This Catalog provides detailed information for current and prospective students about graduate programs at Penn including PhD, research master’s, professional master’s, and other professional degrees. It also provides information about important policies and resources for graduate students and courses at all levels of study.

This Catalog is intended to provide general information about the University of Pennsylvania and is accurate as of May 2020. The University reserves the right to change, modify, or correct any information contained herein without prior notice, at any time.

GRADUATE CATALOG

This Catalog provides detailed information for current and prospective students about graduate programs at Penn including PhD, research master’s, professional master’s, and other professional degrees. It also provides information about important policies and resources for graduate students and courses at all levels of study.

This Catalog is intended to provide general information about the University of Pennsylvania and is accurate as of May 2020. The University reserves the right to change, modify, or correct any information contained herein without prior notice, at any time.

Feedback? Email catalog@lists.upenn.edu.
The following list includes PhD, master’s, certificate, and other professional degree programs. Undergraduate programs are listed in the Undergraduate Catalog (http://catalog.upenn.edu/undergraduate/).

### A
- Academic Foundations, Certificate (p. 90)
- Accounting, MBA (p. 252)
- Accounting, PhD (p. 243)
- Actuarial Science, MBA (p. 253)
- Adult Gerontology Acute Care Nurse Practitioner, MSN (p. 192)
- Adult Gerontology Primary Care Nurse Practitioner, MSN (p. 193)
- Adult Oncology Specialist, Certificate (p. 207)
- Adult Oncology Specialist, Minor (p. 203)
- Africana Studies, PhD (p. 96)
- Ancient History, PhD (p. 96)
- Animal Welfare and Behavior, Certificate (p. 218)
- Animal Welfare and Behavior, MSAWB (p. 218)
- Anthropology: Archaeology, PhD (p. 97)
- Anthropology: Cultural, PhD (p. 98)
- Anthropology: Linguistic, PhD (p. 98)
- Anthropology: Medical, PhD (p. 99)
- Anthropology: Physical, PhD (p. 100)
- Applied Economics, PhD (p. 244)
- Applied Geosciences, MSAG (p. 136)
- Applied Mathematics and Computational Science, MA (p. 100)
- Applied Mathematics and Computational Science, PhD (p. 101)
- Applied Positive Psychology, MAPP (p. 137)
- Architecture, MArch (p. 223)
- Architecture, MS (p. 221)
- Architecture, PhD (p. 222)
- Architecture: Advanced Architectural Design, MSD (p. 224)
- Architecture: Environmental Building Design, MSD (p. 224)
- Architecture: Historic Preservation, MSD (p. 225)
- Architecture: Robotics and Autonomous Systems, MSD (p. 225)
- Art and Archaeology of the Mediterranean World, MA (p. 101)
- Art and Archaeology of the Mediterranean World, PhD (p. 102)

### B
- Behavioral and Decision Sciences, MBDS (p. 138)
- Biochemistry and Molecular Biophysics, PhD (p. 67)
- Bioengineering, MSE (p. 171)
- Bioengineering, PhD (p. 166)
- Bioethics, MBE (p. 82)
- Biology, PhD (p. 102)
- Biomedical Informatics, Certificate (p. 90)
- Biomedical Informatics, MBMI (p. 82)
- Biotechnology, MBiot (p. 172)
- Business Analytics, MBA (p. 254)
- Business Economics & Public Policy, MBA (p. 256)
- Business, Energy, Environment and Sustainability, MBA (p. 257)

### C
- Cell and Molecular Biology: Cancer Biology, PhD (p. 68)
- Cell and Molecular Biology: Cell Biology, Physiology, and Metabolism, PhD (p. 69)
- Cell and Molecular Biology: Developmental, Stem Cell, and Regenerative Biology, PhD (p. 70)
- Cell and Molecular Biology: Gene Therapy and Vaccines, PhD (p. 71)
- Cell and Molecular Biology: Genetics and Epigenetics, PhD (p. 72)
- Cell and Molecular Biology: Microbiology, Virology, and Parasitology, PhD (p. 73)
- Chemical & Biomolecular Engineering, MSE (p. 173)
- Chemical and Biomolecular Engineering, PhD (p. 167)
- Chemical Sciences, MCS (p. 139)
- Chemistry, PhD (p. 103)
- City & Regional Planning: Housing, Community and Economic Development, MCP (p. 226)
- City & Regional Planning: Land Use & Environmental Planning, MCP (p. 227)
- City & Regional Planning: Public & Private Development, MCP (p. 228)
- City & Regional Planning: Smart Cities, MCP (p. 228)
- City & Regional Planning: Sustainable Transportation & Infrastructure, MCP (p. 229)
- City & Regional Planning: Urban Design, MCP (p. 230)
- City Planning, PhD (p. 222)
- Classical Studies, PhD (p. 104)
- Clinical Epidemiology, MSCE (p. 83)
- Clinical Ethics Mediation, Certificate (p. 90)
- Communication, PhD (p. 16)
- Comparative Literature, PhD (p. 104)
- Computer & Information Science, MSE (p. 173)
- Computer & Information Technology, MCIT (p. 175)
- Computer and Information Science, PhD (p. 168)
- Computer Graphics & Game Technology, MSE (p. 176)
- Counseling and Mental Health Services, MSED (p. 27)
- Criminology, MS (p. 105)
- Criminology, PhD (p. 106)

### D
- Data Science, MSE (p. 177)
- Demography, PhD (p. 107)
- Doctor of Dental Medicine, DMD (p. 150)
- Doctor of Medicine, MD (p. 82)
- Doctor of Science in Dentistry, DScD (p. 152)

### E
- Earth and Environmental Science, PhD (p. 107)
- East Asian Languages and Civilizations, MA (p. 108)
- East Asian Languages and Civilizations, PhD (p. 108)
- Ecological Architecture, Certificate (p. 234)
- Ecological Planning, Certificate (p. 235)
- Economics, PhD (p. 109)
- Education Entrepreneurship, MSED (p. 29)
- Education Policy, MSED (p. 28)
- Education Policy, PhD (p. 19)
- Education, Culture, and Society, MSED (p. 27)
- Education, Culture, and Society, PhD (p. 20)
- Educational and Organizational Leadership, EdD (p. 52)
- Educational Leadership, EdD (p. 53)
- Educational Linguistics, EdD (p. 54)
- Educational Linguistics, PhD (p. 21)
- Electrical and Systems Engineering, PhD (p. 169)
- Electrical Engineering, MSE (p. 178)
- Embedded Systems, MSE (p. 179)
- Emerging Design and Research, Certificate (p. 235)
- Endodontics, Certificate (p. 154)
- Energy Management & Policy, Certificate (p. 236)
- English, MA (p. 110)
- English, PhD (p. 110)
- Entrepreneurship and Innovation, MBA (p. 258)
- Environmental Building Design, Certificate (p. 237)
- Environmental Health Sciences, Certificate (p. 80)
- Environmental Studies, M.S. (p. 140)
- Epidemiology and Biostatistics: Biostatistics, MS (p. 74)
- Epidemiology and Biostatistics: Biostatistics, PhD (p. 75)
- Epidemiology and Biostatistics: Epidemiology, PhD (p. 76)
- Ethics and Legal Studies, PhD (p. 245)
- Executive Leadership, DNP (p. 201)
- Executive MBA (p. 276)

F

- Family Nurse Practitioner, MSN (p. 194)
- Finance, MBA (p. 260)
- Finance, PhD (p. 245)
- Fine Arts, MFA (p. 231)

G

- Genetic Counseling, MSGC (p. 83)
- Genomics and Computational Biology, PhD (p. 77)
- Geographical Information Systems & Spatial Analysis, Certificate (p. 237)
- German Languages and Literatures, PhD (p. 111)
- Global Health, Minor (p. 204)
- Government Administration (Exec), MPA (p. 141)
- Government Administration (FT), MPA (p. 141)
- Graduate Training in Medical Science, Certificate (p. 80)

H

- Health Care Innovation, Certificate (p. 91)
- Health Care Innovation, MHCi (p. 84)
- Health Care Management & Economics, PhD (p. 246)
- Health Care Management, MBA (p. 261)
- Health Informatics, Minor (p. 204)
- Health Leadership, MSN (p. 194)

- Health Policy Research, MSHP (p. 85)
- Healthcare Quality and Safety, Certificate (p. 91)
- Healthcare Quality and Safety, MHQS (p. 85)
- Higher Education Management, EdD (p. 54)
- Higher Education, EdD (p. 56)
- Higher Education, MSED (p. 29)
- Higher Education, PhD (p. 22)
- Historic Preservation, Certificate (p. 237)
- Historic Preservation, MSHP (p. 231)
- History and Sociology of Science, PhD (p. 111)
- History of Art, MA (p. 112)
- History of Art, PhD (p. 112)
- History, MA (p. 113)
- History, PhD (p. 113)

I

- Immunology, PhD (p. 78)
- Independent School Teaching Residency, MSED (p. 30)
- Individualized Major, MBA (p. 262)
- Individualized, MPhil (p. 142)
- Insurance and Risk Management, MBA (p. 263)
- Integrated Nursing Care of Autism Spectrum Disorder, Certificate (p. 207)
- Integrated Nursing Care of Autism Spectrum Disorder, Minor (p. 204)
- Integrated Product Design, Certificate (p. 238)
- Integrated Product Design, MIPD (p. 180)
- Integrated Product Design, MSE (p. 181)
- Intercultural Communication, MSED (p. 31)
- Interdisciplinary Studies in Human Development, MSED (p. 32)
- Interdisciplinary Studies in Human Development, PhD (p. 23)
- International Educational Development, MSED (p. 33)
- International, MPA (p. 142)

L

- Land Preservation, Certificate (p. 238)
- Landscape Architecture & Regional Planning, MLA (p. 232)
- Landscape Studies, Certificate (p. 238)
- Law, JD (p. 61)
- Law, LLCM (p. 62)
- Law, LLM (p. 63)
- Law, ML (p. 63)
- Law, SJD (p. 64)
- Learning Sciences & Technologies, MSED (p. 34)
- Learning Sciences & Technologies, PhD (p. 24)
- Liberal Arts Individualized, MLA (p. 143)
- Linguistics, MA (p. 114)
- Linguistics, PhD (p. 114)

M

- Management, MBA (p. 265)
- Management, PhD (p. 247)
- Marketing & Operations Management, MBA (p. 265)
• Marketing, MBA (p. 267)
• Marketing, PhD (p. 248)
• Materials Science and Engineering, MSE (p. 182)
• Materials Science and Engineering, PhD (p. 169)
• Mathematics, MA (p. 115)
• Mathematics, MPhil (p. 115)
• Mathematics, PhD (p. 115)
• Mechanical Engineering & Applied Mechanics, MSE (p. 183)
• Mechanical Engineering and Applied Mechanics, PhD (p. 170)
• Medical Education, MSEd (p. 35)
• Medical Ethics, MSME (p. 86)
• Medical Physics, Certificate (p. 92)
• Medical Physics, MSMP (p. 86)
• Multinational Management, MBA (p. 268)
• Music: Composition, PhD (p. 116)
• Music: Music Studies, PhD (p. 118)

N
• Nanotechnology, MSE (p. 186)
• Near Eastern Languages and Civilizations: Biblical Studies, MA (p. 119)
• Near Eastern Languages and Civilizations: Biblical Studies, PhD (p. 120)
• Near Eastern Languages and Civilizations: Classical and Medieval Hebrew Literature, MA (p. 121)
• Near Eastern Languages and Civilizations: Classical and Medieval Hebrew Literature, PhD (p. 121)
• Near Eastern Languages and Civilizations: Egyptology and Archaeology, MA (p. 122)
• Near Eastern Languages and Civilizations: Egyptology, PhD (p. 123)
• Near Eastern Languages and Civilizations: Mesopotamian Civilization, MA (p. 124)
• Near Eastern Languages and Civilizations: Mesopotamian Civilization, PhD (p. 124)
• Near Eastern Languages and Civilizations: Middle Eastern Literatures & Societies, MA (p. 125)
• Near Eastern Languages and Civilizations: Middle Eastern Literatures & Societies, PhD (p. 126)
• Neonatal Nurse Practitioner, MSN (p. 195)
• Neuroscience, PhD (p. 78)
• Nonprofit Administration, Certificate (p. 145)
• Nonprofit/NGO Leadership, MSNPL (p. 212)
• Nurse Anesthesia Program, DNP (p. 202)
• Nurse-Midwifery, MSN (p. 195)
• Nursing & Health Care Administration, MSN (p. 196)
• Nursing Administration, Minor (p. 205)
• Nursing, DNP (p. 203)
• Nursing, PhD (p. 191)
• Nutrition, Minor (p. 205)

O
• Operations, Information and Decisions, PhD (p. 250)
• Operations, Information, & Decisions, MBA (p. 269)
• Oral and Maxillofacial Surgery, Certificate (p. 155)
• Oral Medicine, Certificate (p. 156)
• Organizational Dynamics, MPhil (p. 144)
• Organizational Dynamics, MSOD (p. 144)
• Organizational Effectiveness, MBA (p. 270)
• Orthodontics and Periodontics, Certificate (p. 157)
• Orthodontics, Certificate (p. 158)

P
• Palliative Care, Certificate (p. 208)
• Palliative Care, Minor (p. 206)
• Pediatric Acute Care Nurse Practitioner: Acute/Chronic, MSN (p. 197)
• Pediatric Acute Care Nurse Practitioner: Critical Care, MSN (p. 198)
• Pediatric Acute Care Nurse Practitioner: Oncology, MSN (p. 198)
• Pediatric Primary Care Nurse Practitioner, MSN (p. 199)
• Pedodontics, Certificate (p. 160)
• Penn Chief Learning Officer, EdD (p. 57)
• Periodontics, Certificate (p. 161)
• Perioprosthesis, Certificate (p. 162)
• Pharmacology, PhD (p. 79)
• Philosophy, PhD (p. 126)
• Physics and Astronomy, PhD (p. 127)
• Political Science, PhD (p. 127)
• Politics, Certificate (p. 146)
• Professional Counseling, MPhilEd (p. 35)
• Program for Advanced Standing Students, DMD (p. 153)
• Prosthodontics, Certificate & Oral Biology, MSOB (p. 163)
• Psychiatric Mental Health Nurse Practitioner, MSN (p. 200)
• Psychology, PhD (p. 128)
• Public Finance, Certificate (p. 146)
• Public Health, Certificate (p. 81)
• Public Health, MPH (p. 87)

Q
• Quality Improvement & Safety Processes Healthcare, Certificate (p. 208)
• Quality Improvement & Safety Processes Healthcare, Minor (p. 206)
• Quantitative Finance, MBA (p. 271)
• Quantitative Methods, MPhilEd (p. 36)
• Quantitative Methods, PhD (p. 24)

R
• Reading/Writing/Literacy, Certificate (p. 59)
• Reading/Writing/Literacy, EdD (p. 57)
• Reading/Writing/Literacy, MSEd (p. 36)
• Reading/Writing/Literacy, PhD (p. 25)
• Real Estate Design & Development, Certificate (p. 239)
• Real Estate, MBA (p. 273)
• Regulatory Affairs, MRA (p. 88)
• Regulatory Science, MSRS (p. 88)
• Religious Studies, PhD (p. 129)
• Robotics, MSE (p. 186)
• Romance Languages: French and Francophone Studies, PhD (p. 129)
• Romance Languages: Hispanic Studies, PhD (p. 130)
• Romance Languages: Italian Studies, PhD (p. 131)

S
• School and Mental Health Counseling, MSEd (p. 39)
• School Leadership, Certificate (p. 59)
• School Leadership, MSEd (p. 38)
• Scientific Computing, MSE (p. 187)
• Social Policy, MSSP (p. 213)
• Social Policy/Data Analytics, MSSP & Certificate (http://catalog.upenn.edu/graduate/programs/social-policy-data-analytics-mssp/)
• Social Welfare, PhD (p. 211)
• Social Work, DSW (p. 214)
• Social Work, MSW (p. 215)
• Social, Cognitive, & Affective Neuroscience, Certificate (p. 147)
• Sociology, PhD (p. 132)
• South Asia Regional Studies, MA (p. 133)
• South Asia Regional Studies, PhD (p. 133)
• Statistics, MBA (p. 274)
• Statistics, Measurement, Assessment, and Research Technology, MSEd (p. 40)
• Statistics, PhD (p. 251)
• Strategic Management, MBA (p. 275)
• Systems Engineering, MSE (p. 188)

T
• Teaching English to Speakers of Other Languages, MSEd (p. 41)
• Teaching, Learning, and Leadership, MSEd (p. 41)
• Teaching, Learning, and Teacher Education, EdD (p. 58)
• Teaching, Learning, and Teacher Education, PhD (p. 26)
• Time-Based and Interactive Media, Certificate (p. 239)
• Transformative Nursing Education Program, Certificate (p. 208)
• Transformative Nursing Education Program, Minor (p. 206)
• Translational Research, MSTR (p. 89)
• Translational Research: Entrepreneurial Science, Certificate (p. 92)
• Translational Research: Regulatory Science, Certificate (p. 93)
• Translational Research: Translational Science, Certificate (p. 93)

U
• Urban Design, Certificate (p. 240)
• Urban Redevelopment, Certificate (p. 240)

ANNENBERG SCHOOL FOR COMMUNICATION

Home to 22 full-time faculty members (https://www.asc.upenn.edu/people/faculty/?faculty-type=28&field_research_area_target_id=All&name=), more than 80 doctoral students (https://www.asc.upenn.edu/people/students/graduate-students/), more than 20 postdoctoral fellows (https://www.asc.upenn.edu/people/faculty/?faculty-type=104), 70 research and support staff (https://www.asc.upenn.edu/people/staff/), and 16 research centers (https://www.asc.upenn.edu/research/research-centers/) and programs, the Annenberg School is the nation’s premiere doctoral program in Communication.

As the smallest of 12 schools at Penn, it is a close-knit and supportive environment for innovative scholarship. The school hosts a variety of academic events (https://www.asc.upenn.edu/news-events/events/) every year, including the Elihu Katz Colloquium Series; the Annenberg and Gerbner Lectures, and numerous other lectures, master classes, workshops, conferences, and symposia.

In addition to bringing some of the world’s top scholars to Annenberg as visiting scholars and guest lecturers, the school provides generous funding to encourage our graduate students to present their research at national and international communication conferences (https://www.asc.upenn.edu/news-events/news/highlights-and-awards-66th-international-communication-association-annual/) and travel globally for their dissertation research (https://www.asc.upenn.edu/news-events/news/student-profile-eleanor-marchant/), making the school a stepping off point to the world of global scholarship.

For more information, visit https://www.asc.upenn.edu/.

In 1958, publisher, diplomat, and philanthropist Walter Annenberg founded the Annenberg School for Communication at the University of Pennsylvania with these words:

“Every human advancement or reversal can be understood through communication. The right to free communication carries with it responsibility to respect the dignity of others – and this must be recognized as irreversible. Educating students to effectively communicate this message and to be of service to all people is the enduring mission of this school.”

Over the ensuing years the Annenberg School has remained true to the mission articulated by Ambassador Annenberg, while responding to changes in both the nature of communication as a social process and in Communication as a discipline and an interdisciplinary field of study. Today, we advance our mission through four central goals:

• Producing and disseminating cutting-edge scholarly research designed to advance our theoretical and empirical understanding of the role of communication in public and private life.

• Producing and disseminating high-quality applied research designed to advance the public’s understanding and effective use of communication, and policy-makers’ ability to create a media environment that fosters the personal and collective development of its citizens.

• Educating Ph.D. graduate students in the theories, substance, and methods of communication research and placing them in leading academic and professional positions in the field.

• Providing a first-class liberal arts education to undergraduates, designed to help them become better consumers and producers of public information, strengthen their understanding of the role of communication in their personal, professional and civic lives, and prepare them for private and public-sector leadership positions in communication-related and other fields.

The Annenberg School stands at the forefront of basic and applied empirical research on the institutions, processes, nature, and consequences of communication. This research is based on theories, methods, and knowledge emerging from our own discipline as well those adapted from cognate disciplines in the humanities, social sciences and sciences. Many Annenberg faculty members are jointly appointed or hold secondary faculty positions in other schools and departments at Penn. Annenberg faculty and students regularly collaborate with each other and with faculty, researchers, and students from Penn’s other distinguished schools and centers.

The result of this inter- and intra-disciplinary research network is a faculty and student body with the theoretical, methodological and substantive breadth, depth, and agility to produce cutting-edge research on the most pressing communication-centered issues of the twenty-first century.

We invite you to learn more about Annenberg’s core research areas, our research centers, labs and working groups, and our grant-related research projects.

Research Areas (https://www.asc.upenn.edu/research/research-areas/)

Annenberg faculty, students, and staff have particular expertise in several intersecting and evolving research areas.

For more information: https://www.asc.upenn.edu/research/research-areas (https://www.asc.upenn.edu/research/research-areas/)

Research Centers (https://www.asc.upenn.edu/research/research-centers/)

Collaborative research is common at the Annenberg School, often taking place through our established centers and labs, as well as through a variety of more informal research working groups.

For more information: https://www.asc.upenn.edu/research/research-centers (https://www.asc.upenn.edu/research/research-centers/)

Programs

PhD and Research Master's Programs

• Communication, PhD (p. 16)

Communication, PhD

Annenberg is interdisciplinary by design. Members of the faculty and students come from a wide range of backgrounds, including Communication, Psychology, Political Science, Sociology, Anthropology, History, and Law. Students are also encouraged to supplement their Communication courses with those offered through one of Penn’s 11 other distinguished schools. The result is a vibrant intellectual experience
that trains students to apply and adapt diverse theories and methods to the cutting-edge communication issues of the twenty-first century.

All doctoral students are fully funded for up to five years, including tuition and fees, health care, teaching and research fellowships, and dissertation research fellowships. All students also receive yearly research and travel funds, allowing them to develop their research and present it at major national and international conferences. In addition to formal classes, students are able to work with faculty on grant- and center-supported projects, attend and participate in frequent colloquia and workshops, and engage in research and learning opportunities around the globe — all designed to enhance their intellectual growth and professional training.

Annenberg alumni go on to productive and fulfilling careers in academia as well as in research-oriented private and public-sector institutions.

The Annenberg Ph.D. program represents a five-year commitment. In addition to satisfactory completion of the core courses, all students are required to take a noncredit proseminar as well as introductory classes in research methods and statistics. In order to progress to dissertation stage, candidates must complete the following milestones, Qualifications Evaluation, Comprehensive Exams, & Dissertation Proposal and Oral Defense.

**Total Course Units** 20

1 All Ph.D. students must take at least one separate class with each of at least five different members of the ASC standing faculty. The intent of this is to foster students’ knowledge of a diverse range of approaches to communication.

**Sample Plan of Study**

A typical course plan for a student entering the program without a Master’s degree includes these components:

- Seven semesters of courses, typically three courses per semester
- Three required classes:
  - COMM 500|Proseminar
  - COMM 522|Introduction to Communication Research
  - Approved statistics course
- A Qualifications Evaluation (see below) at the end of semester 4
- A dissertation proposal defense in semester 8
- Dissertation research in semesters 8 through 10
- Dissertation defense and graduation at the end of semester 10

**Program Milestones**

- **Qualifications Evaluation** (QE) is a review conducted to ensure doctoral students have the requisite skills, creativity, initiative, and plans to successfully complete their degree, including their dissertation. The QE must be completed at the end of the semester during which the student accumulates 12 classes (at least eight of which must be acquired at Penn) toward the degree, but no earlier than the end of the first year.

- **Comprehensive Exams:** In order to advance to candidacy, become eligible to defend the dissertation proposal and to receive a dissertation research fellowship (DRF), students must successfully pass a comprehensive examination. These exam cover theory, methods and research in the student’s field of expertise.

- **Dissertation Proposal and Oral Defense:** Before becoming eligible for a dissertation research fellowship and beginning work on the dissertation, the student must submit and defend a proposal for dissertation research to his or her Dissertation Committee. The proposal is a full statement of the research problem, including its theoretical rationale and methodology.
GRADUATE SCHOOL OF EDUCATION

Overview
The University of Pennsylvania Graduate School of Education is one of the nation’s premier education schools. At Penn GSE, students and faculty enjoy an Ivy League environment that supports both practical knowledge building and high-quality research. Our alumni are recognized as some of the world’s most influential education leaders, and our distinguished professors are pioneers in their fields.

Our Mission: Penn GSE partners with schools, universities, and communities to expand educational access – especially for those underserved by society. Through rigorous research and innovative programs, we develop new knowledge, and transformational teachers and leaders in pursuit of educational opportunity.

What began with the appointment of one professor in 1894 evolved into a top-ranked professional school of education. We have a 100-year legacy of producing education leaders through innovative ideas, passionate people, and a commitment to making a difference. With 40 standing faculty and just over 1,300 students, Penn GSE is a small school with remarkable scholarly productivity and influence.

Penn GSE offers a vibrant array of high-quality degree programs in education research and practice. Our programs prepare students for careers as urban and international educators, school leaders, education researchers, higher education professionals, school psychologists, reading specialists, and more. In addition to degree programs, we offer professional development opportunities and certificates within the field of education.

Renowned for our expertise in urban education, policy research, quantitative methods, practitioner inquiry, developmental psychology, and qualitative analysis, Penn GSE provides rigorous academic training and professional mentoring to help our students become effective leaders. Graduates of our innovative and interdisciplinary programs are shaping the future of education.

By the Numbers
- Ranked #2 graduate school of education in the 2021 U.S. News & World Report
- 1,015+ Masters students
- 395+ Doctoral students (Ed.D. & Ph.D.)
- 28% International students
- 46% Domestic students of color
- 40 Standing faculty

For more information: https://www.gse.upenn.edu/

Research
Penn GSE emphasizes the interplay of theory, research, and practice in everything we do, believing that education research produces knowledge to inform practice, but also that research must be informed by the issues, needs, and concerns of practitioners. We are recognized for our strengths in research on urban education, policy, teaching and learning, the cultural contexts of education, language education, qualitative analysis, practitioner inquiry, developmental psychology, and quantitative and multimethod inquiry.

Penn GSE is home to several faculty-run centers that produce cutting-edge research on global issues in education. Additionally, the School’s many practice-driven initiatives put innovative practices, strategies, and tools directly into the hands of practitioners, both in Philadelphia and across the globe.

For more information: https://www.gse.upenn.edu/academics/research

Diversity
Penn GSE has long been committed to preparing its students to live, work, and become leaders in a world marked by sweeping demographic change and interconnectedness. Our students, faculty, and staff come from diverse backgrounds, and the diversity of the school is intentionally fostered by Penn GSE’s policies and practices. Expanding and sustaining this diversity is crucial to our mission as a school. But there is always much more to do.

Over the last few years, we have deepened our engagement in ongoing learning and dialogue about difference, as well as our shared interest in using education to create opportunity.

Penn GSE is proud of its diverse student population. On average, domestic students of color represent 43% of our student body. Penn GSE continues to enact a number of successful efforts to create a broader pipeline of students.

For more information: https://www.gse.upenn.edu/about-penn-gse/diversity-inclusion

Faculty
Penn GSE’s world-class faculty and researchers—the intellectual heart of our School—have a major impact on education research and practice across the globe. This influential faculty answer vital questions and solve pressing problems in local, national, and global education. From literacy to college access to the Common Core, our researchers are leading the conversation about critical issues in education.

Our professors possess particular strengths in teaching and learning, the cultural contexts of education, language education, qualitative research methods, and practitioner inquiry. In recent years, these strengths have deepened to include national leadership in policy research, urban education, developmental psychology, and quantitative and multimethod inquiry.

For more information: https://www.gse.upenn.edu/academics

Outreach
PHILADELPHIA

Our commitment to active, on-the-ground engagement in Philadelphia is a reflection of the University-wide values expressed in the Penn Compact 2020 (https://president.upenn.edu/penn-compact/). Penn GSE is not just located in Philadelphia—it is of Philadelphia. We partner with schools in small and large ways to work towards social justice—always endeavoring to leverage the expertise of the larger research university in service of a better education for all.

For more information: https://www.gse.upenn.edu/about-penn-gse/diversity-inclusion
The University of Pennsylvania’s Graduate School of Education is deeply involved in Philadelphia schools. It is crucial to our mission that Penn GSE faculty and students engage in all levels of education, both formal and informal, in traditional and alternative settings, to better learn how we can solve the challenges of urban education and contribute to the growth and well-being of our citizens. More than a third of our faculty work in or with Philadelphia public schools on issues ranging from improving the quality of writing instruction to teaching coding as part of the elementary school curriculum.

In any given year, we are involved in about 500 activities in almost 250 schools across Philadelphia. Additionally, we take part in over 70 community activities in over 65 locations.

For more information: View an interactive map of our activities in Philadelphia (https://phillymap.gse.upenn.edu/).

INTERNATIONAL

The University of Pennsylvania nurtures global networks and encourages innovative, cross-disciplinary research to better understand and resolve global issues. As part of this campus-wide initiative, Penn GSE students research, study, teach, and work across the globe, and over 70% of our faculty members are involved in international initiatives. Penn GSE also offers several academic programs that focus on international education or offer students the opportunity to study abroad.

The Global Engagement Office at Penn GSE directly supports the mission of the School and the University in engaging in a sustained and meaningful way with issues of global importance. The aim is to increase GSE’s impact and widen its reach by supporting faculty, students and staff who work across borders and by encouraging partnerships with educational institutions in other nations. It also serves as an initial point of contact for scholars and agencies looking for opportunities and expertise to address strategic issues in teaching and learning.

For more information: https://www.gse.upenn.edu/about-penn-gse/global-initiatives (https://www.gse.upenn.edu/about-penn-gse/global-initiatives/)

Education Policy, PhD

Students in the Education Policy Ph.D. program pursue an individualized program of study that reflects their specific interests in education policy at the local, state, national, or international levels.

The Education Policy Ph.D. program equips graduates with the knowledge and methodological tools to use, understand, and conduct research on the pressing educational issues of the day. Students pursue an individualized program of study that reflects their specific interests, and are required to write a significant qualifying paper and complete a dissertation on an issue in education. At the heart of the Ph.D. program is the research apprenticeship, where students work on research projects alongside faculty members. Doctoral students are matched with Education Policy faculty members whose research interests align with their own. Our program prepares students for a variety of careers, including faculty positions at institutions of higher education, and policy research positions at research firms, nonprofit organizations, and government agencies.

¹ Elective courses may be taken at any school at Penn. Courses must be at the 500 level or above and taken for a letter grade.

Required Milestones
Qualifications Evaluation (Also known as Program Candidacy)
A Qualifications Evaluation of each student is conducted after the completion of 6 but not more than 8 course units. The evaluation is designed by the specialization faculty and may be based on an examination or on a review of a student’s overall academic progress.

Preliminary Examination (Also known as Doctoral Candidacy)
A Candidacy Examination on the major subject area is required. The candidacy examination is a test of knowledge in the student’s area of specialization, requiring students to demonstrate knowledge and reasoning in the key content areas in their specialization as defined by their academic division. This examination is normally held after the candidate has completed all required courses.

Oral Proposal
All doctoral candidates must present their dissertation proposals orally and in person to the dissertation committee.

Final Defense of the Dissertation
The final dissertation defense is approximately two hours in length and is based upon the candidate’s dissertation.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Education, Culture, and Society, PhD
Rooted in the social sciences and humanities, the doctoral program in Education, Culture, and Society focuses on the historical, political, philosophical and sociocultural foundations of education.

The Education, Culture, and Society Ph.D. program provides a rigorous theoretical and methodological framework for the study of education, focusing on social, cultural, political, and normative dimensions. Following a rich academic curriculum centered in social theory and qualitative research methods, the program invites students to interrogate and contribute to scholarship on the social and cultural contexts of learning, both inside and outside of schools. Most students supplement their educational studies with significant coursework in other disciplines of their choosing, including anthropology, sociology, history, urban studies, philosophy, and linguistics. Students may be eligible to pursue a joint Ph.D. degree with other departments such as: anthropology, sociology, Africana studies, or history.

For more information: http://www.gse.upenn.edu/ecs/phd

View the University’s Academic Requirements for PhD Degrees (http://catalog.upenn.edu/pennbook/academic-rules-phd/).

Required Courses
The total course units required for graduation is 16, in addition to whatever advisor and student agree for individualized program of study; doctoral exams; and an acceptable dissertation. A minimum of 12 courses must be taken at Penn, of which 10 must be taken in the field of education; a maximum of 4 courses can be transferred from another institution. Students should confer with their faculty advisor in choosing the most appropriate course for an area of specialization. All courses counted toward the degree must be level 500 or higher.

1 The Quantitative Methods and Methods requirements are defined by the advisor. The courses that are used to fulfill these requirements will NOT be allowed to double count to meet other doctoral course requirements.

Transfer credit

GSE will, under certain conditions, accept equivalent credit toward the degree. Up to 8 graduate level CUs taken at GSE, Penn, or another institution, may count toward the PhD degree.

Transfer credit is not automatically accepted or applied toward the doctoral degree. Students should consult their academic advisor and the GSE website for the policies governing the application for transfer credit in their first semester of coursework at GSE. Students who are not awarded a full 8 CUs of transfer credit should consult their academic advisor for the appropriate elective coursework to fulfill the coursework required for the PhD degree program. Please consult the GSE website for the proper forms and procedures.

Methods Course

All HE doctoral students are required to take 2 methods courses either within GSE or another school at Penn. One of these courses must be a statistics course. Students should consult their academic advisor regarding the appropriate methods courses for their program of study. Methods courses filled at GSE outside of the HE Division will also fulfill GSE’s distribution requirement.

Electives courses

Electives may be taken at any school at Penn, although the majority of HE students fulfill their electives within the division. Courses must be at the 500 level or above and students must consult their academic advisor before enrolling in any course outside of GSE. Students without a master’s degree in HE may be required to fulfill some of their electives with required coursework from the HE MSEd program.

Cognate

All HE PhD students are required to fill a cognate in another discipline at the University. Students should consult their academic advisor regarding their cognate interests and the appropriate courses for their program of study.

For more information: http://www.gse.upenn.edu/hed/phd (http://www.gse.upenn.edu/hed/phd/)
Students may not register for more than 4 independent studies over the course of their program. Information regarding program candidacy, doctoral preliminary examination, forming a dissertation committee, holding an oral proposal hearing and scheduling a final defense can be found on the GSE website (http://www.gse.upenn.edu/phd/).

**Required Milestones**

**Qualifications Evaluation (Also known as Program Candidacy)**

A Qualifications Evaluation of each student is conducted after the completion of 6 but not more than 8 course units. The evaluation is designed by the specialization faculty and may be based on an examination or on a review of a student’s overall academic progress.

**Preliminary Examination (Also known as Doctoral Candidacy)**

A Candidacy Examination on the major subject area is required. The candidacy examination is a test of knowledge in the student’s area of specialization, requiring students to demonstrate knowledge and reasoning in the key content areas in their specialization as defined by their academic division. This examination is normally held after the candidate has completed all required courses.

**Oral Proposal**

All doctoral candidates must present their dissertation proposals orally and in person to the dissertation committee.

**Final Defense of the Dissertation**

The final dissertation defense is approximately two hours in length and is based upon the candidate’s dissertation.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**Interdisciplinary Studies in Human Development, PhD**

The doctoral program in Interdisciplinary Studies in Human Development, (ISHD) provides a strong interdisciplinary foundation in developmental theory and research, and prepares students for faculty positions and research careers.

The ISHD Ph.D. program combines the study of social, emotional, and cognitive aspects of human development considered within cultural contexts and relevant to social policies. Penn GSE's commitment to urban education as well as its West Philadelphia setting offers students the opportunity to create a specialized program of study that leads to an enriched understanding of the diverse perspectives of human development across the lifespan. Students create an individualized program of study in close consultation with an academic advisor. Students are encouraged to take an interdisciplinary approach to human development and may take courses in other schools and departments at Penn.

**Required Milestones**

**Qualifications Evaluation (Also known as Program Candidacy)**

A Qualifications Evaluation of each student is conducted after the completion of 6 but not more than 8 course units. The evaluation is designed by the specialization faculty and may be based on an examination or on a review of a student’s overall academic progress.

**Preliminary Examination (Also known as Doctoral Candidacy)**

A Candidacy Examination on the major subject area is required. The candidacy examination is a test of knowledge in the student’s area of specialization, requiring students to demonstrate knowledge and reasoning in the key content areas in their specialization as defined by their academic division. This examination is normally held after the candidate has completed all required courses.

**Oral Proposal**

All doctoral candidates must present their dissertation proposals orally and in person to the dissertation committee.

**Final Defense of the Dissertation**

The final dissertation defense is approximately two hours in length and is based upon the candidate’s dissertation.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.
Learning Sciences & Technologies, PhD

The Ph.D. in Learning Sciences and Technologies focuses on the preparation of researchers and researcher/developers in education. The program includes formal courses, mentored research, and informal seminars. Ph.D. students are required to hold a master's degree prior to beginning the Ph.D. program, and are expected to have experience in educational practice. You will build a program of study that includes courses in teaching and learning, social foundations, and research methods. The program is designed to draw together coursework, research apprenticeship, and other professional academic activities to build a complete professional program that is tailored to your interests and needs.

For more information: https://www.gse.upenn.edu/academics/programs/learning-sciences-technology-phd/

View the University's Academic Requirements for PhD Degrees (http://catalog.upenn.edu/pennbook/academic-rules-phd/).

Curriculum

The program requires a minimum of 12 course units beyond the master's degree.

1. Chosen in consultation with an advisor.
2. A non-credit bearing Research Apprenticeship Course is required from second semester of first year forward in the Professional Experiences Strand.
3. Electives may be taken outside of GSE with advisor approval. Courses must be at the 500 level or above.

Required Milestones

Qualifications Evaluation (Also known as Program Candidacy)

A Qualifications Evaluation of each student is conducted after the completion of 6 but not more than 8 course units. The evaluation is designed by the specialization faculty and may be based on an examination or on a review of a student's overall academic progress.

Preliminary Examination (Also known as Doctoral Candidacy)

A Candidacy Examination on the major subject area is required. The candidacy examination is a test of knowledge in the student's area of specialization, requiring students to demonstrate knowledge and reasoning in the key content areas in their specialization as defined by their academic division. This examination is normally held after the candidate has completed all required courses.

Oral Proposal

All doctoral candidates must present their dissertation proposals orally and in person to the dissertation committee.

Final Defense of the Dissertation

The final dissertation defense is approximately two hours in length and is based upon the candidate's dissertation.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Quantitative Methods, PhD

The Ph.D. program in Quantitative Methods is designed to prepare students for faculty positions at universities and important responsibilities at research and assessment organizations. Graduates will be prepared to design first rate empirical research and data analyses and to contribute to development of new research methodologies.
Doctoral degree studies include advanced graduate coursework, a research apprenticeship, a Ph.D. Candidacy Examination, and the completion of a doctoral dissertation that represents an independent and significant contribution to knowledge. The research apprenticeship provides students with an opportunity to collaborate with a faculty sponsor on an ongoing basis and to participate in field research leading to a dissertation.

Students who apply directly to the doctoral-level study program following a baccalaureate degree will enroll in the core courses described for M.S.Ed. degree in SMART and the more advanced courses for the Ph.D. degree. This will include the development of independent empirical research projects.

For more information: http://www.gse.upenn.edu/qm/phd (http://www.gse.upenn.edu/qm/phd/)

View the University's Academic Requirements for PhD Degrees (http://catalog.upenn.edu/pennbook/academic-rules-phd/).

The Ph.D. degree program in Quantitative Methods requires a minimum of 20 course units or relevant courses and advanced degree accomplishments. A maximum of eight (8) credits from other institutions may be taken into account in reducing this basic requirement where appropriate.

### Required Milestones

#### Qualifications Evaluation (Also known as Program Candidacy)

A Qualifications Evaluation of each student is conducted after the completion of 6 but not more than 8 course units. The evaluation is designed by the specialization faculty and may be based on an examination or on a review of a student's overall academic progress.

### Preliminary Examination (Also known as Doctoral Candidacy)

A Candidacy Examination on the major subject area is required. The candidacy examination is a test of knowledge in the student's area of specialization, requiring students to demonstrate knowledge and reasoning in the key content areas in their specialization as defined by their academic division. This examination is normally held after the candidate has completed all required courses.

### Oral Proposal

All doctoral candidates must present their dissertation proposals orally and in person to the dissertation committee.

### Final Defense of the Dissertation

The final dissertation defense is approximately two hours in length and is based upon the candidate's dissertation.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

### Reading/Writing/Literacy, PhD

The Ph.D. in Reading/Writing/Literacy program prepares scholar-practitioners for positions in research universities and other educational organizations with a primary mission related to furthering knowledge in literacy and literacy education.

Students focus on developing their understanding and expertise in particular aspects of the field (e.g., teacher education, pedagogy and curriculum, leadership, policy, urban education, multicultural education, adult and community based literacy in and out of school, literacy in international contexts, etc.) and in learning to conduct research on critical issues and problems in literacy. Students are encouraged to develop one or more areas of concentration. Students choose electives from across the divisions in GSE and from other departments in the university.

For more information: http://www.gse.upenn.edu/rwl/rwl/phd (http://www.gse.upenn.edu/rwl/rwl/phd/)

View the University's Academic Requirements for PhD Degrees (http://catalog.upenn.edu/pennbook/academic-rules-phd/).

The total course units for graduation is 20. The requirements include 7 core courses, 3 additional research courses, 1 distribution course, and the remainder your choice of elective courses.

Teaching, Learning, and Teacher Education, PhD

The Ph.D. and Ed.D. programs in Teaching, Learning, and Teacher Education prepare graduates to serve as researchers and teacher educators in universities and colleges, curriculum developers and evaluators in educational agencies, curriculum specialists in school districts and state departments of education, and instructional leaders and classroom teachers in K-12 schools.

Coursework and research experiences address a range of practice-based and theoretical problems in schools and community settings from sociopolitical, cultural, philosophical, psychological, and historical perspectives. Taking an interdisciplinary stance, faculty and students explore issues of equity, social justice and educational change in a range of formal and informal educational settings. Through their programs of study, students select focal areas such as teaching and learning, research and practice in teacher education, mathematics or science education, and the study of urban education and urban contexts. Applicants interested in the focal area of literacy are encouraged to consider the doctoral program in Reading/Writing/Literacy.

Counseling and Mental Health Services, MSEd

The M.S.Ed. in Counseling and Mental Health Services (Year 1) is designed to introduce students to advanced training in psychology, mental health counseling, and school counseling. The program's innovative format combines coursework with practical field experience in preparation for future roles as mental health professionals who provide counseling services for children, adolescents, college students, families, and adults in a variety of settings. Many graduates of CMHS continue on to the M.Phil.Ed. in Professional Counseling (Year 2) at Penn GSE in order to qualify for licensure as a professional counselor or to pursue certification in school counseling.

For more information: https://www.gse.upenn.edu/aphd/cmhs/msed (https://www.gse.upenn.edu/aphd/cmhs/msed/)

Curriculum

A total of 10 course units are required for the MSEd.

Required Milestones

Comprehensive Examination (or Portfolio or Thesis)

Master's degree candidates must demonstrate thorough knowledge of the field of specialization by passing a comprehensive examination in their area of study. The examination/portfolio/thesis serves an educational and evaluative purpose through which students are expected to review and integrate what they have learned in their coursework and fieldwork. Comprehensive formats vary.

Education, Culture, and Society, MSEd

Under the supervision and mentorship of a faculty advisor, master’s students in the Education, Culture, and Society program undertake individualized and interdisciplinary programs of study in the social foundations of education. The program therefore provides students with a nuanced understanding of education as an historical, socio-cultural, political, and moral activity. ECS students explore the role education plays in reproducing and potentially transforming racialized, classed, and gendered relations and structures of inequality – in the U.S. or around the world. Working in small cohorts, students explore and build a unique vision for the program through collaborative dialogue, intensive writing, and critical inquiry.

Students may be eligible to pursue a dual-degree with public policy, non-profit leadership, or social work. Interested students who do not wish to pursue a second degree of study, may also consider the concentration in Community Action and Social Change. Although many ECS students are preparing for a path to doctoral study or academia, many others find the program helpful for establishing careers in schools, administration, educational non-profits, higher education, community advocacy work and/or educational consultancy.

For more information: https://www.gse.upenn.edu/ecs/msed (https://www.gse.upenn.edu/ecs/msed/)

Curriculum

A total of 10 course units are required for the ECS MSEd.

<table>
<thead>
<tr>

<tr>
<td>EDUC 668</td>
<td>Master’s Paper Seminar</td>
<td>0.5</td>
</tr>
</tbody>
</table>
ECS students are required to write a Master’s Paper on a core content area in Education, Culture, and Society. The Master’s Research Seminar in Education, Culture, and Society (EDUC 668) is a year-long, writing-intensive seminar that prepares students to cultivate a narrow area of educational expertise through the preparation of the capstone: an academic paper that demonstrates mastery through a close examination and original synthesis of previous research and argumentation. The course’s instructional team and the students’ faculty advisors coordinate in support of building a robust paper. The Master’s Paper is reviewed and approved by Program Faculty.

1 Methods courses prepare students in both the practical and theoretical implications of collecting, interpreting, analyzing and presenting data on the human condition broadly (and education/learning in particular.

2 Students with interest in qualitative traditions tend to enroll in EDUC 682 Qualitative Modes of Inquiry (offered Fall, Spring and Summer) while those interested in quantitative traditions enroll in EDUC 667 Introductory Statistics for Educational Research (offered Fall, Spring and Summer). Students are encouraged to discuss other options with their faculty advisors.

3 Electives must be graduate level and taken for a letter grade. Students should determine elective courses in conference with their faculty advisors to ensure they align with the Planned Program of Study. With faculty advisor approval, electives may potentially be taken in Education, Culture, and Society (ECS), other GSE programs, or from graduate programs across the university.

4 Students seeking the Community Action and Social Change Concentration must dedicate three CUs as described as follows: the student will complete 2 Community Concentration Electives; 1 Academically Based Community Service (ABCS) course; and an aligning topic for the master’s paper, and has thus meet all requirements of the Community Action and Social Change Concentration. A list of suggested electives is available in the program. ABCS courses are offered through the Netter Center and must be 500 level or higher.

5 Candidates for the M.S.Ed. degree must demonstrate knowledge of the field of education beyond the area of specialization. Students must complete one approved graduate level (500 and above) GSE course outside the student’s area of specialization, earning a grade of ‘B’ or better. In ECS, the requirement must meet the additional following criteria/conditions: (1) it must not be a core course as required in this Planned Program of Study; and (2) it must not be taught by a faculty member whose core appointment is in ECS.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

---

### Education Policy, MSEd

The M.S.Ed. in Education Policy equips students with the knowledge and methodological tools to understand, evaluate, and implement programs and policies that impact students and communities across the country and around the world. Our graduates go on to take leading roles in such organizations as school districts, federal and state departments of education, education policy research institutes, and education-related non-profit organizations.

For more information: [https://www.gse.upenn.edu/ep/msed](https://www.gse.upenn.edu/ep/msed)

#### Curriculum

M.S.Ed. students in Education Policy must complete 10 course units, in accordance with the curriculum outlined below, including the Education Policy Research Practicum (which fulfills the Comprehensive Examination requirement) and the Distribution Requirement. All degree candidates must maintain a minimum cumulative GPA of 3.0.

Master’s degree candidates must demonstrate thorough knowledge of the field of specialization by completing the Education Policy Research Practicum. The Practicum serves an educational and evaluative purpose through which students are expected to review, integrate, and apply what they have learned over the course of their degree.

Students in the M.S.Ed. in Education Entrepreneurship program acquire a strong grounding in three domains: Foundations of Education, Business Essentials, and Entrepreneurial Management of Knowledge. The nation's first Master's degree in Education Entrepreneurship is designed at the intersection of education, business, and entrepreneurship. The accelerated program is delivered through onsite weekend programs and blended distance education to accommodate working adults. The program provides working professionals with the knowledge, practical skills, and experiences necessary to chart new solutions in education. The 13-month capstone experience teaches students to identify a new opportunity, either for an existing entity or for the creation of a new venture, and design their own education program, service, or product. Graduates of this unique program leave with the tools necessary to create new schools and initiatives, launch education startups, fund and manage technology ventures, scale leading-edge programs, and drive innovation in educational organizations and corporations.

Capstone Project

Master's degree candidates must demonstrate thorough knowledge of the field of specialization by completing a capstone in their area of study. The examination/portfolio/thesis serves an educational and evaluative purpose through which students are expected to review and integrate what they have learned in their coursework and fieldwork. Comprehensive formats vary.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Higher Education, MSEd

The M.S.Ed. in Higher Education will prepare students to take on leadership roles in institutions of higher education, nonprofit organizations, and government agencies involved in constructing higher education nationally and worldwide. The program explores a wide range of topics including access to and equity within higher education, student development, postsecondary administration and management,
organizational change, curriculum and pedagogy, economics and financing, and postsecondary policies at federal, state, and global levels. The program offers a variety of courses that enable students to shape a plan of study that will prepare them for their area of interest. The curriculum is based on interactive case studies, discussion-oriented seminars, individual and group projects, and hands-on, work-based applications of learning. The program offers practical higher education administrative experiences through graduate assistantships for full-time students.

For more information: https://www.gse.upenn.edu/hed/msed (https://www.gse.upenn.edu/hed/msed/)

Curriculum
A total of 10 course units are required for the Higher Education MSEd.

</table>

1 Students must complete SIX total Higher Education courses, including EDUC 594. *EDUC 592 is recommended for full-time students with fewer than 4 years of professional work experience. Students with more than 4 years of work experience may be exempt from EDUC 592, and a substitute HE course would serve as a substitute requirement in such cases.

2 Any substitutions for required courses must be approved by your advisor and/or the Division Chair.

3 Candidates for the M.S.Ed must demonstrate knowledge of the field of education beyond their area of specialization, which is met by satisfying the distribution requirement. Students must complete one approved graduate level GSE course outside the Higher Education division, earning a grade of 'B' or better (i.e., any non-HE ‘EDUC’ course, 500-level or above).

4 Electives may be taken at any school at Penn; however, the majority of Higher Ed MSEd students fulfill their electives within the division. Courses must be at the 500-level or above and students should consult their academic advisor before enrolling in any course outside of GSE. Students may not register for more than 2 independent study courses over the course of their program of study.

Comprehensive Examination
Higher Ed MSEd candidates must pass a comprehensive exam in order to graduate. To qualify to take the examination, students must have completed at least 5 Higher Ed CU’s, or be enrolled in at least the fifth course unit. The exam is given in both the Fall and Spring terms. Under this planned program of study, FT students can take the exam in the spring semester.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Independent School Teaching Residency, MSEd
The Independent School Teaching Residency, M.S.Ed. program (ISTR) prepares early educators in our partnered schools with foundational pedagogy and classroom management skills to become successful teachers through a highly mentored, in person and online fellowship. ISTR enables aspiring and early career teachers to receive a master’s degree in education while completing teaching fellowships at host partner schools. With an innovative and comprehensive curriculum designed specifically for the independent schools’ unique settings, ISTR features intensive on-site sessions in combination with innovative and collaborative distance learning. The program also provides an option to apply for a Pennsylvania teaching certification. This option requires the completion of one additional course, EDTF 521 Foundations of Special Education as well as all PA state requirements for certification.

## Master's Portfolio

Master's degree candidates must demonstrate thorough knowledge of the field of specialization by creating a portfolio and passing a portfolio review in their area of study. The portfolio serves an educational and evaluative purpose through which students are expected to review and integrate what they have learned in their coursework and fieldwork. Portfolio formats vary.

The Independent School Teaching Residency MSEd program also provides an option to apply for a Pennsylvania teaching certification. This option requires the completion of one additional course, EDTF 521 Foundations of Special Education as well as all PA state requirements for certification.

## Required course for certification option. Term taken varies.

## Intercultural Communication, MSEd

The M.S.Ed. in Intercultural Communication, housed within the Educational Linguistics Division, provides the skills and knowledge necessary to understand linguistic and social practices in a variety of contexts.
of environments. The M.S.Ed. in Intercultural Communication (ICC), provides a solid foundation in ethnographic and discourse analytic research methods. The core courses examine linguistic and social practices that occur in face-to-face interaction, the cultural expectations and ideologies that inform communicative practices, and the cultural dynamics of power and identity. A degree in ICC prepares students for careers such as cultural exchange advising and administration, study-abroad programming, refugee and immigrant support, and curriculum development, training, and facilitation. The program also provides a solid theoretical foundation for those students considering a career in intercultural research and/or doctoral study.

For more information: https://www.gse.upenn.edu/elx/icc

Curriculum
A total of 12 course units are required for the ICC MSED. All courses must be at the 500 level or above.

Select 1 Distribution Requirement course 5

Capstone Course 4
EDUC 567 Internship: ICC

Total Course Units 12

Required Milestone:
Master's degree candidates must demonstrate thorough knowledge of the field of specialization by passing a comprehensive examination in their area of study. The examination/portfolio/thesis serves an educational and evaluative purpose through which students are expected to review and integrate what they have learned in their coursework and fieldwork. Comprehensive formats vary.

Students must complete an internship of at least 160 hours. The internship proposal (part of EDUC 845 Seminar in Microethnography) must be approved before you can begin your internship; the internship must be completed before you may register for EDUC 567 Internship: ICC. EDUC 567 Internship: ICC is offered in the spring semester only.

2 Students must maintain a 3.5 cumulative GPA after the completion of the first fall semester in order to register for 4 CU’s in subsequent semesters. Students must maintain a 4.0 cumulative GPA after the completion of the first fall semester in order to register for 5 CU’s in subsequent semesters.
3 Two courses may be transferred into the program (as electives only) with the approval of ELX faculty.
4 Students must earn a grade of B- or higher in core courses (see Handbook).
5 Candidates for the M.S.Ed. degree must demonstrate knowledge of the field of education beyond the area of specialization. This requirement is met by satisfying the distribution requirement. To meet the distribution requirement, students must complete one approved graduate level (500 and above) GSE course outside the student’s area of specialization, earning a grade of ‘B’ or better. Students should check with their program manager for a list of courses approved to fulfill the distribution requirement. Further requirements regarding these courses may be specified by each division.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Interdisciplinary Studies in Human Development, MSED
The M.S.Ed. in Interdisciplinary Studies in Human Development (ISHD) program examines the social, emotional, cognitive, and physical aspects of human development within the context of culture and social policy. The ISHD master’s program offers students the opportunity to create an individualized program of study that leads to an enriched understanding of the diverse perspectives of human development across the lifespan in one of the following career interests: traditional academic research, youth programming and services, urban and ethnic studies, adult development and learning, international programming (e.g., work with NGOs), foundation administration, and program development. The program is designed for pre-professional training and to prepare students to advance within their careers by gaining a better understanding of human development issues. The M.S.Ed. in ISHD also gives students a solid foundation for applying to doctoral programs in human development and related fields.

Total Course Units 10

Applied Development and Counseling Skills

Concentration:
ISHD MSEd students may opt for a concentration in Applied Development and Counseling Skills by taking 7 ISHD courses in addition to 3 courses that would fulfill requirements for the concentration.

Required Milestones

Comprehensive Examination (or Portfolio or Thesis)
Master's degree candidates must demonstrate thorough knowledge of the field of specialization by passing a comprehensive examination in their area of study. The examination/portfolio/thesis serves an educational and evaluative purpose through which students are expected to review and integrate what they have learned in their coursework and fieldwork. Comprehensive formats vary.

IEDP Capstone Portfolio
Students must prepare a professional, performance-based portfolio of works that demonstrate their mastery of IED research, theory, skills and practice. The portfolio must include a Policy Brief (prepared in the Master’s Proseminar in International Educational Development).
Students should confer with their faculty advisor about the other requirements of the portfolio, but they may include: technical proposal; internship reports and assignments; and/or term or position papers; academic presentations.

**IEDP Summer Field Internship**

All eligible students may complete an approved 12 week, international internship in an education and development oriented organization (typically in the summer), where there are productive work opportunities, and where interns have the skills that match the position openings. Domestic placements may be considered for those who request them.

All IEDP-Masters students who have passed EDUC514, EDUC695, and EDUC734, and in good academic standing are eligible for an IEDP internship. Students should confer with their faculty advisor about eligibility review and internship placement. Students will be registered for EDUC990 in the term of their internship if they are not enrolled in any other courses.

1. Both quantitative and qualitative courses prepare students in the practical and theoretical implications of collecting, interpreting, analyzing and presenting data on the human condition broadly (and education/learning in particular).
2. IEDP thematic courses build on and extend the foundation built in core courses around particular, specialized areas. These should be IEDP (or related) courses that prepare students for professional paths in international education. With faculty advisor approval, offerings from outside the program that achieve these aims may be considered.
3. Candidates for the M.S.Ed. degree must demonstrate knowledge of the field of education beyond the area of specialization. Students must complete one approved graduate level (500 and above) GSE course outside the student’s area of specialization, earning a grade of “B” or better. Students should confer with their faculty advisor for further guidance.
4. Electives must be graduate level (500 and above) and taken for a letter grade. Students should draw on elective courses to reflect their emerging, self-identified specialization within the field. They may be based on: region of the world (e.g. South Asia or Latin America); discipline, topic or issue (e.g. sociology, human rights or literacy); or practical application (e.g. curriculum design or non-profit leadership).

Electives should be determined in conference with a faculty advisor so they align with the Planned Program of Study. With faculty advisor approval, electives may potentially be taken in International Educational Development (IEDP), other programs in the Graduate School of Education or from graduate programs across the University of Pennsylvania.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

---

**Learning Sciences & Technologies, MSEd**

The M.S.Ed. in Learning Sciences and Technologies lays the foundation for graduates to pursue fulfilling and creative careers as educators, researchers, and developers of next-generation curricula, technology-enriched learning environments, and instructional programs. The Learning Sciences and Technologies M.S.Ed. is designed for students who wish to investigate at an advanced level the interdisciplinary connections between learning environments (both online and offline), design issues, and educational concerns. Students enjoy individualized courses of study in a small, community-oriented cohort of students. The curriculum gives students the knowledge, skills, and techniques needed to assess, design, and implement programs in learning settings that range from after-school opportunities to corporate professional development.

**Other Requirements**

Internship requirement: Supported by EDUC 696 In/formal Learning Experience Internship; includes internship work as outlined in Internship Contract.

Master’s Paper/Capstone Experience: Supported by EDUC 668 Master’s Paper Seminar

1. The MSEd degree requires a minimum of 10 CUs. All courses counted towards the degree must be at the 500 level or above. No transfer credits are accepted. Other program requirements include successful completion of the internship program and the Master's Paper. All students must take at least 3 CUs to be considered full-time. Part-time students enroll in 1 to 2 CUs per semester.
2. Please refer to program for full list of concentration courses
3. The 545 course number is used to denote an experimental course offered for the first time, and several sections of 545 may be offered in a single semester.
Candidates for the M.S.Ed. degree must demonstrate knowledge of the field of education beyond the area of specialization. This requirement is met by satisfying the distribution requirement. To meet the distribution requirement, students must complete one approved graduate level (500 and above) GSE course outside the student’s area of specialization, earning a grade of “B” or better. Students should check with their program manager for a list of courses approved to fulfill the distribution requirement. Further requirements regarding these courses may be specified by each division.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Medical Education, MSEd
The University of Pennsylvania Medical Education (Med Ed) Master of Education degree program is a unique collaboration between physician educators and education experts who have come together to provide a comprehensive, innovative curriculum designed specifically for physicians and other healthcare professionals. The program offers leaders in medical education the opportunity to receive master-level training in the delivery of innovative, evidence-based education programs based on sound educational scholarship and the latest technologies. The format is designed to accommodate professionals from a broad geographic area, pairing brief, on-site intensives with flexible, distance learning. This program is brought to you by the University of Pennsylvania Graduate School of Education. It is directed, designed and led in collaboration with the Perelman School of Medicine and The Children’s Hospital of Philadelphia.

Professional Counseling, MPhilEd
The M.Phil.Ed. in Professional Counseling functions as the second year of our Professional Counseling Programs, following the M.S.Ed. in Counseling and Mental Health Services. The M.Phil.Ed. prepares students to become Certified School Counselors and/or Licensed Professional Counselors (LPCs). The M.Phil.Ed. in Professional Counseling program emphasizes supervised counseling and clinical skills development for addressing the emotional and behavioral health challenges facing individuals and groups in a wide range of settings, including schools, neighborhoods, and larger communities. This program involves a year of advanced study in the mastery of professional counseling, clinical assessment, and consultation services immediately following completion of the one-year Counseling and Mental Health Services (CMHS) M.S.Ed. program. Graduates of the program can either launch their careers as licensed professional counselors after completing post-graduate requirements or go on to pursue doctoral studies.

The M.Phil.Ed. in Quantitative Methods is designed for professionals who have already earned a relevant master's degree and wish to advance their mastery of scale development and assessment, design of randomized field trials and quasi-experiments, multivariate statistical analysis as applied in education, surveys, and the production of high-quality evidence for decision-making in public and organizational policy. In addition to developing expertise in advanced methods of research, students are required to take distribution courses in fields such as early childhood, reading, science education, education in developed and developing countries, dropout and risk prevention, etc. The curriculum integrates research methods with policy content. Research experience is an integral part of the curriculum. Graduates are prepared to design, apply and interpret measures of attitude, behavior, and other social science, education and related phenomena; to validate, scale and equate such measures; to plan and conduct controlled field experiments; to apply and interpret advanced univariate and multivariate statistics; to evaluate programs and policies through quantitative studies; and to disseminate and interpret results for understanding and policy development.

For more information: https://www.gse.upenn.edu/qm/mphiled (https://www.gse.upenn.edu/qm/mphiled/)
students as practitioners, researchers, and policy makers in educational settings that include K-12 schools, colleges and universities, community-based literacy programs, educational publishing, and government programs. Four principles guide the program:

1. Literacy and language are studied from the sociopolitical, cultural, psychological, historical, linguistic, and literary perspectives;
2. The program is inquiry-based, intended to raise questions about the relationships among theory, research, policy, and practice while encouraging students to build their own theories of research and practice;
3. It focuses on diversity and on urban settings and the contexts of different schools, communities, families, and cultures; and
4. The program is committed to educational change, recognizing that educational institutions are sites in which to work for social justice, equity, and transformation.

**Capstone Course**

**Elective Courses**
Capstone

Master’s degree candidates must demonstrate thorough knowledge of the field of specialization by taking a capstone class at the end of their program of study. The capstone course serves an educational and evaluative purpose through which students are expected to review and integrate what they have learned in their RWL coursework and fieldwork.

1 These courses listed are required for RWL MSED + Reading Specialist Certification students (depending on their prior certification/preparation). Regular MSEd students only need two RWL Foundations in Literacy courses (consult with program manager for a full list of courses) to fulfill this requirement.

2 The course selection should be outside RWL but within GSE.

3 Candidates for the M.S.Ed. degree must demonstrate knowledge of the field of education beyond the area of specialization. This requirement is met by satisfying the distribution requirement. To meet the distribution requirement, students must complete one approved graduate level (500 and above) GSE course outside the student’s area of specialization, earning a grade of “B” or better. Students should check with their program manager for a list of courses approved to fulfill the distribution requirement. Further requirements regarding these courses may be specified by each division.

4 Electives must be 500 level or above and taken for a letter grade (no pass/fail) to be included towards the MSEd degree. Non-GSE courses must be approved by your advisor.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

School Leadership, MSEd

The School Leadership Program prepares professionals in independent, public, and charter schools to inquire into their own practice and develop their identities as leaders, building confidence and excellence. Our integrated program of study focuses on the dynamics of instructional, organizational, public, and evidence-based leadership with coursework designed to help students draw connections between theory and practice by applying learning in school settings. We emphasize cross-cutting competencies, including habits of mind, interpersonal/interpersonal growth, reflective practice, communication skills and professionalism. In a field where practitioners are frequently siloed within their schools, grade levels, and sectors, the master’s in School Leadership Program brings together students representing a diverse array of public, charter, and independent schools—not only from across the region but also the nation.

Practitioner Research Project

Required Milestone:
Master’s degree candidates must demonstrate thorough knowledge of the field of specialization by passing a comprehensive examination in their area of study. The examination/portfolio/thesis serves an educational and evaluative purpose through which students are expected to review and integrate what they have learned in their coursework and fieldwork. Comprehensive formats vary.

1 The School Leadership Program is unable to provide immigration sponsorship for international students.
2 To be admitted into this track, students must have several years professional experience in a school setting. Most often our students’ school experience comes from teaching in a classroom but special to the Independent School Track is the ability for those in admissions or development roles at private schools to participate in the program without having had prior classroom experience.
3 To be admitted into this track, students must either have at least three years teaching experience or two years teaching experience and be in a teaching position while completing the program.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

School and Mental Health Counseling, MSEd

The Executive Program in School and Mental Health Counseling, M.S.Ed. is designed for working professionals embarking on careers as either school or mental health counselors. The program is organized around two tracks: Mental Health Counseling Licensure and School Counseling Certification and Mental Health Counseling Licensure. Using an executive-learning format, students can earn their degrees while maintaining full-time employment by attending courses that meet for one week of intensive study each summer and one weekend per month during two academic years. The cohort-model program results in students who work closely with their peers through a sequentially structured curriculum of courses and field training. Supervised field experiences are integral to the program. This program starts in the Summer term.

Required Milestones

Comprehensive Examination (or Portfolio or Thesis)

Master's degree candidates must demonstrate thorough knowledge of the field of specialization by passing a comprehensive examination in their area of study. The examination/portfolio/thesis serves an educational and evaluative purpose through which students are expected to review and integrate what they have learned in their coursework and fieldwork. Comprehensive formats vary.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Statistics, Measurement, Assessment, and Research Technology, MSEd

The M.S.Ed. in Statistics, Measurement, Assessment, and Research Technology (SMART) program is designed to prepare individuals for work in research and assessment organizations, public institutions, and government agencies focused on education, psychology, and related human services fields. The program provides understanding and skills in data collection, management, and processing; measurement theory and test construction; survey design; design and execution of randomized controlled experiments and quasi-experiments; assessment strategies; and statistical analysis and reporting in education. Graduates of the SMART program go on to become researchers and statistical analysts in organizations such as school districts, government agencies, research centers, educational testing companies, and educational research institutes.

For more information: https://www.gse.upenn.edu/qm/smart (https://www.gse.upenn.edu/qm/smart/)

Curriculum

10 CUs are required for the Statistics, Measurement, Assessment, and Research Technology (SMART) MSEd Program.

Distribution Requirement

Select 1 Distribution course (Fall, Spring, or Summer) 1

Elective Courses

Select 2 elective courses (Fall, Spring, or Summer) 2

Total Course Units 10

1 Candidates for the MSeD degree must demonstrate knowledge of the field of education beyond the area of specialization. This requirement is met by satisfying the distribution requirement. To meet the distribution requirement students must complete one approved graduate level (500 or above) GSE course outside the academic division in which they are enrolled, earning a grade of 'B' or better.

2 Students are required to take two elective courses. These courses can be taken at other Penn schools with permission from the advisor and the school in question. The student must also earn a grade of 'B' or better.

3 The SMART Program of study for the M.S.Ed. degree requires that students have had an introductory statistics course, such as EDUC 667 or its equivalent, prior to entering the SMART Program. If it is discovered that an entering student is insufficiently prepared in statistics, the student will be required to enroll in EDUC 667. This will count as an elective in the student’s required 10 CUs. The SMART requirement for a student having had EDUC 667, or its equivalent, prior to program entry applies to all part-time and all full-time students entering the program, whether employed by the university or not.

Comprehensive Examination

Toward the end of completion of course requirements, master’s students are required to pass a general examination in the core content of SMART.

Graduation

Anticipated graduation under this plan can be either May, August, or December.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.
Teaching English to Speakers of Other Languages, MSEd

The M.S.Ed. in Teaching English to Speakers of Other Languages (TESOL), housed within the Educational Linguistics Division, provides a foundation in the practical, theoretical, and professional aspects of the field of language education with a focus on English language teaching. The M.S.Ed. in TESOL prepares students to teach English in settings where English is a second, foreign, or international language. The program emphasizes the many roles and functions of English language education in the political, social, and academic climate of today's globalized world. TESOL's course of study combines the theoretical and practical aspects of the field while emphasizing the motivations and needs of immigrants who settle in English-speaking nations, international scholars and professionals, and students in countries where English is a second or foreign language. In-depth study and field-based practice prepare students to identify and analyze learner needs, design tailored language curricula, and use a variety of evidence-based teaching and assessment practices.

For more information: https://www.gse.upenn.edu/elx/tesol (https://www.gse.upenn.edu/elx/tesol/)

Curriculum

A total of 12 course units are required for the TESOL MSEd.\(^1,2\) All courses must be at the 500 level or above.

Required Milestone:

Master's degree candidates must demonstrate thorough knowledge of the field of specialization by passing a comprehensive examination in their area of study. The examination/portfolio/thesis serves an educational and evaluative purpose through which students are expected to review and integrate what they have learned in their coursework and fieldwork. Comprehensive formats vary.

2 Full-time registration is 3 CUs. Students must reach and maintain a 3.5 cumulative GPA after the completion of the first fall semester in order to register for 4 CUs in subsequent semesters.
3 Students must earn a grade of B- or higher in core courses. See the TESOL Handbook for more information.
4 Students may teach any language at their EDUC 528 TESOL Practice Teaching field site.
5 Depending on prior academic and teaching experience, students may seek faculty permission to waive EDUC 542 TESOL Classroom Fundamentals and EDUC 679 Reading, Writing, and Critical Thinking for Applied Linguistics. If waived, those courses are replaced with electives.
6 Candidates for the M.S.Ed. degree must demonstrate knowledge of the field of education beyond the area of specialization. This requirement is met by satisfying the distribution requirement. To meet the distribution requirement, students must complete one approved graduate level (500 and above) GSE course outside the student's area of specialization, earning a grade of 'B' or better. Students should check with their program manager for a list of courses approved to fulfill the distribution requirement. Further requirements regarding these courses may be specified by each division.
7 Students must teach English at their EDUC 563 TESOL Seminar field site.

Teaching, Learning, and Leadership, MSEd

Focused primarily on K-12 populations, the M.S.Ed. in Teaching, Learning, and Leadership is designed for individuals who wish to work in educational and leadership capacities both in and outside of formal classroom settings. Students choose one of two areas of informal specialization: Teaching and Learning, or Educational Leadership. Students enjoy individualized courses of study in a small, community-oriented cohort. Our two-semester internship program, paired with our Internship Seminar, gives students an in-depth understanding of how learning occurs in out-of-school environments. Graduates work in schools, school administrations, after-school programs, museum settings, and educational non-profits.

For more information: https://www.gse.upenn.edu/tll/msed (https://www.gse.upenn.edu/tll/msed/)

Curriculum

A total of 10 course units are required for the TLL MSEd.\(^1\).

1 Two courses may be transferred into the program (as electives ONLY) with the approval of ELX faculty.
The Urban Teaching Residency program provides solid academic training and professional mentoring necessary to create effective urban educators. The curriculum is set around four core principles: unwavering focus on children; teacher inquiry and reflection; broad understanding of education and commitment to equity and social justice. The program began as a partnership of Penn GSE, the Pennsylvania Department of Education, and the Teach For America Greater Philadelphia Region.

To meet the needs of people working full time, the Urban Teaching Residency program is an executive-style format program with a hybrid of online and in-person coursework.

Our program offers two tracks. One with Pennsylvania certification (Every Teacher Certified, or ETC) and one without (Urban Professionals Program, or UPP).

### Every Teacher Certified Options:

1. **M.S.Ed. in Urban Education with PA Instructional I certification** ([https://utrp.gse.upenn.edu/program/certification/](https://utrp.gse.upenn.edu/program/certification/))
   - The **M.S.Ed. in Urban Education with recommendation for the Instructional Level I Certification** allows you to work towards a Pennsylvania teaching certification while simultaneously completing coursework required to earn a master's degree in education.

2. **M.S.Ed. in Urban Education with dual certification in PA Instructional I and special education** ([https://utrp.gse.upenn.edu/program/certification/](https://utrp.gse.upenn.edu/program/certification/))
   - The **M.S.Ed. in Urban Education with recommendation for the Instructional Level I Certification and K-12 Special Education Certification** allows you to work towards a PA content-area certification and certification in Special Education in two years. You must opt into this track by the first semester of your first year.

3. **Certification Only – General Education or Special Education**
   - General Education Certification Only is for students who are entering the program through one of our educational and school partners.

4. **Special Education Certification Only is for teachers who are already certified in a general education track.**

### Urban Professionals Program track

**M.S.Ed. in Urban Education**

The M.S.Ed in Urban Education is designed for teachers, researchers, educators, and community advocates who are interested in the distinct needs of children and families in high-needs contexts. It explores issues related to equity, access, institutional and school-level policy, as well as the needs of children living in poverty. Drawing from critical and sociocultural perspectives, the M.S.Ed in Urban Education considers how communities, schools, and policy intersect to impact families in high-needs schools.

#### Elective (1)

#### Specializations

Select one specialization below and complete the requirements:

- **Elementary**
  - EDTF 503 & EDTF 531 | Methods: Elementary A and Methods: Elementary B |

- **World Languages**
  - EDTF 508 & EDTF 535 | METHODS: 7-12 WORLD LANGUAGES and Methods: 7-12 World Languages B |

- **English Middle Years**
  - EDTF 504 & EDTF 532 | Methods: 7-12 Mathematics A and Methods: Middle Years B |

- **English Secondary**
  - EDTF 505 & EDTF 533 | Methods: 7-12 English A and Methods: 7-12 English B |

- **Mathematics Middle Years**
  - EDTF 504 & EDTF 532 | Methods: 7-12 Mathematics A and Methods: Middle Years B |

- **Mathematics Secondary**
  - EDTF 520 & EDTF 536 | METHODS: 7-12 MATHEMATICS and Methods: 7-12 Mathematics B |

- **Sciences Middle Years**
  - EDTF 504 & EDTF 532 | Methods: 7-12 Mathematics A and Methods: Middle Years B |

- **General Sciences**
  - EDTF 506 & EDTF 534 | METHODS: 7-12 SCIENCE (BIOLOGY) and Methods: 7-12 General Science/Biology B |

- **Biology**
  - EDTF 506 & EDTF 534 | METHODS: 7-12 SCIENCE (BIOLOGY) and Methods: 7-12 General Science/Biology B |

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

### Every Teacher Certified (ETC) M.S.Ed. with Certification

Certification tracks are assigned based on the content area and grade level placement in which you work in your school. Our program ensures that your coursework and mentoring aligns with requirements for earning teaching certification.

**General Education Tracks:**
- Pre-K-4\(^{th}\) grade
- Middle Years with concentration in
  - Mathematics
  - Science
  - English
- Secondary Mathematics
- Secondary English
- Secondary General Science
- Secondary Physics
- Secondary Biology
- Secondary Chemistry
- Secondary World Languages

1 Consult with Program for choices.

Required Milestone

Comprehensive Examination (or Portfolio or Thesis)
Master's degree candidates must demonstrate thorough knowledge of the field of specialization by passing a comprehensive examination in their area of study. The examination/portfolio/thesis serves an educational and evaluative purpose through which students are expected to review and integrate what they have learned in their coursework and fieldwork. Comprehensive formats vary.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Every Teacher Certified (ETC) M.S.Ed. with Dual Certification

M.S.Ed. in Urban Education with dual certification in PA Instructional I and Special Education (https://utrp.gse.upenn.edu/program/certification/)

Certification tracks are assigned based on the content area and grade level placement in which you work in your school. Our program ensures that your coursework and mentoring aligns with requirements for earning teaching certification.

General Education Tracks
- Pre-K-4th grade
- Middle Years with concentration in
  - Mathematics
  - Science
  - English
- Secondary Mathematics
- Secondary English
- Secondary General Science
- Secondary Physics
- Secondary Biology
- Secondary Chemistry
- Secondary World Languages

Special Education (Dual) Certification

Along with a general education certification, individuals working in special education classrooms may have the opportunity to earn either a Pre-K-6th or a 7th-12th grade special education certification through our dual certification program. A stand-alone special education certification is not an option in the State of Pennsylvania.

Dual certification requires completion of one of the General Education certification tracks above combined with either:

- Elementary Special Education (Pre-K-8th grade)
- Secondary Special Education (7th-12th grade)

Teachers who have earned PA certification and wish to add the special education certification can enroll in the Special Education Certification only track, which is a 5-course, 1-year hybrid model.

For more information: https://utrp.gse.upenn.edu/program/certification (https://utrp.gse.upenn.edu/program/certification/)

Urban Professionals Program (UPP)
M.S.Ed. in Urban Education
The M.S.Ed in Urban Education is designed for teachers, researchers, educators, and community advocates who are interested in the distinct needs of children and families in high-needs contexts. It explores issues related to equity, access, institutional and school-level policy, as well as the needs of children living in poverty. Drawing from critical and sociocultural perspectives, the M.S.Ed in Urban Education considers how communities, schools, and policy intersect to impact families in high-needs schools.

Urban Teaching Apprenticeship, MSEd
Urban Teaching Apprenticeship Program (UTAP) MSEd.
UTAP features a 10-month teaching apprenticeship that provides authentic experiences teaching at the side of experienced classroom mentors. Apprentices have over 800 hours of field time (more than twice the student teaching experience of the average program) to develop research-based practices.

The UTAP apprenticeship begins in the summer. Apprentices work in youth-serving summer programs located in the neighborhood where they will teach in the fall. Once schools begin, an experienced mentor shares the classroom with the apprentice, guiding their emerging teaching practice. Apprentices also receive support from Penn Mentors who visit the classroom one day per week, and provide feedback to ensure development of targeted teaching skills and dispositions learned during course work.

When our alumni seek employment after graduation, they already have a full year of teaching experience on their resume.
Purposeful Mentorship

The mentored field experiences are the core of the Urban Teaching Apprenticeship Programs. Carefully selected PreK-12 school settings and classrooms serve as learning sites for apprentices.

Cohort Model

The program is cohort based: all apprentices begin and move through the program together, sharing classes and experiences in their schools.

Inquiry & Practitioner Research Skills

An inquiry stance is modeled and encouraged; teachers see themselves not only as consumers of research but generators of it, using their own classrooms as sites for ongoing research and self-reflection. In the program, apprentices conduct research in their classrooms and complete a capstone project.

Developing Digital Fluency

Apprentices learn how to develop a webpage (https://utap.gse.upenn.edu/about/research/), use blogs to critically communicate their experiences in schools, and publish original teacher research to their webpage. In addition to participating in an eight-session module on integrating technology into their lessons and classroom, apprentices engage in the use of video to intensively study their own practice as a way to extend reflective self-inquiry and learning.

Advocacy and Leadership: Equity in Education

The Master of Science in Education degree and the urban teaching apprenticeship prepare alumni to take on leadership roles, particularly those that position them as advocates for all students.

Full Year Apprenticeship

Our students begin apprenticing in a Philadelphia public or charter school on the first day of the school year. Unlike traditional student teaching models, our apprentices experience nearly an entire year in the classroom.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Program of Study

Term i: Summer

</tr>
<tr>
<td>EDUC 642</td>
<td>School, Society &amp; Self</td>
<td>1.0</td>
</tr>
</tbody>
</table>

Fieldwork

Field placement in the summer takes place in public libraries, where apprentice teachers will be able to implement small-group teaching tasks learned in their Math, Literacy and Maker-Space courses. Apprentices are in libraries for half-days, Monday - Wednesday each week and spend Fridays at community site-visits bi-weekly. Summer placements are a total of approximately 40 hours of fieldwork.

Term ii & iii: FALL

<td>1.5</td>
</tr>
</tbody>
</table>

Fieldwork

During early spring (January - beginning of March), apprentices are in their placements for five whole days. Apprentices are expected to facilitate whole-group lessons regularly, including a “two-week takeover” during which apprentices become the lead teacher for the entire two days.

Urban Teaching Apprenticeship M.S.Ed. in Elementary Education with PA Grades PreK-4 Certification

The UTAP PreK-4 certification program of study is comprised of fieldwork, courses, and academic/career workshops within its thematic five-term school year, spanning 10-months. A total of 11 course units are required for graduation.

Apprentice-teachers learn how to address the needs and nuances of the whole child. Our program provides a robust foundation in the four core content areas: Math, Literacy, Science and Social Studies, from the position that high-quality content instruction is key.

A total of 11 course units are required for graduation.

For more information: https://www.gse.upenn.edu/tll/utep (https://www.gse.upenn.edu/tll/utep/)
weeks. Early spring placements are a total of approximately 280 hours of fieldwork.

During late spring (beginning of March - early May), apprentices are at their placement for five whole days. Apprentices are expected to facilitate whole-group lessons regularly. Late spring placements are a total of approximately 245 hours of fieldwork.

**Comprehensive Portfolio**

To culminate Term V, students complete the design a web-based Inquiry Portfolio that expands on their Term III inquiry question and highlights their two-week takeover from their Term IV social action project. Evidence of performance assessments, with commentary, appears in the final portfolios.

**Specializations**

In response to the growing need for teachers who can address the needs of specific types of schools and students, UTAP offers the opportunity to begin work in specialty areas. These specialties require additional coursework during the first year of teaching.

Language Diversity/Program Specialist in ESL: Apprentices work as student teachers in partner schools with ESL, bilingual, and dual language students and programs. Currently UTAP seeks apprentices who speak Spanish and Mandarin for bilingual classrooms. Apprentices seeking ESL program specialist certification need not be bilingual.

Special Education: During the apprenticeship year, apprentices in this specialty serve part of their time with students who have Individualized Education Plans (IEPs). Upon completion of the apprenticeship year, candidates will complete coursework for the specialization for the special education certificate Pennsylvania PreK-4.

**Pennsylvania Secondary Education Certification**

Upon successful completion of all components of the Urban Teaching Apprenticeship Program (required coursework and student teaching apprenticeships), including obtaining clearances and completing prerequisite coursework, students receive faculty recommendation for instructional 1 certification, which is awarded by the Pennsylvania Department of Education. PDE requires that all applicants for instructional 1 certification be either U.S. citizens or permanent residents who are willing to submit a form indicating intention of applying for U.S. citizenship.

All applicants for the secondary education certificate must have completed a minimum of two English courses (one a writing course and one a British or American literature course) and two math courses. In addition, a number of courses related to the certification subject are required. Upon admission, we work with students to determine if they need additional courses to satisfy these certification requirements.

While we offer faculty recommendation for Pennsylvania certification, many of our students obtain Pennsylvania certification and then move to other states or countries. There is a NASDTEC Interstate Agreement to facilitate movement by teachers among states. We recommend, therefore, that students obtain Pennsylvania certification even if they plan to teach in other states.

---

**Urban Teaching Apprenticeship M.S.Ed. in Middle Level Education with PA Grades 4-8 Certification – Student-Centered Teaching in Urban Contexts**

The UTAP 4-8 certification program attends to these complexities through its program of study within its thematic, five-term school year, spanning 10 months and culminating with a master’s degree in education and faculty recommendation for instructional 1 certification in a middle years content area.

Apprentice teachers apply coursework theory and engagement with students during their year long fieldwork experience. Apprentice teachers engage in mentored teaching in the K-8 grade range, in public or public charter schools based on their certification area. When possible, these are schools that are developing rich environments that support design thinking, such maker-spaces, STEM classrooms, and robotics clubs.

As with our other programs, field opportunities extend across the full 10 months of our program, offering apprentices up to 800 hours of experience, in contrast to many programs where student teaching occurs over as little as 12 weeks. Our program immerses the apprentices in the teaching environment, spending more than 850 hours by the end of the 10 month program.

A total of 12 course units are required for graduation.

specialty serve part of their time with students who have Individualized Learning Plans (IEPs). Upon completion of the apprenticeship year, candidates will complete coursework for the specialization for the special education certificate.

Pennsylvania Grades 4-8 Certification

Upon successful completion of all components of the Urban Teaching Apprenticeship Program (required coursework and student teaching apprenticeships), including obtaining clearances and completing prerequisite coursework, students receive faculty recommendation for instructional 1 certification, which is awarded by the Pennsylvania Department of Education. PDE requires that all applicants for instructional 1 certification be either U.S. citizens or permanent residents who are willing to submit a form indicating intention of applying for U.S. citizenship.

All applicants for the middle level certification must have completed a minimum of two English courses (one a writing course and one a British or American literature course) and two math courses. In addition, a number of courses related to the certification subject are required. Upon admission, we work with students to determine if they need additional courses to satisfy these certification requirements.

While we offer faculty recommendation for Pennsylvania certification, many of our students obtain Pennsylvania certification and those states or countries. There is a NASDTEC Interstate Agreement to facilitate movement by teachers among states. We recommend, therefore, that students obtain Pennsylvania certification even if they plan to teach in other states.

Urban Teaching Apprenticeship M.S.Ed. in Secondary Education with PA Grades 7-12 Certification

In the Secondary Education program, coursework and intensive field experiences build on content expertise and support the development of pedagogical content knowledge.

Through the secondary education program, teachers are recommended for certification in English, math, social studies, and the sciences. Depending on your certification area, you will be placed in the STEM Inquiry concentration or the Active Learning in the Humanities concentration. Both concentrations are designed to unite apprentices’ passion for their content areas with best-practices in problem-based, student-centered pedagogies.

A total of 11 course units are required for graduation.

Program of Study

Term I: SUMMER

<table>
<thead>
<tr>

<td>Managing Collaborative Learning Environments in Urban Contexts</td>
<td>1.0</td>
</tr>
<tr>
<td>EDUC 642</td>
<td>School, Society &amp; Self</td>
<td>1.0</td>
</tr>
</tbody>
</table>

Fieldwork

Students begin their apprenticeship working with youth in summer programs situated in neighborhoods where they will student teach during
the school year. Summer placements are approximately 20+ hours of fieldwork.

## term ii: FALL

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Course Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>EDUC 507</td>
<td>Teaching &amp; Learning in Student Centered Classrooms</td>

<td>EDUC 641</td>
<td>Culturally Responsive Pedagogy in Urban Secondary Schools</td>
<td>1.0</td>
</tr>
<tr>
<td></td>
<td>1 UTAP methods course in subject area</td>
<td>1.0</td>
</tr>
</tbody>
</table>

### Fall Fieldwork

All teaching apprentices are assigned to a full-year placement in a Philadelphia public school that serves grades 7-12. As student-teaching apprentices, students spend mornings in their placement schools or conducting cross-visits to other schools. They take courses in the late afternoon. At the end of the term, apprentices develop a question about student-centered learning that arises from their practice in the field.

## term iii: spring

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Course Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>EDUC 540</td>
<td>Differentiating Instruction for Diverse Learners/Special Education &amp; Bilingual (second half)</td>

<td>1.5</td>
</tr>
<tr>
<td>EDUC 657</td>
<td>Advanced Methods in Middle &amp; Secondary Education (Math Methods)</td>
<td>1.0</td>
</tr>
</tbody>
</table>

### Spring Fieldwork

Teaching apprentices take full responsibility for teaching in their high school classrooms for five full days per week, while finishing up their remaining courses and completing their Inquiry Portfolios.

### Dual and Additional Certifications

Teaching apprentices can take advantage of opportunities to dual certify in several areas of expertise.

#### Dual certifications

If teaching apprentices demonstrate, through transcript review, content background in multiple areas of study, they can opt to seek recommendation in 2 content areas (i.e. Math and Science; English and History, etc.). Apprentices will serve as student teachers in classes in both content areas during fieldwork and take both content methods courses.

#### Additional Certifications after Graduation

Additionally, in response to the growing demand for teachers who are able to address the needs of specific types of schools and students, UTAP offers the opportunity to further specialize in one of areas shown below.

**Language Diversity/Program Specialist in ESL:** Apprentices work as student teachers in partner schools with ESL, bilingual, and dual language students and programs. Currently UTAP seeks apprentices who speak Spanish and Mandarin for bilingual classrooms. Apprentices seeking ESL program specialist certification need not be bilingual. This program leads to a Pennsylvania program specialist certificate and requires additional coursework during the first year of teaching.

**Special Education:** During the apprenticeship year, students in this specialty serve part of their time with students who have Individualized Education Plans (IEPs). This program leads to Pennsylvania instructional certification in special education and requires additional coursework during the first year of teaching.

**Pennsylvania Secondary Education Certification**

Upon successful completion of all components of the Urban Teaching Apprenticeship Program (required coursework and student teaching apprenticeships), including obtaining clearances and completing prerequisite coursework, students receive faculty recommendation for instructional 1 certification, which is awarded by the Pennsylvania Department of Education. PDE requires that all applicants for instructional 1 certification be either U.S. citizens or permanent residents who are willing to submit a form indicating intention of applying for U.S. citizenship.

All applicants for the secondary education certificate must have completed a minimum of two English courses (one a writing course and one a British or American literature course) and two math courses. In addition, a number of courses related to the certification subject are required. Upon admission, we work with students to determine if they need additional courses to satisfy these certification requirements.

While we offer faculty recommendation for Pennsylvania certification, many of our students obtain Pennsylvania certification and then move to other states or countries. There is a NASDTEC Interstate Agreement to facilitate movement by teachers among states. We recommend, therefore, that students obtain Pennsylvania certification even if they plan to teach in other states.

### Education Opportunities for Undergraduates

Penn undergraduates have multiple ways to engage with Penn GSE.

1. Take a course
2. Add a minor
3. Submatriculate into a graduate program

### Courses

Many Penn GSE courses are open to undergraduates and value their participation. Among the courses we recommend as a first step at Penn GSE are the following:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Course Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>EDUC 202</td>
<td>Urban Education</td>
<td></td>
</tr>
<tr>
<td>EDUC 250</td>
<td>Learning from Children</td>
<td></td>
</tr>
<tr>
<td>EDUC 326</td>
<td>Tutoring in Urban Public Elementary Schools: A Child Development Perspective</td>
<td></td>
</tr>
</tbody>
</table>
Minor(s)

Urban Education Minor
A collaboration between Penn GSE’s Urban Teacher Apprenticeship Program (UTAP), Urban Studies, and the Netter Center for Community Service, offers undergraduates a more focused, goal-directed approach to the study of education.

Three concentrations meet the academic requirements for Pennsylvania certification. An additional semester of student teaching with supervision and field seminar complete those requirements. The three concentrations are PreK-4, Grades 4-8 with content specialty, and Grades 7-12 in one content area.

The fourth concentration is called Policy, Research, and Practice, and is a more academic approach to understanding urban education. This minor is much more flexible and can be molded around student interests while respecting particular categories of courses. Many students who wish to teach elect this broad base approach to learning about urban education and then submatriculate into an M.S.Ed. program through UTAP.

Submatriculation
Undergraduate students at Penn, Haverford, Bryn Mawr and Swarthmore Colleges (a group of colleges and universities know as the Quaker Consortium) may apply to submatriculate into the Urban Teaching Apprenticeship Program M.S.Ed. programs during their senior year. Undergraduates who are admitted into the submatriculation program may take up two courses that will count toward both their undergraduate degree and the Urban Teaching Apprenticeship Program M.S.Ed.

Students wishing to submatriculate usually apply in their junior year of undergraduate study. Once they graduate from their undergraduate institution, they are automatically admitted into the M.S.Ed. degree program in elementary, middle level, or secondary education, with advanced standing. Further information about this option can be found here (http://www.gse.upenn.edu/submatriculation/).

Educational and Organizational Leadership, EdD

The Mid-Career Doctorate in Educational Leadership (Mid-Career) prepares school leaders to be strategic decision makers at their institutions and guiding voices in education policy and practice. The Mid-Career program curriculum fosters a deep understanding of educational organizations, instruction, and learning as it intersects with the rapidly changing demands of education leadership. A typical student brings 10 to 15 years of experience to the seminar table, drawn from experiences in public, private, and parochial schools. This mix is vital to the cohort and is the backbone of the curriculum. Taking an inquiry-based leadership perspective toward the ongoing transformation of public and private education, students become experts in:

- Instructional Leadership
- Organizational Leadership

- Public Leadership
- Evidence-based Leadership

Support for students does not stop at graduation. The program is deeply committed to continuing to help alumni promote their ideas in the world, connect them with others who can solve practical problems, and advance their careers.

For more information: https://www.gse.upenn.edu/exec-ed/midcareer

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Educational Leadership, EdD  
The Ed.D. in Educational Leadership program prepares students to become instructional leaders in public and non-public schools, state agencies, and new entrepreneurial ventures. Students gain a deep understanding of the context of American education from anthropological, historical, and sociological perspectives, and of the central elements of instructional, organizational, public, and evidenced-based leadership. Students develop a variety of qualitative and quantitative analytical skills that are required to identify, understand, and assess evidence on educational problems. 
The Graduate School of Education is not currently accepting applications or admitting new students into this program.

Curriculum  
The program requires a minimum of 12 course units beyond the master’s degree.

Elective Courses  
Select a minimum of 3 electives  3  

Investigation/Inquiry Strand  
Required Courses  
EDUC 669  Seminar in Practitioner Inquiry  1  
EDUC 682  Qualitative Modes of Inquiry  1  
EDUC 767  Regression and Analysis of Variance  1  

Professional Experiences  

Required Milestones  
Qualifications Evaluation (Also known as Program Candidacy)  
The purpose of program candidacy is to provide rigorous review and feedback to Ed.D. students regarding their academic progress within the first two years of study. Program candidacy is a prerequisite to doctoral candidacy.

Preliminary Examinations (Also known as Doctoral Candidacy)  
The preliminary examination is a test of knowledge in the candidate’s area of specialization. The examination requires students to demonstrate knowledge and reasoning in the key content areas in their specialization as specified by the academic division. The format of the examination varies from program to program, but must include at least six hours of examination, at least three hours of which must be written.

2020-21 Catalog | Generated 09/18/20
Oral Proposal
All doctoral candidates must present their dissertation proposals orally and in person to the dissertation committee.

Final Defense of the Dissertation
The final dissertation defense is approximately two hours in length and is based upon the candidate’s dissertation.

1 Chosen in consultation with the advisor.
2 Electives may be taken outside of GSE with advisor approval.
3 A non-credit bearing Research Apprenticeship Course is required from second semester of first year forward in the Professional Experiences Strand.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Educational Linguistics, EdD
The Educational Linguistics Ed.D prepares students with the theoretical foundations and technical expertise necessary to pursue positions as leaders of world language programs. The Educational Linguistics, Ed.D program is designed for early to mid-career world language educators who have a strong commitment to bringing research into their practice. Coursework focuses on language and learning in areas such as:

- Linguistic, cognitive, and sociocultural aspects of additional language development and socialization.
- Local/global perspectives on English language teaching policy and practice in K-12 and higher education
- Multimodal discourse in social and institutional settings
- Bilingualism, biliteracy, and bilingual education
- Multilingual language planning and policy

For more information: https://www.gse.upenn.edu/elx/edd (https://www.gse.upenn.edu/elx/edd/)

Curriculum
16 CU Total Requirements. With advisor approval, up to 4 (non-Penn graduate coursework), or up to 8 (Penn graduate coursework) CUs may be transferred into the program as electives. Core courses may not be transferred in. Program will include 5 core courses, 3 research courses, 2 linguistics courses, and your choice of elective courses agreed upon with your advisor. This is a part-time only program, with students taking no more than 2 course units per semester. All courses must be at the 500 level or above.

Select 6 electives 6
Total Course Units 16

Required Milestones
Inquiry Skill: Foreign Language Examination
Students in the Educational Linguistics program must demonstrate proficiency in one nonnative language. Students may offer evidence of proficiency on admission, otherwise they must demonstrate adequate knowledge of their preferred language by passing an examination.

Qualifications Evaluation (Also known as Program Candidacy)
The purpose of program candidacy is to provide rigorous review and feedback to Ed.D students regarding their academic progress within the first two years of study. Program candidacy is a prerequisite to doctoral candidacy.

Preliminary Examinations (Also known as Doctoral Candidacy)
The preliminary examination is a test of knowledge in the candidate’s area of specialization. The examination requires students to demonstrate knowledge and reasoning in the key content areas in their specialization as specified by the academic division. The format of the examination varies from program to program, but must include at least six hours of examination, at least three hours of which must be written.

Oral Proposal
All doctoral candidates must present their dissertation proposals orally and in person to the dissertation committee.

Final Defense of the Dissertation
The final dissertation defense is approximately two hours in length and is based upon the candidate’s dissertation.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Higher Education Management, EdD
Peerless in our focus on the unique strengths and challenges of senior-level leaders in higher education, the Executive Doctorate reaches far beyond a standard doctoral program, as it brings together cohorts of current senior leaders to challenge each other and engage with world-renown faculty—all without career interruption. The Executive Doctorate in Higher Education Management trains an emerging generation of top higher education leaders from campuses, government, and affiliated
Institutions to manage resources strategically, leverage evidence-based decision-making, create entrepreneurial opportunities, challenge practices critically, and conquer the dynamics of complex organizations. The program redefines academic inquiry; we focus on using sound analytic principles to tackle relevant, practical questions of strategy for governing broad segments of the higher education enterprise. Our alumni form a growing and influential network of college presidents, vice presidents, deans, and other leaders who overwhelmingly report that the program propelled their careers and increased their impact.

Course Requirements

Candidates for the Executive Doctorate must complete the equivalent of at least 20 course units of approved graduate work beyond the baccalaureate degree. Admission to the Executive Doctorate requires a master’s degree (M.S. or M.A.) or professional degree (M.B.A., J.D., M.S.W., M.P.A., M.Ed.) and transfer of eight post-baccalaureate courses. These credits must be approved by the program director. Students are admitted to the Executive Doctorate as a cohort. A minimum of 12 course units of graduate work is included in the program. The program consists of a prescribed curriculum that students take as a single cohort offered over six consecutive semesters of enrollment—there are no elective courses or distribution requirements. Students begin in August, and complete coursework over the next five terms. Dissertations are completed during the sixth and final semester of the program. All degree students must maintain a cumulative grade point average of at least “B” in order to graduate.

CU count

The program is designed as an integrated twenty-two month experience where all classes are predetermined and continue across terms. Students are considered full time and pay a flat tuition/program fee rate regardless of the number of course units they are registered for each term.

Elective courses

The course load per term for Executive Doctorate students is prescribed; students may not take additional courses, either at Penn or elsewhere, nor may students drop or add courses, during the period of their enrollment.

Dissertation Requirements

Information regarding program candidacy, the doctoral preliminary examination, forming a dissertation committee, holding an oral proposal hearing and scheduling a final defense can be found on the GSE website.

Dissertation Supervision Registration

For students registered after the sixth semester of the program, registration for consecutive semesters is required in the form of dissertation supervision (EDUC 99B). Applicable Penn tuition and fees will apply.

Registering for dissertation supervision does not necessarily mean that a student is on dissertation status. Dissertation status is attained once a student completes all coursework and passes the preliminary examination.
The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic advisor regarding final certifications and requirements for graduation.

**Higher Education, EdD**

The Ed.D. in Higher Education is for experienced professionals who wish to continue their careers as practitioners. This program emphasizes the practice of education and consultation in colleges and universities, governmental agencies, and foundations. Aimed at preparing practitioner-scholars, the Ed.D. in Higher Education is designed for experienced professionals who wish to continue their careers as research-practitioners and institutional leaders. Individuals learn to use research to make a difference in the lives of students and institutions by focusing on pressing problems of practice. Ed.D. students attain a broad comprehension of higher education through completion of classes that are designed to facilitate their understanding of research and completion of a dissertation. In addition to these courses, doctoral students draw on their professional work experience to develop the skills they will need to conduct quality primary research in higher education administration.

For more information: [https://www.gse.upenn.edu/hed/edd](https://www.gse.upenn.edu/hed/edd)

**Curriculum**

A total of 20 course units are required for the Higher Ed Ed.D.

**Transfer credit**

GSE will, under certain conditions, accept equivalent credit toward the degree. Up to 8 graduate level CUs taken at GSE, Penn, or another institution, may count toward the EdD degree. Transfer credit is not automatically accepted or applied toward the doctoral degree. Students should consult their academic advisor and the GSE website for the policies governing the application for transfer credit in their 1st semester of coursework at GSE. Students who are not awarded a full 8 CUs of transfer credit should consult their academic advisor for the appropriate elective coursework to fulfill the 20 CUs of coursework required for the EdD program. Students without a master’s degree in HE may be required to fulfill some of their electives with required coursework from the HE MSEd program. Transfer credit paperwork needs to be completed after the student’s 1st semester of coursework; please consult the GSE website for the proper forms and procedures.

**Required Higher Education Courses**

All HE doctoral students should take EDUC 556 Higher Education Finance and EDUC 705 Proseminar in Research & Analysis. It is strongly advised that students enroll in required HE courses at the 1st opportunity they are offered. Course substitutions must be approved by your advisor.

**Methods Course**

All HE doctoral students are required to take 2 methods courses either within GSE or another school at Penn. One of these courses must be a statistics course. Students should consult their academic advisor regarding the appropriate methods courses for their program of study. Methods courses filled at GSE outside of the HE Division will also fulfill GSE’s distribution requirement.

**CU count**

This planned program of study is based on enrollment in 2 courses per semester, including summer session. Doctoral candidates must be registered each fall and spring term for coursework.

**Elective courses**

Elective courses may be taken at any school at Penn; however, the majority of HE students fulfill their electives within the division. Courses must be at the 500 level or above and students must consult their academic advisor before enrolling in any course outside of GSE. Students may not register for more than 4 independent studies (EDUC 999) over the course of their program of study.

**Requirements:**

**Qualifications Evaluation (Also known as Program Candidacy)**

The purpose of program candidacy is to provide rigorous review and feedback to Ed.D. students regarding their academic progress within the first two years of study. Program candidacy is a prerequisite to doctoral candidacy.

**Preliminary Examinations (Also known as Doctoral Candidacy)**

The preliminary examination is a test of knowledge in the candidate’s area of specialization. The examination requires students to demonstrate knowledge and reasoning in the key content areas in their specialization as specified by the academic division. The format of the examination varies from program to program, but must include at least six hours of examination, at least three hours of which must be written.

**Oral Proposal**

All doctoral candidates must present their dissertation proposals orally and in person to the dissertation committee.
Final Defense of the Dissertation

The final dissertation defense is approximately two hours in length and is based upon the candidate's dissertation.

1 Including up to 8 transfer credits

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Penn Chief Learning Officer, EdD

The PennCLO Executive Doctoral Program prepares the Chief Learning Officer (CLO) and other senior-level executives for success in their roles as learning and talent development leaders. Developing an organization's talent is a critical component of its success. Learning leaders who are committed to human capital development within organizations must use evidence-based practice to create and oversee leadership development, learning, and managerial initiatives. The program provides a rigorous academic environment where members build the skills necessary to ensure successful learning outcomes that will align with the organization's strategy.

Reading/Writing/Literacy, EdD

The Ed.D. in RWL features a strong commitment to educational practice and preparing practitioner-scholars. Ed.D. applicants are required to hold a master's degree and are expected to have experience in educational practice. This Ed.D. program trains practitioner-scholars for positions involving the practice of education in schools, school districts, colleges and universities, government agencies, foundations, entrepreneurial ventures, and consulting organizations. Students construct individual programs of study with their advisor to suit their interests, combining core courses with additional coursework in research methodology and electives. The program emphasizes the interrelationships and integration of theory, research, policy, and practice.

### Teaching, Learning, and Teacher Education, EdD

The Ed.D. in Teaching, Learning, and Teacher Education program has a strong commitment to educational practice and preparing scholar-practitioners. The program is designed to draw together course work, research apprenticeship, and other professional academic activities to build a complete professional program that is tailored to students' interests and needs. Students devise an individualized program of study based on their research interests and in consultation with their advisor. Graduates serve as researchers and teacher educators in universities and colleges, curriculum developers and evaluators in educational agencies, curriculum specialists in school districts and state departments of education, and instructional leaders and classroom teachers in K-12 schools.

To be admitted into this track, students must have a Master’s degree and either have at least three years teaching experience or two years teaching experience and be in a teaching position while completing the program.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.
LAW SCHOOL

The hallmarks of the Penn Law experience are a cross-disciplinary, globally-focused legal education taught by our preeminent faculty. Students enjoy a vibrant and collegial community in which graduates are prepared to navigate an increasingly complex world as leaders and influential decision-makers. Our faculty, a renowned group of scholars in every major area of law, defines Penn Law’s intellectual vitality. More than half of the standing faculty hold advanced degrees beyond the JD, and nearly 50 percent have secondary appointments or affiliations with other departments at the University. Penn Law faculty members’ accessibility and engagement with students create a dynamic learning environment, and the school’s distinctive reputation as a small, supportive, and rigorous place for the study of law attracts some of the nation’s most competitive students. Unique among top law schools, our students truly own their educational experiences, actively contributing to a collaborative and supportive environment where they learn to solve problems while developing critical professional skills.

For more information, visit https://www.law.upenn.edu/.

Mission

At Penn Law, we believe that the next generation of lawyers will be those who are not just superbly trained in law, but also have training in related fields — such as business, communications, health, technology, international studies, social work, and education — that complement and enhance their legal expertise.

Our faculty are leaders in law and other cutting-edge disciplines, and our integrative curriculum reflects our commitment to the pursuit of cross-disciplinary learning.

In addition, our position as an essential part of the University of Pennsylvania, one of the world’s leading premier research universities, allows our students to enrich their cross-disciplinary legal education by enrolling in graduate level courses at one of our sister schools or pursuing a joint degree or certificate of study.

Penn Law’s academic programs are fully integrated with the professional and graduate schools on campus, providing students with an unparalleled opportunity to prepare for careers that engage virtually every major issue facing our society.

For more information: https://www.law.upenn.edu/

Integrative Curriculum

Our integrative curriculum ensures that students have an uniquely interdisciplinary experience - without ever leaving the Law School. However, the Law School’s partnerships with its world-class sister schools offer opportunities to build even deeper inroads in complementary fields by enrolling in graduate level courses or pursuing a Joint Degree and/or Certificate of Study. As part of the University of Pennsylvania, one of the world’s preeminent research institutions, Penn Law is the only top law school with as many elite professional schools and departments as proximate to each other on campus and as intellectually connected and seamlessly integrated into the curriculum.

For more information: https://www.law.upenn.edu/crossdisciplinary/curriculum.php

Faculty

Approximately 70 percent of faculty members hold degrees beyond the JD, and nearly half hold secondary appointments or affiliations with other Penn professional schools, departments, or centers.

Accordingly, Penn Law students experience an extraordinary faculty whose depth and breadth of intellectual interests and scholarly achievements are matched by their commitment to teaching excellence. Diverse in philosophy, approach and background, Penn Law faculty members create a vibrant and welcoming intellectual community.

A low student-to-faculty ratio and an open-door policy permit students to work directly with faculty members on projects at the heart of their varied scholarly and career interests.

Philadelphia’s central location between New York City and Washington, D.C. also enables us to attract top governmental leaders, members of the judiciary, practicing attorneys, and business leaders as adjuncts and lecturers to supplement our core curriculum and present a variety of special lectures and symposia.

For more information: https://www.law.upenn.edu/faculty/

Public Service

Public service has always been an essential feature of legal education at Penn Law. Our school was among the first institutions to require all students to complete 70 hours of public service before graduation. In 2000 Penn Law was the first school to ever receive the ABA’s Pro Bono Publica Award.

The Toll Public Interest Center (TPIC) is the hub of public service at Penn Law. TPIC oversees the Penn Law pro bono program, facilitating a wide array of pro bono and public service opportunities that focus on impactful service, personal enrichment, and professional skill development.

Programs

Professional and Other Degree Programs

- Law, JD (p. 61)
- Law, LLCM (p. 62)
- Law, LLM (p. 63)
- Law, ML (p. 63)
- Law, SJD (p. 64)

Law, JD

Penn Law offers a full-time program leading to the JD, the first professional degree in Law. Applicants have completed their undergraduate degrees and, oftentimes, advanced degrees in a broad array of disciplines; many have work experience prior to attending law school. On occasion, Penn Law has admitted international students who hold a law degree from outside the United States but who want to earn a JD degree in the United States. Penn Law also accepts a select group of Penn undergraduates who submatriculate, combining their bachelor’s degrees and their JDs.

Penn Law’s program of legal education, combining its rich, interdisciplinary curriculum, varied co-curricular activities, and pro bono responsibilities, prepares its students for admission to the bar.
and to serve as effective, ethical, and responsible members of the legal profession. Each student will be able to do the following:

- Demonstrate a core knowledge and understanding of substantive and procedural law in a number of different subject areas;
- Engage in legal analysis and reasoning, conduct efficient and effective legal research, apply problem solving skills, and present findings, analyses, and recommendations efficiently and effectively in both written and oral communication;
- Work collaboratively;
- Demonstrate an understanding of the interdisciplinary nature of law and the contributions and benefits to legal analysis and problem solving that other disciplines can make;
- Exercise proper professional judgment and fulfill ethical responsibilities to clients, the profession, and society in general; and
- Utilize a range of professional skills that facilitate active, competent and ethical participation in the legal profession.

For more information: https://www.law.upenn.edu/admissions/jd/

Curriculum

JD candidates are required to complete the following:

- 86 semester hours during 6 semesters in law school residence
  - No more than 22 semester hours may be earned in co-curricular activities
  - One course in Professional Responsibility
  - 6 or more semester hours of experiential learning
  - Pro Bono Requirement
  - A scholarly research and writing project

The First Year (1L)

Penn Law’s first-year curriculum comprises five semester-long required core courses and two spring-term electives, as well as a year-long Legal Practice Skills course.

Electives

- Regulatory/Administrative Course Elective ¹
- General Elective ²

¹ In recognition that legal issues of import often involve our nation’s regulatory system, Penn Law offers a unique elective choice to 1Ls in this area. Students choose from courses in administrative law, environmental law, health law, legislation, and public international law.

² Students choose from a wide range of survey courses that are designed to highlight different viewpoints and areas of law for students’ examination and consideration. Examples include advanced contracts, introduction to intellectual property law & policy, introduction to jurisprudence, law and economics, law and society in Japan, legal responses to inequality, privacy, and property.

The Second and Third Years (2L & 3L)

Across the second and third years, course selection is entirely elective and students have a wide range – between 80 to 100 courses, seminars, clinics, and externships per semester – from which to choose.

Students may receive up to 12 semester hours toward their JD graduation requirements for graduate-level courses taken in other departments at Penn upon establishing that these courses will contribute to their legal educations.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Law, LLCM

The LLCM (Masters in Comparative Law) program is a one-year course of advanced study for students who have already earned their LLM degree.

While many LLCM students come from the population of Penn Law LLM alumni, applicants from other LLM programs are welcomed.

Like Penn Law LLM students, LLCM students design their own curriculum and are eligible to enroll in the Wharton Business and Law Certificate, a program designed for Penn Law graduate students taught by Wharton faculty.

Where appropriate, LLCM students are also eligible to participate in clinical programs focusing on Entrepreneurship, Intellectual Property and Technology, International Human Rights and Immigration, and Mediation.

They may also choose to participate in one of several academic journals, including the Journal of International Law and the Asian Law Review.

For more information: https://www.law.upenn.edu/admissions/grad/llcm.php

Curriculum

In order to receive the LLCM degree, a candidate must complete at least 16 semester hours, earned in at least three courses per semester, over two semesters. Credits earned in the LLM program cannot be counted toward the LLCM degree.

Aside from the above requirements, the LLCM degree is meant to be flexible. LLCM students build their own curriculum; most choose to deepen their understanding by concentrating on a specific area of law and are encouraged to complete a substantial piece of writing in that area.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should...
consult with their academic program regarding final certifications and requirements for graduation.

Law, LLM

The program is a one-year, full-time course of study in advanced legal topics designed primarily for lawyers trained outside the United States. Students select courses from an extensive curriculum of specialized courses and seminars at Penn Law. Penn Law grants a generalized LLM that allows each student to design his or her own curriculum and, in doing so, may choose to focus on a particular topic. LLM students take courses alongside upper level JD students and are on campus for ten months including a five week summer program.

Penn Law LLM students are also eligible to enroll in the Wharton Business and Law Certificate, a custom designed program for Penn Law LLM students taught by Wharton faculty and industry experts selected for their teaching skills, subject expertise and ability to offer applied concepts and examples to participants. All LLM students may participate in this program which runs concurrently with the LLM program.

LLM students may also have the opportunity to enroll in clinical programs focusing on Entrepreneurship, Intellectual Property and Technology, International Human Rights and Immigration, and Mediation and to participate in academic journals including the Journal of International Law and Asian Law Review.

For more information: https://www.law.upenn.edu/admissions/grad/LLM.php

Curriculum

General Requirements

In order to be eligible to receive the LLM degree, a student must attend full-time for two academic semesters, taking no more than 17 and no fewer than 9 semester hours per semester, and complete the requirements of either the Course Track or the Thesis Track.

All students must receive the grade of “F with credit” in no more than four semester hours of coursework.

Credits earned in the summer program count toward the graduation requirements.

Course Track

Complete 24 semester hours, one of which can be earned as an associate editor on a journal.

Thesis Track

Complete 24 semester hours, 17 of which are from courses and seminars; and satisfactorily complete a scholarly thesis, worth 7 semester hours, of high analytical quality suitable for publication in a law journal.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Law, ML

Penn Law’s Master in Law degree enables students and professionals working and studying in related fields to expand their knowledge of law and legal principles. Students enrolled in the program’s specialized curriculum will gain a solid understanding of how the U.S. legal system functions in general as well as specific knowledge of the law in their areas of interest.

The ML degree is available to members of the University of Pennsylvania community (graduate students, alumni, and current staff at Penn and related entities) who are neither law students nor lawyers and who wish to complement their studies or careers in other disciplines with a legal education at Penn Law. Non-Penn affiliates who are interested in the Master in Law degree should contact the program directly to inquire about application opportunities.

The ML degree is intended to provide exposure to critical issues in the law; however, it will not permit a student to sit for any state’s bar examination or otherwise allow recipients to practice law. The American Bar Association regulations do not permit the application of ML classes toward a JD degree.

For more information: https://www.law.upenn.edu/admissions/master-in-law/

Curriculum

Eight courses are required to complete the Master in Law degree:

• 3 required ML foundational courses
• 1 elective ML foundational course
• 1 elective course from the JD curriculum (excluding 1L required courses)
• 3 electives from either the JD curriculum or the ML curriculum

Coursework may be completed on a full-time or part-time basis. Members of the Penn community may take one or more ML courses as stand-alone courses before or without enrolling in the ML degree program. Note that a maximum of two ML courses taken prior to matriculation in the ML program may be applied toward the ML degree if request is made and approval is given by the ML program.

Select 1 course from JD curriculum
Select 3 courses from either JD or ML curricula

1 Excluding 1L required courses.
2 ML offerings, designed for non-lawyers, are listed with the subject code LAWM.

Second Year Requirements
If the faculty advisor approves the proposal, during the second year the student is expected to:

• Submit a dissertation outline to their advisor;
• Assemble their full dissertation committee, which must consist of three members, two of whom (including the chair) must be members of Penn Law’s standing faculty. The third dissertation committee member may, in appropriate cases, be selected from outside the Law School. Determinations regarding the inclusion of a committee member from outside the Law School shall be made by the student’s advisor in consultation with the Deputy Dean for International Affairs.

Third Year Requirements
If the faculty advisor approves the outline, during the third year the student is expected to:

• Submit a draft dissertation to their committee (target deadline – October 1);
• Submit a completed dissertation to their committee (target deadline – February 15);
• Orally defend their dissertation before the dissertation committee.

Dissertation Requirements
Dissertations must make an original and substantial contribution to legal scholarship. This requirement is ordinarily satisfied by work equivalent in scale and quality to a book, extended monograph, or series of scholarly articles reflecting intensive and creative research with respect to a specific topic, problem, or area of law. The work, both in content and form, must be of publishable quality.

The oral defense of the dissertation occurs after the members of the dissertation committee determine that the dissertation substantially satisfies the requirements of the program.

Following a successful dissertation defense, an SJD candidate must submit three copies of their dissertation to the Executive Director for Graduate Programs for placement in Biddle Law Library.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.
PERELMAN SCHOOL OF MEDICINE

The University of Pennsylvania is the oldest and one of the finest medical schools in the United States. Penn is rich in tradition and heritage and at the same time consistently at the forefront of new developments and innovations in medical education and research. Since its founding in 1765 the School has been a strong presence in the community and prides itself on educating the leaders of tomorrow in patient care, biomedical research, and medical education.

At Penn academic excellence, as well as compassion for the patients we are privileged to serve, are stressed. Skillful compassion is truly a hallmark of the Penn learning experience. The Perelman School of Medicine at the University of Pennsylvania consistently ranks among the top five in US News and World Report’s rankings of research-oriented medical schools.

As the nation’s first medical school and home to the first teaching hospital, the Perelman School of Medicine has a long tradition of academic excellence and scientific discovery. Building on this tradition, our innovative, interdisciplinary research programs continue today to pave the way for a future of new paradigms in cutting-edge science. As an internationally renowned community of scientists and physicians, we are dedicated to both advancing knowledge and fostering a culture of excellence in training the next generation of scientific leaders. Our faculty are at the forefront of the biomedical revolution, and we are committed to sustaining a vibrant intellectual environment, with the ultimate goal of translating ground-breaking discoveries into medical therapies that will eradicate disease and improve health care around the world.

Our mission is to advance knowledge and improve health through research, patient care, and the education of trainees in an inclusive culture that embraces diversity, fosters innovation, stimulates critical thinking, supports lifelong learning, and sustains our legacy of excellence.

For more information, visit: https://www.med.upenn.edu/psom/overview.html.

Biomedical Graduate Studies

Overview

Biomedical Graduate Studies was established in 1985 and serves as the academic home within the University of Pennsylvania for nearly 800 students pursuing a PhD in the basic biomedical sciences, including approximately 150 students pursuing a coordinated dual MD/PhD or VMD/PhD degree program. BGS provides training and administration through seven graduate groups, some of which have distinct subspecialty areas. The Perelman School of Medicine is the home school for BGS, and approximately 500 PSOM faculty members participate in BGS as course directors, research mentors, program leaders, and in other educational roles. Another 150 BGS faculty members have primary academic appointments in the other associated health schools (Veterinary, Dental, or Nursing) or in Arts & Sciences, Engineering & Applied Science, or Wharton. BGS faculty members also include researchers based in associated institutes, including the Wistar Institute and the National Institutes of Health. Consequently, BGS students have the opportunity to learn about virtually any area of modern biomedical research.

For more information, visit http://www.med.upenn.edu/bgs/.

Mission

The mission of Biomedical Graduate Studies is to provide each student with a broad-based foundation in a core academic discipline, flexible, interdisciplinary options for scientific and career development; and rigorous research training. Each graduate group has its own academic mission, leadership, and staff, but there is often significant overlap among the groups in respect to faculty membership, courses offered, policies, and procedures. BGS students are admitted with a full-funded fellowship for the duration of their training and may participate in a variety of optional certificate programs and student-run affinity groups for the exploration of academic and professional development interests.

To date, roughly 2500 students have obtained a PhD in BGS. Virtually all BGS graduates are employed in fields that make use of their PhD training. The majority of BGS alumni engage in a postdoctoral research period, after which 39% conduct research in academia, 22% conduct research in industry, 8% are engaged primarily in post-secondary teaching, 8% are in communications, and the remainder are based in a variety of related fields, including consulting, policy, patent law, and grants management.

Master’s & Certificate Programs

Overview

The Perelman School of Medicine Master’s & Certificate Programs (MaC) leverages the strengths of Penn Medicine, a world-renowned academic medical center, to train the next generation of researchers and professionals who will contribute to the integrated health care system. MaC includes twelve professional master’s degrees and eleven certificate programs, totaling approximately 500 students. These programs prepare students for careers in health care practice, research, and patient care.

Each MaC program is independently managed by interdisciplinary faculty and staff. The MaC Program Office enables its programs to pursue their goals within the university environment through academic administrative support and collaborations amongst programs and between schools in the university.

For more information, visit https://www.med.upenn.edu/psom/masters.html.

Mission

The mission of the Perelman School of Medicine (PSOM) Master’s & Certificate Programs (MaC) is to contribute to the integrated health care system by preparing students for careers in health care practice, research, and patient care. Each program embodies its own academic mission and contributes to PSOM’s mission to advance knowledge and improve health through research, patient care, and the education of trainees in an inclusive culture that embraces diversity, fosters innovation, stimulates critical thinking, supports lifelong learning, and sustains our legacy of excellence.

As the nation’s first medical school and home to the first teaching hospital, the Perelman School of Medicine (PSOM) enjoys a long tradition of academic excellence and scientific discovery.

The PSOM Learning for Life program is a four-year multidisciplinary curriculum comprising six modules organized around three themes: the science of medicine, the technology and practice of medicine, and professionalism and humanism. The curriculum emphasizes self-directed lifelong learning and small-group instruction. The Henry A. Jordan Medical Education Center itself plays a prominent role in the training of future physicians and scientists; it is among the first medical
education spaces in the nation physically integrated into active clinical and research facilities.

PSOM medical students can choose from approximately 150 electives and have one and a half years to explore the possibilities. PSOM also offers extensive MD+ options, including eight master’s degrees and 10 certificates available through its various schools. Penn’s 12 schools share a single contiguous campus, providing exceptional opportunities for student to engage interprofessionally.

Research
As the nation’s first medical school and home to the first teaching hospital, the Perelman School of Medicine has a long tradition of academic excellence and scientific discovery. Building on this tradition, our innovative, interdisciplinary research programs continue today to pave the way for a future of new paradigms in cutting-edge science. As an internationally renowned community of scientists and physicians, we are dedicated to both advancing knowledge and fostering a culture of excellence in training the next generation of scientific leaders. Our faculty are at the forefront of the biomedical revolution, and we are committed to sustaining a vibrant intellectual environment, with the ultimate goal of translating ground-breaking discoveries into medical therapies that will eradicate disease and improve health care around the world.

The School’s research enterprise incorporates all areas of contemporary biomedical investigation, with the advantage of being unified on a single campus. The School is comprised of 28 basic and clinical departments, with over 2,500 faculty members and more than 2,500 students and trainees. In fiscal year 2018, the School received $814 million in support of its research activities from extramural sponsors, including $424.8 million from the National Institutes of Health, ranking fifth in the nation among all academic medical institutions.

Faculty at the Perelman School of Medicine work across disciplines to expand the frontiers of scientific knowledge while translating significant breakthroughs into tangible health benefits to improve the lives of patients. Within its diverse, interdisciplinary network of expertise, resources, and exceptional faculty, staff and trainees, the Perelman School of Medicine epitomizes collaborative research across departments and schools, as exemplified by our centers and institutes. These include the Abramson Cancer Center, one of 49 Comprehensive Cancer Centers in the country approved and designated by the National Cancer Institute. The Penn Cardiovascular Institute, the Penn Center for AIDS Research, the Institute for Diabetes, Obesity, and Metabolism, the Mahoney Institute for Neurosciences, the Center for Orphan Disease Research and Therapy, the Institute for Translational Medicine and Therapeutics, the Penn Institute for Biomedical Informatics and the Penn Epigenetics Institute. The specific initiatives of these and other centers, institutes and departments are outlined within this website, along with our exceptional biomedical core facilities and research training programs.

For more information, visit: https://www.med.upenn.edu/research/welcome.html.

Inclusion and Diversity
Lasting commitment is born of genuine appreciation for that which we aspire to be. Penn Medicine’s commitment to inclusion and diversity is more than words echoing our evolving society; it is a commitment backed by actions that are the foundation of our eminence, core values, and the strategic priorities that drive how we discover, educate, and serve the world.

Our efforts are aimed at supporting the many innovative programs underway, as well as exploring new opportunities to embrace diversity and broaden access to people of all ethnicities, historical traditions and economic backgrounds, genders, religions and disabilities, and respecting sexual orientation and veteran status.

Biochemistry and Molecular Biophysics, PhD

The Graduate Group in Biochemistry and Molecular Biophysics (BMB) is devoted to the education and training of doctoral students in quantitative, mechanistic and molecular frontiers of biochemistry and biophysics, broadly conceived. The goal is to produce the next generation of scientists, scholars, educators and leaders in biomedical sciences.

To achieve this goal, BMB starts with a strong relationship with the Department of Biochemistry and Biophysics, combined with a world class, diverse faculty of over 90 members from four institutions, the University of Pennsylvania, the Wistar Institute, and the Children’s Hospital of Philadelphia. Within the University of Pennsylvania, BMB draws on faculty from the schools of Medicine, Arts and Sciences, Engineering, Dental Medicine, and Veterinary Medicine.

BMB offers interdisciplinary training based on a rigorous core curriculum, combined with laboratory rotations, independent studies, and candidacy exam preparation that provides immersive training in laboratory and research skills to equip the students for their independent dissertation research.

Cancer Biology

The Program in Cancer Biology provides students an opportunity to undertake concentrated study of the basic biological processes that underlie the control of cell growth and metabolism, and how such processes are disrupted during the initiation and progression of cancer. The program stresses the importance of fundamental genetic and molecular pathways regulating cell proliferation, differentiation, movement, and survival. Program faculty conduct research in oncogenesis, tumor virology, angiogenesis, cell migration/metastasis, and cancer immunology, cancer genetics and epidemiology. Students present in a research-in-progress seminar series and attend participate in the Abramson Family Cancer Research Institute seminar series.

Cell Biology, Physiology, and Metabolism

Modern cell biology is a dynamic discipline that integrates multiple fields, including molecular biology, biochemistry, biophysics, microbiology, physiology, developmental biology, cytology and genetics. Cell biologists investigate the basic structural and functional units of life: cells that compose all living organisms. Once reliant primarily on microscopic methods, cell biologists now take advantage of cutting edge methods in ultrastructure, biochemistry, genetics and molecular biology, and utilize a diverse range of model organisms. Program faculty conduct research in cellular metabolism; cell motility, the cytoskeleton, and muscle physiology; intracellular trafficking and organelle function; membrane transport; and signal transduction and cell cycle regulation.

Spring
Our students participate in core courses in cell and molecular biology, and research opportunities provided by this large and diverse program. Students from colleges and universities around the nation and the world are enrolled in the program, selecting one discipline area based on their scientific interests, yet have access to the full breadth of curricular areas: biomedical research. Within this integrated program are six discipline areas: Cancer Biology (https://upenn-curr.courseleaf.com/graduate/programs/cell-molecular-biology-cancer-biology-phd/); Cell Biology, Physiology, and Metabolism (https://upenn-curr.courseleaf.com/graduate/programs/cell-molecular-biology-cell-biology-physiology-metabolism-phd/); Developmental, Stem Cell and Regenerative Biology (https://upenn-curr.courseleaf.com/graduate/programs/cell-molecular-biology-developmental-stem-cell-regenerative-biology-phd/); Gene Therapy and Vaccines (https://upenn-curr.courseleaf.com/graduate/programs/cell-molecular-biology-gene-therapy-vaccines-phd/); Genetics and Epigenetics (https://upenn-curr.courseleaf.com/graduate/programs/cell-molecular-biology-genetics-epigenetics-phd/); and Microbiology, Virology and Parasitology (https://upenn-curr.courseleaf.com/graduate/programs/cell-molecular-biology-microbiology-virology-parasitology-phd/). Program faculty include more than 300 scientists representing 35 departments from the Perelman School of Medicine, the Schools of Arts and Sciences, Dental Medicine, and Veterinary Medicine, Children's Hospital of Philadelphia, the Wistar Institute and Fox Chase Cancer Center. The research efforts of these scientists are diverse in their focus, experimental model systems, and represent the leading edge of its wiring; the genesis of tissues and organ systems as well as their homeostasis, metabolism and repair; with goal of understanding the basic biology of these processes, as well as their role in disease. Complementing these areas is work on natural and induced Embryonic Stem Cells to understand disease processes in vitro in order to develop cell replacement strategies for therapy. In conducting their research students utilize all tools of the modern genomic era and a wide variety of experimental model systems.

### Cell and Molecular Biology: Gene Therapy and Vaccines, PhD

#### Cell and Molecular Biology

The Cell and Molecular Biology Graduate Group (CAMB) is an interdisciplinary graduate program, providing rigorous training in modern cell and molecular biology, preparing students for leadership careers in biomedical research. Within this integrated program are six discipline areas: Cancer Biology (https://upenn-curr.courseleaf.com/graduate/programs/cell-molecular-biology-cancer-biology-phd/); Cell Biology, Physiology, and Metabolism (https://upenn-curr.courseleaf.com/graduate/programs/cell-molecular-biology-cell-biology-physiology-metabolism-phd/); Developmental, Stem Cell and Regenerative Biology (https://upenn-curr.courseleaf.com/graduate/programs/cell-molecular-biology-developmental-stem-cell-regenerative-biology-phd/); Gene Therapy and Vaccines (https://upenn-curr.courseleaf.com/graduate/programs/cell-molecular-biology-gene-therapy-vaccines-phd/); Genetics and Epigenetics (https://upenn-curr.courseleaf.com/graduate/programs/cell-molecular-biology-genetics-epigenetics-phd/); and Microbiology, Virology and Parasitology (https://upenn-curr.courseleaf.com/graduate/programs/cell-molecular-biology-microbiology-virology-parasitology-phd/). Program faculty include more than 300 scientists representing 35 departments from the Perelman School of Medicine, the Schools of Arts and Sciences, Dental Medicine, and Veterinary Medicine, Children's Hospital of Philadelphia, the Wistar Institute and Fox Chase Cancer Center. The research efforts of these scientists are diverse in their focus, experimental system, methodology, and represent the leading edge of basic and translational biomedical science.

Students from colleges and universities around the nation and the world are enrolled in the program, selecting one discipline area based on their scientific interests, yet have access to the full breadth of curricular and research opportunities provided by this large and diverse program. Our students participate in core courses in cell and molecular biology, specialized coursework in one or more discipline areas, and original hypothesis-driven thesis research. Upon completion of the PhD, they pursue successful research careers at top academic institutions, in the biotech and pharmaceutical industries, and in other biomedicine-related career paths.

For more information: http://www.med.upenn.edu/camb/

### Gene Therapy and Vaccines

The Gene Therapy and Vaccines Program focuses on the use of animal and human gene transfer for therapeutic purposes and for vaccination. Program faculty conduct research in basic cell biology, molecular biology, developmental biology, molecular physiology, virology and immunology. While the goals of the research are disease-based with the objective of developing prophylactic and therapeutic applications, student training focuses on a basic understanding of disease pathobiology and achieving efficient and effective gene transfer in humans. Students contribute to research of cystic fibrosis, hemophilia, lysosomal storage disease, inherited blindness, cancer, cardiovascular diseases, and immunologic and infectious diseases. Study of vaccines for prophylactic, as well as therapeutic applications are emphasized. Students participate in month research seminar series, as well as present in a bi-weekly research in progress seminar.

Cell and Molecular Biology: Genetics and Epigenetics, PhD

Cell and Molecular Biology

The Cell and Molecular Biology Graduate Group (CAMB) is an interdisciplinary graduate program, providing rigorous training in modern cell and molecular biology, preparing students for leadership careers in biomedical research. Within this integrated program are six discipline areas: Cancer Biology (https://upenn-curr.courseleaf.com/graduate/programs/cell-molecular-biology-cancer-biology-phd/); Cell Biology, Physiology, and Metabolism (https://upenn-curr.courseleaf.com/graduate/programs/cell-molecular-biology-cell-biology-physiology-metabolism-phd/); Developmental, Stem Cell and Regenerative Biology (https://upenn-curr.courseleaf.com/graduate/programs/cell-molecular-biology-developmental-stem-cell-regenerative-biology-phd/); Gene Therapy and Vaccines (https://upenn-curr.courseleaf.com/graduate/programs/cell-molecular-biology-gene-therapy-vaccines-phd/); Genetics and Epigenetics (https://upenn-curr.courseleaf.com/graduate/programs/cell-molecular-biology-genetics-epigenetics-phd/); and Microbiology, Virology and Parasitology (https://upenn-curr.courseleaf.com/graduate/programs/cell-molecular-biology-microbiology-virology-parasitology-phd/). Program faculty include more than 300 scientists representing 35 departments from the Perelman School of Medicine, the Schools of Arts and Sciences, Dental Medicine, and Veterinary Medicine, Children's Hospital of Philadelphia, the Wistar Institute and Fox Chase Cancer Center. The research efforts of these scientists are diverse in their focus, experimental system, methodology, and represent the leading edge of basic and translational biomedical science.

Students from colleges and universities around the nation and the world are enrolled in the program, selecting one discipline area based on their scientific interests, yet have access to the full breadth of curricular and research opportunities provided by this large and diverse program. Our students participate in core courses in cell and molecular biology, specialized coursework in one or more discipline areas, and original hypothesis-driven thesis research. Upon completion of the PhD, they pursue successful research careers at top academic institutions, in the biotech and pharmaceutical industries, and in other biomedicine-related career paths.

For more information: http://www.med.upenn.edu/camb/

Genetics and Epigenetics

The Program in Genetics and Epigenetics provides students an opportunity to undertake concentrated study in the areas of model organism genetics, human genetics, transcriptional and post-transcriptional gene regulation, epigenetics, genomics and bioinformatics. Program faculty include members of the Genetics Department, Epigenetics Program, and other basic science and clinical departments at Penn, The Children's Hospital of Philadelphia, and the Wistar Institute. Students also have the opportunity to undertake training in the application of computational and modeling approaches in genetics, epigenetics and genomics.

Microbiology, Virology, and Parasitology

The Program in Microbiology, Virology, and Parasitology provides students an opportunity to undertake concentrated study in the molecular and cellular biology of viral and bacterial pathogenesis and parasitology. Program faculty conduct research in a broad range of disciplines, including Bacteriology, Emerging Infectious Diseases, Immune Response, Microbial Genomics and Evolution, Parasitology, Tumor Virology, Virology, and Host Microbiome. Viruses, parasites, prions, and bacteria are a major cause of human morbidity and mortality. Disease resulting from HIV, malaria, and tuberculosis are becoming more prevalent. The threat of emerging infectious diseases, such as Zika and West Nile viruses, and bioterrorism also calls for increased research in the area of microbiology. Students study human pathogens, as well as their interplay with host resident microbial populations, learning much about normal cell biology, molecular biology, and immunology, as well
as developing strategies for the prevention and treatment of infectious diseases.

**Epidemiology and Biostatistics: Biostatistics, MS**

The goal of the MS program is to train students in the basic theory and applications of statistical methods, as applied to problems in the biomedical sciences. The program typically consists of two years of full-time study, including the preparation of a Master’s thesis. Requirements include courses in probability, mathematical statistics, and statistical methods including linear models, longitudinal data analysis, survival analysis, statistical computing, and applied data analysis.

Epidemiology and Biostatistics: Biostatistics, PhD

The PhD program in biostatistics is designed to prepare students to be independent researchers in the development of statistical methodologies and in the appropriate and innovative application of these methodologies to biomedical research problems. In the first five semesters of the program, students complete a series of courses in both theory and applied methodology, engage in individually mentored research experiences, explore statistical collaboration, and complete the qualifications examination. Within this period, students also identify a dissertation research problem and an advisor and present a research proposal as part of the candidacy examination. Students typically defend their dissertations and graduate within five years of matriculation.

View the University’s Academic Requirements for PhD Degrees [http://catalog.upenn.edu/pennbook/academic-rules-pha/](http://catalog.upenn.edu/pennbook/academic-rules-pha/).
Epidemiology and Biostatistics: Epidemiology, PhD

The mission of the PhD program in Epidemiology is to train independent researchers in the development and application of epidemiologic methods and to prepare them for positions as scientific leaders in academia and industry. The PhD is a research degree; it indicates the highest attainable level of scholarship, and a commitment to a research career. The PhD does not represent merely the accumulation of course credits, but rather the development and completion of a well-designed and conscientious program of scientific investigation that makes a unique contribution to the field of epidemiology.

1 For those desiring a more advanced statistical analysis background, BSTA 630 and BSTA 632 are recommended if you have previously completed coursework in calculus through multivariable calculus and linear algebra. The permissions of the instructors are required to take these courses.

2 HPR 608 is required for those not taking BSTA 630 and BSTA 632.

3 Any electives taken in the summer required prior authorization by the heads of the PhD Curriculum Committee.

Genomics and Computational Biology, PhD

Genomics and computational biology are now at the center of biomedical research. These disciplines take a holistic approach to ask about the origins, functions, and interactions of whole systems, using both experimental and theoretical work. Therefore, these studies require knowledge, skills, and, most importantly, synthesis and integration of biology, computer science, mathematics, statistics, and engineering.

This synthesis and integration requires a new generation of scientists that thrive in cross-disciplinary research. This can include molecular, cellular, and organismal biology (including genetics), mathematics, statistics, chemistry, and engineering. The goal of the GCB program is to train students that are experts in one or more of these disciplines and well versed in the others. We provide a comprehensive training program in Genomics and Computational Biology that gives students a broad foundation in the biological and quantitative sciences along with practical experience in computational and experimental genomics. The knowledge gained in this program will serve students in their careers as technology progresses.

Recognizing the need to create an environment where researchers could be adequately trained in the multifaceted aspects of immunobiology, Penn became the first medical school to establish a separate degree-granting PhD program in Immunology. The faculty of the Immunology Graduate Group (IGG) are drawn from across the University of Pennsylvania and the University of Pennsylvania Health System, encompassing a broad spectrum of research interests; the IGG has also established a partnership with the National Institutes of Health in Bethesda, MD. The partnership brings to the IGG the extraordinary resources and scientific expertise present at the NIH, one of the largest and most renowned biomedical research centers in the world. Students have the opportunity to interact with NIH faculty in a variety of ways, including conducting a lab rotation or thesis work at the NIH.

At present, there are approximately 110 faculty members in Penn’s Immunology Graduate Group, encompassing a broad spectrum of research studies. Faculty research includes studies on the development and regulation of the immune system, host-pathogen interactions, the fundamental molecular and cellular biology of the immune system, structural studies of immunologically relevant molecules and translational immunology. Research results are being utilized in both experimental models and clinical trials attempting to fight diseases.

Neuroscience is a collaborative and interdisciplinary PhD program that provides training for careers in neuroscience research, teaching and more. Our training program is designed to provide a strong foundation of neuroscience knowledge while at the same time taking into account each student’s strengths, needs, and career goals.

Virtually all aspects of traditional neuroscience are reflected in the research programs of the 186 faculty members who participate in NGG training, including computational, systems, cellular and molecular, developmental, behavioral, and cognitive neuroscience, along with the neurobiology of disease. NGG faculty members represent 30 academic departments in the schools of Arts and Sciences, Engineering and Applied Science, Wharton Business, Veterinary Medicine, Dental Medicine, and Nursing, as well as the Perelman School of Medicine.

Pharmacology, PhD

Pharmacological sciences represent an extremely large field of modern science, intertwined with many other biomedical disciplines: cancer and cardiovascular pharmacology, cell signaling, neuropharmacology, pharmacogenetics, pharmacological chemistry, environmental health sciences, and targeted therapeutics. Core courses include Cell Biology, Fundamentals in Pharmacology, Human Physiology, and Medical Pharmacology. Electives are chosen by the student to suit their interests. Pharmacology students may rotate in labs doing very different types of research, to enrich their background and allow un rushed, instructed selection of direction of their future thesis research.

Environmental Health Sciences, Certificate

A unique curriculum has been designed to provide training to span the disciplines of translational environmental health sciences. This curriculum takes the place of the Graduate Group electives and is designed not to delay the time to attain the PhD degree. Upon completion of the didactic curriculum, trainees will have completed the requirements for the Certificate in Environmental Health Sciences. Upon completion of their thesis, trainees will receive the Certificate in Environmental Health Sciences and a PhD from their graduate group.

The below Plan of Study includes graduate group coursework (16-18 CU depending on group).

Spring

|        | Electives or Pre-Thesis Research | 2     |
|        | Thesis Proposal Candidacy Examination | 2     |
|        | Course Units | 4.00  |

Summer

|        | EPID 812 | Fund of Biostatistics | .5    |
|        | Lab Rotation | 2     |
|        | Course Units | 2.50  |
|        | Total Course Units | 21.00 |

Third to Fifth Year

|        | Thesis Research |
|        | Rotations      |
|        | Students are required to do three rotations. One rotation can be taken in the summer before matriculation. One rotation must involve a mentored community-based experience or epidemiology/population based study. Rotations must be done in the lab of a CEET investigator. |

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Graduate Training in Medical Science, Certificate

The Graduate Training in Medical Science (GTMS) Certificate Program complements our existing doctoral programs in Biomedical Graduate Studies. The GTMS program was specifically designed for students who want to explore human biology and pursue research training at the interface of basic science and medicine. The GTMS program augments graduate training by offering courses that bridge basic and medical science and provides a foundation in the molecular basis of disease.

The GTMS program currently consists of 6 courses (4 required and 2 electives) and a 40 hour clinical clerkship experience. The curriculum requirements change from time to time to keep the program up to date and meeting the student needs.

Bench to Bedside Electives

Select two of the following: 1

2020-21 Catalog | Generated 09/18/20
BMB 518/ CAMB 615/ NGG 615  Protein Conformation Diseases
CAMB 512  Cancer Biology and Genetics
CAMB 530  The Cell Cycle, Genome Integrity and Cancer
CAMB 542  Topics in Molecular Medicine
CAMB 547  Fundamental Virology
CAMB 550  Genetic Principles
CAMB 608  Regulation of Eukaryotic Gene Transcription
CAMB 609  Vaccines and Immune Therapeutics
CAMB 610  Molecular Basis of Gene Therapy and Genome Editing
CAMB 617  Emerging Infectious Diseases
CAMB 630  Topics in Human Genetics and Disease
CAMB 697  Biology of Stem Cells
CAMB 701  Tumor Microenvironment
CAMB 703  The ECM, adhesion receptor signaling, and translational biomechanics
CAMB 704  Stress Responses in Metabolism and Cancer
CAMB 712  Topics in Cancer Biology
IMUN 507  Immunopathology
NGG 618  Recovery After Neural Injury
PHRM 590  Molecular Toxicology: Chemical and Biological Mechanisms
PHRM 623  Fundamentals of Pharmacology
PHRM 624  Medical Pharmacology
PHRM 670  Current Topics in Neuropharmacology

Total Course Units  6

1 Any elective with clinical relevance may be a Bench to Bedside elective, subject to approval from the Program Directors. This list will be updated annually as new courses with clinical relevance may be offered and students are encouraged to suggest courses that they think will enrich their GTMS education.

Non-Course Requirements:
- Monthly seminar series
- 40-hour clinical clerkship

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Public Health, Certificate

PHCP training includes formal coursework, the PHCP seminar series, and a public health project.

FORMAL COURSEWORK:
PHCP students will take public health courses in addition to their doctoral coursework. Students will complete most of the formal coursework during the first and second years of graduate school. In some cases, this may result in a student taking four courses plus a lab rotation in one or more semesters. However, students in the program may also take one public health course per semester in years three through five if necessary and with appropriate permission. Students in PHCP should expect to graduate on time.

PHCP SEMINAR SERIES:
A seminal part of the PHCP program is the bi-weekly seminar series that brings in speakers from Penn and elsewhere to talk about their research and careers linking biomedical research and public health. This is also the forum in which PHCP students present progress reports and their final presentation on their public health project. Attendance is required for all PHCP students. In recognition of attendance and participation, students will receive credit for one semester (1 CU) of PUBH 590 during their fourth or fifth year.

PUBLIC HEALTH PROJECT:
PHCP students are expected to complete a short-term public health research project or independent study. Ideally, this project will focus on a question related to their PhD thesis, but that is not a requirement. Students can choose a public health advisor from the MPH faculty (http://www.publichealth.med.upenn.edu/Faculty.shtml/) or they can substitute an alternative advisor with the permission of PHCP faculty directors. As discussed above, students will present their final project at the PHCP seminar series.

Alternative MPH electives with advice or PHCP Faculty advisors |

Total Course Units  5

1 Students interested in doing an analytic public health project are encouraged to take additional Biostatistics courses as necessary.
2 An introductory course is strongly recommended for PHCP students who have no prior experience and/or coursework in public health.
3 Up to one CU, with a primary focus on the PHCP Public Health Project.
4 Other public health courses across the University may be counted as electives, to be determined on a case-by-case basis with the permission of the PHCP faculty directors.

Non-Course Requirements:

1 Any elective with clinical relevance may be a Bench to Bedside elective, subject to approval from the Program Directors. This list will be updated annually as new courses with clinical relevance may be offered and students are encouraged to suggest courses that they think will enrich their GTMS education.

Doctor of Medicine, MD

As the nation’s first medical school and home to the first teaching hospital, the Perelman School of Medicine (PSOM) enjoys a long tradition of academic excellence and scientific discovery.

The PSOM Learning for Life program is a four-year multidisciplinary curriculum comprising six modules organized around three themes: the science of medicine, the technology and practice of medicine, and professionalism and humanism. The curriculum emphasizes self-directed lifelong learning and small-group instruction. The Henry A. Jordan Medical Education Center itself plays a prominent role in the training of future physicians and scientists; it is among the first medical education spaces in the nation physically integrated into active clinical and research facilities.

PSOM medical students can choose from approximately 150 electives and have one and a half years to explore the possibilities. PSOM also offers extensive MD+ options, including eight master’s degrees and 10 certificates available through its various schools. Penn’s 12 schools share a single contiguous campus, providing exceptional opportunities for student to engage interprofessionally.

For more information: https://www.med.upenn.edu/student/

Bioethics, MBE

The Master of Bioethics (MBE) is an interdisciplinary degree offered by the Department of Medical Ethics & Health Policy. The MBE degree program gives students broad exposure to the full range of topics and issues in contemporary bioethics, drawing on the expertise of distinguished faculty and visiting fellows.

The program admits highly accomplished professionals who work in the bioethics-related fields of medicine, nursing, law, dentistry, social work, genetic counseling, regulatory affairs, public policy, veterinary medicine, and industry, as well as outstanding students in other professional degree programs at the University of Pennsylvania.

The MBE is designed for the following audiences:

- Mid-career and senior health care professionals, including lawyers, physicians, nurses, health care administrators, pharmaceutical employees, social workers, those working in public policy or regulatory affairs, dentists, veterinarians, research associates, other allied health professionals, and other practitioners and teachers who wish to expand their area of competency to include bioethics;
- Students already enrolled or admitted to a Penn graduate or professional degree program, such as medicine, law, nursing, or a PhD program, who want to combine bioethics with their primary training;
- Post-baccalaureate students with a special interest in the field who plan further graduate study in law, medicine, humanities, or social sciences. This degree is not sufficient training for job placement.

For more information: http://medicalethicshealthpolicy.med.upenn.edu/master-of-bioethics (http://medicalethicshealthpolicy.med.upenn.edu/master-of-bioethics/)

Curriculum

The MBE requires the completion of 9 course units.

Biomedical Informatics, MBMI

The Master of Biomedical Informatics (MBMI) program seeks to provide state-of-the-art graduate-level educational and training opportunities in biomedical informatics (BMI), adhering to the best practices as established by national competency standards, to create the next generation of biomedical informatics and practitioners.

For more information: https://www.med.upenn.edu/mbmi/curriculum-overview.html

Curriculum

The MBMI program requires students to complete 10 course units, including required courses, electives, and a capstone project. In addition, students must complete the online HIPAA and CITI training modules.
required of all PSOM students. MBMI students are also expected to participate in the annual Informatics Day, organized by the Institute for Biomedical Informatics.

The MBMI course sequence is flexible, allowing students to pursue required courses and electives at their own pace, provided they complete all requirements within 4 years of matriculation. A typical student might complete the program in two years.

**Clinical Epidemiology, MSCE**

The MSCE is an intensive program for accomplished medical professionals who seek to further their skills as academic investigators. Applicants who possess an advanced degree in medicine, nursing or another health field learn to design controlled epidemiological studies and acquire biostatistical skills that relate directly to their research interests. With close guidance from a primary mentor and a mentorship team, students will gain the ability to hone precise research questions and pursue reliable, complex answers.

For more information: [https://www.cceb.med.upenn.edu/master-science-clinical-epidemiology-msce](https://www.cceb.med.upenn.edu/master-science-clinical-epidemiology-msce)

**Curriculum**

The MSCE degree is comprised of 14 course units consisting of required core courses, electives, and mentored thesis credits. MSCE students generally register for two course units per term. It is expected that all students receive a B- or better in each of the courses being applied to the MSCE degree.

**Genetic Counseling, MSGC**

The MSGC program provides a comprehensive educational environment for future genetic counselors that balances the importance of patient-focused care, scientific knowledge, research, and innovative technology. With an outstanding faculty and access to clinical opportunities at some of the nation’s premier healthcare facilities, the program prepares...
students to be successful genetic counseling professionals in the rapidly evolving field of genetics.

Preparing to become a genetic counselor involves education in three areas: laboratory and clinical medicine, counseling, and research. Students in the University of Pennsylvania’s MSGC program will develop a comprehensive understanding of the complex clinical management of patients with genetic conditions as well as the options for diagnostic testing. Coursework in counseling helps students cultivate the knowledge and skills to address the needs of patients, families, community advocacy groups and other health professionals. The program has a strong emphasis on clinical, translational, and implementation research. Graduates will gain both the research and writing skills necessary to develop and publish literature relevant to the profession.

The University of Pennsylvania Master of Science in Genetic Counseling is fully accredited by the Accreditation Council for Genetic Counseling (ACGC) through 2024. The program meets the requirements of the ACGC for curriculum content, clinical experience, and overall program design. Graduates of the program are qualified to sit for the certification examination offered by the American Board for Genetic Counseling (ABGC) and to apply for state licensure.

For more information: https://www.med.upenn.edu/geneticcounseling/

Curriculum

The program requires the completion of 14 required course units as well as clinical internships, genetic counseling rounds, professional development seminars, advocacy experiences, and an approved research master’s thesis. Successful completion of each course requires a grade of B- or higher.

The curriculum covers advanced genetics, genetic testing technologies, clinical medicine and genetics, counseling techniques, case management, psychosocial assessment, principles of medical ethics and public health, patient advocacy, research design and professionalism. Many courses will have Penn and CHOP genetic counselors as course coordinators and lecturers. The core curriculum will provide the foundation necessary to prepare students for the ever-changing practice of clinical genetics.

Health Care Innovation, MHCI

The University of Pennsylvania’s Master of Health Care Innovation is an online degree program that aims to develop current and future leaders in health care innovation through top-tier, engaging education. The interdisciplinary curriculum is taught by Penn faculty experts in the fields of health policy, operations management, behavioral economics, and innovation methodology. Students in this degree are mid-career health professionals who learn how to improve health care delivery.

For more information: https://www.med.upenn.edu/ethics-and-policy-online/master-of-health-care-innovation/

Curriculum

Students in the Master of Health Care Innovation are required to complete 11 course units of coursework and must maintain a GPA of 3.0 to remain in good academic standing with the program.

Health Policy Research, MSHP
The MSHP is a two year training program that leads to a Master of Science degree. This program is based out of the University of Pennsylvania, Perelman School of Medicine in close collaboration with the Leonard Davis Institute (LDI) and the Department of Health Care Systems at the Wharton School. Building upon the trans-disciplinary nature of LDI, this program is also closely affiliated with the Annenberg School for Communication and the School of Social Policy and Practice—two schools in the University of Pennsylvania with growing interest in and commitment to the fields of health services research and health policy. The MSHP also benefits from LDI’s strong connections to multiple other schools at Penn, including the School of Arts and Sciences, the School of Nursing and the Law School.

The primary goal of the Master of Science in Health Policy Research training program is to train outstanding investigators in health services and policy research. Students completing the MSHP are well situated to pursue careers in academia, non-profit organizations and health policy.

Tailored educational experiences enable students to engage effectively with community partners, policy makers, and other interested stakeholders. Through mentored research students learn to plan and execute policy-relevant, patient-centered research using a variety of different methodologies including qualitative, cross-sectional, simulation, quasi-experimental, and experimental study designs. Finally, the educational experience is deepened with a two year career development lecture series that introduces students to skills essential to careers more generally, including applying for grant funding, managing a research team, negotiating a job, communicating research findings, creating a national reputation and other skills that are just as important to career success as skills in research methods.

Healthcare Quality and Safety, MHQS
Mission Statement
The mission of the Perelman School of Medicine’s Master’s degree in Healthcare Quality and Safety (MHQS) is to train the next generation of healthcare leaders and practitioners in the science of healthcare quality and patient safety.
Program Goals
The goal of the MHQS is to provide in-depth didactic instruction and hands-on experience to current healthcare professionals who aim to improve the quality and safety of healthcare, locally, regionally or nationally. This program will prepare students to pursue careers in healthcare administration and leadership that may be broad (e.g. director of quality and safety for a healthcare system or hospital) or more focused (e.g. positions that oversee population health, health equity, patient safety, value-based care for a healthcare system, department, or organization). Some graduates will combine their clinical and academic careers with a focus on healthcare quality and safety leadership, others will go on to pure leadership positions.

Medical Ethics, MSME

The Master of Science in Medical Ethics (MSME) provides rigorous methodological and conceptual training in bioethics for postdoctoral scholars who aim to become academic bioethicists competing for and conducting externally funded empirical research. Although there are many bioethics-related masters-level graduate programs in the United States, none of these programs is designed to train physician-scientists or other scholars aspiring to empirically oriented bioethics faculty positions in academic medical centers and universities. Penn’s MSME program fills this important need.

Curriculum

Students complete 14.0 course units and must do so with a GPA of 3.0 or higher. Additionally, students must achieve a grade of B- or better in each course and must produce scholarly papers that are accepted for publication.

Medical Physics, MSMP

Penn’s Master of Science in Medical Physics (MSMP) degree prepares students to bridge physics and clinical medicine, overseeing clinical applications of radiation and creating the cutting-edge medical technologies of tomorrow. The program is fully accredited by the Commission on Accreditation of Medical Physics Education Programs (CAMPEP). Full-time students can complete the MSMP program in two years. In the second year, clinical rotations place students in the University of Pennsylvania Health System. During the program, students gain the clinical experience necessary to apply for residencies and move into clinical practice as well as research experience should students desire to pursue a PhD degree.

Students also have the opportunity to do part-time clinical work in the University of Pennsylvania Health System to gain relevant clinical experience while earning an hourly wage. The program can typically be completed full-time in two academic years and one summer session. Part-time study is possible.

For more information: [https://www.med.upenn.edu/mpp/msmp/](https://www.med.upenn.edu/mpp/msmp/)

Curriculum

A total of 15 course units is required, including a thesis. Students complete a faculty-mentored, applied research project of their own design, culminating in a paper and presentation.

Public Health, MPH

The MPH Program prepares students for leadership by integrating research, education, and service learning in population health problems. The program’s aim to educate professionals from diverse disciplines in the core areas that define public health. Its ultimate goal is to ensure that Penn students and faculty can have the maximum positive impact upon current and future public health problems. Penn’s Environmental Health Track offers a curriculum designed specifically for applicants to the interdisciplinary Master of Public Health Program who are interested in mastering skills in identifying, investigating, ameliorating, and communicating about environmental health risks. Key strengths of this track include the MPH Program’s ability to provide mentored Capstone experiences, especially focused on the urban environment and communities with an aging industrial infrastructure, such as Philadelphia and its many surrounding areas.

For more information: http://www.cphi.upenn.edu/mph/about-mph.html

Curriculum

Students must complete 14 course units of coursework and a minimum of 125 hours of fieldwork. Students must maintain a GPA of 3.0 or better and must achieve a B- or higher in each course to receive credit toward the degree.
Regulatory Affairs, MRA

The objective of the Master of Regulatory Affairs (MRA) degree program is to produce a cadre of highly trained and sophisticated practice professionals adept in the skills necessary to maximize compliance and minimize risk in the development of FDA regulated products. Students will learn both the foundation and application of science-based clinical investigation and the corresponding regulation. The program is designed to meet these objectives through didactic course work and an experiential capstone project.

For more information: http://www.itmat.upenn.edu/mra.html

Curriculum

Students must complete 10 course units and achieve a B- or higher for all course work counted toward the degree.

Total Course Units 1

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Regulatory Science, MSRS

The primary objective of the Master of Science in Regulatory Science degree program is to produce a cadre of highly trained and sophisticated investigators adept in the skills necessary to become leaders in the field of regulatory science.

The Master of Science in Regulatory Science provides trainees with in-depth instruction in the fundamental skills, methodology, and principles necessary to become well trained investigator positioned for a future career as a successful academic researcher.

For more information: http://www.itmat.upenn.edu/msrs/

Students complete 12 course units with a GPA of 3.0 or better and no lower than a B- in any given course. Students must defend their thesis in order to fulfill the requirements for graduation.
The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Translational Research, MSTR

The Master of Science in Translational Research (MSTR) provides students with in-depth instruction in the fundamental skills, methodology and principles necessary to become a well-trained translational investigator. The program is designed to meet this objective through the provision of didactic course work, a formal mentorship program, laboratory training, a professional development core, and specific ongoing guidance with hands-on exposure to protocol and grant development. The MSTR is housed within the Institute for Translational Medicine and Therapeutics (ITMAT) which supports research at the interface of basic and clinical research focusing on developing new and safer therapeutics.

The MSTR is designed to facilitate training and research particularly from proof of concept in cellular and animal model systems across the translational divide to proof of concept and dose selection in humans. Student projects and career goals align across this continuum. Students enroll in a core set of courses and also choose an academic pathway to concentrate in a specific area of translational science.

Concentrations

- Discovery: For students who are elucidating the basic pathophysiological etiology and/or process of disease. Projects may be proof of concept in cell or animal models or human samples.

- Translational Therapeutics and Regulatory Science: For students who are testing discoveries for preclinical and/or clinical effect. Projects may be first in humans, phase 1, or assessing the safety, efficacy, quality, and performance of regulated products.

- Entrepreneurial Science: For students who aim to navigate both business and academic environments as you conduct research and consider commercialization opportunities.

- Bioinformatics/Biomedical Informatics: For students who are adopting informatics methodologies to develop and test their own hypotheses.

For more information: [http://www.itmat.upenn.edu/mstr/](http://www.itmat.upenn.edu/mstr/)

Curriculum

Students must complete 12 course units and achieve a B- or higher in each course for the degree.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Academic Foundations, Certificate

The goals of the Academic Foundations Certificate program are to provide CE faculty participants with the core competencies required to be successful academicians while balancing competing demands. This will occur through opportunities to develop skills (particularly focused on scholarship), create strategic career plans, foster mentoring relationships, and to strive for attitudinal orientation toward resilience and self-care within the context of advanced approaches to time-management.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Biomedical Informatics, Certificate

The IBI Certificate in Biomedical Informatics is a four-course sequence for non-informatics professionals designed to build the informatics community at Penn and to train informatics-literate clinicians and researchers who will have a broad understanding of the field of biomedical informatics.

Students in the Certificate in Biomedical Informatics Program can expect to obtain a working knowledge of biomedical informatics, its history, the current landscape, and future directions of the field. The four courses in this program also form the core of the Master of Biomedical Informatics (MBMI) program, so certificate students can expect to interact with a variety of students with diverse interests in informatics.

Certificate students who wish to expand their biomedical informatics skills in a degree program may apply to the MBMI program and, if accepted, may transfer credit from the certificate program to meet the requirements of the Master’s program.

For more information: https://www.med.upenn.edu/mbmi/certificate.html

Clinical Ethics Mediation, Certificate

This certificate option is only available to students who are enrolled in or have completed the Master of Bioethics program.

The Department of Medical Ethics & Health Policy now offers the Penn MBE Clinical Ethics Mediation Certificate. This Certificate can be added to the Master of Bioethics degree, offering students (and alumni) the opportunity to receive additional clinical ethics mediation training right here at Penn.

Students interested in pursuing the combined MBE/Clinical Ethics Certificate will complete an application for the certificate program, in
addition to the MBE application. This additional application can be completed at the time of the original MBE application, or once the student is already admitted to the MBE program. Students will be granted admission based on professional goals related to clinical ethics. Prior experience in clinical ethics is not a required admissions criterion.

Students may complete the MBE and the Certificate concurrently, graduating both with the MBE and the Certificate in the same semester. Alternatively, a student can graduate with the MBE and then complete and be awarded the Certificate at a later date. All students who do not complete both at the same time are encouraged to work with the MBE office to create a plan for completion. Students who graduate before completing all of the Certificate requirements will have at most 2 years to complete the remaining coursework. MBE alumni who have not done any coursework toward the Certificate will have up to 5 years after receiving their MBE degree to apply for the Penn MBE Clinical Ethics Mediation Certificate.

For more information: http://medicalethicshealthpolicy.med.upenn.edu/master-of-bioethics/certificate-in-clinical-ethics-mediation

Curriculum
The Certificate requires the completion of 12 course units: the 9 course units required for the MBE degree, and then an additional 3 additional course units for the Certificate.

Total Course Units 12

1 Each of the Mediation Intensive courses consists of 4 days of intensive practical training in mediation. To receive credit, students must also complete a 10-15 page writing requirement, due at the end of the semester in which the mediation course is being taken.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Health Care Innovation, Certificate
The Certificate in Health Care Innovation allows Penn faculty members, staff members, and currently enrolled graduate and professional students to enroll in a selection of online courses from the Master of Health Care Innovation. Students take courses individually according to their needs and interests, or complete four of these courses within two years to receive a Certificate in Health Care Innovation. Topics include health policy, operations management, behavioral economics, and innovation methodology.

For more information: https://www.med.upenn.edu/ethics-and-policy-online/certificates/academic

Curriculum
The certificate requires students to complete 4.0 course units of coursework within 2 years and maintain a GPA of at least 3.0. Students may choose which courses to take, and they may be taken in any sequence.

HCIN courses range from 0.5 to 1 course units.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Healthcare Quality and Safety, Certificate
The Certificate in Healthcare Quality and Safety is designed to provide individuals with a broad introduction and practical skills related to the field, with the goal of training health care professionals that are proficient and capable of leading quality and safety efforts in their area of clinical interest. Through a four course sequence that includes a mentored capstone QI project, students will gain a foundation in the history, methods, tools, and applications of quality improvement and patient safety in healthcare.

Curriculum
This certificate requires the completion of four course units, including a capstone/thesis requirement. Students must achieve a B- or better in each course.
The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**Medical Physics, Certificate**

Penn's Certificate in Medical Physics offers a career pathway for individuals who have already earned a PhD in physics or a related field (e.g., engineering, computer science or physical chemistry) and a physics minor. The program is fully accredited by the Commission on Accreditation of Medical Physics Education Programs (CAMPEP). As such, the program prepares students to enter a CAMPEP-accredited residency program in medical physics, which provides students with the clinical experience required for certification by the American Board of Radiology.

The Certificate program successfully prepares students to compete for residency positions. Students will have the opportunity to shadow a qualified medical physicist on an elective basis throughout their time in the program at the University of Pennsylvania or at one of Penn's hospital affiliates.

For more information: https://www.med.upenn.edu/mpp/cmp.html

**Curriculum**

A total of six course units is required over two semesters.

The Certificate in Medical Physics provides students with a curriculum based on the recommendations of AAPM report #197S, which outlines the ideal training for a post-graduate education in medical physics. The coursework includes radiological physics, radiation protection, medical imaging, medical ethics/government regulation, anatomy and physiology, radiobiology, and the physics of radiation therapy.

**First Year**

**Fall**

- **MPHY 600** Professional Development 0.0
- **MPHY 601** Introduction to Radiation Protection 0.5
- **MPHY 602** Physics of Medical / Molecular Imaging 1.0
- **MPHY 603** Image-Based Anatomy for Medical Physics 1.0

**Spring**

- **MPHY 604** Radiological Physics 1.0

---

**Translational Research: Entrepreneurial Science, Certificate**

Penn offers three certificates in Translational Research: the Certificate in Translational Science, the Certificate in Entrepreneurial Science, or the Certificate in Regulatory Science. The Certificate in Entrepreneurial Science focuses on the translation of biomedical research into innovative solutions and the development of approaches to commercialization.

The certificate can be finished in one year and must be completed within two years.

For more information: http://www.itmat.upenn.edu/certificate/

**Curriculum**

The certificate requires the completion of 4 course units with a passing grade of B- or better.

**First Year**

**Fall**

- **MTR 610** Introduction to Clinical and Translational Research 1
- **MTR 600** Introduction to Biostatistics 1

**Total Course Units** 4.00

1 Other biostatistics courses may be substituted if taken in the past two years with a grade of B- or better.

2 MTR 640 and HCMG 867 are .5 CU each. Students are recommended to enroll in both courses to fulfill 1 CU.

2020-21 Catalog | Generated 09/18/20
Students may take elective courses outside of these recommendations, by substituting a different MTR/REG course or a course outside of MTR/REG, but must obtain permission before enrolling.

Research Project
The certificate requires a one-year engagement in clinical and translational research. This will take the form of a new research project or as a translational arm to research currently being conducted. Prospective students will identify a mentor and define the research project at the time of application.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Translational Research: Regulatory Science, Certificate
Penn offers three certificates in Translational Research: the Certificate in Translational Science, the Certificate in Entrepreneurial Science, or the Certificate in Regulatory Science. The Certificate in Regulatory Science is designed for PhD scientists who wish to pursue Regulatory Science careers in academia, the pharmaceutical and biotechnology industry, the consulting and legal industries, and federal agencies.

The certificate can be finished in one year and must be completed within two years.

For more information: http://www.itmat.upenn.edu/certificate/

Curriculum
The certificate requires the completion of 4 course units with a passing grade of B- or better.

SCHOOL OF ARTS & SCIENCES

The University of Pennsylvania School of Arts and Sciences forms the foundation of the scholarly excellence that has established Penn as one of the world’s leading research universities. We teach students across all 12 Penn schools, and our academic departments span the reach from anthropology and biology to sociology and South Asian studies.

Members of the Penn Arts & Sciences faculty are leaders in creating new knowledge in their disciplines and are engaged in nearly every area of interdisciplinary innovation. They are regularly recognized with academia’s highest honors, including membership in prestigious societies like the National Academy of Sciences, the American Association for the Advancement of Science, the American Academy of Arts and Sciences, and the American Philosophical Society, as well as significant prizes such as MacArthur and Guggenheim Fellowships.

The educational experience offered by Penn Arts & Sciences is likewise recognized for its excellence. The School’s three educational divisions fulfill different missions, united by a broader commitment to providing our students with an unrivaled education in the liberal arts. The College of Arts and Sciences is the academic home of the majority of Penn undergraduates and provides 60 percent of the courses taken by students in Penn’s undergraduate professional schools. The Graduate Division offers doctoral training to over 1,300 candidates in more than 30 graduate programs. And the College of Liberal and Professional Studies provides a range of educational opportunities for lifelong learners and working professionals.

Africana Studies, PhD

The past twenty years have witnessed two dominant but opposing approaches to the study of the interconnections between Africa and the African Diaspora. Both seek to provide alternatives to traditional models of Africana Studies. The Afrocentric model has tended to focus on historical Africa, particularly the great civilizations of the African past. It has given little attention to the Diaspora, except to those aspects of black culture that reflect a continuum or retention of elements of certain African (specifically West African) cultures. The second model may best be described as a Black Atlantic approach; it has given little attention to the African continent, but has focused on persons of African descent throughout the Western world. This approach is especially concerned with identity formation, hybridity, syncretism, and creolization. Our pedagogical focus neither romanticizes nor ignores historical and contemporary Africa. It seeks to break current conceptualizations of the African Diaspora that only consider West Africa, Europe, North America, the Caribbean, and Brazil. While these areas will continue to be important, we hope to expand an understanding of Diaspora that includes all of Spanish speaking Latin America, East Africa, Asia, and the South Pacific as well.

This program insists that African peoples, as they have moved into different geopolitical circumstances, have developed and maintained a plurality of political strategies which cut across (but are also influenced by) a variety of religious, national, and cultural boundaries. By working to complicate and particularize what we know as 'African identity,' we hope to re-imagine the ways that African and African descendant peoples have worked to establish and maintain a coherent set of cultural and symbolic practices.

Our approach is in conversation with disciplines in the humanities and social sciences, but differs from them in the conceptualization of an interdisciplinary methodology. In other words, while we encourage in-depth knowledge of and training in traditional disciplines, one of the major intellectual goals of the program is the development of an interdisciplinary method and vocabulary for the study of the interconnections between Africa and peoples of African descent around the globe.

For more information: https://africana.sas.upenn.edu/department/graduate/phd-program (https://africana.sas.upenn.edu/department/graduate/phd-program/)

View the University's Academic Requirements for PhD Degrees (http://catalog.upenn.edu/pennbook/academic-rules-phd/).

Three Track Approach

The three tracks of concentration in African Studies, African American Studies, or Diaspora Studies will allow students to select both a topical and an area studies sub-field. Hence, for example, a student who wishes to study public policy can do so while focusing attention on the experiences of African peoples in specific locations in the United States, South America, Africa, or the Caribbean. Prospective students must identify which track they will pursue during the first year of study; however, double track concentrations are welcomed and encouraged.

Second Tier Courses

Select two course units in methodology from the following:

- Ethnographic Methods
- Quantitative Methods
- Methods course specific to an existing graduate group

Program Milestones

- Complete the Core Program
- Pass an examination in a language of library research by October of the second year (for students pursing research in a language other than English)
- Complete 14 course units (includes five Core and two Second-Tier Courses)
- Complete two years introduction to an African language (for students who select the African Studies track)
- Complete a 30-book exam by the end of the second year (for PhD students only)
- Pass the Final Oral Examination, based on a draft proposal for doctoral research and written statements on four related fields of specialization (two major and two minor)
- Submit a Dissertation that is acceptable to both the graduate group and the Graduate Council of the Faculties

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Ancient History, PhD

The Graduate Group in Ancient History is an interdisciplinary, cross-departmental program that encompasses the study of the ancient history of the Near East and the Mediterranean Basin, from the origins of civilization in the fertile river basins of the Tigris and the Euphrates to...
the rise of Islam and the emergence of the so-called barbarian successor kingdoms.

The expertise and interests of members of the group are diverse and heterogeneous. What unites us is the enterprise of building historical narratives from the fragmentary and diffuse textual and material evidence available to us. Students admitted to the Graduate Group in Ancient History will receive training in the political, intellectual, cultural, socio-economic, and religious history of at least two discrete ancient societies as part of their preparation for the degree of Doctor of Philosophy.

In addition to course work, candidates are expected to participate in seminars, act as Teaching Assistants and/or teach their own classes. In order to progress to dissertation stage, students must, in addition to passing their 20 courses, fulfill the following examination requirements: Modern Languages Examination, Qualifying Examination & the Preliminary Examination. Following completion of three years of coursework and all examinations, a student will be advanced to dissertation stage.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

### Anthropology: Archaeology, PhD

The emphasis in the Graduate Program is on training candidates for the degree of Doctor of Philosophy. This degree certifies that, in addition to having a sound knowledge of anthropology as a whole, the holder has been trained to do independent research at a professional level of competence in at least one of the major sub-disciplines of anthropology: archaeology, cultural anthropology, physical anthropology, or linguistic anthropology.

For more information: [http://www.sas.upenn.edu/anthropology/graduate-programs/phd-program](http://www.sas.upenn.edu/anthropology/graduate-programs/phd-program)

Applied Mathematics and Computational Science, MA

Advanced mathematics is continually finding new applications in natural science, biology, engineering, medicine, and social sciences, and these fields are providing new directions for the development of mathematics itself. The graduate group in Applied Mathematics and Computational Science takes a very broad view of mathematics and its applications in our mission to train mathematical scientists for careers in academia, research and industry. In addition to providing a rigorous conceptual foundation for the application of mathematics, our diverse faculty gives AMCS students the opportunity to work in a "wet lab" environment where mathematics is actually being applied to real world problems. The AMCS graduate groups offer a full program of study in mathematics and its applications, offering both doctoral (Ph.D.) and masters (A.M.) degrees.

The Masters of Arts program in AMCS is intended for students who wish to go into professional careers in Applied Mathematics, Data Science, Mathematical Finance, or wish to obtain sufficient background in Applied Mathematics to be a strong candidate for a doctoral program in Applied Mathematics, Mathematics, Statistics, Financial Mathematics, etc.

For more information: http://www.amcs.upenn.edu/

*Art and Archaeology of the Mediterranean World, MA*

The Interdepartmental Graduate Group in Art and Archaeology of the Mediterranean World (AAMW) offers a terminal M.A. program in Mediterranean Archaeology. This program is designed to deliver intensive intellectual and practical training in a range of skills in archaeology to students wishing to be immersed in the study of the visual and/or material culture of the Mediterranean, broadly defined— including, for example, the ancient Near and Middle East and extending from the third millennium BCE to the Late Antique, early Byzantine, and early Islamic periods. The program also aims to facilitate student engagement with the University of Pennsylvania Museum of Archaeology and Anthropology (aka "Penn Museum"). Upon receiving their M.A., Penn graduates will be well positioned to gain admission to prestigious Ph.D. departments in the US and overseas; others might seek curatorial positions in national and local museums, teaching positions in secondary schools, or supervisory positions in CRM firms. Faculty closely mentor and work with M.A. students to achieve the students’ goals and to prepare them for their desired career path.

The M.A. Program is a terminal degree program lasting two years. During this time students have full access to Penn’s outstanding faculty and resources such as the Penn Museum, as well as all of the courses sponsored by AAMW and other programs and departments at Penn, and those offered at neighboring universities with which Penn has reciprocal arrangements. Students admitted to the Mediterranean Archaeology M.A. program should not expect to receive admission after the M.A. into the AAMW Ph.D. program. Students admitted to the M.A. program normally do not receive financial aid from the University of Pennsylvania,
although they may of course apply for outside awards to support their graduate study.

For more information: http://www.sas.upenn.edu/aamw/ma-program

1 Competency in one ancient language, relevant to the student’s preferred cultural focus (Greek, Latin, Akkadian, etc.), to be determined in consultation with the student’s advisor. Competency is measured by an examination or by taking at least one course in that language at the 400 (advanced undergraduate/graduate) level or above with a final grade of “B” or better.

2 Competency in one modern foreign language of international scholarship, typically German or French; this language will be determined in consultation with the student’s advisor. Competency is measured by an examination or by passing one of Penn’s summer academic reading courses after the first year.

3 All students are expected to participate in an archaeological fieldwork project during the summer after the first year. This fieldwork would normally take place in the Mediterranean (broadly defined), though exceptions might be made. The requirement to engage in fieldwork during the summer after the first year might also be waived for students with substantial prior archaeological field experience. Students can expect to bear the cost of the fieldwork.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Art and Archaeology of the Mediterranean World, PhD

The Graduate Group in the Art and Archaeology of the Mediterranean World trains students for careers in the art and archaeology of Classical and Near Eastern Civilizations. Drawing on the vast resources of the University of Pennsylvania Museum of Archaeology and Anthropology, AAMW incorporates fieldwork, museum internships, and university instruction into a flexible interdisciplinary program leading to the M.A. and Ph.D. All students accepted into the program are fully funded for a period of at least five years.

For more information: http://www.sas.upenn.edu/aamw/

1 Graduate students are expected to devote the majority of summers to archaeological fieldwork, or laboratory or museum work if appropriate.

2 Graduate students serve as Teaching Assistants during the four semesters of their second and third years in the program.

3 Consult the AAMW website (http://www.sas.upenn.edu/aamw/) for details on required languages and how the requirements may be fulfilled.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Biology, PhD

The Biology Graduate Program represents many areas of biology, and interactions with a diverse group of colleagues provide opportunities to broaden every student’s thinking and make connections between different fields and scientific approaches. Areas of research include
microbiology, cell biology, development, physiology, neuroscience, animal behavior, plant biology, genetics, computational biology, evolution, ecology and biodiversity.

Each entering graduate student has the freedom to pursue topics ranging from the behavior of molecules to that of cells, organisms, genomes, and ecosystems. We encourage students to get broad exposure through lab rotations with any faculty member in the Biology Graduate Group. As students focus on more specific research interests, they tailor their graduate education accordingly, choosing courses from different departments and schools at Penn as appropriate.

Students complete most of their course work and lab rotations in the first year and then start their thesis research in the second year while completing their teaching requirement and preparing for their candidacy exams. Students are then fully focused on thesis research by the end of the second year. Students still have the option of taking additional courses in advanced years in order to enhance their graduate research.

For more information: http://www.bio.upenn.edu/graduate/

View the University's Academic Requirements for PhD Degrees (http://catalog.upenn.edu/pennbook/academic-rules-phd/).

### Chemistry, PhD

The Graduate Program is designed for students who wish to earn a Ph.D. in Chemistry while undertaking cutting edge research. The program provides students with the necessary theoretical background and hands-on training to become independent and highly successful scientists. Graduate students achieve mastery of advanced chemistry topics through courses in different subdisciplines.

Graduate students conduct research in the fields of bioinorganic chemistry, bioorganic chemistry, chemical biology, biophysical chemistry, bioinformatics, materials science, laser chemistry, health related chemistry, structural and dynamical studies of biological systems, X-ray scattering/diffraction, NMR spectroscopy, applications of computing and computer graphics, as well as investigations of chemical communication and hormone-receptor interactions.

For more information: https://www.chem.upenn.edu/content/phd-program (https://www.chem.upenn.edu/content/phd-program/)
View the University’s Academic Requirements for PhD Degrees (http://catalog.upenn.edu/pennbook/academic-rules-phd/).

**Curriculum**

Twenty course units are required for graduation.

The PhD program requirements consist of:

- A minimum of six course units of lecture courses (usually completed in the first academic year)
- Chemical Information Course
- Lab Rotations (Biological and Biophysical students only)
- Teaching Requirement (Students must TA for two semesters)
- Second Year Candidacy Exam
- Annual Dissertation Committee Meetings
- Public Defense
- Written Dissertation

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Additional Coursework may be taken throughout.

### Classical Studies, PhD

The Graduate Group in Classical Studies trains students in the languages, literatures, and history of the ancient Greek and Roman world. Students are encouraged to combine this work with the investigation of such related fields as Art History and Archaeology, Comparative Literature and Literary Theory, Linguistics, Medieval Studies, Philosophy, Religious Studies, and Women’s Studies.

Penn offers superb resources for the study of classical antiquity. We have a world-class faculty, who specialize in a wide range of sub-fields within the discipline, and who take seriously the responsibility of training graduate students for careers in and beyond academia.

All candidates for the Ph.D are required to teach for at least two semesters under the supervision of the Graduate Group. In practice, students normally teach four semesters, during the second and third years of the program.

All candidates for the Ph.D must take a series of exams including Modern Language Examinations, the Qualifications Evaluation Examination in Greek and Latin translation, and the Preliminary Examination on the literary history of Greece and Rome, along with special topics chosen by the student. The dissertation is normally completed by the end of the student’s fifth year in the program.

For more information: http://www.classics.upenn.edu/graduate/graduate-program-classical-studies (http://www.classics.upenn.edu/graduate/graduate-program-classical-studies/)

Select additional courses in consultation with the advisor

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

### Comparative Literature, PhD

The Ph.D. Program in Comparative Literature covers the study of narrative, poetry, representation and cultural history. The Program enables students to engage rigorously with critical theory. We draw our faculty from many disciplines: the languages and literary histories of Europe, the Americas, the Middle East, East Asia, and South Asia: history, art history, religion; anthropology; folklore; political science; Africana studies; Jewish studies; Gender and Sexuality studies; sociology; communications.
We provide a structured and challenging program in which graduate students can combine the careful study of a particular literary tradition
with interests in other languages and disciplinary approaches. The broad interests that our students bring to their projects include the history
of philosophy, film and media studies, technology and the history of science, and area studies. Students work in varied historical periods, from
antiquity and the Middle Ages to the postmodern, and in diverse language fields.

Comparative Literature at Penn has a dynamic intellectual community. Our signature event is our public colloquium series, Theorizing, which is
organized primarily by the graduate students. Our students and faculty are active participants in the many interdisciplinary lecture and seminar
series at Penn, including the Medieval-Renaissance Seminar, the History of Material Texts Seminar, the Wolf Humanities Center, the Latitudes
Seminar, and several student reading groups.

Criminology, MS
Penn's unique Master of Science in criminology program aims to shape criminal justice "change agents," preparing students to spend
their career applying criminological research in public and non-profit domestic and international organizations. It is also designed for those
research-oriented students who are preparing themselves for graduate or professional education at leading research universities.

Penn’s unique interdisciplinary program combines solid academic learning at one of the nation’s top research universities with practical knowledge that can enhance careers in research and in criminal justice-related policy and practice settings. Students also gain knowledge of the criminal justice system through meeting weekly with guest visitors who work in the justice system. Students work under a faculty member on a semester-long crime analysis project, using their analytical and research skills, to address a specific crime problem. Students present their final masters' projects during a poster session at Penn's Criminology Day in April, through an oral defense of their project, and as a written research article.

### Criminology, PhD

Penn’s highly interdisciplinary Ph.D. in criminology combines the traditional concerns of criminologists with concepts, theories, and empirical research from a wide variety of academic disciplines. The program seeks to produce scholars of unusual breadth who can work creatively in academic or policy settings.

Working closely with faculty, students are encouraged to design their own curriculum and begin research very early in their graduate education. That curriculum will include several core courses taken in the first and second year. These include two courses in criminological theory, two courses in criminal justice policy, and two semesters of graduate level statistics.

For more information: http://crim.sas.upenn.edu/graduate (http://crim.sas.upenn.edu/graduate/)

View the University’s Academic Requirements for PhD Degrees (http://catalog.upenn.edu/pennbook/academic-rules-phd/).

A minimum of 9 course units are required.

</tr>
</tbody>
</table>

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

A student who enters the Ph.D. program with a Bachelors degree will usually take 3 course units in each semester in their first two years and must complete all course requirements by the end of their third year. All students must take 3 CUs in each semester to remain registered as full-time students.

After having completed the substantive, class-based course requirements, they normally fulfill remaining CUs by registering for CRIM 999 Independent Study and Research. They will also have passed the Candidacy Examination by the end of their second year. Students who enter with a Master’s degree or other transfer credit may satisfy the formal course requirements more quickly. However, the Graduate Group Chair in conjunction with the student’s research supervisor has the flexibility to establish the optimal requirements for students.

The customary maximum load for a Ph.D. student is four course units each semester; exceptions for a fifth course unit may be made in extraordinary cases upon approval of the Graduate Dean. The Graduate Group may establish examination requirements in addition to the University’s standards.

Demography, PhD

Penn Demography trains independent researchers who are prepared to fill leading roles in social demography and population analysis at a variety of organizations and are well versed in the growth, structure, health and well-being of human populations. Graduates have a firm grasp of both the substance and methods of study in the core areas of demography and population sciences (mortality, fertility, migration, population aging, and demographic — economic interrelations) from both a domestic and international perspective.

The Graduate Group in Demography is responsible for training students through course work and supervised research. The Graduate Group in Demography is composed of faculty members with backgrounds in demography, sociology, economics, anthropology, nursing, and medicine.

Program Milestones

- Satisfactory completion of 20 course units
- Satisfactory completion of a first year research paper
- Satisfactory completion of a second year research paper
- Satisfactory completion of the MA Exam administered in May in the end of the student’s first year in the program
- Satisfactory completion of the PhD Examination administered in May in the end of the student’s second year in the program
- Successfully complete a dissertation on an approved topic. To remain in good standing students should establish a dissertation committee and defend their dissertation proposal before the beginning of their fourth year in the program.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Earth and Environmental Science, PhD

The mission of the Graduate Group of the Department Earth and Environmental Science is to produce independent, well-rounded scientists that are exceptionally competent in their area of specialization and capable of understanding, solving, and communicating complex and interdisciplinary scientific issues.

The graduate group guides research leading to Doctoral degrees in the range of fields that encompass our research interests:

- Biogeochemistry (terrestrial and ocean)
- Environmental Geology
- Geophysics
- Paleobiology
- Surficial processes

For more information: http://www.sas.upenn.edu/earth/graduate/doctoral-programs/)

East Asian Languages and Civilizations, MA

The Graduate Group in EALC administers a Masters of Arts degree in the humanistic study of East Asia: China, Japan, Korea, and Mongolia. The degree is both an entry point into higher-level graduate study and preparation for careers in teaching, administration, and the public and private sector. This degree is extremely valuable to students who plan to seek employment in East Asia. The program offers flexibility for students who desire to combine this degree with another Master of Arts at Penn or who would like to pursue the degree on a part-time basis. The Master’s in EALC focuses on humanistic disciplines such as literature, history, philosophy, religion, art, and archaeology of East Asia. We encourage training in the more rigorous classical forms of Chinese, Japanese, Korean, and Mongolian in addition to communicative proficiency in modern forms of these languages.

East Asian Languages and Civilizations, PhD

The cross-disciplinary Ph.D. program in East Asian Languages and Civilizations is designed to train graduate students who can teach and conduct independent research in a variety of humanistic disciplines using Chinese, Japanese, Korean, or Mongolian, or occasionally other languages of East Asia. Our region is defined roughly as China, Japan, Korea, Mongolia, and Inner Asia. Before completion of the degree, each student is required to:

1. master the requisite linguistic tools and research methods;
2. demonstrate a comprehensive knowledge of the history and culture of his or her area of expertise;
3. gain an in-depth expertise in one or more period and/or subject areas; and
4. attain the necessary level of training in his or her humanistic discipline.

- Three written field exams
- Research exam
- Oral exam
- Dissertation

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Economics, PhD

The graduate economics program at Penn is a Ph.D. program administered by the Graduate Group in Economics, which consists of the faculty of the Department of Economics, and some of its secondary appointments in the Wharton School and the School of Arts and Sciences. A master’s program in Economics is not offered at the University of Pennsylvania.

The program trains students to conduct outstanding research in economics. All major areas of economics are covered, with particular strengths in theoretical and empirical microeconomics, and in modern macroeconomics. Graduates of the program obtain positions at leading universities, research institutions, and government agencies around the world.

Students in this program first acquire a thorough knowledge of economic theory and econometric methods before they begin their own research. They meet a series of requirements during their first years in the program, and thereafter devote most of their time to the writing of a dissertation. The median length of time required for completion is 5.25 years (however both shorter and longer periods are possible). Almost all students are supported by combinations of fellowships, research assistantships, and teaching assistantships during at least their first five years of study.

For more information: http://economics.sas.upenn.edu/graduate

View the University’s Academic Requirements for PhD Degrees (http://catalog.upenn.edu/pennbook/academic-rules-phd/).

1 By the end of the 3rd year in residence, students must have passed four 700-level econ courses (excluding 701-706 and Tx9, the workshops) with a grade of A- or higher. Credits must total 16 before going on dissertation status.
English, MA

The Department offers full-time M.A. and Ph.D. programs. Comprehensive in their range of specializations, these programs are intellectually dynamic and rigorous. Our M.A. program offers students a solid foundation in the professional study of literature and culture, and our Ph.D. program prepares students for full participation in the profession as scholars and teachers of English and American literature, broadly conceived. Over seventy graduate students enjoy close interaction with thirty-eight internationally renowned faculty members in the Department who teach and publish on a large number of historical periods, theoretical areas, and methodological approaches.

Our Department culture reflects our commitment to fostering an inclusive environment that is at once challenging and supportive. We recognize that success in our profession requires more than taking courses, passing exams, writing a dissertation, attending conferences, and publishing articles; it also involves the recognition that we produce new knowledge collectively. Accordingly, we consider our graduate students full members of the Department and encourage everyone to take an active role in the intellectual and social community of the Department as well as other programs and departments across campus.

English, PhD

The Department offers full-time M.A. and Ph.D. programs. Comprehensive in their range of specializations, these programs are intellectually dynamic and rigorous. Our M.A. program offers students a solid foundation in the professional study of literature and culture, and our Ph.D. program prepares students for full participation in the profession as scholars and teachers of English and American literature, broadly conceived. Over seventy graduate students enjoy close interaction with thirty-eight internationally renowned faculty members in the Department who teach and publish on a large number of historical periods, theoretical areas, and methodological approaches.

Our Department culture reflects our commitment to fostering an inclusive environment that is at once challenging and supportive. We recognize that success in our profession requires more than taking courses, passing exams, writing a dissertation, attending conferences, and publishing articles; it also involves the recognition that we produce new knowledge collectively. Accordingly, we consider our graduate students full members of the Department and encourage everyone to take an active role in the intellectual and social community of the Department as well as other programs and departments across campus.

Each student must take courses that fulfill six distribution requirements:
1. One course pre-1700
2. One course 1700-1900
3. One course post-1900
4. One course on literature of the Americas
5. One course on literature outside the Americas
6. One course in Minority literature (racial, ethnic, gender, sexuality)

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

German Languages and Literatures, PhD

The Department of Germanic Languages and Literatures at Penn takes a forward-looking perspective on developments in the field. In contrast to many Ph.D. programs in German, we provide a solid grounding in the entire German literary tradition. At the same time, we vigorously pursue interdisciplinary study informed by the latest methodological and theoretical movements, and provide state-of-the-art pedagogical training and instruction.

Our Department has particular strengths in gender and sexuality, intermediality, history of the material text, German-Jewish studies, translation theory, cinema studies, environmental humanities, and pedagogy. Our students are trained with an eye to their career objectives. All of our students receive a full five-year Benjamin Franklin Fellowship package, which includes guaranteed summer funding and significant mentored teaching experience.

All candidates must complete 20 course units by the end of year 3. Our curriculum toward a Ph.D. in Germanic Languages and Literatures details steps on the five-year path to degree. By the end of spring term of year 3, students shall have completed a successful prospectus meeting with their dissertation committee. In years 4 and 5, students work on the dissertation. Students teach in years 2 and 3, although they may choose to gain additional teaching experience. Students are encouraged to spend at least one year (typically year 4) at an academic setting in a German-speaking country.

For more information: http://www.sas.upenn.edu/germanic/graduate (http://www.sas.upenn.edu/germanic/graduate/)

Years 4 and 5

Dissertation

1 Students shall take 4 anchor courses in 5 periods. The five periods are:
- medieval (to roughly 1450)
- early modern (to roughly 1789)
- the long 18th century (roughly 1648#1806)
- the long 19th century (roughly 1789#1914)
- the long 20th century (roughly 1871#today)

History and Sociology of Science, PhD

The Department of History and Sociology of Science at Penn offers a distinctive Ph.D. program focusing on the social, historical, and cultural study of science, medicine, technology, and the environment. Our faculty
and student interests span the early modern period to contemporary times, covering regions from around the globe. The city of Philadelphia offers a vibrant range of scholarly resources, including world-class archives, museums, libraries, universities, and learned societies. The Department has trained some of the most successful scholars practicing in the field today; in addition to faculty positions, many of our graduates also go on to successful careers in public history, publishing, policy, and consulting. Our Department is known for its intellectual rigor, innovative scholarship, and strong sense of camaraderie.

Required Courses
A minimum of 18 course units are required, 14 of which must be HSSC courses.

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Course Units</th>
</tr>
</thead>
</table>
| Core Requirement
| HSSC 505 Seminar in the History and Sociology of Science 1 |

Subfield Requirements
Select three seminars in at least two of the following major subfields:
- Science
- Technology
- Medicine

Other Requirements
Research Seminar 2
Pre-1850 Developments Seminar 3

1. Should take in the Fall semester of Year 1.
2. Must receive an A- or higher.
3. Or a research paper dealing with the period before 1850 even if written for a course that includes materials from a later period.

Program Milestones
- Successful passing of the formal Second Year Evaluation (as required by the University).
- Demonstration of proficiency in two languages, a requirement that must be met before the Orals Examination may be scheduled;
- Successful passing of the Orals Examination (usually by the end of your third year), demonstrating mastery of the literature in three special sub-fields, each jointly worked out by the student with a faculty member;
- A dissertation proposal approved by a student’s adviser within six weeks of passing the Orals;
- At least two years (4 semesters, or 4 courses) of mentored teaching experience.
- A dissertation, submitted to and accepted and approved by the student’s dissertation committee, usually consisting of three members of the faculty, in accordance with University regulations.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

History of Art, MA
The History of Art Department offers a Master of Arts degree for students wishing to deepen their knowledge of art and the critical methods employed in the study of art.

Upon receiving their M.A., Penn graduates have gone on to hold curatorial positions in national and local museums, auction houses, and galleries. Students have also used their M.A. as a stepping stone to Ph.D. programs, receiving admission to many prestigious Ph.D. departments in the US and overseas. Faculty closely mentor and work with M.A. students to achieve the students’ goals and to prepare them for their desired career path.

The M.A. Program is a terminal degree program lasting two years. Students admitted for the M.A. do not automatically receive admission after the M.A. into the Ph.D. program; students wishing to continue must apply to the Ph.D. program. Students admitted for the M.A. normally do not receive University Fellowships, although they may apply for outside awards to support their graduate study.

History of Art, PhD
The doctoral program at the University of Pennsylvania provides students with broad training in the history of art and its critical approaches, yet also focused training in their selected fields. Students completing the Ph.D. are well prepared for teaching positions at the university and college level and for curatorial positions in museums and galleries. Faculty work closely with Ph.D. students to outline an appropriate course
of study and mentor students while preparing them for assistantships, curatorial internships, and other career orientations.

### History, MA

The Graduate Program in History at the University of Pennsylvania has a long tradition of distinction. Beginning as one of the first programs in the United States to offer doctoral study in history, (the first Ph.D. in History was conferred in 1891); the Department continues to pioneer new areas of scholarship. In the last twenty years, faculty members of the departments in American, European, and World History have assumed a leading role in their fields. Today, few departments in the country match Penn’s Department of History in coverage and depth across the entire range of history from medieval times to the present.

For more information: http://www.history.upenn.edu/graduate/program-guidelines (http://www.history.upenn.edu/graduate/program-guidelines/)

View the University’s Academic Requirements for Research Master’s Programs (http://catalog.upenn.edu/pennbook/academic-rules-research-masters/).

### Curriculum

A minimum of 8 course units are required for graduation.

**Linguistics, MA**

The Master’s degree provides a grounding in the core areas of linguistic theory, supplemented by courses chosen according to the student’s specific interests. The Graduate Group in Linguistics does not provide fellowships for pursuit of a master’s degree, so students must bring funding from another source.

Applications are considered only from applicants who demonstrate the appropriate academic background as well as interests that match the research pursued at Penn, which can be determined by investigating the current work of the faculty and students. Please consult with the graduate chair before submitting an MA application to ensure that you fit these requirements.

**Electives**
Select 7 course units in consultation with a faculty advisor.

Total Course Units 11

In addition to successful completion of course work, other requirements include

- A thesis written under the supervision of a faculty committee. The thesis can be based on previous coursework. The committee consists of at least two faculty members, the adviser and a reader, who both must also be members of the graduate group.
- An oral examination based on the thesis. This consists of a private meeting with the committee, during which the student answers questions on the content of the thesis.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**Linguistics, PhD**

The Ph.D. program in Linguistics at Penn embraces a wide range of theoretical specializations and methodologies. What unites them is a commitment to careful and explicit formal analysis of the human capacity for learning and using language.

The core of our program is the formal generative tradition, but we encourage the cross-fertilization that results from the confrontation of empirical and theoretical perspectives on language structure. By our close collaboration with other programs (such as computer science and psychology) we promote an awareness of the broad view of language that interdisciplinary study induces. In addition to broad training, students are offered and expected to master the methods and results of their chosen areas of concentration in linguistics as a prerequisite to fruitful engagement in dialogue with others, both within and outside the program.

Total course units 20
The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Mathematics, MA

The Masters of Arts program in mathematics is intended for students who wish to go into professional careers in mathematics, and who have a background corresponding to an undergraduate mathematics major.

Students in the masters program take at least eight graduate mathematical courses numbered 500 and above, including at least one each in algebra, analysis, and geometry-topology. The other courses can be in either pure or applied mathematics, and some can be taken in other departments. There is also a requirement to pass the Masters Preliminary Exam and to submit and defend a masters thesis.

The masters degree can also be earned by Penn Math Ph.D. students, on the way to their Ph.D. In addition, Penn Ph.D. students in allied fields of study can also apply to enter the masters program in mathematics, which can allow them to earn both degrees simultaneously.

For more information: https://www.math.upenn.edu/graduate

Total Course Units 8

1 At least four courses must be taken in the Penn Mathematics Department. Among these courses, every student must take at least a semester of graduate courses in each of algebra, analysis and geometry-topology.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Bridge to Ph.D. Program

The Bridge to PhD is a master's program in mathematics offered by the University of Pennsylvania. The goal of this program is to increase the number of PhD's awarded in mathematics at Penn to members of groups that are traditionally underrepresented. This program is different than conventional master's programs as students will be fully funded and prepared for direct entry into a PhD program.

For more information, visit http://bridge.math.upenn.edu.

Mathematics, MPhil

The Master of Philosophy in mathematics is a terminal professional degree that is designed for students who want to go beyond the usual masters degree. Entering students should have previously completed either an undergraduate or a regular masters program in mathematics. The degree is typically earned one or two years after beginning to take courses that go beyond the regular master of arts degree.

Students who already have a regular masters degree take six additional graduate courses numbered 600 or above to earn an M.Phil. degree. Students who enter the program with just an undergraduate degree will fulfill the usual masters course requirements plus an additional six (for a total of 14 courses). Students in this program also need to pass the Masters Preliminary Exam and an oral exam in one area of mathematics, and to submit and defend an M.Phil. thesis (which is somewhat longer and more in depth than a thesis in the usual masters program).

For more information: https://www.math.upenn.edu/graduate

Mathematics, PhD

The Department of Mathematics of the University of Pennsylvania offers a full Graduate Program in Mathematics, conferring the degrees of Master of Arts (A.M.), Master of Philosophy (M.Phil.), and Doctor of Philosophy (Ph.D.). The educational aim of this program is to provide well-rounded mathematical training for a career of research and teaching in mathematics, as well as for other careers which use advanced mathematics in a substantial way. Students are offered the possibility of a dual Ph.D. degree in Mathematics and a Masters degree in other subjects, including physics and computer science.
This program covers a variety of areas, including analysis, geometry-topology, algebra, mathematical physics, combinatorics, logic, and probability. See our Graduate Mathematics Page and our Math Department home page for detailed information about other aspects of this program and of the Penn Math Department as a whole, including its colloquia, seminars and lecture series, and the research interests of the faculty.

Full time Ph.D. students receive financial support for five years, at least two of which are in the form of a fellowship.

In addition, Penn offers an interdisciplinary graduate program in Applied Mathematics and Computational Science (p. 101), for which there is separate application process.

For more information: https://www.math.upenn.edu/graduate/

**Music: Composition, PhD**

The Ph.D. program in Composition stresses training in the craft of composition, contemporary repertory, and theory and analysis. Instruction in composition comprises much of the course requirement; such instruction takes the form of private lessons. Participation in the concert life of the department and attendance at Composers’ Forum events complement that instruction. Students are assigned to particular instructors for composition lessons by the Director of Graduate Studies on the advice of the composition faculty. Composition instructors are assigned on a rotating basis to assure that all students are exposed to a variety of approaches and have the opportunity to work with each member of the composition faculty during the period of coursework. The Department of Music at the University of Pennsylvania also offers a Ph.D. program in Music Studies, and composition students also take several courses with the music studies faculty during their coursework.

**Exams**

**Musicianship Requirement**

The musicianship requirement may be fulfilled through demonstrating facility as a performer, or through an exam administered by the faculty. Students should consult with faculty about what performance opportunities might be most appropriate for them. For instance, with faculty approval, this requirement could be met through performing at a sufficiently high level (including conducting) in a Penn Sound Collective, or similar, concert. It could also be met by participating for one academic year in a Department-sponsored ensemble. Alternatively, a student may, in consultation with the faculty, take an exam in which facility in sight-singing, dictation, and keyboard are demonstrated. This requirement must be fulfilled by the end of the second year of study.
Practicum Exam
During the first semester of study, students will work collaboratively with faculty (as part of Forum and lessons) to determine their areas of strength and opportunities for growth in repertorial knowledge. During the second semester of study, the faculty and student will outline 5 areas to be examined at the end of the first summer. These areas will be selected as follows: Faculty will select 2-3 areas; faculty and student will agree on a further 1-2 areas; the student will propose the final area. The structure of the exam should be settled and communicated to the Director of Graduate Studies during the Annual Review meeting (see below).

The exam will consist of two questions per area and students will answer 6 (one question from each area must be answered). Questions may take the form of scores, recordings, videos, and/or other objects. Answers should interact with and work toward an identification of the score, recording, or video in question. Emphasis in evaluation will be placed more on the quality of the interaction and less on exact identification. Students will sit for the exam in the week before classes resume (late August) and students will be allotted 4 hours to select and prepare their answers.

Practicum exams will be evaluated based on the following structure:

Pass: A Pass on all portions of the examination is required for admission to the Ph.D. program.

Partial Pass: The student must take some portion of the examination again (normally at least four months later) before the question of admission to the doctoral program is decided. Failure to achieve a Pass during the second sitting may result in an offer of a terminal master’s degree (see Annual Review).

Comprehensive Review
During the third year of study, students will complete a Portfolio of Compositions and prepare a Ph.D. Essay (see below for descriptions). These materials must be submitted for review by the graduate group faculty two weeks prior to the Comprehensive Review. In April of that year (dates set by the faculty exam committee at the beginning of the Spring Semester), each student will sit for their Comprehensive Review. The faculty exam committee, along with the student’s principal advisor in composition will be in attendance. Topics of discussion will include the Portfolio of Compositions, the creative trajectory that it implies, the quality of the work, and the opportunities it suggests. The Ph.D. Essay will also be discussed, both in terms of content and also with a view toward publication.

Portfolio of Compositions
The portfolio will be made up of compositions with a combined duration of no less than thirty (30) minutes. No later than the beginning of the fall term of the second year of study, students must, in consultation with their current composition instructor, establish concrete plans for the medium, number, and scope of compositions that will comprise the portfolio. At least one of the works included in the portfolio should be a significant revision. The portfolio must be submitted for review by the graduate group faculty no later than two weeks prior to the student’s comprehensive review.

Ph.D. Essay
The Ph.D. essay is a paper on an analytical, historical, theoretical, ethnomusicological, or critical subject prepared under the supervision of two members of the faculty. The primary reader must be a member of the composition faculty. The second reader may, where appropriate, be a member of the graduate group faculty with a specialization other than composition. The essay should be an article-length (approx. 8,000 words) study of publishable quality. It may revise a paper that the student prepared for a seminar. Students will find support for their work on this essay in the Dissertation Essay/Grant Writing Workshop and from their advisors. A final draft of the Ph.D. essay must be submitted for review by the graduate group faculty no later than two weeks prior to the student’s comprehensive review.

Ph.D Composition
Candidates will produce a major musical composition as a PhD dissertation, the nature of which must be approved by the composition faculty, which serves as the dissertation committee. It is understood that during the two semesters leading up to completion of the dissertation the student and advisor will be in regular contact regarding the progress of the dissertation. A final draft of the PhD dissertation must be submitted for review to the composition faculty by March 1 of the last semester of study, and the completed, approved composition, incorporating any changes recommended by the faculty, must be submitted to the graduate group faculty by April 1 of the graduation term.

Public Performance of Ph.D. Composition
In consultation with the composition faculty, but no later than April 15 of the graduation term, a public performance, reading, or workshop of the dissertation composition will be scheduled. This public event constitutes the final examination in composition.

Language Requirement
Reading knowledge of two languages is required for students in music studies. Reading knowledge of one language is required for students in composition. Students will select their language exams in consultation with the graduate chair and faculty, with the understanding that their selections should relate clearly to the their projected plan of study and proposed dissertation topic. Students for whom English is not their native language may choose their native language as one of their two language exams if they plan to conduct significant research/fieldwork in that language or in cases where a major corpus of literature pertinent to the student’s field of research exists in that language.

Language Examinations
Language examinations are given twice each year: at the beginning of the fall term and at the beginning of the spring term. Students must take an examination at each of these times until their language requirements have been met. Each language examination consists of a passage of approximately 500 words selected from a representative work of musical scholarship. The student is given two hours to write an English translation. Use of a dictionary is permitted.

Reading courses in French, Italian, and German are administered by the Graduate Division during the summer (May through June), and are available to Ph.D. students at no cost. Students may register for undergraduate language courses as a fourth course as ‘auditors.’ Graduate credit will not be granted for such undergraduate language courses.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should...
consult with their academic program regarding final certifications and requirements for graduation.

Music: Music Studies, PhD

The graduate program in Music Studies at the University of Pennsylvania serves students who intend to conduct cutting-edge research, produce high-quality scholarship, and develop teaching and professional skills in order to pursue academic positions in music studies; it also serves those who want to consider career opportunities beyond academia in both music and non-music domains. Faculty apply methodological tools from ethnomusicology, sound studies, musicology, and music theory to a wide range of research projects. The goal of the graduate program is not to entrench these disciplinary distinctions, but rather to seek out productive and innovative means of placing them in dialogue with each other. This orientation toward holding all of the sub-disciplines in view is reflected in the graduate curriculum as well as in the multiple colloquium series that animate departmental life. The curriculum is designed with flexibility in mind—designed specifically to offer students the freedom to craft a path of study that best addresses the research needs and methodological concerns of their particular dissertation projects. It combines the wide range of courses offered by the world-class faculty in the music department with the possibility of enrolling in seminars in other Penn departments and taking classes at consortium schools such as Princeton, Yale, and Columbia. Our colloquium series provides another means of engaging in both disciplinary and interdisciplinary conversations. In addition, workshops, public performances, and working papers presented by graduate students, post-doctoral fellows and faculty offer a wide range of perspectives on musical practice and scholarship, focusing variously on public lives in music, current research, craft and compositional issues. The faculty is particularly interested in teaching and research in the following areas: Archives, Textualities, and Materialities; Audio Politics and Sound Studies; Conflict, Healing, and Displacement; Gender, Sexuality, and the Body; Global Medieval/Renaissance; the Global South; History, Memory, and Intangible Heritage; Life Forms and Forms of Life; Opera and Performance Studies; Race, Ethnicity, and Empire; and Religion, Ritual, and Secularism. The Department of Music at the University of Pennsylvania also offers a Ph.D. program in composition.

### Core Requirement

**Foundational Methods Core Courses**

Must take 3 of the following: 3

- MUSC 604 Historical and Historiographic Approaches
- MUSC 620 Creative and Compositional Approaches
- MUSC 622 Analytical and Theoretical Approaches
- MUSC 650 Ethnographic and Anthropological Approaches

**Research Seminars**

Select 5 research seminars (700-level and above) taken from 5 different music faculty 5

**Additional Courses**

Select 6 courses (600-level, 700-level or 900-level) in consultation with advisor and graduate chair and including no more than 4 courses outside the department and 2 independent studies 6

**Total Course Units** 14

Exams

**Practicum Exam**

During the first semester of study, each student will work collaboratively with two faculty (these faculty members will be identified by the Director of Graduate Studies according to student research interests) to determine their areas of strength and opportunities for growth in repertorial knowledge. During the first meeting, each student should offer a self-assessment which will guide faculty toward a better sense of their listening habits and sound worlds. In subsequent meetings, students and faculty will explore a variety of possible areas/topics/repertoires for listening and music study. During the second semester of study, the faculty and student will settle on 5 areas to be examined at the end of the first summer. These areas will be selected as follows: Faculty will select 2-3 areas; faculty and student will agree on a further 1-2 areas; the student will propose the final area. The structure of the exam should be settled and communicated to the Director of Graduate Studies during the Annual Review meeting (see below).

The exam will consist of two questions per area and students will answer 6 (one question from each area must be answered). Questions may take the form of scores, recordings, videos, and/or other objects. Answers should interact with and work toward an identification of the score, recording, or video in question. Emphasis in evaluation will be placed more on the quality of the interaction and less on exact identification. Students will sit for the exam in the week before classes resume (late August) and students will be allotted 4 hours to select and prepare their answers.

Practicum exams will be evaluated based on the following structure:

**Pass:** A Pass on all portions of the examination is required for admission to the Ph.D. program.

**Partial Pass:** The student must take some portion of the examination again (normally at least four months later) before the question of admission to the doctoral program is decided. Failure to achieve a Pass during the second sitting may result in an offer of a terminal master’s degree (see Annual Review).

**Comprehensive Review**

During the third year of study, students will complete three comprehensive essays and prepare a dissertation proposal (see below for descriptions). These comprehensive essays and the dissertation proposal (both approved by the dissertation committee) must be submitted for review to the graduate group faculty no later than two weeks prior to the Comprehensive Review. In April of that year (dates set by the faculty exam committee at the beginning of the Spring Semester), each student will sit for their Comprehensive Review. The faculty exam committee, along with the student’s principal advisor will be in attendance. Topics of discussion will include the comprehensive essays, the intellectual terrain that they trace, the quality of the work, and the opportunities it suggests for ongoing research. The dissertation proposal will also be discussed, both in terms of content and also with a view toward the research phase of the project.
Comprehensive Essays

The comprehensive essays will consist of three essays of no more than 3,000 words each. Each student will select topics for these essays in consultation with their advisor, the Exam Committee, and the Director of Graduate Studies. The essays will take the form of literature reviews, tracing the history and current state of research in fields related to but not directly overlapping with the dissertation project. While each student will constitute these essays in different ways, students will often include at least one essay on a theoretical topic and another on a more regional or temporal topic. The comprehensive essays must be submitted for review to the graduate group faculty no later than two weeks prior to the student’s comprehensive review.

Dissertation Proposal

The dissertation proposal is an essay of approximately 15-20 pages plus bibliography outlining the dissertation project, illustrating the disciplinary and theoretical stakes of the work, indicating the interventions that this project will make within music studies and related disciplines, and laying out the arc of the research and writing plan for the project. The proposal is prepared under the supervision of a dissertation advisor and at least two additional faculty (the dissertation committee). The dissertation committee must be chaired by a member of the graduate group in music and an additional member of the committee must be drawn from within the department. The third member of the committee may be selected from within the department, from other departments at Penn, or from an outside institution. Some students choose a committee of four. Students will find additional support for their work on the dissertation proposal in the Dissertation Proposal/Grant Writing Workshop. A final draft of the dissertation proposal, approved by the dissertation committee, must be submitted for review to the graduate group faculty no later than two weeks prior to the student’s comprehensive review.

Dissertation

Each student is responsible for making certain that the dissertation conforms to all requirements and specifications of the Graduate Division of Arts and Sciences, details of which should be requested at an early date from the Graduate Division office. Early in the semester in which students expect to complete the dissertation, they should carefully review the calendar for degree candidates published by the Graduate Division: https://www.sas.upenn.edu/graduate-division/resources/graduation-and-beyond (https://www.sas.upenn.edu/graduate-division/resources/graduation-and-beyond/). It is each student’s responsibility to see that all the deadlines listed therein are met. It should be noted that certain fees can be avoided by careful attention to the various deadlines. The Department of Music requires that a bibliography be provided in all dissertations. A final draft of the dissertation should be circulated to the entire dissertation committee at least one month prior to the submission deadline so that any changes suggested by the committee can be incorporated into the final version.

Approved dissertations must be submitted on-line. The process is described in the on-line dissertation manual: guides.library.upenn.edu/dissertation_manual. The Graduate Division will respond in writing that the submitted dissertation has met the guidelines outlined in the Dissertation manual. Once this written approval is received, the student prints a copy of the dissertation to bring to the Graduate Division. This printed copy will be deposited in the general collection of Van Pelt Library.

Public Dissertation Defense

In consultation with the dissertation committee, and with reference to the yearly deadlines for dissertation submission, students will schedule a dissertation defense. This public event constitutes the final examination for the Ph.D. degree. A final draft of the PhD dissertation must be submitted for review to the graduate group faculty no later than two weeks prior to the student’s dissertation defense. Please see the Provost degree calendar for deadlines: https://guides.library.upenn.edu/c.php?G=476184&P=3255979 (https://guides.library.upenn.edu/c.php?G=476184&P=3255979).

Language Requirement

Reading knowledge of two languages is required for students in music studies. Reading knowledge of one language is required for students in composition. Students will select their language exams in consultation with the graduate chair and faculty, with the understanding that their selections should relate clearly to the their projected plan of study and proposed dissertation topic. Students for whom English is not their native language may choose their native language as one of their two language exams if they plan to conduct significant research/fieldwork in that language or in cases where a major corpus of literature pertinent to the student’s field of research exists in that language.

Language Examinations

Language examinations are given twice each year: at the beginning of the fall term and at the beginning of the spring term. Students must take an examination at each of these times until their language requirements have been met. Each language examination consists of a passage of approximately 500 words selected from a representative work of musical scholarship. The student is given two hours to write an English translation. Use of a dictionary is permitted.

Reading courses in French, Italian, and German are administered by the Graduate Division during the summer (May through June), and are available to Ph.D. students at no cost. Students may register for undergraduate language courses as a fourth course as ‘auditors.’ Graduate credit will not be granted for such undergraduate language courses.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Near Eastern Languages and Civilizations: Biblical Studies, MA

In addition to the MA awarded within the PhD program, NELC offers an independent (terminal) MA degree in Biblical Studies, which is one of the tracks in NELC’s graduate program in Hebrew and Judaic Studies. This track offers advanced study of the languages and philology of the Hebrew Bible as well as the history and archaeology of ancient Israel in its Near Eastern context.

Students admitted to the MA program are assigned a faculty advisor to guide their studies. Courses, selected in consultation with the advisor, will normally be completed in three semesters. All students, regardless of their concentration, must master at least one of the languages in which the primary sources of NELC’s subfields are written. Standards vary by subfield.
Near Eastern Languages and Civilizations: Biblical Studies, PhD

Curriculum

A minimum of 12 course units are required for graduation.

- Coursework
- Reading proficiency examination in one modern language of scholarly research
- MA Final Exams (no more than four exams, with at least one being a language exam)
- Thesis or two research papers

Some MA students apply for NELC's PhD program. However, admission to the MA program or successful completion of the MA does not provide a guarantee of admission to the PhD program.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Near Eastern Languages and Civilizations: Biblical Studies, PhD

NELC's PhD track in Biblical Studies, a part of NELC's Hebrew and Judaic Studies program, offers advanced study of the languages and philology of the Hebrew Bible as well as the history and archaeology of ancient Israel in its Near Eastern context.

At the heart of NELC's Hebrew Bible/Old Testament track are texts composed over a period extending from the early Iron Age to the Hellenistic-Roman period. The goal of this PhD track is to prepare students to research and teach these texts, in both the historical contexts in which they were originally composed, and as they have been understood in later historical periods. Drawing on faculty in NELC, the Jewish Studies Program, and other departments, the Biblical Studies program takes an interdisciplinary approach to biblical literature that involves the study of language, literature, history, archaeology, and other fields. This program can be tailored for individual students with different interests.

View the department's PhD general procedures (https://www.sas.upenn.edu/nelc/grad_programs/phdProcedures.html).

For more information: https://www.sas.upenn.edu/nelc/grad_programs/grad_programs.html

Curriculum

A total of 20 course units is required for graduation.

PhD students in Biblical Studies must acquire proficiency in the following areas:

**Primary Field**
- Hebrew and Aramaic of the Biblical period
- Biblical Literature
- History, geography, and archaeology of Israel in the Biblical period in their ancient Near Eastern context
- Culture, social, and political institutions and history of Israelite religion in the Biblical period in their ancient Near Eastern context

**Ancillary Fields**
- A secondary field in either Cuneiform Studies (Akkadian) or Egyptology, and comparative studies relating the secondary field to Biblical Israel; or a secondary field in Biblical Archaeology.
- Hebrew epigraphy, Northwest Semitic languages, elementary Arabic, and comparative Semitics; Greek adequate for use of the Septuagint; post-Biblical literature and exegesis

**Other Program Milestones**
In addition to the above-described required coursework, PhD students are responsible for two (2) European language reading exams, candidacy exams, and qualifying exams before preparing a dissertation proposal.

**Secondary Field in Biblical Studies**
Graduate students from other programs who wish to take a secondary field in Biblical studies must complete the following requirements:

- Four (4) graduate-level courses in Biblical Hebrew texts; ability to sight-translate uncomplicated texts
- Biblical literature: familiarity with the content of the Bible, distinctive features of its main genres, and important literary-critical issues
- History and culture of ancient Israel
- Comparative studies relating Biblical Israel to the student’s Primary Field

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**Sample Plan of Study**
Students in the PhD program are required to take 20 course units. The coursework component is normally three years in length, but with the potential for transfer credit for other graduate courses within the field. Students entering the PhD program will be assigned a faculty advisor who will supervise the student's program until the Candidacy Examinations in the 4th year of study have been completed.

Near Eastern Languages and Civilizations: Classical and Medieval Hebrew Literature, MA

In addition to the MA awarded within the PhD program, NELC offers an independent (terminal) MA degree in Hebrew Literature and Jewish Tradition, which is one of the tracks in NELC's graduate program in Hebrew and Judaic Studies. Students may specialize in either Post-Biblical Jewish History and Culture or Modern Hebrew Literature. These tracks offer advanced study in Hebrew literature and language and Jewish tradition, culture, and thought in their Near Eastern and/or Western contexts, in modern and pre-modern settings.

Students admitted to the MA program are assigned a faculty advisor to guide their studies. Courses, selected in consultation with the advisor, will normally be completed in three semesters. All students, regardless of their concentration, must master at least one of the languages in which the primary sources of NELC's subfields are written. Standards vary by subfield.

For more information: http://www.sas.upenn.edu/nelc/grad_programs/maProcedures.html

Curriculum
A minimum of 12 course units are required for graduation.

- Coursework
- Reading proficiency examination in one modern language of scholarly research
- MA Final Exams (no more than four exams, with at least one being a language exam)
- Thesis or two research papers

Near Eastern Languages and Civilizations: Classical and Medieval Hebrew Literature, PhD

NELC’s graduate program in Hebrew and Judaic Studies includes two tracks within Hebrew Literature and Jewish Tradition: (1) Post-Biblical Jewish History and Culture and (2) Modern Hebrew Literature. These tracks offer advanced study of Hebrew literature and language and Jewish culture and thought in their Near Eastern and/or Western contexts, in modern and pre-modern settings.

Students in the Hebrew Literature and Jewish Tradition program are expected to command Hebrew as a primary research language and another (usually Arabic, Greek or Yiddish) as a secondary research language. The specific distribution of courses varies by a student’s interests and specialization. Students are expected to work out the broad outlines of their programs in consultation with their faculty advisor when they begin their studies.

Curriculum
A total of 20 course units are required for graduation.

Post-Biblical Jewish History and Culture

Penn's PhD Program in Post Biblical Jewish History and Culture is designed to train students to engage in teaching and in original research that pertains to the cultural developments and products of Jewish life from the seventh through the sixteenth centuries, in communities of...
Mesopotamia, Christian Europe and the Islamicate world. The program of study will be tailored to the needs and interests of each student, and will engage a range of NELC and Penn faculty members. All programs of study will involve the exploration of Jewish historical and cultural phenomena within the diachronic context of the Jewish past, and the synchronic context of the broader regional culture. Students will be expected to acquire proficiency in this historically and geographically broad field, for the purposes of undergraduate instruction, and scholarly expertise in the narrower research field that is chosen.

- Primary Proficiencies
  - Philological competence
  - The Jewish Bookshelf
  - Historical and Contextual Competence
  - Methodological Tool Kit and State of the Field
- Ancillary Proficiencies
  - Familiarity with the foundational corpora of rabbinic Judaism, ability to read with comprehension, and to locate passages in the Hebrew Bible, Babylonian and Palestinian Talmud, Midrashic literature of the classical period, and Jewish Liturgy

Modern Hebrew Literature
The program of study in Modern Hebrew Literature encompasses texts composed from the end of the 18th century to the present day, from wherever they have been written, e.g. Israel, the broader Middle East, Europe, and North America. It is designed to allow students to pursue study, research, and eventually teaching by means of an approach to the field that is textually and linguistically rigorous, consciously interdisciplinary, and responsive to the individual interests of students. Although grounded in Near Eastern and Jewish Studies, our program also engages in dialogue with World Literature, Comparative Literature, History, Slavic and Germanic Studies, Religious Studies, and more.

- Linguistic and Textual Mastery
- Method
- Context

Secondary Field
All students are expected to develop proficiency in one of the following four secondary fields:

- Continuity of Hebrew Literature
- Bible
- Rabbinics
- Liturgy and Medieval Literature

Other Program Milestones
In addition to the above-described required coursework, PhD students are responsible for two (2) European language reading exams, candidacy exams, and qualifying exams before preparing a dissertation proposal.

Sample Plan of Study
Students in the PhD program are required to take 20 course units. The coursework component is normally three years in length, but with the potential for transfer credit for other graduate courses within the field. Students entering the PhD program will be assigned a faculty advisor who will supervise the student’s program until the Candidacy Examinations in the 4th year of study have been completed.

View the University's Academic Requirements for Research Master's Programs (http://catalog.upenn.edu/pennbook/academic-rules-research-masters/).

Curriculum

A minimum of 12 course units are required for graduation.

- Coursework
  - Reading proficiency examination in one modern language of scholarly research
  - MA Final Exams (no more than four exams, with at least one being a language exam)
  - Thesis or two research papers

Some MA students apply for NELC's PhD program. However, admission to the MA program or successful completion of the MA does not provide a guarantee of admission to the PhD program.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Near Eastern Languages and Civilizations: Egyptology, PhD

NELC's graduate program in Egyptology offers advanced study of the languages and civilizations of ancient Egypt.

View the department’s PhD general procedures (https://www.sas.upenn.edu/nelc/grad_programs/phdProcedures.html).

For more information: https://www.sas.upenn.edu/nelc/grad_programs/grad_programs.html

View the University's Academic Requirements for PhD Degrees (http://catalog.upenn.edu/pennbook/academic-rules-phd/).

Curriculum

A total of 20 course units are required for graduation.

Language and Literature Concentration

- Primary Field
  - Ancient Egyptian language and literature (at least 8 courses)
  - History, culture, art and archaeology of Ancient Egypt (at least 6 courses)
- Secondary Field

- Language of chosen secondary field of concentration (at least 4 courses)
- History, culture, art and archaeology (at least 2 courses)

Archaeology Concentration

- Primary Field
  - Archaeology, art, history, and culture of Ancient Egypt (at least 7 courses)
  - History of ancient Egypt (at least 2 courses)
  - Language of ancient Egypt (at least 4 courses)
- Secondary Field
  - Art, Archaeology, history, culture, and anthropology (at least 6 courses)
  - Archaeological interpretation and techniques (at least 1 course)

Other Program Milestones

In addition to the above-described required coursework, PhD students are responsible for two (2) European language reading exams, candidacy exams, and qualifying exams before preparing a dissertation proposal.

Secondary Field in Egyptology

Graduate students in other programs (such as Mesopotamian Civilizations or Biblical Studies) who take a secondary field in Egyptology must take at least four courses in Egyptian language (Middle Egyptian and another significant phase) and two in history and culture.

- History of ancient Egypt (at least 2 courses)

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Sample Plan of Study

Students in the PhD program are required to take 20 course units. The coursework component is normally three years in length, but with the potential for transfer credit for other graduate courses within the field. Students entering the PhD program will be assigned a faculty advisor who will supervise the student’s program until the Candidacy Examinations in the 4th year of study have been completed.

In addition to the MA awarded within the PhD program, NELC offers an independent (terminal) MA degree in Mesopotamian Civilizations. NELC’s graduate program in Mesopotamian Civilizations offers advanced study of the languages and philology of ancient Mesopotamia as well as the history and archaeology of that region in its Near Eastern context.

Students admitted to the MA program are assigned a faculty advisor to guide their studies. Courses, selected in consultation with the advisor, will normally be completed in three semesters. All students, regardless of their concentration, must master at least one of the languages in which the primary sources of NELC’s subfields are written. Standards vary by subfield.

For more information: http://www.sas.upenn.edu/nelc/grad_programs/maProcedures.html

View the University’s Academic Requirements for Research Master’s Programs (http://catalog.upenn.edu/pennbook/academic-rules-research-masters/).

Near Eastern Languages and Civilizations: Mesopotamian Civilization, MA

Curriculum

A minimum of 12 course units are required for graduation.

- Coursework
- Reading proficiency examination in one modern language of scholarly research

- MA Final Exams (no more than four exams, with at least one being a language exam)
- Thesis or two research papers

Some MA students apply for NELC’s PhD program. However, admission to the MA program or successful completion of the MA does not provide a guarantee of admission to the PhD program.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Near Eastern Languages and Civilizations: Mesopotamian Civilization, PhD

NELC’s PhD program in Mesopotamian Civilizations offers advanced study of the languages and philology of ancient Mesopotamia as well as the history and archaeology of that region in its Near Eastern context.

Students in the Mesopotamian Civilization program may specialize in either Archaeology and Art History or History, Language and Literature, but all students are expected to command a primary and secondary ancient language, as well as the general history and culture of the region. The specific distribution of courses varies by specialization. Students are expected to work out the broad outlines of their programs in consultation with their faculty advisor when they begin their studies.

View the department’s PhD general procedures (https://www.sas.upenn.edu/nelc/grad_programs/phdProcedures.html).

For more information: https://www.sas.upenn.edu/nelc/grad_programs/grad_programs.html

View the University’s Academic Requirements for PhD Degrees (http://catalog.upenn.edu/pennbook/academic-rules-phd/).

Curriculum

A total of 20 course units are required for graduation.

Primary Field

- Specialization in History, Language, and Literature
  - Languages
  - History
  - Art and archaeology
- Specialization in Archaeology and Art History
  - Languages and Literatures
  - History
  - Archaeology and Art History

Other Program Milestones

In addition to the above-described required course work, PhD students are responsible for two (2) European language reading exams, candidacy exams, and qualifying exams before preparing a dissertation proposal.
Secondary Field

Students concentrating in other NELC programs such as Biblical Studies or Egyptology may acquire secondary field competence in Mesopotamian Civilization with six courses. The distribution of the courses ought to reflect the student's focus on history, language and literature or archaeology. Students in history, language and literature must take at least two art or archaeology courses and students in archaeology and art history must complete at least one introductory language sequence.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Sample Plan of Study

Students in the PhD program are required to take 20 course units. The coursework component is normally three years in length, but with the potential for transfer credit for other graduate courses within the field. Students entering the PhD program will be assigned a faculty advisor who will supervise the student's program until the Candidacy Examinations in the 4th year of study have been completed.

Dissertation Research and Writing

Year 5

| Semester 9 | Dissertation Research and Writing |
| Semester 10 | Dissertation Research and Writing |

Near Eastern Languages and Civilizations: Middle Eastern Literatures & Societies, MA

In addition to the MA degree awarded within the PhD program, NELC offers an independent (terminal) MA degree in Middle Eastern Literatures and Societies. NELC's graduate program in Middle Eastern Literatures and Societies offers advanced study of the languages, literatures, and societies of the Near and Middle East, including aspects of Islamic civilization, in modern and pre-modern settings.

Students admitted to the MA program are assigned a faculty advisor to guide their studies. Courses, selected in consultation with the advisor, will normally be completed in three semesters. All students, regardless of their concentration, must master at least one of the languages in which the primary sources of NELC's subfields are written. Standards vary by subfield.

For more information: http://www.sas.upenn.edu/nelc/grad_programs/maProcedures.html

Curriculum

A minimum of 12 course units are required for graduation.

• Coursework
• Reading proficiency examination in one modern language of scholarly research
• MA Final Exams (three)
  • One exam on mastery of a language in which primary sources are written
  • Two exams selected from two of the following three groups:
    • Group 1: Pre-modern Arabic or Persian Literature and Modern Arabic or Persian Literature
    • Group 2: Pre-modern Middle East history and Modern Middle East history
    • Group 3: Islamic thought
• Thesis or two research papers

Some MA students apply for NELC's PhD program. However, admission to the MA program or successful completion of the MA does not provide a guarantee of admission to the PhD program.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.
Near Eastern Languages and Civilizations: Middle Eastern Literatures & Societies, PhD

NELC's PhD program in Middle Eastern Literatures and Societies offers advanced study of the languages, literatures and societies of Islamic civilizations, and also Islamic history and thought in their Near Eastern context, in modern and pre-modern settings.

Students in the Middle Eastern Literatures and Societies program are expected to command Arabic or Persian as a primary research language and another (usually Arabic, Persian, Turkish, or Hebrew) as a secondary research language, as well as the general history and culture of the region. The specific distribution of courses varies by a student's interests and specialization. Students are expected to work out the broad outlines of their programs in consultation with their faculty advisor when they begin their studies.

View the department's PhD general procedures (https://www.sas.upenn.edu/nelc/grad_programs/phdProcedures.html).

For more information: https://www.sas.upenn.edu/nelc/grad_programs/grad_programs.html

A total of 20 course units is required for graduation.

Coursework

- Four courses in Arabic or Persian language beyond the Advanced Intermediate level
- Two course units in the secondary research language
- Four courses in Islamics (history & religion)
- Two courses in Arabic or Persian literature
- Three courses in Arabic or Persian literature and Islamics (history or thought) at the 600 level or above
- Two course units at the second-year/Intermediate level in the minor language
- Three elective courses to be chosen in conjunction with the major advisor

Other Program Milestones

In addition to the above-described required coursework, PhD students are responsible for two (2) European language reading exams, candidacy exams, and qualifying exams before preparing a dissertation proposal.

Secondary Field in Middle Eastern Literatures and Societies

PhD students from other programs who wish to take a secondary field in Middle Eastern Literatures and Societies must demonstrate a thorough knowledge of modern standard Arabic or modern Persian equivalent to proficiency at the Advanced Intermediate level.

During Candidacy Exams, students taking a secondary field will be examined in two subjects:

1. Arabic or Persian language and literature (history and criticism, based on sources in European languages)
2. Islamics: the history of the Middle East in the Islamic era, and the institutions of Islam

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Philosophy, PhD

The Penn Philosophy Department has a long and distinguished history. Philosophy has been taught at the University since 1755, and Penn was among the first universities in the country to offer the PhD degree in Philosophy, in 1882. The Department has always prided breadth, and its members are prepared to supervise advanced research in metaphysics and epistemology, philosophy of mind, philosophy of science, logic, philosophy of language, ethics, social and political philosophy, philosophy of law, and the history of philosophy.

The Ph.D. program includes course work, a teaching requirement, a preliminary examination, and the preparation and defense of a dissertation. Required coursework includes two courses in contemporary epistemology and metaphysics (including philosophy of science, mind, language, and mathematics); two courses in value theory (ethics, political or legal philosophy, aesthetics); three courses in history of philosophy, and a logic requirement.

# Physics and Astronomy, PhD

The University of Pennsylvania Department of Physics and Astronomy is a world-leading institution that generally is regarded as among the very best places for graduate students to obtain a PhD. Graduate students at Penn combine a short term of coursework with independent, original research that forms the basis of their dissertation and typically their first publications. A rich program of seminars and colloquia by invited speakers from across the world supplements what students learn in classes and during their research activities.

Primary research areas include outstanding theoretical and experimental work in both hard and soft condensed matter physics, often done in conjunction with other schools and departments at Penn, with some laboratories located in Penn's Singh Center for Nanotechnology and the Laboratory for Research into the Structure of Matter. Biophysics at Penn is also divided amongst advanced theoretical work and hands-on laboratory work, and encompasses both complex networking theories and some of the exotic optics of biological systems.

Our Astrophysics and Cosmology groups explore the structure and evolution of the Universe, perform searches for exoplanets, and study galaxy formation. Efforts in cosmology include theoretical models for the acceleration of the Universe and the properties of dark matter, observations of the structure of the Universe and studies of dark matter using gravitational lensing with the Dark Energy Survey and eventually the Large-aperture Synoptic Survey Telescope, and studies of the cosmic microwave background with telescopes in places like the Chilean Andes and the South Pole. Our effort in nuclear and particle physics also spans both fundamental theoretical work such as string theory, as well as experimental work at the Large Hadron Collider at CERN and various neutrino experiments across the world. Collider efforts include studies of the recently-discovered Higgs boson as well as searches for supersymmetry, and our neutrino work includes searches for Majorana neutrinos and CP violation in neutrino oscillations.

Our experimental nuclear and particle physics effort makes extensive use of Penn’s world-class instrumentation group, giving students the ability to explore creative new ideas in both hardware and in their data analysis work.

### Electives

Select an additional 15 course units

- One course must be outside the student’s field of specialization.
- Up to 11 course units can come from independent research or reading courses.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

# Political Science, PhD

The Graduate Program in Political Science at the University of Pennsylvania reflects the methodological diversity of the discipline. The department has significant strengths in each of the four major subfields in the discipline: American Politics, Comparative Politics, International Relations, and Political Theory.

Courses in each of the four substantive fields clarify important intellectual and conceptual issues and help students learn how to formulate an original research project. Courses in both quantitative and qualitative research methods provide students with cutting-edge tools they can use to conduct their research.

The Ph.D. program includes course work, a teaching requirement, a second-year paper, a preliminary examination, and the preparation and defense of a dissertation. Candidates completing the Ph.D. degree typically pursue careers in academia, government service, and the private sector.

For more information: [http://www.sas.upenn.edu/polisci/content/graduate-program](http://www.sas.upenn.edu/polisci/content/graduate-program)

View the University’s Academic Requirements for PhD Degrees [http://catalog.upenn.edu/pennbook/academic-rules-phd/](http://catalog.upenn.edu/pennbook/academic-rules-phd/).

## Required Courses

A total of 15 course units are required for graduation.

### Research Skills Requirement

- PSCI 692 Advanced Statistical Analysis or a comparable course with the approval of the graduate group chairperson

## Two Exam Fields

- Students must select 2 exam fields from among the 4 major subfields of the discipline (American Politics, Comparative Politics,
International Relations, and Political Theory). They must take at least 3 classes in each of those fields prior to their qualifying exam.

Third Thematic Field

- All students must complete a third field by taking three classes around a unifying substantive theme.

Students may select the remaining 5 courses in consultation with their advisor and/or the graduate group chairperson.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Psychology, PhD

Graduate study in Psychology at Penn emphasizes scholarship and research accomplishment. The first-year program is divided between courses that introduce various areas of psychology and a focused research experience. A deep involvement in research continues throughout the graduate program, and is supplemented by participation in seminars, teaching, and general intellectual give-and-take. Students are admitted into the graduate program as a whole, not into specific subfields. Students and faculty are free to define their fields of interest. A high level of interaction between students and faculty helps generate both a shared set of interests in the theoretical, historical, and philosophical foundations of psychology and active collaboration in research projects.

The Graduate Group in Psychology is highly distinguished and represents a broad range of work in psychology and includes an APA-approved clinical program. Two regular faculty and two emeritus professors are members of the National Academy of Sciences, and three regular faculty are Fellows of the American Academy of Arts and Sciences. The Department also includes past presidents of the American Psychological Association, the Society for Judgment and Decision Making, and of the Linguistics Society of America.

Many other faculty, graduate students, and former students have received national awards for excellence in research and teaching. We have strong connections with other disciplines at the University. Our members play pivotal roles in two of the most important interdisciplinary areas on campus, the cognitive sciences and the neurosciences, both of which have been fostered by the Department as a matter of policy.

Clinical Program Requirements

The clinical training program, nested in the Department, is intended to prepare students for research/academic careers in Clinical Psychology, Psychopathology, or Personality. Clinical training (in assessment, diagnosis and psychotherapy) is seen as an integral part of the education of highly qualified, creative clinical scientists. Nevertheless, the principal goal of Penn clinical students is to become expert psychologists, not simply expert clinicians, and the program is designed to support that goal. Our program is a member of the Academy of Psychological Clinical Science, a coalition of doctoral training programs that emphasize the scientific basis of clinical psychology and is accredited by the Psychological Clinical Science Accreditation System. Our membership in the Academy indicates our commitment to empirical research as the basis of theory, assessment, and intervention, and our PCSAS accreditation attests to our success in training clinical students. The program is also accredited by the American Psychological Association.

For more clinical information: http://psychology.sas.upenn.edu/training-programs/clinical-training-program (http://psychology.sas.upenn.edu/training-programs/clinical-training-program/).

Religious Studies, PhD

The graduate program in Religious Studies at the University of Pennsylvania offers unique research opportunities for students to become first class scholars, teachers and expositors in the field. Our program is situated within one of the largest and finest research universities in the country, easily accessible to other research centers along the eastern seaboard. At the same time, the Department of Religious Studies provides students with a great deal of individual attention from faculty members, and the opportunity to interact with students from diverse subfields.

Within this context of extensive resources and personalized guidance, each student works with an advisor to design his or her own course of study. The structure of the PhD program currently consists of six core full time faculty members, and a graduate group comprised of faculty across the University of Pennsylvania campus whose research and teaching significantly involves the study of religion and who actively participate in the training of graduate students in Religious Studies.

The typical doctoral program in Religious Studies is funded over a five-year period, over which students are expected to engage in coursework, complete teaching assistantships, and attend the graduate colloquium. Requirements for the program include a minimum of two languages, qualifying examinations, preliminary examinations (with an oral examination component), and an oral dissertation defense.

Graduate students in Religious Studies have the benefit of a wealth of resources unrivalled by any major research university. In addition to possessing one of the best research libraries in the world, Penn is also home to the University of Pennsylvania Museum of Archaeology and Anthropology, the oldest institution of its kind in the United States. Within the city of Pennsylvania, research centers include The Library Company of Philadelphia an independent research library specializing in American history and culture from the 17th through the 19th centuries.

Romance Languages: French and Francophone Studies, PhD

The University of Pennsylvania’s Graduate Program in French Studies offers a five-year Ph.D. program. All students admitted to the program are awarded full financial support through the University’s Benjamin Franklin Fellowships, including summer funding for the first three years. The overarching goal of the program is to train students for productive scholarship and for effective college or university teaching. We have an outstanding faculty committed to scholarly excellence and we have an impressive record in placing candidates on the job market.

In addition to our faculty having interest in a broad range of centuries, individual expertise include science studies, popular culture, film noir, fashion, travel writing, poetry, anthropology, gender, postcolonial studies, cultural history, narratology, and history of the book. Students are encouraged to incorporate new critical approaches into their dissertation topics.

Interdisciplinary study is encouraged through participation in the wide range of seminars, lectures, and colloquia sponsored by the various Graduate Groups and affiliated research institutes and centers at Penn. Students may complement their studies by taking up to four courses outside the French section. Graduate students in French and Francophone Studies may also participate in The Penn Humanities Forum which also provides a venue for doctoral students to interact with colleagues from across the disciplines.
For more information: https://www.sas.upenn.edu/french/graduate
(https://www.sas.upenn.edu/french/graduate/)

View the University's Academic Requirements for PhD Degrees (http://catalog.upenn.edu/pennbook/academic-rules-phd/).

Requirements

The Ph.D. program in French and Francophone Studies is planned as a five-year sequence. Requirements for the Ph.D. include:

- A total of twenty (20) graduate courses including:
  - FREN 500 Proseminar: Reading for the M.A. Exam will be taken for credit during the spring semester of the student’s first year.
  - ROML 690 Language Teaching and Learning: This course in Applied Linguistics and Language Teaching will be audited in the fall semester of the second year and will be taken for credit during the spring semester of that year after the student has completed one semester of teaching.
  - FREN 850 Field Statement: Followed by preparation of Field Statement in the summer of the 2nd year, students present and discuss their Field Statement in fall of the third year.
  - FREN 851 Dissertation Proposal: The student will register for this course during the spring of the third year, and will complete the Dissertation Proposal/Prospectus during the following fall (7th semester).

- M.A. Examination — an oral and written examination based on the Master’s Reading List will be given at the conclusion of the spring semester of the student’s first year.

- Qualifying Evaluation—In order to be admitted to candidacy for the Ph.D. degree, students must successfully pass a qualifying evaluation. At the beginning of the second year, the faculty will evaluate all aspects of the student’s performance during his or her first year in the program.

- Foreign Language Requirement—a translation exam in one foreign language appropriate to the student’s prospective field of specialization.

- Ph.D. Examination—the Ph.D. exam consists of an oral and written part and will be taken in May of the third year (or the 6th semester), upon the completion of course work.

- Field Statement—during summer after second year, student will work with their advisor to prepare a Field Statement on their prospective areas of specialization to be presented in the fall semester of the third year.

- Dissertation Proposal—Students will begin work for an eventual dissertation topic to be completed during the summer after the student’s third year.

- Dissertation Defense—a public, oral presentation of the dissertation will take place during the semester in which the student will graduate.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Romance Languages: Hispanic Studies, PhD

The Graduate Program in Hispanic Studies, a five-year Ph.D. program within the Department of Romance Languages, offers a rigorous professional formation in academic research, writing, and pedagogy. The program prepares students in a range of critical and methodological approaches to the study of literature, culture, and theory in Spain and Latin America. Students may complement their areas of specialization with course work in a second Romance language or in other disciplines such as Comparative Literature, English, History, and Philosophy.

Interdisciplinary study is also invited through participation in the many lectures and colloquia sponsored by the various Graduate Groups.

Students who enter the program with previous graduate work may be eligible to transfer some credits toward the Ph.D.
and affiliated research institutes and centers at Penn. All graduate students teach undergraduate courses in Spanish language and Hispanic culture, for which they attend extensive teacher training seminars and workshops. Faculty members are committed to enhancing graduate students’ preparation for professional life through annual seminars on professional concerns and through comprehensive job placement support. The Department of Romance Languages publishes The Hispanic Review, and graduate students in Hispanic Studies may serve as editorial assistants to the journal.

For more information: https://www.sas.upenn.edu/hispanic-portuguese-studies/graduate

View the University's Academic Requirements for PhD Degrees (http://catalog.upenn.edu/pennbook/academic-rules-PhD/).

Requirements

The Ph.D. program in Spanish is planned as a five-year sequence. Requirements for the Ph.D. include:

- A total of twenty (20) graduate courses, including:
  - A course in Literary Theory
  - SPAN 606 Pedagogy Across the Spanish Curriculum
  - SPAN 800 Field Exam (Comprehensive Exam preparation)
- A Qualifying Evaluation—in order to be admitted to candidacy for the Ph.D. degree, students must pass successfully a qualifying evaluation. At the beginning of a student’s second year, the faculty will evaluate all aspects of the student’s performance during his or her first year in the program.
- Foreign Language Requirements—translation exams in two (2) foreign languages appropriate to the student’s prospective field of specialization.
- Comprehensive Exams—an oral exam in the fall of the third year and a written exam in the spring semester of the third year.
- Dissertation Proposal—following successful fulfillment of the Ph.D. Comprehensive Examinations, the candidate will shape a dissertation project and writing schedule by September 15th of their fourth year.
- Dissertation—the presentation of a dissertation is the final requirement for the Ph.D.
- Dissertation Defense—a public, oral presentation of the dissertation will take place during the semester in which the student will graduate.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Romance Languages: Italian Studies, PhD

The Graduate Program in Italian Studies in the Department of Romance Languages at the University of Pennsylvania offers students a range of curricular options that provide a broad academic base in Italian literature, film, cultural studies, and critical theory, as well as the most current pedagogical theory and practice. Students are encouraged to shape a curriculum that will prepare them in a primary period of interest as well as a secondary focal area. Students may complement their studies with up to four courses outside the Italian Studies section—for example, in another Romance language, Comparative Literature, English, and History. Certificate programs in the areas of Women’s Studies, Global Medieval and Renaissance Studies, Cinema Studies and Urban Studies, for example, are also available. Interdisciplinary study is encouraged through participation in the wide range of seminars, lectures, and colloquia sponsored by the various Graduate Groups and affiliated research institutes and centers at Penn, including the Center for Italian Studies, and at the many cultural institutions in the Philadelphia area.
Great resources are available to the graduate students in Italian, including the world-renowned Kislak Center for Special Collections, Rare Books and Manuscripts. The Program in Italian Studies collaborates actively with the Kislak Center to provide students with hands on experience with rare material in conjunction with classes, talks, conferences, and book exhibits. Additionally, individual dissertation research abroad is encouraged and summer research funding is available competitively through the Salvatori Fund or other sources.

Finally, the Center for Italian Studies coordinates scholarly activities among faculty and students across the humanities, organizing research groups, visiting lectures, film screenings and major academic conferences.

For more information: http://www.sas.upenn.edu/italians/graduate/

View the University’s Academic Requirements for PhD Degrees (http://catalog.upenn.edu/pennbook/academic-rules-phd/).

Requirements

The Ph.D. program in Italian is planned as a five-year sequence. Requirements for the Ph.D. include:

- A total of seventeen (17) graduate courses to be distributed as follows:
  - A Literary Theory course (usually in the first or second year)
  - ITAL 691 Italian Teaching & Learning (Italian Teaching & Learning and Second Language Development [SLD]) in the spring semester of the second year
  - A minimum of 12 electives in Italian (including independent studies)
  - Up to 3 courses outside Italian in another field pertinent to the student’s area of specialization.

- A Qualifying Evaluation—in order to be admitted to candidacy for the Ph.D. degree, students must pass successfully a qualifying evaluation. At the beginning of a student’s second year, the faculty will evaluate all aspects of the student’s performance during his or her first year in the program.

- Foreign Language Requirement—a translation exam in two foreign languages appropriate to the student’s prospective field of specialization.

- Ph.D. Examination—A three-part written examination and an oral exam taken at the beginning of the third year.

- Dissertation Proposal—following successful fulfillment of the Ph.D. Examination, the candidate will shape a dissertation project and writing schedule.

- Dissertation—the presentation of a dissertation is the final requirement for the Ph.D.

Dissertation Defense—a public, oral presentation of the dissertation will take place during the semester in which the student will graduate.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Sociology, PhD

Graduate work at the University of Pennsylvania is conducted through graduate groups formed according to different areas of study. These groups administer programs leading to the AM and PhD degrees. Those seeking a graduate degree in Sociology should apply to the Graduate Group in Sociology. Sociology students earn their MA on the way to the PhD. There is no terminal Master’s degree program.

It is possible to earn a joint Ph.D. in Sociology and another discipline by being admitted to and satisfying the requirements of two Ph.D. programs and writing a single dissertation. Currently, students are enrolled in joint degrees with Demography, Education, Communications, and Africana Studies. Students seeking a joint Ph.D. combining Sociology with another program must be admitted in that program (as well as Sociology); admittance to the second program may occur after admission to the Sociology program.

For more information: http://sociology.sas.upenn.edu/graduate_resources (http://sociology.sas.upenn.edu/graduate_resources/)

View the University’s Academic Requirements for PhD Degrees (http://catalog.upenn.edu/pennbook/academic-rules-phd/).

## South Asia Regional Studies, MA

South Asia Studies is an interdisciplinary field focusing on the history, languages, society, literature, and art from India, Pakistan, Bangladesh, Nepal, Sri Lanka, Afghanistan, and Bhutan. America’s oldest and most distinguished South Asia program, faculty work in multiple disciplines and offer study in nearly 15 South Asian languages.

The Department of South Asia Studies (SAST) offers PhD and MA degrees, attracting exceptional students from around the world. Candidates for the MA develop a broad knowledge of disciplines relevant to the study of South Asia and competency in a South Asian language at an Intermediate-High level equivalent to a minimum of two years of study.

If students elect to write a Master’s Thesis they must produce a piece of original research that includes sources in a South Asian language.

For more information: [http://www.southasia.upenn.edu/](http://www.southasia.upenn.edu/)

View the University’s Academic Requirements for Research Master’s Programs ([http://catalog.upenn.edu/pennbook/academic-rules-research-masters/](http://catalog.upenn.edu/pennbook/academic-rules-research-masters/)).

## Required Courses

A minimum of 12 course units are required.

### Core Requirements

Select 10 disciplinary courses ¹

### Primary Language Requirement

Select 2 intermediate level or higher courses in a South Asian language ²

Total Course Units: 12

¹ At least six content courses (not including language courses and independent studies) must be taken with six different Standing Faculty of the South Asia Studies department.

² Candidates who demonstrate Advanced knowledge of a South Asian language may be excused from taking additional language courses. The course units may then be reallocated to electives. In no case will exemption from further language study result in a reduction of the total number of 12 course units required for the degree.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

## South Asia Regional Studies, PhD

South Asia Studies is an interdisciplinary field focusing on the history, languages, society, literature, and art from India, Pakistan, Bangladesh, Nepal, Sri Lanka, Afghanistan, and Bhutan. America’s oldest and most distinguished South Asia program, faculty work in multiple disciplines and offer study in nearly 15 South Asian languages.

The Department of South Asia Studies (SAST) offers PhD and MA degrees, attracting exceptional students from around the world. Candidates for the PhD develop a deep familiarity with the history,
methodology, and practice of a chosen discipline relevant to the study of South Asia, and a broad knowledge of allied disciplines. Additionally, our PhD candidates will show a demonstrable proficiency in at least two relevant research languages as detailed in the department requirements.

In addition to the completion of coursework and language requirements, PhD candidates are expected to act as Teaching Assistants and/or teach their own classes. PhD candidates, through the course of their time in the department, are expected to make two presentations to the South Asia Colloquium and to successfully pass their Qualifying and Candidacy Exams.

For more information: http://www.southasia.upenn.edu

View the University’s Academic Requirements for PhD Degrees (http://catalog.upenn.edu/pennbook/academic-rules-phd/).

Curriculum

A minimum of 20 course units are required at the 400 level or above. A minimum of 12 course units must be taken at the University of Pennsylvania.

Dissertation research and writing

Graduate Division of Arts and Sciences

Graduate education at Penn has a long and distinguished history, beginning with Penn’s first Ph.D. program in 1870. The origins of graduate education in the School of Arts and Sciences can be traced to the
establishment of the graduate faculty in 1881 and the awarding of the first Ph.D. in 1889.

Today the Graduate Division of Arts and Sciences is one of nine graduate schools. This SAS Graduate Division, along with the Undergraduate College (http://www.college.upenn.edu/) and the Division of Professional and Liberal Education (https://www.sas.upenn.edu/degrees-and-programs/lifelong-learning/), comprise the School of Arts and Sciences (https://www.sas.upenn.edu/), the largest of the University’s twelve schools (http://www.upenn.edu/programs/).

The Graduate Division of the School of Arts and Sciences currently includes over thirty graduate groups and offers the degrees of Master of Arts (A.M.), Master of Science (M.S), Master of Philosophy (M.Phil.), and Doctor of Philosophy (Ph.D.). The Office of the Graduate Division, located at 3401 Walnut Street, Suite 322A, is the administrative unit which oversees such matters as admissions, records, funding.

The Graduate Division also oversees degree and graduation for all Ph.D. and Master’s students in the nine research-degree granting schools at the University.

Contact procedures:
- Students should contact the Office of the Graduate Division of Arts and Sciences (https://www.sas.upenn.edu/graduate-division/contact/) directly to submit applications for admission to one of the graduate programs, to turn in dissertations and Master’s theses, and to make arrangements for the graduation ceremony.
- Graduate groups (https://www.sas.upenn.edu/graduate-division/programs/graduate-groups/) are the best initial contact not only for information about program content, but also for assistance with problems related to funding, grades, fulfillment of degree requirements, leaves, and transfers.
- If the event of an academic grievance, The Academic Grievance policy (https://www.sas.upenn.edu/graduate-division/resources/academic-grievance-procedure/) describes the procedures in place for currently enrolled students and former students within 3 years after leaving the University.
- Students are directed to the Office of Student Financial Services (http://www.sfs.upenn.edu/) for information on loans and to pay late fees, microfilm and copyright fees for the dissertation.

Our goal is to train future scholars, teachers, thinkers and social leaders, through the rigors of graduate education. Our doctoral programs aim at developing lifelong skills in pedagogy, critical and analytical thinking, from the humanities, social sciences and natural sciences.

Interdisciplinary nature of our programs encourages our students to engage in a flexible array of coursework and mentorship within the School of Arts and Sciences and in other schools at the university. Our students enjoy the flexibility of pursing dual and joint degrees in SAS and across schools.

This is a part of our investment in excellence through diversity not only in scholarship but also through cultural, social and political experiences at the university.

The University of Pennsylvania Graduate Division of Arts and Sciences in partnership with the Biomedical Graduate Studies participates in the Leadership Alliance Summer Research Early Identification Program (SR–EIP). The Leadership Alliance is an academic consortium of 32 institutions of higher learning, including leading research and teaching college and universities. The mission of the Leadership Alliance is to develop underrepresented students into outstanding leaders and role models in academia, business and the public sector.

This program offers undergraduates interested in pursuing a PhD the opportunity to work for eight to ten weeks under the guidance of a faculty or research mentor at participating Alliance institutions. The SR–EIP is principally designed to encourage students from groups traditionally underrepresented in the social sciences and humanities including students who identify as African Americans, Hispanic Americans, Native Americans (including Alaska Natives) and US Pacific Islanders, to consider research careers in the academic, public, or private sectors.

For more information, visit https://www.sas.upenn.edu/graduate-division/programs/summer-research-early-identification-program).

The Graduate Division of Arts and Sciences has three different courses available to dissertation students while studying abroad or participating in an internship. These GAS courses allow the student to remain registered during the research and writing stages of the dissertation. A student conducting dissertation research abroad in a given semester is eligible to register for Dissertation Research Abroad status. Students who must complete an internship as a part of their degree requirement or those awarded the opportunity to conduct research through specific programs to further their research interest may request to register for GAS 993 or GAS 994.

The Graduate Division of Arts and Sciences covers the tuition for students registered for GAS 996, GAS 993 or GAS 994 in years 2 through 8 of the Ph.D. program. Students are responsible for the reduced general fee while registered for any of the SAS courses listed below regardless of their year in the program.
- GAS 996 Dissertation Abroad Status
- GAS 993 Academic Internship
- GAS 994 Clinical Psychology

Students may not be enrolled in GAS registration in the term in which they file for a degree (alternate master’s or Ph.D.). That is, students must be enrolled in courses or regular dissertation registration in the term in which a degree is earned. Students in the Graduate Division of Arts and Sciences can register for a maximum of 4 semesters of Dissertation Research Abroad (GAS 996), External Internship (GAS 993) and Clinical Internship (GAS 994) over the course of their PhD career in GAS. Tuition will not be charged, but the General Fee will be billed at the reduced rate. The General Fee cannot be waived for any reason. Students are responsible for the reduced general fee and health insurance. The health insurance may be waived, but it is the student’s responsibility to initiate the request and follow through with Student Health.

Liberal and Professional Studies

The College of Liberal and Professional Studies (LPS) is the home of lifelong learning at the University of Pennsylvania. Housed within the School of Arts and Sciences, offering high school, undergraduate, post-baccalaureate, graduate, summer and online studies as well as customizable professional training with courses that span across disciplines.

LPS students—engaged, curious and driven—come to Penn from all over the world with diverse academic and professional backgrounds. Whether to learn English while immersed in an Ivy League institution, join the
global classroom in a MOOC, spend summer abroad or start a new career, LPS offers the very best opportunities.

No matter where a person is in life, or in the world—preparing for college, living overseas, working full-time, active in the military or studying on-campus—the College of Liberal and Professional Studies opens the Ivy League experience.

The eight professional master’s programs at LPS unite rigorous academics, hands-on practice, and individualized advising and support at one of the world’s top research universities. LPS focuses on career aspirations and connects students with the knowledge, experience and networks needed to make them those aspirations a reality.

Mission

Through programming and community, the College of Liberal and Professional Studies proudly embodies the University of Pennsylvania’s mission to encourage lifelong learning relevant to a changing global society.

Wherever a person is in life, or in the world, the College of Liberal and Professional Studies (LPS) offers ambitious students—from veterans and international scholars to high school students and working professionals—an opportunity to take full advantage of the Ivy League. Renowned professors, global alumni network and state-of-the-art facilities guarantee an academic experience that can jumpstart a career, prepare for post-graduate studies or help achieve goals. At LPS, the power of Penn belongs to the student to create.

Applied Geosciences, MSAG

This program provides both theoretical and technical expertise in geochmistry, geophysics, hydrogeology and engineering geology and includes essential project management skills, necessary for leadership in environmental remediation and pollution prevention. The program also facilitates preparation for professional licensure. This degree prepares students to take on a range of pressing environmental problems including approaches to mitigating soil and water contamination, solving waste disposal challenges and responding to human-induced natural disasters such as landslides and floods.

For more information: https://www.sas.upenn.edu/lps/graduate/msag/curriculum (https://www.sas.upenn.edu/lps/graduate/msag/curriculum/)

Curriculum

The Master of Science in Applied Geosciences (MSAG) degree is structured to give students a well-rounded grounding in applied scientific knowledge, as well as project management and leadership skills necessary to effectively put that knowledge into action in the field. To that end, the curriculum is structured with a combination of foundation courses and concentration electives, which allow students to focus on topics best suited to their interests and goals.

The MSAG requires the completion of 12 course units (CU) as follows:

<table>
<thead>
<tr>
<th>Code</th>

Select five course units of foundation courses: 7

Geochemistry Foundation Area

- GEOL 418 Geochemistry
- GEOL 421 Biogeochemistry
- GEOL 528 Aqueous Geochemistry
- GEOL 618 Fundamentals of Air Pollution

Engineering Geology Foundation Area

- GEOL 670 Engineering Geology: Rock Mechanics
- GEOL 671 Engineering Geology: Surficial Materials & Processes
- GEOL 680 Interpretation of Near-surface Geologic Structure for Engineering and Environment

Ground Water Hydrology Foundation Area

- GEOL 656 Fate and Transport of Pollutants
- GEOL 661 Environmental Groundwater Hydrology

Geocomputations Foundation Area

- ENVS 541 Modeling Geographical Objects
- ENVS 681 Modeling Geographical Space
- GEOL 651 Geocomputations
- GEOL 658 Environmental Statistical Analysis

Geomechanics Foundation Area

- GEOL 654 Geomechanics: Solids
- GEOL 668 Geomechanics: Fluids

Professional Concentration  3

Select three course units of electives in a professional concentration

Total Course Units  11
All students must complete one course from each of the five foundation areas.

**Professional Concentration Courses (3 CU)**

Students choose three elective courses within their area of professional concentration. These concentration courses allow students to acquire the skills and the critical perspective necessary to master an applied geosciences sub discipline, and will help prepare students to pursue the final Project Design.

Students choose from the following concentrations:

- Engineering Geology ([https://www.sas.upenn.edu/lps/graduate/msag/curriculum/engineering-geology/](https://www.sas.upenn.edu/lps/graduate/msag/curriculum/engineering-geology/))
- Hydrogeology ([https://www.sas.upenn.edu/lps/graduate/msag/curriculum/hydrogeology/](https://www.sas.upenn.edu/lps/graduate/msag/curriculum/hydrogeology/))
- Environmental Geology ([https://www.sas.upenn.edu/lps/graduate/msag/curriculum/environmental-geology/](https://www.sas.upenn.edu/lps/graduate/msag/curriculum/environmental-geology/))

**Individualized Professional Concentration Option**

Occasionally a student’s interests do not fit within one of the three Master of Science in Applied Geosciences concentrations. In this case, they may develop an individualized concentration under the supervision of a faculty adviser. The proposed individualized concentration must be approved by the Program Director and the Faculty Committee.

**Project Design Seminar (1 CU)**

The Project Design is the culmination of the Master of Science in Applied Geosciences program, blending academic and professional experiences and serving to emphasize the skills and knowledge developed in the program. Students design a project drawing from their learning in and outside the classroom to demonstrate mastery of their concentration area.

**Certifications and Licensure**

Coursework in the program provides the academic depth needed for licensure as a Professional Geologist (PG) in the Commonwealth of Pennsylvania. In addition, students who complete the degree may shorten their “professional geological work” requirement from five years to four.

The program subsidizes and streamlines certification programs like OSHA’s Hazardous Waste Operations and Emergency Response Standard (HAZWOPER).

**Field Opportunities**

Experiences in the field, such as class trips and site visits, are critical components of the curriculum. Students will have the opportunity to participate in research projects being conducted by members of the Department of Earth & Environmental Science. These projects will provide experience working with geoscience professionals in the field, and will involve training in the use of relevant instrumentation, as well as data collection and analysis techniques.

**Time Frame**

Master of Science in Applied Geosciences students may enroll on either a part-time or a full-time basis. Time to graduation will vary depending on how many classes are taken each semester and whether summer classes are taken. Full-time students can complete the program in two years, taking three or four classes per semester. Part-time students typically complete their work in three years, taking one or two classes per semester. Individuals working full time are advised to take no more than two courses per term.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**Applied Positive Psychology, MAPP**

Rapidly becoming one of psychology’s most transformative fields, positive psychology is the scientific study of the strengths that enable humans and organizations to flourish. The Master of Applied Positive Psychology (MAPP) program at the University of Pennsylvania was the first in the world to offer a degree in this rigorous field of study. Dr. Martin E.P. Seligman, founder of the discipline of positive psychology, along with leading researchers and practitioners educate students at the cutting edge of the field. The MAPP curriculum is designed to educate you in the history, theory and research methods of positive psychology, as well as its application in professional settings.

**For more information:** [https://www.sas.upenn.edu/lps/graduate/mapp/](https://www.sas.upenn.edu/lps/graduate/mapp/)

**Curriculum**

The program consists of nine courses, completed in one year of full-time study during consecutive fall, spring and summer semesters.

- During the fall semester, you will begin the program with courses that focus on the science, research and theoretical underpinnings of positive psychology, giving students a strong foundation to build on throughout the remainder of the program.
- The spring semester courses offer content to help you learn how to apply positive psychology in various professional settings, including creating a plan for positive interventions in a real organization.
- The capstone project, which is completed during the summer semester, allows you to integrate what you’ve learned throughout the program, and apply it in the professional or research domain most significant to you. It often serves as a stepping stone to the application of positive psychology in a particular professional domain or to further research in a specific area.

9
Capstone

The capstone project is a distinguishing feature of the Master of Applied Positive Psychology program, blending academic and professional experiences and serving as the culmination of your work in the program. Through the capstone project, you will explore, in depth, the theories and practical applications you’ve learned in the program, to advance the field of positive psychology itself. If you are interested in exploring more capstones, you can visit Penn’s Scholarly Commons website to browse project abstracts (http://repository.upenn.edu/mapp_capstones/) or download full projects (http://repository.upenn.edu/mapp_capstone/).

The capstone is completed during the summer semester and has no on-site course requirements. You will conduct this project work independently, with your advisor’s ongoing guidance, in a setting that is significant to you and most relevant to your future professional goals.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Behavioral and Decision Sciences, MBDS

Penn’s Master of Behavioral and Decision Sciences (MBDS) is informed by contemporary theories and research methods of behavioral economics, decision sciences, network analysis and public policy. Our program equips students with theoretical and practical tools to address a variety of real-life problems, putting you ahead of the curve in a growing field of study. The interdisciplinary degree prepares you to understand how individuals and groups make decisions, and how to affect those decisions. Our world-renowned faculty and researchers are also leading practitioners in their fields. With their expertise, you are guided to apply what you learn to real-life problems in areas such as social and public policy, law, education, business and medicine.

For more information: https://www.sas.upenn.edu/lps/graduate/mbds (https://www.sas.upenn.edu/lps/graduate/mbds/)

Curriculum

Curriculum structure

To fulfill the requirements for this degree program, you must complete nine courses including a capstone research project. You can finish the coursework in one full-time academic year, using the summer to complete the capstone research project, or at a part-time flexible pace.

During your studies, you establish a theoretical, methodological and quantitative foundation in the field with a common core covering behavioral economics, psychology, social norms and public policy. You learn to model how individuals and groups make decisions, the behavioral and neural foundations of decision-making, and have the opportunity to design lab and field experiments to test your hypotheses. You are taught to create and analyze computational models of social emergence, and use network analysis to understand how behavior can spread or dissolve.

You may select a concentration in an area such as social science, public health, neuroscience, education, or social and public policy. Students interested in real-world applications can work with faculty members who employ their research in fields like social and public policy, education, law, business and medicine.

Our interdisciplinary curriculum allows students to take elective classes from:

- The School of Arts and Sciences (https://www.sas.upenn.edu/frd/departments/)
- The School of Social Policy & Practice (https://www.sp2.upenn.edu/)
- The Wharton School (https://www.wharton.upenn.edu/)
- Penn Law (https://www.law.upenn.edu/)
- Penn Graduate School of Education (http://www.gse.upenn.edu/)
- Annenberg School for Communication (https://www.asc.upenn.edu/)
- Penn Nursing (http://www.nursing.upenn.edu/)
- Perelman School of Medicine (http://www.med.upenn.edu/)

Required courses

All students are expected to take five core classes, three elective courses and one dedicated capstone research project to earn the nine course units required for the Master of Behavioral and Decision Sciences.

Select 3 elective courses

Select 1 dedicated capstone research course

Total Course Units 9

1 If you take more than one course from the Quantitative core, it will serve as an elective course.

Electives and concentrations

The goal of the Master of Behavioral and Decision Sciences is to equip students with practical tools for applications and a focused academic portfolio. You can select three courses from disciplines and schools across the University in relation to your academic and professional goals. An advisor from the program works with you one-on-one to craft a successful curriculum.

Elective concentrations include:

- Public health
- Psychology/Neuroscience
- Education policy
- Social and public policy
- Economics/Neuroeconomics
- Sociology/Networks
- Computational systems
Prerequisites

The program has two prerequisite courses:

1. introductory statistics and
2. microeconomics/game theory

For students who lack sufficient background in one or all areas, the prerequisite courses are offered through the College of Liberal and Professional Studies during the summer prior to the start of the program in the fall term.

Capstone experience

The final capstone research project for the Master of Behavioral and Decision Sciences is an independent study experience. Throughout the process, you connect with faculty members in your area of concentration to determine appropriate final projects or ways to participate in applying research, such as completing an internship or conducting fieldwork.

The capstone schedule allows for incremental deadlines and feedback from professors. The requirement for the capstone is a final project that contributes to your future career path. The paper is expected to:

- Present a position that is unique, original and directly applies to your experience
- Use primary sources or apply to a primary organization/agency
- Conform to the style and format of excellent academic writing
- Analyze empirical research data that is collected by you or that has already been collected
- Allow you to demonstrate the competencies gained in the master’s program

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Chemical Sciences, MCS

Your future in chemistry starts at Penn. Whether you’re currently a chemistry professional or seeking to enter the field, Penn’s rigorous Master of Chemical Sciences (MCS) prepares you to take advantage of the myriad career possibilities available in the chemical sciences. Our program equips you with theoretical and technical expertise in biological chemistry, inorganic chemistry, organic chemistry, physical chemistry, environmental chemistry and materials.

For more information: https://www.sas.upenn.edu/lps/graduate/mcs
(https://www.sas.upenn.edu/lps/graduate/mcs/)

Curriculum

The Master of Chemical Sciences degree is designed to give you a well-rounded, mechanistic foundation in a blend of chemistry topics. To that end, the curriculum is structured with a combination of core concentration courses and electives, which allow you to focus on topics best suited to your interests and goals.

Our program may be completed full time in two years. Students can also enroll part time. Our advisors are dedicated to offering each student a tailored academic plan that meets the needs of both full-time and part-time students. For example, if you are currently in the industry, you may complete the research component of the degree while at work. If you are considering part-time enrollment or would like to discuss our customizable options, please contact the Associate Director (https://www.sas.upenn.edu/lps/graduate/mcs/contact/), Dr. Ana-Rita Mayol directly to learn more.

As a new student in the Master of Chemical Sciences program, you will complete a week-long new student orientation, a placement test, and meet with your academic advisor to review your previous experiences and your future goals. Based on this discussion, you will create an individualized academic schedule.

The Master of Chemical Sciences requires the minimum completion of 10 course units (CU)\(^1\) as follows:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Course Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>MCS 540</td>
<td>Mcs Proseminar</td>

</tr>
<tr>
<td>Total Course Units</td>
<td>10</td>
<td></td>
</tr>
</tbody>
</table>

Pro-Seminar course

The Pro-Seminar will review fundamental concepts regarding research design, the scientific method and professional skills, and scientific communication. The course will also familiarize students with techniques for searching scientific databases and with the basis of ethical conduct in science. (MCS 540), 1 CU)

Concentration courses

The concentration courses (https://www.sas.upenn.edu/lps/graduate/mcs/curriculum/concentration-courses/) allow you to develop specific expertise and also signify your mastery of a field to potential employers.

The number of elective courses you take will depend upon the requirements for your area of concentration, and upon the curriculum that you plan with your academic advisor. These concentration courses allow you to acquire the skills and the critical perspective necessary to master a chemical sciences subdiscipline, and will help prepare you to pursue the final capstone project (below).

You may choose from the following six chemical sciences concentrations:

- Biological Chemistry (https://www.sas.upenn.edu/lps/graduate/mcs/curriculum/concentration-courses/#bio)
- Inorganic Chemistry (https://www.sas.upenn.edu/lps/graduate/mcs/curriculum/concentration-courses/#Inorganic)
- Organic Chemistry (https://www.sas.upenn.edu/lps/graduate/mcs/curriculum/concentration-courses/#Organic)
- Physical Chemistry (https://www.sas.upenn.edu/lps/graduate/mcs/curriculum/concentration-courses/#Physical)
- Environmental Chemistry (https://www.sas.upenn.edu/lps/graduate/mcs/curriculum/concentration-courses/#Environmental)
- Materials (https://www.sas.upenn.edu/lps/graduate/mcs/curriculum/concentration-courses/#Materials)
Independent Studies

The optional Independent Studies course will be offered each fall and spring semester, giving you an opportunity to participate in one of the research projects being conducted in one of our chemistry laboratories. During the study, you will also learn analytical skills relevant to your capstone research project and career goals. You can participate in the Independent Studies course during your first year in the program as a one-course unit elective course option. The Independent Studies course is available in the fall, spring and summer terms. (MCS 599, 1 CU maximum)

Capstone project

The capstone project is a distinguishing feature of the Master of Chemical Sciences program, blending academic and professional experiences and serving as the culmination of your work in the program. You will develop a project drawing from your learning in and outside of the classroom to demonstrate mastery of an area in the chemical sciences. The subject of this project is related to your professional concentration and may be selected to complement or further develop a work-related interest. It’s an opportunity to showcase your specialization and your unique perspective within the field.

Your capstone component may be a Penn laboratory research project (https://www.sas.upenn.edu/lps/graduate/mcs/curriculum/advising/), an off-campus laboratory research project (https://www.sas.upenn.edu/lps/graduate/mcs/research-partners-and-opportunities/) or a literature-based review project. All components will require a completed scientific report. It is expected that the capstone project will take an average of six to ten months to complete. Most students are expected to start at the end of the first academic year in the summer and conclude at the end of fall semester of the second year. Depending on the capstone option selected, students may begin to work on the capstone as early as the spring semester of their first year in the program.

All capstone project proposals must be pre-approved by your committee composed of a concentration advisor and/or research supervisor, Master of Chemical Sciences Program Director and a secondary reader. If necessary, nondisclosure agreements will be signed by students securing projects with private companies. Additionally, students from private industry may be able to complete a defined capstone project at their current place of employment. All capstone projects culminate in a final written report, to be graded by the student’s concentration advisor who is a member of the standing faculty or staff instructor in the Chemistry Department.

Your capstone component may be a Penn laboratory research project (https://www.sas.upenn.edu/lps/graduate/mcs/curriculum/advising/), an off-campus laboratory research project (https://www.sas.upenn.edu/lps/graduate/mcs/research-partners-and-opportunities/) or a literature-based review project. Curriculum

The Master of Environmental Studies program provides the knowledge base needed to understand complex environmental issues—and allows the flexibility to develop unique expertise and professional experience in a chosen field. With the help of a dedicated academic adviser, a curriculum suited precisely to the student’s goals is developed.

Students will complete 12 course units (CU) that reflect a balance between disciplinary focus and interdisciplinary knowledge. The course of study includes the following elements:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Course Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Complete each of the following:</td>
<td></td>
<td></td>
</tr>
<tr>
<td>ENVS 601</td>
<td>Proseminar: Contemporary Issues in Environmental Studies</td>
<td>1</td>

</tr>
<tr>
<td>Professional concentration courses</td>
<td></td>
<td>5</td>
</tr>
<tr>
<td>Total Course Units</td>
<td></td>
<td>12</td>
</tr>
</tbody>
</table>

Research Methods Course (1 CU)

The research methods course prepares students to ask, and confidently answer, the innovative questions they will pose in their capstone project. The requirement can be fulfilled by taking a methodology course that provides students with the data gathering and analysis skills they will use to begin their research projects.

Foundation Courses (4 CU)

Foundation courses help broaden students’ knowledge in areas outside of their chosen concentration, and complement their chosen field. For example, if they are studying sustainability, their foundation course credits are an opportunity to learn about environmental law and policy, or become versed in business, which will be necessary while working in the sustainability sector. Foundation courses allow students to make connections between different sectors and offer the opportunity to discover unexpected synergies and resonances in fields beyond their own. Students choose courses from broad areas such as:

- Environmental Chemistry
- Environmental Biology
- Environmental Geology
- Environmental Law
- Environmental Policy
- Environmental Business

Professional Concentration Courses (5 CU)

While foundation courses give students a broad understanding of environmental issues, the professional concentration courses help develop the expertise needed to pursue a career in a sub field of environmental studies.

Concentration courses may be taken in any of the 12 graduate Schools at the University (School of Engineering and Applied Science, Graduate School of Education, School of Design, School of Social Policy
students the opportunity to complete an Ivy League degree and establish a valuable network, while still working full time in and beyond the Philadelphia region.

### Government Administration (FT), MPA

The one-year, full-time Master of Public Administration (MPA) degree at the Fels Institute of Government provides the concepts and skills students need to become the public managers and leaders of tomorrow. Driven by our three-pronged approach of context, analysis, and practice, the Fels MPA program admits a small and selective class of students who work closely with Penn faculty and leading policy practitioners to translate their classroom experiences into real-world results.

For more information: [https://www.fels.upenn.edu/academics/MPA/](https://www.fels.upenn.edu/academics/MPA/)

### Government Administration (Exec), MPA

The Fels Executive MPA is the innovative, practitioner-focused Fels MPA degree, designed and delivered by a team of Penn faculty members, resident scholars, and adjunct instructors to meet the needs of mid-career professionals seeking to advance in or enter the public sector. The on-site, online hybrid format of the program offers Executive MPA students the opportunity to complete an Ivy League degree and establish a valuable network, while still working full time in and beyond the Philadelphia region.

### Individualized, MPhil

The Master of Philosophy in Liberal Arts (MPhil) is an advanced interdisciplinary graduate degree designed for individuals with a passion for academic pursuits. Only six graduate-level courses are required to earn the MPhil, including one that serves an Independent Study for your thesis project. Available on a full- or part-time basis, you elect the courses most relevant to your interests, and based on your schedule. The Master of Philosophy in Liberal Arts can serve as an important step to future PhD studies, or as a way to deepen engagement with the topics that challenge and excite you.

For more information: [https://www.sas.upenn.edu/lps/graduate/mla/mphil/](https://www.sas.upenn.edu/lps/graduate/mla/mphil/)

### Curriculum

#### Individualized curriculum

If you already hold a master's, you can earn an additional graduate degree by completing just six additional courses. Your MPhil program includes five courses (up to four in a single discipline) and an independent study dedicated to completing the final thesis project. We strongly encourage MPhil candidates to take advantage of the many disciplines and departments available across the University during their course selection process.

#### Independent Study

When you join the MPhil program, you select an advisory committee of two members of Penn's acclaimed faculty. It is likely that you will work with professors from your coursework or with faculty who are performing research in your area of interest. The advisory committee helps you establish guidelines for your thesis and approves the written project as part of your successful completion of the Master of Philosophy in Liberal Arts degree. The rigorous MPhil thesis exemplifies dedication to your chosen field and serves as an ideal tool for demonstrating the quality of your research and writing skills to employers, PhD programs, and peers.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

### International, MPA

The University of Pennsylvania’s International Master of Public Administration (I-MPA) is an innovative graduate degree for high-achieving students who are fluent in English and proficient in Mandarin. Our one-year program is anchored in the social and behavioral sciences and provides a skills-based, career-enhancing curriculum that focuses on comparative public administration, global leadership and public-private problem-solving. Individually tailored educational experiences further enhance your ability to confront today's global challenges and work collaboratively across borders and sectors—in government, public service, NGOs, commerce and more. The program provides case-based learning addressing international, national and local level governance and leadership, problems and solutions.

For more information: [https://www.sas.upenn.edu/lps/graduate/impa](https://www.sas.upenn.edu/lps/graduate/impa)

#### Curriculum

The International Master of Public Administration is an interdisciplinary and experiential graduate program with a focus on social and behavioral sciences. Students take foundational and developmental courses in a cohort—which gives you the opportunity to create a strong bond with your peers and work closely with professors in smaller class settings. You also choose two electives from an approved list of courses in the School of Arts and Sciences where you learn with the greater Penn community and expand your network. In order to complete the degree, you must complete 10 course units (CU).

Additional learning opportunities and requirements

Academic advisor and I-MPA Faculty-Senior Staff Committee meetings (required)

Meetings each semester with an advisor are conducted in relation to your capstone project. The meetings with the I-MPA Faculty-Senior Staff Committee are for the purpose of having open-ended check-ins, advancing any special help or necessary trouble-shooting and keeping you connected to the widest range of I-MPA resources.

Participation in I-MPA faculty-student social (required)

The I-MPA faculty consider it essential that the social life of the class be acknowledged, enlivened and supported through such gatherings at the opening and closing of each semester.

Participation in Issues in US Politics and Policy Guest Speaker Series (required)

This non-curricular but critical part of the program affords you the opportunity to meet present and former US government, business and nonprofit leaders during evening sessions. Our guests are especially knowledgeable about US politics and policy and noted as both domestic and international problem-solvers.

Participation in Fox Leadership International's China-US Partnerships for Educational Advancement and Cultural Exchange Student Committee (optional)

Fox Leadership International sponsors a 30-member Penn student group that represents the University’s 2,100 Chinese national students. Known as the China-US Partnerships for Educational and Cultural Exchange-Student and Alumni Society (CUP-SAS), it is led by an alumni executive committee consisting mainly of Chinese national graduates of Penn, with the Penn-Fox Assistant Director Cheng Yao among its permanent members. The CUP-SAS has hosted several major social events for Chinese National Day, the Chinese New Year and the recent Chinese Lantern Festival that came to Philadelphia’s Franklin Square.

1 Academic credit (PDF) (http://www.upenn.edu/registrar/pdf_main/Course-Credit-Information.pdf) is defined by the University of Pennsylvania as a course unit (CU). A course unit (CU) is a general measure of academic work over a period of time, typically a term (semester or summer). A CU (or a fraction of a CU) represents different types of academic work across different types of academic programs and is the basic unit of progress toward a degree. One CU is usually converted to a four-semester-hour course.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Liberal Arts Individualized, MLA

Students in the Master of Liberal Arts (MLA) degree program have the rare opportunity to develop their own concentration in the liberal arts from courses across the University. As an MLA student, you design an individualized curriculum of nine graduate-level courses that center on a particular theme that interests you, culminating in an individual capstone project. The capstone is a large-scale academic project of your own choosing, created with the guidance of your professors and advisors. Previous capstones include memoirs, poetry cycles, and research papers. The process of developing your capstone both tests and celebrates your education at Penn, and can be used to demonstrate the value of your time here to employers or graduate schools.

For more information: https://www.sas.upenn.edu/lps/graduate/mla (https://www.sas.upenn.edu/lps/graduate/mla/)

Curriculum

Individualized curriculum

The range of courses you can take means that you can construct a plan of study at the precise nexus of your interests, or sample several different fields before settling on an ongoing focus. The process itself of curating your own curriculum is one of the most valuable aspects of the MLA program. In doing so, you learn how to listen to your own instincts and curiosities, as well as strategically direct your own development as a person and as an academic or professional in your field.

During the process of choosing your courses, you'll be supported by the Program Director and our administrative staff. We take an intensive student-by-student approach, offering the open conversation and long-term advising relationships that you need to help you create your MLA path.

MLA course requirements and Proseminars

Your Master of Liberal Arts degree curriculum consists of nine graduate-level courses. At least seven of these courses must be taken in the School of Arts and Sciences. MLA students are not limited to enrollment in MLA program courses. As long as permits are not required, you can take any graduate-level course in the College of Liberal and Professional Studies and the School of Arts and Sciences, as well as schools throughout the University, such as the Annenberg School for Communication, the Graduate School of Education, and the School of Social Policy & Practice.

Of the nine courses in your individualized curriculum, one to three of them must be MLA Proseminars. A Proseminar is a small, intensive class that offers a powerful environment for intellectual growth. We debate and provides a powerful environment for intellectual growth. We offer multiple Proseminars each semester, and the topics change every semester as well.

MLA certificates

While earning your Master of Liberal Arts degree, you have the opportunity to earn a certificate in one of several subject areas, including Latin American Studies, Urban Studies, Cinema Studies, and more. Each certificate program consists of an interdisciplinary set of classes, which was chosen by faculty members to help students explore and master a given topic. Please visit the certificate page (https://www.sas.upenn.edu/lps/graduate/mla/certificates/) to learn more.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should
consult with their academic program regarding final certifications and requirements for graduation.

Organizational Dynamics, MPhil

The Master of Philosophy (MPhil) in Organizational Dynamics is an advanced graduate degree designed for individuals who want to demonstrate applied scholarship beyond a master's degree but who are not ready to, or may not wish to, apply for a doctoral program. The Master of Philosophy in Organizational Dynamics can serve as an important step in future PhD study preparation or simply as a way to deepen engagement with the topics studied in a previous master's degree.

For more information: https://www.sas.upenn.edu/lps/graduate/dynamics/mphil

Curriculum

You will work closely with an academic advisor to design a Master of Philosophy degree curriculum suited precisely to your interests and goals. You may also select from the five concentrations (https://www.sas.upenn.edu/lps/graduate/dynamics/curriculum/concentrations-certiﬁcates/) available to the Master of Science in Organizational Dynamics students.

Master of Philosophy degree requirements

If you already hold a Master of Science in Organizational Dynamics degree from the University of Pennsylvania, the Master of Philosophy in Organizational Dynamics requires completion of six course units and a Master of Philosophy capstone paper or project. For master’s degree holders from another program at the University of Pennsylvania, determination of the required number of courses will be based on the nature of the previously completed degree and coursework.

If you completed an equivalent graduate degree from another institution, the Master of Philosophy in Organizational Dynamics requires completion of eight course units and a Master of Philosophy capstone paper or project.

Master of Philosophy capstone

You will choose a member of the Organizational Dynamics faculty to work with as your capstone paper or project advisor. The role of your capstone advisor is to provide mentoring, help you define the scope and content of your paper or project and to read and evaluate your final work.

The format for the capstone may vary. It may be a professional portfolio of competencies acquired; professional/organizational applied research; an evaluation or synthesis of a topic of interest; or another approach selected with your advisor.

Examples of Organizational Dynamics capstone projects completed by program alumni are available on the Scholarly Commons (http://repository.upenn.edu/organizational_dynamics/) website within the Penn Online Digital Library.

We encourage you to contact the program director (https://www.sas.upenn.edu/lps/graduate/dynamics/contact/) to schedule an appointment to review your current research and explore your options for pursuing a Master of Philosophy in Organizational Dynamics.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Organizational Dynamics, MSOD

The Master of Science in Organizational Dynamics (MSOD) is designed to develop your intellectual perspective on today's complex work environment. Our program allows you to explore the practical applications you need to thrive and create positive change within your professional environment. The degree fuses research-based knowledge rooted in the arts and sciences with practical applications. This approach examines the subtleties of human behavior within existing systems, addresses multi-dimensional challenges and transforms organizational culture.

For more information: https://www.sas.upenn.edu/lps/graduate/dynamics

Curriculum

The Master of Science in Organizational Dynamics program provides you with the knowledge-base you need to understand and address complex organizational issues — and allows you to take a deeper dive into the concentration areas of your choice. Throughout your studies, you will work with an academic advisor to help you create a curriculum suited precisely to your interests.

As a Master of Science in Organizational Dynamics student, you will complete 12 course units (CU)\(^1\) that balance core learning with individual exploration. Your course of study includes the following elements: (You can read about each curricular element in further detail below.)

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Course Units</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Foundations</td>
<td>4</td>
</tr>
<tr>

</tr>
<tr>
<td></td>
<td>Capstone project</td>
<td>1</td>
</tr>
<tr>
<td></td>
<td>Total Course Units</td>
<td>12</td>
</tr>
</tbody>
</table>

Foundations courses (4 CU)

Courses in the Foundations category are coded “F” and are drawn from two clusters: Organizational Structure and Function and Organizations in Historical and Cultural Context. Foundation courses give you and your fellow students the common language upon which to build your studies and knowledge, and prepare you for the deeper immersion in topics that you will study in your Application courses.

Methods of Diagnosis and Evaluation courses (1 CU)

Diagnosis and Evaluation courses are coded “DE” and concern the methods for the measurement, diagnosis, analysis, synthesis and/or evaluation of organizations and their activities. These courses provide you with multiple approaches to diagnosing complex issues within...
your organization as well as the tools and frameworks to organize your response to these difficult issues.

Applications courses (4 CU)
Courses in the Applications category are coded “A” and are drawn from three clusters: Organizations and Communications; Organizational Development and Change; and Organizational Leadership and Management. Applications courses will give you the opportunity to further explore the issues and topics you encountered in your Foundations and Diagnosis and Evaluation courses. From social media to sustainability to organizational politics, Application courses provide a closer look at the elements important to any organization.

Elective courses (2 CU)
Electives can be courses from within Organizational Dynamics or from another graduate degree program at Penn.

Note that some courses are coded as fulfilling more than one category. Each course can count only once in fulfilling a degree requirement. For example, if a course is a Foundation (F) and an Application (A), a student may only count this course toward either the Foundations requirement or the Applications requirement, but not towards both requirements.

Capstone project (1 CU)
The capstone project is a distinguishing feature of the Master of Science in Organizational Dynamics program. The project blends academic and professional experiences and serves as the culmination of your work in the program. You will design a project that draws upon your learning in and outside the classroom to identify and explore a focusing question in your area of professional and academic interest. For our students, the capstone experience serves as a career catalyst, whether they intend to change directions or advance on their current path.

Students working on their capstone project enroll in the capstone course. During the course, students have opportunities to discuss their capstone progress, successes and challenges with the course professors and with their classmates. The capstone course professor will describe capstone requirements and formats, facilitate peer feedback and will provide general guidance and support during the selection and writing of the capstone.

You will work with your capstone course professors to select a topic for your capstone project, which will be tailored to your professional and intellectual goals. Once you’ve done so, you will seek out a capstone committee that consists of a faculty advisor and a faculty reader, both of whom are selected to participate on the committee based on their expertise as it relates to the chosen capstone topic.

The capstone projects vary widely; however, all projects demonstrate students’ ability to:

• Make an argument
• Describe or summarize a position that is unique, original or which directly applies to the student
• Use primary sources or ones that apply to a primary organization as much as possible
• Apply competencies gained from the courses completed in the Organizational Dynamics program

Examples of Organizational Dynamics capstone projects completed by program alumni are available on the Scholarly Commons (repository.upenn.edu/organizational_dynamics/) website within the Penn Online Digital Library.

1 Academic credit (PDF) is defined by the University of Pennsylvania as a course unit (CU). A course unit (CU) is a general measure of academic work over a period of time, typically a term (semester or summer). A CU (or a fraction of a CU) represents different types of academic work across different types of academic programs and is the basic unit of progress toward a degree. One CU is usually converted to a four-semester-hour course.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Nonprofit Administration, Certificate
The Certificate in Nonprofit Administration offers current and aspiring nonprofit leaders a practical education to have an even greater impact on their organizations and communities. The certificate has an interdisciplinary curriculum covering the fundamental competencies of nonprofit management such as organizational leadership, governance, policy influence, program evaluation, financial management, marketing, and fundraising.

For more information: https://www.fels.upenn.edu/certificate/certificate-nonprofit-administration

The Certificate in Nonprofit Administration requires 4 course units, including 2 course units of foundational courses and 2 course units of electives chosen from the list below.

---

**Social, Cognitive, & Affective Neuroscience, Certificate**

The Graduate Certificate in Social, Cognitive and Affective Neuroscience (SCAN) program enables graduate students and professionals preparing for a wide range of careers to work knowledgeably with neuroscience. Our program’s aim is to supplement your education if you have expertise in areas other than neuroscience, enabling you to incorporate some of the concepts and methods of neuroscience into your work. The curriculum focuses on the aspects of neuroscience that have the most direct application to the understanding of human behavior, specifically social, cognitive and affective neuroscience.

For more information: [https://neuroethics.upenn.edu/scan/](https://neuroethics.upenn.edu/scan/)

**Curriculum**

**Apply neuroscience to your field of interest**

Penn’s Graduate Certificate in Social, Cognitive and Affective Neuroscience (SCAN) is a four-course program that can be completed in one to two years. The required courses provide a strong grasp of neuroscience for non-neuroscientists, emphasizing those aspects of the field that are most relevant to understanding human behavior. The curriculum is composed of two foundational requirements and two electives.

Students meet individually with the program directors in September of their first year to discuss their goals and possible elective courses. To fulfill the requirements of the SCAN certificate, students are expected to earn a B or higher in every course.

**Required Courses**

</tr>
</tbody>
</table>

**Elective Courses**

The remaining two courses are intended to strengthen your mastery of specific areas of neuroscience and its relation to your fields of interest. Electives are organized into three categories, shown below. For these electives, students may take two Advanced Neuroscience courses or one course from any of these three categories: Advanced Neuroscience, Neuroscience & Society, Bridging. Approved electives for the upcoming semester can also be viewed below.

**Other program requirements and opportunities**

Students meet individually with the program directors in September of their first year to discuss their goals and possible elective courses. To fulfill the requirements of the SCAN certificate, students are expected to earn a B or higher in every course. In addition to the four courses, it is a requirement to attend the annual half-day retreat (https://neuroethics.upenn.edu/scan/retreat/) while enrolled in the program.

The SCAN program makes study space available near the required course classrooms, with textbooks on reserve. Students may propose local neuroscientists as SCAN-sponsored lunch guests for informal conversation in this same area.

**Prerequisites**

There are no course prerequisites required to apply to the SCAN program. However, some of the elective courses that can be taken to fulfill the SCAN course sequence do have prerequisites. Some requirements are waived for SCAN students via a permit issued by the Department of Psychology. All permits for SCAN students are submitted at the end of the application period. At that time, you receive notification that you can register for the course.

Please e-mail us (penn-scan@sas.upenn.edu) if you have any questions about prerequisites and course registration.

---

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**Bridging**

This category includes courses in the student’s home field or a closely related field that includes substantial neuroscience material. The availability of bridging courses varies by program and by year, and course eligibility depends on the syllabus used in a given year. Courses are approved on a case-by-case basis by the Advisory Board after reviewing the course syllabus.

SCHOOL OF DENTAL MEDICINE

The mission of the School of Dental Medicine is to educate predoctoral and graduate dental students in the highest quality clinical and research environment.

The school's core values are consistent with the Penn Compact 2020:

- Inclusion: We value diversity and respect for all
- Innovation: We expand knowledge through cutting edge research; We use the latest technology and evidence based practices in teaching and clinical care
- Impact: We provide high quality comprehensive dental care in all clinics; We make a difference in educational, research and clinical outreach initiatives locally and globally

The School of Dental Medicine advances oral health by educating clinical dentists and fostering leaders in research, education, clinical care and service both locally and globally. Faculty and students strive toward eminence by increasing access to oral health care and professional education, integrating knowledge across disciplines, and engaging with our local, national, and global communities by continued innovation and research.

The School of Dental Medicine excels in discovering new knowledge in fundamental biology and dental medicine and disseminates this knowledge through discovery-oriented methodologies enhanced by the latest technologies. The School excels in instruction, research, and patient care in dental medicine and inspires, demands, and thrives on the need to continuously improve the quality of programs, produce future leaders, and be the best in all of its pursuits.

The School of Dental Medicine's activities in research, teaching, and clinical care promote lifelong learning relevant to a dynamic society and a rapidly expanding, multidisciplinary body of knowledge. The School of Dental Medicine is committed to share this knowledge through a comprehensive range of service activities with the local, national and global communities.

The School of Dental Medicine community values the diversity of its constituents and supports free expression, reasoned discourse, and diversity in ideas. The School of Dental Medicine fosters the growth of humane values and the highest ethical standards among students, faculty, and staff, and values its professional and community affiliations throughout the world.

For more information: https://www.dental.upenn.edu/about-us/mission-statement-vision/

History

The School of Dental Medicine is among the oldest university-affiliated dental institutions in the nation. Its historic ties trace back to the Philadelphia College of Dental Surgery, established in 1852. In 1856, the faculty of the Philadelphia College of Dental Surgery formed the Pennsylvania College of Dental Surgery when the former closed, and in 1878, the Pennsylvania College of Dental Surgery Dean, Dr. Charles J. Essig, was asked to join the University of Pennsylvania, founding the School of Dental Medicine as the Dental Department of the University of Pennsylvania. He would serve as the School's first Dean from 1878-1883.

The Pennsylvania College of Dental Surgery would eventually merge with the University of Pennsylvania in 1909.

The School's first facilities were housed in Medical Hall (now Claudia Cohen Hall). The following year it moved into its own building, Dental Hall, which was designed and constructed for its particular needs.

In 1897, Thomas W. Evans, a Philadelphia native, who became the dentist to the courts of Europe during France's Second Empire and confidant of Napoleon III, left his estate to create and maintain a dental school that would be "second to none." Evans' generosity made possible the construction of the Evans Building (officially called the Thomas W. Evans Museum and Dental Institute) which opened in 1915, the best-equipped dental building in the nation at that time. His boldness and spirit of leadership have continued to guide the School throughout its history of expansion and innovation both in curriculum and in clinical and scientific facilities.

Throughout its history, Penn Dental Medicine has grown in size and has consistently been at the forefront of dramatic changes that have characterized the profession of dentistry during that time. Nevertheless, Penn Dental Medicine has remained faithful to its original mission: "to prepare students for qualification for dental practice, to provide graduate training for qualified practitioners and to create the opportunity and facilities for scientific research in dentistry."

Since its founding, the dental education program has maintained its leadership role in dental education and research by preparing distinguished graduates capable of functioning in the many roles the profession demands: scientist, diagnostician, clinician, artist, engineer, teacher, and business manager. The School is committed to offering an education that advances both the art and science of dentistry, and prepares its students for leadership in the profession.

For more information: https://www.dental.upenn.edu/about-us/history/

Research

The School of Dental Medicine has a rich history as a research intensive institution and continues to be an international leader in the generation of new knowledge and treatment modalities to improve oral health.

As members of one of the world’s leading biomedical research communities, faculty from Penn Dental Medicine actively pursue interdisciplinary collaborations to advance the practice of dentistry. The University of Pennsylvania has top-ranked Schools in each of the health professions—Dental Medicine, Medicine, Nursing and Veterinary Medicine—located on a single, contiguous campus, as well as renowned Departments in Materials Sciences and Bioengineering (School of Engineering) and the basic sciences (School of Arts & Sciences). Interdisciplinary scholarship and translational research are hallmarks of the University and significantly enhance Penn Dental Medicine’s research enterprise.

Penn Dental Medicine places a high priority on research as it is a central component of excellence in instruction and patient care. With its own basic science faculty (unusual among dental schools nationwide), the School’s research enterprise is broad and encompasses many areas of contemporary biomedical investigation with emphasis on both basic and clinical scientific research.

Research within the School focuses on the structures and functions of tissues and fluids and microbial flora in the oral cavity. Investigations range from oral microbiology and virology, inflammation and immunity,
tooth development, mucosal disease, salivary gland disease, orofacial pain and the use of analgesics and sedatives, to the cellular biology of connective tissues and bone, the application of state-of-the-art dental materials, the causes and effects of periodontal disease, the oral delivery of protein drugs, and the relationship between mesenchymal stem cells and orofacial diseases at the molecule and cellular levels. Collectively, Penn Dental Medicine's research enterprise spans scientific disciplines to translate new knowledge into clinical therapies that expand our understanding of oral diseases and advance patient care.

For more information: https://www.dental.upenn.edu/research/research-overview/

Diversity & Inclusion

The School of Dental Medicine welcomes students and faculty from very diverse backgrounds and from all over the world. Diversity is one of our core values, and as such, it is our mission to ensure that our students learn in an environment that respects diverse traditions and experiences. Our goal is to provide a welcoming and supportive community that allows our faculty, students, and staff to achieve. Our commitment to diversity is reflected in the Penn Dental Medicine Statement on Diversity (https://www.dental.upenn.edu/student-life/diversity-and-inclusion/policy-on-diversity/), our Affirmative Action Report (https://www.dental.upenn.edu/wp-content/uploads/2019/02/PDM-Affirmative-Action-Report-Update-2018.pdf), our support programs for students and faculty, our curriculum, and the makeup of our student body.

- The Office of Diversity and Inclusion (https://www.dental.upenn.edu/student-life/diversity-and-inclusion/officer-diversity-and-inclusion/) oversees student support and mentorship programs and recruitment and retention initiatives that help to build diversity within Penn Dental Medicine’s academic community and foster a culture of inclusion, mutual trust, and respect.
- The Office of Faculty Advancement and Diversity (https://www.dental.upenn.edu/admissions-academics/office-of-faculty-advancement-and-diversity/) supports faculty development, recommends proactive strategies for increasing faculty diversity, and offers programs that enhance the climate and quality of academic life.
- Engaging in local and global communities is at the heart of the vibrant diversity that defines the Penn campus and is an integral part of the curriculum as well. Through the School’s Division of Community Oral Health (https://www.dental.upenn.edu/departments/division-of-community-oral-health/), students and faculty provide much-needed oral health services to the community, while connecting with diverse segments of the public and coming to understand the impact of social, cultural, and economic forces on oral health care. These academically based service-learning programs (https://www.dental.upenn.edu/admissions-academics/dmd-program/community-outreach-service-learning/) provide students and faculty with the framework to complete community-based activities as an essential, required component of the curriculum. And through international externships, students expand their perspective of dental education and oral health care delivery in different cultures throughout the world.
- The Penn Dental Medicine student body includes students from throughout the country and around world – see class profiles (https://www.dental.upenn.edu/student-life/profiles/) of recent DMD classes and the many countries of origin among the foreign-trained dentists in our Program for Advanced Standing Students (PASS).

For more information: https://www.dental.upenn.edu/student-life/diversity-and-inclusion/

Community Outreach

Being engaged in the surrounding community and striving to make it a better place is a key piece of Penn’s mission and educational goals. Through the School’s varied outreach and service-learning programs, Penn Dental Medicine students provide much-needed oral health services to the community, while broadening their understanding of public health issues. These academically based service-learning programs provide students and faculty with the framework to complete community-based activities as an essential, required component of academic course work. In total, students log approximately 16,000 service hours each year in both required and elective community experiences and the honors program.

This integral part of the curriculum takes students outside of the School’s clinics and campus to connect with diverse segments of the public and come to understand the impact of social, cultural, and economic forces on oral health care. The service learning programs are also an innovative and sustainable model for increasing access to care within the community and provides dental students and faculty with multiple opportunities to work with community partners in existing service programs where oral health education and services can be readily implemented. The required nature of students’ activities ensures that all students receive a consistent level of mentored community activities, and provides a consistent presence in oral health programs organized with agency partners in the community.

For more information: https://www.dental.upenn.edu/admissions-academics/dmd-program/community-outreach-service-learning/

Programs

Doctoral Programs

- Doctor of Dental Medicine, DMD (p. 150)

- Perioprosthesis, Certificate (p. 162)
- Prosthodontics, Certificate & Oral Biology, MSOB (p. 163)

Doctor of Dental Medicine, DMD

The four-year DMD program and curriculum at Penn Dental Medicine not only reflects a strong commitment to developing knowledge and skills in both oral science and oral health care, but also offers the flexibility for students to tailor their education to their interests. As one of 12 schools within the larger urban campus of the University of Pennsylvania, Penn Dental Medicine is uniquely positioned to provide a depth of opportunities for interdisciplinary study across other professional disciplines. Here,
students find an education that builds excellence in dental medicine by encouraging individual interests and strengths to flourish and grow.

For more information: https://www.dental.upenn.edu/academic_programs_admissions/dmd_program (https://www.dental.upenn.edu/academic_programs_admissions/dmd_program/)

Curriculum
First Year
The first year of the curriculum introduces students to the concepts of human biology as they pertain to medicine in general and to dental medicine in particular. The curriculum reflects an emphasis on integration of scientific information by grouping courses into integrative course streams rather than discipline specific courses. This includes studies relating to the principles of oral disease prevention, patient management, and physical examination. A major segment of the curriculum focuses on the structure and function of oral tissues and contiguous structures. During this time, students will also begin an integrated preclinical course in restorative dentistry combining several disciplines (e.g., dental anatomy and occlusion, operative dentistry and dental materials), including extensive use of the School's Virtual Reality Laboratory. Clinical experiences begin upon entry into the DMD program and increase with each succeeding year. In the first year, students begin clinical rotations in oral medicine, periodontics, health promotion, radiology, and hospital dentistry. Additionally, students will assist upperclassmen on the clinic floor as part of the DRAUT first year course.

Second Year
The second-year curriculum is applied to understanding the pathology of the oral cavity and the principles of diagnosis and treatment. The curriculum includes fundamental courses in pathology (an integration of general and oral pathology), pharmacology, and principles of medicine. The preclinical restorative dentistry course is a continuation of the program offered in the first year and focuses on prosthetic therapy; it also includes additional rotations in the Virtual Reality Laboratory. Other didactic, laboratory, and clinical experiences are initiated in anesthesiology and pain control, community health, endodontics, orthodontics, and periodontics. A course entitled "Introduction to Clinical Dentistry" is offered in the second year; the purpose is to facilitate the transition from the classroom to the clinic by allowing students to observe and practice the provision of services in various clinical departments. Beginning in October, afternoons are set aside for courses in the Selectives Program.

Third Year
Students begin to function as dental practitioners during their third year. Didactic courses provide a deeper and more sophisticated foundation of knowledge in the clinical disciplines. However, the bulk of the third year is spent providing general patient care in a variety of settings. This includes assignments to Primary Care Units in the general clinic and rotations in various specialty clinics. In addition, students provide patient screenings and education in community-based dental health programs at schools, health fairs, geriatric centers, and homes for disabled persons. Third-year students also participate in the Selectives Program.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

The highly respected research environment at the School of Dental Medicine and throughout the University of Pennsylvania provides a valuable opportunity for students applying to the School’s graduate dental education programs to combine their specialty training with advanced research and academic opportunities through a Doctor of Science in Dentistry (DScD) degree. The DScD will prepare students to successfully enter the field of academic dentistry for careers as clinical or basic science researchers.

The program combines the research and clinical strengths of the School, drawing faculty mentors from throughout the clinical and basic science departments. With the goal of providing the opportunity to pursue research across disciplines, students also have the option to work with researchers from the School of Dental Medicine, School of Engineering and Applied Sciences (https://www.seas.upenn.edu/), School of Medicine (https://www.med.upenn.edu/), School of Nursing (https://www.nursing.upenn.edu/), and School of Veterinary Medicine (https://www.vet.upenn.edu/) of the University of Pennsylvania. Both rigorous clinical and research experiences are central to the DScD program and students devote from 40% to 80% of their time in each year of the program to research; clinical training also occurs in each year of the program to ensure maintenance of clinical skills throughout.

The DScD program is open to students with a DMD/DDS degree or equivalent who are pursuing advanced training in the School’s Specialty Programs (https://www.dental.upenn.edu/admissions-academics/graduate-dental-education-programs/specialty/), Periodontics (https://www.dental.upenn.edu/admissions-academics/graduate-dental-education-programs/periodontics/), Endodontics (https://www.dental.upenn.edu/admissions-academics/graduate-dental-education-programs/endodontics/), Orthodontics (https://www.dental.upenn.edu/admissions-academics/graduate-dental-education-programs/orthodontics/), Periodontics/Prosthesis (https://www.dental.upenn.edu/admissions-academics/graduate-dental-education-programs/periodontics-prosthesis/), or Oral Medicine (https://www.dental.upenn.edu/admissions-academics/graduate-dental-education-programs/oral-medicine/). Candidates concurrently complete their clinical specialty training and DScD degree, engaging in an intensive research program that culminates in a thesis and oral defense. The program is also open to individuals who have completed their clinical specialty training, but are interested in obtaining a DScD degree; students in this track complete all of the didactic courses and research requirements but do not directly participate in clinical care. Those interested in applying to the DScD program should indicate so on their application to a clinical specialty program. If the applicant already has a certificate in a clinical specialty, the program to ensure maintenance of clinical skills throughout.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

The Penn Dental Medicine’s Selectives Program enhances the predoctoral curriculum by allowing students to individualize their education to reflect their own professional interests. Selectives are offered from October to June each year, and includes didactic, clinical, community dental health service, and research opportunities. Many Selectives occur in small group seminars or individualized settings that promote close student-faculty interactions.

The program combines the research and clinical strengths of the School, drawing faculty mentors from throughout the clinical and basic science departments. With the goal of providing the opportunity to pursue research across disciplines, students also have the option to work with researchers from the School of Dental Medicine, School of Engineering and Applied Sciences (https://www.seas.upenn.edu/), School of Medicine (https://www.med.upenn.edu/), School of Nursing (https://www.nursing.upenn.edu/), and School of Veterinary Medicine (https://www.vet.upenn.edu/) of the University of Pennsylvania. Both rigorous clinical and research experiences are central to the DScD program and students devote from 40% to 80% of their time in each year of the program to research; clinical training also occurs in each year of the program to ensure maintenance of clinical skills throughout.

The DScD program is open to students with a DMD/DDS degree or equivalent who are pursuing advanced training in the School’s Specialty Programs (https://www.dental.upenn.edu/admissions-academics/graduate-dental-education-programs/specialty/), Periodontics (https://www.dental.upenn.edu/admissions-academics/graduate-dental-education-programs/periodontics/), Endodontics (https://www.dental.upenn.edu/admissions-academics/graduate-dental-education-programs/endodontics/), Orthodontics (https://www.dental.upenn.edu/admissions-academics/graduate-dental-education-programs/orthodontics/), Periodontics/Prosthesis (https://www.dental.upenn.edu/admissions-academics/graduate-dental-education-programs/periodontics-prosthesis/), or Oral Medicine (https://www.dental.upenn.edu/admissions-academics/graduate-dental-education-programs/oral-medicine/). Candidates concurrently complete their clinical specialty training and DScD degree, engaging in an intensive research program that culminates in a thesis and oral defense. The program is also open to individuals who have completed their clinical specialty training, but are interested in obtaining a DScD degree; students in this track complete all of the didactic courses and research requirements but do not directly participate in clinical care. Those interested in applying to the DScD program should indicate so on their application to a clinical specialty program. If the applicant already has a certificate in a clinical specialty, he or she can apply directly to the DScD program.

Curriculum

DScD with Postgraduate Certificate Program

The Doctor of Science in Dentistry (DScD) program is tailored to meet CODA requirements for each clinical specialty. For Endodontics (https://www.dental.upenn.edu/academic_programs_admissions/graduate_dental_education_programs/endodontic_residency_program/), Orthodontics (https://www.dental.upenn.edu/academic_programs_admissions/...
graduate_dental_education_programs/orthodontic_residency_program/), Oral Medicine (https://www.dental.upenn.edu/academic_programs_admissions/graduate_dental_education_programs/oral_medicine_residency_program/), and Pediatric Dentistry (https://www.dental.upenn.edu/academic_programs_admissions/graduate_dental_education_programs/pediatric_dentistry_residency_program/) postgraduate programs it is 5 years, for Periodontics (https://www.dental.upenn.edu/academic_programs_admissions/graduate_dental_education_programs/periodontic_residency_program/) 5.5 years and for Periodontic/Prosthesis (https://www.dental.upenn.edu/admissions-academics/graduate-dental-education-programs/periodontal-prothesis-program/) 6 years. Clinical, didactic, and research aspects of the program are integrated so that in all years students experience both clinical and research training. In years one and two, there is greater focus on clinical training, while in later years there is greater focus on research training with clinical activities continuing in all years. All courses taken as part of clinical training are credited toward the DScD degree. In addition, three didactic courses from Penn’s Biomedical Graduate Studies program related to the research topic are required and typically taken in years two through four. Each student will write a K08 or K23 grant award; the application becomes the basis of a qualifying exam for the program. Only US citizens/green card holders will actually submit their K08 or K23 proposal to the NIH. This represents important training in grant writing as well as training in writing a scientific paper for publication, both of which are important aspects of academic success. NOTE: Acceptance into the specialty certificate program does not guarantee acceptance into the DScD program.

DScD without Postgraduate Certificate Program

Students who have completed clinical specialty training at an accredited institution are eligible to apply for the Doctor of Science in Dentistry (DScD) program without certificate. This program is 4 years in length. Students in this program are associated with a clinical specialty and will take all didactic courses in the specialty as well as a dissertation project but will not receive clinical training. In addition, the student will take three didactic courses from Penn’s Biomedical Graduate Studies program related to the research topic, typically taken in years 2-4. The didactic, research and dissertation components for this program are the same as those for the combined DScD/Certificate program.

General Requirements

All DScD students must complete the Core Graduate Dental Education courses, as well as three didactic courses from Biomedical Graduate Studies and a dissertation. Additional requirements depend on the track and clinical specialty.

Program for Advanced Standing Students, DMD

The Program for Advanced Standing Students (PASS) is designed for graduates of foreign dental schools who want to practice dentistry in the United States. Most states require a degree from a dental school accredited by the American Dental Association (ADA) before granting licensure. To prepare non-U.S. trained dentists, Penn Dental Medicine offers a two-and-a-half year program which leads to a DMD degree. Successful completion of the program allows foreign-trained dentists to take licensing exams in any state. PASS students are expected to successfully complete all competencies required in the 4-year program.

For more information: https://www.dental.upenn.edu/admissions-academics/program-for-advanced-standing-students/

Curriculum

Upon matriculation in January, PASS students will join the second year DMD class by participating in all ongoing preclinical and laboratory courses. PASS students will NOT be required to take any second year basic science courses but instead will participate in an additional, specially designed preclinical laboratory/seminar program.

Third- and Fourth-Year Dental Curriculum

Following the successful completion of the second year, students will be fully integrated into the class where they take part in all academic and clinical experiences in the third and fourth years of dental school. This includes participation in externships abroad or in the U.S. and the Selective course offerings to customize a student’s educational experience. No special or separate teaching is conducted for the PASS program students. Please refer to the DMD curriculum for a complete description of the third- and fourth-year curriculum. Students participate in a modern health care delivery system which simulates general
practice. In addition, they rotate through the specialty departments and work under the preceptorship of master clinicians.

**Third Year**

Students begin to function as dental practitioners during their third year. Didactic courses provide a deeper and more sophisticated foundation of knowledge in the clinical disciplines. However, the bulk of the third year is spent providing general patient care in a variety of settings. This includes assignments to Primary Care Units in the general clinic and rotations in various specialty clinics. In addition, students provide patient screenings and education in community-based dental health programs at schools, health fairs, geriatric centers, and homes for disabled persons. Third-year students also participate in the Selectives Program.

**Fourth Year**

The fourth-year curriculum continues to expand the intellectual and clinical experiences of students, including a two-week hospital externship. Students continue to attend PCU clinical seminars in which they present clinical cases where the integration of knowledge, skills, and values is emphasized. Coursework is designed to augment the basic knowledge in the first three years. By graduation, students will have completed the preceptorship of master clinicians in specialty care. Through the MSOB and DScD programs, students are encouraged to pursue their individual research interests with projects that can span the diverse disciplines and research labs within Penn Dental Medicine's basic and clinical sciences and across the University.

---

**Selectives**

The Penn Dental Medicine's Selectives Program enhances the predoctoral curriculum by allowing students to individualize their education to reflect their own professional interests. Selectives are offered from October to June each year, and includes didactic, clinical, community dental health service, and research opportunities. Many Selectives occur in small group seminars or individualized settings that promote close student-faculty interactions.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

---

**Endodontics, Certificate**

The University of Pennsylvania School of Dental Medicine has the unique honor of being the birthplace of modern Endodontics with Dr. Louis Grossman, the father of modern Endodontics, having established the Penn Dental Medicine Endodontic program.

The Endodontic program is designed to provide postgraduate students with advanced training in Endodontics, and upon its successful completion, students are eligible for the specialty Board of Endodontics. The highly respected research environment at Penn Dental Medicine and throughout the University of Pennsylvania provides a valuable opportunity for students applying to residency programs to combine their specialty training with advanced research and academic opportunities.

In addition to the core basic science courses required for all postgraduate students, the Endodontic Department arranges further basic science courses related to the specialty. Clinical seminars, planned reading seminars, and an extensive guest lecture series are also part of the educational experience.

---

**Additional Program Options**

Penn Dental Medicine also offers a Master of Science in Oral Biology (MSOB) and a Doctor of Science in Dentistry (DScD) that can be earned concurrent with a specialty certificate, preparing students to successfully enter the field of academic dentistry while also becoming skilled clinicians in specialty care. Through the MSOB and DScD programs, students are encouraged to pursue their individual research interests with projects that can span the diverse disciplines and research labs within Penn Dental Medicine's basic and clinical sciences and across the University.

Master of Science in Oral Biology

The School of Dental Medicine also offers a Master of Science in Oral Biology (MSOB). Enrollment in the MSOB program is limited to individuals concurrently registered in one of the postgraduate specialty training (certificate) programs. Candidates receive the MSOB degree after completion of both their specialty training and the Master's curriculum, which consists of didactic, seminar, and research practicum courses. The MSOB program is comprised of two tracks designed for outstanding students who are interested in either integrating research or structured evidence-based learning into their post-graduate education.

Depending on the track selected, research activities or a systematic literature review form the core of the MSOB program. Students are expected to participate in a clinical or basic science research project of sufficient scope and intensity or a formally structured and critically evaluated literature review focused on an important oral health-related research or clinical question. A thesis composed of an in-depth review of the relevant literature along with a manuscript reporting the results of the research or a systematic review is required for graduation for the research and evidence-based learning tracks respectively.

Oral and Maxillofacial Surgery, Certificate

The graduate program in Oral and Maxillofacial Surgery includes the awarding of a medical degree from the University of Pennsylvania School of Medicine, two years of general surgery, and 30 months of clinical rotations in oral and maxillofacial surgery. This dual-degree track is carefully designed to provide a comprehensive approach to both the medical school and residency components of the program. The program is accredited by the Commission on Dental Accreditation. Candidates who complete the program are eligible for examination by the American Board of Oral and Maxillofacial Surgeons.

The hallmark of Penn's medical school is based on an innovative and highly acclaimed curriculum, which fuses basic and clinical sciences. This, coupled with core clinical clerkships, allows the oral and maxillofacial surgery resident to receive a medical education without compromise. The medical school rotations also meet mandatory residency requirements.
Candidates of the oral and maxillofacial surgery program are responsible for two and one-half years of medical school tuition. Rotations in Oral and Maxillofacial Surgery are scheduled at the following affiliated hospitals to provide an extremely broad and diverse clinical experience:

- The Hospital of the University of Pennsylvania
- Presbyterian Medical Center of Philadelphia
- Veterans Administration Hospital
- Children’s Hospital of Philadelphia
- Pennsylvania Hospital
- University of Pennsylvania School of Dental Medicine

**Oral Medicine, Certificate**

The Oral Medicine Residency Program at Penn Dental Medicine began training qualified practitioners in the early 1960’s, many of whom have gone on to become program directors at other institutions both in the United States and abroad, examiners on the Board of the American Academy of Oral Medicine, and internationally respected researchers and leaders in the field of Oral Medicine.

The objective of this program is to train a thoroughly qualified clinician and educator in the field of Oral Medicine. In addition to extensive clinical experience, there is a didactic curriculum that runs throughout the program. Opportunities for students to explore particular areas of interest in the field of Oral Medicine are encouraged.

**Additional Program Options**

Penn Dental Medicine also offers a Master of Science in Oral Biology (MSOB) and a Doctor of Science in Dentistry (DScD) that can be earned concurrent with a specialty certificate, preparing students to successfully enter the field of academic dentistry while also becoming skilled clinicians in specialty care. Through the MSOB and DScD programs, students are encouraged to pursue their individual research interests with projects that can span the diverse disciplines and research labs within Penn Dental Medicine’s basic and clinical sciences and across the University.

Orthodontics and Periodontics, Certificate

The Orthodontics and Periodontics program features a Clinical Track and an Academic Track. Applicants to this joint program must be accepted by both the Periodontics and Orthodontic admissions committees.

Clinical Track

In this track, the first year provides a comprehensive background in periodontics through extensive literature reviews, seminars, and clinical practice. Selected periodontal cases are continued into the second year, which focuses on formal training in orthodontics, orthodontic preclinical laboratories, and the beginning of clinical training in several multi-band techniques. The third and fourth years consist primarily of orthodontic seminars, clinical practice of periodontics and orthodontics, and evaluation of post-treatment periodontal cases. Third- and fourth-year students also do limited teaching. Graduates in this program are
fully certified and board eligible in both periodontics and orthodontics. The four-year track will develop skilled clinicians who will be able to practice and teach in a clinical setting.

Duration of program: 48 months

**Academic Track**

The five-year program is designed to prepare students for full-time academia as dental educators and highly trained clinicians in periodontics and orthodontics. This program is planned in cooperation with a research preceptor and leads to a Master of Science in Oral Biology. The five years are planned and balanced by the Departments of Periodontics and Orthodontics and the research preceptor, so students can undertake clinical research while also being trained as a clinician. The clinical portion of the program is similar to the four-year track. Students will also have courses in the Graduate School of Education and have teaching responsibilities the fourth and fifth years.

Duration of program: 60 months

For more information: [https://www.dental.upenn.edu/academic_programs_admissions/graduate_dental_education_programs/perio_ortho_residency_program/](https://www.dental.upenn.edu/academic_programs_admissions/graduate_dental_education_programs/perio_ortho_residency_program/)

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**Orthodontics, Certificate**

The postgraduate program in Orthodontics integrates basic science and clinical Orthodontics in a comprehensive curriculum, designed to develop clinically proficient specialists who possess a scholarly insight into Orthodontic theory as it relates to patient care. While the basic science courses build upon residents' predoctoral knowledge of oral biology and
related areas, the major part of the program consists of clinical education and training.

Several popular corrective orthodontic regimens are taught, giving residents a thorough understanding of the respective merits of each treatment philosophy and the ability to apply them clinically. Since many corrective orthodontic problems involve adolescents, there is a strong emphasis on growth and development. Residents also gain experience in preventive and interceptive orthodontic care with preadolescents. The management of adult patients is also emphasized through courses such as TMJ therapy and orthognathic surgery. Other highlights of the program include:

- Experience in interdisciplinary care of patients requiring complex restorative dentistry or advanced periodontal therapy. A combined faculty from fixed prosthetics and orthodontics presents a one-year course in occlusion.
- Participation in monthly rotations at the Craniofacial Clinic at The Children’s Hospital of Philadelphia (https://www.chop.edu/), exposing residents to craniofacial anomalies and treatment and the team approach involved in treating such conditions.
- Instruction in computer applications for diagnosis, treatment planning, and practice management.
- Presentation of a course in gross anatomy of the head and neck.

The highly respected research environment at Penn Dental Medicine and throughout the University of Pennsylvania provides a valuable opportunity for students applying to residency programs to combine their specialty training with advanced research and academic opportunities.

### Additional Program Options

Penn Dental Medicine also offers a Master of Science in Oral Biology (MSOB) and a Doctor of Science in Dentistry (DScD) that can be earned concurrently with a specialty certificate, preparing students to successfully enter the field of academic dentistry while also becoming skilled clinicians in specialty care. The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Pedodontics, Certificate

The University of Pennsylvania School of Dental Medicine, in affiliation with The Children’s Hospital of Philadelphia, offers a two-year residency-training program in Pediatric Dentistry. The goal of the program is to prepare Pediatric Dentists who are proficient in providing primary and comprehensive preventive and therapeutic care for infants and children through adolescence, including those with special needs.

Four students are accepted per year (candidates must be citizens of the United States or Canada). Students will receive extensive clinical and didactic training in Pediatric Dentistry including, but not limited to, comprehensive care of both healthy and special needs children and adolescents, restorative dentistry, pulp therapy, periodontal therapy, oral surgery, pharmacologic and non-pharmacologic behavior management techniques, space maintenance, orthodontic therapy, growth and development, treatment of patients under conscious sedation, treatment of patients in the operating room under general anesthesia, and management of traumatic injuries and emergency care.

Hospital rotations will include General Pediatrics, Anesthesiology, Oral and Maxillofacial Surgery, Craniofacial/Cleft Palate Clinic, Sedation, Oncology, Spina Bifida Clinic, General and Craniofacial Surgery, and Emergency Department. Hospital rotations will help students gain a deeper understanding of medical conditions and learn to work closely with medical colleagues and other members of the healthcare team. Students will have time designated for research and involvement in community activities. They will also teach at the University of Pennsylvania School of Dental Medicine Pediatric Dentistry Clinic.

Continuing education opportunities are encouraged. The program encourages development of critical thinking and inquiry in order to be able to participate in practice, education, and research in institutional, private, and public health settings; and to prepare students to grow into leaders in Pediatric Dentistry. The highly respected research environment at Penn Dental Medicine and throughout the University of Pennsylvania provides a valuable opportunity for students applying to post-doctoral programs to combine their specialty training with advanced research and academic opportunities.

Additional Program Options

Penn Dental Medicine also offers a Master of Science in Oral Biology (MSOB) and a Doctor of Science in Dentistry (DScD) that can be earned concurrent with a specialty certificate, preparing students to successfully...
Master of Science in Oral Biology

The School of Dental Medicine also offers a Master of Science in Oral Biology (MSOB). Enrollment in the MSOB program is limited to individuals concurrently registered in one of the postgraduate specialty training (certificate) programs. Candidates receive the MSOB degree after completion of both their specialty training and the Master's curriculum, which consists of didactic, seminar, and research practicum courses. The MSOB program is comprised of two tracks designed for outstanding students who are interested in either integrating research or structured evidence-based learning into their post-graduate education.

Depending on the track selected, research activities or a systematic literature review form the core of the MSOB program. Students are expected to participate in a clinical or basic science research project of sufficient scope and intensity or a formally structured and critically evaluated literature review focused on an important oral health-related research or clinical question. A thesis composed of an in-depth review of the relevant literature along with a manuscript reporting the results of the research or a systematic review is required for graduation for the research and evidence-based learning tracks respectively.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Additional Program Options

Penn Dental Medicine also offers a Master of Science in Oral Biology (MSOB) and a Doctor of Science in Dentistry (DScD) that can be earned concurrent with a specialty certificate, preparing students to successfully enter the field of academic dentistry while also becoming skilled clinicians in specialty care. Through the MSOB and DScD programs, students are encouraged to pursue their individual research interests with projects that can span the diverse disciplines and research labs within Penn Dental Medicine's basic and clinical sciences and across the University.

Curriculum

Program Timeline

- Academic Track
  - MSOB and Certificate: 3 years
  - DScD and Certificate: 5.5 years
- Clinical Certificate Track
  - Certificate only: 3 years

For more information: https://www.dental.upenn.edu/admissions-academics/graduate-dental-education-programs/periodontic-program/

All Dental Medicine certificate students share a common core of required courses throughout the first year. In addition, students complete additional courses specific to their particular program.

Program Requirements (Certificate Only)

- Core Graduate Dental Education Courses (Year 1 only)
- Program Specific Courses (Years 1 - 3 Didactic & Clinical)
- Literature Review (Years 1 - 3)
- Case Presentations (Years 1 - 2)
- Program Seminars (Years 1 - 3)
- Clinical Rotations (Years 1 - 3)

The MSOB program is comprised of two tracks designed for outstanding students who are interested in either integrating research or structured evidence-based learning into their post-graduate education.

Periodontics, Certificate

Approved by the American Dental Association, the Periodontics program is designed to provide postdoctoral students with advanced training in periodontics and implantology. Upon successful completion of the program, students are issued a certificate in periodontics and are qualified for examination by the American Board of Periodontology. In addition to the core basic science courses required for all graduate students, the department arranges further basic science courses related to periodontics.

Other features of the program include clinical seminars, planned reading seminars, interschool symposia, and an extensive guest lecture series. The highly respected research environment at Penn Dental Medicine and throughout the University of Pennsylvania provides a valuable opportunity for students applying to post-doctoral programs to combine their specialty training with advanced research and academic opportunities.
Master of Science in Oral Biology

The School of Dental Medicine also offers a Master of Science in Oral Biology (MSOB). Enrollment in the MSOB program is limited to individuals concurrently registered in one of the postgraduate specialty training (certificate) programs. Candidates receive the MSOB degree after completion of both their specialty training and the Master’s curriculum, which consists of didactic, seminar, and research practicum courses. The MSOB program is comprised of two tracks designed for outstanding students who are interested in either integrating research or structured evidence-based learning into their post-graduate education.

Depending on the track selected, research activities or a systematic literature review form the core of the MSOB program. Students are expected to participate in a clinical or basic science research project of sufficient scope and intensity or a formally structured and critically evaluated literature review focused on an important oral health-related research or clinical question. A thesis composed of an in-depth review of the relevant literature along with a manuscript reporting the results of the research or a systematic review is required for graduation for the research and evidence-based learning tracks respectively.

Interdisciplinary training is the hallmark of this program with faculty representatives of the Departments of Endodontics, Periodontics, Maxillofacial Surgery and Restorative Dentistry, continually interacting both in the seminars and clinics. Literature seminars include Periodontics, Occlusion, Restorative, and Esthetic Dentistry. Each student is expected to write a paper on a clinical research activity and submit it for publication.

Courses specific to Prosthodontics are usually presented in seminar format. These include: material sciences, impression and 10 temporization techniques, biomechanics, CT scan technology and CAD/CAM based restorations, adjunctive orthodontics, occlusion, treatment planning, laboratory technology, practice management, articulators and facebows, porcelain laminates, resin-bonded restorations, and esthetics. A course in Implantology, including both the surgical and prosthetic phase, is presented to the students, as they are expected to perform both phases of treatment during their training program. There is ample interaction with laboratory technicians and students are required to perform various laboratory procedures during the completion of their cases. The highly respected research environment at Penn Dental Medicine and throughout the University of Pennsylvania provides a valuable opportunity for students applying to post-doctoral programs to combine their specialty training with advanced research and academic opportunities.

Additional Program Options

Penn Dental Medicine also offers a Master of Science in Oral Biology (MSOB) and a Doctor of Science in Dentistry (DScD) that can be earned concurrent with a specialty certificate, preparing students to successfully enter the field of academic dentistry while also becoming skilled clinicians in specialty care. Through the MSOB and DScD programs, students are encouraged to pursue their individual research interests with projects that can span the diverse disciplines and research labs within Penn Dental Medicine's basic and clinical sciences and across the University.

Prosthodontics, Certificate & Oral Biology, MSOB

The Advanced Specialty Education Program in Prosthodontics, established in 2017, is the latest addition to the Graduate Dental Education Programs at Penn Dental Medicine. The program is designed to prepare graduates to excel in clinical practice, research, and teaching within the specialty of Prosthodontics. The program begins on July 1, and continues through 36 calendar months. In addition to the core basic science courses required for all postgraduate students, the prosthodontic specialty curriculum provides progressive clinical, laboratory and didactic training, closely supervised, at the postgraduate level in fixed, removable, implant and digital prosthodontics. Dental microscopy, maxillofacial prosthodontics, surgical implant planning, placement, and restoration, full digital dentistry workflow, esthetics, and the interrelation of other medical/dental clinical specialties are integrated aspects of the training, culminating in the award of the Certificate in Prosthodontics.

The highly respected research environment at Penn Dental Medicine and throughout the University of Pennsylvania provides a valuable opportunity for students applying to residency programs to combine their specialty training with advanced research and academic opportunities. To that end, a Master of Science in Oral Biology degree will be earned concurrent with the specialty certificate, preparing students to successfully enter the field of academic dentistry, while also becoming skilled clinicians in specialty care. The curriculum is integrated so that both the certificate and the Master of Science degree will be awarded simultaneously upon the completion of requirements. Successful completion of the program will satisfy the formal training requirement for eligibility for the American Board of Prosthodontics certification examination.

Program Timeline

• **Academic Track**
  • MSOB and Certificate: 3 years

For more information: [https://www.dental.upenn.edu/admissions-academics/graduate-dental-education-programs/prosthodontic-program/](https://www.dental.upenn.edu/admissions-academics/graduate-dental-education-programs/prosthodontic-program/)
Curriculum

Program Requirements for Certificate in Prosthodontics

The curriculum has been designed according to the accreditation standards which dictate that at least 60% of the educational experience must be devoted to patient contact and laboratory procedures and at least 30% to didactic instruction and research. Based on that, the program’s curriculum consists of the following components:

Clinical

Residents of the Advanced Specialty Education Program in Prosthodontics at the University of Pennsylvania School of Dental Medicine have the opportunity to see and treat patients with a variety of complex needs in state-of-the-art clinical facilities. The Program’s clinical activities are held in three treatment centers/clinics:

- The Advanced Prosthodontics Clinical Center (APCC) inside Penn Dental Medicine on the third floor Robert Schattner Center – The APCC is the first prosthodontic clinic fully equipped with dental microscopes. Restorative and surgical procedures will be performed supervised by experienced prosthodontic faculty members.
- The Corporal Michael J. Crescenz Philadelphia VA Medical Center (http://www.philadelphia.va.gov/)
- The Hospital of the University of Pennsylvania (https://www.pennmedicine.org/locations/hospital-of-the-university-of-pennsylvania/) (for the Maxillofacial rotation)

The goal of the off-site rotations is to maximize the learning clinical experience by exposing the residents to diverse clinical settings and patients’ pools.

Laboratory

The techniques will include fixed, removable, implant and digital prosthodontics; occlusion; and CAD/CAM techniques. The Penn Dental Medicine CAD/CAM Center facilities and equipment will prepare the students/residents to experience the potentials of digital dentistry in prosthodontics and become competent in digital laboratory workflow.

Teaching in predoctoral courses/clinic (as faculty or lecturer)

The goal of teaching in predoctoral courses is to give the student/resident experience in dental teaching at the undergraduate level. The objective of this experience is to provide exposure to the decision making process where the student/resident is the final authority rather than the student. An additional objective is to allow the student/resident to be exposed to standardized methods of teaching/learning and foster an interest in academics.

Research

The research component of the program is through the Master of Science in Oral Biology (https://www.dental.upenn.edu/academic_programs_admissions/graduate_dental_education_programs/masters_of_science_in_oral_biology/) program.

Didactic

The courses are presented by means of lecture, seminar, literature review, demonstration and laboratory. They are spread-out throughout the three-year long specialty program and they are part of the prosthodontic certificate program, the master’s degree program, and the core curriculum for basic sciences.

SCHOOL OF ENGINEERING AND APPLIED SCIENCE

Penn’s School of Engineering is unlike any other. Traditionally untraditional. Pioneers in interdisciplinary education and research. Theory linked with real-world practice. The path for students who want to shape the future. With the pace of innovation and technological advancement accelerating ever faster, engineers hold the keys to the next generation’s routine wonders.

For more information, visit http://www.seas.upenn.edu/.

Mission and Philosophy

Penn Engineering seeks an optimal balance between the creation and integration of knowledge through scholarly research, entrepreneurship and innovation in translating the products of our research into practice, and the dissemination of knowledge to our students on the Penn campus and beyond. Accordingly, our mission has two facets:

- The creation, integration and dissemination of knowledge in both the fundamentals and their application in order to be an international center of engineering excellence and a catalyst for technological innovation; and
- The design and delivery of an engineering education known for its rigor, breadth and relevance to prepare students to become global leaders in technology-based fields.

The doctoral program is the hallmark of Penn Engineering’s educational programs. Attracting, educating and mentoring outstanding doctoral students are priorities of the school. Penn Engineering doctoral graduates should be educated, trained and mentored for leadership positions, not only in academia, but also in industry and government. The education that we provide our doctoral candidates must embrace the challenges of the 21st century. The barrier to entry in the field of engineering is being lowered, and some technologies are becoming commoditized, even as new disruptive technologies are being developed. The gap between industry research and development and academic research is narrowing. It is important to strike the right balance between training in basic, curiosity-driven research while ensuring that our students are able to innovate and become leaders in today’s quickly evolving disciplines.

Research

Our interdisciplinary research centers and institutes span across all departments in Penn Engineering and foster collaborations across different schools throughout the University. The physical connectivity of engineering buildings and the proximity to each of the other schools enables exciting collaborations with faculty, students and postdocs.

Research at Penn is constantly pushing back the frontiers of science and using innovative methods of thinking to approach problems and find solutions across many fields. If it hasn't yet been solved, chances are someone at Penn Engineering is working to come up with the solution.

Bioengineering, PhD

The first doctorate degree in bioengineering in the nation was awarded at Penn in 1953, and since that time, Penn Bioengineering has been an integral academic program linking faculty from the engineering, medical, and arts and sciences schools on a single centrally-located campus. Penn Bioengineering provides students with a flexible curriculum and a world-class research environment. Students are given the opportunity to work in a collaborative culture that includes multiple generations of leaders in academia, government, and industry. The careful process of matching students with faculty based on their research interests begins with first-year lab rotations, which gives students an opportunity to begin their dissertation research in their first semester.

For more information: http://www.be.seas.upenn.edu/prospective-students/doctoral/index.php (http://www.be.seas.upenn.edu/prospective-students/doctoral/)

View the University’s Academic Requirements for PhD Degrees (http://catalog.upenn.edu/pennbook/academic-rules-phd/).

Required Courses

Students are required to take at least 9 graduate level courses and 2 seminars.
The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

## Sample Plan of Study

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>

</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### First Year

**Fall**
- Biomedical Science Course
- Math or BE Fundamentals Course
- BE 699  

**Spring**
- BE 699  
- Biomedical Science or BE Fundamentals
- BE Fundamentals Course

**Summer**
- Qualification Evaluation

### Second Year

**Fall**
- BE 999  
- Math Elective
- Biomedical Science or BE Fundamentals Course

**Spring**
- BE 699  
- BE 999  

### Third Year and Beyond

- BE Fundamentals Course
- Dissertation Proposal
- Final Exam and Dissertation Defense

1. Selected in consultation with the research advisor.
2. Qualifications Evaluation will be completed during the Summer or Early Fall.
3. The Dissertation Proposal is required by the end of the Fall semester in the Third Year.

## Chemical and Biomolecular Engineering, PhD

The Ph.D. in Chemical and Biomolecular Engineering is primarily a research-oriented degree for students showing exceptional promise for original contributions to the theory and practice of chemical and biomolecular engineering. The degree is a virtual requirement for those planning to teach chemical and biomolecular engineering, as well as for those planning on a research career. Doctoral candidates are expected to show superior capability for independent work and study.

- CBE 640  
- CBE 641  

The year, major, and requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.
The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

The Doctoral Program (Ph.D.) in Computer and Information Science (CIS) welcomes candidates with strong training in any of the disciplines related to modern information processing, with an emphasis on computer science and mathematics. Research and teaching form the essence of our doctoral program. Our curriculum is designed to develop the intellectual skills essential for the rapidly changing character of research and to meet the demands of academe and industry. Students develop their own advanced study focus, working with faculty mentors on topics ranging from the core computer science discipline to diverse scholarly interactions within the School of Engineering and the University.

### Independent Study

Select 4 courses

### Research

Select 2 required courses related to the Dissertation Research area plus 2 in an unrelated area
Faculty Advisor.

plans for ESE PhDs are very individualized and must be approved by their advisor and Graduate Chair. Course requirements for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Electrical and Systems Engineering, PhD

The ESE PhD program is designed to provide sufficient structure to help you build a strong foundation and to have sufficient flexibility to accommodate the direction of your creativity. You will collaborate closely with your faculty advisor on the direction of your research and develop skills needed to perform independent research and teaching in an exciting, intellectual environment. Current concentration areas are circuits and computer engineering, nanodevices and nanosystems, and information and decision systems. ESE research is focused on the development and application of systems theory to the design of physical, biological, and socio-technical artifacts that improve the human condition.

For more information: http://www.ese.upenn.edu/current-students/phd/index.php

View the University's Academic Requirements for PhD Degrees (http://catalog.upenn.edu/pennbook/academic-rules-phd/).

Course Requirements

ESE Doctoral students must complete a required series of 20 course units (CU) of graduate-level courses and research units. A minimum of 10 CUs must be graduate level courses. The remaining 10 CUs are composed of Research Units (ESE 999 Thesis/Dissertation Research) and may include up to two Independent Study (ESE 899 Independent Study for PhD credit) units.

10 CUs of Coursework: these graduate level courses are organized by depth, breadth, critical thinking and elective categories.

The student must discuss with their advisor the courses that would best suit each of these categories for their specific PhD career at Penn. Course plans for ESE PhDs are very individualized and must be approved by their Faculty Advisor.

- **Depth Requirement:** At least five graduate-level courses in areas supporting the research of the Ph.D. student.
- **Breadth Requirement:** At least two graduate-level courses which are distinct from the major research area. The courses may be thematically linked in a 500-600 sequence or may represent two 500 level courses both distinct from the major research area. Independent Studies cannot be used in this category.
- **Critical Thinking Requirement:** At least two graduate-level courses satisfying formal analytical reasoning. Courses that satisfy this requirement include graduate courses in Mathematics, Engineering

Mathematics, Statistics, or Discrete Mathematics and the following courses:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Course Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>PHYS 516</td>
<td>Electromagnetic Phenomena</td>
<td>1</td>
</tr>
<tr>
<td>PHYS 518</td>
<td>Introduction to Condensed Matter Physics</td>
<td>1</td>
</tr>
<tr>
<td>PHYS 529</td>
<td>Modern Optics</td>
<td>2</td>
</tr>
<tr>
<td>PHYS 530</td>
<td>and Modern Optical Physics and Spectroscopy</td>
<td></td>
</tr>
<tr>
<td>PHYS 531</td>
<td>Quantum Mechanics I</td>
<td>1</td>
</tr>
<tr>

<td>1</td>
</tr>
<tr>
<td>PHYS 661</td>
<td>Solid State Theory I</td>
<td>1</td>
</tr>
<tr>
<td>PHYS 662</td>
<td>Solid State Theory II</td>
<td>1</td>
</tr>
</tbody>
</table>

Courses from other departments may be used provided they have a clear focus on mathematical reasoning and techniques and have been pre-approved. Independent studies cannot be used in this category.

- **Electives:** Any remaining courses approved by your faculty advisor may fulfill this category.
- **10 CUs of Research:** Students may use up to two Independent Study units (ESE 899) to fulfill this requirement. Independent Study units are not required. Additional Research Units (999) may be taken in order to maintain a full-time status (see below). Students who have completed their course work will register for 3 CUs of Research Units per semester to maintain full time status.

Materials Science and Engineering, PhD

Materials science is a highly versatile discipline that enables innovations across a wide variety of technologies from cell phones to solar energy to bioimplants to airplanes. Applying insights from the basic sciences, this discipline designs new materials and fabrication methods to continually expand the scope and combination of mechanical, electrical, optical and transport properties available in materials. The newer fields of nanotechnology, biomaterials and quantum materials are providing materials scientists with an entirely new palette of molecular, organic, biological and inorganic building blocks to engineer materials with unique functionalities. The research and academic programs in the MSE Department and the broader MSE Graduate Group at Penn reflect these exciting new developments and our goal is to provide students enrolling in our program with a broad and multidisciplinary training so that they can be part of this materials revolution and contribute to solving the 21st century challenges.

For more information: http://www.mse.seas.upenn.edu/current-students/masters/phd/
View the University's Academic Requirements for PhD Degrees (http://catalog.upenn.edu/pennbook/academic-rules-phd/).

**Required Courses**

Students are required to take at least 10 graduate level courses, including courses outside of their research area to gain a broader understanding of materials science and engineering. Doctoral students with a Master's degree may transfer up to eight credits as course units to the Ph.D. program upon the approval of the Graduate Group Chair. However, a maximum of five transferred courses count toward the 10 courses required for the Ph.D. program.

**Electives**

- Select three approved non-core courses
- Select one Research Credit course
- Select three additional Graduate Level courses

1. Non-core courses may be selected from offerings within MSE and other departments in SEAS, as well as the physical, biological, and mathematical sciences.

2. Courses must be at the 500 level or greater.

The Ph.D. requirements include the completion of a minimum of 10 course units of graduate level coursework beyond the undergraduate program with a grade-point average of at least 3.0, satisfactory performance in the PhD-related exams, presentation of a departmental seminar, completion of the teaching practicum, and the submission and successful defense of an original and significant dissertation. The milestones in the PhD program are noted in the PhD Handbook.

For more information: http://www.me.upenn.edu/prospective-students/doctoral/degree-overview.php

**Second Year**

**Fall**

- Two Graduate Level courses

**Spring**

- Graduate Level course
- Qualifying Exam

**Third Year and Beyond**

- Thesis/Dissertation Research
- Dissertation

1. Non-core courses may be selected from offerings within MSE and other departments in SEAS, as well as the physical, biological, and mathematical sciences.

2. Courses must be at the 500 level or greater.

3. The Qualifying Examination will be held at the end of May after the second semester.

**Mechanical Engineering and Applied Mechanics, PhD**

The PhD program is a dynamic, hands-on and research-focused degree program. Overseen by the Graduate Group in Mechanical Engineering and Applied Mechanics, students interact closely with faculty to pursue a degree tailored to their research interests. Each student's course of study is selected with the help of their advisor and is approved by the Graduate Group Chair. Dissertation research is guided by a faculty research advisor and a small committee of faculty with interests and competence in areas related to the dissertation.

The Ph.D. requirements include the completion of a minimum of 10 course units of graduate level coursework beyond the undergraduate program with a grade-point average of at least 3.0, satisfactory performance in the PhD-related exams, presentation of a departmental seminar, completion of the teaching practicum, and the submission and successful defense of an original and significant dissertation. The milestones in the PhD program are noted in the PhD Handbook.

For more information: http://www.me.upenn.edu/prospective-students/doctoral/degree-overview.php

View the University’s Academic Requirements for PhD Degrees (http://catalog.upenn.edu/pennbook/academic-rules-phd/).

**Required Courses**

The Ph.D. requirements include the completion of a minimum of 10 course units of graduate level coursework.

**MEAM Core Requirements**

- Select three of the following:
  - MEAM 519 Elasticity and Micromechanics of Materials
  - MEAM 530 Continuum Mechanics
  - MEAM 535 Advanced Dynamics
  - MEAM 561 Thermodynamics: Foundations, Energy, Materials
  - MEAM 570 Transport Processes I
  - MEAM 620 Advanced Robotics

**Depth Requirement**

**Breadth Requirement**

**Research-Related Courses**
1. At least one graduate course in MEAM beyond the core requirements is required to fulfill the Depth Requirement.

2. At least one graduate course outside MEAM that is related to the student’s research is required to fulfill the Breadth Requirement (not including ENM 520 Principles and Techniques of Applied Math I or ENM 521 Principles and Techniques of Applied Math II).

3. At least three additional graduate courses that are related to the student’s research are required to fulfill the Research Requirement.

In addition to the ten course units of graduate level work, students will complete:

- Responsible Conduct of Research in Engineering workshop in the first year (EAS 900 Responsible Conduct for Research in Engineering)
- Three semesters of Teaching Practicum (MEAM 895 Teaching Practicum; normally taken in 3rd, 4th and 5th semesters)
- Six semesters of the MEAM Seminar (MEAM 699 MEAM Seminar)

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

---

**Bioengineering, MSE**

The Bioengineering master’s program provides an interdisciplinary education in scientific and engineering fundamentals, with an emphasis on new developments in the field of Bioengineering. The primary goal of the Penn Bioengineering master’s program is to provide students with a customized curriculum designed to prepare them to function creatively and independently in industry, research and development, government or academia.

The master’s degree program provides rigorous and advanced training in engineering with a focus on biological and medical sciences. The flexible curriculum allows students to select their own graduate coursework in math, biomedical sciences, bioengineering, and other science and engineering disciplines. The University of Pennsylvania has a ‘one university’ philosophy, and students may register for courses from any School in the University. Our students typically take courses in the Schools of Engineering, Arts and Sciences, and Medicine.

Bioengineering master’s degree candidates select either the thesis or non-thesis degree track during their first year, in consultation with the Director of Master’s Advising. Students typically complete their degree program in twelve to eighteen months.

The MSE in Bioengineering is a ‘terminal degree,’ meaning that students interested in pursuing a PhD must apply to the program through the PhD graduate admissions process.

For more information: http://www.be.seas.upenn.edu/current-students/masters/degree-requirements.php

---

**Curriculum**

A total of 10 course units are required for the MSE degree.

---

**Course** | **Title** | **Units**
--- | --- | ---
**Required Courses** | 3 | 2
Select 1 Math course | 1
Select 1 Biological Science course | 1
Select 2 Bioengineering graduate courses | 2
Select 3 SEAS and or Biomedical Science electives | 3
Select 1 general elective | 1
**Thesis/Non Requirements**

BE 597 | Master’s Thesis Research (or Science and Engineering electives) | 2

Total Course Units: 10

---

**Thesis Option Requirements**

If you choose to write a thesis, you will enroll in 2 units of thesis research, BE 597 Master’s Thesis Research (http://www.be.seas.upenn.edu/current-students/masters/forms.php).

Be sure to read the Master’s Thesis Guidelines (http://www.be.seas.upenn.edu/current-students/masters/degree-requirements/). In choosing the thesis option, your thesis advisor may provide additional guidance on course selection and will supervise your thesis research. The director of the bioengineering MSE program will help you find a mentor, traditionally selected from the Bioengineering Graduate Group. (http://www.be.seas.upenn.edu/about-research/grad-group.php)

**Non-Thesis Option Requirements**

If you choose not to write a thesis, you will enroll in an additional 2 course units (2 CU) of science and engineering electives (of which 1 may be BE 599 Master’s Independent Study (http://www.be.seas.upenn.edu/current-students/masters/forms.php))

1. The program director helps you develop a program of study for the fall and spring semester of your first year. You can also access a list of suggested graduate courses broken down by discipline. (http://www.be.seas.upenn.edu/current-students/masters/courses.php)
2. The Master’s Student CPG worksheet (http://www.be.seas.upenn.edu/current-students/documents/MastersCPGinstructions_2014_000.pdf) (accessible through Penn In Touch) helps you design an individualized curriculum that leads to you successfully completing the program. Please complete the CPG worksheet and allow at least 48 hours for review and approval. Once your course selection is approved, you will be permitted to register through Penn In Touch (https://medley.isc-seo.upenn.edu/penn_portal/intouch/splash.html).
3. Must be taken by students in both the thesis and non-thesis tracks. All courses must be 500 level or above.
4. Select any BE courses
5. Select from any science or engineering discipline

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.
The Master of Biotechnology Program prepares students, both full- and part-time, for leadership in the critically important and dynamic industries of biotechnology and pharmaceuticals. Strongly interdisciplinary, this innovative professional master’s program draws its faculty and courses from the School of Arts and Sciences and the School of Engineering and Applied Science. Penn’s world-class biomedical research centers, renowned science departments and position at the hub of the largest pharmaceutical/biotechnology corridor in the United States, place this program at the vanguard of biotechnology education. There are three parallel curriculum tracks: molecular biotechnology, pharmaceutical engineering biotechnology, and biomedical technologies. These tracks, in combination with core courses, insure that students get a uniquely broad exposure to the entire field of biotechnology and give students flexibility to tailor their degree to their background, interests, and current career or career goals.

For more information: http://biotech.seas.upenn.edu/

### Master's Program Curriculum

A minimum of 11.0 course units are required to obtain the Masters of Biotechnology degree.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.
Chemical & Biomolecular Engineering, MSE

The Chemical and Biomolecular Engineering master's is for students who wish to prepare themselves for research and development activities by obtaining a more solid foundation in the principles of chemical and biomolecular engineering. At the same time, limited specialization in one of several fields, such as fluid mechanics, thermodynamics, control, design, bioengineering, polymer engineering, heat transfer, or computer applications is possible.

For more information: [http://www.cbe.seas.upenn.edu/prospective-students/masters/index.php](http://www.cbe.seas.upenn.edu/prospective-students/masters/index.php)

Master's Degree Requirements

10 course units are required for the MSE in Chemical and Biomolecular Engineering.¹ ²

Chemical and Biomolecular Engineering Electives

500-level CBE courses 2

Electives

Engineering or Science elective 500-level or above 1

Any elective 500-level or above ³ 3

Independent Study ⁴

Students are free to take other classes (non-technical, interdisciplinary, or below 500-level) to round out their education, but such will not count toward their ten required credits.

Total Course Units 10

¹ Students are required to take ten course units to graduate: (3 core, 1 math, 2 CBE and 4 electives)

² Program Duration

• MSE students must register for at least three course units per semester to maintain full-time status. This is especially important for international students to maintain their visa status.

• Full-time master’s students can complete their degrees in one to two years. In order to complete the degree in one year, it is necessary to take four course units in both the fall and spring semesters, with two course units during the summer session.

³ Students may take up to one course in the Wharton School. Non-technical classes will be allowed at the discretion of the Graduate Chair.

⁴ With permission, students may take up to two Independent Study (599) course units with a letter grade or two written Thesis (597) course units with an S grade, with a CBE faculty member, which are counted as Free electives.

Transferring Courses

Petition for transfer of up to two course units of graduate credit from another graduate school may be made to the Chair of the Graduate Group Committee after one term’s attendance.

GPA Requirement

Grades given in graduate engineering courses are A, B, C, D, F, and I. The I (Incomplete) is a temporary grade which is changed to a letter grade when the course requirements have been completed. A grade average of at least B must be kept to remain in good standing. Students with an undergraduate degree in a field other than chemical engineering receiving a grade of C or below in any required graduate course will be asked to withdraw. It should be emphasized that merely passing all graduate courses does not obligate the University to grant a degree. Successful candidates for the MSE degree must be recommended as such by the Graduate Group Committee.

Focus areas include:

• Biotechnology and Pharma
• Catalysis, Energy, and Environment
• Computational Science and Simulation
• Process Control and Design
• Soft Matter

See Graduate Group Chair or Graduate Coordinator for suggested lists of elective courses in different focus areas.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Computer & Information Science, MSE

The CIS/ MSE program offers scholars the opportunity for advanced study in the scientific foundations of the rapidly growing field of computer science. Applicants to the MSE program should have strong undergraduate training in mathematics and computer science; prior coursework should include such areas as operating systems, programming languages, data structures, discrete mathematics, linear algebra, algorithms and theory; coursework should be similar to the courses taken by computer science undergraduates at the University of Pennsylvania.

Candidates who do not have an undergraduate major in computer science should consider applying to the Master of Computer and Information Technology program (MCIT). Dual degree/transfer information for current students can be accessed here. Submatriculation information for current students can be accessed here.

CIS/MSE students can pursue many areas within their curriculum, including AI, databases, security, programming languages, etc. The CIS Graduate Program prepares our students to be tomorrow’s innovators, leaders, and visionaries. Our MSE graduates have obtained a wide range of positions in industry and continued in doctoral studies. Here’s a sample:
The MSE degree requires completion of ten course units that satisfies all of the following requirements:

<table>
<thead>

<td>7</td>
</tr>
</tbody>
</table>

Advanced study in a specific area of computer science is encouraged. Besides coursework, students may pursue Independent Studies to increase their depth of knowledge in a specific area - a maximum of two independent study credits can be used as electives for the CIS/MSE degree. Students are also encouraged to submit a master's thesis (see below) which may count as two course units of Masters Student Thesis Research, CIS 597.

**FOR more information:** http://www.cis.upenn.edu/prospective-students/graduate/mse.php

**Curriculum**

The MSE degree requires completion of ten course units that satisfies all of the following requirements:

**CIS Courses**

At least seven of the ten course units required for the degree must be CIS courses. These seven courses include four core courses and three CIS elective courses described below.

**Core Courses**

Select four courses from the following:

- CIS 502 Analysis of Algorithms
- CIS 511 Theory of Computation

**Systems Courses**

- CIS 505 Software Systems
- CIS 548 Operating Systems Design and Implementation
- CIS 553 Networked Systems
- CIS 555 Internet and Web Systems

**Machine-Learning Courses**

- CIS 520 Machine Learning
- CIS 519 Introduction to Machine Learning
- CIS 521 Artificial Intelligence

**Other Courses**

- CIS 500 Software Foundations
- CIS 501 Computer Architecture

The four core courses must include 1) at least one systems course, or CIS 501; 2) at least one theory course; and 3) at most one machine-learning course. (The other machine-learning courses can still be taken as electives.)

**CIS Elective Courses**

Any CIS courses numbered from CIS 500 to CIS 700

At most one CIS 700 class can be included

**CIS or Non-CIS Elective Courses**

Each of the three remaining courses must be a CIS course (numbered from CIS 500 to CIS 800) or a course from the list of approved non-CIS courses

**Master's Thesis**

A student wishing to complete a master's thesis may enroll in two course units of CIS 597/Masters Thesis Research, which count as electives towards the ten credits needed for the CIS/MSE degree. The student first chooses a thesis advisor, who must belong to the CIS Graduate Group, proposing a suitable thesis topic. The thesis advisor and student discuss and determine the topic, scope, etc. of the thesis. The advisor and student also determine one other faculty member to be a reader for the thesis. Once the advisor, reader, and topic have been chosen, the student should email Mike Felker (http://www.seas.upenn.edu/~mfelker/) who will provide a Google Doc master's thesis approval form which can be shared with the thesis advisor, reader, and CIS/MSE, for approval. The advisor and reader will evaluate the thesis and make the determination of its suitability as a research document. An oral presentation of the thesis is required. This can take the form of a public presentation open to all CIS faculty and students to attend, or in lieu of that, a conference presentation or poster presentation (decided by the thesis adviser). Once the final thesis document is approved, it is signed by the advisor, reader, and CIS/MSE Program Chair, Dr. Swapneel Sheth (swapneel@cis.upenn.edu). Information re: thesis formatting and submission of the thesis to the SEAS Research and Academic Services Office can be accessed here. (http://www.cis.upenn.edu/current-students/graduate/advising/graduation.php) A copy of the approved version of the thesis should be emailed to the CIS Master's chair.

**Cumulative GPA Requirement**

A minimum GPA of 2.7 for master's students must be maintained in order to be considered in good academic standing. If this minimum is not maintained, academic probation or dismissal from the program will be invoked. A 2.7 final GPA must be achieved to graduate in all situations. (Effective Fall 2007 class). Students are permitted to graduate with an F grade in a course; however, no grade lower than a C- will be counted towards the degree. In particular, a C- grade or better must be achieved in the core courses or they must be retaken.

**Graduation Checklist for MSE Students**

- Watch for email announcements regarding applying for graduation. Information on applying for a degree/graduation can be found here (http://www.cis.upenn.edu/current-students/graduate/advising/graduation.php).
- If needed, master’s thesis instructions should be obtained early on in the writing stage. You should make your advisor aware of the need for a timely reading and signature before graduation.
A total of 10 course units are required for the MCIT degree.

Check that your academic record is cleared of Incompletes, No Grade Reported, and Unsatisfactory Progress, and that your GPA meets the requirements.

Students who graduate in August or December may participate in the following May Commencement; a student graduating in August may participate in the May Commencement prior to graduation - contact Mike Felker (mfelker@cis.upenn.edu) for information.

Make sure that your bursar’s bill is cleared before the end of the final semester.

Students are allowed a maximum of seven years to complete the MSE degree program.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**Computer & Information Technology, MCIT**

The Master of Computer and Information Technology (MCIT) program is a rigorous graduate-level program that gives talented students who have no prior experience in Computer Science an opportunity to embark on a highly successful career in computing and technology, often in coveted interdisciplinary roles or even in purely technical software development positions. The MCIT program stems from a belief that advanced computer science coursework for people with undergraduate degrees in other diverse fields leads to highly successful career paths. Our graduates and their careers today stand as strong proof to this philosophy. Within the realm of academia, pursuing further advanced study in computer science is also an option open to MCIT graduates. Due to the goals and nature of the MCIT program, it is strictly for applicants with limited or no past experience in computer science. Candidates with an undergraduate major in Computer Science or closely related fields, should consider applying to the Master of Science in Engineering (MSE) program instead.

For more information: [http://www.cis.upenn.edu/prospective-students/graduate/mcit.php](http://www.cis.upenn.edu/prospective-students/graduate/mcit.php)

For students interested in learning more about MCIT Online, click here ([https://onlinelearning.seas.upenn.edu/mcit/](https://onlinelearning.seas.upenn.edu/mcit/)).

**Curriculum**

A total of 10 course units are required for the MCIT degree.¹

</tbody>
</table>

**Electives**

Select 4 electives ²

Total Course Units 10

¹ It is expected that full-time MCIT students will take the six required courses during the first two semesters of enrollment and four electives during their second year.

² Offered in the Fall semester only. They are the prerequisites for CIT 594 Data Structures and Software Design, CIT 596 Algorithms and Computation, and CIT 595 Computer Systems Programming, respectively, which are offered in the Spring semester only.

³ Courses can be waived or replaced only with the permission of the instructor. As of Fall 2016, students must pass a proficiency exam in order to waive a course. All MCIT courses must be completed (or waivers obtained) during the first semester that the course is offered during the student’s time in the program. Students may not waive or replace more than two required MCIT courses. Courses that are waived need to be replaced with a suitable alternative.

⁴ Electives

- MCIT students must also complete four graduate-level (500 or higher) electives.
- At least three must be a CIS course; one may be an approved non-CIS course.
- The following courses are recommended for all MCIT students:
  - CIS 550 Database and Information Systems
  - CIS 555 Internet and Web Systems
  - CIS 573 Software Engineering
  - CIS 557 Programming for the Web
- Additional suitable electives include:
  - CIS 502 Analysis of Algorithms
  - CIS 505 Software Systems
  - CIS 519 Introduction to Machine Learning
  - CIS 551 Computer and Network Security
  - CIS 552 Advanced Programming
  - CIS 553 Networked Systems
  - CIS 554 Programming Paradigms
  - CIS 559 Programming and Problem Solving

- Click here ([http://www.cis.upenn.edu/about-academics/courses.php#500](http://www.cis.upenn.edu/about-academics/courses.php#500)) for all CIS graduate course options.

- One course from the list of pre-approved non CIS graduate courses, found here ([http://www.cis.upenn.edu/current-students/graduate/advising/electives-non-cis.php](http://www.cis.upenn.edu/current-students/graduate/advising/electives-non-cis.php)), may be used as an elective. Graduate courses offered in other departments may count as an elective with the prior approval of the MCIT program director; in general, such courses must have a strong technical component in order to be approved.

**Continuing in the Master of Science in Computer & Information Science (CIS/MSE) Program**

MCIT students may apply to continue in the Master of Science in Engineering in Computer & Information (CIS/MSE) program. Students pursuing this dual degree route need to satisfy a minimum GPA requirement, have earned a high grade in at least one CIS elective, and have completed the majority of the MCIT requirements at the time of applying. In addition to the ten courses required for the MCIT program, students continuing in the CIS/MSE program need to take six additional CIS graduate courses for a total of sixteen credits; satisfactory completion results in the awarding of the MCIT and CIS/MSE degrees. Click here ([http://www.cis.upenn.edu/current-students/graduate/](http://www.cis.upenn.edu/current-students/graduate/)) for more information.
The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

## Computer Graphics & Game Technology, MSE

Interactive entertainment and computer-animated visual effects are now part of our mainstream culture. Creating such computer-generated imagery, however, is no trivial task. It requires a delicate blending of art with science by teams of highly skilled professionals, including artists, animators, writers, designers, engineers and software developers working long hours with cutting-edge technology and tools. Currently there are very few interdisciplinary academic programs at four-year research universities adequately preparing students for such positions. The Master of Science in Engineering in Computer Graphics and Game Technology (CGGT) was created specifically to address this need.

For more information: [http://www.cis.upenn.edu/prospective-students/graduate/cggt.php](http://www.cis.upenn.edu/prospective-students/graduate/cggt.php)

Total Course Units: 10

1. 10 course units are required; 9 course units in addition to a one semester design project over a one year period.
2. Students enrolled in the program from outside the University who have taken substantially similar coursework at their undergraduate institutions also can petition the program for approval of course substitutions. Granting of such approvals will be at the Program Director’s discretion, and will be made on a case by case basis.
3. Must be graduate-level technical or creative course in the area of graphics or animation. Approval of the CGGT program director is required.
4. Any graduate level course in the School of Applied Science and Engineering (SEAS). Approval of the CGGT program director is required.
5. Any graduate level course at the University that relates in some way to graphics, animation and/or games. Approval of the CGGT program director is required.
6. Recommended choices include any of the Graphics Elective, Technical Elective or Business and Entrepreneurship courses.
Additional Information

- CGGT Related Course Schedules and Descriptions (http://www.cis.upenn.edu/current-students/graduate/cggt/courses.php)
- Candidates with non CS backgrounds (http://www.cis.upenn.edu/current-students/graduate/cggt/non-cs.php)
- Submatriculants interested in CGGT (http://www.cis.upenn.edu/current-students/graduate/cggt/submatriculation.php)

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Data Science, MSE

Penn’s Master of Science in Engineering (MSE) in Data Science prepares students for a wide range of data-centric careers, whether in technology and engineering, consulting, science, policy-making, or understanding patterns in literature, art or communications.

The Data Science Program can typically be completed in one-and-a-half to two years. It blends leading-edge courses in core topics such as machine learning, big data analytics, and statistics, with a variety of electives and an opportunity to apply these techniques in a domain specialization – a depth area – of choice.

The depth area offers both preparatory coursework and a thesis or practicum in a data science application area. Potential areas of specialization include network science (the Warren Center for Network and Data Science), digital humanities (the Price Lab for Digital Humanities), biomedical science (the Institute for Biomedical Informatics), and public policy (the Penn Wharton Budget Model and the Annenberg Center for Public Policy) – as well as more traditional opportunities in Computer and Information Science and Electrical and Systems Engineering. For students interested in applying data analysis and modeling to other areas within engineering and the physical sciences, Penn offers a specialized and synergistic program in Scientific Computing.

¹ The ten course units for the Data Science degree are divided into three categories: Foundations, Core Requirements and Technical & Depth Area electives. (As long as the prerequisites for the courses are met, students can complete these courses in any sequence)
² In lieu of these courses, students may take Technical Electives and are encouraged (but not required) to take a course from Bucket C in lieu of Probability, and a course from Bucket B in lieu of PL.
³ Students must choose courses from 3 different buckets, one bucket of which can be a 2 semester sequence of thesis/practicum. Two of the courses must represent a depth sequence, which could be the thesis/practicum or (for bucket options B-J) two courses, one of which builds on the other (e.g. is a prerequisite).

1 Students must choose courses from 3 different buckets, one bucket of which can be a 2 semester sequence of thesis/practicum. Two of the courses must represent a depth sequence, which could be the thesis/practicum or (for bucket options B-J) two courses, one of which builds on the other (e.g. is a prerequisite).
2 Suggestions for projects will be provided to students. Students may choose from these suggested projects or may also come up with their own project/advisor ideas. Students will be mentored jointly by the Program Director and by an advisor in the area of the project, and must receive approval by Faculty Director.
3 Generally, any course in which the primary focus is a physical/chemical/biological/mechanical application area that may be studied computationally is allowed.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Electrical Engineering, MSE

The MSE Program in Electrical Engineering gives students the theoretical and technological foundation needed to deal with the new ideas and new applications that are the hallmarks of modern electrical engineering. A major advantage of our MSE program is that it allows students to focus their education according to their interests and goals, from nanotechnology and circuits, to embedded systems or robotics. The MSE Program in Electrical Engineering gives students the theoretical foundation and the interdisciplinary skills needed to deal with the new ideas and new applications that are the hallmarks of modern electroscience. A major advantage of our MSE Program allows you to tailor your education to your own interests and goals, from Electromagnetics and Photonics, sensors and MEMS to VLSI and Nanotechnology.

For more information: http://www.ese.upenn.edu/current-students/masters/index.php (http://www.ese.upenn.edu/current-students/masters/)

Electrical Engineering Degree Requirements

10 course units are required for MSE in Electrical Engineering. 1
The Embedded Systems (EMBS) Graduate program is designed for students who wish to pursue industrial jobs in automotive, aerospace, defense, and consumer electronics, as well as for practicing engineers in the embedded systems industry who want to gain knowledge in state-of-the-art tools and theories. The core topics span embedded control, real-time operating systems, model-based design and verification, as well as implementation of embedded/autonomous systems. Applicants are expected to have a strong academic background in both computer science and electrical engineering. All EMBS candidates must be confident working at both the hardware and software levels of the stack. EMBS is a multi-disciplinary field, but we understand that not all incoming students may have the background required in certain areas. While we do not have prerequisites for admission, it is highly recommended that your undergraduate coursework covered the basics of both C/C++ and Java programming, computer architecture, operating systems, and algorithms. Work experience and practical project experience in the domain of Cyber-Physical Systems is a plus.
Integrated Product Design, MIPD

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Integrated Product Design, MIPD

The MIPD provides students from engineering, design or business backgrounds with expertise in a human-centered design process that leverages their existing skills and enables them to develop new ones.

Designed to ground students in the disciplines of product design while allowing them to tailor their learning experience to meet their individual goals. MIPD students take both integrated courses designed specifically for the degree and single discipline courses that provide more in-depth training in business, design arts or engineering.

1 The curriculum is comprised of 5 core courses and 5 additional courses, one each in design, business and engineering and two additional courses in any of the disciplines.

• Since the program is cross-disciplinary, students who do not have the requisite background in the three areas, engineering, design arts, and business, may be required to enroll in additional foundational courses in these areas.

• The core curriculum is comprised of 5 foundational courses that are required of all students regardless of their undergraduate degree.
Select 5 electives; one each in design, business and engineering and two additional courses in any of the disciplines from the preapproved list in the handbook. For more information about design, engineering and business courses see the Course Directory (https://ipd.me.upenn.edu/courses/).

For guidance on the policies and procedures that govern the program see the IPD Guidelines (https://ipd.me.upenn.edu/ipd-guidelines/).

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**Integrated Product Design, MSE**

The MSE:IPD teaches students design processes to generate creative ideas, rapid prototyping techniques and how to creatively resolve tensions between design, engineering and business criteria.

The courses provide students with the opportunity to build greater skills in engineering disciplines related to product design while helping them contextualize those skills as a part of the product design process. MSE:IPD students master methods for prototyping, fabrication, manufacturing, and computer-aided design. They complement their strength in engineering with new skills in business and design arts.

Materials Science and Engineering, MSE

The master's program in Materials Science and Engineering prepares students to be leaders, innovators, and visionaries in the materials revolution that is being driven by discoveries that cross the boundaries of physics, chemistry, engineering and biology, such as in the growing fields of nanobioscience, nanophotonics and optoelectronics.

Penn is one of the first universities to establish a center for materials research. By remaining at the forefront of technology innovations, this center, the Laboratory for Research on the Structure of Matter (LRSM), has grown to be one of the largest in the nation. We are opening up new fields in materials science, preparing tomorrow's leaders, and putting our knowledge to practical use in today's high-tech society. Our multidisciplinary program allows you to tailor your education to your own professional and career goals, from ceramics, polymers, and metals to non-structured and soft materials. Our graduates can be found in non-thesis or Thesis option:

Students interested in pursuing the non-thesis option with independent study or the thesis option are encouraged to consult with their academic program regarding final certifications and requirements for graduation.

Total Course Units: 10

Non-thesis or Thesis option:

- Non-thesis course-based option: Students successfully complete 10 course units at the 500 or higher level. All must carry a letter grade (A, B, C or D).
- Students must secure written approval for all course selections from the Masters Program Advisor. Furthermore, all changes to these course selections must be approved in writing by the Masters Program Advisor. Students wishing to take courses not listed on the provided list are required to receive written approval from the Masters Program Advisor. All non-elective courses should have technical/scientific content relevant to the student's M.S.E. degree program.
- 5 MSE courses (500 level or higher) requiring a letter grade are compulsory. Up to 7 MSE courses are highly recommended for obtaining a solid background in materials science. 3 MSE courses are compulsory in the first semester of study.
- Non-thesis option with independent study: Students take 8 courses credits at the 500 or higher level earning letter grades and complete 2 Masters Independent Study (MSE 599) credits. Students receive a letter grade (A, B, C, D or F) in MSE 599. Independent Study requires a faculty advisor; see detail below about selecting an advisor.
- Students interested in pursuing the non-thesis option with independent study or the thesis option are encouraged to attend Faculty Research Presentations in the late August and...
are at the forefront in preparing students for leadership careers by
the Master’s Program Advisor to discuss their research interests.

- **Thesis option:** Students take 7 course units at the 500 or higher level earning letter grades and complete 3 course units of research with a faculty member by registering for 2wo research credits (MSE 597 Masters Thesis Research) and 1 Independent Study (MSE 599). Students receive a letter grade (A, B, C, D or F) in both MSE 597 and MSE 599. Students must have their thesis approved by their thesis advisor and the Graduate Group Chair, as well as submit their thesis to the Graduate Group Coordinator. The thesis option requires a faculty advisor; see details below about selecting an advisor.

1 A maximum of two free electives (500 level or higher) are permitted. Free electives can be selected from across the university, including SEAS, SAS and Wharton. Also, free electives are not permitted for students pursuing a dual degree at Penn.

2 During the first semester, Masters degree students are not permitted to take Independent Study and are required to enroll in only MSE courses.

3 All Masters degree students must maintain a GPA of 2.7 or higher to be in good standing and for graduation. Students are required to attend weekly MSE seminars organized by the department as part of their education and exposure to latest scientific advances.

4 Transfer of credits:
   - A maximum of two graduate-level course units may be transferred from another school to apply toward the M.S.E. degree if approved by the Masters Program Advisor. These two courses cannot have been used in the fulfillment of an undergraduate degree.
   - Sub-matriculants may count up to three 500 or higher level courses for both degrees.

5 A maximum of two SEAS courses relevant to materials science are permitted. Note that only one Engineering Entrepreneurship course will count as a MSE related SEAS-course. A second entrepreneurship course will be counted as a free elective in addition.

**Master’s Scholars Program**

A selected number of awards designated “Master’s Scholars” will be made each year to deserving students to promote and enhance their research experience at Penn. The awards will enable highly motivated students (with a GPA of 3.25 or higher) to pursue a well-designed research project with a faculty member for one or two semesters and obtain valuable training in experimental and computational research. The award carries no financial benefit to the students; award funds are used solely to defray the costs of facility user fees, chemicals, computer resources, etc. Research proposals submitted by students will be evaluated and awards will be made on a competitive basis. A call for proposals occurs near the start of the fall and spring semesters.

A selected number of awards designated “Master’s Scholars” will be made each year to deserving students to promote and enhance their research experience at Penn. The awards will enable highly motivated students (with a GPA of 3.25 or higher) to pursue a well-designed research project with a faculty member for one or two semesters and obtain valuable training in experimental and computational research. **Mechanical Engineering & Applied Mechanics, MSE**

The master's in Mechanical Engineering and Applied Mechanics (MEAM) is innovative, unique, and nationally recognized for its excellence. We are at the forefront in preparing students for leadership careers by providing opportunities to work in emerging and interdisciplinary areas that are fueling exciting advances in technology. The program can be tailored and customized to meet individual needs under the guidance and approval of an academic advisor. Students can choose to concentrate in *Mechatronic and Robotic Systems, *Micro/Nano Systems, *Heat Transfer, Fluid Mechanics, and Energy, *Mechanics of Materials and *Design and Manufacturing.

For more information: http://www.me.upenn.edu/prospective-students/masters/masters-degrees.php

**Curriculum**

10 course units are required for the MSE MEAM degree.

1 There is one required course for each concentration area. In addition to the one required course for each concentration area, two additional courses must be selected from the preapproved core requirement list for the student’s chosen concentration (Appendix A of the handbook). The remaining two MEAM courses can be any MEAM graduate courses selected by the student in consultation with their advisor.

2 A complete list of pre-approved electives can be found in the MEAM MSE Student Handbook. Approval is required if a student wishes to take a graduate course not listed in the handbook.

Nanotechnology, MSE

Nanotechnology, the application of the science of the very small, is an exciting field that is enabling solutions in alternative energy, electronic devices, medical diagnostics and therapeutics. Penn’s Nanotechnology Master’s degree can prepare students for leadership roles, both technical and managerial, in emerging high tech industries as well as in traditional industries that exploit nanoscale phenomena.

Science or Technology-Relevant Electives

Select 3 pre-approved Science or Technology-Relevant electives 3

Total Course Units 10

1. Students must complete 10 course units at the graduate level (500+).
2. Students must attend and submit reports on four technical seminars (two seminars per year for full-time students). Students are expected to present on seminars they attended during their first year to the new cohort of Nano students the following year.
3. Science or Technology-Relevant Electives:
   - These courses may be chosen from: any SEAS course (including engineering entrepreneurship, technology policy, NANO 597 Master’s Thesis Research, special topics, and/or NANO 599 Master’s Independent Study, as well as technology-relevant courses from other Penn departments (typically physics, chemistry, math, biology, etc.).
   - The courses must have significant technical and scientific content and relevance to the student’s program.
   - Approval must be obtained from the NANO program prior to enrollment in the course.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Robotics, MSE

The master’s degree in Robotics (ROBO) is a multi-disciplinary program jointly sponsored by the Departments of Computer and Information Science, Electrical and Systems Engineering, and Mechanical Engineering and Applied Mechanics.

Housed and administered by the GRASP Lab, one of the top robotics research centers in the world, Penn’s ROBO master’s program educates students in the science and technology of robotics, vision, perception, control, automation, and machine learning. Our students hail from a variety of engineering, scientific, and mathematical backgrounds, united by a passion for robots and a desire to advance robotic technologies to benefit humanity. Our program provides an ideal foundation for jobs in a variety of industries including robotics, aerospace, automotive, industrial automation and defense; it also provides a solid basis for further graduate studies.

Technical Electives
Select 5 Technical electives

General Elective
Select 2 General electives

Total Course Units

1 1 course from 3 out of the 4 areas (Artificial Intelligence; Robot Design & Analysis; Control; Perception); 3 courses total required.
2 5 courses are required from the approved Technical Elective list.
3 2 graduate level courses are required; choose from:
   • MATH, CIS, ESE, MCIT, or MEAM courses
   • Foundational Course areas
   • Technical Elective List
   • Certain courses will only be considered general electives (such as EAS 545 Engineering Entrepreneurship I, EAS 546 Engineering Entrepreneurship II).
   • A full list may be found here (https://www.grasp.upenn.edu/academics/masters/current/).
   • Courses from other disciplines with pre-approval of the Program Director.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Scientific Computing, MSE
The MSE in Scientific Computing (SCMP) program at Penn provides multifaceted education in the fundamentals and applications of computational science. This education program provides a rigorous computational foundation for applications to a broad range of scientific disciplines. An education in SCMP combines a comprehensive set of core courses centered on numerical methods, algorithm development for high performance computational platforms, and the analysis of large data, and offers flexibility to specialize in different computational science application areas. Students may elect to pursue a thesis in computationally-oriented research within the School of Engineering and Applied Science.

We welcome applications from candidates who have a strong background in physical or theoretical sciences, engineering, math, or computer science. Some experience with computer programming is also strongly recommended.

The MSE Program in Systems Engineering (SE) is best positioned to give students a broad foundation across data science, systems modeling, and optimization and decision-making with applications in societal systems (energy, transportation, heath operations).

The MSE Program in Systems Engineering (SE), grounded in the intersection of electrical and systems engineering, is best positioned to give students the in-depth theoretical foundation and interdisciplinary skills required by the growing complexity of technological systems. Our flexible curriculum allows you to tailor your studies to your personal interests and goals, from signal processing, optimization, simulation, control and cybernetics to complex adaptive systems, stochastic processes and decision sciences.

---

1 Curriculum
• Students must complete ten (10) course units at the graduate level (500+)
• Students must be registered in the 500-level section in a cross-listed course. Any cross-listed section at the 400-level or below is ineligible towards the degree.

2 Application Area Electives:
• Select 2 course units of approved electives from graduate courses offered at Penn in SEAS, SAS, Medicine, Law, Wharton MBA, Social Policy, and Education.
• These must have technical/scientific content and relevance to the student’s program.
• Approval must be obtained from the ESE department prior to enrollment in the course.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.
SCHOOL OF NURSING

Penn Nursing offers a number of resources and experiences not found at most other schools, including a state-of-the-art simulation lab with mannequins that respond as patients would, classrooms with the latest hospital-based electronic medical records (EMR) technology, and clinical experiences in The Children’s Hospital of Philadelphia and the Hospital of the University of Pennsylvania, two of the nation’s best hospitals. Penn Nursing is a premier academic and research institution renowned for advancing the frontiers of nursing science and patient care. Our students learn from the thought leaders in nursing research, education, and practice who ensure Penn Nursing remain one of the top schools of nursing in the world. At Penn Nursing, students become part of the next generation of healthcare leaders, prepared to care for patients, to conduct landmark research, and to make new strides in healthcare management and health policy.

Learn more about our history: http://www.nursing.upenn.edu/about/history/

Learn more about our school leadership: http://www.nursing.upenn.edu/about/our-leadership/

Mission

The mission of the University of Pennsylvania School of Nursing is to make a significant impact on health by advancing science, promoting equity, demonstrating practice excellence, and preparing leaders in the discipline of nursing.

Philosophy

The mission of the School of Nursing is aimed at meeting the health needs of society in a global and multicultural world. To this end, scholarship, research, education, and practice are integrated to create a culture of inquiry that values intellectual curiosity and diversity, and where faculty, clinicians, staff, and students thrive and learn from one another.

Scholarship and Research

We believe that integrating the arts and sciences is the basis for nursing knowledge and the framework for nursing practice and scholarship. Nursing knowledge encompasses empirical, philosophical, historical, ethical, and personal ways of knowing and is fundamental to the advancement of professional practice. Scholarship encompasses more than research, but also the integration of research into practice and health policy formation and the advancement and dissemination of nursing knowledge. Research is integral in every educational program and strengthened by participating in and contributing to the rich scholarly environment of the University and across national and international health policy organizations.

Nursing is scientifically based and carried out autonomously, as well as interdependently. The focus is development, dissemination, and utilization of knowledge about nursing actions that promote positive changes in patients, systems of care, and the larger society. Nurses collaborate with individuals, families, groups, communities, and other professions to achieve health and well-being for all people.

The School of Nursing is responsive to numerous influences that shape health care, including evolving models of care, consumer advocacy, demographic changes, and advances in science and technology. The faculty are committed to a scholarly agenda that pushes the boundaries of nursing science, in turn influencing education and shaping policy and practice.

Education

Education at the University of Pennsylvania facilitates the intellectual, personal and social development of students as they identify and attain academic and professional goals. Our educational environment fosters independence, ethical behavior, creative and critical thinking, increased breadth of knowledge, and sensitive interactions concerning cultures and viewpoints.

Programs, from baccalaureate to post-doctoral and lifelong learning, are enriched by the varied needs and perspectives of a culturally diverse population, as well as pressing needs for nursing leaders in a rapidly changing world. These leaders will be the clinical experts, health policy shapers, and nursing scholars of the future.

The baccalaureate program, including traditional and second degree students, focuses on professional nursing practice across the continuum of health care, with particular emphasis on vulnerable populations. The curriculum is dynamic and includes leadership skills, interdisciplinary collaboration, and content and clinical experiences that emphasize evidence-based practice. The curriculum also reflects changes in science and technology.

The Master’s programs focus on advanced practice nursing and administration, with an emphasis on specialty and subspecialty practice in concert with changing societal needs. Graduate nurses are prepared for advanced practice that creatively combines knowledge and skills in critical thinking and expert interventions across the lifespan. Special attention is given to clinical decision-making and management skills, as well as methods of evaluation of quality and cost of care.

Pre- and post-doctoral education is dedicated to advancing the discipline of nursing through research. The goal is to equip students with a foundation in nursing and a field of concentration to make substantive contributions to scholarship. Strong faculty mentorship is integral to the development of a critical cadre of future researchers, academicians, and leaders, nationally and internationally.

Practice

The primary goal of nursing practice is to optimize care and outcomes for patients and their family members. The practice of nursing is the foundation for informing educational pedagogies and for the generation of discipline-specific research. Practice is defined as the diverse and varied construction, application, and evaluation of knowledge and the action within the discipline of nursing, particularly for the recipients of nursing care. We believe it is the responsibility of academic nursing to serve as the fulcrum of modeling the intentional integration of education, research, and clinical care to improve the delivery of quality health services.

Nursing is an evidence-based, caring profession that improves the health and quality of life for individuals, families, and communities throughout the world. Nursing possesses a unique body of knowledge that guides its practice in both autonomous and collaborative health care settings. Penn Nursing serves as the model for nurses who care for society’s needs in a global and multicultural context. Thus at Penn, we seek to promote health and alleviate suffering in every part of the world by preparing nurses to be responsive to the health-related issues and preferences, values, and needs of all societies. Our goals are to improve and maintain optimal health, prevent disease, enhance the quality of recovery from illness,
and support patients and families to cope with acute and chronic health problems. Penn Nursing serves as a model to direct the advancement of the translation of evidence-based knowledge toward culturally competent models of care.

Revised Mission and Philosophy approved by the School of Nursing Faculty Senate 2/3/03.

Revised Mission and Philosophy approved by the School of Nursing Faculty Senate 5/7/12.

Revised Practice statement approved by the School of Nursing Faculty Senate 4/8/13.

Revised Mission approved by the School of Nursing Faculty Senate 10/5/15.

The Office of Nursing Research (http://nursing.livewhale.net/research/), along with our four research centers (http://nursing.livewhale.net/research/research-centers/) and partnerships across Penn, provide students with resources and support that are virtually unparalleled in our field. Students, from undergraduates to doctoral students, have numerous opportunities to engage in research and work alongside some of the most recognized researchers in their fields.

For more information, visit: https://www.nursing.upenn.edu/research/.

Accreditation is a hallmark of educational quality, and we are proud to share our credentials on our website: http://www.nursing.upenn.edu/about/accreditation/.

Penn Nursing students benefit from a dual advising structure. All students are assigned a faculty advisor and have access to the professional staff advisors in the Office of Student Affairs.

For more information, visit: http://www.nursing.upenn.edu/student-services/advising/accelerated/.

Nursing, PhD

The mission of the doctoral program of the University of Pennsylvania School of Nursing is to develop scholars of the discipline of Nursing capable of building a program of research that advances nursing knowledge and contributes to the health of individuals, families, and communities.

Graduates of this program will serve as leaders at the forefront of nursing research and its translation into practice locally, nationally, and globally. These nurse scientists will create new knowledge and be informed by a nursing perspective to enhance health and to develop and test innovations to improve outcomes of healthcare, with a priority on populations at greatest need.

The foundation of program success is the substantive match between the student and the faculty advisor. The educational experience focuses on the processes of exploring and examining substantive bodies of knowledge. The researcher’s development is fostered through exposure to an array of philosophic and methodological aspects of nursing and related basic and applied disciplines.

Our full-time PhD students are fully funded for the first three years, which includes a living stipend and covers tuition, fees, and health insurance.

For more information: https://www.nursing.upenn.edu/academics/doctor-of-philosophy-in-nursing-phd/

View the University’s Academic Requirements for PhD Degrees (http://catalog.upenn.edu/pennbook/academic-rules-phd/).
Curriculum

To earn the PhD, students must complete the 14 course units (CUs) in addition to satisfying several non-credit milestones.

The below requirements apply only to PhD students entering Fall 2018 and later. Students who entered in Fall 2017 and earlier should refer to the PhD Student Handbook (http://www.nursing.upenn.edu/student-services/resources/handbooks-forms-policies/phd-handbook/degree-requirements/) for a complete listing of degree requirements.

Most students complete their coursework within three years and then will be on dissertation status until the final dissertation defense.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Sample Plan of Study

Students will take 3 - 4 courses per semester for the first two to three years before moving into the dissertation phase of the program.

The Hillman Scholars Program in Nursing Innovation (http://www.nursing.upenn.edu/academics/accelerated-options/bsn-phd-hillman-scholars/) is an integrated BSN-to-PhD program designed to educate a new cadre of nurse scientists and leaders to develop innovative solutions in healthcare. The program is available for current Penn Nursing undergraduate students, as well as students applying to the Accelerated Second Degree BSN program.

Adult Gerontology Acute Care Nurse Practitioner, MSN

We prepare acute care nurse practitioners for the management of patients with specialized health care needs. You’ll develop expertise in physical assessment, complex clinical decision making, diagnostic and interventional procedures, prescriptive knowledge, and patient care management across the continuum of acute care services, from critical care to discharge to the patient’s transition back into their community.

You’ll have the opportunity to focus in general surgery, internal medicine, cardiology, neurosurgery, oncology, trauma, and many other specialty areas as well as concentrate your work on populations of special interest, such as the underserved or minority health.

And our large network of highly skilled clinicians train you using various technologies—like immersive simulation—to give you the chance to practice newly acquired skills. The program follows a curriculum that includes theoretical content and mentored clinical experience that emphasizes research and holistic patient care within a collaborative team approach. For your practicum, we do the legwork and match you with a preceptor, including acute care nurse practitioners, physicians, or collaborative teams.

You’ll be able to choose from a variety of clinical concentrations, such as cardiology, trauma, general surgery, transplant, nephrology, and internal medicine, and select a minor from a number of relevant areas, such as oncology, palliative care, forensics, global health, and more.

Curriculum

A total of 12 course units are required. Plans of study are available for full time (https://www.nursing.upenn.edu/adult-gerontology/acute-care-nurse-practitioner/plans-of-study/full-time-summer-start/) students, and two year (https://www.nursing.upenn.edu/adult-gerontology/adult-gerontology-acute-care-nurse-practitioner/plans-of-study/part-time-2-years-summer-start/) and three year (https://www.nursing.upenn.edu/adult-gerontology/adult-gerontology-acute-care-nurse-practitioner/plans-of-study/part-time-3-years/) plans of study are available for part time students.

provide every day to their patients and decide if the majority of problems acute care prepared. It means that each NP has to evaluate the care they This does not mean that all NPs working in inpatient settings have to be educated and certified as an acute care nurse practitioner, then this NP should work with acutely ill, critically ill, or chronically complex patients. In many cases, Adult-Gerontology Primary Care Nurse Practitioners follow their patients across care settings, acting as a guardian to protect care quality and patient safety during transitions. These nurses are the backbone of our profession, caring for patients in sickness and in health, and they are in demand today more than ever. We base the program around five core courses, and supplement with three theory and four clinical courses. The clinical courses include classroom case studies and clinical preceptorships that focus on physical assessment and pathophysiology, health maintenance, and the management of common acute and chronic health problems.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

---

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

---

Our program is designed for Primary-Care prepared Nurse Practitioners who work with acutely-ill patients.

We know that many Nurse Practitioners who are primary care prepared and working with acutely-ill patients are interested in becoming certified in acute care. In response to this, and in compliance with the APRN Consensus Model, Penn Nursing created a streamlined post-master's Adult Gerontology Acute Care NP program. Nurse Practitioners who work with the acutely ill every day for a minimum of one year as a Nurse Practitioner are eligible to apply (https://www.applyweb.com/upenng/).

Please visit our Post-Graduate APRN Certificate page for application requirements specific to this program.

The APRN Consensus Model, published in 2008 by the American Association of Colleges of Nursing calls for improved congruence between licensure, accreditation, certification and educational requirements between agencies and State Boards of Nursing. This means that if an NP graduated from a primary care NP program, that they should work with patients who have primary care issues. Likewise, if an NP is educated and certified as an acute care nurse practitioner, then this NP should work with acutely ill, critically ill, or chronically complex patients. This does not mean that all NPs working in inpatient settings have to be acute care prepared. It means that each NP has to evaluate the care they provide every day to their patients and decide if the majority of problems managed are primary care or acute care focused.

*Please be aware that we will need an affiliation agreement with your site of employment where you will be doing your clinical hours. Before applying, we recommend that you confirm with your contracts office/nursing education department/practice manager that they will be willing to sign an affiliation agreement/contract with University of Pennsylvania School of Nursing.

Adult Gerontology Primary Care Nurse Practitioner, MSN

We’ll train you to deliver care that meets patients' needs, regardless of setting. You’ll be comfortable working in community health clinics, private medical practices, specialty clinics, Veteran’s Administration facilities, home care, assisted living facilities, long-term care settings, rehabilitation centers, and urgent care.

Family Nurse Practitioner, MSN

We emphasize hands-on, real life care in all aspects of the program. All of our faculty members are currently in practice, an important cornerstone of our program, giving you indispensable exposure to the kind of work you’ll step into after graduation. You’ll also have opportunities to do clinical work here and abroad, interacting with patients speaking languages other than English and gaining experience with culturally diverse populations. Your coursework will include four core courses (graduate research and sciences), one elective, and nine theory/clinical courses. The clinical courses include classroom work, lab sessions, and clinical preceptorships focused on physical assessment and pathophysiology, health maintenance, and the management of acute and chronic health problems.

For more information: https://www.nursing.upenn.edu/family/

Curriculum

A total of 14 course units are required. We also provide a plan of study for full time (https://www.nursing.upenn.edu/family/plans-of-study/full-time/) students, and two year (https://www.nursing.upenn.edu/family/plans-of-study/part-time-2-year/) and three year (https://www.nursing.upenn.edu/family/plans-of-study/part-time-3-year/) plans of study for part time students.

Health Leadership, MSN

Our Health Leadership Master’s program prepares professional nurses for leadership roles in many healthcare fields such as global and public health, nursing education, consulting, health policy and risk management, and quality improvement.

You’ll have unparalleled freedom to design the focus of your studies to best match your interests and career goals. We emphasize research and systems thinking and provide you with the chance to develop leadership skills. Five core leadership courses are requisite and the remainder of your course of study is designed with program faculty to inform your career interests (three are nursing leadership electives and four courses may be taken anywhere within the University).

For more information: https://www.nursing.upenn.edu/health-leadership/

Curriculum

A total of 12 course units are required.

Due to the number of electives in the program, students can earn multiple minors or can pursue dual degrees. Dual degrees are offered with the Public Health Program (MSN/MPH), with the Bioethics Department (MSN/MBE), and with the Law School (MSN/ML). Minors are offered in Quality Improvement and Safety Processes in Healthcare, Organizational Dynamics, and in Transformative Nursing Education.
A total of 12 course units are required.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

### Neonatal Nurse Practitioner, MSN

We prepare you to care for newborn infants who arrive with a variety of medical needs such as prematurity, birth defects, substance abuse problems, infections, and a variety of chronic conditions. While technically the neonatal period describes the first month after birth, often times these babies will be sick for much longer, requiring lengthy stretches of care to address the challenges laid upon them at delivery. You'll learn to care for infants until discharge and beyond, working with family and support groups to ensure the best quality of life for your patients and families.

We also collaborate with faculty and students in other pediatric graduate programs, increasing the breadth of your exposure to the field and providing you experiences available nowhere else.

For more information: https://www.nursing.upenn.edu/neonatal/

### Post-Masters Certification

Penn's MSN programs include a Post-Master's Certificate option. These programs can be pursued at any time post-degree. Current Master's students are also welcome to add complementary minors to their studies: https://catalog.upenn.edu/graduate/nursing/programs/.

The Post-Master's Certificate curriculum is determined after a gap analysis is made by the Program Director. Prospective students should reach out to the Admissions Office for more information about post-masters and certificate options and to request a review of the student's previous MSN transcript. The length of each program depends on the course units required and course offerings per semester. For more information: https://www.nursing.upenn.edu/admissions/msn-and-post-masters/post-masters/.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

### Nurse-Midwifery, MSN

We prepare you for a midwifery practice focused on providing family-centered, comprehensive care to essentially healthy women and their families. We believe that the autonomous practice of nurse practitioners/midwives is based on the health promotion model and interdependent practice—a system that emphasizes the unique aspects each health professional brings to the care of a client. To develop well-rounded midwives, we offer courses ranging from advanced physiology and pathophysiology to the use of ultrasonography during pregnancy. We also offer students the opportunity to take courses focused on public policy, complementary therapies, and fetal evaluation. You'll
become a highly competent clinician, and an effective and a culturally sensitive patient advocate while learning to manage a team within the varied systems of healthcare delivery.

Your clinical work can be completed in hospitals, birthing centers, and in home birth experiences, as well as abroad through international study opportunities.

Our graduates go on to become home-birth practitioners, birth center practice directors, directors of midwifery educational programs, and directors of CNM services in large teaching and small community hospitals.

The midwifery program at the University of Pennsylvania is fully accredited by the Accreditation Commission for Midwifery Education (ACME), 8403 Colesville Road, Suite 1550, Silver Spring, MD 20910-6374; for information about accreditation please contact ACME directly. Tel: 240-485-1802, acme@acnm.org, www.midwife.org/acme (http://www.midwife.org/acme/).

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Nursing & Health Care Administration, MSN

Drawing on the combined strengths of the School of Nursing, The Wharton School, and the Organizational Dynamics Program, this program gives you unparalleled opportunities to learn from the very best in the field.

We know our students have wide ranging interests regarding the kind of administrative or leadership fields they'd like to pursue, so we tailor your educational plan to best suit your career goals. Generally, you'll focus in these areas: operations management, healthcare consulting, quality improvement, or project management. In addition to coursework in leadership development, research, and systems thinking, we also cover financial management, strategic planning, quality improvement and patient safety processes, negotiations, informatics, and human resources management, all with an emphasis on administration in diverse healthcare settings.

For more information: https://www.nursing.upenn.edu/nursing-and-health-care-administration/

Curriculum

A total of 14.5 course units are required. This program culminates with an administrative practicum in which students work with a healthcare leader in an area of their choosing.

We also provide a plan of study for full time (https://www.nursing.upenn.edu/nursing-and-health-care-administration/plans-of-study/full-time-fall-start/) students; part-time study is also possible and plans of study can be developed with faculty advisors.

Pediatric Acute Care Nurse Practitioner: Acute/Chronic, MSN

Graduates of this program are prepared to provide collaborative, comprehensive care to children and adolescents with a variety of complex critical, acute and chronic conditions, and emerge as clinical and professional leaders who are expert in physical assessment and clinical decision making, managing multifaceted disorders, culturally sensitive family focused care, community engagement, transitional care and integrating health care policy. Our approach, across all health care settings, is based on a thorough assessment and integration of the social determinants of health.

We uniquely offer three concentrations of study all housed within the Pediatric Acute Care Program. This allows for students to approach their Graduate level education with a specific clinical focus while still receiving a broad based education in Pediatric Acute Care. Our graduates from all concentrations are able to pursue career options in any area of Pediatric Acute Care. Our Acute and Chronic Care concentration is focused on the care of children with acute and chronic conditions. It is distinctive as it offers an emphasis and commitment to following children and families throughout chronic childhood illness. We structure the program and clinical experiences to foster an understanding and management of families in the continuum of illness. Clinical experiences are located in diverse settings such as pediatric acute care inpatient units, step-down units, emergency departments, community sites and ambulatory, rehabilitative, and specialty-based clinics.

For more information: https://www.nursing.upenn.edu/pediatric/pediatric-acute-care-nurse-practitioner/

Post-Masters Certification

Penn's MSN programs include a Post-Master's Certificate option. These programs can be pursued at any time post-degree. Current Master's students are also welcome to add complementary minors to their studies: https://catalog.upenn.edu/graduate/nursing/programs/Post-Masters-Certificate/.

The Post-Master's Certificate curriculum is determined after a gap analysis is made by the Program Director. Prospective students should reach out to the Admissions Office for more information about post-masters and certificate options and to request a review of the student's previous MSN transcript. The length of each program depends on the course units required and course offerings per semester. For more information: https://www.nursing.upenn.edu/admissions/msn-and-post-masters/post-masters/.
The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Pediatric Acute Care Nurse Practitioner: Critical Care, MSN

Graduates of this program are prepared to provide collaborative, comprehensive care to children and adolescents with a variety of complex critical, acute and chronic conditions, and emerge as clinical and professional leaders who are expert in physical assessment and clinical decision making, managing multifaceted disorders, culturally sensitive family focused care, community engagement, transitional care and integrating health care policy. Our approach, across all health care settings, is based on a thorough assessment and integration of the social determinants of health.

We uniquely offer three concentrations of study all housed within the Pediatric Acute Care Program. This allows for students to approach their Graduate level education with a specific clinical focus while still receiving a broad based education in Pediatric Acute Care. Our graduates from all concentrations are able to pursue career options in any area of Pediatric Acute Care.

Our Critical Care concentration will prepare you for advanced practice with critically ill children in pediatric critical care units and cardiac intensive care units. It is the first of its kind. We are currently the only program in the country which is specifically preparing students in pediatric critical care. We structure the program and clinical experiences to develop an in depth understanding of critical care physiology and management including invasive procedures. We focus on the spectrum of chronic and acute critical illness as it relates to children and their families. Clinical experiences are located in Pediatric Intensive Care and Cardiac Intensive Care Units.

Post-Masters Certification

Penn’s MSN programs include a Post-Master’s Certificate option. These programs can be pursued at any time post-degree. Current Master’s students are also welcome to add complementary minors to their studies: https://catalog.upenn.edu/graduate/nursing/programs/

The Post-Master’s Certificate curriculum is determined after a gap analysis is made by the Program Director. Prospective students should reach out to the Admissions Office for more information about post-masters and certificate options and to request a review of the student’s previous MSN transcript. The length of each program depends on the course units required and course offerings per semester. For more information: https://www.nursing.upenn.edu/admissions/msn-and-post-masters/post-masters/.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Pediatric Acute Care Nurse Practitioner: Oncology, MSN

Graduates of this program are prepared to provide collaborative, comprehensive care to children and adolescents with a variety of complex critical, acute and chronic conditions, and emerge as clinical and professional leaders who are expert in physical assessment and clinical decision making, managing multifaceted disorders, culturally sensitive family focused care, community engagement, transitional care and integrating health care policy. Our approach, across all health care settings, is based on a thorough assessment and integration of the social determinants of health.

We uniquely offer three concentrations of study all housed within the Pediatric Acute Care Program. This allows for students to approach their Graduate level education with a specific clinical focus while still receiving a broad based education in Pediatric Acute Care. Our graduates
from all concentrations are able to pursue career options in any area of Pediatric Acute Care. Our Oncology concentration offers students a strong foundation in pediatric acute care with a focus on pediatric oncology. It is the first of its kind. We are currently the only program in the country which is specifically preparing students in pediatric oncology. You will be prepared to deliver comprehensive care to children with cancer and their families. Specifically, we structure the program and clinical experiences to help you develop physical assessment skills, clinical decision making, continuity of care, family interventions, health care policy collaboration, and transition care related to children with cancer. Clinical experiences are located in both inpatient and ambulatory centers for pediatric oncology.

Clinical experiences are all arranged and coordinated by the university. A clinical site coordinator will work specifically with you and the Pediatric Acute Care Program.

Pediatric Primary Care Nurse Practitioner, MSN

Penn is a nationally recognized leader in training excellent nurse practitioners for primary care practice. As you study with us, you'll learn all of the pediatric nurse practitioners' responsibilities, including well-child care, sick exams, health counseling, telephone management, behavioral issues, conducting research, providing education, and impacting public policy. The goal will be for you to be able to practice these roles in an autonomous fashion, in collaboration with a physician or as a leader of an interdisciplinary team. Coursework for the NP program includes core graduate courses, electives, and a group of six clinical courses that must be taken together.

For more information: https://www.nursing.upenn.edu/pediatric/pediatric-primary-care-nurse-practitioner/

Curriculum

A total of 12 course units are required. We also provide a plan of study for full time (https://www.nursing.upenn.edu/pediatric/pediatric-primary-care-nurse-practitioner/full-time/) students, and two year (https://www.nursing.upenn.edu/pediatric/pediatric-primary-care-nurse-practitioner/part-time-2-year/) and three year (https://www.nursing.upenn.edu/pediatric/pediatric-primary-care-nurse-practitioner/part-time-3-year/) plans of study for part time students.

Psychiatric Mental Health Nurse Practitioner, MSN

Significant advancements have been made in recent years in our understanding of neuroscience and human behavior and the effective treatment and prevention of mental illness. Yet, despite this progress, mental health issues are often minimized, mishandled, and insufficiently treated, shrouded in fear and shame. There is disparity in treatment across many populations, and a critical shortage of skilled mental health professionals that limits the ability of patients to get the care they so deeply need. Confounding this is a lack of diversity among health care providers who may not adequately understand cultural barriers to seeking care. This is something we are striving to change.

In our program, you'll benefit from a holistic approach that blends neuroscience with psychotherapy and psychopharmacology. You'll work alongside faculty and mentors to advocate treatment of the whole person, blending mind and body in the context of the patient's psychosocial environment. You'll learn biopsychosocial assessment and diagnosis as well as medication management, all while deepening your skills in psychotherapy, including therapeutic approaches like cognitive behavioral therapy, group/family therapy, and more.

We use a three-semester clinical practicum, with the program placing students in settings that allow for exposure to a variety of psychiatric populations. Onsite preceptors will supervise your work, and you'll share experiences with other students through weekly small group seminars on campus.

For more information: https://www.nursing.upenn.edu/psychiatric-mental-health/

Curriculum

A total of 14 course units are required. We also provide plans of study for full time (https://www.nursing.upenn.edu/psychiatric-mental-health/plans-of-study/full-time/) and part time (https://www.nursing.upenn.edu/psychiatric-mental-health/plans-of-study/part-time/) students.

Women's Health/Gender Related Nurse Practitioner, MSN

The Women's Health/Gender-Related Nurse Practitioner program focuses on the primary health care needs of women from adolescence through the advanced years, concentrating on promoting and maintaining wellness. We put a premium on research that examines the influences that affect women's lives, such as public policy, advances in technology, and environmental and socio-cultural factors.

We prepare you for interdependent practice, a care model that emphasizes the unique aspects each health professional brings to the patient. For you, as a nurse practitioner, this involves providing family-centered and comprehensive care to women and their families. We train you to provide care that is shaped by a deep respect for human dignity, an understanding of the nuance of culture, and the woman’s right to self-determination. Through collaborative classroom settings, specially-designed courses, and top-notch clinical experiences, you’ll study a range of women's health issues including normal pregnancy, prenatal management, alternative medicine, clinical management of family planning, well-woman health care and menopause, and primary care that’s associated with women’s health.

Executive Leadership, DNP

Doctor of Nursing Practice in Executive Leadership (DNP-EL)

Our online post-master's DNP-EL program develops nurses for various senior leadership roles aimed at transforming healthcare delivery and improving outcomes at the systems level.

Our Program

Executive leadership in an everchanging and complex healthcare industry requires the knowledge and skills to revolutionize care delivery models and improve patient and organizational outcomes. Focused on systems leadership and innovative change, the DNP-EL prepares graduates for a variety of leadership roles including but not limited to Chief Nursing Officers, Clinical and Project Directors, Healthcare Consultants, and Practice Leaders.

Our Curriculum

Offered online with only a few on-campus intensives, the DNP-EL can be completed while working full-time from any location.

An unparalleled advantage, this interdisciplinary curriculum incorporates content from Wharton Executive Education (https://executiveeducation.wharton.upenn.edu/), Wharton Online (https://executiveeducation.wharton.upenn.edu/), and the Perelman School of Medicine Health Care Innovation Graduate Program (https://improvinghealthcare.mehp.upenn.edu/master-of-health-care-innovation/). Situated within a resource-intensive university, students avail of online library services, and take courses taught by faculty with vast healthcare leadership experience. In-person intensives provide students with networking opportunities, individualized faculty mentorship and access to executives from our world-class academic health system.

The DNP-EL includes coursework in strategic planning, innovation and design thinking, organizational change, and policy advocacy. A mutual benefit for students and their employers, the program culminates with the design of a systems-level evidence-based project implemented within their own organization.

The DNP-EL is a two-year program consisting of 11 course units.

Nurse Anesthesia Program, DNP

Led by a team of expert practitioners, and top nurse researchers, our DNP-NA brings the real world and innovative science into the classroom. Our program faculty – who include many alumni – are nurse anesthetists who practice across a range of settings and are vested in helping you develop your educational and professional career. Mentored by expert nurse anesthetists and anesthesiologists, you'll acquire the critical thinking skills for independent as well as collaborative clinical decision-making.

You'll hone your skills in our state-of-the-art simulation center, performing procedures like placing regional anesthetics, using fiber optic intubating equipment, inserting central venous catheters, pulmonary artery catheters and chest tubes, using ultrasound guidance, performing needle cricothyroidotomies, and placing double lumen endotracheal tubes. And you'll be exposed to experiences that range from common complications to rare occurrences. Our curriculum is divided into four conceptual areas: core courses, area courses, translating research into practice, and leadership and management.

Our robust clinical rotation allows you the opportunity to work with patients of all acuity levels including concentrations in pediatric, cardiac, and non-cardiac thoracic specialties. Our clinical coordinators work to provide you with a supervised introduction to clinical experiences, relying heavily on our excellent faculty to mentor students as they gain independence, critical thinking, and autonomy. The DNP-NA program is a full-time program which can be completed in 36 months.

## Nursing, DNP

Penn Nursing has been a leader in the science and practice of nursing since 1886, and continues to be at the forefront of advancing science, delivering solutions, and shaping health policy and practice to engender a healthier future.

The Post-Master’s DNP focuses on developing skills in translating research in practice, evaluating evidence, applying research in decision-making, and implementing viable clinical innovations to change practice and improve care delivery. Our hybrid online and in-person curriculum is designed to prepare professionals to become leaders in practice innovation by providing education in the translation of evidenced-based practice, project management, and leadership development.

In addition to our world-renowned faculty and state-of-the-art facilities, more than half of the required course curriculum will be offered online by fall 2019, with the goal of offering 100% of the course offerings online by 2020. This flexibility will allow nursing leaders the convenience of earning their PM-DNP while balancing their full-time career.

For more information: [https://www.nursing.upenn.edu/dnp/](https://www.nursing.upenn.edu/dnp/)

---

## Adult Oncology Specialist, Minor

Our Adult Oncology Specialty Minor is designed for graduate nursing students who desire advanced training in oncology nursing from the top researchers and clinicians in the country.

Our faculty have extensive experience in oncology nursing. You’ll interact with nationally recognized scientists and clinicians in the field of cancer care from the School of Nursing and the University of Pennsylvania Health System’s Abramson Cancer Center. You are required to complete three courses, the last of which includes clinical hours. Clinically-focused students will need to complete 240 clinical hours. These hours can be applied to meet the clinical hour requirements for certification.

Courses are online with synchronous and asynchronous components. In addition, students will meet on campus twice per semester (2 days in the fall and 2 days in the spring) for seminars, high-fidelity simulations, and networking with experts in the field of oncology and nursing.

## Curriculum

A total of 3 course units are required. We also provide a sample plan of study ([https://www.nursing.upenn.edu/adult-oncology-minor-post-masters/plans-of-study/typical-sequence/](https://www.nursing.upenn.edu/adult-oncology-minor-post-masters/plans-of-study/typical-sequence/)) for students.
The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

### Global Health, Minor

Available exclusively to Penn Nursing students at both the undergraduate and graduate level, our Global Health minor is an opportunity to increase your knowledge of the world and the factors that contribute to the health of populations. We take a cross-disciplinary approach to help you integrate your knowledge of nursing, culture, and diversity to more effectively engage with patients locally, nationally, and around the world. Open to students in full-or part-time Master’s or Post-Master’s study, this three-course concentration builds on three core dimensions of global health: sociocultural influences of health; methods for assessing population health; and coursework in a geographic area of interest to you.

For more information: http://www.nursing.upenn.edu/global-health-minor/

### Curriculum

A total of 3 course units are required for the Graduate-level Global Health Minor. We also provide a sample plan of study (https://www.nursing.upenn.edu/global-health-minor/plan-of-study-grad/plan-of-study-cam-elective/) for students.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

### Health Informatics, Minor

The emerging field of health informatics is growing in relevance and influence as technologies continue to improve. Our program focuses on concepts and issues surrounding technology and information management in today’s ever-changing healthcare environment. This minor is a perfect complement to advanced practice, administrative, and leadership Master’s programs.

For more information: http://www.nursing.upenn.edu/health-informatics-minor/
Curriculum

A total of four course units is required. We also provide a sample plan of study (https://www.nursing.upenn.edu/health-informatics-minor/plan-of-study/plan-of-study/) for students.

Nutrition, Minor

The focus of the Graduate level Nutrition Minor is to give students an option for more advanced nutrition courses in a manner that permits them to have documentation of this knowledge. This training will be useful for nurses who intend to practice in a nutrition-related field, for MPH students who choose to focus on nutrition-related issues such as obesity or global health, and for Penn students who intend to submatriculate for graduate level work at Penn and desire such coursework.

For more information: https://www.nursing.upenn.edu/academics/master-of-science-in-nursing-msn/minors/

Curriculum

A total of three course units are required.

Pre-requisites: Basic Nutrition Course (NURS 112, NURS 065, or transfer credit).

**Palliative Care, Minor**

In our palliative care program, you'll learn to work throughout the continuum of illness, addressing the physical, emotional, social, and spiritual needs of your patients while bolstering their autonomy and access to information. This high-demand specialty is relevant for all types of nursing practice, including gerontology, oncology, pediatrics, home care, and mental health.

For more information: http://www.nursing.upenn.edu/palliative-care-minor/

**Curriculum**

A total of 3 course units are required.

**Quality Improvement & Safety Processes Healthcare, Minor**

In this minor you’ll focus on systems thinking, the science of patient safety, patient-centered care, team-based collaboration, and quality improvement. Our faculty will mentor you in how to implement process improvement tools, and we’ll give you the opportunity to do a quality improvement project within a healthcare organization. This three-course minor can be done simultaneously with any graduate clinical program, and prepares advanced practice nurses to implement quality improvement processes and measure resultant outcomes.

For more information: http://www.nursing.upenn.edu/quality-improvement-safety-processes-in-healthcare-minor/

**Curriculum**

A total of 3 course units are required. We also provide a sample plan of study (https://www.nursing.upenn.edu/quality-improvement-safety-processes-in-healthcare-minor/plan-of-study/) for students.

**Transformative Nursing Education Program, Minor**

Graduate courses in education coupled with experiential learning is integral for preparing future nursing leaders in education. The aim of this program is to produce educators who enrich learning experiences for nursing students in an academic environment, or for those nurses working in healthcare system.

Designed for nurses interested in teaching in an academic setting or in the care delivery environment as a professional development specialist, this program combines adult learning theory with a toolkit of teaching strategies and hands-on teaching opportunities. Offered in a blended online/in-class learning environment, graduate nursing students complete three courses for this program. Alternatively, students who are mainly interested in academic teaching can pursue just two courses (NURS 600 and NURS 601) aimed at preparing exemplary teachers in the classroom and clinical settings. Students exclusively interested in teaching in the service environment (e.g., hospitals) can complete two courses (NURS 600 and NURS 602) in this focus area.

**Certification**

Those who complete our Transformative Nursing Education program meet the educational requirements to take the NLN Nurse Educator certification exam (http://www.nln.org/), and the ANCC

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

### Women's Health Studies, Minor

In the Women's Health Studies minor you’ll focus on the societal factors that influence women’s health, as well as how their health needs are met by healthcare systems and practitioners alike. You’ll address issues such as research gaps in women’s health, the need for public policy evaluation and advocacy, and how technology can improve the medical lives of women around the world.

This minor is based on advanced practice nursing and midwifery theory, but is open to all Penn graduate students with a strong interest in women’s health.

Certification

Completing this minor does not result in eligibility to sit for a WHNP or CNM certification examination, nor does it result in eligibility for licensure.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

### Adult Oncology Specialist, Certificate

Our Adult Oncology Specialty Certificate is designed for practicing Master's-prepared nurses who desire advanced training in oncology nursing from the top researchers and clinicians in the country.

Our faculty have extensive experience in oncology nursing. Students interact with nationally recognized scientists and clinicians in the field of cancer care from the School of Nursing and the University of Pennsylvania Health System's Abramson Cancer Center. The program consists of three courses, the last of which includes clinical hours. Certificate students who have been working with oncology patients should submit a portfolio to determine if additional clinical experiences are required. Clinically-focused students will need to complete 240 clinical hours. These hours can be applied to meet the clinical hour requirements for certification.

Courses are online with synchronous and asynchronous components. Students are required to come to Penn's campus twice over the course of their studies (2 days in the fall and 2 days in the spring) for seminars, high-fidelity simulations, and networking with experts in the field of oncology and nursing.

For more information: http://www.nursing.upenn.edu/adult-oncology-minor-post-masters/

Curriculum

A total of 3 course units are required. We also provide a sample plan of study (https://www.nursing.upenn.edu/adult-oncology-minor-post-masters/plans-of-study/typical-sequence/) for students.

### Integrated Nursing Care of Autism Spectrum Disorder, Certificate

Designed for registered nurses, school nurses, or advanced practice nurses who focus on pediatrics, mental health, or the family, this three-semester program will prepare you to design and deliver comprehensive care to this unique and special needs population.

You will develop the skills to screen for ASD, to provide comprehensive care for the co-occurring behavioral, medical, and psychiatric conditions,
and to integrate innovative nursing care into the lives of your ASD patients and their families.

We offer the opportunity to work with nationally recognized faculty, clinicians, epidemiologists, and scientists in this field through lectures, seminars, interactive discussions, case-based learning, independent guided studies, and clinical fieldwork. This Post-Master’s Certificate or Minor includes three graduate level courses and one clinical experience. The clinical is six hours one day per week for one semester. Schedules will be flexible to meet individual student needs.

SCHOOL OF SOCIAL POLICY & PRACTICE

The University of Pennsylvania School of Social Policy & Practice, formerly Penn Social Work, is noted for its commitment to social justice and to educating students that will take an active role in the struggle against oppression. The School has articulated a social philosophy that shapes the educational programs it offers, the research it undertakes, and the leadership it provides to the profession. This statement of social philosophy – Penn Approach – is first and foremost an evolving philosophy. It reflects the faculty’s commitment to introduce students to a variety of perspectives related to social work practice, nonprofit leadership, social policy, research, racism, and oppression, and the nature of human behavior in the social environment.

The Penn Approach to the education of future social workers includes at least two major perspectives:

- a clear understanding and respect for the past and a realistic interpretation of current professional issues;
- a vision of the future that reflects a commitment to social change based on the values and philosophy of the School.

The School offers a curriculum that integrates the development of practice skills with research, the study of specific social problems and social policies, theories and methods of social change, knowledge about human relationships, and individual and societal responses to institutional racism and other “isms.”

The University of Pennsylvania School of Social Policy & Practice is educating tomorrow’s leaders to confront societal problems in a time of diminishing resources, to provide leadership to non-profit organizations, to design and facilitate real-world solutions while fostering meaningful societal change. Students can also learn about the integration of innovative technology to enhance the delivery of social services, research on welfare to work initiatives, faith-based services, and other groundbreaking faculty research.

Learn more about SP2’s history: https://www.sp2.upenn.edu/about/sp2-history/

Vision

The passionate pursuit of social innovation, impact, and justice.

Mission

The School of Social Policy & Practice contributes to the advancement of more effective, efficient, and humane human services through education, research, and civic engagement. In pursuit of this mission, our theory-based masters and doctoral programs in social work, social welfare, nonprofit leadership, and social policy encourage students to think and work across disciplinary lines and cultures as well as across national and international boundaries. The pursuit of social justice is at the heart of the School’s knowledge-building activities. Our innovative educational and research programs reinforce our vision of active student engagement in their own learning as well as that of social agencies and larger social collectivities organized at the local, national, and international levels.

Diversity & Inclusion

Throughout its history, the School of Social Policy & Practice (SP2) at the University of Pennsylvania has been committed to understanding and embracing diversity in its countless forms. With our Master of Social Work (MSW) program, the first program of its kind to organize its curriculum around the construct of institutional racism, two other expanding and ambitious masters programs (in Social Policy and Nonprofit Leadership) that organically complement and extend our MSW offering, and two exciting doctoral programs (a clinical Doctorate in Social Work and Nonprofit Leadership) that produce some of the most sought-after thought leaders in our fields, SP2’s mission is to think critically, thoroughly, and holistically about the many factors that impact people’s everyday lives and life chances.

As SP2 has evolved, so too has the understanding of diversity that grounds and enlivens its work. Our historic commitment to racial and economic justice has in recent years intersected in vital ways with emerging commitments individuals and communities marginalized along other axes of oppression. Individuals and organizations across SP2 have mobilized to create curricular, interpersonal, and structural space for the consideration of LGBTQ+ needs and experiences and the elevation of LGBTQ+ voices both within and beyond the School. This understanding and this commitment is about striving to consciously honor the complex and multifaceted experiences of self and community that shape our lives together.

SP2 strives to be a space of principled inclusivity, valuing differences of opinion and attempting to foster an institutional environment where we all think openly, honestly, reflectively, and deeply about the questions and concerns that both unite and divide us. For our faculty, students, and staff, diversity is a multifaceted and intersectional concept that includes careful treatment of questions about how differences linked to race, sexuality, gender identity, religion, ideology, mental illness, ethnicity, class, age, and so much more systematically privilege some and marginalize others. The issues that we grapple with—from homelessness and racism to prisoner re-entry and poverty, from responsible philanthropy and economic mobility to aging and child welfare—are some of the biggest in the academy and in society, and many seem intractable. But we also recognize that we have the best chance of doing justice to these social issues by embodying a truly diverse and inclusive space from which we can attempt to re-imagine our social world.

Promoting social justice and working against forces of oppression have been central to SP2’s efforts since the founding of the MSW program over a century ago; they ground our work to this day, challenging us all—faculty and students, alumni, staff, and community—to grow together into new knowledge and to grapple with ever-evolving examples of injustice and inequity. Understanding, respecting, and celebrating diversity is essential to SP2’s educational mission and values, and we are committed to helping students learn how to have difficult conversations, listening without pre-judgement, and addressing social problems from diverse perspectives. It is a commitment that we take seriously and one that we
hope to nurture in our students as they become empowered to work for a more just, equitable, and compassionate world.

For more information: https://www.sp2.upenn.edu/about/diversity-inclusion/

**Faculty & Research**

The SP2 faculty upholds Penn’s commitment to engage locally and globally. Internationally regarded for producing cutting-edge research, our distinguished scholars, practitioners, and policy advisors bring a broad range of real-world expertise and interdisciplinary focus to the classroom setting. The research of the SP2 faculty is transforming policy and shaping best-practices on international, federal, and local levels. The faculty’s important research and activism stretch across the social sciences and the humanities in ways that link nuanced methodological inquiries and important research questions to attempts at real-world problem-solving.

SP2 faculty members are readily available to students. They are inspirational instructors and supportive mentors and advisors, helping students to approach problems in innovative and creative ways.

Select 4 NPLD electives

Select 2 additional electives

Total Course Units: 10

1 Electives may be any NPLD courses.

2 Students may select to take an additional 2 NPLD electives or complete 2 graduate level course electives at another school at Penn.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Sample Plan of Study

The Master of Science in Nonprofit/NGO Leadership program is available as an on-campus full-time or part-time program and as a fully online degree program. Students may combine on-campus and online study. While students may customize their schedules due to participation in a dual degree or certificate program, enrollment in an international course or study abroad experience, the grid below outlines the standard schedule and course of study for full-time students.
Social Policy, MSSP

The Master of Science in Social Policy Program (MSSP) program is an eleven-month, ten-course program that prepares professionals with knowledge and skills to use policy to increase equality, promote equity, and forge social change. MSSP graduates are prepared for policy leadership positions in government, philanthropic foundations, research institutes, nonprofit and non-governmental organizations, and other related settings, through:

• Understanding the world views, assumptions, and philosophies underlying all policy solutions;
• Understanding how decisions about social policy issues are made, shaped and influenced at local, state, national and global levels;
• Formulating a social reform agenda that is evidence-based and aims at improving the equity, effectiveness, and efficiency of policy creation and implementation; and
• Generating and considering a wide array of policy options to address social problems.

1 Students are eligible to elect to take a waiver exam for MSSP 630. Any student who passes the waiver exam must take an elective in its place, which may include, but is not limited to, a more advanced research methods course.

Social Policy Internships

Students in the MSSP program have the opportunity to practice their policy analysis skills and gain work experience through a required policy internship. The 6-8 week internship is structured on the basis of individual student interests and past social policy experience(s). When appropriate, students may complete the internship requirement at their current place of employment. Internships may occur anywhere in the United States or in another country best suited to the learning objectives of the student. In every case, the policy internship must consist of a minimum commitment of 150 hours. Credit for the internship is incorporated into the MSSP Capstone course.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Sample Plan of Study

The MSSP program may be pursued on a full or part-time basis. While students may customize their schedules due to participation in a dual degree or certificate program, enrollment in an international course or study abroad experience, or successfully passing a waiver exam, the grid below outlines the standard schedule and course of study for full-time students.

Social Work, DSW

The Doctorate in Clinical Social Work is a fully online program that offers all the advantages of a world class learning community in a highly interactive, relational, accessible and convenient format. Balancing the rigor of doctoral education with the practical considerations of busy working professionals, students complete the coursework and dissertation simultaneously, earning the degree in 3 years without career disruption. The program uses a combination of campus immersion experiences and online course delivery (videoconferencing) that works for working professionals, wherever they live. Students enjoy an unparalleled educational experience, coming together to interact and learn on an Ivy League campus during the campus immersion experiences. Technology is used to connect, not to distance. The program recognizes the importance of relational learning and all of the online course delivery and educational strategies are chosen with an eye toward building knowledge in community. Renowned faculty from all over the world teach cutting-edge courses on the latest in clinical practice, research, and teaching. Graduates’ successes prove that the DSW is a gateway to fulfilling careers as social work practice leaders and educators.

For more information: https://www.sp2.upenn.edu/academics/doctorate-in-clinical-social-work/

Curriculum

Students begin the program with a five day immersion experience on Penn’s Philadelphia campus at the start of the fall semester (late August/early September). During this residency period, students attend their first classes and participate in a variety of activities that immerse them in the Penn experience and prepare them for the DSW program. Students come to campus for one more five-day residency period in the summer following the first year. Students who are able to travel to campus more often are invited to do so to use the library, meet with faculty, and take advantage of other campus resources and activities.

Classes meet online two evenings each week for two hours. Students and faculty log in on their personal computers or devices from wherever they are. The real-time online video conferencing format allows everyone to be seen and heard at all times, closely approximating a physical classroom experience. Students are in class for the first two years of the program; in the third year, students participate in a Dissertation Seminar Series that provides support and structure as they complete the last stages of the dissertation.

The curriculum is designed to bridge theory, practice, and research, and prepare students for teaching. Students are actively engaged in learning about and critiquing the latest developments, discoveries, and best practices in evidence-based social work practice and teaching. Classes are taught by Penn faculty and renowned visiting faculty and clinician experts from across the country. The dissertation provides an opportunity to gain deep knowledge and become a content expert in a particular area, as well as contribute to the social work knowledge base.

Total Course Units 12

During the second year, the student cohort selects two electives and takes them together as a group.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Sample Plan of Study

First-year Curriculum

The program begins with a two-semester foundation that spans clinical theory and research and ends with a core course on trauma-informed individual and organizational interventions. Concurrent with their coursework, students engage in a dissertation workshop that helps guide them through the first stages of the dissertation project. Near the end of the first year, students are matched with a dissertation chair who shepherds them through the remainder of the dissertation process.

Second-year Curriculum

The curriculum in year 2 continues with specialized, applied courses that cover clinical content and preparation for teaching. The second and final year of coursework culminates in two electives that the student cohort selects and takes together as a group. Students continue the dissertation work, under the direction of their dissertation committee.
A minimum of 16 course units are required for graduation.

Curriculum

The Master of Social Work (MSW) Program at the University of Pennsylvania’s School of Social Policy & Practice is one of the oldest and most well-respected social work programs in the country. The program (ranked 5th in the nation by Princeton Review’s Gourman Report and 12th by U.S. News and World Report) is designed to prepare social workers for leadership roles in developing and providing services to individuals, families, groups, communities and organizations in the local, national, and global arenas. With a recently redesigned curriculum, Penn’s MSW degree melds cutting-edge innovation with a rich educational tradition rooted in social justice and social change.

For more information: https://www.sp2.upenn.edu/academics/master-of-social-work/

Sample Plan of Study

Penn offers four different MSW program options, enabling students to choose the course of study that best fits with their personal circumstances and career goals: the two-year Full-Time program (http://www.sp2.upenn.edu/degree-programs/master-of-social-work/overview/full-time-two-year/), the three-year Part-Time program (http://www.sp2.upenn.edu/degree-programs/master-of-social-work/overview/part-time-three-year/), the Advanced Standing program (http://www.sp2.upenn.edu/degree-programs/master-of-social-work/overview/advanced-standing/), and the Employed Practitioners program (http://www.sp2.upenn.edu/degree-programs/master-of-social-work/overview/employed-practitioners/). Additionally, the Penn MSW program accepts students from Pennsylvania’s CWEL program (http://www.sp2.upenn.edu/degree-programs/master-of-social-work/overview/cwel/).

While students may customize their schedules due to participation in a dual degree or certificate program, enrollment in an international course or study abroad experience, the needs of their field placement agency, or successfully passing a waiver exam, the grid below outlines the standard schedule and course of study for full-time students.

For more information: https://www.sp2.upenn.edu/academics/master-of-social-work/program-options/

Sample Plan of Study

Below is the standard schedule and course of study for full-time students.

Joint Lectures

Sequences in the MSW program may schedule sequence-wide lectures for all sections at various points in the semester. These lectures feature experts in the field and are a mandatory component of the course(s).

First Year

Foundation-year field placement begins in September and ends in April.

1 Waiver Exams are offered for SWRK 601 and SWRK 602 every August, and for SWRK 615 every October. Students who score a qualifying grade on a waiver exam may take an elective in place of the required course.

2 Practice classes are a year-long sequence. Students remain in the same section of SWRK 604/SWRK 614 for the entire year, and remain in the same section of SWRK 704/SWRK 714 or SWRK 708/SWRK 718 for the entire second year.

3 Non-credit/non-tuition course. For students without an MSW field supervisor.
SCHOOL OF VETERINARY MEDICINE

Established in 1884, Penn Vet is the only veterinary school developed in association with a medical school, and is one of only four private veterinary schools in the nation. Penn Vet’s two campuses, urban and rural, offer students learning opportunities and experiences in virtually every aspect of veterinary medicine. As part of the University of Pennsylvania, Penn Vet is a key partner in one of the world’s great biomedical research and teaching centers. Our students can learn firsthand how veterinary medicine and research impacts human lives, as well as those of animals.

The relationship between animal health and human health is the core of our teaching tradition. Our distinguished faculty members bring a diverse range of academic backgrounds and unique perspectives to the classroom and clinic that will broaden our students’ views of veterinary medicine.

At the center of Penn Vet’s efforts is compassion for both animals and people, as well as the preservation of a healthy environment. People look to veterinarians as professionals who not only deliver healthcare throughout the lifespan of animals, but also improve our quality of life within that context. We value relationships with our clients and further their interests along with those of the local community. Moreover, as a profession and an institution, veterinarians are well positioned to contribute solutions to some of the world’s most pressing challenges, including food security, biosecurity, biodiversity, antimicrobial stewardship, and climate change.

On the campus where modern veterinary medicine was born, we have an obligation to train a diverse student body on emerging career pathways. Adapting the curriculum to a new vision of the veterinary profession will be critical to our success. Penn Vet will further strengthen our profession by enabling broader opportunities through novel certificate and dual degree programs that break down traditional boundaries between the veterinary and other professional disciplines: public health, human healthcare, social policy, business, and law. As a result, graduating VMDs will be better prepared to fashion their own career goals, and ultimately contribute more creatively and effectively towards building a better world.

For more information: https://www.vet.upenn.edu/

Mission

Penn Vet’s mission is to lead the advancement of health and science for the betterment of animals, humans, and their environment.

For more information: https://www.vet.upenn.edu/education (https://www.vet.upenn.edu/education/)

Research

At Penn Vet, our challenge is to advance the field of veterinary medicine, and by extension, all science. Penn Vet faculty conduct groundbreaking research projects ranging in focus from osteosarcoma, molecular genetics, retinal blindness, the therapeutic potential of stem cells, the impact of stress on pregnant females, to the impact of nutrition and crating on swine health and reproduction. From large to small, from molecular to systemic, research at Penn Vet continues to push the limits of what we know about animals and humans.

The work we do here is diverse—from dinosaurs to dogs, from cytokine biology to cell engineering, from mitochondria to mapping avian flu outbreaks, our researchers are in constant motion, advancing the scientific knowledge base.

Penn Vet’s research centers are recognized throughout the nation and the world for groundbreaking advances in:

- Comparative oncology
- Health and productivity in food animal herds and flocks
- Infectious disease
- Regenerative medicine
- Neuroscience

We chose these thematic areas because they cover the major areas of biomedical science and we have outstanding scientists and clinicians working in each of these fields. Just a few of our achievements include our advances in stem cell biology, our strong parasite immunology group, our successes in treating inherited diseases in dogs and cats using gene therapy, our remarkable programs in clinical and basic neuroscience, and our basic and emerging translational work in comparative oncology. In research that impacts humans and non-humans alike, Penn Vet is leading the way toward eminence in veterinary scientific investigation.

For more information: https://www.vet.upenn.edu/research (https://www.vet.upenn.edu/research/)

Diversity

The School of Veterinary Medicine welcomes and accepts diversity in the broadest context so as to recognize, value and learn from all people of varying cultural backgrounds regardless of their race, color, sex, sexual orientation, gender identity, religion, creed, national or ethnic origin, citizenship status, age, disability, veteran status, or any other legally protected class status.

One of the missions of the Office for Faculty Affairs and Diversity is to foster a respectful, creative, and collaborative environment that will support the faculty, staff and student body, to maximize their contributions to the educational, research, clinical, and service missions of Penn Vet.

Our goal is to make Penn Vet a more welcoming and diverse institution by devising strategies for attracting exceptional scholars and students, and nurturing their development. Penn Vet’s diversity among its faculty and student body is of paramount importance, because brilliant scholars and students are absolutely essential in keeping the institution become productive, creative, competitive, and successful in its mission to train the next generation of leaders in all fields of Veterinary Medicine.

Penn’s stature as an eminent and innovative University rests on our conviction, combined with compelling evidence that excellence and diversity go hand in hand. The School of Veterinary Medicine is eager to move decisively forward in building an ever more diverse and eminent faculty, and in fostering an inclusive and equitable community.

Multiple resources are available at UPenn to support and promote our diverse faculty and student body.

History

Founded in 1884, the School of Veterinary Medicine at the University of Pennsylvania – Penn Vet – is one of the world’s premier veterinary schools. Penn Vet is the only veterinary school in the United States that was a direct outgrowth of the University’s School of Medicine. A pioneer since its inception, Penn Vet has led the way in such areas as infectious disease research, germ cell biology, animal transgenesis, comparative oncology, and comparative medical genetics.

Penn Vet has also successfully integrated scholarship and research with all aspects of veterinary medical education. The School’s strength in basic sciences, immunology, and mathematical modeling are valuable assets for developing strategies to rapidly detect and control the spread of new infections, and improving and developing vaccines that effectively protect animals.

Animal Welfare and Behavior, Certificate

This four-course, for-credit Certificate Program in Animal Welfare Science and Animal Behavior is designed for individuals working with animals in research, industry, and the nonprofit sector, as well as for those who are interested in developing careers in animal health and welfare. Taught by nationally and internationally renowned Penn Vet faculty, it prepares students to understand how animal welfare and behavior are understood and assessed. The course follows Penn’s semester schedule and includes both asynchronous and weekly synchronous components, allowing students direct contact with multiple faculty members who have unique expertise in large and small animal health, welfare, and behavior.

For more information: http://www.vet.upenn.edu/AWB (http://www.vet.upenn.edu/AWB/)

Curriculum

This certificate requires the completion of four courses.

Animal Welfare and Behavior, MSAWB

This online Master of Science in Animal Welfare and Behavior provides in depth training in the science of animal welfare to working professionals engaged in animal protection, animal agriculture and food production, animal research, animal oversight or animal health as well as students interested in developing a career in these areas. The degree includes eight or nine online courses that can be completed in two-four years.

**The VMD Curriculum**

**Veterinary Medicine, VMD**

The School of Veterinary Medicine of the University of Pennsylvania (Penn Vet), an integral part of a comprehensive, multi-disciplinary university, exists to better the health and welfare of animals and humans. The synergy generated by Penn Vet's interaction with the University community and the biomedical establishment in the Delaware Valley creates unique challenges and opportunities to excel in teaching, research and service.

Offering the VMD, Penn Vet is committed to innovative educational programs to train veterinarians and biomedical scientists; pioneer research and the discovery of new knowledge in the basic and applied sciences; and maintaining a strong commitment to specialized veterinary medical care and service.

For more information: https://www.vet.upenn.edu/

**Curriculum**

Our students benefit from Penn Vet's commitment to making veterinary medicine more inclusive. Their educational experience is also enriched through interactions with the vibrant, multifaceted biomedical establishment in and around both the University of Pennsylvania and the larger Philadelphia region, with its many facilities in healthcare, research, and technology.

**The Core Curriculum**

The Core Curriculum is the central component of a Penn Vet education. Course requirements for the entire first and second years are based on this curriculum, as are the courses for the fall term of the third year. In the spring term of the third year, students move into the clinical aspect of the curriculum. In the fourth year, the Core Curriculum is combined with foundation clinical rotations. All students must complete the entire Core Curriculum, while also satisfying clinical competency requirements for each class year.

STUART WEITZMAN SCHOOL OF DESIGN

As a diverse community of scholars and practitioners, the School is committed to advancing the public good—both locally, nationally, and globally—through art, design, planning and preservation. With 3 research degrees, 7 professional degrees and 15 certificates offered, the Weitzman School of Design's graduate programs are consistently ranked among the top 10 in the nation, and serve as a platform for groundbreaking research as well as community engagement.

Learn more about our school leadership and the Weitzman School of Design student experience: https://www.design.upenn.edu/about/.

Mission
The Weitzman School of Design prepares students to address complex sociocultural and environmental issues through thoughtful inquiry, creative expression, and innovation. As a diverse community of scholars and practitioners, we are committed to advancing the public good—both locally and globally—through art, design, planning, and preservation.

History
Although the Weitzman School of Design dates its founding from 1890, architecture courses were first offered in 1868, making Penn's architecture program the second oldest in the United States. In 1921, the Department of Architecture joined with the Department of Music and Fine Arts to create an independent undergraduate School of Fine Arts modeled on the French École des Beaux Arts. In 1958, the School was renamed the Graduate School of Fine Arts, reflecting the shift to graduate degree offerings in architecture, city and regional planning, landscape architecture and fine arts. In the 1980s, a program in historic preservation was added. To more accurately capture the School's sphere of influence, it was renamed the School of Design in 2003, and, in early 2019, the University named the School for award-winning designer Stuart Weitzman in recognition of his lifetime commitment and support. Today, the School is made up of a standing faculty of 43, approximately 160 lecturers and associated faculty, and more than 700 students.

Programs
PhD and Research Master's Programs
• Architecture, MS (p. 221)

• Time-Based and Interactive Media, Certificate (p. 239)
• Urban Design, Certificate (p. 240)
• Urban Redevelopment, Certificate (p. 240)
• Urban Resilience, Certificate (p. 241)

Architecture, MS
The Master of Science degree, first offered in 1984, is intended for individuals with an undergraduate professional degree in architecture who wish to pursue a self-directed program of study at the advanced level. It enables students to gain a greater understanding of the relationship between the discipline and the profession. A total of ten approved courses are required, including one course in Architectural Theory and an individually directed selection of electives from the Master of Architecture program, and a qualifying exam. This degree is normally completed in one calendar year. Applicants must hold a bachelor's degree in architecture.

For more information: https://www.design.upenn.edu/architecture/graduate/master-science-architecture (https://www.design.upenn.edu/architecture/graduate/master-science-architecture/)

View the University's Academic Requirements for Research Master’s Programs (http://catalog.upenn.edu/pennbook/academic-rules-research-masters/).

Curriculum
A total of 10 course units are required.
The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**Architecture, PhD**

The Ph.D. Program in Architecture, created in 1964, is the oldest in the country and is widely regarded as preeminent in the fields of theory, technology and representation. Its goal is to produce a body of graduates who will act as a reflective leaven to the architectural profession, providing an historical and/or theoretical context for current practice.

The Doctor of Philosophy in Architecture is for the person who wishes to make a significant scholarly contribution to the discipline of architecture. Requirements for the degree include twenty approved courses, the passing of two language exams, a qualifying examination, a preliminary examination, teaching experience, a dissertation and a final defense. Course work from previous Master's degrees is taken into consideration when deciding the number of courses required for the Ph.D. degree. Students with a Master's degree from Penn may be granted up to 12 course units transfer credit, those with a Master's degree from another institution may be granted up to 8 towards their Ph.D. requirement.

For more information: https://www.design.upenn.edu/architecture/graduate/info/ (https://www.design.upenn.edu/architecture/graduate/info/)

View the University's Academic Requirements for PhD Degrees (http://catalog.upenn.edu/pennbook/academic-rules-phd/).

**Curriculum**

A total of 20 course units are required.

**City Planning, PhD**

The University of Pennsylvania is an intellectually stimulating environment in which to study the serious problems that face our metropolitan areas today and the broad spectrum of responses to meet those challenges. Students enrolled in the City and Regional Planning Ph.D. program have easy access to a broad, multi-disciplinary faculty and all the resources of a first-rate urban research university.

The Ph.D. program in City and Regional Planning (CPLN), governed by the Graduate Group in City and Regional Planning, is one of the oldest in the country, dating back to the 1950s. Penn's faculty has guided more than 300 students though their graduate studies to the completion of the degree and aided them in assuming positions of leadership in both academia and the profession throughout the United States and across the world.

Penn's Ph.D. program in city and regional planning has a straightforward objective: to train thought-leaders and exceptional scholars. To this end, the Graduate Group aims to ensure acquisition of strong research and communication skills. It is also committed to cultivating enduring faculty/student mentoring relationships and collegial networking among
a students’ peers, including other Ph.D. students in urban-focused disciplines.

For more information: https://www.design.upenn.edu/city-regional-planning/phd/about

View the University’s Academic Requirements for PhD Degrees (http://catalog.upenn.edu/pennbook/academic-rules-phd/).

Curriculum
Coursework
A total of 20 course units are required.

The Graduate Group in City and Regional Planning does not designate a formal list of required courses other than the Doctoral Seminar and research methods, but allows students to work with the Graduate Group Chair and their principal advisor to develop a study plan consistent with their research and future teaching interests.

Research Methods
Select two graduate-level methods courses

1 The Graduate Group maintains a list of courses in quantitative and qualitative methods and spatial analytics offered in various schools of the University.

Additional Requirements
Additional elements of the program include:

- Preparatory Requirements (Writing and Presentation and Scholarly Preparation)
- Qualifying/Candidacy Examinations
- Dissertation

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Architecture, MArch
The Master of Architecture Professional Degree is a comprehensive and rigorous program, preparing graduates for the full range of activities in the profession. An intensive sequence in Design Studios constitutes the focus of the program. Thorough training is also provided in history, theory, technology, ecology, society, and professional practice. Studios and courses are supported by a rigorous program in visual studies that develops skills in digital and new media. At the upper levels of the program students establish individual trajectories by selecting from a range of elective studios and courses with leading figures in design, technology and theory. The final year culminates in advanced design studios that include research directed by leading designers as well as the option of an independent thesis. Summer programs abroad and studios based in other countries provide opportunities for international studies. The program aims to develop critical, creative and independent thinking that realizes potentials within an ever-changing world. The Master of Architecture degree is a professional degree accredited by the National Architectural Accrediting Board (NAAB) and is a STEM designated program.

Students who hold a five-year professional Bachelor of Architecture degree or its equivalent are not eligible to apply to the Master of Architecture program. They are encouraged to look into one of the post-professional Master of Science in Design degree programs.

The Master of Architecture Program may be combined with certificate programs offered in the Weitzman School of Design.

Total Course Units: 29.00

Note: ARCH 500 cannot be applied as credit towards the 29 course units required for the Master of Architecture degree.

**Course Waivers**

In some instances, students with a specialized background in a subject will be given permission to waive a required course. A course waiver waives the course requirement NOT the total course units to complete the degree.

---

The advanced architectural design-based program starts with a mandatory ten-day workshop in design technique. A coordinated semester of advanced architectural design and courses follow after which the students join the Master of Architecture program for one year. During this year students pursue an individually directed course of study by choosing from a wide range of options in advanced architectural design studios, and elective courses offered within the Master of Architecture program.

---

**Architecture: Environmental Building Design, MSD**

This three-semester Master of Science in Design with a concentration in Advanced Architectural Design (MSD-AAD) is for architecture students with five-year professional bachelor degrees from the US and around the world. This course of study does not lead to a professional degree in architecture. The MSD-AAD program builds on its success as a program focused on innovation in architecture design.

The purpose of the MSD Advanced Architectural Design program is four-fold. First, to prepare students for high level design research in the profession or academy in contemporary issues that affect the architecture discipline. Second, to develop skills in emerging design and cross-disciplinary tools. Third, to critically engage the theoretical dimensions of the contemporary architectural discourse around these tools; and fourth, to integrate advanced digital modeling techniques into a design methodology that has direct bearing on the development of material, production, fabrication and construction processes and their aesthetics.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**Architecture: Environmental Building Design, MSD**

The Master of Science in Design with a concentration in Environmental Building Design (MSD-EBD) is an advanced, three-semester, post-professional degree designed for architects seeking new skills and competitive advantage in the growing field of sustainable design. With
the renewed urgency of environmental issues—from global climate change to ‘net-zero’ design—architects are faced with demands for new kinds of services that require a new kind of professional. LEED accreditation is a start, helping designers utilize existing technologies, but a wider range of skills is required to achieve real innovation and to meet the needs of clients in this rapidly changing field. New building design, renovation of existing buildings, and environmental analysis at many scales are critical aspects of comprehensive environmental design. The challenge to architects is to operate at scales greater and smaller than that of the building, requiring the understanding of the chemistry of materials as well as consideration of the impact of whole populations of buildings on their local, regional, and global ecosystems.

Architecture: Historic Preservation, MSD

The one-year Master of Science in Design with a concentration in Historic Preservation (MSD-HP) complements Weitzman School’s long-standing two-year MSHP degree. The MSD-HP directly addresses the needs of practicing design professionals seeking post-professional training, specialization, or change in career path. The MSD-HP curriculum requires 12 CUs and spans one calendar year—two full-time semesters, plus one summer studio course. Half of the required courses are elective; personalized curricula can accommodate advanced thesis research or additional studios. Applicants must possess a professional degree in design or planning fields (architecture, landscape architecture, interior architecture, urban planning, urban design, engineering) from an accredited university, and at least three years of professional experience.

Architecture: Robotics and Autonomous Systems, MSD

The Master of Science in Design: Robotics and Automated Systems (MSD-RAS) explores avenues for re-situating the role of architectural design within present day autonomous technologies. The program critically develops novel approaches to manufacturing, construction,
understand the legal and historical basis of city planning; they will know how to use a wide variety of population and economic data to understand local communities; and they will understand the form and arrangement of cities and metropolitan areas around the world. Most important, they will understand which planning approaches work best in which contexts and circumstances.

The Housing, Community and Economic Development concentration focuses on how planners and policy leaders influence the social and economic factors shaping metropolitan economies and urban neighborhoods, particularly low-wealth communities and communities of color. It prepares graduates for positions in housing, community and economic development finance, neighborhood revitalization, workforce development, center city re-development, and public sector management of urban and regional economic development. Housing, Community and Economic Development is a four-credit concentration.

For more information: https://www.design.upenn.edu/city-regional-planning/graduate/program (https://www.design.upenn.edu/city-regional-planning/graduate/program/)

Curriculum
A total of 18 course units are required for graduation. 15 course units must be in City Planning (CPLN) courses.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

City & Regional Planning: Housing, Community and Economic Development, MCP

The Master of City Planning core curriculum encompasses the basic skills and knowledge required of all planners regardless of their specialization, and is a hallmark of our cutting-edge and practical approach to educating city planners. Students who complete the core will understand the legal and historical basis of city planning; they will know occupation, demolition and re-use, through creative engagement with robotics, material systems, and design-computation. Students develop skills in advanced forms of robotic manufacturing, artificial intelligence, sensor and vision technologies in order to develop methods for design that harness production or live adaption as a creative opportunity. Operating predominantly through material prototyping and robotic fabrication, participants critically assess the socio-political, ethical and philosophical dimensions of a recent societal shift towards algorithmic and autonomous technological dependence, and provoke alternative forms of dialogue with industry and culture that address our individual and collective engagement with the built environment. The work of the program is both highly speculative and physically manufactured. Students collaboratively develop robotically manufactured architectural prototypes (part or whole) that is presented and exhibited at the completion of the program.

Curriculum

Land use and environmental planning consultants, for and regional growth planning concentration work for local and municipal governments, for suburbs alike. Students who complete the Land Use and Environmental Planning concentration will have to figure out new ways to accommodate the next forty years (and the world forecast to add 3 billion), land use and environmental planning are at the core of city planning. With the U.S. forecast to add more than 80 million new residents over the next forty years (and the world forecast to add 3 billion), land use and environmental planners will have to figure out new ways to accommodate population and economic growth while strengthening existing cities and towns; preserving precious and irreplaceable farm and resource lands; promoting new urban forms such as transit-oriented and mixed-use development; taking advantage of new water, land, telecom, and transportation infrastructure systems; promoting clean air and water, and robust ecologies; and reducing the carbon footprint of cities and suburbs alike. Students who complete the Land Use and Environmental Planning concentration work for local and municipal governments, for land use and environmental planning consultants, for and regional growth management agencies, and for smart growth, land conservation, and sustainable development policy and advocacy organizations.

Most important, they will understand which planning approaches work best in which contexts and circumstances.

Land use and environmental planning are at the core of city planning. With the U.S. forecast to add more than 80 million new residents over the next forty years (and the world forecast to add 3 billion), land use and environmental planners will have to figure out new ways to accommodate population and economic growth while strengthening existing cities and towns; preserving precious and irreplaceable farm and resource lands; promoting new urban forms such as transit-oriented and mixed-use development; taking advantage of new water, land, telecom, and transportation infrastructure systems; promoting clean air and water, and robust ecologies; and reducing the carbon footprint of cities and suburbs alike. Students who complete the Land Use and Environmental Planning concentration work for local and municipal governments, for land use and environmental planning consultants, for and regional growth management agencies, and for smart growth, land conservation, and sustainable development policy and advocacy organizations.

Total Course Units

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.
The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**City & Regional Planning: Public & Private Development, MCP**

The Master of City Planning core curriculum encompasses the basic skills and knowledge required of all planners regardless of their specialization, and is a hallmark of our cutting-edge and practical approach to educating city planners. Students who complete the core will understand the legal and historical basis of city planning; they will know how to use a wide variety of population and economic data to understand local communities; and they will understand the form and arrangement of cities and metropolitan areas around the world. Most important, they will understand which planning approaches work best in which contexts and circumstances.

Students in the Public & Private Development concentration will learn the planning, design, entrepreneurial, and financing principles of developing for-profit and community-oriented housing and commercial development projects; how to put together development proposals and plans that meet the needs of tenants, the marketplace, and the community; how to develop projects that are economically, socially, and environmentally sustainable; and how private developers can work in partnership with cities and towns, redevelopment agencies, non-profits, and community groups to create affordable housing and public-private development partnerships. These same skills and abilities will be widely valued outside the United States, especially in growing areas of Asia and South America.

Students selecting to take Site Planning for this requirement may NOT use it to meet the Core Breadth Methods requirement.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**City & Regional Planning: Smart Cities, MCP**

The Master of City Planning core curriculum encompasses the basic skills and knowledge required of all planners regardless of their specialization, and is a hallmark of our cutting-edge and practical approach to educating city planners. Students who complete the core will understand the legal and historical basis of city planning; they will know how to use a wide variety of population and economic data to understand local communities; and they will understand the form and arrangement of cities and metropolitan areas around the world. Most important, they will...
understand which planning approaches work best in which contexts and circumstances.

Today’s combination of portable-yet-powerful computing and communication devices and Internet-accessible ‘big data’ are democratizing all aspects of urban planning and decision-making. In the process, these factors are transforming planners from central information gatekeepers into bottom-up enablers who are helping city dwellers take better advantage of the opportunities and richness of urban life. By giving constituents quick access to usable information, these new technologies are connecting planners, residents, businesses, and nonprofits to make them smarter and more productive. The purpose of this concentration is to give MCP students the skills and abilities they will need to develop planning applications that seamlessly combine user-friendly data retrieval and modeling procedures with individual and collaborative urban planning and design tools.

City & Regional Planning: Sustainable Transportation & Infrastructure, MCP

The Master of City Planning core curriculum encompasses the basic skills and knowledge required of all planners regardless of their specialization, and is a hallmark of our cutting-edge and practical approach to educating city planners. Students who complete the core will understand the legal and historical basis of city planning; they will know how to use a wide variety of population and economic data to understand local communities; and they will understand the form and arrangement of cities and metropolitan areas around the world. Most important, they will understand which planning approaches work best in which contexts and circumstances.

This concentration explores the roles of transportation and other capital infrastructure systems in shaping urban and metropolitan development patterns in the U.S. and around the world. It focuses foremost on urban highway, public transit, and non-motorized transportation systems and their connections to sustainable, livable and economically-productive development forms; and secondly on water, energy, and communications infrastructure. It covers initial planning and development topics (such as right-of-way and system planning issues), linkages to urban and economic development issues (such as those surrounding high-speed rail), and ongoing finance and management topics such as pricing, equity of access, and value creation. Students who complete the
Sustainable Transportation & Infrastructure Planning concentration work for local and municipal governments, for state highway departments and metropolitan transit operators, for transportation and infrastructure planning consultants, for system developers and utilities, and for policy and planning organizations advocating more sustainable transportation and development choices.

1 Students may not count CPLN 505 as their Breadth Methods requirement.

Internship Requirement

Because a planning education extends beyond the classroom, all MCP students are required to complete a planning internship, usually between their first and second years. Internships may be paid or unpaid, for at least six weeks. Internships can be completed at any government agency or commission, private consulting firm, or non-profit or advocacy organization involved in planning practice, or research.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

City & Regional Planning: Urban Design, MCP

The Master of City Planning core curriculum encompasses the basic skills and knowledge required of all planners regardless of their specialization, and is a hallmark of our cutting-edge and practical approach to educating city planners. Students who complete the core will understand the legal and historical basis of city planning; they will know how to use a wide variety of population and economic data to understand local communities; and they will understand the form and arrangement of cities and metropolitan areas around the world. Most important, they will understand which planning approaches work best in which contexts and circumstances.

The Urban Design concentration focuses on understanding the links between the physical form and structure of cities and regions and the economic, social and political forces that shape them. It provides knowledge about alternative theories and methods for the physical improvement of urban places and includes courses in graphic communication, the history and theory of design, and the context and operation of development incentives and controls. Graduates from the Urban Design concentration typically work in local government or for private design firms developing urban design plans, neighborhood and district plans, public space and street plans, and, increasingly, plans for new communities.

Fine Arts, MFA
The two-year Master of Fine Arts program at Penn is focused on the professional development of studio artists. Through studio work, seminar courses, international residency opportunities, and interactions with vital working artists, the program provides an open intellectual framework to foster critical awareness and independent methods of artistic research. Students extend their conceptual strategies while inventing and then refining their own hybridized forms of art-making methods. The program encourages exploration, extending studies into other disciplines within the Weitzman School of Design and the University at large through a rich selection of outside electives and optional certificate and dual-degree programs.

For more information: https://www.design.upenn.edu/fine-arts/graduate/program (https://www.design.upenn.edu/fine-arts/graduate/program/)

Historic Preservation, MSHP
The Master of Science in Historic Preservation degree requires two academic years of full-time study, including core subjects and specialized study in one of four focus areas: architectural conservation, preservation design, preservation planning, and public history of the built environment.

For more information: https://www.design.upenn.edu/historic-preservation/about (https://www.design.upenn.edu/historic-preservation/about/)

Curriculum
A total of 19 course units are required.

All courses must be pre-approved by the student’s advisor prior to registration each semester. In addition, students are expected to complete a
summer institute (HSPV 790) before their first year, and a summer internship between their first and second years of study.

### Landscape Architecture & Regional Planning, MLA

The Department of Landscape Architecture and Regional Planning offers two primary courses of study leading to a professionally accredited Master of Landscape Architecture (MLA) degree. The first professional degree program is three years in length and is designed for students with an undergraduate degree in a field other than landscape architecture or architecture. The second professional degree is two years in length and is designed for those who already hold an accredited bachelor’s degree in either landscape architecture or architecture. Students may be admitted with advanced standing into either of these programs depending upon their respective backgrounds. Dual degree programs with Architecture (MLA/MARCH), City Planning (MLA/MCP), Historic Preservation (MLA/MSHP), Urban Spatial Analytics (MLA/MUSA), or Fine Arts (MLA/MFA) are also available. The Master of Landscape Architecture degree may be combined with Weitzman School of Design certificate programs, such as the Urban Design Certificate. The Department also offers a Certificate in
Landscape Studies, designed for students who may wish to augment or focus their prior work through research into landscape topics.

For more information: https://www.design.upenn.edu/landscape-architecture/work (https://www.design.upenn.edu/landscape-architecture/work/)

Curriculum

MLA: First Professional Degree
A total of 28 course units are required for graduation.

All students entering with a Bachelor of Architecture degree are required to audit LARP 512.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Urban Spatial Analytics, MUSA
The for-profit sector has embraced data and analytics as a means to increase efficiency and grow the bottom line. The government and non-profit sectors are next in line. The Master of Urban Spatial Analytics is a one year graduate program that teaches students how to use spatial analysis and data science to address the most pressing public policy and city planning conundrums of our day. We are teaching the next generation of civic technologists. The one-year MUSA program combines coursework on GIS, spatial analysis, data science, statistics, R and python programming, data visualization and web-based mapping with
world-class urban content coursework from across the University of Pennsylvania. The program is administered jointly by the Weitzman School of Design and the Penn Institute for Urban Research.

Students enrolling in the MUSA program are expected to have a basic familiarity with GIS (including ESRI's ArcGIS or ArcView programs) and descriptive/inferential statistics. For those who lack such background, MUSA and the Weitzman School of Design offer introductory GIS courses during the summer, two weeks prior to the start of the fall term.

For more information: https://www.design.upenn.edu/musa/about (https://www.design.upenn.edu/musa/about/)

Curriculum

Course Sequence
Full-Time: 2 terms / 9 months
- Fall Year 1 - 5 course units
- Spring Year 1 - 5 course units

Part-time: 4 terms / 18 months
- Fall Year 1 - 3 course units
- Spring Year 1 - 3 course units
- Fall Year 2 - 2 course units
- Spring Year 2 - 1 course unit / capstone

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Ecological Architecture, Certificate
The goal of the Certificate in Ecological Architecture is to enable students to critically engage in performance-based design, using innovative techniques and exploring new possibilities. It introduces students to the range of approaches in the required courses of the Certificate, and then allows them to pursue different emphases through a selection of elective courses. The use of design to achieve environmental health and well-being involves the acquisition of basic analytical skills and tools, a broad understanding of the dynamic interaction among the natural, technological, and cultural environments, and the study of techniques of immediate use to designers.

For more information: https://www.design.upenn.edu/all-degrees-certificates/ecological-architecture-certificate (https://www.design.upenn.edu/all-degrees-certificates/ecological-architecture-certificate/)

### Ecological Planning, Certificate

Interest in ecological planning has been increasing in recent years along with the growing awareness of the impacts of climate change on the world’s ecosystems, wildlife, and human settlements. The availability of water and the management of storm water and wastewater have become critical issues in planning for the future of human settlements. Of paramount importance is for students to understand the role of natural cycles (hydrologic, carbon, nitrogen, etc.) and the varying carrying capacity of different landscapes to support human settlements. Jobs in sustainability are becoming popular both in the public sector (e.g., Philadelphia’s Office of Sustainability) and in the private sector (e.g., environmental compliance officers and consulting firms). The Certificate in Ecological Planning draws on courses within the Weitzman School of Design, the Environmental Studies Program, and other Schools to offer students an interdisciplinary approach to Ecological Planning.

For more information: https://www.design.upenn.edu/all-degrees-certificates/certificate-ecological-planning

### Emerging Design and Research, Certificate

Today’s design problems require crossing disciplines. They continuously challenge us to apply new skills, methods, tools, and techniques to situations that cannot be addressed with the expertise of a single domain. As designers develop new intuitions to respond to emerging problems, they often need to extend their vocabulary to work in a wide variety of media—ranging from print and screen-based interfaces, mobile applications, responsive materials, and urban-scale installations to programming the behavior of organic matter. In addition to such broad literacies, it also becomes increasingly necessary to understand how design interacts with society at large and resonates with the cultural, political, economic, and environmental realities of 21st Century.

The Emerging Design and Research Certificate credentials an area of concentration that addresses the need for such a design culture. It teaches the theories, techniques, and technologies required for a new breed of artists, designers, and researchers to be equally versed in visual communication, physical prototyping, software, hardware, and interaction design. For today’s cultural producers, the program fosters a pedagogy in which individuals can design their creative expressions, resistances, responsibilities, and critical attitudes as a response to the society they are living in. In addition to taking classes, students are expected to propose and realize a research project under the guidance of the Certificate director and to follow a study plan that includes the courses necessary to realize their project. In the Certificate program, students are able to study visual communication and take graphic design
classes, but can also expand their studies by taking other types of design
classes offered across the Weitzman School of Design.

1 Substitutions must be approved in writing by the Director and submitted to the Weitzman School of Design Office of Student Services. Students enrolled in the Master of Fine Arts program at the Weitzman School of Design may double count these courses towards their graduate degree. Students enrolled in other programs at the Weitzman School of Design or at Penn must receive permission from their graduate degree program director to apply these courses to their primary degree.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Energy Management & Policy, Certificate

The Certificate in Energy Management and Policy is offered through the Kleinman Center for Energy Policy at PennDesign. This certificate draws from a comprehensive set of courses across several schools at Penn, with a foundational offering in the Weitzman School of Design. The certificate is intended for professional graduate students currently enrolled at the University interested in adding an understanding of energy policy to their list of educational qualifications.

For more information: https://kleinmanenergy.upenn.edu/certificate-energy-management-and-policy (https://kleinmanenergy.upenn.edu/certificate-energy-management-and-policy/)

Environmental Building Design, Certificate

The Certificate in Environmental Building Design is only open to students enrolled in the Master of Architecture degree program. Students in the Master of Architecture degree program are eligible to apply for the Certificate as part of the regular spring admission cycle, allowing them to join the program in their 700 year with the incoming cohort of MSD-EBD students in the ARCH 752 and ARCH 708 sequence. The other required courses can be taken by MArch students independently and prior to their acceptance into the Certificate program. The students will take 4 course units of required courses and 2 course units of ARCH 708, which is taken in lieu of ARCH 704.

For more information: https://www.design.upenn.edu/all-degrees-certificates/certificate-environmental-building-design

Curriculum

A total of 6 course units are required to complete the Certificate program. The Certificate is open to students enrolled in the Master of Architecture program only.

1 Substitutions must be approved in writing by the Director and submitted to the Weitzman School of Design Office of Student Services.
2 Students who have previously taken an introductory GIS course in another department (e.g. URBS 530, SWRK 730, or HSPV 741) may use it to meet this requirement subject to the permission of the Certificate director.
3 Students who have completed CPLN 503 may take CPLN 632/LARP 741 as an advanced course.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Historic Preservation, Certificate

The Certificate in Historic Preservation provides an opportunity for students enrolled in other graduate degree programs (including Architecture, Landscape Architecture, and City Planning) to gain expertise in historic preservation while completing requirements for their professional degree.

For more information: https://www.design.upenn.edu/all-degrees-certificates/historic-preservation-certificates
Integrated Product Design, Certificate

The certificate in Integrated Product Design makes a focus on product design feasible for students who are interested in the field from a wide range of disciplines. Jointly offered by the School of Engineering and Applied Science, Wharton and the School of Design, the IPD certificate certifies that students have had additional experience with an interdisciplinary, human-centered design process for developing new product innovations. Students enrolled in the certificate will be exposed to design thinking, have the opportunity to design at different scales and scopes, prototype and iterate distinct executions of their ideas, address manufacturing concerns, design enabling technologies, consider the implications of financial models on their product design, and develop business strategies.

For more information: https://ipd.me.upenn.edu/ipd-programs/ipd-certificate/

Curriculum

A total of 5 course units are required for the Certificate.

Elective Courses

- Elective I: Design Arts
- Elective II: Engineering
- Elective III: Business

Total Course Units: 5

1. Substitutions must be approved in writing by the Director and submitted to the Weitzman School of Design Office of Student Services.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Land Preservation, Certificate

This Certificate is aimed at two types of students: working practitioners needing basic training in land preservation or updating current practices, and graduate students in Penn’s schools interested in adding knowledge about land preservation practices to their professional qualifications. These include students in the Weitzman School of Design, the School of Arts and Sciences (especially in Environmental Studies), Fels, the Law School, and The Wharton School.

For more information: https://www.design.upenn.edu/all-degrees-certificates/land-preservation-certificate

Curriculum

A total of 5 course units are required to complete the Certificate program.

Total Course Units: 5

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Landscape Studies, Certificate

In response to the increased and broad interest in landscape topics, the Department of Landscape Architecture offers a Certificate in Landscape...
Studies. This is targeted toward students enrolled in other programs in both the Weitzman School of Design and the University more broadly, as well as to mid-career professionals and scholars who wish to enhance their education. Potential candidates must apply for admission in accordance with school procedures. Accepted students must complete 5 course units from the Department of Landscape Architecture. Typically, these course units will be elective courses, although courses required for the MLA curriculum such as those from the Theory, Media, and Workshop sequences may be taken with permission from the instructor.

For more information: https://www.design.upenn.edu/all-degrees-certificates/landscape-studies-certificate

Curriculum

A total of 5 course units are required.

Certificate candidates must propose their course of study for approval by the certificate director, selecting 5 course units from the Department of Landscape Architecture. Typically, these course units will be selected from the many seminars, workshops and courses offered in the department, although design may also be taken with the approval of the chair and the studio critics involved.

Real Estate Design & Development, Certificate

The Certificate in Real Estate Design and Development is open only to Master’s degree students already enrolled at the Weitzman School of Design in Architecture, City Planning, Historic Preservation, or Landscape Architecture. Certificate students must complete five course units from the following list of courses; with at least one course each from Architecture, City Planning, and Wharton.

For more information: https://www.design.upenn.edu/all-degrees-certificates/real-estate-design-and-development-certificate

Time-Based and Interactive Media, Certificate

The Time-Based and Interactive Media Certificate program is suited for graduate students and professionals who wish to develop skills with the moving image, digital technology, and interactivity. The curriculum will enable applicants to engage in new technologies and skills that could be incorporated into their practice, or extend their knowledge to improve their career opportunities.

1 The selection and sequence of the elective courses must be approved by the Director and must be completed within six semesters.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Urban Design, Certificate

The Certificate in Urban Design is open to students already enrolled at the Weitzman School of Design in Architecture, City Planning, Historic Preservation, Fine Arts, or Landscape Architecture. The pedagogy of Urban Design education at the Weitzman School of Design is interdisciplinary and based on an appreciation of the city as an irreducibly complex socio-political and ecological system. This manifests in the diversity of faculty teaching in the Certificate and in the course content. The curriculum for the Certificate in Urban Design includes courses in the fundamental principles of urban design, how urban design is produced and implemented, the history and theory of urban design, and an interdisciplinary studio emphasizing design as research. The studio investigates important current urban issues either in the U.S. or in an international setting and approaches urbanism through a range of contemporary theoretical and methodological lenses. The studio is considered a capstone educational experience for students coming from the different disciplines in the Weitzman School of Design and students are expected to work collaboratively in the exploratory pursuit of innovation.

Students interested in the Certificate in Urban Design should contact the certificate director for the most up to date information.

Urban Resilience, Certificate

The Urban Resilience Certificate draws on resilience expertise within the different departments of the School and builds upon a rich legacy at Penn. Rooted in Ian McHarg’s layerd-analysis methods of thinking holistically across systems and scales, the certificate offers a foundational program for ‘resilience by design.’ It includes a flexible set of courses offered at the Weitzman School of Design as well as at Wharton and the School of Engineering and Applied Science. The certificate is intended for professional graduate students enrolled at the Weitzman School of Design who are interested in adding an understanding of urban resilience, and how to design within a risky and uncertain world, to their list of educational qualifications.

The term resilience has different meanings in different domains. Often it is defined simply as the ability to deal with specific shocks or stresses. Resilience, for example, is easily equated with flood risk management. In the engineering world the term is generally used to mean the ability to withstand or bounce back from shocks or stresses. Such simple definitions not only run the risk of overlooking the distinctions between damage mitigation, resilience, and adaptation, but they also misrepresent the transformative potential of the concept. A broader definition of (urban) resilience, as the ‘capacity of individuals, communities, institutions, business, and systems within a city to survive, adapt, and grow no matter what kinds of chronic stresses and acute shocks they experience’ (100 Resilient Cities), challenges us to think of urban systems as complex and adaptive. Designing in such systems forces designers to work across disciplines, at different (time-) scales simultaneously, and in both the social and physical domains. Designers must accept and embrace emergence and uncertainty. While the certificate program offers students an understanding of such challenges as climate change and inequality, and introduces concrete tools for analyzing, communicating, managing, and strategizing about these challenges ‘by design,’ it also urges students to re-think the position of the design disciplines in the face of fundamental uncertainty and lack of control. The program shows students how designers can have agency by participating in cities understood as complex adaptive systems.

THE WHARTON SCHOOL

In 1881, American entrepreneur and industrialist Joseph Wharton established the world’s first collegiate school of business at the University of Pennsylvania.

Wharton’s pioneering vision was to produce graduates who would become “pillars of the state, whether in private or in public life.” The Wharton School maintains a long tradition of educating visionary business leaders in academia, business, government, and not-for-profit organizations.

Today, Wharton has expanded the scope of this vision to become the most comprehensive source of business knowledge in the world — with over 225 faculty members, 95,000 alumni, 5,000 students across 10 academic departments, 20 research centers, and more than 9,000 executive education participants annually.

Learn more about our history: https://www.wharton.upenn.edu/about-wharton/

Learn more about our school leadership: https://www.wharton.upenn.edu/senior-leadership/

Mission and Philosophy

Founded in 1881 as the first collegiate business school, the Wharton School (https://www.wharton.upenn.edu/) of the University of Pennsylvania is recognized globally for intellectual leadership and ongoing innovation across every major discipline of business education. With a broad global community and one of the most published business school faculties, Wharton creates economic and social value around the world. The School has 5,000 undergraduate (https://undergrad.wharton.upenn.edu/), MBA (https://mba.wharton.upenn.edu/), executive MBA (https://executivemba.wharton.upenn.edu/), and doctoral (https://doctoral.wharton.upenn.edu/) students; more than 9,000 participants in executive education (http://executiveeducation.wharton.upenn.edu/) programs annually and a powerful alumni network (https://alumni.wharton.upenn.edu/) of 95,000 graduates.

Wharton Doctoral Programs train students to become academic thought leaders. As leading research scholars, students will develop the ideas that advance academic knowledge and generate innovations in business theory and practice. Students will work closely with Wharton faculty to learn the practice of rigorous research and use the unparalleled resources of the School and University to define their impact as a scholar.

Research Environment

Wharton is part of the University of Pennsylvania, an R1 research institution with deep commitment and broad resources to support student and faculty research.

Research That Matters

Our faculty will tell you that producing high-quality research is critical to your success. It’s the core of the doctoral experience and academic life. The best way to understand what our students do is to browse their research on each program of study site (https://doctoral.wharton.upenn.edu/programs-of-study/), learn about the awards and honors (https://doctoral.wharton.upenn.edu/student-awards/) they receive, and read about their career placements (https://doctoral.wharton.upenn.edu/career-placement/) at top universities and institutions.

Centers for Knowledge

Through Wharton’s 10 departments (https://www.wharton.upenn.edu/departments/) and 20 research centers and initiatives (https://www.wharton.upenn.edu/research-centers/), students have access to faculty within a deep and broad environment that fosters their intellectual growth. As students’ ideas take shape and even change, they can build on their foundational knowledge base with areas such as entrepreneurship and leadership to health care economics and business ethics.

Explore Wharton Faculty (https://doctoral.wharton.upenn.edu/faculty/)

Cross-Disciplinary Research

The faculty’s diverse research agendas encourage students to follow new ideas that go across boundaries — not just at Wharton but also at Penn’s other globally renowned graduate and professional schools. At Penn, students find unparalleled opportunities to work with leading faculty in such disciplines as law, engineering, medicine, economics, sociology, psychology, and mathematics.

Diversity and Inclusion

The Wharton Doctoral Programs is committed to the belief that a diverse range of perspectives is essential to fostering breadth of thought and knowledge. The environment is meant to provide equal opportunity and equal treatment for all students, regardless of age, gender, race, ethnicity, national origin, religion, sexual orientation, disability, and marital or parental status. We take seriously our responsibility to promote responsible conduct by all students and to make institutional arrangements that create an environment of tolerance and that supports participation and advancement by individuals from diverse backgrounds.

- Statistics, MBA (p. 274)
- Strategic Management, MBA (p. 275)

### Executive MBA

- Executive MBA (p. 276)

### Accounting, PhD

The Accounting PhD program trains students to do rigorous research in accounting, a specialized area of financial economics. The program is highly analytical and quantitative. We look for strong undergraduate preparation in microeconomics and mathematics, while some prior accounting or finance training at the undergraduate or graduate level is an advantage. Institutional understanding of how accounting information is used by capital market participants and/or within firms is useful and best obtained through relevant work experience, but is not required of applicants.

Close working relationships with faculty members provide an excellent learning experience while at Wharton and can continue throughout the student’s career. Our program provides students with opportunities to interact with faculty and get started on relevant research early in the program. Required research elements include the first-year research assistantship and the first and second year summer research papers.

For more information: [https://doctoral.wharton.upenn.edu/programs-of-study/accounting/](https://doctoral.wharton.upenn.edu/programs-of-study/accounting/)

View the University’s Academic Requirements for PhD Degrees [http://catalog.upenn.edu/pennbook/academic-rules-phd/](http://catalog.upenn.edu/pennbook/academic-rules-phd/).

### Required Courses

The course of study for the Ph.D. in Accounting requires the completion of 16 graduate course units.¹

Applied Economics, PhD

Combining the faculties of the departments of Real Estate and Business Economics & Public Policy, Wharton’s Applied Economics program leverages the breadth and depth of its faculty to prepare students for careers doing frontier theoretical and empirical research. Students can focus on a variety of areas including Behavioral Economics, Development Economics, Energy and Environmental Economics, Industrial Organization, Market Design, Public Economics, Risk Management, and Urban Economics and Real Estate. Students may also develop an inter-disciplinary focus by taking courses and working with faculty in some of the other departments at Wharton such as Finance, Health Care Management, Management, and Marketing.

For more information: https://doctoral.wharton.upenn.edu/programs-of-study/applied-economics/

View the University’s Academic Requirements for PhD Degrees (http://catalog.upenn.edu/pennbook/academic-rules-phd/).

Required Courses

The course of study for the Ph.D. in Applied Economics requires the completion of 15 graduate course units. The common core consists of 3 theory courses and 3 statistics/econometrics courses. Students are also expected to master two field areas by passing two courses in each (total of 4 courses units). The remaining course units necessary to achieve 15 are split between the mandatory graduate student research seminars and other electives.

Electives
Select three additional electives

1. Students may also take STAT 921, STAT 520, and STAT 521.
2. Taken in the Spring and Fall of years 2 and 3 for 0.5 cu each

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Ethics and Legal Studies, PhD

The Ethics & Legal Studies Doctoral Program at Wharton focuses on the study of ethics and law in business. It is designed to prepare graduates for careers in university teaching and research at leading business schools, law schools, and other programs. Faculty and student interests range over topics including international business ethics and human rights, corporate governance, social impact, environmental law and policy, securities, normative political theory, negotiations, and corporate criminal law.

View the University's Academic Requirements for PhD Degrees (http://catalog.upenn.edu/pennbook/academic-rules-phd/).

Required Courses

The course of study for the Ph.D. requires the completion of sixteen graduate course units, including courses in statistics. Some graduate-level credit from courses at other universities may transfer to Wharton.

Finance, PhD

The department prepares students for careers in research and teaching at the world's leading academic institutions, focusing on Asset Pricing and Portfolio Management, Corporate Finance, International Finance, Financial Institutions and Macroeconomics.

Wharton's Finance faculty, widely recognized as the finest in the world, have been at the forefront of several areas of research. For example, members of the faculty have led modern innovations in theories of portfolio choice and savings behavior, which have significantly impacted the asset pricing techniques used by researchers, practitioners, and policymakers. Another example is the contribution by faculty members to the analysis of financial institutions and markets, which is fundamental to our understanding of the trade-offs between economic systems and their implications for financial fragility and crises.

Faculty research, both empirical and theoretical, includes such areas as:

- Structure of financial markets
- Formation and behavior of financial asset prices
- Banking and monetary systems
- Corporate control and capital structure
- Saving and capital formation
- International financial markets

Health Care Management & Economics, PhD

Health Care Courses

- Value of technology and innovation
- Health insurance design and reform
- Design and impact of incentives in numerous health industry contexts
- Competition and collaboration across the value chain
- The broad interprofessional/multidisciplinary work of the Leonard Davis Institute of Health Economics

Wharton’s doctoral program is unique among similar programs because it provides a strong background in microeconomic theory, an advanced teaching of econometric and statistical techniques, a comprehensive analysis of both health economics and health care services research, and grounding in management/strategy theory and research. The doctoral program complements the course work with numerous opportunities to collaborate with faculty members in research projects exploring a wide variety of topics in the health economics and management fields.

Management, PhD

Wharton’s Management program prepares students to apply rigorous social science disciplinary theory and research methods to the demands of current management and leadership challenges in the public and private sectors. Our faculty has a broad range of interests ranging from the behavior of individuals, teams and groups to organizational strategy of multinational firms. Major areas of faculty research currently include:

- new venture formation, growth, and corporate entrepreneurship;
- human resources and competitiveness;
- emotions, identity, creativity and motivation;
- political and social influence strategies;
- technology and practice adoption, diffusion, and transfer within and across organizations;
- organizational learning and adaptation;
- and the strategic management of complementary resources and capabilities within an organization, alliance, network or ecosystems.

Each student draws on the faculty’s diverse expertise and varied interests to develop a program uniquely suited to his or her interests frequently spanning the formal specializations noted above. The program encourages students to gain research experience by working closely with multiple faculty on a variety of projects beginning with a research assistantship assignment in the first year with the hope of entering the job market in year four or five with multiple research papers in the publication pipeline.

For more information: https://doctoral.wharton.upenn.edu/management/

View the University’s Academic Requirements for PhD Degrees (http://catalog.upenn.edu/pennbook/academic-rules-phd/).

The total course units for graduation in this major is 16.
Marketing, PhD

The Wharton doctoral program offers students an unmatched interdisciplinary environment within which to generate creative ideas and hypotheses and to develop the analytic skills to evaluate them.

Faculty members are active in diverse research areas that connect to initiatives and centers both within Wharton more broadly, and other departments within the university.

### BASIC COURSES

#### Economics Requirement

Select one of the following course combinations: 1-2

- ECON 701 Microeconomic Theory I
- & ECON 703 Microeconomic Theory II
- ECON 681 Microeconomic Theory
- & ECON 682 Game Theory and Applications.
- BEPP 950 Managerial Economics

#### Statistics Requirement

Select one of the following course combinations: 2

- STAT 500 Applied Regression and Analysis of Variance
- & STAT 501 and Introduction to Nonparametric Methods and Log-linear Models
- or PSYC 611 Applied Regression and Analysis of Variance
- & PSYC 612 and Introduction to Nonparametric Methods and Log-linear Models
- STAT 515 Advanced Statistical Inference I
- & STAT 516 and Advanced Statistical Inference II
- STAT 520 Applied Econometrics I
- & STAT 521 and Applied Econometrics II
- STAT 970 Mathematical Statistics
- & STAT 971 and Introduction to Linear Statistical Models
- ECON 705 Econometrics I: Fundamentals
- & ECON 706 and Econometrics II: Methods & Models
- SOCI 536 Quantitative Methods in Sociology II
- & STAT 501 and Introduction to Nonparametric Methods and Log-linear Models

### COURSES IN A RELATED FIELD

Select six course units (or seven course units if taking BEPP 950) to satisfy the Economics requirements 6-7

<table>

Operations, Information and Decisions, PhD

Wharton’s program in Operations, Information and Decisions emphasizes research on real management problems and maintains a balance between theory and implementation. The faculty trains scholars in decision making, information and operations/operations research.

Our faculty leads in the development and application of an innovative blend of analytical and empirical approaches to important problems facing the private and public sectors, including:

- supply chain management;
- service delivery systems;
- product development and innovation processes;
- decision support systems;
- information-based strategy;
- systems development and implementation;
- risk and environmental management; and
- behavioral approaches to individual and managerial decision making.

Our PhD program provides a unique mix of behavioral, economic, statistical and analytical training to its students, and its strength is reflected in our students’ record of placement and achievement.

3 Areas of Specialization

Decision Making (DM)

What factors influence human judgment and decision-making? Why and when are people prone to judgement errors and biases? What kinds of interventions will help people make better decisions, or improve human welfare? Our interdisciplinary Decision-Making PhD program focuses on training students to conduct and publish academic research that helps to answer these important questions. Along the way, students receive rigorous quantitative/statistical training, and acquire a deep understanding of the literature on judgment and decision-making, significant exposure to the fields of psychology, economics, organizational behavior, and marketing.

Information Systems (IS)

The IS track covers a broad range of research interests. Students interested in information and decision technology (IDT) focuses on the analytical and information technology-based methods for managing complex organizations. Those interested in information strategy and economics (ISE) focus on understanding the strategic aspects of information and information management.

Operations Management / Operations Research (OM / OR)

OM/OR focuses on the processes that define an organization’s outputs, as well as the methods commonly used to analyze these processes. Students specializing in OM are interested in a wide range of functions and organizational types, including operations strategy, product design, process design, technology management, capacity planning, inventory control, supply chain management and service system planning. Students interested in OR focus more on the application of mathematical models to these areas.

## Statistics, PhD

Wharton's PhD program in Statistics provides the foundational education that allows students to engage both cutting-edge theory and applied problems. These include problems from a wide variety of fields within Wharton, such as finance, marketing, and public policy, as well as fields across the rest of the University such as biostatistics within the Medical School and computer science within the Engineering School.

Major areas of departmental research include:

- analysis of observational studies;
- Bayesian inference, bioinformatics;
- decision theory;
- game theory;
- high dimensional inference;
- information theory;
- machine learning;
- model selection;
- nonparametric function estimation; and
- time series analysis.

Students typically have a strong undergraduate background in mathematics. Knowledge of linear algebra and advanced calculus is required, and experience with real analysis is helpful. Although some exposure to undergraduate probability and statistics is expected, skills in mathematics and computer science are more important. Graduates of the department typically take positions in academia, government, financial services, and bio-pharmaceutical industries.

19

* The core accounting courses do not count towards the major, but are prerequisites for the other courses in the department.

MBA Core Requirements

Accounting

Select one of the following:

- ACCT 611 Fundamentals of Financial Accounting
- ACCT 613 Fundamentals of Financial and Managerial Accounting

Finance

Corporate Finance
The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

### Actuarial Science, MBA

The Wharton actuarial science curriculum prepares students for professional certification as an actuary. The curriculum includes general business courses important for developing a strong, general understanding of the business environment, as well as quantitative courses in economics, accounting, computer science, and finance. The location of the actuarial science program within an internationally renowned business school provides students with an exceptional opportunity to blend studies in economic theory, financial strategies, general business principles, insurance company management, corporate risk management, and public policy. Students enrolling are expected to have undergraduate training in calculus and at least one course in statistics and probability theory. Students are encouraged, but not required, to take actuarial examinations organized by the Society of Actuaries or the Casualty Actuarial Society during their studies.

The Society of Actuaries and the Casualty Actuarial Society adopted a new examination system in 2007. Three topics (Applied Statistical Methods, Corporate Finance, and Economics) require Validation by Educational Experience (VEE). The Society of Actuaries has approved a large number of Wharton and Penn courses that satisfy the VEE requirements. A list of these approved courses can be found on the Society website.

Students then need to pass four preliminary exams: Probability, Financial Mathematics, Actuarial Models, and Construction and Evaluation of Actuarial Models. Actuarial courses offered by the Department prepare students for the Financial Mathematics and the Actuarial Models. Actuarial Science major electives taken on a pass/fail basis cannot be counted toward the major requirements. A list of these approved courses can be found on the Society website.

For more information: [https://statistics.wharton.upenn.edu/programs/mba/course-requirements-major-actuarial-science/](https://statistics.wharton.upenn.edu/programs/mba/course-requirements-major-actuarial-science/)

### Business Analytics, MBA

The Business Analytics MBA major is designed to build deep competency in the skills needed to implement and oversee data-driven business decisions, including

- collecting, managing and describing datasets,
- forming inferences and predictions from data and
- making optimal and robust decisions.

Business analytics makes extensive use of statistical analysis and the applications of business analytics span all functional areas.

Business analytics has emerged in recent years as a powerful and required capability for firms in competitive markets. The quantity, quality and diversity of available data have never been greater, which has created new and significant opportunities for organizations to use data to improve their decisions with respect to both internal resources as well as external interactions with suppliers and customers.

Students choosing the Business Analytics MBA major are ideally suited for the growing set of careers broadly defined under the header of “data science” with responsibilities for managing and analyzing data. In addition, the major provides an excellent complement to students who choose to focus on one of the functional areas of business (e.g., accounting, finance, marketing, operations).

For more information: [https://mba-inside.wharton.upenn.edu/buan-major/](https://mba-inside.wharton.upenn.edu/buan-major/)

### Curriculum

A minimum of 19 course units is required for graduation.

Major electives taken on a pass/fail basis cannot be counted toward the Business Analytics major. Up to one (1) CU from a list of pre-approved non-Wharton courses may be counted towards the major.
### Business Analytics Major Requirements

**Core Requirements**

- **STAT 613**: Regression Analysis for Business or **STAT 621**: Accelerated Regression Analysis for Business
- **OIDD 611**: Quality and Productivity or **OIDD 615**: Operations Strategy
- **OIDD 612**: Business Analytics

Select 3-4 course units from the following: 3-4

- **ACCT 742**: Financial Reporting and Business Analysis
- **ACCT 747**: Financial Disclosure Analytics
- **BEPP 780**: Applied Data Analysis
- **FNCE 720**: Investment Management
- **FNCE 885**: Fin-Tech
- **HCMG 857**: Healthcare Data and Analytics
- **LGST 642**: Big Data, Big Responsibilities: The Law and Ethics of Business Analytics
- **MGMT/OIDD 793**: People Analytics
- **MKTG 712**: Data and Analysis for Marketing Decisions
- **MKTG 754**: Pricing Policy
- **MKTG 771**: Models for Marketing Strategy
- **MKTG/STAT 776**: Applied Probability Models in Marketing
- **MKTG 809**: Special Topics: Experiments for Business Decision Making
- **MKTG 852**: Special Topics - Marketing Analytics
- **OIDD 636**: Scaling Operations: Linking Strategy and Execution
- **OIDD 642**: Analytics for Services
- **OIDD 643**: Analytics for Revenue Management
- **OIDD 653**: Mathematical Modeling and its Application in Finance
- **OIDD 658**: Service Operations Management
- **OIDD 662**: Enabling Technologies
- **OIDD 672**: Decision Support Systems
- **OIDD 898**: Advanced Topics
- **STAT 701**: Modern Data Mining
- **STAT 705**: Statistical Computing with R
- **STAT 711**: Forecasting Methods for Management
- **STAT 722**: Predictive Analytics for Business (formerly STAT 622)
- **STAT 724**: Text Analytics
- **STAT 770**: Data Analytics and Statistical Computing
- **STAT 974**: Modern Regression for the Social, Behavioral and Biological Sciences

Select up to 1 course unit of the following: 1

- **CIS 519**: Introduction to Machine Learning
- **CIS 520**: Machine Learning
- **CIS 545**: Big Data Analytics
- **CIT 590**: Programming Languages and Techniques
- **CIT 591**: Introduction to Software Development
- **CIT 593**: Introduction to Computer Systems

**Business Economics & Public Policy, MBA**

The Business Economics and Public Policy major equips future business leaders with the tools to analyze incentives and policies of firms, governments, and consumers. Whether a firm is engaged in real estate development, bringing new products to market, developing new technologies, exporting products, addressing environmental issues, or providing infrastructure services, it will need to be familiar with the incentives of competitors and the role of government so that it can understand which actions it can take, and how other actors will respond.

The major enables students to formulate policy with the best techniques offered by both private and public sector research. The tools will be useful across a range of careers, particularly those that involve developing economies or regulated industries. It helps future private managers to understand, react to, and help form the environment in which they will operate.

The department’s courses focus on understanding the implications for the business world of increased globalization; technological change, such as the internet and e-commerce; the increasing role of intellectual property rights; and the public demand for greater government efficiency. These new developments have resulted in privatization, deregulation, and changes in health, antitrust, and environmental policy — all of which critically affect business interests.

For more information: https://bepp.wharton.upenn.edu/programs/mba/

**Curriculum**

A minimum of 19 course units is required for graduation.

Major electives taken on a pass/fail basis cannot be counted toward the Business Economics & Public Policy major.

**Business, Energy, Environment and Sustainability, MBA**

The MBA Major in Business, Energy, Environment and Sustainability ("BEES") is designed to provide in-depth foundations for those interested in the complex relationships between business and the natural environment, management of environmental risks, and the business and economics of energy. As global energy markets grow and change rapidly and environmental challenges rise, there is a strong need for a new generation of expert business leaders who understand the rapidly evolving trends in business models, technology, regulation, and financing. Students choosing the BEES MBA Major are therefore ideally suited for the ever-expanding set of careers in energy companies, clean-tech investing, energy banking, consulting, the non-profit world, and the government. Students will gain insight into these challenges through an inter-disciplinary approach. Relevant courses are offered by departments including Business Economics and Public Policy, Finance, Legal Studies and Business Ethics, Management, Marketing, and Operations Information and Decisions. Additional courses on business, energy, and the environment can be credited toward the Wharton BEES MBA Major from the School of Arts and Sciences, the School of Engineering and Applied Science, and the School of Design, among other programs, as specified below.

For more information: [https://riskcenter.wharton.upenn.edu/mba-bees-major/](https://riskcenter.wharton.upenn.edu/mba-bees-major/)

**Curriculum**

A minimum of 19 course units is required for graduation.

Major electives taken on a pass/fail basis cannot be counted toward the Business, Energy, Environment and Sustainability major.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**Entrepreneurship and Innovation, MBA**

The Entrepreneurship & Innovation major provides MBA students with skills, analytical tools, perspectives, and experiences that prepare them for careers as autonomous entrepreneurs, family-business entrepreneurs, or entrepreneurs in corporate settings. Whether a student wants to start a business while in school, join an emerging
business, or set the groundwork to launch a new firm later in his or her career, the program aims to provide preparation for all of these exciting options. Entrepreneurial skills and thinking are actively sought by more competitive and profitable growing businesses. The special strength of this program is that it combines theory with practice, providing students the opportunity to test the theories, models, and strategies learned in the classroom by creating real business plans, working on other field projects, and gaining access and insight from leaders in the entrepreneurial business community.

Endowed in 1997 by Robert B. Goergen WG'62, The Goergen Entrepreneurial Management Program is based on the leading research conducted by Wharton faculty. The program is distinguished by its ability to combine theory with practice, allowing students to gain access and insight from the entrepreneurial business community. His generous gift endows the teaching programs in entrepreneurship at Wharton, including a Robert B. Goergen Professorship, funds for course development, and fellowships for new faculty.

For more information: https://mgmt.wharton.upenn.edu/programs/mba/entrepreneurial-management/

Curriculum
A minimum of 19 course units is required for graduation.

Only one (1) CU of pass/fail coursework can be counted toward the Entrepreneurship & Innovation major.

**Finance, MBA**

The Finance major provides students with the analytic and theoretical tools required to master practical issues in Finance, with applications to financial management in business firms, financial institutions, government, and not-for-profit entities. While some attention is given to the descriptive, institutional, and historical aspects of the field, primary emphasis is placed on the analytical foundations of the discipline, emphasizing theory and methods of analysis and making extensive use of relevant techniques of economic analysis, mathematics, and statistics. Graduates have begun their professional careers with positions in financial divisions of non-financial firms, investment banks, broker-dealers, asset management firms, and management consulting firms, as well as various departments of commercial banks and other financial intermediaries, not-for-profit entities, central banks, and international financial organizations.

**Finance, MBA**

The Finance major provides students with the analytic and theoretical tools required to master practical issues in Finance, with applications to financial management in business firms, financial institutions, government, and not-for-profit entities. While some attention is given to the descriptive, institutional, and historical aspects of the field, primary emphasis is placed on the analytical foundations of the discipline, emphasizing theory and methods of analysis and making extensive use of relevant techniques of economic analysis, mathematics, and statistics. Graduates have begun their professional careers with positions in financial divisions of non-financial firms, investment banks, broker-dealers, asset management firms, and management consulting firms, as well as various departments of commercial banks and other financial intermediaries, not-for-profit entities, central banks, and international financial organizations.

For more information: https://fnce.wharton.upenn.edu/programs/mba/
Health Care Management, MBA

The Health Care Management major builds on the established strength of the core curriculum to provide expertise in the complex and distinctive features of the dynamic and rapidly changing health care industry. Wharton Health Care majors are unusually well-qualified for careers in management, consulting, and investing in diverse areas within health care space, including health care delivery, services, managed care, biotechnology and pharmaceuticals, information technology, and entrepreneurship.

Health Care majors draw on a rich variety of electives within the Health Care Management Department, other Wharton Departments, and courses across the university. They also benefit from an interdisciplinary faculty based in Wharton, the Perelman School of Medicine, and other Penn schools and departments, along with adjunct faculty with extensive practical experience.

The Health Care Management major differs from others at Wharton in that:

1. Students must choose the major at the time of application to Wharton, and
2. The major integrates academic and professional development, helping students to obtain summer and permanent positions.

The Health Care Management Department also sponsors an alumni mentor program and benefits from strong links to the Wharton Health Care Alumni Association. Students in health care-related dual degree programs, including the MD/MBA, generally complete the Health Care Management major.

#### Individualized Major, MBA

You may find that your course choices do not fit within the standard majors at Wharton. In this case you may plan an individualized major as an alternative to the existing majors. Wharton offers this option for students who have specific, carefully determined interdisciplinary interests and wish to acquire depth in an area not adequately covered by any of the existing majors. To pursue an individualized major, you must propose a theme, course plan, and title for the major and describe how the proposed courses address the theme. You should submit this proposal on an Individualized Major Request (https://mba-inside.wharton.upenn.edu/wp-content/uploads/2014/12/INDM Approval 2012.pdf) form to a faculty member for approval. Completed forms should be submitted to the MBA Program Office in 300 Jon M. Huntsman Hall for final approval. When possible, this form should be submitted toward the end of the third semester in the MBA Program.

The following rules apply to individualized majors:

1. An individualized major must be a sole major; it may not be pursued in conjunction with an existing major.
2. The title of the individualized major must not sound like “general management” or like an existing major or combination of existing majors.
3. Your proposal for the individualized major must be approved by a faculty member in the relevant field and an administrator in the MBA Program Office.

For more information: https://mba-inside.wharton.upenn.edu/individualized-major/

### Curriculum

A minimum of 19 course units is required for graduation.

Only one (1) CU of pass/fail coursework can be counted toward the major.

Total Course Units: 9.5

1. Students cannot enroll in both FNCE 621 and FNCE 623.
2. Students must take at least one of OIDD 611 and OIDD 615, and may take both to satisfy the requirement.
3. STAT 621 is by placement only.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Insurance and Risk Management, MBA

By majoring in insurance and risk management, an MBA student may fuse general management education with specialized expertise. This major enables the student to gain a thorough understanding of risk management and insurance theory and practice. Students are exposed to the legal, actuarial, financial, and economic principles underlying corporate and public sector risk management, with specific applications to individual, business, and social problems. Risk Management and Insurance theory, functions, and strategies are investigated against a background of accelerating change in the legal, regulatory, and economic environment. Career opportunities for MBA graduates with a major in insurance and risk management include positions in many types of consulting, risk management, employee benefits management, insurance company management, and personal financial planning.

Risk management involves financial and statistical analysis of risk and insurance-related problems that confront businesses and public sector managers. Positions are available in risk management departments of large corporations, risk management consulting firms, insurance brokerage firms, and special risk divisions of insurance companies, that deal with large corporate risks as well as government and non-profit organizations around the world. The increasing importance of employee benefits in overall compensation management requires individuals with education in group insurance, pension plans, and deferred compensation arrangements. Positions are available in corporate benefit departments, employee benefit consulting firms, and bank trust departments as well as social insurance agencies in the public sector. Insurance company management positions are available in general management, marketing, financial management, and research and planning; jobs in the regulatory sector also are available to our graduates. The growth in the number of firms providing personal financial planning has increased the demand for persons with education in the use of life insurance and related mechanisms in capital accumulation and estate conservation. Additional opportunities for an MBA combining finance and insurance include positions in insurance company investment, pension fund management, and social insurance program design and oversight. Management consulting firms also seek candidates with expertise in insurance for positions involving insurance industry analysis, including insurance company formations and acquisitions. This demand can be expected to accelerate in view of the ongoing erosion of traditional regulatory barriers.
between commercial banking, insurance, and the securities industry. The Department also participates in a crossfunctional major in Environmental and Risk Management.

Management, MBA

The Management major develops students’ knowledge and expertise to manage complex, established enterprises or guide start-up enterprises in their formative years. The department encompasses strategic and entrepreneurial management, as well as the management of people and organizations across national and cultural borders. It offers a general major in Management, as well as focused majors in Entrepreneurial Management, Organizational Effectiveness, Multinational Management, and Strategic Management. Majors in Entrepreneurial Management, Strategic Management, and Multinational Management can count some courses outside the department toward their major requirements. The general Management major provides the flexibility of choosing courses across different areas of interest within the department.

Marketing & Operations Management, MBA

Marketing and Operations are two closely interrelated functional areas in all manufacturing and service firms. This cross-functional major is designed to satisfy the strong need in industry for MBAs with in-depth training in both areas. Graduates from this major are better prepared to compete in today’s global business environment.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

1. Students cannot enroll in both FNCE 621 and FNCE 623.
2. Students must take at least one of OIDD 611 and OIDD 615, and may take both to satisfy the requirement.
3. STAT 621 is by placement only.
prepared to accept future career challenges at the intersection of these two disciplines. Examples of their first job assignment include brand managers who have to coordinate marketing and manufacturing for a particular product, members of new product development teams, leaders of quality management programs, or managers in the service sector with responsibility for creating and marketing new services.

**For more information:** https://marketing.wharton.upenn.edu/mba-program/marketing-operations-management-major/

**Curriculum**

A minimum of 19 course units is required for graduation.

Marketing (MKTG) electives taken on a pass/fail basis cannot be counted toward the Marketing & Operations major. One (1) CU of Operations (OIDD) elective coursework may be taken on a pass/fail basis.

- OIDD 612: Business Analytics
The marketing major is designed to build deep competency in the art and science of choosing which customers to serve, and getting, keeping and growing them through delivering superior customer value.

Marketing majors will gain a proficiency in the latest methods and concepts for understanding customer behavior and for devising effective marketing strategies. This is a valuable preparation for careers in consulting and general management and essential for entrepreneurs.

Students begin by taking Marketing Management (MKTG 611 and MKTG 612 or MKTG 613), an overview of the role of marketing in the development of business strategies. Using a combination of lectures, readings, case studies, and computer simulations, these core courses review fundamental approaches in product/market selection, product line management, communications management, pricing, distribution, and marketing research. Students can choose among many electives to structure a program of study to match their interests and career objectives.

For more information: https://marketing.wharton.upenn.edu/mba-program/marketing-management-major/

Curriculum

A minimum of 19 course units is required for graduation.

Major electives taken on a pass/fail basis cannot be counted toward the Marketing major.
The purpose of the multinational management major is to prepare MBAs for managerial, financial and consulting positions in which a sophisticated understanding of the multinational firm, the international competitive environment, and the cross-national political and social aspects of business is required. The major consists of courses on multinational management complemented by functional electives in the areas of finance, marketing, accounting, legal studies, public policy, real estate or healthcare management.

For more information: https://mgmt.wharton.upenn.edu/programs/mba/multinational-management/

### Curriculum

Total Course Units 9.5

1 Students cannot enroll in both FNCE 621 and FNCE 623.
2 Students must take at least one of OIDD 611 and OIDD 615, and may take both to satisfy the requirement.
3 STAT 621 is by placement only.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Operations, Information, & Decisions, MBA

The Operations, Information, and Decisions major is designed to improve the quality and productivity of enterprises by educating highly capable professionals, and discovering, developing, and validating new principles, theory, and methods.

Members of the department share common interests in process management, decision-making, and information. Our common approach to education and research is to blend rigor and relevance. We believe in science-based management and our work is built around models. We seek to reconcile theory and data, and to influence practice. We are a group of individuals with diverse interests and training; indeed, our diversity is central to the intellectual vitality of our community. Nevertheless, several themes characterize the questions of primary concern to most members of the department.

- How can the speed and quality of decision-making by individuals, groups, and organizations be improved?
- How can useful inferences be made from large datasets?
- How can supply chains be managed to provide the right products at the right time and place for least cost?
- How can organizations create high-quality and efficient service delivery operations?
- How can the process of developing goods and services be transformed to deliver better products more efficiently?
- How do changes in the quality, speed, and frequency of information exchange impact an enterprise's functions, productivity, and organization?

For more information: https://oid.wharton.upenn.edu/programs/mba/operations-information-and-decisions/

Curriculum

A minimum of 19 course units is required for graduation.

Only one (1) CU of pass/fail coursework can be counted toward the Operations, Information & Decisions major.
Organizational Effectiveness, MBA

The Organizational Effectiveness major is designed to educate students in the leading edge of theory and practice associated with the management of employees and the design of organizations. It spans topics from understanding the behavior of individuals and groups to designing management systems and structures to support business strategy. It serves students with a range of career objectives:

1. those who seek leadership positions focusing on employees in organizations;
2. those interested in consulting in the area of organizational effectiveness or management consulting more generally; and
3. those interested in balancing a more technical academic and business backgrounds with greater depth in understanding behavioral and management expertise.

For more information: https://mgmt.wharton.upenn.edu/programs/mba/organizational-effectiveness/

Curriculum

A minimum of 19 course units is required for graduation.
Only one (1) CU of pass/fail coursework can be counted toward the Organizational Effectiveness major.

Organizational Effectiveness Major Requirements
Select 1 of the following:
- MGMT 611 Managing Established Enterprises
- MGMT 612 Management of Emerging Enterprises

Select 2.5 course units from the following:
- MGMT 624 Leading Diversity in Organizations
- MGMT 625 Corporate Governance, Executive Compensation and the Board
- MGMT 671 Executive Leadership
- MGMT 691/LGST 806/OIDD 691 Negotiations
- MGMT 740 Leading Effective Teams
- MGMT 751 Strategic Management of Human Assets
- MGMT 772 Power and Politics in Organizations
- MGMT 773 Managing Organizational Change
- MGMT/OIDD 793 People Analytics
- MGMT 794 Understanding Careers and Executive Labor Markets
- MGMT 802 Change, Innovation & Entrepreneurship
- MGMT 816 Building Human Assets in Entrepreneurial Ventures
- MGMT 892 Advanced Study Project - Collaborative Innovation Program

Electives
Select 7 course units of electives

MBA Core Requirements
Select one of the following:
- ACCT 611 Fundamentals of Financial Accounting
- ACCT 613 Fundamentals of Financial and Managerial Accounting

Select one of the following:
- FNCE 611 Corporate Finance
- FNCE 621 Corporate Finance (Half CU)

Select one of the following:
- FNCE 613 Macroeconomics and the Global Economic Environment
- FNCE 623 Macroeconomics and The Global Economic Environment (Half CU)

Legal Studies

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Quantitative Finance, MBA

This major focuses on the application of advanced quantitative and computational tools in the finance industry. It prepares students for a professional career in the quantitative modeling of financial markets. Students majoring in Quantitative Finance are ideally suited for careers at banks, financial institutions, and consulting firms.
in asset management firms or in financial modeling in a broad range of firms.

**Curriculum**

A minimum of 19 course units is required for graduation.

Major electives taken on a pass/fail basis cannot be counted toward the Quantitative Finance major.

This major cannot be taken in conjunction with the general Finance (FNCE) major.

## Real Estate, MBA

The Wharton School has offered a real estate concentration for MBA students and undergraduates since 1985. The concentration has grown and developed, both in size and scope. The concentration consists of two required credit units and three electives. While the required courses focus on real estate development and finance, the electives allow students to explore a variety of issues related to real estate. These include real estate economics, urban fiscal policy, real estate law, housing markets, the relationship between government policy and private development, international real estate markets.

The real estate concentration prepares students to be leaders in the real estate industry and provides the quantitative and qualitative tools necessary for their roles in shaping the future of the industry. To keep students informed of current issues in Real Estate, the Real Estate Department and Samuel Zell and Robert Lurie Real Estate Center sponsors conferences, seminars, and special programs on vital public policy issues relevant to the field.

### Statistics, MBA

The Statistics major develops the skills and insights required to draw inferences and conclusions from many types of data. A key challenge facing managers is the interpretation of the vast amount of data generated in the world of business today. Modern computing systems now produce large volumes of information whereas previously one could often only rely upon intuition and guesses. Yet this information does not directly answer important business questions. What combination of features is most desirable for consumers? What will sales be next month? How did we do last month? Data analysis and statistics offer a systematic approach that can help provide answers to these questions.

Courses offered by the Statistics Department develop the skills and insights required to make effective use of statistical methods. The courses provide the knowledge needed to select and apply techniques and to communicate statistical results. Interpretation in realistic applications offers guiding examples, and theory is used to motivate and compare alternative schemes.

Regardless of topic, all of these courses provide useful skills that augment the substantive managerial abilities of students. Courses also provide exposure to computer software that implements key techniques.

Total Course Units 9.5

1 Students cannot enroll in both FNCE 621 and FNCE 623.
2 Students must take at least one of OIDD 611 and OIDD 615, and may take both to satisfy the requirement.
3 STAT 621 is by placement only.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Strategic Management, MBA

This major provides students with a deep grounding in the basic logic of competitive advantage, premised on a careful analytical treatment of the distinct qualities and positions of individual firms and an understanding of broader competitive dynamics. This background would position students well for guiding strategy at both established and emerging enterprises, as well as prepare them for positions with consulting firms that work with firms in setting their strategies.

For more information: https://mgmt.wharton.upenn.edu/programs/mba/strategic-management/

Curriculum

A minimum of 19 course units is required for graduation.

Only one (1) CU of pass/fail coursework can be counted toward the Strategic Management major.

Strategic Management Major Requirements
Select 1 of the following:

MGMT 611 Managing Established Enterprises

MGMT 612 Management of Emerging Enterprises
Select 3-4 course units from the following: 3-4

MGMT 653 Field Application Project
MGMT 701 Strategy and Competitive Advantage
MGMT 711 Competitive Strategy and Industrial Structure
MGMT 712 Managing strategic partnerships
MGMT 714 Value Creation and Value Capture in American Business History
MGMT 717 Deals: The Economic Structure of Transacting and Contracting

MGMT 721 Corporate Development: Mergers and Acquisitions
MGMT 731 Technology Strategy
MGMT 782 Strategic Implementation
MGMT 784 Managerial Economics and Game Theory
MGMT 801 Entrepreneurship
MGMT 871 Advanced Global Strategy
MGMT 891 Advanced Study Project - Strategic Management
MGMT 925 Seminar in Corporate Strategy

Select up to 1 course unit from the following: 1

LGST 785 Business Strategy & Corp
LGST 815 Environmental Management: Law and Policy
MGMT 715 Political Environment of the Multinational Firm
MGMT 720 Corporate Diplomacy
MGMT 729 Intellectual Property Strategy for the Innovation-Driven Enterprise
MGMT 751 Strategic Management of Human Assets
MGMT 773 Managing Organizational Change
MGMT 802 Change, Innovation & Entrepreneurship
MGMT 892 Advanced Study Project - Collaborative Innovation Program
MKTG 777 Marketing Strategy

Electives

Select 5.5 course units of electives 5.5

MBA Core Requirements 9.5

Total Course Units 19

MBA Core Requirements

Accounting
Select one of the following: 0.5-1

ACCT 611 Fundamentals of Financial Accounting
ACCT 613 Fundamentals of Financial and Managerial Accounting

Finance 1

Corporate Finance
Select one of the following: 0.5-1

FNCE 611 Corporate Finance
FNCE 621 Corporate Finance (Half CU)
Executive MBA

Wharton delivers our undiluted MBA curriculum to working professionals through our executive MBA program in Philadelphia and San Francisco. Wharton emphasizes an intensive core in general management and an unmatched selection of electives in a residential every-other-weekend format tailored for working professionals. Wharton's EMBA curriculum offers rigorous learning in a collaborative environment. The intensive, cross-functional core curriculum provides business fundamentals and the leadership, communication and analytical skills that are critical to your success. Through electives in the second year, you may then develop one or more areas of expertise or continue to develop a breadth of knowledge. Options to study globally help students become global citizens.

For more information: https://executivemba.wharton.upenn.edu/

Curriculum

A minimum of 19 course units is required for graduation.

Students are required to complete the core EMBA curriculum and may complete the rest of the required course units with electives. Majors are not required in the executive MBA program but add another option for study.

ACADEMIC RESOURCES

Penn offers a wide variety of resources, offices, and programs for graduate students to support them in all aspects of their Penn experience. The following list highlights some of the most commonly used resources and areas of interest relating to academics and educational opportunities.

- Academic Calendar (p. 278)
- Advising & Mentoring PhD Students (p. 281)
- Career Services (p. 287)
- Doctoral Dissertation Manual (p. 287)
- Ethics and Original Research Handbook (p. 288)
- Exchange Scholar Program (p. 288)
- Fontaine Society (p. 288)
- Graduate Group Review Student Feedback Form (p. 288)
- Graduate Student Center (p. 289)
- Graduation (p. 289)
- Guide To Thriving at Penn (p. 290)
- Information for International Students (p. 290)
- Information for Students with Children (p. 291)
- Learning Resources (p. 291)
- Libraries (p. 291)
- Master’s Thesis Style Guide (p. 292)
- Registrar’s Office (p. 293)
- Wellness (p. 293)

Academic Calendar

Notes:
For the most up-to-date information about Fall 2020, visit https://fall-2020-planning.upenn.edu.

Graduate and professional programs may follow their own calendars; check the website for each School or program.

Rosh Hashanah, Yom Kippur, the first two days of Passover and Good Friday are religious holidays that affect large numbers of University community members and that fall during the academic year. View the University’s policy regarding these and other holidays (http://catalog.upenn.edu/pennbook/secular-religious-holidays/).

The University’s Three-Year Academic Calendar is subject to change. In the event that changes are made, the latest, most up-to-date version will be posted to the Almanac’s website (https://almanac.upenn.edu/penn-academic-calendar/).

### Introduction
This publication is being distributed to graduate students and faculty members throughout the University of Pennsylvania. It is intended to provide graduate students, faculty, and graduate groups with guidelines that promote good mentoring relationships between faculty advisors and graduate students. And by clarifying expectations and responsibilities, we hope to reduce frustration and conflicts, which should foster more productive research experiences for our doctoral students.

While models of mentoring relationships can vary across graduate programs at the University of Pennsylvania, there are general guidelines, policies, and approaches that apply everywhere. These guidelines provide students with direction on choosing an advisor, establishing a dissertation committee and maintaining productive working relationships. Students and faculty can find information about their respective roles and responsibilities in this important relationship as well as advice on conflict resolution and links to important policies.

This publication, based on one produced at the University of Toronto, is intended to promote conversations between faculty and students regarding their mutual expectations. While it focuses almost exclusively on the dissertation stage, recent studies indicate that good advising and mentoring that begin early in the student’s career facilitates expeditious degree completion. Generally, each graduate program will provide a program-specific handbook detailing course and examination requirements, regulations, procedures and expectations of both students and faculty, from matriculation through graduation. Our hope is that this publication will support that effort and can serve as a starting point for further action.

Beth Winkelstein, Vice Provost for Education and The Council of Graduate Deans

Sections of this publication are based on “Graduate Supervision Guidelines for Students, Faculty and Administrators” (2002) produced by the School of Graduate Studies at the University of Toronto. We are grateful for their willingness to allow us to use and revise this work.

### Advising & Mentoring PhD Students
Guidelines for Students, Faculty and Administrators at the University of Pennsylvania
Choosing a Dissertation Advisor

Introduction

While some graduate groups may assign an advisor to a student upon admission to the program, in many graduate groups the responsibility for finding a dissertation advisor rests with the student. The choice of a faculty member who will supervise the dissertation work required to fulfill degree requirements is one of the most critical decisions a graduate student will make. A student will spend several years working with the faculty member of choice, and that choice will significantly affect the direction of the student's career. Choosing a dissertation advisor, therefore, is an extremely important decision for doctoral students, although it is not immutable, as will be discussed later.

A student undertaking dissertation work needs an advisor who will be not only academically competent in a particular area but also willing to act as the student's advocate when necessary. It is important that the student be able to work and communicate effectively with the advisor and not feel overwhelmed or intimidated in the relationship. Dissertation work can be lonely and isolating. Each student requires the guidance of someone who will stimulate thought, who has sufficient interest in the student's topic to produce new insights jointly, and who will challenge the student to think in a novel manner about the research.

Obtaining Information on Potential Advisors

Students who are responsible for finding their own advisor should be familiar with the University rules (http://catalog.upenn.edu/pennbook/academic-rules-phd/) about who can advise dissertation research and serve on the dissertation committee. Several resources and strategies can help students identify an appropriate faculty advisors, as follows.

The graduate group website or handbook is a valuable source of information on potential advisors. Many graduate groups have developed websites that profile affiliated faculty members, including their areas of research, recent publications, and other academic activities. Literature searches can provide further information on the publications and preferred journals of particular faculty members. The graduate group chair can also provide valuable advice on potential advisors and can help students to become familiar with any specific graduate group policies on supervision.

Students can get to know potential advisors by taking a course, doing a lab rotation, acting as a teaching assistant, and/or attending seminars and other presentations by the faculty member.

Graduate students working with the potential advisor are an invaluable source of information. Students who are currently working or have worked with a particular advisor can be asked about their experience with that advisor and about the advisor's expectations and working methods. Getting to know these students is also useful because with anyone choosing to work with a faculty advisor would likely have close, future interactions with their students. Talking to multiple students is always encouraged given the possibly strong and differing opinions one might hear.

Students should make an appointment to see potential advisors. Meeting a potential advisor is an essential step in determining whether a faculty member would be a good fit in terms of mentoring and interpersonal style and research interested. The following is a list of issues that might be covered in such a meeting:

- How many graduate students do you advise? (Students may not want to pick a faculty member who has too many students already.)
- Typically, how often do you meet with your students?
- Typically, how much time do you expect students to take to complete their dissertation?
- How will we agree upon my research topic?
- Are there sufficient funds available for the research project?
- What will be the sources of my stipend/funding? What are ways you can provide assistance for finding additional funding if/when my stipend expires?
- What level of independence is expected of your graduate students?
- Is there any specific knowledge I need to have before starting to work with you?
- Will I have the opportunity to attend conferences? Publish papers? Present work at colloquia? Are there funds available for me to do so?
- Are you planning a sabbatical leave soon? If so, what arrangements for continued supervision will be made during your absence?
- What opportunities would I have in this area of research when I graduate?
- How do you typically assist students on the job market?
- Will guidelines be drawn up for working together?
- How will I receive feedback on my progress?

These questions are designed to help the student and the potential advisor determine whether a good match exists. Where appropriate, the student may also want to ask about the order of authorship on publications and intellectual property issues.

The choice of a dissertation advisor is a decision to be made with a great deal of care and consideration. Discussion of the topics listed above will also give faculty members a sense of what students expect in terms of meetings, feedback, turn-around time on submitted work, etc. Taking time to explore these issues should result in a productive relationship for both student and advisor that culminates in a piece of original research, completed within a reasonable time period.

Changing Advisors

There may be situations in which a student must change advisors. Some situations are beyond the student's control; for example, when an advisor leaves the university or otherwise becomes unavailable. In other situations, the student may want to choose a different advisor; for example if the focus of the research project changes to something outside of the current advisor's expertise, or if works styles do not mesh well.

In these latter situations, students should understand that while there can be risks in changing advisors, it usually can be negotiated in a positive manner. Students deciding to pursue this option should be sure to consult the graduate group for any specific policies and procedures that apply to changing advisors, and be sure to ascertain if funding may change under a new advisor. Students should always be professional and respectful in interactions with the current advisor and potential new advisor, and be certain that another member of the faculty is willing to add them as a new advisee before discussing a change with the current advisor. Students should focus discussions on interests and goals and not on negative incidents or difficulties. The potential new advisor, as
well as leaders or other members of the graduate group, may have advice regarding how to broach this change with the current advisor.

**Expectations, Provision of Structure, and Timelines**

The provision of structure by dissertation advisors is crucial at all stages of a graduate student's work, but is particularly important during the initial phase of dissertation work. It is essential that advisors and students have a shared set of expectations. Each needs to understand the constraints that operate on the other and the effects that these may have on the mentoring relationship. Good advisors make their expectations clear to students on issues such as the need for regular meetings, mastery of methodological skills, conference publications and conference presentations, timelines for degree completion, etc. Once these expectations are clearly outlined, it is much easier to develop a positive, productive relationship.

The following are suggested topics to cover in initial discussions between student and advisor:

- Frequency of contact.
- Preferred communication method (e.g., e-mail, phone calls, Skype, in person).
- Timelines for each stage of the research, including publications and conference presentations.
- Type and frequency of feedback expected.
- Whether students work in the graduate group or at home/library. Hours of work.
- Nature of any directed reading program.
- Monitoring, evaluation, and reporting of progress.
- Additional training, fieldwork requirements.
- Any authorship/collaboration or intellectual property issues.
- The establishment and membership of the dissertation committee.

**The Dissertation Committee**

The academic experience is greatly enhanced if faculty members other than the direct advisor are readily and formally available for consultation and discussion with the graduate student. To provide this element of supervision, a dissertation committee should be put in place for the Ph.D. student early in the dissertation stage. The graduate group is responsible for monitoring the progress of the student through the dissertation committee, as follows:

- A dissertation committee should consist of at least three faculty members (including at least two members of the graduate group). While some graduate groups require all members of the dissertation committee be members of the graduate group or affiliated department, others encourage/require appointment of a faculty member from another department, to encourage an interdisciplinary perspective. Be sure to review the policy about the composition of dissertation committee (http://catalog.upenn.edu/pennbook/academic-rules-phd/) as you are building your committee.
- It is required that the dissertation committee meet with the student, as a committee, at least once per year to assess the student’s progress in the program and to provide advice on future work.
- The committee submits a written report to the graduate group chair, at least once per year, detailing its observations of the student’s progress and its recommendations.

- The student must be given the opportunity to respond to the committee's report/recommendation and to append a response to the committee's report.
- Copies of the report shall be given to the student and filed with the graduate group office.

The Graduate Group is responsible for recording the membership of the dissertation committee in the Student Information System (SRS). The graduate division office at the home school will monitor compliance with this requirement through SRS reports and an annual audit of the official student file.

**Open Access Publication of Dissertations**

The culmination of the research project will be a dissertation. All Penn PhD dissertations are published by ProQuest and a hard copy is placed in the Penn Library once the student graduates. Penn also requires open access publication of dissertations in the institutional repository, Scholarly Commons (http://repository.upenn.edu/etd.html). Open access publication provides a much wider audience, can help to market ideas to potential employers, and can help make plagiarism or theft much easier to detect. The open access dissertation will be available via the internet, including full text searching through search engines like Google. The same legal and copyright protections pertain to open access publication as to traditional hardcopy publication.

In cases where papers are in press, patents are pending, or where there are other intellectual property concerns, it may be beneficial to delay publication (commonly referred to as an ‘embargo’). Students should discuss with the advisor whether a delay in publication is necessary or advisable. If the student and advisor agree that it will be advantageous to embargo the dissertation, embargo preferences can be entered when submitting the dissertation using ETD Administrator. Note that different embargo options are available for traditional publishing (in ProQuest: 6 months, 1 year, 2 years) and open access (in Scholarly Commons: 3 years initially). A request for a three-year delay in open access publication through Penn’s Scholarly Commons will be granted automatically when requested. Requests for additional delays – which must be made in advance of the embargo expiring – require approval by the Graduate Group Chair and in some cases the school’s Graduate Dean or Associate Dean for Graduate Studies.

**Expectations & Responsibilities of the Student, Advisor and Graduate Group**

**Responsibilities of the Student**

Good mentoring practice entails responsibilities not only of the advisor but also of the student. When a student enters a doctoral program, that student commits time and energy necessary for research leading to a dissertation that makes a substantial and original contribution to knowledge. It is the responsibility of the student to conform to University and program requirements and procedures. Although it is the duty of the advisor to be reasonably available for consultation, the primary responsibility for keeping in touch rests with the student. The student’s responsibilities include the following:

- Becoming familiar with, and adhering to, the rules, policies, and procedures in place in the graduate group, home school, and the
University as outlined in available resources such as graduate group student handbooks/web sites and the University’s policies (http://catalog.upenn.edu/pennbook/academic-rules-phd/). Of particular importance are rules around Academic Integrity.

• Knowing and following the rules and policies of the graduate group and the University. Adhering to all deadlines and policies regarding registration, leaves of absence, limitations on time and recertification, dissertation submission and graduation (http://catalog.upenn.edu/pennbook/academic-rules-phd/).
• Selecting and planning an original research topic that can be successfully completed within the expected time frame for the degree program; in some cases, this will be done in consultation with the thesis advisor.
• Preparing a research plan and timetable in consultation with the advisor as a basis for the program of study, including any proposed fieldwork.
• Learning and adhering to responsible conduct of research standards for your field. Acquiring the necessary health and safety skills for undertaking the proposed research.
• Meeting with the advisor when requested and reporting regularly on progress and results.
• Establishing a dissertation committee, with the assistance of the advisor, early in the dissertation stage, as required by the graduate group.
• Keeping advisors informed on how they can be contacted and informing them of any significant changes that may affect the progress of the research.
• Maintaining good records of each stage of the research.
• Be a good citizen of the research group, laboratory, department, or other entity that requires cooperation from its members (e.g., lab chores).
• When necessary, planning to seek additional funding as needed well in advance.
• Thinking critically about career trajectory and mindfully pursuing opportunities to support career goals, for example, through teaching, publishing, presenting, externships, etc. (See Appendix A: Skill Building for more information.)

Responsibilities of the Faculty Advisor

Within the context of their role as advisors, a faculty member’s primary task is to guide and inspire his or her students to reach their scholarly potential. At the same time, each advisor must try to ensure that each student is in compliance with the rules and regulations of the University. The advisor should promote conditions conducive to a student’s research and intellectual growth and provide appropriate guidance on the progress of the research and the standards expected.

Good mentoring practice includes the following:

• Guiding the student in the selection and planning of an original research topic that can be successfully completed within the expected time frame for the degree program.
• Establishing with the student a realistic timetable for completion of various phases of the program.
• Being accessible to give advice and provide feedback, while also establishing for the student a realistic timeline for receiving feedback. Feedback should be professional and constructive and provide concrete guidance for improvement.
• Ensuring that students have an understanding of the relevant theories and the methodological and technical skills necessary for the research, including provision of information through an ethical review process where applicable. Ensuring that students adhere to responsible conduct of research standards for your field.
• Establishing with the student a dissertation committee early-on in the dissertation stage (e.g., after the qualifying exam) and ensuring that the committee meets with the student at least once a year, as a committee, and provides an annual written report of the student’s progress.
• Making arrangements to ensure continuity of supervision during leaves or an extended period of absence.
• Encouraging participation in graduate group seminars and colloquia.
• Encouraging and assisting students to attend and present work at local, national, or international conferences and to publish their work in appropriate journals.
• Advising on matters of career options, job market, preparation of the CV, and strategies for launching a career in research.
• Contributing to the student’s professional development through letters of reference and general advice.
• Advising the student on seeking additional funding, as needed.
• Ensuring that the research environment is safe, equitable, and free from harassment and discrimination.
• Avoiding personal or business relationships that may constitute a conflict of interest.
• Being sensitive to academic needs and concerns that may arise for international students, students from underrepresented groups, students with disabilities, and/or students with family responsibilities.
• Communicating in a timely manner if the student’s academic performance is not meeting expectations, providing an outline for what actions need to be taken in order to return to academic good standing, and a timeline for doing so. While dealing with inadequate academic performance can be difficult, it is in no one’s best interests to prolong a program of study if success is unlikely.
• Serving as an advocate for the student.

Students sometimes experience personal difficulties. These can include family difficulties, problems in personal relationships, cultural adjustments, financial pressures, medical issues, and problems associated with employment. The importance of these various problems should not be under-emphasized. Advisors should not act in a counseling capacity with their students, nor should they intrude into the personal lives of their students with unwanted advice. However, advisors should try to ensure that their relationships with students are such that students will be comfortable telling advisors that they are having significant personal difficulties. Sometimes a timetable can be realigned or a referral made to appropriate campus resources (http://www.gsc.upenn.edu/resources/).

Responsibilities of the Graduate Group

The graduate group chair, the graduate group coordinator, and other support staff play key roles in the lives of graduate students. The graduate group must endeavor to create an environment within which scholarly work by graduate students can flourish, and problems can be resolved in an effective manner. Students should take the time to get to know the graduate group administrators. In this way, students can stay current with regulations and graduate group activities and events.
Responsibilities of the graduate group include the following:

- Producing a handbook/brochure/web site that outlines program requirements, regulations and procedures, financial support and information on faculty members and their area of research/expertise. If requirements change, past versions of the information should be maintained for students admitted under the previous requirements.
- Having procedures in place to facilitate the search for an advisor and to allow a change in advisor in the unlikely event that this becomes necessary.
- Establishing an effective communication system with graduate students (i.e., mailboxes and/or e-mail lists) and workspace, where possible.
- Providing orientation sessions for both new and continuing students. Information conveyed in these sessions should include: overview of program policies and requirements, areas of faculty expertise for research supervision, expected performance and timelines for completion of degree requirements, intellectual property policies, publication and authorship issues, scholarship/funding information, information on policies regarding the proper conduct of research, sexual harassment, safety and workplace regulations, and procedures for complaints and appeals.
- Providing responsible conduct of research training as appropriate for your field.
- Ensuring that the student’s dissertation committee meets University guidelines (http://catalog.upenn.edu/pennbook/academic-rules-phd/) and that the membership is documented in the student’s official file.
- Ensuring that the committee meets once a year and that an annual written progress report is filed in the official student file at the graduate group office.
- Providing a mechanism for resolving problems, which may arise between graduate students, advisors and/or members of the dissertation committee.
- Establishing a graduate group appeals process to review formal complaints from students.
- Ensuring a safe, equitable and fair working environment for students and informing them of all relevant safety and work regulations.
- Being sensitive to academic needs and concerns that may arise for international students, students from underrepresented groups, students with disabilities, and/or students with family responsibilities.
- Disbursing financial support in a fair and equitable manner that is consistent with the graduate group’s funding policy.
- Being knowledgeable about University resources (http://www.gsc.upenn.edu/resources/) in place to support students, and making referrals when appropriate.

**Conflict Resolution**

Students experiencing a conflict with an advisor or other faculty member are encouraged to discuss their situation with the Director of the Graduate Student Center (https://gsc.upenn.edu) for advice and support before moving forward. If a dispute or concern arises between a graduate student and advisor with respect to the mentoring relationship, the student and advisor should try first to resolve any difficulties amicably between themselves. If informal discussion does not resolve the problem, there are several avenues to pursue within the graduate group: in most cases, the graduate group chair should be consulted first. If the graduate group chair is unable to find a satisfactory solution, advice may be sought from the relevant associate dean of the student’s school or from the University Ombuds (http://www.upenn.edu/ombudsman/), which is a confidential, off-the-record resource that can help the student or the advisor explore options, identify resources, manage expectations, and express frustrations. Additionally, the University Ombuds (http://www.upenn.edu/ombudsman/) offers informal mediation services provided by a professionally trained and certified mediator.

If all else fails, and if the nature of the issue is academic, a student may pursue a formal academic appeal by contacting the Office of the Vice Provost for Education (https://provost.upenn.edu/education/).

Here are some further considerations related to conflict resolution:

- All conflict is not necessarily to be avoided. Conflict can result in creative solutions and when the conflict involves ideas, it can advance knowledge.
- There is a significant power differential in the student/advisor relationship, but the very nature of the relationship and the academic enterprise requires that ideas and assumptions may be challenged.
- Expectations should be clear and commonly understood on both sides; put them in writing, if necessary.
- Conflict should be handled early: it is easier to handle smaller issues as they arise, and sometimes options for resolution may diminish over time.
- The Office of Student Conduct’s conflict resolution program (https://www.osc.upenn.edu/mediation-conflict-resolution-mediation/) provides conflict coaching, mediation, and workshops on communication and conflict resolution skills.
- Not all conflict can be resolved informally. If you have tried your best but you have not resolved the issue, follow the recommended route to a more formal resolution.

**Seeking Support & Reporting Concerns**

**Academic Concerns**

Students who believe that their Graduate Group is not following recommended academic guidelines or University requirements (for example, annual dissertation committee meetings) should discuss their concerns first with the Graduate Group Chair. If the Graduate Group Chair is involved in the issue, or is unable to resolve the issue, students should next discuss the concern with the Graduate Dean in their school. Students who do not find resolution here should bring the concern to the University’s Vice Provost for Education at provost-ed@upenn.edu. Students uncomfortable with this process at any stage are encouraged to bring their concerns to the Director of the Graduate Student Center (http://www.gsc.upenn.edu/) for advice and support.

Students who want to provide general feedback about their experiences in their Graduate Group, either anonymously or not, can fill out the Graduate Group Review Student Feedback Form (https://vpe.wufoo.com/forms/w1dk1nrij0k8ihvl/). PhD Graduate Groups are periodically reviewed by the Graduate Council of the Faculties (GCF), and feedback from current graduate students will be used in that review process. Confidentiality will be maintained for students who do provide their name.
Concerns Regarding Unfair Treatment, Bias, Harassment, or any Form of Violence Sorting Through Options

Recognizing that issues of bias, harassment and/or violence can be particularly sensitive, Penn provides several Confidential Campus Resources that can help students sort through options and decide whether and how to make a formal report. These include:

- African-American Resource Center (http://www.upenn.edu/aarc/)
- Counseling and Psychological Services (http://www.vpul.upenn.edu/caps/)
- Lesbian Gay Bisexual Transgender Center (http://www.vpul.upenn.edu/lgbtc/)
- Office of the Chaplain (https://chaplain.upenn.edu/)
- The Office of the Ombuds (http://www.upenn.edu/ombuds/)
- Office of Penn Violence Prevention and Education (https://www.vpul.upenn.edu/pvp/)
- Penn Women's Center (http://www.vpul.upenn.edu/pwc/)
- Special Services Department, Division of Public Safety (https://www.publicsafety.upenn.edu/about/special-services/)
- Student Health Service (http://www.vpul.upenn.edu/shs/)

Reporting

Students wishing to initiate a complaint against a member of the Penn community for sexual misconduct – which includes sexual harassment, sexual violence, relationship violence, and stalking – the complaint should be brought to the Associate Vice President for Equity and Title IX Officer (AVP). See the Sexual Misconduct Policy, Resource Offices and Complaint Procedures (https://catalog.upenn.edu/pennbook/sexual-misconduct-resource-offices-complaint-procedures/) for more information. Penn Violence Prevention (https://www.vpul.upenn.edu/pvp/sexualviolence/) provides support and information about options for reporting sexual misconduct.

Students wishing to lodge an official complaint of discrimination and/or retaliation can pursue either formal mediation or a formal complaint of discrimination and/or retaliation through the Office of Affirmative Action and Equal Opportunity Programs (http://www.upenn.edu/affirm-action/). Affirmative Action maintains a Complaint of Discrimination and/or Retaliation Form. Individuals also may report having been treated in a biased or discriminatory manner by completing a Bias Incident Reporting Form (https://diversity.upenn.edu/diversity-at-penn/bias-motivated-incident-report/). This form may be used to report incidents of bias involving Penn students, faculty, or staff. You are not required to provide your name or contact information. Confidentiality will be maintained to the extent possible.

215-P-COMPLY (https://secure.ethicspoint.com/domain/media/en/gui/22868/) is Penn's confidential reporting and help line. As a member of the Penn community, you are encouraged to raise questions and concerns, particularly if you suspect violations of policies or legal requirements. To report a student engaged in misconduct, contact the Office of Student Conduct (https://www.osc.upenn.edu/), which is responsible for matters of student discipline. Penn Violence Prevention (https://www.vpul.upenn.edu/pvp/gethelp/) provides support and information about options for reporting sexual violence, relationship violence, or stalking.

Appendix A - Skill Building and Career Development

PhD students will find that their academic research experience -- as well as their strength on the job market -- can be enhanced if they focus on developing important skills such as writing, teaching and management throughout their doctoral studies. Students may also want to explore careers outside of the professoriate. The University provides many services to help with these endeavors; all of the services outlined here are free to students at Penn.

Develop Writing Skills

The Office of Learning Resources (http://www.vpul.upenn.edu/lrc/lr/) provides help in skills such as academic reading, writing, study strategies, and time management. This academic support is provided through a varied menu of services and programs, some specifically for graduate students and for international students.

The Marks Family Writing Center (http://writing.upenn.edu/critical/writing_center/) provides graduate students with feedback on seminar papers, proposals, manuscripts, and other texts, working on anything from conceptualizing to polishing a final draft, including how to plan and stage writing work.

Develop Teaching Skills

The Center for Teaching & Learning (https://www.ctl.upenn.edu/programs-and-services-graduate-students/) prepares graduate students to serve as TAs and/or to teach their own classes at Penn. In addition, CTL has a number of programs and services to help graduate students as they go on the job market and imagine themselves as future faculty.

The CTL Teaching Certificate (https://www.ctl.upenn.edu/ctl-teaching-certificate/) provides doctoral students with support for improving their teaching as well as recognition for their commitment to developing as teachers. The CTL Teaching Certificate also offers a structure through which interested graduate students can prepare themselves to become faculty in the future. The certificate is noted on the student’s transcript, as a statement from the University of Pennsylvania that a graduate student has pursued advanced training in teaching.

Develop Leadership and Management Skills

There are many opportunities on campus to develop leadership and management skills. PhD students can benefit from holding leadership roles in their school governments or GAPSA (http://www.gapsa.upenn.edu/) or other graduate student organizations (http://www.gsc.upenn.edu/resources/gradgroups.php). PhD students can also volunteer to serve on University committees (http://www.gapsa.upenn.edu/university-committee-seats/).

There are also paid positions on campus (http://www.gsc.upenn.edu/resources/#resource8content) which can provide management
and leadership experiences. Examples include fellow positions at the Graduate Student Center (http://gsc.upenn.edu/), graduate associate positions in College Houses & Academic Services (http://www.collegehouses.upenn.edu/join/ga/), and advising positions at the Weingarten Learning Resource Center (http://www.vpul.upenn.edu/lrc/lr/).

A session with an advisor in Career Services (http://www.vpul.upenn.edu/careerservices/gradstud/phdpostdoc.php) can help students identify other important skills and opportunities to develop them.

For Students Considering Careers Beyond Academia
The reality is that your faculty advisor is probably not well-equipped to help you explore careers outside of the professoriate. However, there are many other helpful resources at Penn to assist. Set up an appointment with a graduate student/postdoc career advisor at Career Services (http://www.vpul.upenn.edu/careerservices/gradstud/phdpostdoc.php) where you can get guidance and resources specifically for PhD students exploring their many career options. In addition, you can tap into the vast network of PhD alumni who work in a variety of fields through QuakerNet (https://quakernet-idp.alumni.upenn.edu/discovery?entityID=https%3A%2F%2Fquakernet-idp.alumni.upenn.edu%2Fsap%2Fsp%2F&return=https%3A%2F%2Fquakernet-idp.alumni.upenn.edu%2FShibboleth.sso%2FLogin%3FSAMLDS%3D1%26target%3Dss%253Am%253A21c92f0073f163ec21b1). There are also many ways to research career paths taken by Penn alumni using LinkedIn (https://www.linkedin.com/school/university-of-pennsylvania/alumni/). If you are looking for the best ways to take full advantage of these online tools, then call 215-898-7530 to set up a time to speak with career advisors who are specialized in working with PhD students at any stage of the career exploration and career development process. PhD students can begin the process of exploring relevant career paths by reading the Carpe Careers blog (https://www.insidehighered.com/career-advice/carpe-careers/) on the Inside Higher Ed website, written by PhD/postdoc career advisors from a wide range of academic institutions, and setting up free accounts with the following online tools:

- The Versatile PhD (https://www.vpul.upenn.edu/secure/careerservices/pennkey/esub.php) (for all academic disciplines)
- myIDP (http://myidp.sciencecareers.org/) (for PhD students in STEM fields)
- Imagine PhD (https://www.imaginephd.com/) (for PhD students in humanities and Social Sciences)
- BGS Career Development (https://bgscareerdevelopment.com/) (for PhD students in biomedical fields)

Appendix B - Policies, Rules & Resources

Academic Policies
- Academic Rules for PhD Programs (http://catalog.upenn.edu/pennbook/academic-rules-phd/)
- Code of Academic Integrity (http://catalog.upenn.edu/pennbook/code-of-academic-integrity/)
- Fairness of Authorship Credit in Collaborative Faculty-Student Publications for PhD, AM, and MS Students (http://catalog.upenn.edu/pennbook/fairness-authorship-credit-collaborative-faculty-student-publications-phd-am-ms-students/)
- Patent and Tangible Research Property (http://catalog.upenn.edu/pennbook/patent-tangible-research-property-policies-procedures/)
- Ethics & Original Research (p. 288)
- Dissertation Manual (p. 287)
- PhD Student Leave of Absence Policy (http://catalog.upenn.edu/pennbook/phdstudentleaveofabsence/)

Conduct Policies
- Code of Student Conduct (http://catalog.upenn.edu/pennbook/code-of-student-conduct/)
- Alcohol and Other Drug Policy (http://catalog.upenn.edu/pennbook/alcohol-drug-policy/)
- Student Grievance Procedures (http://catalog.upenn.edu/pennbook/student-grievance/)

Resources for student success
Penn provides many resources to help students thrive in graduate school. And we recognize that student overall wellness can fall within several dimensions including academic, emotional, physical, spiritual, and financial. The University offers a wide range of resources (https://gsc.upenn.edu/resources/) designed to support these many dimensions of wellness.

Career Services
Career Services provides support and resources for PhD and master's degree students. Career Advisors are happy to work with students on all aspects of their career exploration and planning at any time during their academic programs, and there are many career-relevant steps that students can take in their first years. With access to the student/employer engagement platform called “Handshake” (https://www.vpul.upenn.edu/careerservices/handshake/), students can search for jobs and internships across industries, search and register for upcoming career workshops/programs, career fairs, and employer information sessions, and schedule 1-on-1 or group appointments with advisors at Career Services. Graduate students are encouraged to set up a time to meet with a career advisor to get any of their career questions answered, or to discuss the types of questions they should be asking in order to maximize their career readiness by the time of their graduation. All career appointments and walk-ins are entirely confidential.

For more information, visit https://www.vpul.upenn.edu/careerservices/gradstud/index.php (https://www.vpul.upenn.edu/careerservices/gradstud/).

Doctoral Dissertation Manual
Writing and submitting your dissertation are among the final steps leading to the award of the PhD degree. At the University of Pennsylvania, a student presents and defends the dissertation publicly, and then, with the approval of the dissertation committee and graduate group chair, submits the final manuscript for publication. Finally, the PhD degree is awarded to the candidate upon the recommendation of the Graduate Council of the Faculties.
A bound copy of the dissertation is shelved in the University Library, where it is available through Interlibrary Loan. A digital copy is included in the ProQuest/UMI database, accessible online to subscribers and libraries.

Beginning December 2015, Penn will require open access publication of dissertations (p. 283). Open access publication provides a much wider audience for your work, and can help to market your ideas to potential employers, and can help make plagiarism or theft much easier to detect. The open access dissertation, published in the University’s institutional repository, ScholarlyCommons, (http://repository.upenn.edu/) will be available via the internet, including full text searching through search engines like Google. The same legal and copyright protections pertain to open access publication as to traditional hardcopy publication. The University permits delay of traditional and open access publication as necessary. See Delay of Publication, below.

Dissertations must be submitted in digital format through ProQuest’s ETD Administrator module. Follow the instructions in Submitting Your Dissertation, and should further questions arise, consult the Graduation Coordinators at the Graduate Division of Arts and Sciences, Suite 322A, 3401 Walnut Street/6228; phone 215-898-7444, email: graddegree@sas.upenn.edu. The Graduate Division of Arts and Sciences serves as the administrative clearinghouse for final deposit of all Penn PhD dissertations.

Ethics and Original Research Handbook

To ensure that all Penn students understand the high academic standards of the University, the Ethics & Original Research Handbook is available to guide you as you approach the research and writing tasks that your courses and dissertation will demand of you. This handbook outlines important information you will need to know about correctly acknowledging your sources when you write a report, research paper, critical essay, or position paper. It also provides guidelines for collaboration on assignments.

View the handbook: https://provost.upenn.edu/uploads/media_items/ethics-handbook.original.pdf

Exchange Scholar Program

The Exchange Scholar Program allows Penn Ph.D. students to apply to study for a semester or an academic year at one of twelve other participating institutions.

Please check with your graduate group about graduate group policies regarding the Exchange Scholar program.

Consortium for Exchange Scholar Program for Ph.D. Students:
  • University of California at Berkeley
  • Brown University
  • University of Chicago
  • Columbia University
  • Cornell University
  • Harvard University
  • Massachusetts Institute of Technology
  • University of Pennsylvania
  • Princeton University
  • Rutgers University
  • Stanford University
  • Yale University

First year doctoral students and master’s students may not participate in the program.

Fontaine Society

Fontaine Fellowships support the education of the most underrepresented groups in PhD education.

In 1970 an endowment was established posthumously in honor of Dr. William Fontaine, (https://archives.upenn.edu/exhibits/penn-people/biography/william-thomas-valeria-fontaine/) Professor of Philosophy, the first African-American appointed to the Standing Faculty at the University of Pennsylvania. From its inception, the endowment, known as the “Fontaine Fellowship” has been used to advance the University’s goals related to diversity. Originally restricted to students from groups “traditionally and historically underrepresented” in higher education – specifically U.S. African American, Native American, and Hispanic students – diversity is now more broadly defined, and may include, for example, first-generation college students who are from low income families, or students whose backgrounds are most underrepresented in a specific discipline or field.

Fontaine funding, in combination with other resources, is used by the schools to recruit a diverse class of PhD students. Fontaine Fellows receive graduate financial aid that is identical to all other funded students in their respective doctoral programs. In addition, the Fontaine Society provides members with opportunities to come together throughout the year to support one another’s academic progress and enhance the University campus as a whole, through their contributions to the scholarly community.

For more information, visit https://gsc.upenn.edu/fontaine/about (https://gsc.upenn.edu/fontaine/about/).

Graduate Group Review Student Feedback Form

PhD Graduate Groups are periodically reviewed by the Graduate Council of the Faculties (GCF) in order to identify strengths and weaknesses within each program, and to recommend any changes that may help to improve the Graduate Group. Feedback from current graduate students is an essential element in that review process. You can provide feedback by attending the meeting with the Graduate Group Review Liaison from the GCF and/or using the feedback form (https://vpe.wufoo.com/forms/w1dk1nrj0k8ihvl/). Even if your Graduate Group is not being reviewed, you are welcome to fill out the form (https://vpe.wufoo.com/forms/w1dk1nrj0k8ihvl/) if you would like to provide feedback on your experiences in your Graduate Group.

Feedback form responses are viewed by the Vice Provost for Education, and by the Graduate Group Review Liaison if the Graduate Group is being reviewed. You are not required to provide your name or contact information. Confidentiality will be maintained for students who do provide their name. However, the feedback you provide may become part
of the Graduate Council of the Faculties review report. Your demographic information is requested but will not be included in the review report.

This feedback form is intended to solicit general information and impressions about your graduate school experiences. If there is a specific incident you would like to report, please use the University’s Bias Incident Reporting Form (https://diversity.upenn.edu/diversity-at-penn/forms/).

If you have questions about the Graduate Group review process, please contact the Office of the Vice Provost for Education at provost-ed@upenn.edu or 215-898-7225.

View the Graduate Group Review Student Feedback Form: https://vpe.wufoo.com/forms/w1dk1njr0k8ihvl/

### Graduate Student Center

The Graduate Student Center (https://gsc.upenn.edu) was established in 2001 to meet the unique needs of graduate and professional students at Penn. The Grad Center empowers graduate and professional students to participate in a graduate community at Penn, and creates academic, social, intercultural and professional development programs.

The Center provides graduate and professional students with a centrally-located home that includes a lounge, free coffee and tea, a cafe, and meeting/study space. We encourage you to learn more about our activities, facilities, and resources; from New Student Orientation to graduation, the Graduate Center is a supportive, fun space that brings together the wide range of graduate and professional students at Penn.

### Grants to help defray the cost of insurance for PhD Students

The University created two grant programs for PhD students to help offset the cost of health insurance and dental insurance. These grants are funded by the Office of the Provost and administered by the Graduate Student Center and the Office of Student Registration and Financial Services.

For more information, visit https://gsc.upenn.edu/resources/graduate-funding-and-finances/insurance-subsidies-and-grants (https://gsc.upenn.edu/resources/graduate-funding-and-finances/insurance-subsidies-and-grants/)

### Graduation

#### Applying for Graduation

The Graduate Division of the School of Arts and Sciences (https://www.sas.upenn.edu/graduate/) oversees the review of all non-professional doctoral dissertations and Master’s theses for the University. Consequently, degree candidates not just in the Graduate School of Arts and Sciences, but for all academic graduate degrees in all nine of the university’s graduate schools must apply (https://fission.sas.upenn.edu/soo/gas/degree/app-start.php) to this office when planning to graduate in any given term.

For more information: https://www.sas.upenn.edu/graduate-division/resources/graduation-and-beyond (https://www.sas.upenn.edu/graduate-division/resources/graduation-and-beyond/)

### Graduation Calendar

*Revised May 20, 2020*

For PhD, AM, MS, and professional degrees in SAS and SEAS

#### August 2020

<table>

August 2022
GAS begins accepting dissertations Thursday, June 2
• Preparing students for arrival to the U.S.
• Helping get adjusted to life in Philadelphia
• Advising on maintaining status, travel, and immigration guidelines
• Providing integration opportunities such as social events, cultural trips and leadership roles
• Assisting with employment authorization before internships or jobs
• Assigned advisors and central online portal for requests and forms via the iPenn system (https://www.ipenn.oip.upenn.edu/)

Find out more information for:
• New Students (https://global.upenn.edu/isss/new/)
• Current Students (https://global.upenn.edu/isss/students/)
• Beyond Immigration (https://global.upenn.edu/isss/beyond-immigration/)

Click the iPenn logo to see your assigned advisor and make requests with eforms.

English Language Programs (https://www.elp.upenn.edu/)
The English Language Programs (ELP) was established in the 1960s. For over half a century, we have offered courses in English as a Second Language as well as dynamic cultural experiences.

The ELP is a top English language program with a CEA-accredited Intensive Program. We offer open-enrollment programs in Academic, Business, and General English as well as provide programs to matriculated Penn students in areas such as business, dentistry, and law. We offer teacher training, cross-cultural training, and testing. Custom programs and consulting services are available for foundations, multinational corporations, universities, and government agencies.

Information for Students with Children
Family Resource Center
Penn's Family Resource Center is a hub for information, resources, childcare benefits, activities and advocacy for students and post-docs with children. The Family Center provides a forum for student parents to connect and develop supportive networks, and offers a welcoming and family-friendly environment for Penn students, post-docs, caregivers, and children.

The Family Center facility includes a large common room and a family reading room complete with toys, games, books, stuffed animals, and two private lactation rooms equipped with Symphony breast pumps. Children visiting the Family Center must be supervised by parents or caregivers at all times. Students and post-docs who wish to use the Family Center should first review the Family Center Guidelines and must complete our Parental Release & Consent Form (https://familycenter.upenn.edu/become-member/).

Visit the Family Center website for more information about activities, benefits, and resources for students with children: https://familycenter.upenn.edu

Resources
• Campus Lactation Rooms
• PhD Grant Program
• PhD Family Leave Policies

Learning Resources
Weingarten Learning Resources Center (http://www.vpul.upenn.edu/lrc/)
The Weingarten Center provides academic support services and programs for undergraduate, graduate, and professional students at the University of Pennsylvania through its two offices. The services and programs of both offices are free and confidential.

Office of Learning Resources (http://www.vpul.upenn.edu/lrc/lr/)
The Office of Learning Resources (http://www.vpul.upenn.edu/lrc/lr/) staff provide a wide range of programming and professional consultation services in university-relevant skills such as reading, writing, study strategies, and time management.

Student Disabilities Services (http://www.vpul.upenn.edu/lrc/sds/)
Student Disabilities Services (http://www.vpul.upenn.edu/lrc/sds/) staff work closely with students who self-identify with disabilities in order to ensure equal access to all University programs, activities and services.

Weigle Information Commons (WIC) (http://commons.library.upenn.edu/)
WIC in Van Pelt Library supports students at the individual and course level. Students can receive assistance with writing, speaking, and study skills (http://commons.library.upenn.edu/student-support/student-assistance-services/) at WIC, in addition to learning software and hardware (http://commons.library.upenn.edu/hardware-software/) through workshops and online tutorials. High-tech study spaces, equipment, and specialized printers are available as well.

Libraries
Penn has a large and service-oriented library system. The combined 15 libraries on campus contain over 4,500,000 volumes, subscribe to more than 33,000 serials, and offer a rapidly growing set of electronic services which can be accessed from home or office, as well as in the libraries.

• Locations and hours (http://www.library.upenn.edu/locations/)

Research
• For Research Guides by subject, visit: https://guides.library.upenn.edu/hometabs (https://guides.library.upenn.edu/hometabs/).

• To get help with research, students can submit questions online (http://faq.library.upenn.edu/ask/) or make an appointment for in-person assistance (http://faq.library.upenn.edu/widget_standalone.php?la_widget_id=3206).
Canvas

Canvas is the online learning management system used at Penn. A valid PennKey is required to login to the system.

- To login to Canvas, visit: https://canvas.upenn.edu.
- For help with Canvas, visit: http://guides.library.upenn.edu/canvas_students.

Weigle Information Commons (WIC)

WIC in Van Pelt Library supports students at the individual and course level. Students can receive assistance with writing, speaking, and study skills at WIC, in addition to learning software and hardware through workshops and online tutorials. High-tech study spaces, equipment, and specialized printers are available as well.

Master's Thesis Style Guide

University Style Guide for Masters Theses

Paper Requirements

Two hard copies of the approved thesis must be submitted in separate, appropriate sized boxes or sealable envelopes to the

Graduation Coordinator
Graduate Division of Arts and Sciences
3401 Walnut Street
Suite 322A/6228

Office of Academic Programs
School of Engineering
111 Towne Building

The thesis must be printed single-sided on acid-free white paper, 20 lb. (or heavier stock), 8 ½ x 11 inches in size. Copier paper is fine.

Font, Spacing, and Margin Requirements

Any non-italic font 10-12 points in size should be used. Headings may be larger. For enhanced screen readability, use Arial (10pt), Courier New (10pt), Georgia (11pt), Times New Roman (12 pt), or Verdana (10pt) font. For footnotes, figures, citations, charts and graphs, a font of 8 point or larger should be used. Italic type may be used for quotations, words in a foreign language, occasional emphasis, or book titles.

For the sake of readability, it is recommended that the text of the dissertation be double-spaced (except for footnotes, long quoted passages, and lists of tables and figures, which are single-spaced). If desired, authors may chose to single-space the abstract and/or thesis manuscript.

Allow one and one-half inches for the left margin and one inch for all other margins. All text, including page numbers, must fit within these margins.

Organization of the Manuscript

Pages must appear in the following order:

- Title Page
- Dedication (optional)
- Acknowledgment (optional)
- Abstract (optional)
- Table of Contents (mandatory for theses 50 pages or longer)
- List of Tables (optional)
- List of Figures/ Illustrations (optional)
- Main Text
- Appendices (optional)
- Bibliography/Works Cited

Title Page

The Title Page must follow the format of the sample below. The author's full legal name must appear on the Title Page, and each copy of the completed thesis must have two original signatures on the Title Page when presented to the Graduate Division Office. Although this page counts as page 'i' of the preliminary pages (see below), no page number appears on this page.

A table of contents must be included if the thesis is 50 pages or longer.

Pagination

All pages except the Title Page (page i) must have a page number. For the preliminary pages (dedication, acknowledgements, table of contents, lists of graphs, tables, and illustrations), use small Roman numerals (i, ii, iii, ...). For the text and appendices (if any), use Arabic numerals (1, 2, 3, ...). Remember that page numbers must also appear within the margins specified above.

Other Requirements

For citations, footnotes, references, and grammar, you may follow the guidelines in the Chicago Manual of Style, the MLA Handbook, or the appropriate manual in your field of study.

If you have any other questions about the appearance of the thesis, please contact the

Graduation Coordinator
3401 Walnut Street
Suite 322A/6228
telephone 215-898-7577

PRACTICAL ADVICE: THE IMPACT OF 'POOR RICHARD'S ALMANAC' ON DOMESTIC HABITS IN THE AMERICAN COLONIES

Wellness

There are a wide variety of resources available to support students at Penn. Some of the most commonly used resources are listed below.

Wellness at Penn (https://www.wellnessatpenn.com/)
The Wellness at Penn initiative provides support, resources, and practical tools for wellness across the Penn community. It affirms wellness as a core priority and necessary driver of life on campus; and it offers a wide range of opportunities to reflect and engage on issues of wellness, stress, mental health, resilience, happiness, personal and academic goals, and the meaning of success.

Counseling and Psychological Services (CAPS) (http://www.vpul.upenn.edu/caps/)
215-898-7021 (Nights and weekends, ask for CAPS counselor on call.)

Counseling and Psychological Services (CAPS) provides professional psychological and psychiatric services to undergraduate, graduate, and professional students who need support in fulfilling their academic, social, and personal objectives. Along with health and wellness partners throughout the Penn community, CAPS directly supports student mental health through counseling, crisis management, consultation, education and outreach, and training.

Division of Public Safety (https://www.publicsafety.upenn.edu/)

A central source for information about police, fire, and emergency services, security services, including walking escorts, and special victim services. Public safety also manages the University’s extensive electronic security infrastructure.
Student Disabilities Services (http://www.vpul.upenn.edu/lrc/sds/)
(215) 573-9235; TDD: (215) 746-6320

The Office of Student Disabilities Services (SDS), part of the Weingarten Learning Resources Center (http://www.vpul.upenn.edu/lrc/), provides comprehensive, professional services and programs for students who self-identify with disabilities to ensure equal academic opportunities and participation in University-sponsored programs. Professional staff evaluate current documentation, determine individual students’ eligibility according to program guidelines, and determine reasonable accommodations for all qualified students with documented disabilities on a case-by-case basis, including academic adjustments, e-text, accessible campus housing, and transportation and parking. SDS also coordinates auxiliary aids and services such as sign language interpreters and Computer Aided Realtime Translation (CART) reporters, as well as the loan of equipment and assistive technologies.

Student Health Service (http://www.vpul.upenn.edu/shs/)
215-746-3535

Student Health Service is a state-of-the-art primary care center dedicated to the health and well-being of Penn students. Student Health provides accessible, cost-effective, culturally-sensitive, and student-focused healthcare, including care for acute and chronic health problems, preventive health services, and health and wellness education. The Health Service works in close collaboration with our partners in the University Life Division, and with our colleagues in the University of Pennsylvania Health System (http://www.pennmedicine.org/) to help ensure the health and wellness of the campus community.

Student Intervention Services (http://www.vpul.upenn.edu/intervention.php)
215-898-6081

Penn Student Intervention Services (SIS) assists the University community in handling emergencies or critical incidents involving the welfare and safety of students.

Office of the Chaplain (https://chaplain.upenn.edu/)
215-898-8456

The staff of the Office of the Chaplain (https://chaplain.upenn.edu/about-us/staff/) is available to students, faculty and staff for pastoral support, guidance, or informal advising and counseling. The Chaplain, an ordained clergy person, participates in campus ceremonies such as Convocation, Baccalaureate and Commencement and also officiates at weddings (https://chaplain.upenn.edu/about-us/weddings-blessings/) and campus memorial services. The office serves and supports a wide range of student organizations (https://chaplain.upenn.edu/student-organizations/), fellowships and religious communities on our campus. They also develop programming designed to improve interfaith understanding and build meaningful, collaborative relationships across religious difference.

Campus Health (http://www.vpul.upenn.edu/shs/campushealth/)
Part of Student Health Service, Campus Health (http://www.vpul.upenn.edu/shs/campushealth/) seeks to empower the Penn community to Live Well through advocacy, education, and action. Campus Health staff focus on a wide variety of healthy living topics including sleep, hygiene, stress reduction, nutrition, exercise, tobacco-free lifestyles and bike safety. Key initiatives include annual flu immunization clinics, which vaccinate more than 2,000 people, and yearlong sexual wellness education through events such as ‘Sex Camp’ and ‘Sex Jeopardy.’

Alcohol and Other Drug Program Initiatives (http://www.vpul.upenn.edu/alcohol/)
The Office of Alcohol and Other Drug Program Initiatives oversees critical areas of health and wellness that can challenge the academic success of Penn students. The office comprises alcohol policy initiatives, violence prevention, data collection, strategic project management, and (in a collaboration with Student Intervention Services (http://www.vpul.upenn.edu/intervention.php)) proactive crisis management.
POLICIES AND PROCEDURES

The following policies and procedures relate to graduate academics at Penn, and are organized by topic.

Most academic policies and procedures at Penn are school-based. University policies (http://catalog.upenn.edu/pennbook/) are also often administered through the schools. Students should consult with their school or graduate group with questions or for help in understanding academic policies and procedures.

Academic Rules
• Academic Rules for PhD Programs (http://catalog.upenn.edu/pennbook/academic-rules-phd/)
• Academic Rules for Research Master’s Programs (http://catalog.upenn.edu/pennbook/academic-rules-research-masters/)

Course and Exam Related Policies
• Academic Good Standing and Academic Withdrawal (p. 295)
• Course Numbering & Academic Credit (http://catalog.upenn.edu/undergraduate/policies-procedures/course-exam/course-numbering-academic-credit/)
• Rules Governing Final Examinations (http://catalog.upenn.edu/pennbook/final-examinations/)
• Policy on Secular and Religious Holidays (http://catalog.upenn.edu/pennbook/secular-religious-holidays/)

Leaves of Absence and Withdrawals
• Academic Good Standing and Academic Withdrawal (p. 295)
• Leaves of Absence (p. 295)

Teaching
• Evaluation and Certification of the English Fluency of Undergraduate Instructional Personnel (http://catalog.upenn.edu/pennbook/evaluation-certification-english-fluency-undergraduate-instructional-personnel/)
• Guide to Graduate Student Appointments (https://www.finance.upenn.edu/sites/default/files/Tax-Withholding-on-Graduate-Stipends.pdf)

Research
• Fairness of Authorship Credit in Collaborative Faculty-Student Publications for PhD, AM, and MS Students (http://catalog.upenn.edu/pennbook/fairness-authorship-credit-collaborative-faculty-student-publications-phd-am-ms-students/)
• Guidelines for Research in the Community (http://catalog.upenn.edu/pennbook/guidelines-research-community/)
• Guidelines for Student Protection in Sponsored Research Projects (http://catalog.upenn.edu/pennbook/protection-sponsored-research/)
• Patent and Tangible Research Property Policies and Procedures (http://catalog.upenn.edu/pennbook/patent-tangible-research-property-policies-procedures/)
• Policy Regarding Human Subject Research in the Sociobehavioral Sciences (http://catalog.upenn.edu/pennbook/human-subject-research/)
• Procedures Regarding Misconduct in Research for Nonfaculty members of the Research Community (http://catalog.upenn.edu/pennbook/misconduct-non-faculty/)

Academic Good Standing and Academic Withdrawal

The minimum standard for satisfactory work for the Graduate Faculties is a B average in each academic year, but the graduate group may set additional requirements that determine advancement; these requirements may require a student to withdraw despite a satisfactory grade average, if the quality of the student’s work is not at a level that predicts successful degree completion.

Students whose grades are not meeting minimum requirements or who are not satisfactorily meeting other graduate group requirements will receive a communication at the end of the academic term or year regarding their academic probation, along with an outline for what actions need to be taken in order to return to academic good standing, and a timeline for doing so. Students receiving such a communication are responsible for working with their advisor and/or graduate group chair to improve academic performance. Students who do not return to academic good standing within the time frame outlined may be withdrawn by the graduate group.

School specific policies:
• Annenberg School for Communication (https://www.asc.upenn.edu/academics/graduate-program/annenberg-school-policies/normal-progress-phd-program/)
• School of Arts and Sciences
• Graduate School of Education (http://www.gse.upenn.edu/pdf/students/Student_Handbook_16-17.pdf)
• School of Engineering and Applied Science (http://www.seas.upenn.edu/graduate/handbook/g-academic-requirements.php)
• Perelman School of Medicine (Biomedical Graduate Studies) (https://webdev.med.upenn.edu/contribute/bgs/documents/ExpectationsofStudents2017forAugustMatrics.pdf)
• School of Nursing (http://www.nursing.upenn.edu/student-services/resources/handbooks-forms-policies/phd-handbook/academic-regulations/)
• School of Social Policy & Practice (https://www.sp2.upenn.edu/resources/phd-student-handbook/academics/#GradesandAcademicSta)
• The Wharton School

Leaves of Absence

Leaves of absence for PhD students are governed by University policy (http://catalog.upenn.edu/pennbook/phdstudentleaveofabsence/). PhD students are also eligible for Family Leave and New Parent Accommodation per University policy (http://catalog.upenn.edu/pennbook/family-friendly-policies-phd-students/).
Leave of absence policies for professional students vary by school. Professional students should consult the policies in their schools and programs.
COURSES A-Z

Courses are organized by subject and include courses at the undergraduate and graduate levels.

Search courses by keyword using the Advanced Course Search (http://catalog.upenn.edu/course-search/)

For more information, see the guide to Course Numbering and Academic Credit (http://catalog.upenn.edu/undergraduate/policies-procedures/course-exam/course-numbering-academic-credit/) at the University of Pennsylvania.

**Accounting (ACCT)**

**ACCT 101 Accounting and Financial Reporting**

This course is an introduction to the basic concepts and standards underlying financial accounting systems. Several important concepts will be studied in detail, including: revenue recognition, inventory, long-lived assets, present value, and long term liabilities. The course emphasizes the construction of the basic financial accounting statements - the income statement, balance sheet, and cash flow statement - as well as their interpretation.

One-term course offered either term

Activity: Lecture

1.0 Course Unit
ACCT 102 Strategic Cost Analysis
Strategic Cost Analysis is the process of analyzing and managing costs in order to improve the strategic position of the business. This goal can be accomplished by having a thorough understanding of which activities and costs support support an organization’s strategic position and which activities and costs either weaken it or have no impact. Subsequent cost management efforts can then focus on reducing or limiting expenditures on activities that add little or no strategic value, while increasing expenditures on activities that support the strategic position of the organization. Performance can then be evaluated to ensure that the chosen actions are taken, and that these actions are yielding improved strategic performance. Throughout the course, a strategic cost analysis and management framework will be applied across functions and organizations to highlight the cost analysis and performance evaluation methods available to forecast financial performance and improve strategic position.
Taught by: Chris Ittner
Course offered summer, fall and spring terms
Activity: Lecture
1.0 Course Unit

ACCT 212 Financial Measurement and Disclosure(X)
This course builds on the knowledge you obtained in your introductory financial accounting course. This is an intermediate level course on financial reporting which covers more complicated transactions than those found in ACCT 101. We will cover major valuation and financial reporting topics on all three major sections of the balance sheet-assets, liabilities, and equity-along with their consequences for net income and cash flows. Case studies and illustrative examples from the financial press will be used to increase your familiarity with actual firms' financial statements and to emphasize the effect of financial accounting rules on the information presented in financial statements. After completing this course, you will have obtained many of the tools necessary to both prepare and analyze financial statements and accounting information provided by firms. You will acquire an understanding of both the 'how' of accounting procedures and the underlying reasons 'why' these practices are adopted. These skills are essential for pursuing a broad range of professions in accounting and finance.
Course usually offered in fall term
Prerequisite: ACCT 101
Activity: Lecture
1.0 Course Unit

ACCT 242 Accounting and Business Analysis
In the course, students learn how to analyze firms’ financial statements and disclosures to determine how a firm’s particular accounting choices reflect the underlying economics of the firm. As a result, the course strengthens students’ ability to use financial statements as part of an overall assessment of the firm’s strategy and valuation. The course is especially useful for anyone interested in working on the buy or sell side. The course provides both a framework for and the tools necessary to analyze financial statements. At the conceptual level, it emphasizes that preparers and users of financial statements have different objectives and incentives. At the same time, the course is applied and stresses the use of actual financial statements. For example, students learn how to detect when firms are managing earnings and/or balance sheets. It draws heavily on real business problems and uses cases to illustrate the application of the techniques and tools.
One-term course offered either term
Also Offered As: ACCT 742
Prerequisite: ACCT 101
Activity: Lecture
1.0 Course Unit

ACCT 243 Accounting for Mergers, Acquisitions, and Complex Financial Structures
The objective of this course is to discuss and understand the accounting that underlies merger, acquisition, and investment activities among firms that result in complex financial structures. Key topics include the purchase accounting method for acquisitions, the equity method for investments, the preparation and interpretation of consolidated financial statements, tax implications of mergers and acquisitions, earnings-per-share considerations, the accounting implications of intercompany transactions and non-domestic investments, etc.
Course usually offered in fall term
Also Offered As: ACCT 743
Prerequisite: ACCT 212 OR ACCT 242
Activity: Lecture
1.0 Course Unit

ACCT 270 Forensic Analytics
Recent trends in Big Data and predictive analytics are revolutionizing the way stakeholders analyze financial data. This course teaches students the hands-on skills necessary to manipulate large-scale financial databases and build predictive models useful for strategic and investment decisions. The course will cover three applications of predictive analytics: (i) forecasting future earnings, (ii) predicting accounting fraud, and (iii) detecting insider trading. The course will draw on cutting-edge academic research in each area; introduce students to the basic SQL coding skills necessary to manipulate Big Data and conduct meaningful analyses; and leverage the datasets and computing power of Wharton Research Data Services. The course is organized as a hybrid of a traditional seminar course and a computer science course. The first few classes of each unit will cover the conceptual material and source material related to each topic. The later classes in each unit will cover the technical material and programming skills needed to manipulate the respective datasets, estimate predication models, and backtest algorithms.
Taught by: Dan Taylor
Course usually offered in spring term
Prerequisite: ACCT 101 AND STAT 102
Activity: Lecture
1.0 Course Unit

ACCT 297 Taxes and Business Strategy
The objective of this course is to develop a framework for understanding how taxes affect business decisions. The key themes of the framework - all parties, all taxes and all costs - are applied to decision contexts such as investments, compensation, organizational form, and mergers and acquisitions. The ultimate goal is to provide a new approach to thinking about taxes that will be valuable even as laws and governments change. One-term course offered either term
Also Offered As: ACCT 897
Prerequisite: ACCT 101 AND FNCE 101
Activity: Lecture
1.0 Course Unit

ACCT 399 Supervised Study
Intensive reading and study with some research under the direction of a faculty member. Approval from one of the departmental advisers must be obtained before registration. Senior standing and 3.4 average in major related subjects required.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
ACCT 611 Fundamentals of Financial Accounting
The objective of this course is to provide an understanding of financial accounting fundamentals for prospective consumers of corporate financial information, such as managers, stockholders, financial analysts, and creditors. The course focuses on understanding how economic events like corporate investments, financing transactions and operating activities are recorded in the three main financial statements (i.e., the income statement, balance sheet, and statement of cash flows). Along the way, students will develop the technical skills needed to analyze corporate financial statements and disclosures for use in financial analysis, and to interpret how accounting standards and managerial incentives affect the financial reporting process. This course is recommended for students who want a more in-depth overview of the financial accounting required for understanding firm performance and potential future risks through analysis of reported financial information, such as students intending to go into security analysis and investment banking.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

ACCT 613 Fundamentals of Financial and Managerial Accounting
This course provides an introduction to both financial and managerial accounting, and emphasizes the analysis and evaluation of accounting information as part of the managerial processes of planning, decision-making, and control. A large aspect of the course covers the fundamentals of financial accounting. The objective is to provide a basic overview of financial accounting, including basic accounting concepts and principles, as well as the structure of the income statement, balance sheet, and statement of cash flows. The course also introduces elements of managerial accounting and emphasizes the development and use of accounting information for internal decisions. Topics include cost behavior and analysis, product and service costing, and relevant costs for internal decision-making. This course is recommended for students who will be using accounting information for managing manufacturing and service operations, controlling costs, and making strategic decisions, as well as those going into general consulting or thinking of starting their own businesses.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

ACCT 706 Cost Management
This course covers managerial accounting and cost management practices that can be strategically applied across the various functions of a business organization to improve organizational performance. The course emphasizes the methods available to measure and evaluate costs for decision-making and performance evaluation purposes. It reviews a number of cost management issues relating to the design and implementation of strategic, marketing, value analysis, and other management models in modern firms; and identifies major contemporary issues in managerial accounting and financial decision-making. A variety of case studies in different industries and decision contexts are used to examine the application of these concepts.
One-term course offered either term
Prerequisite: ACCT 611 OR ACCT 613
Activity: Lecture
0.5 Course Units

ACCT 742 Financial Reporting and Business Analysis
This intensive one-semester course focuses on how to extract and interpret information in financial statements. The course adopts a user perspective of accounting by illustrating several specific accounting issues in a decision context.
One-term course offered either term
Also Offered As: ACCT 242
Prerequisite: ACCT 611 OR ACCT 613
Activity: Lecture
1.0 Course Unit

ACCT 743 Accounting for Mergers, Acquisitions and Complex Financial Structures
This class studies how complex financial structures account for their activities. Primary emphasis is on the application of purchase accounting for mergers and acquisitions, the equity method for investments, and preparing and interpreting consolidated financial statements. Other topics covered include translations and remeasurements for nondomestic investments, and earnings per share calculations for complex financial structures. Tax considerations and acquisition strategies are of only peripheral interest in this class, and students who are concerned primarily with those topics are advised to seek a different elective.
Course usually offered in fall term
Also Offered As: ACCT 243
Prerequisite: ACCT 611 OR ACCT 613
Activity: Lecture
1.0 Course Unit

ACCT 747 Financial Disclosure Analytics
This course focuses on the analysis of financial communications between corporate managers and outsiders, including the required financial statements, voluntary disclosures, and interactions with investors, analysts, and the media. The course draws on the findings of recent academic research to discuss a number of techniques that outsiders can use to detect potential bias or aggressiveness in financial reporting. FORMAT: Case discussions and lectures. Comprehensive final exam, group project, case write-ups, and class participation.
One-term course offered either term
Prerequisite: ACCT 611 OR ACCT 613
Activity: Lecture
1.0 Course Unit

ACCT 749 Taxes and Business Strategy
The objective of this course is to develop a framework for understanding how taxes affect business decisions. Traditional finance and strategy courses do not consider the role of taxes. Similarly, traditional tax courses often ignore the richness of the decision context in which tax factors operate. The key themes of the framework - all parties, all taxes, and all costs - are applied to decision contexts such as investments, compensation, organizational form, regulated industries, financial instruments, tax-sheltered investments, mergers and acquisitions, multinational, and multistate. The ultimate goal is to provide a new approach to thinking about taxes (and all forms of government intervention) that will be valuable even as laws and governments change.
One-term course offered either term
Also Offered As: ACCT 297
Prerequisite: (ACCT 611 OR ACCT 613) AND FNCE 611
Activity: Lecture
1.0 Course Unit
ACCT 910 Accounting Theory Research
This is a theory course covering topics in agency theory, disclosure theory, and incentive design.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

ACCT 921 Empirical Research in Accounting I
This is an empirical literature survey course covering topics that include corporate disclosure, cost of capital, incentives, compensation, governance, financial intermediation, financial reporting, tax, agency theory, cost accounting, capital structure, international financial reporting, analysts, and market efficiency.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ACCT 922 Empirical Research in Accounting II
This is an empirical literature survey course covering topics that include corporate disclosure, cost of capital, incentives, compensation, governance, financial intermediation, financial reporting, tax, agency theory, cost accounting, capital structure, international financial reporting, analysts, and market efficiency.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ACCT 930 Empirical Design in Accounting Research
This is an empirical research design course covering topics related to empirical methodology, causal inference, econometric analysis, and panel data approaches. At least one graduate level course in econometrics is recommended.
Activity: Seminar
1.0 Course Unit

ACCT 981 Workshop Colloquium I
Students attend workshops in departments outside of accounting to provide student exposure to theory, research designs and methods that are being explored outside of accounting to provide breadth of exposure to foster innovative research ideas. Students are required to attend 15 non-accounting workshops over one academic year and write up a referee report for 8 of those workshop papers. They are also required to write up at least one research proposal that stems from theories or research methods gleaned from one or more of the workshops attended.
Activity: Seminar
1.0 Course Unit

ACCT 982 Workshop Colloquium II
Students attend workshops in departments outside of accounting to provide student exposure to theory, research designs and methods that are being explored outside of accounting to provide breadth of exposure to foster innovative research ideas. Students are required to attend 15 non-accounting workshops over one academic year and write up a referee report for 8 of those workshop papers. They are also required to write up at least one research proposal that stems from theories or research methods gleaned from one or more of the workshops attended.
Activity: Seminar
1.0 Course Unit

AFRC 001 Introduction to Africana Studies
The term Africana emerged in public discourse amid the social, political, and cultural turbulence of the 1960s. The roots of the field, however, are much older, easily reaching back to oral histories and writings during the early days of the Trans-Atlantic African slave trade. The underpinnings of the field continued to grow in the works of enslaved Africans, abolitionists and social critics of the nineteenth century, and evolved in the twentieth century by black writers, journalists, activists, and educators as they sought to document African descended people's lives. Collectively, their work established African Studies as a discipline, epistemological standpoint and political practice dedicated to understanding the multiple trajectories and experiences of black people in the world throughout history. As an ever-transforming field of study, this course will examine the genealogy, major discourses, and future trajectory of Africana Studies. Using primary sources such as maps and letters, as well as literature and performance, our study of Africana will begin with continental Africa, move across the Atlantic during the middle passage and travel from the coasts of Bahia in the 18th century to the streets of Baltimore in the 21st century. The course is constructed around major themes in Black intellectual thought including: retentions and transferal, diaspora, black power, meanings of blackness, uplift and nationalism. While attending to narratives and theories that concern African descended people in the United States, the course is uniquely designed with a focus on gender and provides context for the African diasporic experience in the Caribbean and Latin America.
For BA Students: Humanities and Social Science S
Taught by: Beavers, Butler, Charles, Johnson, Hanchard
One-term course offered either term
Activity: Lecture
1.0 Course Unit

AFRC 002 Introduction to Sociology
Sociology provides a unique way to look at human behavior and social interaction. Sociology is the systematic study of the groups and societies in which people live. In this introductory course, we analyze how social structures and cultures are created, maintained, and changed, and how they affect the lives of individuals. We will consider what theory and research can tell us about our social world.

Also Offered As: SOCI 001
Activity: Lecture
1.0 Course Unit

AFRC 006 Race and Ethnic Relations
The course will focus on race and ethnicity in the United States. We begin with a brief history of racial categorization and immigration to the U.S. The course continues by examining a number of topics including racial and ethnic identity, interracial and interethnic friendships and marriage, racial attitudes, mass media images, residential segregation, educational stratification, and labor market outcomes. The course will include discussions of African Americans, Whites, Hispanics, and Asian Americans and Multiracial.
Taught by: Charles, Kao, Zuberi

Also Offered As: ASAM 006, SOCI 006, URBS 160
Activity: Lecture
1.0 Course Unit
AFRC 008 Sociology of the Black Community
This course explores a broad set of issues defining important aspects of the Black/African American experience. In addition to the 'usual suspects' (e.g., race, socioeconomic status, poverty, gender, and group culture), we also think about matters of health and well-being, the family, education, and identity in Black/African American communities. Our goal is to gain a deeper sociological understanding and appreciation of the diverse and ever-changing life experiences of Blacks/African Americans.
Taught by: Charles
One-term course offered either term
Also Offered As: SOCI 028
Activity: Seminar
1.0 Course Unit
Notes: Freshman Seminar

AFRC 010 Freshman Seminar: The World After 1800
This course is cross-listed with PSCI 010 (Freshmen Seminar) when the subject matter is related to African American or other African Diaspora issues. Topics vary. A recent topic is 'Race, Crime, and Punishment.' See the Africana Studies Department's website at https://africana.sas.upenn.edu for a description of the current offerings.
Taught by: Gottschalk
One-term course offered either term
Also Offered As: HIST 106
Activity: Seminar
1.0 Course Unit

AFRC 011 Urban Sociology
This course is a comprehensive introduction to the sociological study of urban areas. This includes more general topics as the rise of cities and theories urbanism, as well as more specific areas of inquiry, including American urbanism, segregation, urban poverty, suburbanization and sprawl, neighborhoods and crime, and immigrant ghettos. The course will also devote significant attention to globalization and the process of urbanization in less developed counties.
Taught by: Flippenn
Course not offered every year

AFRC 012 Freshman Seminar
Also Offered As: LALS 107, PSCI 010
Activity: Seminar
1.0 Course Unit

AFRC 015 Freshman Seminar in 20TH Century History
In this First Year Seminar we will use coming-of-age autobiographies to explore some of the most significant historical developments of the 20th century. By coming of age I mean autobiographies in which the author focuses primarily on the periods of childhood and adolescence into young adulthood. We will read books by people who lived during segregation in the South, the Great Depression, Japanese Internment during World War II, and the Civil Rights Movement of the 1960s. We will consider many issues, including: race, racism, immigration, religion, social class, and gender. We will contemplate questions about identity, family, honesty, and memory. As we read each book we will examine an individual life in a particular place and time, and we will move out beyond the confines of a person, family, or town to explore the broader historical moment in which the individual lived. To make this deeper contextualization possible, the course is divided into segments that will allow us to study the historical context of the autobiography as well as engage in focused discussion of the texts themselves.
Taught by: Williams
One-term course offered either term
Activity: Seminar
1.0 Course Unit

AFRC 017 Topics in Literature
SPRING 2018: This seminar will introduce students to the power of public art. Outdoor murals, painted poetry, poetry performed outdoors, anti-museum sculpture, and outdoor theater will be the focus of this seminar. How does public art make the very idea of art gain new dimensions such as art as an event (not an object) and art as a community intervention? Our starting point will be outdoor murals in Philadelphia and other very recent art reconsidering the meaning of public monuments. In addition to our focus on contemporary public art in Philadelphia, we will focus on the role of public art in the 1960s and 1970s Black Arts Movement. The seminar will unveil the power of outdoor space to create art that has urgency and the openness of radical experimentation. See the Africana Studies Department's website at https://africana.sas.upenn.edu for a description of the current offerings.
Taught by: Beavers, Tillet, Crawford
One-term course offered either term
Also Offered As: COML 016, ENGL 016
Activity: Seminar
1.0 Course Unit

AFRC 019 AFAM Freshman Seminar
This course will introduce students to a more hemispheric understanding of the American experience, through the writings of many authors from the New World, including the United States, on what it means to be an American. Students will read texts from many genres including but not limited to poetry, film, prose, political speeches and autobiography, to come to terms with histories of native Americans, African-Americans, Latinos, and whites in the United States, as well as peoples of South America and the Caribbean. In the process students will become familiar with scholarship across the social sciences and humanities that consider issues of race, culture, nation, freedom and inequality in the Americas, and how racial slavery and the Afro-American hemispheric experience has informed multiple American visions.

Activity: Seminar
1.0 Course Unit
AFRC 041 Homelessness & Urban Inequality
This freshman seminar examines the homelessness problem from a variety of scientific and policy perspectives. Contemporary homelessness differs significantly from related conditions of destitute poverty during other eras of our nation’s history. Advocates, researchers and policymakers have all played key roles in defining the current problem, measuring its prevalence, and designing interventions to reduce it. The first section of this course examines the definitional and measurement issues, and how they affect our understanding of the scale and composition of the problem. Explanations for homelessness have also been varied, and the second part of the course focuses on examining the merits of some of those explanations, and in particular, the role of the affordable housing crisis. The third section of the course focuses on the dynamics of homelessness, combining evidence from ethnographic studies of how people become homeless and experience homelessness, with quantitative research on the patterns of entry and exit from the condition. The final section of the course turns to the approaches taken by policymakers and advocates to address the problem, and considers the efficacy and quandaries associated with various policy strategies. The course concludes by contemplating the future of homelessness research and public policy.

AFRC 047 That's My Song!: Musical Genre as Social Contract
Music in American history has been fundamental to identity formation because, as one scholar notes, it comprises ‘the deepest feelings and qualities that make a group unique. Through moving and sounding together in synchrony, people can experience a feeling of oneness with others.’ This course examines how various musical genres have served as ‘social contracts’ among audiences throughout the process of this country’s nation building process. Within America’s melting pot ideal, communities of listeners have asserted their powerful convictions about social identity through musical praxis and its ‘rules of engagement.’ The discourses surrounding the notion of ‘genre’ have often made these meanings legible, audible and powerful for many. From Protestant church performance practices, to minstrelsy, to Tin Pan Alley to rock and hip-hop, the social agreements of musical genres help us understand the dynamism of American identities.

AFRC 050 World Musics and Cultures
This course examines how we as consumers in the ‘Western’ world engage with musical difference largely through the products of the global entertainment industry. We examine music cultures in contact in a variety of ways – particularly as traditions in transformation. Students gain an understanding of traditional music as live, meaningful person-to-person music making, by examining the music in its original site of production, and then considering its transformation once it is removed, and recontextualized in a variety of ways. The purpose of the course is to enable students to become informed and critical consumers of ‘World Music’ by telling a series of stories about particular recordings made with, or using the music of, peoples culturally and geographically distant from the US. Students come to understand that not all music downloads containing music from unfamiliar places are the same, and that particular recordings may be embedded in intriguing and controversial narratives of production and consumption. At the very least, students should emerge from the class with a clear understanding that the production, distribution, and consumption of world music is rarely a neutral process.

AFRC 053 Music of Africa
African Contemporary Music: North, South, East, and West. Come to know contemporary Africa through the sounds of its music: from South African kwela, jazz, marabi, and kwai to Zimbabwean chimurenga; Central African soukous and pygmy pop; West African Fuji, and North African rai and hophop. Through reading and listening to live performance, audio and video recordings, we will examine the music of Africa and its intersections with politics, history, gender, and religion in the colonial and post colonial era. (Formerly Music 053).

AFRC 054 Sounding Poetry: Music and Literature
Never before has poetry been so inescapable. Hip hop, the soundtrack of our times, has made rhyme, meter, and word-play part of our daily lives. How did this happen? This course begins not on the page, but in the bardic traditions of Homer's Iliad, which encoded many of the values of its time in oral formulas. Poetry was, however, no mere encyclopedia, but also a source of risk, as we will read in Plato's warning against its hypnotic powers, and in the excesses of the Bacchae. We continue through 19th and 20th century attempts to recover these classic traditions (Wordsworth, Longfellow, Pound). Yet Europe was not the only center of poetic production. How does the Homeric tradition relate to living traditions of West African singing poets (griots) and Southern African praise songs? And what traces of these traditions can we hear in the blues? We will listen to early blues recordings and discuss the politics of collecting folklore, and the genius of African American modernists (Langston Hughes, Claude McKay, Georgia Douglas Johnson) who bought vernacular speech onto the page. We will read and listen to a number of 20th century poets inspired when page meets stage in jazz poetry, dub poetry, spoken word, and hip hop. Assignments will include 2 papers, 2 small-group performances, memorization exercises, and a creative adaptation of one poem. See the English Department's website at www/english.upenn.edu for a description of current offerings.

AFRC 056 Seeing/Hearing Globally: Knowing People, Culture, and Places through Travel
Students are provided a general introduction to a country's history, politics, environment, and performance through a range of resources: scholarly literature, film, music, and online resources; with particular focus on sites, communities, and events included in the 12 day intensive travel to that country (either Fall semester Intro with winter break travel; or spring semester Intro with late spring intensive travel). Students are given guidelines for writing about and representing live performances and experiences of exhibits and heritage sites for journaling and are expected to produce a written/creative project at the end of the travel. The itinerary and specific course content will vary according to the travel site and focus of each class.

AFRC 066 African American Drama: From the 1920’s to the present
This course will introduce students to Pulitzer-prize winning plays such as Lynn Nottage's Sweat, groundbreaking plays such as Ntozake Shange's For Colored Girls, as well as less known plays that show the wide range of form and themes in 20th and 21st century African American drama. We will focus on performance as a mode of interpreting a script and performance as a way of understanding the intersections of race, class, and gender. In-class viewings of selected scenes in recorded productions of the plays will energize our analysis of the scripts. Short creative, performance-oriented writing assignments will produce the questions explored in the two critical essays. In addition to Sweat and For Colored Girls, our line-up may include Zora Neale Hurston's Color Struck, Anna Deavere Smith's Twilight: Los Angeles, 1992, Suzan-Lori Parks' 100 Plays for the First Hundred Days, August Wilson's Radio Golf, Lydia Diamond's Harriet Jacobs, Amiri Baraka's The Slave, and Claudia Rankine's The White Card.

AFRC 070 Colonial Latin America
The year 1492 was pivotal in the history of the world. It precipitated huge population movements within the Americas and across the Atlantic - a majority of them involuntary as in the case of indigenous and African people who were kidnapped and enslaved. It led to cataclysmic cultural upheavals, including the formation of new cultures in spaces inhabited by people of African, European and indigenous descent. This course explores the processes of destruction and creation in the region known today as Latin America in the period 1400 - 1800. Class readings are primary sources and provide opportunities to learn methods of source analysis in contexts marked by radically asymmetrical power relationships.

AFRC 073 The African Diaspora: Global Dimensions
This class examines the cultural and social ramifications of the African diaspora on a global level. It is divided into two major sections. The first section provides the historical background to the African diaspora by focusing on the forced migration of Africans to Spanish and Portuguese colonies in the Americas. We will then delve into the black experience in French and British colonial spaces. In this section, we will also endeavor to move beyond the Atlantic-centric paradigm in studies of the African diaspora by examining free and unfree migrations of African people across the Indian Ocean to places as far away as India and the Philippines. The second half of the class devotes significant attention to the historical legacy of slavery and colonialism in places like Brazil, Cuba and the United States. In this section, we will discuss such issues as race relations, the struggle for civil rights for African-descent people as well as the emergence and the implementation of affirmative action policies in places like Brazil and the US.

AFRC 078 Faculty-Student Collaborative Action Seminar in Urban University-Community Rlt
This seminar helps students develop their capacity to solve strategic, real-world problems by working collaboratively in the classroom, on campus, and in the West Philadelphia community. Students develop proposals that demonstrate how a Penn undergraduate education might better empower students to produce, not simply 'consume,' societally-useful knowledge, as well as to function as caring, contributing citizens of a democratic society. Their proposals help contribute to the improvement of education on campus and in the community, as well as to the improvement of university-community relations. Additionally, students provide college access support at Paul Robeson High School for one hour each week.
Taught by: Harkavy
One-term course offered either term

Activity: Seminar
1.0 Course Unit

AFRC 081 African-American Literature
An introduction to African-American literature, typically ranging across a wide spectrum of moments, methodologies, and ideological postures, from Reconstruction and the Harlem Renaissance to the Civil Rights Movement. Most versions of this course will begin in the 19th century; some versions of the course will concentrate only on the modern period. See the English Department's website at www/english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: ENGL 081, GSWS 081
Activity: Lecture
1.0 Course Unit

AFRC 085 Contemporary American Literature
The readings for this course expose the student to a wide range of American fiction and poetry since World War II, giving considerable attention to recent work. Works may include All The King's Men by Robert Penn Warren, Herzog by Saul Bellow, On The Road by Jack Kerouac, V by Thomas Pynchon, Of Love and Dust by Ernest J.Gaines, A Flag For Sunrise by Robert Stone, The Killing Ground by Mary Lee Settle, and selected poem by Ginsberg, Plath, and Walcott. Readings vary from term to term.
Course not offered every year
Also Offered As: CIMS 074, ENGL 074
Activity: Lecture
1.0 Course Unit
Notes: This course is cross-listed with ENGL 074 (Contemporary American Literature) when the course content is related to Afro-American issues. Topic vary. Consult the Africana Department website for a current course description.

AFRC 101 Study of an Author
This course introduces students to literary study through the works of a single author—often Shakespeare, but other versions will feature writers like Jane Austen, Geoffrey Chaucer, Herman Melville, and August Wilson. Readings an individual author across his or her entire career offers students the rare opportunity to examine works from several critical perspectives in a single course. What is the author's relation to his or her time? How do our author's works help us to understand literary history more generally? And how might we understand our author's legacy through performance, tributes, adaptations, or sequels? Exposing students to a range of approaches and assignments, this course is an ideal introduction to literary study for those students wishing to take an English course but not necessarily intending to major. See the Africana Studies Department's website at https://africana.sas.upenn.edu for a description of the current offerings.

Activity: Seminar
1.0 Course Unit
AFRC 112 Discrimination: Sexual and Racial Conflict
This course is concerned with the structure, the causes and correlates, and the government policies to alleviate discrimination by race and gender in the United States. The central focus of the course is on employment differences by race and gender and the extent to which they arise from labor market discrimination versus other causes, although racial discrimination in housing is also considered. After a comprehensive overview of the structures of labor and housing markets and of nondiscriminatory reasons (that is, the cumulative effects of past discrimination and/or experiences) for the existence of group differentials in employment, wages, and residential locations, various theories of the sources of current discrimination are reviewed and evaluated. Actual governmental policies and alternative policies are evaluated in light of both the empirical evidence on group differences and the alternative theories of discrimination. This course is concerned with the structure, the causes and correlates, and the government policies to alleviate discrimination by race and gender in the United States. The central focus of the course is on employment differences by race and gender and the extent to which they arise from labor market discrimination versus other causes, although racial discrimination in housing.

For BA Students: Society Sector

1.0 Course Unit

Notes: This course is not open to freshmen. Students wishing to take this course must submit a writing sample as part of the selection process.

AFRC 115 Religious Ethics and Modern Society
Religious beliefs of Malcolm X and MLK formed their social action during the Civil Rights for African Americans. This seminar will explore the religious biographies of each leader, how religion shaped their public and private personas, and the transformative and transgressive role that religion played in the history of the Civil Rights movement in the United States and abroad. Students in this course will leave with a clearer understanding of religious beliefs of Christianity, the Nation of Islam, and Islam, as well as religiously based social activism. Other course emphases include the public and private roles of religion within the context of the shaping of ideas of freedom, democracy, and equality in the United States, the role of the 'Black church' in depicting messages of democracy and freedom, and religious oratory as exemplified through MLK and Malcolm X.

Also Offered As: RELS 112
Activity: Lecture
1.0 Course Unit

AFRC 116 Caribbean Culture and Politics
This course offers anthropological perspectives on the Caribbean as a geo-political and socio-cultural region, and on contemporary Caribbean diaspora cultures. We will examine how the region's long and diverse colonial history has structured relationships between race, ethnicity, class, gender and power, as well as how people have challenged these structures. As a region in which there have been massive transplantation of peoples and their cultures from Africa, Asia, and Europe, and upon which the United States has exerted considerable influence, we will question the processes by which the meeting and mixing of peoples and cultures has occurred. Course readings include material on the political economy of slavery and the plantation system, family and community life, religious beliefs and practices, gender roles and ideologies, popular culture, and the differing ways national, ethnic, and racial identities are expressed on the islands and throughout the Caribbean diaspora.

0.0 Course Units

AFRC 121 Writing for Children
We will read our favorite kids' books, determine the kinds of books we love to read and write, and then write them, aiming at a clear voice appropriate to the story, and as much order or misrule as each writer's kid-muse demands. For inspiration, we'll visit the Maurice Sendak Collection at the Rosenbach Museum and Library and have a nostalgia wallow in the kids' section at the library. Then students write, fast-fast, drafts of stories to workshop, mull and revise. Yes, fun is required. For sure we'll critique, but first we'll try to outrun our interior grown-up! Workshopping happens first with student writer colleagues, and then with the real kids in schools, through our partner West Philadelphia Alliance for Children. Reading to children will give studentwriters a chance to hear where children laugh, see where they look scared, or notice when they begin to fidget. Returning with revisions will be a promise fulfilled, and an important marker in the literary life of everyone involved. Our class will act as a team of editors, then, to submit stories-and illustrations by authors and/or kids-on the upcoming website, SafeKidsStories.org.

AFRC 122 Popular Culture and Youth in Africa
All across the continent, Africa is alive with the energies of young people, expressed in music, art, fashion, drama, video, poetry, protest, and urban legends. In this course, we take a close look at the wide variety of popular forms produced and consumed by young people in a diversity of contexts, urban and rural, elite and marginal, mainstream and transgressive. We will examine how popular culture draws from African tradition to craft innovative versions of modernity and futurity. We will explore themes of democracy, inequality, and social justice threaded through popular genres as well as experiences of joy, anger, fear, and hilarity. We will see how popular culture provides escape and entertainment for young people while also working to transform African societies.

Course usually offered in spring term
Also Offered As: ANTH 120
Activity: Lecture
1.0 Course Unit

AFRC 124 Writing and Politics
This is a course for students who are looking for ways to use their writing to participate in the 2020 election. Student writers will use many forms—short essay, blogs, social media posts, mini-video or play scripts, podcasts—and consider lots of topics as they publish work, in real time, with #VoteThatJawn. This multi-media platform popped up in 2018 to support youth registration and voting in Philadelphia’s 2018 mid-term elections. Registration of 18-year-olds that year doubled: from 3,300 to nearly 7,000. This year university, high school, and media partners across the city aim to hit 10K. Imagine that. Imagine a Creative Writing class that answers our desire to live responsibly in the world and to have a say in the systems that govern and structure us. Plus learning to write with greater clarity, precision, and whatever special-sauce Jawn your voice brings. The course is designed as an editorial group sharing excellent, non-partisan, fun, cool, sometimes deadly earnest content for and about fresh voters. In addition, you will gain experience in activities that writers in all disciplines need to know: producing an arts-based event, a social media campaign, working with multi-media content, and collaborating with other artists. English 124 will sometimes work directly with diverse populations of youth from other colleges and high schools throughout the city. Because you will engage with a common reading program about the ground-breaking Voting Rights Act of 1965, the class is cross-listed with Africana Studies 124. In addition, the work of #VoteThatJawn performs a civic service; therefore it is listed as an Academically Based Community Service (ABCS) course with the university. Don’t sit out this momentous electoral season because you have so much work. Use your work to bring other youth to the polls.
Taught by: Cary
Also Offered As: ENGL 124
Activity: Seminar
1.0 Course Unit

AFRC 134 Creative Non-Fiction Writing
A workshop course in the writing of creative nonfiction. Topics may include memoir, family history, travel writing, documentary, and other genres in which literary structures are brought to bear on the writing of nonfiction prose. May be repeated for credit with a different instructor.
Taught by: Cary, Watterson
One-term course offered either term

Activity: Seminar
1.0 Course Unit

AFRC 135 Law and Society
After introducing students to the major theoretical concepts concerning law and society, significant controversial societal issues that deal with law and the legal systems both domestically and internationally will be examined. Class discussions will focus on issues involving civil liberties, the organization of courts, legislatures, the legal profession and administrative agencies. Although the focus will be on law in the United States, law and society in other countries of Africa, Asia, Europe and Latin America will be covered in a comparative context. Readings include research, reports, statutes and cases.
Taught by: Fetni
One-term course offered either term
Also Offered As: SOCI 135
Activity: Lecture
1.0 Course Unit

AFRC 141 Histories of Race and Science in Philadelphia
The history of race and science has its American epicenter in Philadelphia. Throughout this Academically-Based Community Service (ABCS) course, we will interrogate the past and legacy of racial science in the United States; the broad themes we broach will be met concretely in direct engagement with Penn and the Philadelphia community. As an extended case study, students will undertake independent research projects using primary source documents from local archives, tracing the global history of hundreds of human skulls in the 19th century Samuel G. Morton cranial collection at the Penn Museum, a foundational and controversial anthropological collection in the scientific study of race. These projects will be formed through an ongoing partnership with a Philadelphia high school in which Penn students will collaborate with high school students on the research and design of a public-facing website on the Morton collection and the legacy of race and science in America. In our seminar, we will read foundational texts on the study of racial difference and discuss anti-racist responses and resistance to racial science from the 19th century to the present. Throughout, we will work directly with both primary and secondary sources, critically interrogating how both science and histories of science and its impacts on society are constructed. Throughout this course, we will explore interrelated questions about Penn and Philadelphia’s outsize role in the history of racial science, about decolonization and ethics in scholarly and scientific practice, about the politics of knowledge and public-facing scholarship, and about enduring legacies of racial science and racial ideologies. All students are welcome and there are no prerequisites, save for intellectual curiosity and commitment to the course. This course will be of particular interest to those interested in race, American history and the history of science, anthropology, museum studies, education, and social justice.
Taught by: Mitchell
Also Offered As: ANTH 140, HIST 154, STSC 140

1.0 Course Unit
AFRC 147 Studies in African American Music
This course explores aspects of the origins, style development, aesthetic philosophies, historiography, and contemporary conventions of African-American musical traditions. Topics covered include: the music of West and Central Africa, the music of colonial America, 19th century church and dance music, minstrelsy, music of the Harlem Renaissance, jazz, blues, gospel, hip-hop, and film music. Special attention is given to the ways that black music produces 'meaning' and to how the social energy circulating within black music articulates myriad issues about American identity at specific historical moments. The course will also engage other expressive art forms from visual and literary sources in order to better position music making into the larger framework of African American aesthetics.
Taught by: Ramsey
Course not offered every year
Also Offered As: MUSC 235

AFRC 175 Society and Culture of Brazil
With its booming economy, the recent inauguration of its first female president, and its selection as host to the 2012 World Cup and Olympic games, Brazil is growing in global prestige. But amid all these exciting developments are devastating socioeconomic inequalities. Access to safe living conditions, livable wages, higher education, and overall social mobility remain painfully out of reach to many Brazilians, the majority of whom are the descendants of slaves. Why do these problems persist in a country that has had such an enduring and widespread reputation as a 'racial democracy'? What are the possibilities of closing the equality gap in Brazil?
Course not offered every year
Also Offered As: HIST 175, LALS 175
Activity: Lecture

AFRC 186 Africa and the Transatlantic Slave Trade
This course focuses on the history of selected African societies from the sixteenth through the mid-nineteenth centuries. The primary goal is to study the political, economic, social, and cultural history of a number of peoples who participated in the Atlantic slave trade or were touched by it during the era of their involvement. The course is designed to serve as an introduction to the history and culture of African peoples who entered the diaspora during the era of the slave trade. Its audience is students interested in the history of Africa, the African diaspora, and the Atlantic world, as well as those who want to learn about the history of the slave trade. Case studies will include the Yoruba, Akan, and Fon, as well as Senegambian and West-central African peoples.

Topics Vary. See the Africana Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.
SPRING 2017: The history of the women and men of African Descent who have studied, taught, researched, and worked at the University of Pennsylvania provides a powerful window into the complex history of Blacks not only in America but throughout the Diaspora. This class will unpack, uncover, and present this history through close studies of texts and archived records on and at the university, as well as through first hand accounts by alumni and past and present faculty and staff members. These stories of the trials and triumphs of individuals on and around this campus demonstrate the amazing and absurd experience that Blacks have endured both at Penn and globally. Emphasis will be placed on the research process with the intent of creating a democratic classroom where all are students and all are instructors. Students will become familiar with archival historical research (and historical criticism) as well as with ethnographic research. Far more than just a survey of historical moments on campus and in the community, students will meet face to face with those who have lived and are presently living history and they will be faced with the challenge of discerning the most effective ways of documenting, protecting, and representing that history for future generations of Penn students.
Taught by: Howard, Peterson
One-term course offered either term
Activity: Seminar
1.0 Course Unit

AFRC 190 Introduction to Africa
This course provides an introduction to the study of Africa in all its diversity and complexity. Our focus is cultural, geographical, and historical: we will seek to understand Africa's current place in the world political and economic order and learn about the various social and physical factors that have influenced the historical trajectory of the continent. We study the cultural formations and empires that emerged in Africa before European colonial invasion and then how colonialism reshaped those sociocultural forms. We'll learn about the unique kinds of kinship and religion in precolonial Africa and the changes brought about by the spread of Islam and Christianity. Finally, we'll take a close look at contemporary issues such as ethnic violence, migration, popular culture and poverty, and we'll debate the various approaches to understanding those issues.
For BA Students: Society Sector
Taught by: Hasty
Course usually offered in fall term
Also Offered As: ANTH 190
Activity: Lecture
1.0 Course Unit

AFRC 201 Divinities, Diviners and Divinations: Religions of the African Diaspora
This undergraduate course is designed to provide students with a broad introduction to major themes within African Diasporic Religions. This is an interdisciplinary course. We will be drawing upon various theoretical methods, i.e. historical, ethnographical, and autobiographical. Additionally, we will be examining visual media to understand the presence and value of African Diasporic Religions in the 20th/21st century. Special attention will be given to Vodou, Santeria, and Candomble in the Americas. Thematically, we will work through concepts of the diaspora; memory, myth and authenticity; ritual and material practices; borders, migration, gender and sexuality, religious commodities and exchange. As we traverse through these various religious traditions, it is through the readings, lectures, invited speakers, films and class discussions that we will develop a complex understanding of integrative religious worldviews that impacts every aspect of life: family structure, gender relations, education, healing, economics, politics, arts, and so on. It is with the hopes that we can apprehend how these traditions are indeed an American Religion.
Taught by: Nwokocha
One-term course offered either term
Also Offered As: GSWS 201
Activity: Lecture
1.0 Course Unit

AFRC 202 Spirit possession in Caribbean Religions
This course is designed to provide students with a broad introduction to possession experiences in Caribbean Religions. Through historical, ethnographic, autobiographical, literary and visual texts this course examines complex, gendered practices within the possession process, the vibrant spiritual energy that sustains communal connections during religious ceremonies, and the transnational imaginations that animate Caribbean religious practices in the Americas. Special attention will be given to Santeria, Candomble, Vodou, Myal, Palo Monte, and Revival Zion in the Americas. Possession is a process through which gender and sexuality can be performed, contesting national and regional discourses of sexuality, gender, and race in the Caribbean. Thematically, we will work through concepts of memory, community, adornment, ritual, borders, and the senses. We will investigate religious ritual practices to understand various religious worldviews that shape communities' religious and social lives.

Also Offered As: GSWS 202
Activity: Seminar
1.0 Course Unit

AFRC 215 The World After 1800: Advanced Benjamin Franklin Seminar
This course is cross listed with HIST 214 (America after 1800: Advanced Benjamin Franklin Seminar) when the subject matter is related to African, African American or African diaspora issues. See the Africana Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.
One-term course offered either term
Also Offered As: HIST 216, JWST 216, URBS 220
Activity: Seminar
1.0 Course Unit
AFRC 218 Diversity and the Law
The goal of this course is to study the role the law has played, and continues to play, in addressing the problems of racial discrimination in the United States. Contemporary issues such as racial profiling, affirmative action, and diversity will all be covered in their social and legal context. The basis for discussion will be assigned texts, articles, editorials and cases. In addition, interactive videos will also be used to aid class discussion. Course requirements will include a term paper and class case presentations.
Taught by: Anderson
One-term course offered either term
Also Offered As: LGST 218
Activity: Lecture
1.0 Course Unit

AFRC 222 African Women's Lives: Past and Present
Restoring women to African history is a worthy goal, but easier said than done. The course examines scholarship over the past forty years that brings to light previously overlooked contributions. African women have made to political struggle, religious change, culture preservation, and economic development from pre-colonial times to present. The course addresses basic questions about changing women’s roles and human rights controversies associated with African women within the wider cultural and historical contexts in which their lives are lived. It also raises fundamental questions about sources, methodology, and representation, including the value of African women’s oral and written narrative and cinema production as avenues to insider perspectives on African women's lives.
Taught by: Blakley
Course not offered every year
Also Offered As: LALS 222
Activity: Lecture
1.0 Course Unit

AFRC 225 African Languages and Culture
The aim of the course is to provide an overall perspective on African languages and linguistics. No background in linguistics is necessary. Students will be introduced to theoretical linguistics-its concepts, theories, ways of argumentation, data collection, data analysis, and data interpretation. The focus will be on the languages and linguistics of Africa to provide you with the knowledge and skills required to handle the language and language-related issues typical of African conditions. We will cover topics related to formal linguistics (phonology/phonetics, morphology, syntax, and semantics), aspects of pragmatics as well as the general socio-linguistic character of African countries. We will also cover language in context, language and culture, borrowing, multilingualism, and cross-cultural communication in Africa.

Activity: Seminar
1.0 Course Unit

AFRC 232 Race and Ethnic Politics
This course examines the role of race and ethnicity in the political discourse through a comparative survey of recent literature on the historical and contemporary political experiences of the four major minority groups (Blacks or African Americans, American Indians, Latinos or Hispanic Americans, and Asian Americans). A few of the key topics will include assimilation and acculturation seen in the Asian American community, understanding the political direction of Black America in a pre and post Civil Rights era, and assessing the emergence of Hispanics as the largest minority group and the political impact of this demographic change. Throughout the semester, the course will introduce students to significant minority legislation, political behavior, social movements, litigation/court rulings, media, and various forms of public opinion that have shaped the history of racial and ethnic minority relations in this country. Readings are drawn from books and articles written by contemporary political scientists.

Activity: Recitation
1.0 Course Unit

AFRC 233 World History: Africa or the Middle East
SPRING 2018: African cities in the past contributed to dynamic and prosperous civilizations. What happened? This course examines Africans’ aspirations of modernity through the lens of African urban history using fiction, film and current scholarship in several disciplines. Each class will explore two temporalities—the precolonial history of African cities, and the colonial and postcolonial histories of economic, social and political progress which goes by the name of development. Grounded in the case studies of both ancient and modern cities, this course explores the emergence and decline of trading centers, the rise of colonial cities, and the dilemmas of postcolonial economies and politics.
Taught by: Babou, Powell

Activity: Seminar
1.0 Course Unit
AFRC 235 Law and Social Change
Beginning with discussion of various perspectives on social change and law, this course then examines in detail the interdependent relationship between changes in legal and societal institutions. Emphasis will be placed on (1) how and when law can be an instrument for social change, and (2) how and when social change can cause legal change. In the assessment of this relationship, emphasis will be on the laws of the United States. However, laws of other countries and international law relevant to civil liberties, economic, social and political progress will be studied. Throughout the course, discussions will include legal controversies relevant to social change such as issues of race, gender and the law. Other issues relevant to State-Building and development will be discussed. A comparative framework will be used in the analysis of this interdependent relationship between law and social change.

Activity: Seminar
1.0 Course Unit

AFRC 238 Modalities of Black Freedom and Escape: Ships
The course circulates around ships and boats. The course combines methods from environmental humanities, visual arts and history to consider multi-modal practices of black freedom and escape. From free black sailors in the eighteenth century Caribbean Sea, to twentieth and twenty-first century West African fishing boats, notions of Haiti as 'boat people,' Parliament Funkadelic's mothership, and sinking boats with Somali and Ethiopian migrants off Yemen's coast, ships have been and remain technologies of containment and freedom for communities of African descent. In the face of environmental vulnerabilities and the reality of water ways as systems of sustenance and imminent death, this course asks: how do black people use the ship and the process and practice of shipping as vessels for freedom, escape, and as a site to experiment with futures? Using the city of Philadelphia and the Schuykill and Delaware rivers as our primary site of interrogation, the course attends to the threats that black people experience following natural disaster (New Orleans, Haiti, Puerto Rico) and everyday engagement with the local and global state structures regarding water (Flint, MI). In this context, we also look to shipping as a site to theorize and account for black innovation, meanings of (non-)sovereignty, and alternative futures.
Taught by: Johnson
Course not offered every year
Also Offered As: ANTH 231
Activity: Seminar
1.0 Course Unit

AFRC 245 Dancing the African Diaspora
This seminar/studio course introduces students to theories, debates, and critical frameworks in African Diaspora Dance Studies. It asks: What role does dance play throughout the African diaspora? What makes a dance 'black'? How do conceptualizations of gender and sexuality inform our reading of dancing bodies? Using African diaspora, critical dance, performance, and black feminist frameworks, we will examine the history, politics, and aesthetics of 'black dance'. Through a keywords format, we'll construct both a vocabulary: a body of words used to describe a phenomena, and a grammar: a body of rules that lay bare the operations between terms. This course recognizes the fluidity of meaning between words depending on the context, geography, and circumstance of their evocation. Our key terms will allow us to examine a number of dancers, choreographers, companies, and movement practices. Moving across an African diasporic map, this course explores the politics of black choreography, and the political significance of black bodies in motion.
Taught by: Johnson
Activity: Seminar
1.0 Course Unit

AFRC 248 The Haitian Revolution
In August 1791, enslaved Africans on the northern plain of Saint Domingue (colonial Haiti) rose up in a coordinated attack against their French colonial masters and plantation overseers, launching the initial revolt in what would come to be known as the Haitian Revolution. In the years that followed, their actions forced the legal abolition of racial discrimination, and then the abolition of slavery, throughout the French Empire. Ultimately, when Napoleon Bonaparte threatened to return slavery to Saint Domingue, they waged a war for independence. After defeating the Napoleonic army, these former slaves then declared the world's first 'Black Republic,' the independent state of Haiti, in 1804. This seminar will examine some of the major themes and debates surrounding Haiti's colonial and revolutionary history. We will begin by considering the colonial paradox: France's leading role in the intellectual movement called the 'Enlightenment' coincided with its ascent as a slaveholding colonial power. The seminar will also explore parallels and pointsof connection between the revolutionary movements in France and Saint Domingue. When the Haitian Revolution began in 1791, the French Revolution was already two years old: how did the increasingly radical ideas and widespread violence in France shape events in the Caribbean? Likewise, how did west African traditions and political ideologies influence insurgents? And how, in turn, did the revolution in Saint Domingue impact the revolution in France? From a diplomatic perspective, we will also consider relations between the Haitian Revolutionary leadership and French officials, examining their respective goals, which overlapped and diverged at different moments. Finally, we will ask how the revolution in Saint Domingue-and the birth of Haiti-inpacted ideas about liberty, sovereignty and freedom throughout the Atlantic world. We will read a combination of primary and secondary materials each week. Students are encouraged to read primary documents in the original French if they are able. A final research paper will be required of all students, drawing on the Kislak Center's rich collection of revolutionary-era documents.
One-term course offered either term

AFRC 253 Music and Performance of Africa
This class provides an overview of the most popular musical styles and discussion of the cultural and political contexts in which they emerged in contemporary Africa. Learning to perform a limited range of African music/dance will be part of this course. No prior performance experience required.
Taught by: Muller
Course not offered every year
Also Offered As: ANTH 263, MUSC 256
Activity: Lecture
1.0 Course Unit

AFRC 258 Latin American Music
This survey course considers Latin American musics within a broad cultural and historical framework. Latin American musical practices are explored by illustrating the many ways that aesthetics, ritual, communication, religion, and social structure are embodied in and contested through performance. These initial inquiries open onto an investigation of a range of theoretical concepts that become particularly pertinent in Latin American contexts—concepts such as post-colonialism, migration, ethnicity, and globalization. Throughout the course, we will listen to many different styles and repertories of music and then work to understand them not only in relation to the readings that frame our discussions but also in relation to our own, North American contexts of music consumption and production. (Formerly Music 158).

AFRC 268 Contemporary Issues in African Society
This course will deal with law and society in Africa. After surveying the various legal systems in Africa, the focus will be on how and to what extent the countries of Africa 're-Africanized' their legal systems by reconciling their indigenous law with western law and other legal traditions to create unified legal systems that are used as instruments of social change and development. Toward this end, the experiences of various African countries covering the various legal traditions will be included. Specific focus will be on laws covering both economic and social relations. This emphasis includes laws of contracts and civil wrongs, land law, law of succession, marriage and divorce and Africa's laws of International Relations, among other laws. Throughout this course a comparative analysis with non-African countries will be stressed.
Taught by: Imoagene, Zuberi
Also Offered As: SOCI 268
Activity: Lecture
1.0 Course Unit

AFRC 269 Constitutional Law: Public Power & Civil Rights to 1912
This course explores the creation and transformations of the American constitutional system's structures and goals from the nation's founding through the period of Progressive reforms, the rise of the Jim Crow system, and the Spanish American War. Issues include the division of powers between state and national governments, and the branches of the federal government; economic powers of private actors and government regulators; the authority of governments to enforce or transform racial and gender hierarchies; and the extent of religious and expressive freedoms and rights of persons accused of crimes. We will pay special attention to the changing role of the Supreme Court and its decisions in interpreting and shaping American constitutionalism, and we will also read legislative and executive constitutional arguments, party platforms, and other influential statements of American constitutional thought.
Taught by: Smith
One-term course offered either term

Activity: Recitation
1.0 Course Unit

AFRC 274 Faces of Jihad in African Islam
This course is designed to provide the students with a broad understanding of the history of Islam in Africa. The focus will be mostly on West Africa, but we will also look at developments in other regions of the continent. We will explore Islam not only as religious practice but also as ideology and an instrument of social change. We will examine the process of Islamization in Africa and the different uses of Jihad. Topics include prophetic jihad, jihad of the pen and the different varieties of jihad of the sword throughout the history in Islam in sub-Saharan Africa.
Taught by: Babou
One-term course offered either term
Also Offered As: HIST 275
Activity: Lecture
1.0 Course Unit

AFRC 276 African American Life and Culture in Slavery
This course will examine the lives of enslaved African Americans in the United States, both in the North and the South. We will engage historiographical debates, and tackle questions that have long concerned historians. For example, if slaves were wrenched from families and traded, could they sustain family relationships? If slaves worked from sun-up until sun-down, how could they create music? We will engage with primary and secondary sources to expand our understandings of values, cultural practices, and daily life among enslaved people. Topics will include: literacy, family, labor, food, music and dance, hair and clothing, religion, material culture, resistance, and memories of slavery. Several disciplines including History, Archaeology, Literature, and Music, will help us in our explorations. Written, oral, and artistic texts for the course will provide us with rich sources for exploring the nuances of slave life, and students will have opportunities to delve deeply into topics that are of particular interest to them. This course will also count as the AFRC 176 requirement for the AFRC major.
Taught by: Williams
Course not offered every year
Also Offered As: HIST 274
Activity: Seminar
1.0 Course Unit
Notes: This course will also count as the AFRC 176 requirement for the AFRC major.
AFRC 277 Penn Slavery Project Research Seminar
This research seminar provides students with instruction in basic historical methods and an opportunity to conduct collaborative primary source research into the University of Pennsylvania's historic connections to slavery. After an initial orientation to archival research, students will plunge into doing actual research at the Kislak Center, the University Archives, the Historical Society of Pennsylvania, the American Philosophical Society, the Library Company, and various online sources. During the final month of the semester, students will begin drafting research reports and preparing for a public presentation of the work. During the semester, there will be opportunities to collaborate with a certified genealogist, a data management and website expert, a consultant on public programming, and a Penn graduate whose research has been integral to the Penn Slavery Project.
Taught by: Brown
One-term course offered either term
Also Offered As: HIST 273
Activity: Field Work
1.0 Course Unit

AFRC 279 (T)rap Music
This course examines the coming to pass of trap music from several perspectives: 1) that of its technological foundations and innovations (the Roland 808, Auto-tune, FL Studio (FruityLoops), etc.); 2) that of its masters/mastery (its transformation of stardom through the figures of the producer (Metro Boomin) and the rock star (Future)); 3) that of its interpretability and effects (what does the music say and do to us). We will thus engage with this music as a practice of art and form of technosociality that manifests uncanny and maximal attunement with the now.
Taught by: White
Course not offered every year

Activity: Seminar
1.0 Course Unit

AFRC 281 Topics in African American Literature
In this advanced seminar, students will be introduced to a variety of approaches to African American literatures, and to a wide spectrum of methodologies and ideological postures (for example, The Black Arts Movement). The course will present an assortment of emphases, some of them focused on geography (for example, the Harlem Renaissance), others focused on genre (autobiography, poetry or drama), the politics of gender and class, or a particular grouping of authors. Previous versions of this course have included 'African American Autobiography,' ‘Backgrounds of African American Literature,’ ‘The Black Narrative’ (beginning with eighteenth century slave narratives and working toward contemporary literature), as well as seminars on urban spaces, jazz, migration, oral narratives, black Christianity, and African-American music. See Africana Studies Department's website at https://africana.sas.upenn.edu for a description of the current offerings.
Taught by: Beavers, Davis, Jackson, Tillet
Course not offered every year
Also Offered As: ENGL 281
Activity: Seminar
1.0 Course Unit
Notes: Spaces will be reserved for English Majors.

AFRC 283 Modern Art
The history of modern art is closely tied to and largely unfolds from the history of Western Imperialism. While the technologies made possible by colonial resource extraction produced new ways of looking, modern conceptions of the self and how to represent it developed in dialogue with racialized notions of the other. This course focuses on encounters between the cultures of Africa and Europe, from 1880 to 1960, and on the visual practices that emerged on both continents as a result. Topics of special interest will include racial difference and the birth of photography, colonial masquerade, impressionism, symbols of power in royal arts, cubism, mass marketing and colonial self-fashioning. West African studio photography, world’s fairs and the Musée de l’Homme, Dada and surrealism, Negritude and interwar Paris, anti-aesthetics, colonial arts education, National art schools in the age of African independence, humanism and South African photography under Apartheid.
Taught by: Roach
Course not offered every year
Also Offered As: ARTH 285, ARTH 685
Activity: Lecture
1.0 Course Unit

AFRC 286 Topics in Race and Ethnicity - No Bench by the Road: Monuments, Memory, and the Afterlife of Slavery
SPRING 2018: In 1989, as she reflected on her magnum opus, Beloved, Toni Morrison declared 'There is no place you or I can go, to think about or not think about, to summon the presences of, or recollect the absences of slaves. She went on, 'There is no suitable memorial, or plaque, or wreath, or wall, or park, or skyscraper lobby. There's no 300-foot tower, there's no bench by the road.' And because such a place doesn't exist...the book had to.' Today, there are significantly more markers of slavery in the public sphere as well as new novels, films, and television shows that directly take up the history and remnants of slavery in our lives. Looking at Colson Whitehead's novel, The Underground Railroad and WGN's tv series 'The Underground,' the remaking of the Whitney Plantation in Louisiana as well as considering the debates about confederate flags and monuments in places like New Orleans, Virginia, and South Carolina, this course will examine the meaning and movements behind these contemporary engagements with American slavery today. See the Africana Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.
Taught by: Beavers, Tillett
Course not offered every year
Also Offered As: ENGL 284

Activity: Seminar
1.0 Course Unit

AFRC 294 Facing America
This course explores the visual history of race in the United States as both self-fashioning and cultural mythology by examining the ways that conceptions of Native American, Latino, and Asian identity, alongside ideas of Blackness and Whiteness, have combined to create the various cultural ideologies of class, gender, and sexuality that remain evident in historical visual and material culture. We also investigate the ways that these creations have subsequently helped to launch new visual entertainments, including museum spectacles, blackface minstrelsy, and early film, from the colonial period through the 1940s.
Taught by: Shaw, Staff
Course not offered every year
Also Offered As: ARTH 274, ARTH 674, ASAM 294, CIMS 293, LALS 274
Activity: Lecture
1.0 Course Unit

AFRC 302 Sustainable Entrepreneurship
This course is designed to introduce students to the multiple methods of engaging Africana entrepreneurship, public service and philanthropy. Alongside a thorough review of both popular and independent activist media, students will be trained to use accessible technology to participate in international communications networks. 'Big ideas,' will be translated into succinct artistic statements. We will look intimately at the architecture of David Adjaye, Adjaye Associates; the initiatives of Majora Carter for Sustainable South Bronx and Majora Carter Group; the philanthropic equity of Vista Equity Partners and C.E.O. Robert Smith, and the political work of Mayor Ras Baraka, City of Newark among other examples from the public and private sector throughout the African Diaspora. Prior to the development of our own app ideas, we will focus on the urban market advertising strategies of majority companies that are lauded for their sustainable initiatives including Nike, Hewlett-Packard and Apple. We will also use as secondary resources macro approaches to sustainability from the United Nations Foundation. This course makes an argument for inclusion of race, class and gender equity in the evolving definition of sustainability. Our argument, consistent with the growth of so many of these professionals inside of and clearly influenced by hip-hop culture, is that they are best prepared, culturally, to ‘make something out of nothing.’
Taught by: Gilliam
Course not offered every year
Activity: Seminar
1.0 Course Unit

AFRC 305 Housing, Race, and Community in the United States
One’s home is the first site of self-identity, socialization, and notions of citizenship. In the United States, neighborhoods are the basic units of political organization, educational options, and familial wealth. This course explores the intersections between race and housing in the United States with a specific focus on the experiences of African-Americans in urban centers. The intersectional housing experiences of Asian, Latinx, first-generation immigrants, Arab, and indigenous communities will also be analyzed. This course represents both a timely and nuanced opportunity to address housing as a focal point of existing racial tensions and deepening socio-economic inequalities in the U.S. Increasingly, housing has become a contested subject, with heated debates concerning its status as a human, and potentially constitutional, right. Students will explore urban governance values, the commodification of urban landscapes, and the institutional dimensions of race in the United States. Students will develop a critical understanding of the underlying structural causation for the issues faced by minority populations seeking adequate, affordable, and safe housing in the U.S. Prior knowledge of urban planning, housing, or social policy is not necessary for this course. Students will finish the course equipped with a broad knowledge base of associated development topics including globalization, commodification, and social justice.
Taught by: Redden
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

AFRC 307 Race, Science and Justice
This course draws on an interdisciplinary body of biological and social scientific literature to explore critically the connections between race, science, and justice in the United States, including scientific theories of racial inequality, from the eighteenth century to the genomic age. After investigating varying concepts of race, as well as their uses in eugenics, criminology, anthropology, sociology, neuroscience, and medicine, we will focus on the recent expansion of genomic research and technologies that treat race as a biological category that can be identified at the molecular level, including race-specific pharmaceuticals, commercial ancestry testing, and racial profiling with DNA forensics. We will discuss the significance of scientific investigations of racial difference for advancing racial justice in the United States.

One-term course offered either term
Also Offered As: HIST 376
Activity: Seminar
1.0 Course Unit
AFRC 316 Africa and Roman Literature
In this course, we will explore race and ethnicity in the Roman world by focusing on the life and works of Roman Africans and the ways in which non-African Romans engaged with and presented the peoples of Africa. The course covers Roman literature in translation from the comedies of Plautus produced in the late 3rd - 2nd centuries BCE, to African Christian writing of the 5th century CE. It also covers a wide range of genres: we will examine how Roman writers articulate questions of race in comedy and satire, epic, history, biography, and elegy among others. We will read African writers (Apuleius, Augustine) and ask how their Africanness influences their works. We will read Roman accounts of journeys to Africa, wars with Africa, and encounters with Africans to ask how the Romans saw themselves as different from or similar to Africans. The course will also explore in more general terms how Romans talk about race: did racism exist? What aspects of different cultures and peoples did Romans choose to emphasize when they talked of non-Romans?

AFRC 321 Understanding African Conflict
The end of colonial rule was the springboard for the start of cold wars in various regions of Africa. Where peace could not be maintained violence erupted. Even where secession has been attained, as in the new country of South Sudan, the threat of civil war lingers. While domestic politics have led to the rise of armed conflicts and civil wars in many African countries, the external factors should also not be ignored. Important in all current conflicts is the concern to international peace and security. Overall this course will: (1) investigate the general nature of armed conflicts in Africa (2) provide in-depth analysis of the underlying factors (3) and discuss the regional and the international responses to these conflicts and their implications. Special emphasis will be placed upon African conflicts and civil wars in: great Lakes area, Mali, Nigeria, Senegal, Sudan, Somalia, South Sudan, and Uganda.

AFRC 322 American Slavery and the Law
In this course, we will work both chronologically and thematically to examine laws, constitutional provisions, and local and federal court decisions that established, regulated, and perpetuated slavery in the American colonies and states. We will concern ourselves both with change over time in the construction and application of the law, and the persistence of the desire to control and sublimate enslaved people. Our work will include engagement with secondary sources as well as immersion in the actual legal documents. Students will spend some time working with murder cases from the 19th century South. They will decipher and transcribe handwritten trial transcripts, and will historicize and analyze the cases with attention to procedural due process as well as what the testimony can tell us about the social history of the counties in which the murders occurred. Students will have the opportunity to choose a topic and conduct original research using both primary and secondary sources, resulting in a 20-page research paper. We will spend a good deal of time throughout the semester learning how to research, write, and re-write a paper of this length. At the end of the semester students will present the highlights of their research to the class.

AFRC 324 Dress and Fashion in Africa
Throughout Africa, social and cultural identities of ethnicity, gender, generation, rank and status were conveyed in a range of personal ornamentation that reflects the variation of African cultures. The meaning of one particular item of clothing can transform completely when moved across time and space. As one of many forms of expressive culture, dress shape and give forms to social bodies. In the study of dress and fashion, we could note two distinct broad approaches, the historical and the anthropological. While the former focuses on fashion as a western system that shifted across time and space, and linked with capitalism and western modernity; the latter approach defines dress as an assemblage of modification the body. The Africanist proponents of this anthropological approach insisted that fashion is not a dress system specific to the west and not tied with the rise of capitalism. This course will focus on studying the history of African dress by discussing the forces that have impacted and influenced it overtime, such as socio-economic, colonialism, religion, aesthetics, politics, globalization, and popular culture. The course will also discuss the significance of the different contexts that impacted the choices of what constitute an appropriate attire for distinct situations. African dress in this context is not a fixed relic from the past, but a live cultural item that is influenced by the surrounding forces.

**AFRC 325 Performance in the African Diaspora**
The purpose of this course is to engage students in the rigorous process of mining experiences for material that can be transformed into a public performance piece. In-class writing, group discussions, and field work in the Philadelphia area. AUGUST WILSON AND BEYOND. The people need to know the story. See how they fit into it. See what part they play. - August Wilson, King Hedley II. In this seminar, students will read groundbreaking playwright August Wilson’s 20th Century Cycle: ten plays that form an iconic picture of African American traumas, triumphs, and traditions through the decades, told through the lens of Pittsburgh’s Hill District neighborhood. Other readings include supporting material on Wilson’s work and African American theatre, the works of contemporary playwrights who Wilson has influenced (such as Suzan-Lori Parks and Tarell Alvin McCraney), and context on Penn’s relationship with West Philadelphia. As an Academically Based Community Service (ABCS) course, this seminar gives students the opportunity to enhance their understanding of the plays, and history and culture that shaped them, by forming meaningful relationships with West Philadelphia residents. Wilson’s plays provide the bridge between the two groups. The course culminates with students writing an original theatre piece inspired by the readings and relationships, which they will share at an end-of-semester performance.

**AFRC 327 Fashioning the Black Body**
The fundamental query underlying this course is what is the relationship between dress, adornment, and corporeal figuring and race, specifically blackness? This course will draw upon a number of disciplines and fields including history, performance theory, cultural studies, gender studies, and queer studies to examine how blackness is fashioned, and refashioned within the United States and globally. Throughout the course we will investigate how not only race—attendant issues of gender, sexuality and citizenship have all been constructed and contested through dress. Finally, we will explore what new and more nuanced insights might fashion, dress, adornment, and corporeal figuring offer us for understanding black subjectivities more broadly.

**AFRC 332 North Africa: History, Culture, Society**
This interdisciplinary seminar aims to introduce students to the countries of North Africa, with a focus on the Maghreb and Libya (1830-present). It does so while examining the region’s close economic and cultural connections to sub-Saharan Africa, Europe, and the Middle East. Readings will include histories, political analyses, anthropological studies, and novels, and will cover a wide range of topics such as colonial and postcolonial experiences, developments in Islamic thought and practice, and labor migration. This class is intended for juniors, seniors, and graduate students. Prerequisite: A university-level survey course in Middle Eastern, African, or Mediterranean history.

**AFRC 336 Africa and the Indian Ocean World**
The Indian Ocean region represents an area with interwoven centuries of interactions, politically, historically, geographically and culturally. This area has witnessed continuous migrations of peoples, the circulation of goods and ideas, and the interaction with foreign forces. The Indian Ocean world has served as an epicenter of global economy in pre-modern world and as such, it gave rise to trading networks and political empires. As part of the Indian Ocean World, the eastern and southern shores of Africa are both the recipients and the transmitters of cultural and political icons. The existence of many islands that separate Africa from Asia stand as hybrid cultures that are influenced by forces from different continents. Political and cultural relations between African regions and the rest of the Indian Ocean world are evident with the presence of African-descent populations in these places, as well as the prevalent of cultural practices of African origin. Signs of interaction between the Indian Ocean world and the African shores are apparent in several archeological sites, as well as in the cultural practices of religion, language, architecture and modes of dress. The European colonial expansion, has allowed the populations in the Indian Ocean World to share strategies during their independence movements to thwart western political hegemony. With the current advanced forms of globalization, this region is moving more towards economic and political cooperation and in addressing the transnational natural and man-made threats.

**AFRC 338 Exhibiting Black Bodies**
This course concerns the exhibiting of Black Bodies in Museums and gallery spaces. We will trace the evolution of public history from the ‘Cabinets of Curiosity’ in 18th and 19th Century Europe, through to the current institutional confirmation of the vindications traditions represented by Museu Afro Brasil (Sao Paulo, Brazil), National Museum of African American History and Culture (Washington, D.C.), and the Museum of Black Civilization (Dakar, Senegal). We will give particular attention to ‘why these representations at these times in these places?’ In the process of addressing these questions we will give voice to the figures who conceived the curatorial content from those with the colonial mentality, to those with the abolitionist and nationalist and Pan-African visions.

Taught by: Zuberi
Also Offered As: AFRC 620, SOCI 338, SOCI 660
Activity: Seminar
1.0 Course Unit

**AFRC 340 Money, Power, Respect: Funding Social Change**
This course is about how to apply a race, gender and LGBTQ lens to support contemporary social justice movements in the U.S. and globally, including Black Lives Matter, #MeToo, transgender equality, and disability justice. We will explore intersectionality as a theoretical framework, and how it is practically applied to support social justice organizations and leaders, and fund social change. Over the course of the semester, Professor of Practice Roz Lee, a black lesbian feminist and lifelong racial, gender, LGBTQ and economic justice advocate, and who currently serves as Vice President of Strategy and Programs at the Ms. Foundation for Women, will be joined by movement leaders and philanthropy colleagues to discuss and analyze what’s happening on the frontlines of movements for equity, justice and freedom.

AFRC 345 Sinners, Sex and Slaves: Race and Sex in Early America
This course explores the lost worlds of sinners, witches, sexual offenders, rebellious slaves, and Native American prophets from the seventeenth to nineteenth centuries. Using the life stories of unusual individuals from the past, we try to make sense of their contentious relationships with their societies. By following the careers of the trouble-makers, the criminals, and the rebels, we also learn about the foundations of social order and the impulse to reform that rocked American society during the nineteenth century.

AFRC 346 Bodies, Race and Rights: Sex and Citizenship in Modern American History
What did it mean to be a man or woman in the post-Civil War United States? Was being a man the same as being a citizen? If African-American men were to be fully embraced as both men and citizens in the aftermath of slavery, where did that leave women, white and black? Why did a nation built on immigration become so hostile to certain groups of immigrants during this period? In this course, we consider how the meanings and experiences of womanhood, manhood, citizenship, and equality before the law changed from the period immediately after the Civil War until the present day. We look at political battles over the meaning of citizenship, the use of terror to subdue African Americans politically and economically, and the fears of white Americans that they would lose their political and economic dominance to immigrant groups they deemed irreconcilably different from themselves. We also consider the repercussions of these conflicts for medical, legal, and economic efforts to regulate the bodies of women, children, poor people, immigrants, working class laborers, military men, and African Americans.
Throughout the course, we will follow the states changing use of racial, sexual, and economic categories to assess the bodily and intellectual capacities of different groups of citizens. We will also note some of the popular cultural expressions of manhood, womanhood, and citizenship. The lectures and reading assignments are organized around a series of historical problems, dynamic leaders, and controversies that illuminate these issues.

AFRC 354 Art, Medicine, & Magic: Bodily Remedies
In this activity-centric course, you will explore art, medicine, and magic as entangled approaches for healing human bodies across time, space, and societies. At first glance, artists, doctors, and religious leaders may seem to address questions about bodies and healing in very different ways. Yet, in practice, art, magic, and medicine have been in deep conversation with one another for millennia. 4,000 years ago in Mesopotamia, medical doctors were professionals who had offices, hospital beds, and pharmacological and surgical equipment expertise, but they often worked hand in hand with diviners and exorcists. In rural Haiti today, Haitian Vodou priestesses collect herbs, craft sculptures, and sing as they clean wounds and dispense antibiotics within the course of a single ‘remèd’ (remedy). In the United States, megachurches send thousands of doctors on evangelical medical missions each year, while in Colombia, contemporary artists are called on to assuage profound social trauma related to decades of military conflict. Examples like these show that art, magic, and medical practice have long been entangled technologies; sometimes working together, sometimes at odds with one another, these practices have always been in dialog about what ‘healing’ is and how it can be achieved. Attending to these entanglements this course asks ‘what does healing look like and feel like - in what ways do humans transform affliction?’ Together, we will investigate how everyday bodily experiences of ‘wellbeing’ and ‘illness’ are configured through art, magic, and medical practices across human communities, shaping how people understand and manage disorders from COVID-19 to schizophrenia, from ancestral trauma to breast cancer. Throughout the course, you will use ethnographic case studies & in-class activities to work through three aspects of the core class question: 1) how do art, magic, and medicine work in communities? 2) how are they experienced in communities (who has access to what kind of healing and who doesn’t have access; who can be a healer and who can’t be; what should and does healing/sickness feel like?) 3) how do they approach inequalities? (e.g. how and why are illnesses unequally distributed; what illnesses matter more (and less) than others; which communities should be saved (and which sacrificed).)

AFRC 357 Undergraduate Topics In African Studies
SPRING 2017 - UNDERSTANDING AFRICA: This course will explore the economic, social, and political realities facing sub-Saharan Africa today by placing them in historical and global contexts. Key themes will include colonial and precolonial history, nationalist movements and cold war politics, economic development and foreign aid, ethnic and political conflicts, media representation and popular culture. The course will focus on local and global dynamics that have a role in shaping the present day Africa.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
AFRC 368 Kinesthetic Anthropology
This class, team-taught by CEE Visiting Fellow Reggie Wilson and Deborah Thomas, investigates various forms of contemporary performance in relationship to Africanist forms and functions of dance, movement and action. We will concern ourselves with how the body knows, and with how we learn to identify the structures of movement that provide context, meaning and usefulness to various Africanist communities across time and space. Grounding ourselves within a history of ethnographic analyses of the body in motion, and within Africana theorizing about the affective power of the body, we will consider what people are doing when they are dancing. In other words, we will train ourselves to recognize the cultural values, social purposes, and choreographic innovations embedded in bodily action and motion. While we will attend to these phenomena in a range of locations throughout the African diaspora, we will also highlight aspects of the Shaker and Black Shout traditions in Philadelphia. The course will be divided between discussions centered on close reading of primary and secondary material (both text and video) and creative writing/movement exploration (no previous movement experience necessary).

AFRC 372 Africa and the Mid-East
This seminar will explore the historical relationship between these two regions from the early modern age to the present. We will examine the history of trade, particularly the slave trade, and its cultural and political legacy. We will compare the experiences of European imperialism—how the scramble for Africa dovetailed with the last decades of the Ottoman Empire—with an eye to how this shaped nationalist movements in both regions. The course will also explore the decades of independence with a special eye towards pan-Africanism and pan-Arabism. We will also study the ramifications of the Arab-Israeli conflict on the relationship between African and Middle-Eastern countries, from Uganda to Ethiopia, from OPEC to Darfur. This course will pay close attention to migrations through the regions, whether forced or economic or religious. Whenever possible we will explore, through film and literature, how people in Africa and the Middle East see their connections, and their differences.

AFRC 373 The History of Foreign Aid and Intervention in Africa
This course examines the history, politics, and significance of foreign aid to Africa since the late 19th century. While we do not typically think about the European colonial period in Africa in terms of "foreign aid," that era introduced ideas and institutions which formed the foundations for modern aid policies and practices. So we start there and move forward into more contemporary times. In addition to examining the objectives behind foreign assistance and the intentions of donors and recipients, we will look at some of the consequences (intended or unintended) of various forms of foreign aid to Africa over the past century. While not designed to be a comprehensive history of development theory, of African economics, or of international aid organizations, the course will touch on all of these topics. Previous course work on Africa is strongly advised.

AFRC 377 Black Speculative Futures
Why do black cultural producers turn to the speculative? What, in turn, is speculative about blackness? These questions frame this seminar's exploration of how black artists, theorists, and activists imagine different futures, often in the service of critiquing power asymmetries and creating radical transformation in the present. We will explore how the speculative works differently across black literature, visual culture and performance. Additionally, inspired by the multi-disciplinary work that we encounter in the course, we will experiment with crafting our own embodied speculative art in order to better understand its function as both art practice and politics. The course will be divided between discussions centered on close reading of primary and secondary material and creative writing/movement exploration (no previous movement experience necessary). Occasional guest lectures with visiting artists will provide additional fodder for our critical and creative work.

Activity: Seminar
1.0 Course Unit
AFRC 387 Topics in Africana Studies
Topics vary: Black Feminist Approaches to History & Memory - The term black feminism emerged in public discourse amid the social, political, and cultural turbulence of the 1960s. The roots of black feminism, however, are much older, easily reaching back to the work of black women abolitionists and social critics of the nineteenth century. The concept continued to grow and evolve in the work of twentieth century black women writers, journalists, activists, and educators as they sought to document black women's lives. Collectively, their work established black feminism as a political practice dedicated to the equality of all people. More recently, black feminism has been deployed as a tool for theoretical and scholarly analysis that is characterized by an understanding that race, class, gender, and sexuality are inextricably interconnected. Using materials such as slave narratives, social criticism, and archival sources, this course will explore the theoretical and practical applications of black feminist thought in nineteenth and twentieth century North American culture and politics. In particular, we will consider the symbols and practices (storytelling, myth-making, art, archival research) that black women use to document lives. We will ask: how do these methods of documentation inform our understanding of the past and the production of historical knowledge? How can we understand black feminism as both theory and practice? And what are the implications of black feminist approaches for current research and scholarship? We will give particular attention to concepts such as gender, race, memory, the archive, and embodied knowledge to complicate our understanding of historical documentation, epistemology, and authenticity. The course material will include scholarship by Harriet Jacobs, Audre Lorde, Saidiya Hartman, Hazel Carby, Hershini Young, Evelyn Brooks Higginbotham, Toni Morrison, and others. (Image: From In Praise of Shadows, Kara Walker (2009). See the Africana Studies Department's website at https://africana.sas.upenn.edu for a description of the current offerings.

AFRC 392 Queering North African Subjectivities
This seminar will explore the ways in which literary and visual representations of sexual difference and gender roles disrupt the cultural imagination of everyday life in North Africa and its Diasporas. Special attention will be given to representations of Arab women and queer subjectivities as sites of resistance against dominant masculinity. We will analyze the ways in which representations of gender have allowed for a redeployment of power, a reconfiguration of politics of resistance, and the redrawing of longstanding images of Islam in France. Finally, we will question how creations that straddle competing cultural traditions, memories and material conditions can queer citizenship. Course taught in English.

1.0 Course Unit

AFRC 393 Cinema and Civil Rights
Topic Varies Spring 2017: This course will examine key moments in the history of civil rights through a cinematic lens. Over the course of the semester, we will explore how filmmakers have depicted the lives, aspirations, and strategies of those who have struggled for equal rights; how different struggles have intersected with each other; what aesthetic strategies have been adopted to represent freedom and the denial of it; and how effective cinematic efforts to contribute to increased freedom have been as well as what criteria we use to evaluate success or failure in the first place. Each week, we will watch a film and read a series of texts that will be drawn from a variety of arenas, including histories of civil rights; civil rights pamphlets and speeches; filmmaker interviews; film and media theory; memoirs; and theories of race, gender and sexuality. Course requirements: mutual respect; completion of all readings and screenings; participation in class discussion; weekly online responses; a final project that can be a research paper, film, art project, or community-based initiative.

Activity: Seminar
1.0 Course Unit
AFRC 400 Seminar in Africana Studies
This course is an examination and analysis of the changing images and achievements of African Americans in motion pictures and television. The first half of the course focuses on African-American film images from the early years of D.W. Griffith’s ‘renegade bucks’ in The Birth of a Nation (1915); to the comic servants played by Steppin Fetchit, Hattie McDaniel, and others during the Depression era; to the post-World War II New Negro heroes and heroines of Pinky (1949) and The Defiant Ones (1958); to the rise of the new movement of African American directors such as Spike Lee (Do the Right Thing), Julie Dash (Daughters of the Dust), Charles Burnett, (To Sleep With Anger) and John Singleton (Boyz N the Hood). The second half explores television images from the early sitcoms ‘Amos ’n Andy’ and ‘Beulah’ to the ‘Cosby Show,’ ‘Fresh Prince of Bel Air,’ and ‘Martin.’ Foremost this course will examine Black stereotypes in American films and television—and the manner in which those stereotypes have reflected national attitudes and outlooks during various historical periods. The in-class screenings and discussions will include such films as Show Boat (1936), the independently produced ‘race movies’ of the 1930s and 1940s, Cabin in the Sky (1943), The Defiant Ones (1958), Imitation of Life (the 1959 remake) & Super Fly (1972).

Activity: Seminar
1.0 Course Unit

AFRC 404 Black Geographies and the Meaning of Land Rights
This course will interweave issues of land dispossession and land rights, both in Africa and in the Americas, with endogenous concepts and practices of space and place. Specifically, this course will trace the concept of property, as developed among Europeans and European descendants, and explore how this concept interacted with the formation of the concept of race in order to established forms of social control and domination. The first part of this course will focus on Africa generally using Kenya as a case study. The material will cover the impact of colonialism and its legacy on land rights after independence. This first part will also explore contemporary forms of land dispossession happening through international land investments, often termed land grabs. The second part of the course will turn to the experiences of African descendants in the Americas. Using a few case studies, this section will examine different countries, histories, and rural and urban areas to unravel how different types of control over land interact with social relationships and specifically with the formation of race and racism. In both sections, we will also look at forms of resistance and resilience as local populations demand not only access to and control over land, but also impose their own ideologies of what it means to occupy space. By the end of this course, students should be able to more fully articulate the significance of control over land as it impacts and effects social relationships and specifically how it relates to the formation and continuation of inequalities along racial lines. Students will apply the concepts learned throughout the course to their own independent research done on an area in Philadelphia or Pennsylvania.
Taught by: Franzen

1.0 Course Unit

AFRC 405 Religion, Social Justice & Urban Development
Urban development has been influenced by religious conceptions of social and economic justice. Progressive traditions within Judaism, Christianity, Islam, Buddhism, Hinduism, Jainism, Baha’i, Humanism and other religions and systems of moral thought have yielded powerful critiques of oppression and hierarchy as well as alternative economic frameworks for ownership, governance, production, labor, and community. Historical and contemporary case studies from the Americas, Europe, Africa, Asia, and the Middle East will be considered, as we examine the ways in which religious responses to poverty, inequality, and ecological destruction have generated new forms of resistance and development.

1.0 Course Unit

AFRC 406 Existence in Black
Racial, colonial, and other political formations have encumbered Black existence since at least the fifteenth-century. Black experiences of and reflections on these matters have been the subject of existential writings and artistic expressions ranging from the blues to reggae, fiction and non-fiction. Reading some of these texts alongside canonical texts in European existential philosophy, this class will examine how issues of freedom, self, alienation, finitude, absurdity, race, and gender shape and are shaped by the global Black experience. Since Black aliveness is literally critical to Black existential philosophy, we shall also engage questions of Black flourishing amidst the potential for pessimism and nihilism.

Activity: Seminar
1.0 Course Unit

AFRC 420 Advanced Topics in Africana Studies
Topics vary. See the Africana Studies Department’s course list at https://africana.sas.upenn.edu for a description of the current offering. After an examination of the philosophical, legal, and political perspectives on Human Rights, this course will focus on US policies and practices relevant to Human Rights. Toward that end, emphasis will be placed on both the domestic and the international aspects of Human Rights as reflected in US policies and practices. Domestically, the course will discuss (1) the process of incorporating the International Bill of Human Rights into the American legal system and (2) the US position on and practices regarding the political, civil, economic, social, and cultural rights of minorities and various other groups within the US. Internationally, the course will examine US Human Rights policies toward Africa. Specific cases of Rwanda, Kenya, South Africa and Egypt, as well as other cases from the continent, will be presented in the assessment of US successes and failures in the pursuit of its Human Rights strategy in Africa. Readings will include research papers, reports, statutes, treaties, and cases.

AFRC 431 Mobilizing Decolonial Arts and Practice in the Black Atlantic and Beyond
This course will define CHOICE by looking at the transnational linkages connecting artistic, curatorial, personal, and political choices. An overarching question of the course will be 'how do artists, activist, curators, and communities, question, select, translate, and disseminate the information needed to incite large-scale movements and global change and how can we, as a class, do the same through our own choices?' Students will examine the significance of theories arising from museum studies, curatorial studies, global social justice movements, as well as dance and diaspora studies. As a way of emphasizing the perspectives, artistic practices, the political engagement of marginalized groups, and the work of activists in the global south, this class will explore rituals, performances, and visual and expressive cultures. Looking closely at altar-making practices, ritual performances, religious coalitions, and resistant narratives, we will learn how artists, activists, and communities seek economic gain, resist oppression, express political opinions, and create tenable lives in difficult situations. The class is divided into sections including: Geographies, Bodies, Spaces, Words, Futures so that students can begin to deconstruct the colonial frameworks that structure their thinking in these areas. The assignments of the class will also afford students opportunities to learn from the work of local curators, activists, artists, exhibitions, and initiatives, including those at the Penn Museum, The Philadelphia Museum of Art, and Philadelphia Assembled.

AFRC 436 Africana Studies Undergraduate Seminar
On the stage of modern world history, Haiti plays the unique role as both the exceptionally victorious and tragic character. This course interrogates archival documents, oral histories, historical texts, and prose created within the nation and her diaspora in order to establish a nuanced image of the projection of Haiti's modern history. Using two classic Haitian texts, Marie Vieux-Chauvet's Love, Anger, Madness (1968) and Michel-Rolph Trouillot's Silencing the Past: Power and the Production of History (1995), this course examines how, why, and to what end Haiti's history and popular narratives about the country have served to construct and dismantle global movements, popular culture, and meanings of race, gender, and citizenship in the Americas. In our historical examination, we will question some of the iconic representations of Haiti through literature that deepen the affective historical profile of Haiti with interrogations of culture, sexuality, political, and media performance. Students will become familiar with the post-colonial history of Haiti and the region, meanings of race, and the production of history. The course is a research and historical methods seminar. Students will conduct archival research and write narratives from primary source material. This course qualifies as a 'methods' course for Africana Studies undergraduate majors and minors. Taught by: Johnson
Course usually offered in spring term
Also Offered As: GSWS 436, HIST 436, LALS 437

1.0 Course Unit

AFRC 437 Race & Criminal Justice
Why are African Americans and some other minority groups disproportionately incarcerated and subjected to penal sanctions? What are the political, social and economic consequences for individuals, communities, and the wider society of mass incarceration in the United States? What types of reforms of the criminal justice system are desirable and possible? This advanced seminar analyzes the connection between race, crime, punishment, and politics in the United States. The primary focus is on the role of race in explaining why the country's prison population increased six-fold since the early 1970s and why the United States today has the highest incarceration rate in the world. The class will likely take field trips to a maximum-security jail in Philadelphia and to a state prison in the Philadelphia suburbs.

AFRC 440 African Art, 600-1400
This course examines the flourishing civilizations of the African continent between the Fall of the Roman Empire and the dawn of the 'Age of Discovery.' Although material remains of the complex cultures that created exceptional works of art are rare, current archaeology is bringing much new information to the fore, allowing for the first time a preliminary survey of the burgeoning artistic production of the African continent while Europe was building its cathedrals. Bronze casting, gold work, terracotta and wood sculpture, and monumental architecture - the course takes a multi-media approach to understanding the rich foundations of African cultures and their deep interconnection with the rest of the world before the disruptive interventions of colonialism.

Also Offered As: LALS 465, PSCI 410
Activity: Seminar
1.0 Course Unit

AFRC 480 Liberation and Ownership
Who is going to own what we all have a part of creating? The history of the Americas, and of all peoples everywhere, is an evolving answer to the question of ownership. Ownership is about: the ties that bind and those that separate; production, participation, and control; the creation of community and the imposition of hierarchies—racial, sexual, and others; dreams of possessing and the burdens of debt and ecological despoliation; dependency and the slave yearning to breathe free. Of all the issues relevant to democracy, oppression, injustice, and inequality, ownership is arguably the most important and least understood. Utilizing a variety of disciplinary perspectives—with a particular emphasis on radical and critical theories of liberation, and by focusing on particular global sites and processes of capitalism, students will assess and refine their views regarding ownership and liberation in light of their own social, political, religious, aesthetic, and ethical commitments.

1.0 Course Unit

AFRC 506 Existence in Black
Racial, colonial, and other political formations have encumbered Black existence since at least the fifteenth-century. Black experiences of and reflections on these matters have been the subject of existential writings and artistic expressions ranging from the blues to reggae, fiction and non-fiction. Reading some of these texts alongside canonical texts in European existential philosophy, this class will examine how issues of freedom, self, alienation, finitude, absurdity, race, and gender shape and are shaped by the global Black experience. Since Black aliveness is literally critical to Black existential philosophy, we shall also engage questions of Black flourishing amidst the potential for pessimism and nihilism.
Taught by: Amponsah

AFRC 514 Africa and the Indian Ocean
The Indian Ocean region represents an area with interwoven centuries of interactions, politically, historically, geographically and culturally. This area has witnessed continuous migrations of peoples, the circulation of goods and ideas, and the interaction with foreign forces. The Indian Ocean world has served as an epicenter of global economy in pre-modern world and as such, it gave rise to trading networks and political empires. As part of the Indian Ocean World, the eastern and southern shores of Africa are both the recipients and the transmitters of cultural and political icons. The existence of many islands that separate Africa from Asia stand as hybrid cultures that are influenced by forces from different continents. Political and cultural relations between African regions and the rest of the Indian Ocean world are evident with the presence of African-descent populations in these places, as well as the prevalent of cultural practices of African origin. Signs of interaction between the Indian Ocean world and the African shores are apparent in several archeological sites, as well as in the cultural practices of religion, language, architecture and modes of dress. The European colonial expansion, has allowed the populations in the Indian Ocean world to share strategies during their independence movements to thwart western political hegemony. With the current advanced forms of globalization, this region is moving more towards economic and political cooperation and in addressing the transnational natural and man-made threats.

1.0 Course Unit
AFRC 518 Topics in American Religion
From Marvin Gaye, to Tammy Faye Baker, to Sarah Palin and James Baldwin, Pentecostalism has influenced many, including politicians, preachers, writers, and the media. One of the fastest growing religious movements in the world, Pentecostalism continues to have a profound effect on the religious landscape. Pentecostalism’s unique blend of charismatic worship, religious practices, and flamboyant, media-savvy leadership, has drawn millions into this understudied and often controversial religious movement. This course will chronicle the inception and growth of Pentecostalism in the United States, giving particular attention to beliefs, practices, gender, ethnicity, and Global Pentecostalism.
Taught by: Butler
Course not offered every year

One-term course offered either term
Also Offered As: GSWS 527, LALS 527
Activity: Seminar
1.0 Course Unit

AFRC 530 Black Performance Theory
In his 1995 documentary Black Is, Black Ain’t Marlon Riggs traces a black cultural tradition while simultaneously destabilizing the very notion of blackness itself. He testifies that: Black is black, and black is blue. Black is bright. Black is you. Black can do you in. In Riggs configuration, black is a color, black is a feeling, black is a sound, black is materiality, and black is a life sentence. In an effort to raise critical questions around blackness, performance, race, and feeling, this course follows in the tradition of Riggs work. In other words, this graduate level course examines the notion of blackness through theorizations of performance. It pursues the following questions: What is blackness? How is blackness embodied, felt, heard, represented, and seen through performance? How is black performance political? Discussions and written work will interrogate the slipperiness of, desire for, and policing of blackness in order to trouble conceptions of race as a biological essence. Organized by keywords in the field of Black Performance Theory - and exploring varying performance forms (the play, the dance, the film, the photograph, the performance of everyday life, the television program, the exhibit, and even the tweet) - This course foregrounds the micro-politics through which black racialized subjects are shaped in the realm of culture. Performances will be consulted each meeting which we will use to interpret and complicate the day’s readings. In examining blackness through a number of performance mediums, we will consider the politics of black creative labor and the processes of racialization produced through black bodies.
Taught by: Jasmine Johnson

Activity: Seminar
1.0 Course Unit

AFRC 531 Mobilizing Decolonial Arts and Practice in the Black Atlantic and Beyond
This course will define CHOICE by looking at the transnational linkages connecting artistic, curatorial, personal, and political choices. An overarching question of the course will be 'how do artists, activist, curators, and communities, question, select, translate, and disseminate the information needed to incite large-scale movements and global change and how can we, as a class, do the same through our own choices?' Students will examine the significance of theories arising from museum studies, curatorial studies, global social justice movements, as well as dance and diaspora studies. As a way of emphasizing the perspectives, artistic practices, the political engagement of marginalized groups, and the work of activists in the global south, this class will explore rituals, performances, and visual and expressive cultures. Looking closely at altar-making practices, ritual performances, religious coalitions, and resistant narratives, we will learn how artists, activists, and communities seek economic gain, resist oppression, express political opinions, and create tenable lives in difficult situations. The class is divided into sections including: Geographies, Bodies, Spaces, Words, Futures so that students can begin to deconstruct the colonial frameworks that structure their thinking in these areas. The assignments of the class will also afford students opportunities to learn from the work of local curators, activists, artists, exhibitions, and initiatives, including those at the Penn Museum, The Philadelphia Museum of Art, and Philadelphia Assembled.

AFRC 535 Sociology of Race and Ethnicity
Race and ethnicity are, above all, both converge as system of ideas by which men and women imagine the human body and their relationships within society. In this course we will question the concept of race and ethnicity and their place in modern society (1500 - 2020). While the course reviews the pre-1500 literature our focus will be on the last 500 years. This course reviews the research that has contributed to the ideas about ethnicity and race in human society. The review covers the discourse on race in political propaganda, religious doctrine, philosophy, history, biology and other human sciences.
Taught by: Zuberi
Also Offered As: SOCI 533
Activity: Seminar
1.0 Course Unit

AFRC 538 Topics in Medieval Art
Topic varies from semester to semester. For the Fall 2020 semester, the topic will be Migrating Materiality: Ivory Carving Around the Mediterranean. The craft of ivory carving around the Mediterranean is contingent upon the availability of imported elephant tusks, from either South East Asia or, more frequently, from the African continent. The shifting winds of trade routes offer an interpretive paradigm with which to analyze ivory objects from a variety of different cultural groups: the lack or abundance of ivory and the resulting desire for or surfeit of the material shapes its meaning and use around the Mediterranean basin. The study of ivory objects as they migrate around the Mediterranean allows us to investigate the rich intercultural interactions between Eastern and Western Christians, and both of these with the Islamic world. This course focuses on an object-oriented knowledge of ivory artifacts, with a strong emphasis on the collections at the Penn Museum, the Philadelphia Museum of Art, and other area collections.

AFRC 542 Archiving Jazz: Visuality And Materiality In The Phila Jazz Community 1945-2019
This seminar will be organized around three distinct pathways. First, it will serve as an introduction to Jazz Studies and thus be attentive to the ways that jazz music has sparked an interdisciplinary conversation that is wide-ranging and ongoing. Second, we will be partnering with the African American Museum of Philadelphia to consider jazz within the realm of visual art. In light of efforts to map the 'black interior', how have visual artists (e.g. painters, sculptors, filmmakers, and photographers) sought to represent jazz? Third, we will endeavor to develop partnerships with the Philadelphia (and beyond) jazz community, especially as it pertains to creating and sustaining an archive that serves as way to understand jazz as an instrument of placemaking and also as a vehicle for jazz musicians to take ownership of their narratives. The seminar will meet at the African American Museum of Philadelphia and be team taught with members of the Museum staff. The course will culminate with a virtual exhibit of visual works and archival materials centering on Philadelphia's jazz community and (if funding is available) a free concert to be held at AAMP. Undergraduates are welcome to register for the course with permission of the instructor.

AFRC 550 Critical Ethnography
'This graduate course introduces students to theories, practices, and critiques of critical ethnography. Ethnography -- an approach to the study of culture which anthropologist James Clifford described as a process that 'translates experiences into text' - will have our full attention. This process of translation, although seemingly straightforward, requires layers of interpretation, selection, and the imposition of a viewpoint or politics. While ethnography is often narrowly conceived of as a methodology, this course considers ethnography as a mode of inquiry, as a philosophy, as an ongoing question and performance. We wrestle with notions of 'the self' and 'the other' at the intersection of imbricated cultural and performance worlds. Together we'll ask: How is ethnography both critical and performative? What is the relationship between theory and method? How can we evaluate ethnographic work? And finally, what kinds of ethnographers do we want to be? This course considers a range of ethnographic examples in order to analyze both the craft and the stakes of 'translating experiences into text.'

Course not offered every year
Also Offered As: ENGL 569
Activity: Seminar
1.0 Course Unit
Notes: This is an English topics course in 20th Century American Literature. The course is cross-listed with English 569 when the course content includes significant African American or other African Diaspora literatures. Content varies with the instructor. A frequent topic is 'A Love Supreme: Literatures of Jazz'

AFRC 570 African-American Literature
Spring 2018: The aim of this seminar can be described as trying to figure out how poetry and poetics figure into the effort to theorize the African American subject in the 21st Century. At a time when the sheer number of African American poets publishing today (to say nothing of the major prizes they are winning) has exploded exponentially, why does poetry continue to be so marginal in African American literary and cultural studies? As we make our way through recently published anthologies of African American poetry, then turn to works of individual poets, we will consider issues of influence, intertextual periodization, stylization, and tradition as they impact approaches to form, structure, and craft. Ultimately, however, we will focus on the question of why are these poets writing these poems at this particular time? Technologies like PennSound and You Tube will provide time? Technologies like PennSound and You Tube will provide important critical tools in our endeavors and at various points during the term, guest lecturers will join our discussions.

AFRC 571 Visualizing W.E.B. DuBois
This seminar will focus on a project that views history as a result of our contemporary society in which biographical truths are constantly shifting. So the historical biographers write about the way they remembered and visualize the past, and not about the way that it happened. We will take Du Bois's biography in his own words and interrogate his narrative with the visual narratives of his life and influence produced by others. 'Visualizing W.E.B Du Bois' focuses on photographic, film, and video representations intended to present some aspect of Du Bois's reality, primarily for the purposes of instruction or maintaining a historical record. Such projects include photos, materials originally shot on film stock, and digital images that can be either displayed in a book or magazine, and moving images made into a film or video for a TV show or released for screening in cinemas, or other broadcast mediums like YouTube and Vimeo.
Taught by: ZUBERI

Activity: Seminar
1.0 Course Unit

AFRC 581 Learning from James Baldwin (1924-1987)
James Baldwin, one of the greatest writers of the twentieth century, spoke to the issues of his times as well as to our own. This class will examine the intellectual legacy that Baldwin left to present-day writers such as Toni Morrison, Charles Johnson, Ta-Nehisi Coates, Thulani Davis, Caryl Phillips and others. We will spend time reading and discussing Baldwin's novels, short stories, plays and essays. In doing so, we will be considering the complex assumptions and negotiations that we make in our day-to-day lives around our identities and experiences built upon gender, sexual preference, the social-constructs called 'race,' and more. James Baldwin's life and work will be the touchstone that grounds our discussions. We will read Go Tell It on the Mountain, Another Country, The Fire Next Time, and Giovanni's Room and see films I Am Not Your Negro, The Price of the Ticket and The Murder of Emmett Till. Students will research subjects of their own choosing about Baldwin's life and art. For example, they may focus on the shaping influences of Pentecostalism; segregation; racism; homophobia; exile in Paris; the Civil Rights Movement; Black Power, Baldwin's faith, or his return to America.
Taught by: Watterson
Also Offered As: ENGL 581, GSWS 580
Activity: Seminar
1.0 Course Unit

AFRC 587 Race, Nation, Empire
This graduate seminar examines the dynamic relationships among empires, nations and states; colonial and post-colonial policies; and anti-colonial strategies within a changing global context. Using the rubrics of anthropology, history, cultural studies, and social theory, we will explore the intimacies of subject formation within imperial contexts past and present especially in relation to ideas about race and belonging. We will focus on how belonging and participation have been defined in particular locales, as well as how these notions have been socialized through a variety of institutional contexts. Finally, we will consider the relationships between popular culture and state formation, examining these as dialectical struggles for hegemony.

AFRC 594 Post-Colonialism Literature
This course covers topics in Post-Colonial literature with emphasis determined by the instructor. The primary focus will be on novels that have been adapted to film. See the Department's website at www.africana.upenn.edu for a complete description of the current offerings
Course not offered every year
Also Offered As: CIMS 595, ENGL 595
Activity: Seminar
1.0 Course Unit

AFRC 602 Stereotype Threat, Impostor Phenomenon, and African Americans
This course critically examines stereotype threat and impostor phenomenon as they relate to African Americans. Both stereotype threat and impostor phenomenon negatively affect African Americans. The apprehension experienced by African Americans that they might behave in a manner that confirms an existing negative cultural stereotype is stereotype threat, which usually results in reduced effectiveness in African Americans' performance. Stereotype threat is linked with impostor phenomenon. Impostor phenomenon is an internal experience of intellectual phoniness in authentically talented individuals, in which they doubt their accomplishments and fear being exposed as a fraud. While stereotype threat relies on broad generalization, the impostor phenomenon describes feelings of personal inadequacy, especially in high-achieving African Americans. This course will explore the evolving meanings connected to both stereotype threat and impostor phenomenon in relation to African Americans.

Topics may draw on methodologies derived from jazz studies, chant studies, and ethnomusicology. See department website (under course tab) for current term course description: https://music.sas.upenn.edu
Taught by: Ramsey
Course not offered every year
Also Offered As: MUSC 606
Activity: Seminar
1.0 Course Unit
AFRC 620 Exhibiting Black Bodies
This course concerns the exhibiting of Black Bodies in Museums and gallery spaces. We will trace the evolution of public history from the ‘Cabinets of Curiosity’ in 18th and 19th Century Europe, through to the current institutional confirmation of the vindications traditions represented by Museu Afro Brasil (Sao Paulo, Brazil), National Museum of African American History and Culture (Washington, D.C.), and the Museum of Black Civilization (Dakar, Senegal). We will give particular attention to ‘why these representations at these times in these places?’
In the process of addressing these questions we will grapple with the figures who conceived the curatorial content from those with the colonial mentality, to those with the abolitionist and nationalist and Pan-African visions.
Taught by: Zuberi
One-term course offered either term

AFRC 624 Race, Poverty, & Place
In recent years, long-disinvested cities have become the site of renewed investment, population growth, and economic development in a phenomenon often described as gentrification. Nonetheless, socioeconomic inequality between races, ethnicities, genders, and places within the larger metropolitan area continue to persist, suggesting that a rising tide does not raise all boats. Planners must grapple with these issues of inequality and inequity, particularly the implementation of plans and policies that may in theory provide benefits to all, but in practice continue to accumulate benefits for a select few. This course examines the construction of race, the making of a place, and the persistence of poverty in racialized places in the city. This course will engage in a critical discussion of the aforementioned themes, such that the normative notions of race, capitalism, urbanism, gender, power, and space are upended to privilege more marginalized perspectives of these processes.
Taught by: Drake-Rodriguez
Course usually offered in spring term
Activity: Seminar

SPRING 2019: This seminar is suitable for graduate students in any discipline in which historical research may be relevant. We will work with both secondary and primary sources, and students will have the opportunity to visit and undertake research in an archive.
Taught by: Williams
One-term course offered either term
Also Offered As: HIST 645
Activity: Seminar
1.0 Course Unit

AFRC 655 Topics in Black Political Thought: Difference And Community
This course is designed to familiarize graduate students with some of the key texts and debates in Africana Studies concerning the relationship between racial slavery, modernity and politics. Beginning with the Haitian Revolution, much of black political thought (thinking and doing politics) has advocated group solidarity and cohesion in the face of often overwhelming conditions of servitude, enslavement and coercion within the political economy of slavery and the moral economy of white supremacy. Ideas and practices of freedom however, articulated by political actors and intellectuals alike, have been as varied as the routes to freedom itself. Thus, ideas and practices of liberty, citizenship and political community within many African and Afro-descendant communities have revealed multiple, often competing forms of political imagination. The multiple and varied forms of political imagination, represented in the writings of thinkers like Eric Williams, Richard Wright, Carole Boyce Davies and others, complicates any understanding of black political thought as having a single origin, genealogy or objective. Students will engage these and other authors in an effort to track black political thought’s consonance and dissonance with Western feminisms, Marxism, nationalism and related phenomena and ideologies of the 20th and now 21st century.
Taught by: Hanchard
Also Offered As: GSWS 655, LALS 656, PSCI 612
Activity: Seminar
1.0 Course Unit
AFRC 677 Black Speculative Futures
Why do black cultural producers turn to the speculative? What, in turn, is speculative about blackness? These questions frame this seminar's exploration of how black artists, theorists, and activists imagine different futures, often in the service of critiquing power asymmetries and creating radical transformation in the present. We will explore how the speculative works differently across black literature, visual culture and performance. Additionally, inspired by the multi-disciplinary work that we encounter in the course, we will experiment with crafting our own embodied speculative art in order to better understand its function as both art practice and politics. The course will be divided between discussions centered on close reading of primary and secondary material and creative writing/movement exploration (no previous movement experience necessary). Occasional guest lectures with visiting artists will provide additional fodder for our critical and creative work.
Taught by: Knight
Course not offered every year
Also Offered As: AFRC 377, ANTH 377, ANTH 677, ENGL 500, FNAR 377
Activity: Seminar
1.0 Course Unit

AFRC 701 African Studies Seminar
Interdisciplinary seminar for discussion of issues of special interest to graduate students and faculty in Africana Studies. Topics vary according to the interests and expertise of instructors. SPRING 2017 - Readings in African American Religion: Traditional narratives of African American Religion go from slavery to civil rights to 'freedom' without taking into account the complex religious lives and intellectual production of people of African descent in the Americas. This course will focus on African American Religion and the historical and theoretical frameworks that have shaped the study of this field. Readings will cover religious studies, anthropology history, and African American studies in order to provide an understanding of the varieties of religion and religious experiences with this particular segment of the African Diaspora.
Taught by: Butler
Course not offered every year
Also Offered As: RELS 701
Activity: Seminar
1.0 Course Unit

AFRC 706 Introduction to Africa and African Diaspora Thought
This course examines the processes by which African peoples have established epistemological, cosmological, and religious systems both prior to and after the institution of Western slavery.
Taught by: Amponsah
One-term course offered either term
Also Offered As: HIST 706
Activity: Seminar
1.0 Course Unit

AFRC 708 Cultural and Literary Theory of Africa and the African Diaspora
This course introduces students to the theoretical strategies underlying the construction of coherent communities and systems of representation and how those strategies influence the uses of expressive culture over time. Topics vary. See the Africana Studies Department's website at https://africana Studies.sas.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

AFRC 710 Political Economy and Social History of Africa and the African Diaspora
This course provides the opportunity for students to investigate the relationship between the emergence of African peoples as historical subjects and their location within specific geopolitical and economic circumstances. Topics vary.
Taught by: Hanchard, Zuberi
Two terms. student must enter first term.
Also Offered As: COML 710, LALS 710, PSCI 711
Activity: Seminar
1.0 Course Unit

AFRC 720 Graduate Prospectus and Grant-Writing Seminar
Prerequisite: Graduate student must be 'All But Dissertation' (ABD).
This course is intended to help students to write a strong dissertation proposal/prospectus. A proposal is a detailed plan for a long journey of conceptualization, research, and writing that will lead to the first major, independent scholarly contribution. Students will work closely with advisors, peers, and the professor in the course, to develop the questions, methodological approaches, and theoretical perspectives that will guide their research and writing. At the end of the semester, each student will have completed a proposal, and will be ready to defend it.
Taught by: Williams
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: Graduate student must be 'All But Dissertation' (ABD).

AFRC 723 Multicultural Issues in Education
This course examines critical issues, problems, and perspectives in multicultural education. Intended to focus on access to literacy and educational opportunity, the course will engage class members in discussions around a variety of topics in educational practice, research, and policy. Specifically, the course will (1) review theoretical frameworks in multicultural education, (2) analyze the issues of race, racism, and culture in historical and contemporary perspective, and (3) identify obstacles to participation in the educational process by diverse cultural and ethnic groups. Students will be required to complete field experiences and classroom activities that enable them to reflect on their own belief systems, practices, and educational experiences.
Taught by: Gadsden
Course usually offered in fall term
Also Offered As: EDUC 723
Activity: Lecture
1.0 Course Unit
AFRC 770 Afro-American American Literature
How does Elizabeth Alexander's poem Praise Song for the Day, written for the inauguration of Barack Obama, relate to Amiri Baraka's 9/11 poem Somebody Blew America? This seminar will explore the unnamings and experimentations that shape African American literature and theory in the early years of the 21st century. Frameworks of the seminar will include the post-9/11 novel, the poetics of the black, black abstraction, twenty-first century practices of the black diaspora, Age of Obama turn to the satirical. Critical texts such as How to See a Work Total Darkness and Abstractionist Aesthetics will be as central as cutting edges such as The Psychic Hold of Slavery and signature essays such as On Failing to the Past Present. This course will focus on the new literary voices that have the 21st century and, also, writers whose 21st century art is the late stage of literary trajectory. Special attention will be given to Toni Morrison, Colson Whitehead, Octavia Butler, Claudia Rankine, Mat Johnson, and Paul Beatty.
Course not offered every year
Also Offered As: ENGL 770
Activity: Seminar
1.0 Course Unit

AFRC 771 Seminar in African-American Music
Seminar on selected topics in African American Music. See department website (under course tab) for current term course description: https://music.sas.upenn.edu
Taught by: Ramsey
Course not offered every year
Also Offered As: MUSC 770
Activity: Seminar
1.0 Course Unit

AFRC 775 African Literature
Course not offered every year
Also Offered As: COML 700, ENGL 775
Activity: Seminar
1.0 Course Unit

AFRC 791 African Film and Media Pedagogy
This graduate seminar offers an intensive, critical, and collaborative study of contemporary African film and media production. The past three decades have seen an unprecedented shift in the African media landscape. Not only has the wide availability of satellite media across the continent made international film and television programming part of African popular culture, but moreover the growing film industries within the continent, most notably Nollywood, have altered how Africans are carving an image of themselves on the big and small screens. In partnership with local, regional, and international film and media centers, we will study a range of films—features, shorts, documentaries, and television shows—paying close attention to the means and sites of production as well as the formal qualities that distinguish these works. Many of the films we will analyze stand out both for their exceptional aesthetic quality as well as their remarkable ability to confront pressing political and social themes. But we will also think about trash: what counts as trashy media, and for whom? Who watches it, where, and why? Other questions we will ask include: What particular indigenous modes of storytelling do African films employ? What categories begin to emerge under the umbrella category of ‘African film and media,’ and where do diasporan film and media practitioners and critics fit in this landscape? How are these films tackling some of the urgent questions of our times, including migration and globalization; ethnic, political, and economic polarization; gender and sexuality; and massive urbanization and industrialization sweeping Africa and other parts of the Global South? What role do festivals in various countries play in shaping media production and distribution? How important is the concept of authorship in this context? And how do these films challenge the dominant western trope of Africa as a spectacle, instead offering novel ways of picturing everyday African experiences that we rarely glimpse in western media? To explore these questions, we will visit multiple sites of film production, distribution, exhibition, and education, including Scribe Video Center in Philadelphia, Sankofa Films in Washington, D.C., and the College of Performing and Visual Art at Addis Ababa University in Ethiopia. Location and knowledge production are inextricably connected, and by considering African media production from these multiple sites, and collaborating with multiple stakeholders, this course offers a directly engaged pedagogy of the complex artistic, cultural, social, and political dynamics of African audiovisual creation. The travel component of this course entails a day trip to Washington, D.C. during the semester (tentative date: April 2, 2020) and a week-long trip to Addis Ababa at the end of the spring term (students applying for this course should be prepared to travel to Addis Ababa May 30, 2020-June 7, 2020). All expenses for travel, accommodation, and food will be covered, but students will need to hold a passport. Ultimately, this course aims to use film and media production to intervene in a larger discourse on how Africa is figured in the global humanities, not as an absent or passive actor but one actively engaged in producing art and humanistic knowledge that has much to teach us and the world. The course will be by permission only and students are required to submit a short statement of interest (max. 250 words) to dagw@english.upenn.edu and redkaren@sas.upenn.edu.
Students must be prepared to travel to Addis Ababa and Washington D.C. as described in the syllabus, and must hold a passport.
Taught by: Redrobe/Woubshet
Course not offered every year

Activity: Seminar
1.0 Course Unit
AFRC 799 Topics in American Literature
An advanced topics course in American literature, with the curriculum fixed by the instructor. See the Africana Studies website at www.africana.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: ENGL 799
Activity: Seminar
1.0 Course Unit

American Sign Language (ASLD)

ASLD 071 American Sign Language I
Introduction to American Sign Language (ASL). Introduces ASL in a contextualized and conversational manner. Course includes receptive and expressive readiness activities, sign vocabulary and grammar, and an introduction to important topics and people within Deaf communities and Deaf culture. Offered through the Penn Language Center.
For BA Students: Language Course
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

ASLD 072 American Sign Language II
Increased communication skill in American Sign Language (ASL). Expressive and receptive abilities are expanded upon via a contextualized and conversational manner Important topics to Deaf communities and Deaf culture are continued within online and in-class discussion. Offered through the Penn Language Center.
For BA Students: Language Course
One-term course offered either term
Prerequisite: ASLD 071
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

ASLD 073 American Sign Language III
American Sign Language (ASL) at the Intermediate I level. Expressive and receptive abilities are expanded upon via a contextualized and conversational manner, including, but not limited to, narrative production. Important topics to Deaf communities and Deaf culture are continued within online and in-class discussion. Offered through the Penn Language Center.
For BA Students: Language Course
One-term course offered either term
Prerequisite: ASLD 072
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

ASLD 074 American Sign Language IV
American Sign Language (ASL) at the Intermediate II level. Expressive and receptive abilities are expanded upon via a contextualized and conversational manner, including, but not limited to, narrative production. Important topics to Deaf communities and Deaf culture are continued within online and in-class discussion. Offered through Penn Language Center.
For BA Students: Last Language Course
One-term course offered either term
Prerequisite: ASLD 073
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

ASLD 075 American Sign Languages V
This is an advanced ASL course in which students expand their conversational and narrative range. While receptive readiness activities continue to be an important part of the class, the emphasis moves toward honing expressive sign skills through narrative presentation and ASL-only class discussions. Various aspects of Deaf culture and cultural behavior rules will be incorporated into the course. A large component of the course is a unit on Deaf history in which students read and discuss major events and famous deaf people via readings, film, class lectures and discussions, and other outside resources. Offered through Penn Language Center.
For BA Students: Advanced Language Course
One-term course offered either term
Prerequisite: ASLD 074
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

ASLD 076 Deaf Literature, Performance, Art, and Film
This course is an advanced/conversational ASL course that explores several key topics related to Deaf culture and the Deaf experience’s influence on literature (both written and signed), theatre, fine and visual arts, and film—both Deaf and hearing directed and acted. Using only ASL in class, students learn about various perspectives and approaches to each of the themes and topics of the course. Some questions to explore and answer in this course will be: What is Deaf Literature? The Deaf Lens: What is it? How is it different from a hearing perspective on film? How is Deafness expressed differently in each of the arts discussed in this course? Analysis and discussion will come from readings as well as viewings of various types of Deaf arts.
For BA Students: Advanced Language Course
Taught by: Draganac-Hawk
Course usually offered in spring term
Prerequisite: ASLD 074
Activity: Lecture
1.0 Course Unit
ASLD 077 ASL/Deaf Studies - ABCS
For this course, students will attend Pennsylvania School for the Deaf on a weekly basis where they will participate in and contribute to the school community via tutoring or other mutually agreeable activities. Students will also have formal class on a weekly basis with discussions and activities centering on reflection of community experiences through linguistic as well as cultural lenses. Additionally, drawing from the required Linguistics and other ASL/Deaf Studies course work, students will develop an inquiry question and conduct preliminary community-based research to analyze sociolinguistic variations of ASL and Deaf cultural attitudes, behaviors, and norms. Ongoing reflections and discussions-formal and informal-on Deaf cultural/theoretical topics drawing from readings as well as community experiences will be integral to the course experience. LING 078, Topics in Deaf Culture and permission from the instructor, are required for this course. Anyone considering taking this course should contact the ASL Program Coordinator early in the semester prior to enrollment (Spring) to ensure adequate time to obtain clearances and appropriate placement. Prerequisite: If course requirement not met, permission of instructor required. Participation in this class requires students to have in place the mandatory clearances for working in schools before the semester starts. Students should also be in contact with the department during the advanced registration period in order to secure a placement in the community. Prerequisite: Anyone considering taking this course should contact the ASL Program Coordinator early in the semester prior to enrollment (Spring) to ensure adequate time to obtain clearances and appropriate placement. Participation in this class requires students to have in place the mandatory clearances for working in schools before the semester starts. Students should also be in contact with the department during the advanced registration period in order to secure a placement in the community.

Taught by: Fisher
Prerequisite: ASLD 078
Activity: Lecture
1.0 Course Unit
Notes: Participation in this class requires students to have in place the mandatory clearances for working in schools before the semester starts. Students should also be in contact with the department during the advanced registration period in order to secure a placement in the community.

ASLD 078 Deaf Culture
For BA Students: Advanced Language Course
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ASLD 091 American Sign Language III/IV
Expanded instruction of American Sign Language (ASL) on the Intermediate I and II levels. Includes receptive and expressive readiness activities, sign vocabulary and grammar growth, fingerspelling practice and narrative skills. Topics on Deaf cultural are also included in the course readings and discussions. Increases the emphasis on more abstract and challenging conversational and narrative range.
For BA Students: Last Language Course
Course not offered every year
Prerequisite: ASLD 072
Activity: Lecture
2.0 Course Units
Notes: Offered by Penn Language Center; permit from Penn Language Center required for admission.

ASLD 079 Disability Rights and Oppression: Experiences within Global Deaf Communities
This course explores the linguistic and social statuses of global Deaf communities with respect to language rights and efforts toward parity with spoken language communities. We will begin by providing some background and context for understanding Deaf communities and people as both linguistic and cultural minorities as well as members of a disability group. We then explore various examples of oppression born by Deaf people throughout history and today, with an emphasis on the Milan Conference of 1880, from which several decrees mandated that sign languages be banned in all instruction of Deaf students worldwide. The impacts of said decrees were catastrophic for the linguistic and social rights of Deaf people; effects of these experiences are pernicious and long lasting. Since then, global Deaf communities have fought to gain the legal rights and social recognition that are typically afforded hearing members of their respective communities. There are some Deaf communities that have attained said rights, where others are still left far behind. We explore the lasting effects of the Milan Congress in global terms, using the United States and North American Deaf communities as a standard for comparative measurement. Application required through Penn Global: https://global.upenn.edu/pennabroad/pgs Do note that this course will include a module on Italian Sign Language (LIS) and will give opportunities to learn and use LIS in and amongst Italian Deaf community members while in Italy. Application required through Penn Global: https://global.upenn.edu/pennabroad/pgs
Taught by: Fisher
Course usually offered in spring term

AMHR 240 Elementary Amharic I
The Elementary Amharic I course can be taken to fulfill a language requirement, or for linguistic preparation to do research on Ethiopia/Africa-related topics. The course emphasizes communicative competence to enable the students to acquire linguistic and extra-linguistic skills in Amharic. The content of the course is selected from various everyday life situations to enable the students to communicate in predictable common daily settings. Culture, as it relates to language use, is also part of the course content. Offered through Penn Language Center.
For BA Students: Language Course
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center
AMHR 241 Elementary Amharic II
Continuation of Elementary Amharic I. Amharic belongs to the southern branch of Hemeto-Semitic languages, which is also referred to as ‘Afrasian.’ Amharic is the official language of Ethiopia and is spoken by 14 million native Amharas and by approximately 18 million of the other groups in Ethiopia. This course continues to introduce basic grammar, vocabulary, and the reading and writing of Amharic to new speakers. Prerequisite: If course requirement not met, permission of instructor required. Offered through Penn Language Center.
For BA Students: Language Course
Taught by: Hailu
Course usually offered in spring term
Prerequisite: AMHR 240
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

AMHR 242 Intermediate Amharic I
Offered through Penn Language Center
For BA Students: Language Course
Taught by: Hailu
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

AMHR 243 Intermediate Amharic II
Offered through Penn Language Center.
For BA Students: Last Language Course
Taught by: Hailu
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

AMHR 247 Advanced Amharic
An advanced Amharic course that will further sharpen the students’ knowledge of the Amharic language and the culture of the Amharas. The learners communicative skills will be further developed through listening, speaking, reading and writing. There will also be discussions on cultural and political issues. Offered through Penn Language Center.
For BA Students: Advanced Language Course
Taught by: Zemichael
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

AMHR 649 Amharic Language and Culture
For BA Students: Advanced Language Course
One-term course offered either term
Activity: Lecture
1.0 Course Unit

Anatomy (ANAT)

ANAT 505 Structural Adaptations to Function
Veterinary gross anatomy course. The basic principles of mammalian and avian anatomy are studied in a veterinary context. The laboratory periods are given to the dissection of the dog, cat, horse, various ruminants, various laboratory animals, chicken and fish. Prerequisite: Permission of instructor in Veterinary School
Taught by: Dr. Orsini and Staff
Course usually offered in fall term
Activity: Lecture
2.0 Course Units

ANAT 512 Human Anatomy: Cardiovascular, Respiratory, Digestive, and Musculoskeletal Systems
This human anatomy course will cover anatomy, embryology, histology, and imaging of the: cardiovascular system; respiratory system; digestive system; and musculoskeletal system, including the limbs, vertebral column, and back. This course is open to LPS Post-Baccalaureate students only. Please contact Kimberly Halscheid (battilo@upenn.edu) if you have question. Cardiovascular and Respiratory Systems. The objectives are to: 1) define and discuss the structures that participate in the process of respiration; 2) compare and contrast structures situated in the chest (thorax and mediastinum); 3) describe anatomic differences of the right versus the left lung, structures in each lung, and how each lung functions; 4) summarize the anatomic differences in the atria and ventricles of the heart and how these chambers contract, resulting in the opening and closing of the atrioventricular and semilunar valves; 5) compare and contrast the histology of the heart, bronchi, bronchioles, and lung alveoli; 6) analyze and identify anatomic structures in plain films and/or other imaging modalities; and 7) discuss the embryology of the heart and lungs, including fetal and postnatal circulation and common congenital heart malformations. Digestive System. The objectives are to: 1) define the embryological basis for the formation of the gastrointestinal tract; 2) define and discuss the anatomic structures that make up the digestive system, including the mouth, larynx, esophagus, stomach, small intestine, large intestine, liver, and biliary tract; 3) compare and contrast the arterial blood supply and the functional and histologic differences in various parts of the gastrointestinal tract; and 4) analyze and identify anatomic structures in plain films and/or other imaging modalities. Musculoskeletal System. The objectives are to: 1) discuss the anatomic structures that make up the major parts of the musculoskeletal system, which are the vertebral column and back, upper limbs, and lower limbs; 2) identify the blood supply, innervation, and musculature of the upper limbs, including the shoulder, elbow, wrist, and hand; 3) identify the blood supply, innervation, and musculature of the lower limbs, including the hip, knee, ankle, and foot; 4) define the components of the nervous system that affect the musculoskeletal system, limbs, vertebral column, and back and discuss nerve lesions; 5) discuss how herniated disks, fractures of the upper and lower limbs, and impingement of nerve roots can result in musculoskeletal abnormalities, and 6) analyze and identify anatomic structures in plain films and/or other imaging modalities.
Taught by: White, James S.
Activity: Online Course
0.5 Course Units
ANAT 513 Human Anatomy: Cardiovascular and Respiratory Systems
This 0.5 CU human anatomy course will cover anatomy, embryology, histology, and imaging of the cardiovascular and respiratory systems. The objectives are to: 1) define and discuss the structures that participate in the process of respiration; 2) compare and contrast structures situated in the chest (thorax and mediastinum); 3) describe anatomic differences of the right versus the left lung, structures in each lung, and how each lung functions; 4) summarize the anatomic differences in the atria and ventricles of the heart and how these chambers contract, resulting in the opening and closing of the atroventricular and semilunar valves; 5) compare and contrast the histology of the heart, bronchi, bronchioles, and lung alveoli; 6) analyze and identify anatomic structures in plain films and/or other imaging modalities; and 7) discuss the embryology of the heart and lungs, including fetal and postnatal circulation and common congenital heart malformations. This course is open to LPS Post-Baccalaureate students only. Please contact Kimberly Halscheid (battillo@upenn.edu) if you have questions.
Taught by: James S. White, PhD
Activity: Online Course
0.5 Course Units

ANAT 514 Human Anatomy: Digestive System
This 0.5 CU human anatomy course will cover anatomy, embryology, histology, and imaging of the digestive system. The objectives are to: 1) define the embryological basis for the formation of the gastrointestinal tract; 2) define and discuss the anatomic structures that make up the digestive system, including the mouth, larynx, esophagus, stomach, small intestine, large intestine, liver, and biliary tract; 3) compare and contrast the arterial blood supply and the functional and histologic differences in various parts of the gastrointestinal tract; and 4) analyze and identify anatomic structures in plain films and/or other imaging modalities. This course is open to LPS Post-Baccalaureate students only. Please contact Kimberly Halscheid (battillo@upenn.edu) if you have questions.
Taught by: James S. White, PhD
Activity: Online Course
0.5 Course Units

ANAT 515 Human Anatomy: Musculoskeletal System
This 1.0 CU human anatomy course will cover anatomy, embryology, histology, and imaging of the musculoskeletal system, including the limbs, vertebral column, and back. The objectives are to: 1) discuss the anatomic structures that make up the major parts of the musculoskeletal system, which are the vertebral column and back, upper limbs, and lower limbs; 2) identify the blood supply, innervation, and musculature of the upper limbs, including the shoulder, elbow, wrist, and hand; 3) identify the blood supply, innervation, and musculature of the lower limbs, including the hip, knee, ankle, and foot; 4) define the components of the nervous system that affect the musculoskeletal system, limbs, vertebral column, and back and discuss nerve lesions; 5) discuss how herniated disks, fractures of the upper and lower limbs, and impingement of nerve roots can result in musculoskeletal abnormalities, and 6) analyze and identify anatomic structures in plain films and/or other imaging modalities. Please contact Kimberly Halscheid (battilo@upenn.edu) if you have questions. Students who have completed ANAT 512 are NOT eligible for this course.
Taught by: James S. White, PhD
Activity: Online Course
1.0 Course Unit

ANAT 516 Human Anatomy: Endocrine and Reproductive Systems
This 0.5 CU human anatomy course will cover anatomy, embryology, histology, and imaging of the endocrine and reproductive systems. The objectives are to: 1) define mechanisms of hormonal signaling; 2) describe the anatomic relationships and gross structure of major endocrine and reproductive organs, including the hypothalamus, pituitary glands, thyroid gland, parathyroid glands, pancreas, adrenal glands, gonads, breasts, and male and female reproductive systems; 3) characterize the microscopic anatomy of major endocrine and reproductive organs; 5) assess the regulation of major hormonal axes and intuit pathophysiologic effects of hormonal dysregulation; 6) explain the effects of significant hormones on their respective target tissues; 7) trace the embryologic origins of the endocrine and reproductive organs, including the pharyngeal apparatus. This course is open to LPS Post-Baccalaureate students only. Please contact Kimberly Halscheid (battilo@upenn.edu) if you have questions.
Activity: Online Course
0.5 Course Units

ANAT 517 Anatomy of the Head and Neck: Cranial Nerves and Their Distribution
This 0.5 CU human anatomy course will cover anatomy, embryology, histology, and imaging of the head and neck with emphasis on the cranial nerves and their distribution. The objectives are to: 1) identify major bone and cartilage components of the neck and skull and how they develop; 2) describe sources of innervation to face, CN V and VII; 3) name cranial nerve innervations of extraocular muscles of the eyes; 4) name major elements that make up naso-, oro-, and laryngeal pharynx; 5) name the cranial nerves involved in swallowing; 6) identify the signs and symptoms of lesions of each of the cranial nerves; and 7) identify structures on CT and plain film imaging of head and neck. This course is open to LPS Post-Baccalaureate students only. Please contact Kimberly Halscheid (battilo@upenn.edu) if you have questions. This course is open to LPS Post-Baccalaureate students only. Please contact Kimberly Halscheid (battilo@upenn.edu) if you have questions.
Taught by: Dr. James S. White
Activity: Online Course
0.5 Course Units
ANAT 518 Brain and Spinal Cord: Longitudinal Neural Pathways
This course, covering the anatomy, development, and cytology of the central nervous system, including a detailed examination of the functional and clinical neuroanatomy of the spinal cord, prepares students to: - Compare and contrast the differences in how the neural tube and neural crest develop, and list their postnatal derivatives. - Compare the malformations that result in open versus closed neural tube defects, including the ability to distinguish the different forms of spina bifida. - List the major excitatory and inhibitory neurotransmitters used by neurons in the central and peripheral nervous system. - Compare the functions of Schwann cells and Oligodendrocytes in forming myelin and the differences in autoimmune diseases (MS and Guillain Barre) associated with each. - Recall the basic anatomy of the spinal cord including the vertebral level where the cord end and meninges end, what makes up the conus medullaris and cauda equina, and which cord segments innervate the upper and lower limbs. - Contrast the two divisions of the ANS in terms of locations of pre and post ganglionic neuron cell bodies, neurotransmitters utilized and receptors that they bind to. - Describe the names and locations of the two neurons that generate voluntary versus reflex contractions of skeletal muscle, and be able to draw and label a cord section with these neurons. - Recall the differences between the myotatic and inverse myotatic reflexes. - Describe how these two sensory systems utilize three neurons to process sensory information. - Draw out the three neurons that are components of the DC/ML System and label the modalities of their dorsal roots, their course and sites of termination. - Draw out the three neurons that are components of the Anterolateral System and label the modalities of their dorsal roots, their course and sites of termination. - Summarize the major signs and symptoms of the 7 common spinal cord diseases and clinical conditions including Polio, Tabes dorsalis, ALS, Subacute Combined Degeneration, Syringomyelia, Anterior cord syndrome, Brown Sequard Syndrome
Taught by: James S. White, PhD
Activity: Online Course
1.0 Course Unit

ANAT 519 Brain and Spinal Cord: Motor and Sensory Functional Systems
This course, covering the anatomy of the central nervous system, including a detailed examination of the functional and clinical neuroanatomy of the brainstem, cerebellum, diencephalon, visual system, auditory system and cerebral cortex, prepares students to: - Describe the cerebellar connectional anatomy that permits the right side of the cerebellum to promote fine-tuning of skeletal muscles on the right side of the body. - Recall how cerebellar lesions cause tremor with movement and how hemisphere lesions of the cerebellum differ from vermis lesions. - Identify which lesions result in dysmetria, disdiadochokinesis, and gait ataxia. - Describe the major components of the Direct and Indirect Basal Ganglia Pathways, the neurotransmitters that they use and their roles in initiating movement or suppressing unwanted movement. - Contrast the signs and symptoms of those with a direct (Parkinson's) and indirect (Huntington's) basal ganglia disease and how each causes different forms of resting tremors. - Name the 4 major tracts that traverse the brainstem and the signs and symptoms if each is lesioned. - Discuss how motor and sensory nuclei of brainstem cranial nerves are organized into functional longitudinal columns in the brainstem and note how this organization correlates with the entry and exit points of cranial nerves. - Distinguish the gaze malfunctions that result from lesions to the Frontal Eye Field, PPRF, and MLF. - Trace the path of a visual stimulus from the nasal and temporal parts of the retina to the cuneus and temporal gyrus of visual cortex. - Draw out the different visual field deficits and the causes evident in lesions to the optic nerve, optic chiasm, optic tract, optic radiations and visual cortex. - Describe the three components of the ear and how the organ of Corti transduces mechanical energy into generator potentials. - Distinguish between the lesion sites and causes of a sensorineural versus a conductive hearing loss and how one uses the Weber and Rinne tests to determine the nature of the hearing loss. - Differentiate the major nuclei of the thalamus and their functions. - Describe the different embryonic origins of the pituitary and the nuclei in the hypothalamus that control or contribute to the functional activity of each pituitary component. - Name the lobes that make up the cortex and distinguish the vascular territories of the anterior, middle and posterior cerebral arteries. - Describe how the dominant hemisphere differs functionally from the non dominant hemisphere. - List four different lesion sites in the dominant hemisphere that result in an aphasia and list the signs and symptoms of that aphasia. - Name the major components of the Papez circuit and how they contribute to memory consolidation. - List the signs and symptoms of lesions to each of the cranial nerves. - Distinguish the signs and symptoms of various lateral versus medial brainstem vascular lesions, the vessels involved and the cranial nerves affected.
Taught by: James S. White, PhD

Ancient History (ANCH)

ANCH 025 Ancient Middle Eastern History and Civilization
A cultural history of Middle Eastern civilization from the invention of writing to the rise of Islam.
For BA Students: History and Tradition Sector
Course usually offered in fall term
Also Offered As: HIST 024, NELC 101
Activity: Lecture
1.0 Course Unit
ANCH 026 Ancient Greece
The Greeks enjoy a special place in the construction of western culture and identity, and yet many of us have only the vaguest notion of what their culture was like. A few Greek myths at bedtime when we are kids, maybe a Greek tragedy like Sophokles’ Oidipous when we are at school: these are often the only contact we have with the world of the ancient Mediterranean. The story of the Greeks, however, deserves a wider audience, because so much of what we esteem in our own culture derives from them: democracy, epic poetry, lyric poetry, tragedy, history writing, philosophy, aesthetic taste, all of these and many other features of cultural life enter the West from Greece. The oracle of Apollo at Delphi had inscribed over the temple, ‘Know Thyself.’ For us, that also means knowing the Greeks. We will cover the period from the Late Bronze Age, c. 1500 BC, down to the time of Alexander the Great, concentrating on the two hundred year interval from 600-400 BC.
For BA Students: History and Tradition Sector

ANCH 027 Ancient Rome
At its furthest extent during the second century CE, the Roman Empire was truly a ‘world empire’, stretching from northern Britain to North Africa and Egypt, encompassing the whole of Asia Minor, and bordering the Danube in its route from the Black Forest region of Germany to the Black Sea. But in its earliest history it comprised a few small hamlets on a collection of hills adjacent to the Tiber river in central Italy. Over a period of nearly 1500 years, the Roman state transformed from a mythical Kingdom to a Republic dominated by a heterogeneous, competitive aristocracy to an Empire ruled, at least notionally, by one man. It developed complex legal and administrative structures, supported a sophisticated and highly successful military machine, and sustained elaborate systems of economic production and exchange. It was, above all, a society characterized both by a willingness to include newly conquered peoples in the project of empire, and by fundamental, deep-seated practices of social exclusion and domination. This course focuses in particular upon the history of the Roman state between the fifth century BCE and the third century CE, exploring its religious and cultural practices, political, social and economic structures. It also scrutinizes the fundamental tensions and enduring conflicts that characterized this society throughout this 800-year period.

ANCH 046 Myths and Religions of the Ancient World
This course will survey the religions of the ancient Middle East, situating each in its historical and socio-cultural context and focusing on the key issues of concern to humanity: creation, birth, the place of humans in the order of the universe, death, and destruction. The course will cover not only the better-known cultures from the area, such as Egypt and Mesopotamia, but also some lesser-known traditions, such as those of the Hurrians, or of the ancient Mediterranean town of Ugarit. Religion will not be viewed merely as a separate, sealed-off element of the ancient societies, but rather as an element in various cultural contexts, for example, the relationship between religion and magic and the role of religion in politics will be recurring topics in the survey. Background readings for the lectures will be drawn not only from the modern scholarly literature, but also from the words of the ancients themselves in the form of their myths, rituals, and liturgies.

ANCH 104 Race and Ethnicity in the Ancient World
Modern political and artistic movements often appeal to an ancient past in order to construct their own social and racial identities. But how did ancient peoples understand themselves and others? How should we understand race and ethnicity in the ancient past? And how are perceptions of the past used today to construct or dismantle structures of power? This course explores both ancient and modern representations of race and ethnicity in antiquity. We will investigate both how ancient peoples around or near the Mediterranean (e.g. Greeks, Romans, Egyptians, Persians, and Nubians) understood difference and also how modern eras have appropriated ancient identities. Our dialogues will include ancient ethnographies, literature, and visual arts as well as modern theories and media, with an emphasis on active learning and collaboration. Students will be encouraged to produce both analytical and creative responses to our materials.

ANCH 133 The History of God
This course introduces the history of God as understood by modern scholars of religion. Why do people believe in gods in the first place? How did so many people come to believe that there was only one god, and how is that god different from earlier gods? How is the God of Judaism different from that venerated by Christians and Muslims. And what is the future of God in a world shaped by secularism, capitalism, and climate-change? This course will address these and other questions in light of anthropology, psychology, intellectual history, and other approaches that scholars uses to illumine religion.

ANCH 136 The Ancient Economy
This class presents an introduction to economies before economics, a study of economic activity in the Greco-Roman world. Ancient Greece and Rome have been called some of the first ‘global’ economies - they engaged in long-distance trade, introduced the first coinage systems, and built and manufactured at large scales. At the same time, they remained agrarian societies, with majority peasant populations, high levels of inequality and social systems that often placed social capital ahead of profit. Using textual sources, archaeology and techniques from the natural and social sciences, this class will not only look at basic elements of economic activity in the ancient world - demographics, trade, monetization, industry - but also ask critical questions about how - or if - modern economic methods can be applied to the distant past. No previous knowledge of the ancient world or economics is necessary.

ANCH 146 Ancient Mediterranean Empires
What constituted an empire in antiquity and how was imperialism legitimized? Which measures were used to maintain and organize imperial power? How did foreign rule affect the daily life of people all over the Mediterranean? In this course we will discuss and compare ancient empires from Achaemenid Persia to Alexander the Great and the Hellenistic kingdoms of his successors to the emergence of Rome as one of the most successful and influential empires in world history. Topics that will be discussed include ancient ideas and concepts of imperial rule, patterns of political, economic and cultural power and their interrelations as well as imperial crises and local resistance. All texts will be discussed in translation. There are no prerequisites.

ANCH 202 Cleopatra
Cleopatra VII (70/69 30 BCE) is one of the most famous women in world history. She has been remembered, admired, and reproached as a power-hungry Hellenistic queen, as the last pharaoh of Egypt, as a self-confident female ruler, and as the vicious seductress of Julius Caesar and Mark Antony. Her supposedly extravagant lifestyle, her political schemes, but also her integrity in choosing suicide over submission have inspired poets, artists, and historians from her own time to the modern world. In this seminar, we will take a closer look at some of the common perceptions and stereotypes that have shaped the image of Cleopatra for more than 2000 years. The main focus, however, will be on the historical queen, her biography, and the political and cultural contexts of her life. We will use ancient literary texts, papyri, inscriptions, coins, and archaeological evidence to analyze Cleopatra’s rise to power, how she presented herself to her subjects, and how she was perceived by others, as well as her role in the tumultuous events that led to the end of the Hellenistic period and the rise of imperial Rome under the rule of Augustus. No prerequisites, but some background in Hellenistic and/or Roman history will be helpful.

ANCH 257 Religion and the Polis
This class is designed to introduce students to the study of Greek religion with particular attention to the notion of polis religion, a recent model used to understand the function and structure of Greek religion. In this class we will look at the major institutions of Greek religion, notably sacrifice, festivals, and processions, but also examine the importance of sanctuaries and temples in the heart of the city, on the edges of its territory and in the countryside. We will also examine religion as a system of belief and action, and will consider the intersection of local, state and international religious institutions.

ANCH 261 Ancient Iranian Empires
Iran - as a landmass and a political entity - was central to the ancient world in a variety of ways. Ancient Iranian Empires were of central importance to - and centrally located in - the ancient world. It was the successor kingdom to the Assyrians and Babylonians; the power against which Greece and Rome defined themselves; and the crucible in which various communities and models of rule developed. This course offers a survey of the history of the ancient Persianate world, focusing in particular on the political and imperial entities that rose to power, the cultural, political, mercantile, and other contacts they shared with their neighbors to the East and West, and the communities and religious groups that arose and flourished within their lands. Ancient Iranian empires rivaled the Greek and Roman Empires to their West, and the central and eastern Asian Empires to their east, and the ongoing history of diplomacy, cultural contact, and war between these regions was formative to each and to the ancient world as a whole. Iran was home to and similarly formative for a variety of religions, including Zoroastrianism, Judaism, Christianity, Manichaemism, and Islam, and a central question Ancient Iranian political powers sought to address was how to negotiate and address the variety of populations under their control. The course will conclude by studying how, rather than a simplistic story of decline, the strategies, policies, institutions, and memory of the Iranian Empires continued to shape early Islam, medieval imagination, and modern political regimes.

ANCH 301 Lies My Ancient History Teacher Told Me
The neat, comforting narratives that we construct of the histories of ancient Greece and Rome cover up a collection of controversies and debates that continue to rage in contemporary scholarship. Can we use the Homeric epics as sources of early Greek history? Who was responsible for the Peloponnesian War? How can we best explain Rome’s acquisition of empire? How new was the political revolution of Augustus? What were the main reasons for the rise of Christianity? In this course, we explore these and other controversies, focusing on both modern scholarship and the ancient sources. All texts will be discussed in translation. No prior knowledge of Ancient History is required, although it would be useful to have taken ANCH 026 and/or ANCH 027.

ANCH 303 Power and Peril: The Paradox of Monarchy among Ancient Greeks, Romans, and Jews
We imagine ancient Greece and Rome as the cradles of democracy and republicanism, early Judea as a pious theocracy, but monarchy was the most common and prevalent form of government in antiquity (and the premodern world in general). In this class, we will take a special look at kinship among the Jews, Greeks, and Romans to assess and discuss similarities, differences, and mutual influences. In all these cultures, the king was a polarizing figure in reality and in conception. On the one hand, some revered the monarch as ideal leader, and monarchy provided the language with which to describe and even imagine the very gods. On the other, monarchs were widely reviled in both theory and practice, from the Greek tyrants to biblical Saul. The Emperor Augustus loudly denied his own affinity to the office of king, even as he ruled alone and was revered as a god. In other words, kings stood both for the ideal and the worst form of government. This class confronts the paradox of monarchical rule and will, through the lens of the king, explore ideas of god, government, human frailty, and utopianism.

ANCH 305 Jewish Diaspora in the Roman Empire
Under the Roman Empire, Jewish communities developed and flourished especially in the cities of the Eastern Mediterranean, in Egypt, Syria, Asia Minor, Greece, Northern Africa, and Italy proper. In many of these cities, the Jews formed a considerable part of the population; they influenced the cultural, social, and political communal life and developed an identity that was distinctively different from that in Judea. In this seminar, we will trace Jewish life in the Diaspora under Roman rule. How did Jews and non-Jews interact? What was the legal status of Jewish communities under the Roman Empire? What caused conflicts and how were they solved? What can the history of Jewish Diaspora communities tell us about minorities in the Roman Empire in general? We will use literary texts, inscriptions, papyri, and archaeological material to answer these questions and many more.
Taught by: Julia Wilker
Also Offered As: JWST 305
Activity: Seminar
1.0 Course Unit
ANCH 311 Disasters in the Ancient World
Natural disasters occupy a powerful place in our imagination. Stories of floods, plagues, earthquakes, and storms excite and horrify us, and communities mobilize their resources quickly in response to these events. In the ancient Mediterranean world, natural disasters could take on potent meaning, indicating the anger or disfavor of the gods, acting as warnings against certain courses of action, or confirmations of individuals' fears or suspicions about the world in which they lived. In this course, we explore the evidence for some disasters in the ancient Mediterranean world, the ways in which contemporaries reacted to those disasters and interpreted their causes. This project is, of necessity, multidisciplinary, involving textual, archaeological, geological, and comparative materials and drawing on methodologies from history, political and archaeological science, and the emerging field of disaster studies. In the process, we will gain an appreciation of the social structures of communities in the period, the thought-world in which they operated, and the challenges and opportunities that attend a project of this sort. No prior knowledge of Ancient History is required, although it would be useful to have taken an introductory survey course. Texts will be discussed in translation.

ANCH 315 Kinship and Connectivity in the Roman World
An individual's life course is often reflected, enhanced, and defined by their relations to other individuals. This course will investigate the concept of kinship in the Roman world through textual, visual, and archaeological evidence. We will explore relationships at all levels of society from the imperial family to the slaves and freedmen who were part of larger households, in order to understand how different relationships shaped and structured interactions in Roman society. Together, we will explore the following questions: how were relationships and bonds represented in the ancient world? What structures were in place for families to perpetuate themselves through biological or adoptive means? How could non-Roman citizens create family connections through formal and informal channels? How could relationships be celebrated in life and commemorated in death? We will use written evidence from ancient historians, visual evidence like the Altar of Peace, and archaeological evidence from cemeteries to examine how Roman notions of kinship shaped life and death in different social milieus.

Activity: Seminar
1.0 Course Unit

ANCH 316 Africa and Roman Literature
In this course, we will explore race and ethnicity in the Roman world by focusing on the life and works of Roman Africans and the ways in which non-African Romans engaged with and presented the peoples of Africa. The course covers Roman literature in translation from the comedies of Plautus produced in the late 3rd - 2nd centuries BCE, to African Christian writing of the 5th century CE. It also covers a wide range of genres: we will examine how Roman writers articulate questions of race in comedy and satire, epic, history, biography, and elegy among others. We will read African writers (Apuleius, Augustine) and ask how their Africanness influences their works. We will read Roman accounts of journeys to Africa, wars with Africa, and encounters with Africans to ask how the Romans saw themselves as different from or similar to Africans. The course will also explore in more general terms how Romans talk about race: did racism exist? What aspects of different cultures and peoples did Romans choose to emphasize when they talked of non-Romans?

Activity: Seminar
1.0 Course Unit

ANCH 323 Greek World After Alexander the Great
This class is designed as a detailed investigation of the world created by Alexander the Great. We will cover the three hundred year period known as the Hellenistic Age from the career of Alexander the Great (354-323 BC) until the defeat of Antony and Cleopatra at the Battle of Actium (31 BC). This was a period during which the world of the Greeks underwent extraordinary and far-reaching changes, as Greek culture was established as far afield as northwestern India, central Asia and Egypt. In the same period kingdoms controlled by Alexanders's Successors used Greek culture to define their rule, establishing a Greek culture of the elite in regions which previously had been dominated by the Persians. As Greek and non-Greek worlds collided, a new interpretation of Greek culture emerged, giving rise, among other things, to universities and professional schools, state subsidized health care, triumphalist architecture, the heroization of the noble savage, coinage with royal portraits, the deification of men and a multitude of other social, artistic and political forms familiar to us. It was an age of radical change, dislocation, as Greek populations colonized regions previously unknown to them.

Activity: Lecture
1.0 Course Unit
ANCH 330 The Rise and Decline of Macedonia
In this course, we will study the rise and development of Macedonia from a tiny kingdom on the northern fringes of the Greek world to one of the major powers of the region and beyond. Regarded by the Greeks as an at least semi-barbarian culture on the periphery, Macedonia became the dominant power in the Greek world during the fourth century BC and its king Alexander the Great set out to conquer the world. After his death, Macedonia was one of the Hellenistic kingdoms competing for power and influence in the Mediterranean until it finally came under Roman control. Topics that will be discussed include questions of ethnicity and identity, Macedonian kingship, culture and society (including the role of women) and the role of Macedonian traditions in the Hellenistic era in general. Special emphasis will therefore be laid on critical reading and interpretation of ancient literary texts, documentary evidence and archaeological material. that will be discussed include questions of ethnicity and identity, Macedonian kingship, culture and society (including the role of women) and the role of Macedonian traditions in the Hellenistic era in general.

ANCH 363 Foreigners in Rome
According to the stories the Romans told about the origins of their city, Rome began as a community of immigrants. As a growing metropolis and, eventually, the center of an empire, the city remained a magnet for people from other parts of the Empire and beyond. Foreigners came to the city as merchants and travelers, they settled here seeking a different and better life, pursuing a career, or escaping hardships in their home communities. Others were brought to Rome against their will, as prisoners or slaves. In this seminar, we will explore the different communities of foreigners and immigrants that shaped Rome. How and why did they move to the city? How did they experience their new home? How did they adapt to life in Rome and how, in turn, did they influence what we define as 'Roman' today? Finally, what can the legal, social, political, and social status of immigrants tell us about Roman society in general? To answer these questions (and more), we will look at a wide array of primary sources, including literary texts, inscriptions, and material culture.

Activity: Seminar
1.0 Course Unit

ANCH 384 The Hellenistic and Roman Near East
In this course we will study the history of the Hellenistic and Roman period from a Near Eastern perspective. From the conquests of Alexander the Great to the end of Roman rule in late antiquity, this region was the scene of conflicts, but also of peaceful and fruitful interactions between Greeks, Romans, Egyptians, Jews, Syrians, Arabs and many other societies. What was the impact of Greek and Roman rule and how did the peoples of the region react to these fundamental changes? On the other hand, how did they influence the culture and worldview of their conquerors? We will use historical texts, documents and archaeological evidence to discuss these political, cultural and religious encounters that made the Near East to a key region of Greco-Roman history. All texts will be discussed in translation. No prerequisites, although it would be useful to have some background in Hellenistic and/or Roman history.

ANCH 535 Problems in Greek: Archaic and Classical
This seminar is designed to introduce students to the major issues and problems in the early history of Ancient Greece, from approximately 776 BC until the reign of Alexander the Great nearly four hundred and fifty years later. A number of these issues have been the subject of academic investigation for decades: the historicity of Homeric society, the origins of democracy, the reforms of Kleisthenes, the population of Athens, for example. The investigation of many of these problems, however, has received fresh impetus from newer approaches: demographic studies of the Aegean islands, the dating of 5th century inscriptions, the study of Solons poetry have all yielded new insights and transformed our understanding of Greek culture and history. In this seminar we will explore many older questions from newer perspectives, with attention to such recent topics as gender, ethnicity and subaltern studies. The result is a view of Greece that is both more familiar and yet equally more alien.

ANCH 604 Provincial Perspectives
Most of the primary sources available to us are commonly taken to reflect the ideology, concepts, and realities of Roman imperial rule through the lenses of the central power. However, a number of sources provide insights into how provincials and imperial subjects perceived the empire and their own status within its political, cultural, and social frameworks. In this seminar, we will focus on how ethnic, religious, cultural, and regional identities were developed, maintained, adapted, and interpreted within and in reaction to the empire in concept and reality. Historiographical and auto-ethnographic works, orations, philosophical, and religious texts reflect different attitudes towards the imperial center, ranging from open hostility and frustrated acceptance to praise and identification. Texts to be discussed include canonical works (Polybius, Dionysius of Halicarnassus, Second Sophistic) as well as lesser-known texts and authors. Special emphasis will be laid on scholarly approaches, including concepts of identity, hybridization and cultural change, the dynamics of imperial integration, and the (de-)construction of modern narratives of Romanization.

ANCH 612 The Flavian Era
The time of the Flavians (69-96 BCE) holds a special place in Roman history and culture as it marks the transition from the Julio-Claudian period to the High Empire. Historically, the rule of Rome's second dynasty saw a stabilization of the imperial power system, the consolidation of social and political hierarchies, and an increasing integration of the empire. Major construction projects reshaped the city of Rome, topographically and ideologically. The literary production in various genres reached a new peak, developed new forms, and explored new topics. The unusually high number of Greek and Latin texts and documents preserved allow us to analyze such changes closely; our focus will be on the interrelation and conjunction of these developments. Final projects will take the form of papers suitable for presentation at the SCS Annual Meeting.

ANCH 616 Ancient Economies
Scholars have long debated the nature of the ancient economy, the terms in which it can best be approached, and the decision-making processes that underpinned economic behavior in antiquity. In particular, controversy has surrounded the extent to which the economies of Greco-Roman antiquity can be modeled using contemporary tools of analysis. In recent scholarship, many of the tenets laid down by Moses Finley in his The Ancient Economy have been re-evaluated, with the result that the field is currently in a state of intellectual ferment. It is the purpose of this course to explore the terms in which contemporary debates over ancient economic systems are formulated, with reference to a variety of societies and periods, from the palace economies of the Mycenaean period to the system of taxation introduced in the early fourth century by the emperor Diocletian and his colleagues in the Tetrarchy.

ANEL 646 The Land of Sumer: Writing, Language, and Culture
This self-contained course sets the Sumerian language, writing system and use of writing in their social and historical context. The aim is to provide students of ancient history and culture from diverse disciplines with a good grounding in Sumerian culture, familiarity with the Sumerian language and cuneiform writing system and the requisite knowledge for critical assessment of published translations and of the secondary literature. The course is organized as two threads, culture on the one hand and language on the other. The two threads are united by taking examples in the language exercises, vocabulary assignments, etc., as far as possible from the domain of the week's cultural topics. The net effect is to examine the culture both through contemporary secondary literature and through direct contact with elementary primary texts of relevance to the various topics of discussion. The language component of the course will be carried out in a combination of transliteration and cuneiform, with an expectation that all students will gain familiarity with at least the core 80 syllabic signs, and about 100 additional logographic signs.
Taught by: Tinney
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANEL 647 Sumerian Daily Texts
Reading administrative and economic texts in the Sumerian Language from ancient Mesopotamia.
Taught by: Tinney
Course not offered every year
Activity: Seminar
1.0 Course Unit

ANEL 664 Coptic
The course will be an introduction to the writing, grammar, and literature of Coptic.
Taught by: Silverman
Course not offered every year
Also Offered As: RELS 616
Activity: Lecture
1.0 Course Unit

ANEL 665 Demotic
The course will be an introduction to the writing, grammar, and literature of Demotic, the phase of the language in use during the latter periods of Egyptian history.
Taught by: Houser Wegner
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANEL 740 Akkadian Religious and Scientific Texts
Readings in Akkadian of religious and scientific texts from ancient Mesopotamia.
Taught by: Frame
One-term course offered either term
Prerequisite: ANEL 641
Activity: Lecture
1.0 Course Unit

ANEL 741 Akkadian Legal Texts
Readings in Akkadian legal texts and law corpora from ancient Mesopotamia.
Taught by: Frame
One-term course offered either term
Prerequisite: ANEL 641
Activity: Lecture
1.0 Course Unit

ANEL 742 Akkadian Economic Texts
Readings in Akkadian economic texts from ancient Mesopotamia.

Anthropology (ANTH)

ANTH 001 Archaeology: Window to the Human Past
This course will introduce students to the methods and theory of archaeology by exploring how we turn archaeological data into statements about cultural behavior. We will discuss the place of archaeology in the broader field of anthropology and debate issues facing the discipline today. The course will rely on case studies from around the world and from many different time periods to introduce students to the research process, field and lab methods, and essential questions of archaeological anthropology. Students will have the opportunity to work hands-on with archaeological materials through visiting the galleries and working with Penn Museum collections.
For BA Students: History and Tradition Sector
Course usually offered in fall term
Activity: Recitation
1.0 Course Unit
ANTH 002 Anthropology, Race, and the Making of the Modern World
Anthropology as a field is the study of human beings - past, present, and future. It asks questions about what it means to be human, and whether there are universal aspects to human existence. What do we share and how do we differ? What is 'natural' and what is 'cultural'? What is the relationship between the past and the present? This course is designed to investigate the ways anthropology, as a discipline, emerged in conjunction with European (and later, American) imperialism, the trans-Atlantic slave trade, and the will to know and categorize difference across the world. We will probe the relationships between anthropology and modern race-making by investigating how anthropologists have studied key institutions and systems that structure human life: family and kinship, inequality and hierarchy, race and ethnicity, ritual and symbolic systems, gender and sexuality, reciprocity and exchange, and globalization and social change. The course fundamentally probes how the material and ideological constellations of any given moment shape the questions we ask and the knowledge we produce about human existence.
For BA Students: Society Sector
Course usually offered in fall term
Activity: Recitation
1.0 Course Unit

ANTH 003 Introduction to Human Evolution
How did humans evolve? When did humans start to walk on two legs? How are humans related to non-human primates? This course focuses on the scientific study of human evolution describing the emergence, development, and diversification of our species, Homo sapiens. First we cover the fundamental principles of evolutionary theory and some of the basics of genetics and heredity as they relate to human morphological, physiological, and genetic variation. We then examine what studies of nonhuman primates (monkeys and apes) can reveal about our own evolutionary past, reviewing the behavioral and ecological diversity seen among living primates. We conclude the course examining the ‘hard’ evidence of human evolution - the fossil and material culture record of human history from our earliest primate ancestors to the emergence of modern Homo sapiens. You will also have the opportunity, during recitations, to conduct hands-on exercises collecting and analyzing behavioral, morphological, and genetic data on both humans and nonhuman primates and working with the Department of Anthropology’s extensive collection of fossil casts.
For BA Students: Living World Sector
Course usually offered in fall term
Activity: Recitation
1.0 Course Unit

ANTH 004 The Modern World and Its Cultural Background
An introduction to the diversity of cultures in the world. This course is divided into two parts. The first briefly examines different models of understanding human diversity: ethnicities, religions, languages, political forms, economic structures, cultures, and ‘civilizations’. Students will learn to think about the world as an interconnected whole, and know the significance of culture on a global scale. The second part is an introduction to area studies, in which we undertake a survey of the different regions of the world. We conduct the survey paying attention to the different aspects of human diversities, which we examine in the first part of this course. Students will acquire a greater appreciation and understanding of cultural differences in the more comprehensive social context.
For BA Students: Humanities and Social Science S
Course usually offered in spring term
Activity: Recitation
1.0 Course Unit

ANTH 005 Great Transformations
This course explores the history and archaeology of the last 20,000 years from the development of agriculture to the industrial revolution. Why did people across the world abandon foraging for farming? How and why did cities and states develop? Why did societies succeed or fail? How have humans transformed themselves and the natural world, including the landscape and the climate? We will explore the methods that archaeologists use to consider these questions and analyze evidence for social and economic change from the Middle East, the Americas, Asia, Africa, Australia and Europe. In addition, students will have a chance to conduct hands-on exercises with artifacts from the Penn Museum during practicums.
For BA Students: History and Tradition Sector
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ANTH 012 Globalization And Its Historical Significance
This course describes and analyses the current state of globalization and sets it in historical perspective. It applies the concepts and methods of anthropology, history, political economy and sociology to the analysis and interpretation of what is actually happening in the course of the semester that relates to the progress of globalization. We focus on a series of questions not only about what is happening but about the growing awareness of it and the consequences of the increasing awareness. In answering these questions we distinguish between active campaigns to cover the world (e.g. Christian and Muslim proselytism, free-trade agreements, democratization) and the unplanned diffusion of new ways of organizing trade, capital flows, tourism and remote interaction via the Internet. The body of the course deals with particular dimensions of globalization, reviewing both the early and recent history of each. The overall approach is historical and comparative, setting globalization on the larger stage of the economic, political and cultural development of various parts of the modern world. The course is taught collaboratively by an anthropologist, an historian, and a sociologist, offering the opportunity to compare and contrast distinct disciplinary approaches. It seeks to develop a general social-science-based theoretical understanding of the various historical dimensions of globalization: economic, political, social and cultural.

Course usually offered in fall term
Also Offered As: HIST 012, SOCI 012
Activity: Lecture
1.0 Course Unit
**ANTH 022 World Musics and Cultures**

This course examines how we as consumers in the 'Western' world engage with musical difference largely through the products of the global entertainment industry. We examine music cultures in contact in a variety of ways—particularly as traditions in transformation. Students gain an understanding of traditional music as live, meaningful person-to-person music making, by examining the music in its original site of production, and then considering its transformation once it is removed, and recontextualized in a variety of ways. The purpose of the course is to enable students to become informed and critical consumers of 'World Music' by telling a series of stories about particular recordings made with, or using the music of, peoples culturally and geographically distant from the US. Students come to understand that not all music downloads containing music from unfamiliar places are the same, and that particular recordings may be embedded in intriguing and controversial narratives of production and consumption. At the very least, students should emerge from the class with a clear understanding that the production, distribution, and consumption of world music is rarely a neutral process.

Fulfills College Cross Cultural Foundational Requirement.
For BA Students: Arts and Letters Sector
Taught by: Muller, Rommen, Sykes
One-term course offered either term
Also Offered As: AFRC 050, FOLK 022, MUSC 050
Activity: Lecture
1.0 Course Unit
Notes: Open to all students

**ANTH 026 Behind the Iron Curtain**

This first-year seminar provides an introduction to the histories, cultures, and societies of Central and Eastern Europe, including Poland, the Czech Republic, Slovakia, Hungary, Romania, Bulgaria, Albania, and the successor states of Yugoslavia. Through a selection of articles and essays written by anthropologists and sociologists and based on their extended fieldwork in the region, students will explore both the anthropological method and the experience of everyday life during and after the communist era. Topics will include: popular music under socialism, ethnographic method and the experience of everyday life during and after the communist era, popular culture, advertising, women's rights, gender and sexuality, emergent nationalisms, and the rise of income inequality and homelessness. All readings and assignments in English.

Taught by: Ghodsee
Course not offered every year
Also Offered As: REES 026
Activity: Seminar
1.0 Course Unit

**ANTH 031 The 'Rights of Nature' in Times of Conflict and Transition**

In less than half a decade, the idea that 'nature' possesses inalienable rights akin to human rights has gone from a strictly theoretical concept to the basis of policy changes in several countries and U.S. municipalities. This first-year seminar will introduce students to current legal, political, ethical, and practical debates about the implementation and impacts of granting 'rights to nature' in these different contexts. We will begin by examining how the Community Environmental Legal Defense Fund (CELDF) supported citizens of Tamaqua, Pennsylvania to write the world's first local 'rights of nature' ordinance. We will then go on to compare the politics of 'rights of nature' cases in Ecuador, New Zealand, India, and Colombia. We will pay particular attention to the way biocentric constitutional moves may transform concepts and understandings of environmental justice and socio-environmental conflicts. In particular, how the recognition of 'nature' as a victim of war may transform understandings of violence, and hence, approaches to constructing peace and engaging and reparative and restorative practices within the larger framework of planetary and community efforts to mitigate climate change. Lastly, we will explore the possibilities and tensions between community decision-making, the 'rights of nature,' and national level policies regarding the intensification of extractive activities and questions of territorial ordinance.

Taught by: Lyons
Course not offered every year
Activity: Seminar
1.0 Course Unit

**ANTH 045 How Our Environment Has Shaped Us**

From our earliest ancestors to the recent warming of our planet, the history and future of humans is fundamentally influenced by our relationship with the world around us. This intimate connection makes it a necessity for us to understand how humans have used, adapted to, altered and are in turn affected by our environment. How has climate change affected the development of human society? How have people adapted to their environments in the past and how have they shaped these environments in turn? What does it mean to develop 'sustainable' approaches to our environments over the short and long term? Environmental archaeology is the study of these questions. By the end of this course you will have the tools to interpret human-environment interactions in the past and the present, and suggest ways we can change our thinking and actions in the future.

Taught by: Bates
Course not offered every year
Activity: Seminar
1.0 Course Unit
ANTH 053 Music in Troubled Places
In this class, we go beyond the headlines to discuss the history and cultures of peoples who have had to endure terrible suffering, particularly through ethnic conflict and civil war. We will focus on a curious phenomenon: populations typically defined as separate from one another (e.g., Israelis and Palestinians) often have a history of shared or related cultural practices, of which music is a prime example. We will survey a number of current and recent conflict zones and use music as a way to deepen our understanding of the identities and relationships between the peoples involved including through a consideration of my own fieldwork in Sri Lanka. Querying the very definitions of music, trouble, and place, the course then broadens out to consider how musicians have been affected by and/or responded to important global problems like slavery, sexual violence, climate change and other ecological disasters, like Hurricane Katrina. Regions to be considered in our lectures and/or readings include: Afghanistan, Iraq, Syria (including Kurdish musics), Israel-Palestine, Sri Lanka, the Maldives, Myanmar/Burma, Uganda, Sierra Leone, North and South Korea, the Marshall Islands, Cambodia, Mexico, and the United States.

ANTH 056 Seeing/Hearing Globally: Knowing People, Culture, and Places through Travel
Students are provided a general introduction to a country’s history, politics, environment, and performance through a range of resources: scholarly literature, film, music, and online resources; with particular focus on sites, communities, and events included in the 12 day intensive travel to that country (either Fall semester Intro with winter break travel; or spring semester Intro with late spring intensive travel). Students are given guidelines for writing about and representing live performances and experiences of exhibits and heritage sites for journaling and are expected to produce a written/creative project at the end of the travel. The itinerary and specific course content will vary according to the travel site and focus of each class.

ANTH 058 Freshman Seminar
This interdisciplinary course introduces students to qualitative research methods and frameworks in the social sciences and humanities. The goals of the semester will be for each student to develop their own research proposal for a specific project that they could imagine pursuing over the summer or later in their undergraduate career, and to develop a web-based exhibit of one Penn-based research collection of interest. Students will be introduced to a range of textual, archival and media collections and databases available at Penn, with particular attention to South Asia and other specific regions of interest to course participants. The class will visit the Penn Museum object collections and archives, the Art library, the Kislak Center for Rare Books and Manuscripts, Film Archives, and other special collections on campus, and meet with a representative from the Center for Undergraduate Research Funding (CURF). Students will learn how to frame an effective research question, situate it in relation to existing research, select the most appropriate methods for addressing the question, and develop an effective research plan. Each week students will be introduced to a new set of frameworks for analysis, see specific examples of their application drawn from anthropological, historical, and related scholarship and have opportunities to practice applying and evaluating the strengths and weaknesses of specific methodological tools. Students will also have the opportunity to identify sources of funding for summer research projects and prepare applications for these opportunities as part of the course. The course is ideal as an introduction to both the excellent libraries and research collections housed at Penn, and to a wide range of intellectual frameworks for engaging with these collections - a great way to kick off your undergraduate experience at Penn! Prerequisite: Topic varies by semester, see subtitle and Professor.

1.0 Course Unit
Notes: Topic varies by semester, see subtitle and Professor

ANTH 086 Desire and Demand: Culture and Consumption in the Global Marketplace
Does consumption shape culture or does culture shape consumption? As even the most mundane purchase becomes socially symbolic and culturally meaningful we can persuasively argue that the concept of ‘need’ has been transformed. Analyzing a variety of physical and virtual consumer venues, the goal of this seminar is to understand and to analyze historical and contemporary issues related to a culture of consumption. We investigate social and political-economic factors that impact when and how people purchase goods and argue that behavior attached to consumption includes a nexus of influences that may change periodically in response to external factors. Readings and research assignments are interdisciplinary and require a critical analysis of global/local linkages. The city of Philadelphia becomes the seminar’s laboratory as we ask: how have issues of culture, consumption, and global capitalism become intertwined around the world?
Taught by: Diggs-Thompson

1.0 Course Unit
Notes: Freshman Seminar
ANTH 091 Sustainable Development and Culture in Latin America
This interdisciplinary course exposes students to the three dimensions of sustainable development - environmental, economic, and social - through an examination of three products - peyote, coca, and coffee - that are crucial in shaping modern identity in areas of Latin America. The course integrates this analysis of sustainable development in relation to cultural sustainability and cultural practices associated with peyote, coca, and coffee and their rich, traditional heritage and place in literature, film, and the arts.
Taught by: Gimenez
Course offered fall; even-numbered years
Also Offered As: ENVS 091, LALS 091, SPAN 091
Activity: Seminar
1.0 Course Unit

ANTH 100 Topics In Anthropology and the Modern World
This course relates anthropological models and methods to current problems in the Modern World. The overall objective is to show how the research findings and analytical concepts of anthropology may be used to illuminate and explain events as they have unfolded in the recent news and in the course of the semester. Each edition of the course will focus on a particular country or region that has been in the news.
Taught by: Spooner
Course usually offered in spring term
Also Offered As: ANTH 654, NELC 281, NELC 681, SAST 161
Activity: Lecture
1.0 Course Unit

ANTH 104 Sex and Human Nature
This course is an introduction to the scientific study of sex in humans. Within an evolutionary framework, the course examines genetic, physiological, ecological, social and behavioral aspects of sex in humans. After providing the basic principles of evolutionary biology, the course delves into the development of sexual anatomy and physiology. Among the subjects to be explored are sex determination, the nature of orgasms, and the sexual development of females and males from birth to adulthood. The role of ecology and social life in shaping human mating patterns is also evaluated using ethnographic and cross-cultural materials from a variety of human cultures. In particular, the course examines why humans marry or pair bond, whether there is a biological basis of love, which biological and psychological factors produce jealousy. Finally, the course explores topics relevant to human sexuality today, such as the 'hook-up culture', contraception and abortion, sex work, sexual transmitted diseases, and the ethical and legal dimensions of human sexuality.
For BA Students: Living World Sector
Taught by: Schurr
Course not offered every year
Also Offered As: GSWS 103
Activity: Lecture
1.0 Course Unit

ANTH 105 Human Adaptation
This course concerns evolutionary processes using humans (Homo sapiens) as a case study. Through a study of the anatomical, genetic, and behavioral adaptations in our species, we will explain and explore our biology through mammalian, primate, and hominid evolutionary histories. Through evolutionary theory, we explore why humans are imperfectly adapted and not an end product of evolutionary change, and how we create and modify, not just respond to, evolutionary pressures. Through this approach, we gain insights into how and why our biology functions (and sometimes malfunctions) in the way that it does. Then, we will explore topics including human birth, growth, locomotion, reproduction, and diet as part of human biocultural adaptation. This course will involve the analysis of hominin fossil casts and human skeletal material from the Penn Museum Physical Anthropology section.
Taught by: Mitchell
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANTH 109 Anthropology of the Senses
Smelling, seeing, hearing, tasting, and touching are the foundation of our empirical knowledge of the world, providing the most basic information we have. These senses are biological yet our sense perception how we see, smell, taste, hear, and touch is both shaped by and shapes our different cultures. As a result, they provide a useful framework to investigate a classic problem in anthropology, the intersection between biology and culture. This class investigates the senses as cultural and historical phenomena, drawing on readings from a range of disciplines, including anthropology, history, psychology, musicology, and cultural studies.
Taught by: Ristvet
One-term course offered either term
Activity: Seminar
1.0 Course Unit
ANTH 111 Water in the Middle East Throughout History
Water scarcity is one of the most important problems facing much of the Middle East and North Africa today. These are arid regions, but human and natural systems have interacted to determine relative water scarcity and abundance at different times and places. This course examines the distribution of water resources throughout the Middle East and the archaeology and anthropology of water exploitation and management over the last 9000 years, looking at continuities and changes through time. Students will learn to make basic digital maps representing Middle Eastern hydro-geography and arguments about modern and historic water resources in the region. The class will cooperatively play an ‘irrigation management game’ designed to familiarize personnel involved in the operation of irrigation schemes with the logistical and social issues involved in water management. We will engage with a variety of media, including academic readings, popular journalism, films, satellite imagery, and digital maps, in our quest to explore whether or not the past can inform present efforts to better manage modern water resources. The course is structured in units focused on each of the major hydro-environmental zones of the Middle East: the river valleys of Mesopotamia, Egypt, and the Levant, the internal basins of western Central Asia and the Levant, the deserts of Arabia and North Africa, highland zones in Yemen and Iran, and coastal marsh areas along the Persian Gulf. We will examine irrigation systems, water supply systems, and ways of life surrounding water sources known from ethnographic studies, history, and archaeological excavations. These data will allow us to engage with debates in Middle Eastern anthropology, including those concerning the relationship between water and political power, the environment in which the world’s earliest cities arose, and the relevance of ‘lessons of the past’ for present and potential future water crises and ‘water wars.’ In our final weeks, we will discuss archaeology and historical anthropology’s contribution to conceptions of water ‘sustainability’ and examine attempts to revive traditional/ancient technologies and attitudes about water.

ANTH 110 Introduction to Mediterranean Archaeology
The cultures of Greece and Rome, what we call classical antiquity, span over a thousand years of multicultural achievement in the Mediterranean. This course tells the story of what it was like to live in the complex societies of ancient Greece and Rome. This story is told principally using the art, architecture, pottery and coins produced by these societies. We will examine both the bold and sexy, and the small and humble, from the Parthenon to wooden huts, from the Aphrodite of Knidos to the bones of a fisherman named Peter.

Activity: Lecture
1.0 Course Unit

ANTH 112 Sacred Stuff: Religious Bodies, Places, and Objects
Does religion start with what’s in our heads? Or are religious commitments made, shaped and strengthened by the people, places, and things around us? This course will explore how religion happens in the material world. We’ll start with classical and contemporary theories on the relationship of religion to stuff. We’ll then consider examples of how religion is animated not just by texts, but through interactions with objects, spaces, bodies, monuments, color, design, architecture, and film. We’ll ask how these material expressions of religion move beyond private faith and connect religion to politics and identity.
Taught by: Schaefer
One-term course offered either term
Also Offered As: ARTH 339, RELS 102
Activity: Seminar
1.0 Course Unit

ANTH 114 Migration and Borders
We live in an interconnected world of ever-intensifying flows of people, goods, and ideas. Rather than giving rise to a ‘borderless world,’ however, these flows have instead led to the proliferation and elaboration of borders on a planetary scale. This introductory course explores this paradox, evaluating the links between migration and borders in different contexts across the globe. We ask a number of related questions: What is migration? What is a border? What is the relationship between migration and borders? How might anthropology – the study of what it means to be human - shed light on this relationship? In so doing, we explore a number of case studies from archaeological, biological, cultural, and linguistic perspectives to better understand migration and borders as conjoined anthropological phenomena.
Taught by: Carruthers
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANTH 116 Caribbean Culture and Politics
This course offers anthropological perspectives on the Caribbean as a geo-political and socio-cultural region, and on contemporary Caribbean diaspora cultures. We will examine how the region’s long and diverse colonial history has structured relationships between race, ethnicity, class, gender and power, as well as how people have challenged these structures. As a region in which there have been massive transplantations of peoples and their cultures from Africa, Asia, and Europe, and upon which the United States has exerted considerable influence, we will question the processes by which the meeting and mixing of peoples and cultures has occurred. Course readings include material on the political economy of slavery and the plantation system, family and community life, religious beliefs and practices, gender roles and ideologies, popular culture, and the differing ways national, ethnic, and racial identities are expressed on the islands and throughout the Caribbean diaspora.
Taught by: Thomas
Course not offered every year
Also Offered As: AFRC 116, LALS 116
Activity: Lecture
1.0 Course Unit
ANTH 118 Witchcraft and Possession
This course explores world witchcraft and possession from the persecutions of the early seventeenth century through the rise of Wicca in the twentieth century. The mere mention of these terms, or of such close cousins as demonology, sorcery, exorcism, magic, and the witches Sabbath, raises clear ethnographic and historical challenges. How can the analysis of witchcraft— including beliefs, patterns of accusation, the general social position of victims, the intensity and timing of witch hunts, and its relation to religious practice, law, language, gender, social marginalization, and property—lead us to a more humane understanding of belief and action? Films such as The Exorcist, The Blair Witch Project, The Crucible, and Three Sovereigns for Sarah will focus discussion.

Activity: Recitation
1.0 Course Unit

ANTH 120 Popular Culture and Youth in Africa
All across the continent, Africa is alive with the energies of young people, expressed in music, art, fashion, drama, video, poetry, protest, and urban legends. In this course, we will take a close look at the wide variety of popular forms produced and consumed by young people in a diversity of contexts, urban and rural, elite and marginal, mainstream and transgressive. We will examine how popular culture draws from African tradition to craft innovative versions of modernity and futurity. We will explore themes of democracy, inequality, and social justice threaded through popular genres as well as experiences of joy, anger, fear, and hilarity. We will see how popular culture provides escape and entertainment for young people while also working to transform African societies.
Taught by: Hasty
Course usually offered in spring term
Also Offered As: AFRC 122
Activity: Lecture
1.0 Course Unit

ANTH 121 Origin and Culture of Cities
The UN estimates that 2.9 of the world’s 6.1 billion people live in cities and that this percentage is rapidly increasing in many parts of the world. This course examines urban life and urban problems by providing anthropological perspectives on this distinctive form of human association and land use. First we will examine the ‘origin’ of cities, focusing on several of the places where cities first developed, including Mesopotamia and the Valley of Mexico. We will then investigate the internal structure of non-industrial cities by looking at case studies from around the world and from connections between the cities of the past and the city in which we live and work today.

Activity: Lecture
1.0 Course Unit

ANTH 122 Becoming Human
Human evolutionary studies is a composite product of the fieldwork of both Paleolithic archaeology and human paleontology (or what we refer to as ‘stones and bones’). This marriage of two subdisciplines of anthropology produces a unique set of data that is intellectually managed and driven by theories within anthropology as a whole and even beyond — to fields such as biology, psychology, and primate ethology, as we try to understand the origins of language, culture, and our unique physical characteristics. In this course, we will jointly discuss and debate the actual evidence of human evolution, describing what the actual evidence is and exploring how far can we take these interpretations.
For BA Students: Natural Science and Math Sector
One-term course offered either term
Activity: Lecture
1.0 Course Unit

ANTH 123 Communication & Culture
The course looks at varieties of human expression -- such as art, film, language and song -- as communicative practices that connect persons together to form a common culture. Discussion is centered around particular case studies and ethnographic examples. Examination of communicative practices in terms of the types of expressive signs they employ, their capacity to formulate and transmit cultural beliefs and ideals (such as conceptions of politics, nature, and self), and to define the size and characteristics of groups and communities sharing such ideals. Discussion of the role of media, social institutions, and technologies of communication (print, electronic). Emphasis on contemporary communicative practices and the forms of culture that emerge in the modern world.
For BA Students: Society Sector
Taught by: Agha
One-term course offered either term
Activity: Recitation
1.0 Course Unit

ANTH 124 Archaeology & The Bible
Archaeology and the Bible is a chronological survey of the long span of human occupation in the Land of the Bible, known by the names of the modern nation-states and political entities that occupy the area, as well as various short hands such as Levant and Syria-Palestine, from ca. 10,000 BCE, when humans first began to farm and herd animals through the time of the Divided Monarchy of Israel and Judah. While archaeology has moved beyond a primary concern with illuminating the Bible, NELC 155 will investigate the broader import of archaeological discoveries for our understanding of ancient Israel and its neighbors.

Course not offered every year
Also Offered As: NELC 155
Activity: Lecture
1.0 Course Unit
**ANTH 127 The Material Past in a Digital World**

The material remains of the human past - objects and spaces - provide tangible evidence of past people's lives. Today's information technologies improve our ability to document, study, and present these materials. But what does it mean to deal with material evidence in a virtual context?

In this class, students will learn basic digital methods for studying the past while working with objects, including those in the collections of the Penn Museum. This class will teach relational database design and 3D object modeling. As we learn about acquiring and managing data, we will gain valuable experience in the evaluation and use of digital tools. The digital humanities are a platform both for learning the basic digital literacy students need to succeed in today's world and for discussing the human consequences of these new technologies and data. We will discuss information technology's impact on the study and presentation of the past, including topics such as public participation in archaeological projects, educational technologies in museum galleries, and the issues raised by digitizing and disseminating historic texts and objects. Finally, we will touch on technology's role in the preservation of the past in today's turbulent world. No prior technical experience is required, but we hope students will share an enthusiasm for the past.

1.0 Course Unit

**ANTH 131 Small Business Anthropology**

With a focus on minority-owned small businesses in the City of Philadelphia, this class will introduce students to the work of anthropologists who have made their careers in the business world using the tools they acquired through training in anthropology. By bringing anthropological perspectives into the workplace, business anthropologists seek to promote well-being for employees and owners, as well as consumers and the communities in which businesses operate.

The class will also introduce students to Philadelphia from the point of view of minority owned small businesses. One of the two class days each week will focus on business anthropology as a profession and include readings on organizational culture, design anthropology, and the role of anthropologists in marketing and advertising, as well as in globalization processes and entrepreneurship. The second of the two days each week will focus on the city of Philadelphia and the role of small businesses within it. We will study the spatial layout of the city, the kinds of small businesses that are operative within the city and where they are located, the relationship of business to ethnicity, gentrification and its impact on small business, and the role of government and community groups in relationship to small businesses and their owners and employees. As part of the class, students will engage in guided research on specific small businesses, with the aim of developing an ethnographic understanding of the experiences of owners and employees, the opportunities they have seized upon and the problems they have confronted. We hope in the course of the semester to provide an ethnographic profile of a sampling of small businesses from different industries, which can in turn contribute to understanding larger social and cultural patterns within Philadelphia. Through a class blog or other means, we hope as well to contribute to the ability of minority small business owners to voice their experiences, as well as their fears and hopes for the future, to members of the University community and beyond.

**ANTH 134 Making the Natural World: An Introduction to Political Ecology**

What are the limits of nature? When do natural systems become human or socio-natural systems? In this course, we examine the human construction of nature both conceptually, through ideas about environment, ecosystem, organism, and ecology; and materially, through trajectories of direct action in and on the landscape. Beginning with a consideration of foundational concepts in human ecology, we will discuss current problems and approaches, centering on political ecology. Readings and case studies are drawn from human-environmental contexts in Oceania, South Asia, Southeast Asia, Sub-Saharan Africa, Latin America, Europe, and North America. We will also consider topics including a) the relationship between indigenous and technocratic knowledge and resource governance, b) environmental movements themselves as objects of ethnographic study; c) justice and sustainability as environmental goals; d) inequality, displacement and violence as environmental problems; and e) fair trade and food security or sovereignty.

Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

**ANTH 139 Ancient Civilizations of the World**

This course explores the archaeology (material culture) of early complex societies or civilizations in Egypt, Mesopotamia, and the Aegean. According to the traditional paradigm, civilization first emerged during the fourth millennium BCE in Egypt and Mesopotamia. In the Mediterranean, state-level societies first appeared in Crete and mainland Greece in the early second millennium BCE. This course investigates how and why these civilizations developed, as well as their appearance and structure in the early historic (or literate) phases of their existence. A comparative perspective will illustrate what these early civilizations have in common and the ways in which they are unique. This course will consist largely of lectures which will outline classic archaeological and anthropological theories on state formation, before turning to examine the available archaeological (and textual) data on emerging complexity in Egypt, Mesopotamia, and the Aegean. This course does not presuppose any knowledge of archaeology or ancient languages; the instructor will provide any background necessary. Because this is a course on material culture, some of the class periods will be spent at the Penn Museum of Archaeology and Anthropology. These will consist largely of object-based lab with archaeological materials selected by the instructor. This course meets the General Education Curriculums Cross Cultural Analysis foundational approach, whose aim is to help students understand and interpret the cultures of peoples (even long-dead peoples) with histories different from their own; it also fulfills the History and Tradition Sector breadth requirement.

ANTH 140 Histories of Race and Science in Philadelphia
The history of race and science has its American epicenter in Philadelphia. Throughout this Academically-Based Community Service (ABCS) course, we will interrogate the past and legacy of racial science in the United States; the broad themes we broach will be met concretely in direct engagement with Penn and the Philadelphia community. As an extended case study, students will undertake independent research projects using primary source documents from local archives, tracing the global history of hundreds of human skulls in the 19th century Samuel G. Morton cranial collection at the Penn Museum, a foundational and controversial anthropological collection in the scientific study of race. These projects will be formed through an ongoing partnership with a Philadelphia high school in which Penn students will collaborate with high school students on the research and design of a public-facing website on the Morton collection and the legacy of race and science in America. In our seminar, we will read foundational texts on the study of racial difference and discuss anti-racist responses and resistance to racial science from the 19th century to the present. Throughout, we will work directly with both primary and secondary sources, critically interrogating how both science and histories of science and its impacts on society are constructed. Throughout this course, we will explore interrelated questions about Penn and Philadelphia’s outsize role in the history of racial science, about decolonization and ethics in scholarly and scientific practice, about the politics of knowledge and public-facing scholarship, and about enduring legacies of racial science and racial ideologies. All students are welcome and there are no prerequisites, save for intellectual curiosity and commitment to the course. This course will be of particular interest to those interested in race, American history and the history of science, anthropology, museum studies, education, and social justice.

Activity: Seminar
1.0 Course Unit

ANTH 141 Public Policy, Museums, and the Ethics of Cultural Heritage
This course will focus upon and examine the ethics of international heritage and the role that Museums play in the preservation of identity and cultural heritage. The mission of this course will be to inform and educate students about the role of Museums within the 21st century. What is the role and position of antiquities and important cultural objects in Museums? How should Museums acquire these objects and when should they be returned to countries and cultural groups? Examples from current issues will be included in the reading and discussions along with objects and issues within the Penn Museum.

ANTH 143 Explorations in Human Biology
This course is an exploration of human biology from a biocultural and evolutionary perspective. The class will provide you with a better understanding of what it means to be human, how humans came to exhibit such a wide range variation, and what biological anthropology can contribute to your understanding of the world. In this class students will learn to integrate the theory and methods used in human biology research through lectures, assignments, and lab sessions. This course will explore topics including human genetics, growth and development, nutrition, disease, and reproduction. We will also use the course as an opportunity to introduce you to the important contributions of biological anthropologists to the study of race, inequality, sex and gender, and health among others.

ANTH 148 Food and Fire: Archaeology in the Laboratory
This course will let students explore the essential heritage of human technology through archaeology. People have been transforming their environment from the first use of fire for cooking. Since then, humans have adapted to the world they created using the resources around them. We use artifacts to understand how the archaeological record can be used to trace breakthroughs such as breaking stone and bone, baking bread, weaving cloth and firing pottery and metals. The seminar will meet in the Penn Museum’s Center for the Analysis of Archaeological Materials. Students will become familiar with the Museum’s collections and the scientific methods used to study different materials. Class sessions will include discussions, guest presentations, museum field trips, and hands-on experience in the laboratory.

ANTH 149 Introduction to Native American and Indigenous Studies
This course offers a broad introduction to evolving scholarship in the
combined fields of Native American Studies and Indigenous Studies
worldwide. Students will examine the various ways that Indigenous
peoples and academic researchers are currently engaging with
Indigenous knowledges, while also exploring the lingering impacts of
settler colonialism and the influence of decolonizing methodologies.
Students will gain foundational understandings of the cross-disciplinary
nature of Native American and Indigenous Studies (NAIS), by studying
theoretical interpretations of Indigenous peoples in academic and
historical contexts, and by examining practical approaches to Indigenous
research in diverse worldwide settings. Students will approach topics
from a variety of disciplinary traditions, utilizing historical texts,
ethnological studies, oral literature, material culture, and modern media,
including websites and databases produced by and for Indigenous
communities. Readings will include the work of researchers who bridge
the disciplines of anthropology, history, folklore, art, law, science, etc.
Students will watch a selection of films by Indigenous filmmakers, and
attend lectures by a selection of Indigenous guest speakers. NAIS faculty
advisors from various schools at Penn (e.g., School of Arts and Sciences,
Education, Law, Nursing) will also present several guest lectures to
highlight their unique experiences and research projects with Indigenous
communities. Special case studies will focus on: new directions in
collaborative research; issues in museum representation and repatriation;
heritage site protection and Indigenous archaeology; legal interventions
and protections for Indigenous rights; and innovative projects in language
restoration and cultural recovery.

ANTH 150 Sport and Society: The Anthropology of Sports
Sport and Society introduces students to the broad field of anthropology
in order to understand the interrelatedness of sport and society. We first
review the evolutionary foundations of sport in play and ritual, and the
biological underpinnings for athletics. We then discuss the broad range
of sports across global history, and highlight how archaeologists have
studied sports in the past. The final section of the class will explore the
ways in which contemporary major sports entangled with broader social
and cultural phenomena. Drawing on examples from the U.S. and around
the world, we focus on questions of gender, race, and nationality.

1.0 Course Unit

ANTH 151 Archaeology of American History: The Colonial Period
Anthropology 151/752 is a lecture-seminar that is open to all students.
This course will explore American history through a different range of
information. Over the last seventy five years the new field of Historical
Archaeology (academically first developed at Penn) has excavated
numerous sites dating from the 16th, the 17th, and the 18th centuries
in what is now the United States. Recovered archaeological remains
combined with archival sources are giving us a different view of the
rise of America as a distinctive society. This class is focused on the
Colonial Period from the earliest explorations by Europeans to the eve
of the American Revolution. Discoveries of early European intrusions
into the continent, especially the Spanish and English, will be reviewed
along with the reaction of Native Peoples to such contact. Successful
settlements on the East Coast in La Florida and at Jamestown as well as
in the Rio Grande Valley in the Southwest will be explored along with later
colonization of the Middle Atlantic and New England regions. Mature 18th
century colonial society as seen in Philadelphia and Annapolis along with
the distinctive subject of African American sites will also be covered.

ANTH 154 Liquid Histories and Floating Archives
Climate change transforms the natural and built environments, and it
is re-shaping how we understand, make sense, and care for our past.
Climate changes history. This course explores the Anthropocene, the
age when humans are remaking earth’s systems, from an on-water
perspective. In on-line dialogue and video conferences with research
teams in port cities on four continents, this undergraduate course
focuses on Philadelphia as one case study of how rising waters are
transfiguring urban history, as well as its present and future. Students
projects take them into the archives at the Independence Seaport
Museum and at Bartram’s Garden. Field trips by boat on the Schuykill
and Delaware Rivers and on land to the Port of Philadelphia and to the
John Heinz National Wildlife Refuge invite transhistorical dialogues
about how colonial and then industrial-era energy and port infrastructure
transformed the region’s vast tidal marshlands wetlands. Excursions also
help document how extreme rain events, storms, and rising waters are
re-making the built environment, redrawing lines that had demarcated
land from water. In dialogue with one another and invited guest artists,
writers, and landscape architects, students final projects consider how
our waters might themselves be read and investigated as archives. What
do rising seas subsume and hold? Whose stories do they tell? What floats
to the surface?

ANTH 159 Population and Public Health in Eastern Europe
Since the collapse of communism in 1989 in Eastern Europe (and 1991 in the Soviet Union), many of the countries in the region have experienced public health crises and demographic catastrophe. Below replacement fertility rates and massive out migration have decimated the populations of these countries even as populations age and place unsustainable strains on pension systems and medical services. The demographic collapse has also been accompanied by falling male life expectancy and the rise of alcoholism, depression, domestic violence, and suicide. The economic exigencies of the transition from communism to capitalism dismantled welfare states at the exact moment when health services were most needed, leaving charities and nongovernmental organization to try to fill in the gaps. Through a combination of readings from the fields of epidemiology, demography, and medical anthropology, this course examines the public health implications of poverty and social dislocation in post-communist states. All readings and assignments are in English.

ANTH 169 Merchants, Saints, Slaves and Sojourners: the Worlds of the Indian Ocean
Do oceans serve to divide and demarcate distinct cultures and regions? Or do they facilitate exchange, connection and cosmopolitanism? This course will explore the manner in which the Indian Ocean has played both roles throughout history, and how the nature of those divisions and connections has changed over time from the ancient to the modern world. We will reconstruct the intertwined mercantile, religious and kinship networks that spanned the Indian Ocean world, across the Middle East, East Africa, South Asia, Southeast Asia and China, illuminating the histories of Hinduism, Buddhism and Islam, while also considering the role of successive imperial political formations, from Rome to Britain. Throughout the semester we will seek to understand the Indian Ocean through the people who lived and worked in its milieu - from consuls and military commanders, to traders, brokers, sailors, prisoners and slaves. Course materials will draw on a variety of disciplines (anthropology, archaeology, material culture, religious studies) to construct the cultural, economic, and environmental history of the Indian Ocean.
Taught by: Petrie
Course not offered every year

ANTH 177 Colonial Pasts and Indigenous Futures: A History of Belize and Central America
The small country of Belize (formerly British Honduras) represents the past history and ongoing story of Central America and the region. Belize has a colonial past and present with strong ties to the UK and emerging connections to the US. At the same time, there is a growing post-colonial debate within the country about the role of indigenous Maya people in the past, present and future of the country. This course will be the first of two courses which will lead to active work in Belize during the summer of 2021 with the development and creation of a Community Museum within the Maya village of Indian Creek in southern Belize. This course will be taught by Richard M. Leventhal who has worked in Belize for the past 20 years. Leventhal will be joined by 3 Maya activists from Belize who will co-teach the class for 5-6 weeks out of the semester.
Taught by: Leventhal

ANTH 180 From Ayahuasca to Zoloft: Anthropological Approaches to Drugs and Drug Use
In this course we will consider the cultural, social, political, medical, and biological aspects of drugs (legal, illegal, pharmaceutical, botanical, and otherwise) through space and time. We will take a broad approach, thinking critically about what, who, and under what circumstances a given substance becomes a ‘drug.’ In doing so, we will be able to interrogate the linguistic dimensions of drugs, considering the way in which language creates social worlds and social meanings. We will explore different kinds of drugs, their origins, biochemical properties, and the biological pathways through which they affect us. We will also think about how drugs and drug use has changed over time, taking a cross-cultural and materialist perspective to investigate drug use past and present. Topics we will address include debates over the commercialization, criminalization, and decriminalization of hallucinogenic plants such as marijuana, the recent use of drugs ranging from LSD to magic mushrooms to treat depression and other mental illnesses, the legacies of colonialism and botanical migrations, the ethics of the pharmaceutical industry, and comparative explorations of the language about and approaches to addressing both the ‘crack epidemic’ of the early 80s and 90s and the current opioid crisis. We will read both classic anthropological texts including ethnographies as well as works from other disciplines including science studies, biology, history, ethnobotany, and sociology.
Taught by: Hoke
Course offered fall; even-numbered years
Also Offered As: LALS 180

1.0 Course Unit

ANTH 190 Introduction to Africa
This course provides an introduction to the study of Africa in all its diversity and complexity. Our focus is cultural, geographical, and historical: we will seek to understand Africa’s current place in the world political and economic order and learn about the various social and physical factors that have influenced the historical trajectory of the continent. We study the cultural formations and empires that emerged in Africa before European colonial invasion and then how colonialism reshaped those sociocultural forms. We’ll learn about the unique kinds of kinship and religion in precolonial Africa and the changes brought about by the spread of Islam and Christianity. Finally, we’ll take a close look at contemporary issues such as ethnic violence, migration, popular culture and poverty, and we’ll debate the various approaches to understanding those issues.
For BA Students: Society Sector
Taught by: Hasty

ANTH 199 Independent Study in Anthropology
A study under faculty supervision of a problem area or topic not included in the formal curriculum. Junior or senior standing and written permission of instructor and undergraduate chair required to enroll.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

ANTH 202 Language, Migration, Diaspora
Centering on the relation between language, migration, and diaspora, this course uses linguistic anthropological approaches to understand how the ‘very big’ is reflected in the ‘very small.’ We will approach language use as a process that unfolds in the microclimate of everyday interaction, but whose effects extend to and shape large-scale social processes. We will ask a number of interrelated questions: How does language use shape global phenomena like transnationalism and diasporic populations? How do globalizing forces impact and shape language structure and use? How are mobility and (im)migration enabled or constrained through everyday communicative interaction? We begin by exploring the ideologies inherent in everyday speech, evaluating how language is linked to social identities like class, race, gender, and sexuality, and to social personae like ‘the migrant,’ ‘the refugee,’ ‘the foreigner,’ or to the ‘diasporic subject’ more generally. We then explore the cultural politics of languages in and across nation-states, attending to their uses and values in unprecedented global flows of information, goods, and people.
Taught by: Carruthers
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANTH 205 American Folklore
This course will examine American expressive culture, including everyday speech, narrative, music, foodways, religion, public celebrations, and material culture through an exploration of the multiple and changing avenues of diversity in the United States. Folklore can be considered the unofficial culture that exists beneath and between the institutions of power that we read about in our history books, and that is what we will be studying—the 99% of American life that goes unseen and unnoticed in other college courses. Some of the topics we will examine are: campus folklore; body art and adornment; contemporary (urban) legends and beliefs; public celebrations and rituals; and the adaptation and commodification of folk culture in popular media.
One-term course offered either term
Also Offered As: FOLK 201
Activity: Recitation
1.0 Course Unit
ANTH 209 Indigenous Communities and Community Museums: Directions for the Future
Community museums are becoming more commonplace within indigenous communities throughout the Americas. These museums are created internally, by and for communities, as a way of framing self-identity and representation. The development of these museums is focused upon the need to define and highlight identity and differences between indigenous communities and the surrounding world. These community museums contrast dramatically with other cultural museums where the stories and histories of groups tend to be controlled by the nation-state and professional curators. This course will focus on the nature of indigenous communities, cultural representation, and identity with a focus upon the modern Maya communities of southern Belize. In addition, museums and community museums, world-wide, will be examined and analyzed. What are the different models of community museums and what is the process for the development of such museums? Is the only de-colonized museum one created and framed within and by the community? Seminar format with weekly discussions, readings, and a final research paper. There are no pre-requisites for this course and a background in anthropology is not required. This course will be connected to a community museum project in Indian Creek, Belize where travel and work will be initiated over the summer of 2021. This course is recommended but not required for participation in summer research program in Belize.

1.0 Course Unit

ANTH 210 Death: Anthropological Perspectives
This course will cover the topic of DEATH from a bio/cultural perspective including the evolution of life history (aging and demography - mortality) as well as from an archaeological perspective (prehistory) and early history of mortuary practices. Nothing in the lifespan of humans is so revealing on the interface of culture and biology as is death and the experience of death. This course is not concerned specifically with how an individual experiences death, but in the ways that culture and biology have come to define and deal with physical death and the death experience.
Taught by: Monge
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANTH 211 Religion and Ecology
This class will introduce the overlaps between religion and ecology. Rather than assuming that there is a necessary positive or negative relationship between religion and ecology, we will look at how these relationships have materialized in complicated ways at different moments in history. We'll consider perspectives and case studies from a range of different moments in history. We'll consider perspectives and case studies from a range of different traditions, with a special attention paid to the genesis of the field of Religion and Ecology in critiques of Christian attitudes toward the environment in the 1960s and 1970s.
Taught by: Covey
Course not offered every year
Also Offered As: ENVS 211, RELS 211
Activity: Lecture
1.0 Course Unit

ANTH 212 Animals & Religion
Religion is full of animals—lions and lambs, monkeys and elephants, buffalo and snakes, even mythical beasts. The identity of the human being is explained, in many traditions, by contrast with the identity of other species. We know who we are because we know who they are, or do we? This course interrogates—through an exploration of sacred texts, art, film, and museum artifacts—the tension present in many traditions between an anthropocentric prioritization of the human being and religious resources that encourage a valuing of other animal species. We'll explore the way animals function both as religious objects and as religious subjects across diverse traditions, asking how human-animal relationships have shaped religion and how religion has shaped the way we think about and interact with other animals. We'll ask how religion has engaged with animals over time and across global cultures, understanding them as symbols, messengers, and manifestations of the divine; as material for ritual and sacrifice; as kin and subordinates; as food and as filth; as helpmeets and as tempters. How have these perspectives shaped animal ethics, influencing the treatment, use, and consumption of animals and their bodies? Finally, we'll ask what it means that we ourselves are evolved animals. How does our own animality factor into the practice of human religion? Is our religious capacity part of what sets us apart from other animals or is religiosity a trait we might expect to find in other species? To what extent is religion a function of the animal?

ANTH 215 The Ancient Maya: Integrating Material, Text, and Image
Ancient Maya studies is one of the most dynamic and innovative fields in world archaeology today. Emerging as a true historical archaeology only in the past three decades, the decipherment of Maya script now provides a powerful complement and counterpoint to both traditional excavation data and new remote sensing technologies. Equally, the reading of images, and their interaction with texts and artifacts, forms a vital part of our interest in the broader humanistic concerns of worldview and the transcendent—where our primary interest lies in gaining access to past mentalities. This course will provide a comprehensive introduction into current knowledge of the Ancient Maya, with a recurring methodological focus on how different types of evidence are integrated to assemble a persuasive ‘portrait of the past.’ This scope of this process is unique in the ancient Americas, since only the Maya offer us the opportunity to read their own descriptions of the world two millennia or more in the past. Geographically, we will be looking at the greater Yucatan Peninsula, which today covers parts of southeastern Mexico, the whole of Guatemala and Belize, and the western extremities of Honduras and El Salvador. Since archaic times (before 1200 BCE) this has been occupied by speakers of the Mayan language group, and millions of people identified as Maya by that means continue to do so today (despite popular notions to the contrary, they have never ‘disappeared’). No prior knowledge of archaeology or art history is necessary. The course structure is one 3-hour session per week, consisting of a lecture followed by group discussion in seminar-style. Additionally, in Week 6 there will be a virtual tour of the new Mexico and Central American Gallery at Penn Museum. This will introduce the class to the issues of disseminating scholarship and building narratives that are accessible to the wider public.

ANTH 221 Material World in Archaeological Science
By focusing on the scientific analysis of inorganic archaeological materials, this course will explore processes of creation in the past. ANTH 221/521 will take place in the Center for the Analysis of Archaeological Materials (CAAM) and will be team taught in three modules: analysis of lithics, analysis of ceramics and analysis of metals. Each module will combine laboratory and classroom exercises to give students hands-on experience with archaeological materials. We will examine how the transformation of materials into objects provides key information about past human behaviors and the socio-economic contexts of production, distribution, exchange and use. Discussion topics will include invention and adoption of new technologies, change and innovation, use of fire, and craft specialization.

1.0 Course Unit
ANTH 231 Modalities of Black Freedom and Escape: Ships
The course circulates around ships and boats. The course combines methods from environmental humanities, visual arts and history to consider multi-modal practices of black freedom and escape. From free black sailors in the eighteenth century Caribbean Sea, to twentieth and twenty-first century West African fishing boats, notions of Haitian 'boat people,' Parliament Funkadelic's mothership, and sinking boats with Somali and Ethiopian migrants off Yemen's coast, ships have been and remain technologies of containment and freedom for communities of African descent. In the face of environmental vulnerabilities and the reality of water ways as systems of sustenance and imminent death, this course asks: how do black people use the ship and the process and practice of shipping as vessels for freedom, escape, and as a site to experiment with futures? Using the city of Philadelphia and the Schuylkill and Delaware rivers as our primary site of interrogation, the course attends to the threats that black people experience following natural disaster (New Orleans, Haiti, Puerto Rico) and everyday engagement with the local and global state structures regarding water (Flint, MI). In this context, we also look to shipping as a site to theorize and account for black innovation, meanings of (non-)sovereignty, and alternative futures.

ANTH 234 Pharmaceuticals and Global Health
In some parts of the world, spending on pharmaceuticals is astronomical. In others, people do not have access to basic or life-saving drugs. Individuals struggle to afford medications; whole populations are neglected, considered too poor to constitute profitable markets for the development and distribution of necessary drugs. This seminar analyzes the dynamics of the burgeoning international pharmaceutical trade and the global inequalities that emerge from and are reinforced by market-driven medicine. Questions about who will be treated and who will not filter through every phase of pharmaceutical production -- from preclinical research to human testing, marketing, distribution, prescription, and consumption. Whether considering how the pharmaceutical industry shapes popular understandings of mental illness in North America and Great Britain, how Brazil has created a model of HIV/AIDS prevention and treatment program, or how the urban poor in Delhi understand and access healthcare, the seminar draws on anthropological case studies to illuminate the roles of corporations, governments, non-governmental organizations, and individuals in relation to global pharmaceuticals. As we analyze each case and gain familiarity with ethnographic methods, we will ask how individual and group health is shaped by new medical technologies and their evolving regulatory regimes and markets. The course familiarizes students with critical debates on globalization and with local responses to globalizing processes; and it contributes to ethical and political debates on the development and access to new medical technologies.

ANTH 236 Iraq: Ancient Cities and Empires
Iraq: Ancient Cities and Empires is a chronological survey of the ancient civilization that existed in the drainage basin of the Tigris and Euphrates Rivers from the early settled village farming communities of the 7th millennium BCE to the middle of the 1st millennium BCE, when Nebuchadnezzar II ruled Babylon and much of the Middle East. Though organized period by period, NELC 241 explores various social, political, economic, and ideological topics, exposing students to various strands of evidence, including settlement survey data, excavated architectural remains, artifacts, and documentary sources, as well as an eclectic mix of theoretical perspectives. The course aims to provide students with a strong foundation for the further study of the ancient and pre-modern Middle East.

ANTH 241 Performing History
This seminar concentrates on the ways that various peoples in the world make their history by means other than relying on written texts alone. Over the course of the semester, we therefore may be examining such different public events and civic rituals as parades, political and religious processes, local historical pageants, carnivals, historic preservation, museums, military reenactments, and history theme parks. The emphasis in each of these forms, places, and semiotic processes will be on their identity and function as key performances that transform consciousness, shift individuals alternatively into both actors and spectators, reframe the everyday as the metaphysical, and intensify the status of cultural values in the histories they present to view. Course requirements: a seminar paper, the topic of which you will discuss with me no later than week five of the course; and a working annotated bibliography and statement of your paper’s main thesis. I will say more about these assignments as they approach.

ANTH 242 Music, Religion, Ritual in South and Southeast Asia.
What role does music play in articulating religious identities and spaces? What is the importance of ritual musics as they persist and change in the modern world? How does music reflect and articulate religious ways of thinking and acting? In this course, we explore these and other questions about the interrelations between music, religion, and ritual in South and Southeast Asia. Focusing on India, Sri Lanka, Malaysia, and Indonesia, the course emphasizes musics from Hindu, Buddhist, Muslim and Christian traditions; nevertheless, it draws widely to touch upon sacred musics in Pakistan, Nepal, Burma, Thailand, Vietnam, and among some indigenous peoples in the region. Throughout, we explore ontologies of sound; sonic occurrences in religious structures, public processions, and pilgrimage sites; the construction of religion and ritual as ideas forged through colonial encounter and modern scholarship on religion; the politics of sacred sounds in today’s public spaces and contemporary media, such as television and online; and the surprising fluidity between popular and sacred musical genres.

ANTH 244 Disease and Human Evolution
This course will explore the role played by disease in human evolution, from the emergence of the human lineage to the present day. We will evaluate both infectious and non-infectious diseases and examine the way in which populations and disease organisms have co-evolved. Related issues to be explored include the nature of the virulence and pathogenicity of infectious agents, and the impact of vaccination on pathogen evolution. In addition, we will discuss the epidemiological transition and the rise of complex diseases of modernization (e.g., diabetes, cancer) that has occurred in the past several centuries. Overall, the course will provide a broader understanding of the influence of disease processes on the evolution of the human species.

ANTH 246 Molecular Anthropology
In this course, we will explore the molecular revolution in biological anthropology. In particular, we will examine how molecular data can be used to illuminate anthropological question concerning human origins, evolution and biological variation. Some of the specific topics to be covered in this course are the phylogenetic relationships among primates, kinship in apes and monkeys, the hominoid trichotomy, modern human origins and migrations, Neanderthal and Denisovan admixture with modern humans, bioge genetics of skin color, and physiological, phenotypic and disease adaptations.

Activity: Seminar
1.0 Course Unit

ANTH 248 Food and Feasting: Archaeology of the Table
Food satisfies human needs on many levels. ANTH 248 explores the importance of food in human experience, starting with the nutritional and ecological aspects of food choice and going on to focus on the social and ritual significance of foods and feasts. Particular attention will be paid to the way that archaeologists and biological anthropologists find out about food use in the past. Contemporary observations about the central significance of eating as a social activity will be linked to the development of cuisines, economies, and civilizations in ancient times. The course will use lectures, discussions, films, food tastings, and fieldwork to explore the course themes.
Taught by: Moore
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANTH 249 Evolutionary Medicine
Evolutionary medicine is the application of modern evolutionary theory to studies of health and disease in humans. In taking this approach, the course will explore the role that disease played in human evolution. We will examine both infectious and non-infectious diseases, and assess the way in which populations and disease organisms have co-evolved. Related issues to be examined are the nature of the virulence and pathogenicity of infectious agents, and their efforts to subvert the immune system’s responses to infection. We will also explore the evolved responses that enable individuals to protect, heal and recuperate themselves from infections and injuries, such as fever and sickness behavior, and the fitness enhancing aspects of these processes. Finally, we will study how past adaptations of early humans to their environments now affects modern humans, who have very different diets, life expectancy, activity patterns, and hygiene than their ancestors.

1.0 Course Unit

ANTH 247 Environment in India: Nature, Culture, & Conservation in the Western Ghats
India, one of the world’s most populous countries, also ranks as one of the most important centers of biodiversity, conservation, and environmental movements. Despite pervasive scholarly and popular narratives of inevitable ecological damage associated with population growth, human land use has, at times, enhanced biodiversity, preserved existing environments, and created new ones. In this course, students will examine long-term human and natural histories from a number of perspectives to develop more accurate, historically-informed understandings of how India’s natural spaces have developed and how the spaces can be best sustained. them. During the travel component, students will visit India and work with local partners who are actively engaged in protecting human livelihoods, reducing human-wildlife conflict, and conserving biodiversity in the Western Ghat Mountains, a biodiversity hotspot.

ANTH 254 Archaeology of the Inca
The Inca created a vast and powerful South American empire in the high Andes Mountains that was finally conquered by Spain. Using Penn's impressive museum collections and other archaeological, linguistic, and historical sources, this course will examine Inca religion and worldview, architecture, sacred temples, the capital of Cuzco, ritual calendar, queque system, textiles, metalworking, economic policies and expansionist politics from the dual perspectives of Inca rulers and their subjects. Our task is to explain the rise, dominance, and fall of the Incas as a major South American civilization.

ANTH 255 Modern Southeast Asia
This freshman-friendly course provides a broad introductory overview of modern Southeast Asia, surveying the region's extraordinary diversity and ongoing social, economic, and political transformations. Centering on the nation-states that have emerged following the second World War, we will assess elements of Southeast Asian geography, history, language and literature, cosmologies, kinship systems, music, art and architecture, agriculture, industrialization and urbanization, politics, and economic change. We will remain particularly attentive to the ways Southeast Asians negotiate and contend with ongoing challenges with modernization, development, and globalization.
Taught by: Carruthers
Also Offered As: SAST 266
Activity: Lecture
1.0 Course Unit

ANTH 256 Caribbean Music and Diaspora
This course considers Caribbean musics within a broad and historical framework. Caribbean musical practices are explored by illustrating the many ways that aesthetics, ritual, communication, religion, and social structure are embodied in and contested through performance. These initial inquiries open onto an investigation of a range of theoretical concepts that become particularly pertinent in Caribbean contexts--concepts such as post-colonialism, migration, ethnicity, hybridity, syncretism, and globalization. Each of these concepts, moreover, will be explored with a view toward understanding its connections to the central analytical paradigm of the course--diaspora. Throughout the course, we will listen to many different styles and repertories of music ranging from calypso to junkanoo, from rumba to merengue, and from dance hall to zouk. We will then work to understand them not only in relation to the readings that frame our discussions but also in relation to our own North-American contexts of music consumption and production. (Formerly Music 258).

ANTH 258 Visualizing the Past
Most people's information about the Past is drawn from coffee table picture books, popular movies, video games, documentaries about discoveries of 'ancient, mysterious, and lost' civilizations, and tours often lead by guides of limited or even dubious credentials. How are these ideas presented, formed, and circulated? Who creates and selects the information presented in this diverse media? Are these presentations accurate? Do they promote or hurt scientific explanations? Can the artistic, aesthetic, and scientific realms be bridged to effectively promote and interpret the past? How can modern technologies be applied to do a better job at presenting what is difficult to experience firsthand? This class will focus on case studies, and methods of how archaeology and the past are created, presented and used in movies, museums, games, the internet, and art. Each year, the studio-seminar focuses on a project. In addition to exploring general concepts of archaeology and the media, students will work in teams to produce an interactive, digital media exhibit using the latest modeling visualization programs for presenting the sacred landscape of the Inca capital of Cuzco, Peru. Cuzco is one of the most important UNESCO World Heritage sites and visited by nearly a million tourists a year. Potential class projects include fly-throughs of architectural and landscape renderings, simulations of astronomy and cosmology, modeling of human behavior within architectural and landscape settings, and study artifacts in the Penn Museum.
One-term course offered either term
Also Offered As: CIS 106
Activity: Lecture
1.0 Course Unit
ANTH 260 Cultures of Science and Technology
Science and technology figure centrally in the economic, political, and socio-cultural changes that impact our worlds. Happenings in the life sciences, including the discovery of new genes, pathways, and processes, are redrawing concepts of the body and human nature and refiguring social and political relations. The seminar starts from the premise that scientific facts are made, not things existing a priori in the world and that are merely picked up by researchers and consumed by lay audiences. Likewise, technologies are created through a process of intense negotiation between producers and their sophisticated users. Focusing on the biosciences, we explore the production of science and technology and how they 1) affect individuals, self-identities, subjectivity, kinship, and social relationships; 2) have interacted with or reinforced political programs, racial classifications, unequal access to knowledge, and patterns of social injustice; 3) inform contemporary institutional structures, strategies of governance, and practices of citizenship. We will combine methods and perspectives from social and cultural anthropology, and the social studies of science and technology, and will draw from historical case studies, contemporary ethnographies of science, scientific and medical journals, documentary films and media reports.

ANTH 267 Living World in Archaeological Science
By focusing on the scientific analysis of archaeological remains, this course will explore life and death in the past. It takes place in the Center for the Analysis of Archaeological Materials (CAAM) and is team taught in three modules: human skeletal analysis, analysis of animal remains, and analysis of plant remains. Each module will combine laboratory and classroom exercises to give students hands-on experience with archaeological materials. We will examine how organic materials provide key information about past environments, human behavior, and cultural change through discussions of topics such as health and disease, inequality, and food.

ANTH 268 Anthropology of Museums
This course examines museums as sites where issues of Indigenous identity, memory, place and power intersect. Museums have long been engaged in the selective preservation, representation, and contextualization of Indigenous objects, cultures, and histories. We will examine antiquarian impulses that inspired the collecting of curiosities, scientific studies that drove the collection of biological specimens, and nationalist ideals that shaped monuments to house imperialist memories. Museums are now sites for complex, often contentious discourse around Indigenous collections. Students will review histories of local and national collecting processes, with a particular focus on Native American collections and concerns. We will also consider how Indigenous curators and new kinds of museums have developed innovative displays and interpretations.

1.0 Course Unit

ANTH 273 Global Health: Anthropological Perspectives
In some parts of the world spending on pharmaceuticals is astronomical. In others, people struggle for survival amid new and reemerging epidemics and have little or no access to basic or life-saving therapies. Treatments for infectious diseases that disproportionately affect the world’s poor remain under-researched and global health disparities are increasing. This interdisciplinary seminar integrates perspectives from the social sciences and the biomedical sciences to explore 1) the development and global flows of medical technologies; 2) how the health of individuals and groups is affected by medical technologies, public policy, and the forces of globalization as each of these impacts local worlds. The seminar is structured to allow us to examine specific case material from around the world (Haiti, South Africa, Brazil, Russia, China, India, for example), and to address the ways in which social, political-economic, and technological factors -- which are increasingly global in nature -- influence basic biological mechanisms and disease outcomes and distribution. As we analyze each case and gain familiarity with ethnographic methods, we will ask how more effective interventions can be formulated. The course draws from historical and ethnographic accounts, medical journals, ethical analyses, and films, and familiarizes students with critical debates on globalization and with local responses to globalizing processes.

ANTH 276 Ethnographic Approaches to Urban Athletics and Human Movement
Rooted in the rubric of public interest social science, the course focuses on bridging theory and practice motivated by a commitment to social justice through original ethnographic research. In particular, this course will focus on kinesiology and the anthropology of sports and well-being through intense analysis of the Young Quakers Community Athletics (YQCA) program, a collaboration between the Netter Center for Community Partnerships and Penn Athletics. In guest lectures from multiple disciplines will help to round out the course. The core learning objective is to bring a broad range of specialized expertise to foster a holistic examination of a complex institutional partnership intended to promote positive social transformation and improved human health and well-being.
Taught by: Frank Johnston, Gretchen Suess
Activity: Seminar
1.0 Course Unit

ANTH 294 Global Cities: Urbanization in the Global South
This course examines the futures of urbanization in most of the world. With cities in 'developing' countries set to absorb 95% of urban population growth in the next generation, the course explores the plans, spaces and social experiences of this dramatic urban century. How do proliferating urban populations sustain themselves in the cities of Latin America, Africa and Asia? What kinds of social and political claims do these populations make more just and sustainable cities? The course investigates the ongoing experiences in urban planning, infrastructure development and environmental governance in cities of the Global South. In so doing, it imagines new forms of citizenship, development and sustainability that are currently unfolding in these cities of the future.

ANTH 300 Research Seminar in Anthropology
ANTH 300 is a Research Seminar for anthropology majors. It defines the Penn anthropology major by bringing together and inter-relating major threads from the different subfields of the Penn anthropology curriculum. Each session includes contributions from members of the standing faculty and seminar discussions of a research theme in which anthropological knowledge is currently progressing.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
Notes: Open to junior and senior anthropology majors

ANTH 301 Senior Thesis
Individual research under faculty supervision culminating in a thesis.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: Permit required

ANTH 303 Research Methods in Cultural Anthropology
This undergraduate seminar is about how ethnographers do research. It introduces fundamental concepts and techniques - research design, participant observation, interviews, questionnaires, field notes, archives, data collection and analysis. It also addresses ethical and legal issues - cultural protocols, intellectual property rights, collaborative anthropology, and institutional review boards. Students will conduct original ethnographic research in partnership with the Netter Center.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ANTH 305 Anthropology and Policy: History, Theory, Practice
From the inception of the discipline, anthropologists have applied their ethnographic and theoretical knowledge to policy issues concerning the alleviation of practical human problems. This approach has not only benefited peoples in need but it has also enriched the discipline, providing anthropologists with the opportunity to develop new theories and methodologies from a problem-centered approach. The class will examine the connection between anthropology and policy, theory and practice (or 'praxis'), research and application. We will study these connections by reading about historical and current projects. As an ABCS course, students will also volunteer in a volunteer organization of their choice in the Philadelphia area, conduct anthropological research on the organization, and suggest ways that the anthropological approach might support the efforts of the organization.
Course not offered every year
Also Offered As: ANTH 609
Activity: Seminar
1.0 Course Unit

ANTH 307 Contemporary Native Americans
This course examines the social and political lives of contemporary Native American Indians in the United States and Canada. Topics include: Indigenous identity; homelands and natural resources; popular culture and media; Indigenous arts and cultural expression; museum representations; athletics; gender relations; tribal recognition and sovereignty; and resistance movements. We will consider the origins of federal programs and legislation that have become essential to the protection of Native American freedoms. Students can expect to gain an appreciation of the complexity and cultural diversity of Native communities and tribal nations and insights into their interactions with other cultures over time.

Activity: Lecture
1.0 Course Unit
ANTH 308 Ethnohistory of the Native Northeast
Ethnohistory is a multi-disciplinary form of ethnographic study and documentary research that employs both anthropological and historical approaches. This course examines the foundations of the ethnohistorical method as a means to interpret cross-cultural colonial interactions and conflicts, and to better understand the complex histories of Native American Indian peoples from Pennsylvania and northward and eastward. Students will develop skills and strategies for interpreting and contextualizing primary and secondary source materials, oral traditions, colonial records, historical maps, and material culture. Hands-on study will include visits to local archives and historical sites to view relevant documents and landscapes.
Taught by: Bruchac
Course not offered every year
Activity: Seminar
1.0 Course Unit

ANTH 309 Psychoanalysis and Anthropology
This course will introduce students to the rich literature that has grown up around the encounter between psychoanalysis and anthropology, from totem and taboo, to studies of the Oedipus complex, child-rearing practices, ritual symbolism, mythology, and dreams. The class will also look to the future, endeavoring to examine as well such issues as the role of computers (are they self objects?) and the internet (including such online games as 'Second Life'), dreams in space alien abduction narratives, sexuality in advertising, political psychology, and other contemporary issues. This course counts towards the Psychoanalytic Studies (PSYS) Minor.

Also Offered As: ANTH 519
Activity: Seminar
1.0 Course Unit

ANTH 310 Transdisciplinary Environmental Humanities
Emergent transdisciplinary fields, such as the environmental humanities, reflect a growing awareness that responses to contemporary environmental dilemmas require the collaborative work of not only diverse scientists, medical practitioners, and engineers, but also more expansive publics, including artists, urban and rural communities, social scientists, and legal fields. This course is inspired by the need to attend to environmental challenges, and their health, justice, and knowledge production implications, as inherently social concerns. The class is co-taught by faculty from the School of Arts and Sciences and the School of Medicine, and will address the challenges and possibilities of working across disciplinary boundaries, building collaborative affinities, and negotiating frictions between diverse methodologies and epistemological approaches. Dr. Kristina Lyons from the Department of Anthropology brings years of experience collaborating with soil scientists, small farmers, indigenous communities, lawyers, and judges in Colombia on watershed restoration projects, soil degradation, toxicity, and the implementation of socio-ecological justice. Dr. Marilyn Howarth is a medical doctor from the Center of Excellence in Environmental Toxicology of the School of Medicine and has experience engaging the public, legislators and regulators around environmental health issues affecting the quality of air, water, soil and consumer products. Through their different lenses, they will foster interdisciplinary environmental collaboration and scholarship by engaging students in discussions and research that bring together the arts and sciences regarding issues of urban air pollution, soil remediation, deforestation, and water contamination, among other environmental health problems. This inaugural course seeks to explore environmental humanities on the global scale. Using Dr. Lyons' deep insight and valuable connections to communities in Colombia, we will explore the experience of environmental degradation, opportunities and challenges for mitigation, and socio-environmental health implications there while placing these issues in conversation with U.S. public health, regulatory and political frameworks and community experiences on similar issues. A comparative exploration of environmental justice in both Colombia and the U.S. will be infused into much of the discussion. This class offers a unique opportunity for students from engineering, natural and social sciences, humanities and the arts to learn to converse and collaborate around pressing socio-environmental and public health issues.

1.0 Course Unit
ANTH 315 Kinship and Connectivity in the Roman World
An individual’s life course is often reflected, enhanced, and defined by their relations to other individuals. This course will investigate the concept of kinship in the Roman world through textual, visual, and archaeological evidence. We will explore relationships at all levels of society from the imperial family to the slaves and freedmen who were part of larger households, in order to understand how different relationships shaped and structured interactions in Roman society. Together, we will explore the following questions: how were relationships and bonds represented in the ancient world? What structures were in place for families to perpetuate themselves through biological or adoptive means? How could non-Roman citizens create family connections through formal and informal channels? How could relationships be celebrated in life and commemorated in death? We will use written evidence from ancient historians, visual evidence like the Altar of Peace, and archaeological evidence from cemeteries to examine how Roman notions of kinship shaped life and death in different social milieus.

Also Offered As: AAMW 514, ANCH 315, CLST 315, CLST 515
Activity: Seminar
1.0 Course Unit

ANTH 317 The Politics of Matter and the Matter of Politics
What is nature? What is culture? What kinds of practices and actors constitute what we call science? Who and what constitute the sphere we refer to as politics? A number of theoretical developments in cultural anthropology, political theory, critical geography, and feminist science studies have problematized the modernist ontological divide between Nature and Culture and a whole series of binary oppositions (such as objects/subjects, matter/form, bio/geo) that follow from it. Taking inspiration from this literature and placing it in conversation with Native and Indigenous scholarship and a series of contemporary socio-environmental struggles occurring in Latin America and beyond, this course will discuss the conceptual-methodological tools that a concern with politics of matter has generated. The epistemic and political implications of these tools go beyond their analytical usefulness as innovative devices to explore novel phenomena. They complicate well-established fields of inquiry, such as political ecology and economy, environmental studies, ethics, social justice, and modern politics; and, indeed, the singular ontology that these fields may inadvertently and explicitly sustain. We will explore how it is that things, stuff, matter, ‘nature’ came to fall outside modern politics as such, and the kinds of ethico-political repercussions that problematizing this division may produce.
Taught by: Kristina Lyons
One-term course offered either term

Activity: Seminar
1.0 Course Unit

ANTH 322 Bodies of Water: Conflicts and Collaborations around Wetlands and Watersheds
In less than half a decade, the idea that ‘nature’ possesses inalienable rights akin to human rights has gone from a strictly theoretical concept to the basis of policy changes in several countries and U.S. municipalities. This seminar will introduce students to current legal, political, ethical, and practical debates about the implementation and impacts of granting ‘rights to nature’ in these different contexts with a particular focus on the rights associated with bodies of water. We will begin by examining how the Community Environmental Legal Defense Fund (CELDF) supported citizens of Tamaqua, Pennsylvania to write the world’s first local ‘rights of nature’ ordinance. We will then go on to compare the politics of ‘rights of nature’ cases in Ecuador, New Zealand, India, and Colombia paying special attention to the cases of rivers. We will focus on the ways biocentric constitutional moves may transform concepts and understandings of environmental justice and socio-environmental conflicts. In particular, how the recognition of ‘nature’ as a victim of war may transform understandings of violence, and hence, approaches to constructing peace and engaging and reparative and restorative practices within the larger framework of planetary and community efforts to mitigate climate change, deforestation, and the degradation of watersheds and wetlands. Lastly, we will explore the possibilities and tensions between community decision-making, the ‘rights of nature,’ and national level policies regarding the intensification of extractive activities and questions of territorial ordinance as they relate to multiple bodies of water.

Course not offered every year
Activity: Seminar
1.0 Course Unit

ANTH 323 Origins of Art / Origins of Writing
Each of the earliest systems of writing had intimate and enduring ties to pictorial traditions. This seminar addresses the fundamental relationship between texts and visual imagery in the Mesopotamian, Egyptian, Chinese, and Maya traditions. The class will take a comparative approach to examine the parallel development of scripts and images, extending from their earliest beginnings to their on-going lives as mature systems. As the individual scripts became more capable of representing speech, the subject matter, composition, and function of images changed, and one goal of this class is to identify these processes. Emphasis will be put on seeing text and image as collaborative and interactive constructions, in which parts of a single message can be encoded and presented in different ways. The class will make extensive use of the collections and the curatorial expertise of the Penn Museum.

ANTH 325 Who Owns the Past? Archaeology and Politics in the Middle East
This course explores the role of cultural heritage and archaeological discoveries in the politics of the Middle East from the nineteenth century to the recent aftermath of the Arab Spring. We will explore how modern Middle East populations relate to their pasts and how archaeology and cultural heritage have been employed to support particular political and social agendas, including colonialism, nationalism, imperialism, and the construction of ethnic-religious identities. Although it was first introduced to the Middle East as a colonial enterprise by European powers, archaeology became a pivotal tool for local populations of the Middle East to construct new histories and identities during the post-World War I period of intensive nation-building after the dissolution of the Ottoman Empire. To understand this process, we will first look at the nineteenth-century establishment of archaeology by institutions like the Penn Museum. Then we will move on to individual case studies in Turkey, Iraq, Egypt, Israel/Palestine, Iran, and the republics of former Soviet Transcaucasia to look at the role of archaeology and cultural heritage in the formation of these countries as modern nation-states with a shared identity among citizens. We will conclude with an examination of the impact of the Islamic State on material heritage in Syria and Iraq, the changing attitudes of Middle Eastern countries toward foreign museums, and the role of UNESCO in defining Middle Eastern sites of world heritage. The course will also include field trips to the Penn Museum.

ANTH 328 Performing Culture, Native American Arts
This course analyzes cultural performances as sites for the formation, expression, and transmission of social identity. Students will read ethnographies, critiques, and reports of performance genres including ritual, theater, music, dance, art, and spoken word, with a particular focus on Native American and Indigenous arts and expressions. Topics include: expressive culture as survivance; debates around authenticity and invented traditions; public identity and sexuality; political resistance; the effects of globalization; transnationalism and hybridity; cultural appropriation; and the transformation of folk performances in the wake of modern media.

ANTH 329 Psychoanalytic and Anthropological Perspectives on Childhood
How do people become who they are, both similar to others and uniquely individual? How might these similarities and differences be shaped by childhood experiences in family, community, and societies around the world? How do children develop emotionally? Morally? What features of human development, expression of emotions, and relational patterns are universal for our species? What features are not universal? And what is and is not known about these questions? In this course, we will consider these and many other questions. We will read about and discuss complex and dynamic interactions between culture and individual psychology, and between nature and nurture from birth to adulthood. We will carefully examine various phases of human development as described by psychoanalysts and anthropologists. The course includes anthropologic and psychoanalytic readings and videotapes, as well as literature, fairy tales, and mythologies from cultures around the world.

The instructors are both psychoanalysts, one a psychiatrist and one a pediatrician. The course counts towards the Psychoanalytic Studies (PSYS) Minor.

ANTH 332 Medicine and the Language of Pain
Pain can be a particularly complex and morally charged object of biomedicine. The interiority of pain- the deeply private nature of pain experience- complicates its communication. Pain, particularly its chronic form, defies purely biological explanation, troubling fundamental biomedical distinctions between mind and body, subject and object. And decisions about analgesia are fraught, as doctors and patients pursue relief from pain amidst a widespread epidemic of opiate abuse that infuses their interaction with concerns about addiction, drug seeking, culpability, and responsibility. This seminar seeks to shed light on these issues by using concepts from linguistic and medical anthropology to explore how we experience, think about, and talk about pain. As an interdisciplinary endeavor, the course is of relevance not only to anthropology but also to medical sociology, medical ethics, public health, health policy, and science and technology studies.

Taught by: Justin Clapp
Course not offered every year
Activity: Seminar
1.0 Course Unit
ANTH 334 Feminist Ethnography
This course will investigate the relationships among women, gender, sexuality, and anthropological research. We will begin by exploring the trajectory of research interest in women and gender, drawing first from the early work on gender and sex by anthropologists like Margaret Mead and Ruth Benedict; moving through the 1970s and 1980s arguments about gender, culture, and political economy; arriving at more current concerns with gender, race, sexuality, and empire. For the rest of the semester, we will critically read contemporary ethnographies addressing pressing issues such as nationalism, militarism, neoliberalism and fundamentalism. Throughout, we will investigate what it means not only to 'write women's worlds', but also to analyze broader socio-cultural, political, and economic processes through a gendered lens. We will, finally, address the various ways feminist anthropology fundamentally challenged the discipline's epistemological certainties, as well as how it continues to transform our understanding of the foundations of the modern world. Prerequisite: Should have some functional knowledge of Cultural Anthropology.

ANTH 336 The Peopling of the Americas
The peopling of the Americas is a question that has intrigued scholars and laymen for over 500 years. The origin of Native Americans was also a seminal issue during the emergence of American Anthropology as a discipline at the turn of the 20th century, with research on this topic animating current studies of ethnohistory, indigenous archeology, post-colonialism and repatriation. The proposed course will review the scholarship dedicated to describing this long history from an interdisciplinary perspective. It will explore their roots in the expansion of modern humans into Eurasia, evaluate the new archeological and genetic research that has fundamentally altered our understanding of the migration history and diversity of indigenous peoples in the American continents, and examine issues of identity, ethnicity and cultural heritage in contemporary Native populations that extend from this knowledge. The course will further draw on the instructor's fieldwork experience working with indigenous communities in Alaska, Canada, the Lower 48, Mexico and the Caribbean, as well as native Siberians in Russia, where the cultural and biological roots of ancestral Native American populations lie.

ANTH 337 Applying Anthropology Methods in Policy and Practice
This course will introduce students to applied anthropology methods for doing research that can change policy and practices. Examples of policy and practice change include clinical practices in health care settings, social welfare policy, and legal advocacy. Students will be trained in multiple anthropology research methods, including brief participant-observation, presentation of self in the field, entering the field in diverse cultural environments, qualitative interviewing, life story interviewing, and ethnographic content analysis of textual material. Students will also learn how to use NVivo software for analyzing qualitative and some quantitative data from their field notes, interviews, and analysis of popular articles/websites. Finally, students will practice writing products for non-academic audiences, such as policymakers, the media, and the general public. The course will emphasize using anthropology research methods to address real-world problems in policy and practice in diverse cultural contexts. This course is a service learning class affiliated with the Netter Center and a Benjamin Franklin Scholars course.
Taught by: Sahota
Activity: Seminar

ANTH 342 Dress and Fashion in Africa
Throughout Africa, social and cultural identities of ethnicity, gender, generation, rank and status were conveyed in a range of personal ornamentation that reflects the variation of African cultures. The meaning of one particular item of clothing can transform completely when moved across time and space. As one of many forms of expressive culture, dress shape and give forms to social bodies. In the study of dress and fashion, we could note two distinct broad approaches, the historical and the anthropological. While the former focuses on fashion as a western system that shifted across time and space, and linked with capitalism and western modernity; the latter approach defines dress as an assemblage of modification the body. The Africanist proponents of this anthropological approach insisted that fashion is not a dress system specific to the west and not tied with the rise of capitalism. This course will focus on studying the history of African dress by discussing the forces that have impacted and influenced it overtime, such as socioeconomic, colonialism, religion, aesthetics, politics, globalization, and popular culture. The course will also discuss the significance of the different contexts that impacted the choices of what constitute an appropriate attire for distinct situations. African dress in this context is not a fixed relic from the past, but a live cultural item that is influenced by the surrounding forces.

Also Offered As: AFRC 324, ARTH 324
Activity: Lecture
1.0 Course Unit
ANTH 344 Documentary Experiments in Urban Research

What can video art, experimental documentary, and sensory ethnography teach us about the practice of urban research? How can we build on the traditions of first person and essay cinema to produce compelling documents of our own questions and findings? This course surveys a range of film and video works on themes such as the production of space, urban nature, infrastructure, and collective memory. Taken as a genre, these time-based works provide a powerful model for training scholars' observational skills, conceptualizing scales of analysis, and engaging broader publics in urban research. In this course, we will explore this audiovisual genre in dialogue with selected theoretical, ethnographic, and case study readings in urban studies. As an advanced theory-practice course, it combines seminar readings and discussion with regular screenings and a series of workshops on photo, video, audio, and postproduction skills. The course will provide a general fluency in contemporary urban research, with particular emphasis on urban political ecology. In dialogue with this scholarship, students will develop and situate their own experimental documentary research projects.

ANTH 346 GIS for the Digital Humanities and Social Sciences

This course introduces students to theory and methodology of the geospatial humanities and social sciences, understood broadly as the application of Geographical Information Systems (GIS) and spatial analysis techniques to the study of social and cultural patterns in the past and present. By engaging with spatial theory, spatial analysis case studies, and technical methodologies, students will develop an understanding of the questions driving, and tools available for, humanistic and social science research projects that explore change over space and time. We will use ESRI's ArcGIS software to visualize, analyze, and integrate historical, anthropological, and environmental data. Techniques will be introduced through the discussion of case studies and through demonstration of software skills. During supervised laboratory sessions, the various techniques and analyses covered will be applied to sample data and also to data from a region/topic chosen by the student.

Course usually offered in fall term
Also Offered As: AAMW 646, NELC 346, NELC 646
Activity: Lecture
1.0 Course Unit

ANTH 347 Anthropology of Corporations

Modern business corporations can be characterized as having their own internal cultures, more or less distinct from one another. They also exist within encompassing cultures and cultural flows. At the same time, corporations are producers and disseminators, and thus have effects on their surrounding environments, effects that extend from the local to the global. This course examines modern corporations from these three perspectives through theoretical and ethnographic readings, guest speakers from the corporate world, and independent research conducted by the students. Course requirements include student presentations of their research and readings; one or more take-home exams; and a final research paper.

ANTH 350 Archaeology of Civilizations in South America

This course provides a basic survey of the archaeology of civilizations of South America (the Andean region of the central highland and coastal areas that today are Peru and Bolivia and parts of Ecuador, Chile, and Argentina). Topics include the history of South American archaeology, peopling of the continent, origins and evolution of agriculture, early village life, ceremonial and domestic architecture, prehistoric art and symbolism, Andean cosmology and astronomy, indigenous technology, the historical ecology of landscapes, outside contacts and relationships, economics and trade, social and political structure, state formation and urbanism, and early contacts with Europeans. The lectures and readings are based on recent archaeological investigations and interpretations combined with appropriate analogy from ethnohistory and ethnography. The prehistory of the Amazonian lowlands and northern South America will be covered in other courses.

ANTH 351 Women Making History: The Penn Museum and the Centennial 2020

The year 2020 marks the 100th anniversary of the 19th Amendment to the U.S. Constitution, which declared that the right of citizens to vote ‘shall not be denied or abridged by the United States or by any State on account of sex’. To mark this centennial - to both celebrate it and critically assess its impact on American society - we will investigate the history of women at the Penn Museum as archaeologists, ethnographers, epigraphers, philanthropists, and more. At the same time, we will examine material in the Penn Museum that women collected, donated, or studied. Our goal will be to produce original research that may contribute to future exhibits and publications as well as to broader public forums. Sponsored by the Department of Near Eastern Languages and Civilizations, our seminar will focus heavily on western Asia, southeastern Europe, and North Africa - all zones that scholars have variously associated with the Near East or Middle East, and where the Penn Museum has been active since its foundation in 1887. To situate the Penn Museum and its collections within a global and comparative frame, we will also study select women who made major scholarly contributions to other parts of the world such as the Americas and Oceania. Among the figures we will study are Sarah Yorke Stevenson (Egypt), Katharine Woolley (Mesopotamia/Iraq), Harriet Boyd Hawes (Ottoman Crete and Greece), Florence Shotridge (Alaska), Zelia Nuttall (Mexico and Russia), and Tatiana Proskouriakoff (Guatemala). We will venture into many different kinds of history. In regional terms, our scope will be transnational and international: we will cover the United States and the Middle East in the wider world. In thematic and methodological terms, we will approach our subject through biography, oral history, and microhistory; material history and museum studies; cultural and intellectual history; women’s and gender studies; and the history of academic disciplines, especially archaeology and anthropology. Some background in Middle Eastern history; or Anthropology; or Women’s History; or Museum Studies recommended.

ANTH 354 Art, Medicine, & Magic: Bodily Remedies

In this activity-centric course, you will explore art, medicine, and magic as entangled approaches for healing human bodies across time, space, and societies. At first glance, artists, doctors, and religious leaders may seem to address questions about bodies and healing in very different ways. Yet, in practice, art, magic, and medicine have been in deep conversation with one another for millennia. 4,000 years ago in Mesopotamia, medical doctors were professionals who had offices, hospital beds, and pharmacological and surgical equipment expertise, but they often worked hand in hand with diviners and exorcists. In rural Haiti today, Haitian Vodou priestesses collect herbs, craft sculptures, and sing as they clean wounds and dispense antibiotics within the course of a single ‘remed’ (remedy). In the United States, megachurches send thousands of doctors on evangelical medical missions each year, while in Colombia, contemporary artists are called on to assuage profound social trauma related to decades of military conflict. Examples like these show that art, magic, and medical practice have long been entangled technologies; sometimes working together, sometimes at odds with one another, these practices have always been in dialog about what ‘healing’ is and how it can be achieved. Attending to these entanglements this course asks ‘what does healing look like and feel like - in what ways do humans transform affliction?’ Together, we will investigate how everyday bodily experiences of ‘wellbeing’ and ‘illness’ are configured through art, magic, and medical practices across human communities, shaping how people understand and manage disorders from COVID-19 to schizophrenia, from ancestral trauma to breast cancer. Throughout the course, you will use ethnographic case studies & in-class activities to work through three aspects of the core class question: 1) how do art, magic, and medicine work in communities? 2) how are they experienced in communities (who has access to what kind of healing and who doesn’t have access; who can be a healer and who can’t be; what should and does healing/sickness feel like?) 3) how do they approach inequalities? (e.g. how and why are illnesses unequally distributed; what illnesses matter more (and less) than others; which communities should be saved (and which sacrificed).

Activity: Seminar
1.0 Course Unit
ANTH 359 Nutritional Anthropology
The course is an introduction to nutritional anthropology, an area of anthropology concerned with human nutrition and food systems in social, cultural and historical contexts. On the one hand, nutritional anthropologists study the significance of the food quest in terms of survival and health. On the other hand, they also know that people eat food for a variety of reasons that may have little, if anything, to do with nutrition, health, or survival. While the availability of food is dependent upon the physical environment, food production systems, and economic resources, food choice and the strategies human groups employ to gain access to and distribute food are deeply embedded in specific cultural patterns, social relationships, and political and economic systems. Thus, nutritional anthropology represents the interface between anthropology and the nutritional sciences, and as such, can provide powerful insights into the interactions of social and biological factors in the context of the nutritional health of individuals and populations. Because food and nutrition are quintessential biocultural issues, the course takes a biocultural approach drawing on perspectives from biological, socio-cultural and political-economic anthropology. Course content will include: a discussion of approaches to nutritional anthropology; basics of human nutrition; food systems, food behaviors and ideas; methods of dietary and nutritional assessment; and a series of case studies addressing causes and consequences to nutritional problems across the world.
Taught by: Hoke
Course not offered every year

Activity: Lecture
1.0 Course Unit

ANTH 361 Global Food Security
This is an interdisciplinary course on the problems of food demand and consumption, production and supply in our increasingly globalized and urbanizing world. Special attention will be given to the intersections of current technologies of food production, current nutritional problems, environmental change and resource degradation, and the changing quality of human social life under globalization. Where and how will sufficient nutritious food be produced sustainably and how can the politics and economics of equitable distribution in such large urban populations be achieved? (Previously ANTH 561)

ANTH 362 Intro to Digital Archaeology
Digital methodologies are now an integral part of archaeological practice and archaeologists are now expected to possess basic computing skills and be familiar with a range of data collection, analysis and visualization techniques. This course will use case studies and applied learning opportunities centered on a course project to explore a broad array of digital approaches in archaeology. The technological underpinnings, professional procedures, and influences on archaeological practice and theory will be discussed for each method covered in the course. Applied learning opportunities in digital data collection methods will include aerial and satellite image analysis, global navigation satellite system (GNSS) survey, 3D scanning methods, close-range photogrammetry, and near-surface geophysical prospection. Students will also have opportunities for practical experience in digital database design and management, geographic information science (GIS) and 3D visualization. Students will communicate the results of the course project in a digital story that will be presented at the end of the term. Prior archaeological classwork and/or experience preferred.

Activity: Lecture
1.0 Course Unit

ANTH 368 Kinesthetic Anthropology
This class, team-taught by CEE Visiting Fellow Reggie Wilson and Deborah Thomas, investigates various forms of contemporary performance in relationship to Africanist forms and functions of dance, movement and action. We will concern ourselves with how the body knows, and with how we learn to identify the structures of movement that provide context, meaning and usefulness to various Africanist communities across time and space. Grounding ourselves within a history of ethnographic analyses of the body in motion, and within Africana theorizing about the affective power of the body, we will consider what people are doing when they are dancing. In other words, we will train ourselves to recognize the cultural values, social purposes, and choreographic innovations embedded in bodily action and motion. While we will attend to these phenomena in a range of locations throughout the African diaspora, we will also highlight aspects of the Shaker and Black Shout traditions in Philadelphia. The course will be divided between discussions centered on close reading of primary and secondary material (both text and video) and creative writing/movement exploration (no previous movement experience necessary).

Activity: Seminar
1.0 Course Unit
ANTH 377 Black Speculative Futures
Why do black cultural producers turn to the speculative? What, in turn, is speculative about blackness? These questions frame this seminar’s exploration of how black artists, theorists, and activists imagine different futures, often in the service of critiquing power asymmetries and creating radical transformation in the present. We will explore how the speculative works differently across black literature, visual culture and performance. Additionally, inspired by the multi-disciplinary work that we encounter in the course, we will experiment with crafting our own embodied speculative art in order to better understand its function as both art practice and politics. The course will be divided between discussions centered on close reading of primary and secondary material and creative writing/movement exploration (no previous movement experience necessary). Occasional guest lectures with visiting artists will provide additional fodder for our critical and creative work.

Activity: Seminar
1.0 Course Unit

ANTH 386 Desire and Demand II: Culture, Production, and Consumption in the Global Marketplace
The goal of this course is to understand and to investigate both historical and contemporary issues related to a culture of consumption. Reading topics cover both contemporary and scholarly issues in cultural anthropology, popular culture, consumer behavior, off-shore production, social networking, media and communications, financial and real estate markets and marketing. Class distinctions are equally interdisciplinary as we focus on investigating and identifying critical global/local linkages. We analyze the various ways in which Philadelphia and other ‘global cities’ are competing for consumer revenues. We ask what factors have led contemporary society reaching its current stage of mass consumption and how have certain goods and services been reconfigured, packaged or re-packaged to attract new consumers. In order to better understand the link between consumption and production factors we explore the relationship between outsourcing and/or offshore production and modern consumption. Approximately sixty percent of the seminar takes place in the classroom and will include lecture, class discussion, and films. The remaining portion of the class meetings will involve local and regional travel. Research assignments emphasize the use of anthropological participant-observation techniques to investigate the relationships between culture and contemporary mass consumption within the contexts of re-gentrification, urbanization, and globalization.
Taught by: Diggs-Thompson
Also Offered As: ANTH 586
Activity: Seminar
1.0 Course Unit

ANTH 391 Multi-Modal Ethnography: Anthropology Beyond Text
What does the digital age mean for humanistic, social scientific, and professional inquiry and practice? How do non-text based formats - such as film, dance and other kinds of performance, creative writing, and soundscapes - transform both the processes and products of research? How do they inform and transform our disciplines, and what might this mean for the communities with which we work? This advanced undergraduate seminar will address these (and other related) questions. Taught by the invited Fellows from the Center for Experimental Ethnography, this course will take shape differently each semester according to the Fellow’s area of expertise and practice. Students will be encouraged to explore alternative formats of representation that move beyond text while still being grounded in ethnographic research, and they will develop skills in relevant media. https://www.sas.upenn.edu/anthropology/courses/topics-courses

One-term course offered either term
Activity: Seminar
1.0 Course Unit

ANTH 402 Applied Research Skills in Global Community Health
While political borders remain, social and human borders fall with the increasing movement of people, ideas, and resources across geographies. What is global becomes local. While biomedical and counting sciences advance, the human experience and influence remain core to understanding behavior, beliefs, and awareness. What is human remains paramount. The Maya Western Highlands of Guatemala are undergoing health changes (trauma, maternal-infant health, diabetes, mental health) through economic development and continued human migration to and from the US. The Cobbs Creek neighborhood in West Philadelphia is also facing epidemics of non-communicable diseases. In this context, Applied Skills in Global Community Health will provide academic and professional skills development in comparing the role of culture, history and politics in the health of a population in transition (demographic, nutritional, epidemiologic, economic) in both settings. Classroom work will occur in the spring of each year combined with a short (1 wk) field experience in the Western Highlands of Guatemala. In addition students will examine health and community research in the Cobbs Creek neighborhood of West Philadelphia. Students may substitute 10 week field work as part of the companion course ANTH 403 for the 1 week experience.
Taught by: Barg/Bream
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ANTH 403 Field Experience in Global Community Health
The Maya Western Highlands of Guatemala are undergoing health changes (trauma, maternal-infant health, diabetes, mental health) through economic development and continued human migration to and from the US. The communities of Santiago Atitlan, Solola, San Juan Sacatepequez, and Coatepeque have community based infrastructures (public health clinics, private NGOs, and research projects) that work to address these health changes. In this context, the Field Experience in Global Community Health will provide applied academic and professional skills development in data collection, analysis, and reporting. Field work will occur in the summer of each year combined with a campus based skills development experience.
Taught by: Barg/Bream
Course usually offered in fall term
Activity: Independent Study
0.5 Course Units
ANTH 404 Introduction to the Human Skeleton
An introduction to the anatomy and biology of the human skeleton. Laboratory work will be supplemented by lectures and demonstrations on the development structure, function, and evolution of the human skeleton.
Taught by: Monge
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANTH 407 Human Evolution
An examination of fossils and other evidence documenting human evolution. Lectures and readings are supplemented with slide and fossil reproduction materials.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANTH 415 Archaeology of Animals
This course introduces the study of animal bones from archaeological sites. Faunal analysis is an interdisciplinary science which draws methods from archaeology, biology, and paleontology. Bones, shells, and other remains yield evidence for the use of animals by humans, and evidence for the biology of animals and for past environments. The course will focus on research approaches to important transitions in human-animal relationships: the development of human hunting and fishing, animal domestication, early pastoralism, and the emergence of market economies in animal products. Class presentations will include lectures and discussion concerning research design and archaeological case material, with additional videos, sidework with field and laboratory equipment, and supervised work identifying and describing archaeological materials from the University Museum's collections. This class is taught in the Zooarchaeology Laboratory of the Center for the Analysis of Archaeological Materials.
Taught by: Moore
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANTH 419 Mining Archaeology
In ancient times, materials such as stone and metals were used to produce artifacts including pigments, jewelry, tools, and weapons. This course is designed to introduce students to research on the early exploitation of mineral resources. Which techniques were used to access and process raw materials in antiquity? Which archaeological methods can be used to investigate these features and artifacts? The course will provide worldwide examples through time, ranging from Stone Age flint mining, Iron Age rock salt mining to Medieval silver mining. Ethnographic studies and hands-on activities will contribute to our understanding of mining in archaeology, and artifacts from the Museum's collections will undergo scientific analysis in the Center for the Analysis of Archaeological Materials. Prerequisite: Desired but not mandatory.
ANTH 221/521 Material World in Archaeological Science

Course usually offered in spring term
Also Offered As: CLST 419, NELC 419
Activity: Seminar
1.0 Course Unit

ANTH 421 Anthropology In and Of Environmental Health
Anthropology provides a critical lens through which we can understand the multiple ways that environmental toxins affect human health and well-being. In this course, we will explore ways that politics, economics, social dynamics and communication strategies affect the uneven distribution of risk from environmental hazards. We will examine issues related to community engagement, environmental justice, risk perception, citizen science and environmental stigma. Students will have an opportunity to visit a local Superfund site.
Taught by: Barg
Course offered fall; odd-numbered years
Activity: Seminar
1.0 Course Unit

ANTH 424 Political Ecologies of the City
Cities have been centres of aspiration for much of human history. They have provided a limited yet critical focus for social mobility, both in political and economic terms. As large agglomerations of political and economic power, urban residents have also consumed growing proportions of the earth's mineral, food and water resources from the national (and international) body. The contradictory aspects of urban aspiration frame this course. Drawing on the frameworks of political ecology, in this course we think through the cities of the global south to understand how cities are made. To do this, we will first focus on the construction on the liberal city and how it has been occupied, both formally and informally, by urban subjects in most of the world. Next, we will learn about projects through which natural resources have been directed to and through the city. Finally we will conclude with a particular attention to how urban resources are claimed by marginalized migrants, and the particular sorts of governance institutions these practices engender.
Taught by: Anand
Course not offered every year
Also Offered As: URBS 424
Activity: Seminar
1.0 Course Unit

ANTH 429 Anthropology of the Environment
This seminar draws from social scientific and scientific literatures to explore current themes in the anthropology of the environment. We will investigate the links between climate change science and social science, and the ways in which anthropologists can contribute via in-depth fieldwork methodology and long engagement in issues of society-environment interactions. We will also explore how potential environmental, social, and biological impacts of global warming on the future are being assessed through conceptual paradigms linked to risk, probability, scenario forecasting, tipping points, planetary boundaries, and extinction.
Taught by: Petryna
Activity: Seminar
1.0 Course Unit

ANTH 433 Andean Archaeology
Consideration of the culture history of the native peoples of the Andean area, with emphasis on the pre-conquest archaeology of the Central-Andean region.
Taught by: Erickson
Course not offered every year
Also Offered As: LALS 433
Activity: Lecture
1.0 Course Unit
**ANTH 440 Plants and Society**
Interactions between humans and the living landscape around us have played - and continue to play - a fundamental role in shaping our worldview. This course is designed to introduce students to the diverse ways in which humans interact with plants. We will focus on the integration of ethnographic information and archaeological case studies in order to understand the range of interactions between humans and plants, as well as how plants and people have profoundly changed one another. Topics will include the origins of agriculture; cooking and plant processing; human health and the world of ethnomedicine; and poisonous and psychoactive plants. We will examine ancient plant material firsthand at the Center for the Analysis of Archaeological Materials (CAAM) and will handle botanical ecofacts from the Penn Museum’s collections. Students will also carry out a substantial research project focused on an archaeological culture and plant species of their own interest.
Taught by: WHITE
Course not offered every year
Also Offered As: CLST 441
Activity: Seminar
1.0 Course Unit

**ANTH 444 Human Growth and Development**
In this course we will examine key issues and the processes involved in human growth and development. By their very nature, growth and development are biocultural processes that require an integrated analysis of social construction and biological phenomena. As such, we will incorporate insight from evolutionary theory, ecology, developmental biology, psychology, human biology, and cultural anthropology in our study of growth and development. Such an integrated perspective will help students to see that development is not just a biological unfolding from birth through adolescence and adulthood. Rather, development is best understood as process that is deeply intertwined with the environment within which the organism develops. Additionally, we will apply these biocultural and socio-ecological insights to emerging health challenges associated with various developmental stages. The study of human growth and development is useful to all students in biological, health-related, and social sciences. Course enrollment is restricted to juniors, seniors, and graduate students only.
Taught by: Hoke
Course not offered every year
Activity: Seminar
1.0 Course Unit

**ANTH 451 Historical Archaeology**
Archaeology of the Modern World from the Columbian voyage (1492) to the 20th century. Topics such as the rise of early modern Europe, European exploration and colonization, African American Archaeology, Asian American Archaeology, the rise of colonial society, contact with native peoples, the Industrial Revolution, and the archaeology of the 20th century will be covered.
Taught by: Schuyler
Course not offered every year
Also Offered As: ANTH 751
Activity: Seminar
1.0 Course Unit

**ANTH 454 Quantitative Analysis of Anthropological Data**
This course is designed to provide students with a basic understanding of how to work with and present quantitative data. Topics include graphical display of numerical data, probability, sampling, descriptive and inferential statistics (parametric and non-parametric two-and three group tests, regression and correlation). Using examples drawn from the social sciences and anthropology, the focus is on teaching the logic behind quantitative arguments and statistical tests, rather than on the mathematical formulas, making the course especially relevant for students who do not have a strong background in mathematics. This course fulfills the Colleges Quantitative Data Analysis requirement.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

**ANTH 508 Conservation of Archaeological Sites and Landscapes**
This seminar will address the history, theories, principles, and practices of the preservation and interpretation of archaeological sites and landscapes. The course will draw from a wide range of published material and experiences representing both national and international contexts. Topics will include site and landscape documentation and recording; site formation and degradation; intervention strategies including interpretation and display, legislation, policy, and contemporary issues of descendant community ownership and global heritage. Depending on the site, students will study specific issues leading toward the critique or development of a conservation and management program in accordance with guidelines established by ICOMOS/ ICAHM and other official agencies.
One-term course offered either term
Also Offered As: HSPV 747
Activity: Seminar
1.0 Course Unit

**ANTH 511 Ethics, Archaeology, and Cultural Heritage**
This seminar will explore some of the most important issues that are now a central part of archaeological, anthropological and historical research throughout the world. The identification and control of cultural heritage is a central part of the framework for research within other communities. Issues for this course will also include cultural identity, human rights, repatriation, colonialism, working with communities and many other topics. Field research today must be based upon a new series of ethical standards that will be discussed and examined within this class. Major topics include: cultural heritage - definitions and constructs, cosmopolitanism and collecting, archaeology and looting, cultural heritage preservation, museums - universal and national, museum acquisition policies, cultural identity, international conventions (including underwater issues), national laws of ownership, community based development, cultural tourism, development models, and human rights.
Taught by: Leventhal
Course not offered every year
Also Offered As: LALS 511
Activity: Seminar
1.0 Course Unit
ANTH 514 Petrography of Cultural Materials
Introduction to thin-section petrography of stone and ceramic archaeological materials. Using polarized light microscopy, the first half of this course will cover the basics of mineralogy and the petrography of igneous, metamorphic and sedimentary rocks. The second half will focus on the petrographic description of ceramic materials, mainly pottery, with emphasis on the interpretation of provenance and technology. As part of this course, students will characterize and analyze archaeological samples from various collections. Prior knowledge of geology is not required.
Taught by: Boileau
Course not offered every year
Also Offered As: AAMW 512, CLST 512
Activity: Seminar
1.0 Course Unit

ANTH 519 Psychoanalysis and Anthropology
This course will introduce students to the rich literature that has grown up around the encounter between psychoanalysis and anthropology, from totem and taboo, to studies of the Oedipus complex, child-rearing practices, ritual symbolism, mythology, and dreams. The class will also look to the future, endeavoring to examine as well such issues as the role of computers (are they self objects?) and the internet (including such online games as ‘Second Life’), dreams in space alien abduction narratives, sexuality in advertising, political psychology, and other contemporary issues. This course counts towards the Psychoanalytic Studies (PSYS) Minor.
Taught by: Urban/Blum
Course not offered every year
Also Offered As: ANTH 309
Activity: Seminar
1.0 Course Unit

ANTH 521 Material World in Archaeological Science
By focusing on the scientific analysis of inorganic archaeological materials, this course will explore processes of creation in the past. ANTH 221/521 will take place in the Center for the Analysis of Archaeological Materials (CAAM) and will be team taught in three modules: analysis of lithics, analysis of ceramics and analysis of metals. Each module will combine laboratory and classroom exercises to give students hands-on experience with archaeological materials. We will examine how the transformation of materials into objects provides key information about past human behaviors and the socio-economic contexts of production, distribution, exchange and use. Discussion topics will include invention and adoption of new technologies, change and innovation, use of fire, and craft specialization.
Taught by: Boileau/Dibble/Jansen
Course not offered every year
Also Offered As: ANTH 221, ARTH 230, CLST 244, NELC 284, NELC 584
Activity: Lecture
1.0 Course Unit

ANTH 527 Cultural Heritage and Conflict
Intentional destruction of cultural heritage is designed to erase the presence of a people in history and has become an all too familiar feature of the devastation wrought by contemporary violence and ‘ethnic cleansing.’ Recent cases appear frequently in news headlines and include such well-known examples as the 2001 demolition of the Bamiyan Buddhas in Afghanistan, the 2012 destruction of Sufi shrines in Timbuktu, Mali, and the recent obliteration of historic sites across Syria and Iraq. This course explores this phenomenon by examining such questions as: Why is cultural heritage targeted in conflict? Under what circumstances? By whom? In so doing, we will engage with readings that discuss the historical development of the international laws and norms that aim to protect cultural heritage during conflict and examples successful and unsuccessful humanitarian interventions.
Taught by: Brian Daniels
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANTH 529 Psychoanalytic and Anthropological Perspectives on Childhood
How do people become who they are, both similar to others and uniquely individual? How might these similarities and differences be shaped by childhood experiences in family, community, and societies around the world? How do children develop emotionally? Morally? What features of human development, expression of emotions, and relational patterns are universal for our species? What features are not universal? And what is and is not known about these questions? In this course, we will consider these and many other questions. We will read about and discuss complex and dynamic interactions between culture and individual psychology, and between nature and nurture from birth to adulthood. We will carefully examine various phases of human development as described by psychoanalysts and anthropologists. The course includes anthropologic and psychoanalytic readings and videotapes, as well as literature, fairy tales, and mythologies from cultures around the world. The instructors are both psychoanalysts, one a psychiatrist and one a pediatrician. The course counts towards the Psychoanalytic Studies (PSYS) Minor.
Taught by: Blum/Shapiro
Course not offered every year
Also Offered As: ANTH 329
Activity: Seminar
1.0 Course Unit
ANTH 531 Women Making History: The Penn Museum and the Centennial 2020
The year 2020 marks the 100th anniversary of the 19th Amendment to the U.S. Constitution, which declared that the right of citizens to vote ‘shall not be denied or abridged by the United States or by any State on account of sex’. To mark this centennial - to both celebrate it and critically assess its impact on American society - we will investigate the history of women at the Penn Museum as archaeologists, ethnographers, epigraphers, philanthropists, and more. At the same time, we will examine material in the Penn Museum that women collected, donated, or studied. Our goal will be to produce original research that may contribute to future exhibits and publications as well as to broader public forums. Sponsored by the Department of Near Eastern Languages and Civilizations, our seminar will focus heavily on western Asia, southeastern Europe, and North Africa - all zones that scholars have variously associated with the Near East or Middle East, and where the Penn Museum has been active since its foundation in 1887. To situate the Penn Museum and its collections within a global and comparative frame, we will also study select women who made major scholarly contributions to other parts of the world such as the Americas and Oceania. Among the figures we will study are Sarah Yorke Stevenson (Egypt), Katharine Woolley (Mesopotamia/Iraq), Harriet Boyd Hawes (Ottoman Crete and Greece), Florence Shotridge (Alaska), Zelia Nuttall (Mexico and Russia), and Tatiana Proskouriakoff (Guatemala). We will venture into many different kinds of history. In regional terms, our scope will be transnational and international: we will cover the United States and the Middle East in the wider world. In thematic and methodological terms, we will approach our subject through biography, oral history, and microhistory; material history and museum studies; cultural and intellectual history; women’s and gender studies; and the history of academic disciplines, especially archaeology and anthropology. Some background in Middle Eastern history; or Anthropology; or Women’s History; or Museum Studies recommended.
Taught by: Sharkey
Also Offered As: ANTH 351, GSWS 331, GSWS 533, NELC 331, NELC 531
Activity: Seminar
1.0 Course Unit

ANTH 533 Archaeobotany Seminar
In this course we will approach the relationship between plants and people from archaeological and anthropological perspectives in order to investigate diverse plant consumption, use, and management strategies. Topics will include: archaeological formation processes, archaeobotanical sampling and recovery, lab sorting and identification, quantification methods, and archaeobotany as a means of preserving cultural heritage. Students will learn both field procedures and laboratory methods of archaeobotany through a series of hands-on activities and lab-based experiments. The final research project will involve an original in-depth analysis and interpretation of archaeobotanical specimens. By the end of the course, students will feel comfortable reading and evaluating archaeobotanical literature and will have a solid understanding of how archaeobotanists interpret human activities of the past.
Taught by: Chantel White
Course not offered every year
Also Offered As: AAMW 539, CLST 543, NELC 585
Activity: Seminar
1.0 Course Unit

ANTH 536 The Peopling of the Americas
The peopling of the Americas is a question that has intrigued scholars and laymen for over 500 years. The origin of Native Americans was also a seminal issue during the emergence of American Anthropology as a discipline at the turn of the 20th century, with research on this topic animating current studies of ethnohistory, indigenous archaeology, post-colonialism and repatriation. The proposed course will review the scholarship dedicated to describing this long history from an interdisciplinary perspective. It will explore their roots in the expansion of modern humans into Eurasia, evaluate the new archeological and genetic research that has fundamentally altered our understanding of the migration history and diversity of indigenous peoples in the American continents, and examine issues of identity, ethnicity and cultural heritage in contemporary Native populations that extend from this knowledge. The course will further draw on the instructor’s fieldwork experience working with indigenous communities in Alaska, Canada, the Lower 48, Mexico and the Caribbean, as well as native Siberians in Russia, where the cultural and biological roots of ancestral Native American populations lie.
Taught by: Schurr

Also Offered As: ANTH 336
Activity: Seminar
1.0 Course Unit

ANTH 543 Public Environmental Humanities
This broadly interdisciplinary course is designed for Graduate and Undergraduate Fellows in the Penn Program in Environmental Humanities (PPEH) who hail from departments across Arts and Sciences as well as other schools at the university. The course is also open to others with permission of the instructors. Work in environmental humanities by necessity spans academic disciplines. By design, it can also address and engage publics beyond traditional academic settings. This seminar, with limited enrollment, explores best practices in public environmental humanities. Students receive close mentoring to develop and execute cross-disciplinary, public engagement projects on the environment.
Taught by: Wiggin
Course not offered every year
Also Offered As: COML 562, ENVS 544, GRMN 544, URBS 544
Activity: Seminar
1.0 Course Unit

ANTH 546 Global Citizenship
This course examines the possibilities and limitations of conceiving of and realizing citizenship on a global scale. Readings, guest lecturers, and discussions will focus on challenges associated with addressing issues that transcend national boundaries. In particular, the course compares global/local dynamics that emerge across different types of improvement efforts focusing on distinctive institutions and social domains, including: educational development; human rights; humanitarian aid; free trade; micro-finance initiatives; and the global environmental movement. The course has two objectives: to explore research and theoretical work related to global citizenship, social engagement, and international development; and to discuss ethical and practical issues that emerge in the local contexts where development initiatives are implemented.
Taught by: Hall
Course usually offered in spring term
Also Offered As: EDUC 503, URBS 546
Activity: Seminar
1.0 Course Unit
ANTH 547 Anthropology and Education
An introduction to the intent, approach, and contribution of anthropology to the study of socialization and schooling in cross-cultural perspective. Education is examined in traditional, colonial, and complex industrial societies.
Taught by: Hall or Posecznick
Course offered summer, fall and spring terms
Also Offered As: EDUC 547, URBS 547
Activity: Lecture
1.0 Course Unit

ANTH 548 Colonialism and its Legacies
In this course we explore the history and long-term consequences of European colonial expansion, with a primary focus on Eurasia and on the British Empire, though we will range further afield as needed. Rather than attempting a comprehensive historical overview, we will use a series of case studies to illustrate changing understandings of colonialism and associated processes, including anti-colonial movements, decolonization, postcoloniality, and the enduring effects of colonialism in the present. This is a seminar-style course.

1.0 Course Unit

ANTH 549 Topics in Archaeological Method and Theory
The subject matter of this seminar will vary by term and instructor. Each course will concern itself with contemporary archaeology through an in-depth examination of new directions in archaeological method and theory. Please check https://www.sas.upenn.edu/anthropology/courses/topics-courses for the term-specific course description.
Taught by: Kassabaum
Course not offered every year
Activity: Seminar
1.0 Course Unit

ANTH 551 Experimental Ethnography at the Interfaces of the Arts & Sciences
This course takes inspiration from conversations and practices occurring at the interfaces of cultural anthropology, the environmental humanities, and feminist science studies. Anthropologist Stuart McLean (2017) has asked: ‘What might become of anthropology if it were to suspend its sometime claims to be a social science? What if it were to turn instead to exploring its affinities with art and literature as a mode of engaged creative practice carried forward in a world heterogeneously composed of humans and other than humans?’ At the same time, the emergence of the environmental humanities as an academic discipline in the twenty-first century reflects the growing conviction on the part of diverse sectors that ‘environmental’ problems cannot be solved by science and technology alone. Instead, cultivation of experimental methods and alliance building between the arts and social and natural sciences has become ever more important strategy in terms of fomenting public engaged scholarship. In this course, we will not necessarily suspend the social scientific claims of anthropology, and ethnography more specifically, but we will push our methodological premises and conceptual work to experiment with our objects of study, matters of concern, and the diverse materialities that emerge from and participate in our ethnographic work.
Taught by: Lyons
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ANTH 557 Seminar in Archaeological Theory and Method: Archaeology of Landscapes
Advanced seminar for potential professional archaeologists. Course will examine critically main past and present theoretical issues in archaeological research and interpretation, and consider various methodologies utilized towards these interpretive ends. Prerequisite: If course requirement not met, permission of instructor required.

ANTH 559 Audio Ethnography
This is an intensive, graduate-level, practice-based course in which students will record, edit, and produce anthropologically informed audio works that record and interpret culture and lived experience. Projects in this class will look beyond conventional linguistic or musical codes to sounds whose semiotic or affective value may be less immediately evident. Through the process of making location recordings, analyzing those recordings, composing them into autonomous works, and critiquing every step of the way, this course will engage with questions of ethnographic representation through the medium of sound. In parallel with contextualizing readings and sound projections, throughout the semester students will work intensively on audio projects, receiving training on recording techniques, audio editing, and basic post-production techniques. The course is an opportunity to open up the question of what might constitute ‘audio documentary’ or ‘ethnographic audio’. Presentation strategies for final projects will be discussed and decided on individual bases. Projects will be situated in relationship to cognate fields, including the anthropology of the senses, interdisciplinary sound studies, ethnomusicology, ethnographic cinema, sound art, sound mapping, soundscape composition, and experimental nonfiction media practices which involve location recording. Through weekly sound projections and home listening, students will also gain a familiarity with existing genres and uses of nonfiction audio in anthropology and related fields.

1.0 Course Unit
ANTH 560 Critical Ethnography
This graduate course introduces students to theories, practices, and critiques of critical ethnography. Ethnography – an approach to the study of culture which anthropologist James Clifford described as a process that ‘translates experiences into text’ - will have our full attention. This process of translation, although seemingly straightforward, requires layers of interpretation, selection, and the imposition of a viewpoint or politics. While ethnography is often narrowly conceived of as a methodology, this course considers ethnography as a mode of inquiry, as a philosophy, as an ongoing question and performance. We wrestle with notions of 'the self' and 'the other' at the intersection of imbricated cultural and performance worlds. Together we'll ask: How is ethnography both critical and performative? What is the relationship between theory and method? How can we evaluate ethnographic work? And finally, what kinds of ethnographers do we want to be? This course considers a range of ethnographic examples in order to analyze both the craft and the stakes of 'translating experiences into text.'

Course not offered every year
Also Offered As: AFRC 550
Activity: Seminar
1.0 Course Unit

ANTH 562 Intro to Digital Archaeology
Digital methodologies are an integral part of contemporary archaeological practice, and demand that archaeologists hold a new set of skills and knowledge fundamentals. This course will expose students to a broad range of digital approaches through a review of relevant literature and through applied learning opportunities centered on a course project. The technological underpinnings, best practices, and influences on archaeological practice and theory will be discussed for each method covered in the course. Applied learning opportunities in digital data collection methods will include: aerial and satellite remote sensing, global navigation satellite system (GNSS) survey, 3D scanning methods, close-range photogrammetry, and near-surface geophysical prospection. Students will also have opportunities for practical experience in digital database design and management, geographic information science (GIS) and 3D modeling and visualization. Students will communicate the results of the course project in a digital story that will be presented at the end of the term. Prior archaeological classwork and/or experience preferred.

Also Offered As: AAMW 562, ANTH 362, CLST 362, CLST 562, NELC 362
Activity: Lecture
1.0 Course Unit

ANTH 564 Colonial Ecologies
This seminar explores the historical ecology of European colonial expansion in a comparative framework, concentrating on the production of 'periphery' and the transformation of incorporated societies and environments. We begin with a discussion of the theoretical frameworks, sources of evidence, and analytical strategies employed by researchers to address the conjunction of environmental and human history in colonial contexts, including underdevelopment and global systems of circulation; political ecology; and ecological imperialism. We then discuss the circulation of persons, crops, invasives, and microbes as fundamental conditions of emerging global systems. Drawing on these elements, we discuss landscapes as sites of misrecognition, rationalization, and cultural production. This discussion sets the stage for an examination of novel forms of economic and ecological production, including the emergence of the 'drug foods', the transformation of forest products, and the rise of the plantation. We then consider the political ecology of crisis in colonial settings, including agrarian collapse, famine, and 'ecological poverty'.
Taught by: Lyckett
Course not offered every year
Activity: Seminar
1.0 Course Unit

ANTH 567 Living World in Archaeological Science
By focusing on the scientific analysis of archaeological remains, this course will explore life and death in the past. It takes place in the Center for the Analysis of Archaeological Materials (CAAM) and is team taught in three modules: human skeletal analysis, analysis of animal remains, and analysis of plant remains. Each module will combine laboratory and classroom exercises to give students hands-on experience with archaeological materials. We will examine how organic materials provide key information about past environments, human behavior, and cultural change through discussions of topics such as health and disease, inequality, and food.
Taught by: White, Monge, Moore

Activity: Lecture
1.0 Course Unit

ANTH 572 Geophysical Prospection for Archaeology
Near-surface geophysical prospection methods are now widely used in archaeology as they allow archaeologists to rapidly map broad areas, minimize or avoid destructive excavation, and perceive physical dimensions of archaeological features that are outside of the range of human perception. This course will cover the theory of geophysical sensors commonly used in archaeological investigations and the methods for collecting, processing, and interpreting geophysical data from archaeological contexts. We will review the physical properties of common archaeological and paleoenvironmental targets, the processes that led to their deposition and formation, and how human activity is reflected in anomalies recorded through geophysical survey through lectures, readings, and discussion. Students will gain experience collecting data in the field with various sensors at archaeological sites in the region. A large proportion of the course will be computer-based as students work with data from geophysical sensors, focusing on the fundamentals of data processing, data fusion, and interpretation. Some familiarity with GIS is recommended.
Taught by: Herrmann
Course offered spring; even-numbered years

Activity: Laboratory
1.0 Course Unit
ANTH 576 Anthromedialities: Experimental Theory and Practice
In recent years much has been made of the ‘beyond text’ turn in anthropology, specifically the need to re-evaluate the singular authority of ‘writing culture.’ Several new approaches advocate for non-textual medialities, with representations originating in both sonovisual media and performance. Less, however, has been theorized and advocated about intermediality and the multicompositional practices of transmediality and plurimediality, specifically their more transgressive multisensory epistemology. This course will examine these radical approaches to interacting textual, visual, sonic and performative mediations, theorizing their epistemic and ethical implications, collaborative potentials, affordances in narrative and non-narrative representation, and political and aesthetic investments. Students will both critically engage histories of transmedial anthropology, and produce projects that are multicompositional.

Course not offered every year
Also Offered As: COMM 877, MUSC 576
Activity: Seminar
1.0 Course Unit

ANTH 577 Everyday States: The Anthropology of Power and Politics
While anthropologists have long been interested in political systems, they have in recent years made the modern state a critical site of ethnographic analysis. By focusing on everyday practice of officials in the Global North and South, anthropologists have drawn attention to the creative ways in which state actors and subjects of rule make and maintain its powerful institutions. Even as bureaucracies are formalized and instituted as sites of rational order and even-handed administration, scholars of everyday state formation have drawn attention to the ways that state authority depends on and reproduces racialized, gendered and geopolitical inequality. Indeed, like many other social institutions, racialized states are constituted through differentiated relations between government workers and the governed, through everyday rituals of violence and sovereignty, discipline and improvement. The class begins with a review of some influential theorizations of the modern state. Next, we focus on how political authority and social difference are produced by the everyday work of states. We attend to the colonial, racialized and gendered workings of states—particularly through their efforts to discipline black and brown bodies through sovereign violence and differentiated plans and programs of development. Finally, we will conclude the class by attending to the political work of subordinated groups as they demand distributive justice, equity and full citizenship in ‘most of the world.’
Taught by: Anand
Course offered spring; odd-numbered years
Activity: Seminar
1.0 Course Unit

ANTH 580 Domestication
Domestication: one of the most frequently cited ‘major transitions’ in our global past. The story of domestication is not consigned to deep time though - it is interwoven with current movements. Rewilding, feralization, paleodiet, and GMO, all have intersections with the concept of domestication, and are politicised through the lens of the archaeology and anthropology of the ‘domesticated’. Traditionally, study of the domestication process has been the exclusive domain of archaeologists and agricultural scientists; today it is an increasingly a multidisciplinary enterprise involving specialists across the sciences and humanities and, importantly, multiple voices that are changing the way we think about this as a single ‘process’. In this seminar series we are going to unpack this term: what is ‘domestication’, how did (or does) it unfold, when did it start and has it ended? And perhaps most importantly, should we even be using this term at all? We will look back to the origins of the ideas, explore the influence of Darwinian thinking, 19th century philosophy, and explore alternative ideas such as familiarisation and multi-species thinking to question the dominance of ‘domestication’ in the archaeological and anthropological literature. The course is appropriate for graduate students interested in exploring this topic in a dynamic conversation. Students will be expected to lead discussions of specific works, as well as explore beyond the reading list or present aspects of their own present or proposed future research.
Taught by: Bates
Course not offered every year
Activity: Seminar
1.0 Course Unit

ANTH 583 Ethnographic Filmmaking
This ethnographic methodology course considers filmmaking/videography as a tool in conducting ethnographic research as well as a medium for presenting academic research to scholarly and non-scholarly audiences. The course engages the methodological and theoretical implications of capturing data and crafting social scientific accounts/narratives in images and sounds. Students are required to put theory into practice by conducting ethnographic research and producing an ethnographic film as their final project. In service to that goal, students will read about ethnography (as a social scientific method and representational genre), learn and utilize ethnographic methods in fieldwork, watch non-fiction films (to be analyzed for formal properties and implicit assumptions about culture/sociality), and acquire rigorous training in the skills and craft of digital video production. This is an ABCS course, and students will produce short ethnographic films with students in Philadelphia high schools as part of a partnership project with the School District of Philadelphia. Due to the time needed for ethnographic film production, this is a year-long course, which will meet periodically in both the fall and spring semesters.
Taught by Hall, Kathleen & Das, Amit
Two terms. student must enter first term.
Also Offered As: EDUC 586
Activity: Seminar
1.0 Course Unit
ANTH 586 Desire and Demand II: Culture, Production, and Consumption in the Global Marketplace
The goal of this course is to understand and to investigate both historical and contemporary issues related to a culture of consumption. Reading topics cover both contemporary and scholarly issues in cultural anthropology, popular culture, consumer behavior, off-shore production, social networking, media and communications, financial and real estate markets and marketing. Class distinctions are equally interdisciplinary as we focus on investigating and identifying critical global/local linkages. We analyze the various ways in which Philadelphia and other ‘global cities’ are competing for consumer revenues. We ask what factors have led contemporary society reaching its current stage of mass consumption and how have certain goods and services been reconfigured, packaged or re-packaged to attract new consumers. In order to better understand the link between consumption and production factors we explore the relationship between outsourcing and/or offshore production and modern consumption. Approximately sixty percent of the seminar takes place in the classroom and will include lecture, class discussion, and films. The remaining portion of the class meetings will involve local and regional travel. Research assignments emphasize the use of anthropological participant-observation techniques to investigate the relationships between culture and contemporary mass consumption within the contexts of re-gentrification, urbanization, and globalization.

ANTH 589 It was the Law at the Time: Museums, Colonialism, and the Question of Property
Current discussions about who owns cultural property, especially in relation to objects acquired under and during Europe’s colonial project, form their arguments, limits and possibilities around international legal instruments such as UNESCO’s conventions on cultural property. Like broader claims for reparations by formally colonized peoples, legal demands for reparations or restitution with regard to cases of colonial injustice often run up against responses such as ‘it was the law at the time’ or ‘it was a long, long time ago and therefore there are no legal venues for claimants today’. The CARICOM-claim regarding reparations for slavery submitted by a number of Caribbean states, as well as demands regarding cultural treasures looted in the late 19th century in different parts of Africa and elsewhere, are clear examples of this phenomenon. Proposed solution for these conflicts almost always circumvent questions of ownership (at the time) or other legal possibilities. They are sought in extra-legal ways. Increased attention for these and similar cases have fueled new research into the histories of slavery and colonialism, and into the provenance of colonial cultural objects in Western museums. Similarly there is an increasing number of research projects that explore, for example, the fate of colonial objects in Europe, in relation to the fate of Nazi-looted art. While the legal limits of current claims form part of the investigation of many of these studies, they often fail to pay serious attention to the relationship between the law and the colonial project itself. Importantly, they also fail to explore the relationship between the law, questions of property and the ‘creation’ of the colonized subject. This seminar will focus on this nexus and will interrogate the role of law within the colonial era, especially with regard to the legal fashioning of hierarchies of colonial subjects and colonial objects. In what ways is the law implicated the colonial project itself, and what role did it place in the fashioning of colonial subjects and colonial objects? Moreover, what role should an attentiveness at the law play in today’s debates around reparation or restitution? These are some of the key questions that the course will explore. Bringing together readings from legal and political philosophy, material culture and critical heritage studies, this course explores some of the key debates and texts surrounding questions of law, philosophy, colonialism and questions around reparations or restitution of cultural objects. Students will be introduced to the works of some of the key thinkers on which contemporary notions of ownership, the legal subject and (cultural) property are based, probing their genealogy in relation to the racial hierarchies established under the colonial project. We will explore both the history and application of legal frameworks that governed colonial subjects and (cultural) objects alike and their basis in legal philosophy. Is there reason to rethink the role of law within debates around reparations and restitution? And, last but not least: are there reasons to rethink the idea of property itself? What other genealogies of the law can we trace to think differently about ownership of (cultural) property?

ANTH 591 Multi-Modal Ethnography: Anthropology Beyond Text
What does the digital age mean for humanistic, social scientific, and professional inquiry and practice? How do non-text based formats - such as film, dance and other kinds of performance, creative writing, and soundscapes - transform both the processes and products of research? How do they inform and transform our disciplines, and what might this mean for the communities with which we work? This advanced undergraduate seminar will address these (and other related) questions. Taught by the invited Fellows from the Center for Experimental Ethnography, this course will take shape differently each semester according to the Fellow’s area of expertise and practice. Students will be encouraged to explore alternative formats of representation that move beyond text while still being grounded in ethnographic research, and they will develop skills in relevant media. https://www.sas.upenn.edu/anthropology/courses/topics-courses
Taught by: Varied
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ANTH 593 Natural and Cultural Heritage in Global Perspective
This seminar will explore the ideas surrounding the theories, discourses, and practices surrounding natural and cultural heritage. Heritage has become inscribed in the planning of urban and rural landscapes, designed as tourist destinations, and considered a universal good in global cosmopolitan society. But it would be well to ask: what kind of ‘nature’ and ‘culture’ has been labelled as heritage? What kind of organizations, economics, and politics are necessary to sustain it? How are these put in place? By whom? For whom? Over the course of the semester, students will engage with readings that discuss how cultural and natural heritage is communicated to the public and the relationship between academic critique and pragmatic social engagement. This seminar is further grounded by a partnership between the Penn Cultural Heritage Center and the U.S. Mission to UNESCO focused on the assessment of World Heritage Sites, and students will have the opportunity to learn from and participate in specific case studies.
Taught by: Daniels
Course not offered every year
Activity: Seminar
1.0 Course Unit

ANTH 598 The Economics of Heritage
Governmental resources for archaeological and heritage sites are declining worldwide while commercial and economic development initiatives are threatening the fabric of heritage and the larger landscape environment to ever greater degrees. As a consequence, the competition for resources to protect and preserve heritage is intensifying, as is the challenge to articulate the value of heritage resources vs. competing commercial or public projects. This is the context for understanding the issues surrounding the definition of the value of cultural heritage assets and the tools available for their measurement and management. This course explores in some depth issues relating to the economic analysis of heritage and culture. It is designed to provide students with a foundational understanding of the economics of heritage-related projects, the tools and techniques available for their analysis and the ethical and practical issues of public policy and private actions that determine the future of heritage resources. Readings and case studies will explore technical, practical and ethical issues that arise in cultural heritage economics. Relevant analytical techniques will be introduced and particular emphasis will be placed on commercial, government and community issues unique to heritage-related activities. Special emphasis will be placed upon developing pertinent strategies for the tourist industry. Students will produce one case-study project intended to integrate the technical and practical aspects of the course.
Taught by: Peter Gould
Activity: Seminar

ANTH 600 Contemporary Archaeology in Theory
This graduate seminar addresses contemporary anthropological archaeology and considers the varied ways inferences are made about past and present human behavior from the archaeological record. It reviews such fundamental topics as the use of analogy, Middle Range theory, symbolism and meaning, social and cultural evolution, ideology and power, feminism and gender, and indigenous (non-Western) perspectives. It also foregrounds basic issues regarding heritage, looting, and ethics.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
Notes: First-year anthropology graduate students.

ANTH 602 Evolutionary Anthropology
This course will explore various subfields of biological anthropology to better understand what it means to be human. Special attention will be paid to current issues and problems in these subfields, and the different ways in which researchers are attempting to understand and uncover the details of human evolution. Among the areas that are explored in this course are paleoanthropology, primatology, human biology, molecular anthropology, evolutionary medicine, epigenetics, and human life history. Specific issues to be explored include the primate roots of human behavior, brain and language evolution, new fossil hominins, the origins of anatomically modern humans, and modern human migration history.
Taught by: Schurr
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
Notes: First-year anthropology graduate students.
ANTH 603 Language in Culture and Society
First-year anthropology graduate students or Instructor Permission. Examination of properties of human language which enable social persons to interpret the cultural world and to act within it. Topics include: principles of lexical and grammatical organization; the role of language structure (grammar) and linguistic context (indexicality) in discursive activity; referential uses of language; social interaction; markers of social role, identity, and group-belonging; criteria by which models of linguistic form and function are formulated; the empirical limits within which different models have explanatory value.
Taught by: Agha
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
Notes: First-year anthropology graduate students.

ANTH 607 Contemporary Native Americans
This course examines the social and political lives of contemporary Native American Indians in the United States and Canada. Topics include: Indigenous identity; homelands and natural resources; popular culture and media; Indigenous arts and cultural expression; museum representations; athletics; gender relations; tribal recognition and sovereignty; and resistance movements. We will consider the origins of federal programs and legislation that have become essential to the protection of Native American freedoms. Students can expect to gain an appreciation of the complexity and cultural diversity of Native communities and tribal nations and insights into their interactions with other cultures over time.
Taught by: Bruchac
Course not offered every year
Also Offered As: ANTH 307
Activity: Lecture
1.0 Course Unit

ANTH 615 Afghanistan, Iran and Pakistan: Islamism, Terrorism and Globalization
Why are Islam and the Middle East continually in the news in the Western world, and why are Afghanistan, Iran and Pakistan the countries that are most frequently named? Fifty years ago, before the terms 'Islamism' and 'terrorism' were coined, and before we began talking about globalization, things were very different. All three countries had close relations with Europe and America. In this course we will track the various currents of social change that produced the current situation, using the methods and theoretical concepts of anthropology. We will follow the news in the course of the semester and track the way things are continuing to change, so that at the end of the semester we can understand the region and its problems in the context of world history and globalization. Instead of an exam at the end of the semester, you will be asked to write a short essay (1000 words) on a question at the end of January relating to issues we have discussed in class, and again at the end of February and March, and to formulate a research question on a problem that interests you in the history of the area and try to answer it a final paper by the end of the examination period.
Taught by: Spooner
Course not offered every year
Activity: Seminar
1.0 Course Unit

ANTH 617 Contemporary Approaches to the Study of Culture and Society
A critical examination of recent history and theory in cultural and social anthropology. Topics include structural-functionalism; symbolic anthropology; post-modern theory. Emphasis is on major schools and trends in America, Britain, and France.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
Notes: First-year anthropology graduate students.

ANTH 620 Directed Reading and Research
To be arranged only by consultation with academic adviser and faculty member(s) to be involved; a proposed syllabus must be presented for approval, and written papers will be required without exception. On approval of these papers one copy must be presented to the Department of Anthropology office for filing. May be repeated for credit.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: May be repeated for credit

ANTH 621 Directed Field Training and Research
To be arranged only by consultation with academic adviser and the faculty member(s) to be involved; a proposed syllabus must be presented for approval and written papers will be required without exception. On approval of these papers, one copy must be presented to the Department of Anthropology office for filing. may be repeated for credit.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: May be repeated for credit

ANTH 626 Intensity
This course examines the manner in which humans encounter the continuous and gradable features of phenomena in social life - sensory qualities of objects, people's aspirations and affect, pitch movement during voiced talk, monsoons and sea breezes, biological growth and environmental degradation, migratory flows in transnational settings - and attempt to evaluate or convert them into discrete dimensions of social life. We examine how intensities and gradients are managed in everyday life as well as in institutional settings - through government policies, scientific protocols, surveillance regimes, infrastructural agendas - and we survey the ways in which everyday and institutional practices reflect and shape each other in societies across the world. In particular, we explore the question of what an anthropology of intensity might look like, and how it may reconfigure approaches to the ethnographic study of human affairs.
Taught by: Carruthers
Activity: Seminar
1.0 Course Unit

ANTH 628 Language in Culture and Society: Special Topics
The course is devoted to a single research topic of contemporary interest in linguistic anthropology. Topics vary from year to year. Readings locate current debates in relation to longstanding assumptions in the literature and new directions in contemporary research.
Taught by: Agha
Course not offered every year
Activity: Seminar
1.0 Course Unit
ANTH 630 Intensive Language Training in Anthropology
This course is designed to allow graduate students to obtain in-depth training in a scholarly language that will be utilized for dissertation fieldwork and satisfying the language exam for the Department of Anthropology Graduate Program. Through this intensive training in the oral and written forms of a language, students will accelerate their competency in it, while also potentially preparing themselves for advanced language training through tutorials or summer immersion programs.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

ANTH 633 Forensic Anthropology
This course will investigate and discuss the various techniques of analysis that biological anthropologists can apply to forensic cases. Topics include human osteology, the recovery of bodies, the analysis of life history, the reconstruction of causes of death, and various case studies where anthropologists have contributed significantly to solving forensic cases. Discussions will include the limitations of forensic anthropology and the application of DNA recovery to skeletal/mummified materials.
Taught by: Monge
Course not offered every year
Also Offered As: ANTH 230, CRIM 230
Activity: Lecture
1.0 Course Unit

ANTH 634 Feminist Ethnography
This course will investigate the relationships among women, gender, sexuality, and anthropological research. We will begin by exploring the trajectory of research interest in women and gender, drawing first from the early work on gender and sex by anthropologists like Margaret Mead and Ruth Benedict; moving through the 1970s and 1980s arguments about gender, culture, and political economy; arriving at more current concerns with gender, race, sexuality, and empire. For the rest of the semester, we will critically read contemporary ethnographies addressing pressing issues such as nationalism, militarism, neoliberalism and fundamentalism. Throughout, we will investigate what it means not only to ‘write women’s worlds’, but also to analyze broader socio-cultural, political, and economic processes through a gendered lens. We will, finally, address the various ways feminist anthropology fundamentally challenged the discipline’s epistemological certainties, as well as how it continues to transform our understanding of the foundations of the modern world. Prerequisite: Should have some functional knowledge of Cultural Anthropology.
Taught by: Thomas
Course not offered every year
Also Offered As: AFRC 334, AFRC 634, ANTH 334, GSWS 334, GSWS 634
Activity: Seminar
1.0 Course Unit

ANTH 636 Iraq: Ancient Cities and Empires
Iraq: Ancient Cities and Empires is a chronological survey of the ancient civilization that existed in the drainage basin of the Tigris and Euphrates Rivers from the early settled village farming communities of the 7th millennium BCE to the middle of the 1st millennium BCE, when Nebuchadnezzar II ruled Babylon and much of the Middle East. Though organized period by period, NELC 241 explores various social, political, economic, and ideological topics, exposing students to various strands of evidence, including settlement survey data, excavated architectural remains, artifacts, and documentary sources, as well as an eclectic mix of theoretical perspectives. The course aims to provide students with a strong foundation for the further study of the ancient and pre-modern Middle East.
Taught by: Zettler
Course not offered every year
Also Offered As: ANTH 236, NELC 241, NELC 641, URBS 236
Activity: Lecture
1.0 Course Unit

ANTH 642 Ethnographies in Linguistic Anthropology
This course provides graduate students in linguistic anthropology and allied fields an opportunity for sustained, critical engagement with ethnographic monographs in linguistic and semiotic anthropology. Readings vary yearly, but run the gamut from the classical or ‘canonical’ to the contemporary or ‘experimental.’ Recurring concerns include: the nature of the ethnographic monograph as text-artifact; the presentation and exposition of ethnographic and linguistic particulars; questions of ‘authorial voice’; and the registers, genres, and styles of ethnographic representation obtaining in the linguistic anthropological tradition.
Taught by: Carruthers
Course usually offered in spring term
Prerequisite: ANTH 603
Activity: Seminar
1.0 Course Unit

ANTH 643 Globalization And Its Historical Significance
Globalization is one of the most comprehensive topics of our time, and also one of the most controversial. This course assesses the current state of globalization, considering it in terms of economic, political, and cultural change, and follows its progress through the semester. The class will be led through the main topics and debates, introduced to conceptual and empirical tools for framing academic discussion and research about its dynamics, how and when it began, and (most particularly) how it differs from earlier episodes of historical change.
Taught by: Spooner
Course not offered every year
Activity: Seminar
1.0 Course Unit
ANTH 649 Molecular Anthropology
In this course, we will explore the molecular revolution in biological anthropology. In particular, we will examine how molecular data can be used to illuminate anthropological questions concerning human origins, evolution and biological variation. Some of the specific topics to be covered in this course are the phylogenetic relationships among primates, kinship in apes and monkeys, the hominid trichotomy, modern human origins and migrations, Neanderthal and Denisovan admixture with modern humans, biogenetics of skin color, and physiological, phenotypic and disease adaptations.
Taught by: Schurr
Course not offered every year
Also Offered As: ANTH 592
Activity: Seminar
1.0 Course Unit

ANTH 654 Topics In Anthropology and the Modern World
This course relates anthropological models and methods to current problems in the Modern World. The overall objective is to show how the research findings and analytical concepts of anthropology may be used to illuminate and explain events as they have unfolded in the recent news and in the course of the semester. Each edition of the course will focus on a particular country or region that has been in the news.
Taught by: Spooner
Course usually offered in fall term
Also Offered As: ANTH 100, NELC 281, NELC 681, SAST 161
Activity: Lecture
1.0 Course Unit

ANTH 655 Methods and Grantwriting for Anthropological Research
This course is designed for third- and fourth-year graduate students in anthropology who are working on their dissertation research proposals and submitting grants. Graduate students from other departments who will be submitting grant proposals that include an ethnographic component are also welcome. Students will develop their proposals throughout the course of the semester, and will meet important fall submission deadlines. They will begin by working with various databases to search funding sources relevant to the research they plan to conduct. In class sessions, they will also work with the professor and their peers to refine their research questions, their methods, the relationship of any previous research to their dissertation fieldwork, and the broader theoretical and ‘real-world’ significance of their proposed projects. Finally, students will also have the opportunity to have live ‘chats’ with representatives from funding agencies, thereby gaining a better sense of what particular foundations are looking for in a proposal.
Taught by: Thomas
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

ANTH 658 Discourse-Centered Research Seminar
This seminar explores the interface between discourse, culture, and social processes. It is designed for graduate students in anthropology and related disciplines who (1) wish to study the current literature in linguistic anthropology concerned with discourse-centered approaches to culture; and (2) themselves have or will acquire during the semester discourse materials (texts, recordings, ethnographic data, etc.) that they wish to analyze from an anthropological point view. The instructor will spend time discussing his own past and current research. Class sessions will also include discussion of the writings of contemporary anthropologists investigating culture through discourse. The seminar is designed for maximum flexibility in accommodating students’ research interests and needs.
Taught by: Urban
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ANTH 663 Independent Study in South Asian Archaeology
This course provides a broad overview of the archaeology and early history of South Asia, a region that includes present-day India, Pakistan, Bangladesh, Sri Lanka, Nepal, Myanmar, Bhutan, and the Maldives. Beginning with a brief overview of the Paleolithic, we will discuss the multiple origins of early agriculture, the development of early states in the Indus river basin and beyond, the second urbanization, the expansion of institutionalized forms of religion, long-distance trade, social differentiation, and the rise of states as empires. No background in archaeology is required. The class will produce a collaborative spatial database of archaeological sites for selected time periods and will produce a document describing some of the major historical changes in South Asia as illustrated by the archaeological database.
Taught by: Morrison
Course not offered every year
Activity: Independent Study
1.0 Course Unit

ANTH 668 Kinesthetic Anthropology
This class, team-taught by CEE Visiting Fellow Reggie Wilson and Deborah Thomas, investigates various forms of contemporary performance in relationship to Africanist forms and functions of dance, movement and action. We will concern ourselves with how the body knows, and with how we learn to identify the structures of movement that provide context, meaning and usefulness to various Africanist communities across time and space. Grounding ourselves within a history of ethnographic analyses of the body in motion, and within Africana theorizing about the affective power of the body, we will consider what people are doing when they are dancing. In other words, we will train ourselves to recognize the cultural values, social purposes, and choreographic innovations embedded in bodily action and motion. While we will attend to these phenomena in a range of locations throughout the African diaspora, we will also highlight aspects of the Shaker and Black Shout traditions in Philadelphia. The course will be divided between discussions centered on close reading of primary and secondary material (both text and video) and creative writing/movement exploration (no previous movement experience necessary).
Taught by: Wilson
Also Offered As: AFRC 368, ANTH 368, COMM 368, FNAR 368
Activity: Seminar
1.0 Course Unit
ANTH 669 Kinesthetic Anthropology
This class, team-taught by CEE Visiting Fellow Reggie Wilson and Deborah Thomas, investigates various forms of contemporary performance in relationship to Africanist forms and functions of dance, movement and action. We will concern ourselves with how the body knows, and with how we learn to identify the structures of movement that provide context, meaning and usefulness to various Africanist communities across time and space. Grounding ourselves within a history of ethnohistoric analyses of the body in motion, and within Africana theorizing about the affective power of the body, we will consider what people are doing when they are dancing. In other words, we will train ourselves to recognize the cultural values, social purposes, and choreographic innovations embedded in bodily action and motion. While we will attend to these phenomena in a range of locations throughout the African diaspora, we will also highlight aspects of the Shaker and Black Shout traditions in Philadelphia. The course will be divided between discussions centered on close reading of primary and secondary material (both text and video) and creative writing/movement exploration (no previous movement experience necessary).
Taught by: Wilson
Activity: Seminar
1.0 Course Unit

ANTH 670 Research Design
This is a practical course on the challenges of designing research projects in anthropology with a special focus on the dissertation project. We will discuss how to select and refine a topic that is, ideally, important without being impossible. Interesting research can often be described or understood in multiple ways, and we will practice recasting project proposals for different kinds of audiences and formats. We will also consider issues of methodology, or the logic of method. Specific kinds of questions tend to lead to specific field and lab methods, and it is important to match your questions to your ways of answering them. This is not, however, a methods course. If you need to learn ethnography, ceramic analysis, textual analysis or some other set of methods, you should look for specific instruction in that field. Instead, we will consider how to assemble a research project that is well-structured, significant, and feasible using one or more analytical strategies. Research design is critical not only for planning research appropriate to your questions but also serves as the basis for successful proposals. Proposal-writing is a specific genre you will need to master; the final product for this course is therefore a research proposal. We will discuss the format of the proposal in detail. Not all proposals need to follow the same template, but there is a family resemblance to successful proposals; thus, although we will follow advice for writing scientific proposals, more humanistically-oriented students should not find this to be a problem.
Taught by: Morrison
Course not offered every year
Activity: Seminar
1.0 Course Unit

ANTH 677 Black Speculative Futures
Why do black cultural producers turn to the speculative? What, in turn, is speculative about blackness? These questions frame this seminar's exploration of how black artists, theorists, and activists imagine different futures, often in the service of critiquing power asymmetries and creating radical transformation in the present. We will explore how the speculative works differently across black literature, visual culture and performance. Additionally, inspired by the multi-disciplinary work that we encounter in the course, we will experiment with crafting our own embodied speculative art in order to better understand its function as both art practice and politics. The course will be divided between discussions centered on close reading of primary and secondary material and creative writing/movement exploration (no previous movement experience necessary). Occasional guest lectures with visiting artists will provide additional fodder for our critical and creative work.

Also Offered As: AFRC 377, AFRC 677, ANTH 377, ENGL 500, FNAR 377
Activity: Seminar
1.0 Course Unit

ANTH 684 Religion and Society in World History
Anthropologists have never found a society that did not have ideas, rituals and practice that falls easily into our category of ‘religion’ (a term coined in Roman times to cover everything relating to assumptions about supernatural forces in any cultural context). So how can we define religion now, over two thousand years since the end of the ‘Axial Age’ (800-200 BCE) that produced all the major religious ideas, that would allow us to include all the forms we know not only of Judaism, Buddhism, Christianity and Islam, but also Confucianism, Hinduism, Jainism, Shinto, Sikhism, Taoism, and Zoroastrianism, and the religions of the small isolated communities we found during the colonial period in Africa and Australia? And why has religious practice been declining in the Western world since the middle of the 20th century? Is the anthropology of religion a different subject now than what it was a hundred years ago? The religions that we know historically, because they are based on texts, especially Christianity and Islam, have obviously changed in many ways since their early days, and it is easy to see a relationship between the way they changed and what was going on in the societies that carried them: Christianity spread through the Roman Empire; Islam spread from Mesopotamia along trade routes, west to Egypt and North Africa, and east into central Asia and north China. It will be interesting to study the various constituents of religion (e.g. Faith, Law, Authority, Ritual, Sacraments, morality, spirituality) comparatively between each of the religions for which we have sufficient data, religious wars, and see the historical significance of (for example) the French Revolution, the Pope, and Ayatollah Ruhollah Khomeini.
Taught by: Spooner
Course not offered every year
Activity: Seminar
1.0 Course Unit
ANTH 704 Culture/Power/Subjectivities
This doctoral level course will introduce students to a conceptual language and theoretical tools for analyzing and explaining the complex intersection of racialized, ethnic, gendered, sexual, and classed differences and asymmetrical social relations. The students will examine critically the interrelationships between culture, power, and subjectivity through a close reading of classical and contemporary social theory. Emphasis will be given to assessing the power of various theories for conceptualizing and explaining mechanisms of social stratification as well as the basis of social order and processes of social change.
Taught by: Hall
Course not offered every year
Also Offered As: EDUC 706, URBS 706
Prerequisite: EDUC 547
Activity: Lecture
1.0 Course Unit

ANTH 706 State, Society, and Culture in South Asia
This interdisciplinary course introduces graduate students to both classic and more recent theoretical frameworks used in understanding and analyzing society, culture, and the state, with particular reference to South Asia. Topics include bureaucracy and the state; power and performance; hierarchy and individualism; caste, community, and domination; money and markets; credit and debt; globalization and consumption; economic liberalization and political transformations; local and trans-local contexts of meaning; the environment, politics, and urban and rural ecologies; and culture and the changing shape of politics. Particular emphasis will be placed on the ways in which recent ethnographic and historical monographs have positioned their interventions in relation to broader debates and scholarship, both within scholarship on South Asia and more generally.
Taught by: Mitchell
Course not offered every year
Also Offered As: SAST 704
Activity: Seminar
1.0 Course Unit

ANTH 707 Craft of Ethnography
This course is designed to follow after Ethnographic Research Methods (EDUC 721). In the introductory course, students learned how to use qualitative methods in conducting a brief field study. This advanced level course focuses on research design and specifically the craft of ethnographic research. Students will apply what they learn in the course in writing a proposal for a dissertation research project. Prerequisite: Must have completed EDUC 721 or equivalent introductory qualitative methods course.
Taught by: Hall
Course not offered every year
Also Offered As: EDUC 700
Activity: Lecture
1.0 Course Unit

ANTH 719 Archaeology Field Project
This is a parallel course to ANTH 219, but on the graduate level. It will only be open to select graduate students (i.e. historical archaeology students and some CGS MA students). Specific permission of the instructor is required in each case.
Taught by: Schuyler
Course usually offered in fall term
Also Offered As: ANTH 219
Activity: Seminar
1.0 Course Unit
Notes: Permission of instructor required.

ANTH 720 Historical Archaeology Laboratory
Parallel graduate course to ANTH 220. Lab class will meet in three hour sections on Fridays and Saturdays and will involve the analysis of artifacts, documentary records, oral historic sources and period illustrations collected on Southern New Jersey historic sites and Silver Reef, a ghost town in Southwestern Utah. No Previous archaeological or lab experience is required. Course may be repeated for credit.
Taught by: Schuyler
Course usually offered in spring term
Also Offered As: ANTH 220
Activity: Laboratory
1.0 Course Unit

ANTH 730 Readings & Research In Linguistic Anthropology
This doctoral level course will introduce students to a conceptual and methodological literature in the study of language and meaning in cross-cultural perspective. Emphasis will be given to assessing the power of various approaches for conceptualizing and explaining mechanisms of social stratification as well as the basis of social order and processes of social change.
Taught by: Hall
Course not offered every year
Also Offered As: EDUC 706, URBS 706
Prerequisite: EDUC 547
Activity: Lecture
1.0 Course Unit

ANTH 733 Colloquium Seminar
This graduate seminar is a full year course open to second year anthropology graduate students. Other interested students should contact the instructors for permission before enrolling. Topic changes each year, corresponding to the Penn Anthropology Department Colloquium series.
Two terms. student may enter either term.
Activity: Seminar
1.0 Course Unit

ANTH 741 Anthropology of Affect
This course draws upon three anthropological literatures pertaining to affect. One, growing out of Darwin’s observations in The Expression of Emotions in Man and Animals, looks at the evolutionary and neurobiological bases of affect. A second developed in connection with psychoanalysis, and centers upon insights gained through empathic and introspective processes. A third arose with cultural studies and reactions within anthropology to structuralism, including research on cross-cultural variation in the conceptualization of emotions. The course is appropriate for graduate students interested in exploring the linkages among these literatures, and who envision or are already actively undertaking research for which knowledge of them is pertinent. Students will be expected to lead discussions of specific works, as well as present aspects of their own present or proposed future research. Students outside of the Anthropology Department should contact the instructor to request a permit.
Taught by: Urban
Course not offered every year
Activity: Seminar
1.0 Course Unit
ANTH 751 Historical Archaeology
Archaeology of the Modern World from the Columbian voyage (1492) to the 20th century. Topics such as the rise of early modern Europe, European exploration and colonization, African American Archaeology, Asian American Archaeology, the rise of colonial society, contact with native peoples, the Industrial Revolution, and the archaeology of the 20th century will be covered.
Taught by: Schuyler
Course not offered every year
Also Offered As: ANTH 451
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit

ANTH 752 Archaeology of American History: The Colonial Period
Over the last fifty years archaeologists have been exploring historic sites in the United States dating from both the Colonial Period and the 19th/20th centuries. What can archaeology now tell us about the origins of American society, the invasion of North America by various European peoples (Spanish, English, Dutch), the impact on native peoples, the rise of African American and Asian American cultures, major crisis (e.g. the revolution, Civil War, and the Great Depression), the settlement of the Far American West, and the final emergence of a truly national culture in the 20th century? A basic question will be how an American history based on both archaeology and archival sources is different and more complete than an image of the past drawn only from written sources.
Taught by: Schuyler
Course not offered every year
Also Offered As: ANTH 151
Activity: Seminar
1.0 Course Unit

ANTH 753 Arch Amer Hist 1790-2000
Also Offered As: ANTH 152

Applied Math & Computational Science (AMCS)

AMCS 510 Complex Analysis
Complex numbers, DeMoivre’s theorem, complex valued functions of a complex variable, the derivative, analytic functions, the Cauchy-Riemann equations, complex integration, Cauchy’s integral theorem, residues, computation of definite integrals by residues, and elementary conformal mapping.
Taught by: Staff.
One-term course offered either term
Also Offered As: MATH 410
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit

AMCS 514 Advanced Linear Algebra
Topics will include: Vector spaces, Basis and dimension, quotients; Linear maps and matrices; Determinants, Dual spaces and maps; Invariant subspaces, Cononical forms; Scalar products: Euclidean, unitary and symplectic spaces; Orthogonal and Unitary operators; Tensor products and polylinear maps; Symmetric and skew-symmetric tensors and exterior algebra.
Also Offered As: MATH 314, MATH 514
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit

AMCS 520 Ordinary Differential Equations
After a rapid review of the basic techniques for solving equations, the course will discuss one or more of the following topics: stability of linear and nonlinear systems, boundary value problems and orthogonal functions, numerical techniques, Laplace transform methods.
One-term course offered either term
Also Offered As: MATH 420
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit

AMCS 525 Partial Dif Equations
Method of separation of variables will be applied to solve the wave, heat, and Laplace equations. In addition, one or more of the following topics will be covered: qualitative properties of solutions of various equations (characteristics, maximum principles, uniqueness theorems), Laplace and Fourier transform methods, and approximation techniques.
Course usually offered in fall term
Also Offered As: MATH 425
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit

AMCS 567 Mathematical Computation Methods for Modeling Biological Systems
This course will cover topics in systems biology at the molecular/cellular scale. The emphasis will be on quantitative aspects of molecular biology, with possible subjects including probabilistic aspects of DNA replication, transcription, translation, as well as gene regulatory networks and signaling. The class will involve analyzing and simulating models of biological behavior using MATLAB. Prerequisite: Graduate standing or permission of the instructor.
One-term course offered either term
Also Offered As: BE 567, GCB 567
Activity: Lecture
1.0 Course Unit
AMCS 584 The Mathematics of Medical Imaging and Measurement
The last several decades have seen major revolutions in both medical and non-medical and imaging technologies. Underlying all of these advances are sophisticated mathematical tools that model the measurement process and reconstruct images. This course begins with an introduction of the mathematical models and then proceeds to discuss the integral transforms that underlie these models: the Fourier transform, the Radon transform and the Laplace transform. We discuss how each of these transforms is inverted, both in theory and in practice. Along the way we study interpolation, sampling, approximation theory, filtering and noise analysis. This course assumes a thorough knowledge of linear algebra and a knowledge of analysis at the undergraduate level (Math 314 and Math 360 and Math 361, or Math 508 and Math 509).
Taught by: Staff.
Course not offered every year
Also Offered As: BE 584, MATH 584
Prerequisite: MATH 114 AND MATH 360 OR MATH 508 AND MATH 361 OR MATH 509
Activity: Lecture
1.0 Course Unit

AMCS 599 Independent Study
Activity: Independent Study
1.0 Course Unit

AMCS 602 Algebraic Techniques for Applied Mathematics and Computational Science, I.
We turn to linear algebra and the structural properties of linear systems of equations relevant to their numerical solution. In this context we introduce eigenvalues and the spectral theory of matrices. Methods appropriate to the numerical solution of very large systems are discussed. We discuss modern techniques using randomized algorithms for fast matrix-vector multiplication, and fast direct solvers. Topics covered include the classical Fast Multipole Method, the interpolative decomposition, structured matrix algebra, randomized methods for low-rank approximation, and fast direct solvers for sparse matrices. These techniques are of central importance in applications of linear algebra to the numerical solution of PDE, and in Machine Learning. The theoretical content of this course is illustrated and supplemented throughout the year with substantial computational examples and assignments.
Course not offered every year
Activity: Lecture
1.0 Course Unit

AMCS 603 Algebraic Techniques for Applied Mathematics and Computational Science, II.
We begin with an introduction to group theory. The emphasis is on groups as symmetries and transformations of space. After an introduction to abstract groups, we turn our attention to compact Lie groups, in particular SO(3), and their representations. We explore the connections between orthogonal polynomials, classical transcendental functions and group representations. This unit is completed with a discussion of finite groups and their applications in coding theory.
Course not offered every year
Activity: Lecture
1.0 Course Unit

AMCS 608 Analysis
Complex analysis: analyticity, Cauchy theory, meromorphic functions, isolated singularities, analytic continuation, Runge’s theorem, d-bar equation, Mittlag-Leffler theorem, harmonic and sub-harmonic functions, Riemann mapping theorem, Fourier transform from the analytic perspective. Introduction to Real Analysis: Weierstrass approximation, Lebesgue measure and integration Euclideansspaces, Borel measures and convergence theorems, C0 and the Riesz-Markov theorem, Lp-spaces, Fubini’s Theorem.
One-term course offered either term
Also Offered As: MATH 608
Prerequisite: MATH 508 AND MATH 509
Activity: Lecture
1.0 Course Unit

AMCS 609 Analysis
One-term course offered either term
Also Offered As: MATH 609
Prerequisite: MATH 608
Activity: Lecture
1.0 Course Unit

AMCS 610 Functional Analysis
Also Offered As: MATH 610
Prerequisite: MATH 608 OR MATH 609
Activity: Lecture
1.0 Course Unit

AMCS 999 Independent Study & Research
Study under the direction of a faculty member.
Activity: Independent Study
1.0 Course Unit
Applied Positive Psychology (APOP)

APOP 100 Introduction to Positive Psychology
In the 20th century, the field of psychology made enormous and important strides in addressing mental health challenges. Today research in the field has expanded, inspired, in part, by Martin E.P. Seligman's 1998 APA presidential address, to include the scientific study of optimal functioning and what helps people live full lives. This course focuses on the science of thriving—what does it mean to be 'happy,' and how can one cultivate well-being at the individual and community level? Students explore the foundations of this science, understand a conceptual framework for well-being, and actively engage in activities that help to cultivate well-being. Drawing upon theory, empirical research, ancient and collective wisdom, we examine these topics critically and experientially and together build an engaged learning community. For those pursuing a Certificate in Applied Positive Psychology, this course is strongly recommended as a prerequisite for the other three courses.

Taught by: na
Also Offered As: LEAD 340
Activity: Online Course
1.0 Course Unit

APOP 120 Human Flourishing: Strengths and Resilience
What does it mean to flourish? What are we like when we are at our best? What helps us bounce back from challenges and adversity? Continuing the exploration of the science of positive psychology, students delve deeply into the study of character strengths as a framework for building positive character and well-being, and explore the concept of resilience, or the ability to overcome challenging situations. In this course, we explore how we can leverage our strengths to more effectively contribute to the greater world and enhance our own well-being. We also study the physical and psychological protective factors that constitute resilience, and how they are cultivated. Students learn about these topics from a scientific and experiential perspective, both as individuals and within our learning community. This course will have required synchronous sessions and the instructor will offer a choice of times. Students will have a more robust learning experience in this course if they first complete Introduction to Positive Psychology.

Taught by: Robertson-Kraft
Also Offered As: LEAD 350
Activity: Online Course
1.0 Course Unit

APOP 200 Positive Psychology at Work
If flourishing is related to our lived daily experience, and approximately 50% of our waking hours are spent working, how do our workplaces contribute to, and diminish, our ability to thrive? Students are exposed to an array of research-informed strategies that have been applied in a variety of disciplines and workplaces, including business, education, health care, and nonprofit organizations. Exploration of case studies and salient research topics such as relationships at work, positive leadership, prosocial behavior, and our sense of meaning and purpose, guide our learning. Students gain an understanding of the variables that contribute to our ability to flourish at work and understand how we both experience and shape our work environments through our individual contributions. This course will have required synchronous sessions and the instructor will offer a choice of times.

Taught by: Meredith Myers
Also Offered As: LEAD 360
Activity: Online Course
1.0 Course Unit

APOP 220 Flourishing with Others: Building Thriving Relationships
Interpersonal relationships are key for happiness and well-being. Christopher Peterson, one of the pioneers of positive psychology used to say that the field could be summarized in three words: ‘Other people matter.’ In this course, we will take a deep dive into the research on relationships that work well and foster well-being. We will study positive relationships at different levels, from the closest ones, like families and romantic partnerships, to friendships, relationships between colleagues and in teams at work, to broader communities, and our relationship with nature and our planet. For each of these domains, we will learn practical ways to nurture and improve relationships and to help people flourish through them. This class will combine academic rigor with experiential learning, and it will provide many opportunities for self-reflection, conversation in small teams and applied ‘experiments’ in students’ lives.

Taught by: Margarita Tarragona
Activity: Online Course
1.0 Course Unit

APOP 300 The Scientific Method in Positive Psychology
How do we both understand and measure well-being, and the psychological characteristics that contribute to it? Understanding the scientific basis of these important questions requires an understanding of the scientific methods that inform them. You will learn the basics of the scientific method, and foundational descriptive statistics used in positive psychology and social sciences. You will explore how concepts related to positive psychology are operationalized and measured, and learn the basics of developing hypotheses, research design, and practicing open science. This is not a statistics course—the goal is to equip you to be critical and informed consumers of research in positive psychology and beyond. This course also involves weekly synchronous recitation sessions (scheduling varies). This course substitutes as a Scientific Process requirement for the BAAS degree. Students will have a more robust learning experience in this course if they first complete Introduction to Positive Psychology.

Taught by: Robertson-Kraft
Activity: Online Course
1.0 Course Unit

APOP 320 Morality and the Good Life
Morality pervades everyday life. Far from being confined to the ivory tower, we make moral decisions and engage in moral behavior every day, ranging from the ordinary (e.g., whether to volunteer or return a lost wallet) to the extreme (e.g., whether to donate one’s kidney to a stranger or fight and die for a cause). Morality is central to our evaluations of ourselves and others, and to the wellbeing of ourselves and the societies in which we live. In this course, you will learn about psychological research on morality. We will cover topics such as (1) How people make moral judgments, (2) How and why people have differing judgments of everything from tax rates to dietary preferences, (3) Psychological factors contributing to moral (e.g., altruistic) behavior, and (4) Intersections between moral psychology and our ideals, aspirations and well-being at the individual and societal level. This course aims to introduce you to the psychology of morality, to enable you to be more aware of and effective in navigating moral challenges in daily life.

Taught by: Damien Crone
Activity: Online Course
1.0 Course Unit
Arabic (ARAB)

ARAB 031 Elementary Arabic I
This is the beginners course in Modern Standard Arabic (MSA). It will introduce you to the speaking, listening, reading and writing skills in the standard means of communication in the Arab World. The course is proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. Evaluation is done by the more traditional testing methods (vocabulary tests, dictations, grammar and translation exercises). We anticipate that by the end of this course, students will range in proficiency from Novice High to Intermediate Low on the ACTFL scale; in other words (using the terminology of the government’s Foreign Service Institute), from ‘incipient survival’ to ‘full survival’ in the native-speaking environment.
For BA Students: Language Course
Course usually offered in fall term
Also Offered As: ARAB 631
Activity: Lecture
1.0 Course Unit

ARAB 032 Elementary Arabic II
This course is a continuation of first semester Elementary Arabic, and builds on the speaking, listening, reading and writing skills in the standard means of communication in the Arab World. Evaluation is done by the more traditional testing methods (vocabulary tests, dictations, grammar and translation exercises). We anticipate that by the end of this course, students will range in proficiency from Novice High to Intermediate Low on the ACTFL scale.
For BA Students: Language Course
Course usually offered in spring term
Also Offered As: ARAB 632
Prerequisite: ARAB 031
Activity: Lecture
1.0 Course Unit

ARAB 033 Intermediate Arabic III
This is the continuation of the Elementary course in Modern Standard Arabic (MSA). This course is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment. Evaluation is done by the more traditional testing methods (vocabulary tests, grammar and translation exercises). We anticipate that students range from Intermediate Low to Intermediate High according to the ACTFL scale.
For BA Students: Language Course
Course usually offered in fall term
Also Offered As: ARAB 633
Prerequisite: ARAB 032
Activity: Lecture
1.0 Course Unit

ARAB 034 Intermediate Arabic IV
This is the continuation of the first semester Intermediate Arabic. This course is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment. Evaluation is done by the more traditional testing methods (vocabulary tests, grammar and translation exercises). We anticipate that students will achieve Intermediate High according to the ACTFL scale.
For BA Students: Last Language Course
Course usually offered in spring term
Also Offered As: ARAB 634
Prerequisite: ARAB 033
Activity: Lecture
1.0 Course Unit

ARAB 035 Advanced Intermediate Arabic I
This is a proficiency-based course which builds on the lessons from Intermediate Arabic. Emphasis continues to be on all four language skills: Speaking, Listening, Reading, & Writing. The readings for the class are chosen from actual texts from both medieval and modern Arabic in a variety of fields and subjects. Students will be expected to give classroom presentations and to write short essays in Arabic. Evaluation will be both Achievement- and proficiency- based.
For BA Students: Advanced Language Course
Course usually offered in fall term
Also Offered As: ARAB 635
Prerequisite: ARAB 034
Activity: Lecture
1.0 Course Unit

ARAB 036 Advanced Intermediate Arabic II
This course is a continuation of first semester Advanced Intermediate Arabic. Emphasis continues to be on all four language skills: Speaking, Listening, Reading, & Writing. The readings for the class are chosen from actual texts from both medieval and modern Arabic in a variety of fields and subjects. Students will be expected to give classroom presentations and to write short essays in Arabic. Evaluation will be both Achievement- and proficiency- based.
For BA Students: Advanced Language Course
Course usually offered in spring term
Also Offered As: ARAB 636
Prerequisite: ARAB 035
Activity: Lecture
1.0 Course Unit

ARAB 037 Advanced Arabic and Syntax I
Advanced syntax through the reading of Arab grammarians. This course is designed to give the student experience in reading whole works in Arabic and giving reports on them. Readings are by medieval and modern writers.
For BA Students: Advanced Language Course
Course usually offered in fall term
Also Offered As: ARAB 637
Prerequisite: ARAB 036
Activity: Lecture
1.0 Course Unit
ARAB 039 Colloquial Arabic
A one-semester, introductory course to the spoken Arabic of one of the regions of the Arab world, chosen according to the dialect of instructor. One-term course offered either term Also Offered As: ARAB 639
Prerequisite: ARAB 032
Activity: Lecture
1.0 Course Unit

ARAB 041 Beginning Arabic I
This is a beginner course in Modern Standard Arabic (MSA). It will introduce you to the speaking, listening, reading, and writing skills in the standard means of communication in the Arab world. The course is proficiency-based, implying that all activities are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. Evaluation is done by the more traditional testing methods (vocabulary tests, dictations, grammar and translation exercises). We anticipate that by the end of this course (ARAB 041) students will range in proficiency from Novice High to Intermediate Low on the ACTFL scale; in other words (using the terminology of the government's Foreign Service Institute), from 'incipient survival' to 'full survival' in the native-speaking environment. Prerequisite: See the LPS Course Guide. **This course does not fulfill the College/Wharton language requirement.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: See the LPS Course Guide. **This course does not fulfill the College/Wharton language requirement.

ARAB 042 Beginning Arabic II
Prerequisite: If course requirements not met, permission of instructor required. **This course does not fulfill the College language requirement.
For BA Students: Language Course
Course usually offered in spring term
Prerequisite: ARAB 041
Activity: Lecture
1.0 Course Unit

ARAB 043 Continuing Arabic III
This is the continuation of ARAB041 and ARAB 042, the elementary course in Modern Standard Arabic (MSA). This course is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. As in ARAB 041-042, evaluation is done by the more traditional testing methods (vocabulary tests, grammar and translation exercises). Completion of this course fulfills the College of Liberal and Professional Studies language requirement in Arabic but not for the School of Arts and Sciences. However, it should be emphasized that you will need a longer period of study to achieve proficiency in Arabic. We anticipate that students range from Intermediate Low to Intermediate High according to the ACTFL scale. Prerequisite: See the CLPS Course Guide. **This course does not fulfill the College language requirement.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: See the CLPS Course Guide. **This course does not fulfill the College language requirement.

ARAB 044 Continuing Arabic IV
Prerequisite: If course requirements not met, permission of instructor required. See the LPS Course Guide. **This course does not fulfill the College language requirement.
Course usually offered in spring term
Prerequisite: ARAB 043
Activity: Lecture
1.0 Course Unit
Notes: See the LPS Course Guide. **This course does not fulfill the College language requirement.

ARAB 131 Intensive Elementary Arabic I&II
This is a six-week intensive beginners' course in Modern Standard Arabic (MSA). It will introduce the student to speaking, listening, reading, and writing skills in the standard means of communication in the Arab world. The course is proficiency-based, implying that all activities are aimed at placing the student in the context of the native-speaking environment from the very beginning. Evaluation is done by the more traditional testing methods (vocabulary tests, dictations, grammar and translation exercises). We anticipate that by the end of this course (ARAB 041) students will range in proficiency from Novice High to Intermediate Low on the ACTFL scale; in other words (using the terminology of the government's Foreign Service Institute) survival to 'full survival' in the native-speaking environment. Prerequisite: Offered through the College of Liberal and Professional Studies Summer Session I.
For BA Students: Language Course
Course usually offered summer term only
Activity: Lecture
2.0 Course Units
Notes: Offered through the College of Liberal and Professional Studies Summer Session I.

ARAB 133 Intensive Intermediate Arabic I&II
This is a six-week intensive course offered in the summer through LPS; see the Penn Summer Course Guide. This is the continuation of ARAB031-32 or ARAB 131, the elementary course in Modern Standard Arabic (MSA). This course is also proficiency-based, implying that all activities within the course are aimed at placing the student in the context of the native-speaking environment from the very beginning. As in ARAB 031-032 or ARAB 131, evaluation is done by the more traditional testing methods (vocabulary tests, grammar and translation exercises). Completion of this course fulfills the College of Arts and Sciences language requirement in Arabic. However, it should be emphasized that the student will need a longer period of study to achieve proficiency in Arabic. We anticipate that students range from Intermediate Low to Intermediate High according to the ACTFL scale. Prerequisite: Offered through the College of Liberal and Professional Studies Summer Session I.
For BA Students: Language Course
Course usually offered summer term only
Activity: Lecture
2.0 Course Units
Notes: Offered through the College of Liberal and Professional Studies Summer Session I.
ARAB 135 Intensive Advanced Intermediate Arabic I&II
This is a six-week intensive course offered in the summer through LPS; see Penn Summer Course Guide. It continues from the first intermediate course, ARAB 033/034 or ARAB 133. Emphasis continues to be on all four language skills: speaking, listening, reading, and writing. Students will be expected to give classroom presentations and to write short essays in Arabic. Evaluation will be both achievement-based and proficiency-based. There is no Oral Proficiency Interview at the end of this session, but we anticipate that by the end of this, third year students will range in proficiency from Intermediate High to Advanced Mid on the ACTFL scale. Prerequisite: Offered through the College of Liberal and Professional Studies Summer Session I. For BA Students: Advanced Language Course Course usually offered summer term only Activity: Lecture 2.0 Course Units Notes: Offered through the College of Liberal and Professional Studies Summer Session I.

ARAB 235 The Adab Tradition
Taught by: Fakhreddine, H.
Course not offered every year
Also Offered As: ARAB 735
Activity: Seminar
1.0 Course Unit

ARAB 331 Advanced Spoken Standard Arabic
The course will concentrate on the reading and speaking skills at the advanced level. Students will be assigned reading and audio-visual materials on which to prepare oral classroom presentations. Final examination in the course will be based on performance in the oral proficiency interview. Taught in MSA with writing assignments in MSA. For BA Students: Advanced Language Course One-term course offered either term Also Offered As: ARAB 531 Prerequisite: ARAB 036 Activity: Lecture 1.0 Course Unit

ARAB 333 Readings in the Qur’an and Tafsir
This course has two goals: to introduce undergraduate students to reading the Qur’an in Arabic, and to enhance the speaking, listening, and writing skills in MSA. Through the reading and study of selected major Qur’anic narratives and commentary (tafsir), students will become familiar with Qur’anic vocabulary, style, recitation practices, and other intricacies of the Qur’anic text. All students will also memorize a short sura of their choice and practice reciting it in an aesthetically appropriate manner (typically suras 1, 112, 113, or 114). Taught in MSA with writing assignments in MSA. Taught by: Lowry Course offered spring; even-numbered years Prerequisite: ARAB 035 Activity: Seminar 1.0 Course Unit

ARAB 433 Arabic Readings in the Social Sciences and the Media
This course trains students to be proficient with written materials and media in MSA. This class will explore the Middle East through timely analysis of Arabic media as well as original analysis of the ideological, intellectual, social, cultural, and religious background to current events, including the Arab Spring and its aftermath. It is intended that, upon completion of this course, students will be able to work independently with a variety of media texts at different levels. Taught in MSA with writing assignments in MSA. Course offered spring; odd-numbered years Prerequisite: ARAB 036 OR ARAB 636 Activity: Lecture 1.0 Course Unit

ARAB 434 Readings in Arabic Literature
Through engaging with authentic texts, this advanced class aims to activate the language skills students have learned in previous language courses. We will read selections from the modern Arabic short story and will respond to them in writing, discussion and translation. We will focus on close reading, relying on our knowledge of grammar. We will also work to develop writing, comprehension, and speaking skills through short critical responses and oral presentations. All class discussions will be conducted in Arabic. Course not offered every year Activity: Seminar 1.0 Course Unit

ARAB 436 Introduction to Pre-Modern Arabic Texts
This course aims to provide incoming graduate students and advanced undergraduate students with an introduction to issues in Arabic grammar and syntax that commonly arise in pre-modern Arabic texts. Students will also be introduced to, and expected to consult, the standard reference works used as aids in reading such texts. Students will be expected to prepare a text or set of texts assigned by the instructor for each session. It is intended that, upon completion of this course, students will be able to work independently with a wide variety of pre-modern Arabic texts. Although the texts in this course are pre-modern, the course reinforces MSA reading skills. May be taken twice for credit with instructors permission. Taught by: Lowry Course offered fall; even-numbered years Prerequisite: ARAB 036 OR ARAB 636 Activity: Seminar 1.0 Course Unit Notes: May be taken twice for credit with instructors permission.

ARAB 437 History & Fiction in Arabic
This course is intended to provide a more advanced exposure to Arabic language skills beyond those offered by the standard Arabic curriculum, particularly in reading, writing, and grammar of MSA and some exposure historical forms of Arabic like Classical Arabic and Middle Arabic, not to mention important genres like the modern academic article, memoirs, chronicles, and biography. Students will refine their readings skills and will be able to read at a quicker rate by the end of the semester, and increase their active vocabulary accordingly. Students will also practice writing and explore some of the finer points of Arabic grammar. Along the way, students will learn a good bit about the history of the Arab world, and grapple with the fuzzy border between history and memory, fact and fiction. Taught by: Cobb Activity: Seminar 1.0 Course Unit
ARAB 531 Advanced Spoken Standard Arabic
The course will concentrate on the reading and speaking skills at the advanced level. Students will be assigned reading and audio-visual materials on which to prepare oral classroom presentations. Final examination in the course will be based on performance in the oral proficiency interview. Taught in MSA with writing assignments in MSA.
For BA Students: Advanced Language Course
Course usually offered in fall term
Also Offered As: ARAB 331
Prerequisite: ARAB 036 OR ARAB 636
Activity: Lecture
1.0 Course Unit

ARAB 533 Readings in Islamic Law
This advanced readings course provides students with the opportunity to study Arabic-language Islamic legal texts from all periods, including the Qur’an, Hadith, premodern and Ottoman-period texts, and modern positive legislation and constitutions to the extent that they are related to or invoke Islamic law.
Taught by: Lowry
Course not offered every year
Prerequisite: ARAB 036 OR ARAB 636
Activity: Seminar
1.0 Course Unit

ARAB 534 Arabic: Reading Historical Manuscripts
Arabic language is used by many societies not only in communication but also in correspondence and in documenting the affairs of their daily lives. Arabic script is adopted by many groups who native languages are not Arabic, in writing their language before some moved to the Roman alphabet. In many historical documents specific style of writing and handwriting are dominant. This specificity is influenced by the dialectical variations, the historical development of each region and the level of Arabic literacy and use.
Taught by: Dinar
Course not offered every year
Activity: Seminar
1.0 Course Unit

ARAB 631 Elementary Arabic I
This is the beginner course in Modern Standard Arabic (MSA). It will introduce you to the speaking, listening, reading and writing skills in the standard means of communication in the Arab World. The course is proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. Evaluation is done by the more traditional testing methods (vocabulary tests, grammar and translation exercises). We anticipate that students range from Novice High to Intermediate Low according to the ACTFL scale.
For BA Students: Language Course
Two terms. student must enter first term.
Also Offered As: ARAB 031
Prerequisite: ARAB 035
Activity: Lecture
1.0 Course Unit

ARAB 632 Elementary Arabic II
This course is a continuation of ARAB 031/631. For the second semester: completion of the first semester or permission of the instructor.
For BA Students: Language Course
Two terms. student must enter first term.
Also Offered As: ARAB 032
Prerequisite: ARAB 631
Activity: Lecture
1.0 Course Unit

ARAB 634 Intermediate Arabic IV
This course is a continuation of ARAB 033/633. For the second semester: completion of the first semester or permission of the instructor.
For BA Students: Last Language Course
Two terms. student must enter first term.
Also Offered As: ARAB 034
Prerequisite: ARAB 632
Activity: Lecture
1.0 Course Unit

ARAB 635 Advanced Intermediate Arabic I
This is a proficiency-based course which continues from the first intermediate course, ARAB 033/034. Emphasis continues to be on all four language skills: Speaking, Listening, Reading, & Writing. The readings for the class are chosen from actual texts from both medieval and modern Arabic in a variety of fields and subjects. Students will be expected to give classroom presentations and to write short essays in Arabic. Evaluation will be both Achievement- and proficiency- based. For the second semester: completion of the first semester or permission of the instructor.
For BA Students: Advanced Language Course
Also Offered As: ARAB 035
Prerequisite: ARAB 634
Activity: Lecture
1.0 Course Unit

ARAB 636 Intermediate Arabic III
This is a continuation of the Elementary course in Modern Standard Arabic (MSA). This course is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. This is the continuation of ARAB031 and ARAB 032, the elementary course in Modern Standard Arabic (MSA). This course is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. As in ARAB 031-032, evaluation is done by the more traditional testing methods (vocabulary tests, grammar and translation exercises). We anticipate that students range from Intermediate Low to Intermediate High according to the ACTFL scale. For the second semester: completion of the first semester or permission of the instructor.
For BA Students: Language Course
Two terms. student must enter first term.
Also Offered As: ARAB 033
Prerequisite: ARAB 635
Activity: Lecture
1.0 Course Unit
ARAB 636 Advanced Intermediate Arabic II
This course is a continuation of ARAB 035/635. For the second semester: completion of the first semester or permission of the instructor.
For BA Students: Advanced Language Course
Two terms. student must enter first term.
Also Offered As: ARAB 036
Prerequisite: ARAB 635
Activity: Lecture
1.0 Course Unit

ARAB 637 Advanced Arabic and Syntax I
Advanced syntax through the reading of Arab grammarians. Development of reading in bulk. Emphasis on classical Arabic read in works by medieval and modern writers. This course is designed to give the student experience in reading whole works in Arabic and giving reports on them. For the second semester completion of the first semester or permission of the instructor.
For BA Students: Advanced Language Course
One-term course offered either term
Also Offered As: ARAB 037
Prerequisite: ARAB 636
Activity: Lecture
1.0 Course Unit

ARAB 639 Colloquial Arabic
A one-semester, introductory course to the spoken Arabic of one of the regions of the Arab world, chosen according to the dialect of instructor.
Course not offered every year
Also Offered As: ARAB 039
Prerequisite: ARAB 032
Activity: Lecture
1.0 Course Unit

ARAB 731 Topics in Islamic Studies
Topics vary from year to year in accordance with the interests and needs of students. Although this course typically focuses on premodern Arabic texts, the readings reinforce MSA reading skills.
Taught by: Lowry
One-term course offered either term
Prerequisite: ARAB 436
Activity: Seminar
1.0 Course Unit
Notes: ARAB 436 or equivalent

ARAB 733 Arabic Texts in Islamic History
This is a graduate seminar course in which different genres of premodern Arabic texts are covered at the advanced graduate level. Students in this course are expected to be able to read and prepare (vowel, parse, and translate) passages from Arabic texts on a weekly basis and to be able to discuss them critically during the class itself. Topics are chosen to reflect student interest. Recent and potential topics include: Geographers and travel accounts; biographical dictionaries; chronicles; heresiography; poetry; memoir and sira. Although this course typically focuses on premodern Arabic texts, the readings reinforce MSA reading skills.
Taught by: Cobb
Course not offered every year
Prerequisite: ARAB 036
Activity: Seminar
1.0 Course Unit

ARAB 734 Selected Topics in Arabic Literature
This is a survey of Arabic poetry from the Pre-Islamic era until today. Readings will be selected to trace major thematic and formal developments in Arabic poetry. Readings also include excerpts from modern critical scholarship on the topic in Arabic. The class aims to introduce students to the basics of academic research and writing in Arabic. The class is taught in MSA with oral presentations and writing assignments in MSA.
Taught by: Fakhreddine
Course not offered every year
Activity: Seminar
1.0 Course Unit

ARAB 735 The Adab Tradition
This is a survey of pre-modern Arabic prose. Selections will be made from major books of Adab, compilations of akhbār, the Qurʾān, the sūrah, and critical treatise. Readings will be accompanied by excerpts from modern critical scholarship on the topic in Arabic. The class is taught in MSA with oral presentations and writing assignments in MSA.
Taught by: Fakhreddine, H.
Course not offered every year
Also Offered As: ARAB 235
Activity: Seminar
1.0 Course Unit

Architecture (ARCH)

ARCH 102 Introduction to Design
An exploration of the design process utilizing drawing and model-making techniques. Skills of representation and fabrication are introduced in the context of the development of each student's capacity to observe, interpret, and translate design concepts into physical form. The course includes a weekly lecture and a biweekly studio component.
Taught by: Faculty
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ARCH 111 Architecture in the Anthropocene
This course will use architecture and as a lens to investigate the emerging field of the environmental humanities. Our goal is to analyze and understand these new intellectual frameworks in order to consider the relationship between global environmental challenges and the process of constructing a just and equitable world. As such, we move between social and political theory, environmental history, architectural history and theory, and explorations of urban change. Issues of importance will include: theories of risk, the role of nature in political conflicts; environmental communication; the culture and technology of energy transition; and the relationship between speculative design and other narratives of the future. These conceptual frameworks will be read alongside creative projects in art, literature, and architecture, and will be amplified through presentations and discussions with numerous visitors to the course.
Taught by: Daniel Barber
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
ARCH 201 Design Fundamentals I
This studio course develops drawing and model-making skills with emphasis on digital representation and digital fabrication. The capacity of nature-inspired design is explored as a foundation for the creative production of new forms of expression.
Taught by: Faculty
Course usually offered in fall term
Prerequisite: ARCH 102
Activity: Studio
1.5 Course Unit

ARCH 202 Design Fundamentals II
A studio course exploring the relationship between two-dimensional images and three-dimensional digital and physical models. This studio course develops advanced techniques in digital representation and fabrication through an investigation of the theme of inhabitation in architecture.
Taught by: Faculty
Course usually offered in spring term
Prerequisite: ARCH 201
Activity: Studio
1.5 Course Unit

ARCH 301 Design I
An introduction to the design of architecture in the city. Students explore the relationships between two-dimensional patterns and their corresponding three-dimensional interpretations through the orthographic drawings of plan, section, and elevation and three-dimensional digital and physical models.
Taught by: Faculty
Course usually offered in fall term
Prerequisite: ARCH 202
Activity: Studio
2.0 Course Units

ARCH 302 Design II
An introduction to the design of architecture in the landscape. Issues of mapping, placement, scale, and construction are explored through studio design projects, site visits, and discussions. Course work focuses on the preparation and presentation of design projects emphasizing analytical skills along with the development of imaginative invention and judgment.
Taught by: Faculty
Course usually offered in spring term
Prerequisite: ARCH 301
Activity: Studio
2.0 Course Units

ARCH 303 Design Fundamentals
The creation of a successful product requires the integration of design, engineering, and marketing. The purpose of this intensive studio course is to introduce basic concepts in the design of three-dimensional products. For purposes of the course, design is understood as a creative act of synthesis expressed through various modes of 2-dimensional and 3-dimensional representation. The course develops basic design skills ranging from hand sketching to the use of digital modeling software and rapid prototyping. Fulfills the requirement for a design background course in the interdisciplinary graduate program in Integrated Product Design (IPD).
Taught by: Wesley
Course usually offered summer term only
Also Offered As: IPD 503
Activity: Studio
1.0 Course Unit

ARCH 318 Topographical Stories: Architecture, Literature, and Cities
This course will argue a simple thesis: that the spaces of our lives record the stories of our lives. Architecture and literature will be studied, through built works and texts, the latter from both author-architects and fiction writers (novelists, short story writers, and poets). Urban settings throughout the world will occupy our attention, in Berlin, New York, Paris, Milan, London, Venice, Vienna, Chicago, and Shanghai. In much the same way that literacy is both cultivated and preserved in books, cultural memory obtains legible shape in buildings, persisting as long as they do. In a time when so much in life seems in flux social norms, family structures, political allegiances, and so on the power of architecture to give practical affairs orientation and stability is especially important. This course will study how architectural settings provide palpable structure for the events of our lives, particularly those events that occur in cities and their institutions, for cities have always been and remain culture’s most efficient and eloquent articulation. Unlike literature, film, or advertising, architecture performs its signifying role rather quietly and unobtrusively; but this fact does not diminish its capacity to allow us to feel ‘at home’ in many and varied settings. This will be clear to non-architects as soon as they reflect on the role played by domestic arrangements, for even the most prosaic events cannot unfold unless the settings in which they are to occur are ‘in order’. Less clear perhaps, but no less important is the role that architecture plays in our understanding and experience of community, civility, and the common good. The course will be structured in two parts. The first part, much shorter than the second, will be thematic and a-historical. In the opening lectures the basic topics of the course will be introduced, as will the questions to be asked of the writings, images, buildings, and cities taken up in part two. The second group of studies will look at a number of cities in Europe, the USA, and China. To make the volume of study materials manageable, we will concentrate on developments in the last hundred to hundred and fifty years. The writings of author architects will provide us with some insight into the ways architecture has served a ‘narrative’ function in these cities, but we will also read stories, poems, and parts of novels that augment and enrich those architectural accounts. The idea is that stories about spaces will clarify the ways that spaces are stories.
Taught by: Leatherbarrow
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ARCH 401 Advanced Design
Content and technique are explored in this studio course through the vehicle of a design project focused on the development of a critical understanding of geometries and mathematics in the representation and fabrication of contemporary architecture.
Taught by: Faculty
Course usually offered in fall term
Prerequisite: ARCH 302
Corequisite: ARCH 411
Activity: Studio
2.0 Course Units
ARCH 411 Theory I: Geometry in Architecture
Following a brief historical overview of Euclidean, stereotomic, projective and descriptive geometry in pre-modern architecture, the course examines the writings and works of early 20th-century modern architects who used regulating lines and numerical harmonic scales to generate and regulate architectural form in accordance with the golden section ratio and the dynamic symmetry of root rectangles. Also examined are works of mid 20th-century architecture based on traditional geometric constructions—conic sections (circles, ellipse, hyperbola and parabola) and ruled surfaces (cylinders, cones, hyperboloids, and hyperbolic paraboloids), as well as those derived from polyhedral and geodesic structures. Following an introduction to the geometry of free-form curves characteristic of the digital turn in late 20th-century architecture—including Bezier, B-spline, NURBS (non-uniform rational B-spline), and developable surfaces—the course concludes with an overview of recent efforts to utilize curvature in contemporary architecture within a set of more definitive geometrical and disciplinary boundaries.
Taught by: Faculty
Course usually offered in fall term
Corequisite: ARCH 401
Activity: Lecture
1.0 Course Unit

ARCH 412 Theory II: Architecture as Cultural Ecology
This course will study and argue a single thesis: that the architects of the early 20th century did not neglect the environmental and cultural context of their buildings because they were narrowly focused on the production of free-standing and radically new objects of design, but developed designs that combined attention to environmental issues with both imaginative approaches to social and cultural purposes and a new understanding of aesthetic content. A review of contemporary ecological mandates will begin the course. That will then be contrasted with historical and ancient conceptions. In depth studies of specific buildings will follow, viewed as cultural ecologies. The course will then turn to the materials and elements of architecture that have been used to construct cultural ecologies. With a more nuanced view of our inheritance we will ask what is not only possible but necessary for architecture in our time, in both its landscape and urban contexts.
Taught by: Faculty
Course usually offered in spring term
Prerequisite: ARCH 411
Activity: Lecture
1.0 Course Unit

ARCH 431 Construction I
Course explores basic principles and concepts of architectural technology and describes the interrelated nature of structure, construction and environmental systems. Open to Intensive Majors only.
Taught by: Faculty
Course usually offered in fall term
Also Offered As: ARCH 531
Activity: Lecture
0.5 Course Units

ARCH 432 Construction II
A continuation of Construction I, focusing on light and heavy steel frame construction, concrete construction, light and heavyweight cladding systems and systems building. Open to Intensive Majors only.
Taught by: Faculty
Course usually offered in spring term
Also Offered As: ARCH 532
Activity: Lecture
1.0 Course Unit

ARCH 433 Building Systems Integration
What makes buildings livable and buildable. After the initial concept design and massing studies are complete the next step is detailing. This seminar will examine the detail, how they can inform and enhance a building's design. The primary goals of a building is that it stands up to external forces, protects inhabitants from the elements and provides a healthy environment. This course will look at the individual components of structure, skin and systems. More importantly though, it will examine the connections between them. The class will begin with lectures examining the different systems and then progress into applying these ideas as a whole to individual studio projects. The final results of this course will be a 3D wall section with accompanying details. These details will be developed in a variety of software as chosen by the student. Recommended options are Revit, Rhino, AutoCAD.
Taught by: Faculty
Course usually offered in fall term
Activity: Seminar
0.5 Course Units

ARCH 435 Structures I
Theory applied toward structural form. A review of one-dimensional structural elements; a study of arches, slabs and plates, curved surface structures, lateral and dynamic loads; survey of current and future structural technology. The course comprises both lectures and a weekly laboratory in which various structural elements, systems, materials and technical principles are explored. Open to Intensive Majors only.
Taught by: Faculty
Course usually offered in fall term
Also Offered As: ARCH 535
Activity: Lecture
0.5 Course Units

ARCH 436 Structures II
A continuation of the equilibrium analysis of structures covered in Structures I. The study of static and hyperstatic systems and design of their elements. Flexural theory, elastic and plastic. Design for combined stresses; prestressing. The study of graphic statics and the design of trusses. The course comprises both lectures and a weekly laboratory in which various structural elements, systems, materials and technical principles are explored. Open to Intensive Design majors only.

Course usually offered in spring term
Prerequisite: ARCH 401
Activity: Independent Study
1.0 Course Unit
Notes: Permission of the Undergraduate Chair
ARCH 500 Summer Preparatory Design Studio
The Summer Preparatory Studio offers an intensive drawing and design experience to candidates for admission to the Graduate Program in Architecture who have not completed the necessary design studio prerequisites or who are required to have additional design experience to qualify for matriculation into the Master of Architecture Professional Degree Program in September. Enrollment in this program does not count towards the Master of Architecture degree. The intent of the drawing component of the course is to familiarize the student with primarily black and white mediums (pencil, charcoal, ink, etc.). Exercises are designed to sharpen the student’s ability to see selectively and to transform image to paper through both line and tonal renderings in freehand sketch form. Exercises will also familiarize the student with basic drafting skills necessary for architectural communication and provide an introduction to computer-aided design through applications of the intensive Rhino and Illustrator tutorials given in the Digital Navigation course. The design part of the course presents a rhythm of basic three-dimensional design studies and simple architectural studio investigations. These are intended to build fundamental skills and acquaint the student with the architectural issues of form, space, conceptualization, transformation of scale, simple functional and constructional problems and a sensitivity to context. Course enrollment is by permit only.
Course usually offered summer term only
Activity: Studio
2.0 Course Units

ARCH 501 Design Studio I
An introductory architectural design studio through which students develop critical, analytical and speculative design abilities in architecture. Students develop representational techniques for the analysis of social and cultural constructs, and formulate propositions for situating built form in the arena of the urban and suburban environment. The studio initiates innovation through a sequence of projects, spatial models and rule sets that introduce each student to rule-based design processes—in which a reversal of expectations leads to the creation of novel spaces and structures. It introduces computation, geometric techniques, and digital fabrication. Projects explore the formation of space in relation to the body, and the developments of small scale public programs.
Course usually offered in fall term
Corequisite: ARCH 521
Activity: Studio
2.0 Course Units

ARCH 502 Design Studio II
This studio explores urban architecture as an embodiment of cultural values. Siting, enclosure of space and tectonic definition are stressed in order to challenge students to project relevant and inventive architectural situations.
Course usually offered in spring term
Corequisite: ARCH 522
Activity: Studio
2.0 Course Units

ARCH 511 History and Theory I
The first of three required courses in the history and theory of architecture, this is a lecture course with discussion groups that meet weekly with teaching assistants. The course explores fundamental ideas and models of architecture that have emerged over the past three hundred years.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ARCH 512 History and Theory II
How do architecture, urbanism, and the environment reflect the dominant social, economic, and political changes of the twentieth and twenty-first centuries and how did its vast geopolitical shifts such as Imperialism, Fascism, the Cold War, Neoliberalism, the ‘War on Terror,’ and Nationalism reshape architecture culture? How might architecture culture respond and help construct its resistant variants, anti-fascism, anti-imperialism, decolonization, and making ‘quieter places’ in Donna Haraway’s sense? How do critical frameworks to rethink positivism, efficiency, standardization, and even utopian thinking become revised through the lenses of queer, postcolonial, critical race, and eco-feminist theory in postwar architectural production? And how do these frameworks allow us to conceive of more equitable ways of being in the world while thinking with a varied pasts? This course provides twelve discursive and theoretical frameworks to rethink architectural history in the twentieth and twenty-first century. Through twelve lectures the course traces critical questions confronting architectural modernity from the violence of settler colonialism to the possibilities of making kin. While we will trace instances of architecture, city planning, landscape and infrastructural developments that corresponded to dominant ways of conceiving modernity and its analog progress narratives, the course is mainly interested in considering resistant paradigms that elide attempts to speak of a unified or homogenous notion of modernity. The course will be active and interactive and will include building a collaborative dictionary of architectural terms.
Taught by Sophie Hochhausl
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ARCH 521 Visual Studies I
The study of analysis and projection through drawing and computer visualization
Course usually offered in fall term
Corequisite: ARCH 501
Activity: Laboratory
0.5 Course Units

ARCH 522 Visual Studies II
A continuation of the study of analysis and projection through drawing and computer visualization.
Course usually offered in spring term
Corequisite: ARCH 502
Activity: Laboratory
0.5 Course Units

ARCH 531 Construction I
Lecture course exploring the basic principles of architectural technology and building construction. The course is focused on building material, methods of on-site and off-site preparation, material assemblies, and the performance of materials. Topics discussed include load bearing masonry structures of small to medium size (typical row house construction), heavy and light wood frame construction, sustainable construction practices, emerging + engineered materials, and integrated building practices. The course also introduces students to Building Information Modeling (BIM) via the production of construction documents.
Course usually offered in fall term
Also Offered As: ARCH 431
Activity: Lecture
0.5 Course Units
ARCH 532 Construction II
A continuation of Construction I, focusing on light and heavy steel frame construction, concrete construction, light and heavyweight cladding systems and systems building.
Course usually offered in spring term
Also Offered As: ARCH 432
Activity: Lecture
1.0 Course Unit

ARCH 535 Structures I
Theory applied toward structural form. A review of one-dimensional structural elements; a study of arches, slabs and plates, curved surface structures, lateral and dynamic loads; survey of current and future structural technology. The course comprises both lectures and a weekly laboratory in which various structural elements, systems, materials and technical principles are explored.
Course usually offered in fall term
Also Offered As: ARCH 435
Activity: Lecture
0.5 Course Units

ARCH 536 Structures II
A continuation of the equilibrium analysis of structures covered in Structures I. The study of static and hyperstatic systems and design of their elements. Flexural theory, elastic and plastic. Design for combined stresses; prestressing. The study of graphic statics and the design of trusses. The course comprises both lectures and a weekly laboratory in which various structural elements, systems, materials and technical principles are explored.
Course usually offered in spring term
Also Offered As: ARCH 436
Activity: Lecture
0.5 Course Units

ARCH 601 Design Studio III
In this studio, students engage architecture in its role as a cultural agent and examine the way buildings establish and organize dynamic relationships between site, program and material. The design of a complex building of approximately 50,000 SF provides the pedagogical focus for this research. Students extend skills in geometrical organization, site analysis and building massing/orientation to relate to program organization, circulation and egress, building systems and materials. The conceptual focus centered on the program of dwelling and how this program can be employed to develop and promote dynamic relationships and conditions through time, both within the building and between the building and the context. Through research and experimentation students integrate ecological processes into their design methodology to support design innovations in the building’s structure, its construction assemblies, environmental systems, and materials. Students work towards a high level of design resolution and visual representation, including the articulation of the building structure and its material assembly/enclosure.
Course usually offered in fall term
Corequisite: ARCH 621
Activity: Studio
2.0 Course Units

ARCH 602 Design Studio IV
This studio enables students to develop and resolve the design of a building in terms of program, organization, construction and the integration of structures, enclosure and environmental systems as well as life safety issues. Students select from a range of individually-directed studios within this overall framework. Each instructor develops a different approach and project for their section of this studio. Studios incorporate the expertise of external consultants in advanced areas of technology, engineering and manufacturing.
Course usually offered in spring term
Activity: Studio
2.0 Course Units

ARCH 611 History and Theory III
This is the third and final required course in the history and theory of architecture. It is a lecture course that examines selected topics, figures, projects, and theories from the history of architecture and related design fields during the 20th century. The course also draws on related and parallel historical material from other disciplines and arts, placing architecture into a broader socio-cultural-political-technological context. Seminars with teaching assistants complement the lectures.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units
Notes: This is the third and final required course in the history and theory of architecture. It is a lecture course that examines selected topics, figures, projects, and theories from the history of architecture and related design fields during the 20th century. The course also draws on related and parallel historical material from other disciplines and arts, placing architecture into a broader socio-cultural-political-technological context. Seminars with teaching assistants complement the lectures.

ARCH 631 Technology Case Studies I
A study of the active integration of various building systems in exemplary architectural projects. To deepen students’ understanding of the process of building, the course compares the process of design and construction in buildings of similar type. The course brings forward the nature of the relationship between architectural design and engineering systems, and highlights the crucial communication skills required by both the architect and the engineer.
Taught by: Franca Trubiano
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

ARCH 621 Visual Studies III
The final of the Visual Studies half-credit courses. Drawings are explored as visual repositories of data from which information can be gleaned, geometries tested, designs refined and transmitted. Salient strengths of various digital media programs are identified and developed through assignments that address the specific intentions and challenges of the design studio project.
Course usually offered in fall term
Corequisite: ARCH 601
Activity: Laboratory
0.5 Course Units
ARCH 633 Environmental Systems I
An introduction to the influence of thermal and luminous phenomenon in the history and practice of architecture. Issues of climate, health and environmental sustainability are explored as they relate to architecture in its natural context. The classes include lectures, site visits and field exploration.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

ARCH 634 Environmental Systems II
Considers the environmental systems of larger, more complex buildings. Contemporary buildings are characterized by the use of systems such as ventilation, heating, cooling, dehumidification, lighting, communications, and controls that not only have their own demands, but interact dynamically with one another. Their relationship to the classic architectural questions about building size and shape are even more complex. With the introduction of sophisticated feedback and control systems, architects are faced with conditions that are virtually animate and coextensive at many scales with the natural and man-made environments in which they are placed.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

ARCH 636 Material Formations
Material Formations introduces robotic production and material dynamics as active agents in design rationalization and expression. The course investigates opportunities for designers to synthesize multiple performance criteria within architecture. Theory, Case-Studies and practical tutorials will focus on the incorporation of analytical, simulation, generative computation and robot fabrication concerns within design. While production is traditionally viewed as an explicit and final act of execution, the course explores the potential for all aspects of building production and use to participate within the creative design process, potentially producing performance and affect. Students will develop skills and experience in computer programming, physics-based simulation, and robot motion planning. A design research project will be undertaken through a number of discrete assignments that require the synthetization or structural performance along with material and robotic production constraints. The course will explore design as the outcome of materially formative processed of computation and production. Structure: the course will commence with weekly lectures and computer-based tutorials, and culminate in a series of intensive incremental learning, and prepare groups to work on a final assignment which involves the robotic fabrication of a small design prototype.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ARCH 671 Professional Practice I
The course consists of a series of workshops that introduce students to a diverse range of practices. The course goal is to gain an understanding of the profession by using the project process as a framework. The course comprises a survey of the architectural profession - its licensing and legal requirements; its evolving types of practice, fees and compensation; its adherence to the constraints of codes and regulatory agencies, client desires and budgets; and its place among competing and allied professions and financial interests. The workshops are a critical forum for discussion to understand the forces which at times both impede and encourage innovation and leadership. Students learn how architects develop the skills necessary to effectively communicate to clients, colleagues, and user groups. Trends such as globalization, ethics, entrepreneurship, sustainability issues and technology shifts are analyzed in their capacity to affect the practice of an architect.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

ARCH 685 Environmental Readings
In this seminar, we will explore this green thread and analyze its influence on how we shape our environments through design and planning. The course has three parts. Throughout, the influence of literature on design and planning theory will be explored. The first part will focus on three most important theorists in environmental planning and landscape architecture: Frederick Law Olmstead Sr., Charles Eliot and Ian McHarg. The second part of the course will critically explore current theories in environmental planning and landscape architecture. The topics include: frameworks for cultural landscape studies, the future of the vernacular, ecological design and planning, sustainable and regenerative design, the languages of landscapes, and evolving views of landscape aesthetics and ethics. In the third part of the course, students will build on the readings to develop their own theory for ecological planning or, alternatively, landscape architecture. While literacy and critical inquiry are addressed throughout the course, critical thinking is especially important for this final section.
Taught by: Dean Steiner
Course usually offered in fall term
Also Offered As: CPLN 685, LARP 685
Activity: Seminar
1.0 Course Unit

ARCH 698 Architectural Association (AA), London
An advanced Architectural Design Studio taught by Homa Farjadi in London at the Architectural Association's School of Architecture. Topics engage aspects of urban life and urban form in London, and vary from year to year. During the fifth term of the Master of Architecture program, up to fifteen students a year may enroll for the semester abroad program in London, England. This is coordinated by Prof. Homa Farjadi and is housed at the Architectural Association (AA), located on Bedford Square in the heart of Bloomsbury. Students enroll in a special design studio, ARCH 702, taught by Prof. Farjadi, and in two elective courses offered by the faculty at the AA.
Course usually offered in fall term
Activity: Lecture
2.0 Course Units
ARCH 701 Studio V
These advanced elective studios provide opportunities for focused exploration of particular themes in contemporary landscape architecture. Important emerging and accomplished designers, often from divergent points-of-view, interests and backgrounds, are invited to run these studios. Collaborative options (between Landscape and the Departments of Architecture or City Planning) are sometimes offered across the School. In addition to our own faculty who offer some of these studios (Fabiani Giannetto, Gouverneur, Marcinkoski, Mathur, M'Closkey, Neises, Olin, Pevzner, Sanders, Tomlin), visitors have included Paolo Burgi (Switzerland), Peter Latz (Munich), Bernard Lassus (Paris), Margie Ruddick (Philadelphia), Chris Reed (Boston), Peter Beard (London), Nicholas Quennell (New York), Ken Smith (New York), Raymond Gastil (New York), Alessandro Tagliolini (Italy), Ignacio Bunster (Philadelphia), Perry Kulper (Los Angeles), James Wines (New York), Lee Weintraub (New York), Charles Waldheim (Chicago), Stanislaus Fung (Australia), Dennis Wedlick (New York), Sandro Marpillero (New York), Peter Connolly (Australia), and former associate professor Anita Berrizbeitia. More recent visitors have been Claire Fellman (New York), Catherine Mosbach (Paris), Nanako Umemento/Neil Cook (New York), Valerio Morobito (Italy), Carol and Colin Franklin (Philadelphia), Keith Kaseman (Philadelphia), Silvia Benedito (New York), Claudia Taborda (Lisbon), Mark Thomann (New York), Jerry Van Eyck (New York), and Martin Rein-Cano (Berlin).
Taught by: Faculty
Course usually offered in fall term
Activity: Studio
2.0 Course Units

ARCH 703 Advanced Architectural Design Studio
An Advanced Architectural Design Studio specifically tailored to post-professional students. Through this studio, students engage in the challenges and opportunities presented by changes in society, technology, and urban experience. Through design projects, they explore alternative modes and markets for practice, along with new directions and new tools for design.
Course usually offered in fall term
Activity: Studio
2.0 Course Units

ARCH 704 Advanced Design: Research Studio
In the final semester of the program, students select from three options: 1) an elective design studio, selected from among the advanced architectural design studios offered by the Department of Architecture; 2) a research studio, the exploration of a topic or theme established by an individual faculty member or group of faculty members; or 3) an independent thesis, the exploration of a topic or theme under the supervision of a thesis advisor.
Course usually offered in spring term
Activity: Studio
2.0 Course Units

ARCH 705 MSD-AAD Design Research Studio
Students learn from industry leaders by electing their Design research Studio. The second semester design research studio focuses on large scale detail leading to a building design.
Taught by: Ali Rahim
Activity: Studio
2.0 Course Units

ARCH 706 Independent Thesis
In the final semester of the program, students select from three options; 1) An elective design studio; selected from among the advanced architectural design studios offered by the Department of Architecture; 2) a research studio, the exploration of a topic or theme established by an individual faculty member or group of faculty members; or 3) an independent thesis, the exploration of a topic or theme under the supervision of a thesis advisor.
Course usually offered in spring term
Activity: Independent Study
2.0 Course Units

ARCH 707 AAD Fabrication Studio
The final studio course in the MSD-AAD sequence. Through this studio, students engage in the challenges and opportunities presented by changes in society, technology, and urban experience. Through design projects, they explore alternative modes and markets for practice, along with new directions and new tools for design.
Course usually offered summer term only
Activity: Studio
2.0 Course Units

ARCH 708 Bioclimatic Design Studio
An advanced design studio for the MSD-EBD program that synthesizes the concepts and techniques of environmental building design. Topics and materials for the studio are developed in Arch 752: EBD Research Seminar, and summarized in a research report at the end of studio.
Taught by: Dorit Aviv
Course usually offered summer term only
Prerequisite: ARCH 751 AND ARCH 752 AND ARCH 753
Activity: Studio
2.0 Course Units

ARCH 709 Environmental Building Design Research Studio
Architecture is a process of discovery, of deciding what to work on, before it ever becomes a matter of design (disegno, drawing). For environmental building design, the process of discovery is even more profound, involving issues of resource consumption, modes of living and working, and of ecological interconnection that have to be explored before questions of performance can even be addressed. This design studio uses research at multiple scales to identify the topic of the studio, then student teams develop design for buildings of maximum (ecological) power.
Course usually offered in fall term
Prerequisite: ARCH 708 AND ARCH 751 AND ARCH 752 AND ARCH 753
Activity: Studio
2.0 Course Units
ARCH 710 Contemporary Theory 1989-Present
A chronological overview of the approaches and attitudes adopted by architects, theorists and inter-disciplinary writers from 1993–today that have helped shape the current discourse of architecture. This course will introduce and contextualize key projects, and polemics over the last 25 years. Central themes in this course include the impact of digital technologies and methods of design, production and materiality. These are explored through texts, movements, projects and buildings that help form an overview that has shaped the contemporary condition that we live in. There have been a myriad of different approaches and through a select set of readings and lectures students will be exposed to crucial texts, projects and buildings making students versatile and knowledgeable in the important concepts that shape our current discourse. A focus will be the organization, configuration and articulation of buildings and the conceptual and cultural arguments they are associated. Formal, organizational and material characteristics of this period will be explored. This class will develop students’ knowledge and provide a platform from which they can continue the discussions surrounding architectural thought and practice. The students will learn to communicate their ideas verbally and in writing. Contemporary topics in architecture theory and projects are introduced in a weekly lecture format critical to the shaping of our discipline today. A weekly recitation session allows students to engage with the readings critically in the subject matter. A mid-term and final paper are required to pass this class. (Topics to be covered: Seminal projects and buildings in the last 25 years, situating the architects work within a culture of debate and discourse identifying the important readings surrounding each building/project.) This course is a requirement of the MSD-AAD curriculum.
Course usually offered in spring term
Activity: Lecture

1.0 Course Unit

ARCH 713 Ecological Thinking in Art and Architecture
This seminar will address the diverse narratives of ecological thinking in the history of art, architecture, and urban planning during the 20th century. The course will contextualize and interrogate contemporary disciplinary discourses as well as historical assumptions related to ecological thinking in art and architectural history and environmentally-conscious practices. By mapping received trajectories of Eco Art, Ecocritical Art History, and Ecological Histories of Architecture and Urban Planning, the course will work from a subtly hidden foundation of eco-historical knowledge that connects these fields of inquiry, while also critiquing these trajectories and seeking to provide more focused and robust alternatives for knowledge production in the present. It aims to attract students from the School of Arts and Sciences and the Weitzman School of Design in a discussion on the interconnected histories of art and architecture during the 20th century.
Taught by: Zarmakoupi
Also Offered As: ARTH 577
Activity: Seminar
1.0 Course Unit

ARCH 714 Museum as Site: Critique, Intervention and Production
In this course, we will take the museum as a site for critique, invention, and production. As architecture, cultural institution, and site of performance, the museum offers many relevant opportunities. Students will visit, analyze, and discuss a number of local exhibitions and produce their own intervention in individual or group projects. Exhibition design, design of museum, the process of curating, producing artworks ranging from paintings to installation and performance, as well as attention to conservation, installation, museum education, and the logistics and economics of exhibitions will be discussed on site and in seminar. These topics and others will be open for students to engage as part of their own creative work produced for the class and an online exhibition.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ARCH 715 Contemporary Aesthetic Theory
This course offers a framework for a provocative history of ideas about beauty as they relate to contemporary thinking and their production of form in architecture. In a world increasingly defined by visuality, the concepts of beauty and visual sensation are not mere intellectual exercises but standards that define the very nature of design practice across disciplines, and that are essential to the worlds of objects, automobiles, furniture and architecture in the twenty-first century. Aesthetic theory is about beauty and about form and how it affects us every day. As architecture practice changes, the tools that are used to create form change due to new technologies, new materials and new tools for fabrication and aesthetics gives us an important way in to understanding the relationship between the object created and the user. This occurs in contemporary cultural landscapes in which we exist, and aesthetics is the organizing element. Through lectures and discussions of aesthetics readings in recitations focused on the object, students will work on a term paper that brings a clear understanding of aesthetics and its role in participating in culture through the objects of the automobile, furniture and architecture industries.
Activity: Seminar
1.0 Course Unit
ARCH 718 History and Theory of Architecture and Climate
This seminar will explore the history of buildings as mechanisms of climate management, and the theoretical and conceptual frameworks that pertain. In particular, we will examine how visual and mediatic interventions became a crucial aspect of architectural engagement with climate systems, and how, simultaneously, architectural image-making techniques became an important interdisciplinary site for understanding the cultural effects of scientific knowledge.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ARCH 719 Archigram and Its Legacy: London, A Technotopia
Acknowledging the ubiquitous proliferation of 'Hi-Tech' architecture in contemporary London, this research seminar examines the scope of technology as it emerges and re-emerges in the work of various architects currently dominating the city. This scope includes the last strains of post-war urbanism which spawned a legacy of radical architecture directly contributing to the Hi-Tech; a particular focus of the course will be the contributing and contrasting influence provided by the counter-cultural groups of the 60's - Archigram, Superstudio, the Metabolists and others. Using the premise of Archigram's idea of infrastructure, both literal and of event, the course will attempt to discover relational networks between works of the present day (Rogers, Foster, Grimshaw, etc.). As this work practices upon and within public space, an understanding of the contribution of technology to urban theatricality will evolve which is relevant to contemporary spheres of technological design practices. Students will be required to produce and present a term research paper.
Taught by: Faculty
Course usually offered in fall term

ARCH 720 Visual Literacy and its Culture
The digital turn in the creative fields resulted in profound transformations of techniques, aesthetics and underlying concepts in the development of contemporary visual culture. The dissemination and consumption of information through images through all types of media platforms influence and re-define (for better or worse) all aspects of our culture and reality. It is vital to develop a deep knowledge of the current visual concepts and techniques in arts, photography, cinema, product design and architecture to claim a critical stance through which we can positively contribute to the evolution of contemporary culture. The discipline of architecture has been deeply influenced by the digital shift in modes of design and visualization which yielded a wide array of directions within the architectural discourse, especially with questions and problems regarding representation. One clear outcome of this transformational period is the diversity of new representational strategies to seek alternative modes of visualization. It is clear that no one representational medium can be defined as the locus of architectural thought and architecture, as a cultural practice, can no longer be defined through the output of a single medium. The reality of our discipline is that we work through collective mediums and conventions of drawings, models, images, simulations, texts, prototypes and buildings to visualize architectural concepts. These mediums all require degrees of expertise in techniques that are necessary for their execution: they all involve conceptual depth that define their disciplinary positions; they all require translations across each other to enable subjective work-flows; they all require aesthetic attitudes to influence the development of visual culture in architecture. This course will introduce the AAD majors to contemporary topics of visualization in arts, photography, cinema and architecture. They will explore multiple mediums of representation to help them gain the vital visual literacy to excel in the program. Students will be introduced to discursive background and contemporary concepts of line drawing, fabricated object and constructed image as they work through 3 distinct projects during the semester. Each exercise will be initiated by a topical lecture and be followed by weekly pin ups to advance student projects. (Topics to be covered: Discourse of Contemporary Line Drawing, Multi-part 3D Printing, Vacuform/CNC Milling, Digital/Analog Surface Articulation, Rendering, Abstraction and Realism, Montage/Collage/Photorealism)
Course usually offered in spring term

1.0 Course Unit
ARCH 721 Designing Smart Objects for Play and Learning

Today’s children enjoy a wide array of play experiences, with stories, learning, characters and games that exist as physical stand-alone objects or toys enhanced with electronics or software. In this course, students will explore the domain of play and learning in order to develop original proposals for new product experiences that are at once tangible, immersive and dynamic. They will conduct research into education and psychology while also gaining hands-on exposure to new product manifestations in a variety of forms, both physical and digital. Students will be challenged to work in teams to explore concepts, share research and build prototypes of their experiences in the form of static objects that may have accompanying electronic devices or software. Final design proposals will consider future distribution models for product experiences such as 3D printing, virtual reality and software/hardware integration. Instruction will be part seminar and part workshop, providing research guidance and encouraging connections will subject matter experts throughout the Penn campus.

Course usually offered in fall term
Also Offered As: IPD 521
Activity: Seminar

ARCH 724 Technology in Design

The aim of this course is to understand the new medium of architecture within the format of a research seminar. The subject matter of new media is to be examined and placed in a disciplinary trajectory of building design and construction technology that adapts to material and digital discoveries. We will also build prototype with the new media, and establish a disciplinary knowledge for ourselves. The seminar is interested in testing the architecture-machine relationship, moving away from architecture that looks like machines into architecture that behaves like machines: An intelligence (based on the conceptual premise of a project and in the design of a system), as part of a process (related to the generative realm of architecture) and as the object itself and its embedded intelligence.

1.0 Course Unit

ARCH 725 Design Thinking

Creating new product concepts was once a specialized pursuit exclusively performed by design professionals in isolation from the rest of an organization. Today’s products are developed in a holistic process involving a collaboration among many disciplines. Design thinking - incorporating processes, approaches, and working methods from traditional designers’ toolkits - has become a way of generating innovative ideas to challenging problems and refining those ideas. Rapid prototyping techniques, affordable and accessible prototyping platforms, and an iterative mindset have enabled people to more reliably translate those ideas into implementable solutions. In this course, students will be exposed to these techniques and learn how to engage in a human-centered design process.

ARCH 726 Furniture Design Strategic Process

Like architecture, furniture exists at the intersection of idea and physical form. Due to the specific scale that furniture occupies, however, this physical form relates not only to the environment in which the furniture is set, but also intimately to the physical bodies that interact with and around it. Additionally, as a manufactured product, often specified in large quantities, furniture must also address not only poetic considerations, but practical and economic ones as well. Instead of being seen as one-off objects, the furniture created in this seminar focuses on furniture development as a strategic design process where the designer’s role is to understand the various responsibilities to each stakeholder (client/manufacturer, market/customer, environment) and the additional considerations (materials, processes, manufacturability, etc.), and ultimately translate these points into a potentially successful product. In order to approach furniture in this manner, the course will be structured around specific design briefs and clustered into three distinct but continuous stages. First, through focused research into stakeholder needs and potential market opportunities, students will craft tailored design proposals and development concepts accordingly. Next, students will work toward visualizing a concept, complete with sketches, small mock-ups, scale-model prototypes, technical drawings, connections and other pertinent details in order to refine their proposals and secure a real world understanding of the manufacturing processes and the potential obstacles created by their decisions. From insights gained and feedback from these steps, students will ultimately develop a final design proposal for a piece, collection, or system of furniture that successfully leverages their understanding of a thoughtful and deliberate design strategy.

ARCH 727 Industrial Design I

This course provides an introduction to the ideas and techniques of Industrial Design, which operates between Engineering and Marketing as the design component of Integrated Product Development. The course is intended for students from engineering, design, or business with an interest in multi-disciplinary, needs-based product design methods. It will follow a workshop model, combining weekly lectures on design manufacturing, with a progressive set of design exercises.

Course usually offered in spring term
Also Offered As: IPD 527
Activity: Lecture
1.0 Course Unit
ARCH 728 Design of Contemporary Products: Mass Customization
Personalization is quickly becoming the norm for mass production in a variety of consumer-centric industries. From retail to food, the idea of designing and making custom-made products tailored to fit one's lifestyle will be our exploration. Utilizing digital design innovations, we are able to incubate ideas, prototype, test and be entrepreneurial in design to create these individualized products. Cues from these industries will be used to shift both cultural and experiential product design from a regional discovery to a global focus. This course will embrace digital design and utilize its engagement with manufacturing solutions for a physical output. Through research and a series of design exercises, the approach will be built upon several strategies including adaptability, materiality, fabrication, modularity, and human-centric design. The final project will interpret the research and result in the creation of a design strategy for a mass customized product or system. This course will explore product design solutions through a combination of physical and digital design methods. Beginning with an examination of case studies, students will gain a sense of the breadth of product and interaction design practice as it applies to smart objects. Through a series of lectures and hands-on studio exercises, students will explore all aspects of smart object design including expressive behaviors (light, sound and movement), interaction systems, ergonomics, data networks and contexts of use. The course will culminate in a final project that considers all aspects of smart object design within the context of a larger theme.
Course usually offered in spring term

Activity: Seminar
1.0 Course Unit

ARCH 730 Techniques, Morphology, and Detailing
The course will focus on design, morphology detailing, and the construction of a pavilion on a chosen site. The course will develop through hands-on workshops and will focus on acquiring knowledge through making, (Technne), understanding the morphological transformation of a given geometric packing, and building using readily available materials. The process consists of building and testing physical models that simulate the actual pavilion in order to ultimately realize the desired design. The second half of the semester will focus on using lightweight construction materials to fabricate the pavilion's actual components, including structural elements, molded components, and joints, which are required for the pavilion's final assembly. Additionally, students will learn to organize design and fabrication teams, control design and production schedules, and work with a set budget, which requires keeping track of construction costs and forecasting required procurements, including material quantities takeoff, ordering materials and scheduling deliveries.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ARCH 731 Experiments in Structures
This course studies the relationships between geometric space and those structural systems that amplify tension. Experiments using the hand (touch and force) in coordination with the eye (sight and geometry) will be done during the construction and observation of physical models. Verbal, mathematical and computer models are secondary to the reality of the physical model. However these models will be used to give dimension and document the experiments. Team reports will serve as interim and final examinations. In typology, masonry structures in compression (e.g., vault and dome) correlate with 'Classical' space, and steel or reinforced concrete structures in flexure (e.g., frame, slab and column) with 'Modernist' space. We seek the spatial correlates to tensile systems of both textiles (woven or braided fabrics where both warp and weft are tensile), and baskets (where the warp is tensile and the weft is compressive). In addition to the experiments, we will examine Le Ricolais' structural models held by the Architectural Archives.

ARCH 733 New Materials and Methods
The primary goal of this course is to help students formulate a robust research proposal for their culminating design studio in digital large-scale fabrication and robotics manufacturing using new materials such as carbon fiber and other composites. The course provides a forum for critical discussion of contemporary design practices that is exploratory and speculative in nature. In addition to collaborative thinking and debate students will develop their own research interests to formulate contemporary positions in the making of architecture through the research of materials and their fabrication methods.

ARCH 734 Ecological Architecture - Contemporary Practices
Architecture is an inherently exploitive act - we take resources from the earth and produce waste and pollution when we construct and operate buildings. As global citizens, we have an ethical responsibility to minimize these negative impacts. As creative professionals, however, we have a unique ability to go farther than simply being 'less bad.' We are learning to design in ways that can help heal the damage and regenerate our environment. This course explores these evolving approaches to design - from neo-indigenous to eco-tech to LEED to biomimicry to living buildings. Taught by a practicing architect with many years of experience designing green buildings, the course also features guest lecturers from complementary fields - landscape architects, hydrologists, recycling contractors and materials specialists. Coursework includes in-class discussion, short essays and longer research projects.

ARCH 737 Semi-Fictitious Realms
The pursuit of immersive digital experiences has long been a goal of the computing industry. Early wearable displays designed in the 1960s depicted simple three-dimensional graphics in ways that had never been seen before. Through trial and error, digital pioneers reframed the relationship between user and machine, and over the last five decades, have made strides that advanced both the input and output mechanisms we are so comfortable with today. As a field, architecture has been reliant on these advancements to design and document buildings, but these tools still leave the architect removed from the physicality of the design, with their work depicted as 2D lines or 3D planes alone. This course will study the evolutionary advancements made that now allow us to fully inhabit digital worlds through Virtual Reality. Using the HTC Vive and Unreal Engine, students will generate immersive, photorealistic models of unbuilt architectural works and explore digital/physical interactivity. From the terraces of Paul Rudolph’s Lower Manhattan Expressway to Boullee’s Cenotaph for Newton, the goal of this course is to breathe new life into places and spaces that have, until this time, never been built or occupied. Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

ARCH 738 The Modern House: Technology Then and Now
In the current age of new fabrication methodologies, methods are emerging for the conception and design of the contemporary house which have radical potential for enclosure, habitation and practices of daily life. This course begins by examining the canonical houses of the original avant-garde – Adolf Loos, Frank Lloyd Wright, Le Corbusier, Mies van der Rohe and Alvar Aalto – on the premise that their houses were working manifestos for rethinking space, form and indeed ideas of life itself – all of which were prompted by new concepts of construction. From this spectrum of issues, contemporary houses and contemporary methods and materials will be studied extensively to develop equally new ideas between matter and quotidian life. As the primary task of the course, students will work in teams to develop highly detailed constructional proposals for a portion of a speculative home. Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ARCH 739 New Approaches to an Architecture of Health
Health care is taking on a new role in our society – with a refocusing from episodic care for those who are ill or symptomatic to providing life-long care geared towards maintaining wellness. These changes are evident across numerous areas of design, from wearable technologies that track and analyze, to large scale building initiatives that aim to create healthier environments and improve lives through strategic planning initiatives. A concrete, physical representation of this paradigm shift can be found within the hospital building itself and in the new manner in which hospitals are looking to serve their patients and care for their clinicians. Simultaneously both public and private spaces, hospitals are complex systems in which sickness, health, hospitality, technology, emergency, and community share space and compete for resource. In order to frame our present day understanding of the role of architecture (and design) in fostering health for individuals and within communities, this seminar will begin with an exploration of the historical and contemporary perspectives on the role of the architect and built environment on health. (Parallels between design and our ever-changing understanding of the biological, social, and environmental causes of sickness and disease will also be explored.) During this conversation, students will read articles and study recently constructed projects in order to examine the ways in which the architects approached these topics through built form. Following from this foundation, students will craft arguments for a new approach to the individual, the community, health, and architecture through a written response and architecturally designed scenario that argues for their perspective on how architecture can and should shape the health of those who inhabit it. Throughout the course, students will engage in weekly readings (and discussions) of critical texts exploring ideas around the role and impact of architecture on health. Various content experts will be included in the course to provide additional insights into key areas of theory and practice in order to lend additional perspectives and ground the conversation. Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

ARCH 741 Architecture Design Innovation
The mastery of techniques, whether in design, production or both, does not necessarily yield great architecture. As we all know, the most advanced techniques can still yield average designs. Architects are becoming increasingly adept at producing complexity & integrating digital design and fabrication techniques into their design process - yet there are few truly elegant projects. Only certain projects that are sophisticated at the level of technique achieve elegance. This seminar explores some of the instances in which designers are able to move beyond technique, by commanding them to such a degree as to achieve elegant aesthetics within the formal development of projects.

ARCH 742 Function of Fashion in Architecture
The Function of Fashion in Architecture will survey the history of fashion and the architectural parallels starting from Ancient Civilization to Present. The focus will be on the relevance of garment design, methods and techniques and their potential to redefine current architecture elements such as envelope, structure, seams, tectonics and details. The functional, tectonic and structural properties of garment design will be explored as generative platforms to conceptualize very specific architectural elements. One of the challenges in the course is the re-invention of a means of assessment, the development of notations and techniques that will document the forces and the production of difference in the spatial manifestations of the generative systems. Taught by: Faculty Course usually offered in spring term Activity: Seminar 1.0 Course Unit

ARCH 743 Form and Algorithm
The critical parameter will be to develop the potential beyond finite forms of explicit and parametric modeling towards non-linear algorithmic processes. We will seek novel patterns of organization, structure, and articulation as architectural expressions within the emergent properties of feedback loops and rule-based systems. This seminar will accommodate both introductory and advanced levels. No previous scripting experience is necessary. It will consist of a series of introductory sessions, obligatory intensive workshops, lectures followed by suggested readings, and will gradually focus on individual projects. Students will be encouraged to investigate the limits of algorithmic design both theoretically and in practice through a scripting environment. Course usually offered in fall term Activity: Seminar 1.0 Course Unit

ARCH 744 Postdigital Craft
As we have entered a postdigital era, the dominance of a purely technological approach as a vehicle for design innovation has waned. Questions of substance and disciplinary autonomy have found their way back into the contemporary cultural discourse, enriching the way we examine and deploy advanced technologies towards novel expressions in architecture. This seminar will investigate, through the production of estranged objects, opportunities for design that are being generated at the intersection of machinic and human minds, and speculate on possible futures in which concepts of nature and technology have been inseparably intertwined. Course usually offered in spring term Also Offered As: IPD 544 Activity: Seminar 1.0 Course Unit

ARCH 746 Cinema and Architecture in Translation
Cinema and Architecture in Translation is a seminar that will survey key cinematic moments and techniques within the history of film and find new intersections between architecture and narratives. The focus will be on the relevance of mise-en-scene, the background and building figures of architecture and future speculations of the city, yet in relation to narrative dynamics. One of the challenges is to consider techniques that will affect both conceptualization and the production of spatial manifestations using potent visual platforms. Current pre and post-production techniques in film making methods are converging with architectural digital representation. This is an opportunity that provides fertile ground for architects to re-examine the ‘digital’ in a variety of scales in relation to impactful narratives and visualizations. These tools, specifically the technique of ‘matte-painting’ will be explored in this course. There is a rich history in constructing images, speculative worlds and scenes for the film industry. We will explore the parallels between the tools and strategies of cinematic visualization as it relates to advanced architectural image making. Students will have the opportunity to analyze filmic scene making, learn advanced representation and techniques in matte painting and zbrush. Above all this course will engage students in the conceptual as well as practical complementarities of architecture and cinema, while watching some of the best films ever made and the most provocative and insightful books to help process them. An important aspect of this course will be to explore the differences between ‘real’ architecture and the cinematic architecture. The expansive Space and Time in which cinematic architecture is located, creates an incubator where true innovated speculation can occur. This is an advanced representation course that produces 2D images and narrative texts. Course usually offered in spring term Activity: Seminar 1.0 Course Unit

ARCH 747 Robotic Fabrication
Automation and robotics have helped manufacturing increase productivity by 1,500% since 1945 (McKinsey 2017). In contrast, however, construction productivity has remained relatively stagnant during the same time. The construction industry is facing pressure to change. For the robotics industry, construction presents potential use cases and unique applications that can utilize a variety of evolving technologies from drones, ground robotics, teleoperation, machine vision, additive manufacturing, and assistive robotics. These technologies take advantage of the digital revolution and utilize ideas in automobile and aerospace engineering. Our interest in these technologies is that they open new opportunities for design. Robotic fabrication will explore the theory and design of a project that will form a component of the culminating design studio for the MSD AAD program. Theory will be explored through a series of lectures and the design component will focus on a one to one scale fabrication of a project determined by the design studio curriculum. Course usually offered summer term only Activity: Seminar 1.0 Course Unit
ARCH 748 Architecture and the New Elegance
This design seminar will define and elaborate on the following topics for the digital discourse - the contemporary diagram, technique, structural thinking, systemic thinking and aesthetic projections. Technological innovations establish new status quos and updated platforms from which to operate and launch further innovations. Design research practices continually reinvent themselves and the techniques they use to stay ahead of such developments. Reinvention can come through techniques that have already been set in motion. Mastery of techniques remains important and underpins the use of digital technologies in the design and manufacturing of elegant buildings. But, ultimately, a highly sophisticated formal language propels aesthetics. The repositioning of design intent and the complex order generated by the behavioral techniques of multi-agent systems has implications for the affects which are generated as well as the nature of hierarchy within architecture. The distributed non-linear operation of swarm systems intrinsically resists the discrete articulation of hierarchies within Modern architecture and contemporary parametric component logic. The bottom-up nature of swarm systems refocuses tectonic concerns on the assemblage at the micro scale rather than the sequential subdivision of program or form. The seminar will explore strategies for high population agent models through the use of lightweight algorithmic environments, in particular the Java-based platform Processing.

ARCH 749 Indeterminate Delineations
Architecture has always been closely entangled with modes of vision. Devices ranging from Durer's perspective machine to the photographic eye have strongly shaped the way we think and design the built environment of our cities. A strange loop is in place here: our world-views provide the development of specific modes of representation, of engagement with the world, and in turn they begin to have an impact in that same world, becoming an active element in the way we understand it. Put more simply, it is the technologies through which we see and experience the built environment that define the way we construct it. In this class, we will focus on visual and physical points as anchors to tie modes of vision with modes of construction. Points play an important role in the history of visuality: if during Impressionism and Pointillism they were devised to delineate the contrast and alignments between what we see and how it is seen in an attempt to investigate the mechanics of vision, it was during the post war period that Max Wertheimer's work at the Berlin School of Gesalt Psychology leveraged them as graphic elements to understand part to whole relationships central to Bauhaus' design pedagogy. Today, imaging technologies are once again placing points as central elements in the construction of our contemporary visual language, transforming ever-growing datasets of partial images in three dimensional machine readable survey models: it is with points and aggregated clouds that we are constructing the figure of our cities. As such, they become a necessary site of design investigation to move beyong monolithic views of the world. This class leverages the bi-product of scanning technologies - point clouds and image making - to explore inclusive modes of delineations: a visual sensibility to engage with the multifaceted nature of the built environment.

ARCH 750 Parafictional Objects
This representation/design seminar explores the aesthetics of estrangement in realism through various mediums. The reality of the discipline is that architecture is a post-medium effort. Drawings, Renderings, Models, Prototypes, Computations, Simulations, Texts, and Buildings are all put forward by architects as a speculative proposal for the reality of the future. Students will explore the reconfiguration of a 'found object' in multiple mediums and represent parafictional scenarios in various techniques of realism. At a time when rendering engines enable the production of hyper-realistic images within the discipline without any critical representational agenda, it has become ever more imperative to rigorously speculate on realism.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ARCH 751 Ecology, Technology, and Design
This course will examine the ecological nature of design at a range of scales, from the most intimate aspects of product design to the largest infrastructures, from the use of water in bathroom to the flow of traffic on the highway. It is a first principle of ecological design that everything is connected, and that activities at one scale can have quite different effects at other scales, so the immediate goal of the course will be to identify useful and characteristic modes of analyzing the systematic, ecological nature of design work, from the concept of the ecological footprint to market share. The course will also draw on the history of and philosophy of technology to understand the particular intensity of contemporary society, which is now characterized by the powerful concept of the complex, self-regulating system. The system has become both the dominant mode of explanation and the first principle of design and organization. The course will also draw on the history and philosophy of technology to understand the particular intensity of contemporary society, which is now characterized by the powerful concept of the complex, self-regulating system. The system has become both the dominant mode of explanation and the first principle of design and organization.

1.0 Course Unit
ARCH 754 Performance Design Workshop
The workshop applies simulation and diagramming techniques to a series of discrete design projects at different scales. The emphasis is on refinement and optimization of performance based building design. Performance analysis techniques can provide enormous amounts of information to support the design process, acting as feedback mechanisms for improved performance, but careful interpretation and implementation are required to achieve better buildings. Energy, lighting, and air flow are the three main domains covered in the workshop. Students will learn how to utilize domain tools at an advanced level, and utilize them as applications to examine the environmental performance of existing buildings. Using the results of analytical techniques, the students will develop high-performance design strategies in all three domains. Lectures will be given on specific topics each week. A series of analytical class exercises will be assigned to provide students with hands-on experience in using the computer models. A case-study building will be provided at the beginning of the course and students will model different components each week throughout the semester. Every week students present the progress of their work, which will be used to correct methodological and technical issues. Energy, lighting, and air flow are the three main domains covered in the workshop. Activity: Seminar
1.0 Course Unit

ARCH 768 Real Estate Development
This course evaluates 'ground-up' development as well as re-hab, re-development, and acquisition investments. We examine raw and developed land and the similarities and differences of traditional real estate product types including office, R & D, retail, warehouses, single family and multi-family residential, mixed use, and land as well as 'specialty' uses like golf courses, assisted living, and fractional share ownership. Emphasis is on concise analysis and decision making. We discuss the development process with topics including market analysis, site acquisition, due diligence, zoning, entitlements, approvals, site planning, building design, construction, financing, leasing, and ongoing management and disposition. Special topics like workouts and running a development company are also discussed. Course lessons apply to all markets but the class discusses U.S. markets only. Throughout the course, we focus on risk management and leadership issues. Numerous guest lecturers who are leaders in the real estate industry participate in the learning process. Format: predominately case analysis and discussion, some lectures, project visits.
Taught by: Alan Feldman
One-term course offered either term

Activity: Studio
0.0 Course Units
ARCH 792 ARCH Summer Institute: Advanced Architectural Design
Digital Workshop
This is a non-credit course for entering Master of Science in Design: Advanced Architectural Design students. The Digital Methods workshop provides a comprehensive introduction to four elements critical to the workflow of the graduate studios at PennDesign: 3D modeling, scripting, visualization and fabrication. Short daily lectures situating digital technologies in contemporary design practice are followed by hands-on tutorials in Maya and Rhinoceros. The first half of the workshop provides an operative knowledge of the many geometry types, modeling techniques, scripting languages and simulation tools available for studio work. Visualization techniques are also introduced, and students will learn to efficiently produce presentation-quality renderings, animations and technical line drawings from digital models. Students also learn protocols for transferring data between various design software packages and how to create data compatible with PennDesign’s digital fabrication equipment. Course fee: $750.00. Course enrollment is by permit only.
