and each other in conducting independent projects that involve the development and/or application of Geographic Information System (GIS) technology. The course is open to all students who can demonstrate sufficient experience, expertise, or initiative to pursue a successful term project.
Taught by: Tomlin
Course usually offered in spring term
Also Offered As: LARP 745
Activity: Seminar
1.0 Course Unit

CPLN 685 Environmental Readings
In this seminar, we will explore this green thread and analyze its influence on how we shape our environments through design and planning. The course has three parts. Throughout, the influence of literature on design and planning theory will be explored. The first part will focus on three most important theorists in environmental planning and landscape architecture: Frederick Law Olmstead Sr., Charles Eliot and Ian McHarg. The second part of the course will critically explore current theories in environmental planning and landscape architecture. The topics include: frameworks for cultural landscape studies, the future of the vernacular, ecological design and planning, sustainable and regenerative design, the languages of landscapes, and evolving views of landscape aesthetics and ethics. In the third part of the course, students will build on the readings to develop their own theory for ecological planning or, alternatively, landscape architecture. While literacy and critical inquiry are addressed throughout the course, critical thinking is especially important for this final section.
Taught by: Dean Steiner
Course usually offered in fall term
Also Offered As: ARCH 685, LARP 685
Activity: Seminar

CPLN 692 Java Script Programming for Planners and Designers
This course will introduce City Planning, MUSA and design graduate students to Javascript. Students will learn the logic and syntax of the Java programming language for use in a simple web application (weeks 1 to 7); as well as how to program database and map-oriented web and desktop applications using Javascript (weeks 8 to 14). The 'hands-on' uses of Javascript in urban planning applications will be emphasized. Students will hone their programming and applications development skills through a series of bi-weekly assignments.

CPLN 709 Studio V
These advanced elective studios provide opportunities for focused exploration of particular themes in contemporary landscape architecture. Important emerging and accomplished designers, often from divergent points-of-view, interests and backgrounds, are invited to run these studios. Collaborative options (between Landscape and the Departments of Architecture or City Planning) are sometimes offered across the School. In addition to our own faculty who offer some of these studios (Fabiani Giannetto, Gouverneur, Marcinkoski, Mathur, M'Closkey, Neises, Olin, Pevzner, Sanders, Tomlin), visitors have included Paolo Burgi (Switzerland), Peter Latz (Munich), Bernard Lassus (Paris), Margie Ruddick (Philadelphia), Chris Reed (Boston), Peter Beard (London), Nicholas Quennell (New York), Ken Smith (New York), Raymond Gastil (New York), Alessandro Tagliolini (Italy), Ignacio Bunster (Philadelphia), Perry Kulper (Los Angeles), James Wines (New York), Lee Weintraub (New York), Charles Waldheim (Chicago), Stanislaus Fung (Australia), Dennis Wedlick (New York), Sandro Marpillero (New York), Peter Connolly (Australia), and former associate professor Anita Berrizbeitia. More recent visitors have been Claire Fellman (New York), Catherine Mosbach (Paris), Nanako Umemoto/Neil Cook (New York), Valerio Morabito (Italy), Carol and Colin Franklin (Philadelphia), Keith Kaseman (Philadelphia), Silvia Benedito (New York), Claudia Taborda (Lisbon), Mark Thomann (New York), Jerry Van Eyck (New York), and Martin Rein-Cano (Berlin).

CPLN 720 Community and Economic Development Practicum
This practicum involves a weekly mixture of lecture and seminar course-time with applied problem solving for real-world clients. It will be a second-year course focused on organizational development, business planning, and other strategic planning techniques that complement the physical planning focus on PennPlanning Workshop and Studio. Required of students in the CED concentration.
Taught by: Servon
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CPLN 730 Sustainable Cities
Sustainability as a concept has been around for almost thirty years, but only recently has become a major factor in planning practice. This seminar course will explore the following sustainability topics and practices: (i) Goals and organization of urban sustainability initiatives; (ii) Transportation, water and air quality, solid waste reduction; (iii) Climate change and energy efficiency initiatives; and (iv) Green building policies. We will thoroughly examine case studies drawn from sustainability planning initiatives from major American cities, with selected international comparisons.
Taught by: Lassiter, Allison
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

CPLN 750 Advance Transportation Seminar
Air transportation is a fascinating multi-disciplinary area of transportation bringing together business, planning, engineering, and policy. In this course, we explore the air transportation system from multiple perspectives through a series of lessons and case studies. Topics will include airport and intercity multimodal environmental planning, network design and reliability, air traffic management and recovery from irregular operations, airline operations, economics, and fuel, air transportation sustainability, and land use issues related to air transportation systems. This course will introduce concepts in economics and behavioral modeling, operations research, statistics, environmental planning, and human factors that are used in aviation and are applicable to other transportation systems. The course will emphasize learning through lessons, guest lecturers, case studies of airport development and an individual group and research project.
Taught by: Ryerson
Course usually offered in spring term
Also Offered As: ESE 550
Prerequisite: CPLN 550
Activity: Seminar
1.0 Course Unit

CPLN 760 Public Realm Studio
This intensive foundation studio focuses on the physical planning and design skills necessary in shaping the public realm. Students will undertake a series of targeted exercises that introduce them to project conceptualization, context analysis, programming, site planning, technical issues, and detailed design of public space in cities. Focusing on issues pertinent to local municipalities, students will work collaboratively and individually over the semester on design elements that cover a range of scales. Intellectual objectives within the studio include: the links between theory and practice, the development of principles to guide design, understanding associations between design and stakeholder-user interests, and exploring larger issues of sustainability and participation in design practice. Emphasis on the pragmatics of problem solving and implementation will be balanced with essential skills in visioning, critical thinking and design leadership.
Taught by: Lin, Zhongjie
Course usually offered in fall term

CPLN 773 Urban Regeneration in the Americas: The Conservation and Dev. of Urban Areas
This advanced topic seminar will focus on the challenges confronted by the conservation and urban planning professions in turning the urban heritage into a social and economic development resource for cities in developing countries. The preservation of the urban heritage is moving to a new paradigm of intervention responding to: a growing interest in communities for preserving their intangible and tangible urban heritage; rising development pressures on historic neighborhoods; the generalization of adaptive rehabilitation as a conservation strategy; and recent international agreements calling for expanding the role of the urban heritage in the social and economic development of the communities. This is a problem that is in the cutting edge of the research and practice of heritage conservation and urban planning and has conservation, planning and design implications making it ideally suited to a multi-discipline seminar approach. The course is modeled on successful 1-CU spring seminars conducted in recent years—the Gordon Site Planning Studio (2011), Parks for the People (2012), and the Regeneration of Historic Areas in the Americas (2012, 2014, 2016, 2018)—that attracted students from across the School and fit easily with core studios and thesis projects. Students from multiple departments are encouraged to participate in the course; enrollment will be kept to about 12. The course will combine seminar and field study methodologies in ways that they support each other. The knowledge acquired through the seminar work will be put to use in a field study exercise whose objective is to allow the students to work on topics of their interest and pursue research or urban development and heritage conservation interventions for expanding the contribution of the historic center of Cartagena in Colombia to the social and economic development of the city.

CPLN 790 MUSA/Smart Cities Practicum
The purpose of this course is for students to work with city and non-profit clients in data science that convert government data into actionable public policy intelligence. Groups of 2-3 students will work with the client to understand the business process, wrangle data, develop spatial and aspatial analytics and serve these outputs to non-technical decision makers through the medium of data visualization. Students will be mentored by MUSA Faculty and advised by someone from the partnering agency. Prerequisites: students must have a working knowledge of R and experience building both spatial and statistical models including machine-learning models. Prerequisites include MUSA-507/CPLN-590 and either CPLN-505 or MUSA-500. Students must have taken or be enrolled concurrently in MUSA-601 or MUSA-800. Students without these specific prerequisites are asked to contact the instructor. Please contact the instructor for full admission details, no later than November 15, 2018. Interested students are asked to contact the instructor to learn about specific projects and how to apply for the course.
Taught by: Ken Steif

Classical Studies (CLST)
CLST 010 Archaeology & Technology
This seminar explores how humans apply and modify technologies in contexts as diverse as everyday life, major politico-economic undertakings, or scholarly research. We investigate this through a comparison of technologies of the past with technologies of the present used to study the past. We will dig into the details of topics like building pyramids and tombs, the function of ancient astronomical devices, pre-telegraph long-distance communication, tools for cutting and carving stone, and kilns for firing pottery. Archaeologists study these issues by examining the material remains of past societies: the cut-marks on stone blocks, extant tomb structures, the debris of manufacturing activities, and much more. Today's technologies enable the detailed scientific examination of the evidence, improving our understanding of the past. Thus, in parallel with our investigation of past technologies, we will also study the history of the application of present technologies to research on the archaeological record. We will dig into topics like the first uses of computers and databases, the development of statistical methods, early digital 3d modeling of objects and architecture, the adoption of geophysical prospection and geographic information systems, and the emerging uses of machine learning. In some cases, we can even compare old and new technologies directly, such as with land measurement and surveying techniques. Throughout the class we will engage in readings and discussions on the theory of humans and technology, to gain a better understanding of how processes such as innovation function in all time periods. Taught by: Peter Cobb Also Offered As: ANTH 010, ARTH 010, NELC 010 Activity: Seminar 1.0 Course Unit

CLST 011 The Iliad and its Afterlife
As the first work in the western tradition, Homer's Trojan War epic, the Iliad, has been a constant point of reference for thinking about heroism, friendship, the search for meaning in the face of mortality, and the effects of war on individuals and societies. We will begin with a close reading of the Iliad in English translation, paying attention both to the story of its hero Achilles as he experiences disillusionment, frustration, anger, triumph, revenge, and reconciliation and to the poem's broader portrait of a society at war; this portrait incorporates the diverse perspectives of invaders and defenders, men and women, old and young, gods and mortals, along with tantalizing glimpses of peacetime life. We will then consider how later writers and artists have drawn on the Iliad to present a range of perspectives of their own -- whether patriotic, mock heroic, romantic, or pacifist -- with particular attention to 20th and 21st century responses by such figures as W.H. Auden, Simone Weil, Jonathan Shay, Cy Twombly, David Malouf, Alice Oswald, and Adrienne Rich. No previous knowledge of the Iliad is required. The course is intended for anyone who is interested in how cultures use their shared myths both to affirm and to question their central values. Taught by: Murnaghan Activity: Seminar 1.0 Course Unit
CLST 012 Private Life in Ancient Rome
What was it like to live in the Roman world? What did that world look, taste and smell like? How did Romans raise their families, entertain themselves, understand death, and interact with their own world? What were Roman values and how did they differ from our own? This course takes as its subject the everyday lives of individuals and explores those lives using the combined tools of archaeology, art and written sources. In doing so, it seeks to integrate the well-known monuments of Roman civilization into a world of real people. Some of the topics explored will include Roman houses, diet, leisure, gender and sexuality, slavery, and poverty.

CLST 014 Classical Antiquity and the Modern World
The ancient Greek and Roman civilizations, whether individually, together, or in relation to other ancient civilizations, have frequently been seen as ancestors of the modern world. This ancestry has been seen both as a common and unifying heritage and as one that divides. This course will consider the relationship between Classical Antiquity and the modern world in the light of different themes, including those of Civilization, Empire, Race, Ethnicity, Simplicity and Complexity, Morality, Religion, and Universality. Classes will focus on discussion of readings with an emphasis on coming to grips with multiple and conflicting points of view. Students will write a research paper related to one of the themes mentioned above or to another one of similar importance.
Taught by: Farrell
Activity: Seminar
1.0 Course Unit

CLST 015 Town and Country in Ancient Greece
The ancient city of Athens, Greece, is renowned as the birthplace of democracy; Sparta is famous for its warlike society; Olympia for the Olympic Games; and Delphi for its famed oracle. But the Greek landscape was dotted with hundreds of other cities, towns, villages, sanctuaries, and hamlets. This seminar is a journey through town and country in ancient Greece, from dense urban spaces to vast forests and agro-pastoral countrysides. We will examine many lines of evidence: (1) ancient texts (e.g., Homeric epics, Hesiod’s depiction of rural life, the histories of Herodotus and Thucydides, the tragedies and comedies of the great playwrights, the geography of Strabo, the travel writing of Pausanias); (2) inscriptions that record details of life and death; and (3) archaeology (site discovery and excavation, recovery of the material remains of everyday life). These sources will reveal much information about how urban and rural life were organized. A central aim of this seminar is to address this question: is the past a foreign country, or is there nothing new under the sun?

CLST 026 Ancient Greece
The Greeks enjoy a special place in the construction of western culture and identity, and yet many of us have only the vaguest notion of what their culture was like. A few Greek myths at bedtime when we are kids, maybe a Greek tragedy like Sophokles’ Oidipous when we are at school: these are often the only contact we have with the world of the ancient Mediterranean. The story of the Greeks, however, deserves a wider audience, because so much of what we esteem in our own culture derives from them: democracy, epic poetry, lyric poetry, tragedy, history writing, philosophy, aesthetic taste, all of these and many other features of cultural life enter the West from Greece. The oracle of Apollo at Delphi had inscribed over the temple, ‘Know Thyself.’ For us, that also means knowing the Greeks. We will cover the period from the Late Bronze Age, c. 1500 BC, down to the time of Alexander the Great, concentrating on the two hundred year interval from 600-400 BC.

Activity: Lecture
1.0 Course Unit

CLST 027 Ancient Rome
At its furthest extent during the second century CE, the Roman Empire was truly a ‘world empire’, stretching from northern Britain to North Africa and Egypt, encompassing the whole of Asia Minor, and bordering the Danube in its route from the Black Forest region of Germany to the Black Sea. But in its earliest history it comprised a few small hamlets on a collection of hills adjacent to the Tiber river in central Italy. Over a period of nearly 1500 years, the Roman state transformed from a mythical Kingdom to a Republic dominated by a heterogeneous, competitive aristocracy to an Empire ruled, at least notionally, by one man. It developed complex legal and administrative structures, supported a sophisticated and highly successful military machine, and sustained elaborate systems of economic production and exchange. It was, above all, a society characterized both by a willingness to include newly conquered peoples in the project of empire, and by fundamental, deep-seated practices of social exclusion and domination. This course focuses in particular upon the history of the Roman state between the fifth century BCE and the third century CE, exploring its religious and cultural practices, political, social and economic structures. It also scrutinizes the fundamental tensions and enduring conflicts that characterized this society throughout this 800-year period.

CLST 029 Rome & America
This course explores a range of social structures and contexts, cultural understandings and intellectual practices where the influence of Roman exemplars is discernible in both historical and present-day America. It presents students with Roman and American materials placed in explicit or implicit dialog with one another: e.g., descriptions and discussions of political processes and structures; attitudes towards games, public entertainments, and communal cohesion; rhetorics and vocabularies of public space. Among other tasks and projects, students will stage a 'reimagination' of the Constitutional (Philadelphia) Convention of 1787, which resulted in the United States Constitution. They will also emulate ancient moralists and satirists, who attacked Rome’s ‘Bread and Circuses’ culture, by focusing their attention upon comparable practices in modern America.
Taught by: Grey
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Freshman Seminar

CLST 100 Greek & Roman Mythology
Myths are traditional stories that have endured many years. Some of them have to do with events of great importance, such as the founding of a nation. Others tell the stories of great heroes and heroines and their exploits and courage in the face of adversity. Still others are simple tales about otherwise unremarkable people who get into trouble or do some great deed. What are we to make of all these tales, and why do people seem to like to hear them? This course will focus on the myths of ancient Greece and Rome, as well as a few contemporary American ones, as a way of exploring the nature of myth and the function it plays for individuals, societies, and nations. We will also pay some attention to the way the Greeks and Romans themselves understood their own myths. Are myths subtle codes that contain some universal truth? Are they a window on the deep recesses of a particular culture? Are they entertaining stories that people like to tell over and over? Are they a set of blinders that all of us wear, though we do not realize it? We investigate these questions through a variety of topics creation of the universe between gods and mortals, religion and family, sex, love, madness, and death.

Course usually offered in spring term
Also Offered As: COML 108
Activity: Lecture
1.0 Course Unit

CLST 101 Sex and Gender in Ancient Greece and Rome
What is being a man, being a woman, being masculine, being feminine, being neither, being both? Is sex about pleasure, domination, identity, reproduction, or something else? Are sexual orientation and gender identity innate? How can words, myths and stories inform cultural assumptions about sex and gender? Did people in ancient times have a concept of sexuality? How do gendered English terms (like ‘girly’, ‘effeminate’, or ‘feisty’) compare to gendered ancient Greek and Latin terms, like virtus, which connotes both ‘virtue’ and ‘masculinity’? Why did the Roman and English speaking worlds have to borrow the word ‘clitoris’ from the ancient Greeks? How did people in antiquity understand consent? Can we ever get access to the perspectives of ancient women? In this introductory undergraduate course, we will learn about sex and gender in ancient Greece and Rome. We will discuss similarities and differences between ancient and modern attitudes, and we will consider how ancient texts, ancient art, ancient ideas and ancient history have informed modern western discussions, assumptions and legislation. Our main readings will be of ancient texts, all in English translation; authors studied will include Ovid, Aristophanes, Plato, Euripides, and Sappho.
Class requirements will include participation in discussion as well as quizzes, reading responses, and a final exam.
Taught by: Wilson
Also Offered As: COML 105, GSWS 104
Activity: Lecture
1.0 Course Unit

CLST 102 Classical Traditions
A broad consideration of the ways in which writers and artists from the early modern era to the present day have responded to the classical tradition, borrowing from, imitating, questioning, and challenging their classical predecessors. Through modern reworkings of ancient epic, tragedy, biography, and lyric by authors ranging from Shakespeare and Racine to contemporary poets, painters, and filmmakers, we will ask what the terms ‘classical’ and ‘tradition’ might mean and will track the continuities and differences between antiquity and the modern world. Should we see ancient Greek and Roman culture as an inheritance, a valuable source of wealth bequeathed to the modern age? Or is there something wrong with that picture? How do ancient texts have to be adapted and transformed if they are to speak to modern conditions and concerns? This is an introductory-level course open to anyone who cares about the relationship between the present and the past.

Course not offered every year
Also Offered As: ENGL 029
Activity: Lecture
1.0 Course Unit
CLST 103 History of Ancient Philosophy

“What is philosophy? How does it differ from science, religion, literature, and other modes of human discourse? This course traces the origins of philosophy as a discipline in the Western tradition, looking to thinkers of Ancient Greece and Rome. We will examine how natural philosophers such as Thales, Anaximander, and Heraclitus distinguished their inquiries from the teachings of poets such as Homer and Hesiod; how ancient atomism had its origins in a response to Parmenides’ challenge to the assertion that things change in the world; how Socrates reoriented the focus of philosophy away from the natural world and toward the fundamental ethical question, how shall I live? We will also examine how his pupil, Plato, and subsequently Aristotle, developed elaborate philosophical systems that address the nature of reality, knowledge, and human happiness. Finally, we will examine the ways in which later thinkers such as the Epicureans and Stoics transformed and extended the earlier tradition.”

CLST 104 Race and Ethnicity in the Ancient World

Modern political and artistic movements often appeal to an ancient past in order to construct their own social and racial identities. But how did ancient peoples understand themselves and others? How should we understand race and ethnicity in the ancient past? And how are perceptions of the past used today to construct or dismantle structures of power? This course explores both ancient and modern representations of race and ethnicity in antiquity. We will investigate both how ancient peoples around or near the Mediterranean (e.g. Greeks, Romans, Egyptians, Persians, and Nabians) understood difference and also how modern eras have appropriated ancient identities. Our dialogues will include ancient ethnographies, literature, and visual arts as well as modern theories and media, with an emphasis on active learning and collaboration. Students will be encouraged to produce both analytical and creative responses to our materials.

CLST 107 Ancient Drama

This course will introduce students to some of the greatest works of dramatic literature in the western canon. We will consider the social, political, religious and artistic functions of drama in ancient Greece and Rome, and discuss both differences and similarities between ancient drama and modern art forms. The course will also pursue some broader goals: to improve students skills as readers and scholarly critics of literature, both ancient and modern; to observe the implications of form for meaning, in considering, especially, the differences between dramatic and non-dramatic kinds of cultural production: to help students understand the relationship of ancient Greek and Roman culture to the modern world; and to encourage thought about some big issues, in life as well as in literature: death, heroism, society, action and meaning.

CLST 111 Introduction to Mediterranean Archaeology

The cultures of Greece and Rome, what we call classical antiquity, span over a thousand years of multicultural achievement in the Mediterranean. This course tells the story of what it was like to live in the complex societies of ancient Greece and Rome. This story is told principally using the art, architecture, pottery and coins produced by these societies. We will examine both the bold and sexy, and the small and humble, from the Parthenon to wooden huts, from the Aphrodite of Knidos to the bones of a fisherman named Peter.

For BA Students: History and Tradition Sector
Taught by: Bowes
Course usually offered in fall
Also Offered As: ANTH 111, ARTH 227, ARTH 627
Activity: Lecture
1.0 Course Unit

CLST 123 Great Discoveries in Archaeology

In this course, we examine famous (Pompeii, Troy, Machu Picchu) and not-so-famous (Uluburun, Kalamianos) archaeological sites, mainly in the Old World of the Mediterranean, Near East, and Asia, but also in the New World of North and South America. We adopt a thematic and comparative approach to delve deeper to explore these societies and examine cultural similarities and differences across the ancient world. A typical sequence of meetings will begin with lecture on a particular theme, such as Writing Systems or Sacred Spaces and Places, followed by the presentation of relevant monuments, sites, or regions from different parts of the world, with discussion and assessment of the cross-cultural similarities and differences. In this way, both the great diversity of culture in our world, as well as our underlying similarities, can be revealed. How different are we from our ancestors who lived hundreds or thousands of years ago? Museum visits and exercises will allow students to engage with the material creations of these civilizations. CLST 123 is a non-technical introduction for students interested in archaeology, history, art history, anthropology, or related subjects. There are no prerequisites. The course fulfills the Cross Cultural Analysis foundational requirement.

Taught by: Tartaron
Activity: Lecture

CLST 127 The Material Past in a Digital World

The material remains of the human past -objects and spaces- provide tangible evidence of past people’s lives. Today’s information technologies improve our ability to document, study, and present these materials. But what does it mean to deal with material evidence in a virtual context? In this class, students will learn basic digital methods for studying the past while working with objects, including those in the collections of the Penn Museum. This class will teach relational database design and 3D object modeling. As we learn about acquiring and managing data, we will gain valuable experience in the evaluation and use of digital tools. The digital humanities are a platform both for learning the basic digital literacy students need to succeed in today’s world and for discussing the human consequences of these new technologies and data. We will discuss information technology’s impact on the study and presentation of the past, including topics such as public participation in archaeological projects, educational technologies in museum galleries, and the issues raised by digitizing and disseminating historic texts and objects. Finally, we will touch on technology’s role in the preservation of the past in today’s turbulent world. No prior technical experience is required, but we hope students will share an enthusiasm for the past.

CLST 129 The Decline and Fall of the Roman Empire?
The Roman Empire, teetering under the weight of its bureaucracy, oppressed by the demands of its soldiers, weakened by wave after wave of barbarian invasions, and, with the rise of Christianity, confronted by its own immorality, finally fell when the last Roman emperor, Romulus Augustulus, was sent into exile in 476 CE. That, at least, is one version of the story. In truth, there are many stories that can be told of the period between the apogee of the Roman empire in the 2nd c. AD and the rise of Christianity and Islam and origins of the so-called Barbarian Kingdoms in the 7th and 8th centuries AD. This course will explore this period of 600 years, using methodologies from history, archaeology, social science and the sciences to understand the complex problem of empire and its evolutions. No previous knowledge of ancient or medieval history required.
Taught by: Bowes, Grey
Also Offered As: ANCH 129
Activity: Lecture
1.0 Course Unit

CLST 136 The Ancient Economy
This class presents an introduction to economies before economics, a study of economic activity in the Greco-Roman world. Ancient Greece and Rome have been called some of the first ‘global’ economies - they engaged in long-distance trade, introduced the first coinage systems, and built and manufactured at large scales. At the same time, they remained agrarian societies, with majority peasant populations, high levels of inequality and social systems that often placed social capital ahead of profit. Using textual sources, archaeology and techniques from the natural and social sciences, this class will not only look at basic elements of economic activity in the ancient world - demographics, trade, monetization, industry - but also ask critical questions about how - or if - modern economic methods can be applied to the distant past. No previous knowledge of the ancient world or economics is necessary.

1.0 Course Unit

CLST 140 Scandalous Arts in Ancient and Modern Communities
What do the ancient Greek comedian Aristophanes, the Roman satirist Juvenal, have in common with Snoop Dogg and Eminem? Many things, in fact, but perhaps the most fundamental is that they are all united by a stance that constantly threatens to offend prevailing social norms, whether through obscenity, violence or misogyny. This course will examine our conceptions of art (including literary, visual and musical media) that are deemed by certain communities to transgress the boundaries of taste and convention. It juxtaposes modern notions of artistic transgression, and the criteria used to evaluate such material, with the production of and discourse about transgressive art in classical antiquity. Students will consider, among other things, why communities feel compelled to repudiate some forms of art, while others into classics.’

Notes: Previously listed as CLST 240.

CLST 143 Great Books of Greece and Rome
The literature of ancient Greece and Rome has been foundational for the national literatures of Europe and the Americas, and in the modern period it remains one of the most influential and widely read world literatures. This course introduces many of the most representative works that define the Greek and Roman canon from Homer to Augustine, along with the most characteristic issues that they examine. In the process, students will become familiar not only with the works themselves, but with the idea of a literary canon consisting of ‘great books,’ and will consider differing perspectives both on that idea and those of what constitutes a ‘foundational’ or a ‘classical’ literature, of literary influence, and of a community or culture defined in part by such a literature.

CLST 146 Ancient Mediterranean Empires
What constituted an empire in antiquity and how was imperialism legitimized? Which measures were used to maintain and organize imperial power? How did foreign rule affect the daily life of people all over the Mediterranean? In this course we will discuss and compare ancient empires from Achaemenid Persia to Alexander the Great and the Hellenistic kingdoms of his successors to the emergence of Rome as one of the most successful and influential empires in world history. Topics that will be discussed include ancient ideas and concepts of imperial rule, patterns of political, economic and cultural power and their interrelations as well as imperial crises and local resistance. All texts will be discussed in translation. There are no prerequisites.

CLST 148 Food and Fire: Archaeology in the Laboratory
This course will let students explore the essential heritage of human technology through archaeology. People have been transforming their environment from the first use of fire for cooking. Since then, humans have adapted to the world they created using the resources around them. We use artifacts to understand how the archaeological record can be used to trace breakthroughs such as breaking stone and bone, baking bread, weaving cloth and firing pottery and metals. The seminar will meet in the Penn Museum’s new Center for the Analysis of Archaeological Materials. Students will become familiar with the Museum’s collections and the scientific methods used to study different materials. Class sessions will include discussions, guest presentations, museum field trips, and hands-on experience in the laboratory.

CLST 185 Ancient Political Thought
The way in which the Greeks understood and expressed their political institutions, activities and challenges has deeply impressed our own conception of politics. This course will trace the history of this ancient heritage from its inception to today, first through a close analysis of key texts from Thucydides, Plato, Aristotle, and Polybius, and then by considering several important moments in the reception of the Greek political tradition, from the Renaissance and American Revolution to the crisis of modernity and the Neo-Conservative Movement. We evaluate the relationship between distant and recent past as well as the influence of both on our own day.

CLST 191 World Literature: Classics of the World I
This course will introduce students to a wide array of literary works from across the world. It operates on the assumption that cultures have never been isolated from each other and that literature has always been in motion across national boundaries; it has been translated, adapted, and circulated. We will explore the genres, forms, and thematic preoccupations of major works that strive to imagine a wider world, while also studying the critical debates around the concept of world literature, from its origins with Goethe’s essay on Weltliteratur to contemporary arguments about cosmopolitanism and globalization.

Activity: Independent Study
1.0 Course Unit

CLST 202 Cleopatra
Cleopatra VII (70/69 30 BCE) is one of the most famous women in world history. She has been remembered, admired, and reproached as a power-hungry Hellenistic queen, as the last pharaoh of Egypt, as a self-confident female ruler, and as the vicious seductress of Julius Caesar and Mark Antony. Her supposedly extravagant lifestyle, her political schemes, but also her integrity in choosing suicide over submission have inspired poets, artists, and historians from her own time to the modern world. In this seminar, we will take a closer look at some of the common perceptions and stereotypes that have shaped the image of Cleopatra for more than 2000 years. The main focus, however, will be on the historical queen, her biography, and the political and cultural contexts of her life. We will use ancient literary texts, papyri, inscriptions, coins, and archaeological evidence to analyze Cleopatra’s rise to power, how she presented herself to her subjects, and how she was perceived by others, as well as her role in the tumultuous events that led to the end of the Hellenistic period and the rise of imperial Rome under the rule of Augustus. No prerequisites, but some background in Hellenistic and/or Roman history will be helpful.

CLST 211 Ancient Moral Philosophy
A survey of the ethical theories debated by philosophers in Classical Greece and Rome. Plato, Aristotle, Stoics, Epicureans and Pyrrhonist Sceptics offer competing answers to the fundamental question raised by Socrates: How are we to live? That is, what is the best life for a human being? These philosophers generally agree that virtue is an important part of the best human life, but disagree about whether it is the greatest good (Epicurus, for example claims that pleasure is the highest good), or whether there are any other goods (for example, health, wealth, family). Much attention is paid in their theories to accounts of the virtues of character, and to the place of wisdom in the best sort of human life.

CLST 217 Periclean Athens
Athens in the 5th Century BCE is often viewed as a high point of human civilization. We will assess this claim by looking at the period’s cultural achievements (in such areas as drama, architecture, and oratory) within their social and political contexts. Topics for discussion include: the structure and workings of the Athenian democracy; the interplay between pro-democratic and anti-democratic positions in Athenian political life; the connections between democracy and imperialism; conceptions of citizenship and relations between citizens and non-citizens (women, slaves, and resident foreigners); the role of the law courts in both dispute resolution and elite competition; sexual politics; and the civic significance of religious ritual.

1.0 Course Unit

CLST 220 Greek Art and Artifact
This course surveys Greek art and artifacts from Sicily to the Black Sea from the 10th century BCE to the 2nd century BCE, including the age of Alexander and the Hellenistic Kingdoms. Public sculpture and painting on and around grand buildings and gardens, domestic luxury arts of jewelry, cups and vases, mosaic floors, and cult artefacts are discussed. Also considered are the ways in which heroic epic, religious and political themes are used to engaged viewers’ emotions and served both domestic and the public aims. We discuss the relationships of images and things to space and structure, along with ideas of invention and progress, and the role of monuments, makers and patrons in Greek society.

CLST 223 The Archaeology of Homer's World
Did you ever wonder what the world of the Iliad and Odyssey was really like? This illustrated lecture course surveys the prehistory and early history of the Greek world through texts and material remains, with the aim of bringing to life the society, economy, and politics of this ancient era. Among the topics are the rise and fall of the great Bronze Age civilizations of the Aegean area, the Minoans of Crete and the Mycenaeans of the Greek mainland; the cataclysmic volcanic eruption on the island of Thera (modern Santorini) and its long-term consequences; the Trojan War (myth or history??); the world of the Dark Age that followed the collapse of the Mycenaean palaces; and the Greek renaissance of the eighth century B.C. - including the adoption of the alphabet, the great colonizing movement, and the great Panhellenic sanctuaries like Olympia and Delphi - that laid the foundation for the Classical world to come. There are no prerequisites, and no prior knowledge of archaeology or the Greek world is assumed.
Taught by: Tartaron
Course not offered every year
Activity: Lecture
1.0 Course Unit

CLST 227 Age of Caesar
A course on Roman culture and society in a period of tumultuous political change, the lifetime of Julius Caesar (100-44BCE). Focuses on the interplay between shifting political and military realities and developments in social organization and literary production at Rome and in the wider Mediterranean world. The reception of Caesar in later ages will also be considered. Readings (all in translation) will include Catullus, Cicero, Lucretius, Plutarch, Sallust, Suetonius, and, of course, Caesar himself.

Also Offered As: ANCH 227
Activity: Seminar
1.0 Course Unit

CLST 228 Excavating Ancient Cities: Troy & Gordion
The instructor has spent the last 30 years excavating the Turkish sites of Troy and Gordion, the latter of which has been explored under Penns sponsorship. The former was famous in antiquity as the site of the Trojan War, the latter served as the capital of the Phrygian Kingdom, ruled by Midas. Both of these are multi-period sites, with nine settlements built above each other during more than four millennia, and determining the chronology and appearance of each settlement has consistently been controversial. In this course we will examine the history of both sites, focusing on the problems of archaeological interpretation. Students will be placed in the position of the archaeologist and charged with re-interpreting the existing archaeological evidence.
Taught by: Rose
Activity: Lecture
1.0 Course Unit

CLST 244 Material World in Archaeological Science
By focusing on the scientific analysis of inorganic archaeological materials, this course will explore processes of creation in the past. clst 244 will take place in the new Center for the Analysis of Archaeological Materials (CAAM) and will be team taught in three modules: analysis of lithics, analysis of ceramics and analysis of metals. Each module will combine laboratory and classroom exercises to give students hands-on experience with archaeological materials. We will examine how the transformation of materials into objects provides key information about past human behaviors and the socio-economic contexts of production, distribution, exchange and use. Discussion topics will include invention and adoption of new technologies, change and innovation, use of fire, and craft specialization.
Taught by: Boileau/Dibble
Also Offered As: ANTH 221, ANTH 521, ARTH 230, NELC 284, NELC 584
Activity: Lecture
1.0 Course Unit

CLST 251 Greek and Roman Universe
This course covers the history of Greek and Roman exploration and mapping of the earth and the cosmos from the Bronze Age to Late Antiquity, together with advances in timekeeping and the measurement of time. Readings include poetic, historical, and scientific texts.
Taught by: Farrell
Course not offered every year
Activity: Seminar

CLST 257 Religion and the Polis
This class is designed to introduce students to the study of Greek religion with particular attention to the notion of polis religion, a recent model used to understand the function and structure of Greek religion. In this class we will look at the major institutions of Greek religion, notably sacrifice, festivals, and processions, but will also examine the importance of sanctuaries and temples in the heart of the city, on the edges of its territory and in the countryside. We will also examine religion as a system of belief and action, and will consider the intersection of local, state and international religious institutions.
Taught by: McInerney
Course not offered every year
Also Offered As: ANCH 257
Activity: Seminar
1.0 Course Unit
Notes: This course is taught exclusively in English
CLST 267 The Ancient Novel
The ancient Greek and Roman novels include some of the most enjoyable and interesting literary works from antiquity. Ignored by ancient critics, they were until fairly recently dismissed by classical scholars as mere popular entertainment. But these narratives had an enormous influence on the later development of the novel, and their sophistication and playfulness, they often seem peculiarly modern—or even postmodern. They are also an important source for any understanding of ancient culture or society. In this course, we will discuss the social, religious and philosophical contexts for the ancient novel, and we will think about the relationship of the novel to other ancient genres, such as history and epic. Texts to be read will include Lucian’s parodic science fiction story about a journey to the moon; Longus’ touching pastoral romance about young love and sexual awakening; Heliodorus’ gripping and exotic thriller about pirates and long-lost children; Apuleius’ Golden Ass, which contains the story of Cupid and Psyche; and Petronius’ Satyricon, a hilarious evocation of an orgiastic Roman banquet.
Taught by: Wilson
Course not offered every year
Activity: Seminar
1.0 Course Unit

CLST 268 Living World in Archaeological Science
By focusing on the scientific analysis of archaeological remains, this course will explore life and death in the past. It takes place in the new Center for the Analysis of Archaeological Materials (CAAM) and is taught in three modules: human skeletal analysis, analysis of animal remains, and analysis of plant remains. Each module will combine laboratory and classroom exercises to give students hands-on experience with archaeological materials. We will examine how organic materials provide key information about past environments, human behavior, and cultural change through discussions of topics such as health and disease, inequality, and food.
Taught by: Kassabaum, Monge, Moore
Course not offered every year
Also Offered As: ANTH 267, ANTH 567, CLST 568, NELC 286, NELC 586
Activity: Lecture
1.0 Course Unit

CLST 271 Greek & Roman Medicine
This course will examine the ways in which the Greeks, and then the Romans, conceptualized the body, disease, and healing, and will compare these to medical culture of our time. We will consider sources from Hippocrates, Plato, and Aristotle to Galen and Soranus, and will juxtapose these writings with modern discourse about similar topics. We will also pay some attention to ancient pharmacology and religious healing, and will visit the Penn Museum to see their collection of ancient medical instruments. All readings will be in English and no previous background in Classical Studies is required. This course will be especially appealing (and useful) to Pre-med and Nursing students, and to students interested in the History of Science, Ancient Philosophy, and Classics.
Taught by: Rosen
Course not offered every year
Also Offered As: ANCH 301
Activity: Seminar
1.0 Course Unit

CLST 300 Lies My Ancient History Teacher Taught Me
The neat, comforting narratives that we construct of the histories of ancient Greece and Rome cover up a collection of controversies and debates that continue to rage in contemporary scholarship. Can we use the Homeric epics as sources of early Greek history? Who was responsible for the Peloponnesian War? How can we best explain Rome’s acquisition of empire? How new was the political revolution of Augustus? What were the main reasons for the rise of Christianity? In this course, we will explore these and other controversies, focusing on both modern scholarship and the ancient sources. All texts will be discussed in translation. No prior knowledge of Ancient History is required, although it would be useful to have taken ANCH 026 and/or ANCH 027.
Taught by: Cam Grey
Course not offered every year
Also Offered As: ANCH 301
Activity: Seminar
1.0 Course Unit

CLST 305 Archaeologies of Subalternity
This course addresses the various areas and approaches to ‘otherness’ in ancient Mediterranean archaeology, and the power dynamics of oppression. We’ll not only examine disempowerment around cultural identity, class, gender and sexuality, and race/ethnicity, but you’ll spend equal time pondering how those subjects have been studied—or ignored—by classical archaeologists. The power relationships both inherent in the subjugation of various kinds of people in the ancient world, and in the academic discourses around them, are the themes of the course. While this course will be focused on the Bronze Age through late antique Mediterranean, those with other period/interests are most welcome. Students will be asked to bring their own interests to the course, which help shape the course. Upper-level courses in archaeology, anthropology or ancient history are recommended prior to enrollment.
Taught by: Bowes
Course not offered every year
Also Offered As: AAMW 550, CLST 605
Activity: Seminar
1.0 Course Unit

CLST 310 Ancient and Modern Constitution Making
Constitutionmaking reemerged as an urgent issue with the transformation of colonial empires after World War II, the collapse of the Soviet empire in 1991, and nationalist movements in the Balkans, the British Isles, and the European Union. It has remained important as competition for control of Central Asia, the Middle East, and Northern Africa has intensified. The written constitution has been hailed by some as the vehicle for changing long established cultures, but its success has been uneven when it comes to reducing political conflict and to reforming if not improving customs, character, habits, and actions. What might explain this uneven success? Is an explanation to be found by going back to what appear to be the roots of constitutionmaking? This course builds on contemporary scholarship to reconstruct what we may call the constitutionmaking tradition as it develops in the main ancient texts, which are read in English translation. The course traces this tradition through the classically trained thinkers of the Seventeenth Century, the American colonial compacts and covenants, the so-called state constitutions, and the debates in the U.S. Constitutional Convention up to recent efforts in, for example, Zimbabwe (2013) or Egypt (2014).

One-term course offered either term
Activity: Seminar
1.0 Course Unit
CLST 311 Disasters in the Ancient World
Natural disasters occupy a powerful place in our imagination. Stories of floods, plagues, earthquakes and storms excite and horrify us, and communities mobilize their resources quickly in response to these events. In the ancient Mediterranean world, natural disasters could take on potent meaning, indicating the anger or disfavor of the gods, acting as warnings against certain courses of action, or confirmations of individuals' fears or suspicions about the world in which they lived. In this course, we explore the evidence for some disasters in the ancient Mediterranean world, the ways in which contemporaries reacted to those disasters and interpreted their causes. This project is, of necessity, multidisciplinary, involving textual, archaeological, geological, and comparative materials and drawing on methodologies from history, political and archaeological science, and the emerging field of disaster studies. In the process, we will gain an appreciation of the social structures of communities in the period, the thought-world in which they operated, and the challenges and opportunities that attend a project of this sort. No prior knowledge of Ancient History is required, although it would be useful to have taken an introductory survey course. Texts will be discussed in translation.
Taught by: Grey

Activity: Seminar
1.0 Course Unit

CLST 313 Landscapes and Seascapes of the Ancient Mediterranean
The Mediterranean environment is both diverse and unique, and nurtured numerous complex societies along its shores in antiquity. This seminar offers a primer on theoretical and methodological approaches to studying landscapes and seascapes of the Mediterranean from the Bronze Age to the early modern era, at scales from local to international and on land and underwater. Concepts from processual, post-processual, and current archaeologies will be considered, and field techniques including excavation and surface survey, remote sensing and geophysics, GIS modeling, and ethnography/ethnoarchaeology are examined. Course content and discussion focus on case studies that illustrate how these tools are used to reconstruct the appearance and resources of the natural environment; overland and maritime routes; settlement location, size, function, and demography; social and economic networks; and agricultural, pastoral, and nomadic lifeways. Seminar participants will develop case studies of their own geographical and chronological interest.

Activity: Seminar
1.0 Course Unit

CLST 315 Kinship and Connectivity in the Roman World
An individual's life course is often reflected, enhanced, and defined by their relations to other individuals. This course will investigate the concept of kinship in the Roman world through textual, visual, and archaeological evidence. We will explore relationships at all levels of society from the imperial family to the slaves and freedmen who were part of larger households, in order to understand how different relationships shaped and structured interactions in Roman society. Together, we will explore the following questions: how were relationships and bonds represented in the ancient world? What structures were in place for families to perpetuate themselves through biological or adoptive means? How could non-Roman citizens create family connections through formal and informal channels? How could relationships be celebrated in life and commemorated in death? We will use written evidence from ancient historians, visual evidence like the Altar of Peace, and archaeological evidence from cemeteries to examine how Roman notions of kinship shaped life and death in different social milieus.
Taught by: Brent
Also Offered As: AAMW 514, ANCH 315, ANTH 315, CLST 515
Activity: Seminar
1.0 Course Unit

CLST 316 Africa and Roman Literature
In this course, we will explore race and ethnicity in the Roman world by focusing on the life and works of Roman Africans and the ways in which non-African Romans engaged with and presented the peoples of Africa. The course covers Roman literature in translation from the comedies of Plautus produced in the late 3rd - 2nd centuries BCE, to African Christian writing of the 5th century CE. It also covers a wide range of genres: we will examine how Roman writers articulate questions of race in comedy and satire, epic, history, biography, and elegy among others. We will read African writers (Apuleius, Augustine) and ask how their Africaness influences their works. We will read Roman accounts of journeys to Africa, wars with Africa, and encounters with Africans to ask how the Romans saw themselves as different from or similar to Africans. The course will also explore in more general terms how Romans talk about race: did racism exist? What aspects of different cultures and peoples did Romans choose to emphasize when they talked of non-Romans?
Taught by: Lewis
Also Offered As: AFRC 316, ANCH 316
Activity: Seminar
1.0 Course Unit
CLST 325 Topics in Roman Art and Architecture
Topic varies from semester to semester. For the Fall 2020 semester, the topic will be "The Last Days of Pompeii." Pompeii is one of the most famous archaeological sites in the world. Not fully excavated and only partially understood, it seems to offer a tantalizing cross-section of Roman architecture, art and society, preserved as it was when the volcano Mount Vesuvius erupted on 24 August 79 CE. At the same time, the rediscovery of Pompeii since the eighteenth century has had a profound impact on western culture. This course will look at the discovery, reception and reinvention as well as 'original' character of Pompeii and other settlements around Vesuvius destroyed at the same time as Pompeii, such as Herculaneum and Stabiae. We will examine the evidence that these Campanian sites provide for Roman architecture, art and society, and the difficulties we face in trying to use it. The course will include a range of material, from the architecture of houses and public areas of the city, tackling the notions of public and private in Roman society, the wall painting in Pompeian houses, examining the forms and functions of Roman frescoes as well as the ways in which they have been viewed in antiquity and modern times, to the shops, workshops and taverns that populated the ancient city and provide evidence for its economy. The approach is thematic, addressing the urban planning and development of the city, the domestic spaces and activities, the public spaces and buildings, and economy of the city, concentrating on case studies, such as the Forum, the House of the Vettii, the textile industry and the Villa of the Papyri. No special prior knowledge of antiquity is assumed.

1.0 Course Unit

CLST 328 Topography and Monuments of Ancient Rome
An intensive exploration of Rome's urban topography during the Republican and Imperial periods (6th c. B.C. through 4th c. A.D.) Using archaeological and textual sources, including the Etruscan and Roman collections of the Penn Museum, the goal will be to reconstruct the built environment and decoration of Rome over the course of a millennium. Of interest to students of classics, archaeology, art history, and architecture. Some familiarity with Rome will be a plus, but is not required.
Course not offered every year
Also Offered As: AAMW 533, CLST 533
Activity: Seminar
1.0 Course Unit

CLST 329 Topics in Classicism and Literature
This advanced seminar will examine the classical backgrounds to English poetry, in particular the Biblical and Greco-Roman antecedents to Renaissance lyric verse and verse drama (such as, preeminently, Shakespeare). Different versions of this course will have different emphases on Biblical or Hellenist backgrounds.
Course not offered every year
Also Offered As: ENGL 329
Activity: Seminar
1.0 Course Unit

CLST 332 The Rise and Decline of Macedonia
In this course, we will study the rise and development of Macedonia from a tiny kingdom on the northern fringes of the Greek world to one of the major powers of the region and beyond. Regarded by the Greeks as an at least semi-barbaric culture on the periphery, Macedonia became the dominant power in the Greek world during the fourth century BC and its king Alexander the Great set out to conquer the world. After his death, Macedonia was one of the Hellenistic kingdoms competing for power and influence in the Mediterranean until it finally came under Roman control. Topics that will be discussed include questions of ethnicity and identity, Macedonian kingship, culture and society (including the role of women) and the role of Macedonian traditions in the Hellenistic era in general. Special emphasis will therefore be placed on critical reading and interpretation of ancient literary texts, documentary evidence and archaeological material. that will be discussed include questions of ethnicity and identity, Macedonian kingship, culture and society (including the role of women) and the role of Macedonian traditions in the Hellenistic era in general.

CLST 335 Etruscan Art & Archaeology in the Penn Museum
The Etruscans, who spoke a language unlike any others known, were cast by their Greek and Roman rivals as outsiders and enemies: pirates, lovers of luxury, loose women. Today we must rely on the archaeological evidence of painted tombs, decorated Tuscan temples and massive engineering works to correct the picture. The course will survey a millennium (1st millennium BCE) of Etruscan culture through archaeological sites, works of art and everyday material culture, especially illustrated with objects in the collection of the Penn Museum. An additional insight into Italic culture comes from tomb groups excavated for the Museum at the Faliscan settlement of Narce. Students will gain familiarity with the societies of pre-Roman Italy through close study of their vases, jewels, arms, armor, textiles and tools, and even their very bones, and discover a surprising amount of Etruscan heritage surviving today.

CLST 336 Archaeology of Anatolia
This class is devoted to the archaeology and history of Anatolia (ancient Turkey) from the beginning of the Bronze Age (3000 BC) to the end of the Byzantine period (1453 AD). Emphasis will be placed on the great empires in Anatolia (Hittite, Phrygian, Lydian, Urartian, Persian, Roman, and Byzantine), and on the great cities (Troy, Sardis, Ephesus, Constantinople). The course is intended to complement the major exhibit on Gordian, the Phrygians, and Anatolian archaeology that will open at the Penn Museum in February of 2016 and run for 10 months.
Taught by: Brian Rose

Activity: Lecture
1.0 Course Unit
CLST 337 Iliad
Homer's Iliad presents a dark and difficult vision of the world, but one that nonetheless inspires. Casual cruelty, divine caprice, and savage violence test heroes and lesser folk and provoke a reckoning with the stark realities of both human vulnerability and capability. It inspires kind of terror, but still also somehow provides a kind of comfort, albeit one whose character seems almost beyond comprehension. By a close and careful reading of Homer’s text, along with some reflections and readings drawn from more contemporary wars, including the current ones, we will try to examine these issues with one eye on the past and one on the present. Our goal will be to achieve some further understanding of war and human experience. This course will be offered online.

Course usually offered summer term only
Activity: Seminar
1.0 Course Unit

CLST 338 Power and Peril: The Paradox of Monarchy among Ancient Greeks, Romans, and Jews
We imagine ancient Greece and Rome as the cradles of democracy and republicanism, early Judea as a pious theocracy, but monarchy was the most common and prevalent form of government in antiquity (and the premodern world in general). In this class, we will take a special look at kinship among the Jews, Greeks, and Romans to assess and discuss similarities, differences, and mutual influences. In all these cultures, the king was a polarizing figure in reality and in conception. On the one hand, some revered the monarch as ideal leader, and monarchy provided the language with which to describe and even imagine the very gods. On the other, monarchs were widely reviled in both theory and practice, from the Greek tyrants to biblical Saul. The Emperor Augustus loudly denied his own affinity to the office of king, even as he ruled alone and was revered as a god. In other words, kings stood both for the ideal and the worst form of government. This class confronts the paradox of monarchical rule and will, through the lens of the king, explore ideas of god, government, human frailty, and utopianism.

CLST 343 The Iliad and its Afterlife
As the earliest work in the western tradition, the Iliad has been a constant point of reference for later considerations of heroism, friendship, the search for meaning in the face of mortality, and the effects of war on individuals and societies. We will begin with a close reading of the Iliad in translation, with attention both to the story of its hero Achilles as he experiences disillusionment, frustration, anger, triumph, revenge, and reconciliation and to the poems broader portrait of a society at war, which incorporates the diverse perspectives of invaders and defenders, men and women, old and young, gods and mortals, along with tantalizing glimpses of peacetime life. We will then consider how later writers and artists have drawn on the Iliad to present a range of perspectives of their own – whether patriotic, mock heroic, romantic, or pacifist – with particular attention to 20th and 21st century responses by such figures as W.H. Auden, Simone Weil, Cy Twombly, David Malouf, Alice Oswald, and Adrienne Rich. There are no specific prerequisites, but the course can serve as a complement to CLST 302, The Odyssey and its Afterlife or CLST 331 Reading the Iliad in a Time of War.
Taught by: Murnaghan
Activity: Seminar
1.0 Course Unit

CLST 344 Curiosity: Ancient and Modern Thinking about Thinking
This course will examine two approaches to the still unanswered question of what happens when we humans come up with new knowledge. How should we describe the impulse, or set of impulses, that leads us to seek it? What is happening when we achieve it? And how do we describe the new state in which we find ourselves after we have it? We will study the work of contemporary physicists and cognitive scientists on these questions along side the approaches developed by the two most powerful thinkers from antiquity on the topic, Plato and Aristotle.

Activity: Seminar
1.0 Course Unit
CLST 345 Ancient Epic Poetry
Admission to this course is by application only. It is a collaboration between Penn and Yale-NUS in Singapore. It will require travel to study in Singapore during Penn’s Spring Break 2019. Seminars on both campuses will focus on five complete epics, Gilgamesh, the Iliad, Odyssey, Ramayana, and Aeneid. In addition to regular class times, it will also require additional evening meetings for plenary sessions via teleconference with Singapore. We will work with a mix of lectures, discussions, and group work with teams drawn from both campuses. Yale-NUS will travel to Philadelphia to join Penn students in face-to-face class sessions, and in additional cultural of events, at Penn and in Philadelphia, including work in the Penn Museum. Penn students will also fly over to meet Yale-NUS students for a week that mirrors the Philadelphia experience, with attendance in classes, and cultural events, including the Asian Civilizations Museum. Part of the expectation for the class is that each group will help host the others as they visit. Course grades will consist in a combination of sole-authored papers and collaborative projects. There will be a limited amount of grant money available to subvene travel for students. We will work with financial aid to determine need. Up-to-date passports are required for the course. Prerequisite: IMPORTANT - APPLICATION REQUIRED: Use the link in ‘Additional course information’.

Taught by: Struck
Activity: Seminar
1.0 Course Unit
Notes: IMPORTANT - APPLICATION REQUIRED: Use the link in ‘Additional course information’

CLST 360 Topics In Classicism and Literature
Ancient epic and mythology had a curious and rich afterlife in the Middle Ages. Virgil and Ovid were taught in medieval schools, read for their moral content, and revered as fiction that concealed great philosophical value. Their influence also gave rise to the great literary form of the Middle Ages, romance: narratives that place a premium on erotic love, individual quests, the unpredictability of adventure, and imaginary or exotic settings. Yet despite what may appear to be merely gratifying entertainment, medieval romance and medieval receptions of classical myth did tremendous cultural work, enabling profound explorations of history, political values, gender and sexual identity, and social power. We will spend some weeks reading Virgil’s Aeneid and Ovid’s Heroides and Metamorphoses. Then we will turn to medieval reimaginings of classical myth and metamorphosis, including poetry by Marie de France, Chretien de Troyes, and Chaucer, and anonymous works such as Sir Gawain and the Green Knight. The course requirements will be: one very short oral presentation on a research topic of your choice related to the reading, together with a short write-up of your research; one short critical paper; and one longer research paper (which can develop the subject of your oral presentation).

CLST 362 Intro to Digital Archaeology
Digital methodologies are now an integral part of archaeological practice and archaeologists are now expected to possess basic computing skills and be familiar with a range of data collection, analysis and visualization techniques. This course will use case studies and applied learning opportunities centered on a course project to explore a broad array of digital approaches in archaeology. The technological underpinnings, professional procedures, and influences on archaeological practice and theory will be discussed for each method covered in the course. Applied learning opportunities in digital data collection methods will include aerial and satellite image analysis, global navigation satellite system (GNSS) survey, 3D scanning methods, close-range photogrammetry, and near-surface geophysical prospection. Students will also have opportunities for practical experience in digital database design and management, geographic information science (GIS) and 3D visualization. Students will communicate the results of the course project in a digital story that will be presented at the end of the term. Prior archaeological classwork and/or experience preferred.

CLST 363 Penn Museum Curatorial Seminar: Reconfiguring the Classical World Galleries
The Greek galleries in the Penn Museum were opened in 1994, and the Etruscan and Roman galleries in 2003. The world was very different then, and many of the themes used to frame the artifacts in the galleries are not especially relevant to contemporary students, scholars, and visitors. In this course we will completely reorganize and reinstall the galleries digitally, creating a series of websites that will highlight the new layout and themes. We will work extensively with the Greek Etruscan, and Roman artifacts themselves to reconfigure the galleries, which will highlight the connections between antiquity and the contemporary world, focusing on themes such as armed conflict, trauma, migration, xenophobia, and wealth and poverty.

Taught by: Rose
Activity: Seminar
1.0 Course Unit

CLST 364 Foreigners in Rome
According to the stories the Romans told about the origins of their city, Rome began as a community of immigrants. As a growing metropolis and, eventually, the center of an empire, the city remained a magnet for people from other parts of the Empire and beyond. Foreigners came to the city as merchants and travelers, they settled here seeking a different and better life, pursuing a career, or escaping hardships in their home communities. Others were brought to Rome against their will, as prisoners or slaves. In this seminar, we will explore the different communities of foreigners and immigrants that shaped Rome. How and why did they move to the city? How did they experience their new home? How did they adapt to life in Rome and how, in turn, did they influence what we define as ‘Roman’ today? Finally, what can the legal, social, political, and social status of immigrants tell us about Roman society in general? To answer these questions (and more), we will look at a wide array of primary sources, including literary texts, inscriptions, and material culture.

Taught by: Wilker
Also Offered As: ANCH 363
Activity: Seminar
1.0 Course Unit
CLST 369 Literary Translation
This course is for graduate students and undergraduates with permission of the instructor. All students enrolled must have knowledge of at least one language other than English. We will study the history, theory and practice of literary translation, and participate in it. Readings will include theoretical works in translation studies, using selections from Lawrence Venuti’s Translation Studies Reader and Schulte/Biguenet’s Translation Theory Reader, with some supplemental readings; we will also look at comparative cases of multiple translations of the same original, and analyze how different translators make different interpretative/formal/aesthetic choices. Course assignments will include both a research paper, on the history and/or theory of translation, and an extended practical translation exercise, to be workshopped over the course of the semester, consisting of a literary translation of a text of the student’s choice.
Taught by: Wilson
Also Offered As: CLST 569, COML 369
Activity: Seminar

CLST 370 Classics & American Government
Before the universities established public-service programs in the twentieth century, many Americans prepared themselves for public life by studying Greek and Latin authors in school and college. In this course, using English translations, students survey an eighteenth-century classical curriculum and trace its influence in the political activity of Madison and others who guided the development of American governmental institutions.
Taught by: John Mulhern
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

CLST 396 History of Literary Criticism
This is a course on the history of literary theory, a survey of major debates about literature, poetics, and ideas about what literary texts should do, from ancient Greece to examples of modern European thought. The first half of the course will focus on early periods: Greek and Roman antiquity, especially Plato and Aristotle; the medieval period (including St. Augustine, Dante, and Boccaccio), and the early modern period (such as Philip Sidney and Giambattista Vico). In the second half of the course we will turn to modern concerns by looking at the literary (or ‘art’) theories of some major philosophers and theorists: Kant, Hegel, Marx, Nietzsche, Freud, and Walter Benjamin. We end the course in the mid-twentieth century. The purpose of this course is to consider closely how this tradition generated questions that are still with us, such as: what is the act of interpretation; what is the ‘aesthetic’, what is ‘imitation’ or mimesis; and how are we to know an author’s intention. During the semester there will be four short writing assignments in the form of analytical essays (3 pages each). Students may use these small essays to build into a long piece of writing on a single text or group of texts at the end of the term. Most of our readings will come from a published anthology of literary criticism and theory; a few readings will be on Canvas.

CLST 403 Post-Baccalaureate Studies in Latin
Intensive Latin reading course for students in the Post-Baccalaureate Program in Classical Studies. Readings are chosen to expose students to a variety of prose and poetry texts during their program experience. The Fall course includes some grammar review and analysis as well as translation. Permission of instructor required for non-Post-Baccalaureate students.
Two terms. student may enter either term.
Activity: Lecture
1.0 Course Unit

CLST 419 Mining Archaeology
In ancient times, materials such as stone and metals were used to produce artifacts including pigments, jewelry, tools, and weapons. This course is designed to introduce students to research on the early exploitation of mineral resources. Which techniques were used to access and process raw materials in antiquity? Which archaeological methods can be used to investigate these features and artifacts? The course will provide worldwide examples through time, ranging from Stone Age flint mining, Iron Age rock salt mining to Medieval silver mining. Ethnographic studies and hands-on activities will contribute to our understanding of mining in archaeology, and artifacts from the Museum’s collections will undergo scientific analysis in the Center for the Analysis of Archaeological Materials. Prerequisite: Desired but not mandatory: ANTH 221/521 Material World in Archaeological Science
Taught by: Jansen
Course usually offered in spring term
Also Offered As: ANTH 419, NELC 419
Activity: Seminar
1.0 Course Unit
CLST 425 Late Antique Arts
What is 'Late Antiquity'? In 312 when Roman emperor Constantine inaugurated a Christian empire, 'Roman' culture was centuries old. The period ca. 200-650 CE saw profound transformations that launched Medieval, Byzantine and Islamic traditions. In this epoch of economic and political upheaval destruction was frequent but partial: Rome long survived, Constantine's 'new Rome,' Constantinople flourished, and around the Empire both proto-global visual culture and local forms prospered. Roman cultural models authorized both innovation and passion for tradition, in forms and styles: we critique art-historical models for Late Antique 'decline', analyse habits of material reuse and curation, and look at new Christian and Jewish roles for Roman things as well as polytheist visual survival. Foreign allies and enemies, and new peoples invading an already polyethnic Empire, interacted with Greco-Roman Late Antiquity; we visit arts of Sasanian and Islamic empires east and south, and 'barbarian' domains in Africa, Europe, Britain. Media discussed, for sacred, courtly, domestic, funerary, political and civic spaces and structures include not just 'monumental' painting, mosaic, sculpture, but also objects of silver, ceramic, ivory, figural textile, glass; painted books; jewelry; mass-media artifacts like coins and pilgrimage tokens. We also study Late Antique texts on art, objects, space and viewership.

Course not offered every year
Also Offered As: AAMW 425, ARTH 425
Activity: Lecture
1.0 Course Unit

CLST 427 Roman Sculpture
Survey of the Republican origins and Imperial development of Roman sculpture - free-standing, relief, and architectural - from ca. 150 BC to 350 AD. We concentrate on sculpture in the capital city and on court and state arts, emphasizing commemorative public sculpture and Roman habits of decorative display; genres examined include relief, portraits, sarcophagi, luxury and minor arts (gems, metalwork, coinage). We evaluate the choice and evolution of styles with reference to the functions of sculptural representation in Roman culture and society.
Taught by: Kutner, Rose
Course not offered every year
Also Offered As: AAMW 427, ARTH 427
Activity: Lecture
1.0 Course Unit

CLST 441 Plants and Society
Interactions between humans and the living landscape around us have played - and continue to play - a fundamental role in shaping our worldview. This course is designed to introduce you to the diverse ways in which humans interact with plants. We will focus on the integration of ethnographic information and archaeological case studies in order to understand the range of interactions between humans and plants, as well as how plants and people have profoundly changed one another. Topics will include the origins of agriculture; cooking and plant processing; human health and the world of ethnomedicine; and poisonous and psychoactive plants. We will examine ancient plant material firsthand at the Center for the Analysis of Archaeological Materials (CAAM) and will handle botanical ecofacts from the Penn Museum’s collections. Students will also carry out a substantial research project focused on an archaeological culture and plant species of their own interest.
Taught by: White
Course not offered every year

Course not offered every year
Also Offered As: AAMW 512, ANTH 514
Activity: Seminar
1.0 Course Unit

CLST 515 Kinship and Connectivity in the Roman World
An individual's life course is often reflected, enhanced, and defined by their relations to other individuals. This course will investigate the concept of kinship in the Roman world through textual, visual, and archaeological evidence. We will explore relationships at all levels of society from the imperial family to the slaves and freedmen who were part of larger households, in order to understand how different relationships shaped and structured interactions in Roman society. Together, we will explore the following questions: how were relationships and bonds represented in the ancient world? What structures were in place for families to perpetuate themselves through biological or adoptive means? How could non-Roman citizens create family connections through formal and informal channels? How could relationships be celebrated in life and commemorated in death? We will use written evidence from ancient historians, visual evidence like the Altar of Peace, and archaeological evidence from cemeteries to examine how Roman notions of kinship shaped life and death in different social milieu.
Taught by: Brent
Also Offered As: AAMW 514, ANCH 315, ANTH 315, CLST 315
Activity: Seminar

CLST 520 Topics in Greek and Roman Art
Topics varies from semester to semester. For the Spring 2020 semester, the topic will be Violence and Ancient Mediterranean Art. The Greek and Roman world was fascinated by representing humans and beasts enduring physical and psychological pain, and images of violence inflicted by mortal and supernatural beings alike. These images occur in art of all kinds, consumed both privately and publicly, emerging in the domestic, religious, military and political sphere. They had a range of aims, from affording emotional catharsis, building political cohesion or enforcing social norms, to generating religious awe or confidence in empire -- and giving entertainment. As we explore this corpus, we can ask: what might be the roots of such preoccupation with the art of violence and pain in the 'Classical tradition' and its post-antique legacy? Many modern cultures exhibit similar fascination: how far can modern reactions to and theories about such images be guides to reconstructing ancient viewership? How can ancient texts and histories help us in this interdisciplinary project?

CLST 523 Narrative in Ancient Art
Art history, and its cousins in religious, social, political and literary studies, have long been fascinated with the question of narrative: how do images engage time, tell stories? These are fundamental questions for ancient Near Eastern, Egyptian and Mediterranean art history and archaeology, whose rich corpus of narrative images is rarely considered in the context of 'Western' art. Relations between words and things, texts and images, were as fundamental to the ancient cultures we examine as they are to modern studies. As we weigh classic modern descriptions of narrative and narratology, we will bring to bear recent debates about how (ancient) images, things, monuments, and designed spaces engage with time, space, and event, and interact with cultural memory. We will ask 'who is the story for, and why?' for public and private narratives ranging from political histories to mythological encounters. Our case studies will be drawn from the instructors' expertise in Mesopotamian visual culture, and the visual cultures of the larger Mediterranean world from early Greek antiquity to the Hellenistic, Roman, and Late Antique periods. One central and comparative question, for instance, is the nature of recording history in pictures and texts in the imperial projects of Assyria, Achaemenid Persia, the Hellenistic kingdoms, and Rome.

CLST 526 Material & Methods in Mediterranean Archaeology
This course is intended to familiarize new graduate students with the collections of the University of Pennsylvania Museum of Archaeology and Anthropology and the wide range of scholarly interests and approaches used by faculty at Penn and neighboring institutions, as well as to provide an introduction to archaeological methods and theory in a Mediterranean context. Each week, invited lecturers will address the class on different aspects of archaeological methodology in their own research, emphasizing specific themes that will be highlighted in readings and subsequent discussion. The course is divided into five sections: Introduction to the Mediterranean Section; Collections; Method and Theory in Mediterranean Archaeology; Museum Work; and Ethics. The course is designed for new AAMW graduate students, though other graduate students or advanced undergraduate students may participate with the permission of the instructor.

CLST 532 Ancient Greek Colonies
This seminar examines the archaeology of Greek colonization from the Late Bronze Age to ca. 500 B.C. These colonies were highly diverse in their motivations, physical settings, and political and social structures, as well as in their relationships with mother cities and the new worlds they inhabited. Emphasis is placed on the colonial experience as a cross-cultural and negotiated process; several streams of the changing theoretical and conceptual approaches to Greek colonization are explored. In addition to archaeological and epigraphic evidence, literary and historical traditions are examined. Colonies from the southern Balkan peninsula, Black Sea, Ionia, northern Africa, and Magna Graecia will be the focus of reading and reports. Seminar meetings will consist of oral reports and discussion of these reports and other topics. Depending on the number of participants, each person will be responsible for two or three reports of approximately 30-45 minutes length. Accompanying the oral report will be a PowerPoint document (in most cases), a synopsis/summary of one to two pages, and a bibliography. These will all be posted on the course Canvas site. No later than one week before an oral presentation, the presenter will identify one or two key readings for all to read, in consultation with the instructor. These will be posted, in PDF format, on the Canvas site. One or more visits to the Penn Museum may be built into the course.

Activity: Seminar
1.0 Course Unit

CLST 540 Plato and Aristotle in the Renaissance
In one of the most evocative frescoes of the Renaissance, Raphael juxtaposes Plato and Aristotle. The pairing would seem obvious, since the two thinkers had been for centuries symbols of philosophy and wisdom. But only the recent revival of Plato, begun in the mid-fifteenth century, had allowed Latin West to gain a better understanding of Platonic philosophy and therefore to compar Plato’s doctrines directly to those of Aristotle. Were master and disciple in harmony? And if not, which of the two should be favored? Such questions were less innocent than one might think, and the answers to them had implications for philosophy, theology, speculation on the natural world, and even politics The course will offer an overview of Renaissance philosophy and culture by focusing on the different ways in which Plato and Aristotle were read, interpreted and exploited between the fifteenth and seventeenth centuries. The course will be conducted in English; a basic knowledge of Latin is desirable but not required.
Taught by: Del Soldato

CLST 543 Archaeobotany Seminar
In this course we will approach the relationship between plants and people from archaeological and anthropological perspectives in order to investigate diverse plant consumption, use, and management strategies. Topics will include: archaeological formation processes, archaeobotanical sampling and recovery, lab sorting and identification, quantification methods, and archaeobotany as a means of preserving cultural heritage. Students will learn both field procedures and laboratory methods of archaeobotany through a series of hands-on activities and lab-based experiments. The final research project will involve an original in-depth analysis and interpretation of archaeobotanical specimens. By the end of the course, students will feel comfortable reading and evaluating archaeobotanical literature and will have a solid understanding of how archaeobotanists interpret human activities of the past.
Taught by: Chantel White

Also Offered As: AAMW 539, ANTH 533, NELC 585
Activity: Seminar
1.0 Course Unit

CLST 559 Myth Through Time and In Time
The textual and physical remains of Greek and Roman culture and belief as ‘myth’ entranced the post-antique European world and its neighbors. Makers, patrons and viewers manipulated those survivals to challenge and speak to a contemporary world. This course focuses on how and why artists and their patrons engaged the mythic and examines the various areas of political and religious life that sought animation through an evocation of narratives from the past. Readings and case studies will engage with very late antique, medieval, and early modern art, turning to the modern and contemporary as well. Moving to the modern lets us examine, among other things, how artists address the exclusionary histories of the past, to enable critiques of myths of supremacy by one gender, race, or culture over others.
Taught by: Kuttner, Brisman
Also Offered As: AAMW 559, ARTH 559, COML 559, GRMN 559
Activity: Seminar
1.0 Course Unit

CLST 562 Intro to Digital Archaeology
Digital methodologies are an integral part of contemporary archaeological practice, and demand that archaeologists to hold a new set of skills and knowledge fundamentals. This course will expose students to a broad range of digital approaches through a review of relevant literature and through applied learning opportunities centered on a course project. The technological underpinnings, best practices, and influences on archaeological practice and theory will be discussed for each method covered in the course. Applied learning opportunities in digital data collection methods will include: aerial and satellite remote sensing, global navigation satellite system (GNSS) survey, 3D scanning methods, close-range photogrammetry, and near-surface geophysical prospection. Students will also have opportunities for practical experience in digital database design and management, geographic information science (GIS) and 3D modeling and visualization. Students will communicate the results of the course project in a digital story that will be presented at the end of the term. Prior archaeological classwork and/or experience preferred.
Taught by: Herrmann
Also Offered As: AAMW 562, ANTH 362, ANTH 562, CLST 362, NELC 362
Activity: Lecture
1.0 Course Unit
CLST 563 Penn Museum Curatorial Seminar: Reconfiguring the Classical World Galleries
The Greek galleries in the Penn Museum were opened in 1994, and the Etruscan and Roman galleries in 2003. The world was very different then, and many of the themes used to frame the artifacts in the galleries are not especially relevant to contemporary students, scholars, and visitors. In this course we will completely reorganize and reinstall the galleries digitally, creating a series of websites that will highlight the new layout and themes. We will work extensively with the Greek Etruscan, and Roman artifacts themselves to reconfigure the galleries, which will highlight the connections between antiquity and the contemporary world, focusing on themes such as armed conflict, trauma, migration, xenophobia, and wealth and poverty.
Taught by: Rose
Activity: Seminar
1.0 Course Unit

CLST 568 Living World in Archaeological Science
By focusing on the scientific analysis of archaeological remains, this course will explore life and death in the past. It takes place in the new Center for the Analysis of Archaeological Materials (CAAM) and is team taught in three modules: human skeletal analysis, analysis of animal remains, and analysis of plant remains. Each module will combine laboratory and classroom exercises to give students hands-on experience with archaeological materials. We will examine how organic materials provide key information about past environments, human behavior, and cultural change through discussions of topics such as health and disease, inequality, and food.
Taught by: Kassabaum, Monge, Moore
Course not offered every year
Also Offered As: ANTH 267, ANTH 567, CLST 268, NELC 286, NELC 586
Activity: Lecture
1.0 Course Unit

CLST 569 Literary Translation
This course is for graduate students and undergraduates with permission of the instructor. All students enrolled must have knowledge of at least one language other than English. We will study the history, theory and practice of literary translation, and participate in it. Readings will include theoretical works in translation studies, using selections from Lawrence Venuti’s Translation Studies Reader and Schulte/Biguenet’s Translation Theory Reader; with some supplemental readings; we will also look at comparative cases of multiple translations of the same original, and analyze how different translators make different interpretative/formal/aesthetic choices. Course assignments will include both a research paper, on the history and/or theory of translation, and an extended practical translation exercise, to be workshopped over the course of the semester, consisting of a literary translation of a text of the student’s choice.
Taught by: Wilson
Also Offered As: CLST 369, COML 369
Activity: Seminar
1.0 Course Unit

CLST 572 Geophysical Prospection for Archaeology
Near-surface geophysical prospection methods are now widely used in archaeology as they allow archaeologists to rapidly map broad areas, minimize or avoid destructive excavation, and perceive physical dimensions of archaeological features that are outside of the range of human perception. This course will cover the theory of geophysical sensors commonly used in archaeological investigations and the methods for collecting, processing, and interpreting geophysical data from archaeological contexts. We will review the physical properties of common archaeological and paleoenvironmental targets, the processes that led to their deposition and formation, and how human activity is reflected in anomalies recorded through geophysical survey through lectures, readings, and discussion. Students will gain experience collecting data in the field with various sensors at archaeological sites in the region. A large proportion of the course will be computer-based as students work with data from geophysical sensors, focusing on the fundamentals of data processing, data fusion, and interpretation. Some familiarity with GIS is recommended.
Taught by: Herrmann
Course offered spring; even-numbered years
Also Offered As: AAMW 572, ANTH 572, NELC 572
Activity: Laboratory
1.0 Course Unit

CLST 598 Language Pedagogy Workshop
The Workshop is intended to serve as a forum for first-time teachers of Latin or Greek. This will include discussing course-plans and pedagogical theories and strategies, collaborating on course materials, and addressing any concerns in the language courses presently being taught.
Taught by: James Ker
Activity: Seminar
1.0 Course Unit

CLST 600 Graduate Seminar
Topics will vary
One-term course offered either term
Activity: Seminar
1.0 Course Unit

CLST 604 Troy and Homer
An interdisciplinary seminar focusing on the city of Troy both as an archaeological site and as the setting of the legendary Trojan War. We will consider Homer’s Iliad (with selected sections read in Greek) together with the topography and archaeology of the site of Troy in order to address a series of interrelated questions: What are the points of continuity and discontinuity between the stories told by the literary tradition and the material record? How do both types of evidence contribute to our understanding of political relations and cultural interactions between Greece and Anatolia in the Bronze Age? How do Hittite sources bear on our reconstruction of the events behind the Troy legend? How have the site and the poem contributed to each other’s interpretation in the context of scholarly discovery and debate? We will give some attention to modern receptions of the Troy legend that deliberately combine material and textual elements, such as Cy Twombly’s ‘Fifty Days at Iliam’ and Alice Oswald’s ‘Memorial: An Excavation of Homer’s Iliad.’ The seminar will include a visit to the site of Troy during the Spring Break.
Taught by: Murnaghan
Also Offered As: AAMW 604, GREK 604
Activity: Seminar
1.0 Course Unit
CLST 605 Archeologies of Subalternity
This course addresses the various areas and approaches to ‘otherness’ in ancient Mediterranean archaeology, and the power dynamics of oppression. We'll not only examine disempowerment around cultural identity, class, gender and sexuality, and race/ethnicity, but we'll spend equal time pondering how those subjects have been studied - or ignored - by classical archaeologists. The power relationships both inherent in the subjugation of various kinds of people in the ancient world, and in the academic discourses around them, are the themes of the course. While this course will be focused on the Bronze Age through late antique Mediterranean, those with other period/interests are most welcome. Students will be asked to bring their own interests to the course, which help shape the course. Upper-level courses in archaeology, anthropology, or ancient history are recommended prior to enrollment.
Taught by: Bowes
Course not offered every year
Also Offered As: AAMW 550, CLST 305
Activity: Seminar
1.0 Course Unit

CLST 607 Roman Humor and Invective
This seminar will explore Roman humor in epigram, iambic, oratory, and satire as a method of constructing and policing norms of sexuality, the body, and social identity. We will read from a wide range of authors including Catullus, Martial, Cicero, Quintilian, Petronius, and Juvenal, as well as texts that discuss or depict laughter and ridicule. Beyond focused analysis of the works at hand, we will evaluate modern theories of humor and laughter according to the ancient evidence and develop models for understanding Roman humor. In addition to weekly readings, students will be responsible for class presentations, contributing to works-in-progress workshops, and a final research paper.
Taught by: Brassel
Course not offered every year
Also Offered As: LATN 607
Activity: Seminar
1.0 Course Unit

CLST 610 Middle English Literature
This seminar will study a number of selected Middle English texts in depth. Attention will be paid to the textual transmission, sources, language, genre, and structure of the works. Larger issues, such as the influence of literary conventions (for example, ‘courtly love’), medieval rhetoric, or medieval allegory will be explored as the chosen texts may require.
Course not offered every year
Also Offered As: COML 714, ENGL 715
Activity: Seminar
1.0 Course Unit

CLST 611 Greek Epigraphy
Scholars have long debated the nature of the ancient economy, the terms in which it can best be approached, and the decision-making processes that underpinned economic behavior in antiquity. In particular, controversy has surrounded the extent to which the economies of Greco-Roman antiquity can be modeled using contemporary tools of analysis. In recent scholarship, many of the tenets laid down by Moses Finley in his ‘Ancient Economy’ have been re-evaluated, with the result that the field is currently in a state of intellectual ferment. It is the purpose of this course to explore the terms in which contemporary debates over ancient economic systems are formulated, with reference to a variety of societies and periods, from the palace economies of the Mycenaean period to the system of taxation introduced in the early fourth century by the emperor Diocletian and his colleagues in the Tetrarchy.

Course not offered every year
Also Offered As: AAMW 611, ANCH 611, GREK 611
Activity: Seminar
1.0 Course Unit

CLST 612 The Flavian Era
The time of the Flavians (69-96 BCE) holds a special place in Roman history and culture as it marks the transition from the Julio-Claudian period to the High Empire. Historically, the rule of Rome's second dynasty saw a stabilization of the imperial power system, the consolidation of social and political hierarchies, and an increasing integration of the empire. Major construction projects reshaped the city of Rome, topographically and ideologically. The literary production in various genres reached a new peak, developed new forms, and explored new topics. The unusually high number of Greek and Latin texts and documents preserved allow us to analyze such changes closely; our focus will be on the interrelation and conjunction of these developments. Final projects will take the form of papers suitable for presentation at the SCS Annual Meeting.
Taught by: Wilker, Damon
Also Offered As: ANCH 612
Activity: Seminar
1.0 Course Unit

CLST 613 Landscapes and Seascapes of the Ancient Mediterranean
The Mediterranean environment is both diverse and unique, and nurtured numerous complex societies along its shores in antiquity. This seminar offers a primer on theoretical and methodological approaches to studying landscapes and seascapes of the Mediterranean from the Bronze Age to the early modern era, at scales from local to international and on land and underwater. Concepts from processual, post-processual, and current archaeologies will be considered, and field techniques including excavation and surface survey, remote sensing and geophysics, GIS modeling, and ethnography/ethnoarchaeology are examined. Course content and discussion focus on case studies that illustrate how these tools are used to reconstruct the appearance and resources of the natural environment; overland and maritime routes; settlement location, size, function, and demography; social and economic networks; and agricultural, pastoral, and nomadic lifeways. Seminar participants will develop case studies of their own geographical and chronological interest.
Taught by: Tartaron
Course not offered every year
Also Offered As: AAMW 613, CLST 313
Activity: Seminar
1.0 Course Unit
CLST 616 Ancient Economies
Scholars have long debated the nature of the ancient economy, the terms in which it can best be approached, and the decision-making processes that underpinned economic behavior in antiquity. In particular, controversy has surrounded the extent to which the economies of Greco-Roman antiquity can be modeled using contemporary tools of analysis. In recent scholarship, many of the tenets laid down by Moses Finley in his The Ancient Economy have been re-evaluated, with the result that the field is currently in a state of intellectual ferment. It is the purpose of this course to explore the terms in which contemporary debates over ancient economic systems are formulated, with reference to a variety of societies and periods, from the palace economies of the Mycenaean period to the system of taxation introduced in the early fourth century by the emperor Diocletian and his colleagues in the Tetrarchy.

Also Offered As: AAMW 503, ANCH 616
Activity: Seminar
1.0 Course Unit

CLST 623 The (Mostly) Latin Epigram
In this seminar we will explore the themes and aesthetics of the Latin epigram, a genre (or is it?) best known for its brevity and wit but one whose precise nature is tantalizingly elusive. After orienting ourselves in the epigrams of Hellenistic Greek epigrammatists and late Republican authors like the so-called Neoterics (Catullus, Cinna, Calvus, Caesar), we will turn our attention to the poetry of Martial, whose accounts of Rome, its inhabitants, and their foibles exerted a profound influence on subsequent epigrammatists. Among the themes we will engage are: epigram as a genre; persona in tessellated textual collections; the interaction of refined and obscene language; and the artistic and intellectual implications of replication, anthology, and remix.
Taught by: Mulligan
Activity: Seminar
1.0 Course Unit

CLST 635 Etruscan Art & Archaeology in the Penn Museum
The Etruscans, who spoke a language unlike any others known, were cast by their Greek and Roman rivals as outsiders and enemies: pirates, lovers of luxury, loose women. Today we must rely on the archaeological evidence of painted tombs, decorated Tuscan temples and massive engineering works to correct the picture. The course will survey a millennium (1st millennium BCE) of Etruscan culture through archaeological sites, works of art and everyday material culture, especially illustrated with objects in the collection of the Penn Museum. An additional insight into Italic culture comes from tomb groups excavated for the Museum at the Faliscan settlement of Narce. Students will gain familiarity with the societies of pre-Roman Italy through close study of their vases, jewels, armor, textiles and tools, and even their very bones, and discover a surprising amount of Etruscan heritage surviving today.
Taught by: Turfa
Course not offered every year
Also Offered As: AAMW 630, CLST 335
Activity: Lecture
1.0 Course Unit

CLST 636 Approaches to Literary Texts
Most seminars focus on literary texts composed during a single historical period; this course is unusual in inviting students to consider the challenges of approaching texts from a range of different historical eras. Taught by a team of literary specialists representing diverse periods and linguistic traditions and conducted as a hands-on workshop, this seminar is designed to help students of literature gain expertise in analysis and interpretation of literary works across the boundaries of time, geography, and language, from classic to modern. Students will approach literature as a historical discipline and learn about key methodological issues and questions that specialists in each period and field ask about texts that their disciplines study. The diachronic and cross-cultural perspectives inform discussions of language and style, text types and genres, notions of alterity, fictionality, literariness, symbolism, intertextuality, materiality, and interfaces with other disciplines. This is a unique opportunity to learn in one course about diverse literary approaches from specialists in different fields. Master classes are taught by Kevin Brownlee, Linda Chance, Eva del Soldato, Huda Fakhreddine, Scott Francis, Nili Gold, Bridget Murnghan, Deven Patel, Kevin Platt, Michael Solomon, Emily Steiner, Julia Verkholantsev, and Emily Wilson.
Taught by: Verkholantsev

1.0 Course Unit

CLST 698 Prospectus Workshop
Designed to prepare graduates in any aspect of study in the ancient world to prepare for the dissertation prospectus. Course will be centered around individual presentations and group critique of prospectus’ in process, as well the fundamentals of large-project research design and presentation. Taught by: Wilker
Course usually offered in spring term
Also Offered As: AAMW 698
Activity: Seminar
1.0 Course Unit
Notes: Graduates only

CLST 700 GEOARCHAEOLOGY
In this course, students will learn the basic concepts of earth systems and explore the ways that archaeologists use various environmental sciences (e.g., geomorphology, limnology, palynology, and dendroclimatology) and paleoecological modeling in their research. The course will include lectures and laboratory activities on the basics of geology, including surficial geology, rock and mineral identification, geomorphology and soils, sedimentation and stratigraphy, as well as a systematic review of depositional environments and their archaeological potential. A series of archaeological case studies will illustrate the application of these concepts in real-world field archaeology.
Taught by: Tartaron & Magee
Also Offered As: AAMW 700
Activity: Seminar
1.0 Course Unit
CLST 702 Greek Sanctuaries
Sanctuaries remain an important focal point for the study of Greek religion. Both as sites for worship, dedication, oracular activity and other cult activity and as sites for the mediation of elite and state competition sanctuaries are, along with the polis, the most essential structuring institutions of Greek life. This seminar takes a selection of larger and smaller extra-urban sanctuaries and examines their growth, articulation and function.
Taught by: McInerney
Course not offered every year
Also Offered As: AAMW 702, ANCH 702
Activity: Seminar
1.0 Course Unit

CLST 705 Ethnoarchaeology Greece
Ethnoarchaeology involves distinctive theoretical and methodological approaches to the study of living societies for the explicit purpose of shedding light on archaeological questions. In this seminar, we will review the intellectual history of ethnoarchaeology in North America and Europe, and explore case studies from Greece, the wider Mediterranean, and beyond. Among the topics will be analogy, cross-cultural comparison, experimental archaeology, oral history research, and archaeologically oriented ethnographic fieldwork. Students will create a proposal for ethnoarchaeological fieldwork in their area of interest in NSF or Wenner-Gren format, to be critiqued by the instructor and their peers.
Taught by: Tartaron
Course not offered every year
Also Offered As: AAMW 705
Activity: Seminar
1.0 Course Unit

CLST 706 Archaeology of the Hellenistic Period in Italy, Greece, and Asia Minor
A survey of the archaeology of the Hellenistic period (331-31 BCE) across the Mediterranean, with a focus on Rome, Magna Graecia, Greece, and western Asia Minor. The course will stress the interactions among cities and kingdoms during the Roman Republic and Greek Hellenistic periods, especially the second century B.C. Students will work with relevant objects in the Penn Museums Mediterranean Section.
Taught by: Brian Rose
Also Offered As: AAMW 706, ARTH 706
Activity: Seminar
1.0 Course Unit

CLST 707 Topcs in Aegean Archaeology
Topics vary. This course explores current topics in Aegean archaeology. It is designed to inform and prompt debate and discussion on substantive, methodological, and theoretical matters of current interest, within a geographical and/or chronological framework. Spring 2017 topic TBA.
Taught by: Tom Tartaron
Also Offered As: AAMW 707
Activity: Seminar
1.0 Course Unit
Notes: Undergraduates require permission of instructor

CLST 711 The Archaeology of Greece and Asia Minor in the Archaic and Classical Periods
An examination of new discoveries and conflicting interpretations in the archaeology of Greece and Asia Minor between the seventh and fourth centuries B.C.E. Both sides of the Aegean will receive equal attention, and emphasis will be placed on sanctuaries, settlements, and cemeteries.
Taught by: C. Brian Rose
Also Offered As: AAMW 726, ARTH 726
Activity: Seminar
1.0 Course Unit
Notes: Graduate Students Only

CLST 715 Archaeology of Troy
An introduction to the archaeology of Troy, in northwestern Turkey. The course will focus on the results of excavations at the site in 1988, although the earlier excavations of Schliemann, Dorpfeld, and Blegen will also be considered. The course will cover a broad chronological span--from the early Bronze age through the late Roman period, and will include Greek, Roman, and Medieval attitudes toward Troy and the Trojan legend.
Taught by: Rose
Course not offered every year
Also Offered As: AAMW 715
Activity: Seminar
1.0 Course Unit

CLST 720 Topics in Aegean Art
Fall 2018: The choices made by groups of people with regard to the treatment of their dead can be reflective of a society's beliefs and social structure. In this course, we will examine the burial traditions of the people of the Prehistoric Aegean from the Neolithic through the end of the Bronze Age, circa 7,000-1,100 BCE. We will focus on burial architecture, grave goods, burials, mortuary variability, and the symbolic meaning of death and burial in Prehistoric Greece. Particular attention will be paid to recent discoveries on Crete, the mainland, and the Cycladic islands. Students will write two papers, and these papers will be presented to the class. The first paper will be circa 15 pages long with footnotes, bibliography, and images (presented via powerpoint) and the second will be a 20-25 page paper with footnotes, bibliography, and images presented via powerpoint.

Climate Change (CLCH)

The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates/).

CLCH 160 Oceanography
This course is designed to provide an overview of geological, chemical, and physical oceanography. It is constructed such that all students (irrespective of their major area of study) can learn about the oceans. Through frequent individual and group assignments, readings, video lectures, and collaborative discussions, students are exposed to the major areas of oceanography including marine geology, physical oceanography, and marine chemistry. This includes the following themes: plate tectonics (particularly as it pertains to the making, shaping, and disruptions of the global ocean), marine provinces, marine sediments, seawater chemistry, air-sea interactions and ocean circulation (particularly as they pertain to climate change), waves and water dynamics, tides, renewable ocean energy, and beaches and shoreline processes.

Activity: Online Course
1.0 Course Unit

CLCH 220 Atmospheric Science
The study of atmospheric science includes the prediction of weather and climate change as well as their impact on society. Designed to provide an understanding of the fundamentals of atmospheric science at the local, regional, and global levels, this course covers the nature, composition, and structure of the atmosphere, its interactions with other parts of the Earth, and the major chemical mechanisms controlling the occurrence and mobility of air pollutants in the atmosphere. Course topics also include global atmospheric composition, ecosystems, living organisms, and environmentally important atmospheric species such as greenhouse gases, stratospheric ozone, acid precipitation, urban smog, and air toxins.

Activity: Online Course
1.0 Course Unit

CLCH 230 Climate Change
Climate change is happening right now! Climate change is something we can worry about in 50 to 100 years, no need to worry about it now. On an almost daily basis we are bombarded by mixed messages about climate in the media. Who is right? What is the truth? This course will examine the cryosphere and build on the previous Climate Certificate courses CLCH 160 Oceanography and CLCH 220 Atmospheric Science to better understand Earth’s climate system. We will explore past climate, how we know what that climate was like, and how and why we believe it has changed. We will then examine current evidence for climate change (sea level rise, loss of glacier mass, changes in weather systems) and critique various climate models. Once the class has a good understanding of the science behind climate change we will examine potential impacts in various parts of the world. Finally we will examine climate policy in the US at the federal, state and local level and in various parts of the world.

Taught by: Yvette Bordeaux
Activity: Online Course
1.0 Course Unit

CLCH 300 Communicating Science
Even the most brilliant scientists must be able to communicate clearly to effectively share their enthusiasm for their fields. Relating scientific concepts and quantitative data to colleagues is very different than sharing it with the general public. This course will show students how to refine their communication skills in crafting messages to address different audiences and genres. There are no required prerequisites for this course, although students pursuing the Certificate in Climate Change are strongly encouraged to already have completed CLCH 160: Oceanography, CLCH 220: Atmospheric Science, and CLCH 230: Climate Change prior to enrolling in this course.

Taught by: N/A

Cognitive Science (COGS)

COGS 001 Introduction to Cognitive Science
How do minds work? This course surveys a wide range of answers to this question from disciplines ranging from philosophy to neuroscience. The course devotes special attention to the use of simple computational and mathematical models. Topics include perception, learning, memory, decision making, emotion and consciousness. The course shows how the different views from the parent disciplines interact and identifies some common themes among the theories that have been proposed. The course pays particular attention to the distinctive role of computation in such theories and provides an introduction to some of the main directions of current research in the field. It is a requirement for the BA in Cognitive Science, the BAS in Computer and Cognitive Science, and the minor in Cognitive Science, and it is recommended for students taking the dual degree in Computer and Cognitive Science.

Course usually offered in fall term
Also Offered As: CIS 140, LING 105, PHIL 044, PSYC 207

College (COLL)

COLL 135 The Art of Speaking
This course is designed to equip students with the major tenets of rhetorical studies and peer education necessary to work as a CWIC speaking advisor. The course is a practicum that aims to develop students’ abilities as speakers, as critical listeners and as advisors able to help others develop those abilities. In addition to creating and presenting individual presentations, students present workshops and practice advising. During this ABCS course, students will practice their advising skills by coaching and mentoring students at a public school in Philadelphia. Prerequisite: Students need to apply and are interviewed by the instructor and Associate Director of CWIC.
Taught by: Weber
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
Notes: Students need to apply and are interviewed by the instructor and Associate Director of CWIC.

Communications (COMM)

COMM 025 Fellows Proseminar I (SNF Paideia Program Course)
The SNF Paideia Fellows Proseminar I introduces sophomore Fellows to academic research and practice related to the civic engagement mission of the SNF Paideia program. We engage diverse perspectives on the purpose of higher education, the nature of citizenship, the value of civility, and the relationship between individual and community wellness. Students will develop their personal civic identity and wellness goals through intentional course exercises and assignments. The goal of the course is to equip students with the knowledge, skills, experiences, and ethical frameworks for healthy, sustainable and robust civic leadership at Penn and in their local, national, and global communities. This course is open only to SNF Paideia Fellows, who are required to take it during the fall of their sophomore year. Prerequisite: This course is open only to SNF Paideia Fellows, who are required to take it during the fall of their sophomore year.
Taught by: Anderson/Howard
Course usually offered in fall term
Activity: Seminar
0.5 Course Units

COMM 123 Critical Approaches to Popular Culture
Popular culture has been alternately condemned as too trivial to warrant attention and too powerful to resist. Its consumers have been dubbed fashion victims, couch potatoes, and victims of propaganda. This course considers these critiques, as well as those that suggest that popular culture can be emancipatory, allowing for the creation and renegotiation of meaning. Over the course of the semester, we consider the impacts of various forms of popular culture, and discuss their effects on how we see ourselves and others. We explore the ever-shifting distinctions between high, middlebrow, and low culture and analyze how power and resistance structure the production and consumption of popular texts.
Taught by: Lingel/Paxton
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

COMM 125 Introduction to Communication Behavior
This course introduces students to social science research regarding the influence of mediated communication on individual and collective attitudes, beliefs, and behaviors. Throughout the semester we explore the impacts of various types of mediated content (e.g., violence, gender and sexuality, race and ethnicity, politics and activism, health and wellbeing); genres (e.g., news, entertainment, educational, marketing); and mediums (e.g., television, film, social media) on what we think and how we act. The aim of the course is to provide students with (1) a general understanding of both the positive and negative effects of mediated communication on people’s personal, professional, social, and civic lives; and (2) the basic conceptual tools needed to evaluate the assumptions, theories, methods, and empirical evidence supporting these presumed effects. Class meets twice a week (MW) as a lecture and once a week (F) in smaller discussion groups led by graduate teaching fellows. In addition to a midterm exam and occasional short assignments, students have the option of producing a multi-media capstone project or a final term paper on a media-effects topic of their choice. Group projects or final papers are permitted, with approval of the instructor. In addition to fulfilling General Education Curriculum Sector 1 Requirement (Society), this course fulfills one of the two introductory-level courses required of Communication majors or prospective majors.
For BA Students: Society Sector
Taught by: Delli Carpini
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

COMM 130 Media Industries and Society
The aim of this course is to prepare you to work in the media business as well as to be an informed citizen by acquainting you with the work and language of media practitioners. The class also investigates the exciting, and (to some employed there) scary changes taking place in the news industry, internet industry, advertising industry, television industry, movie industry, magazine industry, and several other areas of the media system. In doing that, the course ranges over economic, political, legal, historical, and cultural considerations that shape what we see when we go online, use social media, watch TV, read books, play video games, and more. This course fulfills one of the two introductory level courses required of Communication majors or prospective majors.
For BA Students: Society Sector
Taught by: Turow
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

COMM 203 Media, Culture & Society in Contemporary China
This course studies contemporary China in the context of globalization. Starting with an analysis of the origins of economic reform and the struggles for political change in the 1970s and 1980s, the course moves on to cover critical issues in the twenty-first century, including migration and work, middle class consumerism, youth, religion, media and communication, environmental degradation, new forms of inequality, civil society and popular protest. Taking a sociological approach, this course introduces methods and theories for analyzing institutions, inequality, and social change.
Taught by: Yang
Course not offered every year
Also Offered As: SOCI 238
Activity: Lecture
1.0 Course Unit
COMM 210 Quantitative Research Methods in Communication
This course is a general overview of the important components of social research. The goal of the course is to understand the logic behind social science research, be able to view research with a critical eye and to engage in the production of research. It will cover defining research problems, research design, assessing research quality, sampling, measurement, and causal inference. The statistical methods covered will include descriptive and inferential statistics, measures of association for categorical and continuous variables, inferences about means, and the basic language of data analysis. Course activities will include lectures, class exercises, reading published scientific articles, using statistical software, and discussing research featured in the news.
Taught by: Jemmott
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

COMM 211 Media Activism Studies
This seminar provides an introduction to the politics and tactics underlying various types of media activism. The class will examine interventions aimed at media representations, labor relations in media production, media policy reform, activists’ strategic communications, and ‘alternative’ media making. The course will draw from an overview of the existing scholarship on media activism, as well as close analyses of actual activist practices within both old and new media at local, national, and global levels. We will study how various political groups, past and present, use media to advance their interests and effect social change. Each member of the class will choose one case study of an activist group or campaign to explore throughout the semester.
Taught by: Pickard/Balaji
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

COMM 214 Media and South Asia
This course examines the historical development of media institutions across the Indian subcontinent, and how media texts have helped to shape post-colonial national/cultural/religious/social identities, nationalism, and geopolitical relations. The course looks at how the post-colonial State in South Asia (India, Pakistan, Bangladesh, Nepal, Bhutan, and Sri Lanka) has interacted with media industries, and the implications of this interaction.
Taught by: Balaji
One-term course offered either term
Also Offered As: SAST 110
Activity: Lecture
1.0 Course Unit

COMM 215 Children and Media
This course examines children’s relationships to media in their historic, economic, political, and social contexts. The class explores the ways in which ‘childhood’ is created and understood as a time of life that is qualitatively unique and socially constructed over time. It continues with a review of various theories of child development as they inform children’s relationships with and understanding of media. It reviews public policies designed to empower parents and limit children’s exposure to potentially problematic media content and simultaneously considers the economic forces that shape what children see and buy. The course also provides a critical examination of research on the impact of media on children’s physical, cognitive, social, and emotional development. Students in this course produce a proposal for an educational children’s media product as their final project.
Taught by: Woolf
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

COMM 225 Introduction to Political Communication
This course is an introduction to the field of political communication and conceptual approaches to analyzing communication in various forms, including advertising, speech making, campaign debates, and candidates’ and office-holders’ uses of social media and efforts to frame news. The focus of this course is on the interplay in the U.S. between media and politics. The course includes a history of campaign practices from the 1952 presidential contest through the election of 2020.
Taught by: Jamieson
Course usually offered in fall term
Also Offered As: PSCI 232
Activity: Lecture
1.0 Course Unit

COMM 230 Advertising and Society
This course explores the historical and contemporary role of the advertising industry in the U.S. media system. The course will cover the social history of advertising; the structure of today’s advertising industry; the workings of advertising in digital media; and critical analyses of advertising’s role in society. In addition to academic writings, the class will read industry reports to understand contemporary strategies and processes.
Taught by: Turow
Course not offered every year
Activity: Lecture
1.0 Course Unit
COMM 243 Ethnography and Media for Social Justice
How do qualitative social scientists study urban communities? What kinds of powerful tales can be told about urban lifestyles and social issues in places like Philadelphia? This course will allow students to study various ethnographic treatments of urban communities in the United States, using films, articles, TV serials, and books as guides for the framing of their own independent research on the streets of Philadelphia. Students will also form production teams of two or three people, and these production teams will be responsible for (i) identifying and researching an important urban issue in contemporary Philadelphia and (ii) turning that research into a 15-30 minute video documentary or pod cast. Mixing video/audio journalism with ethnographic methods will enhance their skills at archival and social research, from participant observation and interviewing techniques to sound editing and production. This course is intended to be a rigorous and exciting opportunity for students to tell empirically grounded stories using the voices of their participants and the sounds of the city.
Taught by: Lingel
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 248 Digital Dissidence: Networked Movements in the Age of the Internet
This course examines digital dissidence, which takes a wide variety of forms in today's online mediascape. Key issues we will explore include: What is the infrastructure of the global Net and who made it? What is the logic of networked action online and how effective is it? Have the supposedly democratic rules of the internet resulted in positive social transformations? What impact does ever-increasing internet surveillance have on digital dissidence? What can ensure the safety and freedom of online resistance? The sociological concepts and theories covered in this course will help students understand and assess the threats that networked movements face in the political context of contemporary global uprisings.
Taught by: Ustun
One-term course offered either term
Activity: Seminar
1.0 Course Unit

COMM 253 Divine Mediation: Media and the Shaping of Religious Identity and Practice
This course surveys how religious groups interact with media, and how media texts and institutions have played a role in defining religions. The intersections between media and religion are numerous, from the mediated growth of national identities, the rise of online religious extremism, the ingroup/outgroup dynamics within and among religious groups, and the ways in which media is used to legitimize/delegitimize theological positions. We examine how media institutions have played a role in propping up religious norms (both explicitly and implicitly) and the shaping of religious identities. This course looks at media as both enforcer and disruptor, as well as the ways in which religious have been challenged by those with media literacy and access. The evolution of religious practice and social norms can also be linked with technological innovations such as the mass distribution of Bibles in the 15th and 16th century thanks to the printing press, the rise of radio and television messiahs in the 20th century, and the individualization of religious practices through new apps.
Taught by: Balaji
Course not offered every year
Activity: Lecture
1.0 Course Unit

COMM 270 Global Digital Activism
This seminar examines the forms, causes, and consequences of global digital activism, defined broadly as activism associated with the use of digital media technologies (e.g., Facebook, Twitter, mobile phones, and the Chinese Weibo). The goal is to provide students with a theoretical tool-kit for analyzing digital activism and to develop a critical understanding of the nature of contemporary activism and its implications for global social change. Major cases to be examined include the 'Occupy Wall Street' movement in the US, the Arab Spring, the 'indignados' protests in Spain, and internet activism in China. Students are required to conduct primary, hands-on research on a contemporary case (or form) of digital activism and produce a final research paper. This research project may be done individually or in small groups.
Taught by: Yang
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 275 Communication and Persuasion
This course examines theory, research, and application in the persuasive effects of communication in social and mass contexts. The primary focus will be on the effects of messages on attitudes, opinions, values, and behaviors. Applications include political, commercial, and public service advertising, propaganda, and communication campaigns (e.g. anti-smoking). Students will develop their own communication campaign over the semester. The campaign will include identifying and analyzing the persuasion problem, the target audience's characteristics and media habits, and then reating a persuasive message consistent with research and practice targeted to the problem and its solution.
Taught by: Cappella
Course not offered every year
Activity: Lecture
1.0 Course Unit

COMM 282 Sick and Satired: The Insanity of Humor and How it Keeps Us Sane
This course will examine how and why humor, as both an instigator and peacemaker, might be considered one of the most influential and profoundly useful forms of communication devised by human beings. The unique ability of jokes and satire to transcend familiar literary and journalistic forms for the purpose of deepening (or cheapening) socio-philosophical arguments and to inspire (or discourage) debate and participation in public conversations about innumerable political and social issues will be explored. The fearless analytical nature of both high and lowbrow comedy will be examined, as well as its deflective qualities. The course will enable students to consider, through analysis of both contemporary and historical examples, the political and cultural satirist's unique role in society as a witness, a predictor and, in some circumstances, an instigator of public and private debate. We will examine the role of satire in revealing and mediating differences between disparate social groups based not solely on language differences, but also on political affiliation, cultural identity, ethnicity, gender, religious fellowship, sexual orientation, and socio-economic caste.
Taught by: Booth
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
COMM 286 Masculinity and the Media
This course examines the construction of masculinity in American and global media, highlighting how masculinity developed in parallel to social, cultural, economic, and political norms. Using case studies and multiple theoretical approaches, we will seek to understand how constructions of masculinity across the world have served to uphold - or challenge - the status quo. Analysis of individual texts across time periods and different cultural contexts will also help us better come to terms with the idea of masculinity - and its proliferation across media platforms.
Taught by: Balaji
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 290 Special Topics in Communication
This is an intermediate level special topics course that covers varying topics in communication. For more information about the course, please see: https://www.asc.upenn.edu/academics/undergraduate-program/curriculum-and-major-requirements
Taught by: Various Instructors
One-term course offered either term
Activity: Seminar
1.0 Course Unit

COMM 292 WARNING! Graphic Content: Political Cartoons, Comix and the Uncensored Artist
This course examines the past, present and future of political cartooning, underground comix, graphic journalism and protest art, exploring the purpose and significance of image-based communication as an unparalleled propagator of both noble and nefarious ideas. The work presented will be chosen for its unique ability to demonstrate the inflammatory effect of weaponized visual jokes, uncensored commentary and critical thinking on a society so often perplexed by artistic free expression and radicalized creative candor.
Taught by: Booth
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

COMM 301 Introduction to the Political Economy of Media
This course has two aims. First, assuming that communications are central to any society, it situates media systems within larger national and international social relationships and political structures. Second, this course critically examines the structures of the communication systems themselves, including ownership, profit imperatives, support mechanisms such as advertising and public relations, and the ideologies and government policies that sustain these arrangements. Considering case studies ranging from traditional news and entertainment media to new digital and social media, the course provides a comprehensive survey of the major texts in this vibrant sub-field of media studies.

COMM 304 The Communication Research Experience
In this hands-on course students will work with active researchers in the Communication Neuroscience lab at Penn to gain experience in how research works. Students will have the opportunity to interact closely with a mentor and will gain experience conceptualizing research questions, designing experiments, and collecting and analyzing data. In fall 2019, the course 'field experiment' will examine how to increase voter turn-out among Penn students, but the specific research approaches taken to this topic will be driven by students' interests (e.g. in persuasion, marketing, network science, etc). Prerequisite: COMM 210, an equivalent research methods class, or permission of the instructor.
Taught by: Falk
Course not offered every year
Prerequisite: COMM 210
Activity: Seminar
1.0 Course Unit

COMM 310 The Communication Research Experience
In this hands-on course students will work with active researchers in the Communication Neuroscience lab at Penn to gain experience in how research works. Students will have the opportunity to interact closely with a mentor and will gain experience conceptualizing research questions, designing experiments, and collecting and analyzing data. In fall 2019, the course 'field experiment' will examine how to increase voter turn-out among Penn students, but the specific research approaches taken to this topic will be driven by students' interests (e.g. in persuasion, marketing, network science, etc). Prerequisite: COMM 210, an equivalent research methods class, or permission of the instructor.

Course not offered every year
Prerequisite: COMM 210
Activity: Seminar
1.0 Course Unit

COMM 311 Peace Comm: The Use and Abuse of Communications in Intergroup Conflict
Why are conflicts between groups of humans so tragically predictable? What drives us to exclude, demean and fight with members of other groups? And what can we do about it? In this class, we will examine the biological roots of intergroup conflict between religious, ethnic and political groups, and take a critical view of the ways in which psychology and communication have been employed to help foment or transcend conflict. In the first part of the course, we will examine the theoretical work from intergroup psychology. In the second part of the course, we will examine the specific biases that drive conflict (e.g., stereotypes, emotions, prejudice, dehumanization) and how they are measured using both explicit self-report and implicit measures (e.g., physiology, neuroimaging); in the third part, we will explore the interventions that have been demonstrated to work (and fail) to decrease intergroup conflict. No prior experience in psychology or neuroscience is required. The course is lecture-based, but will include class discussions and in-class activities.
Taught by: Bruneau/Moore-Berg
Course not offered every year
Activity: Lecture
1.0 Course Unit
COMM 313 Computational Text Analysis for Communication Research
In this 'big data' era, presidents and popes tweet daily. Anyone can broadcast their thoughts and experiences through social media. Speeches, debates and events are recorded in online text archives. The resulting explosion of available textual data means that journalists and marketers summarize ideas and events by visualizing the results of textual analysis (the ubiquitous 'word cloud' just scratches the surface of what is possible). Automated text analysis reveals similarities and differences between groups of people and ideological positions. In this hands-on course students will learn how to manage large textual datasets (e.g. Twitter, YouTube, news stories) to investigate research questions. They will work through a series of steps to collect, organize, analyze and present textual data by using automated tools toward a final project of relevant interest. The course will cover linguistic theory and techniques that can be applied to textual data (particularly from the fields of corpus linguistics and natural language processing). No prior programming experience is required. Through this course students will gain skills writing Python programs to handle large amounts of textual data and become familiar with one of the key techniques used by data scientists, which is currently one of the most in-demand jobs.
Taught by: O'Donnell
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

COMM 318 Stories From Data: Introduction to Programming for Data Journalism
Today masses of data are available everywhere, capturing information on just about everything and anything. Related but distinct data streams about newsworthy events and issues – including activity from social media and open data sources (e.g., The Open Government Initiative) – have given rise to a new source for and style of reporting sometimes called Data Journalism. Increasingly, news sites and information portals present visually engaging, dynamic, and interactive stories linked to the underlying data (e.g., The Guardian DataBlog). This course offers an introduction to Python programming for data analysis and visualization. Students will learn how to collect, analyze, and present various forms of data. Because numbers and their visualizations do not speak for themselves but require context, interpretation, and narrative, students will practice making effective stories from data and presenting them in blogs and other formats. No programming experience is required for this class.
Taught by: O’Donnell
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

COMM 322 History and Theory of Freedom of Expression
Can legal penalties be assessed against Donald Trump for suggesting his followers might beat up journalists at rallies? Is shouting ‘Heil Hitler! Heil Trump!’ at a performance of Fiddler on the Roof the same as crying fire falsely in a crowded theater? Should racist speech be banned from Penn’s campus? If we were to fashion laws about speech all over again for our media-saturated, fake news world, would they be different from the ones we have? Does the First Amendment—invented for a print world in which most citizens weren’t literate unlike the ultra-connected world we have today—protect democracy or endanger it? This seminar examines the philosophical foundation of the First Amendment, its interpretation by the Supreme Court over time, and the struggles over its application to current controversies. We also examine the challenges of civil society censorship that gets people banned from social media or fired from their jobs for controversial speech, such as the NFL’s threats to fire players for taking a knee. All societies make laws to limit speech. What are these limits in the United States, and are they the ones we want?
Taught by: Marvin
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

COMM 323 Contemporary Politics, Policy and Journalism
This course explores modern media and their impact on government and politics. We focus on the post Watergate/Vietnam era and look, in depth, at the challenges faced by journalists in the contemporary political moment. We will examine the presidency of Donald Trump and the ongoing press coverage of the 2020 election cycle. This course also gives students unique opportunities to discuss the nexus of press, politics and public policy with leading practitioners in these fields.
Taught by: Hunt
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

COMM 330 The Hidden World of Privacy Policies
The US Federal Trade Commission considers privacy policies essential for internet sites and apps. Lawyers for firms with internet sites and/or apps spend much time writing privacy policies. Yet surveys show that most Americans don't read the policies and in fact cannot understand them because of their legal jargon. Moreover, surveys indicate, most Americans don't even correctly understand what the label privacy policy means. The aim of this course will be to examine this crucial but misunderstood aspect of modern life. You will learn how to read privacy policies, how to understand their strategic business purposes within the internet industry, and how to think about the implications for society when the key rules of surveillance and privacy are hidden from all but a relative few. You will also work with others in the class to create and carry out a survey of college students' understanding of privacy policies. There will be one exam and a paper related to the survey.
Taught by: Turow
Course not offered every year
Activity: Seminar
1.0 Course Unit
COMM 332 Survey Research and Design
Survey research is a small but rich academic field and discipline, drawing on theory and practice from many diverse fields including political science, communication, sociology, psychology, and statistics. Surveys are perhaps the most ubiquitous tool of measurement in the social sciences today. Successful practitioners develop expertise in the art and science of survey methodology, including sampling theory and practice, questionnaire instrument development and operationalization, and the analysis and reporting of survey data. Survey researchers are scientists of the method itself testing various practices by which surveys can be improved upon, as well as developing a keen understanding of the nature of error in surveys and how to control it. This course offers an overview of survey research and design. It is highly experiential but also based upon introductory statistical theory and analysis.
Taught by: Dutwin
Course not offered every year
Also Offered As: PSCI 332
Activity: Seminar
1.0 Course Unit

COMM 339 Critical Perspectives in Journalism
This course aims to provide students with a critical understanding of journalism. It combines theoretical perspectives on the making of news with primary source material produced by and about journalists. Students will analyze theoretical material on journalism -- about how news is made, shaped, and performed -- alongside articles and broadcasts appearing in the media, interviews with journalists in the trade press, and professional reviews. Topics include models of journalistic practice, journalistic values and norms, gatekeeping and sourcing practices, storytelling formats in news, and ethical problems related to misrepresentation, plagiarism, and celebrity.
Taught by: Zelizer
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 354 Power and Design in Global Communication
In this course, students will critically explore global communication platforms and internet infrastructures with attention to their social and political implications. The goal is to reflect on how the design of communication technologies embeds power relations, and how these impact specific social groups and shape the relations between the global South and the global North. The course will examine topics such as biased algorithms, digital labor, censorship, surveillance, infrastructure standards and protocols, and their public interest dimensions. Cases to be analyzed include gendered and racially biased artificial intelligence tools, the outsourcing of content moderation in social media that links the United States to the Philippines, connectivity shutdowns from the United Kingdom to India, as well the politics of the domain name system affecting LGBTQ+ groups and indigenous communities in the Amazon region. Students will select case studies to research throughout the semester and will examine the relations between technological design, communication, globalization, and transnationalism to imagine new possibilities for the future of global communication.
Taught by: Rosa
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 359 Journalism in an Age of Information Disorder
As audiences navigate the polluted information environment, they increasingly look to journalists to help them understand what is true or false. As a result, newsrooms now publish regular debunks, journalists verify eyewitness footage posted to Twitter in real-time, and a new ‘disinfo’ beat has emerged with reporters investigating conspiracy theories being peddled on 4Chan, Discord or Reddit. At the same time, some members of the public see journalists as being part of the problem itself and Trump has famously labeled them as the ‘enemy of the people’. This course will examine the major shifts that have happened in the information ecosystem since 2005 and will explore how they have impacted journalism. Each week, we will consider a current challenge US newsrooms are facing, for example: the rise of social networks and the resulting collapse of the local newspaper industry, the media manipulation campaigns aimed at hoaxing and tricking newsrooms into amplifying false or divisive content, and the new pressures on ‘objectivity’ as journalists report on stories related to the current political and social climate. This course will focus on the practical strategies journalists and newsrooms will be adopting in the run-up to the Presidential election including hearing from reporters who now work on this new ‘disinfo beat’.
Taught by: Wardle
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 367 Communication in the Networked Age
Communication technologies, including the internet, social media, and countless online applications create the infrastructure and interface through which many of our interactions take place today. This form of networked communication opens new questions about how we establish relationships, engage in public, build a sense of identity, promote social change, or delimit the private domain. The ubiquitous adoption of new technologies has also produced, as a byproduct, new ways of observing the world: many of our interactions now leave a digital trail that, if followed, can help us unravel the determinants and outcomes of human communication in unprecedented ways. This course will give you the theoretical and analytical tools to critically assess research that uses networked technologies to produce new evidence about communication dynamics, their effects, and how to promote social change.
Taught by: Gonzalez-Bailon
Course not offered every year
Activity: Seminar
1.0 Course Unit
COMM 368 Kinesthetic Anthropology
This class, team-taught by CEE Visiting Fellow Reggie Wilson and Deborah Thomas, investigates various forms of contemporary performance in relationship to Africanist forms and functions of dance, movement and action. We will concern ourselves with how the body knows, and with how we learn to identify the structures of movement that provide context, meaning and usefulness to various Africanist communities across time and space. Grounding ourselves within a history of ethnographic analyses of the body in motion, and within Africana theorizing about the affective power of the body, we will consider what people are doing when they are dancing. In other words, we will train ourselves to recognize the cultural values, social purposes, and choreographic innovations embedded in bodily action and motion. While we will attend to these phenomena in a range of locations throughout the African diaspora, we will also highlight aspects of the Shaker and Black Shout traditions in Philadelphia. The course will be divided between discussions centered on close reading of primary and secondary material (both text and video) and creative writing/movement exploration (no previous movement experience necessary).
Taught by: Wilson
Also Offered As: AFRC 368, ANTH 368, ANTH 668, FNAR 368
Activity: Seminar
1.0 Course Unit

COMM 373 Black Geographies: Race and Visual Culture
What is the relationship between the Flint water crisis, the hyper-policing of racialized people, and the increased surveillance of neighborhoods deemed ‘poverty-stricken’ or ‘at risk?’ How do regimes of security, surveillance, policing, and forms of violence depend upon the concept of ‘risk’ as central to their operation? How is risk informed by systemic racism and forms of anti-Blackness? How does visual culture (e.g., media coverage, documentary photographs, etc.) inform how we come to see and define certain people, communities, and ways of life as ‘risky?’ How have those living in racialized geographies of ‘risk’ found ways to live in, make do, and challenge the faulty narratives of risk? This interdisciplinary course will examine critical debates and key moments—historical (e.g., MOVE bombing in Philadelphia) and contemporary (e.g., Ferguson riots)—that have informed the concept of risk. Over the course of the semester, we will read scholarly texts and engage with objects such as archival documents, photographs, conceptual art, performance art and installations, journalistic texts, and films. This communications course will be approached from a cultural studies perspective, with particular attention to race, gender, and sexuality.
Taught by: Ward
Activity: Seminar
1.0 Course Unit

COMM 377 Philosophical Problems of Journalism
This course explores the relationship between journalism and philosophy by examining particular issues in epistemology, political philosophy, ethics, and aesthetics. Topics will include: the concept of a ‘fact’; the role of the press in the state; whether journalists (like doctors and lawyers) operate according to specialized ‘professional’ ethics; and the limits of journalism as a literary or visual genre. Course readings will include philosophical texts, breaking print journalism, and blogs that specialize in media issues.
Taught by: Romano
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

COMM 378 Comparative Journalism
In this course we examine links between journalism and public service by scrutinizing core concepts involved, practices that sometimes put journalism and public service in conflict (e.g., investigative reporting, coverage of war), and how journalism stacks up against other forms of public service from NGO work to government employment. Beginning with a reading of Robert Coles’s classic The Call of Service, we dissect the notion of the ‘public,’ assess so-called public-service journalism by reading Pulitzer-Prize-winning examples, and reflect on the news media as a political institution. Individual weeks focus on such topics as the conflict that arises when a journalist’s obligation to a confidential source clashes with a duty to the judicial system, whether the business of journalism is business, how journalism and NGO work compares as public service, and whether journalism by committed political activists (such as I.F. Stone) surpasses mainstream ‘neutral’ journalism as a form of public service.
Taught by: Romano
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

COMM 387 Comparative Journalism
Is journalism the same all over the world? Do press systems and practices differ in fundamental ways that affect how we evaluate them politically, morally, aesthetically, epistemologically and economically? Where does U.S. journalism fit among the models? This new undergraduate seminar will introduce students to concrete differences in journalism around the world, but it won’t only be an empirical look at various various press systems operate. We will also examine and argue about which journalistic practices and systems work best for which purposes, and explore the distinctive journalistic and philosophical assumptions and histories that undergird diverse practices and systems. Asian, European, African and Mideast journalism will all be attended to.
Taught by: Romano
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 388 Ritual Communication
This course explores the significance of rituals as communicative events in contemporary American culture. We will pay particular attention to the ways in which rituals contribute to the making and re-making of social groups, be they ethnic, religious, familial, or institutional. And we will also attend to the obverse: the ways in which rituals create and perpetuate boundaries between ‘us’ and ‘them’ and between ‘appropriate’ and ‘deviant’ social behavior. Issues of race, class, gender, nationality, religion, age and sexuality will be central to our exploration of how rituals function. Over the course of the semester, we will analyze individual rites of passage – from quinceanera to funerals – as well as rituals that mark transitions on a far larger scale such as presidential inaugurations. We will explore rituals that unfold at the local level as well as those that most of us experience only in mediated forms. Students will get hand’s on experience conducting original ethnographic fieldwork and will learn how to develop compelling research proposals.
Taught by: Paxton
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
COMM 390 Special Topics in Communication
This is a special topics course that covers varying topics in communication. For more information about the course, please see: https://www.asc.upenn.edu/academics/undergraduate-program/curriculum-and-major-requirements
Taught by: Various Instructors
Course not offered every year
Activity: Lecture
1.0 Course Unit

COMM 393 Political Polling
Political polls are a central feature of elections and are ubiquitously employed to understand and explain voter intentions and public opinion. This course will examine political polling by focusing on four main areas of consideration. First, what is the role of political polls in a functioning democracy? This area will explore the theoretical justifications for polling as a representation of public opinion. Second, the course will explore the business and use of political polling, including media coverage of polls, use by politicians for political strategy and messaging, and the impact polls have on elections specifically and politics more broadly. The third area will focus on the nuts and bolts of election and political polls, specifically with regard to exploring traditional questions and scales used for political measurement; the construction and considerations of likely voter models; measurement of the horserace; and samples and modes used for election polls. The course will additionally cover a fourth area of special topics, which will include exit polling, prediction markets, polling aggregation, and other topics. It is not necessary for students to have any specialized mathematical or statistical background for this course. Equivalent R based course if prerequisite not met.
Taught by: Dutwin
Course not offered every year
Also Offered As: PSCI 333
Prerequisite: PSCI 107
Activity: Seminar
1.0 Course Unit

COMM 395 Communication and the Presidency
This course examines the vital aspect of communication as a tool of the modern Presidency. Reading and class discussions focus on case studies drawn from modern Presidential administrations (beginning with FDR) that demonstrate the elements of successful and unsuccessful Presidential initiatives and the critical factor of communication common to both. This course is also an introduction to primary research methods and to the use of primary research materials in the Presidential Library system.
Taught by: Eisenhower
Two terms. student may enter either term.
Activity: Seminar
1.0 Course Unit

COMM 397 New Media and Politics
This course examines the evolving media landscape and the political process from three perspectives: 1) the voter, 2) political campaigns and candidates, and 3) the news media. The course opens with a broad overview of the main theories of political communication and a historical review of the role played by new media technologies in U.S. political campaigns leading up to 1996, the year the internet debuted in presidential campaigns. The course then follows this evolution from the 1996 presidential campaign through the current 2020 presidential campaign. We will take a deep dive into the landmark changes brought on by new media technologies to mobilize, persuade, inform, and fundraise around modern presidential campaigns. While the course takes a historical perspective it will also focus on what is happening currently in this environment, with special emphasis on President Trump's campaign for re-election, the Democratic primaries and caucuses, sustained attacks on the press, 'fake news,' bots, and outside interference in elections.
Taught by: Winneg
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

COMM 404 Media and Politics
Media and Politics will examine multiple issues specific to the past and present political media environment in the United States. Focus will be primarily, though not exclusively, on the contemporary news media. Topics covered will include political primaries, how elections have been influenced by the rise of partisan media, selective exposure, freedom of political speech as it relates to elections, the theoretical purpose of elections, money and media, political targeting, etc. We will also explore the quantitative and qualitative methods underlying what is and is not known about how elections work. Reading expectations will be relatively heavy, and under the supervision of the professor, students will write an original research paper examining a specific topic in greater depth.
Taught by: Mutz
Course not offered every year
Also Offered As: PSCI 404
Activity: Seminar
1.0 Course Unit

COMM 407 Understanding Social Networks
Digital technologies have made communication networks ubiquitous: even when we can’t really notice them, they mediate most aspects of our daily activities. Networks, however, have always been the backbone of social life: long before Facebook, Twitter, Snapchat, or other similar platforms, communication created channels for information diffusion that linked people in myriad other ways. Through letters, commerce, or simply face to face interactions, people have always been exposed to the behavior of others. These communicative ties embed us into an invisible web of influence that we can make tangible and analyze. This course will teach you how to map those connections in the form of networks, and how to study those networks so that we can improve our understanding of social life. The goal is to help you grasp the consequences of connectivity, and how small changes in the structure of our ties can lead to big differences in how networks behave.
Taught by: Gonzalez-Bailon
Course not offered every year
Activity: Seminar
1.0 Course Unit
COMM 411 Communication, Activism, and Social Change
This course examines the communication strategies of 20th and 21st-century social movements, both U.S. and global. We analyze the communication social movements create (including rhetorical persuasion, art activism, bodily argumentation, protest music, media campaigns, public protest, and grassroots organizing), and the role of communication in the identity formation, circulation, and efficacy of social movements. We also consider the communication created by forces seeking to undermine social change, define the study of social movements from a communication perspective, identify major historical and contemporary movements, and apply theories of communication and social change to ‘real world’ activism. Students are required to research and design their own social movement campaign.
Taught by: Jackson, S.
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 431 Is Public Opinion the Voice of the People?
Democracy relies on mechanism in which the public communicates with policy makers. This course examines the extent to which public opinion effectively represents this mechanism. We begin with historical conceptions of public opinion tracing back to ancient Athens and 18th century enlightenment thinking. We then consider the extent to which public opinion can be captured by modern day polling, or whether it only emerges after considered deliberation and discussion. We then discuss the ways in which elite rhetoric and the media move public opinion, including through the use of public opinion polls. Finally, we ask whether policymakers are actually sensitive to the voice of the people or only the voice of some of the people.
Taught by: Lelkes
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 432 Digital Inequalities
Digital information and communication technologies are intertwined with our everyday lives, from banking, to working, and dating. They’re also increasingly crucial parts of our most powerful institutions, from policing, to the welfare state, and education. This course examines the ways that these technologies combine with traditional axes of inequality like race, gender, and class in ways that may deepen social inequality. We’ll consider major approaches to understanding digital inequalities and apply them to case studies of both problems and solutions. Students will learn to critically analyze policies and programs from a variety of perspectives, and to evaluate the promise of digital technologies against their potential perils.
Taught by: Ticona
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

COMM 441 The Impact of the Internet, Social Media, & Information Technology on Democracy
At the turn of the 21st century, many claimed that the internet would make the world a more democratic place. Have these prophecies borne out? We examine the effects the internet has had on democracy, looking at research that examines whether, for instance, the internet has increased or decreased inequality, polarization, and political participation. In addition to reading and discussing empirical literature, we will also test many of the theories in this course through hands-on workshops in data analysis.
Taught by: Lelkes
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 446 Media Industries and Nationalism
Media institutions have long played a central role in constructing national identity, particularly in the era of nation-states. As globalization increases, media industries have also helped countries project their national identities - and nationalism - for both domestic and international audiences. With contemporary nationalist movements in the spotlight, this course examines how media institutions and cultural industries help to shape nationalism while framing in-group/out-group dynamics for audiences. This course examines case studies in mediated nationalism, paying particularly close attention to - but not limited to - countries such as the United States, the United Kingdom, Brazil, Hungary, Israel, India, Sri Lanka, and Turkey. Using Benedict Anderson’s idea of imagined communities as a theoretical basis, this course seeks to investigate how media industries affirm - and occasionally challenge - nationalistic sentiment, and how much of a role state intervention has played in the production of media texts. This course provides students with an understanding of the deep connection between media institutions and state-sponsored/populist-nationalist movements, as well as the dynamics that shape nationalism in both wartime and peacetime eras.
Taught by: Balaji
Course not offered every year
Activity: Seminar
1.0 Course Unit
COMM 459 Social Networks and the Spread of Behavior
This course explores the nature of diffusion through social networks, the ways networks are formed and shaped by social structures, and the role they play in health behavior, public policy, and innovation adoption. Topics include: the theory of social networks; the small world model of network structure; constructing models to represent society; the social bases of the adoption of innovations and the spread of new ideas; the role of social networks in controlling changes in public opinion; the emergence of unexpected fashions, fads, and social movements; and the connection between social network models and the design of public policy interventions. Students will learn how to use the agent-based computational modeling tool ‘NetLogo’, and they will work directly with the models to understand how to test scientific theories. We will examine the basic theory of social networks in offline, face-to-face, networks, as well as the role of online networks in spreading new ideas and behaviors through social media. Long standing debates on the effects of social networks on changing beliefs and behaviors, their impact on social change, and ethical concerns regarding their potential manipulation will be given careful consideration throughout. Students will be taught new skills that will enable them to use and develop their own agent-based models. Prerequisite: Permission of the instructor
Taught by: Centola
Course not offered every year
Prerequisite: COMM 210 OR COMM 310 OR SOCI 100
Activity: Seminar
1.0 Course Unit

COMM 468 Annenberg Media Lab 2020: It's not Just TV - The HBO Project
'It's not TV. It's HBO.' This is one of the marketing slogans Home Box Office started using in the 1990s to articulate its difference from standard network television. Using videotaped interviews already conducted with many of the executives who helped launch HBO in the 1970s, this hands-on course will provide students with a unique opportunity to engage with the methodological and theoretical implications of crafting arguments/stories in images and sound. Students should be prepared to put theory into practice by working on smaller media products linked to these archival materials. Students will study these interviews with HBO execs, watch fictional and non-fictional films/videos of various genres, discuss relevant media/social theory, and acquire training in (and exposure to) the basics of digital media-making. At the end of the course, students should have acquired a more sophisticated aesthetic and analytical approach to media analysis, to media production, and to the inescapable interconnections between the two.
Taught by: Jackson, J.
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 491 Communication Internship
This seminar provides a scholarly counterpart for students’ internships in various communication-related organizations. Through individually-selected readings, class discussion, and individual conferences, students develop their own independent research agendas which investigate aspects of their internship experience or industry. In written field notes and a final paper, students combine communication theory and practice in pursuit of their individual questions. Requires approval of the Communication Undergraduate Office.
Taught by: Haas
Two terms. student may enter either term.
Activity: Seminar
1.0 Course Unit

COMM 493 Independent Study
The independent study offers the self-motivated student an opportunity for a tailored, academically rigorous, semester-long investigation into a topic of the student's choice with faculty supervision. Students must complete and file a designated form, approved and signed by the supervising faculty member and the Associate Dean for Undergraduate Studies. This form must be received by the Undergraduate Office before the end of the first week of classes in the semester in which the independent study will be conducted.
Taught by: Various
Two terms. student may enter either term.
Activity: Independent Study
1.0 Course Unit

COMM 494 Honors & Capstone Thesis
The senior thesis provides a capstone intellectual experience for Honors students and Communication and Public Service Program (ComPS) participants. Students conduct a primary research study on a communication-related issue over the course of two semesters. Students should consult with and arrange for a faculty supervisor no later than the summer before senior year. Students must also file a designated form and topic statement, approved and signed by the supervising faculty member, no later than the first week of class. Required of all students planning to enroll in COMM 495 or COMM 499 in the Spring. All Honors students must have a 3.5 cumulative GPA at the end of junior year for eligibility. See the Annenberg website for complete eligibility requirements.
Taught by: Ben-Porath/Woolf
Two terms. student must enter first term.
Activity: Seminar
1.0 Course Unit

COMM 495 COMPS Capstone Thesis
Second semester of two semester thesis course. Successful completion of COMM 494 is required for enrollment. The capstone thesis is a requirement for all Communication and Public Service Program participants. Students complete the primary research project started during COMM 494. For students graduating with a 3.5 cumulative GPA after completing COMM 495 with a grade of 3.7 or higher, the capstone thesis may be designated as a senior honors thesis in communication and public service. Prerequisite: written proposal approved by both thesis supervisor and major chair.
Two terms. student may enter either term.
Activity: Independent Study
1.0 Course Unit

COMM 499 Senior Honors Thesis
Second semester of two semester thesis course. Completion of COMM 494 with a grade of 3.3 or higher and a 3.5 cumulative GPA at the end of the Fall semester of senior year are required for enrollment. The Senior Honors Thesis provides a capstone intellectual experience for students who have demonstrated academic achievement of a superior level. Students complete the primary research project started during COMM 494.
Two terms. student may enter either term.
Activity: Independent Study
1.0 Course Unit
COMM 500 Proseminar
Introduction to the field of communications study and to the graduate program in communications. Required of all degree candidates. Open only to graduate students in communication.
Course usually offered in fall term
Activity: Lecture
0.0 Course Units

COMM 522 Introduction to Communication Research
The logic of scientific inquiry and the nature of research. Hypothesis development, research design, field and laboratory observation and experimentation, measurement, interviewing and content analysis, sampling, and basic statistical analysis. Required of all degree candidates. Open only to graduate communication students.
Taught by: Hornik/Lelkes
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

COMM 523 Qualitative Ways of Knowing
How do social scientists create new knowledge? What are the qualitative processes and philosophies of knowing for communication scholars? This course provides students with a range of theories and frameworks for gathering data and developing claims, as well as understanding the limits of social science inquiry. Key areas of focus are identifying research questions, research ethics, understanding evidence, making causal claims and scholarly writing. COMM 523 is required of all degree candidates and open only to graduate communication students.
Taught by: Lingel
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 525 Introduction to Political Communication
This course is designed as a PH.D.-level introduction to the study of political communication, and is recommended as a foundational course to be taken early in one's course of study for students interested in political communication as a primary or secondary area of research and teaching. As an introduction to the field it is structured to cover a wide range of topics and approaches, including media institutions and the effects of both mass mediated and deliberative communications. While no single course can provide comprehensive coverage of a subfield with as long and diverse a history as political communication, our hope is that you will leave this course with a strong grasp of the major theories, trends, methods, findings and debates in this area of study, as well as the gaps in our knowledge and promising directions for future research.
Taught by: Lelkes
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 530 Advertising and the Digital Age
It is impossible to understand the development of the contemporary digital era without understanding the role played by the advertising industry, broadly the understood. From the launch of first popular web browsers in the mid-1990s, various forms of marketing communication have shaped the most popular activities—from search to social to apps and redefined the ways companies think about individuals in society. The aim of this course is to study these developments historically and contemporaneously. First we will range across the history of advertising and its related social force, consumerism, through the late 20th century. We will next investigate the forces that guided the rise of the internet as a commercial medium in the face of an earlier ethic that decreed that very idea. Then we will dive into the ways marketers attempt to guide the internet and other digital media to their benefit by exploring a range of key contemporary activities: the rise of the smartphone as a marketing device, programmatic advertising, personalization strategies, location and cross-platform targeting and attribution, online retailing, the responses of brick and mortar retailers, advertisers’ roles in the creation of print media, native advertising/branded content, the rise of ‘influencers’; and the transformation of ‘television’ as a product, an activity, and an industry. We will read industry documents and other materials to assess how all these activities actually ‘work’ and what drives them. Then we will consider their societal implications through a variety of lenses, including surveillance, privacy, pluralism, and democracy.
Taught by: Turow
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 553 Computational Social Science Research Seminar
This is a graduate research seminar in which top researchers in the field of Computational Social Science will present cutting-edge research. Our focus will be on carefully reading the speaker’s work, and discussing in detail their theoretical models, empirical methods, and overall scientific contribution. Participants will also present in the seminar, which will help to prepare them for professional presentations of their work at conferences and job talks. This seminar will meet weekly.
Taught by: Centola
One-term course offered either term
Activity: Seminar
1.0 Course Unit

COMM 575 Social Psychology of Communication
Contributions of social psychology to understanding communication behavior: message systems; social cognition; persuasive communications; attitude formation and change; face-to-face interactions and small group situations; strategies of attributional and communicative interpretation; mass communication effects; social influence and networks.
Taught by: Cappella
One-term course offered either term
Activity: Seminar
1.0 Course Unit
COMM 576 Communication & Public Opinion
An exploration of enduring research questions concerning mass communication and American public opinion. The course introduces students to the literature on public opinion, with a focus on the role of communication in public opinion formation and change. Important normative, conceptual and theoretical issues are identified and examined by reviewing some early writings (ca. 1890-1930) in social philosophy and social science. These issues are then investigated further through a review and discussion of relevant research in sociology, political science, social psychology and mass communication.
Taught by: Delli Carpini
One-term course offered either term
Activity: Seminar
1.0 Course Unit

COMM 577 Attitudes and Attitude Theory
This course surveys classic and contemporary theory and research in the area of attitude formation and change and examines the principles of social information processing that underlie attitudes. We cover some of the basic concepts of the psychology of attitudes, including attitude structure and measurement at both conscious and unconscious levels. After this introduction, we will review persuasion approaches, the role of affect and fear in communication, influences of past behavior, to finally turn to models that explain behavioral change and allow researchers and practitioners to design ways of modifying recipients' actions.
Taught by: Jemmott
One-term course offered either term
Activity: Seminar
1.0 Course Unit

COMM 594 Intro To Networks
Much of what we think and do is shaped by social interactions, by the behavior we see in other people, or the information we receive from them: we pay attention to what our friends or we monitor news through the feeds of social media, and we are more likely to use technologies already embraced by other users. Networks are behind those (and, by extension, most) dimensions of social life. They offer the language to capture the invisible structure of interdependence that links us together, and the means to analyze dynamics like diffusion, influence, or the effects of media in an increasingly diverse information environment. The aim of this course is to introduce networks and the relational way of thinking. Students will gain the necessary literacy to read, interpret, and design network-based research, learn how to go from concepts to metrics, and draw and interpret networks through the lens of substantive research questions. We will pay equal attention to the theory and the empirics of network science, and set the foundations for more advanced work on networks.
Taught by: Gonzalez-Bailon
One-term course offered either term
Activity: Seminar
1.0 Course Unit

COMM 615 Experimental Design and Issues in Causality
The main goal of this course is to familiarize students with experiments, quasi-experiments, survey experiments and field experiments as they are widely used in the social sciences. Some introductory level statistics background will be assumed, though this is a research design course, not a statistics course. By the end of the course, students will be expected to develop their own original experimental design that makes some original contribution to knowledge. Throughout the course of the semester, we will also consider how to deal with the issue of causality as it occurs in observational studies, and draw parallels to experimental research.
Taught by: Mutz
One-term course offered either term
Also Offered As: COMM 498, PSCI 439, PSCI 635
Activity: Seminar
1.0 Course Unit

COMM 623 Health Psychology Seminar
Seminar members shall critically review current applications of psychosocial theory and methodology to health-related issues with the goal of suggesting new directions that research might take. Preventive health behavior, HIV risk-associated behavior, psychosocial factors and physical health, practitioner patient interactions, patterns of utilization of health services, and compliance with medical regimens are among the topics that will be studied.
Taught by: Jemmott
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 630 History of Media Research, 1890-1990
An introduction into the field of mass communication research covering classic studies from the late 19th century through 1990s. Emphasis is on the societal, organizational, political, and other considerations that shaped the field.
Taught by: Turow
One-term course offered either term
Activity: Seminar
1.0 Course Unit

COMM 637 Public Health Communication
Theories of health behavior change and the potential role for public health communication; international experience with programs addressing behaviors related to cancer, AIDS, obesity, cardiovascular disease, child mortality, drug use and other problems, including evidence about their influence on health behavior; the design of public health communication programs; approaches to research and evaluation for these programs.
Taught by: Hornik
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
COMM 639 Communication and Cultural Studies
This course tracks the different theoretical appropriations of 'culture' and examines how the meanings we attach to it depend on the perspectives through which we define it. The course first addresses perspectives on culture suggested by anthropology, sociology, communication, and aesthetics, and then considers the tensions across academic disciplines that have produced what is commonly known as 'cultural studies.' The course is predicated on the importance of becoming cultural critics versed in alternative ways of naming cultural problems, issues, and texts. The course aims not to lend closure to competing notions of culture but to illustrate the diversity suggested by different approaches.
Taught by: Zelizer
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 660 Content Analysis
An introduction to content analysis, the analysis of large bodies of textual matter, also called message systems analysis, quantitative semantics, propaganda analysis, and (computer-aided) text analysis. The course inquires into the theories, methods, and empirical problems common to these analytical efforts: sampling, text retrieval, coding, reliability, analytical constructs, computational techniques, and abductive inference. It illustrates these problems by studies of mass media content, interview or panel data, legal research, and efforts to draw inferences from personal documents typical in psychology and literature. Students design a content analysis and do the preparatory work for an academic or practical research project. They may also use the opportunity of forging available theories into a new analytical technique and test it with available texts, or solve a methodological problem in content analysis research.
Taught by: Krippendorff
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 675 Message Effects
Current research, theory and statistical methods for assessing the effects of messages. Specific focus on messages designed to have a persuasive effect on attitudes, beliefs, opinions, or behaviors. Experimental and non-experimental research from mass and interpersonal communication, health, social psychology, advertising, political science and journalism will be considered. Unintended effects - such as the consequences of violent pornography - are not considered.
Taught by: Cappella
Course not offered every year
Prerequisite: COMM 575
Activity: Seminar
1.0 Course Unit

COMM 684 Data Visualization for Research
Empirical research employs data to gain insights and build a theoretical understanding of the world. An appropriate visualization of data is key to illuminating hidden patterns and effectively communicate the main findings of research. This course will discuss the visualization strategies of published research, give recommendations of best practice, and discuss tips and techniques for specific research purposes (i.e. hypothesis testing, group comparison) and data structures, including temporal, geographic, and network data. This course will equip you with tools you can use to learn through visualization and to communicate more effectively your own research.
Taught by: Gonzalez=Bailon
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 697 Popular Culture and Politics
Not surprisingly, most research regarding the media's impact on political attitudes, opinions, knowledge and behaviors focuses on news and public affairs genres, ignoring the vast majority of media content labeled 'entertainment.' Spurred in part by technological, economic, cultural and political changes that have increasingly blurred the line between news and entertainment, a small but growing body of empirical research is exploring the political influence of popular culture. In this course we will critically review this literature, focusing on issues of theory, methods, findings and implications.
Taught by: Delli Carpini
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 699 Advanced Project in a Medium
Proposal written in specified form and approved by both the student's project supervisor and academic advisor must be submitted with registration. Open only to graduate degree candidates in communication. One-term course offered either term
Activity: Independent Study
1.0 Course Unit

COMM 701 Introduction to the Political Economy of Media
This course has two aims. First, assuming that communications are central to any society, it situates media systems within larger national and international social relationships and political structures. Second, this course critically examines the structures of the communication systems themselves, including ownership, profit imperatives, support mechanisms such as advertising and public relations, and the ideologies and government policies that sustain these arrangements. Considering case studies ranging from traditional news and entertainment media to new digital and social media, the course provides a comprehensive survey of the major texts in this vibrant sub-field of media studies.
Taught by: Pickard
Course not offered every year
Activity: Seminar
1.0 Course Unit
**COMM 706 Analysis of Election Data**
This course is intended to serve as a workshop for students interested in the empirical analysis of elections, public opinion and political communication more generally. The centerpiece of the course will be an original research paper produced by each student on a topic of his or her own choosing. The requirements for these papers are fairly open, but demanding: the research papers must a) involve empirical analysis of a major election data set, b) be oriented toward answering an original research question selected with the guidance of the instructor, and c) aim to be of publishable quality. There are no formal prerequisites for the course. However, if you have less than two semesters of statistical training, and/or no formal background in the study of elections, public opinion or political communication, then this is probably not the right course for you. In order to be able to formulate an original research question, you need some background in the literature, which is provided by other courses, but is not a formal part of this course.

Taught by: Mutz
One-term course offered either term
Also Offered As: PSCI 805
Activity: Seminar
1.0 Course Unit

**COMM 715 Political Communication**
This course examines the role of political communication in influencing political attitudes and behaviors. Because of the broad nature of the topic, course readings and lectures will be interdisciplinary, drawing on research in sociology, history, psychology, political science and communication research. There are two primary goals for the course. One goal is to acquaint graduate students with the wide-ranging literature on political communication. A second major goal is to stimulate ideas for original research in the field of political communication. Toward this end, by the end of the semester students will be expected to be sufficiently familiar with the field to propose original studies on topics of their choosing. The formulation of an original research question and research design will be an important component of the final examination.

Taught by: Mutz
Course not offered every year
Also Offered As: PSCI 715
Activity: Seminar
1.0 Course Unit

**COMM 722 Theories and Methods in Qualitative Research**
The objective of this course is to ensure that students have a grasp of the fundamental theories and methods of qualitative research. After spending time immersing ourselves in the metatheories that shape social science research, we will address ethical issues that emerge in all human subjects research (qualitative and otherwise), focusing primarily on responsible treatment of participants and their data. Then we will work through a series of research techniques, including semi-structured interviews, focus groups, ethnography, discourse analysis and participatory mapping. With the goal of providing practical instruction on qualitative methods and a grounding in theoretical issues, this course is meant to prepare students for conducting a broad range of qualitative research projects in communication and media studies.

Taught by: Lingel
Course not offered every year
Activity: Seminar
1.0 Course Unit

**COMM 727 Evaluation of Communication Campaigns**
The various roles of research in campaign work: foundational research, formative research, monitoring research, summative evaluation research, policy research. The place for a theory of campaign effects. The ethics of evaluation research. Alternative designs, measurement, statistical and analytic approaches.

Taught by: Hornik
One-term course offered either term
Activity: Seminar
1.0 Course Unit

**COMM 741 Media Effects Research Design**
This course will include three components. Part one will focus on readings and lectures about media effects research design, with some emphasis on exposure measurement, and on constructing out-of-laboratory designs including natural and quasi experiments, longitudinal and time series designs and designs appropriate for evaluating persuasive campaigns. Part two will be case focused, asking for design critiques of current published research studies. Part three will provide an opportunity for development of designs relevant to students’ own interests.

Taught by: Hornik
One-term course offered either term
Activity: Seminar
1.0 Course Unit

**COMM 760 Discursive Constructions of Realities**
This seminar develops qualitative methods for critical inquiries into what language does. It explores linguistic tropes and social interactions in which realities come to be constructed, contested, and maintained. We critically evaluate the epistemological entailments of several dominant theories of language, and settle on conceptions that enable us to examine the cognitive and social consequences of talk, text, and social interaction. These conceptions provide powerful alternatives to the representational theories that dominate popular discourses. For example, we take language as performative: focusing on how narratives are enacted in the presence of others, ranging from speech acts, instructions, individual stories in therapy to nationalism and war. We develop analytical vocabularies that reveal and try to overcome questionable ontological claims, highlighting actionable possibilities in preference to merely describing facts. We rely on dialogical, socially interactive, and constructive conceptions, ranging from conversations and computer interfaces to discourses, whose artifacts make differences to different communities. The methods that this seminar develops are fundamentally emancipatory and liberating. Realizing that most experiences of power and oppression results from linguistically constructed cognitive or disciplinary traps enables us to explore linguistically informed alternatives. Communication research cannot be undertaken without language but theories have largely failed to reflect on their consequences.

Taught by: Krippendorff
One-term course offered either term
Activity: Seminar
1.0 Course Unit
COMM 783 Describing Your Data
This course is for students who have collected empirical data and will explore ways of describing data for scholarly and translational purposes. For example, students will explore different ways to explore and visualize their data (e.g., a conference abstract vs. a blog post), present their data (e.g., a conference talk vs. a pop talk) and make their findings more reproducible. Students will also read scholarly work (oversampling, though not limited to work on media effects and the science of science communication) and critique their work in relation to what is known about effective communication and reproducibility. Students should come prepared to engage with art, science and computer programming.
Taught by: Falk, O'Donnell
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 788 Studying Social Behavior with Internet Experiments
In the last decade, new studies have used Web-based experimentation to identify previously unobservable features of communication networks - from processes of cumulative advantage, to the spread of innovations, to the emergence of cooperation. This course offers a deep-dive into the design, creation and execution of Web-based experiments. Students will learn the core principles of Web-based experimental design, which will prepare them to design their own Web-based studies. Students will learn the relationship between theory and methods through a careful analysis of the theoretical implications of past Web-based experiments (both in terms of their value for some scientific problems, and their limitations for others). To this end, students will explore Web-based experiments through the lens of the theories that motivate them. Discussions and assignments will focus on eliciting both the strengths and limitations of this approach with specific emphasis on identifying the scientific potential for new studies. Longstanding debates concerning the value of identification and replication in social science, alongside the relationship between theoretical models, observational data and experimental data, are given careful consideration throughout. Students will be exposed to new ways of conducting empirical research that will prepare them to design their own Web-based experimental studies.
Taught by: Centola

Activity: Seminar
1.0 Course Unit

COMM 799 Independent Research
Proposal written in specified form and approved by both the student’s project supervisor and academic advisor or another member of the faculty must be submitted with registration. One-term course offered either term
Activity: Independent Study
1.0 Course Unit

COMM 801 Filter Bubbles, Long Tails, & Info Cascades: Methods for a Fragmented Media Env
Scholars and pundits have made many claims in recent years about the impact that digital technologies, and social media in particular, play in shaping access to political information and the formation of beliefs. However, all these claims rely on specific measurement instruments and research designs that are not always appropriately scrutinized or evaluated. This course will discuss the different analytical approaches that can be used to measure media consumption, selective exposure, bias, opinion formation, and the diffusion of information in the online media environment. Our goal is to assess the strengths and weaknesses of different research designs with an eye on how to best triangulate available evidence and advance in a cumulative fashion in this important research domain.
Taught by: Gonzalez-Bailon and Lelkes
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 814 Doing Internet Studies
This is a project-based seminar with two key objectives: introducing students to core theories and methods in internet studies and completing a research project that uses digital media, broadly construed. Comprising many methods and research approaches, Internet studies is inherently interdisciplinary, and this course is designed to provide a practical set of guidelines for doing work in this diverse and growing field. Students will have a lot of independence in developing a final research project for the course they may work individually, in pairs or in small groups, and the final project can take the form of a research paper, an art project or a piece of long-form journalism, as long as these projects use both digital media and critical theory from internet studies.
Taught by: Lingel
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 815 Labor, Communication and Technology
Debates about the future of work, automation, and the working conditions of on-demand work have opened up new questions rooted in long intellectual lineages. This course introduces students to key theoretical perspectives and concepts in the study of labor, communication, and technology from the 19th and 20th centuries and examines their relevance to 21st century issues. We will examine the meaning of labor from Marxist, post-industrial, cultural, and sociological perspectives as well as the place of labor in communication scholarship. We will also examine the relationship between digital transformations of the workplace and new forms of surveillance, social stratification and inequality.

1.0 Course Unit
COMM 824 Critical Race Media
This course will attempt to engage students in an interdisciplinary conversation about how ‘race’ and ‘racism’ are theorized, operationalized and debated in both the academy and ‘the real world.’ The offering’s goal is to articulate one fundamental (though multi-pronged) question: How do disputes about the ontological reality and epistemological utility of race and racism pivot on contestations around various themes/concerns, including (i) essentialism vs. anti-essentialism; (ii) the politics of culture and the semiotics of politics; (iii) globalization and its links to mass-mediation; and (iv) a neoliberalist dispensation’s commodifications of social identities. This course examines the history of race as a socially meaningful category. Where did it come from? Why/how did it develop? What are some of its past and present manifestations? In which ways might it be inextricably linked to other forms of social differentiation (such as class, gender, religion, ethnicity, and sexuality)? Critical. Race. Theory. also requests that students think carefully about their own political, intellectual, and emotional investments in race as a social/biological claim. Race is a deceptively complicated construct (considering how much we all think we understand it), one that demands careful attention to culture and biology, mythology and history, science and superstition. This course seeks to unpack race-thinking in everyday life and popular media/culture.

COMM 837 The Meaning of Measures: Quantification, Culture & Digital Technologies
It’s been said that what’s counted counts. Numbers and other measurements communicate meaning and create hierarchies of value. As such, measurement is a political act. From prices to ratings, risk scores to the 2020 Census, quantification projects surround our daily lives. This class will ask, how do numbers and other metrics communicate meaning throughout the social world? Specifically, we’ll focus on the role of technologies and data in the process of quantification and the construction of cultural meaning and conflict about knowledge and truth. How do our ideas about data shape what we know about ourselves? How we seek to know others? This course will engage in an interdisciplinary conversation about the past and present of culture and quantification, from the cultural pre-history of ‘big data’ technologies’ appeals to objectivity and efficiency, to current conflicts over privacy and platforms.

Notes: Fulfills ASC Influence Requirement

COMM 839 (De)Sexing the Internet
From the earliest message boards and email chains, the internet has given people a way to connect, not just digitally but sexually. Porn, online dating, sex education: digital technology has made it easier for people to find each other and explore sexuality, but these same tools have also been used in relationships that are exploitative and criminal. In this course, we look at the different connections between sex, gender, queerness and the internet: changing policies regulating sex (like FOSTA and SESTA), the platforms that have created controversies around sex (for example, craigslist, tumblr and Grindr) and shifting norms around how sex and sexuality manifest online. This is an interdisciplinary course that brings together internet studies, queer theory, STS and cultural studies in order to understand the social and historical dimensions of sexuality and digital technologies.

Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 841 The Ethics of Forgetting: Media at Risk of Deletion
Digital information is continually being created and circulated, but it is also forgotten, deleted and otherwise lost. Whether from the perspective of journalists, activists, artists or academics, how do we deal with the deletion or loss of media? Where is information archived and what politics guide its organization, curation and erasure? Where do our media live and die? This course begins with theories of institutional and individual archiving. It then moves to concepts of remediation and machine learning to complicate how information travels, data is stored and archives are ‘retrieved’. Finally, using case studies of arts-based digital archiving projects, the course focuses on the politics of forgetting media.

COMM 843 It’s About Time: Problematizing Time in Social Science Research
Human experience is characterized by a complex interplay of processes that play out across multiple timescales: from second to second, from week to week, and from generation to generation. We will critically examine an expansive literature touching on emotions, personality, media engagement, health communication, and more, all in the service of identifying notions of time that are often implicit in theories of human experience. In doing so, students will become accustomed to applying the following questions to the topics they encounter in their everyday readings and their own research: What timescale(s) are addressed by a theory, either implicitly or explicitly? Is the timing of measurement matched to the timescale(s) over which phenomena are unfolding? Seminars will be accompanied by a data science laboratory in which students will gain hands-on experience in describing, visualizing, and analyzing daily diary data.
Taught by: Lydon-Staley
Activity: Seminar
1.0 Course Unit
COMM 855 Polarization and Partisan Discord
In this course we examine the nature, causes and consequences of polarization and incivility. We pay special attention to the role that the media and information plays in exacerbating these problems, as well as ways in which technology can be redesigned to ameliorate incivility and polarization.

COMM 861 Surveillance Capitalism
This course explores the history, technologies, political economy, and regulatory tensions relating to the monitoring of populations and individuals in the contemporary digital media environment.
Taught by: Turow
Activity: Seminar
1.0 Course Unit

COMM 865 Digital Inequalities: Theories & Method
This graduate course will introduce students to key approaches to understanding digital inequalities across communication, media studies, and sociology. From divides in access and skills, to institutional and intersectional approaches, this emerging research area utilizes different types of theories about social inequalities and social scientific methods to understand novel issues arising in our increasingly digitally mediated society. Over the course of the semester, students will develop a research proposal that will prepare them to utilize and contribute to theory and methods discussed in the course.

1.0 Course Unit

COMM 876 The Black Public Sphere, from Freedoms Journal to Black Lives Matter
The field of communication projects and encourages particular visions of deliberation and the public that have been critiqued for failing to represent groups whose citizenship and inclusion in democratic processes is not assured. In this course we correct this practice by centering scholarship on the Black public sphere, recognizing it as central to political and media theory on publics and counterpublics. We will connected ‘classical’ theoretical works and epistemological schools to contemporary critical, cultural, and institutional analysis of Black media-making, geographies, innovation, protest, and deliberation.

Activity: Seminar
1.0 Course Unit

COMM 877 Anthromedialities: Experimental Theory and Practice
In recent years much has been made of the ‘beyond text’ turn in anthropology, specifically the need to re-evaluate the singular authority of ‘writing culture.’ Several new approaches advocate for non-textual medialities, with representations originating in both sonovisual media and performance. Less, however, has been theorized and advocated about intermediality and the multicompositional practices of transmediality and plurimediality, specifically their more transgressive multisensory epistemology. This course will examine these radical approaches to interacting textual, visual, sonic and performative mediations, theorizing their epistemic and ethical implications, collaborative potentials, affordances in narrative and non-narrative representation, and political and aesthetic investments. Students will both critically engage histories of transmedial anthropology, and produce projects that are multicompositional.

COMM 880 The Social Neuroscience of Communication
This interdisciplinary course focuses on understanding the mechanisms of social thinking, media effects and interpersonal communication across multiple levels of analysis. We use the brain as one powerful window to understand and predict outcomes that are challenging to predict otherwise. The course will cover foundational readings and involve weekly, seminar style discussions of recent papers in social neuroscience, neuroeconomics and communication science.
Taught by: Falk
Course not offered every year
Activity: Seminar
1.0 Course Unit

COMM 881 The Performance Society: Readings in Social and Media Theories
Social action has a performative character - people act as if on a stage in response to audience expectations, whether offline or online. This seminar traces the history of this line of critical thought from Weber and Bakhtin through Goffman and Victor Turner to contemporary authors such as Judith Butler, Byung-Chul Han, Jon McKenzie, and Charles Tilly. Special attention will be devoted to the relationship between media and performance, examined through recent work by media scholars and sociologists such as Ben Agger, Jeffrey Alexander, Jeffrey Berry, Danah Boyd, Alice Marwick, and Sarah Sobieraj. A central issue concerns the will to perform. Why are individuals in modern society compelled to perform? What are the manifestations and forms of performance in institutional and non-institutional politics (such as revolutions and social movements)? How are performances related to emotion? How do the internet and digital media shape the forms and meanings of performance? What are the consequences of the performance imperative? A term paper is required.
Taught by: Yang G
Course not offered every year
Also Offered As: SOCI 881

1.0 Course Unit
COMM 885 Summer Culture: Risk and Resistance
What does media at risk look like in the Southern Cone? Summer Culture 2020 will examine risk and resistance in Argentina, situating Argentine media within a global context of media repression and concentration. There are media at risk; there are populations at risk that have to find alternative ways to express themselves. Examining both its past and present, the course will address how populations at risk express themselves when surrounded by the memories and experiences of state dictatorship, censorship, poverty and precarious labor; yet at the same time presenting innovative strategies on the part of active voluntary associations, community media, alternatives to mainstream media and emergent modes of communication. Using the Argentine case as a roadmap for understanding more fully the patterns by which media are put at risk and the societal responses to it, SummerCulture 2020 will be co-taught by Elizabeth Jelin and Barbie Zelizer, with participation by Silvio Waisbord.
Taught by: Zelizer
Activity: Lecture
0.0 Course Units

COMM 889 Cultural Sociology
Studies culture as values, scripts, practice, performance, and style in the contexts of everyday life, social class and status groups, social movements, and status groups, social movements, and changes of communication technologies. Approaches politics, society, institutions, identities, and social change as dynamic processes and complex interactions at both micro/meso and meso/macro levels. Examines the production, reception, circulation, and effects of signs, symbols, and stories. Readings include both classic authors (Elias, Simmel, Bahktin, Goffman, Foucault, Bourdieu, Raymond Williams, etc) and contemporary works from sociology and communication studies.

Comparative Literature (COML)

COML 006 Hindu Mythology
Premodern India produced some of the world’s greatest myths and stories: tales of gods, goddesses, heroes, princesses, kings and lovers that continue to capture the imaginations of millions of readers and hearers. In this course, we will look closely at some of these stories especially as found in Purana-s, great compendia composed in Sanskrit, including the chief stories of the central gods of Hinduism: Visnu, Siva, and the Goddess. We will also consider the relationship between these texts and the earlier myths of the Vedas and the Indian Epics, the diversity of the narrative and mythic materials within and across different texts, and the re-imagining of these stories in the modern world.
For BA Students: Arts and Letters Sector
Taught by: Patel
One-term course offered either term
Also Offered As: RELS 066, SAST 006
Activity: Lecture
1.0 Course Unit

COML 009 Introduction to Digital Humanities
This course provides an introduction to foundational skills common in digital humanities (DH). It covers a range of new technologies and methods and will empower scholars in literary studies and across humanities disciplines to take advantage of established and emerging digital research tools. Students will learn basic coding techniques that will enable them to work with a range data including literary texts and utilize techniques such as text mining, network analysis, and other computational approaches.
Taught by: Trettien
One-term course offered either term
Also Offered As: CIMS 009, ENGL 009, HIST 009
Activity: Lecture

COML 012 India's Literature: Love, War, Wisdom and Humor
This course introduces students to the extraordinary quality of literary production during the past four millennia of South Asian civilization. We will read texts in translation from all parts of South Asia up to the sixteenth century. We will read selections from hymns, lyric poems, epics, wisdom literature, plays, political works, and religious texts.
For BA Students: Arts and Letters Sector
Taught by: Patel
Course not offered every year
Also Offered As: SAST 004
Activity: Lecture
1.0 Course Unit

COML 013 Introduction to Modern South Asian Literatures
This course will provide a wide-ranging introduction to the literatures of South Asia from roughly 1500 to the present, as well as an exploration of their histories and impact on South Asian society today. How are literary movements and individual works - along with the attitudes towards religion, society, and culture associated with them - still influential in literature, film, and popular culture? How have writers across time and language engaged with questions of caste, gender, and identity? We will read from the rich archive of South Asian writing in translation - from languages that include Braj, Urdu, Bengali, and Tamil - to consider how these literatures depict their own society while continuing to resonate across time and space. Topics of discussion will include the bhakti poetries of personal devotion, the literature of Dalits - formerly referred to as the Untouchables - and the ways in which literature addresses contemporary political and social problems. Students will leave this course with a sense of the contours of the literatures of South Asia as well as ways of exploring the role of these literatures in the larger world. No prior knowledge of South Asia is required; this course fulfills the cross-cultural analysis requirement.
For BA Students: Arts and Letters Sector
Taught by: Goulding
One-term course offered either term
Also Offered As: SAST 007
Activity: Seminar
1.0 Course Unit

COML 014 Critical Speaking Seminar
American political discourse, especially since September 11th, has often depicted Islam as an oppressive force from which both Muslims and non-Muslims, particularly women and gender/sexual minorities, must be saved. In this CWIC critical speaking seminar, we will investigate how oral and written narratives - such as political rhetoric, apologetics and historical sources - claim to establish unassailable 'facts' about Islam, Muslims and the Middle East. We will also investigate how the notion of empire - both in its traditionally understood form in Islamic and European history, as well as in its iterations as US Military and soft power-privileges certain voices over others, and how we can reclaim the voices of the marginalized in both contemporary discourse as well as historical oral traditions.
Taught by: Rafii
One-term course offered either term
Also Offered As: GSW 008, NELC 008
Activity: Seminar
1.0 Course Unit

COML 016 Topics in Literature
This course will explore various topics within the diverse landscape of literature with an emphasis on a particular theme or genre.
Course not offered every year
Also Offered As: AFRC 017, ENGL 016
Activity: Seminar
1.0 Course Unit
Notes: Freshman seminar.

COML 023 In Praise of the Small
We can memorize aphorisms and jokes, carry miniature portraits with us, and feel playful in handling small objects. This seminar will ask us to pay attention to smaller texts, short forms, and objects that may easily be overlooked. In addition to reading brief texts and looking at images and objects, we will also read texts on the history and theory of short genres and the small.
Taught by: Weissberg
Course not offered every year
Also Offered As: GRMN 023
Activity: Seminar
1.0 Course Unit
Notes: Freshman seminar. All readings and lectures in English. No knowledge of German is required.

COML 031 Introduction to Renaissance Literature and Culture
This course will survey the cultural history of sixteenth and seventeenth century England. Interdisciplinary in nature and drawing on the latest methodologies and insights of English studies, we will explore how aesthetics, politics, social traditions, impacted literature at this vital and turbulent time of English history. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

Activity: Lecture
1.0 Course Unit
COML 054 Sounding Poetry: Music and Literature
Never before has poetry been so inescapable. Hip hop, the soundtrack of our times, has made rhyme, meter, and word-play part of our daily lives. How did this happen? This course begins not on the page, but in the bardic traditions of Homer’s Iliad, which encoded many of the values of its time in oral formulas. Poetry was, however, no mere encyclopedia, but also a source of risk, as we will read in Plato’s warning against its hypnotic powers, and in the excesses of the Bacchae. We continue through 19th and 20th century attempts to recover these classic traditions (Wordsworth, Longfellow, Pound). Yet Europe was not the only center of poetic production. How does the Homeric tradition relate to living traditions of West African singing poets (griots) and Southern African praise songs? And what traces of these traditions can we hear in the blues? We will listen to early blues recordings and discuss the politics of collecting folklore, and the genius of African American modernists (Langston Hughes, Claude McKay, Georgia Douglas Johnson) who bought vernacular speech onto the page. We will read and listen to a number of 20th century poets inspired when page meets stage in jazz poetry, dub poetry, spoken word, and hip hop. Assignments will include 2 papers, 2 small-group performances, memorization exercises, and a creative adaptation of one poem. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
For BA Students: Arts and Letters Sector
Taught by: TBD
Course usually offered in fall term

Activity: Seminar
1.0 Course Unit
Notes: Application required through Penn Global: <a href="https://global.upenn.edu/pennabroad/pgs">https://global.upenn.edu/pennabroad/pgs</a>

COML 059 Modernisms and Modernities
This class explores the international emergence of modernism, typically from the middle of the 19th century to the middle of the 20th century. We will examine the links between modernity, the avant-garde, and various national modernisms that emerged alongside them. Resolutely transatlantic and open to French, Spanish, Italian, German, or Russian influences, this course assumes the very concept of Modernism to necessitate an international perspective focusing on the new in literature and the arts -- including film, the theatre, music, and the visual arts. The philosophies of modernism will also be surveyed and concise introductions provided to important thinkers like Marx, Nietzsche, Sorel, Bergson, Freud, and Benjamin.
Course not offered every year
Also Offered As: ENGL 059, FREN 258
Activity: Lecture
1.0 Course Unit
Notes: This is a topics course.

COML 061 20th-Century British Literature
This course introduces major works in twentieth-century British literature. We will read across a range of fiction, poetry, plays, and essays, and will consider aesthetic movements such as modernism as well as historical contexts including the two World Wars, the decline of empire, and racial and sexual conflict. Authors treated might include: Conrad, Yeats, Joyce, Eliot, Lawrence, Forster, Shaw, Woolf, Auden, Orwell, Beckett, Achebe, Rhys, Synge, Naipaul, Rushdie, Heaney, and Walcott.
Course not offered every year
Also Offered As: ENGL 061
Activity: Lecture
1.0 Course Unit

COML 062 20th-Century Poetry
From abstraction to beat, from socialism to negritude, from expressionism to eco-poetry, from surrealism to visual poetry, from collage to digital poetry, the poetry of the twentieth century has been characterized by both the varieties of its forms and the range of its practitioners. This course will offer a broad overview of many of the major trends and a few minor eddies in the immensely rich, wonderfully varied, ideologically and aesthetically charged field. The course will cover many of the radical poetry movements and individual innovations, along with the more conventional and idiosyncratic work, and will provide examples of political, social, ethnic, and national poetics, both in the Americas and Europe, and beyond to the rest of the world. While most of the poetry covered will be in English, works in translation, and indeed the art of translation, will be an essential component the course.
Course not offered every year
Also Offered As: ENGL 062
Activity: Lecture
1.0 Course Unit
COML 065 20th-Century British Novel
This course traces the development of the novel across the twentieth-century. The course will consider the formal innovations of the modern novel (challenges to realism, stream of consciousness, fragmentation, etc.) in relation to major historical shifts in the period. Authors treated might include: Conrad, Lawrence, Joyce, Forster, Woolf, Cather, Faulkner, Hemingway, Achebe, Greene, Rhys, Baldwin, Naipaul, Pynchon, Rushdie, and Morrison.
Course not offered every year
Also Offered As: ENGL 065
Activity: Lecture
1.0 Course Unit

COML 070 Latina/o Literature and Culture
This course offers a broad introduction to the study of Latina/o/x culture. We will examine literature, theater, visual art, and popular cultural forms, including murals, poster art, graffiti, guerrilla urban interventions, novels, poetry, short stories, and film. In each instance, we will study this work within its historical context and with close attention to the ways it illuminates class formation, racialization, and ideologies of gender and sexuality as they shape Latino/a/xs' experience in the U.S. Topics addressed in the course will include immigration and border policy, revolutionary nationalism and its critique, anti-imperialist thought, Latinx feminisms, queer Latinidades, ideology, identity formation, and social movements. While we will address key texts, historical events, and intellectual currents from the late 19th century and early 20th century, the course will focus primarily on literature and art from the 1960s to the present. All texts will be in English.
Taught by: Sternad Ponce de Leon
Course not offered every year
Also Offered As: ARTH 070, ENGL 070, GSWS 060, LALS 060
Activity: Lecture
1.0 Course Unit

COML 090 Women and Literature
This course will focus on questions of gender difference and of sexual desire in a range of literary works, paying special attention to works by women and treatments of same-sex desire. More fundamentally, the course will introduce students to questions about the relation between identity and representation. We will attend in particular to intersections between gender, sexuality, race, class, and nation, and will choose from a rich vein of authors: Mary Wollstonecraft, Jane Austen, Mary Shelley, Lord Byron, the Brontes, Christina Rossetti, George Eliot, Oscar Wilde, Henry James, Gertrude Stein, Zora Neale Hurston, E. M. Forster, Virginia Woolf, Nella Larsen, Radclyffe Hall, Willa Cather, Elizabeth Bishop, Jean Rhys, James Baldwin, Sylvia Plath, Bessie Head, Audre Lorde, Adrienne Rich, Cherri Moraga, Toni Morrison, Michael Cunningham, Dorothy Allison, Jeanette Winterson, and Leslie Feinberg.
One-term course offered either term
Also Offered As: ENGL 219, HIST 056, REES 095
Activity: Seminar
1.0 Course Unit
Notes: This is a topics course. If the topic is ‘Gender, Sexuality, and Literature,’ the following description applies.

COML 093 Introduction to Postcolonial Literature
English is a global language with a distinctly imperial history, and this course serves as an essential introduction to literary works produced in or about the former European colonies. The focus will be poetry, film, fiction and non fiction and at least two geographic areas spanning the Americas, South Asia, the Caribbean and Africa as they reflect the impact of colonial rule on the cultural representations of identity, nationalism, race, class and gender.
Course not offered every year
Also Offered As: CIMS 093, ENGL 093
Activity: Lecture
1.0 Course Unit
Notes: This is a topics course.

COML 094 Introduction to Literary Theory
This course introduces students to major issues in the history of literary theory. Treating the work of Plato and Aristotle as well as contemporary criticism, we will consider the fundamental issues that arise from representation, making meaning, appropriation and adaptation, categorization and genre, historicity and genealogy, and historicity and temporality. We will consider major movements in the history of theory including the ‘New’ Criticism of the 1920’s and 30’s, structuralism and post-structuralism, Marxism and psychoanalysis, feminism, cultural studies, critical race theory, and queer theory. See the Comparative Literature website at http://ccat.sas.upenn.edu/complit/ for a description of the current offerings.
Course not offered every year
Also Offered As: ENGL 094, GRMN 279
Activity: Lecture
1.0 Course Unit

COML 095 Universal Language: From the Tower of Babel to Artificial Intelligence
‘Universal Language’ is a course in intellectual history. It explores the historical trajectory, from antiquity to the present day, of the idea that there once was, and again could be, a universal and perfect language among the human race. If recovered, this language can explain the origins and meaning of human experience, and can enable universal understanding and world peace.

Activity: Seminar
1.0 Course Unit
COML 096 Theories of Gender and Sexuality
What makes men and women different? What is the nature of desire? This course introduces students to a long history of speculation about the meaning and nature of gender and sexuality – a history fundamental to literary representation and the business of making meaning. We will consider theories from Aristophanes’ speech in Plato’s Symposium to recent feminist and queer theory. Authors treated might include: Plato, Shakespeare, J. S. Mill, Mary Wollstonecraft, Sigmund Freud, Virginia Woolf, Simone de Beauvoir, Adrienne Rich, Audre Lorde, Michel Foucault, Gayle Rubin, Catherine MacKinnon, Eve Kosofsky Sedgwick, Judith Butler, bell hooks, Leo Bersani, Gloria Anzaldúa, David Halperin, Cherrie Moraga, Donna Haraway, Gayatri Spivak, Diana Fuss, Rosemary Hennesy, Chandra Tadpole Mohanty, and Susan Stryker. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

COML 100 Introduction to Literary Study
Literature does not exist for your protection. So dangerous is it, that Socrates argued poets ought to be banned from his ideal Republic. And Socrates himself—one of the most subversive of all poetic thinkers—was condemned to death for corrupting the young with his speeches. All great literature is unsettling and alarming. Along with its beauty and delicacy and rhetorical power and ethical force, it can be terrifyingly sublime and even downright ugly, full of contempt and horror and grandiosity and malice. From Socrates’ day to our own, countless writers have been jailed, exiled, and murdered, their works censored, banned, burned, for daring to say what others wish would remain unsaid—about religion and the State; sexuality, gender, and the body; art, science, and commerce; freedom and order; love and hate—and for saying it in ways that are aesthetically innovative, surprising, seductive, ravishingly unanticipated. See COML website for current semester’s description at https://complit.sas.upenn.edu/course-list/2019A
For BA Students: Arts and Letters Sector
One-term course offered either term
Also Offered As: ENGL 100

COML 102 Narratives of Memory
For the great Colombian writer Gabriel Garcia Marquez, ‘Life is not what happens to you, but what you remember and how you remember it.’ Across the last century-and-a-half, major books and films from the world over have thought about memory in all its dimensions. What does it mean to remember and narrate one’s life in the context of family, tradition, and community? How is the legacy of major traumatic events like the Holocaust and the 1947 partition shaped by traveling objects and people? How do memories mean different things as they intersect with emotions such as nostalgia or trauma, and when they belong to different communities of gender, race, nation, and religion? By thinking through a range of genres such as films, the novel, memoir, poetry, and song, this course will ask students to consider how our ways of writing and remembering create both memory and our sense of self. Reading work by the likes of Rigoberta Menchu, Julian Barnes, and Vladimir Nabokov while watching canonical films such as Casablanca and The Eternal Sunshine of the Spotless Mind, students will be invited to remember and narrate their lived experiences, and to consider the significance of memory on their own terms.
Taught by: Mian
Activity: Seminar
1.0 Course Unit

COML 104 Study of a Period
This is an introduction to literary study through a survey of works from a specific historical period—often the 20th century, but some versions of this course will focus on other times. We will explore the period’s important artistic movements, ideas, and authors, focusing on interconnectedness of the arts to other aspects of culture.
For BA Students: Arts and Letters Sector
One-term course offered either term
Also Offered As: CIMS 104, ENGL 104

COML 105 Sex and Gender in Ancient Greece and Rome
What is being a man, being a woman, being masculine, being feminine, being neither, being both? Is sex about pleasure, domination, identity, reproduction, or something else? Are sexual orientation and gender identity innate? How can words, myths and stories inform cultural assumptions about sex and gender? Did people in ancient times have a concept of sexuality? How do gendered English terms (like ‘girlie’, ‘effeminate’, or ‘feisty’) compare to gendered ancient Greek and Latin terms, like virtus, which connotes both ‘virtue’ and ‘masculinity’? Why did the Roman and English speaking worlds have to borrow the word ‘clitoris’ from the ancient Greeks? How did people in antiquity understand consent? Can we ever get access to the perspectives of ancient women? In this introductory undergraduate course, we will learn about sex and gender in ancient Greece and Rome. We will discuss similarities and differences between ancient and modern attitudes, and we will consider how ancient texts, ancient art, ancient ideas and ancient history have informed modern western discussions, assumptions and legislation. Our main readings will be of ancient texts, all in English translation; authors studied will include Ovid, Aristophanes, Plato, Euripides, and Sappho. Class requirements will include participation in discussion as well as quizzes, reading responses, and a final exam.

Also Offered As: CLST 101, GSWS 104
Activity: Lecture
1.0 Course Unit
COML 106 Ancient Drama
This course will introduce students to some of the greatest works of dramatic literature in the western canon. We will consider the social, political, religious and artistic functions of drama in ancient Greece and Rome, and discuss both differences and similarities between ancient drama and modern art forms. The course will also pursue some broader goals: to improve students' skills as readers and scholarly critics of literature, both ancient and modern; to observe the implications of form for meaning, in considering, especially, the differences between dramatic and non-dramatic kinds of cultural production; to help students understand the relationship of ancient Greek and Roman culture to the modern world; and to encourage thought about some big issues, in life as well as in literature: death, heroism, society, action and meaning.

COML 108 Greek & Roman Mythology
Myths are traditional stories that have endured many years. Some of them have to do with events of great importance, such as the founding of a nation. Others tell the stories of great heroes and heroines and their exploits and courage in the face of adversity. Still others are simple tales about otherwise unremarkable people who get into trouble or do some great deed. What are we to make of all these tales, and why do people seem to like to hear them? This course will focus on the myths of ancient Greece and Rome, as well as a few contemporary American ones, as a way of exploring the nature of myth and the function it plays for individuals, societies, and nations. We will also pay some attention to the way the Greeks and Romans themselves understood their own myths. Are myths subtle codes that contain some universal truth? Are they a window on the deep recesses of a particular culture? Are they entertaining stories that people like to tell over and over? Are they a set of blinders that all of us wear, though we do not realize it? We investigate these questions through a variety of topics creation of the universe between gods and mortals, religion and family, sex, love, madness, and death.

COML 110 Meditation and Text
Meditation, so it seems, is everywhere. Walking across Locust Walk, numerous posters jump to the eye calling for engagement with all sorts of mindfulness and spiritual contemplations. We often associate with it: quiet, detachment, calm. Yet before meditation acquired this silent character, it was in fact rather ecstatic and voluble. Meditators used to employ text to tease an introspection and put their experience into extensive writing that documents their reaction to the text, allowing the meditator to construct and reveal his or her self through the engagement with the written word. To study the history of meditation is thus to great extent to study the history of reading, and maybe more importantly, the history of the self. The course offers a survey of the history of meditation in the West: Starting with the self-examination of the Roman emperor Marcus Aurelius and the medieval monastic traditions, going through some salient meditators of the early modern period (Montaigne, Ignacio of Loyola, Descartes), all the way to the invasion of Buddhist trends to the West in the 19th and 20th century. It also provides a window to major intellectual trends in the West, and to some key texts of various religions. Given the nature of the material, we will be interested in the ways in which texts affect us, considering the impact of timing, location, reading out loud vs. silently etc. The course involves weekly reading of primary and secondary sources, active in-class discussions and brief individual presentations by the students. Students will be encouraged to bring from their own national/religious/cultural background and to develop a personal project that will culminate in a final conference-like presentation. This is proposed as a Critical Speaking Seminar.

COML 114 Literature of the South Asian City: Space, Culture, Politics
The South Asian city as a way of organizing space and social relations, as a symbol, as a memory is the subject of this course. Through primarily, though by no means exclusively, readings of literature in translation, we will gain a sense for the history of the city and the ways in which it is a setting for protest and nostalgia, social transformation and solitary flâneurie. We will see reflections of the city in poetry recited in its homes, detective novels sold in its train stations, stories scribbled in its backlots. Readings will attempt to address urban spaces across South Asia, and will include works by writers such as Mirza Ghalib, Rabindranath Tagore, Saadat Hasan Manto, and Vijay Tendulkar. We will examine these works in the context of secondary readings, including histories and ethnological works that take up life in the modern city. Students will finish this course prepared to pursue projects dealing with the urban from multiple disciplinary perspectives. This course is suitable for anyone interested in the culture, society, or literature of South Asia, and assumes no background in South Asian languages.

COML 120 Iranian Cinema: Gender, Politics and Religion
This seminar explores Iranian culture, society, history and politics through the medium of film. We will examine a variety of cinematic works that represent the social, political, economic and cultural circumstances of contemporary Iran, as well as the diaspora. Along the way, we will discuss issues pertaining to gender, religion, nationalism, ethnicity, and the role of cinema in Iranian society and beyond. Discussions topics will also include the place of the Iranian diaspora in cinema, as well as the transnational production, distribution, and consumption of Iranian cinema. Films will include those by internationally acclaimed filmmakers, such as Rakhshen Bani-Etemad, Asghar Farhadi, Bahman Ghobadi, Abbas Kiarostami, Mohsen Makhmalbaf, Dariush Mehrjui, Tahmine Milani, Jafar Panahi, Marjane Satrapi and others. All films will be subtitled in English. No prior knowledge is required.

COML 121 Working with Translations
In this class we will study and translate some of the major figures in 20th century poetry, including Rainer Maria Rilke, Claire Malroux, Pablo Neruda, Cesare Pavese, Anna Akhmatova, and Bei Dao. While the curriculum will be tailored to the interests and linguistic backgrounds of the students who enroll, all those curious about world poetry and the formidable, irresistible act of translation are welcome. Students should have at least an intermediate knowledge of a language other than English. We will study multiple translations of seminal poems, render our own versions in response, and have the additional opportunity to work directly from the original. Students may also work in pairs, or groups. A portion of the course will be set up as a creative writing workshop in which to examine the overall effect of each others’ translations so that first drafts can become successful revisions. While class discussions will explore the contexts and particularity of (among others) Urdu, Italian, French, and Polish poetry, they might ultimately reveal how notions of national literature have radically shifted in recent years to more polyglottic and globally textured forms. Through guest speakers, essays on translation theory, and our own ongoing experiments, this course will celebrate the ways in which great poetry underscores the fact that language itself is a translation. In addition to the creative work, assignments will include an oral presentation, informal response papers, and a short final essay.

COML 122 Prague: The Making of a European Nation
Even though such ‘supercities’ as New York, Los Angeles, Chicago, Washington, Boston, and San Francisco claim a special place in the minds and hearts of Americans, no American city plays as crucial a role in the formation of national identity among Americans as Prague does among the Czechs. One may even argue that the formation of a national identity associated with a nation’s urban center is a European phenomenon. The focus of the proposed course is Prague, the capital of the Czech Republic and the geographical center of Europe. From the 14th century, when it became a seat of the Holy Roman Emperor, to the Hussite Revolution; from the 19th-century national revival and the birth of the independent Czechoslovakia in 1918, to the ‘Prague Offensive,’ the last major operation of the Soviet Army in World War II and the re-appearance of the Soviet tanks after the ‘Prague Spring’ in 1968, to the ‘Velvet’ Revolution in 1989, and on to the present day as an EU member, Prague has been the site of major European developments and is where the Czech national identity was forged. Today a popular tourist destination with a uniquely preserved historical center that is part of the UNESCO World Heritage List, Prague combines national character with an increasingly cosmopolitan flavor. Focusing on what makes Prague a national capital, we will note how the ‘national’ negotiates its place with the ‘global.’ As a cultural hub and political center, Prague is the repository of a cultural collective memory and of historical and emotional records. It thus presents an excellent case study of how a national identity could be formed around a single urban center. The study of the many layers of Prague’s urban landscape allows us to observe how history is built into the physical environment, while the analysis of literary and artistic production reveals how the city has become perceived as a national shrine, embodied in word and image. Students will read the ‘Prague text’ as humanists, anthropologists, and historians. They will learn to apply methods of literary, cultural, and historical analyses, and will ask questions of what it means to be a Czech, a Central European, a European, and even, perhaps, an American. The travel component will further one of the key goals of this seminar: to develop cultural knowledge and sensitivity together with the appreciation of socio-cultural differences. COML 125 Narrative Across Cultures
The purpose of this course is to present a variety of narrative genres and to discuss and illustrate the modes whereby they can be analyzed. We will be looking at shorter types of narrative: short stories, novellas, and fables, and also some extracts from longer works such as autobiographies. While some works come from the Anglo-American tradition, a larger number will be selected from European and non-Western cultural traditions and from earlier time-periods. The course will thus offer ample opportunity for the exploration of the translation of cultural values in a comparative perspective.
Taught by: Loomba
One-term course offered either term
Also Offered As: ENGL 103, NELC 180, SAST 124, THAR 105
Activity: Lecture
1.0 Course Unit
COML 126 The Fantastic and Uncanny in Literature: Ghosts, Spirits & Machines
Do we still believe in spirits and ghosts? Do they have any place in an age of science of technology? Can they perhaps help us to define what a human being is and what it can do? We will venture on a journey through literary texts from the late eighteenth century to the present to explore the uncanny and fantastic in literature and life. Our discussions will be based on a reading of Sigmund Freud's essay on the uncanny, and extraordinary Romantic narratives by Ludwig Tieck, E.T.A. Hoffmann, Edgar Allan Poe, Nathaniel Hawthorne, Prosper Merimee, Villiers de Isle-Adam, and others. All readings and lectures in English.
For BA Students: Arts and Letters Sector

Course not offered every year
Also Offered As: GRMN 242, GSWS 243
Activity: Lecture
1.0 Course Unit
Notes: All readings and lectures in English.

COML 127 Sex and Representation
This course explores literature that resists normative categories of gender and sexuality. By focusing on figures writing from the margins, we will explore how radical approaches to narrative form and subject-matter invite us to think in new ways about desire and identity. We will read texts that blur the boundaries between fact and fiction, hybridizing the genres of poetry, drama, and autobiography to produce new forms of expression, such as the graphic novel, auto-fiction, and prose poetry. From Virginia Woolf's gender-bending epic, Orlando, to Tony Kushner's Angels in America, this course traces how non-normative desire is produced and policed by social and literary contexts - and how those contexts can be re-imagined and transformed.
Taught by: Halstead

Activity: Seminar
1.0 Course Unit
Notes: Critical Speaking
**COML 150 War and Representation**

This class will explore complications of representing war in the 20th and 21st centuries. War poses problems of perception, knowledge, and language. The notion of 'fog of war' describes a disturbing discrepancy between agents and actions of war; the extreme nature of the violence of warfare tests the limits of cognition, emotion, and memory; war's traditional dependence on declaration is often warped by language games--'police action,' 'military intervention,' 'nation-building,' or palpably unnamed and unacknowledged state violence. Faced with the radical uncertainty that forms of war bring, modern and contemporary authors have experimented in historically, geographically, experientially and artistically particular ways, forcing us to reconsider even seemingly basic definitions of what a war story can be. Where does a war narrative happen? On the battlefield, in the internment camp, in the suburbs, in the ocean, in the ruins of cities, in the bloodstream? Who narrates war? Soldiers, refugees, gossips, economists, witnesses, bureaucrats, survivors, children, journalists, descendants and inheritors of trauma, historians, those who were never there? How does literature respond to the rise of terror or ideology war, the philosophical and material consequences of biological and cyber wars, the role of the nuclear state? How does the problem of war and representation disturb the difference between fiction and non-fiction? How do utilitarian practices of representation--propaganda, nationalist messaging, memorialization, xenophobic depiction--affect the approaches we use to study art? Finally, is it possible to read a narrative barely touched or merely contextualized by war and attend to the question of war's shaping influence? The class will concentrate on literary objects--short stories, and graphic novels--as well as film and television. Students of every level and major are welcome in and encouraged to join this class, regardless of literary experience.

**COML 151 Water Worlds: Cultural Responses to Sea Level Rise & Catastrophic Flooding**

As a result of climate change, the world that will take shape in the course of this century will be decidedly more inundated with water than we're accustomed to. The polar ice caps are melting, glaciers are retreating, ocean levels are rising, polar bear habitat is disappearing, countries are jockeying for control over a new Arctic passage, while low-lying cities and small island nations are confronting the possibility of their own demise. Catastrophic flooding events are increasing in frequency, as are extreme droughts. Hurricane-related storm surges, tsunamis, and raging rivers have devastated regions on a local and global scale. In this seminar we will turn to the narratives and images that the human imagination has produced in response to the experience of overwhelming watery invasion, from Noah to New Orleans. Objects of analysis will include mythology, ancient and early modern diluvialism, literature, art, film, and commemorative practice. The basic question we'll be asking is: What can we learn from the humanities that will be helpful for confronting the problems and challenges caused by climate change and sea level rise?

**COML 153 Is Europe Facing a Spiritual Crisis?**

Is Europe Facing a Spiritual Crisis? On Contemporary Debates about Secularization, Religion and Rationality. Point of departure for this course is the difference between Europe and the US as to the role of religion in the unfolding of their respective 'cultural identities' (cf. Charles Taylor, A Secular Age, 522-530). As a rule, both the US and Western Europe are now defined as secularized cultures, even if their histories and specific identities are strongly rooted in the Christian heritage. Given this contemporary situation, four research questions will be dealt with in this course. 1) What is meant by secularization? In answer to that question, two secularization theories are distinguished: the classic versus the alternative secularization thesis; 2) What is the historical impact of the nominalist turning-point at the end of the Middle Ages in this process towards secularization? 3) How did the relation between rationality and religion develop during modern times in Europe? 4) What is the contemporary outcome of this evolution in so-called postmodern / post-secular Europe and US? We currently find ourselves in this so-called postmodern or post-secular period, marked by a sensitivity to the boundaries of (modem) rationality and to the fragility of our (modern) views on man, world and God. In this respect, we will focus on different parts of Europe (Western and Eastern Europe alike) and will refer to analogies and differences between Western Europe and US. This historical-thematic exposition is illustrated by means of important fragments from Western literature (and marginally from documents in other arts) and philosophy. We use these fragments in order to make more concrete the internal philosophical evolutions in relation to corresponding changes in diverse social domains (religion, politics, economy, society, literature, art...).

**COML 154 Forest Worlds: Mapping the Arboreal Imaginary in Literature and Film**

Can the humanities help us think differently about the forest? What happens if we imagine forests as the agents of their stories? At a time when humans seem unable to curb the destructive practices that place themselves, biodiversity, and the forests at risk, the humanities give us access to a record of the complex inter-relationship between forests and humanity. The course places a wide range of literature and film in which forests are strongly featured in relation to environmental history and current environmental issues.

COML 156 Queer German Cinema
Taught in English. This course offers an introduction into the history of German-language cinema with an emphasis on depictions of lesbian, gay, bisexual, trans and queer themes. The course provides a chronological survey of Queer German Cinema from its beginnings in the Weimar Republic to its most recent and current representatives, accompanied throughout by a discussion of the cultural-political history of gay rights in the German-speaking world. Over the course of the semester, students will learn not only cinematic history but how to write about and close-read film. No knowledge of German or previous knowledge required. Taught by: Fleishman
Course not offered every year
Also Offered As: CIMS 156, GRMN 156, GSWS 156
Activity: Lecture
1.0 Course Unit

COML 191 World Literature
How do we think 'the world' as such? Globalizing economic paradigms encourage one model that, while it connects distant regions with the ease of a finger-tap, also homogenizes the world, manufacturing patterns of sameness behind simulations of diversity. Our current world-political situation encourages another model, in which fundamental differences are held to warrant the consolidation of borders between Us and Them, 'our world' and 'theirs.' This course begins with the proposal that there are other ways to encounter the world, that are politically compelling, ethically important, and personally enriching—and that the study of literature can help tease out these new paths. Through the idea of World Literature, this course introduces students to the appreciation and critical analysis of literary texts, with the aim of navigating calls for universality or particularity (and perhaps both) in fiction and film. 'World literature' here refers not merely to the usual definition of 'books written in places other than the US and Europe, 'but any form of cultural production that explores and pushes at the limits of a particular world, that steps between and beyond worlds, or that heralds the coming of new worlds still within us, waiting to be born. And though, as we read and discuss our texts, we will glide about in space and time from the inner landscape of a private mind to the reaches of the farthest galaxies, knowledge of languages other than English will not be required, and neither will any prior familiary with the literary humanities. In the company of drunken kings, botanical witches, ambisexual alien lifeforms, and storytellers who've lost their voice, we will reflect on, and collectively navigate, our encounters with the faraway and the familiar—and thus train to think through the challenges of concepts such as translation, narrative, and ideology. Texts include Kazuo Ishiguro, Ursula K. LeGuin, Salman Rushdie, Werner Herzog, Jamaica Kincaid, Russell Hoban, Hiroshi Teshigahara, Arundhati Roy, and Abbas Kiarostami.

1.0 Course Unit

COML 197 Madness and Madmen in Russian Culture
Is 'insanity' today the same thing as 'madness' of old? Who gets to define what it means to be 'sane,' and why? Are the causes of madness biological or social? In this course, we will grapple with these and similar questions while exploring Russia's fascinating history of madness as a means to maintain, critique, or subvert the status quo. We will consider the concept of madness in Russian culture beginning with its earliest folkloric roots and trace its depiction and function in the figure of the Russian 'holy fool,' in classical literature, and in contemporary film. Readings will include works by many Russian greats, such as Pushkin, Gogol, Dostoevsky, Chekhov, Bulgakov and Nabokov.

COML 203 Masterpieces-Italian Literature

This course surveys the history of Italian literature through its major masterpieces. Beginning with Dante’s Divine Comedy, Petrarch’s love poems, and Boccaccio’s Decameron, we will follow the development of Italian literary tradition through the Renaissance (Machiavelli’s political theory and Ariosto’s epic poem), and then through Romanticism (Leopardi’s lyric poetry and Manzoni’s historical novel), up to the 20th century (from D’Annunzio’s sensual poetry to Calvino’s post-modern short stories). The course will provide students with the tools needed for analyzing the texts in terms of both form and content, and for framing them in their historical, cultural, and socio-political context. Classes and readings will be in Italian. ITAL 203 is mandatory for Minors in Italian Literature and Majors in Italian Literature. If necessary, ITAL 201 can be taken at the same time as ITAL 203. Prerequisite: Open to students who have completed ITAL 201 or equivalent.

One-term course offered either term
Also Offered As: ITAL 203
Prerequisite: ITAL 201
Activity: Seminar
1.0 Course Unit

COML 204 Tolstoy

Few authors have ever been able to combine their moral and artistic visions as closely as Tolstoy. Over the course of the semester, we will plot how Tolstoy’s ethical concerns changed over the course of his life and how this was reflected in works, which include some of the greatest prose ever written. We will begin by surveying the majestic and far-reaching world of his novels and end with some of Tolstoy’s short later works that correspond with the ascent of “Tolstoyism” as virtually its own religion.

Taught by: Todorov

COML 206 Italian History on Screen: How Movies Tell the Story of Italy

How has our image of Italy arrived to us? Where does the story begin and who has recounted, rewritten, and rearranged it over the centuries? In this course, we will study Italy’s rich and complex past and present. We will carefully read literary and historical texts and thoughtfully watch films in order to attain an understanding of Italy that is as varied and multifaceted as the country itself. Group work, discussions and readings will allow us to examine the problems and trends in the political, cultural and social history from ancient Rome to today. We will focus on: the Roman Empire, Middle Ages, Renaissance, Unification, Turn of the Century, Fascist era, World War II, post-war and contemporary Italy.

Activity: Seminar
1.0 Course Unit

COML 208 Sicily on Page and Screen

What images come to mind when we hear the words Sicily and Sicilians? Often our thoughts range from scenic vacation spots, delicious seafood and cannoli, and sweet grandmothers dressed in black, to mafia violence, vendettas, and the deep-rooted code of silence, omerta. But, how did these ideas get to us? Is there truth in them? Is there more to this island and its people? Through careful analysis of literary and cinematic representations of this Italian region, and those that do and have inhabited it, we will trace and analyze how Sicilians have represented themselves, how mainland Italians have interpreted Sicilian culture, how outsiders have understood these symbols, how our own perceptions shaped what we thought we knew about this place and, finally, how our own observations will have evolved throughout our studies. We will watch films such as Tornatore’s Cinema paradiso and Coppola’s The Godfather II, and read texts such as Lampedusa’s The Leopard and Maraini’s Bagheria. This course aims to increase students’ understanding and knowledge of the Sicilian socio-cultural system. It will help students develop their ability to understand and interpret Sicilian culture through close analysis of its history, values, attitudes, and experiences, thereby allowing them to better recognize and examine the values and practices that define their own, as well as others’, cultural frameworks.

Notes: Course taught in English. Course Materials in English. There are no prerequisites for this course.

COML 209 Sustainability & Utopianism

This seminar explores how the humanities can contribute to discussions of sustainability. We begin by investigating the contested term itself, paying close attention to critics and activists who deplore the very idea that we should try to sustain our, in their eyes, dystopian present, one marked by environmental catastrophe as well as by an assault on the educational ideals long embodied in the humanities. We then turn to classic humanist texts on utopia, beginning with More’s fictive island of 1517. The ‘origins of environmentalism’ lie in such depictions of island edens (Richard Grove), and our course proceeds to analyze classic utopian tests from American, English, and German literatures. Readings extend to utopian visions from Europe and America of the nineteenth and twentieth centuries, as well as literary and visual texts that deal with contemporary nuclear and flood catastrophes. Authors include: Bill McKibben, Jill Kerr Conway, Christopher Newfield, Thomas More, Francis Bacon, Karl Marx, Henry David Thoreau, Robert Owens, William Morris, Charlotte Perkins Gilman, Ayn Rand, Christa Wolf, and others. Taught in English.

COML 211 Literature of Dissent: Art as Protest in 20th-Century Poland and Czechoslovakia
Eastern and Central Europe was the site of monumental political changes in the twentieth century, including the disillusion of monarchical empires in the First World War and the expansion of Soviet-style communism. At every point, artists have taken part in political debates, sometimes advancing radical agendas, sometimes galvanizing movements, sometimes simply shouting into the void to register their own dissatisfaction. In this course, we will consider texts including literature, political philosophy and film that pushed back against the dominant political norms. In so doing, we will investigate Aesopian language, the mechanics of censorship, the repercussions of dissent, performativity, samizdat and the rise of an alternative culture. We will contextualize our readings of literature with the sociological and historical work of Benedict Anderson, Tony Judt, Jonathan Bolton, Shana Penn, Alexei Yurchak and the series Discourses of Collective Identity in Central and Southeast Europe. As well as becoming familiar with major thinkers and movements in Eastern and Central Europe, students will develop a sense of art as a tool of political protest. Taught by: Weil

COML 212 Modern Middle Eastern Literature in Translation
The Middle East boasts a rich tapestry of cultures that have developed a vibrant body of modern literature that is often overlooked in media coverage of the region. While each of the modern literary traditions that will be surveyed in this introductory course-Arabic, Hebrew, Persian and Turkish-will be analyzed with an appreciation of the cultural context unique to each body of literature, this course will also attempt to bridge these diverse traditions by analyzing common themes such as modernity, social values, the individual and national identity as reflected in the genres of poetry, the novel and the short story. This course is in seminar format to encourage lively discussion and is team-taught by four professors whose expertise in modern Middle Eastern literature serves to create a deeper understanding and aesthetic appreciation of each literary tradition. In addition to honing students’ literary analysis skills, the course will enable students to become more adept at discussing the social and political forces that are reflected in Middle Eastern literature, explore important themes and actively engage in reading new Middle Eastern works on their own in translation. All readings are in English. For BA Students: Arts and Letters Sector Taught by: Gold
Course usually offered in spring term

COML 213 Saints and Devils in Russian Literature and Tradition
This course is about Russian literary imagination, which is populated with saints and devils, believers and religious rebels, holy men and sinners. In Russia, where people’s frame of mind had been formed by a mix of Eastern Orthodox Christianity and earlier pagan beliefs, the quest for faith, spirituality, and the meaning of life has invariably been connected with religious matters. How can one find the right path in life? Is humility the way to salvation? Should one live for God or for the people? Does God even exist?

COML 215 Introduction to Persian Poetic Tradition
This course introduces some of the major genres and themes of the millennium-old Persian poetic tradition from ancient to modern Iran. Epic and romance, love and mysticism, wine and drunkenness, wisdom and madness, body and mind, sin and temptation are some of the key themes that will be explored through a close reading of poems in this course. The course suits undergraduate students of all disciplines, as it requires no prior knowledge of or familiarity with the Persian language or the canon of Persian literature. All teaching materials are available in English translation. Students are expected to attend seminars and take part in discussions.

1.0 Course Unit

COML 220 Russia and the West
This course will explore the representations of the West in eighteenth- and nineteenth-century Russian literature and philosophy. We will consider the Russian visions of various events and aspects of Western political and social life—Revolutions, educational system, public executions, resorts, etc., within the context of Russian intellectual history. We will examine how images of the West reflect Russia's own cultural concerns, anticipations, and biases, as well as aesthetic preoccupations and interests of Russian writers. The discussion will include literary works by Karamzin, Pushkin, Gogol, Dostoevsky, Leskov, and Tolstoy, as well as non-fictional documents, such as travelers' letters, diaries, and historio-sophical treatises of Russian Freemasons, Romantic and Positivist thinkers, and Russian social philosophers of the late Nineteenth century. A basic knowledge of nineteenth-century European history is desirable. The class will consist of lectures, discussion, short writing assignments, and two in-class tests.
For BA Students: Humanities and Social Science S
One-term course offered either term
Also Offered As: HIST 220, REES 220
Activity: Seminar
1.0 Course Unit

COML 221 Creating New Worlds: The Modern Indian Novel
Lonely bureaucrats and love-struck students, Bollywood stars and wayward revolutionaries: this course introduces students to the worlds of the Indian novel. From the moment of its emergence in the 19th century, the novel in India grappled with issues of class and caste, colonialism and its aftermath, gender, and the family. Although the novel has a historical origin in early modern Europe, it developed as a unique form in colonial and post-colonial India, influenced by local literary and folk genres. How did the novel in India—and in its successor states after 1947—transform and shift in order to depict its world? How are novels shaped by the many languages in which they are written, including English? And how do we, as readers, engage with the Indian novel in its diversity? This course surveys works major and minor from the past 200 years of novel-writing in India—with surveys both into predecessors of the Indian novel and parallel forms such as the short story. Readings will include works in translation from languages such as Hindi, Bangla, Urdu, Telugu, and Malayalam, as well as works written originally in English.
Students will leave this course with an understanding of the Indian novel, along with the social conditions underlaying it, especially those relating to caste and gender.

1.0 Course Unit

COML 230 Words Are Weapons: Protests and Political Activism in South Asian Literature
This course focuses on the key themes of protest and resistance in contemporary South Asian literature. Most South Asian countries have been witnessing an endless wave of protests and resistance from various sections of public life for the last three decades. In India, for example, protest literature emerges not only from traditionally marginalized groups (the poor, religious and ethnic minorities, depressed castes and tribal communities), but also from upper-caste groups, whose protest literature expresses concerns over economic oppression, violence and the denial of fundamental rights. Literature is becoming an immediate tool to articulate acts of resistance and anger, as many writers and poets are also taking on new roles as political activists. In this class, we will read various contemporary works of short fiction, poetry and memoirs to comprehend shifts in public life toward political and social activism in South Asia. We will also watch two or three documentaries that focus on public protests and resistance. No pre-requisites or South Asian language requirements. All literary works will be read in English translations.

Activity: Lecture
1.0 Course Unit

COML 236 Napoleonic Era & Tolstoy
In this course we will read what many consider to be the greatest book in world literature. This work, Tolstoy's War and Peace, is devoted to one of the most momentous periods in world history, the Napoleonic Era (1789-1815). We will study both the novel and the era of the Napoleonic Wars: the military campaigns of Napoleon and his opponents, the grand strategies of the age, political intrigues and diplomatic betrayals, the ideologies and human dramas, the relationship between art and history. How does literature help us to understand this era? How does history help us to understand this great novel?

Activity: Lecture
1.0 Course Unit
Notes: All readings and lectures in English.
COML 237 Berlin: History, Politics, Culture
What do you know about Berlin’s history, architecture, culture, and political life? The present course will offer a survey of the history of Prussia, beginning with the seventeenth century, and the unification of the small towns of Berlin and Koellin to establish a new capital for this country. It will tell the story of Berlin’s rising political prominence in the eighteenth century, and its position as a center of the German and Jewish Enlightenment. It will follow Berlin’s transformation into an industrial city in the nineteenth century, its rise to metropolis in the early twentieth century, its history during the Third Reich, and the post-war cold war period. The course will conclude its historical survey with a consideration of Berlin’s position as a capital in reunified Germany. The historical survey will be supplemented by a study of Berlin’s urban structure, its significant architecture from the eighteenth century (i.e. Schinkel) to the nineteenth (new worker’s housing, garden suburbs) and twentieth centuries (Bauhaus, Speer designs, postwar rebuilding, GDR housing projects, post-unification building boom). In addition, we will read literary texts about the city, and consider the visual art and music created in and about Berlin, and focus on Berlin’s Jewish history. The course will be interdisciplinary with the fields of German Studies, history, history of art, urban studies, and German-Jewish studies. It is also designed as a preparation for undergraduate students who are considering spending a junior semester with the Penn Abroad Program in Berlin. All readings and lectures in English.

COML 241 Global Sustainabilities
This research-oriented seminar focuses on the ways in which ‘sustainability’ and ‘sustainable development’ are linguistically and culturally translated into the world’s languages. We may take the terms for granted, but they have only really been on the global stage since they were widely introduced in the 1987 United Nations report, Our Common Future. Seminar participants will first become acquainted with the cultural and conceptual history of the terms and the UN framework within which sustainability efforts directly or indirectly operate. Having established the significance of cultural and linguistic difference in conceiving and implementing sustainability, participants will collaboratively develop a research methodology in order to begin collecting and analyzing data. We will draw heavily on Penn’s diverse language communities and international units. Seminar members will work together and individually to build an increasingly comprehensive website that provides information about the world’s languages of sustainability.

COML 247 Free Radicals: Marx, Marxism, and the Culture of Revolution
‘A spectre is haunting Europe—the spectre of Communism’: This, the famous opening line of The Communist Manifesto, will guide this course’s exploration of the history, legacy, and potential future of Karl Marx’s most important texts and ideas, even long after Communism has been pronounced dead. Contextualizing Marx within a tradition of radical thought regarding politics, religion, and sexuality, we will focus on the philosophical, political, and cultural origins and implications of his ideas. Our work will center on the question of how his writings seek to counter or exploit various tendencies of the time; how they align with the work of Nietzsche, Freud, and other radical thinkers to follow; and how they might continue to haunt us today. We will begin by discussing key works by Marx himself, examining ways in which he is both influenced by and appeals to many of the same fantasies, desires, and anxieties encoded in the literature, arts and intellectual currents of the time. In examining his legacy, we will focus on elaborations or challenges to his ideas, particularly within cultural criticism, postwar protest movements, and the cultural politics of the Cold War. In conclusion, we will turn to the question of Marxism or Post-Marxism today, asking what promise Marx’s ideas might still hold in a world vastly different from his own. All readings and lectures in English.

COML 253 Freud: The Invention of Psychoanalysis
No other person of the twentieth century has probably influenced scientific thought, humanistic scholarship, medical therapy, and popular culture as much as Sigmund Freud. This seminar will study his work, its cultural background, and its impact on us today. In the first part of the course, we will learn about Freud’s life and the Viennese culture of his time. We will then move to a discussion of seminal texts, such as excerpts from his Interpretation of Dreams, case studies, as well as essays on psychoanalytic practice, human development, definitions of gender and sex, neuroses, and culture in general. In the final part of the course, we will discuss the impact of Freud’s work. Guest lecturers from the medical field, history of science, psychology, and the humanities will offer insights into the reception of Freud’s work, and its consequences for various fields of study and therapy.

COML 255 Contemporary Fiction & Film in Japan
This course will explore fiction and film in contemporary Japan, from 1945 to the present. Topics will include literary and cinematic representation of Japan’s war experience and post-war reconstruction, negotiation with Japanese classics, confrontation with the state, and changing ideas of gender and sexuality. We will explore these and other questions by analyzing texts of various genres, including film and film scripts, novels, short stories, manga, and academic essays. Class sessions will combine lectures, discussion, audio-visual materials, and creative as well as analytical writing exercises. The course is taught in English, although Japanese materials will be made available upon request. No prior coursework in Japanese literature, culture, or film is required or expected; additional secondary materials will be available for students taking the course at the 600 level. Writers and film directors examined may include: Kawabata Yasunari, Hayashi Fumiko, Abe Kobo, Mishima Yukio, Oe Kenzaburo, Yoshimoto Banana, Ozu Yasujirō, Naruse Mikio, Kurosawa Akira, Imamura Shohei, Koreeda Hirokazu, and Beat Takeshi.

COML 265 Jewish Films and Literature
From the 1922 silent film 'Hungry Hearts' through the first 'talkie,' 'The Jazz Singer,' produced in 1927, and beyond 'Schindler's List,' Jewish characters have confronted the problems of their Jewishness on the silver screen for a general American audience. Alongside this Hollywood tradition of Jewish film, Yiddish film blossomed from independent producers between 1911 and 1939, and interpreted literary masterpieces, from Shakespeare's 'King Lear' to Sholom Aleichem's 'Tevye the Dairyman,' primarily for an immigrant, urban Jewish audience. In this course, we will study a number of films and their literary sources (in fiction and drama), focusing on English language and Yiddish films within the framework of three dilemmas of interpretation: a) the different ways we 'read' literature and film, b) the various ways that the media of fiction, drama, and film 'translate' Jewish culture, and c) how these translations of Jewish culture affect and are affected by their implied audience. All readings and lectures in English.

COML 269 Fascist Cinemas
Cinema played a crucial role in the cultural life of Nazi Germany and other fascist states. As cinema enthusiasts, Goebbels and Hitler were among the first to realize the important ideological potential of film as a mass medium and saw to it that Germany remained a cinema powerhouse producing more than 1000 films during the Nazi era. In Italy, Mussolini, too, declared cinema 'the strongest weapon.' This course explores the world of 'fascist' cinemas ranging from infamous propaganda pieces such as The Triumph of the Will to popular entertainments such as musicals and melodramas. It examines the strange and mutually defining kinship between fascism more broadly and film. We will consider what elements mobilize and connect the film industries of the Axis Powers: style, genre, the aestheticization of politics, the creation of racialized others. More than seventy years later, fascist cinemas challenge us to grapple with issues of more subtle ideological insinuation than we might think. Weekly screenings with subtitles. All readings and discussions in English.

COML 275 Faces of Love: Gender, Sexuality and the Erotic in Persian Literature
Beloved, Lover and Love are three concepts that dominate the semantic field of eroticism in Persian literature and mysticism. The interrelation among these concepts makes it almost impossible to treat any one of the concepts separately. Moreover, there exists various faces and shades of love in the works of classical and modern Persian literature that challenges the conventional heteronormative assumptions about the sexual and romantic relationships between the lover and the beloved. A sharp contrast exists between the treatment of homosexuality and 'queerness' in Islamic law, on the one hand and its reflection in Persian literature, particularly poetry (the chief vehicle of Persian literary expression), on the other. This course introduces and explores different faces of love, eroticism and homoeroticism in the Persian literary tradition from the dawn of dawn of the Persian poetry in the ninth century all through to the twenty-first century. It offers a comprehensive study of representations and productions of heteronormativity, sexual orientation and gender roles with particular reference to the notion of love, lover and beloved in Persian literature.
Taught by: Shams
Course usually offered in fall term
Also Offered As: COML 574, GSWS 275, GSWS 575, NELC 290, NELC 574

1.0 Course Unit
Notes: No prior knowledge of Persian is required as all literary works will be available in English translation. Students are expected to attend seminars and take part in discussions. Please note that this syllabus is subject to change.

COML 277 Jewish American Literature
What makes Jewish American literature Jewish? What makes it American? This course will address these questions about ethnic literature through fiction, poetry, drama, and other writings by Jews in America, from their arrival in 1654 to the present. We will discuss how Jewish identity and ethnicity shape literature and will consider how form and language develop as Jewish writers ‘immigrate’ from Yiddish, Hebrew, and other languages to American English. Our readings, from Jewish American Literature: A Norton Anthology, will include a variety of stellar authors, both famous and less-known, including Isaac Mayer Wise, Emma Lazarus, Isaac Bashevis Singer, Celia Dropkin, Abraham Cahan, Anzia Yezierska, Saul Bellow, Philip Roth, Cynthia Ozick, and Allegra Goodman. Students will come away from this course having explored the ways that Jewish culture intertwines with American culture in literature. All readings and lectures are in English.

COML 281 Topics Poetry and Poetics
This course explores an aspect of poetry and poetics intensively; specific course topics will vary from year to year. Prerequisite: Spaces will be reserved for English majors. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: ENGL 269
Activity: Seminar
1.0 Course Unit

COML 282 Modern Hebrew Literature and Film in Translation: Autobiography
This course examines cinematic and literary portrayals of childhood. While Israeli works constitute more than half of the course’s material, European film and fiction play comparative roles. Many of the works are placed, and therefore discussed, against a backdrop of national or historical conflicts. Nonetheless, private traumas (such as madness, abuse, or loss) or an adult’s longing for an idealized time are often the central foci of the stories. These issues and the nature of individual and collective memory will be discussed from a psychological point of view. Additionally, the course analyzes how film, poetry and prose use their respective languages to reconstruct the image of childhood; it discusses the authors and directors struggle to penetrate the psyche of a child and to retrieve fragments of past events.
For BA Students: Arts and Letters Sector
Taught by: Gold
One-term course offered either term

Activity: Lecture
1.0 Course Unit

COML 283 Jewish Folklore
The Jews are among the few nations and ethnic groups whose oral tradition occurs in literary and religious texts dating back more than two thousand years. This tradition changed and diversified over the years in terms of the migration of Jews into different countries and historical, social, and cultural changes that these countries underwent. The course attempts to capture the historical and ethnic diversity of Jewish folklore in a variety of oral literary forms.
Taught by: Ben-Amos
Course not offered every year
Also Offered As: FOLK 280, JWST 260, NELC 258
Activity: Lecture

COML 285 Theatre and Politics
This course will examine the relationship between theatre and politics in the twentieth and twenty-first centuries. How do theatre artists navigate their artistic and political aims? How do we distinguish between art and propaganda? Throughout the semester we will ask how the unique components of theatre—its poetic structure, engagement with spectators, aesthetics of representation, relationship to reality, and rehearsal process—contribute to its political capacity. Students will read a variety of plays drawn from late twentieth century and contemporary global theatre practice alongside political and aesthetic theory to interrogate the relationship between artistic production, power, and resistance. We will conclude with a consideration of the ways politics is itself a performance, considering how power is supported by theatrical means and how performance functions in resistance movements.

Activity: Seminar
1.0 Course Unit
COML 287 Ethnic Humor
Humor in ethnic societies has two dimensions: internal and external. The inside humor of an ethnic group is accessible to its members; it draws upon their respective social structures, historical and social experiences, languages, cultural symbols, and social and economic circumstances and aspirations. The external humor of an ethnic group targets members of other ethnic groups, and draws upon their stereotypes, and attributed characteristics by other ethnic groups. The external ethnic humor flourishes in immigrant and ethnically heterogenic societies. In both cases jokes and humor are an integral part of social interaction, and in their performance relate to the social, economic, and political dynamics of traditional and modern societies.

COML 295 Topics in Cultural Studies
This course explores an aspect of cultural studies intensively; specific course topics vary from year to year.
Course not offered every year
Also Offered As: ARTH 293, CIMS 295, ENGL 295
Activity: Seminar
1.0 Course Unit

COML 299 Cinema and Media
This course will provide an introduction to some of the most important film theory debates, and allow us to explore how writers and filmmakers from different countries and historical periods have attempted to make sense of the changing phenomenon known as ‘cinema,’ to think cinematically. Topics under consideration may include: spectatorship, authorship, the apparatus, sound, editing, realism, race, gender and sexuality, stardom, the culture industry, the nation and decolonization, what counts as film theory and what counts as cinema, and the challenges of considering film theory in a global context, including the challenge of working across languages. There will be a weekly film screening for this course. No knowledge of film theory is presumed.
Course requirements: attendance at lecture and participation in lecture and section discussions; canvas postings; 1 in-class mid-term; 1 final project.
Taught by: Redrobe
Course not offered every year
Also Offered As: ARTH 295, ARTH 695, CIMS 305, ENGL 305, GSWS 295
Activity: Lecture

Activity: Seminar
1.0 Course Unit
Notes: This is a topics course. Topics will vary from year to year.

COML 302 Odyssey & Its Afterlife
As an epic account of wandering, survival, and homecoming, Homer’s Odyssey has been a constant source of themes and images with which to define and redefine the nature of heroism, the sources of identity, and the challenge of finding a place in the world.
Taught by: Murnaghan
Course usually offered in spring term
Also Offered As: CLST 302
Activity: Lecture
1.0 Course Unit
COML 304 Topics In Classicism and Literature
Ancient epic and mythology had a curious and rich afterlife in the Middle Ages. Virgil and Ovid were taught in medieval schools, read for their moral content, and revered as fiction that concealed great philosophical value. Their influence also gave rise to the great literary form of the Middle Ages, romance: narratives that place a premium on erotic love, individual quests, the unpredictability of adventure, and imaginary or exotic settings. Yet despite what may appear to be merely gratifying entertainment, medieval romance and medieval receptions of classical myth did tremendous cultural work, enabling profound explorations of history, political values, gender and sexual identity, and social power. We will spend some weeks reading Virgil’s Aeneid and Ovid’s Heroides and Metamorphoses. Then we will turn to medieval reimaginings of classical myth and metamorphosis, including poetry by Marie de France, Chretien de Troyes, and Chaucer, and anonymous works such as Sir Gawain and the Green Knight. The course requirements will be: one very short oral presentation on a research topic of your choice related to the reading, together with a short write-up of your research; one short critical paper; and one longer research paper (which can develop the subject of your oral presentation).
Taught by: Copeland
Course not offered every year
Also Offered As: CLST 360, ENGL 229, GSWS 228
Activity: Seminar
1.0 Course Unit

COML 307 Love, Lust and Violence in the Middle Ages
Medieval Europe was undoubtedly gruff and violent but it also gave birth to courtly culture - raw worries transformed into knights who performed heroic deeds, troubadours wrote epics in their honor and love songs about their ladies, women of the elite carved out a place in public discourse as patrons of the arts, and princely courts were increasingly defined by pageantry from jousting tournaments to royal coronations. This course will trace the development of this courtly culture from the eleventh to the sixteenth century, from its roots in Southern France to its spread to Northern France and then to various kingdoms in Europe. Central themes will include the transformation of the warrior into the knight, the relationship between violence and courtliness, courtly love, cultural production and the patronage, and the development of court pageantry and ceremonial. This is a class cultural history and, as such, will rely on the interpretation of objects of art and material culture, literature as well as historical accounts.

Activity: Lecture
1.0 Course Unit

COML 321 National Literatures
A course that traces how particular literary texts, very often medieval, are adopted to become foundational for national literatures. Key moments of emphasis will be the early nineteenth century, the 1930s, and (to some extent) the unfolding present. Research subtyping this offering has been conducted over the last years, both in my editing of Europe: A Literary History, 1348-1418 (2 vols and 82 chapters, Oxford UP, 2016) and in preparation for ‘Medieval Studies in Troubled Times: the 1930s, to be offered as Presidential plenary at the Medieval Academy of America convention at Penn on 9 March 2019. I have also travelled and lectured extensively for Penn Alumni Travel over the last decade, crossing national boundaries and also pondering how complex literary issues might be framed for a broad (but exceptionally intelligent) audience. Issues arising in traversing Mediterranean space are explored in an article published (in Italian) in Studi migranti. Some texts immediately suggest themselves for analysis. The Song of Roland, for example, has long been fought over between France and Germany; each new war inspires new editions on both sides. The French colonial education system, highly centralized, long made the Chanson de Roland a key text, with the theme of Islamic attack on the European mainland especially timely, it was thought, during the Algerian war of independence. Germany also sees the Niebelungenlied as a key text, aligning it with the Rhine as an impeccably Germanic: but the Danube, especially as envisioned by Stefan Zweig, offers an alternative, hybridized, highly hyphenated cultural vision in running its Germanic-Judaic-Slavic-Roman course to the Black Sea. The course will not be devoted exclusively to western Europe. Delicate issues arise as nations determine what their national epic needs to be. Russia, for example, needs the text known as The Song of Igor to be genuine, since it is the only Russian epic to predate the Mongol invasion. The text was discovered in 1797 and then promptly lost in Moscow’s great fire of 1812; suggestions that it might have been a fake have to be handled with care in Putin’s Russia. Similarly, discussing putative Mughal (Islamic) elements in so-called ‘Hindu epics’ can also be a delicate matter. Some ‘uses of the medieval’ have been exercised for reactionary and revisionist causes in the USA, but such use is much more extravagant east of Prague. And what, exactly, is the national epic of the USA? Preference given to Ben Franklin students.
Taught by: Wallace
One-term course offered either term
Also Offered As: ENGL 321
Activity: Seminar
1.0 Course Unit
Notes: Preference given to Ben Franklin students
COML 322 Advanced Topics in Global Gender and Sexuality Studies
How do sex and gender become sites of cultural production, identity-formation, and contentious politics? This seminar engages these questions in the context of the 'Middle East' as a constructed geopolitical space for imperial politics and political intervention. The class is divided into three units. In the first unit, we engage feminist and queer theories to discuss the shifting meanings of 'sex' and 'gender' in transnational and postcolonial contexts. In the second unit we explore the contextual and shifting notions of 'private' and 'public' as they have been elaborated in political theory, feminist theory, and media studies. We also consider how different media technologies enable and constrain the performance and expression of gender and sexual identities. In the last unit, we examine the material and symbolic construction of sex and gender in the shadow of Orientalism, the War on Terror, Multiculturalism, and the recent Arab uprisings. In this unit, we consider how geopolitics are refracted in public controversies around issues like gay rights, female genital mutilation, the veil, and honor killing.
Also Offered As: GSWS 322, SOCI 322
Activity: Seminar
1.0 Course Unit

COML 324 Sanskrit Literature in Translation
This course will focus solely on the specific genres, themes, and aesthetics of Sanskrit literature (the hymn, the epic, the lyric, prose, drama, story literature, the sutra, etc.) and a study of the history and specific topics of Sanskrit poetics and dramaturgy. All readings will be in translation.
Taught by: Patel
Course not offered every year
Also Offered As: COML 624, SAST 324, SAST 624
Activity: Seminar
1.0 Course Unit

COML 333 Dante's Divine Comedy
In this course we will read the Inferno, the Purgatorio and the Paradiso, focusing on a series of interrelated problems raised by the poem: authority, fiction, history, politics and language. Particular attention will be given to how the Commedia presents itself as Dante's autobiography, and to how the autobiographical narrative serves as a unifying thread for this supremely rich literary text. Supplementary readings will include Virgil's Aeneid and selections from Ovid's Metamorphoses. All readings and written work will be in English. Italian or Italian Studies credit will require reading Italian texts in the original language and writing about their themes in Italian. This course may be taken for graduate credit, but additional work and meetings with the instructor will be required. When crosslisted with ENGL 323, this is a Benjamin Franklin Seminar.
Taught by: Brownlee
One-term course offered either term
Also Offered As: ENGL 323, ITAL 333
Activity: Seminar
1.0 Course Unit

COML 334 A Survey of Sanskrit, Pakrit, and Classical Tamil Literature in Translation
This course will cover most of the genres of literature in South Asia's classical languages through close readings of selections of primary texts in English translation. Special focus will be given to epics, drama, lyric poetry, satirical works, and religious literature.
Taught by: Patel
Course not offered every year
Also Offered As: SAST 334, SAST 534
Activity: Seminar
1.0 Course Unit

COML 335 Arabic Literature and Literary Theory
This course will explore different critical approaches to the interpretation and analysis of Arabic literature from pre-Islamic poetry to the modern novel and prose-poem. The course will draw on western and Arabic literary criticism to explore the role of critical theory not only in understanding and contextualizing literature but also in forming literary genres and attitudes. Among these approaches are: Meta-poetry and inter-Arts theory, Genre theory, Myth and Archetype, Poetics and Rhetoric, and Performance theory. This course is taught in translation.
Taught by: Fakhreddine
Course usually offered in fall term
Also Offered As: COML 505, NELC 434
Activity: Lecture
1.0 Course Unit

COML 343 Nineteenth Century European Intellectual History
Starting with the dual challenges of Enlightenment and Revolution at the close of the eighteenth century, this course examines the emergence of modern European thought and culture in the century from Kant to Nietzsche. Themes to be considered include Romanticism, Utopian Socialism, early Feminism, Marxism, Liberalism, and Aestheticism. Readings include Kant, Hegel, Burke, Marx, Mill, Wollstonecraft, Darwin, Schopenhauer, and Nietzsche.
Taught by: Breckman
Course usually offered in fall term
Also Offered As: HIST 343
Activity: Lecture
1.0 Course Unit

COML 344 20th Century European Intellectual History
European intellectual and cultural history from 1870 to 1950. Themes to be considered include aesthetic modernism and the avant-garde, the rebellion against rationalism and positivism, Social Darwinism, Second International Socialism, the impact of World War One on European intellectuals, psychoanalysis, existentialism, and the ideological origins of fascism. Figures to be studied include Nietzsche, Freud, Woolf, Sartre, Camus, and Heidegger.
Taught by: Breckman
Course usually offered in spring term
Also Offered As: HIST 344
Activity: Lecture
1.0 Course Unit

COML 345 Arabic Literature and Literary Theory
This course will explore different critical approaches to the interpretation and analysis of Arabic literature from pre-Islamic poetry to the modern novel and prose-poem. The course will draw on western and Arabic literary criticism to explore the role of critical theory not only in understanding and contextualizing literature but also in forming literary genres and attitudes. Among these approaches are: Meta-poetry and inter-Arts theory, Genre theory, Myth and Archetype, Poetics and Rhetoric, and Performance theory. This course is taught in translation.

Course not offered every year
Also Offered As: FOLK 229, NELC 249
Activity: Lecture
1.0 Course Unit
COML 359 Seminar in Modern Hebrew Literature
This course introduces students to selections from the best literary works written in Hebrew over the last hundred years in a relaxed seminar environment. The goal of the course is to develop skills in critical reading of literature in general, and to examine how Hebrew authors grapple with crucial questions of human existence and national identity. Topics include: Hebrew classics and their modern ‘descendants,’ autobiography in poetry and fiction, the conflict between literary generations, and others. Because the content of this course changes from year to year, students may take it for credit more than once. This course is conducted in Hebrew and all readings are in Hebrew. Grading is based primarily on participation and students’ literary understanding.
For BA Students: Arts and Letters Sector
Taught by: Gold
Course usually offered in spring term
Also Offered As: JWST 359, JWST 659, NELC 359, NELC 659
Prerequisite: HEBR 059
Activity: Seminar
1.0 Course Unit

COML 369 Literary Translation
This course is for graduate students and undergraduates with permission of the instructor. All students enrolled must have knowledge of at least one language other than English. We will study the history, theory and practice of literary translation, and participate in it. Readings will include theoretical works in translation studies, using selections from Lawrence Venuti’s Translation Studies Reader and Schulte/Biguezet’s Translation Theory Reader, with some supplemental readings; we will also look at comparative cases of multiple translations of the same original, and analyze how different translators make different interpretative/formal/aesthetic choices. Course assignments will include both a research paper, on the history and/or theory of translation, and an extended practical translation exercise, to be workshopped over the course of the semester, consisting of a literary translation of a text of the student’s choice.
Taught by: Wilson
Also Offered As: CLST 369, CLST 569
Activity: Seminar
1.0 Course Unit

COML 378 Topics in Literature and Society
This course explores an aspect of Postcolonial literature intensively specific course topics vary from year to year.
Course not offered every year
Also Offered As: ENGL 293
Activity: Seminar
1.0 Course Unit

COML 380 The Bible in Translation
This course introduces students to one specific Book of the Hebrew Bible. ‘The Bible in Translation’ involves an in-depth reading of a biblical source against the background of contemporary scholarship. Depending on the book under discussion, this may also involve a contextual reading with other biblical books and the textual sources of the ancient Near East. Although no prerequisites are required, this class is a perfect follow-up course to ‘Intro to the Bible.’
Taught by: Cranz
One-term course offered either term
Also Offered As: JWST 255, NELC 250, NELC 550, RELS 224
Activity: Seminar
1.0 Course Unit

COML 385 Japanese Theater
Japan has one of the richest and most varied theatrical traditions in the world. In this course, we will examine Japanese theatre in historical and comparative contexts. The readings and discussions will cover all areas of the theatrical experience (script, acting, stage, design, costumes, music, audience). Audio-visual material will be used whenever appropriate and possible. Requirements include short writing assignments, presentations, and one research paper. Reading knowledge of Japanese and/or previous course work in literature/theatre will be helpful, but not required. The class will be conducted in English, with all English materials.
Taught by: Kano

1.0 Course Unit
Notes: Benjamin Franklin Seminar

COML 393 Queering North African Subjectivities
This seminar will explore the ways in which literary and visual representations of sexual difference and gender roles disrupt the cultural imagination of everyday life in North Africa and its Diasporas. Special attention will be given to representations of Arab women and queer subjectivities as sites of resistance against dominant masculinity. We will analyze the ways in which representations of gender have allowed for a redeployment of power, a reconfiguration of politics of resistance, and the redrawing of longstanding images of Islam in France. Finally, we will question how creations that straddle competing cultural traditions, memories and material conditions can queer citizenship. Course taught in English.
Taught by: Gueydan-Turek
One-term course offered either term
Also Offered As: AFRC 392, FREN 392, GSWS 392
Activity: Seminar
1.0 Course Unit
COML 396 History of Literary Criticism
This is a course on the history of literary theory, a survey of major debates about literature, poetics, and ideas about what literary texts should do, from ancient Greece to examples of modern European thought. The first half of the course will focus on early periods: Greek and Roman antiquity, especially Plato and Aristotle; the medieval period (including St. Augustine, Dante, and Boccaccio), and the early modern period (such as Philip Sidney and Giambattista Vico). In the second half of the course we will turn to modern concerns by looking at the literary (or ‘art’) theories of some major philosophers and theorists: Kant, Hegel, Marx, Nietzsche, Freud, and Walter Benjamin. We will end the course in the mid-twentieth century. The purpose driving this course is to consider closely how this tradition generated questions that are still with us, such as: what is the act of interpretation; what is the ‘aesthetic’; what is ‘imitation’ or mimesis; and how are we to know an author’s intention. During the semester there will be four short writing assignments in the form of analytical essays (3 pages each). Students may use these small essays to build into a long piece of writing on a single text or group of texts at the end of the term. Most of our readings will come from a published anthology of literary criticism and theory; a few readings will be on Canvas.

COML 501 History of Literary Theory
Over the last three decades, the fields of literary and cultural studies have been reconfigured by a variety of theoretical and methodological developments. Bracing and often confrontational debates between theoretical and political positions as varied as Deconstruction, New Historicism, Cultural Materialism, Feminism, Queer Theory, Minority Discourse Theory, Colonial and Post-colonial Studies and Cultural Studies have, in particular, altered disciplinary agendas and intellectual priorities for students embarking on the professional study of literature. In this course, we will study key texts, statements and debates that define these issues, and will work towards a broad knowledge of the complex rewriting of the project of literary studies in process today. The reading list will keep in mind the Examination List in Comparative Literature. We will not work towards complete coverage but will ask how crucial contemporary theorists engage with the longer history and institutional practices of literary criticism.
Course usually offered in fall term
Also Offered As: CLST 511, ENGL 601, GRMN 534, REES 500
Activity: Seminar
1.0 Course Unit

COML 504 Electronic Literary Studies Proseminar

COML 506 Topics in Twentieth-Century Literature
This course treats some aspect of literary and cultural politics in the 20th-Century with emphasis varying by instructor.
Course not offered every year
Also Offered As: ENGL 461
Activity: Seminar
1.0 Course Unit
COML 509 Modernist Jewish Poetry
One version of this seminar considers works by Jewish women who wrote in Yiddish, Hebrew, English, and other languages in the late 19th through the 20th century. The texts, poetry and prose, will include both belles lettres and popular writings, such as journalism, as well as private works (letters and diaries) and devotional works. The course will attempt to define ‘Jewish writing,’ in terms of language and gender, and will consider each writer in the context of the aesthetic, religious, and national ideologies that prevailed in this period. Because students will come with proficiency in various languages, all primary texts and critical and theoretical materials will be taught in English translation. However, those students who can, will work on the original texts and share with the class their expertise to foster a comparative perspective. Because we will be discussing translated works, a secondary focus of the course will, in fact, be on literary translation’s process and products.
Taught by: Hellerstein

Activity: Seminar
1.0 Course Unit

COML 511 Life Writing: Autobiography, Memoir, and the Diary
This course introduces three genres of life writing: Autobiography, Memoir and the Diary. While the Memoir and the diary are older forms of first persons writing the Autobiography developed later. We will first study the literary-historical shifts that occurred in Autobiographies from religious confession through the secular Eurocentric Enlightenment men, expanded to women writers and to members of marginal oppressed groups as well as to non-European autobiographies in the twentieth century. Subsequently we shall study the rise of the modern memoir, asking how it is different from this form of writing that existed already in the middle ages. In the memoirs we see a shift from a self and identity centered on a private individual autobiographer to ones that comes from connections to a community, a country or a nation; a self of a memoirist that represents selves of others. Students will attain theoretical background related to the basic issues and concepts in life writing: genre, truth claims and what they mean, the limits of memory, autobiographical subject, agency or self, the autonomous vs. the relational self. The concepts will be discussed as they apply to several texts. Some examples are: parts of Jan Jacques Rousseau’s Confessions; the autobiography of Benjamin Franklin; selected East European autobiographies between the two world wars; the memoirs of Lady Ann Clifford, Sally Morgan, Mary Jamison and Saul Friedlander. The third genre, the diary, is a person account, organized around the passage of time, and its subject is in the present. We will study diary theories, diary’s generic conventions and the canonical text, trauma diaries and the testimonial aspect, the diary’s time, decoding emotions, the relation of the diary to an audience and the process of transition from archival manuscript to a published book. The reading will include travel diaries (for relocation and pleasure), personal diaries in different historical periods and countries, diaries in political conflict (as American Civil War women’s diaries, Holocaust diaries, Middle East political conflicts diaries). We will conclude with diaries online, and students will have a chance to experience and report about differences between writing a personal diary on paper and diaries and blogs on line. Each new subject in this online course will be preceded by an introduction. Specific reading and written assignments, some via links to texts will be posted weekly ahead of time. We will have weekly videos and discussions of texts and assigned material and students will post responses during these sessions and class presentations in the forums.
Taught by: Ben-Amos, B.

Activity: Online Course
1.0 Course Unit
COML 513 A Black Seed (He) Sowed: An Introduction to Paleography & History of Books
Writing and reading are common actions we do every day. Nonetheless they have changed over the centuries, and a fourteenth century manuscript appears to us very different from a Penguin book. The impact of cultural movements such as Humanism, and of historical events, such as the Reformation, reshaped the making of books, and therefore the way of reading them. The course will provide students with an introduction to the history of the book, including elements of paleography, and through direct contact with the subjects of the class: manuscripts and books. Furthermore, a section of the course will focus on digital resources, in order to make students familiar with ongoing projects related to the history of book collections (including the 'Philosophical Libraries' and the 'Provenance' projects, based at the Scuola Normale Superiore in Pisa and at Penn). The course will be conducted in English; a basic knowledge of Latin is desirable but not required.

Activity: Seminar
1.0 Course Unit

COML 523 The Trouble with Freud: Psychoanalysis, Literature, Culture
For professionals in the field of mental care, Freud's work is often regarded as outmoded, if not problematic psychologists view his work as non-scientific, dependent on theses that cannot be confirmed by experiments. In the realm of literary and cultural theory, however, Freud's work seems to have relevance still, and is cited often. How do we understand the gap between a medical/scientific reading of Freud's work, and a humanist one? Where do we locate Freud's relevance today? The graduate course will concentrate on Freud's descriptions of psychoanalytic theory and practice, as well as his writings on literature and culture. Prerequisite: Readings and discussions in English.
Taught by: Weissberg

COML 537 Topics in Cultural History
Topic for Spring 2016: Making and Marking Time. What is time? In the late 19th century, the questions of how to define time, how to slow down time, and, above all, how to accelerate movement have become focus of the work by many European philosophers who have tried to come to terms with what is now termed as the Industrial Revolution, and the idea of 'progress.' And can time be understood as something continuous, or is it fragmented, proceeding in fits and burst? Such contemplations on time have deeply influenced writers. Marcel Proust was a reader of Henri Bergson and translated his theories of time into a concept of memory. Thomas Mann has tried to navigate timelessness in a novel set on a 'Magic Mountain.' Virginia Woolf and James Joyce have pictured an entire universe in a single day (Mrs. Dalloway, Ulysses) while early 20th century Italian Futurists made the contemplation of time part of their manifestos. With them, and with expressionist writers in Germany or writers from the DADA movement there elsewhere in Europe, a reckoning with time would also influence their choice of genre and form, writerly practice, and technique. Parallel to these literary experimentation, pictures were set into motion in scholarly studies by Eadweard Muybridge and finally in the new medium film; Impressionist painters insisted on picturing fleeting moments, and composers experimented with temporal sequences. We may be able to understand a reconsideration of time as driving force for the modern movement, or simply 'modernity' In this seminar, we will study a selection of literary texts of the late 19th century and the modernist movement, consider the philosophical background and changes in historiography, and integrate a consideration of the visual arts and music. Course not offered every year
Also Offered As: ARTH 584, ENGL 563, GRMN 541
Activity: Seminar
1.0 Course Unit

COML 542 Topics in Eighteenth-Century British Literature
This course covers topics in eighteenth-century British literature. Its emphases varies with instructor.
Course not offered every year
Also Offered As: GRMN 542
Activity: Seminar
1.0 Course Unit

COML 543 The Elemental Turn
The unfolding effects of climate change—rising sea level, melting ice sheets, subsiding land masses, drought stricken regions, wild fires, air laden with greenhouse gases, and inundated cities—heighen our awareness of the elements: air, earth, fire and water. Within the context of the new materialism, philosophers, eco-critics, and writers are re-turning to the elements and encountering, at the same time, predecessor texts that assume new relevance. This seminar will place current thinking and writing about the elements into dialogue with older traditions ranging from the classical (Empedocles, Plato, Lucretius) to writers and thinkers of the eighteenth, nineteenth and twentieth centuries (e.g., Goethe, Novalis, Tieck, Stifter, Bachelard, Heidegger, Boehme).
Taught by: Richter
Course not offered every year
Also Offered As: GRMN 535
Activity: Seminar
1.0 Course Unit

COML 545 Plato and Aristotle in the Renaissance
In one of the most evocative frescoes of the Renaissance, Raphael juxtaposes Plato and Aristotle. The pairing would seem obvious, since the two thinkers t had been for centuries symbols of philosophy and wisdom. But only the recent revival of Plato, begun in the mid-fifteenth century, had allowed Latin West to gain a better understanding of Platonic philosophy and therefore to compar Plato's doctrines directly to those of Aristotle. Were master and disciple i harmony? And if not, which of the two should be favored? Such questions wer less innocent than one might think, and the answers to them had implications for philosophy, theology, speculation on the natural world, and even politics The course will offer an overview of Renaissance philosophy and culture by focusing on the different ways in which Plato and Aristotle were read, interpreted and exploited between the fifteenth and seventeenth centuries. The course will be conducted in English; a basic knowledge of Latin is desirable but not required.
Taught by: Del Soldato
Course not offered every year
Also Offered As: CLST 540, ITAL 540, PHIL 545
Activity: Seminar
1.0 Course Unit

COML 550 Stalinist Culture
This course will explore the cultural context in which the so-called Romantic Movement prospered, and will pay special attention to the relationship between the most notorious popular genres of the period (Gothic fiction and drama) and the poetic production of both canonical and emerging poets.
Taught by: Platt
Course not offered every year
Also Offered As: REES 549
Activity: Seminar
1.0 Course Unit

COML 552 Transalpine Tensions: Franco-Italian Rivalries in the Renaissance
In the Middle Ages and Early Modern period, France and the Italian States were bound together by linguistic, economic, political, and religious ties, and intellectual developments never flowed unilaterally from one country to the other. On the contrary, they were transtnational phenomena, and French and Italian thinkers and writers conceived of themselves and their work both in relation to and in opposition to one another. This course will consider the most fundamental aspects of Franco-Italian cultural exchange in the medieval and early modern period, with an emphasis on humanism, philosophical and religious debates, political struggles, and the rise of vernacular languages in literary and learned discourse. Authors to be studied include Dante, Petrarch, Boccaccio, Ficino, Pico della Mirandola Castiglione, Bembo, Rabelais, Marguerite de Navarre, Du Bellay, Machiavelli, and Montaigne. In addition to learning the material covered in the course, students will gain expertise in producing professional presentations and research papers, and will also have the opportunity to consult original material from the Kislak Center. This course is open to undergraduates with permission of the instructors. It counts toward the undergraduate minor in Global Medieval Studies and the graduate certificate in Global and Medieval Renaissance Studies. Undergraduates must obtain permission from instructor to enroll.
Taught by: Soldato
Course not offered every year
Also Offered As: FREN 541, ITAL 541
Activity: Seminar
1.0 Course Unit
COML 554 British Women Writers
A study of British women writers, often focusing on the women authors who came into prominence between 1775 and 1825.
Course not offered every year
Also Offered As: ENGL 553, GSWS 553
Activity: Seminar
1.0 Course Unit

COML 555 Affect Theory and Power
This seminar will examine contemporary affect theory and its relationship with Michel Foucault’s theory of power. We will begin by mapping out Foucault’s ‘analytics of power’ from his early work on power knowledge to his late work on embodiment, desire, and the care of the self. We will then turn to affect theory, an approach which centralizes the non-rational, emotive force of power. No previous knowledge of theory is required.
Taught by: Schaefer
Also Offered As: GSWS 554, RELS 552
Activity: Seminar
1.0 Course Unit

COML 558 Major Renaissance Writers
This is a monographic course, which may be on Spenser, Milton, or other major figures of the period. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Taught by: Sanchez
Course not offered every year
Also Offered As: ENGL 538
Activity: Seminar
1.0 Course Unit

COML 559 Myth Through Time and In Time
The textual and physical remains of Greek and Roman culture and belief as ‘myth’ entranced the post-antique European world and its neighbors. Makers, patrons and viewers manipulated those survivals to challenge and speak to a contemporary world. This course focuses on how and why artists and their patrons engaged the mythic and examines the various areas of political and religious life that sought animation through an evocation of narratives from the past. Readings and case studies will engage with very late antique, medieval, and early modern art, turning to the modern and contemporary as well. Moving to the modern lets us examine, among other things, how artists address the exclusionary histories of the past, to enable critiques of myths of supremacy by one gender, race, or culture over others.
Taught by: Kuttner, Brisman
Also Offered As: AAMW 559, ARTH 559, CLST 559, GRMN 559
Activity: Seminar
1.0 Course Unit

COML 561 Eighteenth-Century Novel
Please check the Comp Lit website for the course descriptions.
Taught by: DeJean
Course not offered every year
Also Offered As: ENGL 660, FREN 560
Activity: Seminar
1.0 Course Unit
Notes: This is a topics course.

COML 562 Public Environmental Humanities
This broadly interdisciplinary course is designed for Graduate and Undergraduate Fellows in the Penn Program in Environmental Humanities (PPEH) who hail from departments across Arts and Sciences as well as other schools at the university. The course is also open to others with permission of the instructors. Work in environmental humanities by necessity spans academic disciplines. By design, it can also address and engage publics beyond traditional academic settings. This seminar, with limited enrollment, explores best practices in public environmental humanities. Students receive close mentoring to develop and execute cross-disciplinary, public engagement projects on the environment.
Taught by: Wiggin
Course not offered every year
Also Offered As: ANTH 543, ENVS 544, GRMN 544, URBS 544
Activity: Seminar
1.0 Course Unit

COML 564 Modern British Literature
An introduction to British Literary Modernism. Specific emphasis will depend on instructor.
Course not offered every year
Also Offered As: ENGL 564
Activity: Seminar
1.0 Course Unit

COML 565 Reading Benjamin Reading Kafka
Readings and discussions in English. Walter Benjamin’s study of the works of Franz Kafka is as enlightening as it can be bewildering. Moving from philology to Marxism, metaphysics to messianism, Daoism to Talmud, this densely argued piece elliptically touches on almost all of Kafka’s published works in just four short sections. This seminar proposes a line-by-line reading Benjamin’s 1934 ‘Franz Kafka on the Tenth Anniversary of His Death’ with an eye to its literary, philosophical and religious contexts as well as to the rich history of its intellectual reception. Reading Kafka’s works as the essay evokes them, we will situate this piece with regard to Benjamin’s other writings, the essay’s interlocutors (Brod, Scholem, Lukacs, Brecht) and its most illustrious interpreters (Adorno, Arendt, Celan, Hamacher).
Taught by: Fleishman
Course not offered every year
Also Offered As: GRMN 545, JWST 565
Activity: Seminar
1.0 Course Unit
COML 566 The Long Nineteenth Century: Literature, Philosophy, Culture

The present course will discuss German literature and thought from the period of the French Revolution to the turn of the twentieth century, and put it into a European context. In regard to German literature, this is the period that leads from the Storm and Stress and Romanticism to the political period of the Vormarz, Realism, and finally Expressionism; in philosophy, it moves from German Idealism to the philosophy of Schopenhauer, Nietzsche, and neo-Kantian thought. It is also the period that saw the rise of the novel, and new forms of dramatic works. Painting moved out of the studio into plein air; the invention of photography made an imprint on all arts, and the rise of the newspaper led to new literary genres such as the feuilleton. Economically, Germany experienced the industrial revolution; politically, it was striving for a unification that was finally achieved in 1871. The nineteenth century saw the establishment of the bourgeoisie, the collapse of the German working class, and the idea of the nation state; it also saw Jewish emancipation, and the call for women's rights. Readings will focus on a variety of literary, political, and philosophical texts; and consider a selection of art works.

Taught by: Weissberg
Course not offered every year
Also Offered As: ARTH 777, GRMN 558
Activity: Seminar
1.0 Course Unit

COML 570 Topics in Criticism & Theory

Topic for Spring 2021: Cultures of Reading in Imperial Russia What did it mean to be a reader in imperial Russia? What did people read, and to what ends? How was literacy cultivated, and what were the social implications? In this course, students will read several canonical works of nineteenth-century Russian literature that thematize and foreground the act of reading: as a pursuit undertaken for the betterment of self, society, nation, and world; as a light pastime for the bored or underemployed; but also as an enterprise fraught with potential for moral or civic ruin. In addition to closely investigating allusions to the specific texts and authors read by literary characters, we will also examine the reading habits of our own authors as both consumers and producers of literary culture. We will consider these dynamics against a backdrop of constant fluctuations in educational policies, the book market, and the circulation of texts within and beyond Russia as we work together to develop an understanding of the imperial Russian reading public(s).

Taught by: Kim, Brian
Course not offered every year
Also Offered As: ARTH 573, CIMS 515, ENGL 573, GRMN 573, REES 683
Activity: Seminar
1.0 Course Unit

Notes: This course covers topics in literary criticism and theory. It’s specific emphasis varying with instructor.

COML 574 Faces of Love: Gender, Sexuality, and the Erotic in Persian Literature

Beloved, Lover and Love are three concepts that dominate the semantic field of eroticism in Persian literature and mysticism. The interrelation among these concepts makes it almost impossible to treat any one of the concepts separately. Moreover, there exists various faces and shades of love in the works of classical and modern Persian literature that challenges the conventional heteronormative assumptions about the sexual and romantic relationships between the lover and the beloved. A sharp contrast exists between the treatment of homosexuality and queerness in Islamic law, on the one hand and its reflection in Persian literature, particularly poetry (the chief vehicle of Persian literary expression), on the other. This course introduces and explores different faces of love, eroticism and homoeroticism in the Persian literary tradition from the dawn of dawn of the Persian poetry in the ninth century all through to the twenty-first century. It offers a comprehensive study of representations and productions of heteronormativity, sexual orientation and gender roles with particular reference to the notion of love, lover and beloved in Persian literature.

Taught by: Shams
Course usually offered in fall term
Also Offered As: COML 275, GSWS 275, GSWS 575, NELC 290, NELC 574
Activity: Lecture
1.0 Course Unit

Notes: No prior knowledge of Persian is required as all literary works will be available in English translation. Students are expected to attend seminars and take part in discussions. Please note that this syllabus is subject to change.

COML 575 Topics in African Literature

This course is based on a selection of representative texts written in African, as well as a few texts in English translation. It involves, a study of themes relating to social change and the persistence of cultural traditions, followed by an attempt at sketching the emergence of literary tradition by identifying some of the formal conventions established writers in their use of old forms and experiments with new.

Also Offered As: ENGL 589
Activity: Seminar
1.0 Course Unit

COML 579 Slavic Literary Theory in Western Context

This course will compare selected theoretical concepts advanced by Russian Formalists, Prague Structuralists, and the Bakhtin group (e.g., defamiliarization, aesthetic sign, dialogue) with similar or analogous notions drawn from Western intellectual tradition.

Taught by: Steiner, P.
Course not offered every year
Also Offered As: REES 575
Activity: Seminar
1.0 Course Unit
COML 580 Introduction to Bibliography
This course offers an introduction to the principles of descriptive and analytic bibliography and textual editing. The history of authorship, manuscript production, printing, publishing, and reading will be addressed as they inform an understanding of how a particular text came to be the way it is. Diverse theories of editing will be studied and put into practice with short passages. The course is generally suitable for students working in any historical period, but particular emphases specified in the current offerings on the English website. www.english.upenn.edu
Course offered fall; even-numbered years
Also Offered As: ENGL 574, HIST 574
Activity: Seminar
1.0 Course Unit

COML 582 Topics in Aesthetics
Topic title for Spring 2018: Walter Benjamin. Walter Benjamin (1892-1940) is a philosopher whose writings on art, literature, and politics have had tremendous influence on many disciplines in the Humanities and Social Studies. He has been variously described as one of the leading German-Jewish thinkers, and a secular Marxist theorist. With the publication of a four-volume collection of his works in English, many more of his writings have been made accessible to a wider public. Our seminar will undertake a survey of his work that begins with his studies on language and allegory, and continues with his autobiographical work, his writings on art and literature, and on the imaginary urban spaces of the nineteenth-century.
Course not offered every year
Also Offered As: ARTH 560, GRMN 580, JWST 582, PHIL 480
Activity: Seminar
1.0 Course Unit
Notes: This is a topics course.

COML 583 Materialism
How do we recognize materialism? This seminar poses this question by acknowledging ‘materialism’ as a contested category with disparate and contradictory historical meanings: as a synonym for dogmatism, as the arch-enemy of reason and morality, as the scientific philosophy of the revolutionary workers’ movement, as an alternative to (idealist) metaphysics, as a poetic practice, or as a central concern for material nature and environment, among others. Less concerned with enumerating philosophical systems, we will search out ‘family resemblances’ and materialist tendencies among a wide range of texts. To this end, we will not only read the major historical texts of the so-called materialists (from Lucretius to Spinoza, from La Mettrie to Lenin), but also engage with materialism’s supposed critics and antagonists (from Plato to Kant and Hegel). A special emphasis will be placed on the attempts to recuperate materialism as a positive category in recent critical theory and continental philosophy, for example, in the reinventions of Marxist and Spinozist traditions. We will also survey the attempts that found new traditions, such as aleatory materialism or various new materialisms. By reading exemplary literary texts that engage with the problem of materialism the seminar will also ask: can one speak of materialist poetics?
Taught by: Biareishyk
Course not offered every year

COML 589 Fantastic Literature 19th/20th Centuries
This course will explore fantasy and the fantastic in short tales of 19th- and 20th-century French literature. A variety of approaches – thematic, psychoanalytic, cultural, narratological – will be used in an attempt to test their viability and define the subversive force of a literary mode that contributes to shedding light on the dark side of the human psyche by interrogating the ‘real,’ making visible the unseen and articulating the unsaid. Such broad categories as distortions of space and time, reason and madness, order and disorder, sexual transgressions, self and other will be considered. Readings will include ‘recits fantastiques’ by Merimee, Gautier, Nerval, Maupassant, Breton, Pieyre de Mandiargues, Jean Ray and others.
Course not offered every year
Also Offered As: CIMS 582, FREN 582
Activity: Seminar
1.0 Course Unit

COML 590 Recent Issues in Critical Theory
This course is a critical exploration of recent literary and cultural theory, usually focusing on one particular movement or school, such as phenomenology, psychoanalysis, the Frankfurt School, or deconstruction. Course not offered every year
Also Offered As: CIMS 580, ENGL 590, GSWS 589, LALS 590
Activity: Seminar
1.0 Course Unit
COML 591 Theories of Nationalism
You cannot build a wall to stop the free flow of literary and creative ideas. But in constructing narratives of national identity, states have long adopted particular texts as ‘foundational.’ Very often these texts have been epics or romances designated ‘medieval,’ that is, associated with the period in which specific vernaculars or ‘mother tongues’ first emerged. France and Germany, for example, have long fought over who ‘owns’ the Strasbourg oaths, or the Chanson de Roland; new editions of this epic poem, written in French but telling of Frankish (Germanic) warriors, have been produced (on both sides) every time these two countries go to war. In this course we will thus study both a range of ‘medieval’ texts and the ways in which they have been claimed, edited, and disseminated to serve particular nationalist agendas. Particular attention will be paid to the early nineteenth century, and to the 1930s. Delicate issues arise as nations determine what their national epic needs to be. Russia, for example, needs the text known as The Song of Igor to be genuine, since it is the only Russian epic to predate the Mongol invasion. The text was discovered in 1797 and then promptly lost in Moscow’s great fire of 1812; suggestions that it might have been a fake have to be handled with care in Putin’s Russia. Similarly, discussing putative Mughal (Islamic) elements in so-called ‘Hindu epics’ can also be a delicate matter. Some ‘uses of the medieval’ have been exercised for reactionary and revisionist causes in the USA, but such use is much more extravagant east of Prague. And what, exactly, is the national epic of the USA? What, for that matter, of England? Beowulf has long been celebrated as an English Ur-text, but is set in Denmark, is full of Danes (and has been claimed for Ulster by Seamus Heaney). Malory’s Morte Darthur was chosen to provide scenes for the queen’s new robing room (following the fire that largely destroyed the Palace of Westminster in 1834), but Queen Victoria found the designs unacceptable: too much popery and adultery. Foundations of literary history still in force today are rooted in nineteenth-century historiography: thus we have The Cambridge History of Italian Literature and The Cambridge History of German Literature, each covering a millennium, even though political entities by the name of Italy and Germany did not exist until the later nineteenth century. What alternative ways of narrating literary history might be found? Literary models, which do not observe national boundaries, might be explored, and also the cultural history of watercourses, such as the Rhine, Danube, or Nile. The exact choice of texts to be studied will depend in part on the interests of those who choose to enroll. Faculty with particular regional expertise will be invited to visit specific classes.

COML 608 Global France
The purpose of this course is to examine the various modalities of interaction between anthropology and literature in modern French culture. Our guiding thesis is that the turn toward other cultures has functioned as a revitalizing element in the production of cultural artifacts while providing an alternative vantage point from which to examine the development of French culture and society in the contemporary period. The extraordinary innovations of 'ethnosurrealism' in the twenties and thirties by such key figures of the avant-garde as Breton, Artaud, Bataille, Caillois, and Leiris, have become acknowledged models for the postwar critical thought of Barthes, Derrida, and Foucault, as well as inspiring a renewal of anthropology as cultural critique in the United States. Besides the authors just indicated, key texts by Durkheim, Mauss and Levi-Strauss will be considered both on their own terms and in relation to their obvious influence. The institutional fate of these intellectual crossovers and their correlative disciplinary conflicts will provide the overarching historical frame for the course, from the turn of the century to the most recent debates.
Taught by: Richman

Activity: Seminar
1.0 Course Unit

COML 616 Approaches to Literary Texts
Most seminars focus on literary texts composed during a single historical period; this course is unusual in inviting students to consider the challenges of approaching texts from a range of different historical eras. Taught by a team of literary specialists representing diverse periods and linguistic traditions and conducted as a hands-on workshop, this seminar is designed to help students of literature gain expertise in analysis and interpretation of literary works across the boundaries of time, geography, and language, from classic to modern. Students will approach literature as a historical discipline and learn about key methodological issues and questions that specialists in each period and field ask about texts that their disciplines study. The diachronic and cross-cultural perspectives inform discussions of language and style, text types and genres, notions of alterity, fictionality, literariness, symbolism, intertextuality, materiality, and interfaces with other disciplines. This is a unique opportunity to learn in one course about diverse literary approaches from specialists in different fields. Master classes are taught by Kevin Brownlee, Linda Chance, Eva del Soldato, Huda Fakhreddine, Scott Francis, Nili Gold, Bridget Murnghan, Deven Patel, Kevin Platt, Michael Solomon, Emily Steiner, Julia Verkholantsev, and Emily Wilson.
Taught by: Verkholantsev

Activity: Seminar
1.0 Course Unit

COML 618 Medieval Poetics
This course may include some of the following fields: studies of medieval stylistic practices, formal innovations, and theories of form; medieval ideas of genre and form; medieval thought about the social, moral, and epistemological roles of poetry; interpretive theory and practice; technologies of interpretation; theories of fiction (fabula) and allegory; sacred and secular hermeneutics; theories of language and the histories of the language arts; vernacular(s) and Latinity; material texts.
Course not offered every year
Also Offered As: CLST 628, ENGL 721
Activity: Seminar
1.0 Course Unit

COML 620 Studies in the Eighteenth Century
This course varies in its emphases, but in recent years has explored the theory of narrative both from the point of view of eighteenth-century novelists and thinkers as well as from the perspective of contemporary theory. Specific attention is paid to issues of class, gender, and ideology. Course usually offered in fall term
Also Offered As: FREN 660
Activity: Seminar
1.0 Course Unit

COML 622 Postmodernism
An advanced seminar on postmodernist culture. Recently offered as a study of relationship between poetry and theory in contemporary culture, with readings in poststructuralist, feminist, marxist, and postcolonial theory and in poets of the Black Mountain and Language groups.
Course not offered every year
Also Offered As: ENGL 774
Activity: Seminar
1.0 Course Unit
COML 623 Literary History and Aesthetics in South Asia
This seminar surveys the multiple components of literary culture in South Asia. Students will engage critically with selected studies of literary history and aesthetics from the past two millennia. In order to introduce students to specific literary cultures (classical, regional, contemporary) and to the scholarly practices that situate literature in broader contexts of culture and society, the course will focus both on the literary theories - especially from the nineteenth and twentieth centuries - that position South Asia's literary cultures within broader disciplinary frameworks that use literary documents to inform social, historical and cultural research projects. The aim is to open up contexts whereby students can develop their own research projects using literary sources.
Taught by: Patel
Also Offered As: SAST 623
Activity: Seminar
1.0 Course Unit

COML 625 Global Perspectives in French Studies
This course explores the literal and literary landscapes of 19th-century Paris and Philadelphia, paying particular attention to the ways in which the built environment is shaped by and shapes shifting ideologies in the modern age. Although today the luxury and excesses of the 'City of Light' may seem worlds apart from the Quaker simplicity of the 'City of Brotherly Love,' Paris and Philadelphia saw themselves as partners and mutual referents during the 1800s in many areas, from urban planning to politics, prisons to paleontology. This interdisciplinary seminar will include readings from the realms of literature, historical geography, architectural history, and cultural studies as well as site visits to Philadelphia landmarks, with a view to uncovering overlaps and resonances among different ways of reading the City. We will facilitate in-depth research by students on topics relating to both French and American architectural history, literature, and cultural thought.
Taught by: Goulet/Wunsch
Course not offered every year
Also Offered As: FREN 620
Activity: Seminar
1.0 Course Unit

COML 626 Nineteenth-Century Novels: Representations of Work
A study of the tradition of 'serio-comic' literature from ancient times to the present, focusing on works that combine ostensibly incompatible tones, genres, and themes to produce a particular sense of man in history. Readings include: the dialogues of Lucian, Petronius' SATYRICON, extracts from Rabelais and Boccaccio, GULLIVER'S TRAVELS, extracts from Sterne, and Gogol's DEAD SOULS. Students will be expected to attend a series of undergraduate lectures on these works; an additional hour will be scheduled in which the history and theory of menippean satire will be discussed. Special attention is given to general problems of genre theory that are raised by works that seem to challenge generic norms.
Course not offered every year
Also Offered As: SPAN 630
Activity: Seminar
1.0 Course Unit

COML 627 South Asia Literature as Comparative Literature
The extent to which the narrative reflexes of the novel can accommodate and express the nature of human work are explored primarily in a study of two nineteenth-century writers. Eliot and Hardy. Reading for the course also includes novels and short stories of other nineteenth-century writers (Dickens, Zola, tolstoy, Stowe, Melville), and background reading on the social and philosophic theory of work.
Taught by: Goulding
Course not offered every year
Also Offered As: SAST 627
Activity: Seminar
1.0 Course Unit

COML 630 Introduction to Medieval Literature
Topics vary. Previous topics include The Grail and the Rose, Literary Genres and Transformations, and Readings in Old French Texts. Please see the department's website for current course description:
One-term course offered either term
Also Offered As: FREN 630
Activity: Seminar
1.0 Course Unit
Notes: This is a topics course.

COML 632 The Sanskrit Epics
Ancient India's two epic poems, composed in Sanskrit and received in dozens of languages over the span of two thousand years, continue to shape the psychic, social, and emotional worlds of millions of people around the world. The epic Mahabharata, which roughly translates to The Great Story of the Descendants of the Legendary King Bharata, is the longest single poem in the world (100,000 lines of Sanskrit verse) and tells the mythic history of dynastic power struggles in ancient India. An apocalyptic meditation on time, death, and the utter devastation brought upon the individual and the family unit through social disintegration, the epic also houses one of the great religious works of the world, The Bhagavad Gita (translation: The Song of God), which offers a buoy of hope and possibility in the dark ocean of the epic's violent narrative. The other great epic, The Ramayana (Rama's Journey), though essentially tragic, offers a brighter vision of human life, how it might be possible to live happily in an otherwise hopeless situation. It too is about struggles for power in ancient India but it offers characters--especially Rama--that serve as ideals for how human beings might successfully negotiate life's great challenges. It also provides a model of human social order that contrasts with dystopic polities governed by animals and demons.
Our course will engage in close reading of selections from both of these epic poems (in English translation, of course) and thus learn about the epic genre, its oral and textual forms in South Asia, and the numerous modes for interpreting the epic. We will also look at the reception of these ancient works in modern forms of media, such as the novel, television, theater, cinema and the comic book/anime. In the process, through selected essays and reflections, we will pay special attention to the ways in which the ancient epics remain deeply relevant in the modern world, reflecting on topics such as the aesthetics of war, the psychic life of social ideals, and creative responses to ethical conflicts.
Taught by: Patel

COML 657 Becoming Modern
Yuri Slezkine described the twentieth century as a ‘Jewish Age’—to be modern would essentially mean to be a Jew. In German historical and cultural studies, this linkage has long been made—only in reference to the last years of the German monarchy and the times of the Weimar Republic. Indeed, what has become known as ‘modern’ German culture—reflected in literature, music, and the visual arts and in a multitude of public media—has been more often than not assigned to Jewish authorship or Jewish subjects. But what do authorship and subject mean in this case? Do we locate the German-Jewish experience as the driving force of this new ‘modernity’, or is our understanding of this experience the result of this new ‘modern’ world?

Activity: Seminar
1.0 Course Unit
Notes: Graduate Seminar. Taught in English.

COML 675 Topics in 19th Century Literature
Edgar Allan Poe was considered a vulgar hack by many of his fellow Americans, but in 19th-century France, he was touted as an ill-fated poetic genius, the original poet maudit. Through the translations and biographical essays of Charles Baudelaire, who found in Poe a kindred spirit in the ‘gout de l'infini,’ French intellectuals came to know the American writer as a model of compositional lucidity and morbid mastery. From his inklings of an urban modernity in ‘The Man in the Crowd’ to the neurotic perversity of ‘Berenice,’ Poe’s aesthetics have cast an influential shadow on French culture. Beginning with Baudelaire, we will explore in this course the many literary and artistic movements in France that were directly inspired by Poe’s uncanny mix of the macabre and the methodical: Symbolist poetry (Valery, Mallarme), the Scientific Fantastic (Maupassant, Villers de l’Isle-Adam), fin-de-siecle Decadence (Huysmanns,Odilon Redon), Science Fiction, (Verne), the detective novel (Gaboriau), and 20th-century Surrealism (Breton, Max Ernst).

COML 677 The Life of Forms: Ontogenesis, Morphology, Literature
In recent years, the notions of form, formalism, and morphology have reentered contemporary debates across the humanities. This seminar considers the current resurgence of interest in form by tracing form’s evolving concepts throughout modernity. It departs from the observation that experimentation with and debates on form in art and literature are inextricably linked to various notions of life and the living. These debates—this is the provisional thesis of the seminar—are the battlefield where literary and art criticism undermine the major presuppositions of the western metaphysical tradition (e.g., determinations of inside-outside, form-content, living-inorganic). On the one hand, the seminar will explore a selective genealogy of various attempts to dynamize the concept of form through theories of 1) ontogenesis (e.g., Spinoza, Simondon, Malabou), 2) morphology (e.g., Goethe, Propp, Goldstein), and 3) aesthetics (e.g., Baumgarten, Schlegel brothers, Adorno). On the other hand, in order to investigate the political, ideological, and methodological implications of differing concepts of form, the seminar will bring together texts from different disciplines, including literary studies (literary morphology, Russian Formalism), art history (Focillon, Kubler), On the other hand, in order to investigate the political, ideological, and methodological implications of differing concepts of form, the seminar will bring together texts from different disciplines ranging from literary studies (e.g., Jolles, Russian Formalism, Jauss), art history (e.g., Panofsky, Focillon, Kubler), philosophy (e.g., Wittgenstein, Blumenberg, Macherey), history of science (e.g., Vygotsky, Varela), and sociology (e.g., Tarde, DeLanda). Finally, the seminar will engage in close reading of exemplary literary and art works, and situate the findings on the conjunction of form and life in current debates on New Formalisms (e.g., Levine, Levinson, Kornbluh) and New Materialisms (e.g., Bennett, Grosz).

Topics vary from year to year.
Course not offered every year
Also Offered As: ENGL 571, SPAN 682
Activity: Seminar
1.0 Course Unit
COML 683 Collective Violence, Trauma, and Representation
This seminar is organized as a laboratory space for graduate students and faculty working in a number of adjacent fields and problems. Seminar discussions will be led not only by the primary instructors, but also by a number of guests drawn from the Penn faculty. For the first weeks of the course, we will focus on seminal works in the interlinked areas of history and memory studies, cultural representations of collective violence, trauma studies, and other related topics. Beginning with the Xth week of the course, we will turn to case studies in a variety of geographic, cultural and historical contexts. Additionally, some later sessions of the course will be devoted to a presentation and discussion of a work in progress of a Penn graduate student, faculty member or a guest lecturer.

Activity: Seminar
1.0 Course Unit

COML 685 Literary Criticism and Theory in Japanese Literature
While the focus of this seminar will shift from year to year, the aim is to enable students to gain 1) a basic understanding of various theoretical approaches to literature, 2) familiarity with the histories and conventions of criticism, literary and otherwise, in Japan, 3) a few theoretical tools to think in complex ways about some of the most interesting and controversial issues of today, such as nationalism, imperialism, colonialism, postmodernism, and feminism, with particular focus on Japan's position in the world. The course is primarily intended for graduate students but is also open to advanced undergraduates with permission of the instructor. The course is taught in English, and all of the readings will be available in English translation. An optional discussion section may be arranged for those students who are able and willing to read and discuss materials in Japanese. This course will be taught in English and all texts will be read in English translation.

Taught by: Kano

Activity: Seminar
1.0 Course Unit

COML 700 African Literature and Society
An advanced seminar in anglophone African literature, possibly including a few works in translation.
Course not offered every year
Also Offered As: AFRC 775, ENGL 775
Activity: Seminar
1.0 Course Unit

COML 710 Political Economy and Social History of Africa and the African Diaspora
This course provides the opportunity for students to investigate the relationship between the emergence of African peoples as historical subjects and their location within specific geopolitical and economic circumstances.

Taught by: Hanchard
Course not offered every year
Also Offered As: AFRC 710, LALS 710, PSCI 711
Activity: Seminar
1.0 Course Unit

COML 711 Theory in/and East Asia
'Theory' can be exciting and seductive to some scholars, but intimidating or pretentious to others. Unfortunately, this difference in feeling about theoretical scholarship and discussion has a tendency to produce a divide in academia between those who 'do theory' and those who do not. This graduate seminar pursues the question of how theory can be engaged in the context of East Asian cultural studies, with the goal of collectively working through texts to understand how theoretical reflection opens up possibilities for productive conversations across disciplinary boundaries. Many critiques have been made of the way 'traveling theory' serves as a Euro-American universal applied to the 'raw material' of East Asian texts, or a transdisciplinary common language in the Humanities and Social Sciences. Instead, we will take such critiques as a starting point to pragmatically and creatively explore the intersections and interactions of 'theory' and 'East Asia,' emphasizing the archival, historical, political, and institutional contexts that motivate theorization. In that spirit, special attention will be given to discussing what problems we find in our own work that require theoretical consideration, and how such considerations might contribute to, challenge, or transform but may also include Japanese, Chinese, or Korean depending on student interest and language abilities.

Taught by: Poland
Course not offered every year
Also Offered As: EALC 711
Activity: Seminar
1.0 Course Unit

COML 714 Middle English Literature
This seminar will study a number of selected Middle English texts in depth. Attention will be paid to the textual transmission, sources, language, genre, and structure of the works. Larger issues, such as the influence of literary conventions (for example, 'courtly love'), medieval rhetoric, or medieval allegory will be explored as the chosen texts may require.

Course not offered every year
Also Offered As: CLST 610, ENGL 715
Activity: Seminar
1.0 Course Unit

COML 730 Topics in 16th-Century History and Culture
This is an advanced course treating topics in 16th Century history and culture particular emphasis varying with instructor.
Course not offered every year
Also Offered As: ENGL 730
Activity: Seminar
1.0 Course Unit
COML 734 Renaissance Drama
This is a topics course. For Spring 2015, the topic is Genre and Performative Media.
Taught by: Bushnell
Course not offered every year
Also Offered As: ENGL 734
Activity: Seminar
1.0 Course Unit

COML 736 Renaissance Studies
This is an advanced topics course treating some important issues in contemporary Renaissance studies.
Course not offered every year
Also Offered As: ENGL 736
Activity: Seminar
1.0 Course Unit
Notes: This is a topics course.

COML 753 Victorian British Literature
An advanced seminar treating some topics in Victorian British Literature, usually focusing on non-fiction or on poetry. See the Comparative Literature and Literary Theory Program's website for descriptions of the current offerings at http://ccat.sas.upenn.edu/Complit/
Also Offered As: ENGL 753
Activity: Seminar
1.0 Course Unit

COML 769 Feminist Theory
Specific topic varies. The seminar will bring together the study of early modern English literature and culture with histories and theories of gender, sexuality and race. Contact with 'the East' (Turkey, the Moluccas, North Africa and India) and the West (the Americas and the Caribbean) reshaped attitudes to identity and desire. How does this history allow us to understand, and often interrogate, modern theories of desire and difference? Conversely, how do postcolonial and other contemporary perspectives allow us to re-read this past?
Course not offered every year
Also Offered As: ENGL 769, GSWS 769, NELC 783, SAST 769
Activity: Seminar
1.0 Course Unit

COML 781 Writing Sound--Sounding Literature
Seminar on selected topics in sound studies. Please see department website http://ccat.sas.upenn.edu/Complit/ for current term course descriptions.
Taught by: Waltham-Smith
One-term course offered either term
Also Offered As: MUSC 781
Activity: Seminar
1.0 Course Unit

COML 786 Topics in 20th Century Art
Topics vary from year to year.
Taught by: Poggi
Course not offered every year
Also Offered As: ARTH 786, ITAL 685
Activity: Seminar
1.0 Course Unit

COML 790 Recent Issues in Critical Theory
Course varies with instructor.
Course not offered every year
Also Offered As: ENGL 790, GSWS 790
Activity: Seminar
1.0 Course Unit
Notes: This is a topics course.
COML 791 African Film and Media Pedagogy
This graduate seminar offers an intensive, critical, and collaborative study of contemporary African film and media production. The past three decades have seen an unprecedented shift in the African media landscape. Not only has the wide availability of satellite media across the continent made international film and television programming part of African popular culture, but moreover the growing film industries within the continent, most notably Nollywood, have altered how Africans are carving an image of themselves on the big and small screens. In partnership with local, regional, and international film and media centers, we will study a range of films—features, shorts, documentaries, and television shows—paying close attention to the means and sites of production as well as the formal qualities that distinguish these works. Many of the films we will analyze stand out both for their exceptional aesthetic quality as well as their remarkable ability to confront pressing political and social themes. But we will also think about trash: what counts as trashy media, and for whom? Who watches it, where, and why? Other questions we will ask include: What particular indigenous modes of storytelling do African films employ? What categories begin to emerge under the umbrella category of ‘African film and media’; and where do diasporan film and media practitioners and critics fit in this landscape? How are these films tackling some of the urgent questions of our times, including migration and globalization; ethnic, political, and economic polarization; gender and sexuality; and massive urbanization and industrialization sweeping Africa and other parts of the Global South? What role do festivals in various countries play in shaping media production and distribution? How important is the concept of authorship in this context? And how do these films challenge the dominant western trope of Africa as a spectacle, instead offering novel ways of picturing everyday African experiences that we rarely glimpse in western media? To explore these questions, we will visit multiple sites of film production, distribution, exhibition, and education, including Scribe Video Center in Philadelphia, Sankofa Films in Washington, D.C., and the College of Performing and Visual Art at Addis Ababa University in Ethiopia. Location and knowledge production are inextricably connected, and by considering African media production from these multiple sites, and collaborating with multiple stakeholders, this course offers a directly engaged pedagogy of the complex artistic, cultural, social, and political dynamics of African audiovisual creation. The travel component of this course entails a day trip to Washington, D.C. during the semester (tentative date: April 2, 2020) and a week-long trip to Addis Ababa at the end of the spring term (students applying for this course should be prepared to travel to Addis Ababa May 30, 2020-June 7, 2020). All expenses for travel, accommodation, and food will be covered, but students will need to hold a passport. Ultimately, this course aims to use film and media production to intervene in a larger discourse on how Africa is figured in the global humanities, not as an absent or passive actor but one actively engaged in producing art and humanistic knowledge that has much to teach us and the world. Admission to the course will be by permission only and students are required to submit a short statement of interest (max. 250 words) to dagw@english.upenn.edu and redkaren@sas.upenn.edu. Students must be prepared to travel to Addis Ababa and Washington D.C. as described in the syllabus, and must hold a passport. Taught by: Redrobe/Woubshet Course not offered every year
Also Offered As: AFRC 791, ARTH 791, CIMS 791, ENGL 777
Activity: Seminar
1.0 Course Unit

COML 981 M.A. Exam Prep
Course open to first-year Comparative Literature graduate students in preparation for required M.A. exam taken in spring of first year. Course not offered every year
Activity: Seminar
1.0 Course Unit

COML 998 Independent Study and Research
Designed to allow students to pursue a particular research topic under the close supervision of an instructor. One-term course offered either term
Activity: Independent Study
1.0 Course Unit

COML 999 Independent Reading and Research
May be taken for multiple course credit to a maximum of two for the M.A. and four for the Ph.D. Designed to allow students to broaden and deepen their knowledge of literary theory, a national literature, and/or an area of special interest. One-term course offered either term
Activity: Independent Study
1.0 Course Unit

Computer and Information Science (CIS)

CIS 099 Undergraduate Research/Independent Study
An opportunity for the student to become closely associated with a professor (1) in a research effort to develop research skills and techniques and/or (2) to develop a program of independent in-depth study in a subject area in which the professor and student have a common interest. The challenge of the task undertaken must be consistent with the student's academic level. To register for this course, the student must submit a detailed proposal, signed by the independent study supervisor, to the SEAS Office of Academic Programs (111 Towne) no later than the end of the 'add' period. Prerequisite: A maximum of 2 c.u. of CIS 099 may be applied toward the B.A.S. or B.S.E. degree requirements. One-term course offered either term
Activity: Independent Study
1.0 Course Unit

CIS 105 Computational Data Exploration
The primary goal of this course is to introduce computational methods of interacting with data. In this course, students will be introduced to the IPython programming environment. They will learn how to gather data, store it in appropriate data structures and then either write their own functions or use libraries to analyze and then display the salient information in that data. Data will be drawn from a variety of domains, including but not limited to travel, entertainment, politics, economics, biology etc. For BA Students: Formal Reasoning and Analysis
One-term course offered either term
Activity: Lecture
1.0 Course Unit
CIS 106 Visualizing the Past
Most people's information about the Past is drawn from coffee table picture books, popular movies, video games, documentaries about discoveries of 'ancient, mysterious, and lost' civilizations, and tours often lead by guides of limited or even dubious credentials. How are these ideas presented, formed, and circulated? Who creates and selects the information presented in this diverse media? Are these presentations accurate? Do they promote or hurt scientific explanations? Can the artistic, aesthetic, and scientific realms be bridged to effectively promote and interpret the past? How can modern technologies be applied to do a better job at presenting what is difficult to experience firsthand? This class will focus on case studies, c and methods of how archaeology and the past are created, presented and used in movies, museums, games, the internet, and art. Each year, the studio-seminar focuses on a project. In addition to exploring general concepts of archaeology and the media, students will work in teams to produce an interactive, digital media exhibit using the latest modeling visualization programs for presenting the sacred landscape of the Inca capital of Cuzco, Peru. Cuzco is one of the most important UNESCO World Heritage sites and visited by nearly a million tourists a year. Potential class projects include fly-throughs of architectural and landscape renderings, simulations of astronomy and cosmology, modeling of human behavior within architectural and landscape settings, and study artifacts in the Penn Museum.
One-term course offered either term
Also Offered As: ANTH 258
Activity: Lecture
1.0 Course Unit

CIS 110 Introduction to Computer Programming
Introduction to Computer Programming is the first course in our series introducing students to computer science. In this class you will learn the fundamentals of computer programming in Java, with emphasis on applications in science and engineering. You will also learn about the broader field of computer science and algorithmic thinking, the fundamental approach that computer scientists take to solving problems.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: See the CIS 110 website for information about registration in recitations and permission to register for closed sections of CIS 110. Counts as a Formal Reasoning course for College students.

CIS 120 Programming Languages and Techniques I
A fast-paced introduction to the fundamental concepts of programming and software design. This course assumes some previous programming experience, at the level of a high school computer science class or CIS110. (If you got at least 4 in the AP Computer Science A or AB exam, you will do great.) No specific programming language background is assumed: basic experience with any language (for instance Java, C, C++, VB, Python, Perl, or Scheme) is fine. If you have never programmed before, you should take CIS 110 first.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: This counts as a Formal Reasoning course for College students.

CIS 121 Programming Languages and Techniques II
This is a course about Algorithms and Data Structures using the JAVA programming language. We introduce the basic concepts about complexity of an algorithm and methods on how to compute the running time of algorithms. Then, we describe data structures like stacks, queues, maps, trees, and graphs, and we construct efficient algorithms based on these representations. The course builds upon existing implementations of basic data structures in JAVA and extends them for the structures like trees, studying the performance of operations on such structures, and the efficiency when used in real-world applications. A large project introducing students to the challenges of software engineering concludes the course.
Course usually offered in spring term
Prerequisites: CIS 120, 160
Activity: Lecture
1.0 Course Unit

CIS 125 Technology and Policy
Have you ever wondered why sharing music and video generates such political and legal controversies? Is information on your PC safe and should law enforcement be able to access information you enter on the Web? Will new devices allow tracking of your every move and every purchase? CIS 125 is focused on developing an understanding of existing and emerging technologies, along with the political, societal and economic impacts of those technologies. The technologies are spread across a number of engineering areas and each of them raise issues that are of current concern or are likely to be a future issue.
Activity: Lecture
1.0 Course Unit

CIS 160 Mathematical Foundations of Computer Science
What are the basic mathematical concepts and techniques needed in computer science? This course provides an introduction to proof principles and logics, functions and relations, induction principles, combinatorics and graph theory, as well as a rigorous grounding in writing and reading mathematical proofs.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CIS 181 The Quantum and the Computer
This Freshman Seminar is designed to be a very introductory exposition about Quantum Computation and Quantum Information Science. There are no formal physics, mathematics, or computer science prerequisites. It is meant primarily for freshmen in SAS and Wharton, who have an itch to learn about a beautiful subject that intrinsically unites quantum physics, computation, and information science. The structure of the course will be lecture-based using small-team based exercises for evaluation. The enrollment will be limited to 20 students. Freshmen standing.
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: No Prior Physics, Mathematics, or Computer Science Experience required.

CIS 188 Special Topics
This course will be used for 'pilot versions' of new CIS courses of this type that the department is planning to offer. A given course will be offered as CIS 188 at most twice; after this, it will be assigned a permanent course number.
Taught by: Swapneel Sheth
Activity: Lecture
0.5 Course Units
CIS 189 Solving Hard Problems in Practice
What does Sudoku have in common with debugging, scheduling exams, and routing shipments? All of these problems are provably hard -- no one has a fast algorithm to solve them. But in reality, people are quickly solving these problems on a huge scale with clever systems and heuristics! In this course, we’ll explore how researchers and organizations like Microsoft, Google, and NASA are solving these hard problems, and we’ll get to use some of the tools they’ve built!
Taught by: Swapneel Sheth
Prerequisite: CIS 121
Activity: Lecture
0.5 Course Units

CIS 190 C++ Programming
This course will provide an introduction to programming in C++ and is intended for students who already have some exposure to programming in another language such as Java. C++ provides the programmer with a greater level of control over machine resources and are commonly used in situations where low level access or performance are important. This course will illuminate the issues associated with programming at this level and will cover issues such as explicit memory management, pointers, the compilation process and debugging. The course will involve several programming projects which will provide students with the experience they need to program effectively in these languages. This course assumes programming experience equivalent to CIS 110, CIS 120 or ESE 112.
One-term course offered either term
Prerequisite: CIS 240
Activity: Lecture
0.5 Course Units

CIS 191 Using and Understanding Unix and Linux
Unix, in its many forms, runs much of the world’s computer infrastructure, from cable modems and cell phones to the giant clusters that power Google and Amazon. This half-credit course provides a thorough introduction to Unix and Linux. Topics will range from critical basic skills such as examin and editing files, compiling programs and writing shell scripts, to higher level topics such as the architecture of Unix and its programming model. The material learned is applicable to many classes, including CIS 240, CIS 331, CIS 341, CIS 371, and CIS 380.
One-term course offered either term
Prerequisite: CIS 110
Activity: Lecture
0.5 Course Units

CIS 192 Python Programming
Python is an elegant, concise, and powerful language that is useful for tasks large and small. Python has quickly become a popular language for getting things done efficiently in many in all domains: scripting, systems programming, research tools, and web development. This course will provide an introduction to this modern high-level language using hands-on experience through programming assignments and a collaborative final application development project.
One-term course offered either term
Prerequisite: CIS 120 OR ESE 112
Activity: Lecture
0.5 Course Units

CIS 193 C# Programming
C# is the premier programming language for the .NET framework. Over the last decade, the language has evolved to meet the needs of a variety of programming styles while supporting the ever-growing capabilities of the .NET runtime and libraries. This course provides a thorough introduction to the C# language and the .NET framework, building on the skills gained in the introductory programming courses (CIS 110, CIS 120, or ESE 112). In addition to providing the student with a solid background in C#, this course also explores topics that the .NET platform exposes such as object oriented design, .NET runtime internals, and others based on class interest. A series of short, weekly homework assignments reinforces the concepts introduced in class and a group-based final project of the students’ design allows them to apply their C# knowledge toward a substantial problem.
One-term course offered either term
Prerequisite: CIS 110
Activity: Lecture
0.5 Course Units

CIS 194 Haskell
Haskell is a high-level, purely functional programming language with a strong static type system and elegant mathematical underpinnings. It is being increasingly used in industry by organizations such as Facebook, AT&T, and NASA, along with several financial firms. We will explore the joys of function programming, using Haskell as a vehicle. The aim of the course will be to allo you to use Haskell to easily and conveniently write practical programs. All ar welcome, including those with no programming experience. Evaluation wil l be based on regular homework assignments and class participation.
One-term course offered either term
Activity: Lecture
0.5 Course Units

CIS 195 Mobile App Development
This project-oriented course is centered around application development on current mobile platforms like iOS and Android. The first half of the course will involve fundamentals of mobile app development, where students learn about mobile app lifecycles, event-based programming, efficient resource management, and how to interact with the range of sensors available on modern mobile devices. In the second half of the course, students work in teams to conceptualize and develop a significant mobile application. Creativity and originality are highly encouraged! Prerequisite: CIS 120 or previous programming experience.
One-term course offered either term
Prerequisite: CIS 120
Activity: Lecture
0.5 Course Units

CIS 196 Ruby on Rails Web Development
This course will teach the fundamentals of developing web applications using Ruby on Rails, a rapid-development web framework developed by Basecamp, and adopted by companies like Airbnb, GitHub, Bloomberg, CrunchBase, and Shopify. The first part of the course will focus on Ruby, the language that powers Rails. Along the way, students will also pick up essential skills such as git, bash, HTML and CSS. The second part will focus on Rails, the web framework and will include all topics required to develop and deploy production-ready modern web applications with Rails. Throughout the course, students will be working on a web application project of their own choosing. Upon completion of the course, this application will be deployed and made accessible to the public.
Prerequisite: CIS 120
Activity: Lecture
0.5 Course Units
CIS 197 Javascript
This course provides an introduction to modern web development frameworks, techniques, and practices used to deliver robust client side applications on the web. The emphasis will be on developing JavaScript programs that run in the browser. Topics covered include the JavaScript language, web browser internals, the Document Object Model (DOM), HTML5, client-side app architecture and compile-to-JS languages like (CoffeeScript, TypeScript, etc.). This course is most useful for students who have some programming and web development experience and want to develop moderate JavaScript skills to be able to build complex, interactive applications in the browser.
One-term course offered either term
Activity: Lecture
0.5 Course Units

CIS 198 Rust Programming
Rust is a new, practical, community-developed systems programming language that 'runs blazingly fast, prevents almost all crashes, and eliminates data ra (rust-lang.org). Rust derives from a rich history of languages to create a multi-paradigm (imperative/functional), low-level language that focuses on high-performance, zero-cost safety guarantee in concurrent programs. It has begun to gain traction in industry even before official 1.0 release in May 2015, showing a recognized need for a new low-level systems language. In this course, we will cover what makes Rust so unique and apply it to practical systems programming problems. Topics covered will include traits and generics; memory safety (move semantics, borrowing, and lifetimes); Rust's rich macro system; closures; and concurrency. Evaluation is based on regular homework assignments as well as a final project and class participation.
One-term course offered either term
Activity: Lecture
0.5 Course Units

CIS 223 Introduction to Data Ethics
This class introduces students to the basics of data ethics.
Taught by: Michael Kearns
One-term course offered either term
Prerequisite: CIS 121
Activity: Lecture
1.0 Course Unit

CIS 233 Introduction to Blockchain
Blockchain or Distributed Ledger Technology (DLT) provides a decentralized method of information sharing between parties that do not trust each other. Instead the trust is in the underlying cryptographic algorithms. This practical introductory course provides hands-on experience with the fundamentals of cryptography (codes and ciphers, symmetric and asymmetric encryption, public and private keys, hashes, and zero knowledge proofs) - as it is applied to implementing a blockchain solution. This course covers the basics of a distributed ledger, how it is built, used, and secured at the network and data-structure levels. Methods of ensuring consensus - from proof-of-work to more complex solutions (e.g. proof-of-time, proof-of-space, proof-of-stake) will be explored and analyzed. Students will have both written and practical, Python-based, assignments to build and deploy components of a blockchain solution.
One-term course offered either term
Prerequisite: CIS 120
Activity: Lecture
1.0 Course Unit

CIS 240 Introduction to Computer Systems
You know how to program, but do you know how computers really work? How do millions of transistors come together to form a complete computing system? This bottom-up course begins with transistors and simple computer hardware structures, continues with low-level programming using primitive machine instructions, and finishes with an introduction to the C programming language. This course is a broad introduction to all aspects of computer systems architecture and serves as the foundation for subsequent computer systems courses, such as Digital Systems Organization and Design (CIS 371), Computer Operating Systems (CIS 380), and Compilers and Interpreters (CIS 341).
Course usually offered in fall term
Prerequisite: CIS 110
Activity: Lecture
1.0 Course Unit

CIS 261 Discrete Probability, Stochastic Processes, and Statistical Inference
The purpose of this course is to provide a 1 CU educational experience which tightly integrates the theory and applications of discrete probability, discrete stochastic processes, and discrete statistical inference in the study of computer science. The intended audience for this class is both those students who are CS majors as well as those intending to be CS majors. Specifically, it will be assumed that the students will know: Set Theory, Mathematical Induction, Number Theory, Functions, Equivalence Relations, Partial-Order Relations, Combinatorics, and Graph Theory at the level currently covered in CIS 160. This course could be taken immediately following CIS 160. Computation and Programming will play an essential role in this course. The students will be expected to use the Maple programming environment in homework exercises which will include: numerical and symbolic computations, simulations, and graphical displays.
Course usually offered in fall term
Prerequisite: CIS 160
Activity: Lecture
1.0 Course Unit

CIS 262 Automata, Computability, and Complexity
This course explores questions fundamental to computer science such as which problems cannot be solved by computers, can we formalize computing as a mathematical concept without relying upon the specifics of programming languages and computing platforms, and which problems can be solved efficiently. The topics include finite automata and regular languages, context-free grammars and pushdown automata, Turing machines and undecidability, tractability and NP-completeness. The course emphasizes rigorous mathematical reasoning as well as connections to practical computing problems such as test processing, parsing, XML query languages, and program verification.
Course usually offered in fall term
Prerequisite: CIS 160
Activity: Lecture
1.0 Course Unit
CIS 320 Introduction to Algorithms
How do you optimally encode a text file? How do you find shortest paths in a map? How do you design a communication network? How do you route data in a network? What are the limits of efficient computation? This course gives a comprehensive introduction to design and analysis of algorithms, and answers along the way to these and many other interesting computational questions. You will learn about problem-solving; advanced data structures such as universal hashing and red-black trees; advanced design and analysis techniques such as dynamic programming and amortized analysis; graph algorithms such as minimum spanning trees and network flows; NP-completeness theory; and approximation algorithms. Course usually offered in spring term
Prerequisites: CIS 120, 121, 160, 262
Activity: Lecture
1.0 Course Unit

CIS 331 Introduction to Networks and Security
This course introduces principles and practices of computer and network security. We will cover basic concepts, threat models, and the security mindset; an introduction to cryptography and cryptographic protocols including encryption, authentication, message authentication codes, hash functions, public-key cryptography, and secure channels; an introduction to networks and network security including IP, TCP, routing, network protocols, web architecture, attacks, firewalls, and intrusion detection systems; an introduction to software security including defensive programming, memory protection, buffer overflows, and malware; and discuss broader issues and case studies such as privacy, security and the law, digital rights management, denial of service, and ethics. Course usually offered in fall term
Prerequisites: CIS 160, 240
Activity: Lecture
1.0 Course Unit

CIS 334 Advanced Topics in Algorithms
Can you check if two large documents are identical by examining a small number of bits? Can you verify that a program has correctly computed a function without ever computing the function? Can students compute the average score on an exam without ever revealing their scores to each other? Can you be convinced of the correctness of an assertion without ever seeing the proof? The answer to all these questions is in the affirmative provided we allow the use of randomization. Over the past few decades, randomization has emerged as a powerful resource in algorithm design. This course would focus on powerful general techniques for designing randomized algorithms as well as specific representative applications in various domains, including approximation algorithms, cryptography and number theory, data structure design, online algorithms, and parallel and distributed computation. Course not offered every year
Prerequisite: CIS 320
Activity: Lecture
1.0 Course Unit

CIS 341 Compilers and Interpreters
You know how to program, but do you know how to implement a programming language? In CIS341 you'll learn how to build a compiler. Topics covered include: lexical analysis, grammars and parsing, intermediate representations, syntax-directed translation, code generation, type checking, simple dataflow and control-flow analyses, and optimizations. Along the way, we study objects and inheritance, first-class functions (closures), data representation and runtime-support issues such as garbage collection. This is a challenging, implementation-oriented course in which students build a full compiler from a simple, typed object-oriented language to fully operational x86 assembly. The course projects are implemented using OCaml, but no knowledge of OCaml is assumed. Prerequisite: Two semesters of programming courses, e.g., CIS 120, 121, 240.
Course not offered every year
Activity: Lecture
1.0 Course Unit

CIS 350 Software Design/Engineering
You know how to write a 'program'. But how do you create a software 'product' as part of a team, with customers that have expectations of functionality and quality? This course introduces students to various tools (source control, automated build systems, programming environments, test automation, etc.) and processes (design, implementation, testing, and maintenance) that are used by professionals in the field of software engineering. Topics will include: software development lifecycle; agile and test-driven development; source control and continuous integration; requirements analysis; object-oriented design and testability; mobile and/or web application development; software testing; refactoring ; and software quality metrics.
Course not offered every year
Prerequisite: CIS 121
Activity: Lecture
1.0 Course Unit

CIS 371 Computer Organization and Design
This is the second computer organization course and focuses on computer hardware design. Topics covered are: (1) basic digital system design including finite state machines, (2) instruction set design and simple RISC assembly programming, (3) quantitative evaluation of computer performance, (4) circuits for integer and floating-point arithmetic, (5) datapath and control, (6) micro-programming, (7) pipeling, (8) storage hierarchy and virtual memory, (9) input/output, (10) different forms of parallelism including instruction level parallelism, data-level parallelism using both vectors and message-passing multi-processors, and thread-level parallelism using shared memory multiprocessors. Basic cache coherence and synchronization.
Course usually offered in spring term
Prerequisite: CIS 240
Activity: Lecture
1.0 Course Unit

CIS 380 Computer Operating Systems
This course surveys methods and algorithms used in modern operating systems. Concurrent distributed operation is emphasized. The main topics covered are as follows: process synchronization; interprocess communication; concurrent/distributed programming languages; resource allocation and deadlock; virtual memory; protection and security; distributed operation; distributed data; performance evaluation.
Course usually offered in fall term
Prerequisite: CIS 240
Activity: Lecture
1.0 Course Unit
CIS 390 Robotics: Planning Perception
This introductory course will present basic principles of robotics with an emphasis to computer science aspects. Algorithms for planning and perception will be studied and implemented on actual robots. While planning is a fundamental problem in artificial intelligence and decision making, robot planning refers to finding a path from A to B in the presence of obstacles and by complying with the kinematic constraints of the robot. Perception involves the estimation of the robots motion and path as well as the shape of the environment from sensors. In this course, algorithms will be implemented in Python on mobile platforms on ground and in the air. No prior experience with Python is needed but we require knowledge of data structures, linear algebra, and basic probability. Course not offered every year
Prerequisites: CIS 121 AND MATH 240
Activity: Lecture
1.0 Course Unit

CIS 398 Quantum Computer and Information Science
The purpose of this course is to introduce undergraduate students in computer computer science and engineering to quantum computers (QC) and quantum information science (QIS). This course is meant primarily for juniors and seniors in Computer Science. No prior knowledge of quantum mechanics (QM) is assumed. Enrollment is by permission of the instructor. One-term course offered either term
Prerequisites: PHYS 151, MATH 240, 312, 314, CIS 160 and 262
Activity: Lecture
1.0 Course Unit

CIS 399 Special Topics
Visit the CIS department website for descriptions of available Special Topics classes.
Course not offered every year
Activity: Lecture
0.5 Course Units
Notes: See the CIS department website for descriptions of available Special Topics classes

CIS 400 Senior Project
Design and implementation of a significant piece of work: software, hardware or theory. In addition, emphasis on technical writing and oral communication skills. Students must have an abstract of their Senior Project, which is approved and signed by a Project Adviser, at the end of the second week of Fall classes. The project continues during two semesters; students must enroll in CIS 401 during the second semester. At the end of the first semester, students are required to submit an intermediate report and give a class presentation describing their project and progress. Grades are based on technical writing skills (as per submitted report), oral presentation skills (as per class presentation) and progress on the project. These are evaluated by the Project Adviser and the Course Instructor. Senior standing or permission of instructor. Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CIS 401 Senior Project
Continuation of CIS 400. Design and implementation of a significant piece of work: software, hardware or theory. Students are required to submit a final written report and give a final presentation and demonstration of their project. Grades are based on the report, the presentation and the satisfactory completion of the project. These are evaluated by the Project Adviser and the Course Instructor. Course usually offered in spring term
Prerequisites: CIS 400, senior standing or permission of instructor
Activity: Lecture
1.0 Course Unit

CIS 410 CIS Senior Thesis
The goal of a Senior Thesis project is to complete a major research project under the supervision of a faculty member. The duration of the project is two semesters. To enroll in CIS 410, students must develop an abstract of the proposed work, and a member of the CIS graduate group must certify that the work is suitable and agree to supervise the project; a second member must agree to serve as a reader. At the end of the first semester, students must submit an intermediate report; if the supervisor and reader accept it, they can enroll in CIS 411. At the end of the second semester, students must describe their results in a written thesis and must present them publicly, either in a talk at Penn or in a presentation at a conference or workshop. Grades are based on the quality of the research itself (which should ideally be published or at least of publishable quality), as well as on the quality of the thesis and the oral presentation. The latter are evaluated jointly by the supervisor and the reader. The Senior Thesis program is selective, and students are generally expected to have a GPA is in the top 10-20% to qualify.
Activity: Senior Thesis
1.0 Course Unit

CIS 411 CIS Senior Thesis
The goal of a Senior Thesis project is to complete a major research project under the supervision of a faculty member. The duration of the project is two semesters. To enroll in CIS 410, students must develop an abstract of the proposed work, and a member of the CIS graduate group must certify that the work is suitable and agree to supervise the project; a second member must agree to serve as a reader. At the end of the first semester, students must submit an intermediate report; if the supervisor and reader accept it, they can enroll in CIS 411. At the end of the second semester, students must describe their results in a written thesis and must present them publicly, either in a talk at Penn or in a presentation at a conference or workshop. Grades are based on the quality of the research itself (which should ideally be published or at least of publishable quality), as well as on the quality of the thesis and the oral presentation. The latter are evaluated jointly by the supervisor and the reader. The Senior Thesis program is selective, and students are generally expected to have a GPA is in the top 10-20% to qualify.
Activity: Senior Thesis
1.0 Course Unit
CIS 419 Applied Machine Learning
Machine learning has been essential to the success of many recent technologies, including autonomous vehicles, search engines, genomics, automated medical diagnosis, image recognition, and social network analysis, among many others. This course will introduce the fundamental concepts and algorithms that enable computers to learn from experience, with an emphasis on their practical application to real problems. This course will introduce supervised learning (decision trees, logistic regression, support vector machines, Bayesian methods, neural networks and deep learning), unsupervised learning (clustering, dimensionality reduction), and reinforcement learning. Additionally, the course will discuss evaluation methodology and recent applications of machine learning, including large scale learning for big data and network analysis. One-term course offered either term
Also Offered As: CIS 519
Prerequisite: CIS 121
Activity: Lecture
1.0 Course Unit

CIS 421 Artificial Intelligence
This course investigates algorithms to implement resource-limited knowledge-based agents which sense and act in the world. Topics include, search, machine learning, probabilistic reasoning, natural language processing, knowledge representation and logic. After a brief introduction to the language, programming assignments will be in Python.
Also Offered As: CIS 521
Prerequisites: CIS 121 and ESE 301 or STAT 430
Activity: Lecture
1.0 Course Unit

CIS 423 Advanced Data Ethics
This class introduces aspiring data science technologists to the spectrum of ethical concerns, focusing on social norms like fairness, transparency and privacy. It introduces technical approaches to a number of these problems, including by hands-on examination of the tradeoffs in fairness and accuracy in predictive technology, introduction to differential privacy, and overview of evaluation conventions for predictive technology. It also provides guidelines for examining system training data for bias, representation (of race, gender and other characteristics) and ecological validity. Equipped with this knowledge, students will learn how to conduct informed analysis of the usefulness of predictive systems; they will audit for ethical concerns papers from the contemporary top artificial intelligence venues and the ongoing senior design projects.
Taught by: Michael Kearns
One-term course offered either term
Also Offered As: CIS 523
Prerequisite: CIS 121
Activity: Lecture
1.0 Course Unit

CIS 436 Introduction to Computational Biology & Biological Modeling
The goal of this course is to develop a deeper understanding of techniques and concepts used in Computational Biology. The course will strive to focus on a small set of approaches to gain both theoretical and practical understanding of the methods. We will aim to cover practical issues such as programming and the use of programs, as well as theoretical issues such as algorithm design, statistical data analysis, theory of algorithms and statistics. This course WILL NOT provide a broad survey of the field nor teach specific tools but focus on a deep understanding of a small set of topics. We will discuss string algorithms, hidden markov models, dimension reduction, and machine learning (or phylogeny estimation) for biomedical problems. Prerequisite: Probability theory and linear algebra are highly recommended.
Taught by: Kim
Course usually offered in fall term
Also Offered As: BIOL 437
Prerequisite: BIOL 446 AND MATH 104
Activity: Lecture
1.0 Course Unit

CIS 441 Embedded Software for Life-Critical Applications
The goal of this course is to give students greater design and implementation experience in embedded software development and to teach them how to model, design, verify, and validate safety critical systems in a principled manner. Students will learn the principles, methods, and techniques for building life-critical embedded systems, ranging from requirements and models to design, analysis, optimization, implementation, and validation. Topics will include modeling and analysis methods and tools, real-time programming paradigms and languages, distributed real-time systems, global time, time-triggered communications, assurance case, software architecture, evidence-based certification, testing, verification, and validation. The course will include a series of projects that implement life-critical embedded systems (e.g., pacemaker, infusion pumps, closed-loop medical devices).
One-term course offered either term
Also Offered As: CIS 541
Prerequisite: CIS 240
Activity: Lecture
1.0 Course Unit

CIS 450 Database and Information Systems
This course provides an introduction to the broad field of database and information systems, covering a variety of topics relating to structured data, ranging from data modeling to logical foundations and popular languages, to system implementations. We will study the theory of relational and XML data design; the basics of query languages; efficient storage of data, execution of queries and query optimization; transactions and updates; web-database development; and 'big data' and NoSQL systems. The course assumes mathematical and programming experience equivalent to CIS160 and CIST21.
Course usually offered in fall term
Also Offered As: CIS 550
Prerequisites: CIS 121, 160
Activity: Lecture
1.0 Course Unit

2020-21 Catalog | Generated 09/18/20
CIS 455 Internet and Web Systems
This course focuses on the challenges encountered in building Internet and web systems: scalability, interoperability (of data and code), security and fault tolerance, consistency models, and location of resources, services, and data. We will examine how XML standards enable information exchange; how web services support cross-platform interoperability (and what their limitations are); how to build high-performance application servers; how "cloud computing" services work; how to perform Akamai-like content distribution; and how to provide transaction support in distributed environments. We will study techniques for locating machines, resources, and data (including directory systems, information retrieval indexing, ranking, and web search); and we will investigate how different architectures support scalability (and the issues they face). We will also examine ideas that have been proposed for tomorrow's Web, and we will see some of the challenges, research directions, and potential pitfalls. An important goal of the course is not simply to discuss issues and solutions, but to provide hands-on experience with a substantial implementation project. This semester's project will be a peer-to-peer implementation of a Google-style search engine, including distributed, scalable crawling; indexing with ranking; and even PageRank. As a side-effect of the material of this course you will learn about some aspects of large-scale software development assimilating large APIs. Prerequisite: Familiarity with threads and concurrency, strong Java programming skills.
One-term course offered either term
Also Offered As: CIS 555
Activity: Lecture
1.0 Course Unit

CIS 460 Interactive Computer Graphics
This course focuses on programming the essential mathematical and geometric concepts underlying modern computer graphics. Using 3D interactive implementations, it covers fundamental topics such as mesh data structures, transformation sequences, rendering algorithms, and curve interpolation for animation. Students are also introduced to two programming languages widely used in the computer graphics industry: C++ and GLSL. The curriculum is heavily project-based, and culminates in a group project focused on building an interactive first-person world exploration application using the various real-time interaction and rendering algorithms learned throughout the semester.
Course usually offered in fall term
Also Offered As: CIS 560
Prerequisites: CIS 120, 121, 240
Activity: Lecture
1.0 Course Unit

CIS 461 Advanced Rendering
This course is designed to provide a comprehensive overview to computer graphics techniques in 3D modeling, image synthesis, and rendering. Topics cover: geometric transformations, geometric algorithms, software systems, 3D object models (surface, volume and implicit), visible surface algorithms, image synthesis, shading, mapping, ray tracing, radiosity, global illumination, sampling, anti-aliasing, Monte Carlo path tracing, and photon mapping. Prerequisite: A working knowledge of C++ programming is required (one year programming experience in general). Knowledge of vector geometry is useful.
One-term course offered either term
Also Offered As: CIS 561
Activity: Lecture
1.0 Course Unit

CIS 462 Computer Animation
This course covers core subject matter common to the fields of robotics, character animation and embodied intelligent agents. The intent of the course is to provide the student with a solid technical foundation for developing, animating and controlling articulated systems used in interactive computer game virtual reality simulations and high-end animation applications. The course balances theory with practice by 'looking under the hood' of current animation systems and authoring tools and examines the technologies and techniques used from both a computer science and engineering perspective. Topics covered include: geometric coordinate systems and transformations; quaternions; parametric curves and surfaces; forward and inverse kinematics; dynamic systems and control; computer simulation; keyframe, motion capture and procedural animation; behavior-based animation and control; facial animation; smart characters and intelligent agents. Prerequisite: Previous exposure to major concepts inn linear algebra (i.e. vector matrix math), curves and surfaces, dynamical systems (e.g. 2nd order mass-spring-damper systems) and 3D computer graphics has also been assumed in the preparation of the course materials.
One-term course offered either term
Also Offered As: CIS 562
Activity: Lecture
1.0 Course Unit

CIS 467 Scientific Computing
This course will focus on numerical algorithms and scientific computing techniques that are practical and efficient for a number of canonical science and engineering applications. Built on top of classical theories in multi-variable calculus and linear algebra (as a prerequisite), the lectures in this course will strongly focus on explaining numerical methods for applying these mathematical theories to practical engineering problems. Students will be expected to implement solutions and software tools using MATLAB/C++, practice state-of-the-art parallel computing paradigms, and learn scientific visualization techniques using modern software packages. Prerequisites: MATH 240; knowledge of C++, Python or MATLAB
Taught by: Chenfanfu Jiang
Also Offered As: CIS 567
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit

CIS 471 Computer Organization and Design
This is the second computer organization course and focuses on computer hardware design. Topics covered are: (1) basic digital system design including finite state machines, (2) instruction set design and simple RISC assembly programming, (3) quantitative evaluation of computer performance, (4) circuits for integer and floating-point arithmetic, (5) datapath and control, (6) micro-programming, (7) pipelining, (8) storage hierarchy and virtual memory, (9) input/output, (10) different forms of parallelism including instruction level parallelism, data-level parallelism using both vectors and message-passing multi-processors, and thread-level parallelism using shared memory multiprocessors. Basic cache coherence and synchronization. Prerequisite: Knowledge of at least one programming language.
Taught by: Joseph Devietti
Course usually offered in spring term
Also Offered As: CIS 571
Prerequisite: CIS 240
Activity: Lecture
1.0 Course Unit
CIS 497 DMD Senior Project
The goal of this course is to provide an opportunity for seniors to define, desand execute a project of your own choosing that demonstrates the technical skill and abilities that you have acquired during your 4 years as undergraduates. Evaluation is based on selecting an interesting topic, completing appropriate research on the state of the art in that area, communicating your objectives in writing and in presentations, accurately estimating what resources will be reqto complete your chosen task, coding necessary functionality, and executing your plan. Senior Standing or Permission of the instructor.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIS 498 Senior Capstone Project
The Senior Capstone Project is required for all BAS degree students, in lieu of the senior design course. The Capstone Project provides an opportunity for the student to apply the theoretical ideas and tools learned from other courses. The project is usually applied, rather than theoretical, exercise, and should focus on a real-world problem related to the career goals of the student. The one-semester project may be completed in either the fall or spring term of the senior year, and must be done under the supervision of a sponsoring faculty member. To register for this course, the student must submit a detailed proposal, signed by the supervising professor and the student’s faculty advisor, two weeks prior to the start of the term.
Taught by: Norman Badler
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

CIS 500 Software Foundations
This course introduces basic concepts and techniques in the foundational study of programming languages. The central theme is the view of programs and programming languages as mathematical objects for which precise claims may be made and proved. Particular topics include operational techniques for formal definition of language features, type systems and type safety properties, polymorphism, constructive logic, and the Coq proof assistant. This course is appropriate as an upper-level undergraduate CIS elective. Undergraduates who have satisfied the prerequisites are welcome to enroll. No permission from the instructor is needed. Prerequisite: In addition to course prerequisites, at least two additional undergraduate courses in math or theoretical CS.
One-term course offered either term
Prerequisite: CIS 121 AND 160 AND 262
Activity: Lecture
1.0 Course Unit

CIS 501 Computer Architecture
This course is an introductory graduate course on computer architecture with an emphasis on a quantitative approach to cost/performance design tradeoffs. The course covers the fundamentals of classical and modern uniprocessor design: performance and cost issues, instruction sets, pipelining, superscalar, out-of-order, and speculative execution mechanisms, caches, physical memory, virtual memory, and I/O. Other topics include: static scheduling, VLIW and EPIC, software speculation, long (SIMD) and short (multimedia) vector execution, multithreading, and an introduction to shared memory multiprocessors. Knowledge of computer organization and basic programming skills.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIS 502 Analysis of Algorithms
An investigation of paradigms for design and analysis of algorithms. The course will include dynamic programming, flows and combinatorial optimization algorithms, linear programming, randomization and a brief introduction to intractability and approximation algorithms. The course will include other advanced topics, time permitting. Prerequisite: Data Structures and Algorithms at the undergraduate level.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIS 505 Software Systems
This course provides an introduction to fundamental concepts of distributed systems, and the design principles for building large scale computational systems. Topics covered include communication, concurrency, programming paradigms, naming, managing shared state, caching, synchronization, reaching agreement, fault tolerance, security, middleware, and distributed applications. This course is appropriate as an upper-level undergraduate CIS elective. Prerequisite: Undergraduate-level knowledge of Operating Systems and Networking, programming experience. Prerequisite: Undergraduate-level knowledge of Operating Systems and Networking.
One-term course offered either term
Prerequisite: CIT 594
Activity: Lecture
1.0 Course Unit

CIS 511 Theory of Computation
Review of regular and context-free languages and machine models. Turing machines and RAM models, Decidability, Halting problem, Reductions, Recursively enumerable sets, Universal TMs, Church/Turing thesis. Time and space complexity, hierarchy theorems, the complexity classes P, NP, PSPACE, L, NL, and co-NL. Reductions revisited, Cook-Levin Theorem, completeness, NL = co-NL. Advanced topics as time permits: Circuit complexity and parallel computation, randomized complexity, approximability, interaction and cryptography. Discrete Mathematics, Automata theory or Algorithms at the undergraduate level.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIS 515 Fundamentals of Linear Algebra and Optimization
This course provides firm foundations in linear algebra and basic optimization techniques. Emphasis is placed on teaching methods and tools that are widely used in various areas of computer science. Both theoretical and algorithmic aspects will be discussed.
Taught by: Jean Gallier
One-term course offered either term
Activity: Lecture
1.0 Course Unit
CIS 518 Topics in Logic: Finite Model Theory and Descriptive Complexity
This course will examine the expressive power of various logical languages over the class of finite structures. The course begins with an exposition of some of the fundamental theorems about the behavior of first-order logic in the context of finite structures, in particular, the Ehrenfeucht-Fraisse Theorem and the Trakhtenbrot Theorem. The first of these results is used to show limitations on the expressive power of first-order logic over finite structures while the second result demonstrates that the problem of reasoning about finite structures using first-order logic is surprisingly complex. The course then proceeds to consider various extensions of first-order logic including fixed-point operators, generalized quantifiers, infinitary languages, and higher-order languages. The expressive power of these extensions will be studied in detail and will be connected to various problems in the theory of computational complexity. This last motif, namely the relation between descriptive and computational complexity, will be one of the main themes of the course.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

CIS 519 Applied Machine Learning
Machine learning has been essential to the success of many recent technologies, including autonomous vehicles, search engines, genomics, automated medical diagnosis, image recognition, and social network analysis, among many others. This course will introduce the fundamental concepts and algorithms that enable computers to learn from experience, with an emphasis on their practical application to real problems. This course will introduce supervised learning (decision trees, logistic regression, support vector machines, Bayesian methods, neural networks and deep learning), unsupervised learning (clustering, dimensionality reduction), and reinforcement learning. Additionally, the course will discuss evaluation methodology and recent applications of machine learning, including large scale learning for big data and network analysis.
One-term course offered either term
Also Offered As: CIS 419
Prerequisite: CIS 121
Activity: Lecture
1.0 Course Unit

CIS 520 Machine Learning
This course covers the foundations of statistical machine learning. The focus is on probabilistic and statistical methods for prediction and clustering in high dimensions. Topics covered include linear and logistic regression, SVMs, PCA and dimensionality reduction, EM and HMMs, and deep learning. Elementary probability, calculus, and linear algebra. Basic programming experience.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CIS 521 Artificial Intelligence
This course investigates algorithms to implement resource-limited knowledge-based agents which sense and act in the world. Topics include, search, machine learning, probabilistic reasoning, natural language processing, knowledge representation and logic. After a brief introduction to the language, programming assignments will be in Python.
One-term course offered either term
Also Offered As: CIS 421
Prerequisites: CIS 121 and ESE 301 or STAT 430
Activity: Lecture
1.0 Course Unit

CIS 522 Deep Learning for Data Science
Deep learning techniques now touch on data systems of all varieties. Sometimes, deep learning is a product; sometimes, deep learning optimizes a pipeline; sometimes, deep learning provides critical insights; sometimes, deep learning sheds light on neuroscience or vice versa. The purpose of this course is to deconstruct the hype by teaching deep learning theories, models, skills, and applications that are useful for applications.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CIS 523 Advanced Data Ethics
This class introduces aspiring data science technologists to the spectrum of ethical concerns, focusing on social norms like fairness, transparency and privacy. It introduces technical approaches to a number of these problems, including by hands-on examination of the tradeoffs in fairness and accuracy in predictive technology, introduction to differential privacy, and overview of evaluation conventions for predictive technology. It also provides guidelines for examining system training data for bias, representation (of race, gender and other characteristics) and ecological validity. Equipped with this knowledge, students will learn how to conduct informed analysis of the usefulness of predictive systems; they will audit for ethical concerns papers from the contemporary top artificial intelligence venues and the ongoing senior design projects.
Taught by: Michael Kearns
One-term course offered either term
Also Offered As: CIS 423
Prerequisite: CIS 121
Activity: Lecture
1.0 Course Unit

CIS 526 Machine Translation
Google translate can instantly translate between any pair of over fifty human languages (for instance, from French to English). How does it do that? Why does it make the errors that it does? And how can you build something better? Modern translation systems like Google Translate and Bing Translator learn how to translate by reading millions of words of already translated text, and this course will show you how they work. The course covers a diverse set of fundamental building blocks from linguistics, machine learning, algorithms, data structures, and formal language theory, along with their application to a real and difficult problem in artificial intelligence.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIS 530 Computational Linguistics
Computational approaches to the problem of understanding and producing natural language text and speech, including speech processing, syntactic parsing, semantic interpretation, discourse meaning, and the role of pragmatics and world knowledge. The course will examine both rule-based and corpus-based techniques. It is recommended that students have some knowledge of logic, basic linguistics, and/or programming.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
CIS 535 Introduction to Bioinformatics
This course provides overview of bioinformatics and computational biology as applied to biomedical research. A primary objective of the course is to enable students to integrate modern bioinformatics tools into their research activities. Course material is aimed to address biological questions using computational approaches and the analysis of data. A basic primer in programming and operating in a UNIX environment will be presented, and students will also be introduced to Python R, and tools for reproducible research. This course emphasizes direct, hands-on experience with applications to current biological research problems. Areas include DNA sequence alignment, genetic variation and analysis, motif discovery, study design for high-throughput sequencing RNA, and gene expression, single gene and whole-genome analysis, machine learning, and topics in systems biology. The relevant principles underlying methods used for analysis in these areas will be introduced and discussed at a level appropriate for biologists without a background in computer science. The course is not intended for computer science students who want to learn about biologically motivated algorithmic problems; BIOL 437/GCB 536 and GCB/CIS/BIOL537 are more appropriate. Prerequisites: An advanced undergraduate course such as BIOL 421 or a graduate course in biology such as Biol 526 (Experimental Principles in Cell and Molecular Biology), BIOL 527 (Advanced Molecular Genetics), BIOL 540 (Genetic Systems), or equivalent, is a prerequisite.
Taught by: B Voight, C Greene
Course usually offered in spring term
Also Offered As: GCB 536, PHRM 535
Prerequisite: BIOL 421 OR BIOL 526 OR BIOL 527 OR BIOL 528 OR
BIOL 540
Activity: Lecture
1.0 Course Unit

CIS 536 Fundamentals of Computational Biology
Introductory computational biology course designed for both biology students and computer science, engineering students. The course will cover fundamentals of algorithms, statistics, and mathematics as applied to biological problems. In particular, emphasis will be given to biological problem modeling and understanding the algorithms and mathematical procedures at the ‘pencil and paper’ level. That is, practical implementation of the algorithms is not taught but principles of the algorithms are covered using small sized examples. Topics to be covered are: genome annotation and string algorithms, pattern search and statistical learning, molecular evolution and phylogenetics, functional genomics and systems level analysis. Prerequisite: College level introductory biology required; undergraduate or graduate level statistics taken previously or concurrently required; molecular biology and/or genetics encouraged; programming experience encouraged
Taught by: Kim
Course usually offered in fall term
Also Offered As: BIOL 536, GCB 536
Prerequisite: ((BIOL 101 AND BIOL 102) OR BIOL 121) AND STAT 111 AND
STAT 112
Activity: Lecture
1.0 Course Unit

CIS 537 Biomedical Image Analysis
This course covers the fundamentals of advanced quantitative image analysis that apply to all of the major and emerging modalities in biological/biomaterials imaging and in vivo biomedical imaging. While traditional image processing techniques will be discussed to provide context, the emphasis will be on cutting edge aspects of all areas of image analysis (including registration, segmentation, and high-dimensional statistical analysis). Significant coverage of state-of-the-art biomedical research and clinical applications will be incorporated to reinforce the theoretical basis of the analysis methods. Prerequisite: Mathematics through multivariate calculus (MATH 241), programming experience, as well as some familiarity with linear algebra, basic physics, and statistics.
One-term course offered either term
Also Offered As: BE 537
Activity: Lecture
1.0 Course Unit

CIS 540 Principles of Embedded Computation
This course is focused on principles underlying design and analysis of computational elements that interact with the physical environment. Increasingly, such embedded computers are everywhere, from smart cameras to medical devices to automobiles. While the classical theory of computation focuses on the function that a program computes, to understand embedded computation, we need to focus on the reactive nature of the interaction of a component with its environment via inputs and outputs, the continuous dynamics of the physical world, different ways of communication among components, and requirements concerning safety, timeliness, stability, and performance. Developing tools for approaching design, analysis, and implementation of embedded systems in a principled manner is an active research area. This course will attempt to give students a coherent introduction to this emerging area. This course is appropriate as an upper-level undergraduate CIS elective. This course assumes mathematical maturity, commensurate with either ESE 210 (Introduction to Dynamical Systems), or CIS 262 (Introduction to Theory of Computation). It is suitable for students who have an undergraduate degree in computer science, or computer engineering, or electrical engineering. It is also suitable for Penn undergraduates in CIS or CE as an upper-level elective.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CIS 541 Embedded Software for Life-Critical Applications
The goal of this course is to give students greater design and implementation experience in embedded software development and to teach them how to model, design, verify, and validate safety critical systems in a principled manner. Students will learn the principles, methods, and techniques for building life-critical embedded systems, ranging from requirements and models to design, analysis, optimization, implementation, and validation. Topics will include modeling and analysis methods and tools, real-time programming paradigms and languages, distributed real-time systems, global time, time-triggered communications, assurance case, software architecture, evidence-based certification, testing, verification, and validation. The course will include a series of projects that implements life-critical embedded systems (e.g., pacemaker, infusion pumps, closed-loop medical devices).
One-term course offered either term
Also Offered As: CIS 441
Prerequisite: CIS 240
Activity: Lecture
1.0 Course Unit
CIS 542 Embedded Systems Programming
This course explores techniques for writing correct and efficient embedded code. Topics include C/C++ idioms, data abstraction, elementary data structures and algorithms, environment modeling, concurrency, hard real time, and modular program reasoning. C fluency. One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIS 545 Big Data Analytics
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CIS 547 Software Analysis
This course covers the theory and practice of software analysis - a body of algorithms and techniques to reason about program behavior with applications to effectively test, debug, and secure large, complex codebases. The course surveys a wide range of applications of software analysis including proving the absence of common programming errors, discovering and preventing security vulnerabilities, systematically testing intricate data structures and libraries, and localizing root causes in complex software failures. Familiarity with programming (CIS 120), algorithms (CIS 121), and mathematical foundations (CIS 160). Specifically: - Assignments involve programming in C/C++ in the LLVM compiler infrastructure. - Lectures and exams presume knowledge of search and graph algorithms, and background in logic and probability. Taught by: Mayur Naik
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIS 548 Operating Systems Design and Implementation
The purpose of this masters-level course is to teach the design and implementation of operating systems and operating systems concepts that appear in other advanced systems. The course divides into three major sections. The first part of the course discusses concurrency: how to manage multiple tasks that execute at the same time and share resources. Topics in this section include processes and threads, context switching, synchronization, scheduling, and deadlock. The second part of the course addresses the problem of memory management; it will cover topics such as linking, dynamic memory allocation, dynamic address translation, virtual memory, and demand paging. The third major part of the course concerns file systems, including topics such as storage devices, disk management and scheduling, directories, protection, and crash recovery. After these three major topics, the class will conclude with specialized topics such as virtual machines and case studies of different operating systems (e.g. Android, Windows, Linux, etc.). One-term course offered either term
Activity: Lecture
1.0 Course Unit

Notes: This is considered a faster-paced version of the CIS 380 taken by Penn undergraduates. Due to topic overlaps, undergraduates who have taken CIS 380 will not get credit for taking this course. Undergraduates who have taken CIS 380 should directly proceed to take CIS 505 if they are submatriculating.

CIS 549 Wireless Communications for Mobile Networks and Internet of Things
This course covers generations of wireless mobile network standards and systems, basic differences and their evolution, charting the development of mobile telecommunications systems from 3G, to today's state-of-the-art wireless technology 4G LTE, and the next generation wireless technology, 5G.
Taught by: Bongho Kim
One-term course offered either term
Prerequisite: ESE 407 or CIS 505 or 551 or 553
Activity: Lecture
1.0 Course Unit

CIS 550 Database and Information Systems
This course provides an introduction to the broad field of database and information systems, covering a variety of topics relating to structured data, ranging from data modeling to logical foundations and popular languages, to system implementations. We will study the theory of relational and XML data design; the basics of query languages; efficient storage of data, execution of queries and query optimization; transactions and updates; web-database development; and 'big data' and NoSQL systems. The course assumes mathematical and programming experience equivalent to CIS160 and CIST21
Taught by: Susan Davidson
Course usually offered in fall term
Also Offered As: CIS 450
Prerequisites: CIS 121, 160
Activity: Lecture
1.0 Course Unit

CIS 551 Computer and Network Security.
This is an introduction to topics in the security of computer systems and communication on networks of computers. The course covers four major areas: fundamentals of cryptography, security for communication protocols, security for operating systems and mobile programs, and security for electronic commerce. Sample specific topics include: passwords and offline attacks, DES, RSA, DSA, SHA, SSL, CBC, IPSEC, SET, DDoS attacks, biometric authentication, PKI, smart cards, S/MIME, privacy on the Web, viruses, security models, wireless security, and sandboxing. Students will be expected to display knowledge of both theory and practice through written examinations and programming assignments.
Taught by: Sebastian Angel
Course usually offered in spring term
Prerequisite: CIS 160 AND 240
Activity: Lecture
1.0 Course Unit

CIS 552 Advanced Programming
The goals of this course are twofold: (1) to take good programmers and turn them into excellent ones, and (2) to introduce them to a range of modern software engineering practices, in particular those embodied in advanced functional programming languages. Four courses involving significant programming and a discrete mathematics or modern algebra course. Enrollment by permission of the instructor only.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
CIS 553 Networked Systems
This course provides an introduction to fundamental concepts in the design and implementation of networked systems, their protocols, and applications. Topics to be covered include: Internet architecture, network applications, addressing, routing, transport protocols, network security, and peer-to-peer networks. The course will involve written assignments, examinations, and programming assignments. Students will work in teams to design and implement networked systems in layers, from routing protocols, transport protocols, to peer-to-peer networks.
One-term course offered either term
Prerequisite: CIS 121
Activity: Lecture
1.0 Course Unit

CIS 554 Programming Paradigms
Achieving mastery in a new programming language requires more than just learning a new syntax; rather, different languages support different ways to think about solving problems. Not all programming languages are inherently procedural or object-oriented. The intent of this course is to provide a basic understanding of a wide variety of programming paradigms, such as logic programming, functional programming, concurrent programming, rule-based programming, and others.
One-term course offered either term
Prerequisite: CIS 121 OR CIT 594
Activity: Lecture
1.0 Course Unit

CIS 555 Internet and Web Systems
This course focuses on the challenges encountered in building Internet and web systems: scalability, interoperability (of data and code), security and fault tolerance, consistency models, and location of resources, services, and data. We will examine how XML standards enable information exchange; how web services support cross-platform interoperability (and what their limitations are); how to build high-performance application servers; how ‘cloud computing’ services work; how to perform Akamai-like content distribution; and how to provide transaction support in distributed environments. We will study techniques for locating machines, resources, and data (including directory systems, information retrieval indexing, ranking, and web search); and we will investigate how different architectures support scalability (and the issues they face). We will also examine ideas that have been proposed for tomorrow’s Web, and we will see some of the challenges, research directions, and potential pitfalls. An important goal of the course is not simply to discuss issues and solutions, but to provide hands-on experience with a substantial implementation project. This semester’s project will be a peer-to-peer implementation of a Google-style search engine, including distributed, scalable crawling; indexing with ranking; and even PageRank. As a side-effect of the material of this course you will learn about some aspects of large-scale software development assimilating large APIs, thinking about modularity, reading other people’s code, managing versions, debugging, etc. Prerequisite: Familiarity with threads and concurrency, strong Java programming skills.
One-term course offered either term
Also Offered As: CIS 455
Activity: Lecture
1.0 Course Unit

CIS 556 Cryptography
This course is a graduate-level introduction to cryptography, both theory and applications. Topics covered include symmetric cryptography, message authentication, public-key cryptography, digital signatures, cryptanalysis, cryptographic security, and secure channels, as well as a selection of more advanced topics such as zero-knowledge proofs, secure multiparty computation, privacy-enhancing technologies, or lattice-based cryptography.
One-term course offered either term
Prerequisites: CIS 262, 320
Activity: Lecture
1.0 Course Unit

CIS 557 Programming for the Web
This course will focus on web programming. The first half will focus on the basics of the internet and the Web, HTML and CSS, and basic and advanced Ruby. The second half will focus on Rails. Teams (of size 2-3) will build a web application in the second half of the semester as the class project. Through Rails, we’ll explore the ‘culture’ of web programming such as agile methodology, testing, key aspects of software engineering, using web services and APIs, and deploying to the cloud.
Prerequisites: CIS 121, CIT 594, or equivalent, or permission of the instructor
Activity: Lecture
1.0 Course Unit

CIS 559 Programming and Problem Solving
This course develops students problem solving skills using techniques that they have learned during their CS training. Over the course of the semester, students work on group projects in which they use programming techniques to solve open-ended problems, e.g. optimization, simulation, etc. There are no ‘correct’ answers to these problems; rather, the focus is on the four steps of the problem solving process: algorithmic thinking; programming; analysis; and communication. Prerequisite: Proficiency in Java.
One-term course offered either term
Prerequisite: CIS 320 OR CIS 502
Activity: Lecture
1.0 Course Unit

CIS 560 Interactive Computer Graphics
This course focuses on programming the essential mathematical and geometric concepts underlying modern computer graphics. Using 3D interactive implementations, it covers fundamental topics such as mesh data structures, transformation sequences, rendering algorithms, and curve interpolation for animation. Students are also introduced to two programming languages widely used in the computer graphics industry: C++ and GLSL. The curriculum is heavily project-based, and culminates in a group project focused on building an interactive first-person world exploration application using the various real-time interaction and rendering algorithms learned throughout the semester.
Course usually offered in fall term
Also Offered As: CIS 460
Prerequisites: CIS 120, 121, 240
Activity: Lecture
1.0 Course Unit
CIS 561 Advanced Computer Graphics
This course is designed to provide a comprehensive overview to computer graphics techniques in 3D modeling, image synthesis, and rendering. Topics cover: geometric transformations, geometric algorithms, software systems, 3D object models (surface, volume and implicit), visible surface algorithms, image synthesis, shading, mapping, ray tracing, radiosity, global illumination, sampling, anti-aliasing, Monte Carlo path tracing, and photon mapping. Prerequisite: A working knowledge of C++ programming is required (one year programming experience in general). Knowledge of vector geometry is useful.
One-term course offered either term
Also Offered As: CIS 461
Activity: Lecture
1.0 Course Unit

CIS 562 Computer Animation
This course covers core subject matter common to the fields of robotics, character animation and embodied intelligent agents. The intent of the course is to provide the student with a solid technical foundation for developing, animating and controlling articulated systems used in interactive computer games, virtual reality simulations and high-end animation applications. The course balances theory with practice by ‘looking under the hood’ of current animation systems and authoring tools and exams the technologies and techniques used from both a computer science and engineering perspective. Topics covered include: geometric coordinate systems and transformations; quaternions; parametric curves and surfaces; forward and inverse kinematics; dynamic systems and control; computer simulation; keyframe, motion capture and procedural animation; behavior-based animation and control; facial animation; smart characters and intelligent agents. Prerequisite: Previous exposure to major concepts in linear algebra (i.e. vector matrix math), curves and surfaces, dynamical systems (e.g. 2nd order mass-spring-damper systems) and 3D computer graphics has also been assumed in the preparation of the course materials.
One-term course offered either term
Also Offered As: CIS 462
Activity: Lecture
1.0 Course Unit

CIS 563 Physically Based Animation
This course introduces students to common physically based simulation techniques for animation of fluids and gases, rigid and deformable solids, cloth, explosions, fire, smoke, virtual characters, and other systems. Physically based simulation techniques allow for creation of extremely realistic special effects for movies, video games and surgical simulation systems. We will learn state-of-the-art techniques that are commonly used in current special effects and animation studios and in video games community. To gain hands-on experience, students will implement basic simulators for several systems. The topics will include: Particle Systems, Mass spring systems, Deformable Solids & Fracture, Cloth, Explosions & Fire, Smoke, Fluids, Deformable active characters, Simulation and control of rigid bodies, Rigid body dynamics, Collision detection and handling, Simulation of articulated characters, Simulated characters in games. The course is appropriate for both upper level undergraduate and graduate students. Prerequisite: Students should have a good knowledge of object-oriented programming (C++) and basic familiarity with linear algebra and physics. Background in computer graphics is required (CIS 461 and 561).
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIS 564 Game Design and Development
The intent of the course is to provide students with a solid theoretical understanding of the core creative principles, concepts, and game play structures/schemas underlying most game designs. The course also will examine game development from an engineering point of view, including: game play mechanics, game engine software and hardware architectures, user interfaces, design documents, playtesting and production methods. Basic understanding of 3D graphics and animation principles, prior exposure to scripting and programming languages such as Python, C and C++
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIS 565 GPU Programming and Architecture
This course examines the architecture and capabilities of modern GPUs. The graphics processing unit (GPU) has grown in power over recent years, to the point where many computations can be performed faster on the GPU than on a traditional CPU. GPUs have also become programmable, allowing them to be used for a diverse set of applications far removed from traditional graphics settings. Topics covered include architectural aspects of modern GPUs, with a special focus on their streaming parallel nature, writing programs on the GPU using high level languages like Cg and BrookGPU, and using the GPU for graphics and general purpose applications in the area of geometry modeling, physical simulation, scientific computing and games. Students are expected to have a basic understanding of computer architecture and graphics, and should be proficient in OpenGL and C/C++. This course is appropriate as an upper-level undergraduate CIS elective. CIS 460 or CIS 560, and familiarity with computer hardware/systems. The hardware/systems requirement may be met by CIS 501; or CIT 593 and 595; or CIS 240 (with CIS 371 recommended); or equivalent coursework.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIS 566 Procedural Computer Graphics
Sprawling cities, dense vegetation, infinite worlds - procedural graphics empower technical artists to quickly create complex digital assets that would otherwise be unfeasible. This course is intended to introduce the mathematical and algorithmic foundations of procedural modeling and animation techniques, and to offer hands-on experience designing and implementing visual recipes in original graphics projects by applying these methods. Students should have a strong interest in both the creative and technical aspects of computer graphics, as well as a solid programming background.
One-term course offered either term
Prerequisite: CIS 460 OR CIS 560
Activity: Lecture
1.0 Course Unit
CIS 567 Scientific Computing
This course will focus on numerical algorithms and scientific computing techniques that are practical and efficient for a number of canonical science and engineering applications. Built on top of classical theories in multi-variable calculus and linear algebra (as a prerequisite), the lectures in this course will strongly focus on explaining numerical methods for applying these mathematical theories to practical engineering problems. Students will be expected to implement solutions and software tools using MATLAB/C++, practice state-of-the-art parallel computing paradigms, and learn scientific visualization techniques using modern software packages. Prerequisites: MATH 240, knowledge of C++, Python or MATLAB
Taught by: Chenfanfu Jiang
One-term course offered either term
Also Offered As: CIS 467
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit

CIS 568 Game Design Practicum
The objective of the game design practicum is to provide students with hands on experience designing and developing 3D computer games. Working in teams of three or four, students will brainstorm an original game concept, write a formal game design document then develop a fully functional prototype consisting of a playable level of the game. In addition to creation of original art and animation assets for the game, technical features to be designed and implemented include a novel game mechanic and/or user interaction model, game physics (i.e. particle systems and rigid body dynamics), character animation, game AI (i.e. movement control, path planning, decision making, etc.), sound effects and effects and background music, 2D graphical user interface (GUI) design and optional multiplayer networking capabilities. Consistent with standard industry practices, game code and logic will be written using C++ and popular scripting languages such as Python and Lua. State-of-the-art game and physics engine middleware also will be used to expose students to commercial-grade software, production methodologies and art asset pipelines. As a result of their game development efforts, students will learn first hand about the creative process, design documentation, object-oriented software design and engineering, project management (including effective team collaboration and communication techniques), design iteration through user feedback and play-testing, and most importantly, what makes a game fun to play.
One-term course offered either term
Prerequisite: CIS 460 OR CIS 461 OR CIS 462 OR CIS 560 OR CIS 561 OR CIS 562
Corequisite: CIS 564
Activity: Lecture
1.0 Course Unit

CIS 569 Machine Perception
An introduction to the problems of computer vision and other forms of machine perception that can be solved using geometrical approaches rather than statistical methods. Emphasis will be placed on both analytical and computational techniques. This course is designed to provide students with an exposure to the fundamental mathematical and algorithmic techniques that are used to tackle challenging image based modeling problems. The subject matter of this course finds application in the fields of Computer Vision, Computer Graphics and Robotics. Some of the topics to be covered include: Projective Geometry, Camera Calibration, Image Formation, Projective, Affine and Euclidean Transformations, Computational Stereopsis, and the recovery of 3D structure from multiple 2D images. This course will also explore various approaches to object recognition that make use of geometric techniques, these would include alignment based methods and techniques that exploit geometric invariants. In the assignments for this course, students will be able to apply the techniques to actual computer vision problems. This course is appropriate as an upper-level undergraduate CIS elective. A solid grasp of the fundamentals of linear algebra. Some knowledge of programming in C and/or Matlab
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CIS 571 Computer Organization and Design
This is the second computer organization course and focuses on computer hardware design. Topics covered are: (1) basic digital system design including finite state machines, (2) instruction set design and simple RISC assembly programming, (3) quantitative evaluation of computer performance, (4) circuits for integer and floating-point arithmetic, (5) datapath and control, (6) micro-programming, (7) pipelining, (8) storage hierarchy and virtual memory, (9) input/output, (10) different forms of parallelism including instruction level parallelism, data-level parallelism using both vectors and message-passing multi-processors, and thread-level parallelism using shared memory multiprocessors. Basic cache coherence and synchronization. Prerequisite: Knowledge of at least one programming language.
Taught by: Joseph Devietti
Course usually offered in spring term
Also Offered As: CIS 471
Prerequisite: CIS 240
Activity: Lecture
1.0 Course Unit

CIS 573 Software Engineering
This course covers the theory and practice of software analysis -- a body of algorithms and techniques to reason about program behavior with applications to effectively test, debug, and secure large, complex codebases. The course surveys a wide range of applications of software analysis including proving the absence of common programming errors, discovering and preventing security vulnerabilities, systematically testing intricate data structures and libraries, and localizing root causes in complex software failures. Topics covered include dataflow analysis, constraint-based analysis, type systems, program specifications, randomized testing, automated debugging, and symbolic execution. Prerequisite: Proficiency in Java.
Course usually offered in fall term
Prerequisite: CIT 594 OR CIS 350
Activity: Lecture
1.0 Course Unit

CIS 580 Machine Perception
An introduction to the problems of computer vision and other forms of machine perception that can be solved using geometrical approaches rather than statistical methods. Emphasis will be placed on both analytical and computational techniques. This course is designed to provide students with an exposure to the fundamental mathematical and algorithmic techniques that are used to tackle challenging image based modeling problems. The subject matter of this course finds application in the fields of Computer Vision, Computer Graphics and Robotics. Some of the topics to be covered include: Projective Geometry, Camera Calibration, Image Formation, Projective, Affine and Euclidean Transformations, Computational Stereopsis, and the recovery of 3D structure from multiple 2D images. This course will also explore various approaches to object recognition that make use of geometric techniques, these would include alignment based methods and techniques that exploit geometric invariants. In the assignments for this course, students will be able to apply the techniques to actual computer vision problems. This course is appropriate as an upper-level undergraduate CIS elective. A solid grasp of the fundamentals of linear algebra. Some knowledge of programming in C and/or Matlab
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
CIS 581 Computer Vision & Computational Photography
This is an introductory course to Computer Vision and Computational Photography. This course will explore three topics: 1) image morphing, 2) image matching and stitching, and 3) image recognition. This course is intended to provide a hands-on experience with interesting things to do on images/videos. The world is becoming image-centric. Cameras are now found everywhere, in our cell phones, automobiles, even in medical surgery tools. Computer vision technology has led to latest innovations in areas such as Hollywood movie production, medical diagnosis, biometrics, and digital library. This course is suited for students from all Engineering backgrounds, who have the basic knowledge of linear algebra and programming, and a lot of imagination.
Taught by: Jianbo Shi
Course not offered every year
Activity: Lecture
1.0 Course Unit

CIS 597 Master's Thesis Research
For students working on an advanced research leading to the completion of a Master's thesis.
One-term course offered either term
Activity: Masters Thesis
1.0 Course Unit

CIS 599 Independent Study for Masters Students
For master's students studying a specific advanced subject area in computer and information science. Involves coursework and class presentations. A CIS 599 course unit will invariably include formally gradable work comparable to that in a CIS 500-level course. Students should discuss with the faculty supervisor the scope of the Independent Study, expectations, work involved, etc.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

CIS 601 Advanced Topics in Computer Architecture
This course will focus on research topics in computer architecture, and include reading and presenting research papers and an optional project. The content will differ with each offering, covering topics such as multicore programmability, datacenter and warehouse-scale computing, security, energy-efficient architectures, etc.
One-term course offered either term
Prerequisite: CIS 501 OR CIS 371
Activity: Lecture
1.0 Course Unit

CIS 610 Advanced Geometric Methods in Computer Science
The purpose of this course is to present some of the advanced geometric methods used in geometric modeling, computer graphics, computer vision, etc. The topics may vary from year to year, and will be selected among the following subjects (nonexhaustive list): Introduction to projective geometry with applications to rational curves and surfaces, control points for rational curves, rectangular and triangular rational patches, drawing closed rational curves and surfaces; Differential geometry of curves (curvature, torsion, osculating planes, the Frenet frame, osculating circles, osculating spheres); Differential geometry of surfaces (first fundamental form, normal curvature, second fundamental form, geodesic curvature, Christoffel symbols, principal curvatures, Gaussian curvature, mean curvature, the Gauss map and its derivative dN, the Dupin indicatrix, the Theorema Egregium equations of Codazzi-Mainardi, Bonnet's theorem, lines of curvatures, geodesic torsion, asymptotic lines, geodesic lines, local Gauss-Bonnet theorem).
Course usually offered in spring term
Prerequisite: CIS 510
Activity: Seminar
1.0 Course Unit

CIS 620 Advanced Topics in Machine Learning
This course covers a variety of advanced topics in machine learning, such as the following: statistical learning theory (statistical consistency properties of surrogate loss minimizing algorithms); approximate inference in probabilistic graphical models (variational inference methods and sampling-based inference methods); structured prediction (algorithms and theory for supervised learning problems involving complex/structured labels); and online learning in complex/structured domains. The precise topics covered may vary from year to year based on student interest and developments in the field.
Course usually offered in spring term
Prerequisite: CIS 520
Activity: Seminar
1.0 Course Unit

CIS 625 Theory of Machine Learning
This course is an introduction to the theory of Machine Learning, a field which attempts to provide algorithmic, complexity-theoretic and statistical foundations to modern machine learning. The focus is on topics in machine learning theory for researchers and students in artificial intelligence, neural networks, theoretical computer science, and statistics.
Taught by: Michael Kearns
One-term course offered either term
Activity: Seminar
1.0 Course Unit

CIS 630 Advanced Topics in Natural Language Processing
Different topics selected each offering; e.g., NL generation, question-answering, information extraction, machine translation, restricted grammar formalisms, computational lexical semantics, etc.
One-term course offered either term
Prerequisite: CIS 530
Activity: Seminar
1.0 Course Unit
**CIS 640 Advanced Topics in Software Systems: Data Driven IoT/Edge Computing**

This course is to explore selected topics in data driven IoT/Edge Computing. We are currently witnessing a technological paradigm shift, in which the IoT systems are increasingly deployed in society. This course is to study emerging paradigms in IoT/Edge Computing and to learn how to develop data driven applications that can harness the power of the IoT/Edge computing. For application domains, the course will target connected medical devices, smart home for aging, and connected automotive systems. Topics to be covered include IoT/Edge computing architectures, the Internet of medical things, connected vehicles, anomaly detection, mixed initiative systems, closed-loop systems, resource allocation, and security and privacy. The course will require a significant term project in connected health or connected automotive domains.

Taught by: Insup Lee
Course usually offered in spring term
Prerequisite: (CIS 545 OR CIS 519) AND (CIS 505 OR CIS 541)
Activity: Lecture
1.0 Course Unit

---

**CIS 650 Advanced Topics in Databases**

Advanced topics in databases: distributed databases, integrity constraints, failure, concurrency control, relevant relational theory, semantics of data models, the interface between programming of languages and databases. Object-oriented databases. New topics are discussed each year.

Course usually offered in spring term
Prerequisite: CIS 550
Activity: Seminar
1.0 Course Unit

---

**CIS 660 Advanced Topics in Computer Graphics and Animation**

The goal of the course is to review state-of-the art research in the fields of computer graphics and animation as well as provide students with working knowledge of how to convert theory to practice by developing an associated graphics/animation authoring tool. The course is comprised of primers, lectures, student presentations and the authoring tool group project. Each student will be responsible for presenting one primer and at least two SIGGRAPH papers to the class. Working in teams of two, students will design and develop an authoring tool that that facilitates the creation of a new type of user interaction, animation/simulation capability or 3D graphics special effect. Research papers published in the SigGraph Conference proceedings will provide the basis for the features/functionality/special effects that can be selected for implementation in the authoring tool. Each group will analyze the need and user requirements for the tool they plan to develop, prepare a formal software design document, construct a project work plan, develop the authoring tool functionality and user interface, test the design and demonstrate the authoring of associated content. A plug-in to standard authoring tools such as Maya or Houdini must also be developed to enable importing of appropriate assets and/or exporting of results.

Course usually offered in spring term
Prerequisite: CIS 560
Activity: Seminar
1.0 Course Unit

---

**CIS 670 Advanced Topics in Programming Languages**

The details of this course change from year to year, but its purpose is to cover theoretical topics related to programming languages. Some central topics include: denotational vs operational semantics, domain theory and category theory, the lambda calculus, type theory (including recursive types, generics, type inference and modules), logics of programs and associated completeness and decidability problems, specification languages, and models of concurrency. The course requires a degree of mathematical sophistication.

One-term course offered either term
Prerequisite: CIS 500
Activity: Seminar
1.0 Course Unit

---

**CIS 673 Computer-Aided Verification**

This course introduces the theory and practice of formal methods for the design and analysis of concurrent and embedded systems. The emphasis is on the underlying logical and automata-theoretic concepts, the algorithmic solutions, and heuristics to cope with the high computational complexity. Topics: Models and semantics of reactive systems; Verification algorithms; Verification techniques. Topics may vary depending on instructor. Basic knowledge of algorithms, data structures, automata theory, propositional logic, operating systems, communication protocols, and hardware (CIS 262, CIS 380, or permission of the instructor).

One-term course offered either term
Activity: Lecture
1.0 Course Unit

---

**CIS 677 Advanced Topics in Algorithms and Complexity**

This course covers various aspects of discrete algorithms. Graph-theoretic algorithms in computational biology, and randomization and computation; literature in dynamic graph algorithms, approximation algorithms, and other areas according to student interests. Consent of the instructor.

Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

---

**CIS 680 Advanced Topics in Machine Perception**

Graduate seminar in advanced work on machine perception as it applies to robots as well as to the modeling of human perception. Topics vary with each offering. A previous course in machine perception or knowledge of image processing, experience with an operating system and language such as Unix and C, and aptitude for mathematics.

Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
CIS 682 Friendly Logics
The use of logical formalisms in Computer Science is dominated by a fundamental conflict: expressiveness vs. algorithmic tractability. Database constraint logics, temporal logics and description logics are successful compromises in this conflict: (1) they are expressive enough for practical specifications in certain areas, and (2) there exist interesting algorithms for the automated use of these specifications. Interesting connections can be made between these logics because temporal and description logics are modal logics, which in turn can be seen, as can database constraint logics, as certain fragments of first-order logic. These connections might benefit research in databases, computer-aided verification and AI. Discussion includes other interesting connections, eg., with SLD-resolution, with constraint satisfaction problems, with finite model theory and with automata theory.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIS 700 Special Topics
One time course offerings of special interest. Equivalent to a CIS 5XX level course.
Course not offered every year
Activity: Lecture
1.0 Course Unit

CIS 800 PhD Special Topics
One-time course offerings of special interest. Equivalent to CIS seminar course. Offerings to be determined.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIS 895 Teaching Practicum
Enrollment for students participating in Teaching Practicum.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIS 899 Doctoral Independent Study
For doctoral students studying a specific advanced subject area in computer and information science. The Independent Study may involve coursework, presentations, and formally gradable work comparable to that in a CIS 500 or 600 level course. The Independent Study may also be used by doctoral students to explore research options with faculty, prior to determining a thesis topic. Students should discuss with the faculty supervisor the scope of the Independent Study, expectations, work involved, etc. The Independent Study should not be used for ongoing research towards a thesis, for which the CIS 999 designation should be used.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

CIS 990 Masters Thesis
For master's students who have taken ten course units and need only to complete the writing of a thesis or finish work for incompletes in order to graduate. CIS 990 carries full time status with zero course units and may be taken only once.
Activity: Masters Thesis
1.0 Course Unit

CIS 995 Dissertation
For Ph.D. candidates working exclusively on their dissertation research, having completed enrollment for a total of ten semesters (fall and spring). There is no credit or grade for CIS 995.
Activity: Dissertation
1.0 Course Unit

CIS 999 Thesis/Dissertation Research
For students pursuing advanced research to fulfill PhD dissertation requirements.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

Computer and Information Technology (CIT)

CIT 590 Programming Languages and Techniques
Introduction to fundamental concepts of programming and computer science for students who have little or no experience in these areas. Principles of modern object-oriented programming languages: abstraction, types, polymorphism, encapsulation, and inheritance. Basic algorithmic techniques and informal complexity analysis. Graphical user interfaces. Substantial programming assignments in Python and Java. This course is for students who do not have an academic background in computer science and who are not pursuing the Master's in Computer Information Technology and who are not graduate students in the CIS Department.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIT 591 Introduction to Software Development
Introduction to fundamental concepts of programming and computer science. Principles of modern object-oriented programming languages: abstraction, types, polymorphism, encapsulation, inheritance, and interfaces. This course will also focus on best practices and aspects of software development such as software design, software testing, pair programming, version control, and using IDEs. Substantial programming assignments.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

CIT 592 Mathematical Foundations of Computer Science
This course introduces you to math concepts that form the backbone of the majority of computer science. Topics covered include sets, functions, permutations and combinations, discrete probability, expectation, mathematical induction and graph theory. The goal of the course is to ensure that students are comfortable enough with the math required for most of the CIS electives. CIS 502 and CIT596 heavily rely on concepts taught in this course.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
**CIT 593 Introduction to Computer Systems**
This course provides an introduction to fundamental concepts of computer systems and computer architecture. You will learn the C programming language and an instruction set (machine language) as a basis for understanding how computers represent data, process information, and execute programs. The course also focuses on the Unix environment and includes a weekly hands-on lab session.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

**CIT 594 Data Structures and Software Design**
This course will focus on data structures, software design, and advanced Java. The course starts off with an introduction to data structures and basics of the analysis of algorithms. Important data structures covered will include arrays, lists, stacks, queues, trees, hash maps, and graphs. The course will also focus on software design and advanced Java topics such as software architectures, design patterns, networking, multithreading, and graphics. We will use Java for the entire course.
One-term course offered either term
Prerequisite: CIT 593
Activity: Lecture
1.0 Course Unit

**CIT 595 Computer Systems Programming**
This course builds on your knowledge of C and focuses on systems programming for Linux, specifically the libraries that programmers use for threading and concurrency, synchronization, inter-process communication, and networking. The course also introduces the C++ programming language, and covers important concepts in modern operating systems, including processes, scheduling, caching, and virtual memory. After completing this course, you will have the requisite knowledge and experience for systems-focused CIS graduate-level electives.
One-term course offered either term
Prerequisite: CIT 593
Activity: Lecture
1.0 Course Unit

**CIT 596 Algorithms and Computation**
This course focuses primarily on the design and analysis of algorithms. We will begin with sorting and searching algorithms and then spend most of the course on graph algorithms. In order to study graph algorithms, general algorithm design patterns like dynamic programming and greedy algorithms will be introduced. A section of this course is also devoted to understanding NP-Completeness.
One-term course offered either term
Prerequisite: CIT 593
Activity: Lecture
1.0 Course Unit

**Creative Writing (CRWR)**
The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates/).

**CRWR 101 The Craft of Creative Writing**
The Craft of Creative Writing is designed for students who are new to creative writing or who would like to return to the fundamentals of craft. Through frequent writing assignments, assigned readings and collaborative discussions, students familiarize themselves with a variety of styles and approaches, exploring a range of literary genres including poetry, fiction, creative nonfiction, memoir and journalistic prose. Students are expected to hone their skills in creative practice, to revise and take risks with their work and to cultivate their habits of close reading and peer workshop.
Activity: Online Course
1.0 Course Unit

**CRWR 160 Modern and Contemporary US Poetry**
In this fast-paced introductory course, students read and discuss a wide range of modern and contemporary American poets, beginning with Emily Dickinson and Walt Whitman and ending with 21st-century avant-garde poets like Tracie Morris.
Questions central to this course include 'How does experimental poetry help us understand the transition between modernism and postmodernism?' and 'What is the relationship between experimental poetry and experimental teaching?' The poems and poets we study challenge students to read critically and think differently about what a poem is, about what art can be and about what poetry can teach us about reading, writing and learning. Students do not need to have any prior knowledge of poetry or poetics. The course operates primarily as a discussion. Rather than attending lectures, students participate in web-based discussions of the poems, accessible in text, audio and video formats. Requirements include active participation in the online discussion forums, in addition to five short papers, quizzes, creative exercises and a comprehensive final examination.
Taught by: Anna Strong Safford
Also Offered As: ENLT 160
Activity: Online Course
1.0 Course Unit

**CRWR 201 Poetry Workshop**
Poetry Workshop is a course for students who are new to poetry or who would like to return to the fundamentals of poetry. This workshop uses frequent writing assignments, assigned readings and collaborative workshop discussions to explore various elements of poetic craft, including imagery, metaphor, line, stanza, music, rhythm, diction, and tone.
Activity: Online Course
1.0 Course Unit

**CRWR 240 The Art of Editing**
TBA
Taught by: Julia Bloch
Activity: Online Course
1.0 Course Unit

**CRWR 260 Fiction Workshop**
Fiction Workshop is a course for students who are new to fiction writing or who are new to fiction writing or who would like to return to the fundamentals of fiction. This collaborative workshop uses frequent writing assignments, assigned readings and workshop discussions to explore various elements of the craft of fiction, including character, form, description, dialogue, setting, genre, and plot.
Activity: Online Course
1.0 Course Unit
CRWR 300 Writing About Place
This multi-genre, collaborative workshop is devoted to writing of and about place both literally writing about the city or the landscape, for example and figuratively writing that engages thematically and formally with location, with displacement and with the writing process itself as a form of mapping and belonging.
Activity: Online Course
1.0 Course Unit

CRWR 320 Screenwriting
Students are required to complete and revise the first 30 pages of a feature-length screenplay. In place of introductory lectures on story and cinema, an interactive presentation provides multimedia lectures that include sample text, images, and audio and video clips. In addition to two rounds of individual student workshop sessions, students have one-on-one meetings with the instructor conducted through video, audio, or text chat. The final grade is a cumulative assessment of student performance over the course of the term, factoring in all assignments, participation in discussion threads and progress made in the revision of 30 screenplay pages.
Taught by: John Scott F. Burkhardt
Also Offered As: CINM 320
Activity: Online Course
1.0 Course Unit

CRWR 360 Advanced Nonfiction
This is a how-to course for talented aspiring writers, drawn from the instructor's three decades of experience as a full-time working journalist. Learn how to write well in the real world, how to hook the reader and sustain interest, how to mix scenes with exposition, and how to develop the journalistic skills that enable a writer to gather, sift and report information. While reading assignments include famous practitioners of nonfiction writing including Susan Orlean and Gene Weingarten, along with recent Penn alumni Matt Flegenheimer and David Murrell the emphasis is on writing and reporting nonfiction pieces from personal memoirs to observational features and profiles of interesting people. The course is designed to inspire you to tap into your potential, gain fresh insights, and feel comfortable enough to share written assignments—both short and long pieces—with classmates over the span of the semester. The course also addresses practical and ethical journalistic issues such as selecting and handling interviewees, how to use (and not use) the internet, and when to use (or not use) anonymous sources.
Activity: Online Course
1.0 Course Unit

CRWR 370 Journalism
Activity: Online Course
1.0 Course Unit

CRIM 100 Criminology
This introductory course examines the multi-disciplinary science of law-making, law-breaking, and law-enforcing. It reviews theories and data predicting where, when, by whom and against whom crimes happen. It also addresses the prevention of different offense types by different kinds of offenders against different kinds of people. Police, courts, prisons, and other institutions are critically examined as both preventing and causing crime. This course meets the general distribution requirement.
For BA Students: Society Sector
Course usually offered in fall term
Also Offered As: SOCI 233
Activity: Lecture
1.0 Course Unit

CRIM 200 Criminal Justice
This course examines how the criminal justice system responds to crime in society. The course reviews the historical development of criminal justice agencies in the United States and Europe and the available scientific evidence on the effect these agencies have on controlling crime. The course places an emphasis on the functional creation of criminal justice agencies and the discretionary role decision makers in these agencies have in deciding how to enforce criminal laws and whom to punish. Evidence on how society measures crime and the role that each major criminal justice agency plays in controlling crime is examined from the perspective of crime victims, police, prosecutors, jurors, judges, prison officials, probation officers and parole board members. Using the model of social policy evaluation, the course asks students to consider how the results of criminal justice could be more effectively delivered to reduce the social and economic costs of crime.
For BA Students: Society Sector
Course usually offered in spring term
Also Offered As: SOCI 200
Activity: Lecture
1.0 Course Unit

CRIM 240 Forensic Analysis
This course discusses the need for stronger scientific foundations in the analysis of forensic evidence from a scientific and a policy perspective. Forensic evidence, such as fingerprints, firearms, and hair, has been analyzed for hundreds of years to inform crime investigations and prosecutions. However, recent advances, especially the use of DNA technology, have revealed that a faulty forensic analyses may have contributed to wrongful convictions. These advances have demonstrated the potential danger of information and testimony derived from imperfect analysis, which can result not just in wrongful convictions but also in errors of impunity. In this course, students learn about the history of forensics, as well as about the recent advances that aim to improve current practices. It is an interdisciplinary course, but it focuses mostly on the statistical and scientific aspects of testing in forensics. Students discuss recent solutions that quantify the uncertainty, limitations, and errors associated with human factors, pattern evidence, and digital evidence. No prior statistical or forensic knowledge is expected.
Course will be useful for students who wish to become forensic practitioners, law enforcement officers, lawyers, judges, researchers, or simply informed citizens.
Taught by: Cuellar
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
CRIM 250 Statistics for the Social Sciences I
Statistical techniques and quantitative reasoning are essential tools for properly examining questions in the social sciences. This course introduces students to the concepts of probability, estimation, confidence intervals, and how to use the statistical concepts and methods to answer social science questions. The course will require the use of R, a free, open source statistical analysis program. This course has been approved for the quantitative data analysis requirement (QDA).
Taught by: Ridgeway
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CRIM 251 Statistics for the Social Sciences II
In this course, students learn to conduct quantitative data analyses for social sciences, with an emphasis on identifying causal relationships in data. Many social science analyses aim to answer causal questions: Do longer prison sentences reduce crime? Do tougher gun laws reduce homicides and suicides? Can summer jobs help keep youth safe? Students will learn about research designs and data analysis methods to answer these kinds of questions, and especially to learn to implement them in practice. The goal of this class is to help students conduct their own analyses, and to become critical readers of statistical analyses, both in social science publications and in public discourse. The focus will be on what to compute and how to interpret the results. The emphasis is on the intelligent use of statistics. We will be using R, an open-source programming language.
Course usually offered in spring term
Prerequisite: CRIM 250
Activity: Lecture
1.0 Course Unit

CRIM 260 Crime and Human Development
One of the central research problems in criminology is the relationship between human development and the likelihood of committing crime. This course will examine the tools for measuring the onset of crime, its persistence, intermittency, and desistence. These tools include the study of birth cohorts of everyone born in a certain time and place, life course studies of juvenile delinquents and non-delinquents, trajectory analysis of people studied from pre-school through middle age, and interviews with 70 year old former delinquents who reflect on how their life-course affected the crimes they committed. This course will also examine the research findings that have been produced using these tools. Students will be asked to consider what these findings imply for major theories of crime causation as well as policies for crime prevention.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

CRIM 260 Biopsychosocial Criminology
Is there a ‘natural-born killer’? Why don’t psychopaths have a conscience? And is it morally wrong for us to punish those who are biologically-wired for a life of crime? This interdisciplinary biosocial course argues that answers to these inscrutable questions can be found in the fledgling field of neurocriminology. This new sub-discipline brings together the social, clinical, and neurosciences to help us better understand, predict, and prevent future crime. We will explore the biosocial bases to crime and violence, analyze controversial neuroethical, legal and philosophical issues surrounding neurocriminology, and take a field trip to prison. This interdisciplinary course presents perspectives from the fields of psychology, neuroscience, criminology, sociology, law, business, public health, psychiatry, anthropology, neuroimaging, neuroendocrinology, forensics, nutrition, and pediatrics. It is suitable for those without a background in biology or criminology. It is particularly relevant for majors in Criminology, Psychology, Nursing, and Biological Basis of Behavior.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CRIM 270 Biopsychosocial Criminology
Is there a ‘natural-born killer’? Why don’t psychopaths have a conscience? And is it morally wrong for us to punish those who are biologically-wired for a life of crime? This interdisciplinary biosocial course argues that answers to these inscrutable questions can be found in the fledgling field of neurocriminology. This new sub-discipline brings together the social, clinical, and neurosciences to help us better understand, predict, and prevent future crime. We will explore the biosocial bases to crime and violence, analyze controversial neuroethical, legal and philosophical issues surrounding neurocriminology, and take a field trip to prison. This interdisciplinary course presents perspectives from the fields of psychology, neuroscience, criminology, sociology, law, business, public health, psychiatry, anthropology, neuroimaging, neuroendocrinology, forensics, nutrition, and pediatrics. It is suitable for those without a background in biology or criminology. It is particularly relevant for majors in Criminology, Psychology, Nursing, and Biological Basis of Behavior.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CRIM 280 Neighborhood Dynamics of Crime
Crime varies in time, space and populations as it reflects ecological structures and the routine social interactions that occur in daily life. Concentrations of crime can be found among locations, with antisocial activities like assaults and theft occurring at higher rates because of the demographic make-up of people (e.g. adolescents) or conflicts (e.g. competing gangs), for reasons examined by ecological criminology. Variation in socio-demographic structures (age, education ratios, and the concentration of poverty) and the physical environment (housing segregation, density of bars, street lighting) predicts variations between neighborhoods in the level of crime and disorder. Both ethnographic and quantitative research methods are used to explore the connections between the social and physical environment of areas and antisocial behavior.
Course usually offered in spring term
Also Offered As: URBS 280
Activity: Seminar
1.0 Course Unit

CRIM 290 Wrongful Convictions
This course explores wrongful convictions from an interdisciplinary perspective. Using research from the disciplines of law, criminology, psychology and sociology, this course explores how legal errors occur and how they might be prevented in the future. Connections to quality control research and practice in other industries will also be examined. No prerequisites are required.
Taught by: Loeffler
Activity: Seminar
1.0 Course Unit

CRIM 300 Law and Criminal Justice
This course explores constitutional criminal procedure or the law of the Fourth, Fifth, and Sixth Amendments to the United States Constitution. Topics included the laws and rules associated with search and seizure, arrest, interrogation, the exclusionary rule, and deprivation of counsel. Social science evidence that supports or raises questions about legal doctrine will be examined. No prerequisites are required.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
CRIM 315 American Death Penalty in Theory and Practice
Over the past forty years, in response to controversy over the American death penalty, the Supreme Court has created a framework of rules designed to make the death penalty conform to current societal standards. In this course, we will identify the critical issues identified by the courts (and the critics) in light of the practical realities of capital litigation, and we will ask whether the efforts to address these issues have been successful. The class will use specific case examples to identify the critical points in a death penalty case—especially the decision to designate a prosecution as ‘capital’, the performance of defense counsel, the penalty decision, and the method of execution. These critical stages will provide a platform for discussing critical issues like the proper limits of discretion; bias; cruelty; and the decision to disqualify certain groups of people from capital punishment (the mentally disabled, minors). Students will be assigned readings from different kinds of sources. Cases from the Supreme Court will identify key issues and the efforts to address them under the law. More general death penalty history will provide some context. We will also read pieces by advocates (pro and con). Finally, we will focus on a few specific prosecutions and discuss abstract theories in a particular case.
Taught by: Dolgos
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CRIM 402 Criminal Justice Data Analytics
This course covers the tools and techniques to acquire, organize, link and visualize complex data in order to answer questions about crime and the criminal justice system. The course is organized around key questions about police shootings, victimization rates, identifying crime hotspots, calculating the cost of crime, and finding out what happens to crime when it rains. On the way to answer these questions, the course will cover topics including data sources, basic programming techniques, SQL, regular expressions, webscraping, and working with geographic data. The course will use R, an open-source, object oriented scripting language with a large set of available add-on packages.
Course usually offered in fall term
Also Offered As: CRIM 602, SOCI 605
Activity: Lecture
1.0 Course Unit

CRIM 410 Research Seminar in Experiments in Crime and Justice
This seminar focuses on examining data from experiments in criminology including: randomized controlled trials of criminal justice policies, 'natural' experiments in crime, and other quasi-experimental studies. A series of experiments conducted by Penn scholars and elsewhere will be examined. This seminar also guides criminology majors in writing a research proposal for their thesis. Students will learn about how to formulate a research question, develop a review of the literature, and how to apply necessary empirical methods. The final paper for this course will be a research proposal that can serve as the basis for the student’s senior thesis and to satisfy the senior capstone requirement. Readings will come from the disciplines of criminology, sociology, psychology, economics, and urban planning. Prerequisite: Any statistics or research methods course leading to familiarity with Excel, SPSS, R, Stata, SAS, Matlab, or NumPy.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

CRIM 450 Senior Research Thesis
Senior Research Thesis is for senior Criminology majors only. Students are assigned advisors with assistance from the Undergraduate Chair. Course usually offered in spring term
Prerequisite: CRIM 410
Activity: Senior Thesis
1.0 Course Unit
Notes: CRIM:410

CRIM 474 Modern Regression for the Social, Behavioral and Biological Sciences
Function estimation and data exploration using extensions of regression analysis: smoothers, semiparametric and nonparametric regression, and supervised machine learning. Conceptual foundations are addressed as well as hands-on use for data analysis. This course may be taken concurrently with the prerequisite with instructor permission.
Taught by: Berk
Course usually offered in spring term
Also Offered As: STAT 474, STAT 974
Prerequisite: STAT 102 OR STAT 112
Activity: Lecture
1.0 Course Unit

CRIM 535 Introduction to Quantitative Methods for Policy Analysis
This course provides an introduction to applied statistical techniques in social sciences and is tailored, in particular, to students pursuing the master of science degree in the Department of Criminology. It is taught as a basic course in statistics and presumes minimal mathematical or statistical background. We'll begin with a brief introduction to the research process. We'll then cover the computation, interpretation and understanding of basic descriptive statistics, distribution, hypothesis testing, measures of association and finally regression analysis. Depending on how much time we have, we will cover several more advanced topics in regression analysis at the end of the semester.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CRIM 536 Quantitative Methods in Sociology I
This course is an introduction to applied statistical techniques in the social sciences and is tailored, in particular, to students pursuing the master of science degree in the Department of Sociology. It is taught as a basic course in statistics and presumes minimal mathematical or statistical background. We'll begin with a brief introduction to the research process. We'll then cover the computation, interpretation and understanding of basic descriptive statistics, distribution, hypothesis testing, measures of association and finally regression analysis. Depending on how much time we have, we will cover several more advanced topics in regression analysis at the end of the semester.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
CRIM 600 Pro-Seminar in Criminology
This course provides an overview of the leading criminological theories of crime. The central focus is on the major theories of crime developed over the past century from the disciplines of economics, psychology, and sociology. The course will focus on the application of social science research as a way to evaluate theories of crime. Special attention is devoted to the issues of measurement of crime and what is known from the available empirical data. In addition, the course will focus on how these theoretical perspectives relate to public policy responses to crime. Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

CRIM 601 Pro-Seminar in Criminal Justice
This course provides an overview of what we know about the criminal justice system in the United States and other developed nations. The central purpose of the course is to increase your knowledge about how the U.S. criminal justice system works but we will also spend a great deal of time thinking about the quality of the available evidence and how we know what we know. Topics covered will vary from year to year; recent topics have included police use of force, capital punishment, pre-trial detention, the use of predictive algorithms in the criminal justice system and the relationship between immigration and crime in the United States. Course usually offered in spring term
Prerequisite: CRIM 600
Activity: Seminar
1.0 Course Unit

CRIM 602 Criminal Justice Data Analytics
This course covers the tools and techniques to acquire, organize, link and visualize complex data in order to answer questions about crime and the criminal justice system. The course is organized around key questions about police shootings, victimization rates, identifying crime hotspots, calculating the cost of crime, and finding out what happens to crime when it rains. On the way to answer these questions, the course will cover topics including data sources, basic programming techniques, SQL, regular expressions, web scraping, and working with geographic data. The course will use R, an open-source, object oriented scripting language with a large set of available add-on packages.
Taught by: Ridgeway
Course usually offered in fall term
Also Offered As: CRIM 402, SOCI 605
Activity: Lecture
1.0 Course Unit

CRIM 603 Research Methods/Crime Analysis
This course provides an overview of the application of social science research methods and data analysis to criminology. Students will learn research design principles and statistical techniques for the analysis of social science data, including how to interpret results as part of the rigorous practice of evidence-based criminology. M.S. students will conduct a semester-long, data-intensive crime analysis project using quantitative methods to address a specific research question. Student projects culminate with a poster presentation, an oral defense, and the submission of a written research paper.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

CRIM 604 Criminology in Practice
In this capstone course, students will meet weekly with guests who work on or close to the front line of the criminal justice system. Past guests have included police chiefs, forensic scientists, lobbyists for gun rights and lobbyist for gun control, formerly incarcerated individuals, crime analysts, directors of sentencing commissions, prosecutors and defenders, politicians, and researchers at research organizations working closely with criminal justice agencies. Guests share their career paths, the roles of their organizations in the justice system, and key justice system challenges. Students interact with all guest speakers.
Two terms. student must enter first term.
Activity: Seminar
1.0 Course Unit

CRIM 634 Evidence-Based Crime Prevention
This course considers the use of evidence to identify effective crime prevention policies. The course will teach students to think critically about what constitutes convincing evidence, use benefit-cost analysis in comparing policy alternatives, and write effective policy memos that can translate research into practice. We will develop these skills by studying the effects of different policy approaches to crime prevention including incarceration, policing, gun control, drug regulation, and place-based interventions, as well as education, social programs, and labor market policies. Emphasis will be on the methodological challenges to identifying 'what works' and the empirical methods to overcome those challenges.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

CRIM 662 Panel Data Analysis
This course focuses on the ability to use, analyze, and understand panel data. Panel data contain repeated measurements of the dependent variable for the same individuals, and possibly repeated measurements of the predictor variables as well. Panel data offer important opportunities for controlling unobserved variables and for answering questions about causal ordering.
Taught by: Song
Also Offered As: DEMG 662, SOCI 662
Activity: Lecture
1.0 Course Unit

CRIM 671 Violence: A Clinical Neuroscience Approach
Developed for both Psychology and Criminology graduates in particular, this interdisciplinary course outlines a clinical neuroscience approach to understanding violence in which the tools of neuroscience-neuroanatomy, neurophysiology, neurocognition, neuroendocrinology, neuropharmacology, molecular and behavioral genetics- are used to help inform the etiology and treatment of violence. Clinical components include psychopathy, proactive and reactive aggression, homicide domestic violence, conduct disorder, oppositional defiant disorder, antisocial personality disorder, crime, and delinquency as well as their comorbid conditions (schizophrenia, drug abuse, hyperactivity). The interaction between social, psychological, and neurobiological processes in predisposing to violence will be highlighted, together with neurodevelopmental perspectives on violence focusing on prospective longitudinal and brain imaging research. Key implications for the criminal justice system, neuroethics, forensics psychology, and intervention will also be outlined.
Course usually offered in fall term
Also Offered As: PSYC 571
Activity: Lecture
1.0 Course Unit
CRIM 700 Advanced Pro-Seminar in Criminology
This second year doctoral course is a weekly discussion group designed to help students integrate their coursework from different disciplines around the unifying perspectives of criminology. It focuses on preparation for the doctoral comprehensive examination, detailed critiques of published research reports, and colloquia by leading guest lecturers presenting new research results. Students preparing for dissertation research on the causes and prevention of crime will report on their developing research ideas.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

CRIM 701 Advanced Pro-Seminar in Criminal Justice
This second year doctoral course is a weekly discussion group designed to help students integrate their coursework from different disciplines around the behavior and operation of criminal law systems. It focuses on preparation for the doctoral comprehensive examination, detailed critiques of published and unpublished research reports, and colloquia by leading guest lecturers presenting new research results. Students preparing for dissertation research on the behavior of criminal law will report on their developing research ideas.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

CRIM 999 Independent Study and Research
Primarily for advanced students who work with individual faculty upon permission. Intended to go beyond existing graduate courses in the study of specific problems or theories or to provide work opportunities in areas not covered by existing courses.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: Both terms.

Czech (CZCH)

CZCH 110 Czech Through Film
This course has two separate but related components: a series of Czech films, shown with subtitles and open to the entire University of Pennsylvania community, and a Czech language class which relies on the films for content. Each film screening will be preceded by introductory remarks and followed by a discussion, with optional reading material made available in advance. In this way, the film series can but need not also be offered as a for-credit course, cross-listed through REES and Cinema and Media Studies. The films will be sequenced chronologically through Czech history, as opposed to film history, so that the series will double as a survey of Czech history. For example, we will begin with films set in the medieval period, such as Marketa Lazarova (dir. Frantisek Vlacil, 1967) and Cisaruv pekar-Pekaruv cisar (Emperor’s Baker-Baker’s Emperor, dir. Martin Fric, 1955). Eventually we will progress to recent films that deal with the current moment. Classic and contemporary films will be intermingled to simultaneously present a variety of important historical eras and cinematic techniques. Concurrently, students enrolled in the language course will learn basic Czech using custom-made materials drawn from the films. As their vocabulary and grasp of grammatical concepts increases, we will be able to work with longer and more complex sections of the film-texts. The films will provide the material for listening and reading exercises, and the students’ oral and written work will be anchored by their responses to the films. We will advance from picking out simple statements to analyzing dialogue and identifying irony in film and composition, developing skills of intercultural communication and competence. By the end of the course, students will be able to read about Czech cinema using authentic materials, and discuss the films’ aesthetic, historical and political importance.
Taught by: Weil
Activity: Lecture
1.0 Course Unit

CZCH 530 Elementary Czech I
An introduction to the fundamentals of the Czech language, acquisition of conversational, reading and writing skills. Offered through the Penn Language Center.
For BA Students: Language Course
Two terms. student may enter either term.
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center.

CZCH 531 Elementary Czech II
Continuation of SLAV 530. Offered through the Penn Language Center.
For BA Students: Language Course
Taught by: Stejskal
Two terms. student may enter either term.
Prerequisite: SLAV 530
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center.
Data Analytics (DATA)

The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates/).

DATA 101 Introduction to Data Analytics
In our digital world, data-driven decision-making is becoming more common and more expected. Effective leadership and communication, therefore, often hinges on the ability to acquire, manage, analyze, and display large, quantitative data sets. Even many entry-level jobs assume or require basic knowledge of data analytics. This course introduces students to important concepts in data analytics across a wide range of applications using the programming language R. Students complete the course with a clear understanding of how to utilize quantitative data in real-time problem identification, decision-making, and problem-solving. No prerequisites in statistics or math are required. This course will have required synchronous sessions and the instructor will offer a choice of times. Only open to Data Analytics certificate students in LPS Online Program. Please email lps@sas.upenn.edu to request a permit.
Taught by: Samantha Sangenito
Also Offered As: LEAD 305
Activity: Online Course
1.0 Course Unit

DATA 210 Intermediate Data Analytics
In Data Analytics 210: Intermediate Data Analytics students learn the fundamentals of two skills required by many data science jobs: survey and experimental research. The course trains students in all aspects of the survey research process, including designing good survey questionnaires, drawing samples, weighting data, and analyzing survey responses. Students come away from the class with an understanding in how to design, analyze a randomized experiment and build upon the R skills gained in previous courses. Certificate students and individual course takers must complete a prerequisite data analytics course before enrolling in this course. Although courses in the Certificate in Data Analytics must be taken sequentially to build your expertise in data analytics, you have the option to take courses in order without committing to the entire certificate. Students who complete all four courses earn the Certificate in Data Analytics. Data Analytics courses admit a limited number of students each term. Early registration is recommended. To confirm whether registration is still open for a specific term before you enroll, please email lpsonline@sas.upenn.edu or call (215) 746-6903.
Taught by: Samantha Sangenito
Prerequisite: DATA 101
Activity: Online Course
1.0 Course Unit

DATA 310 Introduction to Statistical Methods
Introduction to Statistical Methods exposes students to the process by which quantitative social science and data science research is conducted. The course revolves around three separate, but related tracks. Track one teaches some basic tools necessary to conduct quantitative social science research. Topics covered include descriptive statistics, sampling, probability, and statistical theory. Track two teaches students how to implement these basic tools using R. The third track teaches students the fundamentals of research design. Topics will include independent and dependent variables, generating testable hypotheses, and issues in causality.
Taught by: Samantha Sangenito
Prerequisite: DATA 101 AND DATA 210
Activity: Online Course
1.0 Course Unit

DATA 401 Advanced Data Analytics
Data Analytics 401: Advanced Topics in Data Analytics emphasizes the skills necessary to do predictive modeling of data. This is one of the most commonly sought-after skills in data science jobs, since it can help companies structure future investments, non-profits organize funding drives, or political candidates decide where to focus their get-out-the-vote efforts. The class begins with a comprehensive discussion on basic regression analysis and then moves on to more advanced topics in R like web scraping, mapping, textual analysis, and working with string variables. The course also features content about more advanced data visualization skills, including creating interactive data visualizations in RShiny. Please email lps@sas.upenn.edu to request a permit.
Taught by: Samantha Sangenito
Prerequisite: DATA 101 AND DATA 210 AND DATA 310
Activity: Online Course
1.0 Course Unit
Notes: Data Analytics courses admit a limited number of students each term. Early registration is recommended. To confirm whether registration is still open for a specific term before you enroll, please email lpsonline@sas.upenn.edu or call (215) 746-6903.
Demography (DEMG)

DEMG 535 Quantitative Methods in Sociology I
This course is an introduction to the practice of statistics in social and behavioral sciences. It is open to beginning graduate students and--with the permission of the instructor--advanced undergraduates. Topics covered include the description of social science data, in graphical and non-graphical form; correlation and other forms of association, including cross-tabulation; bivariate regression; an introduction to probability theory; the logic of sampling; the logic of statistical inference and significance tests. There is a lecture twice weekly and a mandatory 'lab.'
Taught by: Allison, Smith
Course usually offered in fall term
Also Offered As: CRIM 536, SOCI 535
Activity: Lecture
1.0 Course Unit

DEMG 536 Quantitative Methods in Sociology II
As the second part of a two-semester sequence, this graduate course focuses on regression analysis as used in social science research. In particular, we discuss features and assumptions of linear regression and logistic regression models. We learn how to apply regression models to real social science data using Stata and how to interpret the results.
Taught by: Allison, Kohler, Park, Schnittker, Smith
Course usually offered in spring term
Also Offered As: SOCI 536
Prerequisite: SOCI 535
Activity: Lecture
1.0 Course Unit

DEMG 541 Gender, the Labor Force, and Markets
Course not offered every year
Also Offered As: GSWS 532, SOCI 541
Activity: Seminar
1.0 Course Unit

DEMG 604 Methodology of Social Research
This course will give students familiarity with the common research methods social scientists use to conduct research. Ethnographic, interview, survey, experimental and historical/comparative research methods will be covered. Four themes will be explored: 1) the basics of solid research design, 2) the various advantages and disadvantages of each method, 3) when the use of a method is appropriate or inappropriate for the research question, and 4) how to evaluate researchers’ claims on the basis of the evidence they present. These themes will be explored by reading examples of and conducting exercises designed to give students hands-on experience in each of the methods. Students will conduct the exercises on a topic of their choice, which together will culminate in their final paper. The course is required and restricted to second year students in sociology and demography.
Taught by: Smith, Wilde, Zuberi
Course usually offered in spring term
Also Offered As: SOCI 604
Activity: Lecture
1.0 Course Unit

DEMG 607 Introduction to Demography
A nontechnical introduction to fertility, mortality and migration and the interrelations of population with other social and economic factors.
Course usually offered in fall term
Also Offered As: SOCI 607
Activity: Lecture
1.0 Course Unit

DEMG 609 Basic Demographic Methods
This course provides an introduction to basic demographic concepts, data, indicators, and techniques. The course emphasizes hands-on applications of techniques in the analysis of population dynamics in the U.S. and elsewhere. Students will learn about the main sources of demographic data, including censuses, surveys, and vital statistics, and methods to estimate demographic processes (e.g., mortality, fertility). Students will leave the course with a solid grounding in a) the sources and limitations of demographic data; b) the construction of basic demographic indicators; and c) appropriate use of basic demographic techniques to answer questions about human populations.
Taught by: Guillot
One-term course offered either term
Also Offered As: SOCI 128, SOCI 609
Activity: Lecture
1.0 Course Unit

DEMG 611 Structure Equation Model
Statistical modeling with multiple equations and latent variables. The first part of the course will focus on linear models that could be estimated with any of the well-known SEM programs (e.g., LISREL, EQS, or Amos). Both Mplus and SAS will be used exclusively in this part of the course. The second part will focus on Mplus models for variables that are categorical, count, or censored. Maximum likelihood methods for missing data will also be covered.
Taught by: Allison
Course not offered every year
Also Offered As: SOCI 611
Activity: Lecture
1.0 Course Unit

DEMG 612 Categorical Data Analysis
This course deals with techniques for analyzing multivariate data which the dependent variable is a set of categories (a dichotomy or polytomy). Topics will include linear probability models, logit (logistic) regression models, probit models, logit analysis of contingency tables, cumulative logit and probit (for ordinal data), multinomial logit, conditional logit (discrete choice), unobserved heterogeneity, log-linear models, square tables, response-based sampling, and repeated measures. Methods will be illustrated using the Stata System. There will be several assignments using Stata to analyze data provided by the instructor.
Taught by: Allison
Course not offered every year
Also Offered As: SOCI 612
Activity: Lecture
1.0 Course Unit

DEMG 613 Event History
An applications-oriented course on statistical methods for the analysis of longitudinal data on the occurrence of events, also known as survival analysis, failure-time analysis, hazard analysis or duration analysis. Emphasis on regression-like models in which the risk of event occurrence is a function of a set of explanatory variables. Topics include accelerated failure-time models, hazard models, censoring, Cox regression models, time-dependent covariates, competing risks, repeated events, unobserved heterogeneity, discrete-time methods.
Taught by: Allison
Course not offered every year
Also Offered As: SOCI 613
Prerequisite: SOCI 533
Activity: Lecture
1.0 Course Unit
**DEMG 621 Health, Mortality & Population Aging**
The course focuses on the description and explanation of health and mortality in human populations and their variability across several dimensions such as age, time, place, social class, race etc. The course includes general theories of health, mortality and morbidity, investigations of mortality and related processes in developing and developed countries, and discussions of future mortality trends and their implications for individual lives and the society at large.
Taught by: Elo
Course not offered every year
Also Offered As: SOCI 621
Activity: Lecture
1.0 Course Unit

**DEMG 622 Fertility**
The biological, social and demographic factors explaining the levels, trends and differentials in human fertility. Data, measures, and methods used in the context of the more and the less developed countries, with an emphasis on the historical and current course of the fertility transition.
Taught by: Smith, Kohler, H
Course not offered every year
Also Offered As: SOCI 622
Activity: Seminar
1.0 Course Unit

**DEMG 630 Advanced Special Topics**
Topics vary from semester to semester. Course titles include: Race, Colonialism & Methods; Mistakes, Errors, Accidents & Disasters, Graduate Research Practicum, Sociology of Violence: Gangs & Organized Crime.
Course not offered every year
Also Offered As: SOCI 430, SOCI 630
Activity: Lecture
1.0 Course Unit

**DEMG 634 Population Processes II**
Population Processes II is part of a two-course sequence designed to introduce students to the core areas of demography (fertility, mortality, and migration) and recent developments in the field. PP II is divided into two parts. The first focuses on family demography and the biological, social and demographic factors explaining levels, trends, and differentials in human fertility transition with an emphasis on the historical and current course of fertility transition in developed and developing countries. The second part of the course provides a comprehensive review of theories and research on international migration. Readings examine patterns and processes of global migration during the classic age from 1800-1914 as well as during the postwar period from 1945 to the present. The course also covers a history and evaluation of immigration policies around the world, and devotes signification attention to theoretical and empirical perspectives on immigrant adaptation. Within this larger topic, we will also discuss internal migration and urbanization; the relationship between gender and migration; the spatial distribution of immigrants within the United States, immigrant communities, and ethnic enclaves; and the undocumented population in the United States.
Taught by: Flippen
Course not offered every year
Also Offered As: SOCI 377, SOCI 677
Activity: Seminar
1.0 Course Unit

**DEMG 637 International Migration**
A comprehensive review of theories and research on international migration. The course introduces the basic precepts of neoclassical economics, the new economics of labor migration, segmented labor market theory, world systems theory, social capital theory and the theory of cumulative causation. Readings examine patterns and processes of global migration during the classic age from 1800-1914 as well as during the postwar period from 1945 to the present. The course also covers a history and evaluation of immigration policies around the world, and devotes signification attention to theoretical and empirical perspectives on immigrant adaptation. Within this larger topic, we will also discuss internal migration and urbanization; the relationship between gender and migration; the spatial distribution of immigrants within the United States, immigrant communities, and ethnic enclaves; and the undocumented population in the United States.
Taught by: Flippen
Course not offered every year
Also Offered As: SOCI 377, SOCI 677
Activity: Seminar
1.0 Course Unit

**DEMG 643 Social Stratification**
In this course we study the current levels and historical trends of inequality in the United States especially in cross-national comparative perspective. We discuss causes and consequences of inequality as well as various policy efforts to deal with inequality. Topics include intergenerational social mobility, income inequality, education, gender, race and ethnicity among others.
Taught by: Song
Course not offered every year
Also Offered As: SOCI 010, SOCI 643
Activity: Lecture
1.0 Course Unit

**DEMG 662 Panel Data Analysis**
This course focuses on the ability to use, analyze, and understand panel data. Panel data contain repeated measurements of the dependent variable for the same individuals, and possibly repeated measurements of the predictor variables as well. Panel data offer important opportunities for controlling unobserved variables and for answering questions about causal ordering.
Taught by: Song
Also Offered As: CRIM 662, SOCI 662
Activity: Lecture
1.0 Course Unit

**DEMG 707 Second-Year Research Seminar I**
This course is intended to hone the skills and judgment in order to conduct independent research in sociology and demography. We will discuss the selection of intellectually strategic research questions and practical research designs. Students will get experience with proposal writing, the process of editing successive drafts of manuscripts, and the oral presentation of work in progress as well as finished research projects. The course is designed to be the context in which master's papers and second year research papers are written. This is a required course for second year graduate students in Demography. Others interested in enrolling in only one of the courses may do so with the permission of the Chair of the Graduate Group in Demography.
Course usually offered in fall term
Also Offered As: SOCI 707
Activity: Seminar
1.0 Course Unit
DEM 708 Second-Year Research Seminar II
Demography 708 is the second part of a two-course sequence designed to introduce and familiarize second year students with current norms for academic research, presentation and publishing in the field of Demography. In DEM 708 students are expected to finalize the analyses and to complete their second year research paper. This is a required course for second year demography students. Others interested in enrolling in the course may do so with the permission of the Chair of the Graduate Group in Demography.
Course usually offered in spring term
Also Offered As: SOCI 708
Activity: Seminar
1.0 Course Unit

DEM 731 Advanced Demographic Methods
This course considers a variety of procedures for measuring and modeling demographic processes. We will consider both deterministic (drawn from classic demographic methods, stable population theory, and the like) and stochastic (drawn from statistics) perspectives and methods, including their integration. Prerequisites: DEM 609 and SOCI 536 (or its equivalent).
Taught by: Smith
Course not offered every year
Also Offered As: SOCI 731
Prerequisite: DEM 609 AND SOCI 536
Activity: Seminar
1.0 Course Unit

DEM 796 Demographic, Economic, and Social Interrelations
The course investigates economic and social determinants of fertility, mortality, and migration, and it discusses the effects of population variables on economic and social conditions, including economic and social development. Topics discussed in the course include: How do economic changes affect marriage, divorce, and child bearing decisions? How do households make decisions about transfers and requests? How can economic and sociological approaches be combined in explanatory models of demography change? How does immigration to the US affect the ethnic composition of the population, the earnings of native workers, taxes on natives, and the macro-economy? What causes the aging of populations, and how will population aging affect the economies of industrial nations, and in particular, pension programs like Social Security? What accounts for the rise in women’s participation in the wage labor force over the past century? How are family composition and poverty interrelated? Does rapid population growth slow economic development with low income countries? In addition to these topics, the course also covers selected methods not included in DEMG 535, DEMG 536 or DEMG 609.
Taught by: Kohler
Course not offered every year
Also Offered As: SOCI 796
Activity: Lecture
1.0 Course Unit

DEM 999 Independent Study
Primarily for advanced students who work with individual instructors upon permission. Intended to go beyond existing graduate courses in the study of specific problems or theories or to provide work opportunities in areas not covered by existing courses.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

**Dental - Community Oral Health (DCOH)**

**DCOH 708 Health Promotion S**
Activity: Seminar
0.5 Credit Hours

**DCOH 712 Community Oral Health**
Activity: Clinic
0.5 Credit Hours

**DCOH 785 Practice Management**
Practice Management Lectures and seminars provide students with foundational knowledge regarding career planning and policies and procedures related to employment and business management in dental practice.
Activity: Lecture
0.25 Credit Hours

**DCOH 808 Health Promotion**
Health Promotion Clinical experiences provide students with the opportunity to apply knowledge and develop competencies related to oral health promotion and disease prevention activities with individual patients in the clinics at Penn Dental Medicine.
Activity: Clinic
1.0 Credit Hour

**DCOH 812 Community Oral Health**
Community Oral Health Experiences in alternate oral health care delivery settings provide students with the opportunity to develop and expand their skills in providing comprehensive oral health care in community based settings under the direct supervision of faculty members. Students are scheduled in the mobile dental vehicle, PennSmiles, and are also scheduled at Community Volunteers in Medicine, a community based medical and dental treatment facility in West Chester, PA. Students attend small group seminars to discuss their experiences and theoretical underpinnings of community oral health activities.
Activity: Clinic
1.25 Credit Hour

**DCOH 885 Practice Management II**
Activity: Lecture
1.0 Credit Hour

**Dental - Dental Medicine (DENT)**

**DENT 245 Breakdown Barriers Club**
Activity: Seminar
1.0 Credit Hour

**DENT 260 Form Inclusive Practice**
Activity: Lecture
0.5 Credit Hours

**DENT 500 Foundation Sciences I**
Foundation Sciences I is aimed at providing students with a thorough understanding of the basic principles of molecular biology and general biochemistry; the biochemical concepts underlying healthy metabolism, nutrition and selected disease states and comprehension at an advanced level of selected topics in cell biology.
Activity: Lecture
4.25 Credit Hours
DENT 502 Foundation Sciences II
The course is structured to provide basic information about the evolution of life processes, structure, physiology, and molecular biology of the prokaryotic cells and viruses, and the basic mechanisms of immunology in relation to oral health. Emphasis will also be placed on how oral microorganisms participate in plaque/biofilm formation, caries and periodontal disease. Primary objectives related to the clinical setting include an understanding of the basis of the selective inhibition of antibiotics and the development of resistance, understanding the basis of serological tests and immunization and interpretation of radiographic evidence for caries and periodontal disease.
Activity: Lecture
3.5 Credit Hours

DENT 504 Foundation Sciences III
Foundation Sciences III is the first course in the curriculum that focuses on the underlying cellular and molecular basis of disease and is a critical component of a larger subject commonly known as Pathology. In its simplest terms, Pathology is the study of the structural, biochemical and functional abnormalities that develop within cells, tissues and organs resulting in disease. The disease process forms the core of pathology and includes: etiology, pathogenesis, lesions and clinical manifestations. Traditionally, Pathology is divided into general and systemic pathology. FSIII is the first of two courses (the other being FSIV) that collectively comprise the topic of general pathology. Specifically, FSIII will focus on: (1) the reactions of cells and tissues to abnormal stimuli leading to either adaption or cell injury and (2) pathogenic mechanisms responsible for disease development.
Activity: Lecture
3.5 Credit Hours

DENT 506 Foundation Sciences IV
This series of lectures will present relevant and important diseases and their treatments. We will explore the mechanisms used by bacteria to infect cells and present two major classes of bacteria, the Streptococcus and Staphylococcus. We will introduce odontogenic infections important to the oral cavity. Gastrointestinal infections, sexually transmitted diseases, tuberculosis and bacterial endocarditis will also be presented. There will be an introduction to antibiotics. This will be followed by a set of lectures on viruses with oral manifestations. These will include herpes, hepatitis, influenza, rhino, coxsackie, measles, mumps, rubella viruses and treatments using antiviral drugs. Highlighted will be HIV and opportunistic infections of AIDS. Next, fungal infections and treatments will be presented. Finally, infection control in dentistry will be featured.
Activity: Lecture
3.5 Credit Hours

DENT 510 Biological Systems I
Biological Systems I is multi-disciplinary, module-based course. Module I will provide the student with a basic understanding of the molecular, tissue patterning and functional mechanisms that give rise to the human form. Clinical aberrations, including craniofacial dysmorphisms will be presented to illustrate what happens when normal developmental mechanisms are disrupted. Module 2 will provide the student with a thorough understanding of the development, biology, morphology and function of mucosal epithelium, connective tissue, skin and salivary glands. Module 3 combines perspectives from neurocytology, neurophysiology and pharmacology to help students develop a pre-clinical understanding of neuronal conduction and coordination as applied to the function and pharmacology of the somatic and autonomic nervous systems. Clinical correlations will be used where appropriate.
Activity: Lecture
4.25 Credit Hours

DENT 512 Biological Systems II
Presented in lectures and seminars, Module 1, will present information on the history of Radiology, in particular Dental Radiology and its implications for diagnosis and patient care. Module 2 will present a detailed survey of osteology of the skull, cervical spine and laryngeal skeleton in a series of interactive lectures and small-group conferences. Appreciation of the three-dimensional anatomy of the cranium, temporomandibular joint and the orofacial skeletal complex will be reinforced with integrative presentations of radiographic anatomy to introduce some clinical correlations. Module 3 will present a basic knowledge of bone based on developmental, anatomical, histological, radiological, molecular and functional perspectives. Teach the fundamental principles of cell-cell interactions, extracellular matrix deposition and mineralization related to bone homeostasis, remodeling and healing. Concepts will be emphasized with radiological presentation of bone diseases using different imaging modalities.
Activity: Lecture
4.0 Credit Hours

DENT 514 Biological Systems III
Biological Systems III combines the study of the general principles of anatomy/physiology of the human vascular, muscular and neuroanatomic systems with an emphasis on the orofacial complex. The goals of the course are to provide students with a sound knowledge of normal biology and organization of those organ systems and to examine and discuss examples of pathophysiological conditions. Students should subsequently be able to recognize the anatomical structures, identify tissue types, and explain the principal physiological functions of the vasculature, muscle and cranial nerves. The third module also includes clinical assessment of cranial nerve function.
Activity: Lecture
4.0 Credit Hours

DENT 516 Biological Systems IV
Cadaveric Anatomy of the Head and Neck is designed to facilitate integration of the gross anatomy learned systemically in the Biological Science track through the meticulous regional dissection of a human cadaver. In addition to enabling visualization of both anatomical structures and their clinically significant relationships in a three-dimensional context, the course provides initiation into the tactile manipulation of the human body.
Activity: Lecture
3.0 Credit Hours
DENT 518 Biological Systems V
The course will provide the student with a sound knowledge of hematology and the basic biology and organization of the cardiovascular, pulmonary and renal systems; and establish the general integrative knowledge of the pathologies most commonly associated with these systems. The student will be made aware of the relevance of those pathologies, and the therapeutic agents applied, to dental practice. On the basis of the information and concepts learned during the course, the student will subsequently be able to: 1) Understand laboratory medicine, hematology disorders, and transplant medicine; 2) To recognize the anatomical structures, identify tissue types, and explain the principal physiological functions of the three internal systems; 3) To recognize and explain the interrelationships within and between the anatomical structures of the heart, blood vessels, lung, and kidney; 4) To familiarize with the common pathologies likely to be encountered during dental practice and their implications to oral health; 5) To understand how specific systemic diseases affect diagnosis, management and general well-being of the dental patient.
Activity: Seminar
3.0 Credit Hours

DENT 530 Advanced Simulation
The objective of the Freshman Advanced Simulation Laboratory course is to introduce and develop specific psychomotor and cognitive skills through the use of virtual reality based training that will enhance and augment future skills acquired in the preclinical General Restorative Dentistry, Operative Dentistry course. Technical skills are developed through learning preparations with a high speed handpiece, and dental hand instruments in a virtual reality, advanced simulation environment. Suitable operative skills, knowledge, and ergonomics will be emphasized for the successful transition into the preclinical operative course. Dental terminology and principles of tooth preparation will be applied to the theory of all the basic preparations. Suitable operative skills, knowledge, and ergonomics will be emphasized for the successful transition into the preclinical operative course.
Activity: Laboratory
0.5 Credit Hours

DENT 532 Dental Devel.& Anatomy
The Freshman Dental Development and Anatomy provides foundational knowledge regarding Tooth development, Primary dentition, Permanent dentition, Tooth numbering systems, Tooth classification (Incisors, Canines, Premolars, Molars), Set Traits (traits between Primary and Permanent dentition), Class traits (traits for each kind of tooth), Arch traits (traits of maxillary vs. mandibular), and Type traits (differences between teeth within the Class). Dental morphology relative to Operative dentistry procedures will be discussed. This knowledge will be called upon throughout all four years of the dental curriculum.
Activity: Lecture
2.5 Credit Hours

DENT 534 Intro. To Occlusion
The objective of the Freshmen Dental Occlusion course is to provide foundational knowledge regarding human occlusion and the temporomandibular joint. Dental occlusion relative to Operative dentistry procedures will be discussed. This knowledge will be called upon throughout all four years of the dental curriculum. This course includes lectures and laboratory sessions where waxing of teeth using only concepts related to dental occlusion, selective grinding to achieve an ideal occlusal relationship, alginate impressions and diagnostic model making, facebow transfer, and diagnostic model mounting procedures will be completed to reinforce didactic materials presented.
Activity: Lecture
2.0 Credit Hours

DENT 536 Operative Dent. Lecture
The objective of the Freshmen Operative Dentistry lecture course is to give foundation knowledge of operative instrumentation, operative dentistry, terminology, principles of cavity preparations, and the basics of single tooth restorations.
Activity: Lecture
1.5 Credit Hour

DENT 538 Operative Dent. Lab
The objective of the Freshmen Operative Dentistry Laboratory course is to develop an understanding of the normal, healthy stomatognathic system and to introduce fundamental didactic and psychomotor skills, relative to operative dentistry procedures. The course includes a review of individual tooth anatomy and the study of occlusion to define what is normal and healthy. The study of cariology and the treatment of the pathologic progress continues afterward. Restoration of form and function with basic intracoronal amalgam and composite procedures then follows. More complex intracoronal procedures such as gold inlay and porcelain onlay preparations and restorations are then taught. Throughout the entire course, the study of occlusion as it applies to restorative dentistry procedures is continued.
Activity: Laboratory
3.25 Credit Hours

DENT 539 Dental Materials
The course is divided into two segments. The first segment teaches the principles of materials science. The second segment is designed to present topics in applied dental materials as students use these materials in General Restorative Dentistry (GRD). After successful completion, the student should understand how the basic principles aid in material selection, risk/benefit assessment, restoration design, patient information and evaluation of new materials and manufacturer's claims.
Activity: Lecture
1.25 Credit Hour

DENT 540 Periodontics I
This course is presented in two parts. The first part presents basic biology concepts applied to the healthy and diseased periodontium. Macroscopic and microscopic changes of the periodontium will be featured and how these are altered by disease. In addition the biological basis for etiology, pathogenesis and epidemiology of periodontal disease is presented. The second part consists of presenting the basic clinic procedures for diagnosis and non-surgical treatment of periodontal diseases through lectures, preclinical labs and clinical rotations. Part 2: consists of lectures, pre-clinical labs and clinical rotations. Those will be dedicated to presenting diagnostic and non-surgical aspects of periodontal therapy.
Activity: Lecture
1.75 Credit Hour
DENT 550 Behav Sci I-Health Promo
Lectures, seminars, clinical sessions and community field experiences are provided so that students gain the necessary knowledge and skills in oral health promotion and disease prevention activities related to caries, periodontal diseases and oral cancer. Focus is placed on assessment, planning, implementation and evaluation of strategies designed to target the individual patient, the community and a population perspective. Course topics include discussion of the philosophy, modalities, rationale and evaluation of health promotion and disease preventive activities related to caries, periodontal diseases and oral cancer. Focus is placed on assessment, planning, implementation and evaluation of strategies designed to target the individual patient, the community and a population perspective. Course includes an introduction to evidence based care and research principles in application to critique of current dental literature.
Activity: Lecture
2.0 Credit Hours

DENT 552 Ethics I
The objective of the PEDM courses (1st, 2nd and 3rd year courses) is to impart a general knowledge of fundamental concepts in principles of professionalism and ethical decision making with emphasis on care-based discussions. The courses utilize lectures, seminars, online discussions, and reflection papers to address issues related to doctor-patient relationships, academic integrity as well as professional communication. These Pass/Fail courses provide a forum for discussing, debating and understanding parameters of professional and ethical behavior, and their impact on the patients, colleagues, the public, and the profession. PEDM I focuses on academic integrity, micro-aggressions and how professional and ethical behavior during pre-clinical years translates into ethical clinical practice.
Activity: Lecture
0.5 Credit Hours

DENT 560 Intro To the Patient
This course will provide foundational knowledge about the doctor patient relationship, present medical history skills and cover the basics of a dental orofacial physical exam. The first part of the course includes lectures outlining the doctor patient relationship, components and applications of the medical history. The second part includes lectures outlining the components and application of the physical exam, including vital signs, cranial nerve exam, head and neck examination, and examination of the heart and lungs. The third and final part of the course includes two practical workshops in small groups where students are required to practice taking medical histories and performing various components of the physical examination. The second rotation occurs in the Oral Diagnosis clinic where students take a medical history and perform a physical examination on a PDM admissions patient.
Activity: Lecture
5.0 Credit Hours

DENT 562 Clinical Prac II - Dau
This course is designed to teach the first-year student a four-handed dental assisting technique which is used to assist third and fourth year students in clinical practice. In addition, skills such as patient communication, team building, and record keeping are taught. Students gain clinical experience and assist in the same procedures that they are encountering in GRD, thus forming a clinical bridge to pre-clinical learning. Lectures, written exercise, a lab, clinical rotations and completion of a clinical exam make up the didactic portions of the course.
Activity: Clinic
3.75 Credit Hours

DENT 564 Intro To Clinical Dent I
This course provides first-year dental students with a variety of different clinical experiences. The student spends day-long rotations in various predoctoral and specialty PDM clinics. In addition, students gain a unique perspective in practice management by assisting PDM staff with dispensing clinical supplies and in Instrument Management Services.
Activity: Lecture
0.25 Credit Hours

DENT 580 Orthodontics I
This course will expose the students to the diagnostic and treatment planning process in orthodontics. The student will also be taught the basic principles and events in child growth and development (craniofacial, somatic and dentitional) as well as the development and diagnosis of malocclusions.
Activity: Seminar
2.25 Credit Hours

DENT 600 Intro To Pharmacology
Neuroparmacology is both a basic science and a clinical science. It builds on the foundation of anatomy, biochemistry, physiology, and pathology and bridges the gap into clinical dentistry. This course in basic neuroparmacology will give the students a better understanding of drugs, interpreting complicated drug/medical histories, and understanding drug reactions. This module will focus on pharmacology of the central nervous system with lectures on analgesic agents, antianxiety drugs, general anesthetics, arthritis and gout drugs, prescription writing and a host of other agents used to treat diseases of the CNS including Parkinson's, seizures, and a variety of psychiatric disorders. Clinically relevant drug-drug interactions will also be covered in this course.
Activity: Lecture
0.75 Credit Hours

DENT 606 Neuro,Neuropharm,Beh Mg
Activity: Lecture
2.75 Credit Hours

DENT 610 Biological Systems V
This course combines an introduction to the general principles of anatomy, histology, and physiology of the human cardiovascular, pulmonary and renal systems, with an extensive study of the pathology and therapeutics of these systems, with an explicit emphasis on their relationship to dental practice. This course is presented in three modules. We have assembled a diverse and experienced group of lecturers, including experts in oral medicine, oral surgery, anatomy, physiology, pharmacology and pulmonary and renal medicine.
Activity: Lecture
5.75 Credit Hours

DENT 612 Biological Systems Vi
This course combines an introduction to the general principles of anatomy, histology, and physiology of the human gastrointestinal, hepatobiliary, and endocrine systems, with an extensive study of the pathology and therapeutics of these systems, with an explicit emphasis on their relationship to dental practice.
Activity: Lecture
4.0 Credit Hours
DENT 614 Biological Systems VII
Cadaveric Anatomy is designed to facilitate integration of the gross anatomy learned systematically in the Biological Systems curriculum stream through the meticulous regional dissection of a human cadaver. In addition to enabling visualization of both anatomical structures and their clinically significant relationships in a three-dimensional context, the course provides initiation into the tactile manipulation of the human body. Activity: Laboratory 1.25 Credit Hours

DENT 616 Biological Systems VIII
This course combines an introduction to the general principles of anatomy, histology, and physiology of the human hematopoietic and lymphoid system and neurologic systems with an extensive study of the pathologies and therapeutics of these systems, and with an explicit emphasis on their relationship to dental practice. Activity: Lecture 2.0 Credit Hours

DENT 620 Oral & Maxil Complex I
This is a course that will apply what students have already learned in Foundation Sciences and Biologic Systems courses to the study, interpretation and diagnosis of oral disease. It is an essential link between the basic and clinical sciences concerned with the mechanisms of disease (e.g., inflammation, genetic disease, neoplasia, immunopathology) and the disease processes that students will encounter during their careers in dentistry. The emphasis will be on oral soft and hard tissue pathology, including oral manifestations of systemic diseases that may impact on the health of the patients. Activity: Lecture 3.0 Credit Hours

DENT 622 Oral & Maxil Complex II
This course will develop a general knowledge of fundamental concepts in orofacial function and occlusion. The course is presented in two modules, with an exam at the end of each module. The orofacial function module will focus on physiology anatomy and function of the facial structures, including saliva, mastication, speech, swallow, smell and taste. The goal is for the students to have a basic understanding of orofacial function. The occlusion module will discuss the role of occlusion in restorative dentistry with emphasis on the clinical application of fundamental biomechanical principles, techniques and instruments. By focusing on diagnosis, the student will be able to understand and develop the parameters to create successful restorative decisions and well-sequenced treatment plans. This module will provide a mandatory hands-on session for facebow transfer, unterocclusal record and articulator set-up. Activity: Lecture 1.75 Credit Hour

DENT 624 Oral & Maxil Complex III
This course is designed to give the student exposure to all methods of anesthesia and pain control used in dentistry, as well as, various medical emergencies encountered in practice. In addition, the students will learn about the mechanisms and consequences of orofacial pain. All lectures will be presented by faculty members from the departments of Oral and Maxillofacial Surgery & Pharmacology and Oral Medicine. Activity: Lecture 3.75 Credit Hours

DENT 628 Oral Diagnosis and Emergency Medical Clerkship
The purpose of this course is to give students a foundation for understanding physical diagnosis, medical work-ups, medical consultations and medical conditions which directly affect the medical management of the dental patient. Activity: Seminar 3.0 Credit Hours

DENT 630 Fixed Prosthodontics Lec
The curriculum of the Fixed Prosthodontics Lecture Course deals with the building of knowledge, thought processes and understanding the procedures required in the restoration of missing and/or badly broken-down teeth by the fabrication of non-removable protheses. Students will learn diagnosis, treatment planning, rehabilitation and maintenance of oral function, comfort, appearance and health of patients with clinical conditions associated with missing or deficient teeth using biocompatible substitutes. These restorations must provide an improved state of oral health, function and esthetics for patients. Activity: Lecture 3.0 Credit Hours

DENT 631 Fixed Prosthodontics Lab
The curriculum of Fixed Prosthodontics Laboratory deals with the building of knowledge, thought processes, skills and understanding the procedures required in the restoration of missing and/or badly broken-down teeth by the fabrication of non-removable protheses. Student will gain hands-on experience in the clinical and technical aspects of fixed prosthodontics. Activity: Laboratory 3.75 Credit Hours

DENT 632 Complete Rem Dent Pros L
The goal of this course is to provide students with the foundation of knowledge needed to diagnose and treat edentulous patients. Students should be able to: 1. Recognize and define complete denture terminology deemed relevant in the classroom, course syllabus, and assigned readings. 2. Describe medical, emotional, and oral anatomic factors that aid in formulation of diagnostic considerations in the complete denture therapy. 3. Describe functional anatomy of the edentulous mouth. 4. Understand the clinical procedures performed during the construction of conventional complete dentures and during the maintenance phase of treatment. 5. List the fundamental clinical procedures performed during the construction of immediate complete dentures. 6. Understand the complete denture occlusion. Upon completion of this course, the students should have an in-depth understanding of: 1. The need for therapy in and restoration of the edentulous arch with complete protheses. 2. The significance of avoiding the edentulous condition in a patient wherever possible. 3. The dental materials that are used at the different stages of complete dentures therapy. 4. The concept and techniques of the clinical steps involved in the treatment of the edentulous patient. Activity: Lecture 2.25 Credit Hours
DENT 633 Complete Rem Dent Pros B
The goal of this second-year course is to provide the dental students with the technical knowledge and skills needed to perform all the laboratory procedures used in the construction of complete dentures and apply the foundation knowledge learned in the lectures. Students should be knowledgeable and skilled in the following: 1. Describing and performing selected sequential clinical and laboratory procedures required during the construction of complete dentures. 2. Applying the knowledge related to dental materials learned in the lectures. Upon completion of this course, the students should be able to: 1. Perform all the laboratory procedures used in construction of complete dentures. 2. Demonstrate the function and the usage of Hanau face bow and articulator in the construction of complete dentures. 3. Communicate with the laboratory technicians via properly written work authorizations.
Activity: Laboratory
2.75 Credit Hours

DENT 634 Partial Rem Dent Pros Lb
A combination of lectures, seminars and laboratory exercises provide the dental student with a fundamental understanding of the partially edentulous condition. Topics covered include classification, diagnosis, treatment planning and treatment of partially edentulous patients with RPDs. This course is designed to provide students with the terminology, concepts and principles necessary for case selection, design, construction of, and patient therapy with conventional RPDs. Upon completion of this course students will have the neccessary didactic knowledge to successfully understand and treat removable partial denture cases in conjunction with the clinical faculty during their third and fourth years.
Activity: Lecture
1.75 Credit Hours

DENT 640 Periodontics II Lec/Lab
This course will be focused on non-surgical periodontal therapy. The macroscopic and microscopic effects of this modality of treatment will be discussed. Different forms of periodontal diseases and non-surgical therapeutic tools will also be presented as well as information on the prognosis of the periodontal therapy and the relevance of maintenance.
Activity: Lecture
2.5 Credit Hours

DENT 650 Local,Public Hlth,Ethic
Lectures, seminars and community experiences provide students with foundation knowledge in general principles of public health and community health, with specific application to the following dental public health concepts: access to care, cost, quality of care and international health. Students complete community experiences that provide foundation experiences in developing and implementing community oral health promotion activities.
Activity: Lecture
1.75 Credit Hour

DENT 652 Ethics II
PEDM II focuses on preparing students to enter the clinical practice of dentistry; building relationships with patients, colleagues, and faculty; and developing a moral framework for clinical decision making.
Activity: Lecture
0.5 Credit Hours

DENT 654 Behavioral Management
This course provides students with the knowledge and skills to communicate with and manage appropriately a diverse group of clinical patients. Eight hours of small group activity, including experiences with standardized patients, as well as twelve hours of large group activities provide the foundational knowledge and skills in patient management with diverse and challenging patients. Motivational interviewing is presented and discussed as a strategy for communication and management with patients.
Activity: Lecture
1.0 Credit Hour

DENT 662 Clinical Prac III-Dau
Dental Auxiliary Utilization for the sophomore class builds on the dental assisting skills the student has mastered in DAU 562. In 662, the student moves on from assisting to Expanded Functions Dental Auxiliary skills that have been taught in the General Restorative Dentistry course. Goals of the course include the goals of DRAUT 562, as well as the development of skills to restore prepared teeth, cement and fabricate temporary crowns, and obtaining, clinical patient records of third and fourth-year student patients. Emphasis is increased on the student’s independent completion of patient-centered tasks and preparation for becoming primary providers in the third year.
Activity: Clinic
3.25 Credit Hours

DENT 664 Intro To Clin Dent II
This course is offered by the Department of Preventive and Restorative Sciences at the University of Pennsylvania School of Dental Medicine. It is intended to integrate topics from General Restorative Dentistry courses and DAU courses at the PDM with clinical expectations and procedures of PDM clinics.
Activity: Lecture
2.25 Credit Hours

DENT 666 Recall Clinic
This course provides students with the knowledge and skills to communicate with and manage appropriately a diverse group of clinical patients. Eight hours of small group activity, including experiences with standardized patients, as well as twelve hours of large group activities provide the foundational knowledge and skills in patient management with diverse and challenging patients. Motivational interviewing is presented and discussed as a strategy for communication and management with patients.
Activity: Lecture
2.5 Credit Hours

DENT 670 Endodontics Lecture
The Department of Endodontics trains pre-doctoral students to become competent in basic endodontic procedures. This includes instruction in the foundational core of Endodontics, including pulp biology, primary non-surgical root canal treatment. Clinical Endodontics: The Department of Endodontics furthermore trains pre-doctoral students to understand advanced endodontic procedures. This includes instruction in trauma, resorption, retreatment, endodontic surgery, bleaching, etc. Our ultimate goal is to implement that treatment/education in a caring, respectful, and responsible manner.
Activity: Lecture
3.75 Credit Hours

DENT 672 Endodontics Lab
The pre-clinical endodontic laboratory course is designed to introduce endodontic concepts and techniques to a student under simulated conditions using extracted teeth.
Activity: Laboratory
1.5 Credit Hour
DENT 680 Orthodontics
The purpose of this course is to provide students with the knowledge of growth and development, concentrating on child somatic, craniofacial, and dental growth and development. The students build a solid foundation along the lines of diagnosing problems and understanding the etiology of malocclusion and space maintenance.
Activity: Lecture
2.25 Credit Hours

DENT 682 Adjunctive Ortho Lec/Lab
This course is designed to expose the student to basic orthodontic laboratory and clinical procedures and encourages the development of technical abilities in banding, bonding, wire bending, and removable appliance fabrication.
Activity: Lecture
1.25 Credit Hour

DENT 685 Pediatric Dentistry I
Pediatric Dentistry. This course will cover Fundamentals of Pediatric Dentistry that will allow you to have a working knowledge of how to manage infants, children, adolescents and patients with special needs that come into your office as a general dentist. The course also describes topics in pediatric relevant to a variety of dental specialities for those interested in pursuing post-graduate studies.
Activity: Seminar
3.0 Credit Hours

DENT 690 Oral Surgery I
This course is designed to give the student exposure to all aspects of the wide and varied scope of oral and maxillofacial surgery. The course also promotes the integration of the basic sciences and medicine into the daily practice of oral and maxillofacial surgery and dentistry. It builds upon and incorporates knowledge from many prerequisite courses, particularly the Pharmacology, Microbiology, and Anesthesia, Pain, and Anxiety courses. After successful completion of this course and its clinical counterpart (course #872), the student should be competent in the management of all aspects of oral and maxillofacial surgery as outlined above under the course goals. Lectures will be presented by faculty members of the department of Oral and Maxillofacial surgery. The lecture material and reading assignments are designed to be complementary. Examinations will encompass material from both sources. Additionally at the request of the dean of academic affairs, the examinations will include questions that reinforce the knowledge obtained by completion of the prerequisite courses of PHARMACOLOGY, MICROBIOLOGY, and Anesthesia, Pain, and Anxiety. Students should review the material from those courses as both the midterm and final examinations will contain questions from knowledge obtained by their completion.
Activity: Seminar
3.0 Credit Hours

DENT 699 Selectives II
Activity: Lecture
1.0 Credit Hour

DENT 752 Ethics III
PEDM III focuses on responsibility transitioning into the post-graduation world of dentistry and covers a variety of topics such as licensure, residency applications, completing graduation requirements, as well as mentorship and real-world clinical practice dilemmas.
Activity: Seminar
0.25 Credit Hours

DENT 790 Multidisciplinary Seminar
The main objective of this year-long seminar-based course is to ensure that students develop the ability to understand biomedical, behavioral and dental sciences and apply such information in a problem-solving context for the comprehensive treatment planning and management of their patients.
Activity: Seminar
1.25 Credit Hour

DENT 799 Selectives III
Activity: Lecture
2.0 Credit Hours

DENT 800 Art Reg Dental School
Activity: Lecture
54.0 Credit Hours

DENT 899 Selectives IV
The Penn Dental Medicine's Selectives Program enhances the predoctoral curriculum by allowing students to individualize their education to reflect their own professional interests. Students must complete this requirement in order to graduate.
Activity: Lecture
1.0 Credit Hour

DENT 996 Intro To Statistics
Activity: Lecture
1.0 Credit Hour

DENT 997 Systematic Reviews
Activity: Lecture
1.0 Credit Hour

Dental - Endodontics (DEND)

DEND 756 Endodontics Clinic
Activity: Clinic
2.75 Credit Hours

DEND 856 The Endodontic Clinic
The Endodontic Clinic trains predoctoral students to become competent in basic endodontic procedures on vital and non-vital teeth. This includes instruction in diagnosis, treatment planning, treatment/obturation, post-endodontic restoration and related entities (bleaching of non-vital teeth, treatment of traumatic injuries, etc.). This instruction is expanded and reinforced in the fourth-year clinic.
Activity: Clinic
2.0 Credit Hours

Dental - Graduate Core Curriculum (DADE)

DADE 910 Clinical Microbiology
The purpose of Microbiology is to provide modern information in five broad categories: 1. Molecular biology of prokaryotic cells as it relates to oral health. 2. Basic principles of immunology as they relate to infection and immunity. 3. Infectious diseases caused by microbial agents. 4. Relationship of microbes to oral health and how microbes cause caries and periodontal disease. 5. Basic aspects of viral infections and how they related to oral health (herpes, hepatitis B and HIV)
Course usually offered in fall term
Activity: Lecture
0.5 Credit Hours
DADE 911 Ethics
The program includes the core basic science courses, designed to encompass the various disciplines basic to advanced studies in the science and practice of dentistry. They are designed to expose students to modern concepts in the areas covered with the objective of updating and expanding upon their predoctoral knowledge of oral biology. The courses are designed to meet the requirements of the different specialty organizations. All programs are presented on an academic term basis. Course usually offered in fall term
Activity: Lecture
0.25 Credit Hours

DADE 912 Genetics, Embryology
The treatment of patients with cleft lip/palate and other types of craniofacial anomalies in the United States has improved dramatically, many children still receive care that is substantially inferior to what can or should be provided. Inadequate care results from diagnostic errors, failure to recognize and treat the full spectrum of health problems associated with these anomalies, unnecessary and poorly timed treatment, and inappropriate or poorly performed procedures. This course will inform of these persistent problems. Embryology lecture is an overview of the field from its 19th Century with Hegel and 'Ontogeny recapitulates Phylogeny' to the 21st century research on 'Evo-Devo' and the HOX development genes and their relations to the contemporary understanding of embryological development including stem cells. Course usually offered in fall term
Activity: Lecture
0.25 Credit Hours

DADE 914 Maxillofacial Radiology
This course is intended to supplement the basic science course by radiographically showing dissimilar pathoses that appear similar on x-rays. Course usually offered in fall term
Activity: Lecture
0.25 Credit Hours

DADE 915 Nitrous Oxide Analgesia
This course is designed to provide didactic and clinical instruction in nitrous oxide/oxygen analgesia in accordance with American Dental Association Guidelines. Upon completion of this course, the participant will be eligible for an Anesthesia Restricted Permit II from the Pennsylvania State Board of Dentistry. Participants will have the opportunity to administer (to each other and patients) and undergo nitrous oxide sedation under close supervision. The course is geared to general dentists and dental specialists.
Activity: Lecture
1.0 Credit Hour

DADE 916 Practice Management
Practice Management Lectures and clinical experiences provide students with foundation knowledge regarding the policies and procedure governing practice.
Activity: Lecture
0.25 Credit Hours

DADE 917 Pathology
Pathology is a course that will apply what students have already learned to the study of disease. It is an essential link between the basic and clinical sciences concerned with the mechanisms of disease (e.g., inflammation, neoplasia, and immunopathology) and the disease processes that students will encounter during their careers in dentistry. While the emphasis will be on oral pathology, one must also be familiar with systemic diseases that may impact on the health of the patients.
Activity: Lecture
0.25 Credit Hours

DADE 918 Pulp/Dentin Biology
Biology of Pulp/Dentin Complex Microcirculation COURSE GOALS/OBJECTIVES: 1. To give the student an understanding of the normal and abnormal biology of the dentin pulp complex. 2. To provide the student with fundamental information on clinically related subjects such as pain control and pulp capping procedures. 3. To provide the student with a general knowledge of the literature related to pulp biology. 4. To review the various physiological methods of investigating pulpal tissue.
Activity: Lecture
0.25 Credit Hours

DADE 919 Head and Neck Anatomy
The purpose of this lecture series is to review the principal anatomy comprising the stomatognathic system. The lectures build on the knowledge of head and neck anatomy acquired in dental school and integrate clinical relevance to this important subject. Slide presentations are employed to teach the anatomical structures of the major head and neck morphologic systems.
Activity: Lecture
0.75 Credit Hours

DADE 920 Advance Library
Activity: Lecture
0.25 Credit Hours

DADE 921 Cultural Competency
Participants in this workshop will assess their beliefs and awareness around cross cultural communication and diversity and inclusiveness. Through lecture, group participation, skill practice, role-play, case studies, and coaching they learn to advance their skill levels and take communication to the next level. Participants will also be recorded at the opening and conclusion of the to assess skill development.
Activity: Lecture
0.25 Credit Hours

DADE 922 Pharmacology
Pharmacology is both a basic science and a clinical science. It builds on the foundation of anatomy, biochemistry, physiology, and pathology and bridges the gap into clinical dentistry. This course in basic pharmacology will give the students a better understanding of drugs, interpreting complicated drug/medical histories, and understanding drug reactions.
Activity: Lecture
0.5 Credit Hours

University of Pennsylvania Graduate Catalog 677
DADE 923 Osteoimmunology
This is a web based course with face to face review sessions prior to in class testing over course material. The material for the course will be presented to students via the online interface. This course covers topics from the text book ‘osteoimmunology’ and from supplemental material provided on Canvas. The course directors will be available by phone, appointment or email for a one hour period each week to address questions. In addition, 90 minute review sessions will be held prior to each exam.
Activity: Lecture
2.0 Credit Hours

DADE 924 Oral Medicine
There are numerous conditions that affect the oral and maxillofacial region, including oral mucosal diseases, temporomandibular joint disorders, orofacial pain syndromes and salivary gland dysfunction. Patients presenting with these disorders can be challenging to diagnose and manage. Several techniques are available for evaluation of these conditions and will guide the clinician toward proper diagnosis. Management protocols vary based upon the specific affecting the oral and maxillofacial region. This course will highlight the etiology, clinical presentation, diagnostic techniques, and management protocols of several conditions, including oral mucosal diseases, temporomandibular joint disorders, orofacial pain syndromes, and salivary gland disorders.
Activity: Lecture
0.25 Credit Hours

DADE 925 Nutrition & Oral Health
Activity: Lecture
0.25 Credit Hours

DADE 926 Wound Healing
The course includes information given by experts in the basic and/ or clinical sciences. The first seven lectures cover the basic biologic aspects of wound healing. These are followed by a series of five lectures discussing wound healing in a more clinical context covering the topics of fracture repair, osseointegration, orthodontics, endodontics and periodontics.
Activity: Lecture
2.0 Credit Hours

DADE 927 Grand Rounds
This course will be in the form of a monthly Penn conference for all the residents of graduate specialty programs in PDM. Each conference will include residents' presentations of patients' treatment with complex dental needs that require multi-disciplinary approach and then open discussion with all involved specialties as panel. This conference is designed to provide residents with an understanding of the sequential management of multidisciplinary cases from a diagnostic and treatment basis.
Activity: Lecture
0.5 Credit Hours

DADE 928 Biostatistics
This course will provide a summary of the main statistical concepts needed to to make decisions based on data. Some of the material that will be covered includes: data displays, summary statistics, probability distributions and expectation, statistical inference procedures for univariate and bivariate data, linear regression models, and analysis of variance. You will learn how to test a hypothesis, which includes phrasing a hypothesis, making a rationale choice of experimental design, choosing the statistics best suited to test the hypothesis, and assessing the results with standard errors, confidence intervals, and p-values.
Activity: Lecture
1.0 Credit Hour

DADE 929 Pulp/Dentin Biology
Activity: Lecture
0.25 Credit Hours

DADE 930 Maxillofacial Trauma
Activity: Seminar
0.25 Credit Hours

DADE 931 Core Curriculum I
Activity: Lecture
5.5 Credit Hours

DADE 932 Core Curriculum II
Activity: Lecture
5.5 Credit Hours

DADE 990 Dscd Research Seminar
Activity: Seminar
1.0 Credit Hour

DADE 991 Guest Lecture Series
Activity: Lecture
1.0 Credit Hour

DADE 996 Biostatics
Activity: Lecture

DADE 997 Systematic Review
Activity: Lecture
1.0 Credit Hour

Dental - Graduate Endodontics (GEND)

GEND 901 Intro To Advanced Endo
Activity: Seminar
3.0 Credit Hours

GEND 902 Adv Endo Lab
Activity: Laboratory
5.5 Credit Hours

GEND 903 Topic Presentation I
Activity: Seminar
1.5 Credit Hour

GEND 904 Topic Presentation II
Activity: Seminar
2.0 Credit Hours

GEND 905 Topic Presentation III
Activity: Seminar
1.5 Credit Hour

GEND 906 Topic Presentation IV
Activity: Seminar
2.25 Credit Hours

GEND 907 Clinical Conference I
Activity: Seminar
1.5 Credit Hour

GEND 908 Clinical Conference II
Activity: Seminar
2.25 Credit Hours

GEND 909 Clinical Conference III
Activity: Seminar
1.5 Credit Hour
Dental - Graduate Oral Medicine (GOMD)

GOMD 963 Omfs H & P Exam
This course is designed to cover topics relevant for residents involved in the on-call service, including maxillofacial infections, trauma, and advanced head and neck anatomy.
Activity: Lecture
1.0 Credit Hour

GOMD 964 S. Gary Cohen Conference
This course will allow academic discussion of disease, disease processes and therapeutic management of a wide range of topics related to oral medicine.
Activity: Seminar
1.5 Credit Hour

GOMD 965 V.J. Brightman Conference
This conference provides residents with didactic training in the fundamentals of oral medicine.
Activity: Seminar
0.75 Credit Hours

GOMD 966 Oral & Maxillofacial Pat
This course introduces residents to the techniques and principles needed for the histopathologic evaluation of tissue specimens from the oral cavity / perioral region.
Activity: Lecture
0.75 Credit Hours

GOMD 967 Oral Medicine Clinics I
Residents will participate in the clinical care of oral medicine patients with direct supervision by department faculty in a variety of different locations within UPHS and Penn Dental Medicine.
Activity: Clinic
18.75 Credit Hours

GOMD 968 Off-Service Clinical Rot
Residents will be assigned to various medical services or outpatient clinics to function as an integral part of the health care system and participate in clinical patient care.
Activity: Recitation
1.0 Credit Hour

GOMD 969 S. Gary Cohen Conf. II
This course will allow academic discussion of disease, disease processes and therapeutic management of a wide range of topics related to oral medicine.
Activity: Seminar
1.5 Credit Hour

GOMD 970 V.J. Brightman Conf. II
This conference provides residents with didactic training in the fundamentals of oral medicine.
Activity: Seminar
0.75 Credit Hours

GOMD 971 Oral Medicine Clinics II
Residents will participate in the clinical care of oral medicine patients with direct supervision by department faculty in a variety of different locations within UPHS and Penn Dental Medicine.
Activity: Clinic
18.75 Credit Hours
GOMD 972 Off-Service Clin Rot II
Residents will be assigned to various medical services or outpatient clinics to function as an integral part of the health care system and participate in clinical patient care.
Activity: Recitation
2.75 Credit Hours

GOMD 973 S. Gary Cohen Conf III
This course will allow academic discussion of disease, disease processes and therapeutic management of a wide range of topics related to oral medicine.
Activity: Seminar
1.5 Credit Hour

GOMD 974 V.J. Brightman Conf III
This conference provides residents with didactic training in the fundamentals of oral medicine.
Activity: Seminar
1.0 Credit Hour

GOMD 975 Omfs Path II
This course introduces residents to the techniques and principles needed for the histopathologic evaluation of tissue specimens from the oral cavity / perioral region.
Activity: Seminar
0.75 Credit Hours

GOMD 976 Oral Medicine Clin III
Residents will participate in the clinical care of oral medicine patients with direct supervision by department faculty in a variety of different locations within UPHS and Penn Dental Medicine.
Activity: Clinic
17.0 Credit Hours

GOMD 977 Off-Service Clin Rot III
Residents will be assigned to various medical services or outpatient clinics to function as an integral part of the health care system and participate in clinical patient care.
Activity: Recitation
1.0 Credit Hour

GOMD 978 S. Gary Cohen Conf Iv
This course will allow academic discussion of disease, disease processes and therapeutic management of a wide range of topics related to oral medicine.
Activity: Seminar
1.5 Credit Hour

GOMD 979 V.J. Brightman Conf Iv
This conference provides residents with didactic training in the fundamentals of oral medicine.
Activity: Seminar
0.75 Credit Hours

GOMD 980 Oral Medicine Clin Iv
Residents will participate in the clinical care of oral medicine patients with direct supervision by department faculty in a variety of different locations within UPHS and Penn Dental Medicine.
Activity: Clinic
17.0 Credit Hours

GOMD 981 Off-Service Clin Rot Iv
Residents will be assigned to various medical services or outpatient clinics to function as an integral part of the health care system and participate in clinical patient care.
Activity: Recitation

**Dental - Graduate Pediatrics (GPED)**

GPED 901 Intro To Ped Dent  
A comprehensive course to provide an overview of main topics in Pediatric Dentistry including diagnosis, rationale for treatment and description of basic treatment and description of basic treatment techniques.  
Activity: Lecture  
1.5 Credit Hour

GPED 902 Review of Ped Dent I  
A comprehensive course to provide an in depth knowledge of all areas of Pediatric Dentistry  
Activity: Lecture  
2.5 Credit Hours

GPED 903 First & Second Year I  
Didactic and Clinical Rotations which provide the residents with the didactic knowledge and clinical experiences for the care of infants, children and adolescents including patients with special health care needs.  
Activity: Clinic  
9.0 Credit Hours

GPED 904 First Year Rot I  
Grand rounds help doctors and other healthcare professionals keep up to date in important evolving areas which may be outside of their core practice.  
Activity: Clinic  
9.0 Credit Hours

GPED 905 Sedation Seminar I  
Sedation Seminar is a series of twenty 1-hour lectures and workshops given to the Periodontal and Pediatric Residents of University of Pennsylvanias School of Dental Medicine. The seminar will be focused on topics and content as advised by the ADA Guidelines for Teaching Pain Control and Sedation to Dentists and Dental Students.

</table>
DOMD 760 Oral Medicine L
The purpose of this course is to give students a foundation for common oral lesions, facial pain, and salivary gland disease as well as an understanding of medical conditions which directly affect the oral and maxillofacial structures.
Activity: Lecture
1.25 Credit Hour

DOMD 761 Admissions and Emergency
Activity: Clinic
1.5 Credit Hour

DOMD 764 Od&E Medical Clerkship
This course is designed to give students a foundation for understanding physical diagnosis, medical workups, consultations, and conditions that directly affect management of the dental patient. Students learn the skills of physical diagnosis, how to complete the ‘History and Physical,’ how to interpret and evaluate clinical, laboratory, radiographic, and other diagnostic information and procedures. In addition, students learn how to recognize the normal range of clinical findings as well as significant abnormalities requiring medical management of the dental patient.
Activity: Lecture
1.0 Credit Hour

DOMD 861 Admissions and Emergency
Admissions and Emergency The Admissions and Emergency Care Clinic rotation consists of combined rotations in the Emergency Care Clinic, and the Oral Diagnosis Clinic. The Emergency Care Clinic provides emergency care to ‘walk-in’ non-registered patients. Emphasis is placed on efficient and thorough dental care to ensure that the patient receives the highest quality of emergency dental care in a timely manner. The Admissions or Oral Diagnosis Clinic provides an initial evaluation for Penn Dental Medicine patients who register for comprehensive care on an appointment basis. Students that rotate through the Oral Diagnosis Clinic assess the medical and oral health status of the patients. Additionally, the medical status of all patients (except ASA I patients) are reassessed annually in the Oral Diagnosis Clinic.
Activity: Clinic
1.0 Credit Hour

DOMD 887 Hospital Assignment
Students spend four weeks in an extramural program at an affiliated hospital or a non-affiliated hospital program approved by Penn Dental Medicine. During the hospital rotation, students evaluate hospitalized patients to reinforce principles of physical and laboratory diagnosis, participate in dental treatment for patients with severe medical problems, and learn to request and answer consultations from other clinical departments such as radiology and otolaryngology.
Activity: Clinic
6.25 Credit Hours
**Dental - Oral Surgery (DOSP)**

**DOSP 770 Oral Surgery L**
This lecture-based course provides students exposure to all aspects of the wide and varied scope of oral and maxillofacial surgery. The course promotes the integration of the basic sciences and medicine into the daily practice of oral and maxillofacial surgery and dentistry.

Activity: Lecture
2.25 Credit Hours

**DOSP 772 Oral Surgery Clinic**
Students perform uncomplicated exodontia and minor pre-prosthetic surgical procedures that are approved by the clinical instructors, assist the instructors in complicated surgical procedures, and observe the administration of intravenous sedation and general anesthesia.

Activity: Clinic
1.0 Credit Hour

**DOSP 782 Oral Surgery Clinic**
Students perform uncomplicated exodontia and minor pre-prosthetic surgical procedures that are approved by the clinical instructors, assist the instructors in complicated surgical procedures, and observe the administration of intravenous sedation and general anesthesia. The bulk of the students’ clinical experience is delivered in a continuous 2-week block. This type of experience enables students to better understand the delivery of surgical care.

Activity: Clinic
2.0 Credit Hours

**Dental - Orthodontics (DORT)**

**DORT 753 Orthodontics II**
Activity: Lecture
1.75 Credit Hour

**DORT 788 P and I Clinic**
Through clinical rotation, the student is exposed to patients with malocclusions that arise in a normally developing craniofacial complex. Management of these problems aims at providing an unimpeded eruption and alignment of dentition.

Activity: Clinic
0.75 Credit Hour

**DORT 803 Adjunctive Orthodontics**
Adjunctive orthodontic intervention involves the management of orthodontic problems prior to restorative treatment. Each student is required to complete the treatment of a clinical case which may involve the following: 1. repositioning teeth that have drifted after extraction or bone loss caused by periodontal disease. 2. forced eruption of broken teeth to expose sound root structure of which to place permanent restorations. 3. correction of crossbites which do not involve a skeletal discrepancy. 4. alignment of anterior teeth for more esthetic restorations.

Activity: Clinic
0.5 Credit Hour

**Dental - Pediatrics (DPED)**

**DPED 704 Pediatric Dentistry L/B**
Activity: Lecture
2.75 Credit Hours

**DPED 751 Pediatric Dentistry Clin**
Activity: Clinic
1.25 Credit Hour

**DPED 851 Pediatric Dentistry Clinic**
The clinical course attempts to expose the student to many components of pediatric dentistry, including but not limited to diagnosis, prevention, restorative dentistry, pulp therapy, management of the developing occlusion, behavior guidance, and care of special children. Penn Dental Medicine competency statements, as they apply to children, adolescents, and special needs patients are the focus. Competency examinations for this course relate to restorative dental care for the child patient.

Activity: Clinic
1.25 Credit Hour

**Dental - Periodontics (DPRD)**

**DPRD 780 Periodontics L**
This course is designed to acquaint the student practitioner with the fundamentals of periodontal surgery necessary for the comprehensive practice of general dentistry. A major emphasis includes understanding the normal periodontium and a correlation of the events in the histopathology of inflammation, trauma and wound healing.

Activity: Lecture
2.0 Credit Hours

**DPRD 781 Periodontics Clinic**
The Periodontics Clinic provides third-and fourth-year students the opportunity to treat patients with differences of severity in existing periodontal disease.

Activity: Clinic
5.25 Credit Hours

**DPRD 881 Periodontics Clinic**
The Periodontics Clinic provides fourth-year students the opportunity to treat patients with differences of severity in existing periodontal disease. In most cases, the patients afford the students adequate experiences and impart to them comprehensive knowledge of the tissues of the periodontium and the fundamental principles underlying the prevention and treatment of diseases that afflict the periodontal tissues.

Activity: Clinic
5.0 Credit Hour

**Dental - Radiology (DRAD)**

**DRAD 777 Radiology Clinic/Seminar**
Students are assigned 12-15 rotations in the Radiology Clinic during their third and fourth years. During these rotations, students take full-mouth x-ray series on newly admitted patients.

Activity: Clinic
0.75 Credit Hour

**DRAD 877 Radiology Clinic**
Students are assigned 12-15 rotations in the Radiology Clinic during their third and fourth years. During their rotations, they take full-mouth x-ray series on newly admitted patients who are sent to Radiology from the Admissions Clinic.

Activity: Clinic
0.25 Credit Hour

**Dental - Restorative Dentistry (DRST)**

**DRST 739 Pass Preparatory Course**
Activity: Laboratory
4.25 Credit Hours
DRST 740 Restorative Dentistry L
Activity: Lecture
4.75 Credit Hours

DRST 741 Comprehensive Care C Fal
Activity: Clinic
4.0 Credit Hours

DRST 742 Restorative Dentistry SP
Activity: Clinic
4.0 Credit Hours

DRST 789 Clinical Seminar
The seminar is an open forum discussion in which students make case presentations after which the diagnosis, treatment plan, and therapy are analyzed and evaluated. Initially, the PCU leader may present cases in order to establish the proper method of case presentation; thereafter, it is the student’s responsibility to present thoroughly documented cases which include photographic slides of pretreatment, a complete dental and medical evaluation, study models, radiographs, and other pertinent data.
Activity: Seminar
1.25 Credit Hour

DRST 841 Comprehensive Care C
Fourth-year students, within their PCU groups, continue to perform examination and diagnostic procedures, comprehensive treatment planning, all restorative dental procedures, fixed and removable prosthodontic procedures, including implant supported restorations, non-surgical periodontal procedures, and maintenance therapy. The PCU program goal is to produce a practitioner who can integrate basic scientific knowledge with clinical proficiency in all phases of general dentistry, based on the concept of recognition and treatment of oral disease.
Activity: Clinic
14.0 Credit Hours

DRST 889 Clinical Seminar
The seminar is an open forum discussion in which students make case presentations, after which the diagnosis, treatment plan, and therapy are analyzed and evaluated. Initially, the PCU leader may present cases in order to establish the proper method of case presentation; thereafter, it is the student’s responsibility to present thoroughly documented cases which include photographic slides of pretreatment, a complete dental and medical evaluation, study models, radiographs, and other pertinent data.
Activity: Seminar
1.25 Credit Hour

Design (DSGN)

DSGN 220 Pixel to Print
This studio course introduces students to the world of print media and circulation through techniques in Risograph (a high-speed digital printing system developed in Japan in the 1980s), xerography, and letterpress, focusing particularly on the format of posters and artists’ ephemera. Beginning with the Adobe Creative Suite, students will create their own broadsides, flyers, announcement cards, and print-based installations throughout the course, exploring ways in which artists and designers make use of the printed form to disseminate information; initiate happenings; advertise events; or foment change. Students will learn about some of the most significant producers working within this realm—from Dada to punk bands in the ’70s to contemporary hybrid publishing collectives—and develop skills in page layout, typography, and design; digital to analog pre-press and post-print production methods; and mechanized and hand-pulled press operations. The course includes a field trip to NYC.
Taught by Kayla Romberger
Also Offered As: DSGN 520
Activity: Studio
1.0 Course Unit

DSGN 233 Digital Illustration
Digital Illustration is a course designed to expose students to the diverse techniques and approaches used in creating digital illustration for print publication. Course assignments will include two-dimensional animation storyboard rendering, figure illustration, technical diagram illustration, photographic retouching and enhancing. Digital applications will include morphing with layers, surface cloning, three-dimensional modeling and spatial transformation of scenes and objects. Students completing this course will possess the capability to design and place creatively and skillfully execute finished artwork.
One-term course offered either term
Also Offered As: DSGN 633
Prerequisite: DSGN 264 AND FNAR 123
Activity: Studio
1.0 Course Unit

DSGN 234 Art of the Web: Interactive Concepts for Art & Design
Art of the Web: Interactive concepts for art and design is a first step in learning how to create, analyze and discuss interactive content, as a visual creator. It is an exploration of the culture of the internet, the ideas behind its quirks, the dreams and freedoms it encapsulates, and the creative power it gives us. Students will be assigned projects that will challenge their current understanding of the web, and the ways it shapes human connectivity and interaction. Upon completion of this course, students will possess a working knowledge how to organize and design websites and learn to critique web-content including navigation, UX design and information architecture. The course will require analytical conceptual skills and foster creative thinking.
One-term course offered either term
Also Offered As: DSGN 634
Prerequisite: DSGN 264
Activity: Studio
1.0 Course Unit
DSGN 235 3-D Computer Modeling
Students will develop a comprehensive knowledge of how virtual worlds are constructed using contemporary computer graphics technique with a fine arts perspective. The course will offer the opportunity to explore the construction, texturing, and rendering of forms, environments, and mechanism while conforming to modeling specifications required for animation, real-time simulations or gaming environments, and rapid prototyping.
One-term course offered either term
Also Offered As: DSGN 635
Prerequisite: FNAR 123 AND DSGN 636
Activity: Studio
1.0 Course Unit

DSGN 236 Digital Figure Modeling
This course introduces methods of modeling, texturing, and rendering human and animal figures. Students will study anatomical bone and muscle structures, and then employ this knowledge as they develop polygonal models for real-time 3D simulations or gaming environments, high-resolution rendering, and rapid prototyping.
Course usually offered in spring term
Also Offered As: DSGN 536
Prerequisite: DSGN 235
Activity: Studio
1.0 Course Unit

DSGN 238 Open Book
'Open Book' will focus on visual communication of information. It will address two methods of inquiry and the corresponding means of visual representation: the objective, well-structured research of facts and images, and the creative process of their subjective evaluation and restatement. Students will propose a topic based on their area of interest and engage in a focused, semester-long exploration, which they will present in the form of a designed and printed book.
Course usually offered in fall term
Also Offered As: DSGN 538
Activity: Seminar
1.0 Course Unit

DSGN 245 Book and Publication Design
Book and Publication Design will focus on the theory and professional practice of designing multi-page publications. Students will analyze formal structures of different types of books-literature and poetry, fiction and non-fiction compilations, illustrated volumes such as art catalogues, monographs and textbooks, and serial editions-discussing both traditional and experimental approaches. The format of the course will be split between theoretical and historical evaluations of book formats by drawing on the Van Pelt Rare Book Collection - and studio time where students will design books with attention to the format's conceptual relationship to the material at hand with a focus on typography and page layout, as well as on understanding production methods of printing and binding. In addition to the conventions of page layout, students will examine paratextual elements (title page, practice of pagination and other internal structuring, content lists and indexes, colophons, notes, and marginalia, and end-leaves binding, etc.). Prerequisite: DSGN 264 or permission from the instructor.
Taught by: Hyland
Course usually offered in fall term
Also Offered As: DSGN 645
Prerequisite: DSGN 264
Activity: Studio
1.0 Course Unit

DSGN 247 Environmental Animation
This studio-based course examines the disciplinary spaces of landscape, art, and architecture through the medium of 3D animation and storytelling. We immerse ourselves in environments that may be as small as a cell or as large as a planet. From the refuging of images, models, graphic design, or video to visualization or coding the genesis of whole environments, this course will allow for a variety of entry point for students of different disciplines and skill levels. Projects will range in scope from animated GIFs to animated shorts. This course embraces a spirit of invention, collaborative learning, and interdisciplinary cross-pollination. Experience in landscape architecture, architecture, animation, programming, film, GIS, and/or graphic design is encouraged. We will examine and discuss some standard typologies such as the walk-through, data-visualization, as well as filmic and avant garde strategies as starting points for creative reinterpretation of space. We will primarily be using Blender and After Effects with support from Unreal Engine. Python scripting will be included in most assignments to enhance artistic control of the software.
Taught by: Landau
Course usually offered in spring term
Also Offered As: DSGN 547
Activity: Studio
1.0 Course Unit

DSGN 264 Art, Design and Digital Culture
This course is an introduction to the fundamental perception, representation, aesthetics, and design that shape today's visual culture. It addresses the way artists and designers create images; design with analog and digital tools; communicate, exchange, and express meaning over a broad range of media; and find their voices within the fabric of contemporary art, design, and visual culture. Emphasis is placed on building an extended form of visual literacy by studying and making images using a variety of representation techniques; learning to organize and structure two-dimensional and three-dimensional space, and designing with time-based and procedural media. Students learn to develop an individual style of idea-generation, experimentation, iteration, and critique as part of their creative and critical responses to visual culture. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
For BA Students: Humanities and Social Science S

Activity: Studio
1.0 Course Unit

DSGN 266 Graphic Design with Creative Technologies
This aim this course is to introduce students creative ways to use color, typography, and layout across new materials and media, ranging from print to physical objects. Students will explore visual design through a set of assignments and projects that are geared towards exploring the role of design in visual arts, interaction design, media design and architecture. The course introduces a number of design concepts such as content organization, navigation, interaction and date-driven design and show ways to develop new design metaphors, presentation techniques, and imagery using old and new technologies. Course is structured as a combination of lectures and hands on workshops where students will have the chance to work both individually and collaboratively to realize their projects.
One-term course offered either term
Also Offered As: DSGN 566
Prerequisite: DSGN 264 OR DSGN 636
Activity: Studio
1.0 Course Unit
DSGN 268 Biological Design
This course is a research-based design studio that introduces new materials, fabrication, and prototyping techniques to develop a series of design proposals in response to the theme: Biological Design. The studio introduces life sciences and biotechnologies to designers, artists, and non-specialists to develop creative and critical propositions that address the social, cultural, and environmental needs of the 21st century.

One-term course offered either term
Also Offered As: DSGN 568
Prerequisite: DSGN 264
Activity: Studio
1.0 Course Unit

DSGN 269 Typography
The study and practice of typography spans the history of individual letterforms through the typesetting of full texts. It is a complete immersion into type as an integral part of visual communication. Typesetting conventions and variables including legibility, readability, texture, color and hierarchy will be stressed, as well as a form for organizing information and expressing visual ideas. Studio work will include collection and analyzing type, designing an original typeface, researching type history and experimenting with typographic forms.

One-term course offered either term
Also Offered As: DSGN 569
Prerequisite: DSGN 264
Activity: Studio
1.0 Course Unit

DSGN 270 Graphic Design Practicum
Practicum provides a real world experience for students interested in solving design problems for non-profit and community organizations. The studio works with two clients each semester, and previous projects have included print design, web design, interpretive signage and exhibit interactives. All projects are real and will result in portfolio-ready finished product. Students will participate in full design experience including design, client interaction, presentations, production and project management. In addition, students will take field trips, meet professionals and go on studio visits.

One-term course offered either term
Also Offered As: DSGN 570
Prerequisite: DSGN 266 OR DSGN 269
Activity: Studio
1.0 Course Unit

DSGN 286 Visual Narrative
Visual Narrative is an introduction to the practice of storytelling with images. From news and information to art, law, and science, visual storytelling is a critical aspect of creating and navigating contemporary culture. This course is situated at the intersection of design, art, and visual culture, focusing on relevant forms and topics including the photo essay, information design and visual explanation, the photographic sequence in contemporary art, scenario design and concept visualization. Visual Narrative focuses on traditional as well as emerging modes of production and distribution for documentary, visual storytelling, and photojournalism, exploring new aesthetics and the social impact of visual narratives. Visual Narrative immerses students in the study of narrative craft and creation of visual stories covering topics relevant to designers and photographers. Beginning with the photo series and the photo documentary tradition, the course evolves through multimedia narrative and non-narrative forms. Students will explore principles of narrative construction in design and photography through lecture, studio projects, and with presentations by visiting artists, designers, and photographers. Students will work within and across disciplines of art, design, and visual journalism, exploring topics including context, cause and effect, time, space, flow, picture-to-picture relationships, sequence, visual hierarchy, and linearity. Study of non-narrative systems- categorical, rhetorical, abstract, and associational forms - as well as interactive narratives will also be included.

Course usually offered in fall term
Also Offered As: DSGN 686
Activity: Studio
1.0 Course Unit

DSGN 300 Contemporary Theories of Design
This seminar explores a range of theories, concepts, and thought patterns that shape different disciplines of design. From critical science studies to object-orient ontology and speculative design, it discusses how theoretical frameworks drive innovation, critique, and user experience.

Taught by: Telhan
Also Offered As: DSGN 500
Activity: Seminar
1.0 Course Unit

DSGN 306 Design 21: Design After the Digital
Last century, the digital revolution transformed every aspect of our lives. It shaped every design discipline and defined the ways we imagine and fabricate anything from images to everyday products to clothing, cars, buildings and and megacities. Today, design is going through other technical and conceptual revolutions. We design with biotechnologies, fall in love in Virtual Reality with AI bots, rent our cognitive labor through cryptocurrencies. Our creative capabilities, on the other hand, are bounded by a polluted, over-crowded, and resource-constrained planet that is suffering major income and educational inequality. Design After the Digital interrogates the role of design for this century. The seminar surveys the conceptual and technical developments in the past decade to develop an interdisciplinary understanding of design, science and technology. We will study how new design and fabrication methods shape what we eat, what we wear, how we form opinions and express ourselves. The goal will be to develop new literacies of design that will help us acclimate better to the realities of the century as creative and critical citizens who can shape its products and values.

Course usually offered in fall term
Also Offered As: DSGN 506
Activity: Seminar
1.0 Course Unit
DSGN 317 Cultures of Making
Cultures of Making is an integrative studio that explores new frontiers of design that enable, empower, and interrogate the human in the 21st century. We will take the human body, identity, or image as a site of investigation and design new types of products for it. Through our designs, we will raise questions about the motivations behind quantifying ourselves, desires for being permanently available and connected, complacency with not having privacy or intimacy, and eagerness to substitute craft, labor, and decision-making with intelligent systems from self-driving cars to painting bots and trading algorithms. This studio will pursue a research- and production-oriented format. We will incorporate techniques and technologies from fields as diverse as printed electronics, biochemical fabrication, machine learning and robotics to develop applications that respond to the emergent perceptions of the human for its individual, social, or environmental identity.
Taught by: Orkan Telhan
Also Offered As: DSGN 517
Activity: Studio
1.0 Course Unit

DSGN 328 Functions for Form and Material
This studio course will introduce methods of material selection and fabrication with the goal of developing evocative and effective designs. We will learn parametric modeling techniques that allow visualization to begin before all of the requirements of a design are known. We will implement techniques that allow us to test and optimize forms to be stronger, lighter, or to fail or perform more predictably. The class will work to identify materials with properties that introduce new structural or conceptual possibilities for our designs. For each project, we will use a broad range of fabrication techniques for metals, natural and synthetic materials. The goal of the course is to develop a creative approach towards learning to work with unfamiliar tools and materials.
Taught by: Mosely
Also Offered As: DSGN 528
Activity: Studio
1.0 Course Unit

DSGN 337 Information Design and Visualization
Information Design and Visualization is an introductory course that explores the structures of information (text, numbers, images, sounds, video, etc.) and presents strategies for designing effective visual communication appropriate for various users and audiences. The course seeks to articulate a vocabulary of information visualization and find new design forms for an increasingly complex culture.
One-term course offered either term
Also Offered As: DSGN 637
Prerequisite: DSGN 264
Activity: Studio
1.0 Course Unit

DSGN 343 Language of Design
The course will explore the changing relationship during the modern era between design (structure, model, plan of a work of art) and language (metaphor for a system of communication; speech, writing, literature). Our readings and visual presentations will focus on topics in the decorative arts, painting, architecture, typography and visual communication. We will focus on primary sources in order to situate our inquiry in a larger historical context. The discussion will center on claims about the inherent meaning of form, discuss different roles for design - as an ideological statement, as an agent of social change, and as an idiosyncratic expression. Topics will also include the search for a universal language, attempts at bridging the perceived gap between spoken and written language, and the impact of visual form on the meaning of literary texts (particularly when the author has been involved in the publication process). Students can suggest additional topics related to their field of study.
Course usually offered in spring term
Also Offered As: DSGN 643
Activity: Seminar
1.0 Course Unit

DSGN 366 Advanced 3-D Modeling
Advanced 3-D Modeling will give students the opportunity to refine skills in modeling, texturing, lighting and rendering with an emphasis on the evolution of ideas through constant revision based class critique. Students will use a variety of industry standard software packages, including but not limited to Maya and Mudbox to compose complex environments. Projects are designed to give students the opportunity to work with original content within a simulated production environment.
One-term course offered either term
Also Offered As: DSGN 646
Prerequisite: DSGN 235 OR DSGN 635 OR DSGN 236 OR DSGN 536
Activity: Studio
1.0 Course Unit

DSGN 370 Advanced Graphic Design and Typography
This course will explore advanced commercial, public and personal forms of visual communication. Emphasis will be placed on creative problem solving with consideration for audience. Discussion of design history, current ideology and future design applications will inform individual student projects. Work generated in this studio can be used to build a portfolio. Prerequisite: Permission from instructor if prerequisites are not met.
Course usually offered in fall term
Also Offered As: DSGN 670
Prerequisite: DSGN 266 AND DSGN 269
Activity: Studio
1.0 Course Unit
DSGN 378 Interfacing Cultures: Designing for Mobile, Web and Public Media
This course introduces advanced topics related to contemporary media technologies, ranging from social media to mobile phone applications and urban interfaces. Students learn how to use new methods from interaction design, service design, and social media and work towards prototyping their ideas using new platforms and media. The class will cover a range of topics such as online-gaming, viral communication, interface culture, networked environments, internet of things and discuss their artistic, social, and cultural implications to the public domain.
Course usually offered in spring term
Also Offered As: DSGN 678
Prerequisite: DSGN 234
Activity: Studio
1.0 Course Unit

DSGN 380 Design Future(s)
Design Future(s) is production-oriented studio which explores the relationship between critical design and emerging technologies. Students learn how to work with sensing, machine learning, robotics, and biofabrication to explore what it means to design in response to the social, cultural, and environmental realities of our times. The course is organized through hands-on workshops, lectures, design and critique sessions to develop both technical skills and learn about new design methodologies. Every semester, the studio is developed around a specific theme (i.e., future of body and labor, future of identity, future interfaces) and work towards developing a discursive and multi-disciplinary understanding of 'future' that is informed by methodologies outside the traditional Western design canon.
Taught by: Orkan Telhan
Also Offered As: DSGN 580
Activity: Studio
1.0 Course Unit

DSGN 388 Creative Research
This seminar explores different aspects of research—knowledge production and dissemination—across a variety of creative practices from the arts to the humanities, engineering, and sciences. Students investigate what it means to observe, measure, analyze, test, study, experiment, diagram, prototype, speculate, generate and criticize; apply multiple modes of inquiry; be conceptual, analytical, propositional and critical at the same time, all in order to develop their work from different perspectives. As students work across different methodologies, they also explore ways of making their work public through various social protocols, publications, and exhibitions that address different audiences.

DSGN 520 Pixel to Print
This studio course introduces students to the world of print media and circulation through techniques in Risograph (a high-speed digital printing system developed in Japan in the 1980s), xerography, and letterpress, focusing particularly on the format of posters and artists’ ephemera. Beginning with the Adobe Creative Suite, students will create their own broadsides, flyers, announcement cards, and print-based installations throughout the course, exploring ways in which artists and designers make use of the printed form to disseminate information; initiate happenings; advertise events; or foment change. Students will learn about some of the most significant producers working within this realm—from Dada to punk bands in the ’70s to contemporary hybrid publishing collectives—and develop skills in page layout, typography, and design; digital to analog pre-press and post-print production methods; and mechanized and hand-pulled press operations. The course includes a field trip to NYC.

DSGN 633 Digital Illustration
Digital Illustration is a course designed to expose students to the diverse techniques and approaches used in creating digital illustration for print publication. Course assignments will include two-dimensional animation storyboard rendering, figure illustration, technical diagram illustration, photographic retouching and enhancing. Digital applications will include morphing with layers, surface cloning, three-dimensional modeling and spatial transformation of scenes and objects. Students completing this course will possess the capability to design and plan creatively and skillfully execute finished artwork.

Activity: Studio
1.0 Course Unit

DSGN 634 Art of the Web: Interactive Concepts for Art & Design
Art of the Web: Interactive concepts for art and design is a first step in learning how to create, analyze and discuss interactive content, as a visual creator. It is an exploration of the culture of the internet, the ideas behind its quirks, the dreams and freedoms it encapsulates, and the creative power it gives us. Students will be assigned projects that will challenge their current understanding of the web, and the ways it shapes human connectivity and interaction. Upon completion of this course, students will possess a working knowledge how to organize and design websites and learn to critique web-content including navigation, UX design and information architecture. The course will require analytical conceptual skills and foster creative thinking.

One-term course offered either term
Also Offered As: DSGN 234
Prerequisite: DSGN 264
Activity: Studio
1.0 Course Unit

DSGN 635 3-D Computer Modeling
Students will develop a comprehensive knowledge of how virtual worlds are constructed using contemporary computer graphics technique with a fine arts perspective. The course will offer the opportunity to explore the construction, texturing, and rendering of forms, environments, and mechanisms while conforming to modeling specifications required for animation, real-time simulations or gaming environments, and rapid prototyping.

One-term course offered either term

1.0 Course Unit

DSGN 646 Advanced 3D Modeling
Advanced 3D Modeling will give students the opportunity to refine skills in modeling, texturizing, lighting, and rendering with an emphasis on the evolution of ideas through constant revision based on class critique. Students will use a variety of industry standard software packages, including but not limited to Maya and Mudbox to compose complex environments. Projects are designed to give students the opportunity to work with original content with a simulated production environment.
One-term course offered either term
Also Offered As: DSGN 366
Prerequisite: DSGN 235 OR DSGN 635 OR DSGN 236 OR DSGN 536
Activity: Studio
1.0 Course Unit
DSGN 670 Advanced Graphic Design and Typography
This course will explore advanced commercial, public and personal forms of visual communication. Emphasis will be placed on creative problem solving with consideration for audience. Discussion of design history, current ideology and future design applications will inform individual student projects. Work generated in this studio can be used build a portfolio. Prerequisite: Permission from instructor if prerequisites are not met.
Course usually offered in fall term
Also Offered As: DSGN 370
Prerequisite: DSGN 266 AND DSGN 269
Activity: Studio
1.0 Course Unit

DSGN 678 Interfacing Culture: Designing for Mobile, Web and Public Media
This course introduces advanced topics related to contemporary media technologies, ranging from social media to mobile phone applications and urban interfaces. Students learn how to use new methods from interaction design, service design, and social media and work towards prototyping their ideas using new platforms and media. The class will cover a range of topics such as online-gaming, viral communication, interface culture, networked environments, internet of things and discuss their artistic, social, and cultural implications to the public domain.
Course usually offered in spring term
Also Offered As: DSGN 378
Prerequisite: DSGN 234
Activity: Studio
1.0 Course Unit

DSGN 686 Visual Narrative
Visual Narrative is an introduction to the practice of storytelling with images. From news and information to art, law, and science, visual storytelling is a critical aspect of creating and navigating contemporary culture. This course is situated at the intersection of design, art, and visual culture, focusing on relevant forms and topics including the photo essay, information design and visual explanation, the photograhic sequence in contemporary art, scenario design and concept visualization. It proposes that studying and making sequential images and visual essays in a wide range of media- comics and graphic novels, propaganda, environements and installations, social media, animation, video, and digital media- are critical to understanding culture. The course immerses students in the study of narrative craft and creation of usual stories covering topics relevant to designers and photographers. Beginning with the photo series an the photo documentary tradition, the course evolves through multimedia narrative and non-narrative forms. Students will explore principles of narrative construction in design and photography through lecture, studio projects, and with presentations by visiting artists, designers, and photographers.

DTCH 153 Is Europe Facing a Spiritual Crisis?
Is Europe Facing a Spiritual Crisis? On Contemporary Debates about Secularization, Religion and Rationality. Point of departure for this course is the difference between Europe and the US as to the role of religion in the unfolding of their respective ‘cultural identities’ (cf. Charles Taylor, A Secular Age, 522-530). As a rule, both the US and Western Europe are now defined as secularized cultures, even if their histories and specific identities are strongly rooted in the Christian heritage. Given this contemporary situation, four research questions will be dealt with in this course. 1) What is meant by secularization? In answer to that question, two secularization theories are distinguished: the classic versus the alternative secularization thesis; 2) What is the historical impact of the nominalist turning-point at the end of the Middle Ages in this process towards secularization? 3) How did the relation between rationality and religion develop during modern times in Europe? 4) What is the contemporary outcome of this evolution in so-called postmodern / post-secular Europe and US? We currently find ourselves in this so-called postmodern or post-secular period, marked by a sensitivity to the boundaries of (modern) rationality and to the fragility of our (modern) views on man, world and God. In this respect, we will focus on different parts of Europe (Western and Eastern Europe alike) and will refer to analogies and differences between Western Europe and US. This historical-thematic exposition is illustrated by means of important fragments from Western literature (and marginally from documents in other arts) and philosophy. We use these fragments in order to make more concrete the internal philosophical evolutions in relation to corresponding changes in diverse social domains (religion, politics, economy, society, literature, art...).

DTCH 574 Politics and Societies in the Early Modern World
In this seminar, we will discuss how early modern globalization affected societies and the ways their members and rulers made politics. Following a historiographical introduction, it is divided into three sections. In the first, we will concentrate on empires and kings in order to detect common features of dynastic power across the globe and to explore how such characteristics influenced each other. Second, we will shift our attention to citizens and the ways they made politics in their city-states. For a long time, research on citizenship has been confined to the post-revolutionary nation states. However, recent research suggests that urban citizenship has far deeper roots in medieval and early modern cities. Up to now most research has focused on urban centers in Western Europe and more precisely on the so-called urban belt stretching from Central and North-Italy, over Switzerland and Southern Germany to the Rhineland and the Low Countries. Comparisons with urban centers in Asia and the colonial Americas will be needed to test that view. In the third section, we will study the people who provided information to societies and decision makers. Often, they held multiple identities or they acted as religious or ethnic outsiders. Therefore, we call them, with a term borrowed from anthropology ‘brokers’. Taken together, the analysis of these aspects will deepen our understanding of politics and societies in the globalizing early modern world. Thus, the seminar will contribute to a more comprehensive, less Europe-centered view on that period.

EALC 007 East Asia: Past and Present
This course surveys the history of East Asia from early times to the present. We will study the establishment of various sociopolitical orders and their characteristics alongside major cultural developments. Covered topics include: state formation and dissolution; the role of ideology and how it changes; religious beliefs and values; agriculture, commerce, and industry; changing family relations; responses to imperialism; and East Asia’s growing stature in the modern world as well as future prospect. Although a main focus will be on understanding how the regions we now know as China, Japan, and Korea emerged with their respective identities, the course will also give attention to various groups that are rarely noticed in the contemporary world but nonetheless historically important, such as the Tibetans, Khitans, Jurchens, Mongols, and Manchus.
Taught by: Park
Also Offered As: HIST 005
Activity: Lecture
1.0 Course Unit
EALC 008 East Asian Religions
This course will introduce students to the diverse beliefs, ideas, and practices of East Asia's major religious traditions: Buddhism, Confucianism, Daoism, Shinto, Popular Religion, as well as Asian forms of Islam and Christianity. As religious identity in East Asia is often fluid and non-sectarian in nature, these religious traditions will not be investigated in isolation. Instead, the course will adopt a chronological and geographical approach, examining the spread of religious ideas and practices across East Asia and the ensuing results of these encounters. The course will be divided into three units. Unit one will cover the religions of China. We will begin by discussing early Chinese religion and its role in shaping the imperial state before turning to the arrival of Buddhism and its impact in the development of organized Daoism, as well as local religion. In the second unit, we will turn eastward into Korea and Japan. After examining the impact of Confucianism and Buddhism on the religious histories of these two regions, we will proceed to learn about the formation of new schools of Buddhism, as well as the rituals and beliefs associated with Japanese Shinto and Korean Shamanism. The third and final unit will focus on the modern and contemporary periods through an analysis of key themes such as religion and modernity, the global reception and interpretation of East Asian religions, and the relationship between religion and popular culture. The class will be conducted mainly in the form of a lecture, but some sessions will be partially devoted to a discussion of primary sources in translation. The course assignments are designed to evaluate the development of both of these areas. No previous knowledge of East Asian languages is necessary, and all readings will be available in English on the Canvas site in PDF form.

Two terms. student may enter either term.
Also Offered As: ARTH 103, VLST 233
Activity: Lecture
1.0 Course Unit

EALC 015 Introduction to Buddhism
This course seeks to introduce students to the diversity of doctrines held and practices performed by Buddhists in Asia. By focusing on how specific beliefs and practices are tied to particular locations and particular times, we will be able to explore in detail the religious institutions, artistic, architectural, and musical traditions, textual production and legal and doctrinal developments of Buddhism over time and within its socio-historical context. Religion is never divorced from its place and its time. Furthermore, by geographically and historically grounding the study of these religions we will be able to examine how their individual ethical, cosmological, and soteriological systems effect local history, economics, politics, and material culture. We will concentrate first on the person of the Buddha, his many biographies and how he has been followed and worshipped in a variety of ways from Lhasa, Tibet to Phrae, Thailand. From there we touch on the foundational teachings of the Buddha with an eye to how they have evolved and transformed over time. Finally, we focus on the practice of Buddhist ritual, magic and ethics in monasteries and among lay communities in Asia and even in the West. This section will confront the way Buddhists have thought of issues such as 'Just-War,' Women's Rights and Abortion. While no one quarter course could provide a detailed presentation of the beliefs and practices of Buddhism, my hope is that we will be able to look closely at certain aspects of these religions by focusing on how they are practiced in places like Nara, Japan or Vietnam, Laos.
Taught by: McDaniel

EALC 022 Gods, Ghosts, and Monsters
This course seeks to be a broad introduction. It introduces students to the diversity of doctrines held and practices performed, and art produced about ‘the fantastic’ from earliest times to the present. The fantastic (the uncanny or supernatural) is a fundamental category in the scholarly study of religion, art, anthropology, and literature. This course will focus both theoretical approaches to studying supernatural beings from a Religious Studies perspective while drawing examples from Buddhist, Shinto, Christian, Hindu, Jain, Zoroastrian, Egyptian, Central Asian, Native American, and Afro-Caribbean sources from earliest examples to the present including mural, image, manuscript, film, codex, and even comic books. It will also introduce students to related humanistic categories of study: material and visual culture, theology, cosmology, shamanism, transcendentalism, soteriology, eschatology, phantasms, spiritualism, mysticism, theophany, and the historical power of rumor. It will serve as a gateway course into the study of Religion among numerous Asian, and East Asian Studies, as well as Visual Culture and Film Studies. It will include guest lectures from professors from several departments, as well as an extensive hands-on use of the collections of the Penn Museum of Archaeology and Anthropology and the manuscripts held in the Schoenberg Collection of Van Pelt Library. It aims to not only introduce students to major approaches, and terms in the study of religion and the supernatural, but inspire them to take more advanced courses by Ilya Vinitsky, Liliane Weissberg, Proti Mukharji, Talys Fishman, Annette Reed, David Barnes, David Spafford, Frank Chance, Michael Meister, Paul Goldin, Renata Holod, Paul Rozin, among several others.

EALC 034 What is Daoism?
This course introduces a wide variety of ideas and practices that have at one time or another been labeled as Daoist (or ‘Taoist’ in the Wade-Giles Romanization), in order to sort out the different senses of the term, and consider whether these ideas and practices have had any common features. We will begin with the two most famous Daoist works—the Zhuangzi and the Daodejing (or Laozi). We will also survey other bio-spiritual practices, such as the meditation techniques of Inner Alchemy and the self-cultivation regimes known today as Qigong and Tai-chi, as well as the theological and ritual foundations of organized Daoist lineages, many of which are still alive across East Asia. We will conclude with a critical review of the twentieth-century reinvention of ‘Daoism;’ the scientization of Inner Alchemy, and the new classification of ‘religious’ versus ‘philosophical Daoism.’ While familiarizing ourselves with the key concepts, practices, and organizations developed in the history of Daoism, this course emphasizes the specific socio-political context of each of them. Throughout the course, we will think critically about the label of ‘Daoist’ (as well as ‘Confucian’ and ‘Buddhist’) in Chinese history and in modern scholarship. We will also question modern demarcations between the fields of philosophy, religion, and science.

EALC 041 Late Imperial China
From an Eurasian empire ruled by Mongols to an ethnically defined Han Chinese Ming dynasty, then again to a multi-ethnic empire ruled by a minority group of Manchus, the disruptions and transformations in the very idea of ‘China’ in the past seven centuries defies our modern notion of China as a unitary nation with the world’s longest continuous cultural tradition. How to understand the continuities and discontinuities of the last three imperial dynasties of China will be the central focus of our survey. How did these different ethnic groups adjust to each other’s way of life? Did complicated cultural interaction prompt different visions of empires? How did the meaning of ‘Chinese’ change over this time period? How did international politics shape the fate of Chinese empires? With no assumption of prior knowledge, lectures open with an overview of Chinese society before the eve of the Mongolian invasion, and then trace the changing visions of ethnic and social orders in the subsequent regimes ruled by three different ethnic groups (Mongolian, Han Chinese, and Manchurian). We will examine and compare bureaucratic operations, cultural ideals, domestic and international policies from above as well as the daily life experiences from below. The course will conclude with an analysis of the collapse of the imperial order at the beginning of the twentieth century, after it was severely challenged by a semi-Christian Utopian movement from within and global drug trade imperialist attacks from without.

EALC 047 History of Modern China
From an empire to a republic, from communism to socialist-style capitalism, few countries have ever witnessed so much change in a hundred year period as China during the twentieth century. How are we to make sense out of this seeming chaos? This course will offer an overview of the upheavals that China has experienced from the late Qing to the Post-Mao era, interspersed with personal perspectives revealed in primary source readings such as memoirs, novels, and oral accounts. We will start with an analysis of the painful transition from the last empire, the Qing Dynasty (1644-1911), to a modern nation state, followed by exploration of a century-long tale of incessant reform and revolution. The survey will focus on three main themes: 1) the repositioning of China in the new East Asian and world orders; 2) the emergence of a modern Chinese state and nationalistic identity shaped and reshaped by a series of cultural crises; and finally, 3) the development and transformation of Chinese modernity. Major historical developments include: the Opium War and drug trade in the age of imperialism, reform and revolution, the Nationalist regime, Mao’s China, the Cultural Revolution, and the ongoing efforts of post-Mao China to move beyond Communism. We will conclude with a critical review of the concept of ‘Greater China’ that takes into account Taiwan, Hong Kong, and the Chinese diaspora in order to attain a more comprehensive understanding of modern China, however defined, at the end of the last century.

EALC 064 Sushi & Ramen: Making Japanese Food Global
Who defines Japanese food? Is it the chef at a top establishment in Tokyo, a home cook in Osaka, a tea master in Kyoto, the ancient capital? Or is it the midwestern American who thinks sushi means raw fish? Is it the person who scarfs cup noodles, or the devotee of artisan ramen stock? Perhaps it is the Japanese government, which in 2006 sent undercover agents abroad to guard against inferior Japanese food outlets. In this class we will consider how Japanese food came to be defined in distinction to Western and Chinese foods beginning in the nineteenth century, and how Japanese food became a global cuisine. Among our questions: What makes a dish Japanese? How did Portuguese or Spanish frying habits (tempura) and Chinese lamian (ramen) become hallmarks? How traditional is the diet of rice and fish, and in what ways does it interact with the environment? How did Buddhist vegetarians justify sukiyaki? What relationship does food have to the longevity of Japanese today? How does gender affect Japanese food cultures? What are the origins of Iron Chef and bento? We will survey the Philadelphia Japanese food scene and learn to make our own sushi.
Some controversies we will discuss include the consumption of whale meat in Japan. We will also investigate Japanese government controls of food to combat obesity and to make food safe. after the Fukushima nuclear catastrophe. Materials include essays, films, novellas, menus, and cookbooks.

EALC 069 Japanese Popular Culture
Today, Japanese manga, anime, J-pop, and film have a global audience. But these exports can only be truly understood in light of longstanding domestic anxieties about sex, violence, gender, and ‘the kids these days.’
More recent concerns about the country’s declining birthrate, weakening geopolitical position, and vulnerability to natural and anthropogenic disaster also deeply influence Japanese media products. This course explores some of these anxieties through critical examinations of manga, anime, video games, television, music, and fashion in Japan.
Film screenings include work by directors Kon Satoshi, Otomo Katsuhiro, Takahata Isao, Miyazaki Hayao; Itami Juzo, and Takita Yojiro; manga excerpts include work by Tezuka Osamu, Urassawa Naoki, and Yazawa Ai. Secondary readings include scholarship in anthropology, history, sociology, literature, film studies and religious studies.

EALC 086 Korean Popular Culture
‘Korean Wave’ (Hallyu) is currently raging throughout non-Western parts of the world, especially Asia, and may be making its way to the West. From South Korean tele-dramas and K-pop music to their respective celebrity icons, these popular cultural forms from Korea are increasingly becoming part of the everyday landscape and vocabulary. We will attempt to understand and evaluate this cultural phenomenon-its promises and limitations as well as its popularity and backlash against it. More specifically, this course explores the ways in which television, music, manhwa (comic books), and the internet participate in the transnational production and circulation of culture, modernity, tradition, ideology, and politics. Some of the more specific topics covered may include: Korean emotions and melodramas; imitation versus innovation in K-pop; fictions of history in period dramas; the marketing of new masculinity; revival of folk culture; preservation of traditional values in postmodern times; repatriation of Korean American pop stars to Korea; and youth culture.
Requires outside viewing and listening.
Course not offered every year
Activity: Lecture
1.0 Course Unit

EALC 101 Introduction to East Asian History
This course will provide an overview of early modern and modern East Asian history. We will discuss developments from ca. 1400 to the present as integrally bound to the history of the modern world. We will also introduce the craft of history and some basic tools and methods of humanities/social science research. By the end of this course you will be able to develop a basic understanding of major topics in early modern and modern East Asian history; learn critical approaches to both primary and secondary sources; compose coherent and persuasive reviews of scholarly works.

EALC 105 East Asian Diplomacy
Home to four of the five most populous states and four of the five largest economies, the Asia/Pacific is arguably the most dynamic region in the twenty-first century. At the same time, Cold War remnants (a divided Korea and China) and major geopolitical shifts (the rise of China and India, decline of the US and Japan) contribute significantly to the volatility of our world. This course will examine the political, economic, and geopolitical dynamism of the region through a survey of relations among the great powers in Asia from the sixteenth century to the present. Special emphasis will be given to regional and global developments from the perspective of the three principal East Asian states—China, Japan and Korea. We will explore the many informal, as well as formal, means of intercourse that have made East Asia what it is today. Graduate students (EALC 505) should consult graduate syllabus for graduate reading list, special recitation time and graduate requirements.
Taught by: Dickinson
Course usually offered in fall term
Also Offered As: EALC 505, HIST 395
Activity: Recitation
1.0 Course Unit

EALC 106 East Asian Cinema
This survey course introduces students to major trends, genres, directors, and issues in the cinemas of East Asian countries/regions, including Japan, Korea, China, Hong Kong, and Taiwan. Charting key developments over more than a hundred years from the early twentieth century to the present, this course examines films as aesthetic objects, asking questions about film form, narrative, and style. It also pays attention to the evolution of cinema as an institution (e.g. modes of production, circulation, and exhibition) in different cultural and political contexts. Weekly course materials will include both films (primary sources) and analytical readings (secondary sources). By the end of the course, students are expected to gain broad knowledge of East Asian cinema, develop skills of film analysis, and apply these skills to perform historically informed and culturally sensitive analysis of cinema. Prior knowledge of East Asian languages is NOT required.
Taught by: Zhou
Also Offered As: ARTH 291, CIMS 291, EALC 506
Activity: Lecture
1.0 Course Unit

EALC 108 Sports in East Asia
This course will examine sports in East Asia from the nineteenth century to the present. Recently, East Asia plays an important role in transforming the global geopolitics of sport. The post-war East Asian Olympic Games-1964 Tokyo Olympics, 1972 Sapporo Winter Olympics, 1988 Seoul Olympics, 1998 Nagano Winter Olympics, and 2008 Beijing Olympics—and the 2002 FIFA World Cup Korea/Japan illustrate the fact that a new global sports order led by East Asia has emerged. East Asia nations will play hosts to other major sporting events, including the 2018 Pyeongchang Winter Olympics, 2020 Tokyo Olympics, and 2022 Beijing Winter Olympics. Chinese, Japanese, and Korean athletes have been highly active in MLB, NBA, English Premier League, and LPGA. The popularity of the various martial arts prove that East Asian sports seem to be everywhere these days. This class will focus on helping students understand how sports have affected and transformed East Asia exploring various issues: imperialism, colonialism, race, class, gender, foreign policy, nationalism, religion, economics, industrialization, tourism, and urbanization. Course contents include lecture, discussions, secondary readings, primary source readings, documentaries, and films.

1.0 Course Unit

EALC 109 New Korean Cinema
In 2019, Bong Joon-ho's Parasite won the Palme d'Or at the 72nd Cannes Film Festival. This event marked the apex of South Korean cinematic renaissance, having steadily become a tour de force in the international film festival scene since 1997 onwards. This course explores the major auteurs, styles, themes, and currents of the so-called 'New Korean Cinema' that emerged in the mid-to-late 1990s to continue to this day. Drawing from texts on critical film and Korean studies, we will pay particular attention to how the selected works re-present, resist, and interweave the sociopolitical climate they concern and are born out of. Using cinema as a lens with which to see the society, we will touch upon major events of the twentieth century including national division, military dictatorship and democratization movements, IMF economic crisis, youth culture, hallyu (the Korean wave), and damunhwah (multiculturalism initiative). In so doing, we will closely examine how each cinematic medium addresses the societal power structure and the role of the 'Other' it represents in terms of class, race, gender, and sexuality in the construction of contemporary Korean society. We will also briefly survey the history of South Korean cinema that has evolved hand-in-hand with the history of modern Korea itself, walking through its five different phases (1945-Korean War era;1955-1972 'Golden Age'; 1973-1979 censorship era; 1980-1996 democratization era; and 1997 onwards). No prior experience of Korean studies courses necessary; all films will be screened with English subtitles. IMPORTANT: This class has TWELVE total Monday evening film screenings, of which you are required to attend AT LEAST SEVEN. Screening times are Mondays 5:20-7:30 PM, Williams Hall 440.

EALC 111 East Asian Digital Humanities

'Are you interested in cutting-edge digital methods for the humanities in East Asia, but don't know where to start? This course covers a wide range of current and emerging digital projects and topics in East Asian studies. Students will engage with digital projects focused on East Asia (encompassing Japan, China, Korea, and Taiwan) as well as research being done on Digital methodologies for the humanities in those areas. Coursework consists of project and research analysis, active discussion, and learning about the implementation of various digital projects. Example topics include text analysis, APIs, network analysis, digital literary studies, and mapping. No technical expertise is required but students must have reading knowledge of Chinese, Japanese, or Korean at the high-intermediate or advanced level. Class presentations, discussions, and all course readings will be in English, but midterm and final projects involve reading articles and midterm and final projects involve reading articles and/or critiquing projects in East Asian language.

Taught by: Des Jardin
Course not offered every year

Course not offered every year
Also Offered As: EALC 515, RELS 175
Activity: Lecture
1.0 Course Unit

EALC 116 East Asian Gardens

Explore the beauty of gardens (and associated buildings) in Japan, China, and Korea from ancient times to the present. Lectures will be illustrated by photographs from dozens of sites in East Asia, and by a field trip to the Japanese House and Garden in Fairmount Park. The main body of the course will be a historical survey of the evolution of East Asian garden art forms from the sixth century to the present. Discussion will touch on geographic and climatic parameters, spiritual and aesthetic principles, practical limitations and creative innovations of East Asian gardens. There will be an additional fee for the Japanese House visit, and possibly for other field trips.

Taught by: Chance, F

EALC 123 Love in China
We all know that love is not easy. But what makes it so complicated? This course examines how the notion of 'love' in Chinese culture offers a key for us to understand Chinese emotions, family structure, gender and sexuality, consumer economy, as well as the formation of political identity. Is 'love' always defined in light of romantic or intimate relationships? Where can we posit the Chinese ideas of 'love' in the English lexicons of passion, desire, and romance? What were considered the (im)proper expressions and behaviors of 'love' between sovereigns and subjects, parents and children, husbands and wives? Why did metaphors of 'love' often go hand in hand with the aspiration for political engagement and the appreciation of literary talents? How did the concepts of 'love' challenge Confucian social and moral hierarchies by bonding individuals as equals, which marked the advent of the modern era? And lastly, in what ways can the transformation of 'love' over the two millennia of Chinese cultural history broaden our contemporary perceptions of selfhood, partnership, and community? We will probe into these issues through some of the most essential Chinese literary and cultural texts from the 8th century B.C.E. to the 20th century, examining a variety of genres including poetry, plays, memoirs, and fictional narratives. We will also discuss contemporary media adaptations and visit the Penn Museum, exploring different perspectives to approach textual sources. This course is organized both chronologically and thematically: in each week, we read representative works from a specific historical period. They together illuminate both the paradigm of 'love' at a given historical time and the transformation of 'love' in Chinese culture in the longue durée. The format of the course contains a mixture of lecture and discussion, with a special focus on developing students' skills of close reading.

EALC 126 Seminar in Modern Chinese Literature
Modern Chinese writers are known for their efforts in creating a literary revolution that sought to reformulate the paradigm of Chinese writing. However, these Chinese writers also endeavored to learn from other cultures such as the European and Indian civilizations. For example, Tagore was invited to visit China in 1923 and was considered a cultural model by many Chinese cultural elites. Hu Shi, a leading Chinese intellectual, wrote The Indianization of China: A Case Study in Cultural Borrowing and India Our Great Teacher, to emphasize the Indian elements in Chinese culture. Other Chinese writers also sought to compare the European with Chinese cultures in different occasions in order to find a path for the rise of modern China. This course explores the ways in which foreign cultures were introduced and how they influence the way Chinese see themselves in their search for a cultural identity free from the constraints of classical tradition. We will read a variety of writers from the Peoples Republic of China, Hong Kong, Taiwan, and Malaysia, in order to examine how modern Chinese literature thrives on cross-cultural elements. All readings will be in English. No prior knowledge is required. Those who are proficient in Chinese are invited to read some of the texts in Chinese.
Taught by: Lin
Course not offered every year
Also Offered As: EALC 526
Activity: Seminar
1.0 Course Unit

EALC 127 Arts of China
A broad survey of Chinese architecture, sculpture, and painting from the Neolithic age through the nineteenth century. Topics include excavated material from China's Bronze Age, Chinese funerary arts, Buddhist caves and sculpture (including works in the University Museum), the Chinese city, the Chinese garden, and major masterpieces of Chinese painting.
Prerequisite: Graduate students may take this course as EALC 527 and should see the instructor to discuss additional requirements for graduate credit.
Taught by: Steinhardt
One-term course offered either term

EALC 139 Religion in Modern China
This course focuses on the history and role of religion in the Chinese cultural sphere (Mainland China, Taiwan, and the Diaspora) from the mid-19th century to the present day, focusing on the relationship between religious institutions and the state during the imperial, republican, and communist regimes. We will learn about the impact of religious ideas, practices, and organizations on social, political and economic processes and inspect the role of religion in the consolidation of individual, communal, and national identity. Adopting a comparative and interdisciplinary approach, we will attempt to ascertain the impact of the various Chinese religious traditions: Confucianism, Daoism, Buddhism, and popular sects, as well as global religions such as Islam and Christianity, on the internal sociopolitical structure of the Chinese state and their role in shaping power relations on a transregional, national, and local level. Special emphasis will be given to the role and use of the grand narratives of secularism and modernity in the shaping of the Chinese nation-state, as well as the value of using these frameworks in the study of modern China. The class is discussion based, supplemented by lectures, student presentations, and documentary films. No knowledge of Chinese is presumed. All readings will be in English.

EALC 145 20th Century China: Ideas, Politics, States
Since 1900 four types of states have ruled China: dynastic, elective parliamentary, authoritarian nationalist, and communist. We will trace each from its intellectual origins to conclusion. By doing so we will present a solid and wide-ranging narrative of China’s past century, introducing newly discovered material, some controversial. Above all we will dig into the issues raised by the century’s mixture of regimes. Right now China is a dictatorship but once it was an imperfect democracy. Does this prove that Chinese are somehow incapable of creating democracy? That sadly it is just not in their DNA? Or only that blood and iron have been used regularly with harsh effectiveness? You will be given a solid grounding in events, and also in how they are interpreted, right up to the present. Readings will be mostly by Chinese authors (translated), everything from primary sources to narrative to fiction. We will also use wartime documentary films. Two lectures per week, regular mid-term and final exams, and a paper on a topic of your own choice. No prerequisites.
Taught by: Waldron
Course usually offered in fall term
Also Offered As: HIST 393
Activity: Lecture
1.0 Course Unit
Notes: Two lectures per week, regular mid-term and final exams, and a paper on a topic of your choice.

EALC 151 Contemporary Fiction & Film in Japan
This course will explore fiction and film in contemporary Japan, from 1945 to the present. Topics will include literary and cinematic representation of Japan’s war experience and post-war reconstruction, negotiation with Japanese classics, confrontation with the state, and changing ideas of gender and sexuality. We will explore these and other questions by analyzing texts of various genres, including film and film scripts, novels, short stories, manga, and academic essays. Class sessions will combine lectures, discussion, audio-visual materials, and creative as well as analytical writing exercises. The course is taught in English, although Japanese materials will be made available upon request. No prior coursework in Japanese literature, culture, or film is required or expected; additional secondary materials will be available for students taking the course at the 600 level. Writers and film directors examined may include: Kawabata Yasunari, Hayashi Fumiko, Abe Kobo, Mishima Yukio, Oe Kenzaburo, Yoshimoto Banana, Ozu Yasujiro, Naruse Mikio, Kurosawa Akira, Iimura Shohei, Koreeda Hirokazu, and Beat Takeshi.

Notes: Fulfills Cross-Cultural Analysis

EALC 152 Love and Loss in Japanese Literary Traditions: In Translation
How do people make sense of the multiple experiences that the simple words ‘love’ and ‘loss’ imply? How do they express their thoughts and feelings to one another? In this course, we will explore some means Japanese culture has found to grapple with these events and sensations. We will also see how these culturally sanctioned frameworks have shaped the ways Japanese view love and loss. Our materials will sample the literary tradition of Japan from earliest times to the early modern and even modern periods. Close readings of a diverse group of texts, including poetry, narrative, theater, and the related arts of calligraphy, painting, and music will structure our inquiry. The class will take an expedition to nearby Woodlands Cemetery to experience poetry in nature. By the end of the course, you should be able to appreciate texts that differ slightly in their value systems, linguistic expressions, and aesthetic sensibilities from those that you may already know. Among the available project work that you may select, if you have basic Japanese, is learning to read a literary manga. All shared class material is in English translation.

EALC 153 Loyal Warriors in Japanese Literature
From the earliest literature to the latest think piece on Japanese society, the roles of the 'warrior' and of 'loyalty' in Japanese culture have fascinated those both inside and outside of Japan. In this course we will trace the development of paragons of loyalty and warrior prowess from the earliest literary works, through the epic Tales of the Heike, and on to the 'Treasury of Loyal Retainers,' theater, and film. We will read in the philosophy of fidelity and samurai codes to track the growing dedication to ideals of loyalty, exploring evidence of behavior less than loyal as we seek the real influence of these notions. Related topics include the extremes of vengeance and fanaticism. Taught by: Chance
Course not offered every year
Activity: Lecture
1.0 Course Unit

EALC 154 Topics in Japanese Art
Topics vary from semester to semester. For the Fall 2020 semester, the topic will be: From Edo to Tokyo. How did a fishing village with a ramshackle castle become an early modern megalopolis over the course of a century? How did that city modernize rapidly, rebuild, and rebuild again to become one of the most technologically advanced urban environments in the world? In this course we will study the development of the city of Edo and its transformation into Tokyo through its urban planning, architecture, and visual arts. Starting with the formation of the shogun's city, Edo, we'll look at castles, mausolea, paintings, and other works to track the uses of architecture and art in the service of political power. At the same time, the long-time imperial capital of Kyoto (Miyako) and other regions actively expanded artistic modes, making this one of the most dynamic eras in Japanese art history, and a new urban population supported other forms of architecture and visual arts, including gardens, paintings, ceramics, and prints. In the final weeks of the course, we will consider how Edo became Tokyo, and how the city was rebuilt through modernization and land reclamation as well as after the 1923 earthquake and the Allied firebombing of WWII. And how did the postwar boom once more transform Tokyo, while also retaining traces of the 1923 earthquake and the Allied firebombing of WWII? Finally, we'll think about the ways东京 in which the Olympics in 1964 and 2020 put the city on display. Taught by: Davis
Course not offered every year
Also Offered As: ARTH 315, EALC 554
Activity: Seminar
1.0 Course Unit

EALC 155 Modern Japanese Literature
This course surveys Japanese literature (novels, short stories, poetry, drama, essays) from 1868 to World War II. The purpose is not only to read some of the most important and interesting literary texts of this period, but also to reflect on the ways we read and study literature, and how we draw connections between literature, self, and society. The reading material will be entirely in English. Taught by: Kano
Course not offered every year

Activity: Lecture
1.0 Course Unit

EALC 156 Post War Japanese Cinema
Mizoguchi Kenji, Ozu Yasujiro, and Kurosawa Akira are recognized today as three of the most important and influential directors in Japanese cinema. In their films of the late 1940s and 1950s, these directors focused upon issues surrounding the human condition and the perception of truth, history, beauty, death, and other issues of the postwar period. This course places their films in period context, and pays particular attention to the connections to other visual media, and to how 'art' and 'history' are being defined in the cinematic context. How other directors also took up these issues, and referred to the 'big three' is also be discussed. Taught by: Davis
Course not offered every year

Activity: Lecture
1.0 Course Unit

EALC 157 Arts of Japan
This course introduces the major artistic traditions of Japan, from the Neolithic period to the present, and teaches the fundamental methods of the discipline of art history. Special attention will be given to the places of Shinto, the impact of Buddhism, and their related architectures and sculptures; the principles of narrative illustration; the changing roles of aristocratic, monastic, shogunal and merchant patronage; the formation of the concept of the artist over time; and the transformation of tradition in the modern age. Taught by: Davis
Course not offered every year
Also Offered As: ARTH 213, ARTH 613, EALC 557
Activity: Lecture
1.0 Course Unit
Notes: Graduate students may take this course as EALC 527 and should see the instructor to discuss additional requirements for graduate credit.

EALC 162 City & Citizenship: Samurai Politics and Commoner Culture in Early Modern Japan
In the early modern period (1600-1867), Japan underwent a staggering urban transformation. Edo, the shogunal capital, grew in barely a century from a new settlement to a sprawling metropolis of over a million. Indeed, most of Japan's current urban centers descend directly from the castle towns built by regional warlords in the late sixteenth and early seventeenth centuries in an effort keep the peace after over a hundred years of civil war. As a result, Japanese cities in the early modern period became a central component of what historians have called a 'feudalization' of society, and retained strong vestiges of their military origins. At the same time the samurai-centered space of the new cities created opportunities for the development of alternative cultural practices and values by urban commoners. The juxtaposition of the regimented, honor-driven society designed and longed for by samurai and the fluid, money-driven society that grew out of the burgeoning cities' commoner quarters is one of the animating forces of the early modern period. Through study of scholarship and contemporary sources (laws and sumptuary regulations, codes of conduct, but also diaries, novels, plays), this course will explore the many facets of early modern urban society, its medieval antecedents, and its legacies in contemporary Japan. Taught by: Spafford
One-term course offered either term
Also Offered As: EALC 562
Activity: Lecture
1.0 Course Unit
EALC 165 Environment, Climate, and Culture in Japan
This course explores how Japanese literature, cinema, and popular culture have engaged with questions of environment, ecology, pollution, and climate change from the wake of the dropping of the atomic bomb on Hiroshima in 1945 to the ongoing Fukushima nuclear power plant disaster in the present. Environmental disasters and the slow violence of their aftermath have had an enormous impact on Japanese cultural production, and we examine how these cultural forms seek to negotiate and work through questions of representing the unrepresentable, victimhood and survival, trauma and national memory, uneven development and discrimination, the human and the nonhuman, and climate change’s impact on imagining the future. Special attention is given to the possibilities and limitations of different forms—the novel, poetry, film, manga, anime—that Japanese writers and artists have to think about humans’ relationship with the environment.
Taught by: Poland
Course not offered every year
Also Offered As: EALC 565, ENVS 165
Activity: Seminar
1.0 Course Unit

EALC 171 Knights with Katanas: Medieval Japan and Europe Compared
This course aims to provide an overview of some of the main themes and problems in the history and historiography of medieval Japan by drawing on comparisons with European counterparts and interpretive models. To this end, each week’s readings on Japan are paired with one or more works on medieval Europe dealing with a similar theme. The primary purpose is not only to draw comparisons between the two civilizations and their development but also to use the great riches of scholarship on the European Middle Ages to shed light on possible new avenues of inquiry and perspectives on Japan.
Taught by: Spafford
Course not offered every year
Also Offered As: EALC 571, HIST 090
Activity: Seminar
1.0 Course Unit

EALC 176 Japan: The Age of the Samurai
Who (or what) where the samurai? What does it mean to say that Japan had an ‘Age of the Samurai’? In popular imagination, pre-modern Japan has long been associated with its hereditary warrior class. Countless movies have explored the character and martial prowess of these men. Yet warriors constituted but a tiny portion of the societies they inhabited and ruled, and historians researching medieval Japan have turned their attentions to a great range of subjects and to other classes (elite and commoner alike). This class is designed to acquaint students with the complex and diverse centuries that have been called the ‘Age of the Samurai’—roughly, the years between ca. 1110 and 1850. In the course of the semester, we will explore the central themes in the historiography of warrior society, while introducing some of the defining texts that have shaped our imagination of this age (from laws to epic poems, from codes of conduct to autobiographies).
Taught by: Spafford
Course not offered every year
Also Offered As: EALC 576, HIST 276
Activity: Lecture
1.0 Course Unit

EALC 183 Readings in Korean History
This course introduces students to English-language scholarship on social history of Korea from the founding of the Choson dynasty (1392-1910) to the mid-nineteenth century. Conducted as a reading seminar, the course will examine status and gender in early modern Korean society by considering, among others, descent, kinship, marriage, education, and economy. A reading list of noteworthy studies is intended to help the students map some critical questions and debates that have shaped the historiography. Everyone must participate actively in discussions, provide oral presentations as a discussion leader, and submit two review essays. No knowledge of Korean language or culture is presumed. This course satisfies Cross Cultural Analysis requirement.
One-term course offered either term
Also Offered As: EALC 583
Activity: Seminar
1.0 Course Unit

EALC 184 Two Koreas: The Politics of Division
In today’s world, the inter-Korean border or DMZ (demilitarized zone) is widely regarded as one of the most impermeable and conflictual frontiers. The purpose of this course is to explore the dynamics of its formation between, and impact within, the two Koreas. The course therefore proposes to analyze how the division of the Korean peninsula not only came into being but also how it has shaped the socio-political trajectories of both the North and the South since 1945. The course also aims at introducing students to conceptual frameworks and comparative debates relevant to understanding the Korean case(s) from a social science perspective.
One-term course offered either term
Also Offered As: EALC 584
Activity: Lecture
1.0 Course Unit

EALC 190 Silk Road: From the Mediterranean to the Pacific
A journey along the overland and sea routes that connected China, India, Iran, and Rome from 200-1000 CE and served as conduits for cultural exchange. Precursor and successor routes will also be taken into consideration. The lives of merchants, envoys, pilgrims, and travelers interacting in cosmopolitan communities will be examined. Exploration of long-known and newly discovered archaeological ruins, along with primary sources in translation, will be studied.
Taught by: Mair
Also Offered As: EALC 590, SAST 190, SAST 590
Activity: Lecture
1.0 Course Unit

EALC 192 Arts of Korea
The goal of this course is understanding the development of visual, performing, and literary arts in Korea and the historical, religious, and social contexts in which they flourished. It serves as an introduction to the arts of Korea, with emphasis on painting, sculpture, ceramics, and architecture and additional consideration of dance, drama, poetry, and culinary arts. Covers the whole history of Korea, from prehistoric times to the twenty-first century.
Taught by: Chance, F
Course not offered every year

EALC 220 Tang China and Nara Japan
This is a seminar about Tang China and Nara Japan, and Early Heian Japan, Unified Silla Korea, Northeast Asia under Parhaes, and Uyghur Inner Asia through their cities, palaces, monasteries, Buddhist art, and painting. We begin by studying material remains of the two best-documented civilizations of East Asian in the seventh-ninth centuries. Using painting, sculpture, ceramics, and architecture of Tang China and Nara Japan, we investigate the validity of the frequent assessment of an international Tang through material remains in China and Japan. We then move to Korea, Mongolia, and Central Asia. Students will have a wide range of topics to work on. They will be encouraged to find comparative topics. This seminar is an opportunity for students to use Chinese, Japanese, or Korean in research papers. There are no exams. Readings will be assigned to the whole group and to individual students for short presentations every week. Undergraduates will write one short and write and present one long paper.
Taught by: Steinhardt
Also Offered As: EALC 620
Activity: Seminar
1.0 Course Unit

EALC 221 First Year Classical Chinese I
Introduction to the classical written language, beginning with Shadick, First Course in Literary Chinese. Students with a background in Japanese, Korean, Cantonese, Taiwanese, and other East Asian languages are welcome; it is not necessary to know Mandarin. The course begins from scratch, and swiftly but rigorously develops the ability to read a wide variety of classical and semi-classical styles. Original texts from the 6th century BC to the 20th century AD are studied. This course is taught in English and there are no prerequisites.
Taught by: Mair
Course usually offered in fall term
Also Offered As: CHIN 491, EALC 621
Activity: Lecture
1.0 Course Unit

EALC 222 1st Year Classical Chin II
Continuation of CHIN491 EALC221/621, which is the only prerequisite for this course. Upon completion of Shadick, readings in a wide selection of texts with Chinese commentaries may be taken up. These readings are in part chosen to reflect student interest. This is the second half of a year-long course. Those who enroll must take both semesters.
Taught by: Mair
Course usually offered in spring term
Also Offered As: CHIN 492, EALC 622
Prerequisite: EALC 221
Activity: Lecture
1.0 Course Unit

EALC 223 Language, Script and Society in China
The Chinese writing system is the only major surviving script in the world that is partially picto-ideographic, Egyptian hieroglyphic and Sumero- Akkadian cuneiform having passed out of use about two millennia ago. Partly because it is so unique, a tremendous number of myths have grown up around the Chinese script. In an attempt to understand how they really function, this seminar will examine the nature of the sinographs and their relationship to spoken Sinitic languages, as well as their implications for society and culture. We will also discuss the artistic and technological aspects of the Chinese characters and the ongoing efforts to reform and simplify them. The use of sinographs in other East Asian countries than China will be taken into account. There are no prerequisites for this class.
Taught by: Mair
Course not offered every year
Also Offered As: EALC 623
Activity: Seminar
1.0 Course Unit

EALC 226 East Asian Funerary Arts
Study of tombs and tomb decoration of emperors and officials in China, Korea, and Japan from the pre-Buddhist era through the 19th century.
Taught by: Steinhardt
Course not offered every year
Also Offered As: EALC 626
Activity: Seminar
1.0 Course Unit

EALC 227 Chinese Painting
Study of Chinese painting and practice from the earliest pictorial representation through the late twentieth century. Painting styles are analyzed, but themes such as landscape and narrative are considered with regard to larger social, cultural, and historical issues. The class will pay particular attention to the construction of the concepts of the ‘artist’ and ‘art criticism’ and their impact on the field into the present. Visits to study paintings at the University of Pennsylvania Museum and Philadelphia Museum of Art.
Taught by: Steinhardt
One-term course offered either term
Also Offered As: ARTH 217, ARTH 617, EALC 627
Activity: Lecture
1.0 Course Unit
EALC 229 Chinese Architecture
Survey of Chinese buildings and building technology from the formative period in the second millennium BCE through the twentieth century. The course will deal with well-known monuments such as the Buddhist monasteries of Wutai, imperial palaces in Chang’an and Beijing, the Ming tombs and the Temple of Heaven, and less frequently studied buildings. Also covered will be the theory and principles of Chinese construction. Graduate-level option requires a 20-page paper and permission of the instructor.
Taught by: Steinhardt

Activity: Lecture
1.0 Course Unit
Notes: Graduate-level option requires a 20-page paper and permission of the instructor

EALC 230 Gender, Religion, and China
This course examines the interrelationship among ‘gender,’ ‘religion,’ and ‘China’ as conceptual and historical categories. We ask, for example, how gender plays critical and constitutive roles in Chinese religious traditions, how religion can be used both to reinforce and to challenge gender norms, how religious women impact Chinese society and culture, and what the construction of ‘China’ as a cultural identity and as a nation-state has to do with women, gender, and religion. We will also think about what assumptions we have when speaking of gender, religion, and China, and the infinite possibilities when we strive to think beyond. We will read three kinds of materials: (1) scholarship on gender and religion in historical and contemporary China as well as the Chinese-speaking world, (2) scholarship concerning theories and methodology of gender and religious studies not necessarily focused on China, and (3) historical record of religious women in English translation.
Taught by: Cheng
Course usually offered in spring term
Also Offered As: EALC 630, GSWS 234, GSWS 630, RELS 237, RELS 630
Activity: Seminar
1.0 Course Unit

EALC 233 Chinese Aesthetics
This seminar investigates classical Chinese conceptions of art and beauty as exemplified in philosophy, literature, music, painting, calligraphy, and architecture. All readings will be in English, and no knowledge of Chinese is presumed. Graduate students should see the instructor to discuss requirements for graduate credit.
Taught by: Goldin
Course not offered every year
Also Offered As: EALC 633
Activity: Lecture
1.0 Course Unit

EALC 234 Daoist Traditions
This course examines the history of various intellectual and religious traditions that came to be known as Daoist (or Taoist in the Wade-Giles Romanization). We will begin with a critical review of the twentieth-century reinvention of Daoism and the new classification of religious versus philosophical Daoism, before tracing chronologically the textual, institutional, and social history of Daoist traditions from the fourth century B.C.E. While familiarizing students with the key concepts, practices, and organizations developed in the history of Daoism, this class emphasizes the specific socio-political context of each of them. Throughout the course, we will think critically about the labeling of Daoist (as well as Confucian and Buddhist) in Chinese history and in modern scholarship. We will also question modern demarcations between philosophy, religion, and science, as well as that between the spiritual and the physical.
Taught by: Cheng
Course not offered every year
Also Offered As: EALC 634, RELS 233, RELS 634
Activity: Seminar
1.0 Course Unit

EALC 239 Sex and Society in Ancient China
Ancient Chinese writers considered sexual activity to be an essential component of humanity, and the study of human sexuality to be essential to the study of human history. Sexuality constituted a fundamental source of imagery and categories that informed the classical Chinese conception of social, political, and military relationships. This course will survey the major sources dealing with sex and society in ancient China. There are no prerequisites, and no knowledge of Chinese is presumed.

Course not offered every year
Also Offered As: EALC 639
Activity: Seminar
1.0 Course Unit

EALC 240 Early Chinese History
This seminar covers the span of Chinese history from the Bronze Age to the end of the Han dynasty in A.D. 220. No knowledge of Chinese is presumed, but EALC 001 (Introduction to Chinese Civilization) is a prerequisite. Graduate students who wish to enroll should meet with the instructor to discuss additional requirements for graduate credit.
Taught by: Goldin
Course usually offered in spring term
Also Offered As: EALC 640
Activity: Seminar
1.0 Course Unit
EALC 241 Law in Pre-Modern China
This course, intended for graduate students and advanced undergraduates, offers a survey of the sources and research problems of pre-modern Chinese law. For reasons to be examined in the course, traditional Sinological education has neglected law as a legitimate field of inquiry; consequently, the secondary literature is surprisingly meager. Our readings will take us from the Warring States Period to the Qing dynasty—an interval of over two millennia—and will cover several varieties of legal documents, including statutes, handbooks, court records, and theoretical treatises. All the readings will be in English, and no knowledge of Chinese is presumed. Graduate students should see the instructor to discuss requirement for graduate credit.
Taught by: Goldin
Course not offered every year
Also Offered As: EALC 641
Activity: Seminar
1.0 Course Unit

EALC 242 Medicine and Healing in China
This course explores Chinese medicine and healing culture, its diversity, and its change over time. We will discuss topics including the establishment of canonical medicine, Daoist approaches to healing and longevity, diverse views of the body and disease, the emergence of treatments for women, medical construction of sex difference and imagination of female sexuality, the thriving and decline of female healers, the identity of scholar physicians, the transmission of medical knowledge, domestic and cross-regional drug market, healer-patient relations, and new visions of traditional Chinese medicine in modern China.
Taught by: Cheng, H
Course not offered every year
Also Offered As: EALC 642
Activity: Lecture
1.0 Course Unit

EALC 243 Pastoralism & Mobility
'Pastoralism and Mobility' will examine the society and history of mobile pastoralists (nomads) in Inner Asia from earliest times to the present. Peoples covered will include Mongols, Tibetans, Turkic nomads (such as Kazakhs, Kyrgyz, and Turkmen), and their ancestors and predecessors. The class will focus on questions such as: Is there a distinctive form of Inner Asian pastoralist society? At the grass roots level? At the elite level? How have states (native and foreign) influenced Inner Asian pastoralist society in pre-modern and modern contexts? How have Inner Asian pastoralists influenced neighboring states? What role does kinship play in governing group formation, property, and status in Inner Asian pastoralist society? Does this role vary over time, space, or ethnic background? If so, how? What purposes does mobility serve in Inner Asian societies? How have various forms of livestock lease-holding changed and shaped wealth in Inner Asian pastoralist society? How did class differentiation emerge & function in pre-modern pastoralist societies? What happens when pastoralists become farmers? How have modern schemes of social improvement and productivity, especially collectivization and decollectivization, shaped pastoralist lives?
Taught by: Atwood
Course offered fall; odd-numbered years
Also Offered As: EALC 643
Activity: Seminar
1.0 Course Unit

EALC 244 Pastoralism and Mobility
This course explores the society and history of mobile pastoralists (nomads) in Inner Asia from earliest times to the present. Peoples covered will include Mongols, Tibetans, Turkic nomads (such as Kazakhs, Kyrgyz, and Turkmen), and their ancestors and predecessors. The class will focus on questions such as: Is there a distinctive form of Inner Asian pastoralist society? At the grass roots level? At the elite level? How have states (native and foreign) influenced Inner Asian pastoralist society in pre-modern and modern contexts? How have Inner Asian pastoralists influenced neighboring states? What role does kinship play in governing group formation, property, and status in Inner Asian pastoralist society? Does this role vary over time, space, or ethnic background? If so, how? EALC 245 Japanese Theater
Japan has one of the richest and most varied theatrical traditions in the world. In this course, we will examine Japanese theater in historical and comparative contexts. The readings and discussions will cover all areas of the theatrical experience (script, acting, stage design, costumes, music, and audience). Audio-visual material will be used whenever appropriate and possible. The class will be conducted in English, with all English materials.
Taught by: Kano
One-term course offered either term

Activity: Seminar
1.0 Course Unit

EALC 251 Readings in Classical Japanese I
Readings in classical texts drawn from the Heian, Kamakura, Muromachi, and Edo periods. Introduction to the different styles of classical Japanese, and to classical Japanese as a whole.
For BA Students: Advanced Language Course
Taught by: Chance
Course usually offered in fall term
Also Offered As: EALC 651, JPAN 491
Prerequisite: JPAN 212
Activity: Lecture
1.0 Course Unit

EALC 252 The Politics of Shinto
Shinto-derived images and ideas frequently appear in Japanese anime and film, and journalists and academics frequently mobilize the term Shinto as a way of explaining Japan’s past or envisioning its future. The environmentalist left champions a green Shinto while Shinto-derived ideas serve as red meat for politicians pandering to Japan’s nationalist right. While the influential position Shinto occupies in Japanese sociopolitical life is therefore clear, the term Shinto itself is actually not. Depending on who one asks, Shinto is either the venerable indigenous religion of the Japanese archipelago, the irreducible core of Japanese culture, a tiny subset of Japanese Buddhism, an environmentalist ethic, or some combination of these. This course investigates the multifarious types of Shinto envisioned by these competing interest groups.
Taught by: Jolyon Thomas
Course usually offered in spring term
Also Offered As: EALC 653, RELS 271, RELS 671
Activity: Seminar
1.0 Course Unit

EALC 253 War and Literature in Japan: Tales of the Heike
Our subject is Tale of the Heike, a multifaceted narrative of the twelfth-century battles that brought the Taira clan down and led to the establishment of Japan’s first military government. We will read the Heike tales with an eye toward how they fictionalize history and idealize certain types, most notably loyal women and warriors; the development of the warrior tale genre; central aspects of the Japanese ethos; and later works of literature based on episodes and characters from the Tale of the Heike. All material is in English translation. (Students of Japanese language may learn to read a famous section in the original.) There are no pre-requisites.

1.0 Course Unit
EALC 256 The Tale of Genji
'Crowning masterpiece of Japanese literature,' 'the world's first novel,' 'fountainhead of Japanese literary and aesthetic culture,' 'a great soap opera in the vein of Jacqueline Susann.' Readers over the centuries have praised the Tale of Genji, the monumental prose tale finished just after the year 1000, in a variety of ways. In this course we will read the latest English translation of Murasaki Shikibu's work. We will watch as Genji loses his mother at a tender age, is cast out of the royal family, and begins a quest to fill the void she left. Along the way, Genji's loyalty to all the women he encounters forges his reputation as the ideal lover. We will consider gender issues in the female author's portrayal of this rake, and question the changing audience, from bored court women to censorious monks, from adoring nationalists to comic book adaptors. Study of the tale requires consideration of poetry, imagery, costume, music, history, religion, theater, political and material culture, all of which will be components of the course. We will also trace the effect of the tale's many motifs, from flora and fauna to murderously jealous spirits, on later literature and conceptions of human emotions. All material is in English translation. There are no prerequisites.

EALC 259 Gender and Sexuality in Japan
If you have ever wondered about the following questions, then this is the right course for you: Is Japan a hyper-feminine nation of smiling geisha and obedient wives? Is it a hyper-masculine nation of samurai and economic warriors? Is it true that Japanese wives control the household? Is it true that Japanese men suffer from over-dependence on their mothers? What do young Japanese women and young men worry about? What does the government think about the future of Japanese women and men? Assuming that expressions of gender and sexuality are deeply influenced by cultural and social factors, and that they also show profound differences regionally and historically, this course examines a variety of texts--historical, biographical, autobiographical, fictional, non-fictional, visual, cinematic, analytical, theoretical--in order to better understand the complexity of any attempts to answer the above questions.

Activity: Lecture
1.0 Course Unit

EALC 260 History of the Book in East Asia
Spring 2018: From handscrolls to manga, books play a vital role in East Asian societies. In this course we will introduce the spread of book cultures across East Asia and reconsider the role and impact of material texts on societies in China, Korea, and Japan. Among the questions we'll engage are: What is a book, an author, or an edition? How do readers affect books? How do publishers decide when to use illustrations, woodblock printing, or movable type? How has the history of books differed in China, Japan, and Korea from the history of the book in the West? We will consider various media (bamboo, paper, silk, and the digital), formats (scrolls, folded books, bound books, small to oversize), and the tensions between handwritten manuscript and printed pages. Hands-on sessions may include paper-making, bookbinding, and printing. This is an Objects-Based Learning course, using materials from the Kislak Center for Special Collections, Rare Books and Manuscripts, and the Penn Museum, with visits to the Philadelphia Museum of Art and the Free Library of Philadelphia. Requires no knowledge of any Asian language.
Taught by: Davis, Chance
Course not offered every year
Also Offered As: ARTH 517, EALC 661
Activity: Seminar
1.0 Course Unit

EALC 261 Japanese Science Fiction and Fantasy
This course will provide an overview of the major tropes, themes, and interpretations of contemporary Japanese science fiction and fantasy. As we establish a foundational knowledge of the history and structural formulations of genre fiction in Japan, we will cover topics such as folklore, high fantasy, apocalypse, dystopia, magical realism, posthumanism, video games, and transnational media franchises and cross-cultural marketing. By the end of the semester, students will possess a deeper understanding and appreciation of the role that science fiction and fantasy play in shaping contemporary media cultures in Japan and around the world.
Taught by: Hemmann
Also Offered As: EALC 662
Activity: Lecture
1.0 Course Unit

EALC 264 Lawlessness and Violence in Pre-Modern Japan
This course will be an exploration of premodern Japanese history through the lens of violence. The centuries under consideration (roughly, the eighth through nineteenth) were characterized by greatly varying levels of violence, both of the state-sanctioned variety (war, punishments for law-breakers and political losers) and of the non-sanctioned variety (piracy, banditry, warrior and peasant rebellions). Examining a wide variety of translated sources, from diaries to chronicles, from legal codes to fiction, we shall examine the changing social, political, economic, and cultural contexts of violence, in order to interrogate not only why certain periods were remarkably peaceful while others were not, but also why violence took different forms in relation to different circumstances. We shall consider how contemporaries made sense of the violence that surrounded them (or didn't) and how they divided the acceptable use of force from the wanton and society-threatening abuse of it. The course will feature presentations and several (very short) papers.
Taught by: Spafford, D.
Course not offered every year
Also Offered As: EALC 664
Activity: Seminar

**EALC 268 Japanese Cinema**
This course is a survey of Japanese cinema from the silent period to the present. Students will learn about different Japanese film genres and histories, including (but not limited to) the benshi tradition, jidaigeki (period films), yakuza films, Pink Film, experimental/arthouse, J-horror, and anime. Although the course will introduce several key Japanese auteurs (Mizoguchi, Ozu, Kurosawa, Oshima, Suzuki, etc), it will emphasize lesser known directors and movements in the history of Japanese film, especially in the experimental, arthouse, and documentary productions of the 1960s and 1970s. Finally, in addition to providing background knowledge in the history of Japanese cinema, one of the central goals of the course will be to interrogate the concept of ‘national’ cinema, and to place Japanese film history within an international context.
Taught by: Alekseyeva
One-term course offered either term
Also Offered As: CIMS 304, ENGL 304
Activity: Seminar
1.0 Course Unit

**EALC 270 From Shamans to Shoguns: The Texts that Made Pre-Modern Japanese History**
This course tackles about a millennium of pre-modern Japanese political, social, and cultural history (roughly, 700-1700). Instead of attempting to cover the period chronologically, as an introductory survey might, this class is structured as a series of case studies. Each of these will take a primary source as its point of departure and explore one or more facets of Japanese history and writing. In the course of each case study, lectures and discussions will branch out from the main source to examine its historical context as well as the (political, cultural, textual) traditions that informed that source’s composition. In general, students will read the entire texts of the main sources (or significant portions of them), along with scholarly articles and shorter excerpts from other sources, composed at the same time or in the same vein/genre. During lectures and discussions alike, students will be asked to engage the readings, so as to grasp the specifics of Japanese history and practice the analytical skills required of historical discourse.

**EALC 293 Introduction to Classical Mongolian**
In this class students who already know some modern Mongolian in the Cyrillic script will learn how to transfer that knowledge to the reading of first post-classical, and then classical texts written in the vertical or Uyghur-Mongolian script. Topics covered will include the Mongolian alphabetic script, dealing with ambiguous readings, scholarly transcription, vowel harmony and syllable structure, post-classical and classical forms of major declensions, converbs, verbal nouns, and finite verbs, syntax, pronunciation and scribal readings. Readings will be adjusted to interests, but as a rule will include selections from short stories, diaries, chronicles, Buddhist translations, government documents, popular didactic poetry, ritual texts, and traditional narratives. Students will also be introduced to the most important reference works helpful in reading classical and post-classical Mongolian. One year of modern Mongolian or equivalent required to enroll.
Taught by: Tseveendulam
Course usually offered in fall term

EALC 501 Chinese History and Civilization
This seminar offers a thematic overview of the academic study of Chinese history from the Neolithic period to the 21st century. Over the course of the semester, students will be introduced to different scholarly approaches to the study of history through a close reading and analysis of the work of leading scholars in the field of Sinology. We will learn about the various subfields in the study of history, such as cultural history, social history, administrative and legal history, intellectual history, history of religion, literary history, history of gender, world history, and historiography, examine their different methodological frameworks and tools, and draw on them in order to problematize and enrich our understanding of Chinese culture. In addition, this seminar will provide incoming students with the relevant tools to produce original graduate-level research on all aspects of Chinese history, society, and culture and present it in a clear and persuasive fashion orally and in written form. While original-language research for the final project is encouraged, all course materials will be in English. Prerequisite: Course intended for first year MA and PhD students. Undergraduates need permission. Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EALC 502 Japanese History and Civilization
This seminar introduces students to the graduate-level study of Japan. In addition to getting a broad overview of Japanese culture, students in the course will develop familiarity with major debates in the history of the field of Japanese studies. The course also provides basic training in using primary and secondary sources in Japanese, Japanese bibliographic conventions, and other skills necessary for pursuing advanced research or a teaching career in the field. Open to all graduate students and to undergraduates with permission from the instructor. Familiarity with Japanese language is a plus but is not required. Taught by: Thomas J
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Undergraduates need permission from instructor.

EALC 503 Korean History & Civilization
This graduate-level seminar focuses on the political, social, and cultural history of the Korean Peninsula and the vicinity from early times to the contemporary era. Readings will consist of primary and secondary sources, including influential modern studies of Korean history and civilization. All course materials are in English and no knowledge of Korean is presumed.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EALC 504 Introduction to Inner Asian Civilizations
This class is intended for new graduate students and upper-division undergraduates with some prerequisites who wish to get a solid grounding in the study of Inner Asia. The class will introduce Inner Asia as a coherent civilizational network, focusing on: 1) the steppe-imperial tradition; 2) the Tibetan-rite Buddhist commonwealth that developed from the Tibetan and Mongol empires; and 3) the increasing integration of these two Inner Asian civilizational patterns with that of imperial China. There will also be some consideration of the Islamic Turco-Mongolian synthesis that developed in the post-Mongol period. Regionally, the class introduce: 1) core Inner Asia (the Mongolian plateau, the Tarim Basin, the Tibetan plateau, the Manchuria) and 2) the main dynasties of China that formed in the Mongolia and Manchuria (Liao, Jin, Yuan and Qing). There will also be some consideration of historically Inner Asian populations in Hexi (Gansu-Qinghai), and the North China plains and the Shaanxi-Shanxi-Rehe uplands. Chronologically, the class will touch on prehistory and the contemporary period, but will mostly cover the period from the emergence of historical records on the Mongolian plateau and the Tarim basin to roughly 1950. Prehistory and the contemporary period will be give less detailed coverage. Taught by: Atwood
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Graduate Seminar

EALC 505 East Asian Diplomacy
This course will survey recent scholarship on East Asian diplomacy from the sixteenth century to the present. We will engage several fundamental debates about the relationship between China, Japan, Korea and the outer world and introduce not only orthodox diplomatic analyses but also newer approaches to modern China, Japan and Korea by international and global historians. Taught by: Dickinson
Course usually offered in fall term
Also Offered As: EALC 105, HIST 395
Activity: Lecture
1.0 Course Unit

EALC 506 East Asian Cinema
This survey course introduces students to major trends, genres, directors, and issues in the cinemas of East Asian countries/regions, including Japan, Korea, China, Hong Kong, and Taiwan. Charting key developments over more than a hundred years from the early twentieth century to the present, this course examines films as aesthetic objects, asking questions about film form, narrative, and style. It also pays attention to the evolution of cinema as an institution (e.g. modes of production, circulation, and exhibition) in different cultural and political contexts. Weekly course materials will include both films (primary sources) and analytical readings (secondary sources). By the end of the course, students are expected to gain broad knowledge of East Asian cinema, develop skills of film analysis, and apply these skills to perform historically informed and culturally sensitive analysis of cinema. Prior knowledge of East Asian languages is NOT required. Taught by: Zhou
Also Offered As: ARTH 291, CIMS 291, EALC 106
Activity: Lecture
1.0 Course Unit
EALC 511 East Asian Digital Humanities

Are you interested in cutting-edge digital methods for the humanities in East Asia, but don't know where to start? This course covers a wide range of current and emerging digital projects and topics in East Asian studies. Students will engage with digital projects focused on East Asia (encompassing Japan, China, Korea, and Taiwan) as well as research being done on digital methodologies for the humanities in those areas. Coursework consists of project and research analysis, active discussion, and learning about the implementation of various digital projects. Example topics include text analysis, APIs, network analysis, digital literary studies, and mapping. Notational expertise is required but students must have reading knowledge of Chinese, Japanese, or Korean at the high-intermediate or advanced level. Class presentations, discussions, and all course readings will be in English, but midterm and final projects involve reading articles and midterm and final projects involve reading articles and critiquing projects in Chinese. Reading knowledge (intermediate or above) of East Asian language required.

Taught by: Des Jardin
Also Offered As: EALC 111
Activity: Lecture
1.0 Course Unit

EALC 515 Buddhist Arts of East Asia: Sources, Iconography and Styles

Survey of art and architecture created for Buddhist religious purposes in China, Japan, and to a lesser extent Korea, Tibet, and Central Asia. The course will include a brief overview of Buddhist monuments in South Asia, study of the iconography of Buddhist images in graphic and sculptural media, and analysis of a variety of Buddhist styles in painting, sculpture, and architecture. Research in an East Asian language required for graduate credit.

Taught by: Chance, F
Course not offered every year
Also Offered As: EALC 115, RELS 175
Activity: Lecture
1.0 Course Unit

EALC 516 East Asian Gardens

Explore the beauty of gardens (and associated buildings) in Japan, China, and Korea from ancient times to the present. Lectures will be illustrated by photographs from dozens of sites in East Asia, and by a field trip to the Japanese House and Garden in Fairmount Park. The main body of the course will be a historical survey of the evolution of East Asian garden art forms from the sixth century to the present. Discussion will touch on geographic and climatic parameters, spiritual and aesthetic principles, practical limitations and creative innovations of East Asian gardens. There will be an additional fee for the Japanese House visit, and possibly for other field trips.

Taught by: Chance, F
Course not offered every year
Also Offered As: EALC 116
Activity: Lecture
1.0 Course Unit

EALC 519 East Asian Ceramics

History of ceramic forms, techniques, and aesthetic principles in China, Korea, and Japan from neolithic times to the present century, illustrated by slides and examples, augmented by readings, field trips, and student presentations. Aimed at students with general interest in Japan and/or ceramics history, particularly but not exclusively those majoring in East Asian Languages & Civs, East Asian Area Studies or History of Art; also art majors interested in ceramics.

Taught by: Chance, F
Course not offered every year
Also Offered As: EALC 119
Activity: Seminar
1.0 Course Unit

EALC 521 Chinese Poetry & Prose: In translation

A wide variety of poetic & prose genres from the earliest times to the 19th century is introduced through English translation. A few selections will also be studied in Chinese characters with romanized transcriptions. There are no prerequisites for this course.

Taught by: Mair
Course usually offered in fall term
Also Offered As: EALC 121
Activity: Lecture
1.0 Course Unit

EALC 522 Chinese Fiction and Drama in Translation

This course explores Romance of Three Kingdoms, the most popular classical novel in East Asia and an important source for understanding Chinese culture, politics, history, and military strategy. We propose to read this work not only as a textbook of Chinese literature and culture, but also as a guidebook for career development and risk assessment. Why didn't Pang Tong have a career as successful as Zhuge Liang? Why did Ma Su volunteer in a project that he is not good at? If Cao Cao, Liu Bei, Sun Quan run for presidency in the U.S., who would you vote for and why? These are some of the questions that we will explore alongside our inquiry into the historical development of various genres of Chinese fiction. In addition to Romance of Three Kingdoms, this course introduces Sun Tzu's The Art of War and other classical Chinese novels such as Dream of the Red Chamber and Strange Tales from a Chinese Studio, as well as classical literary criticism such as Cao Pi's On the Standard of Literature (Dian lun), Lu Ji's Essays on Literature (Wen lun), and Liu Xie's The Literary Mind and the Carving of Dragons.

Taught by: Mair
Course usually offered in spring term
Also Offered As: EALC 122
Activity: Lecture
1.0 Course Unit

EALC 525 Cultural Chinas: 20th Century Chinese Literature and Film

This course serves as a thematic introduction to modern Chinese literature and cinema in China, Hong Kong, Taiwan and other transnational Chinese communities in the twentieth century. By discussing a wide range of key literary and filmic texts, this class looks into major issues and discourses in China's century of modernization: enlightenment and revolution, politics and aesthetics, sentimental education and nationalism, historical trauma and violence, gender and sexuality, social hygiene and body politics, diaspora and displacement, youth sub-culture and urban imagination.

Course usually offered in spring term
Also Offered As: EALC 125
Activity: Lecture
1.0 Course Unit
EALC 526 Seminar in Modern Chinese Literature
Modern Chinese writers are known for their efforts in creating a literary revolution that sought to reformulate the paradigm of Chinese writing. However, these Chinese writers also endeavored to learn from other cultures such as the European and Indian civilizations. For example, Tagore was invited to visit to China in 1923 and was considered a cultural model by many Chinese cultural elites. Hu Shi, a leading Chinese intellectual, wrote The Indianization of China: A Case Study in Cultural Borrowing and India Our Great Teacher, to emphasize the Indian elements in Chinese culture. Other Chinese writers also sought to compare the European with Chinese cultures in different occasions in order to find a path for the rise of modern China. This course explores the ways in which foreign cultures were introduced and how they influence the way Chinese see themselves in their search for a cultural identity free from the constraints of classical tradition. We will read a variety of writers from the Peoples Republic of China, Hong Kong, Taiwan, and Malaysia, in order to examine how modern Chinese literature thrives on cross-cultural elements. All readings will be in English. No prior knowledge is required. Those who are proficient in Chinese are invited to read some of the texts in Chinese.

Taught by: Lin

Course not offered every year

Activity: Lecture
1.0 Course Unit

EALC 530 Mongol Century
This course deals with the empire built by the Mongols in the 13th century - the largest land empire in the world. Most readings will be from translated primary sources of the 13th and 14th centuries, written by the Mongols themselves and also by Persians, Chinese, Eastern Christians, Europeans, and other peoples that fought, surrendered to, or traded with the Mongol conquerors. The course will explore the Mongols, the most spectacular example of the nomadic conquerors who played such a large role in all Eurasian history, and survey how their empire affected themselves and the peoples they conquered. By using primary sources, the course will also provide a survey of civilizations in Eurasia in the 13th and 14th centuries, and give a hands-on example of how historians build historical knowledge from varied sources. Graduate students will receive training in more advanced source critical methodologies for dealing with these sources and for beginning research in this topic.

EALC 531 Introduction to Classical Chinese Thought
This course is intended as an introduction to the foundational thinkers of Chinese civilization, who flourished from the fifth to the second centuries B.C. No knowledge of Chinese is presumed, and there are no prerequisites, although EALC 001 (Introduction to Chinese Civilization) is recommended. Graduate students may take this course as EALC 531 and should see the instructor to discuss requirements for graduate credit.

(Undergraduates must enroll in the course as EALC 131.)

Taught by: Goldin

Course offered spring; odd-numbered years
Also Offered As: EALC 131

Activity: Lecture
1.0 Course Unit

EALC 536 Chinese Martial Arts
This course offers a thematic introduction to the history of martial arts in China. Throughout the semester, we will explore the social, political, and cultural contexts of martial arts practice, from the classical period to the 21st century. The course will take an interdisciplinary approach to situating martial arts practices in history through an examination of religious, literary, and visual sources, against the backdrop of theoretical approaches from across gender studies, anthropology, and cultural theory. The course will be divided into three units. The first unit will focus on the cultural background that led to the emergence of martial arts practices in the pre-modern period. We will examine classical discourses on the human body and its cultivation and the role of medical practices and religious institutions, such as the Shaolin Temple, in the development of martial arts regimens. In the second unit, we will discuss the spread and popularization of martial arts practices in late imperial and modern Chinese society through a close reading of literary sources, such as wuxia novels and other works of fiction. In addition, we will explore the modernization and re-invention of martial arts in the late 19th and early 20th century, when China attempts to re-establish itself as a modern nation. The third and final unit will be devoted to the global impact of Chinese martial arts in contemporary popular culture. Through a discussion and analysis of Kung Fu films, as well as video games, we will explore the role of martial arts narratives and practices in the construction of gender, cultural, and national identity and the various ways in which they are used by the current Chinese regime to assert its influence in the global arena. No knowledge of Chinese is presumed, and all readings will be available in English on the Canvas website in PDF form. Graduate students may take this course as EALC536 and should see the instructor to discuss requirements for graduate credit.

EALC 552 Love and Loss in Japanese Literary Traditions: In Translation
How do people make sense of the multiple experiences that the simple words 'love' and 'loss' imply? How do they express their thoughts and feelings to one another? In this course, we will explore some means Japanese culture has found to grapple with these events and sensations. We will also see how these culturally sanctioned frameworks have shaped the ways Japanese view love and loss. Our materials will sample the literary tradition of Japan from earliest times to the early modern and even modern periods. Close readings of a diverse texts, including poetry, narrative, theater, and the related arts of calligraphy, painting, and music will structure our inquiry. The class will take an expedition to nearby Woodlands Cemetery to experience poetry in nature. By the end of the course, you should be able to appreciate texts that differ slightly in their value systems, linguistic expressions, and aesthetic sensibilities from those that you may already know. Among the available project work that you may select, if you have basic Japanese, is learning to read a literary manga. All shared class material is in English translation. Research in an East Asian language required for graduate credit.
Taught by: Chance

Activity: Lecture
1.0 Course Unit

EALC 553 Ukiyo-e: Beyond the Great Wave
In this seminar we will take a closer look at the prints, paintings, and illustrated books produced in the genre known as 'ukiyo-e'; the 'pictures of the floating world.' We'll begin by asking how the 'Great Wave' became a global icon and we'll bust the myth of prints being used as wrapping paper. As we learn the history of the genre, from 1600 to ca. 1850, we'll also make critical interventions into that narrative, asking how 'ukiyo-e' became a genre within a larger artistic sphere; how publishers collaborated with designers to construct artistic personae; how illustrated books contributed to knowledge formations; and how concepts of authenticity and authorship remain critical to its understanding. Taught online, this course will also consider how internet resources affect our understanding of the work of art. Students need not have any Japanese language skills, but should have taken related courses in art history or East Asian Studies. Advanced undergraduates and graduate students preferred.

EALC 556 Post War Japanese Cinema
Mizoguchi Kenji, Ozu Yasujiro, and Kurosawa Akira are recognized today as three of the most important and influential directors in Japanese cinema. In their films of the late 1940s and 1950s, these directors focused upon issues surrounding the human condition and the perception of truth, history, beauty, death, and other issues of the postwar period. This course places their films in period context, and pays particular attention to the connections to other visual media, and to how 'art' and 'history' are being defined in the cinematic context. How other directors also took up these issues, and referred to the 'big three' is also be discussed.

EALC 558 Topics in Japanese Art
Topic varies. Fall 2018: This course will consider Japanese woodblock prints, illustrated books, and paintings from the seventeenth through the twentieth century. Topics include: the formation of 'ukiyo-e' or 'the pictures of the floating world' as a genre; the development of the publishing system and its audience; specific artists and their works; the reception of Japanese prints in Europe and America; the modern reinvention of the woodblock print; and others. We will also make extensive use of the collections held in the Kislak Center, the Philadelphia Museum of Art, and in other local collections. Assignments may include: close study of a single work; web page development; research paper; regular participation in discussions.
Taught by: Davis
Course not offered every year
Also Offered As: ARTH 515

EALC 565 Environment, Climate, and Culture in Japan
This course explores how Japanese literature, cinema, and popular culture have engaged with questions of environment, ecology, pollution, and climate change from the wake of the dropping of the atomic bomb on Hiroshima in 1945 to the ongoing Fukushima nuclear power plant disaster in the present. Environmental disasters and the slow violence of their aftermath have had an enormous impact on Japanese cultural production, and we examine how these cultural forms seek to negotiate and work through questions of representing the unrepresentable, victimhood and survival, trauma and national memory, uneven development and discrimination, the human and the nonhuman, and climate change's impact on imagining the future. Special attention is given to the possibilities and limitations of different forms—the novel, poetry, film, manga, anime—that Japanese writers and artists have to think about humans' relationship with the environment.

EALC 571 Knights with Katanas: Medieval Japan and Europe Compared
This course aims to provide an overview of some of the main themes and problems in the history and historiography of medieval Japan by drawing on comparisons with European counterparts and interpretive models. To this end, each week's readings on Japan are paired with one or more works on medieval Europe dealing with a similar theme. The primary purpose is not only to draw comparisons between the two civilizations and their development but also to use the great riches of scholarship on the European Middle Ages to shed light on possible new avenues of inquiry and perspectives on Japan.

1.0 Course Unit

EALC 584 Two Koreas: The Politics of Division
In today's world, the inter-Korean border or DMZ (demilitarized zone) is widely regarded as one of the most impermeable and conflictual frontiers. The purpose of this course is to explore the dynamics of its formation between, and impact within, the two Koreas. The course therefore proposes to analyze how the division of the Korean peninsula not only came into being but also how it has shaped the socio-political trajectories of both the North and the South since 1945. The course also aims at introducing students to conceptual frameworks and comparative debates relevant to understanding the Korean case(s) from a social science perspective.

Course not offered every year
Also Offered As: EALC 184
Activity: Lecture
1.0 Course Unit

EALC 590 Silk Road: From the Mediterranean to the Pacific
A journey along the overland and sea routes that connected China, India, Iran, and Rome from 200-1000 CE and served as conduits for cultural exchange. Precursor and successor routes will also be taken into consideration. The lives of merchants, envoys, pilgrims, and travelers interacting in cosmopolitan communities will be examined. Exploration of long-known and newly discovered archaeological ruins, along with primary sources in translation, will be studied.

Taught by: Mair
Also Offered As: EALC 190, SAST 190, SAST 590

Activity: Seminar
1.0 Course Unit

EALC 620 Tang China and Nara Japan
This is a seminar about Tang China and Nara Japan, and Early Heian Japan, Unified Silla Korea, Northeast Asia under Parhae, and Uyghur Inner Asia through their cities, palaces, monasteries, Buddhist art, and painting. We begin by studying material remains of the two best-documented civilizations of East Asian in the seventh-ninth centuries. Using painting, sculpture, ceramics, and architecture of Tang China and Nara Japan, we investigate the validity of the frequent assessment of an international Tang through material remains in China and Japan. We then move to Korea, Mongolia, and Central Asia. Students will have a wide range of topics to work on. They will be encouraged to find comparative topics. This seminar is an opportunity for students to use Chinese, Japanese, or Korean in research papers. There are no exams. Readings will be assigned to the whole group and to individual students for short presentations every week. Graduate students will write and present research papers.
Taught by: Steinhardt
Also Offered As: EALC 220
Activity: Seminar
1.0 Course Unit

EALC 621 First Year Classical Chinese I
Introduction to the classical written language, beginning with Shadick, First Course in Literary Chinese. Students with a background in Japanese, Korean, Cantonese, Taiwanese, and other East Asian languages are welcome; it is not necessary to know Mandarin. The course begins from scratch, and swiftly but rigorously develops the ability to read a wide variety of classical and semi-classical styles. Original texts from the 6th century BC to the 20th century AD are studied. This course is taught in English and there are no prerequisites.
Taught by: Mair
Course usually offered in fall term
Also Offered As: CHIN 491, EALC 221
Activity: Lecture
1.0 Course Unit

EALC 622 1st Year Classical Chin II
Continuation of CHIN491 EALC221/621, which is the only prerequisite for this course. Upon completion of Shadick, readings in a wide selection of texts with Chinese commentaries may be taken up. These readings are in part chosen to reflect student interest. This is the second half of a year-long course. Those who enroll must take both semesters.
Taught by: Mair
Course usually offered in spring term
Also Offered As: CHIN 492, EALC 222
Prerequisite: EALC 621
Activity: Lecture
1.0 Course Unit

EALC 623 Language, Script and Society in China
The Chinese writing system is the only major surviving script in the world that is partially picto-ideographic, Egyptian hieroglyphic and Sumero-Akkadian cuneiform having passed out of use about two millennia ago. Partly because it is so unique, a tremendous number of myths have grown up around the Chinese script. In an attempt to understand how they really function, this seminar will examine the nature of the sinographs and their relationship to spoken Sinitic languages, as well as their implications for society and culture. We will also discuss the artistic and technological aspects of the Chinese characters and the ongoing efforts to reform and simplify them. The use of sinographs in other East Asian countries than China will be taken into account. There are no prerequisites for this class.
Taught by: Mair
Course not offered every year
Also Offered As: EALC 223
Activity: Seminar
1.0 Course Unit

EALC 626 East Asian Funerary Arts
Study of tombs and tomb decoration of emperors and officials in China, Korea, and Japan from the pre-Buddhist era through the 19th century.
Taught by: Steinhardt
Course not offered every year
Also Offered As: EALC 226
Activity: Seminar
1.0 Course Unit

EALC 627 Chinese Painting
Study of Chinese painting and practice from the earliest pictorial representation through the late twentieth century. Painting styles are analyzed, but themes such as landscape and narrative are considered with regard to larger social, cultural, and historical issues. The class will pay particular attention to the construction of the concepts of the 'artist' and 'art criticism' and their impact on the field into the present. Visits to study paintings at the University of Pennsylvania Museum and Philadelphia Museum of Art.
Taught by: Steinhardt
One-term course offered either term
Also Offered As: ARTH 217, ARTH 617, EALC 227
Activity: Lecture
1.0 Course Unit

EALC 629 Chinese Architecture
Survey of Chinese buildings and building technology from the formative period in the second millennium BCE through the twentieth century. The course will deal with well-known monuments such as the Buddhist monasteries of Wutai, imperial palaces in Chang’an and Beijing, the Ming tombs and the Temple of Heaven, and less frequently studied buildings. Also covered will be the theory and principles of Chinese construction.
Taught by: Steinhardt
One-term course offered either term
Also Offered As: EALC 229
Activity: Lecture
1.0 Course Unit
EALC 630 Gender, Religion, and China
This course examines gender in Chinese religious culture from ancient to contemporary times. We will explore topics including the Buddhist accommodation of Chinese family system, Chinese transformation of the bodhisattva Guanyin, female deities in Daoist and popular religious pantheons, writings about religious women, female ghosts and fox spirits in literary imagination and folk tales, and the significance of yin force in Chinese medicine and Daoist alchemy. Through the case of China, we will look at how gender plays critical and constitutive roles in religious traditions, and how religion can be used both to reinforce and to challenge gender norms.
Taught by: Cheng, H
Course not offered every year
Also Offered As: EALC 230, GSWS 234, GSWS 630, RELS 237, RELS 630
Activity: Seminar
1.0 Course Unit

EALC 633 Chinese Aesthetics
This seminar investigates classical Chinese conceptions of art and beauty as exemplified in philosophy, literature, music, painting, calligraphy, and architecture. All readings will be in English, and no knowledge of Chinese is presumed. Graduate students should see the instructor to discuss requirements for graduate credit.
Taught by: Goldin
Course not offered every year
Also Offered As: EALC 233
Activity: Lecture
1.0 Course Unit

EALC 634 Daoist Traditions
This course examines the history of various intellectual and religious traditions that came to be known as Daoist (or Taoist in the Wade-Giles Romanization). We will begin with a critical review of the twentieth-century reinvention of Daoism and the new classification of religious versus philosophical Daoism, before tracing chronologically the textual, institutional, and social history of Daoist traditions from the fourth century B.C.E. While familiarizing students with the key concepts, practices, and organizations developed in the history of Daoism, this class emphasizes the specific socio-political context of each of them. Throughout the course, we will think critically about the labeling of Daoist (as well as Confucian and Buddhist) in Chinese history and in modern scholarship. We will also question modern demarcations between philosophy, religion, and science, as well as that between the spiritual and the physical.
Taught by: Wang
Course not offered every year
Also Offered As: EALC 234, RELS 233, RELS 634
Activity: Seminar
1.0 Course Unit

EALC 639 Sex and Society in Ancient China
Ancient Chinese writers considered sexual activity to be an essential component of humanity, and that study of human sexuality to be essential to the study of human history. Sexuality constituted a fundamental source of imagery and categories that informed the classical Chinese conception of social, political, and military relationships. This course will survey the major sources dealing with sex and society in ancient China. There are no pre-requisites, and no knowledge of Chinese is presumed.
Taught by: Goldin
Course not offered every year
Also Offered As: EALC 239

1.0 Course Unit

EALC 640 Early Chinese History
This seminar covers the span of Chinese history from the Bronze Age to the establishment of the empire in 221 B.C. No knowledge of Chinese is presumed, but EALC 001 (Introduction to Chinese Civilization) is a prerequisite. Graduate students who wish to enroll should meet with the instructor to discuss additional requirements for graduate credit.
Taught by: Goldin
Course usually offered in spring term
Also Offered As: EALC 240
Activity: Seminar
1.0 Course Unit

EALC 641 Law in Pre-Modern China
This course, intended for graduate students and advanced undergraduates, offers a survey of the sources and research problems of pre-modern Chinese law. For reasons to be examined in the course, traditional Sinological education has neglected law as a legitimate field of inquiry; consequently, the secondary literature is surprisingly meager. Our readings will take us from the Warring States Period to the Qing dynasty--an interval of over two millennia--and will cover several varieties of legal documents, including statutes, handbooks, court records, and theoretical treatises. All the readings will be in English, and no knowledge of Chinese is presumed. Graduate students should see the instructor to discuss requirement for graduate credit.
Taught by: Goldin
Course not offered every year
Also Offered As: EALC 241
Activity: Seminar
1.0 Course Unit

EALC 642 Medicine and Healing in China
This course explores Chinese medicine and healing culture, its diversity, and its change over time. We will discuss topics including the establishment of canonical medicine, Daoist approaches to healing and longevity, diverse views of the body and disease, the emergence of treatments for women, medical construction of sex difference and imagination of female sexuality, the thriving and decline of female healers, the identity of scholar physicians, the transmission of medical knowledge, domestic and cross-regional drug market, healer-patient relations, and new visions of traditional Chinese medicine in modern China.
Taught by: Cheng, H
Course not offered every year
Also Offered As: EALC 242
Activity: Lecture
1.0 Course Unit
EALC 643 Pastoralism & Mobility
Pastoralism and Mobility will examine the society and history of mobile pastoralists (nomads) in Inner Asia from earliest times to the present. Peoples covered will include Mongols, Tibetans, Turkic nomads (such as Kazakhs, Kyrgyz, and Turkmen), and their ancestors and predecessors. The class on focus on questions such as: Is there a distinctive form of Inner Asian pastoralist society? At the grass roots level? At the elite level? How have states (native and foreign) influenced Inner Asian pastoralist society in pre-modern and modern contexts? How have Inner Asian pastoralists influenced neighboring states? What role does kinship play in governing group formation, property, and status in Inner Asian pastoralist society? Does this role vary over time, space, or ethnic background? If so, how? What purposes does mobility serve in Inner Asian societies? How have various forms of livestock lease-holding changed and shaped wealth in Inner Asian pastoralist society? How did class differentiation emerge & function in pre-modern pastoralist societies? What happens when pastoralists become farmers? How have modern schemes of social improvement and productivity, especially collectivization and decollectivization, shaped pastoralist lives?

EALC 651 Readings in Classical Japanese I
Readings in classical texts drawn from the Heian, Kamakura, Muromachi, and Edo periods. Introduction to the different styles of classical Japanese, and to classical Japanese as a whole.
For BA Students: Advanced Language Course
Course usually offered in fall term
Also Offered As: EALC 251, JPAN 491
Prerequisite: JPAN 212
Activity: Lecture
1.0 Course Unit

EALC 653 The Politics of Shinto
Shinto-derived images and ideas frequently appear in Japanese anime and film, and journalists and academicians frequently mobilize the term Shinto as a way of explaining Japanese past or envisioning its future. The environmentalist left champions a green Shinto while Shinto-derived ideas serve as red meat for politicians pandering to Japan's nationalist right. While the influential position Shinto occupies in Japanese sociopolitical life is therefore clear, the term Shinto itself is actually not. Depending on who one asks, Shinto is either the venerable indigenous religion of the Japanese archipelago, the irreducible core of Japanese culture, a tiny subset of Japanese Buddhism, an oppressive political ideology linked to the emperor system, an environmentalist ethic, or some combination of these. This course investigates the multifarious types of Shinto envisioned by these competing interest groups.

Course usually offered in spring term
Also Offered As: EALC 253, RELS 271, RELS 671
Activity: Seminar
1.0 Course Unit

EALC 654 Tales of the Heike
Our subject is Tale of the Heike, a multifaceted narrative of the twelfth-century battles that brought the Taira clan down and led to the establishment of Japan's first military government. We will read the Heike tales with an eye toward how they fictionalize history and idealize certain types, most notably loyal women and warriors; the development of the warrior tale genre; central aspects of the Japanese ethos; and later works of literature based on episodes and characters from the Tale of the Heike. All material is in English translation. (Students of Japanese language may learn to read a famous section in the original.) There are no prerequisites. Research in an East Asian language required for graduate credit.

Activity: Seminar
1.0 Course Unit

EALC 656 The Tale of Genji
'Crowning masterpiece of Japanese literature,' 'the world's first novel,' 'fountainhead of Japanese literary and aesthetic culture,' 'a great soap opera in the vein of Jacqueline Susann.' Readers over the centuries have praised the Tale of Genji, the monumental prose tale finished just after the year 1000, in a variety of ways. In this course we will read the latest English translation of Murasaki Shikibu's work. We will watch as Genji loses his mother at a tender age, is cast out of the royal family, and begins a quest to fill the void she left. Along the way, Genji's loyalty to all the women he encounters forges his reputation as the ideal lover. We will consider gender issues in the female author's portrayal of this rake, and question the changing audience, from bored court women to censorious monks, from adoring nationalists to comic book adaptors. Study of the tale requires consideration of poetry, imagery, costume, music, history, religion, theater, political and material culture, all of which will be components of the course. We will also trace the effect of the tale's many motifs, from flora and fauna to murderously jealous spirits, on later literature and conceptions of human emotions. All material is in English translation. There are no prerequisites. Research in an East Asian language required for graduate credit.

EALC 657 Asian Religions in the Global Imagination
This seminar critically examines the missionary impulses, colonial exploits, and translation endeavors that contributed to the rise of Asian studies and the emergence of the scholarly notion of ‘Asian religions.’ It shows the crucial roles played by Asian agents and their European counterparts in the formation of modern conceptions of ‘religion’; it also engages reflexive questions regarding theory, method, and the geopolitical underpinnings of both Asian studies and the non-confessional academic study of religion. Students will conduct sustained research projects on the country or region of their choice.

EALC 661 History of the Book in East Asia
Spring 2018: From handscrolls to manga, books play a vital role in East Asian societies. In this course we will introduce the spread of book cultures across East Asia and reconsider the role and impact of material texts on societies in China, Korea, and Japan. Among the questions we’ll engage are: What is a book, an author, or an edition? How do readers affect books? How do publishers decide when to use illustrations, woodblock printing, or movable type? How has the history of books differed in China, Japan, and Korea from the history of the book in the West? We will consider various media (bamboo, paper, silk, and the digital), formats (scrolls, folded books, bound books, small to oversize), and the tensions between handwritten manuscript and printed pages. Hands-on sessions may include paper-making, bookbinding, and printing. This is an Objects-Based Learning course, using materials from the Kislak Center for Special Collections, Rare Books and Manuscripts, and the Penn Museum, with visits to the Philadelphia Museum of Art and the Free Library of Philadelphia. Requires no knowledge of any Asian language.
Taught by: Davis, Chance
Course not offered every year
Also Offered As: ARTH 517, EALC 260
Activity: Seminar
1.0 Course Unit

EALC 662 Japanese Science Fiction and Fantasy
This course will provide an overview of the major tropes, themes, and interpretations of contemporary Japanese science fiction and fantasy. As we establish a foundational knowledge of the history and structural formulations of genre fiction in Japan, we will cover topics such as folklore, high fantasy, apocalypse, dystopia, magical realism, posthumanism, video games, and transnational media franchises and cross-cultural marketing. By the end of the semester, students will possess a deeper understanding and appreciation of the role that science fiction and fantasy play in shaping contemporary media cultures in Japan and around the world.
Taught by: Hemmann
Also Offered As: EALC 261
Activity: Lecture
1.0 Course Unit

EALC 664 Lawlessness and Violence in Pre-Modern Japan
This course will be an exploration of premodern Japanese history through the lens of violence. The centuries under consideration (roughly, the eighth through nineteenth) were characterized by greatly varying levels of violence, both of the state-sanctioned variety (war, punishments for lawbreakers and political losers) and of the non-sanctioned variety (piracy, banditry, warrior and peasant rebellions). Examining a wide variety of translated sources, from diaries to chronicles, from legal codes to fiction, we shall examine the changing social, political, economic, and cultural contexts of violence, in order to interrogate not only why certain periods were remarkably peaceful while others were not, but also why violence took different forms in relation to different circumstances. We shall consider how contemporaries made sense of the violence that surrounded them (or didn’t) and how they divided the acceptable use of force from the wanton and society-threatening abuse of it. The course will feature presentations and several (very short) papers.
Course not offered every year
Also Offered As: EALC 264
Activity: Seminar
1.0 Course Unit

EALC 670 From Shamans to Shoguns: The Texts that Made Pre-Modern Japanese History
This course takes a millennium of premodern Japanese political, social, and cultural history (roughly, 700-1700). Instead of attempting to cover the period chronologically, as an introductory survey might, this class is structured as a series of case studies. Each of these will take a primary source as its point of departure and explore one or more facets of Japanese history and writing. In the course of each case study, lectures and discussions will branch out from the main source to examine its historical context as well as the (political, cultural, textual) traditions that informed that source’s composition. In general, students will read the entire texts of the main sources (or significant portions of them), along with scholarly articles and shorter excerpts from other sources, composed at the same time or in the same vein/genre. During lectures and discussions alike, students will be asked to engage the readings, so as to grasp the specifics of Japanese history and practice the analytical skills required of historical discourse.
Course not offered every year
Also Offered As: EALC 270, HIST 277
Activity: Seminar
1.0 Course Unit

EALC 691 Archaeology of Central Asia
A site by site investigation of Buddhist and non-Buddhist ruins in Central Asia. Included are Nisa, Khwarezm, Pyandzhikent, Khalchayan, Ay-Khanum, Bamiyan, Miran, Tumshuk, Kizil, Kucha, Khotan, Adzhina-Tepe, Khocho, Khara-Khoto, and Bezeklik.
Taught by: Steinhardt
One-term course offered either term
Also Offered As: EALC 291
Activity: Seminar
1.0 Course Unit
EALC 693 Introduction to Classical Mongolian
In this class students who already know some modern Mongolian in the Cyrillic script will learn how to transfer that knowledge to the reading of first post-classical, and then classical texts written in the vertical or Uyghur-Mongolian script. Topics covered will include the Mongolian alphabetic script, dealing with ambiguous readings, scholarly transcription, vowel harmony and syllable structure, post-classical and classical forms of major declensions, converbs, verbal nouns, and finite verbs, syntax, pronunciation and scribal readings. Readings will be adjusted to interests, but as a rule will include selections from short stories, diaries, chronicles, Buddhist translations, government documents, popular didactic poetry, ritual texts, and traditional narratives. Students will also be introduced to the most important reference works helpful in reading classical and post-classical Mongolian. One year of modern Mongolian or equivalent required to enroll.
Taught by: Tseveendulam
Course usually offered in fall term
Also Offered As: EALC 293
Prerequisite: One year of modern Mongolia or equivalent
Activity: Seminar
1.0 Course Unit

EALC 711 Theory and East Asia
'Theory' can be exciting and seductive to some scholars, but intimidating or pretentious to others. Unfortunately, this difference in feeling about theoretical scholarship and discussion has a tendency to produce a divide in academia between those who 'do theory' and those who do not. This graduate seminar pursues the question of how theory can be engaged in the context of East Asian cultural studies, with the goal of collectively working through texts to understand how theoretical reflection opens up possibilities for productive conversations across disciplinary boundaries. Many critiques have been made of the way 'traveling theory' serves as a Euro-American universal applied to the 'raw material' of East Asian texts, or a transdisciplinary common language in the Humanities and Social Sciences. Instead, we will take such critiques as a starting point to pragmatically and creatively explore the intersections and interactions of 'theory' and 'East Asia,' emphasizing the archival, historical, political, and institutional contexts that motivate theorization. In that spirit, special attention will be given to discussing what problems we find in our own work that require theoretical consideration, and how such considerations might contribute to, challenge, or transform theory originating outside of East Asia.
Readings will primarily be in English, but may also include Japanese, Chinese, or Korean depending on student interest and language abilities.

Activity: Seminar
1.0 Course Unit

EALC 725 Topics in East Asian Art
Seminar in East Asian Art: High-level, research-oriented seminar whose subject changes. Students must be fluent readers of at least one East Asian language.
Course not offered every year
Activity: Seminar
1.0 Course Unit

EALC 731 Tang-Song Religious and Medical Texts
This seminar aims at developing the skill in reading religious and medical texts of a range of different genres from the Tang-Song period, including treatises in medical theory, no sological texts, recipe compilations, material medical, macrobiotic texts, Buddhist and Daoist meditation and ritual instructions, as well as case histories in anecdotal forms. There are a variety of topics we can choose to focus on the studying those texts, and the choice will be made on the students' research interests. Each week we will look at one type of texts, consider its edition, textual history, chapter organization and genre (sometimes with background readings), read line-by-line a sample text assigned in advance, as well as sight-read short samples that students bring to class. Prerequisite: At least one year Classical Chinese is required.
Taught by: Cheng, H
Course not offered every year
Prerequisite: CHIN 491 AND CHIN 492
Activity: Seminar
1.0 Course Unit

EALC 733 Song Dynasty Texts
The goal of this course is to gain a practical ability in doing research concerning the Song dynasty by utilizing Chinese primary sources. Each session we will take a type of source, look at examples of it in the library, consider indexes and other reference aids, consider historiographical uses and limitations, and do some communal reading of a sample text distributed in advance, as well as sight-reading of short samples students bring to class, prepared to translate for the class. We will cover sources including standard histories (Song shi, Liao shi, Jin shi), narrative history (Xu zizhi tongjian changbian), biographical accounts (epitaphs, index of Song biographies), diaries, letters, inscriptions, anecdotes, regional histories/gazetteers, and government documents (Song hui yao).
Course not offered every year
Prerequisite: CHIN 491 AND CHIN 492
Activity: Seminar
1.0 Course Unit
EALC 738 Religion & Ethnicity in Inner Asia

'Religion and Ethnicity in Inner Asia' will examine these two phenomena and their interaction in Inner Asia from earliest times to the present. The class will cover Mongolia, Tibet, Kazakhstan, and Turkic and Mongolian peoples of Russia and China. Religions addressed primarily include Buddhism, Islam, shamanism, and secularism. Why 'ethnicity and religion'? In practice the scholarly research and literature on these two topics in Inner Asia have been closely related. In addition to theoretical works on ethnicity, nationalism, religion and identity, the class will focus on issues such as ethnicity and religious conversions, place-based ethnic and religious identities, ethnicity and the Chinese and Russian states, nationalism, nationality policy, reformist and atheist secularisms, revivalist and apocalyptic movements, and the intersection of ethnicity, race, sexuality, and international networks.

Taught by: Atwood
Activity: Seminar
1.0 Course Unit

EALC 740 Sinological Methods

This seminar is designed to acquaint graduate students with the basic methods and resources of Sinological research. The course will begin with an overview of essential reference works and aids to study, such as dictionaries and concordances, and continue with a survey of the major primary sources for the study of traditional Chinese history. Students are required to demonstrate the use of the methods learned in the course in a research paper, to be presented to the class in the form of a brief lecture at the end of the semester. Only graduate students may enroll in this course. The prerequisites are reading knowledge of modern Chinese and two years of the classical language. Familiarity with Japanese, though not required, would prove helpful.

Taught by: Goldin
Course not offered every year
Activity: Seminar
1.0 Course Unit

EALC 745 Topics Song Dynasty Hist

'This seminar will introduce graduate students to current scholarship on the Song dynasty (960-1276) by surveying both classic and recent work in the field. Students will gain a foundation in how historians have interpreted the Song period and learn the major debates within the field. Readings will be principally in English, and no background in Chinese studies is required.' This seminar will introduce graduate students to current scholarship on the Song dynasty (960-1276) by surveying both classic and recent work in the field. Students will gain a foundation in how historians have interpreted the Song period and learn the major debates within the field. Readings will be principally in English, and no background in Chinese studies is required.

EALC 755 Literary Criticism and Theory in Japanese Literature

While the focus of this seminar will shift from year to year, the aim is to enable students to gain 1) a basic understanding of various theoretical approaches to literature, 2) familiarity with the histories and conventions of criticism, literary and otherwise, in Japan; 3) a few theoretical tools to think in complex ways about some of the most interesting and controversial issues of today, such as nationalism, imperialism, colonialism, postmodernism, and feminism, with particular focus on Japan's position in the world. The course is primarily intended for graduate students but is also open to advanced undergraduates with permission of the instructor. The course is taught in English, and all of the readings will be available in English translation. An optional discussion section may be arranged for those students who are able and willing to read and discuss materials in Japanese.

Taught by: Kano
Course not offered every year
Also Offered As: COML 685
Activity: Seminar
1.0 Course Unit
EALC 760 Japanese Religions
A broad survey of Japanese religions from ancient times to the present. Topics include kami worship, Buddhism, Shinto, Shugendo, Onmyodo, new religions, and Japanese variants of Christianity and Islam. Students will make weekly presentations on reading material in class and will have two major written assignments. This course serves as preparation for a comprehensive exam in Japanese religions or for dissertation research on some aspect of Japanese religions.
Taught by: Thomas, J
Course not offered every year
Activity: Seminar
1.0 Course Unit

EALC 771 Current Japanology
Major trends in scholarship as reflected in important recent publications, especially formative books and periodical literatures. The trajectory within certain disciplines as well as the interaction among them will be critically evaluated in terms of gains and losses. Implications of these theses in the planning of graduate and postgraduate research.
Prerequisite: Knowledge of reading Japanese.
Course not offered every year
Also Offered As: GSWS 771
Activity: Lecture
1.0 Course Unit

EALC 777 Readings in Premodern Japanese History: War & Peace, 1000-1850
This seminar is an introduction to the most recent historiography on premodern Japan, with a special attention to work focused on the medieval and early modern periods (twelfth through nineteenth centuries). The course will range broadly from religious history to social history, from new takes on biography and material culture to new approaches to think of Japanese’s relation to the other, within the archipelago and beyond. Each week will feature a monograph published in the last decade or so, alone or (when possible) in conversation with earlier pieces on similar subjects. Students will be expected to take turns presenting on readings, to write three short book reviews during the course of the semester and a longer seminar paper at the end of the semester (to be submitted by 12/15). The short papers should be handed in no more than three weeks after the book was discussed in class.
Taught by: Spafford
Course not offered every year

Activity: Seminar
1.0 Course Unit

EALC 790 Korean Studies: Methods
Topic varies. Knowledge of Korean helpful but not required.
Course not offered every year
Activity: Seminar
1.0 Course Unit

EALC 990 Masters Thesis
Registration for MA students who have finished coursework and are writing their MA thesis or research papers.
One-term course offered either term
Activity: Masters Thesis
1.0 Course Unit

Economics (ECON)

ECON 001 Introduction to Micro Economics
Introduction to economic analysis and its application. Theory of supply and demand, costs and revenues of the firm under perfect competition, monopoly and oligopoly, pricing of factors of production, income distribution, and theory of international trade. Econ 1 deals primarily with microeconomics.
For BA Students: Society Sector
One-term course offered either term
Activity: Recitation
1.0 Course Unit

ECON 002 Introductory Economics: Macro
Introduction to economic analysis and its application. An examination of a market economy to provide an understanding of how the size and composition of national output are determined. Elements of monetary and fiscal policy, international trade, economic development, and comparative economic systems.
For BA Students: Society Sector
One-term course offered either term
Prerequisite: ECON 001
Activity: Recitation
1.0 Course Unit

ECON 010 Introduction to Economics for Business
The first part of the course covers basic microeconomic concepts such as opportunity cost, comparative advantage, supply and demand, importance of costs and revenues under perfect competition vs. monopoly, externalities and public goods. The second part of the course introduces macroeconomic data, two models of the labor market, a model of the aggregate household, and the standard AD-AS model. The course concludes with an introduction to fiscal policy, banking, and the role of the Central Bank.
Course usually offered in fall term
Activity: Recitation
1.0 Course Unit
Notes: For Wharton students only
ECON 013 Strategic Reasoning
This course is about strategically interdependent decisions. In such situations, the outcome of your actions depends also on the actions of others. When making your choice, you have to think what the others will choose, who in turn are thinking what you will be choosing, and so on. Game Theory offers several concepts and insights for understanding such situations, and for making better strategic choices. This course will introduce and develop some basic ideas from game theory, using illustrations, applications, and cases drawn from business, economics, politics, sports, and even fiction and movies. Some interactive games will be played in class. There will be little formal theory, and the only prerequisites are some high-school algebra and having taken ECON 001. However, general numeracy (facility interpreting and doing numerical graphs, tables, and arithmetic calculations) is very important. This course will also be accepted by the Economics department as an Econ course, to be counted toward the minor in Economics (or as an Econ elective).
Prerequisite: This course may not be taken concurrently with or after ECON 212.
Taught by: Diltenberger
Course usually offered in fall term
Also Offered As: PPE 311
Prerequisite: ECON 001
Activity: Lecture
1.0 Course Unit
Notes: This course may NOT be taken concurrently or after ECON 212.

ECON 014 American Capitalism
A broad overview of American economic history will be provided by focusing on the following topics: European colonization of the western hemisphere; mercantilism and the British Economy; the economics of slavery; metro-industrialization; agricultural expansion and technological innovation in the nineteenth century; the growth and role of credit institutions; financial panics and business cycles; the evolution of federal government interventions into the economy; women and work; the dynamics of mass consumerism; the Great Depression and the New Deal; political economic shifts in post-World II America; forms of globalization; deindustrialization; the 'financialization' of the American economy; and the economic disorders of our own times.
For BA Students: Society Sector
Taught by: Licht
One-term course offered either term
Also Offered As: HIST 161
Activity: Recitation
1.0 Course Unit

ECON 024 Development Economics
This course presents an overview of the field of development economics. The general aim is to show how economic analysis has been applied to issues related to developing countries. Among the topics covered are: income distribution, poverty, health, population growth, migration, growth, and the rural economy. Students may NOT take ECON 024 and 261.
One-term course offered either term
Prerequisite: ECON 001 OR ECON 010
Activity: Lecture
1.0 Course Unit
Notes: Students may NOT take ECON 024 and 261

ECON 028 Financial Meltdown, Past and Present
Economic history is increasingly recognized as a crucial source of policy advice and is invoked with growing frequency in public debates. In particular, the subprime crisis in 2008 and after has generated a demand for 'historical perspective' that would improve the understanding of the causes of financial turmoil and facilitate the prevention of comparable catastrophes. This course begins with a review of the principal features of the subprime crisis of 2008 and asks, so to speak, 'how did we get there?' It answers by providing historical insights that shed light on crucial aspects of financial disasters.
For BA Students: Humanities and Social Science S
Taught by: Flandreau
One-term course offered either term
Also Offered As: HIST 131
Activity: Lecture
1.0 Course Unit

ECON 030 Public Policy Analysis
This course provides an introduction to the economic method for analyzing public policy questions. It develops the implications of this method for the role of government in a market economy and for the analysis of specific public projects. Credit cannot be received for both ECON 030 and 231.
One-term course offered either term
Prerequisite: (ECON 001 AND ECON 002) OR ECON 010
Activity: Lecture
1.0 Course Unit
Notes: Credit cannot be received for both ECON 030 and 231.

ECON 032 Political Economy
This course examines the effects of strategic behavior on political outcomes and government policies. Topics and applications may include voting behavior, candidate competition, voting systems, social choice and welfare, policy divergence, redistributive policies and theories of political transitions. Credit will NOT be given for ECON 032 and ECON 232.
One-term course offered either term
Prerequisite: (ECON 001 AND ECON 002) OR ECON 010
Activity: Lecture
1.0 Course Unit
Notes: Credit will NOT be given for ECON 032 and ECON 232

ECON 033 Labor Economics
The course begins with an extensive discussion of models of labor market demand and supply. The rest of the course addresses a variety of related topics including the school-to-work transition, job training, employee benefits, the role of labor unions, discrimination, workforce diversity, poverty, and public policy. Credit cannot be received for both ECON 033 and ECON 233.
Course usually offered in spring term
Prerequisite: ECON 001 OR ECON 010
Activity: Lecture
1.0 Course Unit
Notes: Credit cannot be received for both ECON 033 and ECON 233.
**ECON 035 Industrial Organization**

Theories of various industrial organizational structures and problems are developed, including monopoly, oligopoly, moral hazard and adverse selection. These theories are then applied to the study of various industries, antitrust cases, and regulatory issues. Credit cannot be received for both ECON 035 and 235.

One-term course offered either term
Prerequisite: ECON 001 OR ECON 010
Activity: Lecture
1.0 Course Unit
Notes: Credit cannot be received for both ECON 035 and 235.

**ECON 036 Law and Economics**

The relationship of economic principles to law and the use of economic analysis to study legal problems. Topics will include: property rights and intellectual property; analysis of antitrust and economic analysis of legal decision making. Credit cannot be received for both ECON 036 and 234.

One-term course offered either term
Also Offered As: PPE 036
Prerequisite: ECON 001 OR ECON 010
Activity: Lecture
1.0 Course Unit
Notes: Credit cannot be received for both ECON 036 and ECON 234.

**ECON 039 The Economics and Financing of Health Care Delivery**

The course provides an application of economic models to demand, supply, and their interaction in the medical economy. Influences on demand, especially health status, insurance coverage, and income will be analyzed. Physician decisions on the pricing and form of their own services, and on the advice they offer about other services, will be considered. Competition in medical care markets, especially for hospital services, will be studied. Special emphasis will be placed on government as demander of medical care services. Changes in Medicare and regulation of managed care are among the public policy issues to be addressed. Prerequisite: If course requirement not met, permission of instructor required.

Taught by: Candon
One-term course offered either term
Also Offered As: HCMG 202
Prerequisite: ECON 001 OR ECON 010
Activity: Lecture
1.0 Course Unit

**ECON 045 Economics and Theories of Fairness**

Free markets excel at producing wealth, but seem to do so at the cost of economic inequality. Is this inequality unjust? Is it a problem economics and public policy should solve? Liberal democracies have traditionally had the protection of private property as a core mandate. But they also have varying degrees of redistribution in order to fund social welfare systems. How can we reconcile these objectives which seem to conflict? Is the protection of individual rights more important than the promotion of the greatest good for all? To what extent can personal liberty and the common good be reconciled? Are current entitlement programs like Medicare unfair to the younger generation? Is our current natural resource usage unfair to future generations? In this course, we will use the philosophical concept of justice to address these and other related questions. We will draw from the economic history, political theory, and the history of philosophy in order to acquire a framework for understanding the concepts of justice, liberty, rights, and equality. We shall then apply this historical and conceptual framework to discussion topics and case studies drawn from present day economics and contemporary social issues. In this way, we shall come to understand economics as more than a social science of laws and theorems. Instead we shall see how economics as an applied science influences the well-being of the whole of society.

Taught by: Kane
Course usually offered in fall term
Prerequisite: ECON 001 AND ECON 002
Activity: Lecture
1.0 Course Unit

**ECON 050 International Economics**

Introduction to the theory of international trade and international monetary economics. The theoretical background is used as a basis for discussion of policy issues. Patterns of international trade and production; gains from trade; tariffs, and impediments to trade; foreign exchange markets, balance of payments, capital flows, financial crises, coordination of monetary and fiscal policy in a global economy.

Prerequisite: ECON 050 is a one-semester course in international economics. Students wishing to study the subject in greater depth should take instead the two-semester sequence ECON 251, 252.

One-term course offered either term
Prerequisite: (ECON 001 AND ECON 002) OR ECON 010
Activity: Lecture
1.0 Course Unit
Notes: ECON 050 is a one-semester course in international economics. Students wishing to study the subject in greater depth should take instead the two-semester sequence ECON 251, 252.

**ECON 101 Intermediate Microeconomics**

Theories of consumer behavior, demand, production, costs, the firm in various market contexts, factor employment, factor incomes, elementary general equilibrium, and welfare. Prerequisite: Incoming freshman with AP or transfer credit. Upper classmen must have at least a B+ in MATH 104 to take ECON 101 or MATH 114 or MATH 115 concurrently.

One-term course offered either term
Prerequisite: ECON 001 AND ECON 002 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: Note: Incoming freshmen with AP or transfer credit for ECON 001 and ECON 002, MUST complete MATH 104, MATH 114 or MATH 115 before enrolling in ECON 101. Upper classmen must have at least a B+ in MATH 104 to take ECON 101 and MATH 114 or MATH 115 concurrently.
ECON 102 Intermediate Macroeconomics
Facts and theories about the determination of per capita income and its differences across countries and across time. The study of economic fluctuations in output and employment. The role of government in influencing these aggregate variables: monetary and fiscal policy. FNCE 101 does not satisfy any of the Economics department requirements. Therefore, students are required to take ECON 102.
One-term course offered either term
Prerequisite: ECON 101 AND MATH 104 AND (ECON 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: FNCE 101 does not satisfy any of the Economics department requirements. Therefore, students are required to take ECON 102.

ECON 103 Statistics for Economists
The course focuses on elementary probability and inferential statistical techniques. The course begins with a survey of basic descriptive statistics and data sources and then covers elementary probability theory, sampling, estimation, hypothesis testing, correlation, and regression. The course focuses on practical issues involved in the substantive interpretation of economic data using the techniques of statistical inference. For this reason empirical case studies that apply the techniques to real-life data are stressed and discussed throughout the course, and students are required to perform several statistical analyses of their own. Prerequisite: Intended primarily for economics majors. ECON cannot be taken by any students who has already completed Statistics at least at the level of STAT 430 (including the sequence STAT 430 and 431). Such students must take an additional 200-level course to satisfy requirements of the major.
One-term course offered either term
Prerequisite: ECON 001 AND ECON 002 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: Intended primarily for economics majors. ECON 103 cannot be taken by any student who has already completed Statistics at least at the level of STAT 430 (including the sequence STAT 430 and 431). Such students must take an additional 200-level course to satisfy requirements of the major.

ECON 104 Econometrics
This course is designed to introduce students to econometric techniques and their applications in economic analysis and decision-making. The main objective of the course is to train the student in (i) handling economic data; (ii) quantitative analyses of economic models with probabilistic tools; (iii) econometric techniques, their application as well as their statistical and practical interpretation; (iv) implementing these techniques on a computer. Estimation and inference procedures are formally analyzed for simple econometric models and illustrated by empirical case studies using real-life data. The course covers linear regression models, simultaneous-equations models, discrete choice models and univariate time series models. Estimation and Inference is conducted using least squares and likelihood based techniques. Students are required to perform several econometric analyses of their own.
Course usually offered in spring term
Prerequisite: ECON 101 AND ECON 103 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit

ECON 199 Independent Study
Individual study and research under the direction of a member of the Economics Department faculty. At a minimum, the student must write a major paper summarizing, unifying, and interpreting the results of the study. This is a one semester, one c.u. course. Please see the department for permission.
One-term course offered either term
Prerequisite: ECON 101 AND ECON 102 AND ECON 103
Activity: Independent Study
1.0 Course Unit
Notes: Please see the Undergraduate Coordinator in Economics (160 McNeil) for the appropriate sequence number.

ECON 210 Economics of Family
This course will use economic tools to explore decision making and allocation of resources within the family. The course will use both economic theory and econometric evidence to investigate these issues. The impact of gender roles and differences will be examined and the effect of these differences on economic decisions and outcomes both within and outside the family will be discussed. In addition, any 200-level evening course (Section 601), when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student. Student participation will be an integral part of the course. During class, students will be required to evaluate data and relate it to the theoretic model covered. Student participation will also include two in-class oral presentations. Students will be working with CWiC (Communication Within the Curriculum) as they work on these presentations.
Course not offered every year
Prerequisite: ECON 101 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: In addition, any 200-level evening course (Section 601), when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

ECON 211 Social Choice Theory
This course investigates a topic which lies at the heart of economic, social and political sciences, namely the aggregation of individual preferences. Can a society as a whole exhibit preferences as individuals do? Can these preferences be based on individual ones, and show the same level of coherence? Which process can lead from individual preferences to the preferences of the society? At the end of the 18th century, the pioneers in the field already realized that mathematics is the only language powerful enough to make deep progress in the understanding of these questions. The formalization involves pure logic as well as geometry and combinatorics. In addition, any 200-level LPS course (Section 601) when offered, MAY NOT count for Economics Majors, unless you are officially registered as an LPS student.
Course not offered every year
Prerequisite: ECON 101 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: In addition, any 200-level LPS course (Section 601), when offered, MAY NOT count for Economics Majors, unless you are officially registered as an LPS student.
ECON 212 Game Theory
An introduction to game theory and its applications to economic analysis. The course will provide a theoretical overview of modern game theory, emphasizing common themes in the analysis of strategic behavior in different social science contexts. The economic applications will be drawn from different areas including trade, corporate strategy and public policy. Any 200-level LPS course when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS students.
One-term course offered either term
Prerequisite: ECON 101 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: Any 200-level LPS course when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

ECON 221 Econometric Forecasting
This course provides a comprehensive introduction to forecasting in economics and business. Topics covered include statistical graphics, trends, seasonality, cycles, forecast construction, forecast evaluation and forecast combination. In addition, any 200-level CGS course (Section 601), when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS students.
One-term course offered either term
Prerequisite: ECON 101 AND ECON 102 AND ECON 103 AND ECON 104 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: In addition, any 200-level CGS course (Section 601), when offered, MAY NOT count for Economics Majors, unless you are officially registered as an LPS student.

ECON 222 Advanced Econometric Techniques and Applications
This course introduces students to advanced study in econometrics, with an emphasis on methods used in microeconomic applications and in evaluating the effects of social interventions. The methods covered include methods for handling limited dependent variables (useful, for example, in forecasting the demand for a new good), maximum likelihood estimators, and flexible semiparametric and non parametric estimation methods, and randomized and nonexperimental methods of estimating treatment effects. Applications of econometrics to the field of program evaluation will also be studied. In addition, any 200-level LPS course, when offered WILL NOT count for Economics Majors unless you are officially registered as an LPS student.
One-term course offered either term
Prerequisite: ECON 101 AND ECON 104 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: In addition, any 200-level LPS course, when offered WILL NOT count for Economics Major unless you are officially registered as an LPS student.

ECON 224 Statistical Learning and Causal Inference for Economics
ECON 224 is an applied data analysis course that introduces students to ideas from modern statistical learning and causal inference, and provides hands-on experience applying them to real-world problems using the R statistical programming language. Topics include regression, randomized controlled trials, classification, instrumental variables, shrinkage methods, random forests, regression discontinuity, and differences-in-differences.
Taught by: DiTraglia
Prerequisite: ECON 103
Activity: Lecture
1.0 Course Unit

ECON 225 Empirical Economics of Climate Change
This course provides a broad introduction to the economics of climate change. The relevant theory is reviewed, but the emphasis throughout is thoroughly empirical. We begin by providing necessary background in geophysics and econometrics. We then move into aspects of the bi-directional feedback relationship between climate change and economic activity. First we examine effects of economic activity on climate, and then we examine the effects of climate on economic activity. Finally, we move to economic strategies, policies, and institutions for climate change mitigation and adaptation, including trading or taxing carbon, hedging climate risk in financial markets, and monetary and supervisory policy.
Taught by: Diebold
Course usually offered in fall term
Prerequisite: ECON 101 AND ECON 102 AND ECON 103 AND ECON 104
Activity: Lecture
1.0 Course Unit

ECON 231 Public Finance
This course has two parts. The first looks at market and government failures and discusses the need for public policies as well as limits to their effectiveness including the evaluation of public projects using cost benefit analysis. The second part focuses on the economic analysis of taxation, including the economic incidence and efficiency of taxes.
Prerequisite: Credit cannot be received for both ECON 030 and 231.
ECON 103 recommended.
One-term course offered either term
Prerequisite: ECON 101 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: Credit cannot be received for both ECON 030 and 231

ECON 232 Political Economy
This course examines the political and economic determinants of government policies. The course presents economic arguments for government action in the private economy. How government decides policies via simple majority voting, representative legislatures, and executive veto and agenda-setting politics will be studied. Applications include government spending and redistributive policies. Prerequisite: ECON 103 is recommended.
One-term course offered either term
Prerequisite: ECON 101 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
ECON 233 Labor Economics
Labor supply and labor demand, income distribution, labor market contracts and work incentives, human capital, labor market discrimination, job training and unemployment. Prerequisite: Credit cannot be received for both ECON 033 and 233. ECON 103 is recommended. One-term course offered either term
Prerequisite: ECON 101 AND MATH 104 AND (MATH 114 or MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: Credit cannot be received for both ECON 033 and 233.

ECON 234 Law and Economics
This course will use basic microeconomic tools to understand how the law often, but not always, promotes economic efficiency. Among the areas to be discussed will be tort law, property law, intellectual property, antitrust regulation. The distinction between common law and legislative law will be drawn. Prerequisite: Credit cannot be received for both ECON 036 and 234. One-term course offered either term
Prerequisite: ECON 101 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: Credit cannot be received for both ECON 036 and 234.

ECON 235 Industrial Organization
Theories of various industrial organizational structures and problems are developed, including monopoly, oligopoly, nonlinear pricing and price discrimination. These theories are used to model various industries, antitrust cases, and regulatory issues. Prerequisite: Credit for both ECON 035 and 235. ECON 103 is recommended. One-term course offered either term
Prerequisite: ECON 101 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: Credit cannot be received for both ECON 035 and 235.

ECON 236 Health Economics
In this course we will use the tools of microeconomics to analyze the functioning of the health care system. We will draw from the sub-disciplines of information economics, industrial organization, labor economics, public economics, and behavioral economics. The primary goal is to use these tools to develop a critical analysis of the functioning of the health care system as well as of the policies aimed at improving it. We will learn about US specific institutional details and policies (most notably the Affordable Care Act), and we will compare them to other important international experiences. Prerequisite: Wharton students can satisfy the ECON 101 prerequisite with BEPP 250 honors. The regular BEPP 250 course does not count as a substitute for ECON 101. One-term course offered either term
Prerequisite: ECON 101 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: For ECON majors only. Intermediate Micro is a prerequisite and this course will use advanced quantitative methods.

ECON 237 Urban Fiscal Policy
The purpose of this course is to examine the financing of governments in the urban economy. Topics to be covered include the causes and consequences of the urban fiscal crisis, the design of optimal tax and spending policies for local governments, funding of public infrastructures and the workings of the municipal bond market, privatization of government services, and public financial systems for emerging economies. Applications include analyses of recent fiscal crises, local services and taxes as important determinants of real estate prices, the infrastructure crisis, financing and the provision of public education, and fiscal constitutions for new democracies using South Africa as an example. One-term course offered either term
Prerequisite: ECON 101 AND ECON 102 AND ECON 103 AND ECON 104 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit

ECON 238 Economics of Education
The course focuses on the educational decisions, including individual choices, institutional strategies and government policies. It is an elective course in economics and it is designed for junior and senior students. During the first part of the course we will go over the mathematical and empirical tools needed to understand and perform quantitative analysis on topics in the economics of education. Students should expect to work on optimization methods, regression analysis and causal inference analysis. We will use Stata (https://www.stata.com/) as statistical software. After we have built a solid foundation of knowledge, we will cover the first ‘real’ topic of the economics of education: the return to schooling. During this phase of the course we seek to address two questions: what are the benefits that an individual acquires (i.e. in terms of earnings in the labor market or career opportunities) by attending more years of school and what are the benefits for society as a whole? While these questions seem to have a simple explanation, we will discover that they are actually quite challenging and require a more complex explanation. Once we have analyzed the benefits of schooling, we will study what motivates some students to further their education for more years, as opposed to others. In particular, we will focus on the differences in the quality of environments that children face throughout childhood (e.g.: family environment and school/classroom environment) and the consequences for observed inequities. Finally, in the remaining portion of the course we will study the evaluations of different policies that have been implemented in the past from previous governments, with the goal of gaining insight for possible future policy recommendations. Taught by: Agostinelli
Course usually offered in spring term
Prerequisite: ECON 101 AND ECON 102 AND ECON 103
Activity: Lecture
1.0 Course Unit
ECON 239 The Digital Economy
This is an advanced undergraduate course on the digital economy. Our two main goals are (a) to understand how people and companies interact in digital markets and (b) to understand how digital markets should be designed. The course uses a combination of theoretical modeling and empirical evidence in order to achieve those goals. We analyze some key features that are prevalent in digital markets, including network effects, two-sided markets, search and matching, reputation systems, and the use of data. We also zoom in on individual markets, such as search engines, e-commerce platforms, and the gig economy.
Taught by: Castillo
Course usually offered in spring term
Prerequisite: ECON 101 AND ECON 104 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit

ECON 241 Economic Growth
The process of economic growth and the sources of differences in economic performance across nations are some of the most interesting, important and challenging areas in modern social science. You cannot travel or read the news without wondering why differences in standards of living among countries are so large. The primary purpose of this course is to introduce undergraduate students to these major issues and the theoretical tools necessary for studying them. The course therefore strives to provide students with a solid background in dynamic economic analysis, as well as empirical examples and data analysis.
One-term course offered either term
Prerequisite: ECON 101 AND ECON 102 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit

ECON 242 Topics in Macroeconomics
This course covers topics of interest in macroeconomics. Two sections are offered: Markets with Frictions. This course studies allocations in markets with frictions, as described by the difficulty in finding a trading partner, private information problems, commitment issues, and so on. Applications to labor markets, monetary economics, the marriage market will be discussed. The main technical tool will be search theory, but a liberal amount of calculus and other mathematics will be used. Numerical Methods for Macroeconomists. This course will study some of the numerical methods that are used in modern macroeconomics. This class will learn how to solve nonlinear equations, difference equations, interpolate functions, smooth data, and conduct Monte Carlo simulations on the computer. This will be done while studying economic problems, such as the determination of labor supply, economic growth and business cycle analysis. Calculus is an integral part of the course and some elementary probability theory will be drawn upon. The MATLAB programming language will be used.
One-term course offered either term
Prerequisite: ECON 101 AND ECON 102 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit

ECON 243 Monetary and Fiscal Policies
This is an advanced course in macroeconomics. A relatively simple, but well defined and internally consistent model of the U.S. economy is set up and used to study how output is generated given the initial resources, how output is divided between consumption and addition to capital stock, and how this process accumulates over time. The role of prices including the rate of interest in this process is also reviewed, and monetary and fiscal policies needed to improve the performance of the economy under such circumstances are discussed. Prerequisite: ECON 103 is recommended.
One-term course offered either term
Prerequisite: ECON 101 AND ECON 102 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit

ECON 244 Macro-Modeling
This is an advanced undergraduate course in models of economic growth. Students will be introduced to the workhorse theoretical models that are used to understand growth by modern macroeconomic researchers and policy makers. The types of questions that we will address include: Why are some countries richer than others? Why do some countries grow quickly while others stagnate? Why did modern economic growth start in Western Europe? What can governments do to accelerate economic growth? How does economic growth interact with demographic and geographic factors? We will build theoretical models that can be used to answer these questions. There will be a strong focus on emphasizing the microeconomic foundations of models, and using the language of mathematics to express the underlying assumptions and assess their implications for policy. Hence, there are strict mathematical prerequisites. We will also compare the predictions of our models with the data. Thus, a fair amount of econometrics will be required. A class in statistics and econometrics is highly recommended. Prerequisite: ECON 103 is recommended.
Course not offered every year
Prerequisite: ECON 101 AND ECON 102 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit

ECON 246 Money and Banking
Money and Banking. This course studies the role that financial markets, institutions, and money play in resource allocation. Financial intermediation and the role of banks in the economic system are analyzed and the economic rationale behind banking regulation is studied. The course examines how monetary policy influences interest rates and asset markets, such as the bond market and the stock market. Finally, the instruments and goals of monetary policy are discussed, focusing in particular on credibility and commitment for central banks. All of the questions are explored analytically, using the tools of economic theory.
One-term course offered either term
Prerequisite: ECON 101 AND ECON 102 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
ECON 251 International Trade
Structure of the world economy; theory of international trade; economic
growth and international trade; international trade policy; developed
countries; developing countries. Direct investment, technology transfers,
and the multinational firm. Prerequisite: In addition, the LPS 200-level
course, when offered, WILL NOT count for Economics Majors unless you
are officially registered as an LP student.
One-term course offered either term
Prerequisite: ECON 101 AND ECON 102 AND MATH 104 AND (MATH 114
OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: In addition, any 200-level LPS course, when offered WILL NOT
count for Economics Major unless you are officially registered as an LPS
student.

ECON 252 International Finance
International monetary economics with emphasis on economic policy
in an open economy. Topics covered in the course include: balance-
of-payments adjustment, theories of exchange rate determinaton, the
effects of exchange rate devaluation, macroeconomic policy under fixed
and floating exchange rates, the Euro-dollar market, currency and balance
of payments crises. Prerequisite: In addition, the LPS 200-level course,
when offered, WILL NOT count for Economics Majors unless you are
officially registered as an LP student.
One-term course offered either term
Prerequisite: ECON 101 AND ECON 102 AND MATH 104 AND (MATH 114
OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: In addition, any 200-level LPS course, when offered WILL NOT
count for Economics Major unless you are officially registered as an LPS
student.

ECON 260 Decision Making Under Uncertainty
This course will show how individuals make decisions in a world full
of uncertainties, both normatively and descriptively. This theory will
help us build skills in understanding and analyzing a choice problem
with uncertainty in a systematic fashion, as well as deepening our
understanding of the fundamental concept of a utility function, which
plays a critical role in economic modeling. The course requires a
substantial ability of abstract thinking. Homework is intended to be
thought-provoking rather than skill-sharpening. All prerequisites MUST be
taken prior to enrolling in this course.
Course not offered every year
Prerequisite: ECON 101 AND ECON 103 AND MATH 104 AND (MATH 114
OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: All prerequisites MUST be taken prior to enrolling in this course.

ECON 261 Topics in Development
This course studies institutions in developing economies. The first
section of the course will cover the organization of production in
traditional agrarian societies. Topics will include land, labor and credit
markets. The second section of the course will focus on the role of the
community in facilitating the transition to the modern market economy.
Here we will study how the community spreads information, permits the
formation of informal networks and organizes collective institutions,
allowing individuals to take advantage of new economic opportunities.
Prerequisite: Student may not receive credit for ECON 024 and ECON 261.
In addition, the LPS 200-level course, when offered, WILL NOT count
for Economics Majors unless officially registered as a LPS student.
ECON 103 recommended.
Course not offered every year
Prerequisite: ECON 101 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: Student may not receive credit for ECON 024 and ECON 261. In
addition, the LPS 200-level course, when offered, WILL NOT count for
Economics Majors unless you are officially registered as an LPS student.

ECON 262 Market Design
Market design is broadly about designing interventions in economic
systems so as to enhance their performance. The power and potential
of market design has recently entered a new era of possibility with the
rise of Artificial Intelligence. Artificial Intelligence is concerned with the
design of intelligent autonomous systems. Such systems are rapidly
transforming our society and economy and have been enabled by major
advances in cloud computing and network telecommunications. Yet
underlying the technological surface of many AI-oriented applications
are fundamental economic and econometric principles which are central
to their design and implementation. In short, to perform well, an AI
system must 'think like economists' - it must: 1. Make predictions about
its environment; 2. Test causal hypotheses about the effect of various
actions they can take, and; 3. Make decisions about an optimal plan
of action in the face of uncertainty, which is a cycle that repeats and
iteratively improves. Many of the established success stories in AI today
have largely been focused on achieving (1), the trend is towards AI
increasingly encompassing (2) and (3). In this course we aim to isolate
these economic principles and understand their role in the modern
development of AI, as well as gaining an appreciation for what the
proliferation of AI based technologies means for the economy in which
we live. Although the course will be principally interested in the former, we
won't fully shy away from some discussion of the latter. Topics include
human judgment and decision making biases (a light intro to behavioral
economics), predictive machine learning and regularization, causal
inference as distinct from prediction with application to product pricing,
and reinforcement learning for dynamic decisions. Prerequisite: The LPS
200-level evening course (Section 601), when offered, WILL NOT count
for Economics Majors unless you are officially registered as a LPS student.
Taught by: Gandhi
One-term course offered either term
Prerequisite: ECON 101 AND ECON 103 AND MATH 104 AND (MATH 114
OR MATH 115)
Activity: Lecture
1.0 Course Unit
Notes: The LPS 200-level evening course (Section 601), when offered,
WILL NOT count for Economics Majors unless you are officially registered
as LPS student.
ECON 271 Foundations of Market Economies
This course will study the historical and intellectual forces behind the appearance of market economies on the world stage. The voyages of exploration undertaken by Europeans in the 15th and 16th century created, in just a few decades, a global economy. By 1600, silver from Mexico was exchanged in Manila for ceramics made in Nanjing (China). After a long trip through the Pacific, Mexico, and the Atlantic, the ceramics ended up in the tables of prosperous merchants in Bruges (modern day Belgium). How did this integrated global economy appear? How did global interconnections over the centuries shape our current world? How did markets emerge and influence these interconnections? Who were the winners of globalization? And who were the losers? How did economists, political scientists, and others think about the strengths and weakness of market economies? This course will explore these questions and the role that markets have played in it from the late 15th century to the present. Even if the economic theory will structure much of the discussion, insights from intellectual history, cultural history, microhistory, legal history, and institutional history will help to frame the main narrative. The course will be, as well, truly global. First, beyond the traditional focus of economic history courses on Europe and the Americas, particular attention will be devoted to Africa and Asia. Second, the priority will be to highlight the interconnections between the different regions and to understand how the people living in them negotiated the opportunities and tensions created by the economic transformations triggered by globalization and how they conceptualized the changing lives around them. Finally, the class will highlight how diverse intellectual traditions handled the challenges presented by historical change.
One-term course offered either term
Prerequisite: ECON 101 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit

ECON 272 China: Institution & the Economy
The rise of China since its economic reform starting from 1978 is one of the most important developments the world witnessed in the twenty-first century. In this seminar course, we explore topics including the political logic of China’s economic reform, the institutional foundations of the Chinese economic growth miracle, as well as detailed analysis of Chinese financial markets, housing markets, fiscal reform, corruption/anti-corruption, labor market transitions, China’s integration into the world economy, village democracy and its impact on resource allocation, the impact of population ageing, the impact of China on US economy and politics, among others. The discussions will focus on China, but will relate broadly to emerging and developed economies. The course will be based on reading and discussing research articles and books selected by the instructors. Prerequisite: ECON 103 recommended. PSCI majors PSCI 110 recommended.
Also Offered As: PSCI 227
Prerequisite: ECON 101 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit

ECON 273 The Political Economy of Early America
This course will study the political economy of Early America, from the British Settlement to c. 1820. In particular, we will explore the forces behind the economic growth of the British colonies, the economic forces behind the Revolution, the economic consequences of the Revolution, the political economy of the constitutional convention and ratification, the role of SCOTUS in creating a national market, and the opposing Hamilton-Jefferson views of an American economy. Early America is a fascinating and rich historical period, and we will need to skip many issues of interest. Nevertheless, we hope to provide you with a good overview of how a group of small peripheral colonies created an institutional arrangement that allowed them, in less than two centuries, to become the biggest economy in the world.
Taught by: Fernandez-Villaverde
Course usually offered in spring term
Prerequisite: ECON 101 AND ECON 102 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit

ECON 274 History of Economic Thought
This course surveys the history of the development of economic thought, beginning with the Classical school and the works of Smith, Ricardo, J.S. Mill, Marx and others and continuing to the 20th century thought, including Keynes, Hayek, and Arrow.
Taught by: Arteaga
Course offered spring; even-numbered years
Prerequisite: ECON 101 AND ECON 102 AND 103 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Lecture
1.0 Course Unit

ECON 300 Honors Seminar
Students prepare an honors thesis in economics over the academic year, supervised by a faculty member of their choice. In both semesters students present their work in progress to the class. Any student intending to do empirical work in the thesis should have completed ECON 103 and ECON 104. Course meets weekly. Required of all honors majors.
Two terms. student must enter first term.
Prerequisite: ECON 101 AND ECON 102 AND ECON 103 AND ECON 104 AND MATH 104 AND (MATH 114 OR MATH 115)
Activity: Seminar
1.0 Course Unit
Notes: Course meets weekly. Required of all honors majors.

ECON 681 Microeconomic Theory
Basic tools of microeconomic theory: consumer choice, firm behavior, partial and general equilibrium theory. This is a more theoretical treatment of the basic tools of microeconomic analysis than ECON 680.
Course usually offered in fall term
Prerequisite: ECON 101
Activity: Lecture
1.0 Course Unit

ECON 682 Game Theory and Applications
A graduate level introduction to decision making under uncertainty, applied game theory, and information economics.
Course usually offered in spring term
Prerequisite: ECON 681
Activity: Lecture
1.0 Course Unit
ECON 701 Microeconomic Theory I  
Nonlinear programming, theory of the consumer and producer, 
general equilibrium. Prerequisite: Meeting the Department’s minimal 
mathematical requirements, ECON 897 Summer Math program. 
Course usually offered in fall term  
Activity: Lecture  
1.0 Course Unit

ECON 702 Macroeconomic Theory I  
Dynamic programming, search theory, neoclassical growth theory, asset 
pricing, business cycles.  
Taught by: Krueger  
Course usually offered in fall term  
Prerequisite: MATH 701 AND MATH 897  
Activity: Lecture  
0.5 Course Units

ECON 703 Microeconomic Theory II  
Game theory, decision making under uncertainty, information economics.  
Prerequisite: Meeting the department’s minimal mathematical 
requirements, ECON 897 Summer Math Program.  
Course usually offered in spring term  
Activity: Lecture  
1.0 Course Unit

ECON 704 Macroeconomic Theory II  
Equilibrium notions in the growth model. Economies with distortions.  
Incomplete markets. Overlapping generations. Prerequisite: Meeting the 
Department’s minimal mathematical requirements; ECON 700, 701, 703,  
897 Summer Math Program.  
Course usually offered in spring term  
Activity: Lecture  
1.0 Course Unit

ECON 705 Econometrics I: Fundamentals  
Violations of classical linear regression assumptions, nonlinear regression 
models (including logit, probit, etc.), diagnostic testing, distributed lag 
models, panel data models, identification, linear simultaneous-equations 
model. Prerequisite: Meeting the Department’s minimal mathematical 
requirements, ECON 897 Summer Math Program.  
Taught by: Faculty  
Course usually offered in fall term  
Activity: Lecture  
1.0 Course Unit

ECON 706 Econometrics II: Methods & Models  
Analysis in time and frequency domains, state space representations,  
Kalman filtering, conditional heteroskedasticity, nonlinear and 
nonparametric methods for time series, integration, co-integration, 
numerical and simulation techniques. Prerequisite: Meeting the 
department’s minimal mathematical requirements; ECON 705, 897 
Summer Math Program.  
Course usually offered in spring term  
Activity: Lecture  
1.0 Course Unit

ECON 708 The Economics of Agency, Information, and Incentives  
This course studies the economics of adverse selection and moral hazard 
in strategic settings. The primary focus is on the agency relationship 
and the structure of agency contracts. Other settings include auctions, 
bilateral trading, and the internal organization of the firm. Prerequisite:  
Meeting the Department’s minimal mathematical requirements; ECON 
898 or equivalent.  
One-term course offered either term  
Activity: Lecture  
0.5 Course Units

ECON 712 Topics in Advanced Economic Theory and Mathematical 
Economics  
Topics and prerequisites announced each year.  
Taught by: Faculty  
One-term course offered either term  
Activity: Lecture  
1.0 Course Unit

ECON 714 Quantitative MacroEconomic Theory  
Computation of Equilibria. Calibration of models. Heterogenous agents, 
macroeconomic models.  
One-term course offered either term  
Prerequisite: ECON 701 AND ECON 702 AND ECON 703 AND ECON 704 
AND ECON 705 AND ECON 706  
Activity: Lecture  
0.5 Course Units

ECON 719 Economic Theory  
One-term course offered either term  
Activity: Seminar  
1.0 Course Unit  
Notes: Related Courses: ECON 712

ECON 721 Econometrics III: Advanced Techniques of Cross-Section 
Econometrics  
Qualitative response models, panel data, censoring, truncation, selection 
bias, errors in variables, latent variable models, survey design, advanced 
techniques of semiparametric estimation and inference in cross-sectional 
One-term course offered either term  
Prerequisite: ECON 701 AND ECON 702 AND ECON 703 AND ECON 704 
AND ECON 705 AND ECON 706  
Activity: Lecture  
1.0 Course Unit

ECON 722 Econometrics IV: Advanced Techniques of Time-Series 
Econometrics  
Focuses on macro-econometrics. Topics include comparison of Bayesian 
and frequentist inference in nonstandard settings (e.g. time series 
models with persistent roots), Bayesian inference in VARS and DSGE 
models including modern computational tools such as Gibbs sampling, 
MCMC, Sequential Monte Carlo, particle filtering, etc., and tools for 
evaluating DSGE models.  
Taught by: Schorfheide/Diebold  
One-term course offered either term  
Prerequisite: ECON 701 AND ECON 702 AND ECON 703 AND ECON 704 
AND ECON 705 AND ECON 706  
Activity: Lecture  
1.0 Course Unit
ECON 729 Econometrics
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: Related Courses: ECON 721 and 722

ECON 749 Monetary Economics
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: Related Courses: ECON 740, 741

ECON 750 Public Economics
Public goods, externalities, uncertainty, and income redistribution as sources of market failures; private market and collective choice models as possible correcting mechanisms. Microeconomic theories of taxation and political models affecting economic variables.
One-term course offered either term
Prerequisite: ECON 701 AND ECON 702 AND ECON 703 AND ECON 704 AND ECON 705 AND ECON 706
Activity: Lecture
0.5 Course Units

ECON 751 Public Economics II
Expenditures: Alternative theories of public choice; transfers to the poor; transfers to special interests and rent seeking; social insurance; publicly provided private goods; public production and bureaucracy. Taxation: Tax incidence in partial and general equilibrium; excess burden analysis. Topics on tax incidence and efficiency: lifetime incidence and excess burden, dynamic incidence, the open economy. Normative theories of taxation: Optimal commodity and income taxation. The political economy of income taxation.
One-term course offered either term
Prerequisite: ECON 701 AND ECON 702 AND ECON 703 AND ECON 704 AND ECON 705 AND ECON 706
Activity: Lecture
0.5 Course Units

ECON 771 Comparative Economic Systems
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: Related Courses: ECON 770, 771

ECON 779 Empirical Microeconomics Workshop
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: Related Courses: ECON 780, 781

ECON 792 Economics of Labor I
Topics include: Theories of the supply and demand for labor, wage determination, wage differentials, labor market discrimination, unemployment, occupational choice and dynamics of specific labor markets, theory of matching, trade unions. The theory and empirics of human capital accumulation, intertemporal labor supply, search, intergenerational mobility of income and wealth, contracts and bargaining, efficiency wage models, principal/agent models, and signaling models.
One-term course offered either term
Prerequisite: ECON 701 AND ECON 702 AND ECON 703 AND ECON 704 AND ECON 705 AND ECON 706 AND ECON 721
Activity: Lecture
1.0 Course Unit

ECON 793 Economics of Labor II
A continuation of ECON 792.
One-term course offered either term
Prerequisite: ECON 701 AND ECON 702 AND ECON 703 AND ECON 704 AND ECON 705 AND ECON 706 AND ECON 721 AND ECON 792
Activity: Lecture
0.5 Course Units

EDUC 202 Urban Education
This seminar focuses on two main questions: 1) How have US schools and urban ones in particular continued to reproduce inequalities rather than ameliorating them? 2) In the informational age, how do the systems affecting education need to change to create more successful and equitable outcomes? The course is designed to bridge the divide between theory and practice. Each class session looks at issues of equity in relation to an area of practice (e.g. lesson design, curriculum planning, fostering positive student identities, classroom management, school funding, policy planning...), while bringing theoretical frames to bear from the fields of education, sociology, anthropology and psychology.
Taught by: Clapper
One-term course offered either term
Also Offered As: URBS 202
Activity: Seminar
1.0 Course Unit

EDUC 235 Psychology of Women
Critical analyses of the psychological theories of female development, and introduction to feminist scholarship on gender development and sexuality.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
EDUC 240 Education in American Culture
This course explores the relationships between forms of cultural production and transmission (schooling, family and community socialization, peer group subcultures and media representations) and relations of inequality in American society. Working with a broad definition of 'education' as varied forms of social learning, we will concentrate particularly on the cultural processes that produce as well as potentially transform class, race, ethnic and gender differences and identities. From this vantage point, we will then consider the role that schools can and/or should play in challenging inequalities in America.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 241 Educational Psychology
Current issues and research, applying psychological theory to educational practice. As such, this course will explore the fundamental themes in behavioral, developmental, and cognitive areas of psychology as they relate to education. Topics include: learning, motivation, growth and development, cognitive processes, intelligence tests, measurements, evaluations, etc.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 250 Learning from Children
This course is about looking at elementary school classrooms and understanding children's experiences of school from a variety of perspectives, and from a variety of theoretical and methodological lenses from which the student can interpret children's educational experiences. This course is about developing the skills of observation, reflection, and analysis and to begin to examine some implications for curriculum, teaching and schooling. This course requires you to spend time in an elementary school classroom.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 251 Mindfulness and Human Development
This course will introduce the student to the many ways in which mindfulness is currently being implemented to support the health and success of students of all ages. Mindfulness-Based Stress Reduction (MBSR), which utilizes secularized practices from Asian and South Asian traditions for the remediation of various health concerns, has revolutionized behavioral medicine, and the scientific evaluation of MBSR has shed new light on the biomechanical pathways linking mind and body. This course will 1) explore fundamental principles underlying mindfulness, 2) the scientific data on its effects, and 3) the ways in which mindfulness is being applied to clinical and educational settings to support healthy human development. Contemplative practices include all forms of meditation, including contemplative dimensions of yoga, tai chi, qigong and other mind-body wellness activities. By far the most well known contemplative practice in the U.S. today is 'mindfulness.'
Mindfulness meditation was introduced into clinical medicine in the 1980's in the form of Mindfulness-Based Stress Reduction (MBSR) by Jon Kabat-Zinn and his colleagues at U Mass; since that time it has had a significant impact on psychoneuroimmunology, clinical medicine, and especially behavioral medicine. Both psychological theory and practice have slowly been transformed by new findings emerging from mindfulness research. Brain imaging studies of persons engaged in meditation suggest that focused mental activities can actually change cerebral blood flow (Newberg et al 2010), brain morphology and neural circuitry, in addition to strengthening the immune system (Davidson et al 2003) and improving attention skills (Jha et al 2007). MBSR has been repeatedly documented to be effective in treating mental health problems, particularly depression and anxiety, in numerous adult populations (Goyal et al 2014). Now, researchers are testing MBSR and other mindfulness approaches in children and adolescents as both a way to treat social-emotional dysfunction as well as to promote health and enhance academic performance (Greenberg and Harris 2011). Prompted by the robust scientific findings of mindfulness as a tool to support physical and mental health, several groups have sprung up over the last decade devoted to applying and evaluating mindfulness in educational settings such as, The Garrison Institute, Mindful Schools, Mindful Education Institute, Mindfulness in Education Network, and the Association for Contemplative Mind in Higher Education. Teachers across the country are enrolling in mindfulness training programs, administrators are introducing mindfulness to their schools, and researchers are devising ways to evaluate the effects of mindfulness. From kindergarten classes to schools of law and medicine, mindfulness is being proffered as a strategy to support health (both physical and mental), enhance performance, and improve interpersonal communication. This course critically examines how mindfulness has been applied and assessed with regard to healthy development. Through readings and class discussions, it is intended that students will acquire a deep appreciation for how the contemporary exploration of mindfulness is changing the way we understand the human mind, the interface between mind and body, and the tools at our disposal to promote well-being as well as to address dysfunction.
Taught by: Elizabeth Mackenzie
Course offered spring; even-numbered years
Activity: Seminar
1.0 Course Unit
EDUC 323 Tutoring School: Theory and Practice
This course represents an opportunity for students to participate in academically-based community service involving tutoring in a West Phila. public school. This course will serve a need for those students who are already tutoring through the West Phila. Tutoring Project or other campus tutoring. It will also be available to individuals who are interested in tutoring for the first time.
Course usually offered in spring term
Also Offered As: URBS 323
Activity: Seminar
1.0 Course Unit

EDUC 326 Tutoring in Urban Public Elementary Schools: A Child Development Perspective
The course provides an opportunity for undergraduate students to participate in academically based community service learning. Student will be studying early childhood development and learning while providing direct, one-to-one tutoring services to young students in Philadelphia public elementary schools. The course will cover foundational dimensions of the cognitive and social development of preschool and elementary school students from a multicultural perspective. The course will place a special emphasis on the multiple contexts that influence children's development and learning and how aspects of classroom environment (i.e., curriculum and classroom management strategies) can impact children's achievement. Also, student will consider a range of larger issues impacting urban education embedded in American society. The course structure has three major components: (1) lecture related directly to readings on early childhood development and key observation and listening skills necessary for effective tutoring, (2) weekly contact with a preschool or elementary school student as a volunteer tutor and active consideration of how to enhance the student learning, and (3) discussion and reflection of personal and societal issues related to being a volunteer tutor in a large urban public school.
Taught by: Fantuzzo
Course usually offered in fall term
Also Offered As: URBS 326
Activity: Seminar
1.0 Course Unit

EDUC 345 Psychology of Personal Growth
Intellectual, emotional and behavioral development in the college years. Illustrative topics: developing intellectual and social competence; developing personal and career goals; managing interpersonal relationships; values and behavior. Recommended for submatriculation in Psychological Services Master's Degree program.
One-term course offered either term
Also Offered As: GSWS 344
Activity: Lecture
1.0 Course Unit

EDUC 360 Human Development in Global Perspective
A life-span (infancy to adulthood) approach to development. Topics include: biological, physical, social and cognitive basis of development. Films and guest speakers are often included.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 414 Children's Literature
Theoretical and practical aspects of the study of literature for children. Students develop both wide familiarity with children's books, and understanding of how children's literature fits into the elementary school curriculum.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 500 Linguistic Anthropology of Education
Linguistic anthropologists study the role of language use in culturally patterned behavior. The course focuses on recent research by linguistic anthropologists in educational settings in the US and Europe marked by increasing linguistic and cultural diversity. The goal of the course is to uncover useful tools that contemporary linguistic anthropology offers to educational research.
Taught by: Moore
Course usually offered in spring term
Prerequisite: EDUC 546
Activity: Lecture
1.0 Course Unit

EDUC 501 Economics of Education in Developing Countries
This is a course on economics of education, a field within the subject of economics that draws upon many areas of economic specialization. The course focuses on developing countries and includes papers and case-studies covering themes such as returns to investment in education, production, costs and financing of education, teacher labor markets, economic growth, education markets, and equity issues.
Taught by: Thapa
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 502 Citizen Sociolinguistics
In this course we will draw on the Internet and daily news (internet circulated, usually) to find 'Citizen Sociolinguists' who speak with authority, while juxtaposing these media with the usual scholarly sources.
Taught by: Rymes
Course not offered every year
Activity: Seminar
1.0 Course Unit

EDUC 503 Global Citizenship
This course examines the possibilities and limitations of conceiving of and realizing citizenship on a global scale. Readings, guest lecturers, and discussions will focus on dilemmas associated with addressing issues that transcend national boundaries. In particular, the course compares global/local dynamics that emerge across different types of improvement efforts focusing on distinctive institutions and social domains, including: educational development; human rights; humanitarian aid; free trade; micro-finance initiatives; and the global environmental movement. The course has two objectives: to explore research and theoretical work related to global citizenship, social engagement, and international development; and to discuss ethical and practical issues that emerge in the local contexts where development initiatives are implemented.
Taught by: Hall
Course usually offered in spring term
Also Offered As: ANTH 546, URBS 546
Activity: Seminar
1.0 Course Unit
EDUC 504 Contemporary Issues in Higher Education
An introduction to the central issues and management problems in contemporary American higher education.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 505 Globalization & the University
The aim of this course is to help students understand the basic concept of globalization, how it impacts higher education in general, and how it shapes the global market for human capital and fosters private sector and for profit provision and diversifies modes of delivery of higher education. The seminars cover the nature of globalization and the way it affects the movement of people between economies to gain and apply skills and knowledge, the creation of branch campuses, the growth of transnational education and the importance of brands and information in the global higher education market.
Taught by: Ruby
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 506 Migration, Displacement, and Education
This course examines the effects of migration (forced and voluntary) on education in a variety of contexts across the world (including the United States). The course reviews sociological and anthropological theories of immigrant incorporation and inclusion. Such frameworks are then applied to migration through case studies of immigrants, refugees, and displaced persons in order to consider the effects of migration and displacement on education in diverse contexts.
Taught by: Ghaffar-Kucher
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 507 Teaching & Learning in Student Centered Classrooms
Most teachers have ambitious goals for their classrooms. They strive to make their classrooms spaces where students engage in authentic and meaningful work, where students collaborate on challenging and complex tasks, and where students develop deep disciplinary knowledge and the skills and mindsets that are necessary for their success in college, career, and society. However, many classrooms fall short of this ambitious vision. This course explores the challenges and opportunities teachers face when they attempt to build student-centered learning environments, and offers educators tangible insights and practices to support their work.
Taught by: Herrmann
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 508 Maker Studio
In this seminar, we will discuss and design projects related to the 'maker movement' in education using various materials and technologies as we consider issues of access and diversity around making.
Taught by: Kafai
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 509 Merit and America
What constitutes merit? What should constitute merit? These questions are both philosophical and practical - and are faced by every educator in some form. The notion of meritocracy has long been at the heart of varied discourses about the place of education in American society. Merit is most often understood as inhering in consistent and individual personality traits such as competency, intelligence, and diligence. And yet, every individual is embedded in complex social worlds that are culturally specific and historically contingent. Drawing on a broad array of disciplines and literatures, this seminar-style course challenges students to consider how ideas of merit and its measurement are shaped by American history, culture, and society, and to articulate their own views as they move toward their professional goals.
Taught by: Posecznick
Course not offered every year
Activity: Seminar
1.0 Course Unit

EDUC 511 Education and the Culture Wars: Historical and Contemporary Perspectives
America is wracked by 'culture wars,' pitting different moral and religious values against each other. But these conflicts are hardly new. Since the founding of the Republic, we have battled over religion, sex, gender, and race. And many of these conflicts have entered our schools, which remain our primary vehicle for deliberating and determining who we are. What languages should we use in school? What should we teach young people about sex? About race? About religion? Most of all, what stories should we tell about the nation itself? This course will probe these issues and help students write primary-source research papers that examine different culture wars in American education.
Taught by: Zimmerman
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 512 University-Community Partnerships
Ranging from civic engagement to economic development, institutions of higher education in the United States have long been involved in a variety of relationships with their local communities; in recent years, there has been increasing attention paid to the opportunities and challenges implicit in those relationships. In this Academically Based Community Service (ABCS) course, students will study and discuss the history, rationales, and manifestations of the partnerships that have developed. Through readings, faculty-and student-led discussions, guest lecturers, and policy-oriented projects, students will develop better understandings of the many topics surrounding university-community partnership activities. Among other themes we will consider institutional roles and relationships, service learning, community perspectives, policy issues, and evaluation.
Taught by: Grossman
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
EDUC 513 Development of the Young Child (TLL)
This course will blend an explanatory and descriptive account of behavioral evolution over the yearly years of life. After a review of ‘grand’ developmental theory and the major themes of child change (from images to representation; from dependence to independence; from instinctual to social beings), this course will survey the child’s passage from infancy through the early school years. While the emphasis will be on the nature of the child—what she/he sees, feels, thinks, fantasizes, wants and loves—these realities will be understood in terms of developmental theory. At each stage, the course will review the development of cognition, personal identity, socialization, and morality in pluralistic contexts.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 514 Education in Developing Countries
In recent years the construct of ‘global development’ has come under increasing scrutiny, leading some scholars and practitioners to wonder whether development remains a useful concept. In this course, we will actively engage in this debate through a survey of the development literature in the field of education. We will examine theoretical frameworks and historical perspectives that will allow us to develop a better understanding of what is meant by ‘development’ as well as recognize how these concepts relate to basic educational planning and practice in various international contexts. Prerequisite: Prior graduate work in related areas recommended. The course will work from primary and secondary materials on theories, research, and applications used to promote global development and basic education. Some programs are carried out by multinational/bilateral agencies such as World Bank, Unicef, UNESCO, and USAID, while others are undertaken by intermediary organizations (such as NGOs and universities) and local organizations or individual specialists. Issues include a range of social, economic and political obstacles to the provision of quality education. The goal of this course is to improve your understanding of how different theories of education and development influence educational policy, priorities, and programs of international, national, and local institutions.
Prerequisite: Prior graduate work in related areas recommended. Taught by: Wagner/Ghafer-Kucher
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 515 Field Seminar (Elementary & Secondary Education)
This seminar is designed to integrate student teaching fieldwork and university course work through reading, discussion, and reflection. Central to this course will be teacher research, an inquiry stance toward learning how to teach, and a social justice approach to education. Throughout the semester, we will be examining a range of issues through theoretical and practice-oriented lenses that will deepen our understanding of teaching and learning. Offered within the Urban Teaching Apprenticeship Program. Course usually offered in fall term
Activity: Lecture
3.0 Course Units

EDUC 516 Teaching Writing in Multilingual Contexts
This course introduces participants to a range of theoretical and practical issues related to second language literacy development, with a particular emphasis on writing instruction. An intensive service-learning project offers course participants the opportunity to work with developing writers in a bilingual community organization. The dual emphasis on theory and pedagogy is intended to create space for critical reflection on the characteristics, production, teaching, and assessment of written texts in bi/multilingual educational settings.
Taught by: Pomerantz
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 517 Classroom Discourse and Interaction
In this course students will read research that investigates the role of classroom interaction in learning and human development. Students will also learn how to ‘do’ discourse analysis using real classroom data. Students will practice and critique methods for analyzing classroom discourse data as teachers, with an aim of developing a critical awareness of our own language use and role in society.
Taught by: Rymes
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 518 Integrating the Arts in the K-8 Classroom
It is an unfortunate state of public elementary and middle level education that programs and time spent in arts education are becoming more and more limited, as school leaders feel the pressure to prepare their students for mandated assessments. In this context, it is essential that K-8 educators enter schools prepared to fill this gap through the development of opportunities for children to explore their worlds and express their knowledge through creative channels. This course has been designed to emphasize student-centered pedagogies and to prepare teachers to utilize the arts as one mechanism for building culturally responsive classrooms. This course will prepare K-8 teachers to enact lessons that support students in authentic, collaborative, iterative learning through the creative integration of visual arts and music. The course is split into two modules, one that focuses on visual arts and one that focuses on integration of music. Additionally, this course supports the development of Pennsylvania Department of Education (PDE) PreK-8 teacher competencies. Prerequisite: Admission to the UTAP program or permission of instructor.
Taught by: Jeffrey Mordan
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDUC 519 The Evolution of Assessment: Classroom and Policy Uses
This course explores the evolution and diverse uses of assessment in four major areas: the historical roots of testing and the development of the achievement testing industry; the rising interest and exploration of alternative forms of assessment; how teachers employ a variety of assessments in their classrooms; and how policymakers use assessment for decision-making and accountability purposes. Prerequisite: Permission needed from department.
Taught by: Supovitz
Course not offered every year
Activity: Lecture
1.0 Course Unit
EDUC 520 Literacy in Elementary/Middle Schools
In this course, the interconnections of language, literacy and culture are explored in order to build a knowledge base and understanding of how children learn to read and write. Emphasis will be on how to teach and develop literacy curriculum in the elementary grades, and on how close listening and observation of children in their classroom contexts, combined with a critical reading of research and theory, can inform teaching practices. A central tenet of this course is that the best teachers of reading and writing are themselves active and engaged readers and writers. An important goal is to combine an inquiry approach to teaching and learning with an inquiry approach to thinking about how we teach. Offered within the Urban Teaching Apprenticeship Program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 521 Science Methods: Project-Based Learning Approaches
The goal of this course is to prepare teachers to facilitate science learning in the elementary and middle school. Special emphasis is placed on striving for a balance between curricular goals; individual needs and interests; and the nature of science. Offered within the Urban Teaching Apprenticeship Program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 522 Psychology of the African-American
Using an Afro-centric philosophical understanding of the world, this course will focus on psychological issues related to African Americans, including the history of African American psychology, its application across the life span, and contemporary community issues.
Taught by: Stevenson
Course usually offered in spring term
Also Offered As: AFRC 522
Activity: Lecture
1.0 Course Unit

EDUC 523 Social Studies in the Elementary and Middle Schools
This course will focus on teaching and learning in the content area of social studies. Curricular and pedagogical theories and practices will be examined for their educational significance, meaningful integration of content areas, respect for students' cultures (past and present), and contribution to social justice issues. Offered within the Urban Teaching Apprenticeship Program.
Two terms. student must enter first term.
Activity: Lecture
0.5 Course Units

EDUC 524 Philosophical Aspects of Education Policy
This course, which is unofficially titled 'Justice goes to School' explores the philosophical or normative foundations of educational policy decisions. School choice, standards-based reform, civic education, children's and parents' rights, school finance reform - how do different arguments for these policies view the role of schools in society? What are their concept of the person, and their view of the educated person? We will consider arguments for and against a variety of contemporary educational policies. Students are encouraged, if they are interested, to bring to class educational policy decision that perplex or intrigue them.
Taught by: Ben-Porath
One-term course offered either term
Activity: Seminar
1.0 Course Unit

EDUC 525 Fieldwork in Language in Education
Supervised fieldwork for individuals preparing to work with reading specialist/teachers in school settings.
Taught by: Waff
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 526 Technology for Educators
The aim of this course is to provide educators with hands-on experience with a range of technologies. During the course we will explore and learn how to handle web-based, free technologies that can be used by educators to design educational activities appropriate for their students.
Course usually offered summer term only
Activity: Seminar
1.0 Course Unit

EDUC 527 Approaches to Teaching English and Other Modern Languages
This course provides students with an introduction to theory and practice in second and foreign language teaching. Students will (a) develop an understanding of the history of language teaching practice and how such a perspective informs current day teaching, (b) explore the relationship between the context in which the language is learned and taught and classroom practice, and (c) develop an awareness of teaching principles central to a personal pedagogical approach and teaching philosophy. Students should have a field site where they can observe, participate, and collect classroom data.
Taught by: Box/Wagner, S
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 528 TESOL Practice Teaching
Fieldwork course for TESOL students. This course focuses on reflective teaching practice, providing a space for students to combine theory and practice as they apply the theoretical constructs of TESOL coursework to their own language teaching. Students will become accurate and systematic observers of and thinkers about their own teaching methodology, in order to continue to develop into increasingly effective language teachers. The theme of a student-centered language classroom will be explored through scholarly literature, pedagogical techniques, and students' own classroom teaching. To participate in this course, a student must be teaching a language class for the majority of the semester. Prerequisite: Permission needed from the department.
Taught by: Pomerantz/Box
Course usually offered in fall term
Prerequisite: EDUC 527 AND EDUC 537
Activity: Lecture
1.0 Course Unit
EDUC 529 Systems Thinking for International Development and Educational Change

This course explores what it means to take a ‘systems approach’ to understanding international development, particularly as it relates to the design and implementation of projects supported at least in part by international aid and donor institutions. We focus overall on the education sector, but we begin with a broader view of complex adaptive systems and international development, drawing upon case studies about education, water, sanitation, health, savings groups, empowering the disabled, climate change and community radio, and others. There is ample room for the course to appeal to those focused on sectors other than education. We build upon a deep discussion of the complexity of development contexts. Next, we turn to systems thinking and ‘theories of change.’ We ultimately go deepest into educational processes, politics, systems and outcomes. Concerns for governance and accountability have increased attention to ‘systems thinking’ in the design and implementation of public services, including education plans and educational reform; therefore, reformers must grasp the range of meanings of an ‘education system’ as complex, multidimensional processes, interactions, and institutional structures. Students will learn to use systems thinking to approach, define, understand and analyze the biggest challenges to improving social outcomes—so called ‘wicked problems’. We will consider the roles of and relationships between the myriad layers and components of educational systems: (a) national and sub-national governments; (b) schools, classrooms, and curricula; (c) external and internal stakeholders and interest groups (e.g., citizens, bureaucrats, elected officials, teachers, unions, textbook publishers, the private sector, community organizations, parents, students, etc); and (d) international development institutions and other global actors. We will discuss a wide range of cases in developed countries (e.g., The United States, France, Finland, Australia, Spain, South Korea); transitional economies (e.g. Russia, Czech Republic, etc); and developing countries (e.g. Brazil, Mexico, Chile, Cuba, Romania, Egypt, India, Indonesia, Cambodia, Nigeria, Rwanda, South Africa, the Republic of Georgia, etc). We will pay particular attention to (and assess critically) some of the most common applications of education-related system approaches by influential global actors: The World Bank (SABER), UNESCO (GEQAF), OECD, DfID, USAID, and The Global Partnership for Education. Students will be introduced to both qualitative and quantitative approaches for analyzing systems, and discuss the benefits and limitations of each; however, the focus of the course is on the more qualitative approaches to systems thinking. The course will be taught in a stylized seminar format with some lecture, some group work, and discussion and student participation. Significant portions of class time will serve to workshop out developing conceptualizations of systems thinking. We will draw upon diverse fields and disciplines: comparative education, international development, public health, engineering, design, planning, and the social sciences. Students will have the opportunity to develop a project and apply an approach to a system of their choosing. The course will be taught in a stylized seminar format with some lecture, some group work, and significant discussion and student participation. In general, a third of each class will be an introduction of the topic (often by me), followed by discussion and some group work.

Taught by: Alec Gershberg
One-term course offered either term
Activity: Seminar
1.0 Course Unit

EDUC 530 Cultivating Creativity in the K-8 Classroom

This course is an introduction to maker education and project-based learning, and will prepare K-8 teachers to enact classroom practices that support students in authentic, collaborative, iterative learning through the use of a variety of creative and technological mediums. Classes will consist of a combination of lecture, discussion, and maker lab. This course is about learning to create and teach others how to make. Students will explore a variety of techniques including basic circuitry, coding, architecture, and design while seeking a balance between free exploration and discovery within parameters. Prerequisite: Admission to the UTAP program or permission of instructor required.

Taught by: Allison Frick
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDUC 531 Mathematics in the Elementary and Middle Schools

Learning to teach mathematics in ways that foster mathematical understanding and enjoyment for every student requires that teachers draw on different kinds of knowledge, skills, and dispositions. In addition to developing an understanding of central mathematical ideas, learning to teach math involves learning about learners, the understandings and conceptions they hold, and the processes through which they learn. It also involves developing skill in constructing tasks that engage students in mathematical exploration, creating an environment that facilitates reasoning, and finding ways to analyze and learn from one’s own teaching. Offered within the Urban Teaching Apprenticeship Program.

Taught by: Remillard/Ebby
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 532 Pursuing Institutions of Excellence: Strategies, Choices, Pitfalls & Possibilities

The aim of this course is to help students understand how universities pursue excellence by examining national and institutional strategies to become high performing institutions. The seminar series will look at the basic concepts of organizational culture and the merits and flaws of different conceptions of excellence.

Taught by: Ruby/Hartley
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 533 Forming and Reforming the Elementary Reading/Writing/Literacy Curriculum

Students explore the theory and practice of constructivist approaches to teaching reading/writing/talking across the curriculum. They read widely and discuss issues that are informed by theory and research in many fields of inquiry including children’s and adolescent literature, educational linguistics, cognitive psychology, curriculum, and anthropology and assessment. They write and share integrative journals; develop, teach and reflect upon holistic lessons; and complete an individual or group project of their own choosing.

Taught by: Campano
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
EDUC 534 Diversity and Social Justice in American K-12 Education
In this course, students will develop a critical understanding of how various markers of social difference mediate the privileging of some and the marginalization of others within K-12 schools. Additionally, by considering their potential to act as agents of change, students will devise and share strategies for anti-oppressive educational practices.
Taught by: Brockenbrough
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 535 Literature for Children and Adolescents
Theoretical and practical aspects of the study of literature for children and adolescents. Students develop both wide familiarity with children’s/adolescents’ books and understanding of how literature can be used in elementary/middle/secondary school curricula. Students complete course projects that focus on literature in specific classroom, research, home, or professional contexts.
Taught by: Thomas
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 536 Indigenous Education and Language Revitalization
The course examines Indigenous education and language revitalization from an international perspective, considering questions like: What policies, ideologies, and discourses shape the history of Indigenous education? What roles do pan-Indigenous and international organizations play? What does decolonizing and Indigenizing schooling look like? How do Indigenous epistemologies, ways of knowing, being and relating influence education? What does culturally relevant schooling mean in Indigenous contexts? What are the roles of Indigenous communities in language revitalization and educational processes?
Taught by: Hornberger
Course not offered every year
Activity: Seminar
1.0 Course Unit

EDUC 537 Educational Linguistics
For students with little or no linguistics background. An introduction to the basic levels of language (phonetics and phonology, morphology and semantics, syntax, pragmatics) with special emphasis on the relevance of linguistic concepts to education. Other topics may include bi/multilingualism, language variation, and language acquisition.
Taught by: Butler/Moore/Matsumoto
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 538 Stereotype Threat, Impostor Phenomenon, and African Americans
This course critically examines stereotype threat and impostor phenomenon as they relate to African Americans. Both stereotype threat and impostor phenomenon negatively affect African Americans. The apprehension experienced by African Americans that they might behave in a manner that confirms an existing negative cultural stereotype is stereotype threat, which usually results in reduced effectiveness in African Americans’ performance. Stereotype threat is linked with impostor phenomenon. Impostor phenomenon is an internal experience of intellectual phoniness in authentically talented individuals, in which they doubt their accomplishments and fear being exposed as a fraud. While stereotype threat relies on broad generalization, the impostor phenomenon describes feelings of personal inadequacy, especially in high-achieving African Americans. This course will explore the evolving meanings connected to both stereotype threat and impostor phenomenon in relation to African Americans.
Taught by: Abiola
Course usually offered in fall term
Also Offered As: AFRC 602
Activity: Seminar
1.0 Course Unit

EDUC 539 Teaching Performance Art for Cross-Cultural Education
This class examines issues related to cultural communities and the arts, specifically performance, writing and storytelling as an educational tool for generating cross cultural and intercultural understanding, dialogue and exchange. Assignments will focus on, cross-cultural research and dialogue, and skill building in teaching, writing and performance. Students will also develop an understanding of how performance can be used to enhance classroom activities in elementary/middle/secondary/post secondary classroom curricula.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 540 Differentiating Instruction for Diverse Learners/Special Education & Bilingual
This course engages student teachers working with diverse learners, presenting factual information about specific areas of need situated within a socio-cultural framework. It addresses content related to both special education and English language learners in four areas: (1) Introduction to Special Education; (2) Learning Categories; (3) Issues in Special Education; and (4) Working with English Language Learners. Offered within the Urban Teaching Apprenticeship Program. Prerequisite: Permission needed from department
Taught by: Watts, Bialka, Kinney Grossman
Two terms. student must enter first term.
Activity: Seminar
1.0 Course Unit
EDUC 541 Access & Choice in American Higher Education
College enrollment is a complex process that is shaped by the economic, social and policy context, higher education institutions, K-12 schools, families, and students. The course will examine the theoretical perspectives that are used to understand college access and choice processes. The implications of various policies and practices for college access and choice will also be explored, with particular attention to the effects of these policies for underrepresented groups. As an Academically Based Community Service (ABCS) course, this course is also designed to generate tangible recommendations that program administrators and institutional leaders may be used to improve college access and choice.
Taught by: Perna
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 542 TESOL Classroom Fundamentals
This course focuses on the fundamental teaching skills that you need as a language educator. It is designed to help you develop effective ways of doing as much as knowing and thinking about language teaching and learning within a reflective practice framework.
Taught by: Box/Kozlova/Pomerantz/Wagner, S
Course usually offered in spring term
Prerequisite: EDUC 527 AND EDUC 537
Activity: Lecture
1.0 Course Unit

EDUC 543 Understanding Minority Serving Institutions
Students taking this course will learn about the historical context of HBCUs in educating African Americans, and how their role has changed since the mid-1800's. Specific contemporary challenges and successes related to HBCUs will be covered and relate to control, and enrollment, accreditation, funding, degree completion, and outreach/retention programming. Students will become familiar with MBCUs in their own right, as well as in comparison to other postsecondary institutions.
Taught by: Gasman
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 544 School and Society in America
This course reviews the major empirical and theoretical research from the social history, and social theory on the development, organization and governance of American education, and the relationship between schooling and the principal institutions and social structures of American society.
Taught by: Puckett/Staff
Course offered summer, fall and spring terms
Activity: Lecture
1.0 Course Unit

EDUC 546 Sociolinguistics in Education
The educational consequences of linguistic and cultural diversity. A broad overview of sociolinguistics, introducing both early foundational work and current issues in the field. Topics include language contact and language prestige, multilingualism and language ecology, regional and stylistic variation, verbal repertoire and communicative competence, language and social identity, codeswitching and diglossia, language socialization and language ideology, as they relate to educational policy and practice in the United States and around the world.
Taught by: Flores/Moore
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 547 Anthropology and Education
An introduction to the intent, approach, and contribution of anthropology to the study of socialization and schooling in cross-cultural perspective. Education is examined in traditional, colonial, and complex industrial societies.
Taught by: Hall or Posecznick
Course offered summer, fall and spring terms
Also Offered As: ANTH 547, URBS 547
Activity: Lecture
1.0 Course Unit

EDUC 548 American Education Reform: History, Policy, Practice
An examination of major trends, central tendencies, and turning points in American education reform, giving particular attention to contemporary developments such as accountability laws and school choice. This historical development of the federal role in American schooling is also considered, as is the history of school desegregation. What is the purpose of 'school'? How have schools evolved across time, and how have Americans tried to change them? And what can we learn from this long history of reform?
Taught by: Zimmerman/Puckett
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 549 Language Teaching and Literacy Development in Multilingual Community Contexts
Immigrant youth often face the dual challenge of learning a new language and learning academic content in that language simultaneously. Many educators, however, struggle to identify and implement instructional practices that acknowledge learners' strengths, while also attending to their communicative, academic, and social needs. This course brings insights and findings from sociolinguistics to bear on research on language and literacy teaching to develop a situated, interactionally mindful approach for supporting emergent bi/multilinguals. An intensive service-learning project offers course participants the opportunity to 'learn by doing' by working closely with children and adolescents in one multilingual, community-based after-school setting. Although the course takes the case of English learners attending U.S. elementary and secondary schools as its starting point, discussion of the implications and applications to other national/educational contexts is encouraged.
The goal of this course is to prepare participants to provide language and literacy instruction in contextually sensitive, theoretically informed, and interactionally attuned ways.
Taught by: Anne Pomerantz
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
EDUC 550 Educational and Social Entrepreneurship
This course provides an understanding of the nature of entrepreneurship related to public/private/for profit and non-profit educational and social organizations. The course focuses on issues of management, strategies and financing of early stage entrepreneurial ventures, and on entrepreneurship in established educational organizations.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 551 Outside the School Box: History, Policy and Alternatives
This course explores historical and contemporary challenges involved in the policy and practice of non-school education agencies and factors that work in service to local school/community settings. Students will explore several historical case studies, conceptual frames, and current policy challenges, culminating in a community-based research project.
Taught by: Johanek
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 552 Video Games and Virtual Worlds as Sites for Learning
Drawing on work from the education, psychology, communication, and the growing field of games studies, we will examine the history of video games, research on game play and players, review how researchers from different disciplines have conceptualized and investigated learning in playing and designing games, and what we know about possible outcomes. We will also address issues of gender, race and violence that have been prominent in discussions about the impact of games.
Taught by: Kafai
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 553 Foundations of Education for Diverse Learners
An introduction to Special Education including the history, the legal regulation of Special Education, and an examination of critical issues.
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 554 Managing Collaborative Learning Environments in Urban Contexts
This course marks the beginnings of your year-long inquiry as preservice teachers, and hopefully your career-long inquiry as committed educational professionals, into the challenges of and opportunities for teaching and learning in urban settings. The theories and practices explored in this course are offered as foundations for instructional approaches that are intentional, reflective, inquiry-based, and learner-centered. As we investigate multiple dimensions of teaching and learning (curriculum design, learning theories, instructional techniques, etc.), you will have opportunities to both clarify and challenge the assumptions, beliefs, hopes, fears, and goals that you bring to your preparation to teach in urban secondary schools. Offered within the Urban Teaching Apprenticeship Program.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

EDUC 555 Advanced Field Seminar (Elementary & Secondary Education)
This course focuses on praxis—the mutually supporting roles of theory and practice that bring rigor and relevance to the work of educational professionals. This course is designed to give student teachers opportunities to develop pedagogical orientations, to learn from ‘problems of practice’ at placement sites, and to enrich student teachers’ theoretical and practical knowledge. All of these experiences will inform the master’s portfolio and will prepare teachers to continue to see themselves and their practice as continuing sites for research. Offered within the Urban Teaching Apprenticeship Program.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 556 Higher Education Finance
Designed for non-financial managers, this course provides students with an introduction to basic concepts related to the finance of higher education. It examines the forces that influence the financing of higher education at both the state and federal levels. It addresses both the macro-economic and micro-economic issues related to higher education finance. In addition, students will be introduced to issues related to institutional finance.
Taught by: Finney
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 557 Developmental Theories: Applications with Adolescents
Focuses on theories of adolescent development and the nature of transactions among adolescents, peers, teachers, specialists, and significant others. Also covers methods of intervening to promote psychological growth.
Taught by: Nakkula
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 558 Developmental Theories: Applications with Young Adults
This course is designed as a collaborative inquiry toward constructing and elaborating upon theories of young adult development and interactions with young adults as counselors, teachers, family members, and higher education administrators. Using a seminar or working group format, participants explore the relationships among developmental theory, sociocultural contexts of young adults, practice (e.g., interventions, relationships), and research. Using literature from empirical and popular, mainstream sources, participants will engage in learning of how young adults navigate the transition from adolescence to adulthood. Specific topics to be addressed include, ‘the quarterlife crisis,’ financial needs of young adults, relationships, family, and career exploration and crystallization.
Course not offered every year
Activity: Lecture
1.0 Course Unit
EDUC 559 Sociology of Education
This course provides an overview of key theoretical perspectives and topics in the sociology of education, including expansion of formal educational systems; the extent to which educational systems contribute to or inhibit social mobility; inequality of educational inputs and outcomes by race, social class, and gender; and the social organization of educational institutions, including sources of authority, community, and alienation. The course includes both K-12 and higher education topics.
Taught by: Ingersoll
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 560 Human Development
Provides an introduction to physical, social, cognitive, emotional and linguistic development from infancy to adulthood. Major theories related to human development will be discussed along with methods of intervention for individuals in various life stages.
Taught by: Fegley/Frye
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 561 Adolescent Development
An interdisciplinary view will be used to frame biological, psychological, and social development among adolescents. Special emphasis will be placed on how contextual factors influence developmental outcomes. Theories of adolescent development and methods of intervention will also be discussed.
Taught by: Fegley
Activity: Lecture
1.0 Course Unit

EDUC 562 Personality & Social Development
The effects of social processes on human development in the interlocking contexts of parents, family, peers, school, communities and culture are considered during the major developmental periods of infancy, childhood, adolescence and adulthood. The course examines what is unique about social developments, how social relationships can be defined, and what are the social precursors and consequences of specific developmental changes.
Taught by: Chen
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 563 TESOL Seminar
A weekly seminar that seeks to consolidate, broaden, and deepen knowledge of the main themes, trends, issues, and practices in the field of TESOL. Students will demonstrate their ability to observe, analyze, and reflect upon their teaching as they make connections between theory and practice, all critical skills for ongoing professional development which relate to the students’ final project, a reflective-analytical or action research paper. The project is based on a thirty-hour teaching internship completed during the semester in which the students are enrolled in EDUC 563. The project is individually designed and subject to the instructor’s approval. All students in the M.S.Ed./TESOL and Language & Literacy must submit a proposal for the internship in the semester before they take the Seminar. Prerequisite: Permission needed from the department.
Taught by: Wagner,S/Box/Kozlova
One-term course offered either term
Prerequisite: EDUC 528
Activity: Seminar
1.0 Course Unit

EDUC 564 Ethics & Schools
This course explores the ethical elements of the work of schooling by examining ethical dilemmas faced by teachers, administrators, and policy makers. This course also explores how ethics should be taught in schools (and if it should be taught at all). The course raises and engages with the following questions: How can educators approach ethical dilemmas in their everyday work? How might an educator respond when she believes school-based policies and procedures are not in a student’s best interest? How might an educator balance responses to particular events with system’s level transformation? Should policy makers pander to upper-middle class parents to attract them to urban districts? How can individual teachers and entire schools teach ethics?
Taught by: BEN-PORATH,S
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 565 Introduction to Teaching & Classroom Routines
This course is designed to support summer fieldwork in libraries, and serves as a bridge between fieldwork and course and fieldwork that begins in the fall. The course begins with a set of experiences in local communities which, along with courses, helps apprentices learn about neighborhoods and communities in which schools are located. This course provides apprentices with approaches to establishing classroom/group norms and practices allowing teachers to develop relationships with children. Apprentices will learn to establish routines and activities to be used in summer and fall fieldwork, as well as the professional cycle of planning, enacting, observing, and reflecting in a professional learning community. This course will also contribute to apprentices’ understanding of literacy and math learning in the K-8 classroom.
Prerequisite: Admission to the UTAP program or permission of the instructor.
Taught by: Janine Remillard
Course usually offered summer term only
Activity: Seminar
1.0 Course Unit
EDUC 566 Cross Cultural Awareness
This course provides students experiential and cognitive awareness through affective exercises and readings. It explores issues of living in a diverse society through a variety of educational strategies including workshops, small group process, guest lectures, etc. It represents the seminar portion of P.A.C.E. (Programs for Awareness in Cultural Education): An 'Educating the Peer Educator' Program.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 567 Internship: ICC
All students in the MS/ICC program must complete a supervised internship of at least 160 hours prior to enrolling in this course. The supervised internship is individually designed and is subject to approval; students must submit a Prospectus describing the internship in the Fall or Spring semester prior to beginning the internship. This course offers guidance as students complete the portfolio or reflective paper, which is based on the experience and data collected during the internship. Through this course, students in the M.S.Ed./ICC program will discuss ways to conceptualize the internship experience, situate it meaningfully within the field of intercultural communication, locate and analyze relevant research literature, and prepare the portfolio or reflective paper, with an overall goal of developing the ability to communicate clearly and effectively for an academic and/or professional audience. Prerequisite: Eight or more courses toward M. S. Ed. degree in Intercultural Communication. Permission needed from department.
Taught by: Pomerantz
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 568 Cognitive Development
This course examines the cognitive development of the child from infancy to adolescence with an emphasis on cultural context. Topics include: origins of thinking, Piaget, Vygotsky, intelligence, development of learning and memory, language development, and moral development.
Taught by: Frye
Course usually offered in fall term
Prerequisite: EDUC 560
Activity: Lecture
1.0 Course Unit

EDUC 569 Administration of Student Life
This course covers a variety of issues in the management of student services on campus. After examining the historical context of student affairs and the theoretical frameworks of student development, students explore ways to most effectively administer the numerous activities that comprise student affairs programs.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 570 Education and the American Metropolis
Education and the American City centers on major trends and factors that have shaped cities and their preK-16 school systems since the Second World War, including racial discrimination, migration and immigration, suburbanization, deindustrialization, U.S. housing policy, social welfare policy, and urban renewal.
Taught by: Puckett
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 571 Collaboration & Conflict
Collaboration & Conflict is an experiential and interdisciplinary exploration of how people work together to solve complex problems. The course explores the deeply intrapersonal and interpersonal demands of exercising leadership within partnerships, teams, and complex organizations. The course seeks to help students understand why effective leadership is a cognitively demanding task, requiring both adept emotional intelligence as well as expert technical skill, and why most of us must develop as individuals in order to develop as leaders. The course draws on relevant research, theoretical frameworks, and best practices from psychology, sociology, business, law, medicine, negotiation, economics, education, and more.
Taught by: Herrmann
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 572 Language and Gender
This course traces the development of research on language and gender, introducing key theoretical issues and methodological concerns in this area. Participants will consider how gender ideologies shape and are shaped by language use, with particular attention to how research findings can be applied to educational and other professional settings.
Taught by: Pomerantz
Course not offered every year
Also Offered As: GSWS 572
Activity: Lecture
1.0 Course Unit

EDUC 573 Higher Education Policy: What Can We Learn from Other Countries?
This course examines the proposition that policy makers, educational leaders and practitioners can learn from what has worked and failed in higher education policy and practice in other nations.
Taught by: Ruby/Eynon
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 574 Race/Ethnicity in Human Development
This interdisciplinary course will employ a critical perspective on minority youth development, analyze the existing literature, and propose alternative explanations for observed phenomena. It will consider pertinent issues and theories of middle childhood, adolescent and young adult development.
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 575 Topics of Psychology in Education: Qualitative Studies of Developmental Interventions
This course is designed to introduce students to innovative approaches to the psychology of education, especially with regard to populations from at-risk contexts, sociocultural dimensions of education, and social-emotional learning.
Course not offered every year
Also Offered As: AFRC 575
Activity: Seminar
1.0 Course Unit
EDUC 576 The Social & Political Philosophy of Education
Is the purpose of education to allow individuals to better themselves by pursuing personal tastes and interests, or should education be primarily aimed at creating good citizens or good members of a group? Is there a way of reconciling these two aims? Assuming that adult relations with children are inherently paternalistic, is it possible for children to be educated for future autonomy to pursue major life goals free from such paternalistic control; and if so, how? How much, if any control over education can be allocated to the state, even when this conflicts with the educational goals parents have for their children? Such questions are especially relevant in multicultural or pluralistic societies in which some groups within a liberal state are non-liberal. Should a liberal democratic state intervene in education to ensure the development of children's personal autonomy, or must toleration of non-liberal groups prevail even at the expense of children's autonomy? Taught by: Detlefsen, K. Course not offered every year Also Offered As: GSWS 249, PHIL 249 Activity: Lecture 1.0 Course Unit

EDUC 577 Selected Topics in Educational Linguistics
The focus for each semester will vary to reflect those issues most relevant to current concerns in educational linguistics. One-term course offered either term Activity: Seminar 1.0 Course Unit

EDUC 578 Teaching Reading and Study in Colleges and Universities
This course is designed for both pre-service and experienced instructors and administrators who are interested in teaching and/or researching the concept of academic literacies and the array of academic skills in postsecondary settings, and/or directing programs in reading, writing and study strategies at the postsecondary level. The course presents theoretical frameworks relevant to the teaching of study strategies, theories of cognitive development, and practical instructional methods. Emphasis is placed on the process and content of such instruction, materials and methods for teaching, and ways to organize postsecondary literacy programs. Taught by: Cohen, M Course usually offered in fall term Activity: Lecture 1.0 Course Unit

EDUC 579 Intercultural Communication and Miscommunication
An introduction to basic issues in intercultural communication, reviewing various perspectives on the nature of culture, communication, ‘miscommunication’ and inter-cultural relations. The course criticizes two commonly held assumptions: 1) that ‘cultures’ are unitary and unchanging and 2) that inter-cultural contact and communication is inherently more troublesome then intra-cultural communication. The course considers ways in which intercultural communication has important consequences in education, medicine, social services, business settings, and international contact situations. Course not offered every year Activity: Lecture 1.0 Course Unit

EDUC 580 Developmental Theories & Applications with Children
The purpose of this course is to provide students with an opportunity to consider mandates, models, and methods related to enhancing the learning and development of preschool and early elementary school children. This course emphasizes the application of developmental psychology and multicultural perspectives to the design of effective classroom-based strategies. Students will consider a ‘whole-child’ approach to understanding children’s classroom behavior in context. Major assignments will involve gathering and synthesizing information about children in routine classroom situations. This information will be used to better understand children’s needs and strengths and how they are manifested in transaction with classroom contexts. Students will focus on one or more students to conduct a comprehensive child study of the child in context. This contact must include opportunities to observe children in a natural setting and interact with them on a regular basis throughout the semester. The placement needs to be approved by the professor. If students do not have a regular classroom contact, one will be arranged. Taught by: Fantuzzo Course usually offered in spring term Activity: Lecture 1.0 Course Unit

EDUC 581 Advanced Psychology of Women
The course is intended for those who already have a foundation in the study of the psychology of women and want to expand their understanding of the provision of psychological services to include a contextual, feminist, and relational perspective. Theoretical and applied practices regarding women’s mental health, issues of diversity, sexuality and relationships for women will be addressed. Prerequisite: Introduction to Psychology and an undergraduate course in the Psychology of Women or approval by professor. Also Offered As: GSWS 581 Activity: Lecture 1.0 Course Unit

EDUC 582 Theories and Pedagogies of Teaching Writing
This seminar examines various theories and pedagogies of teaching writing in multilingual, multimodal contexts. It explores the historical and ideological underpinnings of contemporary theories of writing and attends to how writing, and the teaching of writing, is shifting in a mobile, networked, and global age. Taught by: Stornaiuolo Course usually offered in fall term Activity: Seminar 1.0 Course Unit

EDUC 583 Content-Based Instruction
This course offers students opportunities to investigate, observe, design practice, and critically evaluate the integration of content and language teaching - Content Based Instruction. The settings investigated include thematic English Language teaching; co-teaching and peer coaching by ESL and content teacher teams; and sheltered content instruction, among others. Standards, integrations of tasks, and special language requirements in various content areas are reviewed. Taught by: Box Course usually offered summer term only Activity: Lecture 1.0 Course Unit
EDUC 584 Basic Counseling Skills
This course will teach basic counseling skills to students not seeking a license in professional counseling as a way to help them connect with and work well with others. It will predominantly be oriented towards skill building. We will review/discuss a selection of basic counseling skills and use in-class demonstrations to practice these skills. This course is required for the Counseling and Human Development Skills Concentration.
Taught by: Schultz,Kyle
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 585 Advanced Group and Family Counseling
This course focuses on the basics of systems intervention with a specific focus on families and groups. The purpose is to develop more advanced knowledge of practical therapeutic problem-solving skills at the graduate student level using ecological, systemic, and cultural perspectives.
Students will be exposed to advanced group therapy strategies with children, youth, and adults, with family interventions across various mental health diagnostic populations, and how to intervene within groups and families in which cultural differences and styles are key themes.
Prerequisite: Students must be enrolled in the M. Phil. Ed. in Professional Counseling Program. Students will also be challenged to develop a preliminary rationale for a systemic theory of behavior change. Given the diversity of clients that counselors see professionally, some advanced and demonstrated knowledge of how cultural differences will be addressed in the counseling session and in the relationships of larger societal institutions will be expected. This course will satisfy the Group work II requirement of the MPE program in Professional Counseling and Psychology. The course also fits within the APHD theme of Applied Psychology: Intervention and Certification.
Prerequisite: Students must be enrolled in the M. Phil. Ed. in Professional Counseling Program.
Taught by: Lappin
Activity: Lecture
1.0 Course Unit

EDUC 586 Ethnographic Filmmaking
This ethnographic methodology course considers filmmaking/videoography as a tool in conducting ethnographic research as well as a medium for presenting academic research to scholarly and non-scholarly audiences. The course engages the methodological and theoretical implications of capturing data and crafting social scientific accounts/narratives in images and sounds. Students are required to put theory into practice by conducting ethnographic research and producing an ethnographic film as their final project. In service to that goal, students will read about ethnography (as a social scientific method and representational genre), learn and utilize ethnographic methods in fieldwork, watch non-fiction films (to be analyzed for formal properties and implicit assumptions about culture/sociality), and acquire rigorous training in the skills and craft of digital video production. This is an ABCS course, and students will produce short ethnographic films with students in Philadelphia high schools as part of a partnership project with the School District of Philadelphia. Due to the time needed for ethnographic film production, this is a year-long course, which will meet periodically in both the fall and spring semesters.
Taught by: Hall,Kathleen & Das,Amit
Two terms. student must enter first term.
Also Offered As: ANTH 583
Activity: Seminar
1.0 Course Unit

EDUC 587 Human Sexuality
All persons have moments that elicit reflection on issues related to myriad aspects of sexuality. When working with people in clinical or school settings, these issues are ubiquitous. This course will provide a broad understanding of sexuality and specific ways to address sexuality problems.
Taught by: Schultz,Kyle
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 588 Digital Literacies in a Networked World
This graduate seminar is designed to explore how literacy and learning are changing as people participate with digital technologies across intersecting local and global networks. Participants will collaboratively investigate how young people's digital literacies-their culturally and socially situated meaning making practices mediated by digital tools-emerge in relation to constantly shifting technologies of communication and are constructed, reconstructed, negotiated, and embodied in multiple semiotic systems across everyday contexts. This course highlights how digital literacies are situated, and how these socio-cultural understandings illuminate issues of power and privilege.
Taught by: Stornaiuolo, A
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 589 Teaching and Learning in the Global Era
We are living in an era in which economic, social, cultural, environmental and technological transformations are connecting people across the globe in new and unprecedented ways. Given that our world is increasingly interconnected, it is no longer adequate to prepare students to succeed simply as citizens of a particular nation. Students also must acquire the knowledge, skills, dispositions, understanding and aptitude to engage with people from different regions in the world who may hold varying or conflicting perspectives, forms of knowledge, and ways of knowing that are culturally and historically specific and informed. This course will focus on issues related to teaching and learning in the 21st century, and to preparing young people for global citizenship. We will consider what it means to be a global citizen as well as the various approaches to educating for global citizenship that have emerged in the U.S. and around the world. We will also explore instructional and curricular innovations that aim to enrich how young people learn about world regions and cultural traditions, engage with global issues and come to respect contrasting perspectives.
Taught by: Hall
Course not offered every year
Activity: Seminar
1.0 Course Unit

EDUC 590 Gender & Education
This course is designed to provide an overview of the major discussions and debates in the area of gender and education. While the intersections of gender, race, class, ethnicity, and sexuality are emphasized throughout this course, the focus of the research we will read is on gender and education in English-speaking countries. We will examine theoretical frameworks of gender and use these to read popular literature, examine teaching practices and teachers with respect to gender, using case studies to investigate the topics.
Course not offered every year
Activity: Lecture
1.0 Course Unit
EDUC 591 Applied Research Methods to Inform Policy and Practice
The class is designed to provide students with the knowledge and tools to define relevant research questions to guide program design and operations, as well as to guide policy development; to map questions to appropriate methods of research; to judge the quality of research evidence; and to design strong analysis and evaluation strategies for various purposes. The primary, but not exclusive, focus of the course is on education policy concerns. Prerequisite: Permission needed from department.
Taught by: Maynard
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 592 Professional Development in Higher Education
To prepare for a career in higher education, students are engaged in a 20-hour a week assistantship in the field. This course complements and enhances the graduate assistantship. Emphasizing practical application of theory and skill development, the course does the following: provides students with tools to embark on a successful job search; offers networking opportunities with administrators in higher education; and introduces students to relevant and timely literature and resources in higher education professional development.
Taught by: Aikins
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 593 Experiential Learning Design for Intercultural Communication
Provides new and experienced educators the opportunity to learn and practice training design and facilitation using the principles of experiential and adult learning. Prerequisite: If course requirement not met, permission of instructor required.
Course usually offered in spring term
Prerequisite: EDUC 676
Activity: Lecture
1.0 Course Unit

EDUC 594 Diversity in Higher Education
This course explores issues of diversity as they pertain to higher education, including race, ethnicity, gender, class, religion, sexual orientation, ideology, etc. Rather than focusing on specific populations of people, the course will tackle issues of diversity within the context of concrete higher education functions and problems.
Taught by: Tiao/Staff
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 595 Politics and Education
How is education a form of political action? In this course we look at the governance of schools, the trust in them and their relations to socio-economic conditions in society, among other topics, using research in education, political science, and political theory.
Taught by: BEN-PORATH
Course usually offered in fall term
Also Offered As: PSCI 545
Activity: Seminar
1.0 Course Unit

EDUC 596 International Early Childhood Policies and Programs
This course focuses on early childhood development research, policies, and practices in low and middle-income countries. The first part of the course reviews the evidence for investing in young children from economic, health, and education perspectives. The second part of the course discusses current issues related to designing, implementing, and evaluating quality, contextually-appropriate early childhood interventions.
Taught by: Neuman
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 597 Policy Planning in International Educational Development: Theory and Practice
This course focuses on education policy in low and middle-income countries. The first part examines global policy frameworks and international institutions/actors that shape education reform efforts. The second part covers the contexts, processes, and tools for national education policy planning. The third part analyzes a series of current cross-national education policy issues.
Taught by: Neuman
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 598 Interfaith Dialogue in Action
This ABCS course explores religious pluralism and interfaith dialogue and action on college campuses. It brings together students with diverse faith commitments (including atheism) to engage with and learn from one another in academic study, dialogue, and service.
Taught by: Hall/Kocher
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
EDUC 599 History of American Education
This course will examine the growth and development of American schools, from the birth of the republic into the present. By 1850, the United States sent a greater fraction of its children to school than any other nation on earth. Why? What did young people learn there? And, most of all, how did these institutions both reflect and shape our evolving conceptions of ‘America’ itself? In an irreducibly diverse society, the answers were never simple. Americans have always defined their nation in a myriad of contrasting and often contradictory ways. So they have also clashed vehemently over their schools, which remain our central public vehicle for deliberating and disseminating the values that we wish to transmit to our young. Our course will pay close attention to these education-related debates, especially in the realms of race, class, and religion. When immigrants came here from other shores, would they have to relinquish their old cultures and languages? When African-Americans won their freedom from bondage, what status would they assume? And as different religious denominations fanned out across the country, how would they balance the uncompromising demands of faith with the pluralistic imperatives of democracy? All of these questions came into relief at school, where the answers changed dramatically over time. Early American teachers blithely assumed that newcomers would abandon their old-world habits and tongues; today, ‘multicultural education’ seeks to preserve or even to celebrate these distinctive patterns. Post-emancipation white philanthropists designed vocational curricula for freed African-Americans, imagining blacks as loyal serfs; but blacks themselves demanded a more academic education, which would set them on the road to equality. Protestants and Catholics both used the public schools to teach their faith systems until the early 1960s, when the courts barred them from doing so; but religious controversies continue to hound the schools, especially on matters like evolution and sex education. How should our public schools address such dilemmas? How can the schools provide a ‘common’ education, as Horace Mann called it, melding us into an integrated whole while still respecting our inevitable differences?
Taught by: Zimmerman
Course usually offered in spring term
Also Offered As: HIST 463
Activity: Seminar
1.0 Course Unit

EDUC 600 Curriculum Development and Enactment
The purpose of this course is to advance students’ understanding of curriculum as a phenomenon and artifact of educational practice. Students will explore curriculum as a social and cultural phenomenon, be introduced to an approach to developing curriculum, and examine factors that influence how curriculum is enacted.
Taught by: Remillard
One-term course offered either term
Activity: Seminar
1.0 Course Unit

EDUC 601 Economic Aspects of Educational Policy
This course has two main goals. One is to teach students to apply economic principals to analyze a wide range of educational policy issues. The other is to provide students with a foundation in contemporary education policy issues. The course is designed to address analytic issues relevant to a wide range of educational professionals, including managers, policy makers, and evaluators. The course will be divided into five units: (1) principles of economic analysis in the context of education policy; (2) the economics of early care and education; (3) cost-effectiveness analysis; (4) human capital investment; and (5) education finance.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 602 Youth Cultural Formations
This course explores anthropological perspectives on peer-based youth cultures. It explores how educational institutions, media (fashion, music, magazines), and states shape youth cultures in cross-cultural contexts through social processes such as capitalism, nationalism, and increasing globalization. The course emphasizes ethnographies and histories which explore the relationship of these wider social processes to the lived realities of young people, situated in class, gender, national and race-specific contexts.
Taught by: Strong
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 603 Wellness and Addictions Counseling
This course will provide an overview of addictions and addiction counseling from research, theory, and applied perspectives. It will also explore contemporary conceptions of ‘wellness’ and wellness-promotion strategies, particularly for people struggling with addictions. Applied skills for addressing wellness and addiction will be framed within current evidence-based research. Prerequisite: Students must be enrolled in the M. Phil. ED. in Professional Counseling Program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 604 Ethics and Leadership in Higher Education
This course looks critically at the various theories of leadership with a special emphasis on the ethical dimensions of leadership. Initial classes are devoted to common ethical frameworks from Plato and moving through Kant, Hume and into the present practical application of ethics to leadership. Leadership theory and practice reveal that there is no one approach that is best or that works in all situations. Aspiring leaders must have a variety of lenses through which they can analyze and understand the elements involved in ethical leadership. At the end of the course students will be able to apply essential concepts of ethical decision making and leadership - the role of trust and the ability to build trust, the uses of power, the importance of good decision-making, the conflicting priorities that arise from living out your core values in the workplace.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
EDUC 606 Literacy Research, Theory, and Practice
This graduate seminar is a capstone course in the Reading, Writing, and Literacy master's program, designed to help students develop understandings about key theoretical underpinnings of literacy research. As a foundational course, the seminar will explore how literacy has been conceptualized over time and across disciplines, examining how literacy has functioned as a touchstone issue in policy and practice as people debate what ‘counts’ as literacy. While we explore these debates, we focus particularly on contemporary theories that understand literacy to be multiple, ideological, and socially situated - practices grounded in specific contexts that are fundamentally linked to broader social, cultural, and political power structures. Inquiry sits at the heart of the course, with students developing an online learning portfolio centered around their individual research, course readings, and prior experiences. Students will reflect on their RWL program of study, write about conceptual territories at the heart of the program, and curate materials from the semester and their program of study to demonstrate their learning and development over time. Students will work with coaches as well as engage in a workshop learning environment, culminating in an online learning portfolio and presentation to RWL faculty.
Taught by: Amy Stornaiuolo
Prerequisite: EDUC 533 AND EDUC 629
Activity: Seminar
1.0 Course Unit

EDUC 607 Faculty and Academic Governance
Introduction to selected issues pertaining to faculty and academic governance, such as: Who governs American colleges and universities? What are the respective roles of the president, the board of trustees, the faculty, and students in institutional decision making? The course will also explore key contemporary governance issues.
Taught by: Hartley/Garland/Eckel
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 608 Organizational Change in Higher Education
Colleges and universities today face tremendous challenges—calls by external constituents for greater accountability, scarcity of resources, greater competition, and pedagogical innovations. The need for change, and for change agents, in our institutions of higher learning has never been greater. This course examines organizational change both theoretically and practically in college and university settings. Students will be introduced to many of the most current, influential, and promising theories about how change occurs at the departmental, institutional and system level. Using case studies, we will apply these frameworks in order to diagnose and develop constructive strategies for meaningful change.
Taught by: Hartley
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 610 Cultural Perspectives on Human Development
This course focuses on childrens' and adolescents' development from cultural and cross-cultural perspectives. Topics include traditional and recent theories of cultural influence on development, research strategies, socialization values and practices, and socioemotional and cognitive functions such as aggression and conflict, shyness, and academic achievement in cultural context. Issues involving ethnicity and social and cultural changes are also discussed.
Taught by: Chen
Activity: Lecture
1.0 Course Unit

EDUC 611 Educational Assessment of and for Learning
This course introduces the essential theories and practices of cognition based educational assessment and the focus will be on exploring the implications of recent developments in cognitive psychology and learning theories for educational assessment by reviewing available assessment examples and research assessment prototypes. It includes topics like, what is the purpose of assessment, how can we design fair and valid assessments to elicit student cognition, how technologies can support the measurement of student cognition and learning processes, and assessment and social justice and accessibility issues.
Taught by: Lei Liu
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 612 LGBT Counseling & Development
In the past quarter century, the awareness of the unique issues facing lesbian, gay, bisexual and transgender (LGBT) individuals has expanded and become essential knowledge in our work as educators, providers of psychological services, and other service provision fields. This course provides a contextual and applied understanding the interactional processes facing LGBT individuals.
Course not offered every year
Also Offered As: GSWS 612
Activity: Lecture
1.0 Course Unit

EDUC 613 Group Counseling
Through didactic and experimental learning activities, students will explore various theoretical approaches to groups, learn and apply principles of group dynamics, develop familiarity with ethical, legal and professional standards relative to group leadership, learn member roles and functions in group, examine group counseling in a multicultural context, and relate these issues to the leader's interpersonal style and behavior. Applications to specific developmental stages and contexts will be explored.
Activity: Lecture
1.0 Course Unit
EDUC 614 Child Development and Social Policy
The purpose of this course is to focus on major US social policies impacting our most vulnerable subpopulations of children living in poverty. The class will explore how developmental science can provide a broad conceptual framework to inform the construction of social policies for children and evaluate their effectiveness. Since much of the social policy issues for children in the US public square are currently hotly debated, the class format will incorporate debate and require students to actively research and defend positions on existing policies. Class size will be set at a level to maximize interaction and involvement.
Taught by: Fantuzzo
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 615 Parenting and Children's Educational Development
Theory and research on family influences on achievement development, models of the home-learning environment; parental involvement in schools.
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 616 Master's Foundations of Teaching and Learning
The course explores theoretical and empirical perspectives on the questions: What is knowledge and knowing? What is learning? What is teaching? How do contexts influence teaching, knowing, and learning?
A central goal of the course is to encourage students to consider these questions and their interconnections for themselves, to examine ways scholars and practitioners have answered them, and to develop an analytical framework to use in examining contemporary practices in settings that include formal and informal, urban and international.
Prerequisite: Permission needed from department.
Taught by: Baker
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 617 Counseling for School to Career Transitions
This psychology course will focus on the developmental and emotional changes that coincide with adolescents’ conceptions of work and work-related activities. As a course in career psychology, students will be exposed to readings from multiple disciplinary perspectives and will be expected to learn how to work with youth as they struggle through decisions on career and moving beyond the safety of childhood and adolescence. In addition, students will learn about the family-youth and school-student relational dynamics and that occur simultaneous to the adolescent’s development of a work ethic.
Taught by: Nakkula
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 618 Leadership in Educational Institutions
In this course class members will simultaneously engage in an academic study of educational leadership focusing on Pre-K-12 schools and school districts, and in a continuing leadership development laboratory experience designed to increase one’s personal efficacy as leader. A basic assumption for the course is that leadership is a central component of schooling; teaching is considered as foremost a leadership activity, whether with five year olds or high school seniors, and successful schools and districts are assumed to have capable leaders. The course will give particular attention to the recent shift in role expectations for school leaders - from competent manager to accountable instructional leader - and what this shift means in relation to the day-to-day work of educational leaders.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 619 College Student Health
College Student Health explores postsecondary student health issues from historical and research perspectives, including stress, sleep, sexual health and safety, alcohol and other drugs, and mental health and wellness, among other topics. This course surveys the roles, responsibilities, and best practices of campus health professionals.
Taught by: Aikins
Course not offered every year
Activity: Seminar
1.0 Course Unit

EDUC 620 Enrollment Management
Enrollment management is an organizational concept of strategies for achieving institutional goals. The course provides an overview of multiple enrollment management models, the evolution and maturation of these models, the related implications of these organizational structures and strategies, and the benefits and drawbacks on institutions and their markets.
Taught by: Kaplan/Staff
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 621 Proseminar in Professional Education
An integrative seminar that will provide an opportunity to reflect, orally and in writing, on the issues of quality, stability, and change in teaching, curriculum and school organization, toward the aim of fundamental reform in educational practice.
Taught by: Quinn
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 623 Big Data, Education, and Society
This class discusses the potential and risks of big data-based learning analytics. We will discuss the uses, applications, and benefits of analytics, the relationship between validity and risk, and potential ways to mitigate and reduce risks. We will discuss these issues in the context of existing and emerging educational systems.
Taught by: Baker
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
EDUC 624 Gender in College
Examined in this course are theories and interdisciplinary perspectives pertaining to gender on college and university campuses. Emphasis is placed on the social construction of gender, gendered institutional norms and practices, gender disparities on college campuses, and the unique experiential realities of women, men, and transgender persons in a variety of roles and postsecondary educational contexts.
Course not offered every year
Activity: Seminar
1.0 Course Unit

EDUC 625 Data Processing and Analysis
Use of Statistical Software including Statistical Analysis (SAS) to effectively build a wide variety of datasets for use to address a range of empirical research questions. Evaluate conventional methods for dealing with missing data and apply contemporary methods using SAS.
Taught by: Rovine
Course usually offered in fall term
Prerequisite: EDUC 667
Activity: Lecture
1.0 Course Unit

EDUC 626 Literacy, Discourse, and Interaction
This course draws on varying pedagogical and personal perspectives to explore conceptions of reading comprehension and how it can be taught to children and adolescents. Focus will be given to how certain ways of structuring dialogue about a text profoundly change how readers think about and do reading.
Taught by: Thomas
Activity: Lecture
1.0 Course Unit

EDUC 627 Teaching in the Middle and Secondary Schools
Content-specific sections of this course (math, social studies, science) will examine approaches in planning, implementing and evaluating methods for teaching science, mathematics and social studies in middle and secondary schools. This course is grounded in the belief that teaching and learning require educators to question our teaching purposes and practices through a process of self-reflection, collegial and student-teacher interactions as well as personal and professional growth. Using a variety of learning theories and perspectives as the foundation for interactive teaching strategies, the stories, questions and contradictions of each content area are examined from a variety of perspectives. Offered within the Urban Teaching Apprenticeship Program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 628 Education Finance Policy
This course examines the legal, political and economic issues surrounding how public schools are funded, including equity, productivity and the interaction of finance and school reform. Through readings, discussion and written assignments, students will develop and apply policy analysis skills to the area of education finance.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 629 Teaching English/Language and Literacy in Middle and Secondary Schools
This course is a collaborative inquiry into the dynamic concept of adolescent literacy and its potential as an organizing construct for improving teaching and learning. It provides opportunities to investigate a variety of resources including our own histories as well as a range of print, digital and visual texts and to conduct fieldwork in various middle and secondary school classrooms where youth are being positioned (and positioning themselves) as literacy learners and literacy is being defined, performed, practiced, interrogated, and interpreted, within and beyond the school curricula. By engaging with youth, in various texts and contexts and for a range of purposes, participants will try to make sense of how adolescents negotiate their worlds, in school and out. The approach to literacy is interdisciplinary, drawing from the domains of literature, composition, linguistic, curriculum theory, anthropology and psychology and from theory, research and practice of both university-based and school-based teachers, writers and researchers. The intent is to pose and refine questions about what it means to teach literacy in ways that take seriously what youth bring to school as their own knowledge and passions, cultural and linguistic resources.
Taught by: Stornaiuolo
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 630 Introduction to Mixed-Methods Research
This course introduces students to the theory, history, and practice of mixed methods research. Students will build skills in design and implementation of studies that incorporate both qualitative and quantitative methods. Theoretical framing, research questions, design and selection of methods, sampling, instrumentation and data collection, and analysis are addressed.
Taught by: Gray
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 631 Research Topics
This seminar offers students a collaborative setting in which to explore a topical area, craft a literature review and refine their research questions. The course will be of special interest to doctoral candidates who are drawn to an area of inquiry (e.g., presidential leadership, diversity, access, organizational change) but now wish to elicit from it a discrete ‘researchable’ question. Prerequisite: Permission needed from department.
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 633 Selected Topics in Reading/Writing
Examines a topic of current interest to theory, research, and practice in reading, writing.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit
EDUC 634 Language Assessment
This course concerns a basic theoretical and practical foundation in
language assessment, with particular emphasis on assessments used in
second and foreign language education. The course covers various kinds
of testing (both formal testing and performance-based assessment),
theoretical and technical issues associated with test development,
administration, the social influences of testing, and future directions in
language assessment.
Taught by: Butler
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 635 Assessing Language and Learning Differences
This course exposes students to a wide variety of assessments used
to look closely at growth in reading/writing/literacy. Students critique
both formal and informal approaches to assessment as well as complete
structured observations of learners within diverse instructional contents.
Emphases include contextual and affective components of reading/
language difficulties, innovative assessment procedures, observational
strategies and collaborative inquiry. Auditors not permitted.
Taught by: Gadsden/Campano
Course usually offered in spring term
Prerequisite: EDUC 533
Activity: Lecture
1.0 Course Unit

EDUC 636 Young Adult Literature, Media & Culture
This course acquaints students with the ever-expanding body of literature
written for young adults, considering the theoretical and pedagogical
issues it raises. Readings include many young adult novels; empirical
research on adolescent response to literature; and literary theory.
Taught by: Thomas
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 637 Contemporary Issues in Science and Technology Education
Research
This course focuses on topics that represent some of the most salient
and contemporary issues in science education research today. The
syllabus moves through four sections that address: 1) Curriculum and
Content (What and Why); 2) Learning Processes (How); 3) Contexts
(When and Where); and 4) Teaching and Teacher Education (Who).
Taught by: Yoon
Course not offered every year
Activity: Seminar
1.0 Course Unit

EDUC 638 Principles of Monitoring & Evaluation in International
Education Development
This course covers theories, methods, and applications of monitoring and
evaluation for educational and social programs, with special emphasis
on international education development. Topics include basic statistical
concepts, program theory, process and outcome assessment, concepts in
survey methods, introduction to causal inference, introductory regression
analysis, and an overview of impact assessments and cost-benefit/cost-
effectiveness analysis.
Taught by: Thapa
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 639 Design of Learning Environments
This course examines different theoretical frames and strategies related
to the study and design of learning environments in school, community
and online contexts. Physical, social and cognitive aspects of learning
situations are considered as students evaluate current research and
applications in a variety of existing educational learning environments.
Taught by: Yoon/Staff
Course usually offered in fall term
Prerequisite: EDUC 616
Activity: Lecture
1.0 Course Unit

EDUC 640 History of American Higher Education
This interactive course focuses on the history of American higher
education from the Colonial period through the current day. An emphasis
is placed on underrepresented institutions and individuals. Students will
have the opportunity to make connections between historical trends and
movements and current issues.
Taught by: Gasman
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 641 Culturally Responsive Pedagogy in Urban Secondary Schools
While a wealth of evidence has illustrated the role of culture in mediating
learning & engagement in educational spaces, responding to the
pedagogical impact of culture remains challenging for many educational
practitioners and institutions. This course will tackle that challenge by
exploring the affordances of culturally responsive pedagogies, defined
briefly as the philosophical beliefs and conceptual understandings of
the interactions between cultures, learners, and educational contexts
that guide the design and facilitation of learning experiences. Through
course texts and discussions, dialogue with local educators, and inquiry-
and practice-oriented assignments, this course will expose students to
culturally responsive strategies for engaging, educating, and empowering
students in urban secondary schools. Prerequisite: Admission to the
UTAP program or permission of instructor.
Taught by: Ed Brockenbrough
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

2020-21 Catalog | Generated 09/18/20
EDUC 642 School, Society & Self
Teaching is a work of the whole self; and teachers are the lynchpins of schools and schooling in American society. The purpose of this course is to develop a critical understanding of the larger forces at play in our work as educators, and conceptualize what that means for the day-to-day of our teaching practice. In this course, we will explore the ways in which American schools have been molded by the social, political, economic, cultural, and ideological forces in society at large. By historically linking the development of educational initiatives to notions of power, nation building, and citizenship, this class furthers an understanding of the assumptions about the purpose of education within this democratic nation, and its role(s) within our current social and political climate. Additionally, we will explore how the work of teaching can support transformation, rather than reproduction, of these macro-level injustices and inequities. We will draw on students’ experiential knowledge of schools and teaching to imagine how urban educators can transform the socially reproductive practices of schools. The work of increasing access to opportunity has been a path walked by educators, individually and collectively, and schools, by leaders and as organizations, and by reformers. With these understandings about self, school, and society, we seek to create a community of practice of equity- and justice-minded teachers, driven by the belief that we are all co-learners in our endeavor as teachers and as citizens, and that we are all co-participants in a democratic society. Prerequisite: Admission to the UTAP program or permission of department.
Taught by: A. J. Schiera
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

EDUC 644 Learning Sciences: Past, Present, Future
This course is a survey of the kinds of theories, methods, and applications through which educational researchers understand learning and how to improve it. The course is designed to provide information about how the field of the learning sciences emerged, has evolved, and is growing to address current and future learning needs. The learning sciences is a relatively new field of research in education that began in the late 80s. It is an interdisciplinary field consisting of researchers who study among other things, cognition, science and math education, language literacy, anthropological and sociological perspectives, computer science, and educational psychology. Learning scientists study learning as it happens in real world contexts and design resources and environments to improve learning in those contexts. This can happen in school, in informal places, at work, and online. Although the learning sciences is continually evolving, what remains true of the tenets of this educational field is that learning happens through mediated processes that most often require collaboration with others whereby learning is inextricably linked to context and culture.
Taught by: Susan Yoon
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 645 Issues in Education and Health: Disparities and Prevention in Schools and Communities
Drawing upon research and scholarship in health and education, this course aims to deepen our knowledge, understanding, and ability to effect positive change in the health and health practices of students and families in urban settings, using schools and community agencies as sites of engagement.
Taught by: Gadsden
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 646 Examining the School to Prison Pipeline: Implications of History, Policy, and Race
The term school-to-prison pipeline typically refers to a disturbing trend in which punitive policies have led to children being funneled out of schools and into the criminal justice system at an alarming rate. This course: 1. Examines the historical context and policies that have contributed to the school-to-prison pipeline. 2. Explores the workings of contemporary racism, in particular, colorblind racism and its relationship to education and corrections policies. Discusses the outcomes of such policies and explores interventions for an alternate approach to such policies.
Taught by: Harper
One-term course offered either term
Activity: Seminar
1.0 Course Unit

EDUC 647 Global Perspectives on School Climate
This course provides an international and comparative perspective on school climate using available case studies, examples and relevant articles from developed as well as developing countries. Topics include definitions and models of school climate, trends in the field, assessment mechanisms, policy discussions, challenges in the field, etc.
Taught by: Thapa
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 650 Communication and Culture in Context
This course brings together scholarship in pragmatics, interactional sociolinguistics, and critical discourse analysis to help language teachers and intercultural educators foster pedagogies that respond to the complexities of living in a multilingual/multicultural society. Through a series of readings, small research projects, and activities, participants will develop a collection of educational practices that focus on 1) raising metalinguistic awareness, 2) developing resources and strategies for communicating across perceived social and cultural boundaries, and 3) assessing intercultural interactional competence.
Taught by: Pomerantz
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 655 Ethnography for Intercultural Communication
This course is for practitioners and researchers engaging in and thinking about mentoring, supervision, and fieldwork in teacher education and counseling as well as in social work and other applied development fields.
Taught by: Moore
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
EDUC 656 College and University Teaching
In this class, students will learn how to systematically plan for a university course, develop a teaching philosophy, create a course syllabus relevant to their discipline and expertise, design and implement evaluation instruments to assess teaching and learning, experiment with a range of technologies to advance teaching, and participate in a teaching simulation. This course also incorporates issues of diversity with regard to teaching.
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 657 Advanced Methods in Middle & Secondary Education
Formal teaching and learning are on-going processes that require an examination of our practice and purpose through self-reflection, self-evaluation, collegial and student/teacher interaction, and personal and professional growth. This course is the second half of a content-specific secondary methods sequence that is geared toward teaching middle and high school English, math, science and social studies in an urban setting. Special focus will be on content, pedagogical strategies as well as specific skills and Pennsylvania and national standards. We will work together as teacher-researchers to combine theory with practice to increase our understanding and utilization of an inquiry based, multiple perspective, constructivist approach to teaching. Offered within the Urban Teaching Apprenticeship Program.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 658 Diagnosis and Psychopathology
In this course, students will explore the etiology, course, and prevalence of psychological disorders of childhood and adolescence. Particular focus is on the role of these issues in the developing person within the context of family, school, and culture. Major clinical and empirical classification systems (DSMIV and the new DSM5) are examined, as well as some of the diagnostic and assessment strategies used to aid the conceptualization and treatment of these disorders.
Taught by: Richardson
Activity: Lecture
1.0 Course Unit

EDUC 659 How Innovations Flourish
This course is a survey of contemporary innovative developments, topics, and trends taking place in education across the world. It focuses on the education innovations themselves, the conditions under which they succeed, and the processes and mechanisms for change. Close analysis will be directed at the underlying methods people use to bring these current innovations to the field in a variety of new ways to improve learning. The course examines new pedagogies and approaches to teaching and learning, learning sciences research and its growing influence on solution development, technologies that continually respond to and lead change, and an emerging culture where learning takes place anytime, anywhere. The course will explore how these innovations can transform education systems to offer equitable access, experiences and outcomes for all. The course begins with an overview of the global state of education, including a critical review of comparative rankings of education systems and their contexts, seminal and non-canonized works, and national policy approaches to education. The second session focuses on an examination of what it means for a solution to be innovative and to whom. Each subsequent weekly class session will introduce a major contemporary topic in education innovation. In each discussion, you will explore the research underlying the innovation, the traction it is making in the field with examples from across diverse contexts and countries, and the conditions necessary for the innovation to succeed at scale across diverse communities. In addition, we will look with criticality at innovations that serve to perpetuate structural racism, institutionalize inequality and discrimination and investigate indigenous research and Participatory Action Research approaches to counteract them. The course is designed based on what we know about effective learning from the learning sciences and an innovative project-based pedagogy. We take a student-centered, blended learning approach with the course, using in-class and online discussions (a flipped classroom with a state-of-the -art social media platform) to build a vibrant, collaborative learning community and model the methods we are studying to enhance our learning. Curriculum for each session will include a leading expert on that topic joining the classroom virtually to share her/his expertise along with students selecting that topic of interest co-facilitating the discussion. By leveraging all of our knowledge: of the professor, students, and guest experts, we will all deepen our understanding of these topics as we examine current examples of promising and proven innovations in that area together. The course will culminate in a double-class period presentation of the students’ semester-long authentic products aligned to their interests and goals for the course and delivered through digital tools chosen to best convey its message. The core readings in the course have been selected to present an overview, background, case studies and multiple perspectives on each topic while ensuring a manageable workload for students. As co-contributors to the success of the course, you are each welcome to offer additional suggestions for readings to supplement these using the trending topic ‘General Resources’ on Yellowdigr, our discussion board (additional guidance is included in the Discussion Board Guidelines). These readings will be integrated into online discussions and in class where appropriate to ensure students investigate the topics with criticality.
Taught by: Michael Golden

Activity: Seminar
1.0 Course Unit
EDUC 660 Museum Education
Since the nineteenth century, museums have played a key role in the collection and dissemination of knowledge, and today their educational programs play a vital role for an array of communities. This seminar provides an introduction into museum education, the fields that influence it, pedagogical approaches used, and contemporary challenges.
Taught by: Aplenc
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 661 Language Diversity and Education
Exploration of issues affecting educational policy and classroom practice in multilingual, multicultural settings, with an emphasis on ethnographic research. Selected U.S. and international cases illustrate concerns relating to learners' bilingual/bicultural/biliterate development in formal educational settings. Topics include policy contexts, program structures, teaching and learning in the multilingual classroom, discourses and identities in multilingual education policy and practice, and the role of teachers, researchers, and communities in implementing change in schools. Prerequisite: Permission needed from the department.
Taught by: Hornberger/Flores
Course usually offered in fall term
Also Offered As: LALS 661
Activity: Lecture
1.0 Course Unit

EDUC 662 Picturebooks and the Practice of Literacy
This course examines the formal properties of picture books and their use in enabling literacy development. The course uses aesthetic theory, theories of text-picture relationships, theories of literacy and theories of literary understanding, and also exposes students to empirical research on children's responses to this literary form.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 663 Sociocultural Foundations in Counseling
The course provides an understanding of sociocultural concepts essential to the work of counselors and providers of psychological services. This course provides a contextual and applied understanding of working with socioculturally diverse clients. The purpose of this course is to expand one's understanding of the impact of sociocultural and contextual factors, social-psychological influences, the role of values, and the interaction of identities in counseling and psychological services. Both intervention and prevention strategies will be addressed. The student will be required to demonstrate a working knowledge of key concepts in sociocultural psychology and the topical areas addressed in the course.
Taught by: Warren/Staff
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 664 Participatory Educational Research in Global Perspective: Theory and Practice
This course examines participatory models and frameworks in relation to international applied educational development research. Through a critical examination of approaches to international applied development research, the course examines real-world models of development research in order to examine questions regarding the nature of knowledge, post-colonial histories, researcher positionalities, and the relationships between concepts, theory, methodology, community, and identity. Course focuses on participatory methodologies as cross-sector strategy frameworks for sustainable, equitable, locally driven educational development efforts.
Taught by: Ravitch
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 665 Research on Teaching
This course is designed to explore the research literature on classroom teaching processes as well as the contrasting conceptual and methodological approaches upon which this literature is based. The course introduces students to the major substantive areas in the field, develops a critical perspective on contrasting paradigms, and raises questions about the implication of research on teaching for curriculum, instruction, evaluation, and teacher education.
Taught by: Remillard
Course offered spring; odd-numbered years
Activity: Lecture
1.0 Course Unit

EDUC 666 Introductory Statistics for Educational Research
Scales of measurement; indices of central tendency and variability; product-movement correlation; introduction to the chi-squared; Z, T, and F distributions.
Course offered summer, fall and spring terms
Activity: Lecture
1.0 Course Unit

EDUC 668 Master's Paper Seminar
This seminar explores key foundational questions for graduate-level work: How is academic knowledge formed and reproduced? How do we engage with and interrogate the scholarly research? And, how do we participate in the academic conversation around a topic? The Master's Paper Seminar introduces students to academic discourse, disciplinary writing conventions, and research practices. As part of this course, students are guided through preparing a Capstone Project on a topic of their choice (TLL MSEd and LST MSEd students) or a literature review of a topic of their choice (ECS MSEd students). This review, in turn, forms the foundation of their Capstone Proposal and Capstone Project (TLL and LST students) or 30-40 page paper (ECS students) that are required for the completion of the M.S.Ed degree.
Taught by: Aplenc/Posecznick/Staff
Activity: Seminar
0.5 Course Units
EDUC 669 Seminar in Practitioner Inquiry  
This course is designed as a collaborative investigation into practitioner inquiry and the work of inquiry communities in K-16 and graduate/professional school settings, professional networks and community-based organizations. The focus is on conceptual and methodological frameworks and methods of practitioner inquiry and the contexts, purposes and practices of differently situated inquiry communities. Participants will explore a range of practitioner inquiry traditions and texts that go by terms such as action, collaborative, critical, community-based, participatory, autobiographical, emancipatory, narrative and pedagogical. They will also conduct an inquiry based on their particular interests and contexts. The course will emphasize practitioner inquiry that intentionally engages issues of equity, access and culture in educational settings.  
Taught by: Campano  
Course offered spring; even-numbered years  
Activity: Lecture  
1.0 Course Unit

EDUC 670 Second Language Development  
This course provides an introduction to theory and research on second/multilingual language development. Linguistic, cognitive, social, political, and educational perspectives are considered through readings, lectures, activities, and assignments. Students gain an understanding of research design, methodology, and documentation through guided analysis of published studies and an opportunity to design research projects.  
Taught by: Butler/Matsumoto  
Course usually offered in spring term  
Activity: Lecture  
1.0 Course Unit

EDUC 671 Adult Literacy  
Teaching reading/writing/literacy to adults for whom English is a first or second language. Topics include contrasting conceptions of literacy and learning; participatory literacy programs; instruction and curriculum for adults with diverse cultural and linguistic backgrounds and nationalities; alternative/performance-based assessment; and practitioner research in adult literacy education.  
Course usually offered in fall term  
Activity: Lecture  
1.0 Course Unit

EDUC 673 Curriculum & Pedagogy in International Contexts  
This course explores the problems, issues, and approaches to teacher preparation and the development of curricula and instructional materials, particularly (though not exclusively) in developing country contexts through a seminar styled class and a hands-on semester long project.  
Taught by: Ghaffar-Kucher, Ameena  
Course usually offered in spring term  
Activity: Seminar  
1.0 Course Unit

EDUC 674 Curriculum and Materials Development for English Language Teaching  
This course is designed for those who are ready to develop skills in curriculum, course and materials design. The objectives of the course include learning how (a) to become able to analytically respond to readings on curriculum, course and materials development; (b) to analyze the sociocultural, economic, linguistic and occupational contexts of language teaching programs; (c) to design an original semester-long ESL/EFL course; (d) to design original pedagogical tasks and supplementary materials; and (e) to design in a group. EDUC 527 & EDUC 537 provide essential background for this advanced course. Prerequisite: Permission from instructor is required.  
Taught by: Wagner,S  
Course usually offered in fall term  
Prerequisite: EDUC 527 AND EDUC 537  
Activity: Lecture  
1.0 Course Unit

EDUC 675 Structure of English  
The goal of this course is to increase students' explicit knowledge of selected isolatable parts of the English language and to identify their pedagogical applications with respect to the needs of learners of English as a foreign/second language. This goal is realized through an investigation of: 1)frequently occurring linguistic forms and the rules and principles that govern the way that these forms can be combined and ordered; 2) the meanings that can attach to these forms; and 3) the social functions associated with these forms.  
Course usually offered in spring term  
Activity: Lecture  
1.0 Course Unit

EDUC 676 Discursive Approaches in Intercultural Communication  
This course offers a discourse-based approach and hands-on introduction to the field of intercultural communication, from the micro-level of interpersonal interaction to the macro-level of institutional practice. Through a series of readings and service learning projects in multicultural settings, students will hone their observational and analytic abilities, while gaining an appreciation of and facility for participating in the communicative diversity around them. Topics will include a repertoire approach to examining language in use, interpretation and metacommentary, and the possibility of intervention to facilitate new communicative patterns.  
Taught by: Rymes  
Course usually offered in fall term  
Activity: Lecture  
1.0 Course Unit

EDUC 677 Information and Communications Technologies for Education and Development in Global Perspective  
The importance of the relationship between education, technology, and social-economic development is increasing in the U.S. and around the world. What are new information and communications technologies (ICTs), how are they being deployed, and for what reasons? Are new ICTs a means for delivering skill-based or distance education information, and in what ways are they becoming a part of societies today? What constitute, then, ICTs for Development (ICT4D), and what role do they play in societies that are ‘industrialized’ and ‘developing’.  
Taught by: Wagner  
Course usually offered in spring term  
Activity: Lecture  
1.0 Course Unit
EDUC 678 Gender and Sexuality in Education
This seminar gives an overview of the intersections and interplay among gender, sexuality, and education through theory, practice, current discussions, and analysis of varied contexts in English speaking countries (e.g. the United States, Canada, Great Britain, and Australia). After examining the theoretical foundations of genders and sexualities, we will look at their histories and effects in K-12 schools and colleges and universities as well as explore special topics.
Taught by: Cross
Course usually offered in fall term
Also Offered As: GSWS 678
Activity: Seminar
1.0 Course Unit

EDUC 679 Reading, Writing, and Critical Thinking for Applied Linguistics
This course offers international students a hands-on introduction to the practices that constitute academic language use in the fields of TESOL/ICC through a variety of scholarly readings that also serve as an introduction to multilingual writing research. Participants will focus on developing skills and strategies that will strengthen their existing expertise in the following areas: locating, reading, and critiquing academic articles; producing graduate-level written work across a variety of genres; and participating in oral activities.
Taught by: Pomerantz/Box/Kozlova
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 680 Evaluation of Policies, Programs and Projects
Basic evaluation policy and methods for determining nature and severity of problems, implementation of programs relative effects and cost-effectiveness of interventions to reduce problems, design and conduct of evaluation studies in education, social services, crime and delinquency, in the U.S. and other countries.
Taught by: Boruch
Course usually offered in fall term
Prerequisite: EDUC 667
Activity: Lecture
1.0 Course Unit

EDUC 681 Literacy and Illustrated Texts: Picturebooks, Comics and Graphic Novels
Students develop familiarity with illustrated materials - including picture books, comics, and graphic novels - while cultivating understanding of how illustrated texts like these can be used in 21st century elementary/middle/secondary literacy curricula. Students complete individualized and group course projects that focus on illustrated texts in specific classroom, research, critical, theoretical, home, community, and/or professional contexts.
Taught by: Thomas
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 682 Qualitative Modes of Inquiry
This course surveys the field of qualitative research and focuses on foundational philosophies of and approaches to qualitative research. The course focuses on the stages of qualitative research including the development of researchable questions, research designs, conceptual frameworks, methodological stances, data collection and analysis and instrument design and implementation.
Taught by: Ravitch/Strong/Staff
Course offered summer, fall and spring terms
Activity: Lecture
1.0 Course Unit

EDUC 683 Survey Methods & Design
This course covers the methods and design of field surveys in the U.S. and other countries in education, the social sciences, criminal justice research, and other areas. It covers methods of eliciting information through household, mail, telephone surveys, methods of assuring privacy, enhancing cooperation rates and related matters. Finally, the fundamentals of statistical sampling and sample design are handled. Much of the course is based on contemporary surveys sponsored by the National Center for Education Statistics and other federal, state and local agencies.
Taught by: Boruch
Course usually offered in spring term
Prerequisite: EDUC 667
Activity: Lecture
1.0 Course Unit

EDUC 684 Measurement & Assessment
Analysis of primary assessment concepts including basic theoretical principles, types and purposes of assessment devices, levels of measurement, standardization and norming, and methods to support reliability and validity; special focus on appropriate test interpretation, fairness, measurement of change, and incremental validity; application of standards for test development, usage, and critique in education, health care, public policy, and scientific inquiry.
Taught by: Victor
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 685 Career Counseling and Development
Career development is studied as an aspect of general development theories of educational and vocational choice and adjustment; psychological aspects of occupations. Prerequisite: Permission needed from instructor.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit
**EDUC 686 Counseling Interventions**
This course will provide an overview of the approaches to various psychological interventions with a focus on theory, key concepts, and therapeutic processes. The purpose of this course is to develop a knowledge base of the underlying principles and approaches of psychological interventions. Students will be required to demonstrate a working knowledge of the key concepts of the psychotherapeutic approaches presented, distinguish between different approaches, and make a preliminary rationale for the use of a particular approach. Students also are expected to develop a critical perspective and demonstrate the ability to analyze theories and interventions. 
Prerequisite: EDUC 721
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

**EDUC 687 Counseling Ethics & Professional Principles**
This course will provide the student with an opportunity to learn and incorporate the multifaceted roles of the professional counselor and assist the student in developing a sense of their professional identity. In this process, the course will focus on the professional role of the counselor; ethics and their application across situations and professional settings; and gaining strong professional communication abilities. The primary goals of the course are to develop the student's awareness of their roles and responsibilities as a professional, incorporating ethical standards as a counselor, increasing professional communication skills, and understanding the roles of counselor across professional settings. 
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

**EDUC 688 Counseling Practicum**
Seminar and lab to accompany supervised practicum or apprenticeship experiences in schools, colleges, or community agencies. Placement to be arranged by instructor.
Two terms: student must enter first term.
Activity: Lecture
1.0 Course Unit

**EDUC 689 Contemporary Issues in Mathematics Curriculum**
Educational leaders and policy makers in the U.S. have long used curriculum reform to drive change in K-12 teaching and schooling practices. This course examines the assumptions underlying this approach and examines the related research evidence.
Taught by: Remillard
Course offered spring; odd-numbered years
Activity: Seminar
1.0 Course Unit

**EDUC 691 Core Methods in Educational Data Mining**
Students learn to execute core educational data mining methods in standard software packages, the limitations of existing implementations of these methods, and when and why to use these methods. The course will also cover how EDM differs from more traditional statistical and psychometric approaches. Prerequisite: Prior experience with either statistics or computer science recommended.
Taught by: Baker
Course usually offered in spring term
Prerequisite: EDUC 721
Activity: Lecture
1.0 Course Unit

**EDUC 692 Education Policy Issues**
This course is an introduction to the process of conducting educational research. Its purpose is to help students learn to approach problems like researchers by examining and critiquing existing research and developing coherent 'researchable' questions. Students will carry out a substantial independent project where they will develop elements of a research proposal.
Taught by: Maynard
One-term course offered either term
Activity: Lecture
1.0 Course Unit

**EDUC 693 Student Development in College Environments**
An overview of college student development theory is offered in this course. Specifically, three families of theory are explored: 1) Psychosocial and identity, 2) cognitive-structural, and 3) environmental. The theories are discussed in terms of their foundations, constructs, and applicability to work in various functional areas of higher education.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

**EDUC 694 Organization and Administration of Intercollegiate Athletics**
Athletics play a critical role at colleges and universities. This course examines the role of intercollegiate athletics, how they are structured, what educational purposes they serve and how such programs influence the social and academic development of students.
Taught by: Weaver/Staff
One-term course offered either term
Activity: Lecture
1.0 Course Unit

**EDUC 695 International Educational Development in Practice: Tools, Techniques and Ethics**
This course covers the broad arena of international educational development practice by introducing students to a variety of tools used in international educational development work. It is a required course for IEDP Masters students and is offered in the Fall semester only.
Coursework is built around the project cycle and will acquaint you with current approaches to development and accompanying tools employed by a variety of international development organizations. Specifically, you will gain skills to determine how to gather adequate information, interpret information and put this information into clear and helpful frameworks for formulating recommendations for action. To learn these skills, you will work in small groups on a technical proposal throughout the semester. Throughout the semester, we will seek a more nuanced understanding of the general context and the role of institutions in global development work, while being aware of local realities and ethical issues that make development as contested locally as it is at national and global levels. Development from this perspective is not primarily a technical enterprise, although it does require skill with 'techniques'. Rather it involves a process of heralding the best available information to facilitate the mobilization of resources and people to engender development - a development process whose focus is broadening people's capacities, opportunities, choices, and access to social justice.
Taught by: Ameena Ghaffar-Kucher
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
EDUC 696 In/formal Learning Experience Internship
The In/For mal Learning Experiences Internship is a two-semester course that meets throughout the academic year to cover theory, research, and practice of informal learning. The internship is undertaken from October to March each academic year in one of our partnership institutions and includes about 120 hours of field work. The course is designed to provide background readings, a discussion forum of central issues in informal learning, and a place to share and exchange internship experiences. This course will be required for all LST MSEd and TLL MSEd students as part of the required Internship Program.
Two terms. Student must enter first term.
Activity: Lecture
1.0 Course Unit

EDUC 698 Politics of School Reform
In this seminar, we'll explore the political causes and consequences of school reform in the post-Brown era. Coverage will be eclectic so as to give participants a broad, interdisciplinary background in the field. We'll draw primarily from the politics of education literature, but we'll reach beyond and examine works from political science, sociology, and history. Rather than the standard categories organizing this scholarship—by level (local, state, federal), decision-making body (school board, legislature, judiciary), or issue area (standards, decentralization, funding)—we'll structure our exploration by considering fundamental conclusions about the politics of school reform: (1) School reform as contained politics, (2) School reform as transgressive politics, (3) School reform as collaborative politics, and (4) Institutions, ideas, and interests as constraints on the politics of school reform.
Taught by: Quinn
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 700 Craft of Ethnography
This course is designed to follow after Ethnographic Research Methods (EDUC 721). In the introductory course, students learned how to use qualitative methods in conducting a brief field study. This advanced level course focuses on research design and specifically the craft of ethnographic research. Students will apply what they learn in the course in writing a proposal for a dissertation research project. Prerequisite: Must have completed EDUC 721 or equivalent introductory qualitative methods course.
Taught by: Hall
Course not offered every year
Also Offered As: ANTH 707
Activity: Lecture
1.0 Course Unit

EDUC 702 Conceptual Models of School Leadership & Organization
This graduate seminar has three components. One, we will explore contemporary theories of organization as frameworks for understanding how classrooms, schools, and districts function. Two, we will employ a case method approach on several real-world cases developed by Harvard Business School and the Public Education Leadership Project at Harvard University. Three, we will learn from and interact directly with local education leaders and their communities through a series of school leadership study tours.
Taught by: Quinn
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 703 Advanced Qualitative and Case Study Research
This course explores epistemological and methodological choices and stances in qualitative research as well as advanced research methods including qualitative research design and concept mapping, sampling/participant selection, interviewing, coding and data analysis, instrument development and triangulation techniques.
Taught by: Ravitch
Course usually offered in spring term
Prerequisite: EDUC 682
Activity: Lecture
1.0 Course Unit

EDUC 704 Economics of Higher Education
Covers selected topics in the economics of higher education, including investment and consumption theories, cost functions, university investment practices and principles, and academic labor markets.
Taught by: Presley
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 705 Proseminar in Research & Analysis
This course is designed to provide students with the skills, information, and resources that are necessary to develop a research proposal. This course will also examine strategies for completing proposals and dissertations. A variety of research designs and approaches to educational research will be explored. Through this course, students will become both informed consumers of research and effective designers of research. Prerequisite: Permission needed from department.
Taught by: Perna/Hartley
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 706 Culture/Power/Subjectivities
This doctoral level course will introduce students to a conceptual language and theoretical tools for analyzing and explaining the complex intersection of racialized, ethnic, gendered, sexual, and classed differences and asymmetrical social relations. The students will examine critically the interrelationships between culture, power, and subjectivity through a close reading of classical and contemporary social theory. Emphasis will be given to assessing the power of various theories for conceptualizing and explaining mechanisms of social stratification as well as the basis of social order and processes of social change.
Taught by: Hall
Course not offered every year
Also Offered As: ANTH 704, URBS 706
Prerequisite: EDUC 547
Activity: Lecture
1.0 Course Unit
EDUC 708 Schools as Organizations
Schools are places of learning - but they are also workplaces, teachers are employees and teaching is a job. This in-depth doctoral-level course focuses on theory and research concerned with the organizational and occupational side to schools and teaching. It draws from multiple fields and perspectives, including: organizational theory; the sociology of organizations, occupations and work; educational administration; and school leadership. The objective is to have students understand and evaluate a series of different perspectives from theory, research and policy concerned with the character of the teaching occupation and the organization of schools.
Taught by: Ingersoll
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 709 Peer Relationships in Childhood and Adolescence.
This course focuses on various aspects of children’s peer relationships, especially with regard to their significance for human development. The roles of family, community, and socio-cultural contexts in the development of interpersonal competence and relationships are discussed. The course explores possible intervention strategies to help children with peer relationship difficulties.
Taught by: Chen
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 710 Methods of Discourse Analysis
This course introduces several methodological approaches that have been developed to do discourse analysis. The course intends primarily to provide students with various methodological tools for studying naturally-occurring speech. Assignments include both reading and weekly data analysis exercises. Prerequisite: This course is designed to follow after Qualitative Modes of Inquiry (EDUC 682) and as such it is suggested that students have some background in qualitative methods before enrolling.
Taught by: Rymes
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 711 Education Policy Research Practicum
This course will partner students with educational leaders to conduct client-based, applied education research projects. Students will engage in original empirical analysis, learning how to use empirical evidence to support the work of policymakers and practitioners, and will complete written policy reports and present their findings to clients.
Course usually offered in spring term
Prerequisite: EDUC 591 AND (EDUC 667 OR EDUC 751)
Activity: Seminar
1.0 Course Unit

EDUC 713 Responding to Literature: An Interdisciplinary Perspective
This course deals with the ways in which readers respond to and transact with literary texts, and aims at helping students understand the nature of the variety of ways in which literature interfaces with our lives. Three different types of discourse are read: literary criticism; empirical research on response to literature; and literary texts themselves. Various types of literary criticism are considered, including (but certainly not limited to ) what is commonly called 'reader response criticism'; text-based criticism; and criticism that contextualizes literature socially and historically. The empirical research on response deals with ways in which readers of various ages interact with literature, mostly in school settings; some attention is given to instructional design and critique of methodology. The literary texts range from picturebooks to literature for young adults.
Taught by: Thomas
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 714 Law and Higher Education
An examination of the most important state and federal laws governing U.S. colleges and universities, with an emphasis on current legal problems.
Taught by: Roth
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 715 Case Studies in Higher Education Administration
This course is designed to enhance understanding of decision making in higher education administration. Based on case studies, students will analyze, propose policies, generate action plans and implementation procedures, and assess the potential consequences of their administrative decisions.
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 716 Public Policy Issues in Higher Education
A study of the most influential federal and state policies, legislation and practices affecting colleges and universities.
Taught by: Finney
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 717 Professional Internship in Counseling I
The course will consist of experiential and small group learning, with a focus on practicing and refining skills related to advanced work in psychological services, including the application of various techniques of counseling, ethical considerations, and critiques of live and simulated counseling sessions through role-playing, audio and visual taping.
Prerequisite: Formal admission into Professional Counseling and Psychology M. Phil. Program.
Taught by: Watts
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
EDUC 718 Professional Internship in Counseling II
Lab seminar group with a seminar group leader is the second component of the Professional Counseling Internship course. Lab will provide students with exposure to others' experiences in different types of internships, working with a variety of different client populations. Prerequisite: Students must be enrolled in the M. Phil. Ed. in Professional Counseling Program. A primary goal of this course is to help each student refine his/her evolving knowledge of self as a provider of psychological services to others. Students will also evaluate contexts of practice and the professional skills, ethics and practices inherent in effective provision of counseling and psychological services. This course consists of two components: CLASS MEETINGS, during which the full group will meet to address issues related to work in various internships, as well as discuss the development of advanced counseling skills and issues; and, LAB SEMINAR GROUP which consists of 7-8 masters students with a seminar group lab leader. Prerequisite: Students must be enrolled in the M. Phil. ED. in Professional Counseling Program. Taught by: Watts Course usually offered in spring term Activity: Lecture 1.0 Course Unit

EDUC 719 Research on Teacher Education and Learning to Teach
This course focuses on issues of research, practice, and policy related to teacher education at the preservice, induction, and continuing education levels in the United States and internationally. The course is designed as a seminar to engage participants in the study of teacher education through interaction with researchers and policy-makers, through in-depth study of critical issues in the field, and through engagement with teacher education programs. It is anticipated that each course participant will develop a literature review focusing on one or more topics related to critical issues in teacher education. Taught by: Reisman/Staff Course usually offered in fall term Activity: Lecture 1.0 Course Unit

EDUC 720 Teachers and Teaching Policy
Explores research, policies, and practices that promote a high-quality teacher workforce, and effective instruction. Topics include recruitment, retention, mentoring, induction, professional development, certification, value-added, merit pay, etc. Appropriate for students from different programs, including education, social/public policy, psychology, political science, sociology, business, and current and future teachers and school leaders. One-term course offered either term Activity: Lecture 1.0 Course Unit

EDUC 721 Ethnographic Research Methods
A course in ethnographic participant observational research; its substantive orientation, literature, and methods. Emphasis is on the interpretive study of social organization and culture in educational settings, formal and informal. Methods of data collection and analysis, critical review of examples of ethnographic research reports, and research design and proposal preparation are among the topics and activities included in this course. Prerequisite: This course is designed to follow after Qualitative Modes of Inquiry (EDUC 682) and as such it is suggested that students have some background in qualitative methods before enrolling. Taught by: Hall/Strong Course not offered every year Activity: Lecture 1.0 Course Unit

EDUC 722 Reforming Philadelphia Schools: A Research Practicum on Community Engagement
The course offers a unique opportunity for students to directly contribute to school improvement efforts in Philadelphia. Teams of students will consult with a local public school with the goal of conducting actionable research with broad policy relevance to the community engagement in education sector. Teams will submit a final report and present their findings at a public venue. The course is designed as a research practicum because understanding community engagement in education as it occurs in practice will provide insights that are unlikely to surface if we merely considered it in the abstract. The experience will provide students a set of skills appropriate to the design, interpretation, and presentation of research on community engagement in education. But we are much more ambitious in our aims. Our consultancies are also meant to help a local community solve an immediate problem of educational relevance. The course is suitable for graduate and undergraduate students with an interest in education, policy, and civil society. Taught by: Quinn One-term course offered either term Activity: Lecture 1.0 Course Unit

EDUC 723 Multicultural Issues in Education
This course examines critical issues, problems, and perspectives in multicultural education. Intended to focus on access to literacy and educational opportunity, the course will engage class members in discussions around a variety of topics in educational practice, research, and policy. Specifically, the course will (1) review theoretical frameworks in multicultural education, (2) analyze the issues of race, racism, and culture in historical and contemporary perspective, and (3) identify obstacles to participation in the educational process by diverse cultural and ethnic groups. Students will be required to complete field experiences and classroom activities that enable them to reflect on their own belief systems, practices, and educational experiences. Taught by: Gadsden Course usually offered in fall term Also Offered As: AFRC 723 Activity: Lecture 1.0 Course Unit
EDUC 724 Literacy: Social and Historical Perspectives
A review of the cross-cultural and historical literature on writing and reading with emphasis on the identification of norms and practices which affect the teaching and learning of reading and literacy today. Special attention to the social functions of literacy in work, home, and school settings and to myths regarding the consequences of literacy for cognition, socio-economic mobility, and predictability, and the predictability of citizen behaviors. Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 725 Advanced Professional Practice in Communities, Agencies and Organizations
The purpose of this course is to expand the student's awareness of the multifaceted responsibilities and roles of school counselors in primary and secondary school settings. Through readings, class discussions and guest lectures, it is intended that students will acquire additional competencies and a broader appreciation for professional issues confronted by school counselors and varied responsibilities they have in helping students focus on academic, personal, social and career development in an effort to achieve success in school and lead fulfilling lives. An important emphasis of this course will be on school counseling from an ecological and multicultural perspective. Prerequisite: Students must be enrolled in the M. Phil. ED. in Professional Counseling Program. Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 726 Doctoral Foundations of Teaching and Learning
The course explores theoretical and empirical perspectives on the questions: What is knowledge and knowing? What is learning? What is teaching? How do contexts influence teaching, knowing and learning? A central goal of the course is to encourage students to consider these questions and their interconnections for themselves, to examine ways scholars and practitioners have answered them, and to develop an analytical framework to use in examining contemporary practices in settings that include formal and informal, urban and international. Taught by: Kafai/Remillard/Yoon/Reisman/Staff
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 727 Education, Culture and Society
This course surveys basic issues in the philosophical and social foundations of education, addressing basic questions about the purpose of education, mostly through reading primary texts. Intended for incoming doctoral students. Taught by: Ben-Porath
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 728 Advanced Public Policy Seminar in Higher Education
Students explore higher education in one state and collaboratively develop a case study to understand the relationship between state policies and higher education performance. Through readings, interviews and student presentations, students learn about the context, the performance, and the public policies influencing higher education performance. Taught by: Finney, J
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 729 International Educational Development Doctoral Proseminar
The IEDP Doctoral Proseminar covers the broad arena of international educational development. Drawing on the research experiences of the faculty and of the enrolled doctoral students, the course allows for the analysis of intellectual and technical challenges of working in international education and development, especially around issues of social and public policy. Taught by: Ghaffar-Kucher,Ameena & Wagner,Dan
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDUC 731 Risk, Resilience, and Prevention Science
Examines the definition and measurement of risk and resilience from the perspectives of developmental psychology and ecological theories of development; introduces students to the conceptual and practical integration of intervention and prevention sciences to address social, emotional, educational, and health problems across childhood. Taught by: Wolf
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 732 Doctoral Proseminar on Education Research
This seminar is designed to enable first-year doctoral students at Penn GSE to understand the broad and diverse field of educational research and the driving debates within the broader field and sub-fields. A primary goal of the course is to support students' developing identities as educational scholars and to help them develop the intellectual skills and stances they will draw upon in doctoral work. We will pay particular attention to the multidisciplinary nature of education research, how individual disciplines and theoretical traditions approach education problems in complementary or contrasting ways, and how educational research functions at the intersection of policy and practice. The seminar seeks to encourage an intellectual community among doctoral students across Penn GSE divisions and programs and to build familiarity with professional norms and expectations. This seminar is intended to build on and complement related courses and activities that are offered by individual Penn GSE divisions. Taught by: Varies
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
EDUC 733 Students’ Transitions from High School to College and to the Job Market
Scope and Audience: This course is appropriate for both masters level and doctoral level students in fields relevant to education, policy, or social science. Special emphasis will be given to develop research proposal that address gaps detected in the literature pertaining to issues and factors affecting students’ transitions from high school to college and to the job market. The ultimate goal of the coursework is to critically analyze and have informed opinions of the state of knowledge regarding factors affecting students’ college choice, access, and success, as well as how these choices impact their job market prospects. Course Description and Objectives: This course examines existing research on the analysis of college access and success, the transition from high school to college, community colleges, labor market opportunities, and the policies, interventions, and initiatives that have been developed to address inequities and inequities in students’ college plans, academic preparation, and financial access. Particular attention will be paid to issues of poverty, race, and ethnicity. The topics studied are informed by sociological, economic, and anthropological theories. Given that community colleges enroll close to 50% of total undergraduate students, and serve as the primary provider of college education for underrepresented, first-generation, low-income, and minoritized students, their role as a potential equalizing engine in the American higher education system will be studied. Specifically, we will study the diverse set of theoretical frameworks and methods that researchers have been using to understand these institutions and will assess the extensive evidence we have to date regarding their effects on education and labor market outcomes. Expectations: Students are expected to be engaged intellectual thinkers and active participants in the pursuit of knowledge, not just passive recipients of information. This course is reading intensive and the majority of class time will be spent in a seminar format discussing the assigned readings. There will be opportunities for students to take turns leading discussion sessions using a set of guiding questions generated by the students own creative and original thinking with the help of the instructor. These student-professor led discussion sessions will occupy about half of our class time while the other half will be lecture and presentation by the instructor along with presentation of work in progress of final papers to gain collective feedback.
Taught by: Manuel Gonzalez Canche
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 734 Masters Proseminar in International Educational Development
This course covers the broad professional arena of international educational development. It is designed to provide an analytical perspective on applied research and policy as undertaken by UN, donor and non-profit agencies, with a focus on developing countries. Such work will require analyzing intellectual and technical challenges of working in international education and human development, especially around issues of social and public policy as developed through writing policy briefs. Several specialists and speakers will be invited as guests throughout the semester.
Taught by: Alec Gershberg
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 735 Tutorial Work in Reading/Writing/Literacy
Tutorial in Reading Writing and Literacy, is designed for participants to gain knowledge and insight into the major challenges facing learners in their quest for proficiency in literacy. The course participants investigate and develop instructional plans for the literacy needs of learners in pre-K to 12th grade settings. Course participants will investigate the roles and responsibilities of the literacy specialist as related to identifying the needs of learners and planning appropriate instruction to meet those needs. Prerequisite: Permission needed from instructor.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 736 Quasi-Experimental Design
Quasi-experimental design is the set of statistical procedures designed to reduce bias inherent to the analysis of observational data. This course covers the most pressing quasi-experimental techniques employed in the social sciences, with an especial emphasis on education issues. The class combines lecture and lab exercises complemented with real-life examples.
Taught by: Gonzalez Canche
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 737 Research in Teaching Writing
This doctoral seminar explores theories and research on writing, investigating current and traditional areas of inquiry in the field of writing studies. As class participants review and analyze theoretical and empirical literature on writing and teaching writing, the seminar will offer students opportunities to compose texts and reflect on their roles as writers in the academy through collaborative inquiry. Participants will think together about the purposes, functions, and consequences of writing in diverse communities and across school and out-of-school settings. The course will pay particular attention to how writing is shifting in a mobile, networked, global age, and how multimodality, interactivity, and hybridity characterize our composing lives.
Taught by: Stornaiuolo, A
Course offered spring; odd-numbered years
Activity: Lecture
1.0 Course Unit

EDUC 738 Advanced Topics in Monitoring & Evaluation in International Education Development
This is a sequel to the Principles of M&E course offered in the fall. The course will review both theories as well as methods of program evaluation in a deeper way using papers and technical reports as case studies, with special emphasis on international education development.
Taught by: Thapa
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 739 Poverty and Child Development
The goal of this course is to help students develop a coherent understanding of the ways in which poverty affects families and children, the different needs of families and children across different developmental stages of childhood, and the intersection between poverty and education.
Taught by: Wolf
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
EDUC 744 Building Inclusive Communities in Higher Education
This course provides students an opportunity to apply their knowledge related to the practice of higher education administration. The goal of the course is to advance students' understanding of climate on today's campuses and to utilize diverse methods to create inclusive spaces on campus for all institutional stakeholders.
Taught by: Tiao
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 747 Social and Statistical Network Analysis
Network analysis aims to find structure among a variety of connections/settings. This course highlights the inferential/statistical aspect of network analysis which overcomes its main limitation of being depicted as a descriptive tool. Since applications of network analysis to education research are emerging, course participants will gain a competitive job-market advantage.
Taught by: Gonzalez Canche
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 751 Introduction to Applied Quantitative Methods for Education Research: Pre-K to 20
An introduction to the interpretation and use of data about education policy issues through the use of computer-assisted methods of statistical analysis. Emphasis is on the implications for educational policy and research design.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 764 Cognitive Processes
Basic concepts, theory, and research in cognitive science, problem-solving, psycholinguistics, memory, perception and social cognition. Special topics may include reading, bilingualism, computer modeling, and cognitive theory applied to education and non-education settings.
Taught by: Frye
Prerequisite: EDUC 568
Activity: Lecture
1.0 Course Unit

EDUC 766 Advanced Professional Counseling Interventions
This course will focus on advanced issues in the clinical practice of professional psychology with children, adolescents and adults where students will practice clinical skills in role-played therapeutic situations. Students will be using this class as preparation for the formal clinical examination required by all Master of Philosophy in Education students prior to graduation from the Professional Psychology and Counseling program. Prerequisite: Admission into Professional Counseling M. Phil. Ed. Program
Taught by: Morris/Stevenson
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 767 Regression and Analysis of Variance
This course covers design of controlled randomized experiments, analysis of survey data and controlled field experiments, including statistical models, regression, hypothesis testing, relevant data analysis and reporting.
Taught by: Rovine/Victor
One-term course offered either term
Prerequisite: EDUC 667
Activity: Lecture
1.0 Course Unit

EDUC 768 Measurement Theory and Test Construction
Design of ability, achievement, and performance measures such as those applied for high-stakes decision making in large-scale assessment and for diagnosis and classification of individuals; advanced true-score and item response theory; item formatting, analysis, selection, calibration, linking, and scaling; analysis of reliability for continuous, ordinal, nominal, and composite scales; analysis of differential item functioning; unidimensionality, and local independence; model contrasting, test equating, and scaling for longitudinal assessment; standards and cut-point setting.
Taught by: McDermott
Course not offered every year
Prerequisite: EDUC 684
Activity: Lecture
1.0 Course Unit

EDUC 770 New Models for Postsecondary Education
Taught by: Pritchett
Course not offered every year
Activity: Seminar
1.0 Course Unit

EDUC 771 Factor Analysis and Scale Development
Advanced measurement theory; exploratory and confirmatory item factoring and clustering for self-report, observational, rating, performance, and personality instruments; factoring of dichotomous and ordered categorical data, full-information factoring; scaling procedures, hierarchical structure, full-information bifactor structure, invariance, generality, reliability, validity, interpretation, and scientific reporting.
Taught by: McDermott
Course usually offered in fall term
Prerequisite: EDUC 684
Activity: Lecture
1.0 Course Unit
EDUC 777 Structural Equations Modeling
Theory and application of means modeling and longitudinal analysis through structural equations, including observed variable regression with multiple equations simultaneously estimated, confirmatory factor analysis measurement models using multiple observed indicators to define sets of latent variables, and regression relationships among multiple latent variables; advanced applications for repeated measures and multilevel growth modeling in educational and social science research. Prerequisite: Introductory Statistics
Taught by: Rovine
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 782 Assessment for Counselors I
A critical analysis of tests and clinical methods in assessment as related to theories of intelligence, and includes: 1) factors influencing assessments; 2) assessment theory; 3) assessment practices; 4) interpretations of assessments. Prerequisite: Admission to Professional Counseling M. Phil. Ed. Program.
Activity: Lecture
1.0 Course Unit

EDUC 785 Selected Topics in Professional Psychology
Consideration of research and theory, on selected advanced topics. Prerequisite: Admission to Counseling & Mental health Services or Professional Counseling M. Phil, Program
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 806 Narrating the Self
This seminar explores, in some linguistic detail, how narrators can partly construct their selves while telling autobiographical stories. The seminar addresses three questions: What is the structure of narrative discourse? How might we construct ourselves by telling stories about ourselves? If narrative is central to self-constructions, what is 'the self'? Taught by: Rymes
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 829 Policy Research
Study of the roles of scientific inquiry in development and assessment of contemporary educational and social policy. Analysis and application of foundational research, statistical and psychometric methods to inform a variety of policy topics and related issues and problems encountered in policy formation and evaluation. Taught by: Rovine
Course usually offered in spring term
Prerequisite: EDUC 667
Activity: Lecture
1.0 Course Unit

EDUC 834 Theories of Reading
This course is designed as a collaborative inquiry toward constructing and elaborating theories of practice as teachers and/or researchers of reading. Using a seminar or working group format, participants explore the relationships among theory, reading, practice, pedagogy and research. The course's conceptualization is informed primarily by (1) frameworks from critical, feminist and culturally-centered literatures which foreground issues of equity, representation, and ethics; and (2) current conversations in the field of literacy where the definitions, purposes, and practices of reading have been made problematic. It also invites participants to engage the notion that knowledge for teaching and research comes from inquiry into the questions, issues, and contradictions that arise from everyday life. The course provides historical lenses for comparative analyses of theoretical frameworks and research paradigms as well as opportunities to investigate participants' individual histories as well as teaching and research interests. Taught by: Campano
Course offered fall; even-numbered years
Activity: Lecture
1.0 Course Unit

EDUC 836 Issues in Instructional Leadership in Reading and Writing
Participants will consider current critical issues in Reading, Writing, and Literacy, such as: improving accountability and assessment; approaches to professional development and curriculum development; and the use of scientifically 'valid' research to advance literacy learning. Taught by: Waff
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDUC 838 Applied Research & Reporting
Hands-on experience conducting applied research. Students will be guided through a research project of relevance to education or social policy chosen by the student, with assistance from the instructor. The research entails analysis of one or more public or quasi-public use data sets, such as the National Longitudinal Survey of Youth; the National Longitudinal Survey of Youth Child Supplement; The Teenage Parent Demonstration Data Base; the National Profile of Child Care Settings Data Base; or the National Post Secondary Student Aid Survey. The students will prepare journal-length papers based on their research and respond to the reviews of classmates and the instructor. Prerequisite: Competence in basic statistics and computer literacy.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
EDUC 845 Seminar in Microethnography
This course provides an introduction to theory and method in the unified analysis of verbal and nonverbal behavior as it is culturally patterned, socially organized, and socially organizing in face-to-face interaction, in an approach that integrates participant observation with the detailed analysis of audiovisual records. Students read relevant literature in linguistic anthropology, interactional sociolinguistics, conversation analysis, and embodiment in social interaction. Class requirements include in-class reading presentations, a small microethnographic research project, and several short data analysis reports drawing on differing levels of analysis and differing theoretical orientations. Students review and apply methods of audiovisual data collection, transcription, processing, archiving, and presentation.
Taught by: Boruch
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 860 ISHD Proseminar
This course gives students the opportunity to better understand their own psychological development and how this interacts with their scholarship and professional development. Required course for ISHD students.
Taught by: Stevenson
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 871 Randomized Trials and Experiments
This course will cover three alternatives to conventional modeling in the social sciences: (1) design and execution of field trials in education and other social sectors including criminology, (2) quasi-experiments especially contemporary research comparing results of randomized and non-randomized trials, and (3) analysis for descriptive and exploratory purposes. The course themes include causal inference, vulnerability of models applied to observational data, recent developments computer-intensive inductive approaches to data, and related matters. Although some methodological background papers will be discussed, the seminar is case study oriented with readings from contemporary research on the topics from peer reviewed journals and well-vetted reports issued by governmental and nongovernmental agencies. Cases will include work supported by IES on effects of Odyssey Math, for example, and work in the crime and justice arena. We will study the work of scholars affiliated with Penn who are actively involved in randomized and non-randomized trials, for instance, and the work of colleagues at other universities (Berkeley, Northwestern, Wisconsin, Princeton, others) and colleagues in non-profit and for profit research organizations such as Analytica, AIR, Mathematica and others that contribute to learning in this arena. Colleagues who have contributed notably to contemporary trials and related topics, and whose work we study, will be invited to present guest lectures. Seminar participants are required to read relevant papers prior to the presentations. The course is open to graduate students who have had basic statistics courses at the graduate level, and have a strong interest in evidence based policy and in studies that transcend discipline boundaries.
Taught by: Boruch
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDUC 880 Complex, Multilevel, and Longitudinal Research Models
Strategy, application, interpretation, and reporting for simple and complex factorial, repeated measures, time series, higher-order growth, unbalanced, and multiple constant and inconstant covariates designs; error covariance structure modeling, hierarchical linear modeling, multilevel cross-classification modeling, multilevel individual growth-curve modeling, multiple-group multilevel modeling, multilevel generalized linear modeling for discrete outcomes (multilevel multiple logistic regression); Receiver Operating Characteristic curve analysis; latent growth mixture modeling.
Taught by: McDermott
Course usually offered in fall term
Prerequisite: EDUC 767
Activity: Lecture
1.0 Course Unit

EDUC 881 Applied Multivariate Statistics
Multivariate strategies for hypothesis testing, prediction, and classification including multiple regression, multivariate multiple regression, canonical regression, multiple logistic regression, multiple discriminant functions, factor analysis of scaled variables, hierarchical cluster analysis, and multivariate classification analysis; computer processing, interpretation, and reporting. Prerequisite: Permission needed from instructor.
Taught by: McDermott
Course usually offered in spring term
Prerequisite: EDUC 767
Activity: Lecture
1.0 Course Unit

EDUC 890 Research Seminar in Applied Research Synthesis Methods
Issues in research design, development of a literature review, and dissertation proposal.
Taught by: Maynard
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

EDUC 901 Issues in Second Language Acquisition
This course is designed for students to be able to analyze, synthesize and discuss second language acquisition theory and research on the basis of intensive reading of work that reflects perennial and current issues in the field. Comparisons and connections are drawn from theoretical and empirical literature on second language acquisition processes, constraints, and interventions. Relevant research methods are also addressed. Topics, issues, and readings are updated each time the course is offered. Prerequisite: Permission needed from instructor.
Taught by: Butler
Course not offered every year
Prerequisite: EDUC 670
Activity: Lecture
1.0 Course Unit
Entrepreneurship program.
These courses are only for students enrolled in the Education Entrepreneurship (EDEN) program.

EDUC 917 Research Seminar: Language and Power
The course examines the relationship between language, meaning and power in their social context. The course is organized around a number of core themes; Language studies rooted in Critical Discourse analysis; The application of Bourdieu’s concepts to this field; multi modality; the growing concern with 'Superdiversity' that links Local/ Global; academic literacies, with particular reference to the writing required in students’ own contexts; and methodological issues in researching language and power, and we then bring all of this to bear on our own context under the heading 'language in education'.
Course not offered every year
Activity: Lecture
1.0 Course Unit

EDUC 920 Research Seminar in Reading and Writing
For doctoral candidates and others engaged in research and advanced professional study in the field of literacy.
Taught by: Campano
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDUC 927 Research Seminar: Language Policy and Education
Seminar participants are introduced to concepts, theories, and methods in the field of language planning and policy, which they then apply in developing their own library-based research on specific language planning cases from around the world. Cases may include: official language decisions, instructional medium choices, literacy initiatives, gender-neutral language reforms, foreign/heritage/second language pedagogy and policy, indigenous language revitalization efforts, or other language-related decisions and policies at international, national or local levels. Prerequisite: Permission needed from instructor.
Taught by: Hornberger
Course not offered every year
Activity: Seminar
1.0 Course Unit

EDUC 960 Advanced Research in Human Learning and Development
Selected topics from human learning, human development, cognitive processes, social psychology, and personality.
Taught by: Frye
Activity: Lecture
1.0 Course Unit

EDUC 980 Mixed Methods Research: Counseling & Development
This course is designed to position students to acquire a more sophisticated understanding of research methods in order to conduct and critically evaluate empirical research in applied and clinical settings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

Education - Education Entrepreneurship (EDEN)
These courses are only for students enrolled in the Education Entrepreneurship program.

EDEN 501 Entrepreneurship in Education
Entrepreneurship in Education provides an understanding of the nature of entrepreneurship related to public/private for profit and non-profit educational and social organizations. The course focuses on issues of management, strategies and financing of early stage entrepreneurial ventures, and on entrepreneurship in established educational organizations. Students will learn the fundamentals of business plan design and development. This course is only available to students in the Education Entrepreneurship program. Prerequisite: Enrollment in Education Entrepreneurship program.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDEN 502 Foundations of Education
Foundations of Education surveys basic issues in the philosophical and social foundations of education. The course addresses basic questions about the purpose of education, the appropriate treatment for children from different cultural and economic groups and the relationship between rigor and relevance. Intended for advanced Masters and doctoral students. Prerequisite: Enrollment in Education Entrepreneurship program.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDEN 503 Management in Education
Management in Education introduces the critical management skills involved in planning, structuring, controlling and leading an organization. The course provides a framework for understanding issues involved in both managing and being managed. The class develops a systems view of organizations, examining organizations as part of a context, including but not limited to environment, strategy, structure, culture, tasks, people and outputs. Students consider how managerial decisions made in any one of these domains affect decisions in each of the others. Prerequisite: Enrollment in Education Entrepreneurship program.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDEN 504 Capstone (Part 1)
The Capstone Experience is the culminating project of the EdEnt Program. Students acquire and develop the foundations for the ideation, design and launch of an innovative education venture whether entrepreneurial or intrapreneurial. The process of developing the project is an integrative one that brings together the concepts, tools, approaches and frameworks learned throughout the Program. Students start with an idea, build a business case, and then validate their idea using a series of evaluative methods and tests learned through coursework, independent research, product/service design and development activities. The Capstone Experience concludes with the presentation of a new Venture Pitch and the submission of a pro forma Business Plan suitable for presenting to prospective customers, end users, investors, funders, business partners, staff and other ecosystem stakeholders. The process equips an entrepreneur or an intrapreneur to tackle the next steps of launching their venture - whether that is building a minimally viable product, testing with customers, bringing on team members or seeking funding. Prerequisite: Enrollment Education Entrepreneurship program.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units
EDEN 505 Foundations of Teaching, Learning & Curriculum
Teaching, Learning & Curriculum explores theoretical and empirical perspectives on the questions: What is knowledge and knowing? What is learning? What is teaching? How do contexts influence teaching, knowing, and learning? A central goal of the course is to encourage students to consider these questions and their interconnections, to examine ways scholars and practitioners have answered them, and to develop an analytical framework to use in examining contemporary practices in settings that include formal and informal, urban and international. Prerequisite: Enrollment in Education Entrepreneurship program.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDEN 506 Economics of Education: Intro
This is a survey course at the introductory level designed to provide an overview of selected theoretical, conceptual and empirical perspectives on topics in the economics of education. We will apply economic principles to analyze a wide range of educational issues. This course assumes that students have no background in economics. Many of the readings will contain technical economic material, but the focus will be on the conceptual, theoretical and empirical findings of economic research within education. It is expected that you reflect on the findings we cover and how these findings may inform and relate to your educational and professional experiences, and how economic theory and empirical evidence might inform your business plan ideas. As we move through the course, you should gain a solid understanding of how economists think about and study education-related issues. Prerequisite: Enrollment in Education Entrepreneurship program.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDEN 507 Design of Learning Environments
Design of Learning Environments examines different theoretical frames and strategies related to the study and design of learning environments in school, community and online contexts. Physical, social and cognitive aspects of learning situations are considered as students evaluate current research and applications in a variety of existing educational learning environments. Prerequisite: Enrollment in Education Entrepreneurship program.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDEN 508 Technology Strategy
Technology Strategy is designed to meet the needs of future managers, entrepreneurs, consultants and investors who must analyze and develop business strategies in technology-based industries. The emphasis is on learning conceptual models and frameworks to help navigate the complexity and dynamism in such industries. This is not a course in new product development or in using technology to improve business processes and offerings. The class will take a perspective of both established and emerging firms competing through technological innovations, and study the key strategic drivers of value creation and appropriation in the context of business ecosystems. Prerequisite: Enrollment in Education Entrepreneurship program.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDEN 509 Marketing for Entrepreneurs
Marketing for Entrepreneurs addresses how to design and implement the best combination of marketing efforts to carry out a firm’s strategy in its target markets. Specifically, this course seeks to develop the student’s (1) understanding of how the enterprise can benefit by creating and delivering value to its customers and stakeholders, and (2) skills in applying the analytical concepts and tools of marketing to such decisions as segmentation and targeting, branding, pricing, distribution, and promotion. Prerequisite: Enrollment in Education Entrepreneurship program.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDEN 510 Evaluation for Education Innovation
Evaluation for Education Innovation explores the use of exploratory, dynamic and adaptive frameworks for the evaluation of social sector programs, services and products. The course draws upon core principles and methodologies from business, design, entrepreneurship, engineering and the social sciences to help build, assess and scale education innovations. Students will learn how to assess effectiveness, quality, and value through real-world education cases, and how to use evaluation tools to drive the development of their education ventures. Prerequisite: Enrollment in Education Entrepreneurship program.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDEN 511 Economics of Education: Entrepreneurial Finance
Entrepreneurial Finance provides a step-by-step introduction to core finance concepts in the context of new venture design and innovation implementation planning. Main areas of course focus are solution pricing, creation of a sustainable business model, and development of a robust financial model. In this course, students will learn to use financial analytical tools and frameworks to enable a venture/innovation launch. Students will build a financial model for the venture one that will assist in making critical choices and assessing the attractiveness of an enterprise to potential stakeholders. Closing the course, we will address issues of funding and fundraising strategy. The emphasis of the course is on assisting students to apply knowledge and concepts towards their personal professional and career aspirations. Prerequisite: Enrollment in Education Entrepreneurship program.
Activity: Lecture
0.5 Course Units

EDEN 513 Design of Learning Environments 2- Design Thinking
This course is structured for students to learn design thinking principles experientially. Design thinking is a critical tool and problem-solving methodology that is human-centered; values qualitative research merged with quantitative metrics; and applies prototyping to services, processes and experiences. Students will apply design thinking methods to conduct basic qualitative research and work to develop a new model for transformation on a real and relevant education challenge. This course is ideal for working professionals in the education, non-profit and social entrepreneurship sectors, wanting to apply a robust methodology that yields innovative insights and actionable results. This course is only available to students in the Education Entrepreneurship program.
Activity: Lecture
0.5 Course Units
EDEN 514 Foundations of Education - Ecosystem
Through this course, students will examine global trends impacting education and learning; analyze their own enterprise idea in the context of the global EdTech Market Landscape; evaluate one possible scenario for the future of education and generated critical questions about the implications of different scenarios; and assessed the role of different data for decision making at the education market level. Prerequisite: Enrollment in Education Entrepreneurship program.
Activity: Lecture
0.5 Course Units

EDEN 515 Capstone (Part 2)
The Capstone Experience is the culminating project of the EdEnt Program. Students acquire and develop the foundations for the ideation, design and launch of an innovative education venture whether entrepreneurial or intrapreneurial. The process of developing the project is an integrative one that brings together the concepts, tools, approaches and frameworks learned throughout the Program. Students start with an idea, build a business case, and then validate their idea using a series of evaluative methods and tests learned through coursework, independent research, product/service design and development activities. The Capstone Experience concludes with the presentation of a new Venture Pitch and the submission of a pro forma Business Plan suitable for presenting to prospective customers, end users, investors, funders, business partners, staff and other ecosystem stakeholders. The process equips an entrepreneur or an intrapreneur to tackle the next steps of launching their venture whether that is building a minimally viable product, testing with customers, bringing on team members or seeking funding. Prerequisite: Enrollment in Education Entrepreneurship program.
Activity: Lecture
0.5 Course Units

EDEN 601 Schools as Organizations
Schools as Organizations focuses on the theory and research concerned with the organizational and occupational side to schools and teaching. The course draws from multiple fields and perspectives, including: organizational theory; the sociology of organizations, occupations and work; educational administration; and school leadership. The objective is to have students understand and evaluate a series of different perspectives from theory, research and policy concerned with the character of the teaching occupation and the organization of schools. Prerequisite: Enrollment in the Education Entrepreneurship program.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDEN 602 Technology Strategy (Part 2)
Technology Strategy is designed to meet the needs of future managers, entrepreneurs, consultants and investors who must analyze and develop business strategies in technology-based industries. The emphasis is on learning conceptual models and frameworks to help navigate the complexity and dynamism in such industries. This is not a course in new product development or in using technology to improve business processes and offerings. The class will take a perspective of both established and emerging firms competing through technological innovations, and study the key strategic drivers of value creation and appropriation in the context of business ecosystems. Prerequisite: Enrollment in Education Entrepreneurship program.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

Education - Higher Education Management (EDHE)
These courses are only for students enrolled in the Higher Education Management executive program.

EDHE 501 Introduction to Doctoral Studies
Introduction to Doctoral Studies provides an introduction and orientation to the Executive Doctorate in Higher Education Management. This course highlights resources, strategies, and expectations for earning the Doctor of Education degree at Penn through GSE’s Executive Doctorate program. Discussions center on students’ background and goals, program curriculum and milestones, library resources and academic writing. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDHE 502 Contemporary Issues
By introducing the key issues confronting (primarily American) higher education, this course will encourage students to develop the capacity to identify, summarize and critique arguments and perspectives on these issues. Students will think concretely about the key research questions that need to be asked and answered to move these issues forward, and will begin to develop an appreciation for the kinds of data that are available to describe and analyze these issues. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDHE 503 Why History Matters
How an institution remembers its history, what use it makes of its important historical moments, and how the interpretation of those events divide or coalesce an institution’s stakeholders shape our understanding of the past and, often quite powerfully, shape the present. The task in Why History Matters is to use contemporary writing and original documents to sort through historical events as historians understand them and simultaneously to ask how those events shape our current views of higher education. The module argues that historical moments are rarely simply events that once happened. They matter because interpretations of the events - some of which occurred over long periods of time- are both controversial and become part of the institutional culture at an institution. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
1.0 Course Unit

EDHE 504 Introduction to Doctoral Studies
Introduction to Doctoral Studies provides an introduction and orientation to the Executive Doctorate in Higher Education Management. This course highlights resources, strategies, and expectations for earning the Doctor of Education degree at Penn through GSE’s Executive Doctorate program. Discussions center on students’ background and goals, program curriculum and milestones, library resources and academic writing. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDHE 505 Contemporary Issues
By introducing the key issues confronting (primarily American) higher education, this course will encourage students to develop the capacity to identify, summarize and critique arguments and perspectives on these issues. Students will think concretely about the key research questions that need to be asked and answered to move these issues forward, and will begin to develop an appreciation for the kinds of data that are available to describe and analyze these issues. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDHE 506 Why History Matters
How an institution remembers its history, what use it makes of its important historical moments, and how the interpretation of those events divide or coalesce an institution’s stakeholders shape our understanding of the past and, often quite powerfully, shape the present. The task in Why History Matters is to use contemporary writing and original documents to sort through historical events as historians understand them and simultaneously to ask how those events shape our current views of higher education. The module argues that historical moments are rarely simply events that once happened. They matter because interpretations of the events - some of which occurred over long periods of time- are both controversial and become part of the institutional culture at an institution. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
1.0 Course Unit
EDHE 504 Proseminar I
The purpose of Proseminar is to introduce students to the fundamentals of doctoral study: how to read scholarly materials critically, how to systematically review literature relevant to an area of inquiry, and how to formulate a focused research question (or set of interrelated questions). This course will help students conceptualize their research projects for their dissertations and assist them in formulating rough drafts of dissertation proposals. During monthly meetings, students spend much of their time developing literature reviews on their topics of interest and preparing for their dissertation proposal hearings. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDHE 505 Proseminar II
This module builds upon Proseminar I and continues to explore the fundamentals of doctoral study: how to read scholarly materials critically, how to systematically review literature relevant to an area of inquiry, and how to formulate a focused research question (or set of interrelated questions). This course will help students conceptualize their research projects for their dissertations and assist them in formulating rough drafts of dissertation proposals. During monthly meetings, students spend much of their time developing literature reviews on their topics of interest and preparing for their dissertation proposal hearings. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered summer term only
Activity: Lecture
0.67 Course Units

EDHE 506 Strategic Management Research I
Through exploring key issues related to strategic management, students will come to an understanding of the types of possible research questions that might be pursued to enhance decision-making. This module will cover a set of topics at the heart of strategic management, including management, governance, leadership, and strategic planning while maintaining focus on how the changing context of higher education influences these topics. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered fall term
Activity: Lecture
1.0 Course Unit

EDHE 507 Quantitative Methods I
This course provides an overview of basic quantitative methods applicable to applied research in higher education. Students will develop the ability to recognize good data and good evidence, including the distinctions between data and evidence within the context of institutional decision-making. The course includes attention to basic approaches to quantitative research, methods of collecting and analyzing data, and usefulness of data and analyses for decision-making, and will draw on the real problems students in the class are facing in their current jobs. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered fall term
Activity: Lecture
0.33 Course Units

EDHE 508 Qualitative Methods I
Intended to provide a survey of the field of qualitative research, this course focuses on foundational philosophies of qualitative inquiry and develops tools needed to conduct qualitative research. The course is designed to support students in developing a critical understanding of the various stages of qualitative research including the development of researchable questions, theoretical and conceptual frameworks, methodological stances and approaches, data collection and analysis plans as well as instrument design and implementation. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in fall term
Activity: Lecture
0.67 Course Units

EDHE 509 Public Policy
This module is designed to help students embrace a better understanding of the broad economic/political pressures facing colleges/universities today, the role of the state and federal governments and how these roles have changed over time, the public institutional tradeoffs related to public accountability. Through coursework, students examining one or more states in-depth, in terms of demographic, economic, and policy contexts as it relates to higher education. Course meets in Boulder, CO.
Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDHE 510 Leadership and Change
The module on Leadership explores how executives and senior managers in higher education can think strategically and communicate persuasively, act decisively, and build leadership and teamwork in their organizations. Students apply theory and models to real world cases, both contemporary and historical, from multiple industries. Students focus on building leadership and teamwork to anticipate challenges ahead of serving long-term organizational interests, executing decisions and policies with integrity, and identifying an mentoring those whose leadership will be needed in the future. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
One-term course offered either term
Activity: Lecture
0.33 Course Units

EDHE 511 Leading Small Colleges
This module focuses on strategies for the sustainability and growth of small colleges, asking what is required to improve competitive standing, particularly among top colleges. Students analyze real data from an institution to develop an action plan to address this question, with the assumptions made and questions asked to arrive at this plan carefully scrutinized during class discussion. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
One-term course offered either term
Activity: Lecture
0.33 Course Units
EDHE 512 Proseminar III
This module builds upon Proseminar II and continues to explore the fundamentals of doctoral study: how to read scholarly materials critically, how to systematically review literature relevant to an area of inquiry, and how to formulate a focused research question (or set of interrelated questions). This course will help students conceptualize their research projects for their dissertations and assist them in formulating rough drafts of dissertation proposals. During monthly meetings, students spend much of their time developing literature reviews on their topics of interest and preparing for their dissertation proposal hearings. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDHE 513 Strategic Management Research II
The purpose of this module is to build on and explore additional topics presented in Strategic Management Research I. Through exploring key issues related to strategic management, students will come to an understanding of the types of possible research questions that might be pursued to enhance decision-making. This module will cover a set of topics at the heart of strategic management including management, governance, leadership, and strategic planning while maintaining focus on how the changing context of higher education influences these topics. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDHE 514 Quantitative Methods II
The purpose of this module is to build on and explore additional topics presented in Quantitative Methods I. This course provides an overview of basic quantitative methods applicable to applied research in higher education. Students will develop the ability to recognize good data and good evidence, including the distinctions between data and evidence within the context of institutional decision-making. The course includes attention to basic approaches to quantitative research, methods of collecting and analyzing data, and usefulness of data and analyses for decision-making, and will draw on the real problems students in the class are facing in their current jobs. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in spring term
Activity: Lecture
0.67 Course Units

EDHE 515 Qualitative Methods II
The purpose of this module is to build on and explore additional topics presented in Qualitative Methods I. Intended to provide a survey of the field of qualitative research, this course focuses on foundational philosophies of qualitative inquiry and develops tools needed to conduct qualitative research. The course is designed to support students in developing a critical understanding of the various stages of qualitative research including the development of researchable questions, theoretical and conceptual frameworks, methodological stances and approaches, data collection and analysis plans as well as instrument design and implementation. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in spring term
Activity: Lecture
0.33 Course Units

EDHE 516 Higher Education Finance
This module focuses on strategies for the sustainability and growth of small colleges, asking what is required to improve competitive standing, particularly among top colleges. Students analyze real data from an institution to develop an action plan to address this question, with the assumptions made and questions asked to arrive at this plan carefully scrutinized during class discussion. Prerequisite: Enrollment in Executive Doctorate in Higher Education.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDHE 517 Equity and Diversity
The goal for this course is to provide students with a critical understanding of issues of diversity in American higher education. The module is designed around functions of higher education and its success is dependent on open and mature conversations about sometimes difficult and sensitive issues that ultimately inform students’ research and practice. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDHE 518 Managing Intercollegiate Athletics
Students will review a number of issues that resonate in higher education such as athletic department right-sizing (dropping or adding sports), leading through a PR crisis involving athletics, and strategizing whether the investment a campus is making in athletics is appropriate. Students will also clarify their understanding of the philosophical arguments surrounding an institutions organizational and Divisional classification, the roles and responsibilities of the governing bodies, the expectations and challenges that confront todays student athletes, and the market forces that drive big time college sports. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in fall term
Activity: Lecture
0.33 Course Units

EDHE 519 University and Its Community
This course will focus on the past, present, and likely future of university-community relationships. It will provide an overview of university-community conflict, cooperation and collaboration from the colonial college to the present. Particular emphasis will be placed on developments since the early 1990s and the birth of what might be termed the engaged, democratic, civic university responsibility movement. Various approaches to university-community partnerships in the US and abroad will be discussed. Through readings, discussion, and written assignments students will develop strategies for developing effective democratic partnerships that would positively impact the community and the university and powerfully contribute to student learning and development. Prerequisite: Enrollment in Executive Doctorate in Higher Education.
Course usually offered in spring term
Activity: Lecture
0.33 Course Units
EDHE 520 Managing Human Resources
This module addresses the most important tasks in managing people, from hiring to supervising to development. Our focus is first on what research tells us about the factors that drive success in these areas and second on the practice of using those principles to enhance individual and organizational performance. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
One-term course offered either term
Activity: Lecture
0.33 Course Units

EDHE 521 Leadership, Governance, and Change
The purpose of this module is to explore key issues related to these topics and the types of possible research questions and methods that might be pursued to understand these topics more deeply. The content is intended to link practice and theory. The course has a strong tilt toward non-profit four-year colleges and universities in the U.S. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
The course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDHE 522 Higher Education Finance II
The purpose of this module is to build on and explore additional topics in higher education finance presented earlier. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
The course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDHE 523 Globalization
Following a field research project outside the United States, students reflect on the continuing globalization of higher education and institutional implications. By exploring current issues higher education faces outside the United States, students develop a more informed understanding of domestic challenges and how these challenges might be addressed. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
The course usually offered in either term
Activity: Lecture
0.33 Course Units

EDHE 524 Innovation
 Globally, higher education institutions are struggling with the effects of an increasingly digital world. This course provides an overview of how digitization impacts the economics, administration, teaching and learning, and research practices of universities and colleges. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
The course usually offered in either term
Activity: Lecture
0.33 Course Units

EDHE 525 International Context
The Higher Education in International Contexts course provides students with exposure to issues facing international higher education and uses this exposure to reflect on higher education in the United States. The course will be centered on an experiential field research project. Students will travel to another country to meet and collaborate with higher education leaders there to learn firsthand about the challenges and opportunities associated with developing and transforming higher education. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
The course usually offered in the fall term
Activity: Lecture
2.0 Course Units

EDHE 601 Student and Campus Services
A scan of most any American college or university will reveal a wide variety of services, functions and activities offered in support of student learning, student expectations and student life. Such functions include robust athletic and recreation programs, comprehensive health care and comprehensive arts, culture, diversity and community service programs. Many argue the essential nature of these functions; other decry the excessive hand-holding of students and the substantial expense of these services and functions. In this module, students will review the complex landscape of campus services intended predominantly for student support and engagement. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
The course usually offered in fall term
Activity: Lecture
0.33 Course Units

EDHE 602 Technology
In this module we will discuss a range of Information Technology goals (and challenges) shared by most colleges and universities, and they may be pursued through local IT infrastructure or services contracted with external entities. We will discuss IT challenges and opportunities especially relevant to the higher education sector, making the practice of IT at a college or university different from IT in most small and large corporations. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
The course usually offered in either term
Activity: Lecture
0.33 Course Units

EDHE 603 Higher Education Law
This module explores topics such as contract law, employment law, Constitutional law (freedom of speech, due process, equal protection), tort law (liability for negligence), anti-discrimination laws, and administrative law. The premise of this module is that a successful higher education executive has an understanding of the legal environment in which colleges and universities must function today. The objective of the module is to provide this understanding. From a pragmatic perspective, this knowledge enables a higher education administrator to employ preventive legal strategies in institutional decision-making. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
The course usually offered in fall term
Activity: Lecture
0.33 Course Units

EDHE 604 Enrollment Management
Enrollment management is an organizational concept with a varying set of associated strategies for achieving institutional goals. Based on institutional type and mission, these goals can range from increasing and diversifying enrollment to optimizing tuition revenue. The impact of enrollment management over the last several decades has caused institutional leaders and the public to reexamine their values regarding higher education. This course will provide an overview of multiple enrollment management models.
The course usually offered in either term
Activity: Lecture
0.33 Course Units
EDHE 606 Dissertation Workshop I
Designed to support students through the dissertation process, this course will cover topics such as: submitting to the IRB; selecting an analytic strategy; data collection and management; coding and data analysis; and structuring dissertation chapters. Students will use a structured timeline in order to successfully defend their dissertations in the spring of their second year of the program. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDHE 607 Higher Ed Entrepreneurship
The purpose of this module is to focus on an emerging future in light of today’s demands, particularly balancing entrepreneurial demands with public purpose objectives. This module asks, 1) what is the future going to hold? and 2) how must college and university leaders respond? Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in fall term
Activity: Lecture
0.33 Course Units

EDHE 608 New Models for Post-Secondary Education
This course will create a foundation to understand the push for reform in higher education, examine in depth several new approaches to post-secondary education in the United States, and develop frameworks for assessing new models of post-secondary education. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in fall term
Activity: Lecture
0.33 Course Units

EDHE 609 Capstone Seminar
The Capstone module offers a culminating experience for students to share and discuss their intellectual and professional experiences in the program and how this has prepared them for the future. It is also an opportunity for students to provide feedback on the curriculum, pedagogy, and other program elements. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in spring term
Activity: Lecture
0.33 Course Units

EDHE 610 Advancement
In this course, students will develop an in-depth understanding of institutional advancement and an ability to relate it to the broader management of colleges and universities. The course focuses primarily on how colleges and universities attract voluntary support, and will begin with an overview of advancement and external relations before moving on to fundraising specific issues. The history of fundraising, fundraising theory, fundraising ethics, fundraising tactics and other related topics will be discussed. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in spring term
Activity: Lecture
0.33 Course Units

EDHE 611 Teaching and Learning
Through this course, students will be able to articulate the importance of student learning from a variety of perspectives; explain the role of organizational culture and how it interfaces with student learning; understand how issues of diversity and inclusive excellence support student learning; clarify what responsibilities administrators have as campus leaders to ensure student learning; identify existing barriers to student learning; and develop strategies to overcome those barriers. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in spring term
Activity: Lecture
0.33 Course Units

EDHE 612 Negotiating & Bargaining
Through role-plays and exercises in class, the module addresses conflict management and negotiations through focusing on behavioral skills rather than substantive knowledge, putting relatively straightforward conceptual material to use in the context of real situations. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in spring term
Activity: Lecture
0.33 Course Units

EDHE 613 Dissertation Workshop II
The purpose of this module is to build on and explore additional topics presented in Dissertation Workshop I. Designed to support students through the dissertation process, this course will cover topics such as: submitting to the IRB; selecting an analytic strategy; data collection and management; coding and data analysis; and structuring dissertation chapters. Students will use a structured timeline in order to successfully defend their dissertations in the spring of their second year of the program. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDHE 614 Ethics and Leadership
This module introduces some models of organizational and leadership ethics and uses case discussions and personal experiences to explore and better understand the ethical dilemmas that face leaders in higher education. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in spring term
Activity: Lecture
0.33 Course Units

EDHE 615 Leadership and Change for Higher Education’s Future
Most discussions of higher education’s future focus on key and familiar trends—demographics, technology, funding, new organizational models, etc. While each trend will affect higher education, the reality is that leaders will face a multitude of challenges simultaneously and those trends will interact with each other. How can higher education leaders explore those trends and issues sufficiently and begin to prepare for how, as a set, they may impact higher education? Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Course usually offered in fall term
Activity: Lecture
0.33 Course Units
EDHE 616 Advanced Topics in Higher Education Management III: Faculty Roundtable
Seminar on special topics on higher education. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.33 Course Units

EDHE 617 Community Colleges
