This module examines the historical origins, evolving mission, programmatic similarities and differences, demographics, performance, finances, governance, and presidential leadership of U.S. community colleges. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.33 Course Units

EDHE 618 Virtual Distance Learning
In this course, you will experience Virtual Distance Analytics by participating in the Virtual Distance Index Assessment, receive your own Virtual Distance Management Report, detailing where Virtual Distance is most likely impacting you and your organization as well as content to master Virtual Distance in order to reduce and manage it over time for better educational outcomes. You will learn new leadership skills and core competencies to enhance your effectiveness in the Digital Age and help your students maximize their educational potential during this process of digital transformation. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Activity: Lecture
0.33 Course Units

EDHE 619 Quality/Risk Management
This module will focus on what leaders can do to induce a culture of quality within an academic environment. This course is only for students enrolled in the Higher Education Management executive program. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Taught by: Larry Ward
One-term course offered either term
Activity: Lecture
0.33 Course Units

Education - Independent School Teaching Residency (EDPR)
These courses are only for students enrolled in the Independent School Teaching Residency Program.

EDPR 501 Social Foundations of Independent Schools I
This course examines the purposes of school and focuses specifically on the role of independent schools in American education. The course examines the independent school from philosophical, historical, and sociological perspectives. The course focuses on the role of school mission and examines how different stakeholders in the school experience the mission. In this course the student perspective is examined. Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDPR 502 Introduction to Teaching as Inquiry
This course explores foundations of learning theory and pedagogy, covering classic theories of learning through the latest research in brain science. These theories are put into action around building the teachers capacity to provide effective feedback, construct effective learning environments, plan instruction, and implement instructional strategies. Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDPR 503 Learning Theory and Instructional Design I
Building off what was learned in in EDPR 502, this course continues an exploration on curricular planning and instructional practice by focusing on Understanding by Design as a planning framework and builds the teachers capacity to observe classroom activity to analyze the effectiveness of learning in that classroom. The course continues to build the teacher's capacity to improve instructional practice with a focus on the implementation of instructional activities. Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDPR 504 Field Seminar I
This course carries the credit for the weekly school-based course for the fall of the 1st year. During this course, which functions as a field seminar, fellows receive focused support around planning, grading, assessment, and other school duties such as coaching and advising. This course also supports students to observe other members of the school community and learn from school-based experts in counseling, learning differences, and diversity. Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDPR 506 Reflective Practice in Schools I
This course carries the credit for online theory to practice sessions in the fall of the 1st year of instruction. During these sessions, students follow a protocol in which they engage in a process of instructional rounds that involve 1) readings about the focal topic 2) sharing video of classroom practice 3) observing video of other teachers in their cohort and 4) meeting with other fellows in the program to discuss their analysis of the videos shared with one another. Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDPR 507 Social Foundations of Independent Schools II
This course is a continuation of EDPR 501, examining the purposes of school and focuses specifically on the role of independent schools in American education. The course examines the independent school from philosophical, historical, and sociological perspectives. The course focuses on the role of school mission and examines how different stakeholders in the school experience the mission. In this course the faculty and administrator perspectives are examined. Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units
**EDPR 508 Adolescent Development and Classroom Applications**
This course builds the teacher’s understanding of adolescent risk development dealing with topics such as identity development, risk taking, sexuality, relationships, and racial and ethnic identity development. Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

**EDPR 509 Field Seminar II**
This course carries credit for the weekly school-based course for the spring of the 1st year. During this course, which functions as a field seminar, fellows receive focused support around planning, grading, assessment, and other school duties such as coaching and advising. This course also supports students to observe other members of the school community and learn from school-based experts in counseling, learning differences, and diversity. Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

**EDPR 510 Methods I - Modern Language**
In the first of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students also focus on planning and implementing small units of instruction (ranging from one to a few days). Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

**EDPR 511 Methods I - Math**
In the first of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students also focus on planning and implementing small units of instruction (ranging from one to a few days). Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

**EDPR 512 Methods I - Social Studies**
In the first of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students also focus on planning and implementing small units of instruction (ranging from one to a few days). Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

**EDPR 513 Methods I - Science**
In the first of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students also focus on planning and implementing small units of instruction (ranging from one to a few days). Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

**EDPR 514 Methods I - English**
In the first of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students also focus on planning and implementing small units of instruction (ranging from one to a few days). Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

**EDPR 515 Methods I - Independent Study**
In the first of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students also focus on planning and implementing small units of instruction (ranging from one to a few days). Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

**EDPR 516 Reflective Practice in Schools II**
Though this course is listed in the fall, the course carries the credit for online theory to practice sessions in the spring of the 1st year of instruction. During these sessions, students follow a protocol in which they engage in a process of instructional rounds that involve 1) readings about the focal topic 2) sharing video of classroom practice 3) observing video of other teachers in their cohort and 4) meeting with other fellows in the program to discuss their analysis of the videos shared with one another. Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

**EDPR 601 Advanced Methods of Inquiry I**
This course develops students’ capacity to reflect on their practice and growth as practitioners over the course of the program, examining their own development through the use of rubrics and reflective analysis to build a portfolio that outlines this growth and identifies a plan for continued growth in the future. Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units
EDPR 602 Advanced Methods of Inquiry II
This course develops student’s capacity to articulate and investigate an inquiry question about their own practice. The course builds the capacity of the teacher to use qualitative research strategies to systematically investigate and improve elements of their practice that are important to student learning. The course focuses on qualitative modes of inquiry, building researchable questions, and collecting data. Prerequisite: Enrollment in Independent School Teaching Residency Program. Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDPR 603 Social Foundations of Independent Schools: Advanced I
This course examines the purposes of school and focuses specifically on the role of independent schools in American education. The course examines the independent school from philosophical, historical, and sociological perspectives. The course focuses on the role of school mission and examines how different stakeholders in the school experience the mission. In this course, the parent perspective is examined. Prerequisite: Enrollment in Independent School Teaching Residency Program. Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDPR 604 Advanced Learning Theory I
This course continues a focus on applying learning theory to educational practice, building on EDPR 505. The course supports students to build capacity to: understand the latest research on teaching and learning, provide effective feedback, lead instruction that supports active learning, develop effective classroom learning environments, and plan instruction using the Understanding by Design framework. Prerequisite: Enrollment in Independent School Teaching Residency Program. Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDPR 605 Advanced Field Seminar I
This course carries credit for the weekly school-based course for the fall of the 2nd year. During this course, which functions as a field seminar, fellows receive focused support around planning, grading, assessment, and other school duties such as coaching and advising. This course also supports students to observe other members of the school community and learn from school-based experts in counseling, learning differences, and diversity. Prerequisite: Enrollment in Independent School Teaching Residency Program. Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDPR 606 Social Foundations of Independent Schools: Advanced II
This course examines the purposes of school and focuses specifically on the role of independent schools in American education. The course examines the independent school from philosophical, historical, and sociological perspectives. In this course, the outsider/societal perspective is examined; in particular, the course engages with the historical and contemporary context of public schooling in the United States. Prerequisite: Enrollment in Independent School Teaching Residency Program. Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDPR 607 Advanced Learning Theory II
This course is a continuation of EDPR 604, with a focus on applying learning theory to educational practice. The course supports students to build capacity to: understand the latest research on teaching and learning, provide effective feedback, lead instruction that supports active learning, develop effective classroom learning environments, and plan instruction using the Understanding by Design framework. Prerequisite: Enrollment in Independent School Teaching Residency Program. Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDPR 608 Advanced Field Seminar II
This course carries credit for the weekly school-based course for the spring of the 2nd year. During this course, which functions as a field seminar, fellows receive focused support around planning, grading, assessment, and other school duties such as coaching and advising. This course also supports students to observe other members of the school community and learn from school-based experts in counseling, learning differences, and diversity. Prerequisite: Enrollment in Independent School Teaching Residency Program. Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDPR 609 Masters Seminar
This course supports the students construction of their final portfolio, with a focus on supporting data collection and analysis around the students inquiry project and analysis of program competencies. These two components form a portfolio that serves as the final assessment for the program. Prerequisite: Enrollment in Independent School Teaching Residency Program. Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDPR 610 Methods II- Modern Language
In the second of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students focus on planning larger units of instruction from one to multiple weeks. Prerequisite: Enrollment in Independent School Teaching Residency Program. Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDPR 611 Methods II- Math
In the second of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students focus on planning larger units of instruction from one to multiple weeks. Prerequisite: Enrollment in Independent School Teaching Residency Program. Course usually offered in fall term
Activity: Lecture
0.5 Course Units
**EDPR 612 Methods II- Social Studies**
In the second of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students focus on planning larger units of instruction from one to multiple weeks. Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

**EDPR 613 Methods II- Science**
In the second of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students focus on planning larger units of instruction from one to multiple weeks. Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

**EDPR 614 Methods II- English**
In the second of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students focus on planning larger units of instruction from one to multiple weeks. Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

**EDPR 615 Methods II- Independent Study**
In the second of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students focus on planning larger units of instruction from one to multiple weeks. Prerequisite: Enrollment in Independent School Teaching Residency Program.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

**Education - Medical Education (EDME)**
These courses are only available to students in the Medical Education program.

**EDME 501 Applied Learning and Technology in Medical Education**
This course is embedded in a block of three courses focusing on learning and technology in medical education. This course focuses on historical and current learning methods and practices, as well as learning technologies in medical education. Topics include the fundamentals of learning theories, effectively applying emerging technologies in medical education, adult learning and development, diversity, inclusion and medical education, and the challenges of teaching/learning in modern academic medicine and within the healthcare context. Prerequisite: Enrollment in Medical Education program.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

**EDME 502 Learning & Instructional Design in Medical Education**
This course is embedded in a block of three courses focusing on learning and technology in medical education. This course focuses on the design and delivery of medical education programs and interventions. Topics include current trends in medical education, pedagogy, curriculum and instructional design, assessment of learning and educational initiatives, and implementation of learning interventions in an uncertain environment. Prerequisite: Enrollment in Medical Education program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

**EDME 503 Managing Technology in Curriculum in Medical Education**
This course is embedded in a block of three courses focusing on learning and technology in medical education. This course focuses on selecting, embedding and managing technology in the medical education curriculum. Topics include the role of experiential learning in medical education, simulation, the virtual learning environment and emerging technologies, group dynamics, and the instructor-learner relationship. Prerequisite: Enrollment in Medical Education program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

**EDME 504 Evidence Based Medical Education**
This course is embedded in a block of three courses focusing on research in medical education. This course focuses on research and research methods in medical education. Topics include quantitative, qualitative, and mixed methods research design in medical education. Specifically, students will explore the philosophical foundation of research, conducting the literature review, introduction to quantitative and qualitative data collection and analysis, the role of language in research, and developing research questions. Prerequisite: Enrollment in Medical Education program.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

**EDME 505 Assessing Medical Instruction**
This course is embedded in a block of three courses focusing on research in medical education. This course focuses on research and research methods to measure the effectiveness of medical education practices. Topics include assessment of learning outcomes, how to critically evaluate medical education research, evaluating the impact of learning interventions, and evidence-based decision making. Prerequisite: Enrollment in Medical Education program.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

**EDME 506 Evidence Based Medical Education II**
This course is embedded in a block of three courses focusing on research in medical education. This course focuses on advanced topics in research and research methods in medical education, as well as the development of medical educator skills. Specific topics include advanced quantitative, qualitative, and mixed methods research skills, and medical educator skills (e.g., study development, coaching, remediation and feedback, and presentation skills). Prerequisite: Enrollment in Medical Education program.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit
EDME 545 Medical Education Experimental Course
This topic course explores multiple and different aspects of Medical Education. Specific course topics vary from year to year. Consult with the program for current course offerings.
Activity: Lecture
1.0 Course Unit

EDME 601 Leadership Skills in Education
This course is embedded in a block of three courses focusing on leadership in healthcare and medical education. This course focuses on leadership theories, models, and skills. Topics include a historical review of leadership theories and models, as well as an exploration of current research on leadership development. Students will explore the competency-based approach to understanding effective leadership, emotional intelligence, employee engagement and happiness at work, and team dynamics as they relate to the medical education context.
Prerequisite: Enrollment in Medical Education program.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

EDME 602 Leadership Effectiveness in Medical Education
This course is embedded in a block of three courses focusing on leadership in healthcare and medical education. This course focuses on individual leadership development and will provide students with experiences, perspectives, and theories that will enable them to better understand themselves in the context of a diverse, changing world and a rapidly changing industry. Topics covered include adult development, adult learning, perception, bias, diversity and inclusion, emotional and social intelligence, and the role of values and ethics in leadership.
Prerequisite: Enrollment in Medical Education program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDME 603 Directing Education Programs
This course is embedded in a block of three courses focusing on leadership in healthcare and medical education. This course focuses on how to lead medical education in a complex organization embedded in a complex and changing industry. Students will explore how to lead educational change in the organization, including organizational effectiveness, focusing on current research and practices in the areas of organizational culture, organizational change, organizational effectiveness, and organizational diagnosis.
Prerequisite: Enrollment in Medical Education program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDME 604 Capstone: Leadership in Medical Education I
This course focuses on academic and practical skills needed to prepare students for the final Capstone assignment, inclusive of all elements of the masters thesis portfolio. Specific topics include influencing across cultural boundaries in organizations, building teams to create sustainable change, and advanced medical educator skills (e.g., story development, coaching, remediation and feedback, and presentation skills).
Prerequisite: Enrollment in Medical Education program.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDME 605 Frameworks for Understanding Literacy, Teaching & Learning
Designed as a collaborative inquiry, this module will provide a range of contexts for exploring the nature and purposes of literacy education in the 21st century. Individually and collectively, we will unpack the conceptual frameworks -the images, practices, assumptions, and beliefs- that structure our understanding of what it means to teach and learn literacy in various settings. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDME 606 Online-Research and Writing
Independent writing and research time for students. Supported by writing coach. Prerequisite: Enrollment in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDMC 601 Leading Teams and Fostering Learning Communities
This module is designed to help students learn what is known about teams and team leadership. It will be both research and case based. Drawing on the research literature, it will help students understand the nature of the different kinds of work teams are asked to do and how teams may be structured for effectiveness, depending on their objectives. Students will be asked to examine two cases that reflect different objectives and different designs. Through a field-based assignment, particular emphasis will be given to the various kinds of teams and groups principals, heads of schools, superintendents and others associated with the educational enterprise must work with and lead. As they work on their projects in this module, in other modules and in particular, in the Practitioner Research Module this fall, participants will also learn how to collect and make meaning of data on teams they choose to study. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDMC 602 Social Foundations of Education
This module provides the basis for more rigorously and thoroughly understanding the key, big picture, foundational issues of education, such as defining education, exploring common goals of education, and moral and political challenges in education. This module will introduce students to a handful of standard intellectual frameworks and provide guided challenging of prevalent assumptions about education. A handful of humanistic and scientific approaches will be used, but the principle disciplinary lens will be sociocultural anthropology, which investigates shared norms, values and activities within and across social groups.
Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

EDMC 603 Practitioner Research
In the Practitioner Research Module this Fall, participants will choose to study. Prerequisite: Enrollment in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

EDMC 604 Online-Research and Writing
Independent writing and research time for students. Supported by writing coach. Prerequisite: Enrollment in the Mid-Career Doctoral Program in Educational Leadership.
Course usually offered summer term only
Activity: Lecture
1.5 Course Unit

EDMC 605 Frameworks for Understanding Literacy, Teaching & Learning
Designed as a collaborative inquiry, this module will provide a range of contexts for exploring the nature and purposes of literacy education in the 21st century. Individually and collectively, we will unpack the conceptual frameworks -the images, practices, assumptions, and beliefs- that structure our understanding of what it means to teach and learn literacy in various settings. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units
EDMC 606 Exploring Frameworks for Learners and Learning
This module will use a contextual approach to examine individual developmental issues across the life-course, specifically learner's identities and pathways to learning. In addition to investigating how children learn at school, home, and in their communities, students in the course will become their own units of analyses. It is sometimes advantageous in fields of education and social science to regard oneself and life experiences as a point of departure in order to make sense of larger social forces. To that end, we will reflect on our own learning at different points throughout our lives and within a variety of social and educational contexts. This approach assumes that educational leaders might better understand and respond to developmental issues and identity formation of teachers and students by (re)examining our own biographies as learners and professionals and the interconnectedness of these roles and the expectations associated with them. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDMC 607 Qualitative Research Methods I
This year-long course will introduce students to the foundations, theories, methods, and practices of qualitative inquiry broadly and practitioner research specifically. This course is intended to teach students, who are educational leaders, what research is, both historically and currently, and in terms of its promise for guiding informed, inquiry-based practices, including the practices of change and reform. Further, this course is designed to prepare students to conduct qualitative research in their own educational or community-based settings. Students will be guided through a systematic and self-reflective process of learning to become reflective, ethical, and critical researchers. Students will be supported as they develop a theoretically strong practice of qualitative research that is directly informed by their own professional experiences, questions, and contexts. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDMC 608 Quantitative Methods I
This module focuses on the use of statistics for analyzing numerical data from educational contexts. The course materials and assignments are designed to help you gain the skills and knowledge required to plan and conduct high quality quantitative research. As such, the curriculum for this course focuses on the statistical methods most frequently used in education research and provides examples of the application of these methods using real data. This is an applied methods course, so the content will not be highly technical. While we will discuss some of the details of the mathematics behind statistics, we will place much more emphasis on understanding the concepts behind the statistics. What does each method do? How does it work? How do we interpret the results? This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Taught by: Leslie Nabors Olah
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDMC 609 Leadership and Literature
Running a school is about understanding yourself and the perspectives of others to include your administration and staff, your students, their parents, alumni, and the larger school community. Good literature deepens your self-awareness and provides a wider appreciation of the experiences of others. Literature lets you experience what leaders are thinking and feeling and see how their decisions affect the lives of others. Reading literature opens insight into the most complex human issues, provides access to multiple human perspectives, and develops in school leaders empathy for the human condition and the complexity of the leadership challenges they face. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDMC 610 Public Leadership: Philosophy
In this module we will examine how education prepares students for citizenship and citizenship as a key aim of education. The tensions around this and other aims of education, the accommodation of difference, and the role of patriotism in education will be explored in relation to the preparation of the next generation of citizens. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDMC 611 Understanding Race and Politics
Using a culturally responsive philosophical world view and a racial socialization framework, this course will cover theoretical frames for shifting educational leaders' assessment, engagement, and processing, and problem-solving of racial tension within educational contexts. The course will follow a self-development, emotions processing and interactive role-playing format where participants will offer experience from their own schooling and employment challenges where racial politics are at play. This course fits within the Understanding Context, Self, Others, Vision & Direction theme of the Mid-Career program. The objectives of this course include helping students to develop useful knowledge on racial literacy and practice of racial negotiation skills in the following areas: theorizing about managing racial politics in urban schooling, identifying the impact of racial microaggressions on psychological adjustment, applying problem-solving strategies to address racial tensions in relationships, policies, and curricula. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units
EDMC 612 Introduction to Education Research
This course is designed to introduce students to the cycle of inquiry used in the on-going process of school reform and improvement. In this process, methods of gathering and analyzing various types of quantitative and qualitative data are central to posing questions, testing hypothesis, and evaluating new programs and initiatives-all of which are components of the inquiry cycle. This course will provide students with a hands-on opportunity to experience the inquiry cycle to guide the exploration of the causes and effects student performance and possible means of improving poor performance through the analysis of internal data from a case study of a school district with twenty elementary schools. Analysis of both quantitative and qualitative data will be a particular focus of this guided inquiry, with the goal of helping students to begin developing fluency in these methods. Students will be asked to take on the responsibility of the superintendent of this school district and in this role, lead a team in the investigation of the problems underlying the schools' performance on the statewide assessment of fourth grade writing skills. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDMC 613 Quantitative Methods II
This module focuses on the use of statistics for analyzing numerical data from educational contexts. The course materials and assignments are designed to help you gain the skills and knowledge required to plan and conduct high quality quantitative research. As such, the curriculum for this course focuses on the statistical methods most frequently used in education research and provides examples of the application of these methods using real data. This is an applied methods course, so the content will not be highly technical. While we will discuss some of the details of the mathematics behind statistics, we will place much more emphasis on understanding the concepts behind the statistics. We will investigate what each method does, how it works, and how we interpret the results. Prerequisite: this course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership.
Taught by: Leslie Nabors Olah
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDMC 614 Qualitative Research Methods II
This year-long course will introduce students to the foundations, theories, methods, and practices of qualitative inquiry broadly and practitioner research specifically. This course is intended to teach students, who are educational leaders, what research is, both historically and currently, and in terms of its promise for guiding informed, inquiry-based practices, including the practices of change and reform. Further, this course is designed to prepare students to conduct qualitative research in their own educational or community-based settings. Students will be guided through a systematic and self-reflective process of learning to become reflective, ethical, and critical researchers. Students will be supported as they develop a theoretically strong practice of qualitative research that is directly informed by their own professional experiences, questions, and contexts. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDMC 615 Public Leadership: History
This module will examine how Americans have used their public schools to make citizens, from the birth of the republic into the present. By 1850, the United States sent a greater fraction of its children to school than any other nation on earth. Why? What did young people learn there? And, most of all, how did these institutions both reflect and shape our evolving conceptions of America itself? Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDMC 616 Leadership Seminar: Theory & Cases
Central to enhancing the leadership practice is the deepening of competency to frame and reframe challenges. Through a series of guest instructors, this seminar will address intentionally distinctive perspectives on leadership practice, toward the development of increased reframing skills. Conceptual frames will include change management theories, entrepreneurship, recent leadership theory, and equity/social justice. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDMC 617 Exploring/Enacting Leadership for STEM
Our approach to the STEM module embraces all three of these meanings of STEM. Our aims are to 1. introduce you to the critical competencies and practices that are at the heart of STEM learning and activity regardless, 2. ensure that you understand the key components of the four content domains brought together by STEM, and 3. provide opportunities for you to imagine and design STEM learning opportunities in your educational site. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDMC 701 Proseminar I (Research Methods)
The goal of this course is to support you in your first steps toward forming your dissertation proposal. Beginning this process can be daunting for many doctoral students, but the clearer you are in articulating your research questions and the more knowledgeable you are about the research literature informing your questions, the more successful you will be in efficiently completing a strong proposal. To this end, we will focus on the relationship between reviewing the research literature, developing a conceptual framework, asking researchable questions, and choosing appropriate methods for addressing such questions. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units
EDMC 702 Leadership and Emotional Intelligence
The Leadership and Emotional Intelligence Module will focus on concepts and practices that will enable you to become a great leader. Through the study of social and emotional intelligence, you will become familiar with competencies that actually work in the real world of organizations and institutions. You will learn how these concepts have been identified, how they can be applied, and how to develop them in yourself and others. As part of the course, you will engage in reflective exercises that enable you to focus specifically on your own leadership - your strengths, your weaknesses, your vision for yourself as a person and as a professional, and how you plan to realize this vision and your goals. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership. Course usually offered summer term only Activity: Lecture 0.5 Course Units

EDMC 703 Public Poliy Workshop I
This workshop provides a survey of key policy debates and the various ways in which issues can be assessed and contested. The course explores democratic governance, education policymaking, and the way policy shapes education practice. Four topics will frame the class: the nature of public policy, the question and politics of accountability, the topics of teacher quality and school choice, and how science, research, and innovation interact with policy. Specific topics that the class will touch upon will include No Child Left Behind, Teach For America, charter schooling, scientifically based research, and parent trigger laws. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership. Course usually offered summer term only Activity: Lecture 0.5 Course Units

EDMC 704 Online-Research and Writing
Independent writing and research time for students. Supported by writing coach. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership. Course usually offered summer term only Activity: Lecture 1.0 Course Unit

EDMC 705 Public Leadership: Social Contexts
This module will focus on conceptual, pedagogical, and practical issues typically studied under the headings, social context and social capital. It will examine families as a particular cultural and social context in which learning takes place and in which learners are engaged and engage others. Class meetings will be designed around three questions that will serve as themes for our reflections and discussions over the course of the module. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership. Course usually offered summer term only Activity: Lecture 0.5 Course Units

EDMC 707 Educational Brand Management
This class experience is designed to provide experienced educational leaders with the requisite skills and knowledge necessary to design, implement and manage a brand identity for educational organizations, primarily schools or school districts. Successful branding is a comprehensive management issue. In schools, proactive and successful brand management builds financial and emotional value that enables success for the school or school district. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership. Course usually offered in fall term Activity: Lecture 0.5 Course Units

EDMC 708 Research Proposal & Instrument Design I
In the first module, students will receive structured assistance as they develop a solid research plan that includes refining their research questions' theoretical framework, identify and marshal literature in support of the planned study, devise a research design, identify and/or construct instruments to collect data, and produce a plan for analysis. Ideally, the first module will culminate in the completion of the dissertation proposal. The second module will focus on data collection and analysis as well as study implications. The two modules in this course are designed to provide structured support to students as they proceed with their dissertation work. While there will be didactic instruction on selected topics, significant time will be spent in small groups iteratively and collaboratively working through common challenges that students face in developing an empirical piece of research that emerges from their practice. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership. Course usually offered in fall term Activity: Lecture 0.5 Course Units

EDMC 709 Online-Research and Writing
Independent writing and research time for students. Supported by writing coach. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership. Course usually offered in fall term Activity: Lecture 0.5 Course Units

EDMC 710 Organizational Diagnostics
Leaders in education are constantly presented with organizational challenges and opportunities for innovation. Each system has its own characteristic strengths and dynamics. Organizational Diagnosis is a process by which school leaders can learn to systematically see a system and decide what to do. This course will teach a sound framework for understanding and enhancing a system. The process focuses on identifying and defining an organizational issue, collecting and analyzing data on the system to create a narrative for what is and a roadmap for what ought to be, and determining the method and method of feedback to both promote increased understanding of the situation and energize the school to take action. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership. Course usually offered in fall term Activity: Lecture 0.5 Course Units
EDMC 711 Engaging the Polis and Public of U.S. School Reform I
In recent decades, significant institutional changes to the education policy landscape have made local public engagement more difficult. Among these changes are increased centralization of policymaking in the federal government and in state governments, the rise of charter schools and portfolio management models, and mayoral and state takeovers of urban school districts. In this part of the module, we examine scholarship addressing the new landscape and the challenges it poses to community-based groups and to democratic decision-making. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDMC 713 Research Proposal & Instrument Design II (Continued)
In the first module, students will receive structured assistance as they develop a solid research plan that includes refining their research questions’ theoretical framework, identify and marshal literature in support of the planned study, devise a research design, identify and/or construct instruments to collect data, and produce a plan for analysis. Ideally, the first module will culminate in the completion of the dissertation proposal. The second module will focus on data collection and analysis as well as study implications. The two modules in this course are designed to provide structured support to students as they proceed with their dissertation work. While there will be didactic instruction on selected topics, significant time will be spent in small groups iteratively and collaboratively working through common challenges that students face in developing an empirical piece of research that emerges from their practice. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDMC 714 Creating Contexts for Teacher Learning and Leadership
This module will be a collaborative inquiry into the nature and relationships of teaching, teacher learning, and teacher leadership and their implications for leading learning in a school, district, or other educational organization. It will build on your work in other strands of the program, especially the Instructional Strand in which you have been taking up current perspectives on teaching and learning in various subjects and promising ways to provide leadership at the level of the department, school, and district, as well as in other educational organizations. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDMC 716 Online-Research and Writing
Independent writing and research time for students. Supported by writing coach. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDMC 717 Organizational Theory
This module examines schools as organizations and leadership within these organizations to address fundamental questions regarding how organizations come to be, persist, and/or change. Over the semester, we will grapple with questions regarding when and under what conditions do leaders effect meaningful organizational change. Students will be asked to reflect on their own leadership experiences inside organizations as well as potential changes to their approaches. In this way, students will gain knowledge and skills regarding the structures of educational organizations and the enabling and constraining conditions for leadership. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDMC 718 Instructional Technology
This module involves exploration and analysis of historical and contemporary ideas about instructional technology, as well as the development of practical applications for such theories. Our focus will be on K-12 contexts; however, we will also consider how relevant experiences and practices with technologies outside of schools are related to what happens within. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDMC 719 Leadership for Humanities
This course builds on previous learning in the Frameworks for Understanding Literacy Teaching and Learning module. After having encountered a range of perspectives about the nature of literacy (with an emphasis on literacy as critical social practice), we will examine the links between educational leadership and literacy teaching and learning. Seeing leadership as a shared enterprise, we will explore the core elements of a distributed perspective on literacy leadership at every level with a district/school community. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDMC 801 Proseminar II: Data Analysis and Reporting
The goals of this module are twofold. First, it aims to provide students with a set of practical skills for making sense of qualitative and mixed data. Students will practice organizing and coding qualitative data, use various techniques to develop hypotheses and draw conclusions based on data, and apply these skills to their own dissertation research. Second, this module seeks to enable each student to make significant progress on his/her research over the course of the week. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered summer term only
Activity: Lecture
0.5 Course Units

EDMC 803 Dissertation/Research
Dedicated dissertation research hours in year three of the program. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered summer term only
Activity: Lecture
2.5 Course Units
EDMC 805 Inquiry Seminar
The purpose of the Inquiry Community session is two-fold: to provide students with assistance with problems that occur in the process of doing qualitative or quantitative data analysis and to develop reflective processes for examining data that students can use in their settings of practice. The sessions should serve the practical purpose of providing students with support as they solve problems associated with issues of interpretation, and work toward the completion of their dissertations. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDMC 806 Advanced Issues in Educational Leadership I
As a capstone integrative experience, this module features a series of day-long workshop-style sessions on Saturdays of the third program year. These Saturday Experiences will allow students to revisit core themes raised in various modules during the program and provide an opportunity to extend prior module work in new synthetic ways. Sessions will revisit each student’s leadership philosophy, engage constructs of decision-making and judgment, continue discussions around diversity and privilege, engage alumni leadership challenges, re-engage data analysis, take a further view into the global field of educational leadership, and reprise the three-year program experience. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDMC 807 Dissertation/Research
Dedicated dissertation research hours in year three of the program.
Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Activity: Lecture
1.0 Course Units

EDMC 808 Leading Instructional and Curricular Change
This course is the Capstone Module for the Instructional Leadership strand of the Mid-Career Doctorate Program. A first emphasis of the module will be on several topics that have not yet been directly addressed during the program. The module is designed to provide opportunity to deal more intensively with topics and others that are identified through our initial discussions. A second focus of this course is on the process of collaborative problem-posing and problem-solving around issues in instructional leadership you are currently facing. To engage these topics and issues, we will draw on your experience as well as what has been addressed so far in the Instructional Leadership modules. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDMC 809 Advanced Issues in Educational Leadership II (Continued)
As a capstone integrative experience, this module features a series of day-long workshop-style sessions on Saturdays of the third program year. These Saturday Experiences will allow students to revisit core themes raised in various modules during the program and provide an opportunity to extend prior module work in new synthetic ways. Sessions will revisit each student’s leadership philosophy, engage constructs of decision-making and judgment, continue discussions around diversity and privilege, engage alumni leadership challenges, re-engage data analysis, take a further view into the global field of educational leadership, and reprise the three-year program experience. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EDMC 810 Dissertation/Research
Dedicated dissertation research hours in year three of the program.
Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in spring term
Activity: Lecture
2.0 Course Units

EDMC 811 EBL Capstone-Data Informed Inquiries
The goal of this module is to learn to apply the concept of data informed improvement into our daily practice. The field of educational improvement shares a set of goals, frameworks, and methods with other fields like organizational learning in sociology, continuous improvement in business and evidence-informed improvements in medicine. Each of these fields has its own set of frameworks and language to describe the improvement process, but they are all based on the notion of using data to inform continuous learning and improvement. This course is only for students enrolled in the Mid-Career Doctoral Program in Educational Leadership. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership
Taught by: Jon Supovitz
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

EDMC 812 Engaging the Polis and Public of U.S. School Reform II
In recent decades, significant institutional changes to the education policy landscape have made local public engagement more difficult. Among these changes are increased centralization of policymaking in the federal government and in state governments, the rise of charter schools and portfolio management models, and mayoral and state takeovers of urban school districts. In this part of the module, we examine scholarship addressing the new landscape and the challenges it poses to community-based groups and to democratic decision-making. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

Education - Penn Chief Learning Officer (EDCL)
These courses are only available to students in the Penn Chief Learning Officer program.
EDCL 545 Penn Chief Learning Officer Program Experimental Course
This topic course explores multiple and different aspects of Chief Learning Officer Program. Specific course topics vary from year to year. Consult with the program for current course offerings.
Activity: Lecture
1.0 Course Unit

EDCL 701 Learning Technology in the Workplace
This course is embedded in a block of three courses focusing on the role of technology in learning at work. This course focuses on the evolution of technology in organizations and a review of the most current technologies in use in organizational learning today. Topics include the history of and new directions in learning technologies, emerging learning technologies, security and privacy in a high-tech world, evaluating technological solutions for organizational learning needs, and evaluating learning technologies in light of organizational goals. This course is only available to students in the Penn Chief Learning Officer program.
Activity: Lecture
1.0 Course Unit

EDCL 702 Technology Strategies for Corporate Learners
This course is embedded in a block of three courses focusing on the role of technology in learning at work. This course focuses on the role of technology in advancing learning in organizations. Topics include designing technology-enabled learning environments, using simulations, games, and apps, choosing and evaluating e-tools, educational entrepreneurship, evaluating technology-enabled learning interventions. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Lecture
1.0 Course Unit

EDCL 703 Managing Technology in the Workplace
This course is embedded in a block of three courses focusing on the role of technology in learning at work. This course focuses on managing learning technologies in the modern organization. Topics include identification and selection of learning technologies, managing change, communication skills to influence decisions about technology change/ adoption/implementation, and implementation of learning technologies. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Lecture
1.0 Course Unit

EDCL 704 Individual Effectiveness
This course is embedded in a block of four courses focusing on leadership in organization. This course focuses on individual leadership development and will provide students with experiences, perspectives, and theories that will enable them to better understand themselves in the context of a diverse and changing world. Topics covered include adult development, adult learning, perception, bias, diversity and inclusion, emotional and social intelligence, and the role of values and ethics in leadership. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Lecture
1.0 Course Unit

EDCL 705 Organizational Leadership
This course is embedded in a block of four courses focusing on leadership in organization. This course focuses on leadership in the context of the modern organization. Students will review the history of management science as well as current research and practices in the areas of organizational culture, organizational change, organizational effectiveness, organizational diagnosis, engagement and happiness at work, and coping with stress in leadership roles. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Lecture
1.0 Course Unit

EDCL 706 Functional Leadership
This course is embedded in a block of four courses focusing on leadership in organization. This course focuses on managing teams within and across all functions of the organization, as well as functions in the organization that are responsible for talent management, leadership development, and human resources. Topics covered include team dynamics, organizational structure, talent management, and the impact of historical models and theories as well as globalization and demographic shifts that impact organizations. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Lecture
1.0 Course Unit

EDCL 707 Learning Leader as Performance Consultant
This course is embedded in a block of three courses focusing on organizational learning. This course focuses on research and current practices in leadership development and organizational effectiveness. Topics covered include the models of individual change and development, the relationships among and between individual, team and organizational effectiveness, individual and large-scale leadership development, executive coaching, aligning and integrating learning and performance with organizational goals, and evaluation of learning interventions. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Lecture
1.0 Course Unit

EDCL 708 Organizational Effectiveness
This course is embedded in a block of three courses focusing on organizational learning. This course focuses on the role of learning and development in organizational effectiveness. Topics covered include current learning practices in organizations, historical and current research on the efficacy of learning interventions in organizations, and designing learning interventions for individuals and groups in organizations. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Lecture
1.0 Course Unit

EDCL 709 Organizational Learning
This course is embedded in a block of three courses focusing on organizational learning. This course focuses on theories and models of learning in organizations. Topics include learning theories, pedagogy and curriculum in adult learning, implications of the diverse global workforce for learning and development in organizations, organizational success and learning in an uncertain environment, and assessment of learning in organizations. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Lecture
1.0 Course Unit
EDCL 710 Individual and Social Learning
This course is embedded in a block of three courses focusing on organizational learning. This course focuses on the role of cognition in learning as well as the impact of the social context on individual learning and change. Topics covered include the cultural foundations of learning, action learning, informal learning, and the impact of organizational culture on individual learning and organizational change. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Lecture
1.0 Course Unit

EDCL 711 Marketing for Executives
This course is embedded in block of three courses focusing on business acumen. This course focuses on strategic marketing. Topics covered include research and practices related to branding, managing innovation, customer contact and customer service, communication in business, crisis communication, the interaction of marketing and strategy, and the impact of marketing on organizational effectiveness. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Lecture
1.0 Course Unit

EDCL 712 Finance for Executives
This course is embedded in a block of three courses focusing on business acumen. This course focuses on business and corporate finance. Topics include basic financial tools, and practices, global finance, micro- and macroeconomics in the context of business finance, strategy and decision making, the relationship between strategy and finance, strategy execution, mergers and acquisition, and governance. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Lecture
1.0 Course Unit

EDCL 713 Management for Executives
This course is embedded block of three courses focusing on business acumen. This course focuses on topics impacting the modern business world, as well as topics impacting not-for-profit, government and non-governmental organizations. Specific topics include global trends and strategy, people analytics, talent management, employee engagement, entrepreneurship, and social entrepreneurship. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Lecture
1.0 Course Unit

EDCL 714 Masters Thesis (CLO)
This online course guides students through a process of identifying a topic, reviewing historical and current literature, forming an argument for a research study, and writing the masters thesis. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Masters Thesis
1.0 Course Unit

EDCL 715 Qualitative Data Analysis
The course is embedded in a block of three courses focusing on evidence-based research. This course focuses on qualitative research in organizations. Topics include researcher positionality, theoretical and conceptual frameworks, the role of research questions in instrument development, common qualitative research data collection methods (e.g. interviews and focus groups), qualitative data analysis methods (e.g. coding, thematic analysis), and research ethics. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Lecture
1.0 Course Unit

EDCL 716 Quantitative Data Analysis
The course is embedded in a block of three courses focusing on evidence-based research. This course focuses on quantitative research in organizations. Topics include hypothesis design and testing, variables, descriptive and analytic statistics, and critically evaluating quantitative and mixed methods research. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Lecture
1.0 Course Unit

EDCL 717 Research Design & Delivery
The course is embedded in a block of three courses focusing on evidence-based research. This course focuses on qualitative, quantitative, and mixed methods research design. Topics include designing conceptual frameworks, designing research questions, conducting a literature review, designing qualitative and quantitative data collection and analysis methods (e.g. designing interview protocols and surveys), and research ethics. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Lecture
1.0 Course Unit

EDCL 802 Practicum (CLO)
Practical application of academic program content. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Field Work
0.0 Course Units

EDCL 995 Advanced Dissertation Research Methods
This course provides students with further development of research and writing skills, guidance on the formation of a research question, literature review, and research design for the doctoral dissertation. The course also provides guidance on conducting doctoral research and writing the dissertation. Under guidance of the chair of the dissertation committee, students will write a dissertation to be evaluated by the committee chair and committee members. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Activity: Dissertation
1.0 Course Unit

Education - School & Mental Health Counseling (EDSC)
These courses are only available to students in the Executive Program in School and Mental Health Counseling.
EDSC 501 Ethics & Professional Principles in School & Mental Health Counseling
This course is designed to fulfill the Professional Orientation requirement of state licensure, as well as the Ethics and Professional Orientation requirement of the Planned Program of Study. It provides an opportunity for students to learn clinical skills and to refine skill application with clients. Students are also able to integrate theory and the other components of the program (Human Growth & Development, Social & Cultural Foundations, Helping Relationships) into practical application in this course. This will assist students in the development of their knowledge and skills in ethical decision-making, ethical standards related to the field of school and mental counseling. In addition, a primary goal of this course is to help each student increase his/her knowledge of self as a provider of counseling services to others. Prerequisite: Enrollment in Executive Program in School and Mental Health Counseling.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

EDSC 502 Counseling Interventions: Theory & Practice
This course will provide an overview of several of the primary theories of counseling, along with the key concepts and therapeutic processes related to those theories. Students will be guided to demonstrate a working knowledge of the theories presented, to be able to distinguish between different approaches, and develop a preliminary rationale for the use of a particular approach. The main objectives of the course are for the student to develop a working knowledge of the theories of counseling and the practical counseling interventions derived from those theoretical perspectives, and to begin practicing the applications of this knowledge. Prerequisite: Enrollment in Executive Program in School and Mental Health Counseling.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

EDSC 503 School & Mental Health Counseling: Practicum I
This course emphasizes practical counseling experience utilizing rudimentary counseling skills when working with approved supervisors in school counseling programs, mental health agencies, and recording volunteer practice clients. All practicum sites have been pre-approved to meet certification standards. A primary purpose of this course is to provide beginning counseling students with a supportive learning environment and ground them in practical skills and application to the counseling profession. Students will have opportunities to practice, enhance, and refine their emerging counseling skills acquired in class, as well as through structured supervised learning opportunities in schools and clinical settings. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

EDSC 504 Assessment for Counselors in School & Mental Health Counseling
This course seeks to help students understand the assessment process including the theoretical and historical basis as well as legal and ethical concerns. Students will develop knowledge of concepts of measurement including descriptive statistics, central tendency, norms, reliability, validity, etc. This course will also review assessment as it relates to educational law, entitlement decisions, and high stakes accountability, in addition to teaching students how to implement assessment techniques through observation, interview and ecological and environmental methods. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDSC 505 Sociocultural Foundations in Counseling
Understanding sociocultural and individual differences is essential to the work of counselors. This course provides a contextual and applied understanding of working with clients who are culturally diverse. The purpose of this course is to expand one’s understanding of the impact of sociocultural and contextual factors, the interaction of identities, and the application of this knowledge to working with underserved and under-addressed individuals in counseling. Both intervention and prevention strategies will be addressed. The student will be required to demonstrate a working knowledge of key concepts in sociocultural counseling and the topical areas addressed in the course. Prerequisite: Enrollment in Executive Program in School and Mental Health Counseling.
Activity: Lecture
1.0 Course Unit

EDSC 506 School & Mental Health Counseling: Practicum I (Continued)
This course emphasizes practical counseling experience utilizing rudimentary counseling skills when working with approved supervisors in school counseling programs, mental health agencies, and recording volunteer practice clients. All practicum sites have been pre-approved to meet certification standards. A primary purpose of this course is to provide beginning counseling students with a supportive learning environment and ground them in practical skills and application to the counseling profession. Students will have opportunities to practice, enhance, and refine their emerging counseling skills acquired in class, as well as through structured, supervised learning opportunities in schools and clinical settings. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Activity: Lecture
0.0 Course Units
EDSC 507 Human Development
This course explores the characteristics of developmental change over time - from infancy through late adulthood - and the processes or mechanisms underlying these changes. Students will gain an understanding of the fundamental theories and research traditions of the field, how variations in context influence development, and how theory and research can be applied to real world issues. Using a cultural ecological framework, we will examine theoretical approaches to the study of human development emphasizing the importance of contextual factors (e.g., race, ethnicity, culture, gender, socioeconomic status, historical moment, etc.) and individual perceptions in understanding growth and change. Students will be encouraged to explore developmental change and growth as they occur across different developmental periods of life and within a wide variety of settings and cultural contexts in order to help them begin to crystallize their own world-views and conceptual frameworks of human development. Throughout the semester we will search for new ideas, challenge old ones, and wrestle with paradoxical issues. Prerequisite: Enrollment in Executive Program in School and Mental Health Counseling.
Activity: Lecture
1.0 Course Unit

EDSC 508 Applied Quantitative Methods
This course is designed for counselors in training. To that end, this course will cover topics related to statistics and research methodology using instructional strategies intended to build the capacity of counselors-in-training to understand, interpret and use statistics and research methods to support their work with students, school staff, and school administrators. The majority of the course will involve a balance of lecture, discussion, and interactive practice activities, linking statistics and research methods to counseling and the real-world responsibilities of counselors-in-training. Prerequisite: Enrollment in Executive Program in School and Mental Health Counseling.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDSC 509 Career Counseling & Development
This course addresses career development throughout the life span. It includes the nature of work, career assessment measures, classification systems, and theory related to vocational planning. Student self-assessment, career guidance programs, and unique needs of special populations are covered. Prerequisite: Enrollment in Executive Program in School and Mental Health Counseling.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDSC 510 Group Counseling
This course is designed as an introduction to the use of groups in counseling practice. Its chief purpose is to provide students with an overview of basic elements of group process, with a focus on stages of group development; guidelines for multicultural practice; ethical and professional issues in group practice; and group leadership. The course is a combination of didactic and experiential elements, including demonstrations, short lectures, discussions of group process concerns, and questions and answers. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDSC 511 School & Mental Health Counseling: Practicum II
This course emphasizes practical counseling experience utilizing rudimentary counseling skills when working with approved supervisors in school counseling programs, mental health agencies, and recording volunteer practice clients. All practicum sites have been pre-approved to meet certification standards. A primary purpose of this course is to provide beginning counseling students with a supportive learning environment and ground them in practical skills and application to the counseling profession. Students will have opportunities to practice, enhance, and refine their emerging counseling skills acquired in class, as well as, through structured supervised learning opportunities in schools and clinical settings. The Practicum is the initial opportunity for students to synthesize and integrate theoretical information from course work into their individual counseling and small group work. These objectives are met at the clinical site, through individual recorded client sessions, and in class. An additional aim of this course is to help students increase and explore their own self-knowledge as providers of counseling services to others. The course promotes an awareness and better understanding of oneself, how individual understanding may impact professional practice; appreciation of others, reinforcing the importance of empathic attention to the needs of others differing from ones own (cultural, educational, and socioeconomic background); and professional development, emphasizing skill building, ethics, and providing counseling services. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDSC 512 School & Mental Health Counseling: Practicum III
This course is a continuation of Practicum II for students who need to complete their field placements. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Course usually offered summer term only
Activity: Lecture
0.0 Course Units

EDSC 545 School and Mental Health Counseling Experimental Course
This topic course explores multiple and different aspects of School and Mental Health Counseling. Specific course topics vary from year to year. Consult with the program for current course offerings.
Activity: Lecture
1.0 Course Unit

EDSC 560 School and Mental Health Counseling: Internship I
This course provides the experience necessary to develop the skills to implement a comprehensive, developmental, and collaborative school counseling or mental health program. The course also translates knowledge, skills, attitudes to practice, and competencies that foster professionalism in school and community settings. Students will also complete supervised field experiences that provide actual on-the-job experience for a minimum of 420 clock hours of instructional experience for school counselor certification and/or 600 clock hours of supervised internship and a minimum of 240 hours of direct service to individuals and groups for Licensed Professional Counselor (LPC) eligibility. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit
EDSC 602 Advanced Group & Family Systems Counseling
This course will focus on the basics of systems intervention with a specific focus on families and groups, and a second focus on diversity and racial stress and literacy in systems. The purpose is to develop more advanced knowledge of practical therapeutic problem-solving skills at the graduate student level using ecological, systemic, and cultural perspectives. Students will be exposed to basic group therapy strategies with children and youth, with family interventions across various school-based emotional health diagnostic populations, and how to intervene within groups and families in which cultural differences and styles are key themes. The student will be required to demonstrate a working knowledge of the key concepts in systems intervention, to make preliminary judgments about how to apply various strategies to specific problems in a variety of naturalized and formal therapeutic contexts including schools, homes, and community centers, and evaluated on the ability to react spontaneously to moment-by-moment shifts in group and family therapy processes. Students will also be challenged to develop a preliminary rationale for a systemic theory of behavior change. Given the diversity of clients that counselors see professionally, some demonstrated knowledge of how cultural differences will be addressed in the counseling session and in the relationships of larger societal institutions will be expected. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

EDSC 603 Advanced Professional Development: Utilizing & Building Resources within Community Agencies & Orgs
This course is structured to create an intellectual and practice-driven inquiry community in which you as students have the opportunity to deepen and expand your understanding of the multifaceted professional roles and responsibilities of school and mental health counselors, as well as the complex systems in which these roles are formed and enacted. The primary goal of the course is to support you in developing an inquiry stance on your practice (Cochran-Smith & Lytle, 2009) as a means of enhancing the quality and meaning of your work and professional identity. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Two terms. student must enter first term.
Activity: Lecture
0.5 Course Units

EDSC 604 Foundations in Education for Diverse Learners
This course is intended to engage you in thoughtful discussion about working with diverse learners while presenting factual information about specific areas of need. Our work will be situated within a socio-cultural framework that sees our students as resources that enrich our counseling work and their communities. In this class, we will address content related to both Special Education/Students with Disabilities and English Language Learners. As such, we use three major themes as central to school counseling work and professionalism: Supporting students with disabilities and English language learners; development of inclusive and empowering student practices and environments; and supporting positive school, community and life goals which affirm diversity and ensure equitable outcomes for all students. Over the course of the semester, you will have an opportunity to clarify and challenge your beliefs about working with students with diverse learning needs in your role as a school counselor, in urban and diverse environments. In particular, through course readings, discussion, and projects students will be challenged to think deeply and thoroughly about educating diverse students in schools, through the following core elements: a) taking an inquiry stance; b) urban contexts of schools, c) supporting social justice & equity, d) integrating theory with practice. In doing so, students will critically examine their own role in providing services to students which will support equitable, positive, student- and family-centered school and life outcomes. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDSC 605 School & Mental Health Counseling: Internship I (Continued)
This course provides the experience needed to develop the skills to implement a comprehensive, developmental and collaborative school counseling or mental health program. The course also translates knowledge, skills, attitudes to practice and competencies that foster professionalism in school and community settings. Students will also complete supervised field experiences that provide actual on-the-job experiences for a minimum of 420 clock hours of instructional experience for school counselor certification and/or 600 clock hours of supervised internship and a minimum of 240 hours of direct service to individuals and groups for Licensed Professional Counselor (LPC) eligibility. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Course usually offered in fall term
Activity: Lecture
0.0 Course Units
EDSC 606 Advanced Counseling Skills & Human Sexuality
This course will be a hybrid course combining advanced counseling skills and counseling related to human sexuality issues. The advanced counseling skills portion of the class will be understood as an elaboration of the basic understanding of theoretical interventions learned in the first year of the program by presenting students with information about case conceptualization and more advanced intervention from three major theoretical orientations (cognitive behavioral, psychoanalytic, and emotion-focused therapy). There will also be a brief consideration of what it means to integrate and combine different theoretical approaches, if they really are as different as we think. Topics in human sexuality that commonly present in school and mental health settings will be used as the context for applying advanced skills. This course aims to present students with factual information about advanced skills and human sexuality while also providing an atmosphere in which self-reflection and effective learning can facilitate counselor development in the areas of advanced skills and human sexuality. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

EDSC 607 Healthy Development & Psychopathology
This course will familiarize counseling students with the major mental disorders, as well as with conceptions of mental health, mental health promotion, resilience and recovery. It is important that counselors, regardless of concentration or specialization, be acquainted with the language, taxonomy, conceptualizations, and developments in the study of psychopathology, as well as a sense of the lived experience of people with mental disorders. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDSC 608 Research and Evaluation Seminar in Counseling and Education
This course focuses on the application of research concepts and use of data in comprehensive school counseling programs. The course materials, exercises and assignments are designed to help students gain and use practical skills required to make data-based decisions. Specifically, students will learn to use data to: identify needs within the school; identify possible interventions and programs to address the needs; implement interventions and programs; monitor and evaluate the interventions to demonstrate the results of the interventions; and use data to advocate for the profession, the work, and for students. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Two terms. Student must enter first term.
Activity: Lecture
0.5 Course Units

EDSC 610 School & Mental Health Counseling: Internship II
Internship II, a continuation of Internship I, continues to provide the experience needed to develop the skills to implement a comprehensive, developmental and collaborative school counseling or mental health program. Students will continue to work on translating their knowledge, skills and attitudes to practice. The course also uses knowledge of the following areas to provide students with an understanding of the hands-on experiences of a school counselor K-12 and a mental health counseling professional: individual and group counseling, classroom guidance activities and academic, personal/social and career interventions; consultation, coordination, and referral; school/agencies policies and procedures; community-based agencies and referrals; working with students with disabilities and English language learners; professional, ethical, and legal considerations; assessment and evaluation techniques; supervision and professional development through Seminar Group. Enrollment in the Executive Program in School and Mental Health Counseling.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDSC 611 Wellness & Addiction Counseling
This course will provide an overview of the foundations of addictions from a theoretical, practical and applicable standpoint. The basics of understanding the process of screening, assessing and treating addictions will be discussed as well as a focus on the strengths and wellness perspective of persons with addictions. In addition, students will gain an understanding of the effects and treatment of co-occurring disorders (e.g., addiction and depression). Addiction lingo, positive psychology and the various types of addictions will be addressed along with etiological models and current approaches for treatment. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDSC 612 Trauma in School & Mental Health Counseling
Due to the overwhelming incidence of trauma, adversity, and toxic stress among consumers of mental health services and the potential profound and pervasive impact of trauma on development, it is essential that mental health professionals gain the necessary knowledge, competencies, and skills to foster resilience and healing. This course explores how trauma impacts not only cognitive and emotional processing, but also dysregulates neurophysiology, and discusses evidence based assessments and interventions that counselors can use to help alleviate the negative impact of trauma with their clients. This course is designed to provide foundational trauma education for mental health professionals working within schools and community settings to promote their ability to recognize trauma responses, to create trauma-sensitive educational and clinical environments to foster learning, growth and health and to develop trauma responsive counseling skills. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
EDSC 701 School and Mental Health Counseling: Advanced Internship in Professional Counseling
This course is a continuation of Internship II for students who need to complete their field placements. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Activity: Lecture
0.5 Course Units

EDSC 702 School and Mental Health Counseling: Advanced Internship in Professional Counseling
This course is a continuation of Internship II for students who need to complete their field placements. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Activity: Lecture
0.0 Course Units

**Education - School Leadership (EDSL)**

These courses are only available to students in the School Leadership Program.

EDSL 501 Sustainability in Schools
Addresses an issue of great relevance to schools in the 21st century. As the leadership program comes to a close, students in this course will look at the issue of sustainability across the financial, environmental, and programmatic dimensions of school life. Prerequisite: Enrollment in School Leadership Program.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDSL 502 Leadership in Public, Independent & Parochial Schools
Encourage students to consider the challenges of leadership in public, independent, and parochial schools as part of the broader discussion of educational leadership in elementary and secondary education. The course will seek to identify themes that have implications for independent, parochial, and public schools and will seek to establish interconnections. Prerequisite: Enrollment in School Leadership Program.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDSL 503 Developing Instructional Leadership in Practice
Emphasizes how to connect organizational systems with schools’ instructional missions. Prerequisite: Enrollment in School Leadership Program.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDSL 504 Field Internship Seminar: Inquiring Into Organizational and Legal Dimensions of Principal Leadership
Provides the systems-thinking lens through which students inquire into how an individual’s organizational leadership can support continuous school improvement through attention to school climate, program coherence, and effectiveness of instruction. Prerequisite: Enrollment in School Leadership Program.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDSL 505 Aligning Fiscal, Human, and Community Resources in Support of the School’s Instructional Mission
Emphasizes the connections between the school’s mission and daily decision-making (including managing budgets and funding streams, use of space, use of time, and scheduling and assignments of staff and students). Prerequisite: Enrollment in School Leadership Program.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EDSL 506 Instructional Leadership to Promote Learning
The first course of the program, Instructional Leadership to Promote Learning begins with an exploration of values and beliefs underlying leadership in schools. Prerequisite: Enrollment in School Leadership Program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDSL 507 Practitioner Research
Addresses an important goal of the program: developing school leaders who are skilled practitioner researchers. As an outgrowth of this course, students will engage in a practitioner research project that is the culminating experience of the program. Prerequisite: Enrollment in School Leadership Program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDSL 508 Team and Collaborative Leadership in Schools
Presents two conceptual models for examining organizational practice in schools: working in groups and applying moral/ethical decision-making in schools. Prerequisite: Enrollment in School Leadership Program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDSL 509 Field Internship Seminar: Leadership for School Improvement
Supports each student in becoming a reflective practitioner. Students develop the inquiry, communication, and interpersonal skills needed to build purposeful learning communities for adults and students. Prerequisite: Enrollment in School Leadership Program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDSL 510 Critical Issues in Education
Engages the leadership cohort in analysis of three important issues of relevance to contemporary school leadership: technology, globalization, and equity and access. Prerequisite: Enrollment in School Leadership Program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

**Education - Urban Teaching Residency Certificate (EDTC)**

These courses are only available to students in the Urban Teaching Residency program.

---

2020-21 Catalog | Generated 09/18/20
EDTC 503 Methods: Elementary A
This course is designed to enhance literacy and mathematics instruction that engages all students as readers, thinkers and sense makers. In this course, we will explore the interrelationship of language, literacy, numeracy, and culture, and will co-construct a knowledge base for understanding how children learn. We will also develop and practice new routines for teaching literacy and mathematics that build on students interests, curiosities, and informal knowledge. Throughout the course, you will be encouraged to critically reflect on continually develop your teaching practice. Course readings, discussions, and assignments will offer opportunities to think in both theoretical terms and practical terms about your teaching. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Also Offered As: EDTF 503
Activity: Lecture
1.0 Course Unit

EDTC 504 Methods: Middle Years A
This course focuses on you as both a learner and a teacher of mathematics and science. Its development is premised on the notion that in order for you to foster understanding and engagement for all your students, you have to develop and draw on different kinds of knowledge, skills, and dispositions. As a result, the course is designed to help you hone your practice as a teacher of mathematics and science and involves you learning about learners (yourself included), the understandings and conceptions they hold, and the developmental processes through which they learn. It also involves developing skills in teaching practices that engage students in mathematical and scientific exploration, creating an environment that facilitates reasoning and promotes inquiry, and finding ways to analyze and learn from your own teaching. Good teaching is essentially a decision laden process, and the decisions you make are contextually based. Consequently, the aim of the course is not to provide you with a bag of tricks that are applicable or generalizable to all situations, but rather to help you develop necessary tools for thinking and working as a teacher. These tools include ways to explore scientific and mathematical content, assess your students understanding on an ongoing basis, and help all your students develop as learners of mathematics and science. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Also Offered As: EDTF 504
Activity: Lecture
1.0 Course Unit

EDTC 505 Methods: 7-12 English A
This course is designed for preservice and working educators and is intended to weave theory into practice. In this data and standards driven climate, educators are often hit with buzzwords instead of solid theory and solid pedagogy. The framework for the course is to provide a foundation in theory and then explores how that theory works within and against existing practices in schools. We will be reflecting on practice and designing and redesigning lessons and units based on theory and best practices for adolescent literacy. This course is an overview of the theory and pedagogy needed for effective English language arts instruction. Prerequisite: Enrollment in Urban Teaching Residency Program.
Taught by: n/a
Course usually offered in fall term
Also Offered As: EDTF 505
Activity: Lecture
1.0 Course Unit

EDTC 506 Methods: 7-12 General Science/Biology A
The purpose of this class is to introduce secondary science teachers to pedagogy, content and methodologies supported by a three-pillar foundation: teaching diverse learners (cultural responsiveness), curriculum development (Understanding by Design) and demonstration of knowledge and skill acquisition (high leverage practices and competencies). Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Also Offered As: EDTF 506
Activity: Lecture
1.0 Course Unit

EDTC 508 Methods: 7-12 World Languages A
The objectives of this course are for teachers to be able to: Align the four domains of professional practice with world languages pedagogy, recognize and demonstrate how pedagogical theories inform effective methodologies, incorporate a variety of standards-driven instructional practices using communicative techniques that engage students, research, identify and use resources that encourage student-centered learning practices, investigate and utilize a variety of assessments that effectively measure student performance and enhance proficiency, participate in local, state and national professional World Languages organizational activities including workshops and/or conferences. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Also Offered As: EDTF 508
Activity: Lecture
1.0 Course Unit

EDTC 512 Methods: 7-12 Science (Chemistry)
The purpose of this class is to introduce secondary science teachers to pedagogy, content and methodologies supported by a three-pillar foundation: teaching diverse learners (cultural responsiveness), curriculum development (Understanding by Design) and demonstration of knowledge and skill acquisition (high leverage practices and competencies). Prerequisite: Enrollment in Urban Teaching Residency Program.
One-term course offered either term
Also Offered As: EDTF 512
Activity: Lecture
1.0 Course Unit

EDTC 513 Methods: 7-12 Science (Physics)
The purpose of this class is to introduce secondary science teachers to pedagogy, content and methodologies supported by a three-pillar foundation: teaching diverse learners (cultural responsiveness), curriculum development (Understanding by Design) and demonstration of knowledge and skill acquisition (high leverage practices and competencies). Prerequisite: Enrollment in Urban Teaching Residency Program.
One-term course offered either term
Also Offered As: EDTF 513
Activity: Lecture
1.0 Course Unit
EDTC 515 Child Development
This course explores the origins and context of urban education in the United States by critically examining how schools reproduce and sustain systemic inequality. We will examine historical, political, economic, and socio-cultural frameworks for understanding urban schools, students and teachers. Through course readings, field visits and class discussions, we explore the following: (1) student, teacher and researcher perspectives on urban education, (2) the broader sociopolitical urban context of K-12 schooling in cities, (3) teaching and learning in urban settings and (4) ideas about re-imagining urban education. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Also Offered As: EDTF 515
Activity: Lecture
1.0 Course Unit

EDTC 520 Methods: 7-12 Mathematics A
The goal of this course is to enhance the teaching and learning of mathematics through a focus on the practical application of pedagogical theory. Each week we will engage in discussions and activities centered on different pedagogical approaches, using lessons covering specific mathematical concepts as demonstration tools. We will also use class time to reflect on experiences from our current teaching positions, and we will work together to develop solutions to problems that arise within our daily classroom experience. I aim to provide you with lesson and curricular development experience, multiple teaching techniques, and an engaging and supportive classroom environment to help us all develop as teachers and learners. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Also Offered As: EDTF 520
Activity: Lecture
1.0 Course Unit

EDTC 521 Foundations of Special Education
This course strives to teach students who are working towards certification in general education problem solving strategies, teaching techniques, itinerant services, team and community building, and types of disabilities found in students who are eligible for Individualized Education Programming (IEPs) under the Individuals with Disabilities Act (IDEA). We will learn what constitutes disabilities in this population and issues surrounding providing this populations with an effective education. Students will explore the ramifications, jargon, specific goals and objectives included with implementing and IEP in the general education, or inclusive, environment. Students will discuss the appropriateness of various academic environments as children with disabilities progress from elementary to secondary education, and transition into adulthood. General issues surrounding the topic of inclusion and the least restrictive environment will be addressed. In addition, time will be spent in this course discussing the education of students who are English Language Learners from the standpoint of sheltered instruction and the use of WIDA lesson planning. A holistic approach to educating all students, with an emphasis on academic, social, emotional, behavioral, and transition skills area focus. Content will be presented through online lecture, hands on projects, and reading. It is expected that students will work within their current teaching placement and with actual students to complete some, if not all, of the 7 projects. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTF 521
Activity: Online Course
0.0 Course Units

EDTC 524 School & Society Seminar
This course is designed to provide students with an opportunity to investigate the philosophical underpinnings, social context, and current discourse of education and schooling in the United States. By historically linking the development of educational initiatives to notions of power, nation building, and citizenship, this class furthers an understanding of the assumptions about the purpose of education within this democratic nation, and its role(s) within our current social and political climate. Discussions of differential access to power and resources will be central to this class, thereby providing a forum for critically exploring educational policy, teaching practices, and the aims and purposes of education that are intimately connected to the social stratification and reproduction. We will draw on students experiential knowledge of schools and teaching to imagine how urban educators can transform the socially reproductive practices of schools. Prerequisite: Enrollment in Urban Teaching Residency Program.
One-term course offered either term
Also Offered As: EDTF 524
Activity: Lecture
1.0 Course Unit

EDTC 527 Social, Emotional, and Behavioral Interventions
This course is designed to provide students with a comprehensive understanding of students who present with social, emotional, and behavioral difficulties. The course will focus on the definitions, characteristics, prevalence, causes, and assessment of emotional and behavioral disorders. Effective teaching practices will be integrated in the course, including education service placements, functional behavior assessment, ABA, positive behavior supports and social skills instruction. Current issues in the field will also be explored. There will be a focus on the direct application of knowledge and skills to the classroom, as well as the expectation that students’ teaching experiences will inform discussion and learning. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTF 527
Activity: Online Course
1.0 Course Unit

EDTC 529 Language and Literacy Acquisition
This course addresses research-based instructional strategies for teaching literacy (including language development, reading, writing, and speaking) to learners in grade levels PreK-12 as well as practical and effective modifications for diverse learners (including struggling readers, English language learners, and students with learning disabilities in reading, as well as students with a wide range of disabilities requiring accommodations (cognitive, linguistic, physical, and social)). Formative and summative assessments of emergent and content literacy, including components of literacy (phonological awareness, word analysis, comprehension, vocabulary, fluency) will also be addressed. Also included are factors which influence literacy acquisition (including, but not limited to: English Language Learners), social and cultural implications for language and literacy development, as well as life-long literacy for children and adolescents who struggle in literacy. Prerequisite: Enrollment in Urban Teaching Residency Program.
Also Offered As: EDTF 529
Activity: Online Course
1.0 Course Unit
EDTC 530 Contemporary Issues in Urban Education
This course explores the origins and context of urban education in the United States by critically examining how schools reproduce and sustain systemic inequality. We will examine historical, political, economic, and socio-cultural frameworks for understanding urban schools, students and teachers. Through course readings, field visits and class discussions, we explore the following: (1) student, teacher and researcher perspectives on urban education, (2) the broader sociopolitical urban context of K-12 schooling in cities, (3) teaching and learning in urban settings and (4) ideas about re-imagining urban education. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Also Offered As: EDTF 530
Activity: Lecture
0.5 Course Units

EDTC 531 Methods: Elementary B
In this course we will be examining many aspects of the teaching of science and social studies in elementary schools today. The importance of the National Science and Social Studies Education Standards, the Next Generation of Science Standards, and the Pennsylvania State Standards in curriculum development and reform will be explored in depth. Among the topics covered will be planning science and social studies instruction to include inquiry and integrated concepts, developing authentic assessments involving a variety of tools, creating and maintaining a safe laboratory and learning environment that meets the needs of diverse learners, and the integration of technology into science and social studies education. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTF 531
Activity: Lecture
1.0 Course Unit

EDTC 532 Methods: Middle Years B
Middle school teachers are involved in the constant process of increasing students’ active reading and writing about content area texts within the high-pressure environment of state accountability. Middle Years Methods offers practical strategies and applications that help establish a literate classroom environment in support of learning across all subject areas. Teachers learn approaches to help them establish literate classroom environments that are rich in problem-solving, critical thinking, logical reasoning concepts focused on state and national standards, and practical techniques that investigate and connect content in all subject areas to the real world. Middle Years Methods is structured to allow participants the opportunity to explore strategies and concepts for increasing student reading and writing proficiency. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTF 532
Activity: Lecture
1.0 Course Unit

EDTC 533 Methods: 7-12 English B
This course is designed for preservice and working educators and is intended to weave theory into practice. In this data and standards driven climate, educators are often hit with buzzwords instead of solid theory and solid pedagogy. The framework for the course builds from Secondary ELA Methods I. We will begin the semester by exploring the self, culturally relevant pedagogy, and how these things impact our practice. Then we will explore a variety of practices for teaching reading, writing, listening, and speaking. The practices for teaching reading, writing, listening, and speaking align to Special Education Competencies IV. Pedagogy. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTF 533
Activity: Lecture
1.0 Course Unit

EDTC 534 Methods: 7-12 General Science/Biology B
This course is the second course in the three-course series that addresses teaching and learning in secondary science classrooms. The methods topics have been carefully selected to represent current and relevant areas in science education research and are geared toward understanding issues impacting students, teachers and schools in the modern urban society. The course is premised on several organizing themes in education: Assessing misconceptions, teaching through multiple intelligences, expanding instructional practices, teaching science in urban schools, culturally relevant pedagogies, gender, professional learning communities and workforce development, problem-based learning, current STEM fields of research, citizenship science, and ethical decision making. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTF 534
Activity: Lecture
1.0 Course Unit

EDTC 535 Methods: 7-12 World Languages B
This course includes theoretical and practical applications for the teaching of world languages based on the five ‘C’ goal areas: Communication, Cultures, Comparisons, Connections, and Communities of the World-Readiness Standards for Learning Languages. Approaches and techniques will be explored to equip world language teachers with the knowledge and tools necessary to create a student- centered, standards-driven classroom. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTF 535
Activity: Lecture
1.0 Course Unit
EDTC 536 Methods: 7-12 Mathematics B
Mathematics Methods B is enhancing student learning through knowing the content, planning around our knowledge and reflecting on our practice and our practice and our students thinking. Each week we will think about mathematics through talking about mathematics, doing mathematics, and presenting mathematics, as we will learn to expect our students to do. Each week we will spend time both learning concepts behind the mathematics taught and learned in middle and high school, with a couple of topics from elementary school that have bearing on middle and high school mathematics. We will learn about these concepts in ways that you will be able to use in the classroom, giving you experiences with different methods. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTF 536
Activity: Lecture
1.0 Course Unit

EDTC 601 Methods: Advanced Elementary
This course has been designed for first and second year teachers who are currently teaching in elementary classrooms. Our work together will build upon the course work you completed this year, your past experiences as a student and a teacher, and your current classroom practices. In this course, we explore the interrelationship of language, literacy, numeracy and culture in order to co-construct a knowledge base for understanding how children learn. We will interrogate our own teaching practices in an effort to make our classrooms more content-rich and child-centered. Our work will span content areas - math, literacy, social studies, and science - emphasizing both their interconnectedness and their particularity. The course will offer opportunity to think in both theoretical terms and practical terms about implications of our teaching. Prerequisite: Enrollment in Urban Teaching Residency Program.
Also Offered As: EDTF 601
Activity: Lecture
1.0 Course Unit

EDTC 604 Methods: 7-12 Advanced English
This course is designed to give working teachers intensive, hands-on practice with research-based pedagogy that they need to address the immediate challenges of teaching English in urban public schools. Students will develop plans for a full course, several conceptual units, and eight weeks of daily lesson plans. In addition, students will develop and present various instructional routines, which the class will critique. Finally, students will share resources with each other and engage in problem-solving of their real-world classroom issues. Prerequisite: Enrollment in Urban Teaching Residency Program.
Also Offered As: EDTF 604
Activity: Lecture
1.0 Course Unit

EDTC 605 Methods: 7-12 Advanced Science
This course addresses teaching and learning in secondary science classrooms. The advanced methods topics have been carefully selected to represent current and relevant areas in science education research and are geared toward understanding issues impacting students, teachers and schools in the modern urban society. The course is premised on several organizing themes in education. Skills: topics investigated under this theme include: assessing misconceptions, teaching through multiple intelligences, expanding instructional practices. Teaching Science in Urban Schools: topics investigated under this theme include: culturally relevant pedagogies, gender, professional learning communities and workforce development. 21st Century Learning: topics investigated under this theme include: problem-based learning, information technologies, educational technologies, current STEM fields of research, citizenship science, and ethical decision making. Prerequisite: Enrollment in Urban Teaching Residency Program.
Also Offered As: EDTF 605
Activity: Lecture
1.0 Course Unit

EDTC 606 Methods: 7-12 Advanced World Languages
As a sequel to your introductory world language teaching and learning course, this course assumes a level of familiarity with theoretical and practical approaches to world language teaching and learning such as: communicative language teaching, task-based instruction, student centered instruction, and national and state standards. Building on this background, we will examine and analyze the use of emerging key concepts in world language education as well as consider critical perspectives to more traditional pedagogical approaches. Our exploration of world language learning and teaching methods will be grounded in praxis; that is, we will consider how theoretical and research-based approaches inform classroom practices, experiences, and beliefs, and vice versa. Accordingly, the course will provide opportunities for you to bridge theory and practice through an ongoing cycle of discussion, in-class application, and learning experiences such as collaborative activities, peer feedback, self-reflection, brief presentations, and the design of instruction materials. Prerequisite: Enrollment in Urban Teaching Residency Program.
Also Offered As: EDTF 606
Activity: Lecture
1.0 Course Unit

EDTC 618 Methods: 7-12 Advanced Mathematics
This course will focus on gaining a deeper understanding of the methods of mathematics teaching practice. This course will provide students the opportunity to put theory into practice through in-class demonstrations of mathematical pedagogical practices. Through in-class and online discussions, students will reflect on current teaching practices and the impact that these practices have on learning. It is my goal to support each student in further creating effective student-centered rational behind all teaching decisions. Prerequisite: Enrollment in Urban Teaching Residency Program.
Also Offered As: EDTF 618
Activity: Lecture
1.0 Course Unit
EDTC 625 Culturally Responsive Pedagogy
What is culturally responsive (or relevant) pedagogy? What does it look like, what does it consist of, how is it done, who can do it, when and where can it enter? Is it effective, and for whom? What are the impediments and limitations? What are its roots? What can its future look like, and what can it mean for urban education, student success, and community empowerment? This course will explore these questions and more, providing a theoretical grounding to push this field further, and practical tools to incorporate into current and future teaching and learning activities. The course will also look closely at various intersections (critical race theory, critical pedagogy, gender studies, social justice, multiculturalism, diversity/equity), sociopolitical landscapes, and educational reform efforts, to understand how culturally responsive pedagogy fits within the broader narratives. The class is intentionally designed as a seminar/workshop. Class activities will include full group discussions, small group breakouts, video clips, informal presentations, and possible guest speakers. Students are expected to actively engage—both with the readings and in class activities. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTF 625
Activity: Lecture
1.0 Course Unit

EDTC 701 Educating Students with Disabilities - Part II
The purpose of this course is to teach students problem solving strategies, teaching techniques, itinerant services, team and community building, and types of disabilities found in students who have disabilities related to specific learning disabilities. We will look what constitutes disabilities in this population and issues surrounding providing this population with an effective education. Students will explore the ramifications, jargon, specific goals and objectives included with creating and implementing an IEP for students in the population. General issues surrounding the topic of inclusion and the least restrictive environment will be addressed. Instructional techniques and assessments strategies will be a focus. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTF 701
Activity: Online Course
1.0 Course Unit

EDTC 702 Special Education Law & Processes
This course is designed to provide students with an understanding of special education processes, including the evaluation processes, exceptionalities and eligibility, the development and delivery of Individual Education Plans, as well as theories and best educational practices in the field and profession of special education. Students will become familiar with the Individuals with Disabilities in Education Act (IDEA), the cornerstone of special education law, Section 504 of the Americans with Disabilities Act, and Pennsylvania statutes and regulations governing special education law. Issues related to an understanding of the evaluation and determination of exceptionalities in a cultural context will be explored. There will be a focus on the direct application of knowledge and skills to the classroom, as well as the expectation that students teaching experiences will inform discussion and learning. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Also Offered As: EDTF 702
Activity: Online Course
1.0 Course Unit

EDTC 703 Educating Students with Disabilities - Part I
The purpose of this course is to teach students problem solving strategies, teaching techniques, itinerant services, team and community building, and types of disabilities found in students who are eligible to take alternative state testing. We will learn what constitutes disabilities in this population with an effective education. Students will explore the ramifications, jargon, specific goals and objectives included with creating and implementing an IEP for students in the population. Students will discuss the appropriateness of various academic environments as children with less encompassing disabilities progress from elementary to secondary education, and transition into adulthood. General issues surrounding the topic of inclusion and the least restrictive environment will be addressed. A holistic approach to educating this population, with an emphasis on social, emotional, behavioral, transition and life skills are a focus. Students will receive a grade of a pass or fail at the conclusion of the fall term. 40 mandatory hours of fieldwork will take place in the spring semester. This will allow students to demonstrate learning acquired in the course work in a realistic setting. At the conclusion of the spring semester, a grade will be issued. Content will be presented through on line lecture, hands on projects, reading and fieldwork experience.
Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Also Offered As: EDTF 703
Activity: Online Course
1.0 Course Unit

Education - Urban Teaching Residency Master's (EDTF)
These courses are only available to students in the Urban Teaching Residency program.

EDTF 503 Methods: Elementary A
This course is designed to enhance literacy and mathematics instruction that engages all students as readers, thinkers and sense makers. In this course, we will explore the interrelationship of language, literacy, numeracy, and culture, and will co-construct a knowledge base for understanding how children learn. We will also develop and practice new routines for teaching literacy and mathematics that build on students interests, curiosities, and informal knowledge. Throughout the course, you will be encouraged to critically reflect on continually develop your teaching practice. Course readings, discussions, and assignments will offer opportunities to think in both theoretical terms and practical terms about your teaching. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Also Offered As: EDTF 503
Activity: Lecture
1.0 Course Unit
EDTF 504 Methods: Middle Years A
This course focuses on you as both a learner and a teacher of mathematics and science. Its development is premised on the notion that in order for you to foster understanding and engagement for all your students, you have to develop and draw on different kinds of knowledge, skills, and dispositions. As a result, the course is designed to help you hone your practice as a teacher of mathematics and science and involves you learning about learners (yourself included), the understandings and conceptions they hold, and the developmental processes through which they learn. It also involves developing skills in teaching practices that engage students in mathematical and scientific exploration, creating an environment that facilitates reasoning and promotes inquiry, and finding ways to analyze and learn from your own teaching. Good teaching is essentially a decision laden process, and the decisions you make are contextually based. Consequently, the aim of the course is not to provide you with a bag of tricks that are applicable or generalizable to all situations, but rather to help you develop necessary tools for thinking and working as a teacher. These tools include ways to explore scientific and mathematical content, assess your students understanding on an ongoing basis, and help all your students develop as learners of mathematics and science. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Also Offered As: EDTC 504
Activity: Lecture
1.0 Course Unit

EDTF 505 Methods: 7-12 English A
This course is designed for preservice and working educators and is intended to weave theory into practice. In this data and standards driven climate, educators are often hit with buzzwords instead of solid theory and solid pedagogy. The framework for the course is to provide a foundation in theory and then explores how that theory works within and against existing practices in schools. We will be reflecting on practice and designing and redesigning lessons and units based on theory and best practices for adolescent literacy. This course is an overview of the theory and pedagogy needed for effective English language arts instruction. Prerequisite: Enrollment in Urban Teaching Residency Program.
Taught by: n/a
Course usually offered in fall term
Also Offered As: EDTC 505
Activity: Lecture
1.0 Course Unit

EDTF 506 Methods: 7-12 General Science/Biology A
The purpose of this class is to introduce secondary science teachers to pedagogy, content and methodologies supported by a three-pillar foundation: teaching diverse learners (cultural responsiveness), curriculum development (Understanding by Design) and demonstration of knowledge and skill acquisition (high leverage practices and competencies). Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Also Offered As: EDTC 506
Activity: Lecture
1.0 Course Unit

EDTF 508 Methods: 7-12 World Languages A
The objectives of this course are for teachers to be able to: Align the four domains of professional practice with world languages pedagogy, recognize and demonstrate how pedagogical theories inform effective methodologies, incorporate a variety of standards-driven instructional practices using communicative techniques that engage students, research, identify and use resources that encourage student-centered learning practices, investigate and utilize a variety of assessments that effectively measure student performance and enhance proficiency, participate in local, state and national professional World Languages organizational activities including workshops and/or conferences. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Also Offered As: EDTC 508
Activity: Lecture
1.0 Course Unit

EDTF 512 Methods: 7-12 Science (Chemistry)
The purpose of this class is to introduce secondary science teachers to pedagogy, content and methodologies supported by a three-pillar foundation: teaching diverse learners (cultural responsiveness), curriculum development (Understanding by Design) and demonstration of knowledge and skill acquisition (high leverage practices and competencies). Prerequisite: Enrollment in Urban Teaching Residency Program.
One-term course offered either term
Also Offered As: EDTC 512
Activity: Lecture
1.0 Course Unit

EDTF 513 Methods: 7-12 Science (Physics)
The purpose of this class is to introduce secondary science teachers to pedagogy, content and methodologies supported by a three-pillar foundation: teaching diverse learners (cultural responsiveness), curriculum development (Understanding by Design) and demonstration of knowledge and skill acquisition (high leverage practices and competencies). Prerequisite: Enrollment in Urban Teaching Residency Program.
One-term course offered either term
Also Offered As: EDTC 513
Activity: Lecture
1.0 Course Unit

EDTF 515 Child Development
This course explores the origins and context of urban education in the United States by critically examining how schools reproduce and sustain systemic inequality. We will examine historical, political, economic, and socio-cultural frameworks for understanding urban schools, students and teachers. Through course readings, field visits and class discussions, we explore the following: (1) student, teacher and researcher perspectives on urban education, (2) the broader sociopolitical urban context of K-12 schooling in cities, (3) teaching and learning in urban settings and (4) ideas about re-imagining urban education. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Also Offered As: EDTC 515
Activity: Lecture
1.0 Course Unit
EDTF 520 Methods: 7-12 Mathematics A
The goal of this course is to enhance the teaching and learning of mathematics through a focus on the practical application of pedagogical theory. Each week we will engage in discussions and activities centered on different pedagogical approaches, using lessons covering specific mathematical concepts as demonstration tools. We will also use class time to reflect on experiences from our current teaching positions, and we will work together to develop solutions to problems that arise within our daily classroom experience. I aim to provide you with lesson and curricular development experience, multiple teaching techniques, and an engaging and supportive classroom environment to help us all develop as teachers and learners. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Also Offered As: EDTC 520
Activity: Lecture
1.0 Course Unit

EDTF 521 Foundations of Special Education
This course strives to teach students who are working towards certification in general education problem solving strategies, teaching techniques, itinerant services, team and community building, and types of disabilities found in students who are eligible for Individualized Education Programming (IEPs) under the Individuals with Disabilities Act (IDEA). We will learn what constitutes disabilities in this population and issues surrounding providing this populations with an effective education. Students will explore the ramifications, jargon, specific goals and objectives included with implementing and IEP in the general education, or inclusive, environment. Students will discuss the appropriateness of various academic environments as children with disabilities progress from elementary to secondary education, and transition into adulthood. General issues surrounding the topic of inclusion and the least restrictive environment will be addressed. In addition, time will be spent in this course discussing the education of students who are English Language Learners from the standpoint of sheltered instruction and the use of WIDA lesson planning. A holistic approach to educating all students, with an emphasis on academic, social, emotional, behavioral, and transition skills area focus. Content will be presented through online lecture, hands on projects, and reading. It is expected that students will work within their current teaching placement and with actual students to complete some, if not all, of the 7 projects. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTC 521
Activity: Online Course
0.0 Course Units

EDTF 524 School & Society Seminar
This course is designed to provide students with an opportunity to investigate the philosophical underpinnings, social context, and current discourse of education and schooling in the United States. By historically linking the development of educational initiatives to notions of power, nation building, and citizenship, this class furthers an understanding of the assumptions about the purpose of education within this democratic nation, and its role(s) within our current social and political climate. Discussions of differential access to power and resources will be central to this class, thereby providing a forum for critically exploring educational policy, teaching practices, and the aims and purposes of education that are intimately connected to the social stratification and reproduction. We will draw on students experiential knowledge of schools and teaching to imagine how urban educators can transform the socially reproductive practices of schools. Prerequisite: Enrollment in Urban Teaching Residency Program.
One-term course offered either term
Also Offered As: EDTC 524
Activity: Lecture
1.0 Course Unit

EDTF 527 Social, Emotional, and Behavioral Interventions
This course is designed to provide students with a comprehensive understanding of students who present with social, emotional, and behavioral difficulties. The course will focus on the definitions, characteristics, prevalence, causes, and assessment of emotional and behavioral disorders. Effective teaching practices will be integrated in the course, including education service placements, functional behavior assessment, ABA, positive behavior supports and social skills instruction. Current issues in the field will also be explored. There will be a focus on the direct application of knowledge and skills to the classroom, as well as the expectation that students’ teaching experiences will inform discussion and learning. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTC 527
Activity: Online Course
1.0 Course Unit

EDTF 529 Language and Literacy Acquisition
This course addresses research-based instructional strategies for teaching literacy (including language development, reading, writing, and speaking) to learners in grades levels PreK-12 as well as practical and effective modifications for diverse learners (including struggling readers, English language learners, and students with learning disabilities in reading, as well as students with a wide range of disabilities requiring accommodations (cognitive, linguistic, physical, and social)). Formative and summative assessments of emergent and content literacy, including components of literacy (phonological awareness, word analysis, comprehension, vocabulary, fluency) will also be addressed. Also included are factors which influence literacy acquisition (including, but not limited to: English Language Learners), social and cultural implications for language and literacy development, as well as life-long literacy for children and adolescents who struggle in literacy. Prerequisite: Enrollment in Urban Teaching Residency Program.
Also Offered As: EDTC 529
Activity: Online Course
1.0 Course Unit
EDTF 530 Contemporary Issues in Urban Education
This course explores the origins and context of urban education in the United States by critically examining how schools reproduce and sustain systemic inequality. We will examine historical, political, economic, and socio-cultural frameworks for understanding urban schools, students and teachers. Through course readings, field visits and class discussions, we explore the following: (1) student, teacher and researcher perspectives on urban education, (2) the broader sociopolitical urban context of K-12 schooling in cities, (3) teaching and learning in urban settings and (4) ideas about re-imagining urban education. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Also Offered As: EDTC 530
Activity: Lecture
0.5 Course Units

EDTF 531 Methods: Elementary B
In this course we will be examining many aspects of the teaching of science and social studies in elementary schools today. The importance of the National Science and Social Studies Education Standards, the Next Generation of Science Standards, and the Pennsylvania State Standards in curriculum development and reform will be explored in depth. Among the topics covered will be planning science and social studies instruction to include inquiry and integrated concepts, developing authentic assessments involving a variety of tools, creating and maintaining a safe laboratory and learning environment that meets the needs of diverse learners, and the integration of technology into science and social studies education. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTC 531
Activity: Lecture
1.0 Course Unit

EDTF 532 Methods: Middle Years B
Middle school teachers are involved in the constant process of increasing students’ active reading and writing about content area texts within the high-pressure environment of state accountability. Middle Years Methods offers practical strategies and applications that help establish a literate classroom environment in support of learning across all subject areas. Teachers learn approaches to help them establish literate classroom environments that are rich in problem-solving, critical thinking, logical reasoning concepts focused on state and national standards, and practical techniques that investigate and connect content in all subject areas to the real world. Middle Years Methods is structured to allow participants the opportunity to explore strategies and concepts for increasing student reading and writing proficiency. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTC 532
Activity: Lecture
1.0 Course Unit

EDTF 533 Methods: 7-12 English B
This course is designed for preservice and working educators and is intended to weave theory into practice. In this data and standards driven climate, educators are often hit with buzzwords instead of solid theory and solid pedagogy. The framework for the course builds from Secondary ELA Methods I. We will begin the semester by exploring the self, culturally relevant pedagogy, and how these things impact our practice. Then we will explore a variety of practices for teaching reading, writing, listening, and speaking. The practices for teaching reading, writing, listening, and speaking align to Special Education Competencies IV. Pedagogy. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTC 533
Activity: Lecture
1.0 Course Unit

EDTF 534 Methods: 7-12 General Science/Biology B
This course is the second course in the three-course series that addresses teaching and learning in secondary science classrooms. The methods topics have been carefully selected to represent current and relevant areas in science education research and are geared toward understanding issues impacting students, teachers and schools in the modern urban society. The course is premised on several organizing themes in education: Assessing misconceptions, teaching through multiple intelligences, expanding instructional practices, teaching science in urban schools, culturally relevant pedagogies, gender, professional learning communities and workforce development, problem-based learning, current STEM fields of research, citizenship science, and ethical decision making. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTC 534
Activity: Lecture
1.0 Course Unit

EDTF 535 Methods: 7-12 World Languages B
This course includes theoretical and practical applications for the teaching of world languages based on the five 'C' goal areas: Communication, Cultures, Comparisons, Connections, and Communities of the World-Readiness Standards for Learning Languages. Approaches and techniques will be explored to equip world language teachers with the knowledge and tools necessary to create a student- centered, standards-driven classroom. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTC 535
Activity: Lecture
1.0 Course Unit
EDTF 536 Methods: 7-12 Mathematics B
Mathematics Methods B is enhancing student learning through knowing the content, planning around our knowledge and reflecting on our practice and our practice and our students thinking. Each week we will think about mathematics through talking about mathematics, doing mathematics, and presenting mathematics, as we will learn to expect our students to do. Each week we will spend time both learning concepts behind the mathematics taught and learned in middle and high school, with a couple of topics from elementary school that have bearing on middle and high school mathematics. We will learn about these concepts in ways that you will be used in the classroom, giving you experiences with different methods. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTC 536
Activity: Lecture
1.0 Course Unit

EDTF 601 Methods: Advanced Elementary
This course has been designed for first and second year teachers who are currently teaching in elementary classrooms. Our work together will build upon the course work you completed this year, your past experiences as a student and a teacher, and your current classroom practices. In this course, we explore the interrelationship of language, literacy, numeracy and culture in order to co-construct a knowledge base for understanding how children learn. We will interrogate our own teaching practices in an effort to make our classrooms more content-rich and child-centered. Our work will span content areas - math, literacy, social studies, and science - emphasizing both their interconnectedness and their particularity. The course will offer opportunity to think in both theoretical terms and practical terms about implications of our teaching. Prerequisite: Enrollment in Urban Teaching Residency Program.
Also Offered As: EDTC 601
Activity: Lecture
1.0 Course Unit

EDTF 604 Methods: 7-12 Advanced English
This course is designed to give working teachers intensive, hands-on practice with research-based pedagogy that they need to address the immediate challenges of teaching English in urban public schools. Students will develop plans for a full course, several conceptual units, and eight weeks of daily lesson plans. In addition, students will develop and present various instructional routines, which the class will critique. Finally, students will share resources with each other and engage in problem-solving of their real-world classroom issues. Prerequisite: Enrollment in Urban Teaching Residency Program.
Also Offered As: EDTC 604
Activity: Lecture
1.0 Course Unit

EDTF 605 Methods: 7-12 Advanced Science
This course addresses teaching and learning in secondary science classrooms. The advanced methods topics have been carefully selected to represent current and relevant areas in science education research and are geared toward understanding issues impacting students, teachers and schools in the modern urban society. The course is premised on several organizing themes in education. Skills: topics investigated under this theme include: assessing misconceptions, teaching through multiple intelligences, expanding instructional practices. Teaching Science in Urban Schools: topics investigated under this theme include: culturally relevant pedagogies, gender, professional learning communities and workforce development. 21st Century Learning: topics investigated under this theme include: problem-based learning, information technologies, educational technologies, current STEM fields of research, citizenship science, and ethical decision making. Prerequisite: Enrollment in Urban Teaching Residency Program.
Also Offered As: EDTC 605
Activity: Lecture
1.0 Course Unit

EDTF 606 Methods: 7-12 Advanced World Languages
As a sequel to your introductory world language teaching and learning course, this course assumes a level of familiarity with theoretical and practical approaches to world language teaching and learning such as: communicative language teaching, task-based instruction, student centered instruction, and national and state standards. Building on this background, we will examine and analyze the use of emerging key concepts in world language education as well as consider critical perspectives to more traditional pedagogical approaches. Our exploration of world language learning and teaching methods will be grounded in praxis; that is, we will consider how theoretical and research-based approaches inform classroom practices, experiences, and beliefs, and vice versa. Accordingly, the course will provide opportunities for you to bridge theory and practice through an ongoing cycle of discussion, in-class application, and learning experiences such as collaborative activities, peer feedback, self-reflection, brief presentations, and the design of instruction materials. Prerequisite: Enrollment in Urban Teaching Residency Program.
Also Offered As: EDTC 606
Activity: Lecture
1.0 Course Unit

EDTF 613 Education Law
The practice of pushing students out of the education system and into the legal system has become known more concisely as the 'school-to-prison pipeline.' This course will examine the policies and procedures of school discipline grounded in the rhetoric of law and order and the criminalization of young people. We will address the historical, social, political, economic, and ethical dimensions of the relationship between education and the carceral state, with justice as our primary focus. We will engage with philosophical, theoretical, and empirical readings from a wide variety of disciplines toward the development of meaningful research questions and a proposal for the capstone. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
EDTF 616 Politics of School Reform
In this course we will explore the implications of US school reform in the post-Brown era. Interdisciplinary in nature, Politics of School Reform takes on the causes and consequences of reform by considering historical, sociological, and legal concepts related to major reform issues and initiatives. Prerequisite: Enrollment in Urban Teaching Residency Program.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EDTF 618 Methods: 7-12 Advanced Mathematics
This course will focus on gaining a deeper understanding of the methods of mathematics teaching practice. This course will provide students the opportunity to put theory into practice through in class demonstrations of mathematical pedagogical practices. Through in class and online discussions, students will reflect on current teaching practices and the impact that these practices have on learning. It is my goal to support each student in further creating effective student-centered rational behind all teaching decisions. Prerequisite: Enrollment in Urban Teaching Residency Program.
Also Offered As: EDTC 618
Activity: Lecture
1.0 Course Unit

EDTF 619 Research Seminar
Research plays a critical role in education. Discipline-specific studies are used to evaluate new curricula and educational programming, and to better understand classroom and school environments. The ability to both use and to be a critical consumer of this literature is essential for educators. In this course, we examine multiple research and evaluation methodologies, their applicability to issues in education, and the use of research findings to develop educational policy. The course provides an overview of research design and qualitative and quantitative data collection and analysis. A key goal is to equip students with the knowledge they need to become critical consumers and strategic users of educational research. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDTF 625 Culturally Responsive Pedagogy
What is culturally responsive (or relevant) pedagogy? What does it look like, what does it consist of, how is it done, who can do it, when and where can it enter? Is it effective, and for whom? What are the impediments and limitations? What are its roots? What can its future look like, and what can it mean for urban education, student success, and community empowerment? This course will explore these questions and more, providing a theoretical grounding to push this field further, and practical tools to incorporate into current and future teaching and learning activities. The course will also look closely at various intersections (critical race theory, critical pedagogy, gender studies, social justice, multiculturalism, diversity/equity), sociopolitical landscapes, and educational reform efforts, to understand how culturally responsive pedagogy fits within the broader narratives. The class is intentionally designed as a seminar/workshop. Class activities will include full group discussions, small group breakouts, video clips, informal presentations, and possible guest speakers. Students are expected to actively engage both with the readings and in class activities. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTF 625
Activity: Lecture
1.0 Course Unit

EDTF 627 Outside of the School Box
This course explores education broadly, focusing on the interconnections between individuals, families, and policy as each relates to urban public schools. Drawing from a critical sociocultural lens, Outside the School Box also engages with ongoing discussions of school quality and public policy. Major topics include the impact of housing selection on the makeup of urban public schools; teacher training, recruitment and retention; and causes and effects of market-driven educational systems. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EDTF 628 Racial Literacy
This course will provide you with opportunities to explore the experiences, perspectives, and contributions of various cultures, groups, and individuals while exposing you to the knowledge, skills, and tools that are necessary to become a racially competent and highly effective educator. We will learn how racial literacy is defined, practiced, acquired, and used ensure that culturally responsive practices are a substantial piece of your pedagogical framework. This course will introduce a number of different racial perspectives about the same subject matter in an effort to demonstrate that understanding different viewpoints can improve ones ability to respond accordingly. Through storytelling, journaling, stress management practice, role-playing, and open exchange and dialogue you will see how racial literacy is established by reflecting on in-the-moment stress reactions. We will support you as you learn how to address diversity related topics in ways that create teaching and learning environments where mutual respect and trust form the basis of the relationships between you and the communities you serve. Prerequisite: Enrollment in Urban Teaching Residency Program.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
EDTF 701 Educating Students with Disabilities - Part II
The purpose of this course is to teach students problem solving strategies, teaching techniques, itinerant services, team and community building, and types of disabilities found in students who have disabilities related to specific learning disabilities. We will learn what constitutes disabilities in this population and issues surrounding providing this population with an effective education. Students will explore the ramifications, jargon, specific goals and objectives included with creating and implementing an IEP for students in the population. General issues surrounding the topic of inclusion and the least restrictive environment will be addressed. Instructional techniques and assessments strategies will be a focus. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Also Offered As: EDTC 701
Activity: Online Course
1.0 Course Unit

EDTF 702 Special Education Law & Processes
This course is designed to provide students with an understanding of special education processes, including the evaluation processes, exceptionalities and eligibility, the development and delivery of Individual Education Plans, as well as theories and best educational practices in the field and profession of special education. Students will become familiar with the Individuals with Disabilities in Education Act (IDEA), the cornerstone of special education law, Section 504 of the Americans with Disabilities Act, and Pennsylvania statutes and regulations governing special education law. Issues related to an understanding of the evaluation and determination of exceptionalities in a cultural context will be explored. There will be a focus on the direct application of knowledge and skills to the classroom, as well as the expectation that students teaching experiences will inform discussion and learning. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Also Offered As: EDTC 702
Activity: Online Course
1.0 Course Unit

EDTF 703 Educating Students with Disabilities - Part I
The purpose of this course is to teach students problem solving strategies, teaching techniques, itinerant services, team and community building, and types of disabilities found in students who are eligible to take alternative state testing. We will learn what constitutes disabilities in this population with an effective education. Students will explore the ramifications, jargon, specific goals and objectives included with creating and implementing an IEP for students in the population. Students will discuss the appropriateness of various academic environments as children with more encompassing disabilities progress from elementary to secondary education, and transition into adulthood. General issues surrounding the topic of inclusion and the least restrictive environment will be addressed. A holistic approach to educating this population, with an emphasis on social, emotional, behavioral, transition and life skills are a focus. Students will receive a grade of a pass or fail at the conclusion of the fall term. 40 mandatory hours of fieldwork will take place in the spring semester. This will allow students to demonstrate learning acquired in the course work in a realistic setting. At the conclusion of the spring semester, a grade will be issued. Content will be presented through on line lecture, hands on projects, reading and fieldwork experience. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Also Offered As: EDTC 703
Activity: Online Course
1.0 Course Unit

EDTF 704 Special Education Capstone - Part I
In this course, students who are working towards their Masters of Education in the Urban Teaching Residency Program will be involved in the process of designing and utilizing research in education. Students will learn the components of an educational research project including hypothesis development, literature review techniques, and various research methodologies including action research, data collection and analysis. Significant topics in education will be discussed. Students will be required to complete a preliminary literature review, Capstone Project Proposal and completed literature review in the fall term; followed by methodology, data analysis and discussion in the spring term. Both semesters will include whole group and individual instruction that will support the completion of a comprehensive Capstone Project that addresses a notable issue in education. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in fall term
Activity: Lecture
0.0 Course Units

EDTF 705 Urban Education Capstone Writing Seminar
This course is designed as a writing seminar in order to complete a thesis for a master’s degree. Students are required to develop a research question and methods for data collection, analyze existing literature related to the research question, collect data, analyze the data, and draw conclusions from the data. There will be four whole class sessions and at least three individual writing conferences. During the whole class sessions, students will learn how to plan, execute, and analyze research. Since this class is a writing seminar, be prepared to spend time in class drafting, conferencing, and/or researching. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

EDTF 706 Special Education Capstone - Part II
In the second session of the Special Education Capstone students will continue the writing process with finalizing edited Literature Review sections from session I, and learning how to write and develop research based methodology appropriate for each student’s project. The course will then break apart the components of data analysis and discussion with students moving through the research process to compose each. The semester is comprised of face to face sessions in whole group and individual conferences. Prerequisite: Enrollment in Urban Teaching Residency Program.
Course usually offered in spring term
Activity: Lecture
0.0 Course Units
Electrical & Systems Engineering (ESE)

ESE 099 Undergraduate Research and/or Independent Study
An opportunity for the student to become closely associated with a professor in (1) a research effort to develop research skills and technique and/or (2) to develop a program of independent in-depth study in a subject area in which the professor and student have a common interest. The challenge of the task undertaken must be consistent with the student's academic level. To register for this course, the student and professor jointly submit a detailed proposal to the undergraduate curriculum chairman no later than the end of the first week of the term. One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: A maximum of 2 c.u. of ESE 099 may be applied toward the B.A.S. or B.S.E. degree requirements

ESE 111 Atoms, Bits, Circuits and Systems
Introduction to the principles underlying electrical and systems engineering. Concepts used in designing circuits, processing signals on analog and digital devices, implementing computation on embedded systems, analyzing communication networks, and understanding complex systems will be discussed in lectures and illustrated in the laboratory. This course provides an overview of the challenges and tools that Electrical Engineers and Systems Engineers address and some of the necessary foundations for students interested in more advanced courses in ESE. Prerequisite: FOR FRESHMAN ONLY
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Freshmen only

ESE 112 Engineering Electromagnetics
This course covers basic topics in engineering electromagnetics, namely, electric charge, electric field, electric energy, conductors, insulators, dielectric materials, capacitors, electric current, magnetic field, inductors, Faraday's law of induction, alternating current (AC), impedance, Maxwell's equations, electromagnetic and optical wave propagation, with emphasis on engineering issues. Relevant engineering topics are emphasized in our lectures in order to prepare students for other courses in ESE that rely on the contents on this course. Several laboratory experiments accompany the course to provide hands-on experience on some of the topics in the lecture and prepare students for the capstone project.
Course usually offered in spring term
Activity: Lecture
1.5 Course Unit

ESE 150 Digital Audio Basics
Primer on digital audio. Overview of signal processing, sampling, compression, human psychoacoustics, MP3, intellectual property, hardware and software platform components, and networking (i.e., the basic technical underpinnings of modern MP3 players and cell phones). Prerequisite: FOR FRESHMAN ONLY
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Freshmen only

ESE 190 Silicon Garage: Introduction to Open Source Hardware and Software Platforms
Project-centric learning course for non-ESE majors on microprocessor control of physical systems using open-source hardware and software platforms. Students will work in teams to develop software controlled systems based on the Arduino and Raspberry-Pi that interface with the real world (sensors, actuators, motors) and each other (networking).
Prerequisite: High School Physics and Math
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

ESE 204 Decision Models
This first course in decision models will introduce students to quantitative models for decision making, using optimization and monte-carlo simulation. Examples will be drawn from manufacturing, finance, logistics and supply chain management. Students will use EXCEL and @Risk to build and analyze models.
Course usually offered in fall term
Prerequisite: MATH 104
Activity: Lecture
1.0 Course Unit

ESE 210 Introduction to Dynamic Systems
This first course in systems modelling covers linear and nonlinear systems in both continuous and discrete time. Topics covered include linearization and stability analysis, elementary bifurcations, and an introduction to chaotic dynamics. Extensive applications to mechanical, electrical, biological, social, and economic/financial systems are included. The course will use both analytical and numerical/symbolic tools.
Course usually offered in fall term
Corequisite: MATH 240
Activity: Lecture
1.0 Course Unit

ESE 215 Electrical Circuits and Systems
This course gives an introduction of modern electric and electronic circuits and systems. Designing, building and experimenting with electrical and electronic circuits are challenging and fun. It starts with basic electric circuit analysis techniques of linear circuits. Today mathematical analysis is used to gain insight that supports design; and more detailed and accurate representations of circuit performance are obtained using computer simulation. It continues with 1st order and 2nd order circuits in both the time and frequency domains. It discusses the frequency behavior of circuits and the use of transfer functions. It continues with introduction of non-linear elements such as diodes and MOSFET (MOS) transistors. Applications include analog and digital circuits, such as single stage amplifiers and simple logic gates. A weekly lab accompanies the course where concepts discussed in class will be illustrated by hands-on projects; students will be exposed to state-of-the-art test equipment and software tools (LabView, Spice).
Course usually offered in fall term
Prerequisites: PHYS 150, 151
Corequisite: MATH 240
Activity: Lecture
1.5 Course Unit
ESE 218 Electronic, Photonic, and Electromechanical Devices
This first course in electronic, photonic and electromechanical devices introduces students to the design, physics and operation of physical devices found in today's applications. The course describes semiconductor electronic and optoelectronic devices, including light-emitting diodes, photodetectors, photovoltaics, transistors and memory; optical and electromagnetic devices, such as waveguides, fibers, transmission lines, antennas, gratings, and imaging devices; and electromechanical actuators, sensors, transducers, machines and systems.
Course usually offered in fall term
Prerequisites: PHYS 150, 151
Corequisite: MATH 240
Activity: Lecture
1.5 Course Units

ESE 224 Signal and Information Processing
Introduction to signal and information processing (SIP). In SIP we discern patterns in data and extract the patterns from noise. Foundations of deterministic SIP in the form of frequency domain analysis, sampling, and linear filtering. Random signals and the modifications of deterministic tools that are necessary to deal with them. Multidimensional SIP where the goal is to analyze signals that are indexed by more than one parameter. Includes a hands-on lab component that implements SIP as standalone applications on modern mobile platforms.
Course usually offered in spring term
Prerequisite: MATH 104
Corequisite: MATH 240
Activity: Lecture
1.5 Course Units

ESE 290 Introduction to Electrical and Systems Engineering Research Methodology
Introduction to the nature and process of engineering research as represented by ongoing ESE faculty (and collaborating colleagues’ and industrial partners’) research projects. Joint class exercises in how to pursue effective background technical reading, pitch a proposal, and aim for the discovery of new human knowledge to complement the individually mentored topic specific project work.
Course usually offered in spring term
Prerequisites: MATH 240, 150, ESE 215 218 or ESE 204, 210 or ESE 215 and CIS 240
Corequisite: ESE 291
Activity: Lecture
0.5 Course Units

ESE 291 Introduction to Electrical and Systems Engineering Research and Design
Students contract with a faculty mentor to conduct scaffolded original research in a topic of mutual interest. Prepare project report on research findings.
Course usually offered in spring term
Corequisite: ESE 290
Activity: Laboratory
1.0 Course Unit

ESE 292 Introduction to Electromechanical Prototyping
This is a project-centric course for ESE majors to engage in circuit layout and prototype design skills. Students will work in teams to develop printed circuit boards using industry standard tools like Altium and learn mechanical prototyping skills using Solidworks. Emphasis will be on developing sound printed circuit board layout practices using circuitry knowledge that they acquire in ESE 215 and ESE 370. A module on using Cypress PSoC will introduce students to recent developments in analog/digital co-design.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

ESE 296 Study Abroad
Activity: Lecture
1.0 Course Unit

ESE 301 Engineering Probability
This course introduces students to the mathematical foundations of the theory of probability and its rich applications. The course begins with an exploration of combinatorial probabilities in the classical setting of games of chance, proceeds to the development of an axiomatic, fully mathematical theory of probability, and concludes with the discovery of the remarkable limit laws and the eminence grise of the classical theory, the central limit theorem. The topics covered include: discrete and continuous probability spaces, distributions, mass functions, densities; conditional probability; independence; the Bernoulli schema: the binomial, Poisson, and waiting time distributions; uniform, exponential, normal, and related densities; expectation, variance, moments; conditional expectation; generating functions, characteristic functions; inequalities, tail bounds, and limit laws. But a bald listing of topics does not do justice to the subject: the material is presented in its lush and glorious historical context, the mathematical theory buttressed and made vivid by rich and beautiful applications drawn from the world around us. The student will see surprises in election-day counting of ballots, a historical wager the sun will rise tomorrow, the folly of gambling, the sad news about lethal genes, the curiously persistent illusion of the hot hand in sports, the unreasonable efficacy of polls and its implications to medical testing, and a host of other beguiling settings.
Course usually offered in spring term
Prerequisite: MATH 114
Activity: Lecture
1.0 Course Unit
ESE 303 Stochastic Systems Analysis and Simulation
Stochastic systems analysis and simulation (ESE 303) is a class that explores stochastic systems which we could loosely define as anything random that changes in time. Stochastic systems are at the core of a number of disciplines in engineering, for example communication systems and machine learning. They also find application elsewhere, including social systems, markets, molecular biology and epidemiology. The goal of the class is to learn how to model, analyze and simulate stochastic systems. With respect to analysis we distinguish between what we could call theoretical and experimental analysis. By theoretical analysis we refer to a set of tools which let us discover and understand properties of the system. These analysis can only take us so far and is usually complemented with numerical analysis of experimental outcomes. Although we use the word experiment more often than not we simulate the stochastic system in a computer and analyze the outcomes of these virtual experiments. Prerequisite: One computer language The class’s material is divided in four blocks respectively dealing with Markov chains, continuous time Markov chains, Gaussian processes and stationary processes. Emphasis is placed in the development of toolboxes to analyze these different classes of processes and on describing their applications to complex stochastic systems in different disciplines. Particular examples include: (i) the problem of ranking web pages by a search engine; (ii) the study of reputation and trust in social networks; (iii) modeling and analysis of communication networks; (iv) the use of queues in the modeling of transportation networks; (v) stochastic modeling and simulation of biochemical reactions and gene networks; (vi) arbitrages, pricing of stocks, and pricing of options through Black-Scholes formula; and (vii) linear filtering of stochastic processes to separate signals of interest from background noise. For more information visit the class’s web page at http://alliance.seas.upenn.edu/~ese303/

Course usually offered in fall term
Prerequisite: ESE 301
Activity: Lecture
1.0 Course Unit

ESE 305 Foundations of Data Science
Introduction to a broad range of tools to analyze large volumes of data in order to transform them into actionable decisions. Using case studies and hands-on exercises, the student will have the opportunity to practice and increase their data analysis skills.

Course usually offered in fall term
Prerequisites: EAS 205 or MATH 312 and CIS 120 and ESE 301
Activity: Lecture
1.0 Course Unit

ESE 310 Electric and Magnetic Fields I
This course examines concepts of electromagnetism, vector analysis, electrostatic fields, Coulomb’s Law, Gauss’s Law, magnetostatic fields, Biot-Savart Law, Ampère’s Law, electromagnetic induction, Faraday’s Law, transformers, Maxwell equations and time-varying fields, wave equations, wave propagation, dipole antenna, polarization, energy flow, and applications.

Course not offered every year
Prerequisite: PHYS 151 AND MATH 114
Activity: Lecture
1.0 Course Unit

ESE 319 Fundamentals of Solid-State Circuits
Analysis and design of basic active circuits involving semiconductor devices including diodes and bipolar transistors. Single stage, differential, multi-stage, and operational amplifiers will be discussed including their high frequency response. Wave shaping circuits, filters, feedback, stability, and power amplifiers will also be covered. A weekly three-hour laboratory will illustrate concepts and circuits discussed in the class.

Course usually offered in spring term
Prerequisite: ESE 215
Activity: Lecture
1.5 Course Unit

ESE 321 Physics and Models of Semiconductor Devices
Semiconductor materials form the basis of modern electronic technology. This course develops the physics of semiconductor devices, the evolution of modern semiconductor technology, device engineering considerations, and introduces emerging technologies. The course stresses intuitive understanding of the physics through interactive exercises, instructional videos, in-class examples and a research project. Topics covered include an introduction to quantum mechanics and band theory of solids; physics governing charge carriers in semiconductors; fundamental operating mechanisms for p-n junctions, bipolar and field-effect transistors, and optoelectronic devices; and an introduction to nanoscale devices and the limits of transistor scaling.

Course not offered every year
Prerequisite: ESE 218
Activity: Lecture
1.0 Course Unit

ESE 325 Fourier Analysis and Applications in Engineering, Mathematics, and the Sciences
This course focuses on the mathematics behind Fourier theory and a wide variety of its applications in diverse problems in mathematics, engineering, and the sciences. The course is very mathematical in content and students signing up for it should have junior or senior standing. The topics covered are chosen from: functions and signals; systems of differential equations; superposition, memory, and non-linear systems; resonance, eigenfunctions; the Fourier series and transform; spectra; convergence theorems; inner product spaces; mean-square approximation; interpolation and prediction, sampling; random processes, stationarity; wavelets, Brownian motion; stability and control, Laplace transforms. Prerequisite: Junior or Senior standing The applications of the mathematical theory that will be presented vary from year to year but a representative sample include: polynomial approximation, Weierstrass’s theorem; efficient computation via Monte Carlo; linear and non-linear oscillators; the isoperimetric problem; the heat equation, underwater communication; the wave equation, tides; testing for randomness, fraud; nowhere differentiable continuous functions; does Brownian motion exist?; error-correction; phase conjugate optics and four-wave mixing; cryptography and secure communications; how fast can we compute?; X-ray crystallography; cosmology; and what the diffusion equation has to say about mathematical finance and arbitrage opportunities.

Course usually offered in fall term
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit
ESE 330 Principles of Optics and Photonics
This course introduces the fundamental principles of optics, photonics, and antennas alongside a range of applications. Specific topics include: Maxwell's equations and the wave equation; light propagation and interaction with materials; geometric/ray optics and polarization; wave optics, diffraction and gratings; waveguides and fiber optics; optical cavities; lasers and light sources; antennas and applications to wireless communication. Prerequisite: Permission of instructor
Prerequisites: ESE 215, 218
Activity: Lecture
1.0 Course Unit

ESE 336 Nanofabrication of Electrical Devices
This course is an intermediate undergraduate course in the understanding, fabrication, and characterization of electrical, optical, electromagnetic, and/or electromechanical nanodevices; i.e., micro- and nanoscale devices which have significant relevance to electrical engineering. Example devices of interest include transistors, microelectromechanical systems (MEMS), and optical and optoelectronic devices (including photovoltaic devices). Weekly laboratory sessions will enable the fabrication and characterization of a subset of electrical nanodevices. Students will learn basic physics and modeling of electrical nanodevices as well as acquire hands-on skill in their fabrication and characterization. Prerequisite: If course requirements not met, permission of instructor required.
Course usually offered in spring term
Prerequisite: ESE 218
Activity: Lecture
1.5 Course Unit

ESE 350 Embedded Systems/Microcontroller Laboratory
An introduction to interfacing real-world sensors and actuators to embedded microprocessor systems. Concepts needed for building electronic systems for real-time operation and user interaction, such as digital input/outputs, interrupt service routines, serial communications, and analog-to-digital conversion will be covered. The course will conclude with a final project where student-designed projects are featured in presentations and demonstrations. Prerequisite: Knowledge of C programming or permission of the instructor
Course usually offered in spring term
Activity: Lecture
1.5 Course Unit

ESE 370 Circuit-Level Modeling, Design, and Optimization for Digital Systems
Circuit-level design and modeling of gates, storage, and interconnect. Emphasis on understanding physical aspects which drive energy, delay, area, and noise in digital circuits. Impact of physical effects on design and achievable performance.
Course usually offered in fall term
Prerequisites: ESE 150, 215
Activity: Lecture
1.0 Course Unit

ESE 400 Engineering Economics
This course investigates methods of economic analysis for decision making among alternative courses of action in engineering applications. Topics include: cost-driven design economics, break-even analysis, money-time relationships, rates of return, cost estimation, depreciation and taxes, foreign exchange rates, life cycle analysis, benefit-cost ratios, risk analysis, capital financing and allocation, and financial statement analysis. Case studies apply these topics to actual engineering problems. Prerequisite: Knowledge of Differential Calculus
Course usually offered in fall term
Also Offered As: ESE 540
Activity: Lecture
1.0 Course Unit

ESE 402 Statistics for Data Science
The course covers the methodological foundations of data science, emphasizing basic concepts in statistics and learning theory, but also modern methodologies. Learning of distributions and their parameters. Testing of multiple hypotheses. Linear and nonlinear regression and prediction. Classification. Uncertainty quantification. Model validation. Clustering. Dimensionality reduction. Probably approximately correct (PAC) learning. Such theoretical concepts are further complemented by exemplary applications, case studies (datasets), and programming exercises (in Python) drawn from electrical engineering, computer science, the life sciences, finance, and social networks.
Course usually offered in fall term
Also Offered As: ESE 542
Prerequisites: ESE 301 and CIS 110, 120
Activity: Lecture
1.0 Course Unit

ESE 407 Introduction to Networks and Protocols
This is an introductory course on packet networks and associated protocols, with a particular emphasis on IP-based networks such as the Internet. The course introduces design and implementation choices that underlie the development of modern networks, and emphasizes basic analytical understanding of the concepts. Topics are covered in a mostly 'bottom-up' approach starting with a brief review of physical layer issues such as digital transmission, error correction and error recovery strategies. This is followed by a discussion of link layer aspects, including multiple access strategies, local area networks (Ethernet and 802.11 wireless LANs), and general store-and-forward packet switching. Network layer solutions, including IP addressing, naming, and routing are covered next, before exploring transport layer and congestion control protocols (UDP and TCP). Finally, basic approaches for quality-of-service and network security are examined. Specific applications and aspects of data compression and streaming may also be covered.
Course usually offered in fall term
Also Offered As: ESE 507
Prerequisite: ESE 301
Activity: Lecture
1.0 Course Unit
Notes: Course open to Seniors in SEAS and Wharton
ESE 419 Analog Integrated Circuits
Design of analog circuits and subsystems using primarily MOS technologies at the transistor and higher levels. Transistor level design of building block circuits such as op amps, comparators, sample and hold circuits, voltage and current references, capacitors and resistor and class AB output stages. The Cadence Design System will be used to capture schematics and run simulations using Spectre for some homework problems and for the course project. Topics of stability, noise, device matching through good layout practice will also be covered. Students who take ESE419 will not be able to take ESE572 later. More will be expected of ESE572 students in the design project. Prerequisite: If course requirement not met, permission of instructor required. Course usually offered in fall term
Also Offered As: ESE 572
Prerequisite: ESE 319
Activity: Lecture
1.0 Course Unit

ESE 420 Agent-Based Modeling and Simulation
Agents are a new technique for trying to model, simulate, and understand systems that are ill-structured and whose mathematics is initially unknown and possibly unknowable. This approach allows the analyst to assemble models of agents and components where micro-decision rules may be understood; to bring the agents and components together as a system where macro-behavior then emerges; and to use that to empirically probe and improve understanding of the whole, the interrelations of the components, and synergies. This approach helps one explore parametrics, causality, and what-if’s about socio-technical systems (technologies that must support people, groups, crowds, organizations, and societies). It is applicable when trying to model and understand human behavior - consumers, investors, passengers, plant operators, patients, voters, political leaders, terrorists, and so on. This course will allow students to investigate and compare increasingly complex agent based paradigms along three lines - math foundations, heuristic algorithms/knowledge representations, and empirical science. The student will gain a toolbox and methodology for attempting to represent and study complex socio-technical systems. Course usually offered in fall term
Also Offered As: ESE 520
Activity: Lecture
1.0 Course Unit

ESE 423 Quantum Engineering
Quantum engineering - the design, fabrication, and control of quantum coherent devices - has emerged as a multidisciplinary field spanning physics, electrical engineering, materials science, chemistry, and biology, with the potential for transformational advances in computation, secure communication, and nanoscale sensing. This course surveys the state of the art in quantum hardware, beginning with an overview of the physical implementation requirements for a quantum computer and proceeding to a synopsis of the leading contenders for quantum building blocks, including spins in semiconductors, superconducting circuits, photons, and atoms. The course combines background material on the fundamental physics and engineering principles required to build and control these devices with readings drawn from the current literature, including promising architectures for scaling physical qubits into larger devices and secure communication networks, and for nanoscale sensing applications impacting biology, chemistry, and materials. Prerequisite: If course requirement not met, permission of instructor required. Course usually offered in spring term
Also Offered As: ESE 523
Prerequisite: PHYS 411
Activity: Lecture
1.0 Course Unit

ESE 444 Project Management
The course emphasizes a systems engineering approach to project management including the cycle costing and analysis, project scheduling, project organization and control, contract management, project monitoring and negotiations. In addition, the course will also examine management issues in large infrastructure projects like non-recourse or limited recourse project financing. Examples from the logistics planning process and global software project management will be used to highlight the course topics. Two terms. student may enter either term.
Also Offered As: ESE 544
Prerequisite: ESE 304
Activity: Lecture
1.0 Course Unit

ESE 450 Senior Design Project I - EE and SSE
This is the first of a two-semester sequence in electrical and systems engineering senior design. Student work will focus on project/team definition, systems analysis, identification alternative design strategies and determination (experimental or by simulation) or specifications necessary for a detailed design. Project definition is focused on defining a product prototype that provides specific value to a least one identified user group. Students will receive guidance on preparing professional written and oral presentations. Each project team will submit a project proposal and two written project reports that include coherent technical presentations, block diagrams and other illustrations appropriate to the project. Each student will deliver two formal Powerpoint presentations to an audience comprised of peers, instructors and project advisors. During the semester there will be periodic individual-team project reviews. Prerequisite: Senior Standing or permission of the instructor Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
ESE 451 Senior Design Project II - EE and SSE
This is the second of a two term sequence in electrical and systems engineering senior design. Student work will focus on completing the product prototype design undertaken in ESE 450 and successfully implementing the said product prototype. Success will be verified using experimental and/or simulation methods appropriate to the project that test the degree to which the project objectives are achieved. Each project team will prepare a poster to support a final project presentation and demonstration to peers, faculty and external judges. The course will conclude with the submission of a final project written team report. During the semester there will be periodic project reviews with individual teams.
Course usually offered in spring term
Prerequisite: ESE 450
Activity: Lecture
1.0 Course Unit

ESE 460 The Principles and Practice of Microfabrication Technology
A laboratory-based course on fabricating microelectronic and micromechanical devices using photolithographic processing and related fabrication technologies. Lectures discuss: clean room procedures; microelectronic and microstructural materials; photolithography; diffusion, oxidation; materials deposition; etching and plasma processes. Basic laboratory processes are covered for the first two thirds of the course with students completing structures appropriate to their major in the final third. Students registering for ESE 574 will be expected to do extra work (including term paper and additional project).
Course not offered every year
Also Offered As: ESE 574, MEAM 564
Prerequisites: ESE 218, MSE 321, MEAM 333, CBE 351, PHYS 250
Activity: Lecture
1.0 Course Unit

ESE 500 Linear Systems Theory
This graduate-level course focuses on continuous and discrete n-dimensional linear systems with m inputs and p outputs in a time domain based on linear operators. The course covers general discussions of linear systems such as, linearization of non-linear systems, existence and uniqueness of state-equation solutions, transition matrices and their properties, methods for computing functions of matrices and transition matrices and state-variable changes. It also includes z-transform and Laplace transform methods for time-invariant systems and Floquet decomposition methods for periodic systems. The course then moves to stability analysis, including: uniform stability, uniform exponential stability, asymptotic stability, uniform asymptotic stability, Lyapunov transformations, Lyapunov stability criteria, eigenvalues conditions and input-output stability analysis. Applications involving the topics of controllability, observability, realizability, minimal realization, controller and observer forms, linear feedback, and state feedback stabilization are included, as time permits. Open to graduates and undergraduates who have taken undergraduate courses in linear algebra and differential equations.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ESE 501 Networking - Theory and Fundamentals
Networks constitute an important component of modern technology and society. Networks have traditionally dominated communication technology in form of communication networks, distribution of energy in form of power grid networks, and have more recently emerged as a tool for social connectivity in form of social networks. In this course, we will study mathematical techniques that are key to the design and analysis of different kinds of networks. First, we will investigate techniques for modeling evolution of networks. Specifically, we will consider random graphs (all or none connectivity, size of components, diameters under random connectivity), small world problem, network formation and the role of topology in the evolution of networks. Next, we will investigate different kinds of stochastic processes that model the flow of information in networks. Specifically, we will develop the theory of markov processes, renewal processes, and basic queueing, diffusion models, epidemics and rumor spreading in networks.
Course usually offered in spring term
Prerequisite: ESE 530
Activity: Lecture
1.0 Course Unit

ESE 502 Introduction to Spatial Analysis
The course is designed to introduce students to modern statistical methods for analyzing spatial data. These methods include nearest-neighbor analyses of spatial point patterns, variogram and kriging analyses of continuous spatial data, and autoregression analyses of area data. The underlying statistical theory of each method is developed and illustrated in terms of selected GIS applications. Students are also given some experience with ARCMAP, JMPIN, and MATLAB software.
Course usually offered in fall term
Prerequisite: ESE 302
Activity: Lecture
1.0 Course Unit

ESE 503 Simulation Modeling and Analysis
This course provides a study of discrete-event systems simulation in the areas of queueing, inventory and reliability systems as well as Markov Chains, Random-Walks and Monte-Carlo systems. The course examines many probability distributions used in simulation studies as well as the Poisson process. Fundamental to most simulation studies is the ability to generate reliable random numbers and so the course investigates the basic properties of random numbers and techniques used for the generation and testing of pseudo-random numbers. Random numbers are then used to generate other random variable using the methods of inverse-transform, convolution, composition and acceptance/rejection. Finally, since most inputs to simulation are probabilistic instead of deterministic in nature, the course examines some techniques used for identifying the probabilistic nature of input data. These include identifying distributional families with sample data, using maximum-likelihood methods for parameter estimating within a given family and testing the final choice of distribution using chi-squared goodness-of-fit.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
ESE 504 Intro to Linear, Nonlinear and Integer Optimization
Introduction to mathematical optimization for graduate students who would like to be intelligent and sophisticated users of mathematical programming but do not necessarily plan to specialize in this area. Linear, integer and nonlinear programming are covered, including the fundamentals of each topic together with a sense of the state-of-the-art and expected directions of future progress. Homework and projects emphasize modeling and solution analysis, and introduce the students to a large variety of application areas.
Course usually offered in fall term
Also Offered As: OIDD 910
Activity: Lecture
1.0 Course Unit

ESE 505 Feedback Control Design and Analysis
Basic methods for analysis and design of feedback control in systems. Applications to practical systems. Methods presented include time response analysis, frequency response analysis, root locus, Nyquist and Bode plots, and the state-space approach.
Course usually offered in spring term
Also Offered As: MEAM 513
Prerequisite: MEAM 321 OR ESE 210
Activity: Lecture
1.0 Course Unit

ESE 506 Introduction to Optimization Theory
Introduction to mathematical optimization for graduate students who would like to be intelligent and sophisticated users of mathematical programming but do not necessarily plan to specialize in this area. Linear, integer and nonlinear programming are covered, including the fundamentals of each topic together with a sense of the state-of-the-art and expected directions of future progress. Homework and projects emphasize modeling and solution analysis, and introduce the students to a large variety of application areas.
Taught by: Michael Carchidi
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ESE 507 Introduction to Networks and Protocols
This is an introductory course on packet networks and associated protocols, with a particular emphasis on IP-based networks such as the Internet. The course introduces design and implementation choices that underlie the development of modern networks, and emphasizes basic analytical understanding of the concepts. Topics are covered in a mostly 'bottom-up' approach starting with a brief review of physical layer issues such as digital transmission, error correction and error recovery strategies. This is followed by a discussion of link layer aspects, including multiple access strategies, local area networks (Ethernet and 802.11 wireless LANs), and general store-and-forward packet switching. Network layer solutions, including IP addressing, naming, and routing are covered next, before exploring transport layer and congestion control protocols (UDP and TCP). Finally, basic approaches for quality-of-service and network security are examined. Specific applications and aspects of data compression and streaming may also be covered.
Course usually offered in fall term
Also Offered As: ESE 407
Activity: Lecture
1.0 Course Unit
Notes: Course open to Graduate Students in SEAS and Wharton

ESE 510 Electromagnetic and Optics
This course reviews electrostatics, magnetostatics, electric and magnetic materials, induction, Maxwell's equations, potentials and boundary-value problems. Topics selected from the areas of wave propagation, wave guidance, antennas, and diffraction will be explored with the goal of equipping students to read current research literature in electromagnetics, microwaves, and optics.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ESE 512 Dynamical Systems for Engineering and Biological Applications
This midlevel course in nonlinear dynamics focuses on the analysis of low dimensional, continuous time models for describing and understanding complex behavior in physical, biological and engineered systems. We assume some background knowledge of ordinary differential equations, and develop at an engineering applications level the concepts and tools of qualitative dynamical systems theory with major focus on analysis and some on synthesis.
Course usually offered in fall term
Prerequisites: MATH 240, PHYS 150, ESE 210
Activity: Lecture
1.0 Course Unit

ESE 513 Prin of Quantum Tech
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ESE 516 IoT Edge Computing
This course was developed to bring lessons learned from the product design industry into the classroom - specifically focusing on Internet of Things (IoT) device development and deployment. To achieve the highest level of knowledge transfer, the course will incorporate device design theory with discussions of real-world product failures and successes - as well as a heavy hands-on component to build a device from end to end. Students will learn to use industry standard tools, such as Altium, Atmel Studio, and IBM Watson - allowing them the same level of power and customization at the disposable of startups and Fortune 500 companies alike. Prerequisite: If course requirement not met, permission of instructor required.
Course usually offered in spring term
Prerequisite: ESE 519
Activity: Lecture
1.0 Course Unit
ESE 518 Battery and Super-Capacitor Systems
This is a senior / graduate course on scientific and technological fundamentals as they apply to electrochemical batteries and super-capacitors. The perspective utilized will be a combination of materials and systems science. The course will introduce the student to the different categories of electrochemical cells and batteries, and their related chemistry, kinds of super-capacitors, charging and discharging profiles, equivalent series resistance (ESR), power capacities, and lifetimes. For super-capacitors, the student will be introduced to double layer capacitance (DLC) and pseudo-capitance types of energy storage, super-capacitor fundamentals through Faradaic and non-Faradaic processes, pseudo-capitance of metal oxides and electro-active polymers (EAPs), non-ideal polarizable electrodes, energetics and kinetics of electrode processes, theories of dielectric polarization, inorganic and organic electrol carbonaceous materials, effective surface area (ESA) and functionalizations, as well as the AC impedance behavior of batteries and super-capacitors including the self-discharge characteristics of both. The fundamental electrochemical relations will be discussed, as well as battery / super-caps system modeling, and batteries management systems.
Course not offered every year
Prerequisite: CHEM 101 AND MATH 104
Activity: Lecture
1.0 Course Unit

ESE 519 Real-Time Embedded Systems
The use of distributed wireless sensor networks has surged in popularity in recent years with applications ranging from environmental monitoring, to people- and object-tracking in both cooperative and hostile environments. This course is targeted at understanding and obtaining hands-on experience with the state-of-the-art in such wireless sensor networks which are often composed using relatively inexpensive sensor nodes that have low power consumption, low processing power and bandwidth. The course will span a variety of topics ranging from radio communications, network stack, systems infrastructure including QoS support and energy management, programming paradigms, distributed algorithms and example applications. Some guest lectures may be given.
Prerequisite: One course in computer networks and Senior or Graduate standing
Course usually offered in fall term
Also Offered As: IPD 519
Prerequisite: CIS 120 AND ESE 350
Activity: Lecture
1.0 Course Unit

ESE 520 Agent-Based Modeling and Simulation
Agents are a new technique for trying to model, simulate, and understand systems that are ill-structured and whose mathematics is initially unknown and possibly unknowable. This approach allows the analyst to assemble models of agents and components where micro-decision rules may be understood; to bring the agents and components together as a system where macro-behavior then emerges; and to use that to empirically probe and improve understanding of the whole, the interrelations of the components, and synergies. This approach helps one explore parametrics, causality, and what-ifs about socio-technical systems (technologies that must support people, groups, crowds, organizations, and societies). It is applicable when trying to model and understand human behavior - consumers, investors, passengers, plant operators, patients, voters, political leaders, terrorists, and so on. This course will allow students to investigate and compare increasingly complex agent based paradigms along three lines - math foundations, heuristic algorithms/knowledge representations, and empirical science. The student will gain a toolbox and methodology for attempting to represent and study complex socio-technical systems. Students taking this for graduate credit will also learn how to design agent-based tools.
Course usually offered in fall term
Also Offered As: ESE 420
Activity: Lecture
1.0 Course Unit

ESE 521 The Physics of Solid State Energy Devices
An advanced undergraduate course or graduate level course on the fundamental physical principles underlying the operation of traditional semiconducting electronic and optoelectronic devices and extends these concepts to novel nanoscale electronic and optoelectronic devices. The course assumes an undergraduate level understanding of semiconductors physics, as found in ESE 218 or PHYS 240. The course builds on the physics of solid state semiconductor devices to develop the operation and application of semiconductors and their devices in energy conversion devices such as solar photovoltaics, thermophotovoltaics, and thermoelectrics, to supply energy. The course also considers the importance of the design of modern semiconductor transistor technology to operate at low-power in CMOS. Prerequisite: If course requirement not met, permission of instructor required.
Course usually offered in spring term
Prerequisite: ESE 218 OR PHYS 240
Activity: Lecture
1.0 Course Unit
**ESE 523 Quantum Engineering**

Quantum engineering - the design, fabrication, and control of quantum coherent devices - has emerged as a multidisciplinary field spanning physics, electrical engineering, materials science, chemistry, and biology, with the potential for transformational advances in computation, secure communication, and nanoscale sensing. This course surveys the state of the art in quantum hardware, beginning with an overview of the physical implementation requirements for a quantum computer and proceeding to a synopsis of the leading contenders for quantum building blocks, including spins in semiconductors, superconducting circuits, photons, and atoms. The course combines background material on the fundamental physics and engineering principles required to build and control these devices with readings drawn from the current literature, including promising architectures for scaling physical qubits into larger devices and secure communication networks, and for nanoscale sensing applications impacting biology, chemistry, and materials science.

Course usually offered in spring term

Also Offered As: ESE 423

Prerequisite: PHYS 411

Activity: Lecture

1.0 Course Unit

**ESE 525 Nanoscale Science and Engineering**

Overview of existing device and manufacturing technologies in microelectronics, optoelectronics, magnetic storage, Microsystems, and biotechnology. Overview of near- and long-term challenges facing those fields. Near- and long-term prospects of nanoscience and related technologies for the evolutionary sustention of current approaches, and for the development of revolutionary designs and applications.

Prerequisite: If course requirement not met, permission of instructor required.

Course usually offered in fall term

Also Offered As: ESE 218 OR PHYS 240 OR MSE 220

Activity: Lecture

1.0 Course Unit

**ESE 526 Photovoltaic Systems Engineering**

This course will present the engineering basis for photovoltaic (PV) system design. The overall aim is for engineering students to understand the what, why, and how associated with the electrical, mechanical, economic, and aesthetic aspects of PV system. The course will introduce additional practical design considerations, added to the theoretical background, associated with pertinent electro-mechanical design.

Permission of the instructor

Course not offered every year

Activity: Lecture

1.0 Course Unit

**ESE 527 Design of Smart Systems**

Smart systems are materials, structures, devices and/or networks that seek to autonomously emulate human capabilities (sensing, nervous system, deliberating, acting) for adapting and continued functioning in potentially adverse conditions. Smart systems are a highly trans-disciplinary field that utilize microsystems technology with other disciplines like biology, information science, nanoscience, or cognitive science to control networks of components. Smart systems are causing a sea-change in hybrid cyber-physical-social systems leading to such breakthroughs as: the internet of Everything, smart cars, smart cities, the next industrial revolution, solutions to reduce global warming, and personalized e-healthcare, among many others. In this course students explore state-of-the-art smart system components, learn a design methodology to integrate the components, and apply the methodology to design and simulate a smart system prototype. The course will also cover life-long coping skills for human-centered design and for modeling the security, privacy and reliability hazards of the smart systems approach.

Prerequisite: Junior or Senior standing, course or experience in a course with high level language

Course not offered every year

Activity: Lecture

1.0 Course Unit

**ESE 528 Estimation and Detection Theory**

Statistical decision making constitutes the core of multiple engineering systems like communication, networking, signal processing, control, market dynamics, biological systems, data processing, etc. We strive to introduce mathematical theories that formulate statistical decision and obtain decision making algorithms with application to one or more of the above domains. This course will be offered every other year.

One-term course offered either term

Prerequisite: ESE 530

Activity: Lecture

1.0 Course Unit

**ESE 529 Introduction to Micro- and Nano-electromechanical Technologies**

Taught by: Troy Olsson

Course usually offered in spring term

Also Offered As: MEAM 529

Activity: Lecture

1.0 Course Unit
ESE 530 Elements of Probability Theory
This rapidly moving course provides a rigorous development of fundamental ideas in probability theory and random processes. The course is suitable for students seeking a rigorous graduate level exposure to probabilistic ideas and principles with applications in diverse settings. The topics covered are drawn from: abstract probability spaces; combinatorial probabilities; conditional probability; Bayes’s rule and the theorem of total probability; independence; connections with the theory of numbers, Borel’s normal law; rare events, Poisson laws, and the Lovasz local lemma; arithmetic and lattice distributions arising from the Bernoulli scheme; limit laws and characterizations of the binomial and Poisson distributions; continuous distributions in one and more dimensions; the uniform, exponential, normal, and related distributions; random variables, distribution functions; orthogonal and stationary random processes; the Gaussian process, Brownian motion; random number generation and statistical tests of randomness; mathematical expectation and the Lebesgue theory; expectations of functions, moments, convolutions; operator methods and distributional convergence, the central limit theorem, selection principles; conditional expectation; tail inequalities, concentration convergence in probability and almost surely, the law of large numbers, the law of the iterated logarithm; Poisson approximation, Janson’s inequality, the Stein-Chen method; moment generating functions, renewal theory; characteristic functions. A solid foundation in undergraduate probability at the level of ESE 301 or STAT 430 at Penn. Students are expected to have a sound calculus background in the first two years of a typical undergraduate engineering curriculum. Undergraduates are warned that the course is very mathematical in nature with an emphasis on rigor; upperclassmen who wish to take the course will need to see the instructor for permission to register.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ESE 531 Digital Signal Processing
This course covers the fundamentals of discrete-time signals and systems and digital filters. Specific topics covered include: review of discrete-time signal and linear system representations in the time and frequency domain, and convolution; discrete-time Fourier transform (DTFT); Z-transforms; frequency response of linear discrete-time systems; sampling of continuous-time signals, analog to digital conversion, sampling-rate conversion; basic discrete-time filter structures and types; finite impulse response (FIR) and infinite impulse response (IIR) filters; design of FIR and IIR filters; discrete Fourier transform (DFT), the fast Fourier transform (FFT) algorithm and its applications in filtering and spectrum estimation.
Course usually offered in fall term
Prerequisites: ESE 224, 325
Activity: Lecture
1.0 Course Unit

ESE 532 System-on-a-Chip Architecture
Motivation, design, programming, optimization, and use of modern System-on-a-Chip (SoC) architectures. Hands-on coverage of the breadth of computer engineering within the context of SoC platforms from gates to application software, including on-chip memories and communication networks, I/O interfacing, RTL design of accelerators, processors, concurrency, firmware and OS/infrastructure software. Formulating parallel decompositions, hardware and software solutions, hardware/software tradeoffs, and hardware/software codesign. Attention to real-time requirements. Undergraduates: CIS 240, ESE 350; Graduate: Working knowledge of C.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ESE 535 Electronic Design Automation
Formulation, automation, and analysis of design mapping problems with emphasis on VLSI and computational realizations. Major themes include: formulating and abstracting problems, figures of merit (e.g. Energy, Delay, Throughput, Area, Mapping Time), representation, traditional decomposition of flow (logic optimization, covering, scheduling, retiming, assignment, partitioning, placement, routing), and techniques for solving problems (e.g., greedy, dynamic programming, search, (integer) linear programming, graph algorithms, randomization, satisfiability). Digital logic, Programming (need to be course not offered every year
Activity: Lecture
1.0 Course Unit

ESE 536 Nanofabrication and Nanocharacterization
This course is intended for first year graduate students interested in the experimental practice of nanotechnology. In the context of a hands-on laboratory experience, students will gain familiarity with both top-down and bottom-up fabrication and characterization technologies. This will be achieved through the realization of a variety of micro- and nanoscale structures and devices that can exhibit either classical or quantum effects at the small scale. Although concepts relevant to the laboratories will be emphasized in lecture, it is expected that students will already have been exposed to many of the underlying theoretical concepts of nanotechnology in previous courses. Prerequisite: If course requirement not met, permission instructor required.
Course usually offered in spring term
Prerequisite: ESE 525 OR MSE 525
Activity: Lecture
1.0 Course Unit

ESE 540 Engineering Economics
This course is cross-listed with an advanced-level undergraduate course (ESE 400). Topics include: money-time relationships, discrete and continuous compounding, equivalence of cash flows, internal and external rate of return, design and production economics, life cycle cost analysis, depreciation, after-tax cash flow analysis, cost of capital, capital financing and allocation, parametric cost estimating models, pricing, foreign exchange rates, stochastic risk analysis, replacement analysis, benefit-cost analysis, and analysis of financial statements. Case studies apply these topics to engineering systems. Students are not required to do additional work compared to ESE 400 students. The work-load is identical.
Course usually offered in fall term
Also Offered As: ESE 400
Activity: Lecture
1.0 Course Unit
ESE 542 Statistics for Data Science
The course covers the methodological foundations of data science, emphasizing basic concepts in statistics and learning theory, but also modern methodologies. Learning of distributions and their parameters. Testing of multiple hypotheses. Linear and nonlinear regression and prediction. Classification. Uncertainty quantification. Model validation. Clustering. Dimensionality reduction. Probably approximately correct (PAC) learning. Such theoretical concepts are further complemented by exemplar applications, case studies (datasets), and programming exercises (in Python) drawn from electrical engineering, computer science, the life sciences, finance, and social networks.
Taught by: Victor Preciado
Course usually offered in fall term
Also Offered As: ESE 402
Prerequisites: ESE 301 or equivalent, CIS 110 or 120
Activity: Lecture
1.0 Course Unit

ESE 543 Human Systems Engineering
This course is an introduction to human systems engineering, examining the various human factors that influence the spectrum of human performance and human systems integration. We will examine both theoretical and practical applications, emphasizing fundamental human cognitive and performance issues. Specific topics include: human performance characteristics related to perception, attention, comprehension, memory, decision making, and the role of automation in human systems integration.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

ESE 544 Project Management
The course emphasizes a systems engineering approach to project management including the cycle costing and analysis, project scheduling, project organization and control, contract management, project monitoring and negotiations. In addition, the course will also examine management issues in large infrastructure projects like non-recourse or limited recourse project financing. Examples from the logistics planning process and global software project management will be used to highlight the course topics.
Two terms. student may enter either term.
Also Offered As: ESE 444
Prerequisite: ESE 304
Activity: Lecture
1.0 Course Unit

ESE 545 Data Mining: Learning from Massive Datasets
Many scientific and commercial applications require us to obtain insights from massive, high-dimensional data sets. In this graduate-level course, students will learn to apply, analyze and evaluate principled, state-of-the-art techniques from statistics, algorithms and discrete and convex optimization for learning from such large data sets. The course both covers theoretical foundations and practical applications.
Course usually offered in spring term
Prerequisites: ESE 530, ENM 503
Activity: Lecture
1.0 Course Unit

ESE 546 Principles of Deep Learning
Introductory class in machine learning and optimization. CIS 519, CIS 520, ESE 545, ESE 304, ESE 504, ESE 605 recommended or permission of the instructor.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ESE 547 Introduction to Legged Locomotion
This course reviews three decades' development of agile legged machines, treating past and recent advances as well as remaining formidable challenges in the materials selection, design, and programming of robots that can run, leap and climb through complicated, unstructured terrain. Emphasis is on developing understanding of and facility using key dynamical primitives whose composition allows more complicated behaviors to emerge from simpler constituents. Several historical case studies will be used to illustrate how advances have rewarded interdisciplinary thinking about animals, materials, mathematics and mechatronics. Course credit will be based on problem sets and coding exercises.
Taught by: D. E. Koditschek
Activity: Lecture
1.0 Course Unit

ESE 548 Transportation Planning Methods
This course introduces students to the development and uses of the 4-step urban transportation model (trip generation-trip distribution-mode choice-traffic assignment) for community and metropolitan mobility planning. Using the VISUM transportation desktop planning package, students will learn how to build and test their own models, apply them to real projects, and critique the results. Prerequisite: CPLN 505 or other planning statistics course.
Taught by: Ryerson
Course usually offered in spring term
Also Offered As: CPLN 650
Prerequisite: CPLN 505
Activity: Lecture
1.0 Course Unit

ESE 550 Advance Transportation Seminar
Air transportation is a fascinating multi-disciplinary area of transportation bringing together business, planning, engineering, and policy. In this course, we explore the air transportation system from multiple perspectives through a series of lessons and case studies. Topics will include airport and intercity multimodal environmental planning, network design and reliability, air traffic management and recovery from irregular operations, airline operations, economics, and fuel, air transportation sustainability, and land use issues related to air transportation systems. This course will introduce concepts in economics and behavioral modeling, operations research, statistics, environmental planning, and human factors that are used in aviation and are applicable to other transportation systems. The course will emphasize learning through lessons, guest lecturers, case studies of airport development and an individual group and research project.
Taught by: Ryerson
Course usually offered in spring term
Also Offered As: CPLN 750
Prerequisite: CPLN 550
Activity: Seminar
1.0 Course Unit
ESE 566 Networked Neuroscience
The human brain produces complex functions using a range of system components over varying temporal and spatial scales. These components are couples together by heterogeneous interactions, forming an intricate information-processing network. In this course, we will cover the use of network science in understanding such large-scale and neuronal-level brain circuitry. Prerequisite: Graduate standing or permission of the instructor. Experience with Linear Algebra and MATLAB.
Course usually offered in spring term
Also Offered As: BE 566
Activity: Lecture
1.0 Course Unit

ESE 567 Risk Analysis and Environmental Management
This course will introduce students to concepts in risk governance. We will delve into the three pillars of risk analysis: risk assessment, risk management, and risk communication. The course will spend time on risk financing, including insurance markets. There will be particular emphasis on climate risk management, including both physical impact risk and transition risk, although the course will also discuss several other examples, including management of environmental risks, terrorism, and cyber-security, among other examples. The course will cover how people perceive risks and the impact this has on risk management. We will explore public policy surrounding risk management and how the public and private sector can successfully work together to build resilience, particularly to changing risks.
One-term course offered either term
Also Offered As: BEPP 261, BEPP 761, BEPP 961, OID 261, OID 761
Activity: Lecture
1.0 Course Unit

ESE 568 Mixed Signal Circuit Design and Modeling
This course will introduce design and analysis of mixed-signal integrated circuits. Topics include: Sampling and quantization, Sampling circuits, Switched capacitor circuits and filters, Comparators, Offset compensation, DACs/ADCs (flash, delta-sigma, pipeline, SAR), Oversampling, INL/DNL, FOM. The course will end with a final design project using analysis and design techniques learned in the course. Students must provide a written report with explanations to their design choices either with equations or simulation analysis/insight along with performance results. Prerequisite: If course requirement not met, permission of instructor required.
Course usually offered in fall term
Prerequisites: ESE 319, 419
Activity: Lecture
1.0 Course Unit

ESE 572 Analog Integrated Circuits
Design of analog circuits and subsystems using bipolar and MOS technologies at the transistor and higher levels. Transistor level design of building block circuits such as op amps, comparators, sample and hold circuits, voltage and current references, capacitors and resistor arrays, and class AB output stages. The course will include a design project of an analog circuit. The course will use the Cadence Design System for schematic capture and simulation with Spectre circuit simulator. This course is similar to ESE 570, except that it will not require the use of the physical layout tools associated with VLSI design and implementation.
Course usually offered in fall term
Also Offered As: ESE 419
Prerequisite: ESE 319
Activity: Lecture
1.0 Course Unit

ESE 574 The Principles and Practice of Microfabrication Technology
A laboratory-based course on fabricating microelectronic and micromechanical devices using photolithographic processing and related fabrication technologies. Lectures discuss: clean room procedures; microelectronic and microstructural materials; photolithography; diffusion, oxidation; materials deposition; etching and plasma processes. Basic laboratory processes are covered for the first two thirds of the course with students completing structures appropriate to their major in the final third. Students registering for ESE 574 will be expected to do extra work (including term paper and additional project).
Course not offered every year
Also Offered As: ESE 460, MEAM 564
Prerequisites: ESE 218, MSE 321, MEAM 333, CBE 351, PHYS 250
Activity: Lecture
1.0 Course Unit

ESE 576 Digital Integrated Circuits and VLSI-Fundamentals
Explores the design aspects involved in the realization of an integrated circuit from device up to the register/subsystem level. It addresses major design methodologies with emphasis placed on the structured design. The course includes the study of MOS device characteristics, the critical interconnect and gate characteristics which determine the performance of VLSI circuits, and NMOS and CMOS logic design. Students will use state-of-the-art CAD tools to verify designs and develop efficient circuit layouts.
Course usually offered in spring term
Prerequisite: ESE 319
Activity: Lecture
1.0 Course Unit

ESE 578 RFIC (Radio Frequency Integrated Circuit) Design
Introduction to RF (Radio Frequency) and Microwave Theory, Components, and Systems. The course aims at providing knowledge in RF transceiver design at both microwave and millimeter-wave frequencies. Both system and circuit level perspective will be addressed, supported by modeling and simulation using professional tools (including Agilent ADS, Sonnet, and Cadence Design Systems). Topics include: Transmission Line Theory, S-parameters, Smith Chart for matching network design, stability, noise, and mixed signal design. RF devices covered will include: hybrid/Wilkinson/Lange 3dB couplers, Small Signal Amplifiers (SSA), Low Noise Amps (LNA), and Power Amps (PA). CMOS technology will be largely used to design the devices mentioned.
Course usually offered in spring term
Prerequisite: ESE 572
Activity: Lecture
1.0 Course Unit
ESE 590 Systems Methodology
This course covers the methodologies and techniques important to designing large complex, purposeful systems and to discovering policies that influence them throughout the stages of their lifecycle. The course focuses on hands-on synthetic thinking, where students assemble the big picture from modeling the individual actors, organizations, and artifacts in a socio-technical system of interest. This is the study of emergence of macro-behavior from the micro-decision making of the actors involved - to inquire into the design of a purposeful system, and to examine alternative futures that are ideal, yet affordable, sustainable, and workable. Specifically, the student learns systems theory, systems methodologies (design inquiry/learning systems, idealized design/interactive planning, and soft systems methodology/knowledge management), bottom up modeling (decision science, multi-attribute utility theory, affective reasoning, agent based modeling, simulated societies), and how to further research and apply the synthetic paradigm. Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ESE 597 Master's Thesis
One-term course offered either term
Activity: Masters Thesis
1.0 Course Unit

ESE 599 Independent Study for Master’s credit
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

ESE 605 Modern Convex Optimization
This course concentrates on recognizing and solving convex optimization problems that arise in engineering. Topics include: convex sets, functions, and optimization problems. Basis of convex analysis. Linear, quadratic, geometric, and semidefinite programming. Optimality conditions, duality theory, theorems of alternative, and applications. Interior-point methods, ellipsoid algorithm and barrier methods, self-concordance. Applications to signal processing, control, digital and analog circuit design, computation geometry, statistics, and mechanical engineering. Knowledge of linear algebra and willingness to do programming. Exposure to numerical computing, optimization, and application fields is helpful but not required. Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ESE 610 Electromagnetic and Optical Theory II
This course covers exact, approximate and numerical methods of wave propagation, radiation, diffraction and scattering with an emphasis on bringing students to a point of contributing to the current research literature. Topics are chosen from a list including analytical and numerical techniques, waves in complex media and metamaterials, photonic bandgap structures, imaging, miniaturized antennas, high-impedance ground plans, and fractal electrodynamics. Course not offered every year
Activity: Lecture
1.0 Course Unit

ESE 611 Nanophotonics: Light at the Nanoscale
This course is intended for first and second year graduate students interested in nanoscale optics and photonics. Building on prior coursework in electromagnetism, this course provides a theoretical foundation and up-to-date survey of the key principles and phenomena relevant to the field of nanophotonics. Topics discussed include light-matter interaction through Maxwell's equations, photonic band theory and photonic crystals, plasmonic structures and devices, metamaterials and metasurfaces, PT-symmetric & topological photonic systems. Applications of nanophotonic devices and principles to a wide range of scenarios will also be explored in depth, including for renewable energy, information processing, imaging and sensing. Experimental techniques used in nanophotonics will be concurrently introduced and discussed. Prerequisite: Permission of instructor
One-term course offered either term
Activity: Lecture
1.0 Course Unit

ESE 615 F1/10 Autonomous Racing Cars
This hands-on, lab-centered course is for senior undergraduates and graduate students interested in the fields of artificial perception, motion planning, control theory, and applied machine learning. It is also for students interested in the burgeoning field of autonomous driving. This course introduces the students to the hardware, software and algorithms involved in building and racing an autonomous race car. Every week, students take two lectures and complete an extensive hands-on lab. By Week 6, the students will have built, programmed and driven a 1/10th scale autonomous race car. By Week 10, the students will have learned fundamental principles in perception, planning and control and will race using map-based approaches. In the last 6 weeks, they develop and implement advanced racing strategies, computer vision and machine learning algorithms that will give their team the edge in the race that concludes the course. Prerequisites: C++ and Python programming, Matrix algebra, Differential equations, Signals and Systems
Taught by: Rahul Mangharam
Activity: Lecture
1.0 Course Unit

ESE 617 Non-Linear Control Theory
The course studies issues in nonlinear control theory, with a particular emphasis on the use of geometric principles. Topics include: controllability, accessibility, and observability, for nonlinear systems; Forbenius’ theorem; feedback and input/output linearization for SISO and MIMO systems; dynamic extension; zero dynamics; output tracking and regulation; model matching disturbance decoupling; examples will be taken from mechanical systems, robotic systems, including those involving nonholonomic constraints, and active control of vibrations. Course not offered every year
Also Offered As: MEAM 613
Prerequisite: ESE 500
Activity: Lecture
1.0 Course Unit
ESE 619 Model Predictive Control
Increased system complexity and more demanding performance requirements have rendered traditional control laws inadequate regardless if simple PID loops are considered or robust feedback controllers designed according to some H2/∞ criterion. Applications ranging from the process industries to the automotive and the communications sector are making increased use of Model Predictive Control (MPC) where a fixed control law is replaced by on-line optimization performed over a receding horizon. The advantage is that MPC can deal with almost any time-varying process and specifications, limited only by the availability of real-time computer power. In the last few years we have seen tremendous progress in this interdisciplinary area where fundamentals of systems theory, computation and optimization interact. For example, methods have emerged to handle hybrid systems, i.e. systems comprising both continuous and discrete components. Also, it is now possible to perform most of the computations off-line thus reducing the control law to a simple look-up table.
Course usually offered in spring term
Prerequisites: ESE 500, 504 or 605
Activity: Lecture
1.0 Course Unit

ESE 621 Nanoelectronics
This is a graduate level course on fundamental operating principles and physics of semiconductor devices in reduced or highly scaled dimensions. The course will include topics and concepts covering basic quantum mechanics and solid state physics of nanostructures as well as device transport and characterization, materials and fabrication. A basic knowledge of semiconductor physics and devices is assumed. The course will build upon basic quantum mechanics and solid state physics concepts to understand the operation of nanoscale semiconductor devices and physics of electrons in confined dimensions. The course will also provide a historical perspective on micro and nanoelectronics, discuss the future of semiconductor computing technologies, cutting edge research in nanomaterials, device fabrication as well as provide a perspective on materials and technology challenges. Prerequisite: If course requirement not met, permission of instructor required.
Course usually offered in spring term
Prerequisite: ESE 521
Activity: Lecture
1.0 Course Unit

ESE 625 Nanorobotics
Nanorobotics is a field at the forefront of nano-science and engineering that seeks to create synthetic systems that sense and respond to their environment at dimensions comparable to biological microorganisms. This course explores the topic of small state machines: What materials should we use to make these devices? How should they be powered or locomote? What capacities can they have for memory or information processing? How can they be made to interface safely with biological systems? This course covers the major frameworks for building small machines, including self-assembled systems (DNA nanotechnology, biohacking) and those fabricated by top-down lithography (self-folding systems, synthetic micro-swimmers, smart-dust). Particular emphasis is given to exploring physical principles that can be used to analyze the strengths and limitations of current robot designs at the micro and nanoscale.
Taught by: Marc Miskin
Activity: Lecture
1.0 Course Unit

ESE 635 Distributed Systems
This research seminar deals with tools, methods, and algorithms for analysis and design of distributed dynamical systems. These are large collections of dynamical systems that are spatially interconnected to form a collective task or achieve a global behavior using local interactions. Over the past decade such systems have been studied in disciplines as diverse as statistical physics, computer graphics, robotics, and control theory. The purpose of this course is to build a mathematical foundation for study of such systems by exploring the interplay of control theory, distributed optimization, dynamical systems, graph theory, and algebraic topology. Assignments will consist of reading and researching the recent literature in this area. Topics covered in distributed coordination and consensus algorithms over networks, coverage problems, effects of delay in large scale networks, Power law graphs, gossip and consensus algorithms, synchronization phenomena in natural and engineered systems, etc.
Course not offered every year
Prerequisites: Basic knowledge of linear systems (ESE 500), linear algebra (MATH 312 or equivalent), and optimization (ESE 504 or equivalent) and some familiarity with basics of nonlinear systems (ESE 617 or equivalent). Students without this background should consult with the instructor before registering.
Activity: Lecture
1.0 Course Unit

ESE 650 Learning in Robotics
This course will cover the mathematical fundamentals and applications of machine learning algorithms to mobile robotics. Possible topics that will be discussed include probabilistic generative models for sensory feature learning, Bayesian filtering for localization and mapping, dimensionality reduction techniques for motor control, and reinforcement learning of behaviors. Students are expected to have a solid mathematical background in machine learning and signal processing, and will be expected to implement algorithms on a mobile robot platform for their course projects. Grading will be based upon course project assignments as well as class participation. Students will need permission from the instructor. They will be expected to have a good mathematical background with knowledge of machine learning techniques at the level of CIS 520, signal processing techniques at the level of ESE 531, as well as have some robotics experience.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ESE 672 Integrated Communication Systems
This is an advanced radio frequency (RF) circuit design course that includes analysis and design of high-frequency and high-speed integrated communication circuits at both transistor and system levels. Students gradually design and simulate different blocks of an RF receiver and combine these blocks to form the receiver as their final project. We assume some background knowledge of device physics, electromagnetics, circuit theory, control theory, and stochastic processes. One-term course offered either term
Prerequisite: ESE 419 OR ESE 572
Activity: Lecture
1.0 Course Unit
**ESE 673 Integrated Photonic Systems**
Analysis and design of photonic integrated systems at both device and system levels including architectures, photonic integrated circuit technologies, passive components (nano-waveguides, resonators, couplers, and Y-junctions) and active components (lasers, modulators, and photodiodes) are studied. The emphasis is on silicon photonics. Prerequisite: If course requirement not met, permission of instructor required.

Course usually offered in spring term
Prerequisite: ESE 510
Activity: Lecture
1.0 Course Unit

**ESE 674 Information Theory**
Deterministic and probabilistic information. The pigeon-hole principle. Entropy, relative entropy, and mutual information. Random processes and entropy rate. The asymptotic equipartition property. Optimal codes and data compression. Channel capacity. Source channel coding. The ubiquitous nature of the theory will be illustrated with a selection of applications drawn from among: universal source coding, vector quantization, network communication, the stock market, hypothesis testing, algorithmic computation and kolmogorov complexity, and thermodynamics.
Course not offered every year
Prerequisite: ESE 530
Activity: Lecture
1.0 Course Unit

**ESE 676 Coding Theory**
Coding theory for telecommunications with emphasis on the algebraic theory of cyclic codes using finite field arithmetic, decoding of BCH and Reed-Solomon codes, finite field Fourier transform and algebraic geometry codes, convolutional codes and trellis decoding algorithms, graph based codes, Berrou codes and Gallager codes, turbo decoding, iterative decoding. And belief propagation.
Course not offered every year
Prerequisites: ESE 224, MATH 240, PHYS 150
Activity: Lecture
1.0 Course Unit

**ESE 680 Special Topics in Electrical and Systems Engineering**
Advanced and specialized topics in both theory and application areas. Students should check Graduate Group office for offerings during each registration period.
Course not offered every year
Activity: Lecture
1.0 Course Unit

**ESE 695 Teaching Practicum**
Participation of graduate students in the teaching mission of the department will help to develop teaching, presentation, leadership, and interpersonal skills while assisting the department in discharging its teaching responsibilities. All doctoral students are required to participate under faculty guidance in the teaching mission of the department. This requirement will be satisfied by completing two 0.5 course units of teaching practicum (ESE 695). Each 0.5 course unit of teaching practicum will consist of the equivalent of 10 hours of effort per week for one semester. As a part of the preparation for and fulfillment of the teaching practicum requirement, the student will attend seminars emphasizing teaching and communication skills, lead recitations, lead tutorials, supervise laborator experiments, develop instructional laboratories, develop instructional materiaand grade homeworks, laboratory reports, and exams. A teacher training seminar will be conducted the day before the first day of classes of the Fall semester. Attendance is mandatory for all second-year students. As much as possible, the grading aspect of the teaching practicum course will be such as not to exceed 50% of the usual teaching assistant commitment time. Some of the recitations will b supervised and feedback and comments will be provided to the student by the faresponsible for the course. At the completion of every 0.5 course unit of teach, the student will receive a Satisfactory/Unsatisfactory grade and a written eseign by the faculty member responsible for the course. The evaluation will beon comments of the students taking the course and the impressions of the facul

**ESE 895 Independent Study for PhD credit**
For students who are studying a specific advanced subject area in electrical engineering. Students must submit a proposal outlining and detailing the study area, along with the faculty supervisor's consent, to the graduate group chair for approval. A maximum of 1 c.u. of ESE 899 may be applied toward the MSE degree requirements. A maximum of 2 c.u.'s of ESE 899 may be applied toward the Ph.D. degree requirements.
One-term course offered either term
Activity: Independent Study

Energy Management and Policy (ENMG)

ENMG 502 Introduction to Energy Policy
Energy, especially in the context of economic development and environmental sustainability, presents a career-defining challenge to many disciplines and professions. This course, therefore, is intended to provide an organizing foundation for courses across the University in Law, Wharton, Design, SAS, and SEAS. This course provides an advanced introduction to the design and delivery of energy policy at various levels of government in the U.S. and elsewhere. We will take a deep look at policies that regulate oil and gas industry, nuclear, green energy, and electricity markets. This will involve looking at past, present, and proposed policy mechanisms with a special consideration of how issues of climate change and sustainability affect those policies and policy proposals.
Taught by: Hughes
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Special Information: Please note that this is a 1 cu graduate level course offered by the Department of City and Regional Planning in the School of Design, not by the undergraduate program in the College of Arts and Sciences. All undergraduates seeking a permit should contact Cornelia Colijn for permission: ccolijn@upenn.edu.

ENMG 503 Topics in Energy Policy
This seminar will explore a collection of ideas influencing energy policy development in the U.S. and around the world. Our platform for this exploration will be seven recent books to be discussed during the semester. These books each contribute important insights to seven ideas that influence energy policy: Narrative, Transition, Measurement, Systems, Subsidiarity, Disruption, Attachment. Books for 2018 will be chosen over the summer; the 2017 books are listed here as examples: Policy Paradox (2011) by Stone, Climate Shock (2015) by Wagner and Weitzman, Power Density (2015) by Smil, Connectography (2016) by Khanna, Climate of Hope (2017) by Bloomberg and Pope, Utility of the Future (2016) by MIT Energy Initiative, Retreat from a Rising Sea (2016) by Pilkey, Pilkey-Jarvis, Pilkey.

EAS 097 Embed Controlled Gardening
A service course intended to integrate concepts of basic physics, biology and electronics and systems engineering for the benefit of Penn engineering students, teachers and students from two minority centered community public schools. The course will engage the participants in the design and implementation of indoors cultivating systems using photo-voltaic (PV) technology to energize LED emulating the needed solar radiation for plant growth, a liquid nutrient distribution system, sensors / actuators capable of selecting the harvestable plants and keeping track of overall system parameters.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EAS 203 Engineering Ethics
In this course, students will study the social, political, environmental and economic context of engineering practice. Students will develop an analytical toolkit to identify and address ethical challenges and opportunities in the engineering profession, including studies of risk and safety, professional responsibility, and global perspectives. The course will begin with a foundation in the history of engineering practice and major Western ethical and philosophical theories. Students will then apply this material to both historical case studies, such as Bhopal, the NASA Shuttle Program, and Three Mile Island, as well as contemporary issues in big data, artificial intelligence, and diversity within the profession. Students will consider how engineers, as well as governments, the media, and other stakeholders, address such issues.

EAS 204 Technical Innovation & Civil Discourse in a Dynamic World
The promises of today's emerging technologies include longer, healthier lives; safer, faster, and more efficient transportation; and immediate, far-reaching communication mechanisms. Recent advances in machine learning, autonomous systems, nanomaterials, and neurotechnologies offer the potential to dramatically change the way our global society lives, works and shares information. With such prolific power, these technologies also pose new challenges and risks such as reduced individual privacy, political repercussions, and inequitable access to the benefits of technology. Rapid technological innovation often outpaces and challenges established legal regulations, cultural norms, and societal frameworks of communications. A robust civil discourse anchored in technical expertise, cultural context, and inclusivity can foster the optimization of the benefits of emerging technologies. This course is aimed at preparing undergraduate students to engage in and lead such discourses. The students will consider a series of engineering innovations from technical, legal and social perspectives and will hone the analytical and communication skills necessary to identify and address opportunities for civil discourse. Undergraduates must have passed the WRIT requirement.

EAS 205 Applications of Scientific Computing.
This course will discuss a number of canonical problems and show how numerical methods are used to solve them. Lectures will introduce the underlying theory and the relevant numerical methods. Students will be expected to implement solutions to the problems using MATLAB. The course will use the visualization capabilities of MATLAB to provide students with a geometric interpretation of the key ideas underlying the numerical methods. Topics to be covered will include: The solution of systems of linear systems equations with application to problems such as force balance analysis and global illumination computation. Representing and computing coordinate transformations with applications to problems in graphics, vision and robotics. Transform Coding with applications to the analysis of audio signals and image compression. Analysis of variance and the search for low dimensional representations for high dimensional data sets egs. Google's PageRank algorithm. Least Squares model fitting with applications to data analysis. Analysis of linear dynamical systems with applications to understanding the modes of vibration of mechanical systems. The analysis of stochastic systems governed by state transition matrices. Prerequisite: Prior exposure to computing via courses such as EAS 105, CIS 110, or ESE 112, Math 114, Sophomore standing.

1.0 Course Unit

EAS 244 Curiosity: Ancient and Modern Thinking about Thinking
This course will examine two approaches to the skill unanswered question of what happens when we humans come up with new knowledge. How should we describe the impulse, or set of impulses, that leads us to seek it? What is happening when we achieve it? And how do we describe the new state in which we find ourselves after we have it? We will study the work of contemporary physicists and cognitive scientists on these questions along side the approaches developed by the two most powerful thinkers from antiquity on the topic, Plato and Aristotle.
Course not offered every year
Also Offered As: CLST 344, INTG 344
Activity: Seminar
1.0 Course Unit

EAS 261 Emerging Technologies and the Future of the World
Technological change is always occurring, but the rate of change seems to be accelerating. Advances in robotics, artificial intelligence, cyber, biotechnology, and other arenas generate promise as well as peril for humanity. Will these emerging technologies unleash the innovative capacity of the world, generating new opportunities that help people live meaningful lives? Alternatively, are automation and other technologies chipping away at the labor market in a way that could create severe generational dislocation at best, and national and international turmoil at worst? These questions are important, and have consequences for how we live our lives, how nations interact, and the future of the world writ large. Emerging technologies could shape public policy at the local, national, and international level, and raise questions of fairness, ethics, and transparency. This course takes a unique approach, combining insights from engineering, political science, and law in an interdisciplinary way that will expose students both to the key technologies that could shape the future and ways to think about their potential politics, and society.
Taught by: Horowitz
Activity: Lecture
One-term course offered either term

1.0 Course Unit
EAS 301 Climate Policy and Technology
The course will examine Pacala and Socolow’s hypothesis that ‘Humanity already possesses the fundamental scientific, technical and industrial know-how to solve the carbon and climate problem for the next half-century.’ Fifteen ‘climate stabilization wedges’ i.e., strategies that each have the potential to reduce carbon emissions by 1 billion tons per year by 2054, will be examined in detail. Technology and economics will be reviewed. Socio-political barriers to mass-scale implementation will be discussed. Pacala and Socolow note ‘Every element in this portfolio has passed beyond the laboratory bench and demonstration project; many are already implemented somewhere at full industrial scale’.
One-term course offered either term
Also Offered As: EAS 505
Activity: Lecture
1.0 Course Unit

EAS 306 Electricity and Systems Markets
The course discusses the existing electricity system from technical, economic, and policy perspectives. Basic power system engineering will be reviewed early in the course. Generation, transmission, distribution, and end-use technologies and economics will be discussed. Additional topics will include system operation, industry organization, government regulation, the evolution of power markets, environmental policy, and emerging technologies.
One-term course offered either term
Also Offered As: EAS 506
Activity: Lecture
1.0 Course Unit

EAS 320 Basic Chemical Process Safety
Process safety is an important but often overlooked aspect of a chemical engineer’s education. When working in chemical engineering, it’s simply not possible to learn by trial and error when the error can have catastrophic or dangerous implications. Students will learn the important technical fundamentals to allow them to contribute to a safer future.
Chemical process safety is a scientific discipline as important as chemical production. What the students learn here could literally save their life. At the conclusion of the course, the expectation is that students should be able to identify hazards, safety risks and perform inherently safer design for chemical processes. By the end of the course, students will achieve Level I certification from SACHE (Safety and Chemical Engineering Education), a division of AIChE.
Taught by: Marylin Huff
Course not offered every year
Prerequisite: CBE 160
Activity: Lecture
1.0 Course Unit

EAS 401 Energy and Its Impacts: Technology, Environment, Economics, Sustainability
The objective is to introduce students to one of the most dominating and compelling areas of human existence and endeavor: energy, with its foundations in technology, from a quantitative sustainability viewpoint with its association to economics and impacts on environment and society. This introduction is intended both for general education and awareness and for preparation for careers related to this field, with emphasis on explaining the technological foundation. The course spans from basic principles to applications. A review of energy consumption, use, and resources; environmental impacts, sustainability and design of sustainable energy systems; introductory aspects of energy economics and carbon trading; methods of energy analysis; forecasting; energy storage; electricity generation and distribution systems (steam and gas turbine based power plans, fuel cells), fossil fuel energy (gas, oil, coal) including nonconventional types (shale gas and oil, oil sands, coalbed and tight-sand gas), nuclear energy wastes: brief introduction to renewable energy use: brief introduction to solar, wind, hydroelectric, geothermal, biomass; energy for buildings, energy for transportation (cars, aircraft, and ships); prospects for future energy systems: fusion power, power generation in space. Students interested in specializing in one or two energy topics can do so by choosing them as their course project assignments. Prerequisite: Any University student interested in energy and its impacts, who is a Junior Senior. Students taking the course EAS 501 will be given assignments commensurate with graduate standing.
Course usually offered in fall term
Also Offered As: EAS 501
Activity: Lecture
1.0 Course Unit
Notes: Any University student interested in energy and its impacts, who is a Junior Senior. Students taking the course as EAS 501 will be given project assignments. Prerequisite: Any University student interested in energy and its impacts, who is a Junior Senior. Students taking the course as EAS 501 will be given assignments commensurate with graduate standing.

EAS 402 Renewable Energy and Its Impacts: Technology, Environment, Economics, Sustainability
The objective is to introduce students to the major aspects of renewable energy, with its foundations in technology, association to economics, and impacts on ecology and society. This introduction is intended both for general education and awareness and for preparation for careers related to this field. The course spans from basic principles to applications. A review of solar, wind, biomass, hydroelectric, geothermal, energy, and prospects for future energy systems such as renewable power generation in space. Prerequisite: Junior standing
Course not offered every year
Also Offered As: EAS 502
Activity: Lecture
1.0 Course Unit

EAS 403 Energy Systems and Policy
This is a survey course that will examine the current U.S. energy industry, from production to consumption, and its impacts on local, regional, and the global environment. The course will seek to provide a fuller understanding of existing energy systems, ranging from technical overviews of each, a review of industry organization, and an exploration of the well-established policy framework each operates within. Near-term demands upon each energy supply system will be discussed, with particular focus on environmental constraints. Policy options facing each energy industry will be reviewed.
One-term course offered either term
Also Offered As: EAS 503
Activity: Lecture
1.0 Course Unit
EAS 408 Building Leadership
This course will build students' personal leadership skills by helping them to kick-start a venture that they are passionate about. Ideas could range from a non-profit to help provide tutoring skills to local under-represented youth, to designing a product that could be launched on a crowdfunding platform to creating a movement to drive more minority representation in books/media. Students must bring their own idea for their project and as we work to build it out, they will develop the leadership skills needed to bring it to life (e.g., networking, harnessing an ecosystem, building out a project plan). Lectures will be a mix lessons on real-world skill building (e.g., for networking - where to start, who to contact) with activities that will be specifically applied to the student's venture. In addition, guest lecturers will be brought in so that students can learn from their leadership journeys. Students will also be paired with mentors to act as a sounding board and there will be weekly in-class discussions on their projects so that students can push each other as well - similar to how CEO roundtables work. At the end of this course, the goal will be to build enough momentum that students can take their project and continue to build it outside of class. Students will also be pushed to 'think big' so that their ideas from just a passion project to something that will have an impact. Prerequisite: Idea for the Passion Project that you want to build and Permission of the instructor. Taught by: Vanessa Z Chan
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

EAS 499 Senior Capstone Project
The Senior Capstone Project is required for all BAS degree students, in lieu of the senior design course. The Capstone Project provides an opportunity for the student to apply the theoretical ideas and tools learned from other courses. The project is usually applied, rather than theoretical, exercise, and should focus on a real world problem related to the career goals of the student. The one-semester project may be completed in either the fall or spring term of the senior year, and must be done under the supervision of a sponsoring faculty member. To register for this course, the student must submit a detailed proposal, signed by the supervising professor, and the student's faculty advisor, to the Office of Academic Programs two weeks prior to the start of the term. One-term course offered either term
Activity: Independent Study

EAS 507 Intellectual Property and Business Law for Engineers
Engineers are often on the front line of innovation. The goal of this course is to introduce engineering students to the basics of Intellectual property (IP) and business laws that they will encounter throughout their careers. Understanding these laws is critical for the protection of IP and for the creation and success of high-tech start-up ventures. Market advantage in large part springs from a company's IP. Without legal protection and correct business formation, proprietary designs, processes, and inventions could be freely used by competitors, ruining market advantage. A basic understanding of IP laws, contractual transactions, employment agreements, business structures, and debt-equity financing will help engineering students become effective employees or entrepreneurs, to acquire investors, and to achieve success. Though open to students of all disciplines, the course will use case studies particular relevance to students of engineering and applied science.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

EAS 510 Technical Communication and Academic Writing for Non-native Speakers of English
Students will improve the grammar, word choice and organization of their professional writing by completing weekly writing assignments and a full-length research paper. Students will also give short oral presentations and receive feedback on pronunciation, wording, grammar and organization. Prerequisite: Graduate students who native language is English, but who would benefit from a course in Technical Communication, should take EAS 500.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EAS 512 Engineering Negotiation
The goal of this course is to teach students of engineering and applied science to be effective negotiators. It aims to improve the way these students communicate virtually any human interaction. The course intends to improve the ability of engineers and other technology disciplines to gain more support more quickly for projects, research product and services development, and marketing. For those wanting to be entrepreneurs or intrapreneurs, the course is designed essentially to find the most valuable possible in starting up and running companies. Based on Professor Diamond's innovative and renowned model of negotiation, it is intended to assist those for whom technical expertise is not enough to persuade others, internally and externally, to provide resources, promotions and project approvals; or to resolve disputes, solve problems and gain more opportunities. Rejecting the 10-year-old notions of power, leverage and logic, the course focuses on persuasion by making better human connections, uncovering perceptions and emotions, and structuring agreements to be both collaborative and fair. This course is entrepreneurial in nature and can provide many times more value than traditional persuasion. The Getting More book has sold more than 1 million copies around the world and is also used by universities, corporations (Google), and U.S. Special Operations (SEALs, Green Berets, Special Forces, Marines) to save lives and reduce conflict. From the first day, students will do interactive cases based their own engineering-related problems and based on current problems in the news. There will be diagnostics enabling every student to assess his/her skill and improvements.

1.0 Course Unit

EAS 545 Engineering Entrepreneurship I
Engineers and scientists create and lead great companies, hiring managers when and where needed to help execute their vision. Designed expressly for students having a keen interest in technological innovation, this course investigates the roles of inventors and founders in successful technology ventures. Through case studies and guest speakers, we introduce the knowledge and skills needed to recognize and seize a high-tech entrepreneurial opportunity - be it a product or service and then successfully launch a startup or spin-off company. The course studies key areas of intellectual property, its protection and strategic value; opportunity analysis and concept testing; shaping technology driven inventions into customer-driven products; constructing defensible competitive strategies; acquiring resources in the form of capital, people and strategic partners; and the founder's leadership role in an emerging high-tech company. Throughout the course emphasis is placed on decisions faced by founders, and on the sequential risks and determinants of success in the early growth phase of a technology venture. The course is designed for, but not restricted to, students of engineering and applied science and assumes no prior business education. Prerequisite: Third or Fourth year or Graduate standing

EAS 546 Engineering Entrepreneurship II
This course is the sequel to EAS 545 and focuses on the planning process for a new technology venture. Like its prerequisite, the course is designed expressly for students of engineering and applied science having a keen interest in technological innovation. Whereas EAS 545 investigates the sequential stages of engineering entrepreneurship from the initial idea through the early growth phase of a startup company, EAS 546 provides hands-on experience in developing a business plan for such a venture. Working in teams, students prepare and present a comprehensive business plan for a high-tech opportunity. The course expands on topics from EAS 545 with more in-depth attention to: industry and marketplace analysis; competitive strategies related to high-tech product/service positioning, marketing, development and operations; and preparation of sound financial plans. Effective written and verbal presentation skills are emphasized throughout the course. Ultimately, each team presents its plan to a distinguished panel of recognized entrepreneurs, investors and advisors from the high-tech industry. One-term course offered either term
Prerequisite: EAS 545
Activity: Lecture
1.0 Course Unit

EAS 549 Engineering Entrepreneurship Lab
Engineering Entrepreneurship Lab applies the principles of engineering and engineering entrepreneurship to a real-world problem of your specific field of study or professional interest. You will develop a venture based on a high-tech concept of your choosing (the one that you submitted as part of your application to the course). Like its prerequisite, EAS545 Engineering Entrepreneurship I, the course is designed expressly for students of engineering and applied science having a keen interest in technological innovation. Throughout the course you will formulate and test hypotheses using Lean Startup methodologies to develop key aspects of the venture including product development, customer and market development, team building and operations, and financial modeling and planning. The primary objective of the course is to develop a venture characterized by market-driven, high-tech product-service offering with a clear and validated product-market fit, an operational plan to bring your offering to market, and a plan to secure the resources required for execution of your plan. As discussed in EASS45, primary market research is essential to achieving product-market fit and validating all aspects of your business model. The success of your venture and your grade in the course will depend on the results of this research and testing process. Ideally, your work in this course results in pursuit of your high-tech venture outside of class and beyond the hallowed halls of Penn! Course usually offered in spring term
Prerequisite: EAS 545
Activity: Lecture
1.0 Course Unit

EAS 590 Commercializing Information Technology
EAS 590 provides real world, hands-on learning on what it's like to actually start a high-tech company. We do that by using the Lean LaunchPad framework for Web start-ups. This class is not about how to write a business plan. Instead you will be getting your hands dirty talking to customers, partners, competitors, as you encounter the chaos and uncertainty of how a startup actually works. EAS 590 provides real world, hands-on learning on what it's like to actually start a high-tech company. We do that by using the Lean LaunchPad framework for Web start-ups. EAS 591 Leading Technology Teams
Engineers routinely work in teams collaborating with experts from multiple fields to address increasingly large complex problems/opportunities. EAS 591, Leading Technology Teams, focuses on the dynamics of innovative, interdisciplinary, cross-functional teams. We examine ways to improve team performance by exploring technology leadership issues from multiple perspectives (i.e., the individual, the team, and the organization). Developing skills to be an effective technology team member, leader, and/or sponsor will provide you with a competitive advantage, not only for getting your first job but also for success throughout your career.
Activity: Lecture
0.5 Course Units

EAS 592 Service Learning and Leadership
This course is designed to train the student leaders for service learning programs and exposes students to relevant skills, including leadership, risk management, cultural competency, and organizational dynamics.
Activity: Lecture
1.0 Course Unit

EAS 595 Foundations of Leadership
The goal of EAS 595 is to increase your capacity to effectively lead throughout your career and wherever you find yourself in an organization. This involves understanding and learning about yourself and about working effectively with others. The course starts with an identification of values, strengths, preferences and passions. It then proceeds with the personal and interpersonal and moves through the strategic aspects of leadership by bringing together aspects of management science, social psychology, psychology of personality and behavioral economics. Topics include teamwork and team dynamics, identifying life's goals and dreams, decision making, valuing differences, understanding the dynamics of influence, using power with integrity, giving and receiving feedback, leading change, and discovering where we can make our contribution.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
EAS 895 Professional Master's Academic Field Studies
This class allow master's students to pursue full-time internship opportunities in the Fall semester to apply what they have learned in practice. The student is required to work 20-40 hours a week, 12-15 week long full-time internships. International students under this academic field study track will be eligible for full-time CPT. As part of the application for field studies, students have to attach their coursework plan and receive approval from their program director to make sure they can meet all program requirements in 10 CU's (11 CU's for BIOT). Prerequisites: This class is restricted to SEAS Master's students only. Students can apply after their first two semesters of academic work at Penn. Students must complete at least 6 CU's (course units) between their first two semesters during their first year. Academic field studies can only be done once for the duration of a master’s student studies at Penn. For students pursuing a single Master’s degree, the field study period is usually the summer and continuing into the Fall semester of the second year. This option is not permitted in the final semester in which the student is graduating. As part of the application for field studies, students have to attach their coursework plan and receive approval from their program director to make sure they can meet all program requirements in 10 CU's (11 CU's for BIOT). Students on a single master’s degree have to graduate within 2 years. Dual degree masters students have to graduate within 3 years. Student must be in good academic standing (minimum GPA 3.0) with their program and the University. Those that are not, are unable to apply for the track. It is the student’s responsibility to apply for CPT through ISSS. Students have to submit an academic field study proposal at least one month before the Spring term ends. Students that receive an offer to extend their Summer internship, must turn in their proposal no later than August 1st. Proposal requires details on internship work, explain relevance to student’s field of study, and requires a supervising faculty member. Students apply for field study has to have an internship offer from company. It is not the responsibility of Penn to help students find an internship.
Activity: Field Work
1.0 Course Unit

EAS 896 Professional Master's Career Development
This class on professional career development broadly exposes students to organized workshops and seminar talks related to career development and research development. In career development, workshops will be held by career services staff related to identifying career interests, interview strategies, and career fair preparation. The research seminar talks are geared toward giving students exposure to research activities at Penn. The research seminar talks will be offered by individual departments and research programs, and include invited talks by external or internal faculty members. Students will receive a S/U grade and submit a final report at the end of the semester. Prerequisite: This class is restricted to SEAS Master’s student only. Master’s students can take the class at any time. However, the recommendation time to take this course is Fall semester of the second year.
Activity: Lecture
1.0 Course Unit
Notes: This class is restricted to SEAS Master’s students only. Master’s students can take the class at any time. However, the recommended time to take this course is Fall semester of the second year.

Engineering (ENGR)

ENGR 101 Introduction to Engineering: Energy, Environment and Sustainability
This course is intended to introduce students to the field of engineering. It will expose students to the engineering disciplines through hands-on laboratory experiences. In addition, the course will provide tutorials on how to use important software packages as well as a 'Professional Preparation' module through studies of communication (writing and speaking skills), ethics, leadership and teamwork. This course is ideal for any freshman interested in exploring the possibility of studying engineering at Penn. The course counts as an engineering requirement in SEAS.
Taught by: Eric Stach
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ENGR 105 Introduction to Scientific Computing
This course will provide an introduction to computation and data analysis using MATLAB - an industry standard programming and visualization environment. The course will cover the fundamentals of computing including: variables, functions, decisions, iteration, and recursion. These concepts will be illustrated through examples and assignments which show how computing is applied to various scientific and engineering problems. Examples will be drawn from the simulation of physical and chemical systems, the analysis of experimental data, Monte Carlo numerical experiments, image processing, and the creation of graphical user interfaces. This course does not assume any prior programming experience but will make use of basic concepts from calculus and Newtonian physics.
Activity: Lecture
1.0 Course Unit

ENGR 140 Penn Global Seminar: Robotics and Rehabilitation
This course focuses on understanding the design of intelligent technologies for rehabilitation diagnostics and intervention, which include using biomechanics, computer science, robotics and mechatronics design principles. Beyond technology, this course explores the design process in which medical technology is developed for foreign economies, cultures, and healthcare systems. Student projects focus on understanding stake-holders needs and developing technology able to address a Jamaican client rehabilitation needs.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
ENGR 212 Concepts in Micro- and Nanotechnology
Seminar/Lecture course on micro- and nanotechnology intended for nonspecialists. This course will discuss how very small structures and devices, as well as systems comprising these devices, are fabricated and characterized, with application examples from microelectronics, microelectromechanical systems, and quantum devices and systems. Current societal and ethical implications of micro- and nanotechnology, as well as creation and exploitation of commercial opportunities, will be discussed. Prerequisite: If course requirement not met, permission of instructor.
One-term course offered either term
Prerequisite: MATH 104 AND PHYS 093
Activity: Lecture
1.0 Course Unit

ENGR 250 Energy Systems, Resources and Technology
The course will present a comprehensive overview of the global demand for energy, and the resource availability and technology used in its current and future supply. Through a personal energy audit, students will be made aware of the extensive role that energy plays in modern life, both directly, through electricity and transportation fuel, and indirectly in the manufacturing of goods they use. The course will cover how that energy is supplied, the anticipated global growth in energy demand, the resource availability and the role of science and technology in meeting that demand in a world concerned about climate change. The roles of conservation, improved efficiency and renewable energy in meeting future demand in a sustainable, environmentally benign way will be covered. Prerequisite: Basic understanding of chemistry and physics
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ENGR 450 Biotechnology, Immunology, Vaccines and COVID-19
This course will start with the fundamentals of biotechnology, and no prior knowledge of biotechnology is necessary. Some chemistry is needed to understand how biological systems work. We will cover basic concepts in biotechnology, including DNA, RNA, the Central Dogma, proteins, recombinant DNA technology, polymerase chain reaction, DNA sequencing, the functioning of the immune system, acquired vs. innate immunity, viruses (including HIV, influenza, adenovirus, and coronavirus), gene therapy, CRISPR-Cas9 editing, drug discovery, types of pharmaceuticals (including small molecule inhibitors and monoclonal antibodies), vaccines, clinical trials. Some quantitative principles will be used to quantifying the strength of binding, calculate the dynamics of enzymes, writing and solving simple epidemiological models, methods for making and purifying drugs and vaccines. The course will end with specific case study of coronavirus pandemic, types of drugs proposed and their mechanism of action, and vaccine development. Taught by: Daniel Hammer
Course usually offered in fall term
Also Offered As: ENGR 550
Prerequisite: MATH 114 AND CHEM 102
Activity: Lecture
1.0 Course Unit

ENGR 503 Engineering in Oil, Gas and Coal, from Production to End Use
While conventional wisdom is that the world is running out of fossil fuels, technical advances such as deep water production, directional drilling, hydrofracturing, and the refining of non-conventional crude oil sources has increased the resource base significantly and there are well over 100 years of reserves of oil, natural gas and coal. The effect of technology advances has been most profound in the United States, where net energy imports are projected to fall to 12% of consumption by 2020. Excellent, highly technical careers are available in these industries, with opportunities to reduce their impact on the environment and in particular on climate change. The course will cover engineering technology in oil, natural gas and coal from production through end use. It will equip graduating students with the knowledge to contribute in these industries and to participate in informed debate about them.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ENGR 504 Fundamental Concepts in Nanotechnology
This is a Master’s level course that seeks to teach the physics needed to begin a study of engineering and science at the nanometer scale. Since the nanometer scale is so close to the quantum scale, much of the course deals with an introduction to quantum mechanics but the course also includes discussions in solid-state physics, electricity and magnetism and mechanics. The objective of the course is to teach the physics that an engineering student would need to have in order to do experimental work at the nanometer scale. In addition, this course will prepare the student to take more advanced courses in the Nanotechnology Program. Prerequisite: Some Differential Equations, Senior or Master’s standing in Engineering or permission of the instructor
One-term course offered either term
Activity: Lecture
1.0 Course Unit

ENGR 550 Biotechnology, Immunology, Vaccines and COVID-19
This course will start with the fundamentals of biotechnology, and no prior knowledge of biotechnology is necessary. Some chemistry is needed to understand how biological systems work. We will cover basic concepts in biotechnology, including DNA, RNA, the Central Dogma, proteins, recombinant DNA technology, polymerase chain reaction, DNA sequencing, the functioning of the immune system, acquired vs. innate immunity, viruses (including HIV, influenza, adenovirus, and coronavirus), gene therapy, CRISPR-Cas9 editing, drug discovery, types of pharmaceuticals (including small molecule inhibitors and monoclonal antibodies), vaccines, clinical trials. Some quantitative principles will be used to quantifying the strength of binding, calculate the dynamics of enzymes, writing and solving simple epidemiological models, methods for making and purifying drugs and vaccines. The course will end with specific case study of coronavirus pandemic, types of drugs proposed and their mechanism of action, and vaccine development. Taught by: Daniel Hammer

Activity: Visiting Student Tuition
1.0 Course Unit
1.0 Course Unit
Activity: Lecture

ENM 240 Differential Equations and Linear Algebra
This course discusses the theory and application of linear algebra and differential equations. Emphasis is placed building intuition for the underlying concepts and their applications in engineering practice along with tools for solving problems. We will also use computer simulations in MATLAB to augment this intuition.
One-term course offered either term
Prerequisite: MATH 114
Activity: Lecture
1.0 Course Unit

ENM 251 Analytical Methods for Engineering
This course introduces students to physical models and mathematical methods that are widely employed in various branches of engineering. Illustrative examples are used to motivate mathematical topics including ordinary and partial differential equations, Fourier analysis, eigenvalue problems, and stability analysis. Analytical techniques that yield exact solutions to problems are developed when possible, but in many cases, numerical calculations are employed using programs such as Matlab and Maple. Students will learn the importance of mathematics in engineering.
Prerequisite: Sophomore standing in SEAS or permission of instructor(s)
Course usually offered in spring term
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit

ENM 321 Engineering Statistics
This is a first course in applied statistics and probability for students in engineering. The course covers basic concepts of probability, discrete and continuous random variables, probability distributions, data description techniques, random samples, estimations, hypothesis testing, regression, and statistical quality control.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ENM 360 Introduction to Data-driven Modeling
From recognizing voice, text or images to designing more efficient airplane wings and discovering new drugs, machine learning is introducing a transformative set of tools in data analysis with increasing impact across engineering, sciences, and commercial applications. In this course, you will learn about principles and algorithms for extracting patterns from data and making effective automated predictions. We will cover concepts such as regression, classification, density estimation, feature extraction, sampling and probabilistic modeling, and provide a formal understanding of how, why, and when these methods work in the context of analyzing physical, biological, and engineering systems.
Course usually offered in fall term
Prerequisites: ENGR 105, MATH 240
Activity: Lecture
1.0 Course Unit

ENM 375 Biological Data Science I - Fundamentals of Biostatistics
The goal of this course is to equip bioengineering undergraduates with fundamental concepts in applied probability, exploratory data analysis and statistical inference. Students will learn statistical principles in the context of solving biomedical research problems.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ENM 502 Numerical Methods and Modeling
This course provides an advanced introduction to various numerical methods for solving systems of algebraic equations (linear and non-linear) and differential equations (ordinary and partial). Techniques covered include Newton’s method, implicit and explicit time stepping, and the finite difference and finite element methods. The MATLAB software package will be used to implement the various methods and execute representative calculations.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ENM 503 Introduction to Probability and Statistics
Course usually offered in fall term
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit

ENM 510 Foundations of Engineering Mathematics - I
This is the first course of a two semester sequence, but each course is self contained. Over the two semesters topics are drawn from various branches of applied mathematics that are relevant to engineering and applied science. These include: Linear Algebra and Vector Spaces, Hilbert spaces, Higher-Dimensional Calculus, Vector Analysis, Differential Geometry, Tensor Analysis, Optimization and Variational Calculus, Ordinary and Partial Differential Equations, Integral-Value and Boundary-Value Problems, Green's Functions, Special Functions, Fourier Analysis, Integral Transforms and Numerical Analysis. The fall course emphasizes the study of Hilbert spaces, ordinary and partial differential equations, the initial-value, boundary-value problem, and related topics.
Course usually offered in fall term
Prerequisite: MATH 240, 241
Activity: Lecture
1.0 Course Unit

ENM 575 Biological Data Science I - Fundamentals of Biostatistics
The goal of this course is to equip bioengineering undergraduates with fundamental concepts in applied probability, exploratory data analysis and statistical inference. Students will learn statistical principles in the context of solving biomedical research problems.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
ENM 511 Foundations of Engineering Mathematics - II
This is the second course of a two semester sequence, but each course is self contained. Over the two semesters topics are drawn from various branches of applied mathematics that are relevant to engineering and applied science. These include: Linear Algebra and Vector Spaces, Hilbert spaces, Higher-Dimensional Calculus, Vector Analysis, Differential Geometry, Tensor Analysis, Optimization and Variational Calculus, Ordinary and Partial Differential Equations, Initial-Value and Boundary-Value Problems, Green's Functions, Special Functions, Fourier Analysis, Integral Transforms and Numerical Analysis.

Course usually offered in spring term
Prerequisite: ENM 510
Activity: Lecture
1.0 Course Unit

ENM 512 Nonlinear Dynamics and Chaos
Activity: Lecture
1.0 Course Unit

ENM 520 Principles and Techniques of Applied Math I
This course is targeted to engineering PhD students in all areas. It will focus on the study of linear spaces (both finite and infinite dimensional) and of operators defined on such spaces. This course will also show students how powerful methods developed by the study of linear spaces can be used to systematically solve problems in engineering. The emphasis in this course will not be on abstract theory and proofs but on techniques that can be used to solve problems. Some examples of techniques that will be studied include Fourier series, Green's functions for ordinary and partial differential operators, eigenvalue problems for ordinary differential equations, singular value decomposition of matrices, etc. Prerequisite: Basic theory of ordinary and partial differential equations
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ENM 521 Principles and Techniques of Applied Math II
This course is a continuation of ENM 520 (or equivalent) and deals with classical methods in applied mathematics. The topics to be covered include: Functions of a Complex Variable, Partial Differential Equations, Asymptotic and Perturbation Methods, and Convex Analysis and Variational Methods.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ENM 531 Data-driven Modeling and Probabilistic Scientific Computing
We will revisit classical scientific computing from a statistical learning viewpoint. In this new computing paradigm, differential equations, conservation laws, and data act as complementary agents in a predictive modeling pipeline. This course aims to explore the potential of modern machine learning as a unifying computational tool that enables learning models from experimental data, inferring solutions to differential equations, blending information from a hierarchy of models, quantifying uncertainty in computations, and efficiently optimizing complex engineering systems. Prerequisite: Programming in Python and MATLAB
Course not offered every year
Prerequisites: MATH 240, 513, 430 or ENM 240, 321, 503
Activity: Lecture
1.0 Course Unit

ENM 540 Topics In Computational Science and Engineering
This course is focused on techniques for numerical solutions of ordinary and partial differential equations. The content will include: algorithms and their analysis for ODEs; finite element analysis for elliptic, parabolic and hyperbolic PDEs; approximation theory and error estimates for FEM. Prerequisite: Background in ordinary and partial differential equations; proficiency in a programming language such as MATHLAB, C, Fortran
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENM 550 Topics In Computational Science and Engineering
This course is focused on techniques for numerical solutions of ordinary and partial differential equations. The content will include: algorithms and their analysis for ODEs; finite element analysis for elliptic, parabolic and hyperbolic PDEs; approximation theory and error estimates for FEM. Prerequisite: Background in ordinary and partial differential equations; proficiency in a programming language such as MATHLAB, C, Fortran
Course not offered every year
Activity: Lecture
1.0 Course Unit

English (ENGL)

ENGL 003 Introduction to Queer Theory
This course provides an introduction to the field of queer studies. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Also Offered As: GSWS 003
Activity: Lecture
1.0 Course Unit
ENGL 005 In Dark Times: The Dystopian Imagination in Literature and Film
This CWiC course will offer a guided introduction to the one of the most resilient genres of the human imagination: dystopian and apocalyptic fiction. Like a group of survivors huddled around a campfire, we will turn to literature and cinema to debate some of the big questions about the future of science, technology, religion, and capitalism. This course is designed as a Critical Speaking Seminar, and the majority of class assignments will be devoted to oral presentations: including a Parliamentary-style debate and a video essay. We will begin by reading some of the early, influential works in the dystopian genre by authors like Mary Shelley, H.G. Wells, and Aldous Huxley. Next, we will explore the paranoid, schizophrenic world of Cold-War-era dystopias by J.G Ballard, Philip K. Dick and Octavia Butler. We will conclude by reading contemporary climate fiction by the likes of Margaret Atwood and Kim Stanley Robinson. Alongside the literary material, we will also track the changing nature of dystopian cinema from classics like Metropolis (1927) and La Jetee (1962) to the latest Zombie film. By the end of course, students will have a firm grasp of the history of the genre and will be able to draw on this knowledge to effectively debate issues related to privacy, big business, animal rights, climate change, migration etc.
Taught by: Dadawala
Also Offered As: CIMS 005
Activity: Seminar

ENGL 009 Introduction to Digital Humanities
This course provides an introduction to foundational skills common in digital humanities (DH). It covers a range of new technologies and methods and will empower scholars in literary studies and across humanities disciplines to take advantage of established and emerging digital research tools. Students will learn basic coding techniques that will enable them to work with a range data including literary texts and utilize techniques such as text mining, network analysis, and other computational approaches.
Taught by: Trettien
One-term course offered either term
Also Offered As: CIMS 009, COML 009, HIST 009
Activity: Lecture

ENGL 010 Introduction to Creative Writing
A course designed to introduce students to many of the elements of creative writing, including fiction, poetry, journalism, creative nonfiction, and memoir. Students can expect to read from a variety of assigned texts, respond to regular writing prompts, and workshop their own creative work in a collaborative setting. This course does not satisfy the writing requirement. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar

ENGL 014 Dark Comedy in Theatre and Film
This course will examine the ‘troublesome genre’ of dark comedy by looking at the ways in which theatre and film use comic and tragic structures and traditions to explore concepts and stories seemingly at odds with those traditions. Although not always organized chronologically in time, we will examine the formal and structural characteristics of tragicomedy by tracing its development, from some of its earliest roots in Roman comedy, to its manifestation in contemporary films and plays. Aside from close readings of plays and analysis of films, we will read selected critical essays and theory to enhance our understanding of how dark comedies subvert categories and expectations. We will look at how dark comedies affect audiences and read sections of plays aloud in class. Issues to be considered include comparing the way the genre translates across theatre and film (adaptation) and examining the unique placement of the genre at the heart of contemporary American culture. Students will have the opportunity to experiment with creating tragicomic effect through performance in their presentations. The class is a seminar, with required participation in discussions. Other assignments include an 8-10 page paper and a presentation. We will read plays by authors as diverse as Plautus, Anton Chekhov, and Lynn Nottage, and filmmakers including Charlie Chaplin, Sofia Coppola, and Bong Joon-ho.
Taught by: Ferguson
Also Offered As: CIMS 274, THAR 273
Activity: Seminar

ENGL 015 Topics in Literature
An introduction to Writing about Literature, with emphasis on a particular theme, genre, or period. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
One-term course offered either term
Also Offered As: CIMS 015, CLST 019, GSWS 017, LALS 016
Activity: Seminar

ENGL 016 Topics in Literature
Freshman Seminars under the title 'Topics in Literature' will afford entering students who are considering literary study as their major the opportunity to explore a particular and limited subject with a professor whose current work lies in that area. Topics may range from the lyric poems of Shakespeare's period to the ethnic fiction of contemporary America. Small class-size will insure all students the opportunity to participate in lively discussions. Students may expect frequent and extensive writing assignments, but these seminars are not writing courses; rather, they are intensive introductions to the serious study of literature. One of them may be counted toward the English major and may be applied to a period, genre, or thematic requirement within the major. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Also Offered As: AFRC 017, COML 016
Activity: Seminar
Notes: Freshman Seminar
ENGL 017 Freshman Seminar
The primary goal of the freshman seminar program is to provide every freshman the opportunity for a direct personal encounter with a faculty member in a small sitting devoted to a significant intellectual endeavor. Specific topics be posted at the beginning of each academic year. Please see the College Freshman seminar website for information on current course offerings https://www.college.upenn.edu/node/403
One-term course offered either term
Also Offered As: ARTH 100, CIMS 016, URBS 106
Activity: Seminar
1.0 Course Unit
Notes: For Freshmen Only

ENGL 018 Old English
This course introduces students to the powerful and influential corpus of Old English literature. We will read a wide variety of texts: short poems such as The Wonderer, The Seafarer, The Wife’s Lament and the passionate religious poem The Dream of The Rood; chronicles such as The Battle Of Maldon Against The Vikings, The Old Testament, Exodus and Bede’s Conversion Of The English; and selections from the greatest of all English epics, Beowulf. Readings will be in Old English, and the first few weeks of the course will be devoted to mastering Old English prosody, vocabulary, and grammar (as well as a crash course on the early history of the English language). During the last few weeks we may read modern criticism of Old English poetry, or we will consider the modern poetic reception of Old English literature and explore theories and problems of translation, reading translations of Old English poems by Yeats, Auden, Tolkien, and Heaney. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 020 Literature Before 1660
This course will introduce students to key works of English literature written before 1660. It will explore the major literary genres of this period, as well as the social and cultural contexts in which they were produced. The course will examine how literature texts articulate changes in language and form, as well as in concepts of family, nation, and community during the medieval and early modern periods. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ENGL 021 Medieval Literature and Culture
This course introduces students to four hundred years of English literary culture, from approximately 1100 to 1500. This period was marked by major transformations, not only with respect to government, law, religious practice, intellectual life, England’s relation to the Continent (during the 100 Years War), the organization of society (especially after the Black Death), the circulation of literary texts, and the status of authors. Topics may include medieval women writers, manuscript production, literatures of revolt, courtly culture, Crusades, cross-Channel influences, and religious controversy. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 024 Introduction to American and British Film and Media
This is a course on the history of Hollywood. It seeks to unravel Hollywood’s complex workings and explain how the business and politics of the film industry translate into the art of film. We will trace the American film industry from Edison to the internet, asking questions such as: What is the relationship between Hollywood and independent film? How has the global spread of Hollywood since the 1920s changed the film industry? How has Hollywood responded to crises in American politics (e.g., world wars, the cold war, terrorism)? And how have new technologies such as synchronized sound and color cinematography, television and the VCR, and new digital technologies changed film and the film industry? We will look closely at representative studios (Paramount, Disney, and others), representative filmmakers (Mary Pickford, Frank Capra, and George Lucas, among many others), and we will examine the impact of industrial changes on the screen. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
Course not offered every year
Also Offered As: CIMS 024
Activity: Lecture
1.0 Course Unit

ENGL 025 The Age of Chaucer
In this class we come to speak as people spoke in England some six centuries ago: in medieval or ‘Middle’ English. We do this by reading the poetry of Geoffrey Chaucer, a great poet who has influenced everyone from William Shakespeare to Sylvia Plath. Since Middle English takes some getting use to, class assignments are not heavy: usually about 800 lines per class. A typical class might begin by looking at a few of the easier passages in the Canterbury Tales, proceed to reading the greatest poem of love in the English language (Chaucer’s Troilus And Criseyde), before moving on to other contemporary writers in medieval culture. We will likely compare representations of medieval Christianity, Judaism, and Islam, as well as aspects of film adaptation by Italian filmmaker Pasolini (and perhaps by Chaucer scholar Terry Jones). We will consider what it might have been like to live secure in an age of faith; yet to live insecure, as a dizzying new profusion of trades and occupations sprang up in unprecedented ‘divisions of labor.’ We will imagine being a medieval woman, and may visit and handle medieval manuscripts. Above all, we will enjoy the poetry. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 022 Romance
This course will focus on what is arguably the most extravagant, adventuresome, and fantastical of the literary genres: the Romance. We will read a number of medieval and renaissance romance narratives, in verse and prose, beginning with the Arthurian romances (Malory’s Morte D’Arthur, Sir Gawain And The Green Knight) and continuing with as many (and as much) of the great renaissance romances as time will allow. Sir Philip Sidney’s Arcadia, Edmund Spensers The Faerie Queen, and Lady Mary Wroth’s Urania. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit
ENGL 026 Early Drama
Early drama in English had its roots as much in Christianity as in Classical antiquity. What grew into the theater of Shakespeare began as networks of strolling players and church authorities in market towns sponsoring cycles of ‘miracle’ and ‘mystery’ plays. This course will introduce students to major dramatic works of the medieval and early modern periods, including plays written for the public stage, closet dramas, masques, mayoral pageants and other kinds of performances. The course will also pay attention to the development of different dramatic genres during these periods, as well as the social and cultural contexts in which they were produced. Students thus will explore the history of drama in English through the renaissance to the closing of the theaters in 1641 and their eventual reopening in 1660. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 029 Classical Antiquity and English Literature
This course will examine the relationship between English literature and that of ancient Greece and Rome. At times we will discuss how classical theories of genre and aesthetics were appropriate and reinvented in medieval, renaissance, and seventeenth-century texts. What does it mean to call Hamlet and Oedipus The King tragedies, or The Frogs and The Way Of The World comedies? Should we consider the development of English drama and poetry as an extension of an imposing classical tradition or as a sustained and resistant response to it? See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
For BA Students: Arts and Letters Sector

Also Offered As: CLST 102
Activity: Lecture
1.0 Course Unit
Notes: Formerly ENGL 096

ENGL 031 Introduction to Renaissance Literature and Culture
This course will survey the cultural history of sixteenth and seventeenth century England. Interdisciplinary in nature and drawing on the latest methodologies and insights of English studies, we will explore how aesthetics, politics, social traditions, impacted literature at this vital and turbulent time of English history. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

ENGL 033 The Bible As Literature
Successive generations have found the Bible to be a text which requires even demands extensive interpretation. This course explores the Bible as literature, considering such matters as the artistic arrangement and stylistic qualities of individual episodes as well as the larger thematic patterns of both the Old and New Testaments and the Apocrypha. A good part of the course is spent looking at the place of the Bible in cultural and literary history and the influence of such biblical figures as Adam and Eve, David, and Susanna on writers of poetry, drama, and fiction in the English and American literary traditions. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 034 Cultures of The Book
The impact of various technologies (from writing to various forms of manuscript to print to electronics) on the way the written word gives shape to a culture. The emphasis is on western cultures from Plato to the present, but participation by students with interest or expertise in non-western cultures will be of great value to the group as a whole. The course offers an ideal perspective from which students can consider meta-issues surrounding their own special interests in a wide variety of fields, as well as learn to think about the way in which traditional fields of study are linked by common inherited cultural practices and constructions. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

ENGL 038 The Age of Milton
The seventeenth century was a time of revolution and upheaval, of excesses both puritanical and cavalier. It saw the execution of one kind and the restoration of another, and survived the English Civil War and the Great Fire and Great Plague of London. This course explores the literature of this century through the works of John Milton’s major works (selected sonnets, Comus, Areopagitica, Paradise Lost, Paradise Regained, and Samson Agonistes), and his contemporaries. We will concentrate on a number of issues that governed writing in the period, particularly the tension between individual interiority and historical, social and political activity. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 040 British Poetry 1660 - 1914
This course provides students with a survey of British poetry and poetics from the Restoration to the Modern period, and usually will include writers ranging from Aphra Behn and Alexander Pope to Thomas Hardy. The course may be offered in various forms, some covering less, and some more historical back ground. Most will provide a sampling of eighteenth-century, Romantic, and Victorian poets. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit
ENGL 041 18th-Century British Literature
An introduction to British literary and cultural history in the eighteenth century. Typically, this course will contain materials from the later seventeenth to the early nineteenth centuries—from the Restoration and Glorious Revolution through the Enlightenment, the American and French Revolutions, and the Napoleonic Wars—though it need not cover the entire period. We will read plays, poetry and prose in order to understand the aesthetic, intellectual, social and political issues of literary production and achievement in this period. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 045 18th-Century Novel
This survey of the novel addresses key questions about the novel’s ‘rise’ in the eighteenth century on both sides of the Atlantic, as well as attending to the cultural conditions that attended this new literary form. How did the concurrent ‘rise’ of the middle classes and the emergence of an increasingly female reading public affect the form and preoccupations of early novels? What role did institutions like literary reviews, libraries, and the church play in the novel’s early reception? While reading will vary from course to course, students should expect to read such authors as Austen, Behn, Brockden Brown, Burney, Defoe, Fielding, Richardson, Rowlandson, Rowson, Scott, and Smollett. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 046 Drama from 1660 - 1840
This course surveys drama from the Restoration through the Romantic period, and in so doing explores arguably the most tumultuous period of British and American Theater history. These years saw the reopening of the theaters in London in 1660 after their having been closed through two decades of Civil War and Puritan rule. They witnessed the introduction of actresses to the stage, the development of scenery and the modern drop-apron stage, the establishment of theatrical monopolies in 1660 and stringent censorship in 1737, and the gradual introduction, acceptance, and eventual celebration of the stage in America. Perhaps most importantly, they oversaw some of the best comedies and farces in the English language, the introduction of pantomime and the two-show evening, sustained experimentation with music and spectacle on stage, and the transformation of tragedy into a star vehicle for actors and actresses like David Garrick, Sarah Siddons, John Philip Kemble, and Edmund Kean. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 050 The Romantic Period
This course offers an introduction to the literature of the Romantic period (ca. 1770-1830). Some versions of this course will incorporate European romantic writers, while others will focus exclusively on Anglo-American romanticism, and survey authors such as Austen, Blake, Brockden Brown, Byron, Coleridge, Emerson, Irving, Keats, Radcliffe, Scott, Shelley, and Wordsworth. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

ENGL 051 19th-Century British Literature
In 1815 in the wake of the battle of Waterloo, Great Britain controlled a staggering quarter of the world’s landmass and half of its gross national product. This course will begin with the Napoleonic Wars and this Regency aftermath to survey a century of British literature—from Romanticism through the revolutions of 1848 and the Victorian and Edwardian periods to the beginning of the first World War. Most versions of this course will read both novels and poetry, often focusing on the relation between the two and their function within nineteenth century culture. Others may incorporate drama and non-fiction prose. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 053 19th-Century American Literature
A consideration of outstanding literary treatments of American culture from the early Federalist period to the beginnings of the First World War. We will traverse literary genres, reading autobiographies and travel accounts as well as fiction and poetry. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Formerly ENGL 083
ENGL 054 Sounding Poetry: Music and Literature
Never before has poetry been so inescapable. Hip hop, the soundtrack of our times, has made rhyme, meter, and word-play part of our daily lives. How did this happen? This course begins not on the page, but in the bardic traditions of Homer's Iliad, which encoded many of the values of its time in oral formulas. Poetry was, however, no mere encyclopedia, but also a source of risk, as we will read in Plato's warning against its hypnotic powers, and in the excesses of the Bacchae. We continue through 19th and 20th century attempts to recover these classic traditions (Wordsworth, Longfellow, Pound). Yet Europe was not the only center of poetic production. How does the Homeric tradition relate to living traditions of West African singing poets (griots) and Southern African praise songs? And what traces of these traditions can we hear in the blues? We will listen to early blues recordings and discuss the politics of collecting folklore, and the genius of African American modernists (Langston Hughes, Claude McKay, Georgia Douglas Johnson) who bought vernacular speech onto the page. We will read and listen to a number of 20th century poets inspired when page meets stage in jazz poetry, dub poetry, spoken word, and hip hop. Assignments will include 2 papers, 2 small-group performances, memorization exercises, and a creative adaptation of one poem. See the English Department's website at www.english.upenn.edu for a description of current offerings.

ENGL 055 19th-Century Novel
During the nineteenth century the novel became the dominant literary form of its day, supplanting poetry and drama on both sides of the Atlantic. In this introduction to the novelists of the period, we will read the writers who secured the novel's cultural respectability and economic prominence. Likely authors will include Austen, the Brontes, Collins, Dickens, Eliot, Hardy, Hawthorne, Melville, Poe, Thackeray, Scott, and Stowe. The course will explore the themes, techniques, and styles of the nineteenth-century novel. It will focus not only on the large structural and thematic patterns and problems within each novel but also on the act of reading as a historically specific cultural ritual in itself. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 056 Modern Drama
This course will explore the major dramatic and theatrical movements that constitute the 'modern,' from the successive rises of melodrama and 'realism' in the nineteenth century, to those theatrical aesthetics that positioned themselves beyond or against realism at the turn of the twentieth century, to the present day. We'll explore political theatre, the invention of the avant-garde, the rise of the auteur-director, performance art, feminist and queer theatres, and the integration of non-western theatre into shared theatre practice in the colonial and post-colonial world. See the English Department's website at www.english.upenn.edu for a description of the current offerings.

Notes: Formerly ENGL 063

ENGL 059 Modernisms and Modernities
This class explores the international emergence of modernism, typically from the middle of the 19th century to the middle of the 20th century. We will examine the links between modernity, the avant-garde, and various national modernisms that emerged alongside them. Resolutely transatlantic and open to French, Spanish, Italian, German, or Russian influences, this course assumes the very concept of Modernism to necessitate an international perspective focusing on the new in literature and the arts -- including film, the theatre, music, and the visual arts. The philosophies of modernism will also be surveyed and concise introductions provided to important thinkers like Marx, Nietzsche, Sorel, Bergson, Freud, and Benjamin. See the English Department's website at www.english.upenn.edu for a description of the current offerings.

**ENGL 060 Rise of the Novel**
This course explores the history of the British novel and the diverse strategies of style, structure, characterization, and narrative techniques it has deployed since the late seventeenth century. While works from the eighteenth and nineteenth centuries will form the core of the reading, some versions of this course will include twentieth-century works. All will provide students with the opportunity to test the advantages and limitations of a variety of critical approaches to the novel as a genre. Readings may include works by Behn, Swift, Defoe, Richardson, Fielding, Lennox, Smollett, Burney, Scott, Austen, the Brontes, Dickens, Eliot, Hardy, Conrad, Joyce, Lawrence, Woolf, Rhys, Greene, Naipaul, Carter, Rushdie, and Coetzee. See the English Department's website at www.english.upenn.edu for a description of the current offerings.

**ENGL 062 20th-Century Poetry**
From abstraction to beat, from socialism to negritude, from expressionism to ecopoetry, from surrealism to visual poetry, from collage to digital poetry, the poetry of the twentieth century has been characterized by both the varieties of its forms and the range of its practitioners. This course will offer a broad overview of many of the major trends and a few minor eddies in the immensely rich, wonderfully varied, ideologically and aesthetically charged field. The course will cover many of the radical poetry movements and individual innovations, along with the more conventional and idiosyncratic work, and will provide examples of political, social, ethnic, and national poetics, both in the Americas and Europe, and beyond to the rest of the world. While most of the poetry covered will be in English, works in translation, and indeed the art of translation, will be an essential component the course. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: COML 062

**ENGL 063 Art Now**
One of the most striking features of today's art world is the conspicuous place occupied in it by the photographic image. Large-scale color photographs and time-based installations in projections are everywhere. Looking back, we can see that much of the art making of the past 60 years has also been defined by this medium, regardless of the form it takes. Photographic images have inspired countless paintings, appeared in combines and installations, morphed into sculptures, drawings and performances, and served both as the object and the vehicle of institutional critique. They are also an increasingly important exhibition site: where most of us go to see earthworks, happenings and body-art. This course is a three-part exploration of our photographic present. Taught by: Silverman
Course usually offered in spring term
Also Offered As: ARTH 294, ARTH 694, GSWS 294, VLST 236
Activity: Lecture
1.0 Course Unit

**ENGL 064 Modern America**
This course is concerned with American literature and cultural life from the turn of the century until about 1950. The course emphasizes the period between the two World Wars and emphasizes as well the intellectual and cultural milieu in which the writers found themselves. Works by the following writers are usually included: James, Eliot, Frost, Fitzgerald, Faulkner, West, Stevens, DuBois, Williams, Wharton, Stein, West, Moore, and Hemingway. See the English Department's website at www.english.upenn.edu for a description of the current offerings.

ENGL 066 African American Drama: From the 1920's to the present
This course will introduce students to Pulitzer-prize winning plays such as Lynn Nottage's Sweat, groundbreaking plays such as Ntozake Shange's For Colored Girls, as well as less known plays that show the wide range of form and themes in 20th and 21st century African American drama. We will focus on performance as a mode of interpreting a script and performance as a way of understanding the intersections of race, class, and gender. In-class viewings of selected scenes in recorded productions of the plays will energize our analysis of the scripts. Short, creative, performance-oriented writing assignments will produce the questions explored in the two critical essays. In addition to Sweat and For Colored Girls, our line-up may include Zora Neale Hurston's Color Struck, Anna Deavere Smith's Twilight: Los Angeles, 1992, Suzan-Lori Parks' 100 Plays for the First Hundred Days, August Wilson's Radio Golf, Lydia Diamond's Harriet Jacobs, Amiri Baraka's The Slave, and Claudia Rankine's The White Card.

Also Offered As: CIMS 273, THAR 272
Activity: Lecture
1.0 Course Unit

ENGL 069 Poetry and Poetics
What is poetry and what place does it have among literary forms? What is its relation to culture, history, and our sense of speakers and audiences? This course will focus on various problems in poetic practice and theory, ranging from ancient theories of poetry of Plato and Aristotle to contemporary problems in poetics. In some semesters a particular school of poets may be the focus; in others a historical issue of literary transmission, or a problem of poetic genres, such as lyric, narrative, and dramatic poetry, may be emphasized. The course will provide a basic knowledge of scansion in English with some sense of the historical development of metrics. This course is a good foundation for those who want to continue to study poetry in literary history and for creative writers concentrating on poetry. See the English Department's website at www/english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 070 Latina/o Literature and Culture
This course offers a broad introduction to the study of Latina/o/x culture. We will examine literature, theater, visual art, and popular cultural forms, including murals, poster art, graffiti, guerrilla urban interventions, novels, poetry, short stories, and film. In each instance, we will study this work within its historical context and with close attention to the ways it illuminates class formation, racialization, and ideologies of gender and sexuality as they shape Latino/a/xs' experience in the U.S. Topics addressed in the course will include immigration and border policy, revolutionary nationalism and its critique, anti-imperialist thought, Latinx feminisms, queer latinidades, ideology, identity formation, and social movements. While we will address key texts, historical events, and intellectual currents from the late 19th century and early 20th century, the course will focus primarily on literature and art from the 1960s to the present. All texts will be in English.

ENGL 078 Television and New Media
As a complex cultural product, television lends itself to a variety of critical approaches that build-on, parallel, or depart from film studies. This introductory course in television studies begins with an overview of the medium's history and explores how technical and industrial changes correspond to developing conventions of genre, programming, and aesthetics. Along the way, we analyze key concepts and theoretical debates that shaped the field. In particular, we will focus on approaches to textual analysis in combination with industry research, and critical engagements with the political, social and cultural dimensions of television as popular culture. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term

Activity: Lecture
1.0 Course Unit

ENGL 080 Literatures of Jazz
That modernism is steeped as much in the rituals of race as of innovation is most evident in the emergence of the music we have come to know as jazz, which results from collaborations and confrontations taking place both across and within the color line. In this course we will look at jazz and the literary representations it engendered in order to understand modern American culture. We will explore a dizzying variety of forms, including autobiography and album liner notes, biography, poetry, fiction, and cinema. We’ll examine how race, gender, and class influenced the development of jazz music, and then will use jazz music to develop critical approaches to literary form. Students are not required to have a critical understanding of music. Class will involve visits from musicians and critics, as well as field trips to some of Philadelphia’s most vibrant jazz venues. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

ENGL 083 Sicily on Page and Screen
What images come to mind when we hear the words Sicily and Sicilians? Often our thoughts range from scenic vacation spots, delicious seafood and cannoli, and sweet grandmothers dressed in black, to mafia violence, vendettas, and the deep-rooted code of silence, omerta. But, how did these ideas get to us? Is there truth in them? Is there more to this island and its people? Through careful analysis of literary and cinematic representations of this Italian region, and those that do and have inhabited it, we will trace and analyze how Sicilians have represented themselves, how mainland Italians have interpreted Sicilian culture, how outsiders have understood these symbols, how our own perceptions shaped what we thought we knew about this place and, finally, how our own observations will have evolved throughout our studies. We will watch films such as Tornatore’s Cinema paradiso and Coppola’s The Godfather II, and read texts such as Lampedusa’s The Leopard and Maraini’s Bagheria. This course aims to increase students’ understanding and knowledge of the Sicilian socio-cultural system. It will help students develop their ability to understand and interpret Sicilian culture through close analysis of its history, values, attitudes, and experiences, thereby allowing them to better recognize and examine the values and practices that define their own, as well as others’, cultural frameworks.

ENGL 085 War and Representation
This class will explore complications of representing war in the 20th and 21st centuries. War poses problems of perception, knowledge, and language. The notional ‘fog of war’ describes a disturbing discrepancy between agents and actions of war; the extreme nature of the violence of warfare tests the limits of cognition, emotion, and memory; war’s traditional dependence on declaration is often warped by language games—‘police action,’ ‘nation-building,’ or palpably unnamed and unacknowledged state violence. Faced with the radical uncertainty that forms of war bring, modern and contemporary authors have experimented in historically, geographically, experientially and artistically particular ways, forcing us to reconsider even seemingly basic definitions of what a war story can be. Where does a war narrative happen? On the battlefield, in the internment camp, in the suburbs, in the ocean, in the ruins of cities, in the bloodstream? Who narrates war? Soldiers, refugees, gossips, economists, witnesses, bureaucrats, survivors, children, journalists, descendants and inheritors of trauma, historians, those who were never there? How does literature respond to the rise of terrorist or ideology war, the philosophical and material consequences of biological and cyber wars, the role of the nuclear state? How does the problem of war and representation disturb the difference between fiction and non-fiction? How do utilitarian practices of representation—propaganda, nationalist messaging, memorialization, xenophobic depiction—affect the approaches we use to study art? Finally, is it possible to read a narrative barely touched or merely contextualized by war and attend to the question of war’s shaping influence? The class will concentrate on literary objects—short stories, and graphic novels—as well as film and television. Students of every level and major are welcome in and encouraged to join this class, regardless of literary experience.

1.0 Course Unit

ENGL 087 Theatre, History and Culture I, Classical Athens to Elizabethan London
This course will explore the forms of public performance, most specifically theatre, as they emerge from and give dramatic shape to the dynamic life of communal, civic and social bodies, from their anthropological origins in ritual and religious ceremonies, to the rise of great urban centers, to the closing of the theaters in London in 1642. This course will focus on development of theatre practice in both Western and non-Western cultures intersects with the history of cities, the rise of market economies, and the emerging forces of national identity. In addition to examining the history of performance practices, theatre architecture, scenic conventions and acting methods, this course will investigate, where appropriate, social and political history, the arts, civic ceremonies and the dramatic structures of urban living. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

ENGL 088 American Poetry
Some versions of this course survey American poetry from the colonial period to the present, while others begin with Whitman and Dickinson and move directly into the 20th century and beyond. Typically students read and discuss the poetry of Williams, Stein, Niedecker, H.D., Pound, Stevens, Fearing, Rakoksi, McKay, Cullen, Wilbur, Plath, Rich, Ginsberg, Kerouac, Waldman, Creeley, Ashberry, O’Hara, Corman, Bernstein, Howe, Perelman, Silliman, and Retallack. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENGL 089 American Fiction
Some versions of this course survey the American novel from its beginnings to the present, focusing on the development of the form, while others concentrate on the development of American fiction in one or two periods. Readings may include novels by writers such as Brown, Cooper, Hawthorne, Melville, Wharton, Morrison, Twain, James, Adams, Chopin, Howells, Norris, Whitman, Dreiser, Fitzgerald, Hemingway, Faulkner, Dos Passos, Ellison, and Nabokov. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1.0 Course Unit
ENGL 090 Gender, Sexuality, and Literature
This course will focus on questions of gender difference and of sexual desire in a range of literary works, paying special attention to works by women and treatments of same-sex desire. More fundamentally, the course will introduce students to questions about the relation between identity and representation. We will attend in particular to intersections between gender, sexuality, race, class, and nation, and will choose from a rich vein of authors: Mary Wollstonecraft, Jane Austen, Mary Shelley, Lord Byron, the Brontes, Christina Rossetti, George Eliot, Oscar Wilde, Henry James, Gertrude Stein, Zora Neale Hurston, E. M. Forster, Virginia Woolf, Nella Larsen, Radclyffe Hall, Willa Cather, Elizabeth Bishop, Jean Rhys, James Baldwin, Sylvia Plath, Bessie Head, Audre Lorde, Adrienne Rich, Cherrie Moraga, Toni Morrison, Michael Cunningham, Dorothy Allison, Jeanette Winterson, and Leslie Feinberg. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

Activity: Lecture
1.0 Course Unit

ENGL 091 World Film History to 1945
This course is an introduction to the history of cinema from the 1890s to the present. In demonstrating how history energizes and complicates the movies, we will examine numerous film cultures and historical periods, including Hollywood silent cinema, Italian neo-realist, the French New Wave, recent films from Iran, and a variety of other film movements from different historical epochs and cultures. Screenings will feature movies such as Sergei Eisenstein’s THE BATTLESHIP POTEMKIN (1925), Jean Renoir’s THE GRAND ILLUSION (1937), Nicholas Ray’s REBEL WITHOUT A CAUSE (1955), Jean-Luc Godard’s CONTEMPT (1963), Spike Lee’s DO THE RIGHT THING (1989), Sally Potter’s ORLANDO (1992), and Pedro Almodovar’s TALK TO HER (2003). Our aim is to establish a broad historical and global foundation for the understanding of film as a complex exchange between art, technology, politics, and economics. Screenings will be mandatory. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
For BA Students: Arts and Letters Sector
One-term course offered either term
Also Offered As: COML 109, ARTH 109
Activity: Lecture
1.0 Course Unit

ENGL 092 World Film History 1945-Present
This course is an introduction to the analysis of film as both a textual practice and a cultural practice. We will examine a variety of films—from Fritz Lang’s M (1931) to Julia Dash’s DAUGHTERS OF THE DUST (1991)—in order to demonstrate the tools and skills of ‘close reading.’ We will concentrate on those specifically filmic features of the movies, such as mise-en-scene, cinematography, editing and sound strategies, as well as those larger organizational forms, such as narrative and non-narrative structures and movie genres. Because our responses to the movies always extend beyond the film frame, we will additionally look closely at the complex business of film distribution, promotion, and exhibition to show how the less visible machinery of the movie business also shapes our understanding and enjoyment of particular films. Along the way, we will discuss some of the most influential and productive critical schools of thought informing film analysis today, including realism, auteurism, feminism, postmodernism, and others. Screenings are mandatory.
See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

Activity: Lecture
1.0 Course Unit

ENGL 093 Introduction to Postcolonial Literature
English is a global language with a distinctly imperial history, and this course serves as an essential introduction to literary works produced in or about the former European colonies. The focus will be poetry, film, fiction and non fiction and at least two geographic areas spanning the Americas, South Asia, the Caribbean and Africa as they reflect the impact of colonial rule on the cultural representations of identity, nationalism, race, class and gender. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: CIMS 093
Activity: Lecture
1.0 Course Unit

ENGL 094 Introduction to Literary Theory
This course introduces students to major issues in the history of literary theory, and provides an excellent foundation for the English major or minor. Treating the work of Plato and Aristotle as well as contemporary criticism, we will consider the fundamental issues that arise from representation, making meaning, appropriation and adaptation, categorization and genre, historicity and genealogy, and historicity and temporality. We will consider major movements in the history of theory including the ‘New’ Criticism of the 1920’s and 30’s, structuralism and post-structuralism, Marxism and psychoanalysis, feminism, cultural studies, critical race theory, and queer theory. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: COML 094
Activity: Lecture
1.0 Course Unit
ENGL 096 Theories of Gender and Sexuality
What makes men and women different? What is the nature of desire? This course introduces students to a long history of speculation about the meaning and nature of gender and sexuality – a history fundamental to literary representation and the business of making meaning. We will consider theories from Aristophanes speech in Platos Symposium to recent feminist and queer theory. Authors treated might include: Plato, Shakespeare, J. S. Mill, Mary Wollstonecraft, Sigmund Freud, Virginia Woolf, Simone de Beauvoir, Adrienne Rich, Audre Lorde, Michel Foucault, Gayle Rubin, Catherine MacKinnon, Eve Kosofsky Sedgwick, Judith Butler, bell hooks, Leo Bersani, Gloria Anzaldua, David Halperin, Cherrie Moraga, Donna Haraway, Gayatri Spivak, Diana Fuss, Rosemary Hennesy, Chandra Tadpole Mohanty, and Susan Stryker. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

1.0 Course Unit

ENGL 097 Theatre, History and Culture II
This course examines theatre and performance in the context of the border urban, artistic and political cultures housing them from the Renaissance to the mid-19th century. Encompassing multiple cultures and traditions, it will draw on a variety of readings and viewings designed to locate the play, playwright, trend or concept under discussion within a specific socio-historical context. The evolution of written and performed drama, theatre architecture, and scenography will be examined in tandem with the evolution of various nationalisms, population shifts, and other commercial and material forces on theatrical entertainment. Readings consequently will be drawn not only from plays and other contemporary documents, but also from selected works on the history, theory, design technology, art, politics or society of the period under discussion. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
For BA Students: Arts and Letters Sector

Also Offered As: THAR 102
Activity: Lecture
1.0 Course Unit

ENGL 098 Introduction to Literary Study
Literature does not exist for your protection. So dangerous is it, that Socrates argued poets ought to be banned from his ideal Republic. And Socrates himself—one of the most subversive of all poetic thinkers—was condemned to death for corrupting the young with his speeches. All great literature is unsettling and alarming. Along with its beauty and delicacy and rhetorical power and ethical force, it can be terrifyingly sublime and even downright ugly: full of contempt and horror and grandiosity and malice. From Socrates’ day to our own, countless writers have been jailed, exiled, and murdered, their works censored, banned, burned, for daring to say what others wish would remain unsaid—about religion and the State; sexuality, gender, and the body; art, science, and commerce; freedom and order; love and hate—and for saying it in ways that are aesthetically innovative, surprising, seductive, ravishingly unanticipated. See COML website for current semester’s description at https://complit.sas.upenn.edu/course-list/2019A This course will introduce you to fundamentals of literary style, form, and history, and to approaches to reading and interpretation. It will also mean paying close attention to your own writing, in a series of brief essays and blog contributions in which you’ll learn better how to meet the demands of college-level writing while striving always to be a dangerous writer yourself. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
For BA Students: Arts and Letters Sector

Also Offered As: COML 100
Activity: Lecture
1.0 Course Unit
Notes: This course is intended to serve as a foundation for students interested in going on to become English majors.

ENGL 101 Study of an Author
This course introduces students to literary study through the works of a single author—often Shakespeare, but other versions will feature writers like Jane Austen, Geoffrey Chaucer, Herman Melville, and August Wilson. Readings an individual author across his or her entire career offers students the rare opportunity to examine works from several critical perspectives in a single course. What is the author’s relation to his or her time? How do our author’s works help us to understand literary history more generally? And how might be understand our author’s legacy through performance, tributes, adaptations, or sequels? Exposing students to a range of approaches and assignments, this course is an ideal introduction to literary study for those students wishing to take an English course but not necessarily intending to major. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
For BA Students: Arts and Letters Sector
One-term course offered either term

1.0 Course Unit
ENGL 102 Study of a Literary Theme
This is an introduction to literary study through the works of a compelling literary theme. The theme's function within specific historical contexts, within literary history generally, and within contemporary culture, are likely to be emphasized. Some versions of this course will also serve as an introduction to other members of the English faculty, who will visit the class as guest lecturers. This course is designed for the General Requirement, and is ideal for the students wishing to take an English course but not necessarily intending to major. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
For BA Students: Arts and Letters Sector

Also Offered As: CIMS 112, COML 245, GSWS 102
Activity: Lecture
1.0 Course Unit

ENGL 103 Narrative Across Cultures
The purpose of this course is to present a variety of narrative genres and to discuss and illustrate the modes whereby they can be analyzed. We will be looking at shorter types of narrative: short stories, novellas, and fables, and also some extracts from longer works such as autobiographies. While some works will come from the Anglo-American tradition, a larger number will be selected from European and non-Western cultural traditions and from earlier time-periods. The course will thus offer ample opportunity for the exploration of the translation of cultural values in a comparative perspective.
Taught by: Loomba

ENGL 105 Topics in Literature and Society
While the topic of this course varies from semester, its subject is always the relation between literature and socio-economic realities: political, economic, social, and of identity. Past versions of English 105 have included 'The World of Work,' 'Disability Narratives,' and 'Conflict in Print.' Each devotes a number of weeks to the economic and social theories underlying its given subject in order to provide students with adequate background. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
For BA Students: Humanities and Social Science S
One-term course offered either term

ENGL 111 Experimental Writing
A creative writing workshop committed to experimentation. The workshop will be structured around writing experiments, collaborations, intensive readings, and new and innovative approaches to composition and form. See English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ENGL 112 Workshop for Fiction Writers
This course emphasizes the study and practice of basic techniques of short fiction, with assignments divided between readings and discussion of student-written material. May be repeated for credit with a different instructor. See English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit with a different instructor.

ENGL 113 Poetry Writing Workshop
This is a workshop for students who are interested in exploring a variety of approaches to poetry. Students will encounter a diverse series of readings, in-class writing activities, weekly writing assignments, and creative methods for heightening your abilities as a reader and writer. May be repeated for credit with different instructor. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Also Offered As: AFRC 114
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit with different instructor.

ENGL 114 Playwriting Workshop
The expressive possibilities and limitations of the stage medium through close reading of plays of various styles and period; study of the various resources of various types of theater, and original exercise in dramatic writing. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Also Offered As: THAR 114
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit with different instructor.
ENGL 115 Workshop for Advanced Fiction Writers
An advanced workshop in the writing of fiction, with reading assignments and discussion of student works in progress. Topics may include the short story or the art of the novel. See the English Department's website at www.english.upenn.edu for a description of the current offerings. One-term course offered either term  
Prerequisite: ENGL 112  
Activity: Seminar  
1.0 Course Unit  
Notes: This course is not open to freshmen. May be repeated for credit with a different instructor. Permission needed from instructor; writing sample required.

ENGL 116 Screenwriting Workshop
This course will look at the screenplay as both a literary text and a blue print for production. Several classic screenplay texts will be critically analyzed (REBEL WITHOUT A CAUSE, DOCTOR STRANGELOVE, PSYCHO, etc.) Students will then embark on writing their own scripts. We will intensively focus on: character enhancement, creating 'believable' cinematic dialogue, plot development and story structure, conflict, pacing, dramatic foreshadowing, the element of surprise, text and subtext and visual story-telling. Class attendance is mandatory. Students will submit their works-in-progress to the workshop for discussion. See English Department's website at www.english.upenn.edu for a description of the current offerings. One-term course offered either term  
Also Offered As: CIMS 116  
Activity: Seminar  
1.0 Course Unit  
Notes: May be repeated for credit with a different instructor.

ENGL 117 The Arts and Popular Culture
A creative writing workshop that concentrates on various aspects of writing about artistic endeavor, including criticism, reviews, profiles, interviews and essays. For the purposes of this class, the arts will be interpreted broadly, and students are able – and, in fact, encouraged – to write about both the fine arts and popular culture, including music, theater, film, fashion, photography and television. Students will write on a weekly basis, and many assignments will be tailored to each student's individual interests and are likely to include reporting and research. Writing subjects can range from a local band to a museum, from a theater group to a comedian. Course offerings may include Writing about Music, Writing about Popular Culture, or other topics and themes. Prerequisite: Students who have previously taken ENGL 117 should also be able to take this course in the spring term file. See the English Department's website at www.english.upenn.edu for a description of the current offerings. One-term course offered either term  
Activity: Seminar  
1.0 Course Unit  
Notes: Students who have previously taken ENGL 117 should also be able to take this course in the spring term file.

ENGL 118 Advanced Poetry Writing Workshop
This workshop is especially valuable for creative writing concentrators in poetry within the English Major, for those who are working on longer works, or for those who wish to work on a series of poems connected by style and subject matter. Prerequisite: This workshop is designed for those students who have taken the introductory workshop ENGL 113 or its equivalent and desire advance study. May be repeated for credit with a different instructor. See the English Department's website at www.english.upenn.edu for a description of the current offerings. One-term course offered either term  
Activity: Seminar  
1.0 Course Unit  
Notes: This workshop is designed for those students who have taken the introductory workshop ENGL 113 or its equivalent and desire advance study. May be repeated for credit with a different instructor.

ENGL 120 Working with Translations
In this class we will study and translate some of the major figures in 20th century poetry, including Rainer Maria Rilke, Claire Malroux, Pablo Neruda, Cesare Pavese, Anna Akhmatova, and Bei Dao. While the curriculum will be tailored to the interests and linguistic backgrounds of the students who enroll, all those curious about world poetry and the formidable, irresistible act of translation are welcome. Students should have at least an intermediate knowledge of a language other than English. We will study multiple translations of seminal poems, render our own versions in response, and have the additional opportunity to work directly from the original. Students may also work in pairs, or groups. A portion of the course will be set up as a creative writing workshop in which to examine the overall effect of each others' translations so that first drafts can become successful revisions. While class discussions will explore the contexts and particularity of (among others) Urdu, Italian, French, and Polish poetry, they might ultimately reveal how notions of national literature have radically shifted in recent years to more polyglottic and globally textured forms. Through guest speakers, essays on translation theory, and our own ongoing experiments, this course will celebrate the ways in which great poetry underscores the fact that language itself is a translation. In addition to the creative work, assignments will include an oral presentation, informal response papers, and a short final essay. See the English Department's website at www.english.upenn.edu for a description of current offerings.  
Course not offered every year  
Also Offered As: COML 121  
Activity: Seminar  
1.0 Course Unit  
Notes: This workshop is designed for those students who have taken the introductory workshop ENGL 113 or its equivalent and desire advance study. May be repeated for credit with a different instructor.

ENGL 121 Writing for Children
This is a course for students who have always thought it would be challenging, fun, curious, or rewarding to write a children's book. The class will be conducted as a seminar, using a wide variety of published children's books in all genres--picture books, chapter books, young fiction, older fiction as examples of successful books for young readers. See English Department website at www.english.upenn.edu for a description of current offerings. One-term course offered either term  
Also Offered As: AFRC 121  
Activity: Seminar  
1.0 Course Unit
ENGL 122 Grotesque Forms
An introduction to letterpress printing and bookmaking and writing for the artist book, focusing on the history of the artist book, competence in letterpress technique, print composition and design skills, and alternative book binding. Course readings will focus on the work of Joanna Drucker and Jerome Rothenberg, and the examination of multi-media works. Field trips to local artist book collections will supplement course reading, projects, and the final project. The entire class will be taught, and practiced, through the lens of ‘the grotesque’ in art and literature. As a final project, each student will make their own limited-edition artist book that considers the course theme of ‘the grotesque’ through writing, image, printing and binding. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. One-term course offered either term
Activity: Seminar
1.0 Course Unit

ENGL 124 Writing and Politics
This is a course for students who are looking for ways to use their writing to participate in the 2020 election. Student writers will use many forms--short essay, blogs, social media posts, mini video- or play scripts, podcasts--and consider lots of topics as they publish work, in real time, with #VoteThatJawn. This multi-media platform popped up in 2018 to support youth registration and voting in Philadelphia’s 2018 mid-term elections. Registration of 18-year-olds that year doubled: from 3,300 to nearly 7,000. This year university, high school, and media partners across the city aim to hit 10K. Imagine that. Imagine a Creative Writing class that answers our desire to live responsibly in the world and to have a say in the systems that govern and structure us. Plus learning to write with greater clarity, precision, and whatever special-sauce Jawn your voice brings. The course is designed as an editorial group sharing excellent, non-partisan, fun, cool, sometimes deadly earnest content for and about fresh voters. In addition, you will gain experience in activities that writers in all disciplines need to know: producing an arts-based event, a social media campaign, working with multi-media content, and collaborating with other artists. English 124 will sometimes work directly with diverse populations of youth from other colleges and high schools throughout the city. Because you will engage with a common reading program about the ground-breaking Voting Rights Act of 1965, the class is cross-listed with Africana Studies 124. In addition, the work of #VoteThatJawn performs a civic service; therefore it is listed as an an Academically Based Community Service (ABCS) course with the university. Don’t sit out this momentous electoral season because you have so much work. Use your work to bring other youth to the polls.

Also Offered As: AFRC 124
Activity: Seminar
1.0 Course Unit

ENGL 129 Across Forms: Art and Writing
What if a poem spoke from inside a photograph? What if a sculpture unfurled a political manifesto? What if a story wasn’t just like a dance, but was a dance or a key component of a video, drawing, performance, or painting? In this course, artists and writers will develop new works that integrate the forms, materials, and concerns of both art and writing. Many artists employ writing in their practices, but many not look at the texts they create as writing. And many writers have practices that go beyond the page and deserve attention as art. This course will employ critique and workshop, pedagogic methodologies from art and writing respectively, to support and interrogate cross-pollination between writing and art practices. Additionally, the course will examine a field of artists and writers who are working with intersections between art and writing to create dynamic new ways of seeing, reading, and experiencing. Prerequisite: Permission to enroll is required; please submit a short description of your interest in the class to zoefr@writing.upenn.edu. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. One-term course offered in fall term
Also Offered As: FNAR 315, FNAR 615
Activity: Seminar
1.0 Course Unit

ENGL 130 Advanced Screenwriting
This is a workshop-style course for students who have completed a screenwriting class, or have a draft of a screenplay they wish to improve. Classes will consist of discussing student’s work, as well as discussing relevant themes of the movie business and examining classic films and why they work as well as they do. See English Department website at www.english.upenn.edu for a description of current offerings. One-term course offered either term
Also Offered As: CIMS 130
Activity: Seminar
1.0 Course Unit
Notes: This course is not open to freshmen.

ENGL 131 Inner Outer Space Travel Writing: A Creative Writing Workshop
Inner Outer Space Travel Writing is a creative writing workshop focused on writing work within the science fiction/speculative fiction/alternative futurities, science/land/travel writing, and creative-critical nonfiction traditions. Students will work within a variety of genres, with an emphasis on the essay, the short story, screen/tele-play, play, blog and performance. Students will read recommended texts from within their particular interests, and the course will culminate in both a public performance and dissemination/publication via another media platform (zine, website, podcast, etc). All levels of experience, from none/first-time writer to published writers, are encouraged to register for the course.
Taught by: Bracho
Also Offered As: GSWS 510, LALS 510
Activity: Seminar
1.0 Course Unit
ENGL 133 Self-Scripting: Writing through Body and Space
In Self-Scripting, students will write through a variety of exercises and activities that put text into play with the body and space. Over the course of the semester, students will actively engage space and composition as they develop and explore scriptwriting for performance. We will explore exercises in an active laboratory setting. This course aims to expand on techniques for writing plays, poetry, and experimental biography.
Taught by: O'Karra
Course not offered every year
Also Offered As: THAR 115
Activity: Studio
1.0 Course Unit

ENGL 134 Passion Projects: Radical Experiments in Writing Plays, Screenplays, and Pilots
This creative writing workshop will focus on writing for screen, stage and internet and is open to undergraduate and graduate students at every level of writing experience. The course will be writing intensive and also include the reading and analysis of feminist, trans, queer, working class and racially liberatory plays, films, television and performance as models of inspiration. Meditation, drawing, theater games, improv exercises, screenings and outings to see work on and off campus will round out this holistic and experimental approach to making work that illuminates and entertains audiences from across the US and global audience spectrum.
Taught by: Bracho
Also Offered As: GSWS 512, LALS 512
Activity: Seminar
1.0 Course Unit

ENGL 135 Creative Non-Fiction Writing
A workshop course in the writing of creative nonfiction. Topics may include memoir, family history, travel writing, documentary, and other genres in which literary structures are brought to bear on the writing of nonfiction prose. May be repeated for credit with a different instructor.
See the English Department’s website at www.english.upenn.edu for a description of the current offerings
One-term course offered either term
Also Offered As: AFRC 134, GSWS 135, URBS 135
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit with a different instructor.

ENGL 136 Experimental Playwriting
In this course, students will write for theater and performance. Writers in the class will take cues from a myriad of experimental playwrights and performance artists who have challenged conventional ideas of what a script should look and sound like. Students will be asked to challenge how narrative is constructed, how characters are built and what a setting can be. This class will push beyond the formal structures of the well-made play script and address how writers explore and reinvent form and language as a means for radical change in the field of performance. Some playwrights we will read include Gertrude Stein, Suzan-Lori Parks, Maria Irene Fornes, Robert O'Hara, Young Jean Lee, John Jesurun, and Toshiki Okada. This class is ideal for playwrights, performers, screenwriters, and writers of experimental fiction. This course is cross-listed with Theatre Arts.
Taught by: O'Hara
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 138 Writing Center Theory & Practice
WRIT 138 401: This course is intended for capable writers who possess the maturity and temperament to work successfully as peer tutors at Penn. WRIT 138 402: ABCS course. Along with a study of theories, strategies, and methods for teaching and tutoring writing in diverse communities, this course will also interrogate our own social locations and the ways we engage with the realities of teaching and learning. To enable this, this course will provide opportunities for community engagement and reflection beyond the walls of our classroom by working with nearby high school students to prepare them for college-level writing. Please note that 8 of our weekly classes will be held at Robeson High School (4125 Ludlow School, Philadelphia, PA 19102). In addition to fieldwork, students will read and discuss key texts on community-engaged writing instruction, keep a weekly reflection and reading response journal, and engage in a scaffolded semester-long research project on community-engaged writing theory and practice.

One-term course offered either term
Also Offered As: WRIT 138
Activity: Seminar
1.0 Course Unit

ENGL 142 Duchamp is My Lawyer
This course examines the impact of copyright law on artists and creative industries. Looking at publishing, music, film, and software, we will ask how the law drives the adoption of new media, and we will consider how regulation influences artistic decisions. A mix of the theoretical with the practical, we will be using UbuWeb (the largest and oldest site dedicated to the free distribution of the avant-garde) as our main case study. The course will cover both the history of copyright law and current debates, legislation, and cases. We will also follow major copyright stories in the news. Readings cover such diverse topics as the player piano, Disney films, YouTube, video game consoles, hip hop, the Grateful Dead, file sharing, The Catcher in the Rye, and many more. We will also examine the critical role of 'shadow libraries,' (free culture hubs) in regards how the cultural artifact is produced and distributed in the digital age, alongside today's gatekeepers of algorithmic culture, such as Netflix, Amazon, and Spotify.
Taught by: Decherney
Course usually offered in spring term
Also Offered As: CIM 142
Activity: Seminar
1.0 Course Unit

ENGL 144 Speculative Fiction
A creative writing course devoted to speculative fiction. Topics may include science fiction, fantasy, horror, or other related genres. Students will study the literary origins of these genres and create their own original work. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Activity: Seminar
1.0 Course Unit
ENGL 145 Advanced Non-Fiction Writing
An advanced writing course devoted to creative nonfiction. Topics may include writing for literary magazines; writing for journals of opinion; memoir; family history; travel writing; documentary; or other topics and genres in which literary structures inform the writing of nonfiction prose. Offerings may address writing as a public act, questions of ethics and policy, methods of research and fact-checking, marketing, and how to understand and enter the world of publishing. May be repeated for credit with a different instructor. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Also Offered As: GSWS 145
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit with a different instructor.

ENGL 155 Writing in the Documentary Tradition
This course will function as a workshop, with a select group of students. It's a course that will honor the spirit and tradition of 'documentary' writing. The word 'documentary' has meant many things over time. Here, it means a kind of nose-close observation and reportage. It means a level of being with one's subject matter in a way that other creative writing courses do not allow because of their format and structure. In English 155, a student writer at Penn will dare to 'hang' with a topic--a girl's high-school basketball team; a medical intern in a HUP emergency room; a janitor doing the graveyard shift in a classroom building; a food-truck operator crowding the noontime avenues; a client-patient in the Ronald McDonald House near campus; a parish priest making a solitary and dreary and yet redemptive rounds of the sick and the dying in the hospital--for the entire term. At the term's end, each writer in the course will have produced one extended prose work: a documentary piece of high creative caliber. This is our goal and inspiration. The piece will be 35 to 40 pages long, at minimum. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ENGL 156 Photographs and Stories
A creative writing course built entirely around the use of photographs, and the crafting of compelling nonfiction narratives from them. The essential concept will be to employ photographs as storytelling vehicles. So we will be using curling, drugstore printed Kodak shots from our own family albums. We will be using searing and famous images from history books. We will be taking things from yesterday's newspaper. We will even be using pictures that were just made by the workshop participants outside the campus gates. In all of this, there will be one overriding aim to achieve memorable, full-bodied stories. To locate the strange, evocative, storytelling universes that are sealed inside the four rectangular walls of photograph. They are always there, if you know how to look. It's about the quality of your noticing, the intensity of your seeing. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ENGL 157 Introduction to Journalistic Writing
This workshop is designed as an introduction to journalistic writing. Topics may include Writing about Food, Journalism and the Environment, Digital Newswriting, and other themes. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ENGL 158 Advanced Journalistic Writing
A workshop in creative writing devoted to original student work in journalism. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Also Offered As: STSC 118
Activity: Seminar
1.0 Course Unit

ENGL 159 Political Writing in the Digital Age
A primer on writing about U.S. politics, in an era of major technological upheaval and serious voter polarization. Today's 24/7, wi-fi'd, blogging environment-along with the rise of new conservative media—are changing the ways that writers cover politics and deliver the information. May be repeated for credit with a different instructor. See English Department website at www.english.upenn.edu for a description of current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit with a different instructor.

ENGL 160 Long-form Journalism
This course in long-form journalism is required of all journalistic writing minors. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit
ENGL 161 The Art of the Profile
One of the toughest challenges for any journalist is to master the art of profiling. In this course, students will read and critique some of the classic profile articles of the past 40 years and, most importantly, write profile articles of their own. Writing about people is often very rewarding, but rarely easy. In this course, students will debate the questions that have plagued and energized journalists for generations: How do you persuade someone that theirs is a worthy topic for a profile? How do you ask sensitive questions? If the person is a celebrity, how do you avoid being manipulated into writing a 'puff piece'? Do you tape the interviews or just take notes? How do you structure a profile in order to keep the reader's attention? Is it even possible to capture the essence of a person on the written page? Are you a friend to the profile subject—or a manipulator? A journalist at The New Yorker once said that a writer's relationship with the profile subject is 'a kind of love affair.' On the other hand, a famous author once said that a profile writer is typically 'gaining their trust and betraying without remorse.' Which is closer to the truth? Students, in addition to writing their own profiles, will kick around these questions while reading some of the best contemporary profile writers, including Susan Orlean, Gay Talese, David Remnick, Mark Bowden, and Judy Bachrach. The instructor will also offer several of his own. See the English Department's website at www.english.upenn.edu for a description of current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ENGL 162 Covering Political Elections
In this course, students with a passion for both writing and politics will have the unique opportunity to track the news as it unfolds week by week, to critique it in class, and, most importantly, to write about it in a variety of formats, ranging from 'straight' news to informed opinion. Students can expect spirited class debate about the elusive nature of 'objectivity,' the often thin line between truth and rumor, the challenges of fact-checking a candidate's 'spin,' the challenges of writing responsibility in an era when even facts seem to be polarized, the challenges of analyzing election results and writing effectively, the growing pressure on journalists to reveal their political beliefs, and much more. Some of the writing will happen in class; students will view excerpts from election debates and broadcasts, and will file their reports 'on deadline.' And students will also have a chance, in class, to critique some of the nation's best political writers—reporters, feature writers, columnists, and bloggers. Topics for this course may include reporting on Congressional midterms and reporting on the Presidential election. See English Department website at www.english.upenn.edu for a description of current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ENGL 169 Advanced Writing Projects in Long-Form Nonfiction
An advanced course in long-form nonfiction journalistic writing for a select group of experienced and self-starting student writers. (Ideally, each accepted member will have already taken one or two nonfiction seminars within the creative writing program.) The goal will be to tailor a reporting and writing project to your interest, one you may have long wished to take up but never had the opportunity. It could be a project in the arts. It could be a profile of a person or place. It might be a documentary in nature, which is to say an extremely close-up observation of your subject. (An example: think of a hospital chaplain at Penn, going on his dreary, redemptive, daily rounds, to visit the sick and anoint the dying. What if you were there, for most of the term, as unobtrusively as possible, at his black-clad elbow?) The group will meet at to-be-determined intervals. In between, the enrollees will be pairing off and in effect serving as each other's editor and coach and fellow (sister) struggler. When we do assemble as a group, we will be reading to each other as well as discussing the works of some long-form heroes—Didion, Talese, Richard Ben Cramer, one or two others you may not have heard of. In essence, this is a kind of master course, limited in enrollment, and devoted to your piece of writing, to be handed in on the final day. It will be in the range of 25 to 30 pages, something above 8,000 words. The course presumes a lot of individual initiative and self-reliance. If you're interested, please email phendric@english.upenn.edu and suggest your qualifications. Permission to enroll is required.
Taught by: Hendrickson
Course usually offered in spring term
Activity: Seminar

ENGL 199 Independent Study in Writing
Supervised study in writing.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: Interested students must receive permission by the professor and the English Department.
ENGL 200 Junior Research Seminar
This course offers junior English majors the opportunity to design and undertake a semester-long research and writing project in an advanced seminar setting. Discussions will address debates within the field/period/topic of the course, research methods, and advanced writing and critical thinking issues. This course is required for most English Majors. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: This course is required of most English Majors.

ENGL 201 Virtual Reality Lab
In this collaboration between Penn and the Philadelphia Museum of Art (PMA), students will work with curators to create virtual reality projects connected to the museum’s collections. This course mixes virtual reality theory, history, and practice. We will read a wide range of scholarship, manifestoes, and memoirs that examine virtual reality and other immersive technologies, stretching from the 18th century to today. We will explore virtual reality projects, including narrative and documentary films, commercial applications, and games. We will work with many different virtual reality systems. And we will learn the basics of creating virtual reality, making fully immersive 3-D, 360-degree films with geospatial soundscapes. Finally, we will take what we have learned out of the classroom, working with the Philadelphia Museum of Art curators to create virtual reality experiences based around the museum’s objects and exhibits. Students will gain an understanding of the unique approaches needed to appeal to museum visitors in a public setting, so we can make viable experiences for them. No previous knowledge of VR or experience is necessary. Interested students should email Prof. Peter Decherney to obtain a permit for the course.

ENGL 205 Spiegel-Wilks Seminar
Topic varies from semester to semester. For the Fall 2020 semester, the topic will be: Elijah Pierce’s America: Barnes Foundation Curatorial Seminar This Spiegel-Wilks Curatorial Seminar is offered in collaboration with the Barnes Foundation. Students will be provided with an immersion in curatorial and museum studies and will have the opportunity to interact with curators, scholars, and staff at Penn and the museum, including Executive Director and President Thom Collins, who will co-teach the course. The course syllabus will engage the permanent collection at the museum, where the course will meet weekly. As part of the course, students will also conduct research and contribute to the temporary exhibition opening at the Barnes Foundation that semester, which will feature the work of Elijah Pierce (1892-1984), a self-taught woodcarver whose handcrafted works reacted to life in 20th-century America. One of the first generations of African Americans born into freedom, his remarkable narratives depict religious parables, autobiographical scenes, episodes from American politics, and figures from popular culture.
Course not offered every year
Also Offered As: ARTH 305, SAST 305
Activity: Seminar
1.0 Course Unit

ENGL 209 Topics in Digital Humanities
This course focuses intensively on a particular issue in digital humanities (DH) and computational approaches to literary texts. See the English Departments website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 210 Critical-Creative Approaches to Literature
These courses enable students to think and write creatively as a means to the critical understanding of literary texts. The topic of the course will vary from semester to semester, but the course will always seek to advance students understanding of literature, its formal elements, and its relationship to culture and history through the use of creative projects instead of or alongside more traditional critical writing. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Spaces will be reserved for English Majors.

ENGL 211 Paris Modern: Spiral City
Paris has been shaped by a mixture of organic development, which is still today perceptible in the ‘snail’ pattern of its arrondissements whose numbers, from 1 to 20, coil around a central island several times so as to exemplify a ‘spiral city’ and of the violent cuts, interruptions and sudden transformations that again and again forced it to catch up with modern times, the most visible of which was Baron Haussmann’s destruction of medieval sections of the city to make room for huge boulevards. Thus Parisian modernism has always consisted in a negotiation between the old and the new, and a specific meaning of modernity allegorized for Louis Aragon, the Surrealists and Walter Benjamin consisted in old-fashioned arcades built in the middle of the 19th century and obsolete by the time they turned into icons of Paris. The aim of the class will be to provide conceptual and pragmatic (visual, experiential) links between a number of texts, theories and films deploying various concepts of the modern in Paris, with a guided tour of the main places discussed. The course that Professors Jean Michel Rabate (English) and Ken Lum (Fine Arts) will lead studies Paris as a work of science-fiction where its many futures are embedded in its many pasts, where discontinuity is a continuous process and where the curving line of the snail’s shell is a line of ceaseless curling resulting in a perennial oscillation where an outside converts into an inside and an inside then converts to an outside. The course will travel to Paris over spring break to get an in-depth look at the topics discussed in class.
One-term course offered either term
Also Offered As: FNAR 318, FNAR 518
Activity: Seminar
1.0 Course Unit

ENGL 219 Topics in Critical Studies
This course focuses on a topic within critical studies and is designed to help students develop critical thinking and writing skills. The topic will vary from semester to semester. Students will engage in readings, discussions, and writing assignments to explore the selected topic. The course aims to improve students' ability to think critically and express ideas effectively through writing. The course will be assessed through participation, writing assignments, and a final project.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 220 Critical-Creative Approaches to Literature
These courses enable students to think and write creatively as a means to the critical understanding of literary texts. The topic of the course will vary from semester to semester, but the course will always seek to advance students understanding of literature, its formal elements, and its relationship to culture and history through the use of creative projects instead of or alongside more traditional critical writing. See the English Departments website at www.english.upenn.edu for a description of the current offerings.

ENGL 212 Walt Whitman and the People's Press
Walt Whitman and the People’s Press: A Course to Design and Program a Mobile Printing Space as a Public Art Project. Inspired by Whitman at 200, a region-wide celebration of Walt Whitman, this hands-on and collaborative course will engage students with artists, writers, community leaders and the public to design and program a mobile poetry printing facility that recognizes the complicated legacy of Walt Whitman in the 21st Century. To do this students and instructors will consider Whitman’s poetry as well as in his historical period and his place in Philadelphia and Camden. At the same time students will learn to use a press, design materials and create their own multimedia responses to Whitman. Students in this course should expect to read a great deal of poetry but also to be ready to work with their classmates to create responses to Whitman and to see and experience Philadelphia and Camden in new ways.
Taught by: Turner and Comberg

Course not offered every year
Also Offered As: GSWS 226
Activity: Seminar
1.0 Course Unit

ENGL 229 Topics In Classicism and Literature
Ancient epic and mythology had a curious and rich afterlife in the Middle Ages. Virgil and Ovid were taught in medieval schools, read for their moral content, and revered as fiction that concealed great philosophical value. Their influence also gave rise to the great literary form of the Middle Ages, romance: narratives that place a premium on erotic love, individual quests, the unpredictability of adventure, and imaginary or exotic settings. Yet despite what may appear to be merely gratifying entertainment, medieval romance and medieval receptions of classical myth did tremendous cultural work, enabling profound explorations of history, political values, gender and sexual identity, and social power. We will spend some weeks reading Virgil's Aeneid and Ovid's Heroides and Metamorphoses. Then we will turn to medieval reimaginings of classical myth and metamorphosis, including poetry by Marie de France, Chretien de Troyes, and Chaucer, and anonymous works such as Sir Gawain and the Green Knight. The course requirements will be: one very short oral presentation on a research topic of your choice related to the reading, together with a short write-up of your research; one short critical paper; and one longer research paper (which can develop the subject of your oral presentation).

ENGL 242 Life Stories in America, 1730-1830
This seminar explores the social and cultural history of America by focusing on the lives of specific individuals, ranging from Jesuit priests in early Quebec to Philadelphia politicians to Saramaka slaves to Maine midwives. One of the people in Philadelphia who we will discuss is Benjamin Franklin, Penn's founding father. As we examine biography and autobiography as two of history's most powerful narrative frames, we will concentrate on the spaces and places in the social landscape that shaped individual understandings of work, sense of self, gender, beliefs, and political power.
Taught by: St. George
Also Offered As: HIST 242
Activity: Seminar
1.0 Course Unit

ENGL 243 Topics In Early American Literature
This course explores an aspect of early American literature intensively; specific course topics will vary from year to year. See the English Department's website at www.english.upenn.edu for a description of the current offerings.

Also Offered As: THAR 274
Activity: Seminar
1.0 Course Unit
Notes: ?Formerly ENGL 271?. Spaces will be reserved for English majors

ENGL 257 Topics of Americas Before 1900
The Essay Film is an important tradition within the various genres that constitute the field of Film and Video Art. Through the element of time it differentiates itself from its literary and photographic antecedents. It borrows selectively from both narrative fiction and documentary - highly subjective and occasionally poetic but without perhaps the burden of truth. The Essay Film is an attempt to dimensionalize our experience of the world and our place in it. It represents an argument, a meditation, a critical engagement with a place, a time or a subject. This is a combination seminar/studio course. Through readings, screenings and discussion students will gain an historical perspective on the genre. The core assignment is for each student to complete a short film (20 minutes max.) in the tradition of the Essay Film. See the English Department’s website at www/english.upenn.edu for a description of the current offerings.
Also Offered As: FNAR 177, FNAR 677
Activity: Seminar
1.0 Course Unit
Notes: Spaces will be reserved for English majors

ENGL 259 Topics In Modernism
This course explores an aspect of literary modernism intensively; specific course topics will vary from year to year. Past offerings have included seminars on the avant-garde, on the politics of modernism, and on its role in shaping poetry, music, and the visual arts. See the English Department’s website at www/english.upenn.edu for a description of the current offerings. Prerequisite: Some knowledge of 20th-century poetry.
Spaces will be reserved for English majors
Course not offered every year
Also Offered As: ARTH 385, COML 140, FREN 259, GRMN 249
Activity: Seminar
1.0 Course Unit

Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Spaces will be reserved for English Majors

ENGL 268 Apocalypse and the Anthropocene
In this class we will explore the narrative mode of the apocalypse in the context of the geologic designation of the Anthropocene. We will analyze a diversity of cultural forms to think about questions, reconceptions, and social issues relevant to that ephocal concept. Specifically, we will study the ways American apocalyptic novels, films, blogs, and video games attempt to understand the human and non-human relationships in the Anthropocene. We will look to the ways apocalypse narratives can represent and contest the exploitative, extractive, and unequal power relations that the ‘era of the human’ includes, paying special attention to American notions of nature and stewardship as they relate to geologic time and the legacies of genocide, slavery, and capitalism. Our class will investigate the ways works of art attempt to render these complex and perhaps overwhelming concepts comprehensible so that we may envision and enact just futures.
Taught by: Anson

ENGL 273 The Chinese Body and Spatial Consumption in Chinatown
This course looks at representations of the Chinese (and Asian body) since the Limehouse district in East London and the advent of Chinese contract laborers to the Americas in the 19th century. The localization of the Chinese throughout the Americas within Chinatown precincts were also subject to representational imaginings that were negotiated through the lens of civic planning, literature and later in cinema. Chinatowns are ultimately a product of racism. They were created as a political and social support system for newly arrived Chinese immigrants. While Chinese laborers arrived into the United States in 1840 and in significant numbers into Canada about 1860, Chinese contract workers were encouraged to immigrate to the Americas as an inexpensive source of labor, especially after the end of the American Civil War. Industrial leaders in America, Canada and elsewhere in the Americas (Mexico, Cuba, Peru, etc) saw the arrival of Chinese workers as a victory for commercial interests. However, the celebration was short-lived, as anti-Chinese sentiment quickly transformed into anti-Chinese hysteria. Rather than attacking the vested interests that exploit foreign labor as embodied by the Chinese worker, racist unions with the cooperation of civic leaders and the police deemed it safer to burn Chinatowns than capitalist property. Deeply under-studied to this day is the number of mass murders of Chinese workers in the 19th century by anti-Chinese thugs. This seminar will focus in on how the body of the Chinese (and Asian) was imagined and reimagined multiple times from the middle of the 19th century to today.

1.0 Course Unit
Notes: Formerly ENGL 285, Spaces will be reserved for English majors

ENGL 275 Sustainability & Utopianism
This seminar explores how the humanities can contribute to discussions of sustainability. We begin by investigating the contested term itself, paying close attention to critics and activists who deplore the very idea that we should try to sustain our, in their eyes, dystopian present, one marked by environmental catastrophe as well as by an assault on the educational ideals long embodied in the humanities. We then turn to classic humanist texts on utopia, beginning with More’s fictive island of 1517. The origins of environmentalism lie in such depictions of island edens (Richard Grove), and our course proceeds to analyze classic utopian tests from American, English, and German literatures. Readings extend to utopian visions from Europe and America of the nineteenth and twentieth centuries, as well as literary and visual texts that deal with contemporary nuclear and flood catastrophes. Authors include: Bill McKibben, Jill Kerr Conway, Christopher Newfield, Thomas More, Francis Bacon, Karl Marx, Henry David Thoreau, Robert Owens, William Morris, Charlotte Perkins Gilman, Ayn Rand, Christa Wolf, and others. Taught in English.

ENGL 276 Advanced Topics in Theatre History
The purpose of this course is to introduce students to the basic materials and methods of theatre history and historiography, as applied to a particular topic, organized around a specific period, national group, or aesthetic issue. This course is concerned with methodological questions: how the history of theatre can be documented; how primary documents, secondary accounts, and historical and critical analyses can be synthesized; how the various components of the theatrical event—acting, scenography, playhouse architecture, audience composition, the financial and structural organization of the theatre industry, etc.—relate to one another; and how the theatre is socially and culturally constructed as an art form in relation to the politics and culture of a society in a particular time and place. See the English Department's website at www.english.upenn.edu for a description of the current offerings.

1.0 Course Unit
ENGL 279 Jewish Films and Literature
From the 1922 silent film 'Hungry Hearts' through the first 'talkie,' 'The Jazz Singer,' produced in 1927, and beyond 'Schindler's List,' Jewish characters have confronted the problems of their Jewishness on the silver screen for a general American audience. Alongside this Hollywood tradition of Jewish film, Yiddish film blossomed from independent producers between 1911 and 1939, and interpreted literary masterpieces, from Shakespeare's 'The King Lear' to Sholom Aleichem's 'Teyve the Dairyman,' primarily for an immigrant, urban Jewish audience. In this course, we will study a number of films and their literary sources (in fiction and drama), focusing on English language and Yiddish films within the framework of three dilemmas of interpretation: a) the different ways we 'read' literature and film, b) the various ways that the media of fiction, drama, and film 'translate' Jewish culture, and c) how these translations of Jewish culture affect and are affected by their implied audience. All readings and lectures in English.

ENGL 280 Arts and Research Studio: Queer Archives, Aesthetics, and Performance
This course focuses on questions of how to represent the queer past, which it approaches from several angles: through training in archival methods and in scholarly debates about historiographical ethics (or, in the words of David Halperin, 'how to do the history of homosexuality'); through engagement with the work of artists who make archives central to their practice; and through lab-based training that aims to represent encounters with queer history through embodied performance. Expectations: This course meeting weekly for 3 hours. But as you will see listed below (these activities and dates are not confirmed for this draft syllabus) the course includes and require that you attend a series of off-campus trips both in Philadelphia and to NYC that occur outside of the class schedule. Below is a list of archives we will visit, performances we will attend, and artists' studios we will visit for in-depth conversation with artist about their practice. The course will address both practical and theoretical issues raised by research in LGBT archives. We will take advantage of local resources in Philadelphia, including the John J. Wilcox Archives at the William Way Center (http://www.waygay.org/archives/). But we will also visit the Lesbian Herstory Archives (http://www.lesbianherstoryarchives.org/) and The Downtown Collection at the Fales Library at NYU (https://guides.nyu.edu/downtown-collection) and the Franklin Furnace Performance Archives (http://www.franklinfurnace.org), all in New York City. We will also bring artists to campus to work directly with students, and will meet with artists in New York. We will take advantage of the staging of Killjoy Kastle in Philadelphia in Fall 2019. This site-specific art installation, the work of Toronto artists Allyson Mitchell and Dierdre Logue, is a haunted house that addresses the difficult history of lesbian feminism, as well as its potential for contemporary LGBT politics. Since the Haunted House will include materials related to the history of feminist and LGBT activism in Philadelphia, students in the course can actively contribute to the research for this project.

ENGL 281 Topics In African-American Literature
In this advanced seminar, students will be introduced to a variety of approaches to African American literatures, and to a wide spectrum of methodologies and ideological postures (for example, The Black Arts Movement). The course will present an assortment of emphases, some of them focused on geography (for example, the Harlem Renaissance), others focused on genre (autobiography, poetry or drama), the politics of gender and class, or a particular grouping of authors. Previous versions of this course have included 'African American Autobiography,' 'Backgrounds of African American Literature,' 'The Black Narrative' (beginning with eighteenth century slave narratives and working toward contemporary literature), as well as seminars on urban spaces, jazz, migration, oral narratives, black Christianity, and African-American music. See the English Department's website at www.english.upenn.edu for a description of the current offerings.

ENGL 282 (T)rap Music
This course examines the coming to pass of trap music from several perspectives: 1) that of its technological foundations and innovations (the Roland 808, Auto-tune, FL Studio (FruityLoops), etc.); 2) that of its masters/mastery (its transformation of stardom through the figures of the producer (Metro Boomin) and the rock star (Future)); 3) that of its interpretability and effects (what does the music say and do to us). We will thus engage with this music as a practice of art and form of technosociality that manifests uncanny and maximal attunement with the now. Taught by: White

ENGL 285 American Musical Theatre
The American musical is an unapologetically popular art form, but many of the works that come from this tradition have advanced and contributed to the canon of theatre as a whole. In this course we will focus on both music and texts to explore ways in which the musical builds on existing theatrical traditions, as well as alters and reshapes them. Finally, it is precisely because the musical is a popular theatrical form that we can discuss changing public tastes, and the financial pressures inherent in mounting a production. Beginning with early roots in operetta, we will survey the works of prominent writers in the American musical theatre, including Kern, Berlin, Gershwin, Porter, Rodgers, Hart, Hammerstein, Bernstein, Sondheim and others. Class lecture/discussions will be illustrated with recorded examples.

ENGL 287 Theatre and Politics
This course will examine the relationship between theatre and politics in the twentieth and twenty-first centuries. How do theatre artists navigate their artistic and political aims? How do we distinguish between art and propaganda? Throughout the semester we will ask how the unique components of theatre--its poetic structure, engagement with spectators, aesthetics of representation, relationship to reality, and rehearsal process--contribute to its political capacity. Students will read a variety of plays drawn from late twentieth century and contemporary global theatre practice alongside political and aesthetic theory to interrogate the relationship between artistic production, power, and resistance. We will conclude with a consideration of the ways politics is itself a performance, considering how power is supported by theatrical means and how performance functions in resistance movements.

One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: Interested students must receive permission by the professor and the English Department

ENGL 303 Women in Theatre and Performance
What is feminist theatre? How do artists use live performance to provoke not only thought and feeling, but also social, personal, and political change? This course will examine a wide array of plays and performances by and about women; these pieces are, in turn, serious, hilarious, outrageous, poignant—and always provocative. Our focus will be on English-language works from the late 20th century to the present (#meToo) moment. We will read these performance texts and/or view them on stage/screen; we will also read essays that provide contextual background on feminist theatre theory and history. Throughout the semester, we will engage diverse perspectives on women and race, ethnicity, class, sexuality, and gender identity; the issues we encounter will also include marriage and motherhood, career and community, feminism and friendship, and patriarchy and power. The class will take full advantage of any related events occurring on campus or in the city, and will feature visits with guest speakers. Students will have the opportunity to pursue research on their own areas of interest (some recent examples are ‘women in comedy,’ trans performance, drag kings, feminist directing, etc.).
Taught by: Malague
Course not offered every year
Also Offered As: GSWS 279, THAR 279
Activity: Seminar
1.0 Course Unit
Notes: Students must receive permission from the Director of English Honors Program.

ENGL 304 Japanese Cinema
This course is a survey of Japanese cinema from the silent period to the present. Students will learn about different Japanese film genres and histories, including (but not limited to) the benshi tradition, jidaigeki (period films), yakuza films, Pink Film, experimental/arthouse, J-horror, and anime. Although the course will introduce several key Japanese auteurs (Mizoguchi, Ozu, Kurosawa, Oshima, Suzuki, etc), it will emphasize lesser known directors and movements in the history of Japanese film, especially in the experimental, arthouse, and documentary productions of the 1960s and 1970s. Finally, in addition to providing background knowledge in the history of Japanese cinema, one of the central goals of the course will be to interrogate the concept of ‘national’ cinema, and to place Japanese film history within an international context.
Taught by: Alekseyeva
One-term course offered either term

Notes: Benjamin Franklin Seminar
ENGL 321 National Literatures
A course that traces how particular literary texts, very often medieval, are adopted to become foundational for national literatures. Key moments of emphasis will be the early nineteenth century, the 1930s, and (to some extent) the unfolding present. Research subverting this offering has been conducted over the last years, both in my editing of Europe: A Literary History, 1348-1418 (2 vols and 82 chapters, Oxford UP, 2016) and in preparation for 'Medieval Studies in Troubled Times: the 1930s,' to be offered as Presidential plenary at the Medieval Academy of America convention at Penn on 9 March 2019. I have also travelled and lectured extensively for Penn Alumni Travel over the last decade, crossing national boundaries and also pondering how complex literary issues might be framed for a broad (but exceptionally intelligent) audience. Issues arising in traversing Mediterranean space are explored in an article published (in Italian) in Studi migranti. Some texts immediately suggest themselves for analysis. The Song of Roland, for example, has long been fought over between France and Germany; each new war inspires new editions on both sides. The French colonial education system, highly centralized, long made the Chanson de Roland a key text, with the theme of Islamic attack on the European mainland especially timely, it was thought, during the Algerian war of independence. Germany also sees the Niebelungenlied as a key text, aligning it with the Rhine as an impecable Germanic: but the Danube, especially as envisioned by Stefan Zweig, offers an alternative, hybridized, highly hyphenated cultural vision in running its Germanic-Judaic-Slavic-Roman course to the Black Sea. The course will not be devoted exclusively to western Europe. Delicate issues arise as nations determine what their national epic needs to be. Russia, for example, needs the text known as The Song of Igor to be genuine, since it is the only Russian epic to predicate the Mongol invasion. The text was discovered in 1797 and then promptly lost in Moscow's great fire of 1812; suggestions that it might have been a fake have to be handled with care in Putin's Russia. Similarly, discussing putative Mughal (Islamic) elements in so-called 'Hindu epics' can also be a delicate matter. Some 'uses of the medieval' have been exercised for reactionary and revisionist causes in the USA, but such use is much more extravagant east of Putin's Russia. And what, exactly, is the national epic of the USA? Preference given to Ben Franklin students.
Taught by: Wallace
One-term course offered either term
Also Offered As: COML 321
Activity: Seminar
1.0 Course Unit
Notes: Preference given to Ben Franklin students

ENGL 322 Topics In Medieval Poetry
In this course we will read the Inferno, the Purgatorio and the Paradiso, focusing on a series of interrelated problems raised by the poem: authority, fiction, history, politics and language. Particular attention will be given to how the Commedia presents itself as Dante's autobiography, and to how the autobiographical narrative serves as a unifying thread for this supremely rich literary text. Supplementary readings will include Virgil's Aeneid and selections from Ovid's Metamorphoses. All readings and written work will be in English. Italian or Italian Studies credit will require reading Italian texts in their original language and writing about their themes in Italian. This course may be taken for graduate credit, but additional work and meetings with the instructor will be required. When crosslisted with ENGL 323, this is a Benjamin Franklin Seminar.
Course not offered every year
Also Offered As: COML 333, ITAL 333
Activity: Seminar
1.0 Course Unit
Notes: Benjamin Franklin Seminar

ENGL 323 Topics In Medieval Poetry

Notes: Benjamin Franklin Seminar

ENGL 326 Topics In Drama to 1660
This course explores an aspect of drama before 1660 intensively; specific course topics will vary from year to year. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Benjamin Franklin Seminar

ENGL 329 Topics In Classicism and Literature
This advanced seminar will examine the classical backgrounds to English poetry, in particular the Biblical and Greco-Roman antecedents to Renaissance lyric verse and verse drama (such as, preeminently, Shakespeare). Different versions of this course will have different emphases on Biblical or Hellenist backgrounds. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: CLST 329
Activity: Seminar
1.0 Course Unit
Notes: Benjamin Franklin Seminar

ENGL 330 Topics In Renaissance Literature
This course explores an aspect of Renaissance literature intensively; specific course topics will vary from year to year. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Benjamin Franklin Seminar

ENGL 338 Topics In 17th-Century Literature
This course explores an aspect of 17th-Century literature intensively; specific course topics will vary from year to year. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Benjamin Franklin Seminar

ENGL 341 Topics In 18th-Century Literature
This course explores an aspect of 18th-Century British literature intensively; specific course topics will vary from year to year. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Benjamin Franklin Seminar

ENGL 345 Topics In The 18th Century Novel
This course explores an aspect of 18th-Century novel intensively; specific course topics will vary from year to year. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 369 Topics In Poetry and Poetics
This course explores an aspect of poetry and poetics intensively; specific course topics will vary from year to year. See the English Department's website at www.english.upenn.edu for a description of the current offerings. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: GSWS 369
Activity: Seminar
1.0 Course Unit
Notes: ?Formerly ENGL 370?. Benjamin Franklin Seminar

ENGL 378 Global Media
This course explores a broad media landscape through new critical and conceptual approaches. It is designated as a Benjamin Franklin Seminar. This course maps the footprints of television at a global scale. Adopting comparative approaches, we will be studying TV’s formation of national and global discourses, and thereby recognizing not only television's impact on processes of globalization, but also the ability of television to matter globally. Working through concepts of 'broadcasting,' 'flow,' 'circulation,' and 'circumvention,' the course examines the movement of (and blocks encountered by) television programs and signals across national borders and cultures. The course particularly focuses on how global television cultures have been transformed due to shifts from broadcasting technologies to (Internet) streaming services? Navigating from United States and Cuba to India and Egypt, the readings in the course illuminate how particular televised genres, institutions, and reception practices emerged in various countries during specific historical periods. We shall be addressing a range of questions: what kind of global phenomenon is television? Can we study television in countries where we do not know the existing local languages? In what different ways (through what platforms, interfaces, and screens) do people in different continents access television content? What explains the growing transnational exports of Turkish and Korean TV dramas? What is the need to historically trace the infrastructural systems like satellites (and optical fiber cables) that made (and continue to make) transmission of television programming possible across the world? How do fans circumvent geo-blocking to watch live sporting events? Assignments include submitting weekly discussion questions and a final paper. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Taught by: Mukherjee
One-term course offered either term
Also Offered As: ARTH 379, CIMS 378
Activity: Seminar
1.0 Course Unit
ENGL 380 Performance in the African Diaspora
The purpose of this course is to engage students in the rigorous process of mining experiences for material that can be transformed into a public performance piece. In-class writing, group discussions, and field work in the Philadelphia area. AUGUST WILSON AND BEYOND. The people need to know the story. See how they fit into it. See what part they play. - August Wilson, King Hedley II. In this seminar, students will read groundbreaking playwright August Wilson's 20th Century Cycle: ten plays that form an iconic picture of African American traumas, triumphs, and traditions through the decades, told through the lens of Pittsburgh's Hill District neighborhood. Other readings include supporting material on Wilson's work and African American theatre, the works of contemporary playwrights whom Wilson has influenced (such as Suzan-Lori Parks and Tarell Alvin McCraney), and context on Penn's relationship with West Philadelphia. See the English Department's website at www.english.upenn.edu for a description of current offerings. Taught by: Beaver, Berger
One-term course offered either term
Also Offered As: AFRC 325
Activity: Seminar
1.0 Course Unit

ENGL 388 Topics In American Poetry
Sometimes limiting itself to the works of one or two authors, sometimes focusing on a particular theme such as 'American Poetry and Democratic Culture,' this course devotes itself to the study of twentieth-century American poetry. See the English Department's website at www.english.upenn.edu for a description of the current offerings. Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Benjamin Franklin Seminar

ENGL 390 Topics In Gender, Sexuality, and Literature
The advanced women's studies course in the department, focusing on a particular aspect of literature by and about women. Topics might include: 'Victorian Literary Women'; 'Women, Politics, and Literature'; 'Feminist Literary Theory'; and similar foci. See the English Department's website at www.english.upenn.edu for a description of the current offerings. Course not offered every year
Also Offered As: GSWS 390
Activity: Seminar
1.0 Course Unit
Notes: Benjamin Franklin Seminar

ENGL 392 Topics In Film Studies
This course explores an aspect of Film Studies intensively; specific course topics vary from year to year. See the English Department's website at www.english.upenn.edu for a description of the current offerings. Course not offered every year
Also Offered As: ARTH 389, CIMS 392, COML 391
Activity: Seminar
1.0 Course Unit
Notes: Benjamin Franklin Seminar

ENGL 393 Topics In Postcolonial Literature
This course explores an aspect of Postcolonial literature intensively; specific course topics vary from year to year. See the English Department's website at www.english.upenn.edu for a description of the current offerings. Course not offered every year
Also Offered As: COML 392, SAST 323
Activity: Seminar
1.0 Course Unit
Notes: Benjamin Franklin Seminar

ENGL 396 History of Literary Criticism
This is a course on the history of literary theory, a survey of major debates about literature, poetics, and ideas about what literary texts should do, from ancient Greece to examples of modern European thought. The first half of the course will focus on early periods: Greek and Roman antiquity, especially Plato and Aristotle; the medieval period (including St. Augustine, Dante, and Boccaccio), and the early modern period (such as Philip Sidney and Giambattista Vico). In the second half of the course we will turn to modern concerns by looking at the literary (or 'art') theories of some major philosophers and theorists: Kant, Hegel, Marx, Nietzsche, Freud, and Walter Benjamin. We end the course in the mid-twentieth century. The purpose driving this course is to consider closely how this tradition generated questions that are still with us, such as: what is the act of interpretation; what is the 'aesthetic'; what is 'imitation' or mimesis; and how are we to know an author's intention. During the semester there will be four short writing assignments in the form of analytical essays (3 pages each). Students may use these small essays to build into a longer piece of writing on a single text or group of texts at the end of the term. Most of our readings will come from a published anthology of literary criticism and theory; a few readings will be on Canvas. Taught by: Copeland
Course not offered every year
Also Offered As: CLST 396, COML 396
Activity: Seminar
1.0 Course Unit

ENGL 399 Independent Study in Language and Literature
Supervised reading and research.
One-term course offered either term
Activity: Independent Study
2.0 Course Units
Notes: Interested students must receive permission of the professor and the English department. This course number is for two course units and created for LPS students.
ENGL 500 Black Speculative Futures
Why do black cultural producers turn to the speculative? What, in turn, is speculative about blackness? These questions frame this seminar's exploration of how black artists, theorists, and activists imagine different futures, often in the service of critiquing power asymmetries and creating radical transformation in the present. We will explore how the speculative works differently across black literature, visual culture and performance. Additionally, inspired by the multi-disciplinary work that we encounter in the course, we will experiment with crafting our own embodied speculative art in order to better understand its function as both art practice and politics. The course will be divided between discussions centered on close reading of primary and secondary material and creative writing/movement exploration (no previous movement experience necessary). Occasional guest lectures with visiting artists will provide additional fodder for our critical and creative work.
Taught by: Knight
Course not offered every year
Also Offered As: AFRC 377, AFRC 677, ANTH 377, ANTH 677, FNAR 377
Activity: Seminar
1.0 Course Unit

ENGL 501 Introduction to Old English Language and Literature
This is an accelerated study of the basic language of Anglo-Saxon England, together with a critical reading of a variety of texts, both prose and poetry. See the English Department’s website at www/english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: ARTH 506, CIMS 505, COML 504
Activity: Seminar
1.0 Course Unit

ENGL 505 Electronic Literary Studies Proseminar
This course is designed to introduce advanced undergraduate and graduate students to the range of new opportunities for literary research afforded by recent technological innovation. See the English Department’s website at www/english.upenn.edu for a description of the current offerings.
One-term course offered either term
Also Offered As: GRMN 510
Activity: Seminar
1.0 Course Unit

ENGL 512 Fiction Writing Workshop
In this fiction writing workshop, we will be making a conscious effort to transcend our personal reading and writing preferences in order to be apprenticed by divergent literature—aesthetic achievements centered around objective reality, subjective life, and ecstatic confession and play! Most of the works that tend to affect us deeply are the ones that might have wearied us, or even greatly disturbed us. But in time, upon further reflection, we find them rather informative—or even illuminating! We will do a lot of new weekly writing, which will result in a draft and a final version of an original story. You and another classmate will be 'hosting' at least one class in open discussion of a weekly reading, and critiquing each other's drafts—focusing on craft, rather than content. You will challenge your self-censorship in a safe and supportive environment, and will read weekly what you write to develop your observational and listening skills in determining the effects of the spoken word.
Taught by: Richardson
Also Offered As: GSWS 512
Activity: Seminar
1.0 Course Unit

ENGL 513 Writing through Music
'Not all that's heard is music...Remember the little / lovely notes' - Lorine Niedecker. This writing workshop will focus on the provocative interchanges between music and creative writing. We will consider music of all kinds, all genres (jazz, classical, hip-hop, ambient, folk, electronic, experimental, etc.), as a springboard for the imagination, as a counterpoint to forms of language, and as a tool for cultivating creative writing practices; we will also explore a range of poets and prose writers whose engagement with music reveals new ways of understanding the relationship between sound and the written word. Students will craft their own original pieces in this community-based classroom, where we will read and comment on each other's work as well as on outside readings and recordings; students will also be encouraged to explore the live music scenes where they live, and to create their own music if so inclined. Through regular weekly writing assignments in a range of genres, including poetry, essay, and fiction, we will push the boundaries of our ideas and discover and expand our own listening and reading practices. Course requirements include thoughtful and committed class participation, regular writing assignments, and a final portfolio as well as statement of creative practice.
Taught by: Johnson
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 514 Writing Experiments
A workshop course devoted to cultivating experimental approaches in your writing. Practitioners of prose, poetry, and mixed-genre writing—as well as students who are new to any of these genres—are all welcome. We will test the boundaries of form and language as we hone our skills, experiment with new tools, read a number of writings by authors who break the rules, and explore what taking risks can teach us about our craft.
Taught by: Davids
Activity: Seminar
1.0 Course Unit

ENGL 518 King Arthur: Medieval to Modern
From the Middle Ages to the present, stories about King Arthur, the brave deeds of the nights of the Round Table, and Merlin's mysterious prophecies have mesmerized readers and audiences. In this course, we will study nearly 1000 years of literature about King Arthur, beginning with Geoffrey of Monmouth's twelfth-century History of the Kings of Britain and Sir Gawain and the Green Knight, and ending with Mark Twain, Alfred Lord Tennyson, and the fantasy fiction classic, T. H. White's Once and Future King. We will also be reading authors who repurposed Arthurian literature to think about gender relations (for example, Elizabeth Phelps' critique of domesticity), colonialism and nationalism (Wales and India), and religious cultures (for example, the medieval Hebrew version of King Arthur). Throughout the course, we will think about what Arthurian legends mean to the way we write history and the ways in which we view our collective pasts (and futures). Assignments will include response papers, an oral presentation, and a final paper.
Taught by: Steiner
Course not offered every year
Activity: Lecture
1.0 Course Unit
ENGL 524 Topics Medieval Studies
This course covers topics in Medieval literature. Its emphasis varies with instructor. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 525 Chaucer
An advanced introduction to Chaucer's poetry and Chaucer criticism. Reading and discussion of the dream visions, Troilus and Criseyde, and selections from Canterbury Tales, from the viewpoint of Chaucer’s development as a narrative artist. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
Course not offered every year
Also Offered As: COML 522, GSWS 524, ITAL 525
Activity: Seminar
1.0 Course Unit

ENGL 537 Renaissance Epic
An introduction to the practice and theory of epic in the early modern period. Specific texts vary with instructor. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 549, FREN 550, GSWS 550
Activity: Seminar
1.0 Course Unit

ENGL 538 Major Renaissance Writers
This is a monographic course, which may be on Spenser, Milton, or other major figures of the period. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Taught by: Sanchez
Course not offered every year
Also Offered As: COML 558
Activity: Seminar
1.0 Course Unit

ENGL 540 Topics in 18th Century British Literature
This course covers topics in 18th Century British literature. Its emphasis varies with instructor. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 541 Archiving Jazz: Visuality And Materiality In The Phila Jazz Community 1945-2019
This seminar will be organized around three distinct pathways. First, it will serve as an introduction to Jazz Studies and thus be attentive to the ways that jazz music has sparked an interdisciplinary conversation that is wide-ranging and ongoing. Second, we will be partnering with the African American Museum of Philadelphia to consider jazz within the realm of visual art. In light of efforts to map the 'black interior,' how have visual artists (e.g. painters, sculptors, filmmakers, and photographers) sought to represent jazz? Third, we will endeavor to develop partnerships with the Philadelphia (and beyond) jazz community, especially as it pertains to creating and sustaining an archive that serves as way to understand jazz as an instrument of placemaking and also as a vehicle for jazz musicians to take ownership of their narratives. The seminar will meet at the African American Museum of Philadelphia and be team taught with members of the Museum staff. The course will culminate with a virtual exhibit of visual works and archival materials centering on Philadelphia's jazz community and (if funding is available) a free concert to be held at AAMP. Undergraduates are welcome to register for the course with permission of the instructor.
Taught by: Beavers
Course not offered every year
Also Offered As: AFRC 542, ARTH 519, MUSC 542, URBS 542
Activity: Seminar
1.0 Course Unit

ENGL 544 Eighteenth-Century Novel
A survey of the major novelists of the period, often beginning with Defoe and a few of the writers of amatory fiction in the early decades of the century and then moving on to representative examples of the celebrated novels by Richardson, Fielding, and others of the mid-century and after. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 548 English Literature and Culture, 1650-1725
English 548, with its companion, English 549, studies the literature of this period in the context of the artistic and cultural milieu of the later seventeenth and early eighteenth centuries. Texts usually include works by Dryden, Rochester, Swift, Pope, and Defoe. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 550 Topics in Romanticism
This class explores the cultural context in which the so-called Romantic Movement prospered, paying special attention to the relationship between the most notorious popular genres of the period (gothic fiction and drama) and the poetic production of both canonical and emerging poets. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit
ENGL 553 British Women Writers
A study of British women writers, often focusing on the women authors who came into prominence between 1775 and 1825. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 554, GSWS 553
Activity: Seminar
1.0 Course Unit

ENGL 556 Topics in 19th-Century British Literature
This course covers topics in nineteenth-century British Literature, its specific emphasis varying with the instructor. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 560 The Novel
This course will provide an intensive introduction to the study of the novel, approaching the genre from a range of theoretical, critical, and historical perspectives. It may examine conflicting versions of the novel’s history (including debates about its relationship to the making of the individual, the nation-state, empire, capital, racial and class formations, secularism, the history of sexuality, democracy, print and other media, etc.), or it may focus on theories of the novel, narratology, or a particular problem in novel criticism. It may attend to a specific form or subgenre of fiction, or it may comprise a survey of genres and texts. See the English Department’s website at: www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 563
Activity: Seminar
1.0 Course Unit

ENGL 563 Topics in 20th-Century British Literature
Topic for Spring 2016: Making and Marking Time. What is time? In the late 19th century, the questions of how to define time, how to slow down time, and, above all, how to accelerate movement have become focus of the work by many European philosophers who have tried to come to terms with what is now termed as the Industrial Revolution, and the idea of ‘progress.’ And can time be understood as something continuous, or is it fragmented, proceeding in fits and burst? Such contemplations on time have deeply influenced writers. Marcel Proust was a reader of Henri Bergson and translated his theories of time into a concept of memory. Thomas Mann has tried to navigate timeless in a novel set on a ‘Magic Mountain.’ Virginia Woolf and James Joyce have pictured an entire universe in a single day (Mrs. Dalloway, Ulysses) while early 20th century Italian Futurists made the contemplation of time part of their manifestos. With them, and with expressionist writers in Germany or writers from the DADA movement there elsewhere in Europe, a reckoning with time would also influence their choice of genre and form, writerly practice, and technique. Parallel to these literary experimentation, pictures were set into motion in scholarly studies by Eadweard Muybridge and finally in the new medium film; Impressionist painters insisted on picturing fleeting moments, and composers experimented with temporal sequences. We may be able to understand a reconsideration of time as driving force for the modern movement, or simply ‘modernity.’ In this seminar, we will study a selection of literary texts of the late 19th century and the modernist movement, consider the philosophical background and changes in historiography, and integrate a consideration of the visual arts and music.
Course not offered every year
Also Offered As: ARTH 584, COML 537, GRMN 541
Activity: Seminar
1.0 Course Unit

ENGL 564 British Modernism
An introduction to British Literary Modernism. Specific emphasis will depend on instructor. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 564
Activity: Seminar
1.0 Course Unit

ENGL 569 Topics in 20th-Century American Literature
This course covers topics in 20th-century literature, its emphasis varying with instructor. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: AFRC 569
Activity: Seminar
1.0 Course Unit

ENGL 570 African-American Literature
This course treats some important aspect of African-American literature and culture. Some recent versions of the course have focused on the emergence of African-American women writers, on the relation between African-American literature and cultural studies, and on the Harlem Renaissance. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: AFRC 570, GSWS 570
Activity: Seminar
1.0 Course Unit
ENGL 572 Topics in African Literature
This course is based on a selection of representative texts written in English, as well as a few texts in English translation. It involves, a study of themes relating to social change and the persistence of cultural traditions, followed by an attempt at sketching the emergence of literary tradition by identifying some of the formal conventions of established writers in their use of old forms and experiments with new. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: AFRC 572, CIMS 572, COML 575
Activity: Seminar
1.0 Course Unit

ENGL 573 Topics in Criticism & Theory
Topic for Spring 2021: Cultures of Reading in Imperial Russia What did it mean to be a reader in imperial Russia? What did people read, and to what ends? How was literacy cultivated, and what were the social implications? In this course, students will read several canonical works of nineteenth-century Russian literature that thematize and foreground the act of reading: as a pursuit undertaken for the betterment of self, society, nation, and world; as a light pastime for the bored or underemployed; but also as an enterprise fraught with potential for moral or civic ruin. In addition to closely investigating allusions to the specific texts and authors read by literary characters, we will also examine the reading habits of our own authors as both consumers and producers of literary culture. We will consider these dynamics against a backdrop of constant fluctuations in educational policies, the book market, and the circulation of texts within and beyond Russia as we work together to develop an understanding of the imperial Russian reading public(s). Taught by: Kim, Brian
Course not offered every year
Also Offered As: ARTH 573, CIMS 515, COML 570, GRMN 573, REES 683
Activity: Seminar
1.0 Course Unit

ENGL 574 Introduction to Bibliography
This course offers an introduction to the principles of descriptive and analytic bibliography and textual editing. The history of authorship, manuscript production, printing, publishing, and reading will be addressed as they inform an understanding of how a particular text came to be the way it is. Diverse theories of editing will be studied and put into practice with short passages. The course is generally suitable for students working in any historical period, but particular emphases specified in the current offerings on the English website. www.english.upenn.edu
Course not offered every year
Also Offered As: COML 580, HIST 574
Activity: Seminar
1.0 Course Unit

ENGL 581 Learning from James Baldwin (1924-1987)
James Baldwin, one of the greatest writers of the twentieth century, spoke to the issues of his times as well as to our own. This class will examine the intellectual legacy that Baldwin left to present-day writers such as Toni Morrison, Charles Johnson, Ta-Nehisi Coates, Thulani Davis, Caryll Phillips and others. We will spend time reading and discussing Baldwin’s novels, short stories, plays and essays. In doing so, we will be considering the complex assumptions and negotiations that we make in our day-to-day lives around our identities and experiences built upon gender, sexual preference, the social-constructs called ‘race,’ and more. James Baldwin’s life and work will be the touchstone that grounds our discussions. We will read Go Tell It on the Mountain, Another Country, The Fire Next Time, and Giovanni’s Room and see films I Am Not Your Negro, The Price of the Ticket and The Murder of Emmett Till. Students will research subjects of their own choosing about Baldwin’s life and art. For example, they may focus on the shaping influences of Pentecostalism; segregation; racism; homophobia; exile in Paris; the Civil Rights Movement; Black Power, Baldwin’s faith, or his return to America. Taught by: Watterson
Also Offered As: AFRC 581, GSWS 580
Activity: Seminar
1.0 Course Unit

ENGL 582 American Literature to 1810
In this course we shall examine the ways various voices--Puritan, Indian, Black, Female, Enlightened, Democratic--intersect with each other and with the landscape of America to produce the early literature(s) of America. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 584 Environmental Imaginaries
Drawing on theories of worldmaking and ethnographic works on culture and environment, this seminar will examine the production of Cartesian-based environmental imaginaries and their alternatives across a range of genres and practices. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.

Also Offered As: ARTH 593, CIMS 590, COML 599
Activity: Seminar
1.0 Course Unit

ENGL 594 Theories of Nationalism
You cannot build a wall to stop the free flow of literary and creative ideas. But in constructing narratives of national identity, states have long adopted particular texts as ‘foundational.’ Very often these texts have been epics or romances designated ‘medieval,’ that is, associated with the period in which specific vernaculars or ‘mother tongues’ first emerged. France and Germany, for example, have long fought over who ‘owns’ the Strasbourg oaths, or the Chanson de Roland; new editions of this epic poem, written in French but telling of Frankish (Germanic) warriors, have been produced (on both sides) every time these two countries go to war. In this course we will thus study both a range of ‘medieval’ texts and the ways in which they have been claimed, edited, and disseminated to serve particular nationalist agendas. Particular attention will be paid to the early nineteenth century, and to the 1930s. Delicate issues arise as nations determine what their national epic needs to be. Russia, for example, needs the text known as The Song of Igor to be genuine, since it is the only Russian epic to predate the Mongol invasion. The text was discovered in 1797 and then promptly lost in Moscow’s great fire of 1812; suggestions that it might have been a fake have to be handled with care in Putin’s Russia. Similarly, discussing putative Mughal (Islamic) elements in so-called ‘Hindu epics’ can also be a delicate matter. Some ‘uses of the medieval’ have been exercised for reactionary and revisionist causes in the USA, but such use is much more extravagant east of Prague. And what, exactly, is the national epic of the USA? What, for that matter, of England? Beowulf has long been celebrated as an English Ur-text, but is set in Denmark, is full of Danes (and has been claimed for Ulster by Seamus Heaney). Malory’s Morte Darthur was chosen to provide scenes for the queen’s new robing room (following the fire that largely destroyed the Palace of Westminster in 1834), but Queen Victoria found the designs unacceptable: too much popery and adultery. Foundations of literary history still in force today are rooted in nineteenth-century historiography: thus we have The Cambridge History of Italian Literature and The Cambridge History of German Literature, each covering a millennium, even though political entities by the name of Italy and Germany did not exist until the later nineteenth century. What alternative ways of narrating literary history might be found? Itinerary models, which do not observe national boundaries, might be explored, and also the cultural history of watercourses, such as the Rhine, Danube, or Nile. The exact choice of texts to be studied will depend in part on the interests of those who choose to enroll. Faculty with particular regional expertise will be invited to visit specific classes.
Taught by: Wallace
Course not offered every year
Also Offered As: COML 591, ITAL 594
Activity: Seminar
1.0 Course Unit

ENGL 595 Post-Colonial Literature
This course covers topics in Post-Colonial literature with emphasis determined by the instructor. The primary focus will be on novels that have been adapted to film. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: AFRC 594, CIMS 595
Activity: Seminar
1.0 Course Unit
ENGL 596 Topics in Contemporary Art
Topics varies. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: ARTH 596, CIMS 596, FNAR 605, GSWS 596
Activity: Seminar
1.0 Course Unit

ENGL 597 Modern Drama
This course will survey several basic approaches to analyzing dramatic literature and the theatre. The dramatic event will be broken into each of its Aristotelian components for separate attention and analysis: Action (plot), Character, Language, Thought, Music and Spectacle.
Several approaches to analysing the dramatic text will be studied: phenomenological, social-psychological, semiotic, and others. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 600 Proseminar
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 605 Modern Literary Theory and Criticism
This course will provide an overview of major European thinkers in critical theory of the 20th and 21st centuries. We will pay particular attention to critical currents that originated in Eastern European avant-garde and early socialist contexts and their legacies and successors. Topics covered will include: Russian Formalism and its successors in Structuralism and Deconstruction (Shklovsky, Levi-Strauss, Jakobson, Derrida); Bakhtin and his circle, dialogism and its later western reception; debates over aesthetics and politics of the 1930s (Lukacs, Brecht, Adorno, Benjamin, Radek, Clement Greenberg); the October group; Marxism, new Left criticism, and later lefts (Althusser, Williams, Eagleton, Jameson, Zizek).
Taught by, Platt
One-term course offered either term
Also Offered As: COML 605, FREN 605, GRMN 605, REES 605

1.0 Course Unit

ENGL 616 Approaches to Literary Texts
Course not offered every year
Also Offered As: CLST 636, COML 616, EALC 715, REES 616, ROML 616
Activity: Seminar
1.0 Course Unit

ENGL 705 Interdisciplinary Approaches to Literature
This course will explore one or more interdisciplinary approaches to literature. Literary relationships to science, art, or music may provide the focus. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 705
Activity: Seminar
1.0 Course Unit

ENGL 707 Orality and Literacy
Major lines of study of the subject of literacy are traceable in at least three disciplines: history of Western literature (especially classical and medieval studies), anthropology, and ethnography of education, including education development in the Third World and psychological and developmental education theory and practice. The linkages between oral and literary communicative modes in different cultures are studied, from a folklorist’s viewpoint. The overall task of the course is not to isolate topics of narrowly defined folkloric interest in the broad field of literacy, but to integrate and critique the diverse approaches to literacy as a communicative mode or modes, from the point of view of folklore as a discipline. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: CLST 530, COML 530
Activity: Seminar
1.0 Course Unit

ENGL 715 Middle English Literature
This seminar will study a number of selected Middle English texts in depth. Attention will be paid to the textual transmission, sources, language, genre, and structure of the works. Larger issues, such as the influence of literary conventions (for example, ‘courtly love’), medieval rhetoric, or medieval allegory will be explored as the chosen texts may require.
Course not offered every year
Also Offered As: CLST 610, COML 714
Activity: Seminar
1.0 Course Unit

ENGL 721 Medieval Poetics
This course may include some of the following fields: studies of medieval stylistic practices, formal innovations, and theories of form; medieval ideas of genre and form; medieval thought about the social, moral, and epistemological roles of poetry; interpretive theory and practice; technologies of interpretation; theories of fiction (fabula) and allegory; sacred and secular hermeneutics; theories of language and the histories of the language arts; vernacular(s) and Latinity; material texts. See the English Department’s website at www.english.upenn.edu for a complete description of the current’s offerings.
Course not offered every year
Also Offered As: CLST 628, COML 618
Activity: Seminar
1.0 Course Unit

ENGL 730 Topics in 16th-Century History and Culture
This is an advanced course treating topics in 16th Century history and culture particular emphasis varying with instructor. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 730
Activity: Seminar
1.0 Course Unit

ENGL 731 Renaissance Poetry
An advanced seminar in English poetry of the early modern period. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit
ENGL 734 Renaissance Drama
This is an advanced course in Renaissance drama which will include plays by non-Shakespearean dramatists such as Marlowe, Jonson, and Middleton. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.  
Course not offered every year  
Also Offered As: COML 734  
Activity: Seminar  
1.0 Course Unit

ENGL 736 Renaissance Studies
This is an advanced topics course treating some important issue in contemporary Renaissance studies. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.  
Course not offered every year  
Also Offered As: COML 736  
Activity: Seminar  
1.0 Course Unit

ENGL 739 Milton
An examination of Milton's major poetry and prose with some emphasis on the social and political context of his work. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.  
Course not offered every year  
Activity: Seminar  
1.0 Course Unit

ENGL 745 Restoration and 18th-Century Fiction
This is an advanced course in the fiction of the Restoration and the 18th-Century, the period of 'The rise of the novel'. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.  
Course not offered every year  
Activity: Seminar  
1.0 Course Unit

ENGL 748 Studies in the Eighteenth Century
This course varies in its emphases, but in recent years has explored the theory of narrative both from the point of view of eighteenth-century novelists and thinkers as well as from the perspective of contemporary theory. Specific attention is paid to issues of class, gender, and ideology. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.  
Course not offered every year  
Activity: Seminar  
1.0 Course Unit

ENGL 753 Victorian British Literature
An advanced seminar treating some topics in Victorian British Literature, usually focusing on non-fiction or on poetry. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.  
Course not offered every year  
Also Offered As: COML 753  
Activity: Seminar  
1.0 Course Unit

ENGL 761 British Modernism
This course treats one or more of the strains of British modernism in fiction, poetry, or the arts. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.  
Course not offered every year  
Activity: Seminar  
1.0 Course Unit

ENGL 768 Genres of Writing
Please check the department's website for the course description: https://www.english.upenn.edu. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.  
Course not offered every year  
Activity: Seminar  
1.0 Course Unit

ENGL 769 Feminist Theory
Specific topic varies. The seminar will bring together the study of early modern English literature and culture with histories and theories of gender, sexuality and race. Contact with 'the East' (Turkey, the Moluccas, North Africa and India) and the West (the Americas and the Caribbean) reshaped attitudes to identity and desire. How does this history allow us to understand, and often interrogate, modern theories of desire and difference? Conversely, how do postcolonial and other contemporary perspectives allow us to re-read this past? See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.  
Course not offered every year  
Also Offered As: COML 769, GSWS 769, NELC 783, SAST 769  
Activity: Seminar  
1.0 Course Unit

ENGL 770 Afro-American Literature
An advanced seminar in African-American literature and culture. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.  
Course not offered every year  
Also Offered As: AFRC 770  
Activity: Seminar  
1.0 Course Unit

ENGL 771 Textual Production
This course is based on library work and is intended as a practical introduction to graduate research. It addresses questions of the history of the book, of print culture, and of such categories as 'work', 'character', and 'author' as well as of gender and sexuality, through a detailed study of the (re)production of Shakespearean texts from the seventeenth to the twentieth century. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.  
Course not offered every year  
Activity: Seminar  
1.0 Course Unit

ENGL 773 Modernism
An interdisciplinary and international examination of modernism, usually treating European as well as British and American modernists. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.  
Course not offered every year  
Activity: Seminar  
1.0 Course Unit
ENGL 774 Postmodernism
An advanced seminar on postmodernist culture. Recently offered as a study of relationship between poetry and theory in contemporary culture, with readings in poststructuralist, feminist, marxist, and postcolonial theory and in poets of the Black Mountain and Language groups. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 622
Activity: Seminar
1.0 Course Unit

ENGL 775 African Literature
An advanced seminar in anglophone African literature, possibly including a few works in translation. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: AFRC 775, COML 700
Activity: Seminar
1.0 Course Unit

ENGL 777 African Film and Media Pedagogy
This graduate seminar offers an intensive, critical, and collaborative study of contemporary African film and media production. The past three decades have seen an unprecedented shift in the African media landscape. Not only has the wide availability of satellite media across the continent made international film and television programing part of African popular culture, but moreover the growing film industries within the continent, most notably Nollywood, have altered how Africans are carving an image of themselves on the big and small screens. In partnership with local, regional, and international film and media centers, we will study a range of films--features, shorts, documentaries, and television shows--paying close attention to the means and sites of production as well as the formal qualities that distinguish these works. Many of the films we will analyze stand out both for their exceptional aesthetic quality as well as their remarkable ability to confront pressing political and social themes. But we will also think about trash: what counts as trashy media, and for whom? Who watches it, where, and why? Other questions we will ask include: What particular indigenous modes of storytelling do African films employ? What categories begin to emerge under the umbrella category of 'African film and media,' and where do diasporan film and media practitioners and critics fit in this landscape? How are these films tackling some of the urgent questions of our times, including migration and globalization; ethnic, political, and economic polarization; gender and sexuality; and massive urbanization and industrialization sweeping Africa and other parts of the Global South? What role do festivals in various countries play in shaping media production and distribution? How important is the concept of authorship in this context? And how do these films challenge the dominant western trope of Africa as a spectacle, instead offering novel ways of picturing everyday African experiences that we rarely glimpse in western media? To explore these questions, we will visit multiple sites of film production, distribution, exhibition, and education, including Scribe Video Center in Philadelphia, Sankofa Films in Washington, D.C., and the College of Performing and Visual Art at Addis Ababa University in Ethiopia. Location and knowledge production are inextricably connected, and by considering African media production from these multiple sites, and collaborating with multiple stakeholders, this course offers a directly engaged pedagogy of the complex artistic, cultural, social, and political dynamics of African audiovisual creation. The travel component of this course entails a day trip to Washington, D.C. during the semester (tentative date: April 2, 2020) and a week-long trip to Addis Ababa at the end of the spring term (students applying for this course should be prepared to travel to Addis Ababa May 30, 2020-June 7, 2020). All expenses for travel, accommodation, and food will be covered, but students will need to hold a passport. Ultimately, this course aims to use film and media production to intervene in a larger discourse on how Africa is figured in the global humanities, not as an absent or passive actor but one actively engaged in producing art and humanistic knowledge that has much to teach us and the world. Admission to the course will be by permission only and students are required to submit a short statement of interest (max. 250 words) to dagw@english.upenn.edu and redkaren@sas.upenn.edu. Students must be prepared to travel to Addis Ababa and Washington D.C. as described in the syllabus, and must hold a passport.
Taught by: Redrobe/Woubshet
Course not offered every year
Also Offered As: AFRC 791, ARTH 791, CIMS 791, COML 791
Activity: Seminar
1.0 Course Unit
ENGL 778 20th-Century Aesthetics
This course explores notions that have conditioned 20th century attitudes toward beauty among them ornament, form, fetish, the artifact ‘women’, the moves to 20th century fiction, art manifestos, theory, and such phenomena as beauty contests and art adjudications. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: ARTH 797
Activity: Seminar
1.0 Course Unit

ENGL 783 Major American Author
A seminar treating any one of the major American Writers. Past versions have focused on Melville, Whitman, Twain, James, Pound, Eliot, and others. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 790 Recent Issues in Critical Theory
See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 790, GSWS 790
Activity: Seminar
1.0 Course Unit

ENGL 791 Collective Violence, Trauma, and Representation
This seminar is organized as a laboratory space for graduate students and faculty working in a number of adjacent fields and problems. Seminar discussions will be led not only by the primary instructors, but also by a number of guests drawn from the Penn faculty. For the first weeks of the course, we will focus on seminal works in the interlinked areas of history and memory studies, cultural representations of collective violence, trauma studies, and other related topics. Beginning with the 4th week of the course, we will turn to case studies in a variety of geographic, cultural and historical contexts. Additionally, some later sessions of the course will be devoted to a presentation and discussion of a work in progress of a Penn graduate student, faculty member or a guest lecturer.
Taught by: Platt
Course not offered every year
Also Offered As: COML 683, LALS 683, REES 666
Activity: Seminar
1.0 Course Unit

ENGL 794 Postcolonial Literature
An advanced seminar treating a specific topic or issue in Postcolonial Literature. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 794
Activity: Seminar
1.0 Course Unit

ENGL 795 Topics in Poetics
Topics in poetics will vary in its emphasis depending on the instructor. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ENGL 799 Topics in American Literature
An advanced topics course in American literature, with the curriculum fixed by the instructor. Recently offered with a focus on American Literature of Social Action and Social Vision. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: AFRC 799
Activity: Seminar
1.0 Course Unit

ENGL 800 Teaching of Literature and Composition
A course combining literary study with training in teaching. These courses will normally be taken by students in their first semester of teaching.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

ENGL 850 Field List
Students work with an adviser to focus the area of their dissertation research. They take an examination on the field in the Spring and develop a dissertation proposal.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ENGL 851 Dissertation Proposal
A continuation of ENGL 850.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ENGL 998 Independent Study
Open to students who apply to the graduate chair with a written study proposal approved by the advisor. The minimum requirement is a long paper. Limited to 1 CU.
Course offered summer, fall and spring terms
Activity: Independent Study
1.0 Course Unit
Notes: Limited to 1 CU

ENGL 999 Independent Reading
Open only to candidates who have completed two semesters of graduate work.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Environmental Studies (ENVS)

ENVS 060 Global Environmental History from Paleolithic to the Present
This course explores the changing relationships between human beings and the natural world from early history to the present. We will consider the various ways humans across the globe have interacted with and modified the natural world by using fire, domesticating plants and animals, extracting minerals and energy, designing petrochemicals, splitting atoms and leaving behind wastes of all sorts. Together we consider the impacts, ranging from population expansion to species extinctions and climate change. We examine how human interactions with the natural world relate to broader cultural processes such as religion, colonialism and capitalism, and why it is important to understand the past, even the deep past, in order to rise to the challenges of the present.
Taught by: Norton, Berg
Also Offered As: HIST 060
Activity: Lecture
1.0 Course Unit

ENVS 091 Sustainable Development and Culture in Latin America
This interdisciplinary course exposes students to the three dimensions of sustainable development -environmental, economic, and social- through an examination of three products -peyote, coca, and coffee- that are crucial in shaping modern identity in areas of Latin America. The course integrates this analysis of sustainable development in relation to cultural sustainability and cultural practices associated with peyote, coca, and coffee and their rich, traditional heritage and place in literature, film, and the arts.
Taught by: Gimenez
Course offered fall; even-numbered years
Also Offered As: ANTH 091, LALS 091, SPAN 091
Activity: Seminar
1.0 Course Unit

ENVS 100 Introduction to Environmental Science
This course will explore the physical science of the Earth’s environment and human interactions with it. Coverage will include the Earth’s various environmental systems, various environmental problems, and the direct and indirect causes of these environmental problems. Fresman seminar will mirror the ENVS100 recitation, and have additional discussions and social media projects.
For BA Students: Physical World Sector
Taught by: Plante
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ENVS 150 Water Worlds: Cultural Responses to Sea Level Rise & Catastrophic Flooding
As a result of climate change, the world that will take shape in the course of this century will be decidedly more inundated with water than we're accustomed to. The polar ice caps are melting, glaciers are retreating, ocean levels are rising, polar bear habitat is disappearing, countries are jockeying for control over a new Arctic passage, while low-lying cities and small island nations are confronting the possibility of their own demise. Catastrophic flooding events are increasing in frequency, as are extreme droughts. Hurricane-related storm surges, tsunamis, and raging rivers have devastated regions on a local and global scale. In this seminar we will turn to the narratives and images that the human imagination has produced in response to the experience of overwhelming watery invasion, from Noah to New Orleans. Objects of analysis will include mythology, ancient and early modern diluvialism, literature, art, film, and commemorative practice. The basic question we'll be asking is: What can we learn from the humanities that will be helpful for confronting the problems and challenges caused by climate change and sea level rise?
For BA Students: Arts and Letters Sector
Taught by: Richter, Simon
Course not offered every year
Also Offered As: CIMS 150, COML 151, GRMN 150
Activity: Lecture
1.0 Course Unit

ENVS 151 Forest Worlds: Mapping the Arboreal Imaginary in Literature and Film
Can the humanities help us think differently about the forest? What happens if we imagine forests as the agents of their stories? At a time when humans seem unable to curb the destructive practices that place themselves, biodiversity, and the forests at risk, the humanities give us access to a record of the complex inter-relationship between forests and humanity. The course places a wide range of literature and film in which forests are strongly featured in relation to environmental history and current environmental issues.
Taught by: Richter
Course not offered every year
Also Offered As: CIMS 152, COML 154, GRMN 151
Activity: Lecture
1.0 Course Unit

ENVS 152 Liquid Histories
Also Offered As: ANTH 154, COML 152, ENGL 052, GRMN 152, HIST 152
Activity: Lecture
1.0 Course Unit
ENVS 165 Environment, Climate, and Culture in Japan
This course explores how Japanese literature, cinema, and popular culture have engaged with questions of environment, ecology, pollution, and climate change from the wake of the dropping of the atomic bomb on Hiroshima in 1945 to the ongoing Fukushima nuclear power plant disaster in the present. Environmental disasters and the slow violence of their aftermath have had an enormous impact on Japanese cultural production, and we examine how these cultural forms seek to negotiate and work through questions of representing the unrepresentable, victimhood and survival, trauma and national memory, uneven development and discrimination, the human and the nonhuman, and climate change’s impact on imagining the future. Special attention is given to the possibilities and limitations of different forms—the novel, poetry, film, manga, anime—that Japanese writers and artists have to think about humans’ relationship with the environment.
Taught by: Poland
Course not offered every year
Also Offered As: EALC 165, EALC 565
Activity: Seminar
1.0 Course Unit

ENVS 181 Comparative Cultures of Sustainability
Sustainability is more than science, engineering, policy, and design. Surveying the world, we see that the politics and practice of sustainability play out in different ways depending on cultural factors. Some cultures are more prone to pursue ecological goals than others. Why? Do the environmental history and experience of a nation affect policy? Do nature and the environment play a crucial role in the cultural memory of a nation? Can cultural components be effectively leveraged in order to win approval for a politics of sustainability? And what can we, as residents of a country where climate change and global warming are flashpoints in an enduring culture war, learn from other cultures? This course is designed to equip undergraduate students with the historical and cultural tools necessary to understand the cultural aspects of sustainability in two countries noted for their ecological leadership and cultural innovation, Germany and the Netherlands. Summer abroad course.
Taught by: Simon Richter
Course usually offered summer term only
Also Offered As: GRMN 181
Activity: Lecture
1.0 Course Unit

ENVS 211 Religion and Ecology
Also Offered As: ANTH 211, RELS 211
Activity: Lecture
1.0 Course Unit

ENVS 212 Animals & Religion
Religion is full of animals—lions and lambs, monkeys and elephants, buffalo and snakes, even mythical beasts. The identity of the human being is explained, in many traditions, by contrast with the identity of other species. We know who we are because we know who they are, or do we? This course interrogates—through an exploration of sacred texts, art, film, and museum artifacts—the tension present in many traditions between an anthropocentric prioritization of the human being and religious resources that encourage a valuing of other animal species. We’ll explore the way animals function both as religious objects and as religious subjects across diverse traditions, asking how human-animal relationships have shaped religion and how religion has shaped the way we think about and interact with other animals. We’ll ask how religion has engaged with animals over time and across global cultures, understanding them as symbols, messengers, and manifestations of the divine; as material for ritual and sacrifice; as kin and subordinates; as food and as filth; as helpmeet and as tempter. How have these perspectives shaped animal ethics, influencing the treatment, use, and consumption of animals and their bodies? Finally, we’ll ask what it means that we ourselves are evolved animals. How does our own animality factor into the practice of human religion? Is our religious capacity part of what sets us apart from other animals or is religiosity a trait we might expect to find in other species? To what extent is religion a function of the animal?
Taught by: Covey
Course not offered every year
Also Offered As: ANTH 212, RELS 212
Activity: Seminar
1.0 Course Unit

ENVS 239 Sustainability & Utopianism
This seminar explores how the humanities can contribute to discussions of sustainability. We begin by investigating the contested term itself, paying close attention to critics and activists who deplore the very idea that we should try to sustain our, in their eyes, dystopian present, one marked by environmental catastrophe as well as by an assault on the educational ideals long embodied in the humanities. We then turn to classic humanist texts on utopia, beginning with More’s fictive island of 1517. The origins of environmentalism lie in such depictions of island edens (Richard Grove), and our course proceeds to analyze classic utopian tests from American, English, and German literatures. Readings extend to utopian visions from Europe and America of the nineteenth and twentieth centuries, as well as literary and visual texts that deal with contemporary nuclear and flood catastrophes. Authors include: Bill McKibben, Jill Kerr Conway, Christopher Newfield, Thomas More, Francis Bacon, Karl Marx, Henry David Thoreau, Robert Owens, William Morris, Charlotte Perkins Gilman, Ayn Rand, Christa Wolf, and others. Taught in English.

ENVS 245 Petrosylvania: Reckoning with Fossil Fuel
Fossil fuel powered the making—now the unmaking—of the modern world. As the first fossil fuel state, Pennsylvania led the United States toward an energy-intensive economy, a technological pathway with planetary consequences. The purpose of this seminar is to perform a historical accounting—and an ethical reckoning—of coal, oil, and natural gas. Specifically, students will investigate the histories and legacies of fossil fuel in connection to three entities: the Commonwealth of Pennsylvania, the City of Philadelphia, and the University of Pennsylvania. Under instructor guidance, students will do original research, some of it online, much of it in archives, on and off campus, in and around Philadelphia. Philly-based research may also involve fieldwork. While based in historical sources and methods, this course intersects with business, finance, policy, environmental science, environmental engineering, urban and regional planning, public health, and social justice. Student projects may take multiple forms, individual and collaborative, from traditional papers to data visualizations prepared with assistance from the Price Lab for Digital Humanities. Through their research, students will contribute to a multi-year project that will ultimately be made available to the public.
Taught by: Farmer
Also Offered As: HIST 245
Activity: Seminar
1.0 Course Unit

ENVS 246 Spirituality in the Age of Global Warming: How Can Science & the Humanities Work Together?
We are living in the midst of one of the most severe crises in the Earth’s history. Science confirms the glaciers are melting, hurricanes are growing more intense, and the oceans are rising. But there is also a deeply spiritual dimension to global warming that does not factor into the scientific explanations. This part of the problem has been more powerfully expressed in film, literature, and art. We will be looking at films like Lee’s ‘When the Levees Broke,’ about how the people of New Orleans turned to music and storytelling to rebuild their communities in the wake of Hurricane Katrina and Linda Hogan’s novel, ‘Solar Storm’ which explores how Native American women drew upon spirituality to heal their community after a dam flooded their ancestral homeland. The class will also work on an ongoing research project in partnership with th eCanadian government and Ojibwe First Nations who submitted a successful UNESCO World Heritage Site application to preserve the boreal forest and the Native people’s traditional knowledge about their land. The class will be working on an interactive map to document how photographs, oral histories, and artwork helped convince UNESCO to preserve the land and the Traditional Ecological Knowledge (TEK) of the people who have lived on that land for thousands of years.

1.0 Course Unit

ENVS 258 Extreme Heat: White Nationalism in the Age of Climate Change
The Amazon is burning. The glaciers are melting. Heat waves, hurricanes, earthquakes, floods, wildfires, and droughts devastate ever larger swaths of the earth, producing crop failures, air pollution, soil erosion, famine and terrifying individual hardship. At the same time the so-called Western World is literally walling itself off from the millions who are fleeing from disaster and war with what little they can carry. White militants chant ‘blood and soil’ and ‘Jews will not replace us,’ social media spreads memes and talking points about ‘white genocide’ and ‘white replacement’ and online ideologues fantasize about building white ethnostates. Are these developments connected? Is there a causal relationship? Or are these conditions purely coincidental? Increasingly, arguments about limits to growth, sustainability, development and climate change have come to stand in competitive tension with arguments for social and racial equality. Why is that case? What are the claims and underlying anxieties that polarize western societies? How do white nationalist movements relate to populist and fascist movements in the first half of the 20th century? What is new and different about them now? What are the relationship between environmentalism, rightwing populism and the climate crisis? And how have societies responded to the climate crisis, wealth inequality, finite resources and the threat posed by self-radicalizing white nationalist groups?

1.0 Course Unit

ENVS 279 Nature’s Nation: Americans and Their Environment
The United States is ‘nature’s nation.’ Blessed with an enormous, resource-rich geographically diverse and sparsely settled territory, Americans have long seen ‘nature’ as central to their identity, prosperity, politics and power, and have transformed their natural environment accordingly. But what does it mean to be ‘nature’s nation’? This course describes and explores how American ‘nature’ has changed over time. How and why has American nature changed over the last four centuries? What have Americans believed about the nation’s nature, what have they known about the environment, how did they know it and how have they acted on beliefs and knowledge? What didn’t or don’t they know? How have political institutions, economic arrangements, social groups and cultural values shaped attitudes and policies? How have natural actors (such landscape features, weather events, plants, animals, microorganisms) played roles in national history? In addition to exploring the history of American nature, we will look for the nature in American history. Where is ‘nature’ in some of the key events of American history that may not, on the surface, appear to be ‘environmental?’

1.0 Course Unit
ENVS 295 Maritime Science and Technology: Woods Hole Sea Semester
A rigorous semester-length academic and practical experience leading to an understanding of the oceans. The Sea Semester is composed of two intensive six-week components taken off-campus. The Shore Component is six weeks at Woods Hole, Massachusetts, with formal study in: Oceanography, Maritime Studies, and Nautical Science. This is followed by six weeks aboard a sailing research vessel, during which students conduct oceanographic research projects as part of the courses, Practical Oceanography I and II. Prerequisite: Laboratory course in physical or biological science or its equivalent; college algebra or its equivalent. This set of courses requires special application procedures. Contact Maria Andrews for information and an application. Only the ‘SEA semester: Ocean Exploration’ and ‘SEA Semester: Oceans and Climates’ can be taken for Penn credit without taking a leave, and all students must have permission from Maria Andrews before registering at SEA. Maritime Studies. A multidisciplinary study of the history, literature, and art of our maritime heritage, and the political and economic problems of contemporary maritime affairs. Nautical Science. The technologies of operation at sea. Concepts of navigation, naval architecture, ship construction, marine engineering systems, and ship management are taught from their bases in physics, mathematics, and astronomy. Practical Oceanography I. Taken aboard SSV Westward or SSV Corwith Cramer. Theories and problems raised in the shore component are tested in the practice of oceanography at sea. Students are introduced to the tools and techniques of the practicing oceanographer. During two lectures daily and while standing watch, students learn the operation of basic oceanographic equipment, the methodologies involved in the collection, reduction, and analysis of oceanographic data, and the attendant operations of a sailing oceanographic research vessel. Practical Oceanography II. Taken aboard SSV Westward or SSV Corwith Cramer. Students assume increasing responsibility for conducting oceanographic research and the attendant operations of the vessel. The individual student is responsible directly to the chief scientist and the master of the vessel for the safe and orderly conduct of research activities and related operation of the vessel. Each student completes an individual oceanographic research project designed during the shore component.
Taught by: Andrews
One-semester course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: This set of courses requires special application procedures. Contact Maria Andrews for information and an application. Only the ‘SEA semester: Ocean Exploration’ and ‘SEA Semester: Oceans and Climates’ can be taken for Penn credit without taking a leave, and all students must have permission from Maria Andrews before registering at SEA.

ENVS 299 Independent Study
Directed study for individuals or small groups under supervision of a faculty member. Permission of department required.
One-semester course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: May be repeated for credit

ENVS 301 Environmental Case Studies
A detailed, comprehensive investigation of selected environmental problems. Guest speakers from the government and industry will give their accounts of various environmental cases. Students will then present information on a case study of their choosing.
Taught by: Dmochowski
Course usually offered in fall term
Prerequisite: ENVS 200
Activity: Lecture
1.0 Course Unit

ENVS 302 Case Studies in Environmental Sustainability
A detailed, comprehensive investigation of selected environmental sustainability problems specific to a selected region. This course aims to introduce students to myriad Earth and environmental issues (understanding how humans interact, affect and are influenced by our environment) through the analysis of several environmental case studies, as well as giving students an introduction to how complex cases are analyzed and what goes into decision-making at the individual, group, state, federal and global levels. The course includes an intensive field trip at the end of the semester - locations will vary by offering.
Taught by: Plante
Course offered spring; odd-numbered years
Prerequisite: ENVS 100 OR GEOL 100 OR GEOL 103 OR GEOL 125 OR GEOL 130
Activity: Seminar
1.0 Course Unit
Notes: Application required through Penn Global: <a href='https://global.upenn.edu/pennabroad/pgs'>https://global.upenn.edu/pennabroad/pgs</a>

ENVS 312 Ocean-Atmosphere Dynamics and Implications for Future Climate Change
This course covers the fundamentals of atmosphere and ocean dynamics, and aims to put these in the context of climate change in the 21st century. Large-scale atmospheric and oceanic circulation, the global energy balance, and the global energy balance, and the global hydrological cycle. We will introduce concepts of fluid dynamics and we will apply these to the vertical and horizontal motions in the atmosphere and ocean. Concepts covered include: hydrostatic law, buoyancy and convection, basic equations of fluid motions, Hadley and Ferrel cells in the atmosphere, thermohaline circulation, Sverdrup ocean flow, modes of climate variability (El-Nino, North Atlantic Oscillation, Southern Annular Mode). The course will incorporate student led discussions based on readings of the 2007 Intergovernmental Panel on Climate Change (IPCC) report and recent literature on climate change. Aimed at undergraduate or graduate students who have no prior knowledge of meteorology or oceanography or training in fluid mechanics. Previous background in calculus and/or introductory physics is helpful. This is a general course which spans many subdisciplines (fluid mechanics, atmospheric science, oceanography, hydrology).
Taught by: Marinov
Course usually offered in spring term
Also Offered As: ENVS 640, PHYS 314
Prerequisite: MATH 114
Activity: Lecture
1.0 Course Unit
ENVS 325 Sustainable Goods
The study of sustainability—the long term viability of humans in harmony with the environment—has been identified as a critical issue for society and industry and is evolving to examine how society should conduct itself in order to survive. This issue impacts the consumer goods that we use in our lives, the processes that are designed to make these goods, and the raw materials that we obtain to create these goods. The questions that we will examine will be: can these goods be obtained, made, and consumed in a fashion that allows the current quality of life to be maintained (or enhanced) for future generations? Can these processes be sustainable? A review of consumer goods is necessary as the starting point in order to understand the basic needs of people in society and why people consume goods as they do. Subsequently, each student will choose a product to examine in detail and will research the product for its impact with respect to natural resource selection, production, use, and disposal/reuse.
Taught by: Hagan
Activity: Lecture
1.0 Course Unit

ENVS 326 GIS: Mapping Places & Analyzing Spaces
This course is a hands-on introduction to the concepts and capabilities of geographic information systems (GIS). Students will develop the skills necessary for carrying out basic GIS projects and for advanced GIS coursework. The class will focus on a broad range of functional and practical applications, ranging from environmental science and planning to land use history, social demography, and public health. By the end of the course, students will be able to find, organize, map, and analyze data using both vector (i.e. drawing-based) and raster (i.e. image-based) GIS tools, while developing an appreciation for basic cartographic principles relating to map presentation. This course fulfills the spatial analysis requirement for ENVS and EASC Majors. Previous experience in the use of GIS is not required.
Taught by: Heinlen
Activity: Lecture
1.0 Course Unit

ENVS 327 Principles of Sustainability
What is sustainability? Can any fundamental concepts, principles or framework be constructed that adequately describes the search for sustainability? Is there a meaningful methodology? Sustainability science is a trans-disciplinary approach in which the quantitative and qualitative, natural and social, and theory and practice are reconciled and creatively combined. The objective of this course is to provide an in-depth analysis of the foundational concepts, principles, processes and practices of sustainability science. The course will explore three foundational laws governing sustainability: the law of limits to growth, the second law of thermodynamics, and the law of self-organization. Students will examine how these laws operate in biological, ecological, and physical systems, and then apply them to social, economic and political systems.
Taught by: Alain Plante
Activity: Lecture
1.0 Course Unit

ENVS 391 Sustainable Development And Culture in Latin America
This interdisciplinary course exposes students to the three dimensions of sustainable development—environmental, economic, and social—through an examination of three products—peyote, coca, and coffee—that are crucial in shaping modern identity in areas of Latin America. The course integrates this analysis of sustainable development in relation to cultural sustainability and cultural practices associated with peyote, coca, and coffee and their rich, traditional heritage and place in literature, film, and the arts. This is an upper level seminar open to majors and minors of Spanish and those who have completed Pre-requisite SPAN 219 or SPAN 223 or permission of the Undergraduate Chair.
Taught by: Gimenez
Course offered fall; even-numbered years
Also Offered As: LALS 391, SPAN 391
Prerequisite: SPAN 219 OR SPAN 223
Activity: Seminar
1.0 Course Unit

ENVS 399 Environmental Studies Research Seminar for Juniors
This seminar is designed to help Juniors prepare for the Senior Thesis research. Topic selection, advisor identification, funding options, and basic research methods will be discussed.
Taught by: Andrews
Course usually offered in spring term
Also Offered As: GEOL 399
Prerequisite: ENVS 100
Activity: Seminar
1.0 Course Unit

ENVS 400 Environmental Studies Seminar
Application of student and faculty expertise to a specific environmental problem, chosen expressly for the seminar. May be repeated for credit.
Taught by: Plante, Jerolmack, Kulik
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit

ENVS 404 Urban Environments: Speaking About Lead in West Philadelphia
Lead poisoning can cause learning disabilities, impaired hearing, behavioral problems, and at very high levels, seizures, coma and even death. Children up to the age of six are especially at risk because of their developing systems; they often ingest lead chips and dust while playing in their home and yards. In ENVS 404, Penn undergraduates learn about the epidemiology of lead poisoning, the pathways of exposure, and methods for community outreach and education. Penn students collaborate with middle school and high school teachers in West Philadelphia to engage middle school children in exercises that apply environmental research relating to lead poisoning to their homes and neighborhoods.
For BA Students: Natural Science and Math Sector
Taught by: Pepino
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
Notes: ABCS Course. Requires community service in addition to class time.
ENVS 406 Community Based Environmental Health
From the fall of the Roman Empire to Love Canal to the epidemics of asthma, childhood obesity and lead poisoning in West Philadelphia, the impact of the environment on health has been a continuous challenge to society. The environment can affect people’s health more strongly than biological factors, medical care and lifestyle. The water we drink, the food we eat, the air we breathe, and the neighborhood we live in are all components of the environment that impact our health. Some estimates, based on morbidity and mortality statistics, indicate that the impact of the environment on health is as high as 80%. These impacts are particularly significant in urban areas like West Philadelphia. Over the last 20 years, the field of environmental health has matured and expanded to become one of the most comprehensive and humanly relevant disciplines in science. This course will examine not only the toxicity of physical agents, but also the effects on human health of lifestyle, social and economic factors, and the built environment. Topics include cancer clusters, water borne diseases, radon and lung cancer, lead poisoning, environmental tobacco smoke, respiratory diseases and obesity. Students will research the health impacts of classic industrial pollution case studies in the US. Class discussions will also include risk communication, community outreach and education, access to health care and impact on vulnerable populations. Each student will have the opportunity to focus on Public Health, Environmental Protection, Public Policy, and Environmental Education issues as they discuss approaches to mitigating environmental health risks. This honors seminar will consist of lectures, guest speakers, readings, student presentations, discussions, research, and community service. The students will have two small research assignments including an Environmental and Health Policy Analysis and an Industrial Pollution Case Study Analysis. Both assignments will include class presentations. The major research assignment for the course will be a problem-oriented research paper and presentation on a topic related to community-based environmental health selected by the student. In this paper, the student must also devise practical recommendations for the problem based on their research. For BA Students: Natural Science and Math Sector
Taught by: Kulik
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
Notes: ABCS Course. Requires community service in addition to class time.

ENVS 407 Urban Environments: Prevention of Tobacco Smoking in Adolescents
Cigarette smoking is a major public health problem. The Centers for Disease Control and Prevention Control reports that more than 80% of current adult tobacco users started smoking before age 18. The National Youth Tobacco Survey indicated that 12.8% of middle school students and 34.8% of high school students in their study used some form of tobacco products. In ENVS 407, Penn undergraduates learn about the short and long term physiological consequences of smoking, social influences and peer norms regarding tobacco use, the effectiveness of cessation programs, tobacco advocacy and the impact of the tobacco settlement. Penn students will collaborate with teachers in West Philadelphia to prepare and deliver lessons to middle school students. The undergraduates will survey and evaluate middle school and Penn student smoking. One of the course goals is to raise awareness of the middle school children to prevent addiction to tobacco smoke during adolescence. Collaboration with the middle schools gives Penn students the opportunity to apply their study of the prevention of tobacco smoking to real world situations. Taught by: Pepino
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
Notes: ABCS Course. Requires community service in addition to class time.

ENVS 408 Urban Environments: The Urban Asthma Epidemic
Asthma as a pediatric chronic disease is undergoing a dramatic and unexplained increase. It has become the number one cause of public school absenteeism and now accounts for a significant number of childhood deaths each year in the USA. The Surgeon General of the United States has characterized childhood asthma as an epidemic. In ENVS 408, Penn undergraduates learn about the epidemiology of urban asthma, the debate about the probable causes of the current asthma crisis, and the nature and distribution of environmental factors that modern medicine describes as potential triggers of asthma episodes. Penn students will co-teach asthma classes offered in public schools in West Philadelphia and survey asthma caregivers, providing them with the opportunity to apply theoretical knowledge to real-world situations, promote community education and awareness about asthma, and use problem-solving learning to enhance student education in environmental health. Taught by: Kulik
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
Notes: ABCS Course. Requires community service in addition to class time.
ENVS 410 The Role of Water in Urban Sustainability and Resiliency
This course will provide an overview of the cross-disciplinary fields of civil engineering, environmental sciences, urban hydrology, landscape architecture, green building, public outreach and politics. Students will be expected to conduct field investigations, review scientific data and create indicator reports, working with stakeholders and presenting the results at an annual symposium. There is no metaphor like water itself to describe the cumulative effects of our practices, with every upstream action having an impact downstream. In our urban environment, too often we find degraded streams filled with trash, silt, weeds and dilapidated structures. The water may look clean, but is it? We blame others, but the condition of the creeks is directly related to how we manage our water resources and our land. In cities, these resources are often our homes, our streets and our communities. This course will define the current issues of the urban ecosystem and how we move toward managing this system in a sustainable manner. We will gain an understanding of the dynamic, reciprocal relationship between practices in an watershed and its waterfront. Topics discussed include: drinking water quality and protection, green infrastructure, urban impacts of climate change, watershed monitoring, public education, creating strategies and more.
Taught by: Neukrug
Course not offered every year
Prerequisite: ENVS 100 OR GEOL 100
Activity: Seminar
1.0 Course Unit
Notes: An academically-based curriculum service learning approach to using water, science and politics to create a sustainable Philadelphia.

ENVS 411 Air Pollution: Sources & Effects in Urban Environments
This is an ABCS course designed to provide the student with an understanding of air pollution at the local, regional and global levels. The nature, composition, and properties of air pollutants in the atmosphere will also be studied. The course will focus on Philadelphia’s air quality and how air pollutants have an adverse effect on the health of the residents. The recent designation by IARC of Air Pollution as a known carcinogen will be explored. How the community is exposed to air pollutants with consideration of vulnerable populations will be considered. Through a partnership with Philadelphia Air Management Service (AMS) agency the science of air monitoring and trends over time will be explored. Philadelphia’s current non-attainment status for PM2.5 and ozone will be studied. Philadelphia’s current initiatives to improve air quality of the city will be discussed. Students will learn to measure PM2.5 in outdoor and indoor settings and develop community-based outreach tools to effectively inform the community of Philadelphia regarding air pollution. The outreach tools developed by students may be presentations, written materials, apps, websites or other strategies for enhancing environmental health literacy of the community.
A project based approach will be used to include student monitoring of area schools, school bus routes, and the community at large. The data collected will be presented to students in the partner elementary school in West Philadelphia. Upon completion of this course, students should expect to have attained a broad understanding of and familiarity with the sources, fate, and the environmental impacts and health effects of air pollutants.
For BA Students: Natural Science and Math Sector
Taught by: Andrews and Howarth
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

ENVS 416 Freshwater Ecology
Survey of the physical, chemical and biological properties of freshwater ecosystems, both riverine and lentic, natural and polluted. Prerequisite: One semester of college chemistry.
Taught by: Arscott
Course usually offered in spring term
Also Offered As: BIOL 415
Prerequisite: BIOL 101 OR BIOL 121
Activity: Lecture
1.0 Course Unit

ENVS 417 The Anthropocene: Human-dominated Earth
How much have humans altered the planet they live on? Beyond climate change, humans have altered the Earth’s land, oceans and biosphere to such an extent that the concept of a new geologic epoch defined by the action of humans is seriously debated. This seminar will examine the origins of the Anthropocene, the ways in which humans have altered Earth systems, whether or not these alterations warrant a new geologic designation, and what the future potentially holds for both humans and the planet.
Taught by: Alain Plante
Activity: Seminar
1.0 Course Unit

ENVS 420 Regional Field Ecology
Over the course of six Sunday field trips, we will travel from the barrier islands along the Atlantic Ocean in southern New Jersey to the Pocono Mountains in northeastern Pennsylvania, visiting representative sites of the diverse landscapes in the region along the way. At each site we will study and consider interactions between geology, topography, hydrology, soils, vegetation, wildlife, and disturbance. Students will summarize field trip data in a weekly site report. Evening class meetings will provide the opportunity to review field trips and reports and preview upcoming trips.
Six all-day Sunday field trips are required.
Taught by: Willig
Course usually offered summer term only
Also Offered As: ENVS 610
Activity: Lecture
1.0 Course Unit

Course not offered every year
Activity: Seminar
1.0 Course Unit

ENVS 460 Environmental Policy
Environmental policy
Taught by: Kulik
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
ENVS 498 Senior Thesis
The culmination of the Environmental Studies major. Students, while working with an advisor in their concentration, conduct research and write a thesis. Prerequisite: ENVS 400-level course and declaration of the ECVS major. The environmental studies major, as of the fall of 2008, requires 1 semester of ENVS 399 and two semesters of ENVS 498.
Taught by: Dmochowski
Two terms. student may enter either term.
Activity: Senior Thesis
0.5 Course Units
Notes: The Environmental Studies major, as of the fall of 2008, requires 1 semester of ENVS399 and two semesters of ENVS498.

ENVS 507 Wetlands
The course focuses on the natural history of different wetland types including climate, geology, and hydrology factors that influence wetland development. Associated soil, vegetation, and wildlife characteristics and key ecological processes will be covered as well. Lectures will be supplemented with weekend wetland types, ranging from tidal salt marshes to non-tidal marshes, swamps, and glacial bogs in order to provide field experience in wetland identification, characterization, and functional assessment. Outside speakers will discuss issues in wetland seed bank ecology, federal regulation, and mitigation. Students will present a short paper on the ecology of a wetland animal and a longer term paper on a selected wetland topic. Readings from the text, assorted journal papers, government technical documents, and book excerpts will provide a broad overview of the multifaceted field of wetland study.
Taught by: Willig
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ENVS 510 Regional Ecology: Restoration and Management to Build Resilience
Using the regional geology as a framework for comparison, this online course aims to 1) introduce the varied ecosystems of the region extending from the Atlantic Ocean to the Appalachian Mountains, 2) provide an approach to site analysis that examines connections between climate, geology, topography, hydrology, soils, vegetation, wildlife, and disturbance, both natural and anthropogenic, and 3) investigate restoration and management efforts to build resilience in a changing climate. We will study natural and modified areas representative of regional physiographic provinces (areas of similar geology and topography) to better understand landscape patterns and processes as well as case studies of restoration and management projects. Students will complete weekly assignments and a research project involving a presentation and paper on a topic of interest. *This is an online course*+
Taught by: Sarah Willig, PhD
Activity: Online Course
1.0 Course Unit

ENVS 526 The History and Science of Climate Change
This course will provide an understanding of the Earth’s climate system and how and why this has changed through time. The emphasis will be placed on spatial and temporal scales in the modern system while exploring the evidence for past change, possible mechanisms to explain these changes and the implications of these changes to past, present and future global climate. Students will learn to reconstruct the history and scales of climate change through the use of proxies; understand the mechanisms that act to drive climate change; show and understanding of the long-term natural climate variability on a global and regional scale; understand the importance of natural environmental change, against which to assess human impacts, recent climate change and issues of future environmental change.
Taught by: Yvette Bordeaux
Activity: Online Course
1.0 Course Unit

ENVS 541 Modeling Geographical Objects
This course offers a broad and practical introduction to the acquisition, storage, retrieval, maintenance, use, and presentation of digital cartographic data with both image and drawing based geographic information systems (GIS) for a variety of environmental science, planning, and management applications. Its major objectives are to provide the training necessary to make productive use of at least two well known software packages, and to establish the conceptual foundation on which to build further skills and knowledge in late practice.
Taught by: Tomlin
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ENVS 544 Public Environmental Humanities
This broadly interdisciplinary course is designed for Graduate and Undergraduate Fellows in the Penn Program in Environmental Humanities (PPEH) who hail from departments across Arts and Sciences as well as other schools at the university. The course is also open to others with permission of the instructors. Work in environmental humanities by necessity spans academic disciplines. By design, it can also address and engage publics beyond traditional academic settings. This seminar, with limited enrollment, explores best practices in public environmental humanities. Students receive close mentoring to develop and execute cross-disciplinary, public engagement projects on the environment.
Taught by: Wiggin
Course not offered every year
Also Offered As: ANTH 543, COML 562, GRMN 544, URBS 544
Activity: Seminar
1.0 Course Unit

ENVS 601 Proseminar: Contemporary Issues in Environmental Studies
A detailed, comprehensive investigation of selected environmental problems. This is the first course taken by students entering the Master of Environmental Studies Program.
Taught by: Bordeaux/Colijn
One-term course offered either term
Activity: Seminar
1.0 Course Unit
ENVS 604 Conservation and Land Management
Understanding a region’s natural resources and its threats are a key component in land preservation. This course will explore the different drivers and the techniques used to achieve success in small and large scale land protection. This field-based course will explore various strategies for open space conservation and protection, along with cultural perspectives on land preservation. Evaluation of management techniques used on preserved lands will also be investigated. Emphasis will be placed on developing skills in reading the landscape, the landowner, and the political motivators to determine conservation and restoration priorities.
Taught by: John Goodall
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit
Notes: Some Saturday field trips will be required.

ENVS 605 Bioremediation
This course is an introduction to current and developing techniques for analyzing environmental contamination and for remediation of damaged environments. Knowledge of these options is important for students interested in public/law applications and environmental/landscape design and as a starting point for those pursuing a more science-oriented understanding. The first portion of this course will address bioindicators—the use of living systems to assess environmental contamination. These include systems ranging from biochemical assays to monitoring of whole organisms or ecosystems, as well as techniques ranging from laboratory to field and satellite surveys. The second portion of the course will introduce technologies for bioremediation—the use of living systems to restore contaminated environments. The technologies scale from single-species systems to complex ecosystems such as constructed wetlands; case studies will be examined. Students will be expected to participate in field trips, as well as prepare a final paper examining a particular technology in detail.
Taught by: Vann
Course not offered every year
Activity: Lecture
1.0 Course Unit

ENVS 606 Avifaunal Ecology: Studying ornithological principles & behaviors to indicate ecosystem health
This class will explore the foundations of avifaunal biology and ecology using a combination of hands-on classroom and in-the-field experiences. Classroom content includes physiology, anatomy, and morphology of birds. The fall migration of birds in North America is an epic and often tragic event. Sampling birds in migration has resulted in foundational understandings about stopover habitats, species-specific energy budgets and has helped realize the complete life cycle of hundreds of species. We will enter the field and participate in actual ornithological research, explore avifaunal ecology through birdwatching, and meet with regional leaders in the ornithological field.
Taught by: McGraw
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ENVS 610 Regional Field Ecology
Over the course of six Sunday field trips, we will travel from the barrier islands along the Atlantic Ocean in southern New Jersey to the Pocono Mountains in northeastern Pennsylvania, visiting representative sites of the diverse landscapes in the region along the way. At each site we will study and consider interactions between geology, topography, hydrology, soils, vegetation, wildlife, and disturbance. Students will summarize field trip data in a weekly site report. Evening class meetings will provide the opportunity to review field trips and reports and preview upcoming trips. Activity: Lecture
1.0 Course Unit
Notes: Some Sunday field trips required.

ENVS 616 Risk Assessment: Science & Policy Challenges
How do government policy-makers make decisions about potential threats to human health and the environment in the face of scientific uncertainty? The course develops the concept of Risk Assessment from the publication of the 1983 National Research Council (NRC) report commonly known as the 'Red Book' which was used to rank the initial hazardous waste sites under the Superfund program. Using a variety of teaching tools, including lectures, panel discussions, and case studies, the course examines how public policy decisions regarding environmental risk are made and how effective those decisions are at reducing risks to affected populations. The course focuses on the complex interaction of science, economics, politics, laws, and regulations in dealing with environmental and public health risks. The course will begin with a review of the policy process and methods used in evaluating human health and environmental risks, including the traditional steps in the risk assessment process, including quantitative and qualitative aspects of hazard identification, dose-response assessment, exposure assessment, and risk characterization. The course will then focus on how scientific uncertainty, risk perceptions, socio-economic disparities, risk communication, and politics influence environmental risk-based decision-making. Issues such as special populations (e.g., children, elderly, immune-compromised, woman of pregnancy age, etc.) must be considered when developing risk reduction strategies. The use of the 'precautionary principle' will be discussed in the context of different types of environmental stressors (e.g., pesticides, chemicals, climate change, air pollution, water quality, and land use) and how this important controversial principle is applied differently in contrasting national and European risk management policies.

ENVS 617 Sustainable Estuaries: An Investigation of Resources & Recovery
This course will evaluate the multiple factors that must function to ensure the sustainability of estuaries of national significance. Since the beginning of the environmental movement in the 1960s, we have attempted to protect and improve our watersheds and estuaries through a series of environmental laws, but we learned over the last three decades that regulatory-based ‘command & control’ approaches may have achieved their limits of success, and we now need to think more holistically in order to achieve the Clean Water Act goal of ‘fishable and swimmable’ waters. In this course we will explore the new collaborative strategies and partnerships, which are available, and how social, economic and cultural factors are equally important as regulation to achieve estuary restoration. The National Estuary Program (NEP) was established in 1987 by amendments to the Clean Water Act (Section 320) to identify, restore and protect estuaries along the coasts of the U.S. Unlike traditional regulatory approaches to environmental protection, the NEP targets a broad range of issues and engages local communities in the process. The program focuses not just on improving water quality in an estuary, but on maintaining the integrity of the whole system - its chemical, physical, and biological properties, as well as its economic, recreational, and aesthetic. This course will examine the twenty estuaries of national significance, including the Chesapeake and the Delaware Bays, in an effort to define the condition of estuaries in the US and what strategies can be utilized to attain water quality and habitat goals while achieving important socioeconomic needs of the estuary’s diverse stakeholders. You will examine the history of estuary management, the factors that stress water quality and habitat, and what strategies are commonly used to reduce risks while safeguarding the environment and public health.
Taught by: Pepino
Course usually offered summer term only
Activity: Seminar
1.0 Course Unit

ENVS 620 Developing Environmental Policy
When we think of environmental policies in the USA, we may think of one or more laws geared to improve our nation’s air, water, ecosystems, and biodiversity. However, environmental policies and policy-making comprise more than just specific laws and regulations. Making and implementing environmental policy is a process influenced by multiple political, cultural, and economic factors in addition to scientific factors, all of which impact the ability of policies to be effective, that is, to actually improve the environment. In this course, we develop a framework to analyze the effectiveness of the social actors, process and outcomes of environmental policy-making. We ask questions such as: How do policy makers define environmental problems and solutions? Who are the social actors involved in the process? How are policies created and negotiated? What underlying assumptions and realities about the roles of government and society shape policy instruments and design? Are science and risk accurate or distorted? How are social and environmental justice intertwined? To answer these complex questions, we contextualize and critically analyze policies to determine how both government and society impact on regulatory approaches. We study the institutions involved and examine social and ecological outcomes of environmental policies. We also discuss contemporary issues and policy situations that arise throughout the course of the semester, and comment on them in a class blog. Finally, students will select an environmental issue and formulate a policy proposal to recommend to decisionmakers.
Taught by: Kulik
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ENVS 622 Environmental Enforcement
The goal of the course is to provide students with an introduction to the role of enforcement in federal, state and local environmental regulatory programs. Emphasis will be placed on federal enforcement actions initiated by the U.S. Environmental Protection Agency and U.S. Department of Justice. The course will provide students with an introduction to the American Legal System and legal concepts, like standing, jurisdiction, and burden of proof. A number of case studies and classroom exercises will be utilized as part of the discussion of civil and criminal enforcement actions. For example, a detailed case study will be presented concerning a successful prosecution by the federal government of a wastewater treatment plant operator (from the receipt of the initial tip through the sentencing of the defendant). A theme of all classes, presentations and assignments will be the role of the environmental professional in the enforcement context (e.g., the environmental professional who testifies as an expert in a judicial proceeding, or performs an audit that becomes the subject of a self-disclosure to EPA).

**ENVS 629 The US Water Industry in the 21st Century**
The course will explore all 4 sectors of the water business in the United States: The Drinking Water Industry, The Stormwater Utility, Water Resources (rivers, streams, reservoirs) Management and the Water Pollution Control Industry. The course will have 2 primary foci: 1. The influences on the industry from new technologies and infrastructure, acceptable levels of risk, public and private sector competition, climate change, the bottled water industry, resource recovery, rates and affordability and other influences will be investigated. 2. The management of a 21st century utility will be explored, including topics of organization and leadership, the role of environmentalism, infrastructure financing, water / wastewater treatment facility operations, public affairs and media, and designing a capital improvement program are examples of topic areas.

Taught by: Neukrug
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

**ENVS 634 Topics in Water Policy**
This course will explore various themes such as the UN Millennium Development Goals, EPA regulatory practices, and global water policy and governance.

Taught by: Laskowski

Activity: Seminar
1.0 Course Unit

**ENVS 635 Current Issues in the Delaware River Basin: An Insider’s Perspective**
This course will connect students with thought leaders and experts working to solve the critical water challenges of the 21st century. Students will go behind the scenes of the ‘water business’ and meet with some of the nation’s leading professionals and practitioners through 3 days of site visits to some of the world’s greatest public water systems - Philadelphia, NYC and Washington, DC and to the headquarters of several of our nation’s most innovative private water companies - Aqua American, American Water and Suez Water. These professionals and practitioners are invested in meeting today’s water challenges which include delivering potable drinking water, managing rainwater/flooding, treating wastewater and protecting and enhancing our rivers and streams. Major challenges and issues to be investigated throughout the course include: climate impact on our water supplies and rivers; how we are adapting our natural and anthropogenic systems to make them more resilient and sustainable; emerging contaminants and technologies to monitor and treat these contaminants; the conflict between managing for drought and flood; public versus private business models; and equity, justice and the very value of water. Readings are required prior to the start of the course with a report and presentation as a wrap-up. Professor Neukrug, former Water Commissioner and CEO of Philadelphia Water will be available for pre-course discussions to ensure students are ready to jump into the water on day 1 of the class.

Taught by: Howard Neukrug

**ENVS 642 Global Water Conference in Stockholm, Sweden**
The global water and sanitation crisis kills over 4,000 children each day and represents one of the biggest health problems in the world. At the University of Pennsylvania school year 2010-2011 was declared the 'Year of Water' in recognition of the many challenges that lie ahead as global increases in population and affluence and the influences of climate change will stress limited water resources. Each year the Stockholm International Water Institute convenes a Conference with experts from around the globe to exchange the latest water research findings and develop new networks. Students will attend the Conference, present research by presentations/posters, document a key issue, interview experts, and meet colleagues with common interests. They will also help other organizations at the Conference.

Course usually offered summer term only
Activity: Seminar
1.0 Course Unit

**ENVS 643 From Brownfield Remediation to Land Revitalization: US Strategies for Reducing Soil Contamination**
This course is intended to give students an overview of the genesis of the so-called ‘Brownfield’ problem and of the various efforts our society is taking to solve or, at least, ameliorate it. The course will place the ‘Brownfield’ problem in the broader context of the growth and decline of the industrial base of cities like Philadelphia. Students will study the general constitutional and statutory framework within which we approach the problems of orphan, polluted sites and the disposal of contemporary solid wastes. They will also analyze the principal actions that have been taken by Federal and state government to address remediation and redevelopment of abandoned industrial sites. The course will also explore environmental equity issues. The students will collaborate with high school students at the West Philadelphia High School to identify sites in their neighborhoods and to learn how to determine the sites ownership and land use history. The students will study ways of determining environmental risk and the various options that are available for remediation in light of community ideas about re-use. Students will be expected to participate actively in the seminar and the sessions with high school students. Students in the course are required to prepare and present a term paper on a topic in the general area of ‘Brownfield’ analysis and remediation.

Taught by: Keene
Course not offered every year
Activity: Seminar
1.0 Course Unit

**ENVS 644 Energy, Waste and the Environment**
The aim of this course is to provide an incentive to use geochemical and mineralogical principles to address and solve major environmental problems. The students identify the problems that are associated with different types of waste. This course covers a wide range of problems associated with the waste arising from the generation of electricity. The main topics will be the uranium cycle, characterization of nuclear waste, and the containment and disposal of nuclear waste. Based on insights from the nuclear fuel cycle, solutions are presented that diminish the environmental impacts of coal and biomass combustion products, incineration of municipal solid waste, toxic waste due to refuse incineration, and landfills and landfill gases.

Taught by: Giere

Activity: Seminar
1.0 Course Unit
ENVS 667 Introduction to Superfund Sites and Health Effects of Hazardous Waste
Superfund hazardous waste sites are prevalent in our nation and the exposures to toxicants from these sites raise immediate health concerns. The aims of this course are to educate students about such sites and provide a scientific basis for hazard identification, hazard characterization, risk communication and risk management. The course will describe the effect of these hazardous chemicals on the ecosystem and vice-versa, and remediation and mitigation approaches. These environmental science issues will lead into the environmental health aspects of exposures including: biomonitoring (external and internal dose, biomarkers and the exposome), toxicological properties of contaminants and mode-of-action. The course will be complemented with visits to two Superfund sites in the region: Ambler (asbestos) and Palmerton (heavy metals). Prerequisite: 400 level course in Biology/Chemistry and Biochemistry
Taught by: Jane Willenbring, Richard Pepino, Trevor Penning
Also Offered As: PHRM 657
Activity: Lecture
1.0 Course Unit

ENVS 665 Industrial Ecology and the Circular Economy
Industrial Ecology is the multidisciplinary study of industrial systems and economic activities and their links to natural systems. The word 'industrial' represents how humans use natural resources in the production of goods and services. 'Ecology' refers to the concept that our industrial systems need to operate within sustainable natural ecosystems. The application of industrial ecology requires a movement of industrial processes from open loop business processes, where resource and capital investments move through the system to create products and waste, to a closed loop system where wastes (aka by-products) become inputs for new processes. This approach will allow to move to a circular economy. The implementation of industrial ecology, which aligns business operations with the natural cycle, creates the opportunity for a circular economy and has the potential for significant benefit for industry as well as for the long term viability of the human population and the natural ecosystem. Prerequisite: Approval from the instructor if course prerequisites not met.
Taught by: James Hagan
Course usually offered summer term only
Prerequisite: ENVS 667
Activity: Seminar
1.0 Course Unit

ENVS 669 Corporate Sustainability Strategies
Before the year 2000, 'environmental management' for a business was typically driven by the need to respond to restrictions imposed by environmental regulation. But, at the dawn of the new millennium, leading businesses began to change their concept of environmental management to look beyond simply meeting governmental dictates. These organizations began to evolve and utilize 'environmental strategy' to create new ways of growing their businesses by bringing sustainability to the core of their business strategies. This seismic shift in view was accompanied by a bottom line emphasis that, in some cases, turned sustainability efforts into profit centers. Sustainability increasingly is not hidden within the silo of environmental, health, and safety departments but has become much more seamlessly integrated into the operations of corporate functional disciplines. Today, to effectively work in senior management, an executive needs to be knowledgeable not only about his or her specific business function but also how his or her business will be impacted by governmental regulations, policies, corporate sustainability initiatives, green marketing regulations, industry guidelines or 'best practices', new sustainable technologies, energy planning, environmental performance metrics, and required reporting on the environmental impact of their business unit.
Taught by: Survis
Course usually offered in spring term
Activity: Seminar

ENVS 673 The Future of Water
From Wall Street to rural Sub-Saharan Africa, technology innovation to aging infrastructure-this course will explore the; impact of water and consider what future leaders need to know about the dynamics of the industry, investment and business opportunities, and water-related risk; Opportunities for water are booming around the world, in large part because of existing or looming shortages and decades of underinvestment, population growth, rapid industrialization and urbanization, pollution, and climate change. Water is the only irreplaceable natural resource on the planet. Its critical role in every aspect of the global economy, could, in fact, lead it to be the next gold or the next oil; This course will address the fundamentals of the water sector from an international perspective. The future of water will be critical to our global economic, social and political development and will likely become one of the most influential factors in business decisions for the future. Furthermore, it is essential for leaders across all sectors-from pharmaceuticals to financials, energy to agriculture-to understand how to sustainably manage and account for water resources, capitalize on new technologies, mitigate water-related risks and navigate through complex and dynamic policy and regulation. The course will engage students in high-level discussion and strategy formation, challenging them to develop creative and sustainable solutions to some of the greatest challenges facing environmental, business and water industry leaders today. Interactive sessions and projects will provide an introduction to appropriately managing, valuing and investing in water assets to create sustainable and compelling business opportunities.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
ENVS 674 Life Cycle Assessment
In order to make sensible decisions on products or projects, people need to understand the environmental impacts of these actions. Life cycle assessment (LCA) is a process to assess environmental impacts throughout the different stages of a product or project’s life. This seminar is intended to be comprehensive and covers material extraction, processing, manufacture, distribution, use and end of life reuse, recovery or disposal. The objective of conducting an LCA is to compare the full range of environmental impacts that emanate from the provision of these products or services and then use that information to improve the situation to minimize or eliminate harm. The focus of this class will be to understand the phases of an LCA as well as conduct LCAs that compare the impacts of two related options. This course will enable the student to conduct LCAs and examine the use of software that could be used in this regard. The classic examples are cloth vs. disposable diapers, paper vs. ceramic cups, and so on. This course will enable the student to conduct LCAs and examine the use of software that could be used in this regard. Prerequisite: If course requirement not met, permission of instructor required.
Taught by: Hagan/English

ENVS 675 Charting a New Course for the Water Industry
We are entering an era of growing water infrastructure failures and remaining 'legacy' water pollution challenges. Fortunately, a network of global water CEOs from water utilities, industry and engineering consulting are leading the water sector towards innovative change. They are finding solutions at the intersection of science, engineering/technology and policy and paving the path forward for our water industry and our global water resources. This short course is led by the former CEO of Philadelphia Water and the Chair of the Leading Utilities of the World Network. Professor of Practice Howard Neukrug will lead a series of discussions on: (1) a brief history of water infrastructure systems in the US and the paradox of how our water resources have been used, valued, and priced over time; (2) a specific focus on the past 50 years of Philadelphia's efforts to meet the challenges of the Clean Water Act and Safe Drinking Water Act through leadership in the legislative, regulatory, management, and policy and research arenas of the water business; and (3) personal interviews with key water leaders on their greatest challenges past and future and how they are managing change and innovation towards more sustainable water systems in the 21st century.
Taught by: Howard Neukrug
Course not offered every year
Activity: Online Course
0.5 Course Units

ENVS 677 Sustainable Agriculture and Product Stewardship.
This course will focus on how food is produced around the globe and inputs required to ensure food security. Topics explored include: Integrated Pest Management, Precision Agriculture, Product Stewardship, Biodiversity, Biologicals, Organics and Synthetic Products, GMOs, Sustainable Development Goals, Regulations, Stakeholders (Growers, NGOs, consumers, etc.), and Food waste.
Taught by: Linda Froelich
Activity: Seminar
1.0 Course Unit

ENVS 681 Modeling Geographical Space
This course explores the nature and use of raster-based geographic information systems (GIS) for the analysis and synthesis of spatial patterns and processes through 'cartographic modeling'. Cartographic modeling is a general but well defined methodology that can be used to address a wide variety of analytical mapping applications in a clear and consistent manner. It does so by decomposing both data and data-processing tasks into elemental components that can then be recomposed with relative ease and with great flexibility.
Taught by: Tomlin
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ENVS 686 Resiliency, Health & Built Environment
Overnight field trips required Aug 20-21, 2020 and Aug 24-25, 2020. Additional fees apply. Healthy resilient communities are successful outcomes of built places. This course is designed for MES students to build area expertise through lectures, on-site visits and real time simulations. Students will travel to New York City and Washington DC to learn about these topics and observe current practices first hand. Through the design and synthesis of place, including educational and health facilities, and the workplace, the class will investigate the impact of Social Determinants of Health and sustainability. They will also integrate resiliency planning to address impacts of sea level rise, severe heat and different climate and environmental conditions affecting the built environment. Course work covers design and planning theory that intersects with diseases, mental health, climate action and their interconnectivity. Case studies, seminars and tours of projects and health departments will bring to focus how the built environment can be a culprit and a solution.

ENVS 688 Floodplain Management in a Changing Climate
According to a 2019 paper by Scott A. Kulp and Benjamin H. Strauss in the journal Nature Communications, 230 million people worldwide occupy land that is less than 1 meter above current high tide. These lands will be inundated by sea level rise by the end of this century, or earlier. Add to this the inherent flood risks in riverine and urban settings. How do we prepare and adapt? The class will explore the challenge of floodplain management in a changing climate through lectures, talks by guest experts, readings and multimedia, and exploration in the field. We will take a field trip to the New Jersey coast to witness home elevations, beach nourishment, and locales that are already experiencing chronic tidal flooding; we will meet with municipal officials challenged by increasingly persistent sea level rise. Our class will look at the National Flood Insurance Program, examine its goals, critique its 50 year history and debate reforms to the program at the same time the US Congress is considering reauthorization of the program. We will look at resiliency efforts that states and local governments are pursuing and the new city- and state-level position of Chief Resiliency Officer. In class we will cover hazard mitigation planning, land use, hard and natural infrastructure, regulations, the Community Rating System and other issues pertaining to flooding and climate change, including social justice and public health issues. Throughout the course, material will be introduced to prepare the student to take the Certified Floodplain Manager exam administered by the Association of State Floodplain Managers. This optional test, should the student pass, will provide credentialing that is well recognized in the United States.
Taught by: John Miller
Course usually offered in fall term

ENVS 699 Masters of Environmental Studies Capstone Seminar
This course is designed to help students successfully complete their MES Capstone. A set of milestones will be set and regular meetings will be held in groups and individually to aid the student as they complete the research portion of their degree. We will be working together to complete a series of steps towards the final project. These steps fall into five major areas 1) Reviewing the literature; 2) Finding a model; 3) Framing your research; 4) Managing data; and 5) Writing your results. Throughout the semester, we will also discuss career goals and the job search. Prerequisite: Project proposal and Online Application required for course registration. See MES Office and ‘Guide to the Capatone’ for more information.
Taught by: Bordeaux
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
Notes: Project proposal and Online Application required for course registration. See MES Office and ‘Guide to the Capatone’ for more information.

ENVS 999 Independent Study
Directed study for individuals or small groups under supervision of a faculty member.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: Permission of instructor required

Epidemiology (EPID)

EPID 510 Introductory Epidemiology
This course provides an introduction to the fundamentals of research in clinical epidemiology. It covers definitions of epidemiology, measures of disease frequency; measures of effect and association; epidemiologic study designs, including randomized clinical trials, cohort and case-control studies, cross-sectional surveys, meta-analysis and decision analysis; and an overview of the conduct and analysis of epidemiologic studies. The course is composed of a series of lectures and discussion sessions designed to reinforce concepts introduced in the preceding lecture. Prerequisite: Permission of instructor
Taught by: Bewtra
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

EPID 516 Mathematical Models for the Control of Infectious Diseases
As infectious diseases are transmitted from one host to another, the dynamics of transmission in the population of hosts follow certain basic rules. If one knows and understands these rules, one can plan rational strategies to prevent or control infections. One of the principal tools of those interested in public health interventions to control or ameliorate infectious diseases is the mathematical model. A model is just a means of representing and manipulating something that would not otherwise be accessible. This course provides students with the opportunity to construct models of the transmission of infectious diseases and to use these models to plan or compare disease control strategies. The course is predicated upon the notion that the act of building a mathematical model of disease transmission is often the very best way of understanding what is going on. This understanding will be further refined by the examination of more complicated and sophisticated model structures as they appear in the recent published literature. Prerequisite: Permission of instructor A disproportionate number of emerging infectious diseases and recent disease outbreaks in the United States and elsewhere have shared a common characteristic: they affect veterinary as well as human populations. Many are also vector-borne, passing between different species of hosts through insects and other invertebrates. In some cases humans are only ‘spillover hosts’ whose infection is incidental to the transmission cycle. Interdisciplinary approaches are especially important to control such diseases. As a particular focus of the course, students will learn the tools needed for successful collaborations to address the growing problem of zoonotic and vector-borne diseases.
Taught by: Levy, Smith
Course usually offered in fall term
Also Offered As: PUBH 610
Activity: Lecture
1.0 Course Unit

EPID 518 Geography & Public Health
This course will provide an introduction to GIS in public health research and practice. Through a series of lectures and labs students will explore theories linking health and the environment, spatial analysis and spatial epidemiology, and applications of GIS-related data collection and analysis.
Course usually offered in fall term
Also Offered As: PUBH 517
Activity: Lecture
1.0 Course Unit
EPID 526 Biostatistics for Epidemiologic Methods I
The first half of this will cover graphical methods, probability, discrete and continuous distributions, estimation, confidence intervals, and one sample hypothesis testing. Emphasis is placed on understanding the proper application and interpretation of the methods. The second half of this course will cover two sample hypothesis testing, nonparametric techniques, sample size determination, correlation, regression, analysis of variance, and analysis of covariance. Emphasis is placed on understanding the proper application and underlying assumptions of the methods presented. Laboratory sessions focus on the use of the STATA statistical package and applications to clinical data. Prerequisite: Permission of instructor. This course runs from mid summer to mid fall term. There is a corresponding lab.
Taught by: Cucchiara, Yang
Activity: Lecture
1.0 Course Unit

EPID 527 Biostatistics for Epidemiologic Methods II
The first half of this covers concepts in biostatistics as applied to epidemiology, primarily categorical data analysis, analysis of case-control, cross-sectional, cohort studies, and clinical trials. Topics include simple analysis of epidemiologic measures of effect; stratified analysis; confounding; interaction, the use of matching, and sample size determination. The second half of this course covers concepts in biostatistics as applied to epidemiology, primarily multivariable models in epidemiology for analyzing case-control, cross-sectional, cohort studies, and clinical trials. Topics include logistic, conditional logistics, and Poisson regression methods; simple survival analyses including Cox regression. Emphasis is placed on understanding the proper application and underlying assumptions of the methods presented. Laboratory sessions focus on the use of the STATA statistical package and applications to clinical data. Prerequisite: This course runs from mid fall to mid spring term. There is a corresponding lab.
Taught by: Landis, Shaw
Prerequisite: EPID 526
Activity: Lecture
1.0 Course Unit

EPID 532 Database Management for Clinical Epidemiology
This course provides students with an introduction to the techniques of database management as they apply to clinical research. Students learn how to design and implement computerized databases, perform basic query and reporting operations, migrate data between various file formats, prepare databases for statistical analysis, and perform quality assurance procedures. This course focuses on the practical issues of database management and is intended to support each student's planned research enterprise. Each class session will be preceded by a one-hour online lecture and brief self-assessment quiz to be completed prior to attending class. This lecture is intended to prepare students for the class for the week, which will be dedicated to practical experience in a laboratory setting. Prerequisite: Restricted to MSCE degree students. Permission of Instructor.
Taught by: Harhay
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

EPID 534 Qualitative Methods in the Study of Health, Disease and Medical Systems
This course combines informal lecture and discussion with practical exercises to build specific skills for conducting qualitative research on healthcare, broadly defined. Readings include books and papers about research methodology and articles that provide exemplars and pitfalls of qualitative research. Specific topics covered include: the role of theory in qualitative research, method-research question fit, collecting different types of qualitative data (observation, interview, focus group, text, video), ethical issues in qualitative research, establishing rigor in qualitative research, introduction to qualitative data analysis using software, mixing methods, approaches for obtaining grant funding for qualitative research and writing up qualitative research studies for publication. The objectives of this course are: To introduce the student to the epistemological underpinning of qualitative methodology; To review how to select the best qualitative approach for different research questions; To introduce the student to different qualitative data collection techniques; To review standards of methodological rigor in qualitative research; To introduce the basic principles of qualitative data analysis using NVivo software; To provide practical advice about planning, getting funding for and implementing a qualitative study. Prerequisite: Previous course work in research methods or permission of course director.
Taught by: Szymczak
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EPID 542 Measurement of Health in Epidemiology
This course addresses the measurement of epidemiological variables, which broadly encompasses the tasks involved in obtaining data, without which analyses cannot proceed. Course topics to be discussed include: defining the concepts of exposure, disease, and health; approaches to measuring exposures, which may be personal (i.e., psychological, behavioral, biological, or genetic) or environmental (i.e., physical, chemical, social, or organizational); approaches to measuring disease and health status; assessing the validity and reliability of measurement instruments; problems of misclassification of exposure status; missing data; instrument (e.g., questionnaire) development; and qualitative methods. Prerequisite: If course requirement not met, permission of course director.
Taught by: Farrar
Course usually offered in fall term
Prerequisite: EPID 510 AND EPID 526
Activity: Lecture
0.5 Course Units

EPID 546 Clinical Database Research Methodology
This course will discuss appropriate selection of automated databases for research questions of interest; assessment of drug exposures; validation of health outcomes of interest; and addressing biases, confounding, and missing data in databases. We will also review key aspects of protocol development for database studies and discuss research grant applications related to these studies. Prerequisite: If course requirement not met, permission of course director required.
Taught by: Lo Re
Prerequisite: EPID 510 AND EPID 526
Activity: Lecture
0.5 Course Units
EPID 550 Clinical Economics and Clinical Decision Making
This course focuses on the application of decision analysis and economic analysis to clinical and policy research. The course begins with material about the selection, use, and analysis of diagnostic tests using two by two tables, likelihood ratios, and ROC curves. The course continues with the introduction of more general tools for decision analysis, including decision trees and other mathematical models. Special emphasis is placed on the assessment and use of utilities in these models. A major focus of the course is the application of economic principles to the evaluation of health outcomes. During seminars, students will carry out practical exercises that include problem solving, critically analyzing published articles, and learning to use computer software that facilitates decision and economic analyses. Prerequisite: Permission of instructor
Taught by: Glick,Williams
Course usually offered in spring term
Also Offered As: HPR 550
Activity: Lecture
1.0 Course Unit

EPID 560 Issues in Research Protocol Development
This course focuses on major issues in research protocol development, including methodological issues regarding different research designs, development of research questions, and plans for analysis. Each student will present his or her research proposal for open discussion during one of the sessions. Prerequisite: Restricted to MSCE degree students.
Course usually offered in spring term
Activity: Seminar
0.25 Course Units

EPID 570 Critical Appraisal of the Medical Literature
This course focuses on techniques for critical appraisal of the medical literature. Each student will be responsible for at least one critical appraisal session covering different epidemiologic topics. Prerequisite: Restricted to MSCE degree students.
Course usually offered in spring term
Activity: Lecture
0.25 Course Units

EPID 575 Introduction to Genetic Epidemiology
There is an increasing need for researchers to understand the genetic basis of incorporate the collection and analysis of genetic information into studies of The objectives of this course are to provide students with an understanding of used by molecular and genetic epidemiologists. This course consists of a series discussions focused on the critical appraisal of genetic/molecular epidemiology. After completing this course, students will be able to read and interpret the epidemiology literature, and understand data collection and analysis approaches molecular and genetic epidemiological studies. Prerequisite: Permission of course director. Students enrolling in this class are expected to have a working knowledge of epidemiology, biostatistics, and humangenetics. Students who do not meet these requirements may be allowed to enroll in the class, but may be required to undertake supplemental readings and/or tutorials to obtain the necessary background.
Taught by: Devoto,Saleheen
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

EPID 580 Outcomes Research
This course is divided into two main parts. The first part addresses issues related to the measurement of quality in health care. Included is a review of the classical structure-process-outcome quality paradigm. The paradigm’s strengths and limitations are addressed. This part especially focuses on outcome measure of quality and examines the validity of alternative measures. The second part deals with observational, or quasi-experimental, research studies. It addresses the advantages and limitations of alternative designs, and covers the role of clinical risk adjustment in observational studies of medical interventions. It focuses on the problem of selection bias, and reviews recent methods for dealing with this bias, such as instrumental variables. Prerequisite: Introductory course in statistics including regression methods. Permission of instructor if prerequisite is not met.
Taught by: Silber
Course usually offered in fall term
Also Offered As: HPR 580
Activity: Lecture
1.0 Course Unit

EPID 582 Systematic Review and Meta-Analysis
This course will provide an introduction to the fundamentals of systematic reviews and meta-analysis. It will cover introductory principles of meta-analysis; protocol development; search strategies; data abstraction methods; quality assessment; meta-analytic methods; and applications of meta-analysis.
Taught by: Umscheid, Chen
Course offered fall; odd-numbered years
Prerequisite: EPID 510 AND EPID 526
Activity: Lecture
1.0 Course Unit

EPID 584 Health Disparities Research
This course will provide an overview of research in health disparities. It will cover the historical aspects, concepts, policy, economic, genomic and social perspectives of health disparities. It will provide students with methodological tools for health disparities research and introduce students to ongoing health disparities research by current Penn and affiliated faculty members. The course is composed of a series of weekly small group lectures and discussion, including critical appraisal of published papers, guest faculty presentations, and student presentations. Students will be expected to attend weekly meetings and participate in class discussions, prepare and lead discussions of assigned papers, review assigned readings, and draft and present a scientific protocol of their choosing related to health disparities.
Taught by: Guevara,Takeshita
Course usually offered in spring term
Prerequisite: EPID 510 AND EPID 526
Activity: Lecture
1.0 Course Unit
EPID 600 Data Science for Biomedical Informatics
In this course, we will use R and other freely available software to learn fundamental data science applied to a range of biomedical informatics topics, including those making use of health and genomic data. After completing this course, students will be able to retrieve and clean data, perform explanatory analyses, build models to answer scientific questions, and present visually appealing results to accompany data analyses; be familiar with various biomedical data types and resources related to them; and know how to create reproducible and easily shareable results with R and github. Prerequisite: Familiarity with basic statistical (e.g., EPID 526, 527 or other first-year graduate level stats course) concepts is expected, as this course will not cover basic concepts in depth.
Taught by: Himes
Course usually offered in fall term
Also Offered As: BMIN 503
Activity: Lecture
1.0 Course Unit

EPID 602 Topics in Biom/Hlth Info
Also Offered As: BMIN 504
Activity: Lecture
1.0 Course Unit

EPID 610 Tutorial in Epidemiologic Research
This is a tutorial given by each student's advisor. Advisor and student meet weekly. Topics include: discussion and review of epidemiologic concepts and principles, guided readings in the epidemiology of a specific health area, and the development of the research protocol.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

EPID 621 Longitudinal and Clustered Data in Epidemiologic Research
An introduction to the principles of and methods for longitudinal and clustered data analysis with special emphasis on clinical, epidemiologic, and public health applications. Designed for advanced MS and PhD-level students in epidemiology and related fields. Marginal and conditional methods for continuous and binary outcomes. Mixed effects and hierarchical models. Simulations for power calculations. Software will include Stata and R. Prerequisite: Completion of EPID 526 and 527 or equivalent preparation in biostatistics, including generalized linear models. Completion of semester course in principles of epidemiology or equivalent. Good working knowledge of Stata and SAS and familiarity with principles of first-year calculus and matrix algebra. Permission of course director.
Taught by: Shults
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EPID 622 Applied Regression Models for Categorical Data
This course will provide in-depth treatment of several topics in categorical data analysis. After a brief review of methods for contingency tables, we will introduce the idea of generalized linear models, and focus on two special cases: multiple logistic regression and loglinear models. Each topic will be presented in detail by stating the model and covering parameter estimation and interpretation, inference, model building, regression diagnostics and assessment of model fit. Finally, we will cover extensions to both models, including models for multinomial data, analysis of matched-pair data, and random effects models. Topics will be illustrated in class with examples, and we will discuss the use of STATA to conduct the analyses.
Taught by: Xiao
Course usually offered in fall term
Prerequisite: EPID 510 AND EPID 526 AND EPID 527
Activity: Lecture
0.5 Course Units

EPID 623 Applied Survival Analysis
This course will focus on statistical methods for survival or time-to-event data. Topics covered will include: the concepts of survival data and censoring, estimation of survival functions, comparison of groups, regression analysis, sample size and power considerations, and methods for competing risks. All methods will be illustrated by in class examples and homework sets. Prerequisite: Students should be comfortable with basic calculus concepts (e.g., derivatives, integrals, etc). Offered second half of fall term.
Taught by: Li
Course usually offered in fall term
Prerequisite: EPID 510 AND EPID 526 AND EPID 527
Activity: Lecture
0.5 Course Units

EPID 624 Methods in PCOR
The goal of this course is to provide a broad overview of methods used in patient centered outcomes research (PCOR). Expert faculty will lecture on topics such as standards for research questions, patient centeredness, systematic reviews, causal inference, heterogeneity of treatment effect handling missing data, data networks, Bayesian designs, data registries, and diagnostic tests. Topics may also include advanced observational study design, statistical methods for observational studies, health status/quality of life as applied to PCOR and case studies of patient engagement. Prerequisite: Permission of instructor
Taught by: Gelfand
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
EPID 625 Advanced Biostatistical Methods for Multivariable Prediction Models
This course is an introduction to statistical methods that can be used to evaluate biomarker prognostic studies and multivariate prediction models. It is designed for advanced MS and PhD-level students in epidemiology and related fields (nursing, health policy, social work, demography). Topics will include biostatistical evaluation of biomarkers, predictive models based on various regression modeling strategies and classification trees, assessing the predictive ability of a model; internal and external validation of models; and updating prognostic models with new variables or for use in different populations. Students will learn about the statistical methods that are required by current reporting guidelines for biomarker prognostic studies or the reporting guidelines for multivariable prediction models. Prerequisite: Working knowledge of either Stata, SAS or R to fit regression, logistic regression and/or Cox regression models. Permission of course director for students outside of School of Medicine graduate programs.
Taught by: Gimotty
Course usually offered in spring term
Prerequisite: EPID 526 AND EPID 527 AND (EPID 622 OR EPID 623)
Activity: Lecture
0.5 Course Units

EPID 630 Clinical Trials
This course is to serve as a general introduction to clinical trials, with emphasis on trial design issues. This is not a course on the biostatistics of clinical trials. It is expected that at the conclusion of the course, a student will be able to plan a clinical trial. Each class will consist of a two-hour lecture followed by a one hour discussion. Prerequisite: Permission of instructor.
Taught by: Farrar
Course usually offered in spring term
Also Offered As: REG 630
Prerequisite: EPID 510 AND EPID 526
Activity: Lecture
1.0 Course Unit

EPID 632 Introduction to Biomedical and Health Informatics
This course is designed to provide a survey of the major topic areas in medical informatics, especially as they apply to clinical research. Through a series of lectures and demonstrations, students will learn about topics such as databases, natural language, clinical information systems, networks, artificial intelligence and machine learning applications, decision support, imaging and graphics, and the use of computers in education.
Taught by: Holmes
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

EPID 634 Clinical Trial Outcomes: Measurement, Analysis and Interpretation
This course is intended to teach students the skills necessary to select and/or design appropriate outcomes for a clinical trial. Students will focus on recent changes in our understanding of clinical trial outcome measurements, analyses, and interpretation for both subjective and objective phenomena, such as adherence, use of multiple outcomes, and clinical importance. While design issues for clinical trials are the main focus, other types of clinical studies will be considered as appropriate. Student will be expected to learn about the problems inherent in the design of outcome measures of health and how to apply different epidemiologic and biostatistical concepts toward a solution. It is expected that at the conclusion of the course, students will be able to plan a clinical trial with a valid, responsive, and interpretable outcome. Prerequisite: Permission of instructor
Taught by: Farrar
Course usually offered in fall term
Prerequisite: EPID 510
Activity: Lecture
1.0 Course Unit

EPID 636 Epidemiological Methods in Acute Care
This is an advanced seminar that will cover nuanced methodological considerations and logistical challenges of research in acute care settings (e.g. prehospital, emergency department, hospital, and intensive care units). Topics to be covered with regards to primary data collection include: recruitment and consent, outcomes measurement, survey and qualitative research, clinical trials, quality improvement, decision making and cognitive biases, end-of-life issues, and acute care research networks. Topics to be covered with regards to secondary data analysis include: data sources, risk adjustment, missing data, causal inference, predictive modeling, decision rules, variability in care, organizational factors, and economic analysis. The course will finish with a discussion of the landscape for obtaining funding for acute care research. Weekly sessions will include expert guest lectures, review of landmark papers, and round-table discussion of the students'going research projects as they pertain to issues covered in the course. Prerequisite: Permission of instructor.
Taught by: Delgado,Holena
Course not offered every year
Prerequisite: EPID 510,EPID 526
Activity: Lecture
1.0 Course Unit

EPID 638 Topics in Clinical Trial Design and Analysis
This course is intended to follow, and be complementary to EPID 630: Clinical Trials. It will build on the basic principles of design, conduct, and analysis introduced in that course and will go into more detail on particular approaches. Topics covered will include noninferiority trials, phase 1 designs, multi-stage and other adaptive designs, graphical data presentations and current ethical controversies in clinical trials.
Taught by: Ellenberg
Course usually offered in fall term
Prerequisite: EPID 630
Activity: Lecture
1.0 Course Unit
**EPID 640 Advanced Topics in Epidemiology**
This course is designed to introduce students to advanced epidemiologic methods through a series of readings and discussions. The course aims to deepen the students' understanding of important concepts and controversies in contemporary epidemiology and to enhance their ability to think critically about empirical epidemiologic research. The course is intended for students who are already familiar with the fundamentals of epidemiology and biostatistics, and who wish to gain an understanding of the complex issues underlying epidemiologic study design and interpretation. Prerequisite: Permission of instructor.
Taught by: Naj
Course usually offered in spring term
Prerequisite: EPID 510 AND EPID 526 AND EPID 527
Activity: Lecture
1.0 Course Unit

**EPID 644 Cardiopulmonary Epidemiology**
This is an advanced course that addresses epidemiological research issues as they apply to important clinical topics in cardiovascular and pulmonary medicine. Lectures and workshops are designed to acquaint students with the classic literature in the fields of cardiovascular and pulmonary epidemiology, to use a body of literature to demonstrate the strengths and weaknesses of epidemiological research designs as they have been applied to cardiovascular and pulmonary medicine to expose students to the range of topics studied to teach advanced epidemiological principles using a problem-based approach, and to stimulate students to develop independent research questions. Prerequisite: Permission of instructor.
Taught by: Kimmel
Course usually offered summer term only
Prerequisite: EPID 510 AND EPID 526 AND EPID 527
Activity: Lecture
1.0 Course Unit

**EPID 645 Research Methods in Cancer Epidemiology**
Research in cancer etiology, prevention, treatment, and control includes a wide range of subject matter science, from the initial molecular changes which precede the development of cancer to issues of primary guidelines for cancer survivors. The course reviews the possible study designs applied to cancer etiology, prevention, treatment, and control. These include randomized controlled trials and multiple types of observational studies (cohort, case-control, cross-sectional). Other topics will include causal inference, bias, and effect modification. Prerequisite: Permission of instructor.
Taught by: Aplenc, Getz
Course usually offered summer term only
Prerequisite: EPID 510 AND EPID 526 AND EPID 527
Activity: Lecture
1.0 Course Unit

**EPID 646 Reproductive Epidemiology**
This is an advanced course that addresses epidemiological research issues as they apply to important clinical topics in obstetrics and gynecology and related clinical disciplines. Lectures and workshops are designed to acquaint students with seminal issues in the field of reproductive epidemiology, to use a body of literature to demonstrate the strengths and weaknesses of epidemiological research designs as they have been applied to obstetrics and gynecology and related clinical disciplines, to expose students to the range of topics studied, to teach advanced epidemiologic principles using a problem-based approach, and to stimulate students interested in reproductive epidemiology to develop independent research questions.
Taught by: Barnhart
Course offered spring; even-numbered years
Activity: Lecture
1.0 Course Unit

**EPID 652 Renal and Urologic Epidemiology**
The objective of this course is to prepare students to function as effective, independent researchers in the fields of renal and urologic epidemiology by providing the students an understanding of how epidemiologic research can and has advance(d) the knowledge of diseases in treatments of renal and urologic medicine. The structure of the course consists of a lecture series, workshops, and student presentations. Prerequisite: Permission of instructor.
Taught by: Feldman
Prerequisite: EPID 510 AND EPID 526 AND EPID 527
Activity: Lecture
1.0 Course Unit

**EPID 656 Research Methods in Infectious Diseases Epidemiology**
This is an advanced course addressing epidemiological issues as they apply to important clinical topics in infectious diseases. Lectures and discussions will serve two primary goals: 1) to explore epidemiologic methods specific to infectious diseases (e.g. adherence to therapy) or which have important applications to infectious diseases (e.g. molecular epidemiology); and 2) to explore the epidemiology of particular infectious diseases or syndromes (e.g. HIV). This course will acquaint students with the classic literature in the field of infectious diseases epidemiology, teach advanced epidemiological principles using a problem-based approach, and demonstrate the strengths and weaknesses of research methodologies as they have been applied to infectious diseases. Prerequisite: Permission from instructor is needed.
Taught by: Gross, Han
Course usually offered summer term only
Prerequisite: EPID 510 AND EPID 526 AND EPID 527
Activity: Lecture
1.0 Course Unit

**EPID 658 Gastroenterology Epidemiology**
This course provides an in-depth presentation of advanced methodological issues in conducting clinical epidemiological research in the field of gastroenterology. Prerequisite: Permission of instructor.
Taught by: Yang
Course offered spring; odd-numbered years
Prerequisite: EPID 510 AND EPID 526 AND EPID 527
Activity: Lecture
1.0 Course Unit
EPID 664 Methods in Neurologic Clinical Epidemiology
This course will introduce students to methods and study design principles that are specific or unique to clinical research and trials in neurology, child neurology, neuro-ophthalmology, neurosurgery, and related fields. Prerequisite: Permission of instructor
Taught by: Farrar, Waldman
Course offered spring; even-numbered years
Activity: Lecture
0.5 Course Units

EPID 666 Pharmacoepidemiology Research Methods
The purpose of this course is to explore and integrate concepts and considerations that are key to the conduct of pharmacoepidemiologic research. The format will be a mixture of seminar, instructor-led discussion, student-led discussion, and student presentations. Papers from the applied and methods literature will be used to illustrate concepts and as springboards for discussion. Topics covered include use of automated databases, pharmacogenomics, and approaches to addressing confounding.
Taught by: Hennessy
Course usually offered in spring term
Prerequisite: EPID 510 AND EPID 526 AND EPID 527
Activity: Lecture
1.0 Course Unit

EPID 672 Biostatistical Methods for Addressing Confounding
This course is designed to teach epidemiology students the statistical principles of analysis specific to pharmacoepidemiology study designs including the use of propensity scores, inverse probability weighting, time varying confounding analyses, disease risk scores, and instrumental variables. Each session includes both a lecture component and laboratory component. Students will learn the statistical principles and then apply them to example study datasets. Laboratory sessions will be conducted on the students laptops using STATA software. Prerequisite: Permission of the instructor(s).
Taught by: Ogdie-Beatty, Stephens-Sheilds
Course usually offered summer term only
Prerequisite: EPID 526 AND EPID 527
Activity: Lecture
1.0 Course Unit

EPID 674 Measuring the Microbiome: Methods and Tools
This is an advanced course addressing the methods and tools used to analyze microbiome data as well as their implications for clinical study design. The course will include: (1) lectures focused on how the microbiome is measured, approaches to the analysis of highly multivariate microbiome data, and the bioinformatic tools used to execute these analyses; (2) hands-on R and command-line coding to build familiarity with commonly used tools and analytic methods; and (3) short, practical assignments to reinforce the lectures and classwork. The course will acquaint students with classic literature in the field of microbiome research and prepare students to integrate microbiome data collection and analysis with epidemiologic research methodologies. Prerequisite: Permission of instructor if course prerequisites not met
Taught by: Brendan J. Kelly, MD, MSCE Assistant Professor of Medicine (Infectious Diseases) and Epidemiology 731 Blockley Hall brendank@pennmedicine.upenn.edu
Course not offered every year
Prerequisite: EPID 510 AND EPID 526 AND EPID 527
Activity: Lecture
1.0 Course Unit

EPID 675 Advanced Methods for Analysis of Complex Genetic Traits
The advent of high-throughput genotyping has created unprecedented opportunities to characterize in detail information related to genome, epigenome and transcriptome. Such technological advancements have offered exciting opportunities for biological discovery as well as translation of biological data for targeted therapies. However, investigation of genetic polymorphisms, epigenetic signatures, gene transcription, biomarkers and their relationship with environmental factors and disease outcomes requires a thorough understanding of a wide range of experimental methods and statistical approaches. Through critical review of the current literature, this course will provide understanding on various ‘OMICS’ approaches for the study of complex disorders and traits. Students will also understand and present advanced statistical methods and how such concepts can be applied. Prerequisite: Introduction to Genetic Epidemiology or equivalent; training in study design and statistical analysis related to statistical genetics and molecular epidemiology, and permission of course directors.
Taught by: Saleheen
Course not offered every year
Activity: Lecture
1.0 Course Unit

EPID 699 Lab Rotation
Activity: Laboratory
0.33 Course Units

EPID 701 Introduction to Epidemiologic Research
This course is intended to provide in-depth, exposure to the theory and methods of epidemiologic research. Topics to be covered include causal inference, measures of disease frequency and association, study design, bias and confounding, validity, and epidemiologic analysis. Prerequisite: Quantitative proficiency. Knowledge and/or experience in working in biomedical research. Permission of instructor.
Activity: Lecture
1.0 Course Unit
EPID 702 Advanced topics in Epidemiologic Research
The overarching goal of this course is to expose doctoral students in epidemiology to advanced epidemiologic and statistical research methods and theories that are limitedly or not otherwise covered in courses available in the curriculum. Topics that will be covered include reporting guidelines and best practices for reporting statistical methods and results, handling missing data, purposeful selection and application of propensity scores, selected topics in longitudinal and clustered data analysis, contemporary topics in statistical inference and use of p-values and other Frequentist statistical methods, Bayesian theory and inference, and topics selected in collaboration with students and the Graduate Group in Epidemiology and Biostatistics (GGBE) each term. This course is intended for doctoral students in the PhD program in Epidemiology. However, students from other graduate groups are welcome, as long as they meet the prerequisites; such students are welcome during any year of study. Three learning objectives have been developed for this course: (i) provide students with an understanding of modern and cutting-edge quantitative methods, advanced topics, and best practices in epidemiologic, statistical, and biomedical research; (ii) develop students’ competence and confidence in statistical programming to support accurate and reproducible epidemiologic and biostatistical analyses; (iii) improve the ability of students to make informed decisions regarding the selection of analytic methods in their individual and collaborative research projects. This course emphasizes the following core competencies: knowledge within program area (epidemiologic and biostatistical methods); research skills (study planning, critically appraising published research); quantitative and computational methodologies (data manipulation, data analysis, statistical coding and debugging, Bayesian inference, data visualization, purposeful statistical inference, and model selection). Through technical lectures, reading of carefully selected peer-reviewed tutorials, critical appraisal of published research studies, and in-class statistical coding laboratory sessions, this course will provide instruction on rigorous and informed statistical model selection, estimation, and interpretation.

Taught by: Michael Harhay, PhD, Assistant Professor of Epidemiology and Medicine
Course usually offered in spring term
Prerequisite: EPID 526 AND EPID 527 AND EPID 701
Activity: Lecture
1.0 Course Unit

EPID 714 Grant Writing/Review
This course will assist students in the design of an NIH grant (F-32, K, R21 orR01) for submission by enhancing their appreciation of the specifics of the grant writing process and in understanding the grant review process. This course is designed to provide background, training, and practice with the writing and submitting of NIH style grants. As a minimum all students who enroll will be expected to write and submit a reasonable draft of a full NIH style grant proposal by the end of the term. During the process, the portions of each proposal will be reviewed as a group by the other students in the course. In response to each review, students are expected to revise their grant sections. Prerequisite: If course requirement not met, permission of instructor required.

Taught by: Farrar/Surber
Course usually offered in spring term only
Also Offered As: HPR 714
Prerequisite: EPID 510 AND EPID 526 AND EPID 560 AND EPID 570
Activity: Seminar
0.5 Course Units

EPID 899 Pre-dissertation Research
Activity: Laboratory
0.5 Course Units
Finance (FNCE)

FNCE 100 Corporate Finance
This course provides an introduction to the theory, the methods, and the concerns of corporate finance. The concepts developed in FNCE 100 form the foundation for all elective finance courses. The main topics include: 1) the time value of money and capital budgeting techniques; 2) uncertainty and the trade-off between risk and return; 3) security market efficiency; 4) optimal capital structure, and 5) dividend policy decisions. ACCT 101 + STAT 101 may be taken concurrently.
Taught by: Changes by semester
Also Offered As: FNCE 611
Prerequisite: (ECON 001 AND ECON 002) OR ECON 010 AND (MATH 104 OR MATH 110)
Activity: Lecture
1.0 Course Unit

FNCE 101 Monetary Economics and the Global Economy
This is an intermediate-level course in macroeconomics and the global economy, including topics in monetary and international economics. The goal is to provide a unified framework for understanding macroeconomic events and policy, which govern the global economic environment of business. The course analyzes the determinants and behavior of employment, production, demand and profits; inflation, interest rates, asset prices, and wages; exchange rates and international flows of goods and assets; including the interaction of the real economy with monetary policy and the financial system. The analysis is applied to current events, both in the US and abroad. Students cannot receive credit for taking both FNCE 101 and ECON 102. Wharton students are required to take FNCE 101.
Taught by: Varies by semester
One-term course offered either term
Also Offered As: FNCE 613
Prerequisite: (ECON 001 AND ECON 002) OR ECON 010 AND (MATH 104 OR MATH 110)
Activity: Lecture
1.0 Course Unit

FNCE 202 Consumer Financial Decision Making
Research shows that many individuals are profoundly underinformed about important financial facts and financial products, which frequently lead them to make mistakes and lose money. Moreover, consumer finance comprises an enormous sector of the economy, including products like credit cards, student loans, mortgages, retail banking, insurance, and a wide variety of retirement savings vehicles and investment alternatives. Additionally, recent breakthroughs in the FinTech arena are integrating innovative approaches to help consumers. Though virtually all people use these products, many find financial decisions to be confusing and complex, rendering them susceptible to fraud and deception. As a result, government regulation plays a major role in these markets. This course intended for Penn undergraduates considers economic models of household decisions and examines evidence on how consumers are managing (and mismanaging) their finances. Although academic research has historically placed more attention on corporate finance, household finance is receiving a brighter spotlight now-- partly due to its role in the recent financial crisis. Thus the course is geared toward those seeking to take charge of their own financial futures, anyone interested in policy debates over consumer financial decision making, and future FinTech entrepreneurs.
Taught by: Olivia Mitchell/Nicholas Roussanov
One-term course offered either term
Also Offered As: BEPP 202
Activity: Lecture
1.0 Course Unit

FNCE 203 Advanced Corporate Finance
The objective of this course is to study the major decision-making areas of managerial finance and some selected topics in financial theory. The course reviews the theory and empirical evidence related to the investment and financing policies of the firm and attempts to develop decision-making ability in these areas. This course serves as an extension of FNCE 100 (FNCE 611). Some are as of financial management not covered in FNCE 100 are covered in FNCE 203. These may include leasing, mergers and acquisitions, corporate reorganizations, financial planning and working capital management, and some other selected topics. Other areas that are covered in FNCE 100 are covered more in depth and more rigorously in FNCE 203. These include investment decision making under uncertainty, cost of capital, capital structure, pricing of selected financial instruments and corporate liabilities, and dividend policy.
Taught by: Changes by semester
One-term course offered either term
Also Offered As: FNCE 726
Prerequisite: FNCE 100 AND FNCE 101
Activity: Lecture
1.0 Course Unit
FNCE 205 Investment Management
This course studies the concepts and evidence relevant to the management of investment portfolios. Topics include diversification, asset allocation, portfolio optimization, factor models, the relation between risk and return, trading, passive (e.g., index-fund) and active (e.g., hedge-fund, long-short) strategies, mutual funds, performance evaluation, long-horizon investing and simulation. The course deals very little with individual security valuation and discretionary investing (i.e., 'equity research' or 'stock picking'). In addition to course prerequisites, STAT 102 may be taken concurrently.
Taught by: Changes by semester
One-term course offered either term
Prerequisite: FNCE 100 AND FNCE 101 AND STAT 101
Activity: Lecture
1.0 Course Unit

FNCE 206 Financial Derivatives
This course covers one of the most exciting yet fundamental areas in finance: derivative securities. In the modern financial architecture, financial derivatives can be the most challenging and exotic securities traded by institutional specialists, while at the same time, they can also be the basic securities commonly traded by retail investors such as S&P Index Options. Beyond trading, the basic ideas of financial derivatives serve as building blocks to understand a much broader class of financial problems, such as complex asset portfolios, strategic corporate decisions, and stages in venture capital investing. The global derivatives market is one of the most fast-growing markets, with over $600 trillion notional value in total. It is important as ever to understand both the strategic opportunities offered by these derivative instruments and risks they imply. The main objective of this course is to help students gain the intuition and skills on (1) pricing and hedging of derivative securities, and (2) using them for investment and risk management. In terms of methodologies, we apply the non-arbitrage principle and the law of one price to dynamic models through three different approaches: the binomial tree model, the Black-Scholes-Merton option pricing model, and the simulation-based risk neutral pricing approach. We discuss a wide range of applications, including the use of derivatives in asset management, the valuation of corporate securities such as stocks and corporate bonds with embedded options, interest rate derivatives, credit derivatives, as well as crude oil derivatives. In addition to theoretical discussions, we also emphasize practical considerations of implementing strategies using derivatives as tools, especially when no-arbitrage conditions do not hold. In addition to course prerequisites, STAT 102 may be taken concurrently.
Taught by: Varies by semester
One-term course offered either term
Also Offered As: FNCE 717
Prerequisite: FNCE 100 AND FNCE 101 AND STAT 101
Activity: Lecture
1.0 Course Unit

FNCE 207 Valuation
The focus of this course is on the valuation of companies. The course covers current conceptual and theoretical valuation frameworks and translates those frameworks into practical approaches for valuing companies. The relevant accounting topics and the appropriate finance theory are integrated to show how to implement the valuation frameworks discussed on a step-by-step basis. The course teaches how to develop the required information for valuing companies from financial statements and other information sources in a real-world setting. Topics covered in depth include discounted cash flow techniques and price multiples. In addition, the course covers other valuation techniques such as leveraged buyout analysis. During the spring semester students cannot take Professor Glode's FNCE 207 class pass/fail. This section must be taken for a grade. Professor Glode requires attendance at first class.
Taught by: Professor Holthausen (Fall); Professor Glode (Spring)
One-term course offered either term
Prerequisite: FNCE 100 AND ACCT 101 AND STAT 101
Activity: Lecture
1.0 Course Unit

FNCE 209 Real Estate Investment: Analysis and Financing
This course provides an introduction to real estate with a focus on investment and financing issues. Project evaluation, financing strategies, investment decision making and real estate capital markets are covered. No prior knowledge of the industry is required, but students are expected to rapidly acquire a working knowledge of real estate markets. Classes are conducted in a standard lecture format with discussion required. The course contains cases that help students evaluate the impact of more complex financing and capital markets tools used in real estate. There are case studies and two midterms, (depending on instructor).
Taught by: Ferreira, Handbury, Harari, Keys, Sinai, Wong
One-term course offered either term
Also Offered As: REAL 209
Prerequisite: FNCE 100
Activity: Lecture
1.0 Course Unit

FNCE 219 International Financial Markets
FNCE 219 is a course on international financial markets. Major topics include foreign exchange rates, international money markets, currency and interest rate derivatives (forwards, options, and swaps), international stock and bond portfolios, and cryptocurrencies. Students learn about the features of financial instruments and the motivations of market participants. The class focuses on risk management, investing, and arbitrage relations in these markets. In addition to course prerequisites, FNCE 101 is recommended.
Taught by: Urban Jermann
One-term course offered either term
Prerequisite: FNCE 100 AND FNCE 101 AND STAT 101
Activity: Lecture
1.0 Course Unit
FNCE 230 Urban Fiscal Policy
This course will examine the provision of public services for firms and people through cities. Why cities exist, when fiscal policy fails, investments in infrastructure, realities of local governments such as inequality, crime, corruption, high cost of living, congestion, and unfunded pensions and debt, will be covered. We will pay special attention to recent topics, such as partnerships with the private sector, enterprise zones, the role of technology, environmental challenges, and real estate policies that promote housing affordability, such as rent control and inclusionary zoning.
Taught by: Fernando Ferreira
Course usually offered in spring term
Also Offered As: BEPP 230, REAL 230
Activity: Lecture
1.0 Course Unit

FNCE 231 International Corporate Finance
(Formerly FNCE 208) Analyzes financial problems corporations face that result from operating in an international environment. Major topics include managing exchange risk through hedging and financing, measuring exchange rate exposure, calculating the cost of capital for foreign operations, assessment of sovereign risks, capital budgeting from a project and parent perspective, and international taxation.
Taught by: Karen Lewis
Also Offered As: FNCE 731
Prerequisite: FNCE 100
Activity: Lecture
1.0 Course Unit

FNCE 232 International Banking
(Formerly FNCE 220) This course focuses on international financial institutions, especially the activities of global, systemically important banks. We will examine how current and historical events are reshaping the industry and highlight the basic analytics of managing a bank's exposure to liquidity, credit, market and reputational risk. Most classes will begin with discussion of a current event related to course topics.
Three team projects will be assigned that will give you deeper exposure to analytic techniques related to the course. Throughout the semester, we will discuss public policy issues facing the international financial system.
In addition to course prerequisites, FNCE 101 is recommended.
Taught by: Professor Richard Herring
Course usually offered in spring term
Prerequisite: FNCE 100
Activity: Lecture
1.0 Course Unit

FNCE 233 Islamic Finance
This course will provide an overview of Islamic finance and its applications in the global financial system. We will examine the historical and theoretical foundations of Islamic finance, the unique contractual structures and financing mechanisms it employs, and the challenges and opportunities it presents for firms seeking to operate in the international financial system.
Taught by: Changes by semester
Course usually offered in spring term
Prerequisite: FNCE 100
Activity: Lecture
1.0 Course Unit

FNCE 234 Introduction to Financial Risk Management
This course will introduce students to the fundamental concepts and tools used in the management of financial risk. We will cover topics such as market risk, credit risk, and operational risk, and explore how these risks are measured and managed.
Taught by: Michael Roberts
Course usually offered in spring term
Prerequisite: FNCE 100
Activity: Lecture
1.0 Course Unit

FNCE 235 Fixed Income Securities
This course covers fixed income securities (including fixed income derivatives) and provides an introduction to the markets in which they are traded, as well as to the tools that are used to value these securities and to assess and manage their risk. Quantitative models play a key role in the valuation and risk management of these securities. As a result, although every effort will be made to introduce the various pricing models and techniques as intuitively as possible and the technical requirements are limited to basic calculus and statistics, the class is by its nature quantitative and will require a steady amount of work. In addition, some computer proficiency will be required for the assignments, although familiarity with a spreadsheet program (such as Microsoft Excel) will suffice. In addition to course prerequisites, FNCE 101 is recommended.
Taught by: Changes by Semester
One-term course offered either term
Prerequisite: FNCE 100 AND FNCE 101 AND STAT 101
Activity: Lecture
1.0 Course Unit

FNCE 236 Financial Markets and Institutions
This course will provide an overview of the global financial system and its various institutions, including banks, insurance companies, and pension funds. We will cover topics such as the role of financial intermediaries, the nature of financial markets, and the implications of financial innovation.
Taught by: Fernando Ferreira
Course usually offered in spring term
Also Offered As: BEPP 230, REAL 230
Prerequisite: FNCE 100
Activity: Lecture
1.0 Course Unit

FNCE 237 Data Science for Finance
This course will introduce students to data science for financial applications using the Python programming language and its ecosystem of packages (e.g., Dask, Matplotlib, Numpy, Numba, Pandas, SciPy, Scikit-Learn, StatsModels). To do so, students will investigate a variety of empirical questions from different areas within finance including: FinTech, investment management, corporate finance, corporate governance, venture capital, private equity, and entrepreneurial finance. The course will highlight how big data and data analytics shape the way finance is practiced. Some programming experience is helpful though knowledge of Python is not assumed.
Taught by: Michael Roberts
One-term course offered either term
Prerequisite: FNCE 100 AND FNCE 101 AND STAT 102
Activity: Lecture
1.0 Course Unit

FNCE 238 Capital Markets
The objective of this course is to give you a broad understanding of the framework and evolution of U.S. capital markets, the instruments that are traded, the mechanisms that facilitate their trading and issuance, and the motivations of issuers and investors across different asset classes.
The course will highlight the problems that capital market participants are seeking to solve, which you can use in your post-Wharton careers to evaluate future market innovations. We will consider design, issuance, and pricing of financial instruments, the arbitrage strategies which keep their prices in-line with one another, and the associated economic and financial stability issues. We will draw from events in the aftermath of the recent financial crisis, which illustrate financing innovations and associated risks, as well as policy responses that can change the nature of these markets. In addition to course prerequisites, FNCE 101 is recommended.
Taught by: Changes by semester
One-term course offered either term
Prerequisite: FNCE 100 AND FNCE 101
Activity: Lecture
1.0 Course Unit
FNCE 250 Venture Capital and the Finance of Innovation
This course covers the finance of technological innovation, with a focus on the valuation tools useful in the venture capital industry. These tools include the 'venture capital method,' comparables analysis, discounted cash flow analysis, contingent-claims analysis. The primary audience for this course is finance majors interested in careers in venture capital or in R&D-intensive companies in health care or information technology.
Taught by: Luke Taylor
Course usually offered in fall term
Prerequisite: FNCE 100 AND FNCE 101
Activity: Lecture
1.0 Course Unit

FNCE 251 The Finance of Buyouts and Acquisitions
The course focuses on financial tools, techniques, and best practices used in buyouts (financial buyers) and acquisitions (strategic buyers). While it will touch upon various strategic, organizational, and general management issues, the main lens for studying these transactions will be a financial one. It will explore how different buyers approach the process of finding, evaluating, and analyzing opportunities in the corporate-control market; how they structure deals and how deal structure affects both value creation and value division; how they add value after transaction completion; and how they realize their ultimate objectives (such as enhanced market position or a profitable exit). The course is divided into two broad modules. The first module covers mergers and acquisitions, and the second one studies buyouts by private equity partnerships. During the spring semester this course cannot be taken pass/fail.
FNCE 203 or FNCE 207 may be taken concurrently.
Taught by: Bilge Yilmaz
Prerequisite: FNCE 100 AND FNCE 101
Activity: Lecture
1.0 Course Unit

FNCE 254 Impact Investing
This course explores Impact Investing, a discipline that seeks to generate social benefits as well as financial returns. From tiny beginnings, the Impact Investment space has expanded and now commands significant attention from policymakers, wealthy and public-spirited individuals, academia and, not least, the world’s largest asset managers and philanthropic foundations. Evangelists believe it may be the key to freeing the world from poverty. Skeptics think it will remain confined to the boutique. Regardless, Impact Investing is becoming a distinct career specialization for finance professionals despite the diverse skillset each must have and the uncertainty of the new field’s growth. FNCE 101, FNCE 205, and FNCE 238 are recommended but not required.
Taught by: Chris Geczy
Prerequisite: FNCE 100 AND FNCE 101
Activity: Lecture
1.0 Course Unit

FNCE 256 Energy Finance
The objective of this course is to provide students with detailed knowledge of corporate structures, valuation methods, project finance, risk management practices, corporate governance issues, and geopolitical risks in the energy industry. In general, this course seeks to provide students with an overall context for understanding energy issues and risks, and how these might affect financing and investment decisions for both providers of energy and end-users of energy. FNCE 203 or FNCE 207 are recommended but not required.
Taught by: Professor Erik Gilje
Course usually offered in spring term
Prerequisite: FNCE 100 AND FNCE 101
Activity: Lecture
1.0 Course Unit

FNCE 257 Foundations of Asset Pricing
This course will cover methods and topics that form the foundations of modern asset- set pricing. These include: investment decisions under uncertainty, mean-variance theory, capital market equilibrium, arbitrage pricing theory, state prices, dynamic programming, and risk-neutral valuation as applied to option prices and fixed-income securities. Upon completion of this course, students should acquire a clear understanding of the major principles concerning individuals’ portfolio decisions under uncertainty and the valuations of financial securities. In addition one of the following is recommended FNCE 205; BEPP 250; MATH 360; STAT 433
Taught by: Jessica Wachter
Course usually offered in spring term
Also Offered As: FNCE 757
Prerequisite: FNCE 100 AND FNCE 101 AND MATH 114 AND MATH 312 AND STAT 430
Activity: Lecture
1.0 Course Unit

FNCE 283 Strategic Equity Finance
This course combines lectures and cases, and will go through actual situations where companies need to make strategic decisions on raising equity capital. We will address different phases of a company’s life cycle. Through these cases, from the decision-makers perspective, we will explore the different paths that can be taken and consider issues such as investor activism, governance and regulatory and valuation impact.
FNCE 283 is a half semester course. FNCE 238 is recommended but not required.
Taught by: Professor David Musto and Professor David Erickson
One-term course offered either term
Prerequisite: FNCE 100 AND FNCE 101
Activity: Lecture
0.5 Course Units
FNCE 291 Corporate Restructuring
This course will explore the highly active and sophisticated deal making environment that is the hallmark of modern distress corporate restructuring. The course is primarily comprised of two key components. The first is groundwork-laying lectures by three of the top practitioners in the restructuring field. In particular, the lectures will focus on fundamental rights and obligations of debtors, creditors, and other parties in interest in the various types of major chapter 11 cases, providing critical insight into understanding the motivations, strategies, and available tools for chapter 11 participants (which also serve as the foundation for out-of-court deals). The course also will provide a valuation framework for distressed assets. The second element of the course is a series of case study panels. The professors survey the market trends from the previous year bring together key participants from recent deals, including the CEO or chairman of the company, the judge, the lead banker and lead lawyer, and the lead investors to give their insight and perspectives to the class. These panels will provide students real-world insights into the most current issues in the field.

Other Information: Application: send a short 30 second to 1 minute video to Kyle.Ferrier@Kirkland.com stating why you want to take this course. The deadline to submit the video is June 21, 2020.
Taught by: Professor Bilge Yilmaz will co-teach with James Spayregen, Edward Sassower, Stephen Hessler from the Kirkland Law Firm.
Also Offered As: FNCE 791, LAW 908
Prerequisite: FNCE 101 AND FNCE 203 AND FNCE 207
Activity: Lecture
1.0 Course Unit

FNCE 311 Infrastructure Investing
The world economy runs on the infrastructure which has been built over the past 10,000 years. Each year, this infrastructure requires updating and new additions, from roads and bridges (the original infrastructure), to railroads, airports (the more recent infrastructure), to telecommunications and solar and wind power installations (modern infrastructure). There is a vast amount of public (i.e., taxpayer money directed by government officials) and private (i.e., individuals' money typically managed on their behalf and directed by private equity or banks into infrastructure investments). In this course, we will cover Infrastructure Financing and investing from various angles. We will provide descriptions of types of infrastructure, examine the financing needs of infrastructure projects, consider the historic role of government and non-government funding, and assess the changing needs of consumers and role of technology and the increasing demands posed by a globalizing economy. As private equity firms continue to build infrastructure funds, the need for, and role for, private money continues to evolve, so we will also examine infrastructure investing as an alternative asset class from the investors’ perspective. FNCE 203 or FNCE 207 are recommended but not required.
Taught by: Professor Kevin Kaiser
Prerequisite: FNCE 100 AND FNCE 101
Activity: Lecture
1.0 Course Unit

FNCE 341 Distressed Investing and Value Creation
This course familiarizes students with financial, strategic and legal issues associated with the restructuring of financially distressed firms and investment in distressed securities. The objective is to give students the concepts and tools necessary to assess the often-complex situation facing a firm facing financial distress. The course will cover the various options available for distressed firms, such as out-of-court workouts, exchange offers, prepackaged and pre-negotiated, bankruptcies, distressed asset sales, 363 auctions, and Chapter 11 reorganization. We will consider distressed debt as an asset class and develop techniques for investing in distressed securities. We will assess investment opportunities using the concepts of value investing, in which we distinguish the value of asset from price. Students will sharpen their conceptual knowledge of finance and valuation in order to properly estimate the value of a distressed firm, and its securities. We will also address the importance of value creation and how to manage for value creation to resolve distress, or avoid it in the first place. FNCE 203 or FNCE 207 are recommended but not required.
Taught by: Kevin Kaiser
Prerequisite: FNCE 100 AND FNCE 101
Activity: Lecture
1.0 Course Unit

FNCE 384 Advanced Topics in Private Equity
This course will address a variety of applied topics in private equity (PE), with a focus on growth and later-stage buyout transactions (venture capital is not explicitly addressed in this course), and a primarily U.S.-centric view that should be largely applicable in other markets. In addition, the course will focus on the transaction stage of PE investing i.e., the art of the deal and mostly leave aside deal sourcing, portfolio management and investor relations. The goal of this course is to educate students about the substance, process and mechanics of PE investing, through the lens of the investment professionals, counterparties and advisors that drive transactions to completion. Course topics will address the entire deal process, and will include the following: Commercial Diligence (incl. financial modeling); Debt Financing; Accounting Diligence; Sales & Purchase Agreements; Compas Analysis; and Other Advisory Work. Throughout the course, students will learn about each element of the deal process through in-class lectures, while concurrently apply those learnings to a real-time mock deal, and preparing dealmaterials that mirror a real private equity transaction. The in-class lectures will cover both conceptual frameworks and real-world examples.
Taught by: Bilge Yilmaz and Burcu Esmer
Prerequisite: FNCE 100 AND FNCE 101 AND (FNCE 203 OR FNCE 251)
Activity: Lecture
1.0 Course Unit
FNCE 385 ASP - Fin-Tech
The course exposes students to this fast-growing and exciting intersection between finance (Fin) and technology (Tech) while emphasizing the role data and analytics play. The course is structured around three main FinTech areas: (i) Lending/Banking services, (ii) Clearing (iii) Trading. It provides specific coverage and examples of developments from (1) market-place lending, (2) blockchain and distributed ledgers, (3) quantitative trading and its use of non-standard inputs. In each of these areas, we start by analyzing the marketplace, the incumbents, and then proceed to analyze the impact of the most relevant technologies have on the business. The course is built around data/code examples, cases, guest lectures, and group projects. Student are thus expected to work in teams and demonstrate a high level of independent learning and initiative.
Taught by: Shimon Kogan
Also Offered As: FNCE 885
Prerequisite: FNCE 100 AND FNCE 101
Activity: Lecture
0.5 Course Units

FNCE 386 ASP - Hedge Funds
This course will cover critical aspects and characteristics of hedge funds and the hedge fund industry. It will look at the legal foundations and structures of hedge funds including the primary regulations in the U.S. and abroad that are most relevant for hedge funds. It will also present the major hedge fund strategies, describe operation, control, administration, due diligence and valuation issues. Performance evaluation and investing in hedge funds from the investor’s perspective will be discussed as will be issues of potential changes in regulation, risk management, and the use of leverage. The format of the course will mix lectures with presentations from industry participants, hedge fund managers, those who invest in hedge funds, those who advise them and provide services to them, and those who regulate them. Those who want to launch a hedge fund, join an existing one, invest in one, or provide services to one will want to register for this course.
Taught by: Professor Scott Richard
Course usually offered in fall term
Prerequisite: FNCE 100 AND FNCE 101
Activity: Lecture
0.5 Course Units

FNCE 393 Central Banks, Macroeconomic Policy and Financial Markets
Understanding and predicting central banking decision making and behavior is crucial for all market participants from asset managers and traders to private consumers. This course aims to provide the methods and knowledge on how central banks and governments think and implement policies to reach the goals of price and financial stability as well as support of growth and employment. The core of the course connects between the legal and actual goals that central banks follow and the related economic analysis on which these goals and policies are set. We explain the economic rationale for the policy prescriptions to reach the goals and how these policies are actually implemented by the Federal Reserve Bank (Fed) in the US, the European Central Bank (ECB), Bank of Israel (BOI) and some remarks on other countries. We use data, current events of the 2007-2018 period as the basis for discussion and assignments. All of these are aimed understanding how and why the Fed, the ECB and the BOI set their policies. For each we shall simulate in class current decisions based on assignment related to past policies and the theory presented in class. In addition to course prerequisites, FNCE 100 is recommended.
Taught by: Zvi Eckstein and Joao Gomes
Also Offered As: FNCE 893
Prerequisite: FNCE 100 AND FNCE 101 AND STAT 102
Activity: Lecture
1.0 Course Unit

FNCE 395 Private Equity
The course will be a survey of the private equity asset class. Its objective is to provide an understanding of the concepts, agents, and institutions involved in the late stage corporate private equity market in the U.S. and around the globe. It will examine the buyout market and the activities of buyout funds from the differing perspectives of private equity investors, private equity fund sponsors, and managers of the portfolio companies. The course will be taught almost entirely with cases. Distinguished Wharton alumni in the private equity industry will be our guest speakers for many of the cases based on transactions they concluded. PLEASE NOTE: While this course is primarily intended for graduate students, admission may be granted to a limited number of interested undergraduate students. Be aware that this course may be recorded for live or subsequent distribution, display, broadcast, or commercialization in any media, including video, audio, or electronic media. For additional information, see the course syllabus or contact the department. This is a Pass/Fail course and will not count towards your concentration.
Also Offered As: FNCE 895
Prerequisite: FNCE 101 AND FNCE 203 OR FNCE 251
Activity: Lecture
0.5 Course Units

FNCE 399 Supervised Study in Finance
Integrates the work of the various courses and familiarizes the student with the tools and techniques of research.
Prerequisite: FNCE 100 AND FNCE 101
Activity: Independent Study
1.0 Course Unit
FNCE 401 Advanced Topics in PE
This course will cover a variety of applied topics in private equity (PE) with a focus on growth and later-stage buyout transactions. It will have a primarily U.S.-centric view that is largely applicable to other markets. Venture capital is not explicitly addressed in this course. Course topics will address the entirety of the deal process and value creation in the post-acquisition period, and will include the following: - LBO modeling - Commercial due diligence (principles and execution) - Debt financing - Sale & purchase agreements (SPA) - Accounting diligence - Deal structuring - Operations & Value creation Throughout the course, students will learn about each element of the deal process through in-class lectures, while concurrently applying those learnings to former transactions (these must be old enough that sharing material is no longer sensitive). The in-class lectures will cover conceptual frameworks, practical considerations and real-world case studies and examples. There will be four assignments in this course. The first three assignments will apply these learnings to the art of the deal through a real world lens. In the last assignment, students will develop a value creation plan for designated public companies 'TargetCo1' and 'TargetCo2'. Students are expected to actively engage in classroom discussions, challenging one another and the instructors about how to think through these issues in an ever-evolving investment world. In addition, throughout the course, students are expected to work as a team on the assignments.
Taught by: Bilge Yılmaz, Burcu Esmer
One-term course offered either term
Prerequisite: FNCE 101 AND FNCE 251 AND WH 101 AND WH 201 AND (WH 301 OR MGMT 301)
Activity: Lecture
1.0 Course Unit

FNCE 402 Shareholder Activism
The aim of the course is to provide an introduction to shareholder activism. The course makes use of lectures and case studies. The lectures expose the students to the institutional and empirical facts as well as approaches followed by leading shareholder activists. The case studies are designed to provide students an experience on identifying potential opportunity for value creation through active engagement. Assignments require students to develop/practice skills on fundamental analysis.
Taught by: Bilge Yılmaz
Prerequisite: FNCE 100 AND FNCE 101 AND WH 101 AND WH 201 AND (WH 301 OR MGMT 301)
Activity: Lecture
1.0 Course Unit

FNCE 403 Behavioral Finance
This course combines insights from behavioral economics and psychology to shed light on anomalous decisions by investors and possibly behavior of asset prices. Its content is designed to both complement and challenge the ‘rational’ investment paradigms developed in the early finance classes. It introduces students to much modern theoretical and empirical research showing this paradigm to be insufficient to describe various features of actual financial markets. The course structure involves early lectures, several cases, and a final project involving ‘real life’ examples and some modern research methods. In the capstone project students research and explore a specific behavioral bias or a profitable investment opportunity. Students will work in groups to simulate the behavior of, say, a portfolio management team looking for a new trading strategy; a consulting firm advising corporations on issues of financial management; or an entrepreneurial start-up developing a retail financial product. The main deliverable is in a form of a ‘pitch’ to potential clients to be delivered both in the form of a group presentation in class and a formal write-up to be submitted by the due date. Completion of FNCE 203 and FNCE 205 is recommended.
Taught by: Nikolai Roussanov
Course usually offered in spring term
Prerequisite: FNCE 100 AND FNCE 101 AND WH 101 AND WH 201 AND (WH 301 OR MGMT 301)
Activity: Lecture
1.0 Course Unit

FNCE 404 Financial Engineering
This course expands the key insights from the prior quantitative finance classes such as Derivatives and Fixed Income by using more advanced tools in statistics and applied mathematics. Its focus is on devising new and innovative financial products, often employing financial derivatives and related dynamic strategies, to address portfolio and risk-management problems. The course structure involves an introductory lectures and case discussions in the first half, and a capstone ‘real life’ group project where students will seek to address specific problems in finance faced by sell-side banks, and buy-side corporate clients or investment funds. Each project will focus on practical economic needs and standard activities of a specific client and/or bank and the use of derivatives and dynamic strategies to solve them. Programming skills and an exposure to numerical methods are an important part of the project in this course.
Taught by: Krishna Ramaswamy
Course offered summer, fall and spring terms
Prerequisite: FNCE 101 AND (FNCE 207 OR FNCE 235) AND WH 101 AND WH 201 AND (WH 301 OR MGMT 301)
Activity: Lecture
0.5 Course Units
FNCE 611 Corporate Finance
This course serves as an introduction to business finance (corporate financial management and investments) for both non-majors and majors preparing for upper-level course work. The primary objective is to provide the framework, concepts, and tools for analyzing financial decisions based on fundamental principles of modern financial theory. The approach is rigorous and analytical. Topics covered include discounted cash flow techniques; corporate capital budgeting and valuation; investment decisions under uncertainty; capital asset pricing; options; and market efficiency. The course will also analyze corporate financial policy, including capital structure, cost of capital, dividend policy, and related issues. Additional topics will differ according to individual instructors. Taught by: Varies by semester
Also Offered As: FNCE 100
Activity: Lecture
1.0 Course Unit

FNCE 613 Macroeconomics and the Global Economic Environment
This course is required for all students except those who, having prior training in macroeconomics, money and banking, and stabilization policy at an intermediate or advanced level, can obtain a waiver by passing an examination. The purpose of the course is to train students to think systematically about the current state of the economy and macroeconomic policy, and to be able to evaluate the economic environment within which business and financial decisions are made. The course emphasizes the use of economic theory to understand the workings of financial markets and the operation and impact of government policies. We will study the determinants of the level of national income, employment, investment, interest rates, the supply of money, inflation, exchange rates, and the formulation and operation of stabilization policies. Taught by: Professors Abel, Landvoigt
Also Offered As: FNCE 101
Activity: Lecture
1.0 Course Unit

FNCE 621 Corporate Finance (Half CU)
(Formerly FNCE 614) This half-semester course serves as an introduction to corporate investments for non-majors. The primary objective is to provide a framework, concepts, and tools for analyzing financial decisions based on fundamental principles of modern financial theory. Topics covered include discounted cash flow techniques, corporate capital budgeting and valuation, investment decisions under uncertainty, and capital asset pricing. The approach is rigorous and analytical but the course will not cover several topics included in the full semester Corporate Finance course, including: market efficiency, corporate financial policy (including capital structure, cost of capital, dividend policy, and related issues), and options. Taught by: Varies by semester
Prerequisite: (ACCT 611 OR ACCT 612 OR ACCT 613) AND (MGEC 611 AND MGEC 612) AND (STAT 613 OR STAT 621)
Activity: Lecture
0.5 Course Units

FNCE 623 Macroeconomics and The Global Economic Environment (Half CU)
(Formerly FNCE 615) This half-semester course in Macroeconomics is intended for non-finance majors. The goal of this course is to provide the foundation needed to recognize and understand broad economic and financial movements in the global economy. Key topics include national income accounting, production and economic growth, employment, business cycles, monetary and fiscal policy, and international finance. By the end of this course, students will be able to evaluate and discuss the global economic environment in which business and financial decisions are made. Taught by: Varies by semester
Prerequisite: FNCE 611
Activity: Lecture
0.5 Course Units

FNCE 717 Financial Derivatives
This course covers one of the most exciting yet fundamental areas in finance: derivative securities. Financial derivatives can be the most challenging and exotic securities traded by institutional specialists, while at the same time, they can also be the basic securities commonly traded by retail investors such as S&P Index Options. Beyond trading, the basic ideas of financial derivatives serve as building blocks to understand a much broader class of financial problems, such as complex asset portfolios, strategic corporate decisions, and stages in venture capital investing. The main objective of this course is to help students gain the intuition and skills on (1) pricing and hedging of derivative securities, and (2) using derivatives for investment and risk management. In terms of methodologies, we apply the non-arbitrage principle and the law of one price to dynamic models through three different approaches: the binomial tree model, the Black-Scholes-Merton option pricing model, and the simulation-based risk neutral pricing approach. We discuss a wide range of applications, including the use of derivatives in asset management, the valuation of corporate securities such as stocks and corporate bonds with embedded options, interest rate derivatives, credit derivatives, as well as crude oil derivatives. In addition to theoretical discussions, we also emphasize practical considerations of implementing strategies using derivatives as tools, especially when no-arbitrage conditions do not hold. In addition to prerequisites, STAT 613 may be taken concurrently. Taught by: Krishna Ramaswamy
One-term course offered either term
Also Offered As: FNCE 206
Prerequisite: FNCE 611
Activity: Lecture
1.0 Course Unit

FNCE 719 International Financial Markets
This course covers topics on foreign exchange rates, international money markets, currency and interest rate derivatives (forwards, options, and swaps), international stock and bond portfolios, and cryptocurrencies. Students learn about the features of financial instruments and the motivations of market participants. The class focuses on risk management, investing, and arbitrage relations in these markets. In addition to prerequisites, FNCE 613 is recommended but not required. Taught by: Urban Jermann
One-term course offered either term
Prerequisite: FNCE 611
Activity: Lecture
1.0 Course Unit
FNCE 720 Investment Management
This course studies the concepts and evidence relevant to the management of investment portfolios. Topics include diversification, asset allocation, portfolio optimization, factor models, the relation between risk and return, trading, passive (e.g., index-fund) and active (e.g., hedge-fund, long-short) strategies, mutual funds, performance evaluation, long-horizon investing and simulation. The course deals very little with individual security valuation and discretionary investing (i.e., 'equity research' or 'stock picking').
Taught by: Professor Keim & Professor Stambaugh
One-term course offered either term
Prerequisite: FNCE 611 AND (STAT 613 OR STAT 621)
Activity: Lecture
1.0 Course Unit

FNCE 721 Real Estate Investment: Analysis and Financing
This course provides an introduction to real estate with a focus on investment and financing issues. Project evaluation, financing strategies, investment decision making and capital markets are covered. No prior knowledge of the industry is required, but students are expected to rapidly acquire a working knowledge of real estate markets. Classes are conducted in a standard lecture format with discussion required. The course contains cases that help students evaluate the impact of more complex financing and capital markets tools used in real estate. Lecture with discussion required.
Taught by: Ferreira, Handbury, Harari, Keys, Sinai, Wong
One-term course offered either term
Also Offered As: REAL 721
Prerequisite: FNCE 611
Activity: Lecture
0.5 Course Units

FNCE 725 Fixed Income Securities
This course covers fixed income securities (including fixed income derivatives) and provides an introduction to the markets in which they are traded, as well as to the tools that are used to value these securities and to assess and manage their risk. Quantitative models play a key role in the valuation and risk management of these securities. In addition to course prerequisites, FNCE 613 is recommended but not required.
Taught by: Professor Cuoco
Course usually offered in fall term
Prerequisite: FNCE 611 AND (STAT 613 OR STAT 621)
Activity: Lecture
1.0 Course Unit

FNCE 726 Advanced Corporate Finance
The objective of this course is to study the major decision-making areas of managerial finance and some selected topics in financial theory. The course reviews the theory and empirical evidence related to the investment and financing policies of the firm and attempts to develop decision-making ability in these areas. This course serves as an extension of FNCE 611. Some areas of financial management not covered in FNCE 611 are covered in FNCE 726. These may include leasing, mergers and acquisitions, corporate reorganizations, financial planning, and working capital management, and some other selected topics. Other areas that are covered in FNCE 611 are covered more in depth and more rigorously in FNCE 726. These include investment decision making under uncertainty, cost of capital, capital structure, pricing of selected financial instruments and corporate liabilities, and dividend policy.
Taught by: Professor Gultekin
One-term course offered either term
Also Offered As: FNCE 203
Prerequisite: FNCE 611
Activity: Lecture
1.0 Course Unit

FNCE 728 Valuation
The focus of this course is on the valuation of companies. The course covers current conceptual and theoretical valuation frameworks and translates those frameworks into practical approaches for valuing companies. The relevant accounting topics and the appropriate finance theory are integrated to show how to implement the valuation frameworks discussed on a step-by-step basis. The course teaches how to develop the required information for valuing companies from financial statements and other information sources in a real-world setting. Topics covered in depth include discounted cash flow techniques and price multiples. In addition, the course covers other valuation techniques such as leveraged buyout analysis. In addition to prerequisites, ACCT 742 is recommended but not required.
Taught by: Professor Glode
One-term course offered either term
Prerequisite: FNCE 611 AND (ACCT 611 OR ACCT 613) AND (STAT 613 OR STAT 621)
Activity: Lecture
1.0 Course Unit

FNCE 730 Urban Fiscal Policy
This course will examine the provision of public services for firms and people through cities. Why cities exist, when fiscal policy fails, investments in infrastructure, realities of local governments such as inequality, crime, corruption, high cost of living, congestion, and unfunded pensions and debt, will be covered. We will pay special attention to recent topics, such as partnerships with the private sector, enterprise zones, the role of technology, environmental challenges, and real estate policies that promote housing affordability, such as rent control and inclusionary zoning.
Taught by: Fernando Ferreira
Course usually offered in fall term
Also Offered As: BEPP 773, REAL 730
Activity: Lecture
1.0 Course Unit
FNCE 731 International Corporate Finance
This course analyzes financial problems corporations face that result from operating in an international environment. Major topics covered are corporate strategy and the decision to invest abroad, international portfolio diversification, managing exchange risk, taxation issues, cost of capital and financial structure in the multinational firm, and sources of financing.
Taught by: Professor Karen Lewis
Also Offered As: FNCE 208, FNCE 231
Prerequisite: FNCE 611
Activity: Lecture
1.0 Course Unit

FNCE 732 International Banking
This course focuses on international financial institutions, especially the activities of global, systemically important banks. We will examine how current and historical events are reshaping the industry and highlight the basic analytics of managing a bank’s exposure to liquidity, credit, market and reputational risk. Most classes will begin with discussion of a current event related to course topics. Team projects will give deeper exposure to analytic techniques related to the course. Throughout the semester, we will discuss public policy issues facing the international financial system.
In addition to prerequisites, FNCE 613 may be taken concurrently.
Taught by: Professor Richard Herring
Course usually offered in spring term
Prerequisite: FNCE 611
Activity: Lecture
1.0 Course Unit

FNCE 737 Data Science for Finance
This course will introduce students to data science for financial applications using the Python programming language and its ecosystem of packages (e.g., Dask, Matplotlib, Numpy, Numba, Pandas, SciPy, Scikit-Learn, StatsModels). To do so, students will investigate a variety of empirical questions from different areas within finance by way of data labs, or case studies that rely on data and analytics. Some of the areas that may be covered in the course, subject to time constraints, include: FinTech, investment management, corporate finance, corporate governance, venture capital, private equity. The course will highlight how big data and data analytics shape the way finance is practiced. Some programming and experience is helpful though knowledge of Python is not assumed.
One-term course offered either term
Prerequisite: FNCE 611
Activity: Lecture
1.0 Course Unit

FNCE 738 Capital Markets
The objective of this course is to give you a broad understanding of the instruments traded in modern financial markets, the mechanisms that facilitate their trading and issuance, as well as, the motivations of issuers and investors across different asset classes. The course will balance functional and institutional perspectives by highlighting the problems capital markets participants are seeking to solve, as well as, the existing assets and markets which have arisen to accomplish these goals. We will consider design, issuance, and pricing of financial instruments, the arbitrage strategies which keep their prices in-line with one another, and the associated economic and financial stability issues. The course is taught in lecture format, and illustrates key concepts by drawing on a collection of case studies and visits from industry experts. In addition to prerequisites, FNCE 613 may be taken concurrently.
Taught by: Professor David Musto and Professor Michael Schwert
One-term course offered either term
Prerequisite: FNCE 611
Activity: Lecture
1.0 Course Unit

FNCE 750 Venture Capital and the Finance of Innovation
This course covers the finance of technological innovation, with a focus on the valuation tools useful in the venture capital industry. These tools include the ‘venture capital method,’ comparables analysis, discounted cash flow analysis, contingent-claims analysis. The primary audience for this course is finance majors interested in careers in venture capital or in R&D-intensive companies in health care or information technology.
Taught by: Professor Taylor and Professor Catherine
Course usually offered in spring term
Prerequisite: FNCE 611
Activity: Lecture
1.0 Course Unit

FNCE 751 The Finance of Buyouts and Acquisitions
The focus of this course is on buying (or acquiring controlling stakes in) firms. The main topics to be covered are mergers and friendly acquisitions, hostile takeovers and buyouts. Using case studies, the course surveys the drivers of success in the transactions. While issues regarding motive and strategy will be discussed, financial theory would be the main lens used to view these control acquiring transactions. This will allow students to (1) evaluate transactions through valuation approaches and (2) structure deals employing financial innovation as a response to legal framework and economic frictions. This course should be of interest to students interested in pursuing careers as private equity investors, advisors in investment banking and corporate managers that deal with these issues. This course assumes familiarity with valuation analysis. During the spring semester students are not permitted to take this course pass fail. In addition to prerequisites, FNCE 726 or 728 are recommended but not required.
Taught by: Professor Yilmaz
Prerequisite: FNCE 611
Activity: Lecture
1.0 Course Unit
FNCE 754 Impact Investing
This course explores Impact Investing, a discipline that seeks to generate social benefits as well as financial returns. From tiny beginnings, the Impact Investment space has expanded and now commands significant attention from policymakers, wealthy and public-spirited individuals, academia and, not least, the world’s largest asset managers and philanthropic foundations. Evangelists believe it may be the key to freeing the world from poverty. Skeptics think it will remain confined to the boutique. Regardless, Impact Investing is becoming a distinct career specialization for finance professionals despite the diverse skillset each must have and the uncertainty of the new field’s growth. In addition to prerequisites, FNCE 720 is recommended but not required.

Taught by: Christopher Geczy, Ph.D.
Prerequisite: FNCE 611
Activity: Lecture
1.0 Course Unit

FNCE 756 Energy Finance
The objective of this course is to provide students with detailed knowledge of corporate structures, valuation methods, project finance, risk management practices, corporate governance issues, and geopolitical risks in the energy industry. In general, this course seeks to provide students with an overall context for understanding energy issues and risks, and how these might affect financing and investment decisions for both providers of energy and end-users of energy. In addition to prerequisites, FNCE 726 and FNCE 728 are recommended but not required.

Taught by: Professor Erik Giljie
One-term course offered either term
Prerequisite: FNCE 611
Activity: Lecture
1.0 Course Unit

FNCE 757 Foundations of Asset Pricing
This course will cover methods and topics that form the foundations of modern asset- setting pricing. These include: investment decisions under uncertainty, mean-variance theory, capital market equilibrium, arbitrage pricing theory, state prices, dynamic programming, and risk-neutral valuation as applied to option prices and fixed-income securities. Upon completion of this course, students should acquire a clear understanding of the major principles concerning individuals’ portfolio decisions under uncertainty and the valuations of financial securities. In addition one of the following is recommended FNCE 205; BEPP 250; MATH 360; STAT 433

Taught by: Jessica Wachter
Course usually offered in spring term
Also Offered As: FNCE 257
Prerequisite: FNCE 611
Activity: Lecture
1.0 Course Unit

FNCE 783 Strategic Equity Finance
This half-semester course combines lectures and cases, and will go through actual situation where companies need to make strategic decisions on raising equity capital. We will address different phases of a company’s life cycle. Through these cases, from the decision-makers perspective, we will explore the different paths that can be taken and consider issues such as investor activism, governance and regulatory and valuation impact.

Taught by: Professor David Musto and Professor David Erickson
Course usually offered in spring term
Prerequisite: FNCE 611
Activity: Lecture
0.5 Course Units

FNCE 785 Business Strategy & Corp
This course explores strategic, business and legal decision making in a fluid real world corporate context. Classes will cover a series of timely financial and legal subjects as well as case studies that deal with topical problems in corporate governance, investment strategy, finance, private equity, executive compensation, and potential corporate and criminal behavior. Press, public market reaction, and governmental/political considerations will be integrated into the discussion. All students will be required to participate in one major and two minor team projects. An equal number of graduate law and business students will be enrolled in this class. The instructor, a 30 year veteran and partner at a major private equity firm, is also an attorney and CPA. No prerequisites.

Taught by: Perry Golkin
Also Offered As: LAW 542, LGST 785
Activity: Lecture
1.0 Course Unit

FNCE 791 Corporate Restructuring
This course will explore the highly active and sophisticated deal making environment that is the hallmark of modern distress corporate restructuring. The course is primarily comprised of two key components. The first is groundwork-laying lectures by three of the top practitioners in the restructuring field. In particular, the lectures will focus on fundamental rights and obligations of debtors, creditors, and other parties in interest in the various types of major chapter 11 cases, providing critical insight into understanding the motivations, strategies, and available tools for chapter 11 participants (which also serve as the foundation for out-of-court deals). The course also will provide a valuation framework for distressed assets. The second element of the course is a series of case study panels. The professors survey the market trends from the previous year bring together key participants from recent deals, including the CEO or chairman of the company, the judge, the lead banker and lead lawyer, and the lead investors to give their insight and perspectives to the class. These panels will provide students real-world insights into the most current issues in the field. By Video application only, send a short 30 second to 1 minute video why you want to take this course. The video must go to Kyle.Ferrier@Kirkland.com by 8-1-19

Also Offered As: FNCE 291, LAW 908
Activity: Lecture
1.0 Course Unit
FNCE 801 ASP - Advanced Topics in Private Equity
(Formerly FNCE 884) This course will address a variety of applied topics in private equity (PE), with a focus on growth and later-stage buyout transactions (venture capital is not explicitly addressed in this course), and a primarily U.S.-centric view that should be largely applicable in other markets. In addition, the course will focus on the transaction stage of PE investing i.e., the art of the deal and mostly leave aside deal sourcing, portfolio management and investor relations. The goal of this course is to educate students about the substance, process and mechanics of PE investing, through the lens of the investment professionals, counterparties and advisors that drive transactions to completion. Course topics will address the entire deal process, and will include the following: Commercial Diligence (incl. financial modeling); Debt Financing; Accounting Diligence; Sales & Purchase Agreements; Comps Analysis; and Other Advisory Work. Throughout the course, students will learn about each element of the deal process through in-class lectures, while concurrently apply those learnings to a real-time mock deal, and preparing deal materials that mirror a real private equity transaction. The in-class lectures will cover both conceptual frameworks and real-world examples.
Taught by: Professor Bilge Yilmaz (yilmaz@wharton.upenn.edu) and Fellow David Bard
Prerequisite: FNCE 611 AND (FNCE 726 OR FNCE 751)
Activity: Lecture
1.0 Course Unit

FNCE 803 Behavioral Finance
(Formerly FNCE 739) There is an abundance of evidence suggesting that the standard economic paradigm - rational agents in an efficient market - does not adequately describe behavior in financial markets. In this course, we will survey the evidence and use psychology to guide alternative theories of financial markets. Along the way, we will address the standard argument that smart, profit-seeing agents can correct any distortions caused by irrational investors. Further, we will examine more closely the preferences and trading decisions of individual investors. We will argue that their systematic biases can aggregate into observed market inefficiencies. The second half of the course extends the analysis to corporate decision making. We then explore the evidence for both views in the context of capital structure, investment, dividend, and merger decisions. In addition to prerequisites, FNCE 720 and FNCE 726 are recommended but not required.
Taught by: TBA
Course usually offered in spring term
Prerequisite: FNCE 611
Activity: Lecture
1.0 Course Unit

FNCE 811 ASP - Infrastructure Investing
The world economy runs on the infrastructure which has been built over the past 10,000 years. Each year, this infrastructure requires updating and new additions, from roads and bridges (the original infrastructure), to railroads, airports (the more recent infrastructure), to telecommunications and solar and wind power installations (modern infrastructure). There is a vast amount of public (i.e., taxpayer money directed by government officials) and private (i.e., individuals’ money typically managed on their behalf and directed by private equity or banks into infrastructure investments). In this course, we will cover Infrastructure Financing and investing from various angles. We will provide descriptions of types of infrastructure, examine the financing needs of infrastructure projects, consider the historic role of government and non-government funding, and assess the changing needs of consumers and role of technology and the increasing demands posed by a globalizing economy. As private equity firms continue to build infrastructure funds, the need for, and role for, private money continues to evolve, so we will also examine infrastructure investing as an alternative asset class from the investors’ perspective. FNCE 728 is recommended but not required.
Taught by: Professor Kevin Kaiser
Prerequisite: FNCE 611
Activity: Lecture
1.0 Course Unit

FNCE 812 The Finance, Economics and Law of Fiscal Crises
The focus will be on the causes of fiscal crises, a careful detailing of who wins and who loses, and then on how such crises might be resolved and, perhaps most importantly, how they might be prevented in the future. The course will draw upon the fiscal experiences of US local governments (New York, Philadelphia, Detroit, Orange County, Puerto Rico), utilities (WPPSS) and states (Illinois), and the international experience from such countries as Greece, Brazil, and Argentina. The costs of such crises for citizens, pensioners, and bond holders can be significant. We seek to understand the underlying economic, political, and legal/regulatory causes of such events so that they may be prevented in the future. The importance of private information and public regulation for disciplining the fiscal performance of democratically elected governments will be a central concern. We believe strongly that diagnosing and treating the ‘disease’ of fiscal mismanagement is an interdisciplinary endeavor drawing on finance, economics, political science, and the law. Students with backgrounds in any of these disciplines are welcome.
Taught by: Robert Inman & David Skeel
Also Offered As: LAW 609
Activity: Lecture
1.0 Course Unit

FNCE 898 Finance (FNCE)
FNCE 841 ASP - Distressed Investing and Value Creation
This course familiarizes students with financial, strategic and legal issues associated with the restructuring of financially distressed firms and investment in distressed securities. The objective is to give students the concepts and tools necessary to assess the often-complex situation facing a firm facing financial distress. The participants will gain a basic understanding of the various options available for distressed firms, such as out-of-court workouts, exchange offers, prepackaged and pre-negotiated bankruptcies, distressed asset sales, 363 auctions, and Chapter 11 reorganization. We will explore the difference between economic and financial distress, and the implications for the restructuring process. Finally, we will consider distressed debt as an asset class and develop techniques for investing in distressed securities. We will approach the investment opportunities using the concepts of value investing, in which we sharply distinguish the value of an asset from its price (as Warren Buffet explains, 'Price is what you pay, value is what you get') Students will sharpen their conceptual knowledge of finance and valuation in order to properly estimate the value of a distressed firm, and then supplement that with the complexities of valuing specific securities with the capital structure.
Taught by: Professor Kevin Kaiser
Prerequisite: FNCE 611
Activity: Lecture
1.0 Course Unit

FNCE 883 Strategic Equity Finance
Strategic Equity Finance has a new course number effective 19A This course is listed as FNCE783 going forward
Taught by: Professor David Musto and Professor David Erickson
Course usually offered in spring term
Prerequisite: FNCE 611
Activity: Lecture
0.5 Course Units

FNCE 885 Fin-Tech
The course exposes students to this fast-growing and exciting intersection between finance (Fin) and technology (Tech) while emphasizing the role data and analytics play. The course is structured around three main FinTech areas: (i) Lending/Banking services, (ii) Clearing (iii) Trading. It provides specific coverage and examples of developments from(1) market-place lending, (2) blockchain and distributed ledgers, (3) quantitative trading and its use of non-standard inputs. In each of these areas, we start by analyzing the marketplace, the incumbents, and then proceed to alalyze the impact of the most relevant technologies have on the business. The course is built around data/code examples, cases, guest lectures, and group projects. Student are thus expected to work in teams and demonstrate a high level of independent learning and initiative.
Taught by: Professor Kogan
Also Offered As: FNCE 385
Prerequisite: FNCE 611
Activity: Lecture
0.5 Course Units

FNCE 886 ASP - Hedge Funds
This course will cover critical aspects and characteristics of hedge funds and the hedge fund industry. It will look at the legal foundations and structures of hedge funds including the primary regulations in the U.S. and abroad that are most relevant for hedge funds. It will also present the major hedge fund strategies, describe operation, control, administration, due diligence and valuation issues. Performance evaluation and investing in hedge funds from the investor’s perspective will be discussed as will be issues of potential changes in regulation, risk management, and the use of leverage. The format of the course will mix lectures with presentations from industry participants, hedge fund managers, those who invest in hedge funds, those who advise them and provide services to them, and those who regulate them. Those who want to launch a hedge fund, join an existing one, invest in one, or provide services to one will want to register for this course.
Taught by: Professor Scott Richard
Prerequisite: FNCE 611
Activity: Lecture
0.5 Course Units

FNCE 887 ASP - Shareholder Activism
The aim of the course is to provide an introduction to shareholder activism. The course makes use of lectures and case studies. The lectures expose the students to the institutional and empirical facts as well as approaches followed by leading shareholder activists. The case studies are designed to provide students an experience on identifying potential opportunity for value creation through active engagement.
Assignments require students to develop/practice skills on fundamental analysis.
Taught by: Professor Bilge Yilmaz and Kevin Kaiser
One-term course offered either term
Prerequisite: FNCE 611
Activity: Lecture
1.0 Course Unit

FNCE 888 Adv PE-Fundraising, Sourcing and Value Creation.
This course is for second year MBA students. Please Note: Students cannot receive credit for both FNCE 884 and FNCE 888.....This course will address a variety of topics in private equity (PE) leveraging a highly practical and real-world approach. It will focus on growth and later-stage buyout transactions (venture capital is not explicitly addressed in this course), and a primarily U.S.-centric view that should be largely applicable in other markets. The course will focus on several key areas outside the private equity transaction: fundraising, sourcing investment opportunities, and creating value under PE ownership. The goal of this course is to educate students about these aspects of PE investing through the lens of the investment professionals, consultants, counterparties and advisors that live them each day. Students will be expected to actively engage in classroom discussions, challenging one another and the lecturers about how to think through these issues in an ever-evolving investment world. In addition, throughout the course, students will be expected participate actively with their teams as they proceed with at home assignments.
Taught by: Professor Bilge Yilmaz
Prerequisite: FNCE 751
Activity: Lecture
1.0 Course Unit
FNCE 893 ASP - Central Banks, Macroeconomic Policy and Financial Markets
This course aims to provide the future global manager and financial analyst with the knowledge on policies set by central banks, regulators and governments to reach the goals of price and financial stability as well as support of growth and employment. The core of the course connects between the formal and actual goals that central banks follow and the related economic analysis on which the goals and the policies are set. We will explain the economic rationale for the policy prescriptions to reach the goals and how these are implemented using institutional framework in the US, the European Central Bank (ECB), Israel and remarks on other countries. We use data, current events and events of the 2007-2018 financial crisis as a basis for discussion and assignments. All these are aimed at understanding how and why the Federal Reserve of the US (the Fed), The Bank of Israel (BOI) and the European Central Bank (ECB) set their policies and how that is related to academic research on these issues.
Taught by: Zvi Eckstein and Joao Gomes
One-term course offered either term
Also Offered As: FNCE 393
Prerequisite: FNCE 613 AND STAT 613
Activity: Lecture
1.0 Course Unit

FNCE 895 Advanced Seminar in Private Equity
This course will be a survey of the private equity asset class. Its objective is to provide an understanding of the concepts, agents, and institutions involved in the late stage corporate private equity market in the U.S. and around the globe. It will examine the buyout market and the activities of buyout funds from the differing perspectives of private equity investors, private equity fund sponsors, and managers of the portfolio companies. The course will be taught almost entirely with cases. Distinguished Wharton alumni in the private equity industry will be our guest speakers for many of the cases based on transactions they concluded. While this course is primarily intended for graduate students, admission may be granted to a limited number of interested undergraduate students.
PLEASE NOTE: this course may be recorded for live or subsequent distribution, display, broadcast, or commercialization in any media, including video, audio, or electronic media. For additional information, see the course syllabus or contact the department. This is a Pass/Fail course and will not count towards your concentration.
Also Offered As: FNCE 395
Prerequisite: FNCE 726 OR FNCE 751
Activity: Lecture
0.5 Course Units

FNCE 896 Global Modular Course
Open to MBA, Executive MBA and Undergraduate students, these modular courses are intended to provide unique educational experiences to students in a regional context that has particular resonance with the topic. Taught around the globe, the modular courses help us enrich the curriculum and research on our own campuses in Philadelphia and San Francisco.
Taught by: Bulent Gultekin and Bilge Yilmaz
Course not offered every year
Also Offered As: WH 215
Activity: Lecture
0.5 Course Units

FNCE 897 Finance In The Middle East & North Africa
This is a Wharton Global Modular Course on finance in the Middle East and North Africa. Its objective is to bring students, academics and industry experts together to study financial markets, practice, and institutions in this region.
Taught by: Professor Bulent Gultekin, Finance Department and Professor Michael J.T. McMillen, Penn Law School
Also Offered As: WH 214
Activity: Lecture
0.5 Course Units

FNCE 899 Independent Study Project in Finance
Independent Study Projects require extensive independent work and a considerable amount of writing. ISP in Finance are intended to give students the opportunity to study a particular topic in Finance in greater depth than is covered in the curriculum. The application for ISP's should outline a plan of study that requires at least as much work as a typical course in the Finance Department that meets twice a week. Applications for FNCE 899 ISP's will not be accepted after the THIRD WEEK OF THE SEMESTER. ISP's must be supervised by a Standing Faculty member of the Finance Department.
Taught by: Varies by Project
Prerequisite: FNCE 611 AND FNCE 613
Activity: Independent Study
1.0 Course Unit

FNCE 911 Financial Economics
The objective of this course is to undertake a rigorous study of the theoretical foundations of modern financial economics. The course will cover the central themes of modern finance including individual investment decisions under uncertainty, stochastic dominance, mean variance theory, capital market equilibrium and asset valuation, arbitrage pricing theory, option pricing, and incomplete markets, and the potential application of these themes. Upon completion of this course, students should acquire a clear understanding of the major theoretical results concerning individuals' consumption and portfolio decisions under uncertainty and their implications for the valuation of securities.
Course usually offered in fall term
Prerequisite: ECON 681 OR ECON 701
Activity: Lecture
1.0 Course Unit

FNCE 912 Corporate Finance and Financial Institutions
This course provides students with an overview of the basic contributions in the modern theory of corporate finance and financial institutions. The course is methodology oriented in that students are required to master necessary technical tools for each topic. The topics covered may include capital structure, distribution policy, financial intermediation, incomplete financial contracting, initial and seasoned public offerings, market for corporate control, product market corporate finance interactions, corporate reorganization and bankruptcy, financing in imperfect markets, security design under adverse selection and moral hazard, and some selected topics.
Course usually offered in spring term
Prerequisite: ECON 681 OR ECON 701
Activity: Lecture
1.0 Course Unit
FNCE 921 Introduction to Empirical Methods in Finance
This course is an introduction to empirical methods commonly employed in finance. It provides the background for FNCE 934, Empirical Research in Finance. The course is organized around empirical papers with an emphasis on econometric methods. A heavy reliance will be placed on analysis of financial data.
Course usually offered in spring term
Prerequisite: FNCE 911 AND STAT 510 AND STAT 511
Activity: Lecture
1.0 Course Unit

FNCE 922 Continuous-Time Financial Economics
This course covers some advanced material on the theory of financial markets developed over the last two decades. The emphasis is on dynamic asset pricing and consumption choices in a continuous time setting. The articles discussed include many classical papers in the field as well as some of the most recent developments. The lectures will emphasize the concepts and technical tools needed to understand the articles.
Course usually offered in fall term
Prerequisite: FNCE 911 AND ECON 701 AND ECON 703
Activity: Lecture
1.0 Course Unit

FNCE 923 Financial Economics Under Imperfect Information
This course covers General equilibrium and rational expectations, foundations of the theory of information; learning from prices in rational expectations equilibrium models, moral hazard, adverse selection, and signalling Bidding theories.
Course not offered every year
Prerequisite: FNCE 922
Activity: Lecture
1.0 Course Unit

FNCE 924 Intertemporal Macroeconomics and Finance
This is a doctoral level course on macroeconomics, with special emphasis on intertemporal choice under uncertainty and topics related to finance. Topics include: optimal consumption and saving, the stochastic growth model, q-theory of investment, (incomplete) risk sharing and asset pricing. The course will cover and apply techniques, including dynamic programming, to solve dynamic optimization problems under uncertainty. Numerical solution methods are also discussed.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

FNCE 925 Topics In Asset Pricing
This course exposes student to recent development in the asset pricing literature. The starting point for the course is the standard neo-classical rational expectations framework. We will then investigate where this framework has succeeded and where it has not. Recently documented deviations from the framework in the literature are discussed and placed in context. The course will also focus on hypothesis development, recent research methods, and research writing. The ultimate objective is for students to develop their own hypotheses and research ideas, resulting in a paper.
Course not offered every year
Prerequisite: ECON 681 OR ECON 701
Activity: Lecture
1.0 Course Unit

FNCE 926 Empirical Methods in Corporate Finance
The course will cover a variety of microeconomic models and methods including panel data models, program evaluation methods (e.g. difference in differences, matching techniques, regression discontinuity design) instrumental variables, duration models, structural estimation (e.g. simulated methods of moments). The structure of the course consists of lectures, student presentations, and empirical exercises. I will utilize published studies in a variety of fields such as corporate finance, labor economics, and industrial organization to illustrate the various techniques. The goal of the course is to provide students with a working knowledge of various econometric techniques that they can apply in their own research. As such, the emphasis of the course is on applications, not theory. Students are required to have taken a graduate sequence in Econometrics, you should be comfortable with econometrics at the level of William Green's 'Econometric Analysis of Cross-Section and Panel Data'.
Course usually offered in fall term
Prerequisite: STAT 521
Activity: Lecture
1.0 Course Unit

FNCE 932 Topics In Corporate Finance
This course covers Advanced theory and empirical investigations; financial decisions of the firm, dividends, capital structure, mergers, and takeovers.
Course not offered every year
Prerequisite: FNCE 922
Activity: Lecture
1.0 Course Unit

FNCE 933 International Finance
To provide an understanding of selected topics of current academic research in the areas of international finance and its intersection with international macroeconomics; to teach interested students the tools for conducting research in this field. Each topic will be developed beginning with early classic papers and then updated through the current status of the profession. The typical target audience comprises students in their second year or later. Prerequisite: Completion of first year course requirements
Taught by: Karen Lewis
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
FNCE 934 Empirical Methods In Asset Pricing
This course has three main objectives: The first object is to introduce students to the fundamental works and the frontier of research in dynamic asset pricing. We will cover recent models that have been proposed to shed light on intriguing and important empirical patterns in the cross section and in the time series. Topics include non-separable utilities, market incompleteness, learning, uncertainty, differences of opinions, ex-ante and ex-post asymmetric information, ambiguity and Knightian uncertainty. The second objective is to teach students how to think of asset pricing research under a bigger or richer framework. We shall focus on the interactions between asset pricing and other fields such as macroeconomics, corporate finance, financial institutions, and international finance. The goal of investigating the joint dynamics is not only to better understand how asset prices are determined, but also (maybe more importantly) how would asset pricing dynamics affect other important economic variables such as investment, corporate payout and financing, unemployment, risk sharing, and international capital flows. Students will learn production-based asset pricing models, particularly the asset pricing models with investment-specific technology shocks, risk shocks, financial friction, searching frictions and information frictions. Of course, the advanced solution methods will focus too. The third objective is to introduce advanced empirical methods to analyze the data and the quantitative dynamic models. It includes how to estimate structural dynamic models, how evaluate structural models beyond goodness-of-fit tests, how confront the models predictions with empirical data by simulation and re-sampling techniques, and how to efficiently test models and explore new patterns using asset pricing and macro data.
Course usually offered in fall term
Prerequisite: FNCE 911 AND FNCE 921
Activity: Lecture
1.0 Course Unit

FNCE 937 Topics in Macro Finance
This is an advanced course in quantitative theory applied to macro and finance models. It is intended for doctoral students in finance, economics and related fields. The course focuses on four broad theoretical literatures: (i) firm investment and growth; (ii) corporate, household and sovereign debt; (iii) asset pricing in general equilibrium; and (iv) equilibrium macro models with a financial sector. My approach is to develop and discuss in detail a unified framework that is suited to address most topics, usually covering a few central topics and the core papers. We then discuss the more recent literature, highlighting how authors combine and expand upon the core ideas. This part of the course usually relies on regular student presentations.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

FNCE 950 Research Seminar in Finance
This course may be offered (and taken by a student) several times a year with varying topics.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

Fine Arts (FNAR)

FNAR 061 Video I
In this studio based course, students are introduced to video production and postproduction as well as to selected historical and theoretical texts addressing the medium of video. Students will be taught basic camera operation, sound recording and lighting, as well as basic video and sound editing and exporting using various screening and installation formats. In addition to a range of short assignment-based exercises, students will be expected to complete three short projects over the course of the semester. Critiques of these projects are crucial to the course as students are expected to speak at length about the formal, technical, critical and historical dimensions of their works. Weekly readings in philosophy, critical theory, artist statements and literature are assigned. The course will also include weekly screenings of films and videos, introducing students to the history of video art as well as to other contemporary practices. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
For BA Students: Humanities and Social Science S
One-term course offered either term
Also Offered As: CIMS 061, FNAR 661, VLST 261
Activity: Seminar
1.0 Course Unit

FNAR 062 Video II
Video II offers opportunities to further explore the role of cinematic narrative technique, non-narrative forms, digital video cinematography, editing, and screen aesthetics. Through a series of several video projects and a variety of technical exercises, students will refine their ability to articulate technically and conceptually complex creative projects in digital cinema. In addition, one presentation on a contemporary issue related to the application of cinematic storytelling and/or the cultural context of digital video is required.
One-term course offered either term
Also Offered As: CIMS 062, FNAR 662
Prerequisite: FNAR 061
Activity: Seminar
1.0 Course Unit

FNAR 063 Documentary Video
Documentary Video is an intensive production course involving the exploration of concepts, techniques, concerns, and aesthetics of the short form documentary. Building on camera, sound, and editing skills acquired in Video I, students will produce a portfolio of short videos and one longer project over the course of the semester using advanced level camera and sound equipment. One short presentation on a genre, technique, maker, or contemporary concern selected by the student is required.
Course usually offered in fall term
Also Offered As: CIMS 063, FNAR 663
Prerequisite: FNAR 061
Activity: Seminar
1.0 Course Unit
FNAR 065 Cinema Production
This course focuses on the practices and theory of producing narrative based cinema. Members of the course will become the film crew and produce a short digital film. Workshops on producing, directing, lighting, camera, sound and editing will build skills necessary for the hands-on production shoots. Visiting lecturers will critically discuss the individual roles of production in the context of the history of film. Course usually offered in fall term Also Offered As: CIMS 065, FNAR 665 Prerequisite: FNAR 061 Activity: Seminar 1.0 Course Unit

FNAR 067 Advanced Video Projects
This course is structured to create a focused environment and support for individual inquiries and projects. Students will present and discuss their work in one to one meetings with the instructor and in group critiques. Readings, screenings, and technical demonstrations will vary depending on students' past history as well as technical, theoretical, and aesthetic interests. Course not offered every year Also Offered As: FNAR 667 Prerequisite: FNAR 061 Activity: Seminar 1.0 Course Unit

FNAR 070 Film Sound: History, Aesthetics and Subversion
Sound and Image as experienced in the cinema, are not divisible. One perception influences the other, and transforms it. While a preexisting harmony between these two senses may exist, its conventions are subject to manipulation and the whims of subversion. Film Sound tracks the technological and aesthetic history of sound for film including psychoacoustics, dialogue, music, sound fx and audio's gradual and triumphant march towards fidelity, stereo and surround sound. This lecture course, through an historical and pedagogical romp loaded with examples throughout film history and visits by lauded audio professionals from the film world, seeks to instruct students to engage in the process of sound perception, gaining an appreciation for the art of sound as it relates to the varied phenomenological dimensions of that unique audio-visual encounter we call movies. Taught by: Novack One-term course offered either term Also Offered As: FNAR 671 Activity: Seminar 1.0 Course Unit

FNAR 073 Machine for Seeing: Architecture and the Moving Image
Architecture's relationship with cinema was established with the very first motion picture. In Sortie de l'usine Lumiere de Lyon by Auguste and Louis Lumiere we see a didactic presentation of film titles as workers from the Lumiere brother's factory stream forth from its interior at days end. In many ways the context of the film is its subject as well. The title of the class plays on Le Corbusier's maxim that architecture is machine for living and perhaps cinema is simply a machine for helping us understand the vast construct of our built environment. A device, which allows us to imagine even greater follies or more importantly to think critically about architecture's relationship with and impact on society. Readings, screenings, discussions and critiques make up the curriculum along with studio time. Students will produce their own film and we will look at films produced by a range of practitioners: From architects speculating on the nature of and use of public space and urban development to documentarians researching the pathologies of neo-liberalism and its effect on the privatization of space. We will also look at the work of artists who engage with the poetics of space and who unpack the conflicted legacies of the built environment. Taught by: Hartt Course usually offered in spring term Also Offered As: FNAR 673 Prerequisite: FNAR 061 Activity: Studio 1.0 Course Unit

FNAR 074 A Virus in the Culture: Social Critique in Media Arts
In order to change the world, we must first learn how to infect it. A Virus in the Culture is a studio class that examines and generates various forms of media resistance to dominant hegemonic systems of power and control. Using filmmaking, publication design and interactive media we'll think through and develop responses to some of the most pressing issues facing us today. We'll look at historical models from the agitprop design work of Gee Vaucher for Anarcho-punk band Crass to Chris Marker's film Le Fond de L'Air Est Rouge, a radical analysis of global social and political turmoil in the late 60s and early 70s. We'll also look at experimental contemporary design firms like Metahaven who question the role of designers and filmmakers today - Bypassing the power dynamics of clients and briefs they took it upon themselves to create a graphic identity for WikiLeaks. Each example broadens the definition and possibilities of practice to create a more porous engagement with audiences and users while informing the practice of social critique today. Considering a diverse range of topics from education policy, to the rights of environmental refugees, we'll use the class to workshop a singular comprehensive project that targets researches and responds to a specific contested position. The outcome of which will be a class produced short film, publication design and website that unpacks the social, cultural, and economic complexities of our subject. This class is co-taught by David Hartt, an artist and filmmaker along with graphic designer, Mark Owens. Reading, screenings, discussions and critiques make up the curriculum along with studio time. While the focus of this course is not technical, prior knowledge of design programs, camera functions, and post-production techniques is expected. Taught by: David Hartt and Marks Owens Course usually offered in fall term Also Offered As: FNAR 674 Prerequisite: FNAR 061 Activity: Studio 1.0 Course Unit
**FNAR 075 Image and Sound Editing**
This course presents an in-depth look at the storytelling power of image and sound in both narrative and documentary motion pictures. Students apply a theoretical framework in ongoing workshops, exploring practical approaches to picture editing and sound design. Students edit scenes with a variety of aesthetic approaches, and create story-driven soundtracks with the use of sound FX, dialogue replacement, foleys, music and mixing. Students not only learn critical skills that expand creative possibilities, but also broaden their understanding of the critical relationship between image and sound.
Course usually offered in spring term
Also Offered As: CIMS 075, FNAR 675
Prerequisite: FNAR 061
Activity: Seminar
1.0 Course Unit

**FNAR 076 Advanced Lens Based Projects**
Advanced Lens Based Projects (ALBP) is structured to create an open environment for students to develop a series of self-determined projects using any variety of image capture technologies. Mobile devices and DSLRs have blended the function of moving and still image capture while computers have become ubiquitous as instruments of display and dissemination. This has consequently led to the increasingly collapsed boundaries of artistic mediums. ALBP is a studio class where students will explore different modes of production and address the expanding field of exhibition strategies. Additionally the class will foster a transdisciplinary approach to critiquing work and emphasize the shared context of the works reception. Readings, screenings, discussions and critiques make up the curriculum along with dedicated studio time. Each student is required to complete 3 self-determined projects using still or moving image capture technologies. Grades will be determined through participation, completion of assignments and the students’ formal and critical engagement with the technology. While the focus of this course is not technical, prior knowledge of camera functions and post-production techniques is expected.
Taught by: Hartt
Also Offered As: FNAR 676
Prerequisite: FNAR 061 OR FNAR 150 OR FNAR 271 OR FNAR 340
Activity: Studio
1.0 Course Unit

**FNAR 083 Performance/Camera: Performance and-with-through-for Cameras**
This intermediate course will explore the wide and expansive territories of art-making that exist between live performance and mediated image making-both still and moving. For much of the 21st century, the mediums of performance, video and photography have been weaving in and out of contact. Performance is known and understood largely through its documentation: sometimes voluminous and sometimes little more than a single photograph. On the other side, video, film and photography each developed through widespread explorations that were deeply entwined with the ‘capturing’ of bodies on film. Using photography, video and performance in equal parts, the course is a hands-on exploration of this capacious terrain. The course will be structured by a series of bi-weekly assignments that allow for individual and collective production. The course will also include a regular schedule of short readings and presentations/screenings of existing works.
Taught by: Hayes, Sharon
Course usually offered in fall term
Also Offered As: FNAR 583
Prerequisite: FNAR 061 AND FNAR 340
Activity: Studio
1.0 Course Unit

**FNAR 085 Performance Studio**
This course supports the individual and collaborative production of performance works. As the medium of performance consists of diverse forms, actions, activities, practices and methodologies, the course allows for an open exploration in terms of material and form. Students are invited to utilize technologies, materials and methodologies from other mediums and/or disciplines such as video, photography, writing and sound. In addition to the production component, the course will examine multiple histories of performance through readings, screenings and directed research.
Taught by: Hayes
Course usually offered in spring term
Also Offered As: FNAR 585
Prerequisite: FNAR 123 OR FNAR 145 OR FNAR 150 OR FNAR 061
Activity: Studio
1.0 Course Unit

**FNAR 123 Drawing I**
This course is designed to develop visual awareness and perceptual acuity through the process of drawing. Students learn to sharpen perceptual skills through observational drawing, and to explore the expressive potential of drawing. A variety of problems and media will be presented in order to familiarize students with various methods of working and ways of communicating ideas visually. Subject matter will include object study, still life, interior and exterior space, self-portrait and the figure. Different techniques and materials (charcoal, graphite, ink, collage) are explored in order to understand the relationship between means, material and concept. Critical thinking skills are developed through frequent class critiques and through the presentation of and research into historical and contemporary precedent in drawing.
If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
One-term course offered either term
Also Offered As: FNAR 523, VLST 253
Activity: Studio
1.0 Course Unit

**FNAR 124 Drawing Investigations**
Drawing is a fundamental means of visualization and a hub for thinking, constructing, and engaging in a wide variety of creative activities and problem solving. This studio class explores drawing in both its traditional and contemporary forms. The projects are designed to help students in all disciplines find ways express and clarify their ideas through the process of drawing. The semester begins with the refinement of perceptual skills acquired in Drawing I, while encouraging experimentation through the introduction of color, abstract agendas, conceptual problem solving, and collaborative exercises, as well as new materials, techniques and large format drawings. Particular attention is given to ways to conduct visual research in the development of personal imagery. Assignments are thematic or conceptually based with ample opportunity for individual approaches to media, subject, scale and process. The goal is to strengthen facility, develop clarity in intent and expand expression. Attention is paid to the development of perceptual sensitivity, methods of imagemage construction, and the processes of synthesis and transformation in order to communicate ideas through visual means. Recommended for students in all areas.
One-term course offered either term
Also Offered As: FNAR 524
Prerequisite: FNAR 123
Activity: Studio
1.0 Course Unit
FNAR 125 Contemporary Art Studio
This course offers an introduction to studio-based practices aimed at synthesizing the expansive potentialities of art through exposure to a diverse set of approaches, their histories, and contemporary applications. A wide range of multi-disciplinary projects will provide students with skills to conceptualize and visualize material investigations. Lectures, readings, films, visiting lectures, field trips, and critiques, will provide a historic and theoretical foundation for critical inquiry.
Taught by: Neff
Also Offered As: FNAR 625
Activity: Studio
1.0 Course Unit

FNAR 127 Space/Form
In this studio-based course, students are introduced to a wide range of approaches and techniques that explore surface, space, and time (2D, 3D, 4D). Traditional sculptural materials and techniques will be investigated along with more ephemeral interventions in space such as sound, light, and projection. Through lectures, readings, and critiques, students will explore the history of installation and interactive sculptural work, discover new directions in contemporary art, and develop self-directed projects that interrogate historical, social, and psychological conditions of the built environment.
Taught by: Neff
Activity: Studio
1.0 Course Unit

FNAR 145 Sculpture Practices
As an introduction to traditional and contemporary three-dimensional practice, this course is concerned with the concepts and methodologies surrounding three-dimensional art making in our time. Students experiment with a variety of modes of production, and develop some of the fundamental techniques used in sculpture. In addition to these investigations, assignments relative to the history and social impact of these practices are reinforced through readings and group discussion. Processes covered include use of the Fab Lab, wood construction, clay, paper, mixed media, and more. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
One-term course offered either term
Also Offered As: FNAR 545, VLST 252
Activity: Studio
1.0 Course Unit

FNAR 147 Advanced Sculpture: Installation & Interventions
In this course students will create sculptural installations and spatial interventions that explore site specificity and architectural environments. A range of traditional sculptural materials and techniques will be investigated along with more ephemeral interventions in space such as sound, light, and projection. Through lectures, readings, and critiques, students will explore the history of installation and interactive sculptural work and develop self-directed projects that interrogate historical, social, and psychological conditions of the built environment.
Also Offered As: FNAR 607
Prerequisite: FNAR 145
Activity: Studio
1.0 Course Unit

FNAR 148 Clay Practices
This course introduces clay as a sculptural medium through fundamental clay-building techniques, mold making, model making, and casting. Through experimentation with these methods, this course promotes an understanding of materials, processes, visual concepts and techniques for creating three-dimensional forms in space. In addition to using different water-based clays and plaster, other materials such as wax, plastiline, paper pulp, and cardboard will be explored. Students will explore the full range of clay’s capabilities and its role in contemporary art through lectures, readings, demonstrations, and assignments that incorporate conceptual and technical issues.
Also Offered As: FNAR 508
Activity: Studio
1.0 Course Unit

FNAR 150 Photography Practices
This course is an introduction to the basic principles, strategies and processes of photographic practice. It is designed to broaden the student’s aesthetic explorations and to help the student develop a visual language based on cross-disciplinary artistic practice. Through a series of projects and exercises students will be exposed to a range of camera formats, techniques and encouraged to experiment with the multiple modes and roles of photography - both analogue and digital. Attention will also be given to developing an understanding of critical aesthetic and historical issues in photography. Students will examine a range of historical and contemporary photowork as an essential part of understanding the possibilities of image making. This course is primarily for freshman and sophomores. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu

Activity: Studio
1.0 Course Unit

FNAR 177 On Thoughts Occasioned By
The Essay Film is an important tradition within the various genres that constitute the field of Film and Video Art. Through the element of time it differentiates itself from its literary and photographic antecedents. It borrows selectively from both narrative fiction and documentary - highly subjective and occasionally poetic but without perhaps the burden of truth. The Essay Film is an attempt to dimensionalize our experience of the world and our place in it. It represents an argument, a meditation, a critical engagement with a place, a time or a subject. This is a combination seminar/studio course. Through readings, screenings and discussion students will gain an historical perspective on the genre. The core assignment is for each student to complete a short film (20 minutes max.) in the tradition of the Essay Film.
Taught by: Hartt/Corrigan
Also Offered As: ENGL 257, FNAR 677
Activity: Seminar
1.0 Course Unit
FNAR 212 Walt Whitman and the People’s Press
Walt Whitman and the People’s Press: A Course to Design and Program a Mobile Printing Space as a Public Art Project. Inspired by Whitman at 200, a region-wide celebration of Walt Whitman in the 21st Century. To do this students and instructors will consider Whitman’s poetry as well as in his historical period and his place in Philadelphia and Camden. At the same time students will learn to use a press, design materials and create their own multimedia responses to Whitman. Students in this course should expect to read a great deal of poetry but also to be ready to work with their classmates to create responses to Whitman and to see and experience Philadelphia and Camden in new ways.
Taught by: Turner and Comberg
Course not offered every year
Also Offered As: ENGL 212
Activity: Seminar
1.0 Course Unit

FNAR 222 The Big Picture: Mural Arts in Philadelphia
The history and practice of the contemporary mural movement couples step by step analysis of the process of designing with painting a mural. In addition students will learn to see mural art as a tool for social change. This course combines theory with practice. Students will design and paint a large outdoor mural in West Philadelphia in collaboration with Philadelphia high school students and community groups. The class is co-taught by Jane Golden, director of the Mural Arts Program in Philadelphia, and Shira Walinsky, a mural arts painter and founder of Southeast by Southeast project, a community center for Burmese refugees in South Philadelphia.
One-term course offered either term
Also Offered As: FNAR 622, URBS 322
Activity: Seminar
1.0 Course Unit

FNAR 231 Painting Practices
Painting practices is an introduction to the methods and materials of oil painting. This course begins with an investigation of color and color relationships. The beginning of the semester will cover technical issues and develop the student’s ability to create a convincing sense of form in space using mass, color, light and composition. The majority of work is from direct observation including object study, still life, landscape, interior and exterior space and the self portrait. Class problems advance sequentially with attention paid to perceptual clarity, the selection and development of imagery, the process of synthesis and translation, color, structure and composition, content and personal expression. Students will become familiar with contemporary and art historical precedent in order to familiarize them with the history of visual ideas and find appropriate solutions to their painting problems.
One-term course offered either term
Also Offered As: FNAR 531
Activity: Studio
1.0 Course Unit

FNAR 232 Painting Studio
Painting Studio presents an ongoing exploration of the techniques, problems and poetics of painting, the nuances of the painting language, and the development of a personal direction. A wide variety of problems will address such issues as color, composition, and the development of imagery, process, and content. Students are expected to improve in technical handling of paints and move towards developing personal modes of seeing, interpreting, and thinking for themselves. This course introduces different topics, strategies and individual challenges each semester, so it may be repeated with advanced course numbers.
One-term course offered either term
Also Offered As: FNAR 532
Prerequisite: FNAR 231
Activity: Studio
1.0 Course Unit
Notes: This course can be continued by registering for FNAR 333 Painting Studio (III), and FNAR 334 Painting Studio (IV).

FNAR 239 Photographic Thinking
This course will explore the vitality and range of photography as a discursive practice by analyzing the way images are structured and deployed in contemporary art and wider media culture. Students will be introduced to the key issues surrounding photography now—led through these questions by lectures, readings, group discussion and project-based work. A series of photo-assignments challenge the students to integrate critical thought with practice, exploring a range of formal strategies and thematic frameworks that affect the meaning of their images. Students should have a strong interest in philosophy and art histories (especially the history of photography.) They should be motivated to work independently & experiment creatively. There are no prerequisites for this course. It is intended for all different levels of technical experience, but the minimum requirements are a digital camera, a basic familiarity with Photoshop and access to a computer with imaging software.
Activity: Seminar
1.0 Course Unit
FNAR 240 Mystics & Visionaries: Arts and Other Ways of Knowing
As a pioneer of abstraction in the early 1900's, Hilma Af Klint channeled a complex and highly original body of abstract symbolic work in secrecy. Using the upcoming Hilma Af Klint exhibition at the Guggenheim as a focus and departure point, this course will explore the ways in which artists have accessed alternative ways of seeing, knowing, and embodying non-visible realities as a source for their work. Accessing spiritual realms has been the subject of early European Modernisms investigations into Theosophy and Anthroposophy, as well as the primary intention of Tibetan Thangkas and Indian Tantra paintings. Postmodernism's crisis of belief and skepticism generated a cultural situation wherein the subject of spirituality was marginalized, ridiculed as anti-intellectual, and in disgrace. The Hilma Af Klint exhibition and surge of interest in her work signifies a new moment, where questions about consciousness and the nature of reality are being addressed with renewed vigor. How do we create space in a technology driven world for experiences that attempt to align the viewer/maker with the contemplative realm, heightened states of consciousness, or transcendence? We will examine a wide field of artists in an attempt to understand the possibilities of the 'spiritual' in art and contemporary culture. This seminar will engage in readings, lectures, discussions, projects, and field trips. This course is appropriate for both grad and undergrad, art majors and non-majors alike.
Taught by: Jackie Tileston
Also Offered As: FNAR 540
Activity: Seminar
1.0 Course Unit

FNAR 241 Hand-Drawn Computer Animation
Using software tools designed for hand-drawn animation, students will develop animation skills applicable to all forms of animation. In this course students will learn to draw with a sense of urgency and purpose as they represent motion and drama in a series of frames. Through careful study of natural movements, precedents in the history of animation, and through the completion of a series of animation projects students will develop strategies for representing naturalistic movement, inventing meaningful transformations of form, and storytelling.
Course not offered every year
Also Offered As: FNAR 541
Prerequisite: FNAR 264
Activity: Studio
1.0 Course Unit

FNAR 250 Introduction to Printmaking
The course offers an introduction to several forms of printmaking including: intaglio, screen printing, relief, and monoprinting. Through in-class demonstrations students are introduced to various approaches to making and printing in each medium. The course enhances a student's capacity for developing images through two-dimensional design and conceptual processes. Technical and conceptual skills are developed through discussions and critiques. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
Course usually offered in spring term
Also Offered As: FNAR 550, VLST 250
Activity: Studio
1.0 Course Unit

FNAR 251 Printmaking: Etching
The class will challenge the possibilities of experimental drawing and ways of creating incisions and textures using copper plates as the matrix, which then will be printed on paper and other materials. The class offers full technical and historical description of each individual process: Dry Point, Etching, Hard ground, Soft Ground, Aquatint, Shine Cole', Spit-Biting, Sugar Lift, Color Printing and Viscosity printing.
One-term course offered either term
Also Offered As: FNAR 551
Activity: Studio
1.0 Course Unit

FNAR 252 Printmaking: Screen Printing
This course is an introduction to technical skills and investigative processes in screen printing and relief and examines methods for combining digital technology with traditional print media. The course introduces students to several contemporary applications of silkscreen and relief printmaking including techniques in multi-color printing, photo-based silkscreening, digital printing, woodcut, linocut, and letterpress. Demonstrations include photo and image manipulation, color separating and output techniques, hand carving and printing, as well as drawing and collage. Both traditional and experimental approaches are explored and encouraged and technical and conceptual skills are developed through discussions and critiques.
Course usually offered in fall term
Also Offered As: FNAR 552
Activity: Studio
1.0 Course Unit

FNAR 254 Printmaking & Publications: Intro to Independent Publishing and Artists' Publications
This course introduces students to independent publishing and artists’ publications through print methods in letterpress, Risograph, and Xerox. The class will focus on the self-published artists’ zine/book as an affordable, accessible, and easily reproducible format for exploring ideas, disseminating artists’ work, and collaborating across disciplines. Students will learn a range of skills, including techniques in both mechanized and hand-pulled forms of printed media (Risograph, copy machine, Vandercook letterpress); short-run editions and binding; design and layout; pre-press and print production; and the web as it relates to and supports independent and democratic modes of distribution. Students will learn about and become acquainted with some of the most significant independent publishers working today and throughout history. Students will leave class having completed three individual projects: a 16-page booklet/zine; a carefully considered online publication, and a final collaborative book designed, developed and published as a class. The course commences with a field trip to New York City's Printed Matter, one of the oldest and most important nonprofit facilities dedicated to the promotion of artists’ books, where students will be encouraged to submit a publication by semester’s end.
Taught by: Romberger
Course usually offered in spring term
Also Offered As: FNAR 654
Activity: Studio
1.0 Course Unit
FNAR 265 Nonhuman Photography
Our culture is increasingly made up of nonhuman actors. Facial recognition algorithms spend more hours ‘seeing’ in a day than humans; drones equipped with visual sensors conduct our warfare; voice chat bots call businesses and make appointments for us. Meanwhile, humans conduct labor that we view as the work of bots: posting disinformation for political gain, or mass-producing children’s YouTube videos for ad revenue. As objects begin to see and think, how can we understand the role of human agency and the possibilities (or lack thereof) for artistic expression in this space? What does the future of art look like when more photographs are taken as surveillance than by individuals, or when important cultural producers are nonhuman intelligences? In Nonhuman Photography, we will attempt to interrogate these ideas from an artist’s perspective, approaching nonhuman agents and the various components that comprise them both as tools for studio work and as generative entities in their own right. Over the course of the semester we will read and discuss these issues extensively, while engaging in studio projects in a variety of media. While the course bears the title ‘photography’, we will find that many of these tools will be non-photographic or para-photographic, and as a result many of our studio projects will be interdisciplinary. This course takes its name from Joanna Zylinska’s Nonhuman Photography, parts of which we will examine over the course of the semester.

Taught by: Vierkant
Course usually offered in spring term
Also Offered As: FNAR 655
Prerequisite: FNAR 061 OR FNAR 271 OR FNAR 340
Activity: Seminar

FNAR 267 Computer Animation
Through a series of studio projects this course introduces techniques of 2D and 3D computer animation. Emphasis is placed on time-based design and storytelling through animation performance and montage. Students will develop new sensitivities to movement, composition, cinematography, editing, sound, color and lighting.

Taught by: Mosley
One-term course offered either term
Also Offered As: CIMS 267, FNAR 567
Activity: Studio
1.0 Course Unit

FNAR 271 Introduction to Photography
This course is an introduction to the basic processes and techniques of black & white photography. Students will learn how to expose and process 35mm film, SLR camera operation, darkroom procedures & printing, basic lighting and controlled applications. It begins with an emphasis on understanding and mastering technical procedures and evolves into an investigation of the creative and expressive possibilities of making images. This is a project-based course, where students will begin to develop their personal vision, their understanding of aesthetic issues and photographic history. Assignments, ideas and important examples of contemporary art will be presented via a series of slide lectures, critiques and discussion. No previous experience necessary. 35mm SLR cameras will be available throughout the semester for reservation and checkout from the photography equipment room. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu

One-term course offered either term
Also Offered As: FNAR 571, VLST 251

1.0 Course Unit

FNAR 274 Reconfiguring Portraiture
As methods of representation are constantly shifting, one thing is clear - the photographic portrait is not what is used to be. Exploring both traditional and contemporary methods of portraiture, this class will uncover and discuss the ways in which we perceive each other in imagery, both as individuals and as groups. Throughout the semester, we will consider how portraits deal with truth, physical absence, the gaze, cultural embodiment, voyeurism and the digital persona. This course will build on the combination of perception, technology, and practice. Throughout the semester, students will advance by learning lighting techniques and strategies of presentation - as these core skills will become tools in the execution of project concepts. In tandem with each project, students will encounter and discuss a wide array of photography and writings from the past to the present, in an effort to understand the meanings and psychological effects of freezing the human image in time.

Course usually offered in spring term
Also Offered As: FNAR 271 OR FNAR 340
Activity: Seminar
1.0 Course Unit

FNAR 280 Figure Drawing I
Students work directly from the nude model and focus on its articulation through an understanding of anatomical structure and function. Students will investigate a broad variety of drawing techniques and materials. The model will be used as the sole element in a composition and as a contextualized element.

One-term course offered either term
Also Offered As: FNAR 580
Prerequisite: FNAR 123
Activity: Studio
1.0 Course Unit

FNAR 284 Photography and Fashion
Since the invention of photography, the fashion industry has been one of the cornerstones of creative expression, innovation and visionary provocation. Contemporary fashion photography has continued to attract a leading group of image-makers that continue the tradition of creating artwork that not only is being published in cutting edge magazines such as V, Another Magazine and Citizen K, but also are exhibiting their work in various galleries and museums around the world. This course is designed for students who are interested in creating contemporary fashion images through specific assignments that define the process: lighting in studio or location, working with fashion designers, stylists, models, hair/ make up artists, and the application of a variety of post production techniques, via Photoshop. The class will explore modern constructs that define the importance of branding, marketing, advertising and the relationship of fashion photography in contemporary art and culture today.

Also Offered As: FNAR 684
Prerequisite: FNAR 271 OR FNAR 340
Activity: Studio
1.0 Course Unit
FNAR 285 Photography and Fiction
In spite of photography’s traditional relationship with fact, the medium has been a vehicle for fiction since the very beginning. Fiction and photography encompass a broad range of meanings, from elaborately staging and performing for the camera, to manipulations using digital technology such as Photoshop to construct the work. This class will examine and trace the history of manipulated photography while paying special attention to the complex negotiations between the decisive moment, the constructed tableau, and the digitally manipulated image. There will be a combination of class lectures, studio projects, assigned readings, visiting artists, film screenings, field trips, and class critiques.
Taught by: Diamond
Course usually offered in spring term
Also Offered As: FNAR 271 OR FNAR 340
Activity: Seminar
1.0 Course Unit

FNAR 289 Mixed Media Animation
Mixed Media Animation is a contemporary survey of stop-motion animation concepts and techniques. Students use digital SLR cameras, scanners and digital compositing software to produce works in hand-drawn animation, puppet and clay animation, sand animation, and multiplane collage animation. Screenings and discussions in the course introduce key historical examples of animation demonstrating how these techniques have been used in meaningful ways. Students then learn how to composite two or more of these methods with matte painting, computer animation or video.
One-term course offered either term
Also Offered As: CIMS 289, FNAR 589
Prerequisite: FNAR 123 AND FNAR 264
Activity: Studio
1.0 Course Unit

FNAR 300 Civic Studio
Civic Studio is an engaged research course that explores significant theories, methods, and practices of public and socially-engaged artwork. Students draw from arts- and place-based modes of inquiry toward collaborative projects with fellow classmates, artists, and organizations in Philadelphia and beyond, while pursuing semester-long individual projects that build on their own independent interests and pursuits. Each semester, students work with and as embedded practitioners in exhibitions, installations, research projects, and other artistic platforms throughout the city. In turn, through readings, site visits, and site-specific work, students gain creative and critical capactiy for producing their own final projects. Through Civic Studio students are able to reflect upon and practice public work with artistic, scholarly, and civic aims.
Taught by: Farber
Also Offered As: FNAR 500
Activity: Seminar
1.0 Course Unit

FNAR 310 Critical Issues in Art
Perspectives on Critical Issues aims to engage students in an ongoing and informed study of both historical and contemporary issues in a spirit of curiosity and critique. We will investigate how these concepts can clarify and complicate our creative practice and our understanding of the contemporary art world. This seminar will explore the shifts in artistic production, theory and criticism and topics will range from traditional investigations of aesthetics, Modernism, Post-Modernism and contemporary themes. Through discussions of assigned readings, class presentations, films, lectures, and field trips, this seminar will help establish a critical and theoretical foundation where your own beliefs and doubts about art and culture will be called into question and will provoke an ongoing inquiry into how you understand art, you own creative process, and the relationship of art and artists to society and creative culture.

FNAR 313 The Chinese Body and Spatial Consumption in Chinatown
This course looks at representations of the Chinese (and Asian body) since the Limehouse district in East London and the advent of Chinese contract laborers to the Americas in the 19th century. The localization of the Chinese throughout the Americas within Chinatown precincts were also subject to representational imaginations that were negotiated through the lens of civic planning, literature and later in cinema. Chinatowns are ultimately a product of racism. They were created as a political and social support system for newly arrived Chinese immigrants. While Chinese laborers arrived into the United States in 1840 and in significant numbers into Canada about 1860, Chinese contract workers were encouraged to immigrate to the Americas as an inexpensive source of labor, especially after the end of the American Civil War. Industrial leaders in America, Canada and elsewhere in the Americas (Mexico, Cuba, Peru, etc) saw the arrival of Chinese workers as a victory for commercial interests. However, the celebration was short-lived, as anti-Chinese sentiment quickly transformed into anti-Chinese hysteria. Rather than attacking the vested interests that exploit foreign labor as embodied by the Chinese worker, racist unions with the cooperation of civic leaders and the police deemed it safer to burn Chinatowns than capitalist property. Deeply under-studied to this day is the number of mass murders of Chinese workers in the 19th century by anti-Chinese thugs. This seminar will focus in on how the body of the Chinese (and Asian) was imagined and reimagined multiple times from the middle of the 19th century to today.

1.0 Course Unit
FNAR 314 Tiananmen Square: A Case Study for Fine Arts and Landscape Architecture
This course takes as its subject the systems of representation and design that have historically and presently operate in Tiananmen Square in Beijing. There have been several incarnations of Tiananmen Square since its original form in 1651. During Imperial times and through the period of foreign legations, the square was once surrounded by walls and gates, creating a city within a city. With the advent of the Republic of China established on January 1, 1912, much of the enclosures were removed, opening up for public use previously restricted imperial areas. After the Communist Revolution in 1949, planning was afoot to enlarge the square. With its enlargement completed in 1958, the square expanded its footprint by four-fold, making it one of the largest public squares in the world. The enlarged and remodeled square coincided with the completion of the massive Monument to the People's Heroes. In 1976, a large mausoleum containing the preserved body of Mao Zedong was built near the site of the former Gate of China, further increasing the size of the square. In the 1990s, the building of the National Grand Theatre and expansion of the National Museum on grounds contiguous to the square necessitated further alterations to both the Eastern and Western skirts of the square. In recent years, there have been a widening debate regarding the transformation of the concrete heavy and by and large featureless square into a green space. Today, Tiananmen Square holds sacrosanct status to the Communist revolution of 1949, designed more for military parades and massive public rallies than public space repose. In a city that has few green spaces, such a verdant transformation in the heart of the Chinese capital would signal a radical symbolic deviation to China's development-first guiding principles. The square fronts Tiananmen Gate and the Forbidden City and is situated at the intersection of the historical east-west and north-south axes. Chang'an Avenue, important for military processions, separates the square from Tiananmen Gate and is considered the most important thoroughfare in the Capital and the path of the east-west number one subway line. The entirety of the Tiananmen Square area is marked by ideology and political prominence, often confusingly. Tiananmen Tower, functions as a conflation of monumental facade with political embodiment. This course will focus on imagined interventions through public art and landscape design within Tiananmen Square and its contiguous areas. It is a studio practice course with a significant seminar component that will include lectures and readings relating to issues of public space and urban design in contemporary China. The course will also study the development of contemporary art in China. The tragic events of Tiananmen Square in 1989 represented a turning point in terms of a generation of Western exiled Chinese artists and curators including Hou Hanru, Chen Zhen, Xu Min, Huang Yong Ping and Yan Pei Ming among many others. The class will study the strategies deployed by these so-called First Generation of Chinese artists. Making use of their double identity as traditionally taught Chinese artist residing in the West, their art offered a pointed critique of both China and the West. The course will include a trip to Beijing.

FNAR 315 Across Forms: Art and Writing
What if a poem spoke from inside a photograph? What if a sculpture unfurled a political manifesto? What if a story wasn't just like a dance, but was a dance or a key component of a video, drawing, performance, or painting? In this course, artists and writers will develop new works that integrate the forms, materials, and concerns of both art and writing. Many artists employ writing in their practices, but may not look at the texts they create as writing. And many writers have practices that go beyond the page and deserve attention as art. This course will employ critique and workshop, pedagogic methodologies from art and writing respectively, to support and interrogate cross-pollination between writing and art practices. Additionally, the course will will examine a field of artists and writers who are working with intersections between art and writing to create dynamic new ways of seeing, reading, and experiencing.
Prerequisite: Permission to enroll is required; please submit a short description of your interest in the class to zolfr@writing.upenn.edu.

FNAR 316 Art and Social Work: Art and the Ecology of Justice
How can the arts help us build a more just society? How can the arts transform social structures and systems? Public health crises involving clean water (Flint), police violence (Baltimore), and a lack of economic and educational opportunity following reentry (Philadelphia) make legible the need for a new visual language that critiques these conditions and challenges entrenched structural inequalities. We will engage the work of creative practitioners who are mapping new relationships between art and social justice and directly impacting individual and communal well-being. In so doing, the course seeks to challenge traditional constructions of public health, which often isolate individual histories from their social life and their relation to families, communities, and geographies. Readings will build upon disciplinary perspectives in the arts, humanities, and social policy. Requirements include weekly readings, class participation, and a collaborative final project. The course will meet in the Health Ecologies Lab at Slought Foundation, an arts organization on campus.

FNAR 318 Paris Modern: Spiral City
Paris has been shaped by a mixture of organic development, which is still today visible in the 'snail' pattern of its arrondissements whose numbers, from 1 to 20, coil around a central island several times so as to exemplify a ‘spiral city’, and of the violent cuts, interruptions and sudden transformations that again and again forced it to catch up with modern times, the most visible of which was Baron Haussmann’s destruction of medieval sections of the city to make room for huge boulevards. Thus Parisian modernism has always consisted in a negotiation between the old and the new, and a specific meaning of modernity allegorized for Louis Aragon, the Surrealists and Walter Benjamin consisted in old-fashioned arcades built in the middle of the 19th century and obsolete by the time they turned into icons of Paris. The aim of the class will be to provide conceptual and pragmatic (visual, experiential) links between a number of texts, theories and films deploying various concepts of the modern in Paris, with a guided tour of the main places discussed. The course that Professors Jean Michel Rabate (English) and Ken Lum (Fine Arts) will lead studies Paris as a work of science-fiction where its many futures are embedded in its many pasts, where discontinuity is a continuous process and where the curving line of the snail’s shell is a line of ceaseless curling resulting in a perennial oscillation where an outside converts into an inside and an inside then converts to an outside. The course will travel to Paris over spring break to get an in-depth look at the topics discussed in class.

FNAR 320 Topics in Animation
This course will look at animation as an art form, a technology and an industry. We will explore the way in which artistic, technical, historical, and cultural conditions shape the development of animation and in turn, how animation impacts viewers. Topics will include trends in animation and their relation to contemporary popular culture, issues of art versus commerce in the creation of cartoons, the intersection of animation and politics, and shifts in style and technique throughout the years. We will look at the figures who have shaped the art forms and continue to influence it, the rise in animation’s popularity, and current day applications of animate imagery.

FNAR 330 Public Art and Issues of Spatial Production
The French social philosopher Michel de Certeau upset the common understanding of the relationship between space and place by elevating space as practice place. By this, he meant that place is but a set of geophysical particularities that has no dynamic meaning unless activated through social engagement so that space is produced. Spatial practice is a key concept in the modern understanding of the city as a society of abstract space, one in which the problem of human alienation is riven with the logic of spatial spectacularization. Public Art is often employed to address or mollify such urban problems through concepts of historical reconstruction or institutional critique, including possibly testing the limits of public expression. Historical markers play a somewhat different role by calling attention to lost or negative histories, albeit most often vetted through the language of tourism factoids. This course will examine the discursive issues at play in respect to art and markers, particularly for Philadelphia. Additionally, important public art works from around the world will be examined. The course will also include the occasional visit of several key works downtown in which the question of what can and cannot said will be pondered.

FNAR 336 Monument Lab: Praxis Approaches to Socially-Engaged Public Art
What makes an exceptional socially-engaged public artwork or project? For those who practice in the field, the question invites careful consideration of aesthetics, process, participation, staging, and interpretation. Across the better part of the last decade, this line of inquiry has fueled the work of Monument Lab, a public art and history studio based in Philadelphia. With deep roots and close ties to the Department of Fine Arts’s Center for Public Art and Space, and methods interlinking contemporary art and pedagogy, Monument Lab works with artists, students, activists, municipal agencies, and cultural institutions on exploratory approaches to public engagement and collective memory. The Monument Lab course in Fine Arts explores the theoretical study and practical applications of public art. The course operates as a socially-engaged ‘civic studio’ to engage case studies, debate key issues in the field, meet with artists and practitioners, conduct site and studio visits, and practice direct methods for producing individual and collaborative public projects. Focusing on the intersection of theory and practice, the praxis course highlights engaged methods piloted by Monument Lab in citywide exhibitions and special projects, especially to focus on themes and models for participation, public engagement, co-creation, curation, temporary installation, and socially engaged art-making. Each student will embark on a semester-long independent project, as well as participate in a group initiative centered on a current Monument Lab project in Philadelphia to gain experience in the field of socially-engaged public art.

FNAR 340 Digital Photography
This class offers an in-depth technical and conceptual foundation in digital imagery and the opportunity to explore the creative, expressive possibilities of photography. Students will become proficient with the basic use of the camera, techniques of digital capture, color management and color correction. They will also develop competency in scanning, retouching, printing and a variety of manipulation techniques in Photoshop. Through weekly lectures and critiques, students will become familiar with some of the most critical issues of representation, consider examples from photo history, analyze the impact of new technologies and social media. With an emphasis on structured shooting assignments, students are encouraged to experiment, expand their visual vocabulary while refining their technical skills. No previous experience is necessary. Although it is beneficial for students to have their own Digital SLR camera, registered students may reserve and checkout Digital SLR cameras and other high-end equipment from the department. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
One-term course offered either term
Also Offered As: FNAR 640, VLST 265
Activity: Studio
1.0 Course Unit

FNAR 342 Digital Photography II
In this course students will continue to develop conceptual, technical, aesthetic and formal strategies in digital photography, expanding their artistic process while refining their critical approach to researched subject matter. The class will be driven initially by a series of assignments formulated to further expose students to broad possibilities related to the medium and then they will be guided towards the evolution of a personalized body of work that is culturally, theoretically and historically informed. We will be examining key issues surrounding the digital image in contemporary society, led through a combination of class lectures, readings, group discussions, film screenings, gallery visits and class critiques. Students will further their knowledge of image control and manipulation, retouching and collage, advanced color management; become familiar with high-end camera and lighting equipment and develop professional printing skills. In addition to learning these advanced imaging practices, this course will also emphasize an investigation of critical thought surrounding contemporary visual culture and the role of digital media in the creation of art.
Taught by: Jamie Diamond
Course offered summer, fall and spring terms
Also Offered As: FNAR 642
Prerequisite: FNAR 340
Activity: Studio

FNAR 348 Counter the Land: Photography and the Landscape
Starting with the representation of landscape in painting in the early 1800s, the course will then move through Pictorialism and the Modernist movement in photography. Revisiting the later half of the 20th century, we will begin to consider the shifting practices of landscape and the ways it has been photographically depicted up to the present. Collaborating with the Brandywine River Museum of Art in Chadds Ford, students will begin their photographic exploration with the work of Andrea Wyeth and the landscape of the Brandywine Valley. As we consider Wyeth, the images of James Welling will also be introduced. Credited for pioneering new forms of representation in photography in the 1970s, Welling also revisited the work of Wyeth from 2010-2015, and committed to a fresh (and challenging) look at tradition. Working with imagery and text, this class will also touch on conceptual art, the New Topographics, and postmodernism. Through these various concentrations, students will consider and counter the traditions that they are already familiar with, while creating work based on issues of the landscape today. Questions about meaning, politics, social critique, land rights, technology and methods of presentation will be encouraged and explored throughout the course.
Taught by: Wahl
Course usually offered in fall term
Also Offered As: FNAR 648
Prerequisite: FNAR 271 OR FNAR 340
Activity: Studio
1.0 Course Unit
FNAR 352 Dispersive Lends
This studio course will explore the nexus between photography, sculpture, installation, drawing, painting, and the moving image. The course is informed by the printed image, as students will explore how photography can encourage thinking in other mediums, in addition to how other mediums can influence the making of photography. When does an abstract painting appear more like a photograph? How can a photograph suggest ways to make a video? Can a sculpture exist as a photograph?
A variety of assignments will expose students to interdisciplinary approaches addressing these questions and more. Class projects will be supported by regular slide lectures, group critiques, and readings examining modern and contemporary artists and practices.

FNAR 368 Kinesthetic Anthropology
This class, team-taught by CEE Visiting Fellow Reggie Wilson and Deborah Thomas, investigates various forms of contemporary performance in relationship to Africanist forms and functions of dance, movement and action. We will concern ourselves with how the body knows, and with how we learn to identify the structures of movement that provide context, meaning and usefulness to various Africanist communities across time and space. Grounding ourselves within a history of ethnographic analyses of the body in motion, and within Africana theorizing about the affective power of the body, we will consider what people are doing when they are dancing. In other words, we will train ourselves to recognize the cultural values, social purposes, and choreographic innovations embedded in bodily action and motion. While we will attend to these phenomena in a range of locations throughout the African diaspora, we will also highlight aspects of the Shaker and Black Shout traditions in Philadelphia. The course will be divided between discussions centered on close reading of primary and secondary material (both text and video) and creative writing/movement exploration (no previous movement experience necessary).

Also Offered As: AFRC 368, ANTH 368, ANTH 668, COMM 368
Activity: Seminar
1.0 Course Unit

FNAR 377 Black Speculative Futures
Why do black cultural producers turn to the speculative? What, in turn, is speculative about blackness? These questions frame this seminar’s exploration of how black artists, theorists, and activists imagine different futures, often in the service of critiquing power asymmetries and creating radical transformation in the present. We will explore how the speculative works differently across black literature, visual culture and performance. Additionally, inspired by the multi-disciplinary work that we encounter in the course, we will experiment with crafting our own embodied speculative art in order to better understand its function as both art practice and politics. The course will be divided between discussions centered on close reading of primary and secondary material and creative writing/movement exploration (no previous movement experience necessary). Occasional guest lectures with visiting artists will provide additional fodder for our critical and creative work.

Notes: A minimum three-page proposal must be submitted and approved by both the Instructor and the Undergraduate Director.

FNAR 410 Urban Communities and the Arts
Urban Communities and the Arts concerns itself with Arts, Music and Activism in Philadelphia. We investigate the social, economic and cultural fabric from which activism in the arts arises. To do so, we will investigate the histories and artistic reactions to oppression in Philadelphia by drawing on specific examples from various sections of the city and through the media of music, visual art, theater, and dance. The long history of systemic and individual oppression in the US manifests itself in different ways in various urban neighborhoods in Philly and artists of various genres and inclinations participate in activism in many different ways. Examples of artistic and musical responses to the various forms of oppression will be offered and class participants will be asked to bring their own examples to share and analyze. By visiting significant arts practitioners and organizations that provide access to arts education and justice work, participants will have a hands-on experience to unpack the dynamics of artistic production in city life. In addition to art as an outlet for exposing oppression, we will also consider the ways that art and music become markers of the uniqueness of a neighborhood or city, which further complicates the idea of art as a tool for activism. Participants in Urban Communities and the Arts will unpack the role of music and art in defining city or neighborhood cultures by considering a few key sectors that reveal the ways in which cities fail to provide equal access to resources or participate in outright discrimination. At the same time, cities continue to cultivate creative spaces and socio-economic opportunities for economic gain and social understanding through art and music. It is the contradictions that this course will concern itself with and out of our study we will invite course participants to respond creatively. Participants will create either an original work of art, music or intellectual response like a visually interesting research poster as part of a final art/music show. Ultimately students will be asked to reflect back on the role of art in social and political activism to better understand the successes and failures of such movements as they come to define the ethos of city life and its limits.

FNAR 488 Senior Seminar Project (Fall)
This rigorous pair of courses, one offered in the Fall and one offered in the Spring semester, are designed as the capstone of the Fine Arts major and are required for all graduating fine arts seniors. They can only be taken in the senior year. Students work in individual studio spaces provided by the department and then meet with faculty for seminar, critique, and professional practice exercises. Through individual and group critiques, students begin to conceptualize their final thesis exhibition or project. The senior seminar allows students to create lasting professional relationships with the fine arts faculty and visiting lecturers. The fall semester culminates in a group exhibition of senior student work paired with final semester critiques.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
FNAR 489 Senior Seminar Project (Spring)
The Spring semester seminar culminates in a senior thesis exhibition for each graduating student. These exhibitions have traditionally been held as a small group exhibition featuring a few students in one group, or as a larger end of semester exhibition with each student installing a series of works. The format of the exhibition will be determined during the fall semester by the senior faculty. The process of preparing, installing, and promoting the thesis exhibition is covered in detail throughout the semester. Students will work in their on-campus studio spaces to produce dynamic, thoughtful and well-crafted work that will serve as their final portfolio. They will present their portfolio of work during a final critique before graduation.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

FNAR 500 Civic Studio
Civic Studio is an engaged research course that explores significant theories, methods, and practices of public and socially-engaged artwork. Students draw from arts- and place-based modes of inquiry toward collaborative projects with fellow classmates, artists, and organizations in Philadelphia and beyond, while pursuing semester-long individual projects that build on their own independent interests and pursuits. Each semester, students work with and as embedded practitioners in exhibitions, installations, research projects, and other artistic platforms throughout the city. In turn, through readings, site visits, and site-specific work, students gain creative and critical capacity for producing their own final projects. Through Civic Studio students are able to reflect upon and practice public work with artistic, scholarly, and civic aims.

FNAR 503 Sachs Research: Imaginary Modernisms
Over the course of the 2017-2018 school year, but officially as Spring 2018, credited course, I am inviting a group of 6-8 MFA students to participate as a group in a project focused on research, dialogue and the essential ‘possibilities’ available to any artist to participate in the constant rewriting and redefining of art history. Students will participate in a body of research and readings leading to my upcoming participation in Rice University’s Campbell Lecture Series in March 2018 and an associated publication with the University of Chicago Press. The lectures are divided into three distinct parts over three nights, all of which focus on alternate approaches to modernism. Part I investigates the ‘Literary’ theory of architecture by Bruno Taut and Paul Scheerbart. Part II is concerned with the painting practices of Hilma af Klint and Blinky Palermo. And Part III discusses the music of Sun Ra and Pauline Oliveros. Students participating in Imaginary Modernisms will meet and work with me in a series of scheduled and structured activities. beginning with a visit to Philadelphia in November for personal studio visits with each of the 6-8 students, not as a critique but to get to know you and your work a bit. Participation includes three trips to New York, each for two days. These 2-day trips will each involve one day at my studio in Brooklyn, to discuss the readings and research, as well as to observe the development of ongoing sculptural artworks being created in my studio, and a second day of self-guided visits to exhibitions and performances that I will suggest, with an optional meeting together for lunch or dinner. Readings for these meetings will be sent to you in advance of trip. Participating students should be prepared to read various texts along with me for the 5 month project duration. This is an essential part of the project and this should be a pleasurable process, so those do not have time to add a medium amount of reading to their schedules, followed by group discussion, should probably not apply. The only other requirement will be preparing for an exchange with undergraduate students at Rice University in March. For our trip to Houston in March, there will be three nights of lectures, one participatory performance, one exhibition opening reception, plus visits and interaction with curators at the Menil Collection, the Museum of Fine Arts Houston, the Contemporary Arts Museum Houston and the Core Program (an important option for MFA students post graduation.)
Taught by: Josiah McElheny
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

FNAR 508 Clay Practices
This course introduces clay as a sculptural medium through fundamental clay-building techniques, mold making, model making, and casting. Through experimentation with these methods, this course promotes an understanding of materials, processes, visual concepts and techniques for creating three-dimensional forms in space. In addition to using different water-based clays and plaster, other materials such as wax, plastilite, paper pulp, and cardboard will be explored. Students will explore the full range of clay’s capabilities and its role in contemporary art through lectures, readings, demonstrations, and assignments that incorporate conceptual and technical issues.
Also Offered As: FNAR 148
Activity: Studio
1.0 Course Unit
FNAR 515 Photography Studio Abroad
This Traveling Studio is offered every other spring term to upper level photography & related media students. It is a cross-cultural visual investigation, exploring the contradictions and significance of the chosen city. This course incorporates multi-disciplinary research in preparation for the trip; exploring various fields of knowledge production such as art, history, social sciences, markets and governance. Class discussion, readings and individual research will be focused towards the development of each student's photo/media project, which will be realized while abroad. After returning to Philadelphia, students will develop and refine their work; the remaining classes will emphasize critique, editing, printing and presentation options. The final projects will be included in a group exhibition at the end of the semester. Admission to the course is on a competitive basis.
Course offered spring; odd-numbered years

FNAR 523 Drawing I
This course is designed to develop visual awareness and perceptual acuity through the process of drawing. Students learn to sharpen perceptual skills through observational drawing, and to explore the expressive potential of drawing. A variety of problems and media will be presented in order to familiarize students with various methods of working and ways of communicating ideas visually. Subject matter will include object study, still life, interior and exterior space, self-portrait and the figure. Different techniques and materials (charcoal, graphite, ink, collage) are explored in order to understand the relationship between means, material and concept. Critical thinking skills are developed through frequent class critiques and through the presentation of and research into historical and contemporary precedent in drawing. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu

FNAR 524 Drawing Investigations
Drawing is a fundamental means of visualization and a hub for thinking, constructing, and engaging in a wide variety of creative activities and problem-solving. This studio class explores drawing in both its traditional and contemporary forms. The projects are designed to help students in all disciplines find ways express and clarify their ideas through the process of drawing. The semester begins with the refinement of perceptual skills acquired in Drawing I, while encouraging experimentation through the introduction of color, abstract agendas, conceptual problem solving, and collaborative exercises, as well as new materials, techniques and large format drawings. Particular attention is given to ways to conduct visual research in the development of personal imagery. Assignments are thematic or conceptually based with ample opportunity for individual approaches to media, subject, scale and process. The goal is to strengthen facility, develop clarity in intent and expand expression. Attention is paid to the development of perceptual sensitivity, methods of image/construction, and the processes of synthesis and transformation in order to communicate ideas through visual means. Recommended for students in all areas.

FNAR 530 Public Art and Issues of Spatial Production
The French social philosopher Michel de Certeau upset the common understanding of the relationship between space and place by elevating space as practice place. By this, he meant that place is but a set of geo-physical particularities that has no dynamic meaning unless activated through social engagement so that space is produced. Spatial practice is a key concept in the modern understanding of the city as a society of abstract space, one in which the problem of human alienation is riven with the logic of spatial spectacularization. Public Art is often employed to address or mollify such urban problems through concepts of historical reconstruction or institutional critique, including possibly testing the limits of public expression. Historical markers play a somewhat different role by calling attention to lost or negative histories, albeit most often vetted through the language of tourism factoids. This course will examine the discursive issues at play in respect to art and markers, particularly for Philadelphia. Additionally, important public art works from around the world will be examined. The course will also include the occasional visit of several key works downtown in which the question of what can and cannot said will be pondered. Taught by: Lum
Course usually offered in fall term
Also Offered As: FNAR 330
Activity: Seminar
1.0 Course Unit

FNAR 531 Painting Practices
Painting practices is an introduction to the methods and materials of oil painting. This course begins with an investigation of color and color relationships. The beginning of the semester will cover technical issues and develop the student’s ability to create a convincing sense of form in space using mass, color, light and composition. The majority of work is from direct observation including object study, still life, landscape, interior and exterior space and the self portrait. Class problems advance sequentially with attention paid to perceptual clarity, the selection and development of imagery, the process of synthesis and translation, color, structure and composition, content and personal expression. Students will become familiar with contemporary and art historical precedent in order to familiarize them with the history of visual ideas and find appropriate solutions to their painting problems. One-term course offered either term
Also Offered As: FNAR 231
Prerequisite: FNAR 523
Activity: Studio
1.0 Course Unit

FNAR 532 Painting Studio
Painting Studio presents an ongoing exploration of the techniques, problems and poetics of painting, the nuances of the painting language, and the development of a personal direction. A wide variety of problems will address such issues as color, composition, and the development of imagery, process, and content. Students are expected to improve in technical handling of paints and move towards developing personal modes of seeing, interpreting, and thinking for themselves. This course introduces different topics, strategies and individual challenges each semester, so it may be repeated with advanced course numbers. One-term course offered either term
Also Offered As: FNAR 232
Prerequisite: FNAR 531
Activity: Studio
1.0 Course Unit
Notes: This course can be continued by registering for FNAR 533 Painting Studio (III), and FNAR 534 Painting Studio (IV).

FNAR 534 Painting Studio
Painting Studio IV focuses on continuing the student’s exploration of techniques, problems, and poetics of painting, the nuances of the painting language, and the development of a personal direction. While students may choose to work on assigned projects (either in consultation with the instructor or following the projects that the Painting II/III students may be involved in), the emphasis is on the investigation of the student’s own sensibility. Students will be expected to engage in ongoing critical analysis of their own practices and assumptions. One-term course offered either term
Also Offered As: FNAR 334
Prerequisite: FNAR 523 AND FNAR 533
Activity: Studio
1.0 Course Unit

FNAR 540 Mystics & Visionaries: Arts and Other Ways of Knowing
As a pioneer of abstraction in the early 1900’s, Hilma Af Klint channeled a complex and highly original body of abstract symbolic work in secrecy. Using the upcoming Hilma Af Klint exhibition at the Guggenheim as a focus and departure point, this course will explore the ways in which artists have accessed alternative ways of seeing, knowing, and embodying non-visible realities as a source for their work. Accessing spiritual realms has been the subject of early European Modernisms investigations into Theosophy and Anthroposophy, as well as the primary intention of Tibetan Thangkas and Indian Tantra paintings. Postmodernism’s crisis of belief and skepticism generated a cultural situation wherein the subject of spirituality was marginalized, ridiculed as anti-intellectual, and in disgrace. The Hilma Af Klint exhibition and surge of interest in her work signifies a new moment, where questions about consciousness and the nature of reality are being addressed with renewed vigor. How do we create space in a technology driven world for experiences that attempt to align the viewer/maker with the contemplative realm, heightened states of consciousness, or transcendence? We will examine a wide field of artists in an attempt to understand the possibilities of the ‘spiritual’ in art and contemporary culture. This seminar will engage in readings, lectures, discussions, projects, and field trips. This course is appropriate for both grad and undergrad, art majors and non-majors alike. Taught by: Jackie Tileston
Course usually offered in fall term

FNAR 541 Hand-Drawn Computer Animation
Using software tools designed for hand-drawn animation, students will develop animation skills applicable to all forms of animation. In this course students will learn to draw with a sense of urgency and purpose as they represent motion and drama in a series of frames. Through careful study of natural movements, precedents in the history of animation, and through the completion of a series of animation projects students will develop strategies for representing naturalistic movement, inventing meaningful transformations of form, and storytelling. Course not offered every year
Also Offered As: FNAR 241

FNAR 545 Sculpture Practices
As an introduction to traditional and contemporary three-dimensional practice, this course is concerned with the concepts and methodologies surrounding three-dimensional art making in our time. Students experiment with a variety of modes of production, and develop some of the fundamental techniques used in sculpture. In addition to these investigations, assignments relative to the history and social impact of these practices are reinforced through readings and group discussion. Processes covered include use of the Fab Lab, wood construction, clay, paper, mixed media, and more. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu

FNAR 550 Introduction to Printmaking
The course offers an introduction to several forms of printmaking including: intaglio, screen printing, relief, and monoprinting. Through in-class demonstrations students are introduced to various approaches to making and printing in each medium. The course enhances a student's capacity for developing images through two-dimensional design and conceptual processes. Technical and conceptual skills are developed through discussions and critiques.
Course usually offered in spring term

Also Offered As: FNAR 251
Activity: Studio
1.0 Course Unit

FNAR 552 Printmaking: Screen Printing
This course is an introduction to technical skills and investigative processes in screen printing and relief and examines methods for combining digital technology with traditional print media. The course introduces students to several contemporary applications of silkscreen and relief printmaking including techniques in multi-color printing, photo-based silkscreening, digital printing, woodcut, linocut, and letterpress. Demonstrations include photo and image manipulation, color separating and output techniques, hand carving and printing, as well as drawing and collage. Both traditional and experimental approaches are explored and encouraged and technical and conceptual skills are developed through discussions and critiques.
Course usually offered in fall term

FNAR 574 Reconfiguring Portraiture
As methods of representation are constantly shifting, one thing is clear - the photographic portrait is not what is used to be. Exploring both traditional and contemporary methods of portraiture, this class will uncover and discuss the ways in which we perceive each other in imagery, both as individuals and as groups. Throughout the semester, we will consider how portraits deal with truth, physical absence, the gaze, cultural embodiment, voyeurism and the digital persona. This course will build on the combination of perception, technology, and practice. Throughout the semester, students will advance by learning lighting techniques and strategies of presentation - as these core skills will become tools in the execution of project concepts. In tandem with each project, students will encounter and discuss a wide array of photography and writings from the past to the present, in an effort to understand the meanings and psychological effects of freezing the human image in time.
Course usually offered in spring term
Also Offered As: FNAR 274
Prerequisite: FNAR 571 OR FNAR 640
Activity: Seminar
1.0 Course Unit

FNAR 575 Graduate Drawing Seminar
This seminar examines the essential nature drawing has in an artist’s process. Direct visual perception, self-referential mark making, the viability of space and understanding it, and drawing from one’s own work are some of the drawing experiences encountered in the course. There are regular critiques and discussions based on the work and readings.
Taught by: Tileston/Freedman
Course usually offered in spring term
Activity: Seminar

FNAR 576 Critical Issues Seminar
This seminar investigates issues concerning visual artists. Part one begins with Plato and Kant and progresses through a history of ideas in art, exploring the questions which concern artists today, including Modernism, post-modernism, abstraction and representation, appropriation, context, art and politics, identity, and the artist’s relationship to these subjects. Part two of the course will focus on current texts in contemporary art, the current dialogue(s), and issues specific to our time and place as artists. The seminar engages contemporary issues in a spirit of curiosity and critique, and relates them to our studio practice.

One-term course offered either term
Activity: Seminar
1.0 Course Unit

FNAR 580 Figure Drawing I
Students work directly from the nude model and focus on its articulation through an understanding of anatomical structure and function. Students will investigate a broad variety of drawing techniques and materials. The model will be used as the sole element in a composition and as a contextualized element.
One-term course offered either term
Also Offered As: FNAR 280
Prerequisite: FNAR 523
Activity: Studio
1.0 Course Unit

FNAR 583 Performance/Camera: Performance and-with-through-for Cameras
This intermediate course will explore the wide and expansive territories of art-making that exist between live performance and mediated image making - both still and moving. For much of the 21st century, the mediums of performance, video and photography have been weaving in and out of contact. Performance is known and understood largely through its documentation: sometimes voluminous and sometimes little more than a single photograph. On the other side, video, film and photography each developed through widespread explorations that were deeply entwined with the ‘capturing’ of bodies on film. Using photography, video and performance in equal parts, the course is a hands-on exploration of this capacious terrain. The course will be structured by a series of bi-weekly assignments that allow for individual and collective production. The course will also include a regular schedule of short readings and presentations/screenings of existing works.
Taught by: Hayes
Course usually offered in fall term
Also Offered As: FNAR 085
Prerequisite: FNAR 661 OR FNAR 640
Activity: Studio
1.0 Course Unit

FNAR 585 Performance Studio
This course supports the individual and collaborative production of performance works. As the medium of performance consists of diverse forms, actions, activities, practices and methodologies, the course allows for an open exploration in terms of material and form. Students are invited to utilize technologies, materials and methodologies from other mediums and/or disciplines such as video, photography, writing and sound. In addition to the production component, the course will examine multiple histories of performance through readings, screenings and directed research.
Taught by: Hayes
Course usually offered in spring term
Also Offered As: FNAR 085
Prerequisite: FNAR 523 OR FNAR 545 OR FNAR 640 OR FNAR 661
Activity: Studio
1.0 Course Unit

FNAR 589 Mixed Media Animation
Mixed Media Animation is a contemporary survey of stop-motion animation concepts and techniques. Students use digital SLR cameras, scanners and digital compositing software to produce works in hand-drawn animation, puppet and clay animation, sand animation, and multiplane collage animation. Screenings and discussions in the course introduce key historical examples of animation demonstrating how these techniques have been used in meaningful ways. Students then learn how to composite two or more of these methods with matte painting, computer animation or video.
Course usually offered in spring term
Also Offered As: CIMS 289, FNAR 289
Prerequisite: FNAR 523 AND FNAR 636
Activity: Studio
1.0 Course Unit
FNAR 591 The Body and Photography
The last few decades have introduced dramatic changes in the way we interact with each other, the way we communicate, the way we date, watch porn, etc. Ethical concerns have arisen with scientific advances such as stem cell research, fertility drugs, Botox, cloning and erectile dysfunction. This studio course will investigate the myriad ways in which the corporeal is addressed and manipulated in contemporary art, science, religion, pop culture and media. Students will develop photographic projects related to updated questions concerning gender, sexuality and social issues. Lectures, readings and class discussion will focus and inform their individual work.
Course usually offered in spring term
Prerequisite: FNAR 271 OR FNAR 340
Activity: Seminar
1.0 Course Unit

FNAR 594 Graduate Photography Seminar
This seminar will examine contemporary issues in photography from the point of view of the practicing artist. Students will meet with visiting critics during the semester, the course will also include student presentations, weekly discussions and group critiques, visits to artists' studios and gallery and museum exhibitions. Texts for the seminar will be drawn from contemporary critical theory in art, philosophy, history and popular culture. Required for all graduate photographers.
Taught by: Davenport
Activity: Seminar
1.0 Course Unit

FNAR 598 Grad Sculpture Seminar
Sculpture instructor (to be announced) will lead this studio course based on improvisational approaches to developing individually made sculptural works, as well as works that are made in collaboration with others. As in Music or Theater, these works involve the collaboration of others, yet they are equally initiated by small thoughts, and carry those thoughts into a more public and interactive format of installation.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

FNAR 601 Graduate Studio I
First year studio for MFA students' core pursuit of self-directed interdisciplinary problems that contribute to one or more of the visual arts disciplines.

Course usually offered in fall term
Also Offered As: FNAR 501
Activity: Studio
2.0 Course Units

FNAR 602 Graduate Studio II
Second year studio for MFA students' core pursuit of self-directed interdisciplinary problems that contribute to one or more of the visual art disciplines.
Taught by: Adkins/Davenport/Freedman/Mosley/Telhan/Tileston
Course usually offered in spring term
Also Offered As: FNAR 502
Activity: Studio
2.0 Course Units

FNAR 605 Topics in Contemporary Art
An experimental class for artists and scholars. Organized around a series of case studies of artists, collectives, infrastructures, and curatorial projects, the course includes: in-class discussion and viewing; workshops with class visitors; site visits; participation in small reading groups. In the first half of the class, students will complete some short assignments. In addition, students will complete a final project that is intentionally open in terms of form. The project, which can be collective or individual in nature, will enable an in-depth material investigation of one of the threads of the class.
Taught by: Hayes and Redrobe
Course not offered every year
Also Offered As: ARTH 596, CIMS 596, ENGL 596, GSWS 596
Activity: Seminar
1.0 Course Unit

FNAR 607 Advanced Sculpture: Installation & Intervention
In this course students will create sculptural installations and spatial interventions that explore site specificity and architectural environments. A range of traditional sculptural materials and techniques will be investigated along with more ephemeral interventions in space such as sound, light, and projection. Through lectures, readings, and critiques, students will explore the history of installation and interactive sculptural work and develop self-directed projects that interrogate historical, social, and psychological conditions of the built environment.
Also Offered As: FNAR 147
Activity: Studio
1.0 Course Unit

FNAR 613 The Chinese Body and Spatial Consumption in Chinatown
This course looks at representations of the Chinese (and Asian body) since the Limehouse district in East London and the advent of Chinese contract laborers to the Americas in the 19th century. The localization of the Chinese throughout the Americas within Chinatown precincts were also subject to representational imaginations that were negotiated through the lens of civic planning, literature and later in cinema. Chinatowns are ultimately a product of racism. They were created as a political and social support system for newly arrived Chinese immigrants. While Chinese laborers arrived into the United States in 1840 and in significant numbers into Canada about 1860, Chinese contract workers were encouraged to immigrate to the Americas as an inexpensive source of labor, especially after the end of the American Civil War. Industrial leaders in America, Canada and elsewhere in the Americas (Mexico, Cuba, Peru, etc) saw the arrival of Chinese workers as a victory for commercial interests. However, the celebration was short-lived, as anti-Chinese sentiment quickly transformed into anti-Chinese hysteria. Rather than attacking the vested interests that exploit foreign labor as embodied by the Chinese worker, racist unions with the cooperation of civic leaders and the police deemed it safer to burn Chinatowns than capitalist property. Deeply under-studied to this day is the number of mass murders of Chinese workers in the 19th century by anti-Chinese thugs. This seminar will focus in on how the body of the Chinese (and Asian) was imagined and reimagined multiple times from the middle of the 19th century to today.
Taught by: Lum/Yang

Activity: Seminar
1.0 Course Unit
FNAR 614 Tiananmen Square: A Case Study for Fine Arts and Landscape Architecture
This course takes as its subject the systems of representation and design that have historically and presently operate in Tiananmen Square in Beijing. There have been several incarnations of Tiananmen Square since its original form in 1651. During Imperial times and through the period of foreign legations, the square was once surrounded by walls and gates, creating a city within a city. With the advent of the Republic of China established on January 1, 1912, much of the enclosures were removed, opening up for public use previously restricted imperial areas. After the Communist Revolution in 1949, planning was afoot to enlarge the square. With its enlargement completed in 1958, the square expanded its footprint by four-fold, making it one of the largest public squares in the world. The enlarged and remodeled square coincided with the completion of the massive Monument to the People's Heroes. In 1976, a large mausoleum containing the preserved body of Mao Zedong was built near the site of the former Gate of China, further increasing the size of the square. In the 1990s, the building of the National Grand Theatre and expansion of the National Museum on grounds contiguous to the square necessitated further alterations to both the Eastern and Western walls of the square. In recent years, there have been a widening debate regarding the transformation of the concrete heavy and by and large featureless square into a green space. Today, Tiananmen Square holds sacrosanct status to the Communist revolution of 1949, designed more for military parades and massive public rallies than public space repose. In a city that has few green spaces, such a verdant transformation in the heart of the Chinese capital would signal a radical symbolic deviation to China's development-first guiding principles. The square fronts Tiananmen Gate and the Forbidden City and is situated at the intersection of the historical east-west and north- south axes. Chang'An Avenue, important for military processions, separates the square from Tiananmen Gate and is considered the most important thoroughfare in the Capital and the path of the east west number one subway line. The entirety of the Tiananmen Square area is marked by ideology and political prominence, often confusingly. Tiananmen Tower, functions as a conflation of monumental facade with political embodiment. This course will focus on imagined interventions through public art and landscape design within Tiananmen Square and its contiguous areas. It is a studio practice course with a significant seminar component that will include lectures and readings relating to issues of public space and urban design in contemporary China. The course will also study the development of contemporary art in China. The tragic events of Tiananmen Square in 1989 represented a turning point in terms of a generation of Western exiled Chinese artists and curators including Hou Hanru, Chen Zhen, Xu Min, Huang Yong Ping and Yan Pei Ming among many others. The class will study the strategies deployed by these so-called First Generation of Chinese artists. Making use of their double identity as traditionally taught Chinese artist residing in the West, their art offered a pointed critique of both China and the West. The course will include a trip to Beijing.

Also Offered As: FNAR 314
Activity: Seminar
1.0 Course Unit

FNAR 615 Across Forms: Art and Writing
What if a poem spoke from inside a photograph? What if a sculpture unfurled a political manifesto? What if a story wasn't just like a dance, but was a dance or a key component of a video, drawing, performance, or painting? In this course, artists and writers will develop new works that integrate the forms, materials, and concerns of both art and writing. Many artists employ writing in their practices, but may not look at the texts they create as writing. And many writers have practices that go beyond the page and deserve attention as art. This course will employ critique and workshop, pedagogic methodologies from art and writing respectively, to support and interrogate cross-pollination between writing and art practices. Additionally, the course will examine a field of artists and writers who are working with intersections between art and writing to create dynamic new ways of seeing, reading, and experiencing.
Taught by: Hayes and Zolf
Course usually offered in fall term
Also Offered As: ENGL 129, FNAR 315
Activity: Seminar
1.0 Course Unit

FNAR 616 Art and Social Work: Art and the Ecology of Justice
How can the arts help us build a more just society? How can the arts transform social structures and systems? Public health crises involving clean water (Flint), police violence (Baltimore), and a lack of economic and educational opportunity following reentry (Philadelphia) make legible the need for a new visual language that critiques these conditions and challenges entrenched structural inequalities. We will engage the work of creative practitioners who are mapping new relationships between art and social justice and directly impacting individual and communal well-being. In so doing, the course seeks to challenge traditional constructions of public health, which often isolate individual histories from their social life and their relation to families, communities, and geographies. Readings will build upon disciplinary perspectives in the arts, humanities, and social policy. Requirements include weekly readings, class participation, and a collaborative final project. The course will meet in the Health Ecologies Lab at Slought Foundation, an arts organization on campus.
Taught by: Neff, Levy and Ghose

FNAR 622 The Big Picture: Mural Arts in Philadelphia
The history and practice of the contemporary mural movement couples step by step analysis of the process of designing with painting a mural. In addition students will learn to see mural art as a tool for social change. This course combines theory with practice. Students will design and paint a large outdoor mural in West Philadelphia in collaboration with Philadelphia high school students and community groups. The class is co-taught by Jane Golden, director of the Mural Arts Program in Philadelphia, and Shira Walinsky, a mural arts painter and founder of Southeast by Southeast project, a community center for Burmese refugees in South Philadelphia.
One-term course offered either term
Also Offered As: FNAR 222, URBS 322
Activity: Seminar
1.0 Course Unit
FNAR 625 Contemporary Art Studio  
This course offers an introduction to studio-based practices aimed at synthesizing the expansive potentialities of art through exposure to a diverse set of approaches, their histories, and contemporary applications. A wide range of multi-disciplinary projects will provide students with skills to conceptualize and visualize material investigations. Lectures, readings, films, visiting lectures, field trips, and critiques, will provide a historic and theoretical foundation for critical inquiry.

1.0 Course Unit

FNAR 631 Interdisciplinary Studio: Sites of Convergence and Hybridity  
This course takes an experimental multimedia approach to investigating some of the boundaries in contemporary art making practices. Painting, photography, video, design and sculpture intersect, overlap, and converge in complicated ways. Projects will be designed to explore hybrid forms, collage, space/ installation, and color through a variety of strategic and conceptual proposals as students work towards unique ways of expanding their own work. Weekly readings, critiques, and presentations will be integrated with studio projects. This studio/seminar is appropriate for students at all levels and from all areas of Fine Arts and Design.

FNAR 640 Digital Photography  
This class offers an in-depth technical and conceptual foundation in digital imagery and the opportunity to explore the creative, expressive possibilities of photography. Students will become proficient with the basic use of the camera, techniques of digital capture, color management and color correction. They will also develop competency in scanning, retouching, printing and a variety of manipulation techniques in Photoshop. Through weekly lectures and critiques, students will become familiar with some of the most critical issues of representation, consider examples from photo history, analyze the impact of new technologies and social media. With an emphasis on structured shooting assignments, students are encouraged to experiment, expand their visual vocabulary while refining their technical skills. No previous experience is necessary. Although it is beneficial for students to have their own Digital SLR camera, registered students may reserve and checkout Digital SLR cameras and other high-end equipment from the department. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu.

FNAR 642 Digital Photography II  
In this course students will continue to develop conceptual, technical, aesthetic and formal strategies in digital photography, expanding their artistic process while refining their critical approach to researched subject matter. The class will be driven initially by a series of assignments formulated to further expose students to broad possibilities related to the medium and then they will be guided towards the evolution of a personalized body of work that is culturally, theoretically and historically informed. We will be examining key issues surrounding the digital image in contemporary society, led through a combination of class lectures, readings, group discussions, film screenings, gallery visits and class critiques. Students will further their knowledge of image control and manipulation, retouching and collage, advanced color management; become familiar with high-end camera and lighting equipment and develop professional printing skills. In addition to learning these advanced imaging practices, this course will also emphasize an investigation of critical thought surrounding contemporary visual culture and the role of digital media in the creation of art.

FNAR 648 Counter the Land: Photography and the Landscape  
Starting with the representation of landscape in painting in the early 1800s, the course will then move through Pictorialism and the Modernist movement in photography. Revisiting the later half of the 20th century, we will begin to consider the shifting practices of landscape and the ways it has been photographically depicted up to the present. Collaborating with the Brandywine River Museum of Art in Chadds Ford, students will begin their photographic exploration with the work of Andrea Wyeth and the landscape of the Brandywine Valley. As we consider Wyeth, the images of James Welling will also be introduced. Credited for pioneering new forms of representation in photography in the 1970s, Welling also revisited the work of Wyeth from 2010-2015, and committed to a fresh (and challenging) look at tradition. Working with imagery and text, this class will also touch on conceptual art, the New Topographics, and postmodernism. Through these various concentrations, students will consider and counter the traditions that they are already familiar with, while creating work based on issues of the landscape today. Questions about meaning, politics, social critique, land rights, technology and methods of presentation will be encouraged and explored throughout the course.

Also Offered As: FNAR 348  
Prerequisite: FNAR 571 OR FNAR 640  
Activity: Studio  
1.0 Course Unit
FNAR 652 Dispersive Lens
This studio course will explore the nexus between photography, sculpture, installation, drawing, painting, and the moving image. The course is informed by the printed image, as students will explore how photography can encourage thinking in other mediums, in addition to how other mediums can influence the making of photography. When does an abstract painting appear more like a photograph? How can a photograph suggest ways to make a video? Can a sculpture exist as a photograph? A variety of assignments will expose students to interdisciplinary approaches addressing these questions and more. Class projects will be supported by regular slide lectures, group critiques, and readings examining modern and contemporary artists and practices.

FNAR 654 Printmaking & Publications: Intro to Independent Publishing and Artists’ Publications
This course introduces students to independent publishing and artists’ publications through print methods in letterpress, Risograph, and Xerox. The class will focus on the self-published artists’ zine/book as an affordable, accessible, and easily reproducible format for exploring ideas, disseminating artists’ work, and collaborating across disciplines. Students will learn a range of skills, including techniques in both mechanized and hand-pulled forms of printed media (Risograph, copy machine, Vandercook letterpress); short-run editions and binding; design and layout; pre-press and print production; and the web as it relates to and supports independent and democratic modes of distribution. Students will learn about and become acquainted with some of the most significant independent publishers working today and throughout history. Students will leave class having completed three individual projects: a 16-page booklet/zine, a carefully considered online publication, and a final collaborative book designed, developed and published as a class. The course commences with a field trip to New York City’s Printed Matter, one of the oldest and most important nonprofit facilities dedicated to the promotion of artists’ books, where students will be encouraged to submit a publication by semester’s end.

FNAR 656 Monument Lab: Praxis Approaches to Socially-Engaged Public Art
What makes an exceptional socially-engaged public artwork or project? For those who practice in the field, the question invites careful consideration of aesthetics, process, participation, staging, and interpretation. Across the better part of the last decade, this line of inquiry has fueled the work of Monument Lab, a public art and history studio based in Philadelphia. With deep roots and close ties to the Department of Fine Arts’ Center for Public Art and Space, and methods interanimating contemporary art and pedagogy, Monument Lab works with artists, students, activists, municipal agencies, and cultural institutions on exploratory approaches to public engagement and collective memory. The Monument Lab course in Fine Arts explores the theoretical study and practical applications of public art. The course operates as a socially-engaged ‘civic studio’ to engage case studies, debate key issues in the field, meet with artists and practitioners, conduct site and studio visits, and practice direct methods for producing individual and collaborative public projects. Focusing on the intersection of theory and practice, the praxis course highlights engaged methods piloted by Monument Lab in citywide exhibitions and special projects, especially to focus on themes and models for participation, public engagement, co-creation, curation, temporary installation, and socially engaged art-making. Each student will embark on a semester-long independent project, as well as participate in a group initiative centered on a current Monument Lab project in Philadelphia to gain experience in the field of socially-engaged public art.

FNAR 661 Video I
In this studio based course, students are introduced to video production and postproduction as well as to selected historical and theoretical texts addressing the medium of video. Students will be taught basic camera operation, sound recording and lighting, as well as basic video and sound editing and exporting using various screening and installation formats. In addition to a range of short assignment-based exercises, students will be expected to complete three short projects over the course of the semester. Critiques of these projects are crucial to the course as students are expected to speak at length about the formal, technical, critical and historical dimensions of their works. Weekly readings in philosophy, critical theory, artist statements and literature are assigned. The course will also include weekly screenings of films and videos, introducing students to the history of video art as well as to other contemporary practices. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
One-term course offered either term

Activity: Seminar
1.0 Course Unit
FNAR 662 Video II
Video II offers opportunities to further explore the role of cinematic narrative technique, non-narrative forms, digital video cinematography, editing, and screen aesthetics. Through a series of several video projects and a variety of technical exercises, students will refine their ability to articulate technically and conceptually complex creative projects in digital cinema. In addition, one presentation on a contemporary issue related to the application of cinematic storytelling and/or the cultural context of digital video is required.

One-term course offered either term
Also Offered As: CIMS 062, FNAR 062
Prerequisite: FNAR 661
Activity: Seminar
1.0 Course Unit

FNAR 663 Documentary Video
Documentary Video is an intensive production course involving the exploration of concepts, techniques, concerns, and aesthetics of the short form documentary. Building on camera, sound, and editing skills acquired in Video I, students will produce a portfolio of short videos and one longer project over the course of the semester using advanced level camera and sound equipment. One short presentation on a genre, technique, maker, or contemporary concern selected by the student is required.

FNAR 671 Film Sound: History, Aesthetics and Subversion
Sound and Image as experienced in the cinema, are not divisible. One perception influences the other, and transforms it. While a preexisting harmony between these two senses may exist, its conventions are subject to manipulation and the whims of subversion. Film Sound tracks the technological and aesthetic history of sound for film including psychoacoustics, dialogue, music, sound fx and audio’s gradual and triumphant march towards fidelity, stereo and surround sound. This lecture course, through an historical and pedagogical romp loaded with examples throughout film history and visits by lauded audio professionals from the film world, seeks to instruct students to engage in the process of sound perception, gaining an appreciation for the art of sound as it relates to the varied phenomenological dimensions of that unique audio-visual encounter we call movies.

FNAR 673 Machine for Seeing: Architecture and the Moving Image
Architecture's relationship with cinema was established with the very first motion picture. In Sortie de l'usine Lumiere de Lyon by Auguste and Louis Lumiere we see a didactic presentation of film titles as workers from the Lumiere brother’s factory stream forth from its interior at days end. In many ways the context of the film is its subject as well. The title of the class plays on Le Corbusier's maxim that architecture is machine for living and perhaps cinema is simply a machine for helping us understand the vast construct of our built environment. A device, which allows us to imagine even greater follies or more importantly to think critically about architecture's relationship with and impact on society. Readings, screenings, discussions and critiques make up the curriculum along with studio time. Students will produce their own film and we will look at films produced by a range of practitioners: From architects speculating on the nature of and use of public space and urban development to documentarians researching the pathologies of neo-liberalism and its effect on the privatization of space. We will also look at the work of artists who engage with the poetics of space and who unpack the conflicted legacies of the built environment.

**FNAR 674 A Virus in the Culture: Social Critique in Media Arts**
In order to change the world, we must first learn how to infect it. A Virus in the Culture is a studio class that examines and generates various forms of media resistance to dominant hegemonic systems of power and control. Using filmmaking, publication design and interactive media we’ll think through and develop responses to some of the most pressing issues facing us today. We’ll look at historical models from the agitprop design work of Gee Vacher for Anarcho-punk band Crass to Chris Marker’s film Le Fond de L’Air Est Rouge, a radical analysis of global social and political turmoil in the late 60s and early 70s. We’ll also look at experimental contemporary design firms like MetaHaven who question the role of designers and filmmakers today - Bypassing the power dynamics of clients and briefs they took it upon themselves to create a graphic identity for WikiLeaks. Each example broadens the definition and possibilities of practice to create a more porous engagement with audiences and users while informing the practice of social critique today. Considering a diverse range of topics from education policy, to the rights of environmental refugees, we’ll use the class to workshop a singular comprehensive project that targets researches and responds to a specific contested position. The outcome of which will be a class produced short film, publication and website that unpacks the social, cultural, and economic complexities of our subject. This class is co-taught by David Hartt, an artist and filmmaker along with graphic designer, Mark Owens. Reading, screenings, discussions and critiques make up the curriculum along with studio time. While the focus of this course is not technical, prior knowledge of design programs, camera functions, and post-production techniques is expected.

**FNAR 675 Image and Sound Editing**
This course presents an in-depth look at the storytelling power of image and sound in both narrative and documentary motion pictures. Students apply a theoretical framework in ongoing workshops, exploring practical approaches to picture editing and sound design. Students edit scenes with a variety of aesthetic approaches, and create story-driven soundtracks with the use of sound FX, dialogue replacement, foleys, music and mixing. Students not only learn critical skills that expand creative possibilities, but also broaden their understanding of the critical relationship between image and sound.

**FNAR 676 Advanced Lens Based Projects**
Advanced Lens Based Projects (ALBP) is structured to create an open environment for students to develop a series of self-determined projects using any variety of image capture technologies. Mobile devices and DSLRs have blurred the function of moving and still image capture while computers have become ubiquitous as instruments of display and dissemination. This has consequently led to the increasingly collapsed boundaries of artistic mediums. ALBP is a studio class where students will explore different modes of production and address the expanding field of exhibition strategies. Additionally, the class will foster a transdisciplinary approach to critiquing work and emphasize the shared context of the works’ reception. Readings, screenings, discussions, and critiques make up the curriculum along with dedicated studio time. Each student is required to complete three self-determined projects using still or moving image capture technologies. Grades will be determined through participation, completion of assignments, and the students’ formal and critical engagement with the technology. While the focus of this course is not technical, prior knowledge of camera functions and post-production techniques is expected.

**FNAR 684 PHOTOGRAPHY AND FASHION**
Since the invention of photography, the fashion industry has been one of the cornerstones of creative expression, innovation and visionary provocation. Contemporary fashion photography has continued to attract a leading group of image-makers that continue the tradition of creating artwork that not only is being published in cutting edge magazines such as V, Another Magazine and Citizen K, but also are exhibiting their work in various galleries and museums around the world. This course is designed for students who are interested in creating contemporary fashion images through specific assignments that define the process: lighting in studio or location, working with fashion designers, stylists, models, hair/ make up artists, and the application of a variety of post production techniques, via Photoshop. The class will explore modern constructs that define the importance of branding, marketing, advertising and the relationship of fashion photography in contemporary art and culture today.

FNAR 685 Photography and Fiction
In spite of photography’s traditional relationship with fact, the medium has been a vehicle for fiction since the very beginning. Fiction and photography encompass a broad range of meanings, from elaborately staging and performing for the camera, to manipulations using digital technology such as Photoshop to construct the work. This class will examine and trace the history of manipulated photography while paying special attention to the complex negotiations between the decisive moment, the constructed tableau, and the digitally manipulated image. There will be a combination of class lectures, studio projects, assigned readings, visiting artists, film screenings, field trips, and class critiques. Taught by: Diamond

FNAR 712 Visual Epistemologies for Creative Practices
In this joint seminar between Architecture and Fine Arts, we investigate the alternative modes of diagrammatic thinking that are influencing art and design disciplines. The course provides a historical perspective on the evolution of visual epistemologies from late 1950s and reviews its current state from the lens of contemporary representation theory, computation, fabrication and information technologies. The goal is to gain both theoretical and hands-on experience with the contemporary diagramming techniques in order to advance both designs and the thinking behind them. Taught by: Furjan/Telhan

Folklore (FOLK)

FOLK 022 World Musics and Cultures
This course examines how we as consumers in the 'Western' world engage with musical difference largely through the products of the global entertainment industry. We examine music cultures in contact in a variety of ways: particularly as traditions in transformation. Students gain an understanding of traditional music as live, meaningful person-to-person music making, by examining the music in its original site of production, and then considering its transformation once it is removed, and recontextualized in a variety of ways. The purpose of the course is to enable students to become informed and critical consumers of 'World Music' by telling a series of stories about particular recordings made with, or using the music of, peoples culturally and geographically distant from the US. Students come to understand that not all music downloads containing music from unfamiliar places are the same, and that particular recordings may be embedded in intriguing and controversial narratives of production and consumption. At the very least, students should emerge from the class with a clear understanding that the production, distribution, and consumption of world music is rarely a neutral process.

FOLK 029 Gender, Sexuality, & Religion
What does it mean to be a gendered individual in a Muslim, Hindu, Jewish, Christian, Buddhist, or Sikh religious tradition? How important are gender differences in deciding social roles, ritual activities, and spiritual vocations? This course tackles these questions, showing how gender - how it is taught, performed, and regulated - is central to understanding religion. In this course we will learn about gendered rituals, social roles, and mythologies in a range of religious traditions. We will also look at the central significance of gender to the field of religious studies generally. The first part of the course will be focused on building a foundation of knowledge about a range of religious traditions and the role of gender in those traditions. This course emphasizes religious traditions outside the West. Although it is beyond the scope of this class to offer comprehensive discussions of any one religious tradition, the aim is to provide entry points into the study of religious traditions through the lens of gender. This course will emphasize both historical perspectives and contemporary contexts. We will also read religion through feminist and queer lenses - we will explore the key characteristics of diverse feminist and queer studies approaches to religion, as well as limits of those approaches.

1.0 Course Unit

FOLK 201 American Folklore
This course will examine American expressive culture, including everyday speech, narrative, music, foodways, religion, public celebrations, and material culture through an exploration of the multiple and changing avenues of diversity in the United States. Folklore can be considered the unofficial culture that exists beneath and between the institutions of power that we read about in our history books, and that is what we will be studying—the 99% of American life that goes unseen and unnoticed in other college courses. Some of the topics we will examine are: campus folklore; body art and adornment; contemporary (urban) legends and beliefs; public celebrations and rituals; and the adaptation and commodification of folk culture in popular media.
One-term course offered either term
Also Offered As: ANTH 205

FOLK 252 Themes Jewish Tradition: Iberian Conversos: Jew-Christian?
Course topics will vary; they have included The Binding of Isaac, Responses to Catastrophes in Jewish History, Holy Men & Women (Ben-Amos); Rewriting the Bible (Dohrmann); Performing Judaism (Fishman); Jewish Political Thought (Fishman); Jewish Esotericism (Lorberbaum) Democratic culture assumes the democracy of knowledge - the accessibility of of knowledge and its transparency. Should this always be the case? What of harmful knowledge? When are secrets necessary? In traditional Jewish thought, approaching the divine has often assumed an aura of danger. Theological knowledge was thought of as restricted. This seminar will explore the ‘open’ and ‘closed’ in theological knowledge, as presented in central texts of the rabbinc tradition: the Mishnah, Maimonides and the Kabbalah. Primary sources will be available in both Hebrew and English.

FOLK 280 Jewish Folklore
The Jews are among the few nations and ethnic groups whose oral tradition occurs in literary and religious texts dating back more than two thousand years. This tradition changed and diversified over the years in terms of the migrations of Jews into different countries and the historical, social, and cultural changes that these countries underwent. The course attempts to capture the historical and ethnic diversity of Jewish folklore in a variety of oral literary forms. A basic book of Hasidic legends from the 18th century will serve as a key text to explore problems in Jewish folklore relating to both earlier and later periods.

FOLK 406 Folklore and the Supernatural
Beliefs in the supernatural have not diminished appreciably in modern cultures, despite many predictions that they would. Recent public opinion surveys indicate many Americans hold supernatural beliefs or have had experiences they believe to be supernatural. This course will introduce key concepts in the study of culture and the supernatural. We will examine traditional beliefs about supernatural beings, supernatural realms, and humans who interact with these, as well as the historical development of Western ideas of ‘the supernatural’ itself. Students will enhance their understanding of human diversity through cross-cultural examples of supernatural folklore, consider the relationship between the supernatural and place, and examine how various folklore genres have expressed human relationships to the supernatural. Topics may include witchcraft, ghosts, vampires, fairies, UFOs, supernatural assault, vodou, Neopaganism, saints, healing, legend tripping, and dark tourism. There will also be opportunity for students to explore related topics of interest to them.

FOLK 440 Fairy Tales
In this seminar we review and evaluate critical approaches to understanding manhood and masculinity as they have been used to examine the individual and collective lives of men in communities around the world. Through a perspective that emphasizes how masculinity is performed and narrated, we seek to integrate concepts of: (1) the self—the experiencing and embodiment of personhood, subjectivity, and emotion; (2) spatiality and power—public and sporting events, leisure spaces; and (3) the state—relations between gender ideology, governmentality and power in political theatre, media control, warfare and military memorials.

FOLK 459 Prose Narrative
Historical, literary, comparative, and ethnographic methods contribute to study of prose narratives which were told in oral societies in antiquity and in modern times and were documented in literary societies for different purposes. Oral storytellers, both professional and amateurs, performed them in private and public spaces. Their recording from antiquity to modern times became an integral element of modern life in general and in education and arts in particular. The storytellers, their performances in oral and literary cultures, their genres, and their symbolic meanings are the subjects of the course, together with the analytical methods that help mapping their distribution worldwide.

FREN 110 Elementary French I
French 110 is the first semester of the elementary-level sequence designed to develop functional proficiency in the four skills and gain familiarity with French and Francophone culture. The primary emphasis is on the development of the oral-aural skills, speaking and listening. Readings on topics in French culture as well as frequent writing practice are also included in the course. As in other French courses, class will be conducted entirely in French. You will be guided through a variety of communicative activities in class which will expose you to a rich input of spoken French and lead you from structured practice to free expression. You will be given frequent opportunity to practice your newly acquired vocabulary and grammatical structures in small group and pair work which simulate real-life situations. The course will introduce you to French and Francophone culture through authentic materials including written documents, simple articles, songs, films, videos, and taped conversations between native speakers. Out-of-class homework will require practice with the online component of the textbook (MyFrenchLab) as well as regular writing practice. The course will also invite you to explore the Francophone world by completing an engaging, interactive project in the final stage of the semester. By the end of this course, you should be able to meet a variety of day-to-day needs in a French-speaking setting and to handle a range of basic travel transactions. You will be able to engage in simple conversations on familiar topics such as family, lodging, daily routines, leisure activities, etc. You will begin to be able to speak and write in the past, present and the future, make comparisons, and describe people and things in increasing detail. You will develop reading skills that should allow you to get the gist of simple articles and you will more readily discern information when you hear native speakers talking in a simple fashion about topics familiar to you.

FREN 121 Accelerated Elementary French for 'False Beginners'
French 121 is an intensive one-semester language course for students who have had some French before but who can benefit from a complete review of elementary French. This course will provide a re-introduction of the basic structures of French, with intensive work on speaking and listening designed to prepare students to take Intermediate French. Due to the nature of the course, the first half of the semester will progress rapidly, with much more difficult material being presented after the midterm period. As in other French courses, class will be conducted entirely in French. You will be guided through a variety of communicative activities in class that will expose you to a rich input of spoken French and lead you from structured practice to free expression. You will be given frequent opportunity to practice your newly acquired vocabulary and grammatical structures in small-group and pair work activities that simulate real-life situations, so please prepare each day's lesson attentively. See 'Preparation for each class' below for additional details. The course will introduce you to French and Francophone culture through authentic materials including written documents, simple articles, songs, films, videos, and conversations between native speakers. Out-of-class homework will consist of aural comprehension exercises in the online SAM as well as regular writing practice. The course will also invite you to explore the Francophone world by completing an engaging, interactive project in the final stage of the semester. By the end of this course, you should be able to meet a variety of day-to-day needs in a French-speaking setting and to handle a range of basic travel transactions. You will begin to be able to speak and write in the past, present, and the future, make comparisons, and describe people and things in increasing detail. FREN 130 Intermediate French I
In French 130, you will be 'parachuted' to Paris where you will choose where you want to live and explore your chosen neighborhood in depth. Every week we will discuss a different theme of Parisian life and French culture. As you discover your arrondissement, you will share information about it with your classmates and develop a collective knowledge of the French capital. You will tell your imagined experiences through your journal and therefore as a class, we will 'raconter Paris'. French 130 is the first half of the intermediate sequence designed to help you attain a level of proficiency that should allow you to function comfortably in a French-speaking environment. This course will build on your existing skills in French, increase your confidence and ability to read, write, speak, and understand French, and introduce you to more refined lexical items, more complex grammatical structures, and more challenging cultural material. As in other French courses at Penn, class will be conducted entirely in French. In addition to structured oral practice, work in class will include frequent communicative activities such as role-plays, problem-solving tasks, discussions, and debates, often carried out in pairs or small groups. Through the study of authentic materials such as articles, literary texts, songs, films, videos, you will deepen your knowledge of the French language and culture.

**FREN 140 Intermediate French II**
French 140 is the second half of a two-semester intermediate sequence designed to help you attain a level of proficiency that should allow you to function comfortably in a French-speaking environment. You are expected to have already learned the most basic grammatical structures in elementary French and you will review these on your own in the course workbook. This course will build on your existing skills in French, increase your confidence and ability to read, write, speak and understand French, and introduce you to more refined lexical items, more complex grammatical structures, and more challenging cultural material. This course focuses on the culture of French-speaking countries beyond the borders of France. Along with your classmates, you will explore the cities of Dakar, Fort-de-France and Marrakesh, investigating the diversity of the Francophone world through film, literature and music. As in other French courses at Penn, class is conducted entirely in French. In addition to structured oral practice, work in class will include frequent communicative activities such as problem-solving tasks, discussions, and debates, often carried out in pairs or small groups. Daily homework will require researching in the library and on the Internet, listening practice with video clips, in addition to regular written exercises in the workbook.

Two terms. student may enter either term.
Activity: Seminar
0.5 Course Units

**FREN 202 Advanced French**
French 202 is a third-year level course aimed at better understanding contemporary French society, language and culture, with a special focus on today's young generation. What defines a generation in the first place, and how do the lives of young people in France compare to those of their American counterparts? To answer these questions, students in 202 will delve into numerous aspects of French youth experience from the school system to family life, and from the workplace to the political arena, with the aid of resources including contemporary films, news articles, songs, literary texts, and the recent sociological project ‘Generation Quoi.’ In addition, they will forge connections with the French community on Penn's campus, as they embark on a journey of cultural exploration and reflexive self-discovery. Prerequisite: Open to students who have completed the language requirement. Students who are continuing from French 134 or 140 should take French 202 before moving on to more advanced French courses. While 202 is not a grammar-focused course, particular attention will be given to recognizing and employing the different registers of spoken and written French. The course constitutes excellent preparation for study abroad in a French-speaking region.
Prerequisite: Open to students who have completed the language requirement. Students who are continuing from French 134 or 140 should take French 202 before moving on to more advanced French courses.

**FREN 211 French for Business I**
This content-based language course, taught in French, introduces economic, business and professional terminology through the study of the following topics: financial institutions (banking, stock market and insurance); business practices (business letters and resumes); trade and advertising; the internal structure and legal forms of French companies. The course also emphasizes verbal communication through three components: 1) In-class activities such as problem-solving tasks, discussions and debates. 2) The study of authentic materials such as newspapers and magazines' articles, video clips, and radio shows. 3) A series of students' presentations. Finally, in order to use and practice the new economic and business terminology studied in this course, and to also further explore the structure, the management, and the operations of the French companies, students will work in pairs on a research project about a major French company of their choice. One of the other goals of this course is to also prepare the students to take one of the exams offered by the Paris Chamber of Commerce and Industry: the Diplome de Francais Professionnel, Affaires, C1. This exam will be held on campus in April.
One-term course offered either term
Prerequisite: FREN 202
Activity: Seminar
1.0 Course Unit

**FREN 212 Advanced French Grammar and Composition**
Intensive review of grammar integrated into writing practice. A good knowledge of basic French grammar is a prerequisite (French 202 or equivalent is recommended). Conducted entirely in French, the course will study selected grammatical difficulties of the French verbal and nominal systems including colloquial usage. Frequent oral and written assignments with opportunity for rewrites. Articles from French newspapers and magazines, literary excerpts, and a novel or short stories will be used as supplementary materials in order to prepare students to take content courses in French in disciplines other than French.
For BA Students: Advanced Language Course
One-term course offered either term
Prerequisite: FREN 202
Activity: Seminar
1.0 Course Unit
FREN 214 Advanced French Composition and Conversation
Entitled 'Contemporary French Society through its Media,' this course is intended to improve communicative skills through extensive practice in a variety of styles and forms. It aims to enhance student understanding of contemporary French culture, thought and modes of expression by promoting both cross-cultural understanding and critical thinking and developing students' communicative abilities (in the presentational, interpretive, and interpersonal modes). The specific language functions we will focus on are: narration; description; offering and soliciting advice and opinions; expressing feelings; critique and analysis; argumentation. It is organized around the themes of current events, identity and art. Activities include the study, analysis and emulation of model texts as well as discussion and debates about events and social issues as covered by the French news media (television, print, Internet sources). The oral work include video blogs and group presentations on selected topics and current events. Written practice will comprise reflective journals, essays and collaborative work on Web projects. On completing this course, students will feel more confident and be able to speak and write effectively on a range of contemporary issues. Recommended for students who are planning to study abroad in France.

FREN 225 History, Memory, Culture
This course explores the history of the dark years of the French collaboration with Nazi Germany during WWII. In the first part, it examines the rise of the myths of an 'eternal France' and the 'true French' promoted by Marechal Petain's National Revolution, as well as the myth of the resistance fighters that arose after the Liberation. The Holocaust adn the holes left in national memory will hold a pivotal place in our reading of the national narrative. The second part of the course is dedicated to the study of literary works written by post-memory writers or survivors of the Holocaust who tried to fill in the blanks and confronted the linguistic challenge posed by Auschwitz. Paris will play a connecting role, as both witness to history and as tangible trace of the forgotten. This study of French history, its silences and (non-) memory will shed light on the legacy of the Occupation for contemporary France. Assessment consists of a semester-long creative writing project and a final oral exam. Reading assignments include works by Pierre Assouline, Marcel Cohen, Georges Didi-Huberman, David Foenkinos, Sarah Kofman, Marceline Loridan-Ivens, Patrick Modiano, Georges Perec. Prerequisite: Two 200-level French courses taken at Penn or equivalent. Application required through Penn Global: https://global.upenn.edu/pennabroad/pgs. Permission needed from instructor. Penn Global Seminar.

FREN 226 French History and Culture until 1789
This civilization course presents the fabric/fabrication of the so-called national memory through its places of memory (lieux de memoire), as well as its places of non-memory (lieux de non-memoire), going from the Gauls to the Enlightenment. As the course tells the story of the rise and fall of the French monarchy, one is encouraged to envision it as a palimpsest and to become aware of the roles played by myths and legends. It helps see how French history has been manipulated by the collective memory, how retrospection often redefines, fabricates events and people depending on the needs of the moment. This course is taught in French. Prerequisite: Two-level French courses taken at Penn or equivalent.
For BA Students: History and Tradition Sector
Course usually offered in fall term
Activity: Seminar

FREN 227 French History and Culture 1789-1945
This civilization course presents the creation of modern France from 1789 to 1945 through the omnipresence of the myth of Perseus and Medusa in the historical narrative. The objective of the course is to introduce students to a period in France's history that begins with the French Revolution and ends with Marechal Petain's National Revolution. It also helps them discover the intricacies of the slow construction of modern France. In this course, students are led to reflect on the contemporary French culture and society that are the result and the remnants of the Revolution, and to make connections with the American history. Prerequisite: Two 200-level French courses taken at Penn or equivalent. This course is taught in French. Prerequisite: Two 200-level French courses taken at Penn or equivalent.
For BA Students: Humanities and Social Science S
Course usually offered in spring term
Activity: Seminar

FREN 228 Contemporary France
In this course we will be exploring the transformations of French society since the Second World War and into the Millennium. From the legacy of decolonization to the multicultural fervor of the 1998 Soccer World Cup, from the May 1968 civil protests to the Republican marches of 2015, we'll be delving into the major historical and cultural movements that have marked the contemporary period. How did France recover from German occupation and cope with further wars in its colonial territories? How did unprecedented rates of urbanization and immigration change the face of the country over the ensuing decades? Who have been the major players on the historical stage? And what are the political, cultural, and socioeconomic challenges facing France at the outset of the 21st century? These are some of the questions that will guide our investigation into the past 70 years of French history, a period as turbulent as it is rich in cultural production, and as complex as it is fascinating. Throughout the semester we will be especially attentive to images, in every sense of the word: the images of national identity that France projects to the world and to itself, but also pictorial representations of the country, its people and its territory. These images, and the stories they tell, will help us envision the kaleidoscopic portrait of a nation. The course will be conducted entirely in French. Prerequisite: Two 200-level courses taken at Penn or equivalent.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

FREN 229 French in the World
Where and how is French spoken in the world? Which variety (or varieties) of French represents 'good' or standard language use? What does it mean to have an accent or to experience linguistic insecurity? To what extent have political forces and movements historically affected the evolution of French? How do language attitudes differ among French- and English-speaking regions of the world and what is the status of French in an era of globalization? In what ways does language shape our identities? Le Francais dans le monde/French in the World examines these questions by providing a survey of the sociolinguistics of the French language in the contemporary world. We will explore how societal changes influence the manner and the contexts in which the French language is spoken.
Case studies focus on various parts of the Francophone world, including Europe (Belgium, Switzerland), New World (Quebec, Caribbean, Louisiana), Africa (North Africa, Sub-Saharan Africa), etc. Readings and class discussions are in French. Prerequisite: Two 200-level French courses taken at Penn or equivalent.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

FREN 230 Masterpieces of French Cinema
This course will introduce students to key films of the French film canon, selected over a period ranging from the origins of French cinema to the present. Students will also be introduced to the key critical concepts (such as the notion of the 'auteur' film genre) informing the discussion of films in France. The films will be studied in both a historical and theoretical context, related to their period styles (e.g. 'le realisme poeitique,' 'la Nouvelle Vague,' etc.), their 'auteurs,' the nature of the French star system, the role of the other arts, as well to the critical debates they have sparked among critics and historians. Students will acquire the analytical tools in French to discuss films as artistic and as cultural texts. Please note: This course follows a Lecture/Recitation format. The Lecture (FREN 230-401/CIMS 245-401) is taught in English. For French credit: please register for both FREN 230-401 (lecture) and FREN 230-402 (recitation); the FREN 230-402 recitation is conducted in French. For Cinema Studies credit: please register for CIMS 245-401 (lecture) and CIMS 245-403 (recitation); both are taught in English. Prerequisite: Two-level courses taken at Penn or equivalent.

FREN 231 Perspectives in French Literature: Love and Passion
This basic course in literature provides an overview of French literature and acquaints students with major literary trends through the study of representative works from each period. Students are expected to take an active part in class discussion in French. French 231 has as its theme the presentation of love and passion in French literature. This course was previously offered as French 221. Prerequisite: Two-200-level courses taken at Penn or equivalent.
For BA Students: Arts and Letters Sector
Course usually offered in fall term
Also Offered As: COML 218
Activity: Seminar
1.0 Course Unit
FREN 232 Perspectives in French Literature: The Individual and Society
This basic course in literature provides an overview of French literature and acquaints students with major literary trends through the study of representative works from each period. Special emphasis is placed on close reading of texts in order to familiarize students with major authors and their characteristics and with methods of interpretation. Students are expected to take an active part in class discussion in French. French 232 has as its theme the Individual and Society. prerequisite: Two 200-level courses taken at Penn or equivalent. For BA Students: Arts and Letters Sector
Course usually offered in spring term
Also Offered As: COML 219
Activity: Seminar
1.0 Course Unit

FREN 233 Francophone Literature and Film
French 233 is designed to give students a basic historical and theoretical groundwork in Francophone and postcolonial studies, and to help them develop their skills in literary and filmic analysis. It will provide an introductory survey of the richly diverse literature and film of the French-speaking world, from the 1950s through to the 21st century. Beginning with the gradual breakup of the French colonial empire, we will investigate the construction of individual and collective Francophone identities in such regions as the Caribbean, Africa, and the Maghreb, while exploring an equally wide range of literary and cinematic genres. Other histories and regions such as Quebec and Lebanon will also be discussed. Throughout the course we will remain especially attentive to questions of space—public and private spheres, urban and rural topographies, borders and migrations, as well as the complex dynamics between the Francophone regions and France itself—and to the ways in which these tensions are mapped onto the textual and visual surfaces of the works studied. Prerequisite: Two 200-level French courses taken at Penn or equivalent. For BA Students: Arts and Letters Sector
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

FREN 250 French Literature in Translation
The content of the course will vary from semester to semester. All works read in English. Please check the department's website for a description: https://www.sas.upenn.edu/french/pc. Prerequisite: Two 200-level French courses taken at Penn or equivalent. Course not offered every year

FREN 311 French Thought After 1968
In American academia, French thought after May '68 is often referred to as ‘French Theory,’ a heterogeneous corpus of philosophical and critical texts compacted into a set of poststructuralist premises, first introduced by and grew within humanities departments, then identified as a luxury by-product of the 'literary' people. This course proposes to unpack the notion of 'French Theory' and re-anchor it into its original social/historical background. We will read some of the most influential texts of its key figures, study how a post May 68 revolutionary energy is transformed into various innovative but also destabilizing ways of rethinking power relations, gender, language and subjectivity, and finally, consider in what capacities and limits these diverse critical approaches go beyond the simple label of 'post-structuralism' and relate to our own epoch and personal experiences. The readings and discussions will be divided into four axes: 1. Philosophy of Desire (Lacan, Deleuze/Guattari); 2. Sexual Revolt and Body Politics (Foucault, Hocquenghem, Barthes); 3. Deconstruction and Its Impact on Feminism (Derrida, Cixous, Irigaray); 4. Consumer Society and Society of the Spectacle (Lipovetsky, Baudrillard, Debord). Several documentaries and feature films will be shown outside class time. Taught in English. Reading knowledge of French is welcome but not required. One-term course offered either term
Also Offered As: COML 309
Activity: Seminar
1.0 Course Unit
FREN 313 French for Business II
The course, conducted entirely in French, emphasizes verbal communication in business professional situations through three components. First, a series of student's presentations, in-class activities (using newspapers’ articles, technical readings, radio shows and films), and debates on the following topics (list not exhaustive) related to France's economy and society: The role of the State in France’s economy; the French fiscal system; Labor (impact of the 35-hour work week, ‘conges;’ women in the workplace, etc.); Regions of France (production); major French industries/companies/brands; France’s major imports/exports; ‘Green business”; Business of pop culture. Second, as effective communication is based not only on linguistic proficiency but also on cultural proficiency, cultural differences mostly between Americans and French will be explored. Finally, throughout the semester, students will work in groups on the creation of their own business, association, or other organization and will be invited to present their project to the class at the end of the semester. On completion of the course, students will also have the opportunity to take the Diplome de Francais Professionnel-DFP Affaires (C1) administered by the Paris Chamber of Commerce and Industry.
Course usually offered in spring term
Prerequisite: FREN 211
Activity: Seminar
1.0 Course Unit

FREN 322 France and the European Union
This course aims to provide an understanding of the European Union as a complex entity: its history, institutions, challenges and future. After reviewing the history of European integration and learning about the Community's institutions, common programs and market, we will consider a wide variety of themes important to Europe: economics, education, immigration, the environment, social issues, national and European identities, the debate over a Federal Europe vs. a Europe of nations, European social/cultural models vs. American liberalism, relations between the EU and the rest of the world. Considering the acute and ongoing challenges facing the European community, we will focus on current events and discuss issues that are critical to the EU in general and to France in particular. Students will be responsible for pursuing substantive research on these and other topics and participating actively in debates. This class will be conducted entirely in French and is designed to improve cross-cultural understanding and communicative skills in the presentational, interpretive and interpersonal modes.
Prerequisite: Two 200-level French courses taken at Penn or equivalent.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

FREN 325 Advanced French Translation
This course provides an introduction to the theory and practice of translation and is designed to help foster a critical understanding of differences between French and English syntactical and lexical patterns. It will introduce students to theoretical concepts and problems of translation, with the ultimate goal being to improve their ability to communicate in more authentic-sounding French. Students will have the opportunity to practice translation individually and to work with their peers on a variety of projects (advertising, journalistic and literary texts, movie and broadcast news subtitling) and to engage in critique and discussion of others’ translations. This course will help students refine their language skills and navigate more proficiently between these cultures and language systems. Prerequisite: Two 200-level French courses taken at Penn or equivalent. French 212 or equivalent highly recommended. (Designed for students who already have a solid foundation in French and English grammar)
For BA Students: Advanced Language Course
Course usually offered in spring term
Activity: Seminar

FREN 371 Poe's French Legacies
Edgar Allan Poe was considered a vulgar hack by many of his fellow Americans, but in 19th-century France, he was touted as a misunderstood poetic genius, the original poete maudit. Through the translations of Charles Baudelaire, who found in Poe a kindred spirit in the ‘gout de l'infini,’ French intellectuals came to know the American writer as a fount of aesthetic wisdom, diabolical sensibility, and mystic mastery. In this course, we will study Baudelaire’s poetry as well as the many literary and artistic movements in France that were directly inspired by Poe’s uncanny mix of the macabre and the methodical: Symbolist poetry (Valery, Mallarme), the Scientific Fantastic (Maupassant, Villiers de l’Isle-Adam), fin-de-siècle Decadence (Huysmans, Odilon Redon), Science Fiction (Verne), the detective novel (Gaboriau), and 20th-century Surrealism (Breton, Max Ernst). Prerequisite: Two 200-level French courses taken at Penn equivalent. Course not offered every year Activity: Seminar 1.0 Course Unit

FREN 380 Literature of the Twentieth Century
This course, the theme of which changes from semester to semester, provides an introduction to important trends in twentieth-century literature. Please check the department’s website for the course description: https://www.sas.upenn.edu/french/pc. Prerequisite: Two 200-level French courses taken at Penn or equivalent. Course not offered every year Activity: Seminar 1.0 Course Unit

FREN 382 Horror Cinema
The purpose of this course is to provide an introduction to the history and main themes of the supernatural/horror film from a comparative perspective. Films considered will include: the German expressionists masterworks of the silent era, the Universal classics of the 30’s and the low-budget horror films produced by Val Lewton in the 40’s for RKO in the US, the 1950’s color films of sex and violence by Hammer studios in England, Italian Gothic horror or giallo (Mario Brava) and French lyrical macabre (Georges Franju) in the 60’s, and on to contemporary gore. In an effort to better understand how the horror film makes us confront our worst fears and our most secret desires alike, we will look at the genre’s main iconic figures (Frankenstein, Dracula, Dr. Jekyll and Mr. Hyde, etc.) as well as issues of ethics, gender, sexuality, violence, spectatorship through a variety of critical lenses (psychoanalysis, socio-historial and cultural context, aesthetics...). Prerequisite: Two 200-level French courses taken at Penn or equivalent are required for FREN 382. There are no pre-requisites for CIMS 382. This course will be taught in English. Taught by: Met Course not offered every year Also Offered As: CIMS 382 Activity: Lecture 1.0 Course Unit

Notes: Two 200-level French courses taken at Penn or equivalent are required for FREN 382. There are no pre-requisites for CIMS 382. The course will be taught in English.

FREN 384 The French Novel of the Twentieth Century
Topics vary. Please check the department’s website for the course description: https://www.sas.upenn.edu/french/pc Prerequisite: Two 200-level French courses taken at Penn or equivalent. Course not offered every year Activity: Seminar 1.0 Course Unit

FREN 385 Modern French Theater
A study of major movements and major dramatists from Giraudoux and Sartre to the theater of the absurd and its aftermath. Prerequisite: Two 200-level French courses taken at Penn or equivalent. Course not offered every year Activity: Seminar 1.0 Course Unit

FREN 386 Paris in Film
Latter-day examples like Christophe Honore’s Dans Paris, Cedric Klapisch’s Paris or the international omnibus Paris, je t’aime (with each director paying homage to a distinctive ‘arondissement’ of the capital), not to mention American blockbusters like The Da Vinci Code and Inception or Woody Allen’s Midnight in Paris, are there to remind us that there is something special – indeed, a special kind of magic – about Paris in and on film. Despite the extreme polarization between Paris and provincial France in both cultural and socio-economic terms, cultural historians have argued that Paris is a symbol of France (as a centralized nation), more than Rome is of Italy and much more than Madrid is of Spain or Berlin of Germany, for example. The prevalence of the City of Lights on our screens, Gallic and otherwise, should therefore come as no surprise, be it as a mere backdrop or as a character in its own right. But how exactly are the French capital and its variegated people captured on celluloid? Can we find significant differences between French and non-French approaches, or between films shot on location that have the ring of ‘authenticity’ and studio-bound productions using reconstructed sets? Do these representations vary through time and perhaps reflect specific historical periods or zeitgeists? Do they conform to genre-based formulas and perpetuate age-old stereotypes, or do they provide new, original insights while revisiting cinematic conventions? Do some (sub)urban areas and/or segments of the Parisian population (in terms of gender, race, or class, for example) receive special attention or treatment? These are some of the many questions that we will seek to address...with a view to offering the next best thing to catching the next non-stop flight to Paris! Prerequisite: Two 200-level French course taken at Penn or equivalent. For French credit: Please register for both FREN 386-401 (lecture) and FREN 386-402 (recitation). The FREN 386-402 recitation is conducted in French. For Cinema and Media Studies credit: Please register for CIMS 386-401 (lecture) and CIMS 386-403 (recitation). Both lecture and recitation are taught in English. Prerequisite: Two 200-level French courses taken at Penn or equivalent. Taught by: Professor Philippe Met Course usually offered in spring term Also Offered As: CIMS 386 Activity: Lecture 1.0 Course Unit

FREN 389 France and Its Others
A historical appreciation of the impact of the exploration, colonization, and immigration of other peoples on French national consciousness, from the 16th century to the present. Emphasis is on the role of the Other in fostering critiques of French culture and society. Readings include travel literature, anthropological treatises, novels, and historical documents. Oral presentations and several short papers are included in the course. Prerequisite: Two 200-level French courses taken at Penn or equivalent. Course not offered every year Activity: Seminar 1.0 Course Unit
FREN 390 Francophone Postcolonial Cultures
A brief introduction about the stages of French colonialism and its continuing political and cultural consequences, and then reading in various major works – novels, plays, poems – in French by authors from Quebec, the Caribbean, Africa (including the Maghreb), etc. Of interest to majors in International Relations, Anthropology and African Studies, as well as majors in French. Taught in French. Prerequisite: Two 200-level French courses taken at Penn or equivalent.
Course not offered every year
Activity: Seminar
1.0 Course Unit

FREN 391 Global France
Please check the department's website for the course description: https://www.sas.upenn.edu/french/pc Prerequisite: Two 200-level French course taken at Penn or equivalent.
Course not offered every year
Activity: Seminar

FREN 392 Queering North African Subjectivities
This seminar will explore the ways in which literary and visual representations of sexual difference and gender roles disrupt the cultural imagination of everyday life in North Africa and its Diasporas. Special attention will be given to representations of Arab women and queer subjectivities as sites of resistance against dominant masculinity. We will analyze the ways in which representations of gender have allowed for a redeployment of power, a reconfiguration of politics of resistance, and the redrawing of longstanding images of Islam in France. Finally, we will question how creations that straddle competing cultural traditions, memories and material conditions can queer citizenship. Course taught in English.
Taught by: Gueydan-Turek

FREN 541 Transalpine Tensions: Franco-Italian Rivalries in the Renaissance
In the Middle Ages and Early Modern period, France and the Italian States were bound together by linguistic, economic, political, and religious ties, and intellectual developments never flowed unilaterally from one country to the other. On the contrary, they were transnational phenomena, and French and Italian thinkers and writers conceived of themselves and their work both in relation to and in opposition to one another. This course will consider the most fundamental aspects of Franco-Italian cultural exchange in the medieval and early modern period, with an emphasis on humanism, philosophical and religious debates, political struggles, and the rise of vernacular languages in literary and learned discourse. Authors to be studied include Dante, Petrarch, Boccaccio, Ficino, Pico della Mirandola Castiglione, Bembo, Rabelais, Marguerite de Navarre, Du Bellay, Machiavelli, and Montaigne. In addition to learning the material covered in the course, students will gain expertise in producing professional presentations and research papers, and will also have the opportunity to consult original material from the Kislak Center. This course is open to undergraduates with permission of the instructors. It counts toward the undergraduate minor in Global Medieval Studies and the graduate certificate in Global and Medieval Renaissance Studies. Undergraduates must obtain permission from instructor to enroll.

FREN 582 Fantastic Literature 19th/20th Centuries
This course will explore fantasy and the fantastic in short tales of 19th- and 20th-century French literature. A variety of approaches – thematic, psychoanalytic, cultural, narratological – will be used in an attempt to test their viability and define the subversive force of a literary mode that contributes to shedding light on the dark side of the human psyche by interrogating the 'real', making visible the unseen and articulating the unsaid. Such broad categories as distortions of space and time, reason and madness, order and disorder, sexual transgressions, self and other will be considered. Readings will include ‘recits fantastiques’ by Merimee, Gautier, Nerval, Maupassant, Breton, Pieyre de Mandiargues, Jean Ray and others.
Course not offered every year
Also Offered As: CIMS 582, COML 589
Activity: Seminar
1.0 Course Unit

FREN 590 Introduction to Francophone Studies
An introduction to major literary movements and authors from five areas of Francophonie: the Maghreb, West Africa, Central Africa, the Caribbean and Quebec.

1.0 Course Unit

FREN 595 Travel Literature
Within the context of the ill-defined, heterogeneous genre of the travelogue and of today's age of globalization, CNN and the Internet, this seminar will examine the poetics of travel writing based largely albeit not exclusively on travel notebooks, or journaux/carnets de voyage, spanning the 20th century from beginning to end. One of the principal specificities of the texts studied is that they all evince to a lesser or greater degree a paradoxical resistance both to the very idea of travel(ing) as such and to the mimetic rhetoric of traditional travel narratives. We will therefore look at how modern or postmodern texts question, revisit, subvert or reject such key notions of travel literature as exoticism, nostalgia, exile, nomadism, otherness or foreignness vs. selfhood, ethnicity and autobiography, etc. Authors considered will include Segalen, Morand, Michaux, Leiris, Levi-Strauss, Butor, Le Clezio, Baudrillard, Bouvier, Jouanard, Leuwers.

FREN 605 Modern Literary Theory and Criticism
This course will provide an overview of major European thinkers in critical theory of the 20th and 21st centuries. We will pay particular attention to critical currents that originated in Eastern European avant-garde and early socialist contexts and their legacies and successors. Topics covered will include: Russian Formalism and its successors in Structuralism and Deconstruction (Shklovsky, Levi-Strauss, Jakobson, Derrida); Bakhtin and his circle, dialogism and its later western reception; debates over aesthetics and politics of the 1930s (Lukacs, Brecht, Adorno, Benjamin, Radek, Clement Greenberg); the October group; Marxism, new Left criticism, and later lefts (Althusser, Williams, Eagleton, Jameson, Zizek). Taught by: Platt
One-term course offered either term
Also Offered As: COML 605, ENGL 605, GRMN 605, REES 605
Activity: Seminar
1.0 Course Unit

FREN 609 Global France
The purpose of this course is to examine the various modalities of interaction between anthropology and literature in modern French culture. Our guiding thesis is that the turn toward other cultures has functioned as a revitalizing element in the production of cultural artifacts while providing an alternative vantage point from which to examine the development of French culture and society in the contemporary period. The extraordinary innovations of 'ethnosurrealism' in the twenties and thirties by such key figures of the avant-garde as Breton, Artaud, Bataille, Caillois, and Leiris, have become acknowledged models for the postwar critical thought of Barthes, Derrida, and Foucault, as well as inspiring a renewal of 'anthropology as cultural critique in the United States.' Besides the authors just indicated, key texts by Durkheim, Mauss and Levi-Strauss will be considered both on their own terms and in relation to their obvious influence. The institutional fate of these intellectual crossovers and their correlative disciplinary conflicts will provide the overarching historical frame for the course, from the turn of the century to the most recent debates.

FREN 620 Paris and Philadelphia: Landscapes and Literature of the 19th Century
This course explores the literal and literary landscapes of 19th-century Paris and Philadelphia, paying particular attention to the ways in which the built environment is shaped by and shapes shifting ideologies in the modern age. Although today the luxury and excesses of the 'City of Light' may seem worlds apart from the Quaker simplicity of the 'City of Brotherly Love,' Paris and Philadelphia saw themselves as partners and mutual referents during the 1800s in many areas, from urban planning to politics, prisons to paleontology. This interdisciplinary seminar will include readings from the realms of literature, historical geography, architectural history, and cultural studies as well as site visits to Philadelphia landmarks, with a view to uncovering overlaps and resonances among different ways of reading the City. We will facilitate in-depth research by students on topics relating to both French and American architectural history, literature, and cultural thought.
Taught by: Professors Andrea Goulet and Aaron Wunsch (Design)
Course usually offered in fall term
Also Offered As: COML 625

FREN 645 Renaissance Art, Architecture, and Society
This course examines the relationship between art and society in the context of the Italian Renaissance. It focuses on works of art from the 15th and 16th centuries, and considers how these works reflect and shape the social and cultural conditions of their time. The course will explore the role of patronage and the influence of humanist ideas on art production and reception. Taught by: Professors Andrea Goulet and Aaron Wunsch (Design)
Course usually offered in fall term
Also Offered As: COML 645
Activity: Seminar
1.0 Course Unit

FREN 650 Studies in the 17th Century
Topics of discussion will vary from semester to semester. One possible topic is 'The Royal Machine: Louis XIV and the Versailles Era.' We will examine certain key texts of what is known as the Golden Age of French literature in tandem with a number of recent theoretical texts that could be described as historical. Our goal will be to explore the basis of 'the new historicism,' a term that is designed to cover a variety of critical systems that try to account for the historical specificity and referentiality of literary texts. Please see department's website for current course description: https://www.sas.upenn.edu/french/pc
Course not offered every year
Activity: Seminar
1.0 Course Unit

FREN 660 Studies in the Eighteenth Century
Topics of discussion will vary from semester to semester. One possible topic is 'Masterpieces of the Enlightenment.' We will read the most influential texts of the Enlightenment, texts that shaped the social and political consciousness characteristic of the Enlightenment—for example, the meditations on freedom of religious expression that Voltaire contributed to 'affaires' such as the 'affaire Calas.' We will also discuss different monuments of the spirit of the age—its corruption (Les Liaisons dangereuses), its libertine excesses and philosophy (La Philosophie dans le boudoir). We will define the specificity of 18th-century prose (fiction), guided by a central question: What was the Enlightenment?

FREN 681 Studies in Modern French Poetry
How does one approach the modern poetic text which ever since the Mallarmean 'crise de vers' appears to have cut loose from all referential anchoring and traditional markers (prosody, versification, etc.)? This course will present an array of possible methodological answers to this question, focusing on poetic forms and manifestations of brevity and fragmentation. In addition to being submitted to precise formal and textual inquiries, each text or work will be the point of departure for the analysis of a specific theoretical issue and/or an original practice - e.g., genetic criticism, translation theory, the poetic 'diary', aphoristic modes of writing, quoting and rewriting practices, etc. Texts by key modern poets (Ponge, Chazal, Du Bouchet, Jourdan, Jabes, Michaux).

Freshman Seminar (FRSM)
FRSM 002 Research: From Curiosity to Knowledge
How does one act on curiosity about the physical and living world and the human cultures in it? This seminar will use case-study and brainstorming approaches to explore how people generate and define good questions, pitting curiosity against ignorance, and practice research to answer these questions in a wide range of disciplines, from the humanities and social sciences to natural sciences and engineering. We identify common components (e.g., evidence, method) and how they differ among a broad spectrum of phenomena and human behavior, and how might we observe and trace patterns in them to find new ideas and answers. We will also highlight field-specific approaches for translating evidence into knowledge. The seminar will be structured around readings, discussions, active learning activities and field trips to active research sites on campus (e.g., labs, archives and museums). Our goal is to enable students to participate in and appreciate how research is performed in a range of areas, as a stimulus to using the arts of observation and questioning for whatever might be their own objects of curiosity.
Taught by: Plante
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

Gender, Sexuality & Women's Studies (GSWS)
GSWS 002 Gender and Society
This course will introduce students to the ways in which sex, gender, and sexuality mark our bodies, influence our perceptions of self and others, organize families and institutions, delimit opportunities for individuals and groups of people, as well as impact the terms of local and transnational economic exchange. We will explore the ways in which sex, gender, and sexuality work with other markers of difference and social status such as race, age, nationality, and ability to further demarcate possibilities, freedoms, choices, and opportunities available to people.
Prerequisite: Requirement for Gender, Sexuality and Women's Studies major and minor
For BA Students: Society Sector
Taught by: Beetham
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: Requirement for Gender, Sexuality and Women's Studies major
GSWS 003 Introduction to Sexuality Studies and Queer Theory
This course will introduce students to the historical and intellectual forces that led to the emergence of queer theory as a distinct field, as well as to recent and ongoing debates about gender, sexuality, embodiment, race, privacy, global power, and social norms. We will begin by tracing queer theory's conceptual heritage and prehistory in psychoanalysis, deconstruction and poststructuralism, the history of sexuality, gay and lesbian studies, woman-of-color feminism, the feminist sex wars, and the AIDS crisis. We will then study the key terms and concepts of the foundational queer work of the 1990s and early 2000s. Finally, we will turn to the new questions and issues that queer theory has addressed in roughly the past decade. Students will write several short papers.
Course usually offered in fall term
Also Offered As: ENGL 003
Activity: Lecture
1.0 Course Unit

GSWS 004 The Family
Family life is deeply personal but at the same time is dramatically impacted by social forces outside of the family. In this course we will examine how families are organized along the lines of gender, sexuality, social class, and race and how these affect family life. We will consider how family life is continually changing while at the same time traditional gender roles persist. For example, how 'greedy' workplaces, which require long work hours, create work-family conflicts for mothers and fathers. We will also examine diverse family forms including single-parent families, blended families, families headed by same-gender parents, and families headed by gender non-conforming parents. The lectures will also examine how economic inequality shapes family life. Students will have the opportunity to apply key concepts to daily life.
For BA Students: Society Sector
Taught by: Lareau
One-term course offered either term
Also Offered As: SOCI 004, SOCI 524
Activity: Seminar
1.0 Course Unit

GSWS 007 Population and Society
The course serves as an introduction to the study of population and demography, including issues pertaining to fertility, mortality, migration, and family formation and structure. Within these broad areas we consider the social, economic, and political implications of current trends, including: population explosion, baby bust, the impact of international migration on receiving societies, population aging, racial classification, growing diversity in household composition and family structure, population and environmental degradation, and the link between population and development/poverty.
For BA Students: Society Sector
Taught by: Flippen, Harknett, Kohler, Zuberi
One-term course offered either term
Also Offered As: SOCI 007
Activity: Lecture
1.0 Course Unit

GSWS 008 Critical Speaking Seminar
American political discourse, especially since September 11th, has often depicted Islam as an oppressive force from which both Muslims and non-Muslims, particularly women and gender/sexual minorities, must be saved. In this CWIC critical speaking seminar, we will investigate how oral and written narratives such as political rhetoric, apologetics and historical sources - claim to establish unassailable 'facts' about Islam, Muslims and the Middle East. We will also investigate how the notion of empire both in its traditionally understood form in Islamic and European history, as well as in its iterations as US Military and soft power-privileges certain voices over others, and how we can reclaim the voices of the marginalized in both contemporary discourse as well as historical oral traditions.
Taught by: Rafii
One-term course offered either term
Also Offered As: COML 014, NELC 008
Activity: Seminar
1.0 Course Unit

GSWS 017 Topics in Literature
An introduction to Writing about Literature, with emphasis on a particular theme, genre, or period. See the English Department's website at www.english.upenn.edu for a description of current offerings.
For BA Students: Humanities and Social Science S
One-term course offered either term
Also Offered As: CIM 015, CLST 019, ENGL 015, LALS 016
Activity: Seminar
1.0 Course Unit

GSWS 028 Introduction to Feminist Philosophy
This course is an introduction to feminist thought, both in theory and in practice. We will consider how feminist thought emerged and evolved, as well as how feminist theories respond to various intellectual, social and political challenges. Questions we will address include: What exactly is feminism? How does one's gender identity impact one's lived experiences? How should we revise, reformulate, or rethink traditional answers to political and ethical issues in light of feminist theories? How can feminist analyses contribute to the development of better science, and our conceptions of knowledge? Prerequisite: Offered through the College of General Studies.
Taught by: M. Meyer
Course not offered every year
Also Offered As: PHIL 028
Activity: Seminar
1.0 Course Unit

GSWS 040 Womanism and Identity Politics in the Realm of Hip-Hop
This course centers on the intersections of womanism, woman of color identity development, and agency within hip-hop culture. We will touch on several topics that uncover the condition of minoritized women in hip-hop media, including creating/owning space, lyrical assault, defining womanhood, sexuality, and fetishes. In exploring music, literature, advertisements, film, and television, we will discuss the ways women of color construct understandings of self, while navigating and reimagining reality within hip-hop contexts.
Taught by: Patterson
Also Offered As: URBS 050
Activity: Seminar
1.0 Course Unit
GSWS 050 The Romantic Period
This course offers an introduction to the literature of the Romantic period (ca. 1770-1830). Some versions of this course will incorporate European romantic writers, while others will focus exclusively on Anglo-American romanticism, and survey authors such as Austen, Blake, Brockden Brown, Byron, Coleridge, Emerson, Irving, Keats, Radcliffe, Scott, Shelley, and Wordsworth. The primary for this course is ENGL-050. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: ENGL 050
Activity: Lecture
1.0 Course Unit

GSWS 060 Latina/o Literature and Culture
This course offers a broad introduction to the study of Latina/o/x culture. We will examine literature, theater, visual art, and popular cultural forms, including murals, poster art, graffiti, guerrilla urban interventions, novels, poetry, short stories, and film. In each instance, we will study this work within its historical context and with close attention to the ways it illuminates class formation, racialization, and ideologies of gender and sexuality as they shape Latino/a/xs' experience in the U.S. Topics addressed in the course will include immigration and border policy, revolutionary nationalism and its critique, anti-imperialist thought, Latinx feminisms, queer latinidades, ideology, identity formation, and social movements. While we will address key texts, historical events, and intellectual currents from the late 19th century and early 20th century, the course will focus primarily on literature and art from the 1960s to the present. All texts will be in English.

GSWS 081 African-American Literature
An introduction to African-American literature, typically ranging across a wide spectrum of moments, methodologies, and ideological postures, from Reconstruction and the Harlem Renaissance to the Civil Rights Movement. Most versions of this course will begin in the 19th century; some versions of the course will concentrate only on the modern period. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: AFRC 081, ENGL 081
Activity: Lecture
1.0 Course Unit

GSWS 090 Gender, Sexuality, and Literature
This course will focus on questions of gender difference and of sexual desire in a range of literary works, paying special attention to works by women and treatments of same-sex desire. More fundamentally, the course will introduce students to questions about the relation between identity and representation. We will attend in particular to intersections between gender, sexuality, race, class, and nation, and will choose from a rich vein of authors: Mary Wollstonecraft, Jane Austen, Mary Shelley, Lord Byron, the Brontes, Christina Rossetti, George Eliot, Oscar Wilde, Henry James, Gertrude Stein, Zora Neale Hurston, E. M. Forster, Virginia Woolf, Nella Larsen, Radclyffe Hall, Willa Cather, Elizabeth Bishop, Jean Rhys, James Baldwin, Sylvia Plath, Bessie Head, Audre Lorde, Adrienne Rich, Cherrie Moraga, Toni Morrison, Michael Cunningham, Dorothy Allison, Jeanette Winterson, and Leslie Feinberg. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.

GSWS 096 Theories of Gender and Sexuality
What makes men and women different? What is the nature of desire? This course introduces students to a long history of speculation about the meaning and nature of gender and sexuality – a history fundamental to literary representation and the business of making meaning. We will consider theories from Aristophanes speech in Platios Symposium to recent feminist and queer theory. Authors treated might include: Plato, Shakespeare, J. S. Mill, Mary Wollstonecraft, Sigmund Freud, Virginia Woolf, Simone de Beauvoir, Adrienne Rich, Audre Lorde, Michel Foucault, Gayle Rubin, Catherine MacKinnon, Eve Kosofsky Sedgwick, Judith Butler, bell hooks, Leo Bersani, Gloria Anzaldua, David Halperin, Cherrie Moraga, Donna Haraway, Gayatri Spivak, Diana Fuss, Rosemary Hennesy, Chandra Tadpole Mohanty, and Susan Stryker. See the English Department's website at www.english.upenn.edu for a description of the current offerings.

GSWS 101 Study of an Author
This is an introduction to literary study through the works of a single author–often Shakespeare, but some versions of this course will feature other writers. (For offerings in a given semester, please see the on-line course descriptions on the English Department website.) We will read several works and approach them–both in discussion and in writing–from a range of critical perspectives. The author's relation to his or her time, to literary history generally, and to the problems of performance, are likely to be emphasized. This course is designed for the General Requirement; it is also intended to serve as a first or second course for prospective English majors. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.

GSWS 103 Sex and Human Nature
This course is an introduction to the scientific study of sex in humans. Within an evolutionary framework, the course examines genetic, physiological, ecological, social and behavioral aspects of sex in humans. After providing the basic principles of evolutionary biology, the course delves into the development of sexual anatomy and physiology. Among the subjects to be explored are sex determination, the nature of orgasms, and the sexual development of females and males from birth to adulthood. The role of ecology and social life in shaping human mating patterns is also evaluated using ethnographic and cross-cultural materials from a variety of human cultures. In particular, the course examines why humans marry or pair bond, whether there is a biological basis of love, which biological and psychological factors produce jealousy. Finally, the course explores topics relevant to human sexuality today, such as the 'hook-up culture', contraception and abortion, sex work, sexual transmitted diseases, and the ethical and legal dimensions of human sexuality.

GSWS 104 Sex and Gender in Ancient Greece and Rome
What is being a man, being a woman, being masculine, being feminine, being neither, being both? Is sex about pleasure, domination, identity, reproduction, or something else? Are sexual orientation and gender identity innate? How can words, myths and stories inform cultural assumptions about sex and gender? Did people in ancient times have a concept of sexuality? How do gendered English terms (like 'girly', 'effeminate', or 'feisty') compare to gendered ancient Greek and Latin terms, like virtus, which connotes both 'virtue' and 'masculinity'? Why did the Roman and English speaking worlds have to borrow the word 'clitoris' from the ancient Greeks? How did people in antiquity understand consent? Can we ever get access to the perspectives of ancient women? In this introductory undergraduate course, we will learn about sex and gender in ancient Greece and Rome. We will discuss similarities and differences between ancient and modern attitudes, and we will consider how ancient texts, ancient art, ancient ideas and ancient history have informed modern western discussions, assumptions and legislation. Our main readings will be of ancient texts, all in English translation; authors studied will include Ovid, Aristophanes, Plato, Euripides, and Sappho. Class requirements will include participation in discussion as well as quizzes, reading responses, and a final exam.
Taught by: Wilson
Also Offered As: CLST 101, COML 105
Activity: Lecture
1.0 Course Unit

GSWS 109 Gender, Sexuality, & Religion
What does it mean to be a gendered individual in a Muslim, Hindu, Jewish, Christian, Buddhist, or Sikh religious tradition? How important are gender differences in deciding social roles, ritual activities, and spiritual vocations? This course tackles these questions, showing how gender - how it is taught, performed, and regulated - is central to understanding religion. In this course we will learn about gendered rituals, social roles, and mythologies in a range of religious traditions. We will also look at the central significance of gender to the field of religious studies generally. The first part of the course will be focused on building a foundation of knowledge about a range of religious traditions and the role of gender in those traditions. This course emphasizes religious traditions outside the West. Although it is beyond the scope of this class to offer comprehensive discussions of any one religious tradition, the aim is to provide entry points into the study of religious traditions through the lens of gender. This course will emphasize both historical perspectives and contemporary contexts. We will also read religion through feminist and queer lenses - we will explore the key characteristics of diverse feminist and queer studies approaches to religion, as well as limits of those approaches.

GSWS 111 Gender and Elections in America and Beyond
This course tackles four theoretical and empirical challenges related to gender and political equality: the extension of citizenship rights and voting rights to women; the problem of women's persistent under-representation in politics; the nature of the gender gap in preferences across time and space; and the possibilities for substantive representation. We will focus about half the class on the US (contrasting the experiences of white and black women and men in politics) and the other half on other countries, detailing how different party systems, variation in electoral rules (like proportional representation), and institutional innovations such as gender quotas, enable or constrain gender equality in politics.

**GSWS 114 Discrimination: Sexual and Racial Conflict**
This course is concerned with the structure, the causes and correlates, and the government policies to alleviate discrimination by race and gender in the United States. The central focus of the course is on employment differences by race and gender and the extent to which they arise from labor market discrimination versus other causes, although racial discrimination in housing is also considered. After a comprehensive overview of the structures of labor and housing markets and of nondiscriminatory reasons (that is, the cumulative effects of past discrimination and/or experiences) for the existence of group differentials in employment, wages and residential locations, various theories of the sources of current discrimination are reviewed and evaluated. Actual government policies and alternatives policies are evaluated in light of both the empirical evidence on group differences and the alternative theories of discrimination.

**GSWS 118 Iranian Cinema: Gender, Politics and Religion**
This seminar explores Iranian culture, society, history and politics through the medium of film. We will examine a variety of cinematic works that represent the social, political, economic and cultural circumstances of contemporary Iran, as well as the diaspora. Along the way, we will discuss issues pertaining to gender, religion, nationalism, ethnicity, and the role of cinema in Iranian society and beyond. Discussions topics will also include the place of the Iranian diaspora in cinema, as well as the transnational production, distribution, and consumption of Iranian cinema. Films will include those by internationally acclaimed filmmakers, such as Rakhshan Bani-Etemad, Asghar Farhadi, Bahman Gobadi, Abbas Kiarostami, Mohsen Makhmalbaf, Dariush Mehrjui, Tahmineh Milani, Jafar Panahi, Marjane Satrapi and others. All films will be subtitled in English. No prior knowledge is required.

**GSWS 119 Witchcraft and Possession**
This course explores world witchcraft and possession from the persecutions of the early seventeenth century through the rise of Wicca in the twentieth century. The mere mention of these terms, or of such close cousins as demonology, sorcery, exorcism, magic, and the witches Sabbath, raises clear ethnographic and historical challenges. How can the analysis of witchcraft— including beliefs, patterns of accusation, the general social position of victims, the intensity and timing of witch hunts, and its relation to religious practice, law, language, gender, social marginalization, and property—lead us to a more humane understanding of belief and action? Films such as The Exorcist, The Blair Witch Project, The Crucible, and Three Sovereigns for Sarah will focus discussion.

**GSWS 122 The Sociology of Gender**
Gender is an organizing principle of society, shaping social structures, cultural understandings, processes of interaction, and identities in ways that have profound consequences. It affects every aspect of people's lives, from their intimate relationships to their participation in work, family, government, and other social institutions and their place in the stratification system. Yet gender is such a taken for granted basis for differences among people that it can be hard to see the underlying social structures and cultural forces that reinforce or weaken the social boundaries that define gender. Differences in behavior, power, and experience are often seen as the result of biological imperatives or of individual choice. A sociological view of gender, in contrast, emphasizes how gender is socially constructed and how structural constraints limit choice. This course examines how differences based on gender are created and sustained, with particular attention to how other important bases of personal identity and social inequality—race and class—intersect with patterns of gender relations. We will also seek to understand how social change happens and how gender inequality might be reduced.

Activity: Seminar
1.0 Course Unit

**GSWS 125 Sex and Representation**
This course explores literature that resists normative categories of gender and sexuality. By focusing on figures writing from the margins, we will explore how radical approaches to narrative form and subject-matter invite us to think in new ways about desire and identity. We will read texts that blur the boundaries between fact and fiction, hybridizing the genres of poetry, drama, and autobiography to produce new forms of expression, such as the graphic novel, auto-fiction, and prose poetry. From Virginia Woolf's gender-bending epic, Orlando, to Tony Kushner's Angels in America, this course traces how non-normative desire is produced and policed by social and literary contexts - and how those contexts can be re-imagined and transformed.

GSWS 152 Love and Loss in Japanese Literary Traditions: In Translation
How do people make sense of the multiple experiences that the simple words ’love’ and ’loss’ imply? How do they express their thoughts and feelings to one another? In this course, we will explore some means Japanese culture has found to grapple with these events and sensations. We will also see how these culturally sanctioned frameworks have shaped the ways Japanese view love and loss. Our materials will sample the literary tradition of Japan from earliest times to the early modern and even modern periods. Close readings of a diverse group of texts, including poetry, narrative, theater, and the related arts of calligraphy, painting, and music will structure our inquiry. The class will take an expedition to nearby Woodlands Cemetery to experience poetry in nature. By the end of the course, you should be able to appreciate texts that differ slightly in their value systems, linguistic expressions, and aesthetic sensibilities from those that you may already know. Among the available project work that you may select, if you have basic Japanese, is learning to read a literary manga. All shared class material is in English translation.

GSWS 160 Sex and Socialism
This seminar examines classic and current scholarship and literature on gender and sexuality in contemporary Eastern Europe, and examines the dialogue and interchange of ideas between East and West. Although the scholarly and creative works will primarily investigate the changing status of women during the last three decades, the course will also look at changing constructions of masculinity and LGBT movements and communities in the former communist bloc. Topics will include: the woman question before 1989; gender and emerging nationalisms; visual representations in television and film; social movements; work; romance and intimacy; spirituality; and investigations into the constructed concepts of ’freedom’ and ’human rights’.

GSWS 162 Women in Jewish Literature
’Jewish woman, who knows your life? In darkness you have come, in darkness do you go.’ J. L. Gordon (1890). This course will bring into the light the long tradition of women as readers, writers, and subjects in Jewish literature. All texts will be in translation from Yiddish and Hebrew, or in English. Through a variety of genres – devotional literature, memoir, fiction, and poetry – we will study women’s roles and selves, the relations of women and men, and the interaction between Jewish texts and women’s lives. The legacy of women in Yiddish devotional literature will serve as background for our reading of modern Jewish fiction and poetry from the past century. The course is divided into five segments. The first presents a case study of the Matriarchs Rachel and Leah, as they are portrayed in the Hebrew Bible, in rabbinic commentary, in pre-modern prayers, and in modern poems. We then examine a modern novel that recasts the story of Dinah, Leah’s daughter. Next we turn to the seventeenth century Glikl of Hamel, the first Jewish woman memoirist. The third segment focuses on devotional literature for and by women. In the fourth segment, we read modern women poets in Yiddish, Hebrew, and English. The course concludes with a fifth segment on fiction written by women in Yiddish, Hebrew, and English. All readings and lectures in English.

GSWS 165 The Asian Caribbean
This course complicates prevailing understandings of the Caribbean and extends the boundaries of Asian America by exploring the histories, experiences, and contributions of Asians in the Caribbean. In particular, we will focus on the migrations of Chinese and Indian individuals to Cuba, Trinidad, and Guyana as well as how their descendants are immigrating to the United States. We will examine the legal and social debates surrounding their labor in the 19th century, how they participated in the decolonization of the region, and how their migration to the United States complicates our understandings of ethnicity and race. Ultimately, through our comparative race approach, we will appreciate that the Caribbean is more than the Black Caribbean, it is also the Asian Caribbean.

GSWS 201 Divinities, Diviners and Divinations: Religions of the African Diaspora
This undergraduate course is designed to provide students with a broad introduction to major themes within African Diasporic Religions. This is an interdisciplinary course. We will be drawing upon various theoretical methods, i.e. historical, ethnographical, and autobiographical. Additionally, we will be examining visual media to understand the presence and value of African Diasporic Religions in the 20th/21st century. Special attention will be given to Vodou, Santeria, and Candomble in the Americas. Thematically, we will work through concepts of the diaspora; memory, myth and authenticity; ritual and material practices; borders, migration, gender and sexuality, religious Commodities and exchange. As we traverse through these various religious traditions, it is through the readings, lectures, invited speakers, films and class discussions that we will develop a complex understanding of integrative religious worldviews that impacts every aspect of life: family structure, gender relations, education, healing, economics, politics, arts, and so on. It is with the hopes that we can apprehend how these traditions are indeed an American Religion.

GSWS 202 Spirit possession in Caribbean Religions
This course is designed to provide students with a broad introduction to possession experiences in Caribbean Religions. Through historical, ethnographic, autobiographical, literary and visual texts this course examines complex, gendered practices within the possession process, the vibrant spiritual energy that sustains communal connections during religious ceremonies, and the transnational imaginations that animate Caribbean religious practices in the Americas. Special attention will be given to Santeria, Candomble, Vodou, Myal, Palo Monte, and Revival Zion in the Americas. Possession is a process through which gender and sexuality can be performed, contesting national and regional discourses of sexuality, gender, and race in the Caribbean. Thematically, we will work through concepts of memory, community, adornment, ritual, borders, and the senses. We will investigate religious ritual practices to understand various religious worldviews that shape communities' religious and social lives.

GSWS 220 Asian American Women: Nation, Self and Identity
This course examines the literary constructions of Asian American Women’s identity in relation to the U.S. nation state. How have the figures of the tiger mother, the Asian nerd, the rice queen, the trafficked woman, the geisha, the war bride, emerged to represent Asian American women, and how have Asian American feminists responded to these problematic racial stereotypes? How does the scholarship on such racialized representations illuminate historical and contemporary configurations of gender, sexuality, race, class, nation, citizenship, migration, empire, war, neoliberalism and globalization as they relate to the lives of Asian American women? In exploring these questions, this course examines Asian American histories, bodies, identities, diasporic communities, representations, and politics through multi- and interdisciplinary approaches, including social science research, literature, popular representations, film, poetry and art.

GSWS 222 African Women's Lives: Past and Present
Restoring women to African history is a worthy goal, but easier said than done. The course examines scholarship over the past forty years that brings to light previously overlooked contributions African women have made to political struggle, religious change, culture preservation, and economic development from pre-colonial times to present. The course addresses basic questions about changing women's roles and human rights controversies associated with African women within the wider cultural and historical contexts in which their lives are lived. It also raises fundamental questions about sources, methodology, and representation, including the value of African women's oral and written narrative and cinema production as avenues to insider perspectives on African women's lives.

GSWS 227 Sex and Power
Gender has been a primary way of organizing power relations throughout history. This class asks how transformations in the global economy, technological change, new patterns of household formation, and social movements, have influenced women’s access to economic and political positions over the past two centuries. We will examine how women’s mobilization contributed to the abolition of slavery, reform of property and franchise laws, and to the formation of the welfare state. Next, we turn to thinking about how women’s increasing labor force participation was hindered by institutions like marriage bars and union policy. Third, we look at cross-national patterns of women’s political participation and descriptive representation including whether and how the adoption of electoral quotas influences gender equality more generally. Finally we study how institutional norms and gender stereotypes affect political representation. This class will draw on examples from around the world, and will look a experiences of women from all economic, social, and aspiritive backgrounds.

GSWS 228 Topics In Classicism and Literature
Ancient epic and mythology had a curious and rich afterlife in the Middle Ages. Virgil and Ovid were taught in medieval schools, read for their moral content, and revered as fiction that concealed great philosophical value. Their influence also gave rise to the great literary form of the Middle Ages, romance: narratives that place a premium on erotic love, individual quests, the unpredictability of adventure, and imaginary or exotic settings. Yet despite what may appear to be merely gratifying entertainment, medieval romance and medieval receptions of classical myth did tremendous cultural work, enabling profound explorations of history, political values, gender and sexual identity, and social power. We will spend some weeks reading Virgil’s Aeneid and Ovid’s Heroides and Metamorphoses. Then we will turn to medieval reimaginings of classical myth and metamorphosis, including poetry by Marie de France, Chretien de Troyes, and Chaucer, and anonymous works such as Sir Gawain and the Green Knight. The course requirements will be: one very short oral presentation on a research topic of your choice related to the reading, together with a short write-up of your research; one short critical paper; and one longer research paper (which can develop the subject of your oral presentation).

GSWS 234 Gender, Religion, and China
This course examines the interrelationship among ‘gender,’ ‘religion,’ and ‘China’ as conceptual and historical categories. We ask, for example, how gender plays critical and constitutive roles in Chinese religious traditions, how religion can be used both to reinforce and to challenge gender norms, how religious women impact Chinese society and culture, and what the construction of ‘China’ as a cultural identity and as a nation-state has to do with women, gender, and religion. We will also think about what assumptions we have when speaking of gender, religion, and China, and the infinite possibilities when we strive to think beyond. We will read three kinds of materials: (1) scholarship on gender and religion in historical and contemporary China as well as the Chinese-speaking world, (2) scholarship concerning theories and methodology of gender and religious studies not necessarily focused on China, and (3) historical record of religious women in English translation.

GSWS 242 Science of Sex & Sexuality
While sexual and gender diversity have been consistent features in most cultures throughout history, how such gender and sexual based discussion have been articulated, understood, condoned, or condemned has varied. If medical historians and queer theorists have paid most obsessive attention to these subjects, bioethicists have intervened to a lesser degree and on only a handful of relevant subjects. Bearing in mind the social and medical legacies related to sexual and gender identities, this course will consider a range of historical and contemporary topics which speak to the intersection of bioethical dilemmas on medicine, sexuality and gender identity, including: the gay adolescent, the intersex person, gay-conversion therapies, the prospect of gay gene studies, sex addiction, queer blood/organ donation policies, and the wake of the global HIV/AIDS pandemic. Specifically, we will focus on literary sources (memoirs, diaries, and films) as well as non-literary accounts (medical texts, bioethical scholarship, and historical records) that explore the emotional and somatic aspects of matters related to sexuality, gender identity, and bioethics.

GSWS 243 The Fantastic and Uncanny in Literature: Ghosts, Spirits & Machines
Do we still believe in spirits and ghosts? Do they have any place in an age of science of technology? Can they perhaps help us to define what a human being is and what it can do? We will venture on a journey through literary texts from the late eighteenth century to the present to explore the uncanny and fantastic in literature and life. Our discussions will be based on a reading of Sigmund Freud’s essay on the uncanny, and extraordinary Romantic narratives by Ludwig Tieck, E.T.A. Hoffmann, Edgar Allan Poe, Nathaniel Hawthorne, Prosper Merimee, Villiers de l’Isle-Adam, and others. All readings and lectures in English.

GSWS 244 American Feminist and LGBT Movements, 1960s-1980s
This seminar explores the history of the feminist and LGBT movements from the mid-1960s to mid-1980s in Philadelphia. Although there will be some attention to national organizations, we will focus on social and political activism as it was made in local groups and spaces. We will explore the social and cultural web that fostered activism, for example, in gay and lesbian coffee houses, campus women’s centers, bookstores, and radio shows. We will also pay attention to groups and actions that may not have been self-consciously defined as ‘feminist’ or ‘gay liberationist,’ but had important effects on social change related to gender and sexuality; these include African American, Latino/a, and working-class organizations. This is a hands-on research seminar, with students exploring local archives and special collections to document and analyze these complex movements. Each student will conduct an oral history, analyze a set of published and printed sources, and write a paper based on archival research.
Taught by: Peiss

Activity: Seminar
1.0 Course Unit
Notes: This is an Academically-Based Community Service course.
Enrollment in the course is by permit only following an interview with the instructor. Please be in touch with Professor Detlefsen <detlefsen@sas.upenn.edu> to schedule an interview.

GSWS 248 High School Ethics Bowl
In this course, teams of undergraduate students, each joined by a graduate student in philosophy, will coach teams of high school students for participation in the National High School Ethics Bowl, an annual competitive yet collaborative event in which teams analyze and discuss complex ethical dilemmas. Cases for the 2019-20 Ethics Bowl will be released in September 2019, and these will serve as a foundational starting point for the undergraduate students’ investigations into ethical theory and the study of the ethics bowl itself, to develop the capacities to provide coaching and mentorship to the teams of high school students from schools in West Philadelphia and across the city. Undergraduates will travel to these schools as part of the course, and there will be one or two Saturday sessions when all high school convene on Penn's campus for practice scrimmages. This course will introduce the ethics bowl to many new Philadelphia School District schools and students, and it will provide Penn students with the opportunity to develop their teaching and communication skills, build collaborative relationships with community schools, and solidify their knowledge of ethical theory through coaching.
Taught by: Detlefsen

Notes: This is an Academically-Based Community Service course.

GSWS 249 Philosophy of Education
The philosophy of education asks questions about the foundational assumptions of our formal institutions for the reproduction of culture. It ranges therefore, from epistemology and philosophy of mind to ethics and political philosophy. For instance: What is the nature of learning and teaching? How is it possible to come to know something we did not know already—and how can we aid others in doing that? How, if at all, should formal institutions of education be concerned with shaping students’ moral and civic character? What is the proper relation between educational institutions and the state? We also ask questions more specific to our own time and context. For example: how, in a multicultural state, should we educate students of varied social identities, like race, gender, and religion? What is the relationship between education and justice.

**GSWS 252 Freud: The Invention of Psychoanalysis**
No other person of the twentieth century has probably influenced scientific thought, humanistic scholarship, medical therapy, and popular culture as much as Sigmund Freud. This course will study his work, its cultural background, and its impact on us today. In the first part of the course, we will learn about Freud's life and the Viennese culture of his time. We will then move to a discussion of seminal texts, such as excerpts from his Interpretation of Dreams, case studies, as well as essays on psychoanalytic practice, human development, definitions of gender and sex, neuroses, and culture in general. In the final part of the course, we will discuss the impact of Freud's work. Guest lectureres from the medical field, history of psychology, and the humanities will offer insights into the reception of Freud's work, and its consequences for various fields of study and therapy.

**GSWS 255 Thinking about Capitalism**
Throughout the world today, economists are influential policymakers and pub intellectuals, and non-economists understand many aspects of their lives in economic terms. But as recently as 1945 in some regions of the world and a distantly as 1776 in others, the concept of the economy, the field of economics, and economists as a professional community did not exist. This class explores non-economic ways of understanding material life that have preceded, challenged, or undergirded economic thinking; the emergence of th economy and economics as naturalized, globally recognized concepts; the formation of economists as an authoritative professional group; and the ris of economic reasoning in daily life. The class takes a global approach, exploring these developments in societies from eighteenth-century Britain t twentieth-century Egypt in order to understand the local variations, international relationships, and transnational processes at work. It simultaneously takes a social approach to intellectual history, considering how popular and professional ideas developed in relation to one another, an how knowledge related to lived experience.

**GSWS 257 Contemporary Fiction & Film in Japan**
This course will explore fiction and film in contemporary Japan, from 1945 to the present. Topics will include literary and cinematic representation of Japan s war experience and post-war reconstruction, negotiation with Japanese classics, confrontation with the state, and changing ideas of gender and sexuality. We will explore these and other questions by analyzing texts of various genres, including film and film scripts, novels, short stories, mangazines, and academic essays. Class sessions will combine lectures, discussion, audio-visual materials, and creative as well as analytical writing exercises. The course is taught in English, although Japanese materials will be made available upon request. No prior coursework in Japanese literature, culture, or film is required or expected; additional secondary materials will be available for students taking the course at the 600 level. Writers and film directors examined may include: Kawabata Yasunari, Hayashi Fumiko, Abe Kobo, Mishima Yukio, Oe Kenzaburo, Yoshimoto Banana, Ozu Yasujirö, Naruse Mikio, Kurosawa Akira, Imamura Shohei, Koreeda Hirokazu, and Beat Takeshi.

**GSWS 270 Folklore and Sexuality**
Sexuality is usually thought of as being biological or social, divided into categories of natural and unnatural. Often misssed are its creative and communicative aspects. Examining the constructed social elements of sexuality requires attention be paid to folklore in groups, between individuals and on the larger platform of popular technological media. The most interesting locations for exploration are those places where borderlands or margins, occur between genders, orientations and other cultural categories. A field-based paper will be required that must include documentary research.

GSWS 275 Faces of Love: Gender, Sexuality and the Erotic in Persian Literature
Beloved, Lover and Love are three concepts that dominate the semantic field of eroticism in Persian literature and mysticism. The interrelation among these concepts makes it almost impossible to treat any one of the concepts separately. Moreover, there exists various faces and shades of love in the works of classical and modern Persian literature that challenges the conventional heteronormative assumptions about the sexual and romantic relationships between the lover and the beloved. A sharp contrast exists between the treatment of homosexuality and ‘queerness’ in Islamic law, on the one hand and its reflection in Persian literature, particularly poetry (the chief vehicle of Persian literary expression), on the other. This course introduces and explores different faces of love, eroticism and homoeroticism in the Persian literary tradition from the dawn of dawn of the Persian poetry in the ninth century all through to the twenty-first century. It offers a comprehensive study of representations and productions of heteronormativity, sexual orientation and gender roles with particular reference to the notion of love, lover and beloved in Persian literature.

GSWS 277 Gender, Sex & Urban Life
Is urban space gendered? Do we change how it is gendered as we move through it? Does it change us? This course explores gender and sexuality in the contemporary global city through the study of urban spaces. We will consider feminist, queer, and transgender theories of the city, as we investigate how practices of using and making space are gendered and sexualized. Each week of the course will be organized around a type of space, including subway, school, and birthing center, nightclub, suburb, and park. Assignments will include an auto-ethnography, a short critical essay, and a final assignment that asks you to propose an additional type of space in which to study the intersections of sex, gender, and the urban built environment. In each space, we will conduct an interdisciplinary exploration, drawing from sociology, anthropology, geography, city planning history, feminist and queer theory, as well as from fiction, poetry, music videos, photography, and documentary film.

GSWS 279 Women in Theatre and Performance
What is feminist theatre? How do artists use live performance to provoke not only thought and feeling, but also social, personal, and political change? This course will examine a wide array of plays and performances by and about women; these pieces are, in turn, serious, hilarious, outrageous, poignant—and always provocative. Our focus will be on English-language works from the late 20th century to the present (#metoo) moment. We will read these performance texts and/or view them on stage/screen; we will also read essays that provide contextual background on feminist theatre theory and history. Throughout the semester, we will engage diverse perspectives on women and race, ethnicity, class, sexuality, and gender identity; the issues we encounter will also include marriage and motherhood, career and community, feminism and friendship, and patriarchy and power. The class will take full advantage of any related events occurring on campus or in the city, and will feature visits with guest speakers. Students will have the opportunity to pursue research on their own areas of interest (some recent examples are ‘women in comedy,’ trans performance, drag kings, feminist directing, etc.).

GSWS 294 Art Now
One of the most striking features of today's art world is the conspicuous place occupied in it by the photographic image. Large-scale color photographs and time-based installations in projections are everywhere. Looking back, we can see that much of the art making of the past 60 years has also been defined by this medium, regardless of the form it takes. Photographic images have inspired countless paintings, appeared in combines and installations, morphed into sculptures, drawings and performances, and served both as the object and the vehicle of institutional critique. They are also an increasingly important exhibition site: where most of us go to see earthworks, happenings and body-art. This course is a three-part exploration of our photographic present.

Activity: Lecture
1.0 Course Unit

GSWS 295 Cinema and Media
This course will provide an introduction to some of the most important film theory debates, and allow us to explore how writers and filmmakers from different countries and historical periods have attempted to make sense of the changing phenomenon known as 'cinema,' to think cinematically. Topics under consideration may include: spectatorship, authorship, the apparatus, sound, editing, realism, race, gender and sexuality, stardom, the culture industry, the nation and decolonization, what counts as film theory and what counts as cinema, and the challenges of considering film theory in a global context, including the challenge of working across languages. There will be a weekly film screening for this course. No knowledge of film theory is presumed.
Course requirements: attendance at lecture and participation in lecture and section discussions; canvas postings; 1 in-class mid-term; 1 final project.

Also Offered As: CIMS 301, FREN 301
Activity: Seminar
1.0 Course Unit

GSWS 302 Queer Cinema
Queerness has often been understood as a threat to society whether social institutions like marriage or monogamy or familial practices have been characterized by increasing acceptance of gays and lesbians into mainstream society, this process has no doubt reproduced new inequalities and asymmetries - in terms of race, class and access to institutional spaces. Does 'queer' still pose a threat to the mainstream or is it now part of the 'normal'? Should one welcome the progressive acceptance of queer lives within the mainstream or should one reject it in the name of an indissoluble difference? In this course we will range across movies and theories that engage with these questions, particularly focusing on negative reactions to processes of assimilation. Topics will include sex and death, queerness and neoliberalism, intersections of race and sexuality. Some of the films we will watch and discuss are Paolini's Pigsty, Fassbiner's In a Year of 13 Moons, Jennie Livingstone's Paris is Burning, Cheryl Dunye's Watermelon Woman, Kimberly Peirce's Boys Don't Cry.
Also Offered As: CIMS 303, COML 303
Activity: Seminar
1.0 Course Unit

GSWS 307 Love, Lust and Violence in the Middle Ages
Medieval Europe was undoubtedly gruff and violent but it also gave birth to courtly culture - raw worries transformed into knights who performed heroic deeds, troubadours wrote epics in their honor and love songs about their ladies, women of the elite carved out a place in public discourse as patrons of the arts, and princely courts were increasingly defined by pageantry from jousting tournaments to royal coronations. This course will trace the development of this courtly culture from the eleventh to the sixteenth century, from its roots in Southern France to its spread to Northern France and then to various kingdoms in Europe. Central themes will include the transformation of the warrior into the knight, the relationship between violence and courtliness, courtly love, cultural production and the patronage, and the development of court pageantry and ceremonial. This is a class cultural history and, as such, will rely on the interpretation of objects of art and material culture, literature as well as historical accounts.

GSWS 310 Politics of Political Writing: From 'We, the People' to 'Power to the People'
The Politics of Political Writing: From 'We, the People' to 'Power to the People' is a literary study and research course charting the development of liberatory politics, aesthetics and subjectivities in response to colony, capital and empire. Students will read anthology, collected essays, a novel, reportage, oral history, interviews, travel writing and memoir. We will look at works in which the authors articulate political stances that impact the public sphere and their literary craft as well as works in which they examine, often self-critically, the politics of writing as practice, career, advocacy, trickery, solace and pleasure. The works, including ones by June Jordan, Jean Genet, Patricia Galvao, and Claribel Alegria worry the divide between art and politics, and some trouble the notion that writing encapsulates an author's politics and activism. Using the texts as models we will examine in lecture, discussion, and research projects the effect and impact of aesthetic acts on making trouble for state, social and financial structures as such trouble-making urged many of these works into inception, making difficult their production and reception. The Marxist theory of the dialectic and M. Jacqui Alexander's configuration of palimpsestic time in the neo/post/anti-colonial Americas will serve as our theory touchstones. While some of the works are from the recent past and others far older, they touch on, and in many instances, speak to the histories of regions and countries currently in the news and in crisis (Central America, the Caribbean, the Middle East, France, the US and Brazil) contemporary movements (Black Lives Matter, international solidarity, undocuqueers) and problematics (migration, US financial intervention, imperialism).

GSWS 315 Queer Modernisms
This course tracks the development of Modernism in America, Western Europe, and specific other locations around the globe, with particular emphasis as to how and why dissident sexualities so often found expression in and as aesthetic dissent. Creating new expressive forms and theories that often seem far removed from any traditional definition of sexuality, queer modernist artists often replaced dangerous forms of social dissent with more prudent forms of formal dissidence. In pursuing these questions, we will place art in its broader social context, seeking to answer such significant problems as how and why forms of artistic representation that were once transparent, eminently legible to all strata of society, increasingly became, under the avant garde, designed to speak only to an elite, to a select few in our culture. We will ask what happens when art deliberately narrows its audience, and how that narrowing is related to questions of sexual difference. What is the relationship between queerness and cultural elitism, a connection generally presumed in popular culture, but rarely examined academically? And finally we will ask about the utility of forms of queer political dissent if those forms remain illegible as queer to a wider audience. Throughout, new methods informed by queer, gender, and critical race theory will be utilized.

GSWS 331 Women Making History: The Penn Museum and the Centennial 2020
The year 2020 marks the 100th anniversary of the 19th Amendment to the U.S. Constitution, which declared that the right of citizens to vote 'shall not be denied or abridged by the United States or by any State on account of sex'. To mark this centennial - to both celebrate it and critically assess its impact on American society - we will investigate the history of women at the Penn Museum as archaeologists, ethnographers, epigraphers, philanthropists, and more. At the same time, we will examine material in the Penn Museum that women collected, donated, or studied. Our goal will be to produce original research that may contribute to future exhibits and publications as well as to broader public forums. Sponsored by the Department of Near Eastern Languages and Civilizations, our seminar will focus heavily on western Asia, southeastern Europe, and North Africa - all zones that scholars have variously associated with the Near East or Middle East, and where the Penn Museum has been active since its foundation in 1887. To situate the Penn Museum and its collections within a global and comparative frame, we will also study select women who made major scholarly contributions to other parts of the world such as the Americas and Oceania. Among the figures we will study are Sarah Yorke Stevenson (Egypt), Katharine Woolley (Mesopotamia/Iraq), Harriet Boyd Hawes (Ottoman Crete and Greece), Florence Shotridge (Alaska), Zelia Nuttall (Mexico and Russia), and Tatiana Proskouriakoff (Guatemala). We will venture into many different kinds of history. In regional terms, our scope will be transnational and international: we will cover the United States and the Middle East in the wider world. In thematic and methodological terms, we will approach our subject through biography, oral history, and microhistory; material history and museum studies; cultural and intellectual history; women's and gender studies; and the history of academic disciplines, especially archaeology and anthropology. Some background in Middle Eastern history; or Anthropology; or Women's History; or Museum Studies recommended.

1.0 Course Unit
GSWS 334 Feminist Ethnography
This course will investigate the relationships among women, gender, sexuality, and anthropological research. We will begin by exploring the trajectory of research interest in women and gender, drawing first from the early work on gender and sex by anthropologists like Margaret Mead and Ruth Benedict; moving through the 1970s and 1980s arguments about gender, culture, and political economy; arriving at more current concerns with gender, race, sexuality, and empire. For the rest of the semester, we will critically read contemporary ethnographies addressing pressing issues such as nationalism, militarism, neoliberalism and fundamentalism. Throughout, we will investigate what it means not only to 'write women's worlds', but also to analyze broader socio-cultural, political, and economic processes through a gendered lens. We will, finally, address the various ways feminist anthropology fundamentally challenged the discipline's epistemological certainties, as well as how it continues to transform our understanding of the foundations of the modern world. Prerequisite: Should have some functional knowledge of Cultural Anthropology.
Taught by: Thomas

Course usually offered in fall term
Also Offered As: AFRC 345, HIST 345
Activity: Recitation
1.0 Course Unit

GSWS 346 Bodies, Race and Rights: Sex and Citizenship in Modern American History
What did it mean to be a man or woman in the post-Civil War United States? Was being a man the same as being a citizen? If African-American men were to be fully embraced as both men and citizens in the aftermath of slavery, where did that leave women, white and black? Why did a nation built on immigration become so hostile to certain groups of immigrants during this period? In this course, we consider how the meanings and experiences of womanhood, manhood, citizenship, and equality before the law changed from the period immediately after the Civil War until the present day. We look at political battles over the meaning of citizenship, the use of terror to subdue African Americans politically and economically, and the fears of white Americans that they would lose their political and economic dominance to immigrant groups they deemed irreconcilably different from themselves. We also consider the repercussions of these conflicts for medical, legal, and economic efforts to regulate the bodies of women, children, poor people, immigrants, working class laborers, military men, and African Americans. Throughout the course, we will follow the state's changing use of racial, sexual, and economic categories to assess the bodily and intellectual capacities of different groups of citizens. We will also note some of the popular cultural expressions of manhood, womanhood, and citizenship. The lectures and reading assignments are organized around a series of historical problems, dynamic leaders, and controversies that illuminate these issues.

GSWS 347 Gender History and American Film
More than any other medium, the motion pictures fostered new ideals and images of modern womanhood and manhood in the United States. Throughout the twentieth century, gender representations on the screen bore a complex relationship to the social, economic, and political transformations marking the lives and consciousness of American men and women. This course explores the history of American gender through film. It treats the motion pictures as a primary source that, juxtaposed with other kinds of historical evidence, opens a window onto gendered work, leisure, sexuality, family life, and politics. We will view a wide range of Hollywood motion pictures since 1900, as well as films by blacklist artists, feminists, and independent producers.

GSWS 349 History of Sexuality in the U.S.
This course introduces students to a relatively new field of inquiry, the history of sexuality in the U.S. It explores the past to consider why sexuality has been so central to American identities, culture, and politics. Primary documents and other readings focus on the history of sexual ideology and regulation; popular culture and changing sexual practices; the emergence of distinct sexual identities and communities; the politics of sexuality; and the relationship between sexual and other forms of social difference, such as gender, race, ethnicity, age, and class. Topics include many with continuing relevance to contemporary public debate: among them, sexual representation and censorship, sexual violence, adolescent sexuality, the politics of reproduction, gay and lesbian sexualities and sexually transmitted diseases.

GSWS 350 Trans Method
What are the subjects of trans studies? What are the disciplinary and theoretical tools necessary to do trans studies? What does 'trans' as a category afford us in looking at texts, people, systems, objects? To what extent is trans an identity? What might it mean to think of it as a methodology? This course aims to introduce students to 'trans' as an analytic by drawing from queer studies, feminism, critical race theory, disability studies, environmental humanities, literary studies, and postcolonial critique, centering trans ways of thinking on scales from the body to the nation. As a relatively 'new' field, trans studies contributes to feminist and queer theory but is uniquely engaged with social and health sciences, trans activist movements, and trans cultural production. In particular, Trans Method aims to extend trans beyond self-identified trans bodies and beyond the United States to consider the affordances of a global, polycalar trans politics.

GSWS 374 Topics In Africana Studies
Topics vary. Black Feminist Approaches to History & Memory - The term black feminism emerged in public discourse amid the social, political, and cultural turbulence of the 1960s. The roots of black feminism, however, are much older, easily reaching back to the work of black women abolitionists and social critics of the nineteenth century. The concept continued to grow and evolve in the work of twentieth century black women writers, journalists, activists, and educators as they sought to document black women's lives. Collectively, their work established black feminism as a political practice dedicated to the equality of all people. More recently, black feminism has been deployed as a tool for theoretical and scholarly analysis that is characterized by an understanding that race, class, gender, and sexuality are inextricably interconnected.

GSWS 392 Queering North African Subjectivities
This seminar will explore the ways in which literary and visual representations of sexual difference and gender roles disrupt the cultural imagination of everyday life in North Africa and its Diasporas. Special attention will be given to representations of Arab women and queer subjectivities as sites of resistance against dominant masculinity. We will analyze the ways in which representations of gender have allowed for a redeployment of power, a reconfiguration of politics of resistance, and the rewriting of longstanding images of Islam in France. Finally, we will question how creations that straddle competing cultural traditions, memories and material conditions can queer citizenship. Course taught in English.

1.0 Course Unit
GSWS 394 Topics in Contemporary Art
Topic varies. Spring 2017: This course will examine key moments in the history of civil rights through a cinematic lens. Over the course of the semester, we will explore how filmmakers have depicted the lives, aspirations, and strategies of those who have struggled for equal rights; how different struggles have intersected with each other; what aesthetic strategies have been adopted to represent freedom and the denial of it; and how effective cinematic efforts to contribute to increased freedom have been as well as what criteria we use to evaluate success or failure in the first place. Each week, we will watch a film and read a series of texts that will be drawn from a variety of arenas, including histories of civil rights; civil rights pamphlets and speeches; filmmaker interviews; film and media theory; memoirs; and theories of race, gender and sexuality. Course requirements: mutual respect; completion of all readings and screenings; participation in class discussion; weekly online responses; a final project that can be a research paper, film, art project, or community-based initiative. GSWS 436 Africana Studies Undergraduate Seminar
On the stage of modern world history, Haiti plays the unique role as both exceptionally victorious and tragic character. This course investigates archival documents, oral histories, historical texts, and portraiture of the nation and her diaspora in order to establish a nuanced image of the projection of Haiti’s modern history. Using two classic Haitian texts, Ma Vieux-Chauvet’s Love, Anger, Madness (1968) and Michel-Rolph Trouillot’s Silencing the Past: Power and the Production of History (1995), this course examines how, why, and to what end Haiti’s history and popular narratives, a the country have served to construct and dismantle global movements, popular culture, and meanings of race, gender, and citizenship in the Americas. In our historical examination, we will question some of the iconic representations of Haiti through literature that deepen the affective historical profile of Haiti with interrogations of culture, sexuality, political, and media performance. Students will become familiar with the colonial history of Haiti and the region, meanings of race, and the production of history. The course is a research and historical methods seminar. GSWS 488 Topics: Culture, Sexuality and Global Health
What does it mean to claim that ‘Homosexuality is un-African?’ This course explores the linked histories of race, nation, and sexuality in Africa that such an ideological claim invokes, yet effaces. The polemics that produce statements like this play out through the disciplinary tensions that exist between African and sexuality/queer studies. These tensions have as much to do with the role played by the relation between sexuality and race within cultures of European colonization, as they have with the role of gender and sexuality within postcolonial power relations in Africa. Such antagonisms are sustained through the marginalization of gender and sexuality perspectives within postcolonial scholarship on Africa, as well as the bracketing of African perspectives in queer and feminist studies. This course will deconstruct these impasses by exploring scholarship at the margins of each area of study. Students will be encouraged to ask questions about how issues of race, ethnicity, nation, gender, and sexuality are produced as suppressed presences in a range of texts, films and other materials. The course will include readings from postcolonial, gender, sexuality, and African studies, anthropology, history, literary studies and Marxism, giving students a grounding in historical and contemporary perspectives at the intersection of African, queer and feminist studies. Course usually offered in fall term

GSWS 509 Modernist Jewish Poetry
One version of this seminar considers works by Jewish women who wrote in Yiddish, Hebrew, English, and other languages in the late 19th through the 20th century. The texts, poetry and prose, will include both belles lettres and popular writings, such as journalism, as well as private works (letters and diaries) and devotional works. The course will attempt to define ‘Jewish writing,’ in terms of language and gender, and will consider each writer in the context of the aesthetic, religious, and national ideologies that prevailed in this period. Because students will come with proficiency in various languages, all primary texts and critical and theoretical materials will be taught in English translation. However, those students who can, will work on the original texts and share with the class their expertise to foster a comparative perspective. Because we will be discussing translated works, a secondary focus of the course will, in fact, be on literary translation’s process and products.
Course not offered every year

GSWS 510 Inner Outer Space Travel Writing: A Creative Writing Workshop
Inner Outer Space Travel Writing is a creative writing workshop focused on writing work within the science fiction/speculative fiction/alternative futurities, science/land/travel writing, and creative-critical nonfiction traditions. Students will work within a variety of genres, with an emphasis on the essay, the short story, screen/tele-play, play, blog and performance. Students will read recommended texts from within their particular interests, and the course will culminate in both a public performance and dissemination/publication via another media platform (zine, website, podcast, etc). All levels of experience, from none/first-time writer to published writers, are encouraged to register for the course.

GSWS 516 Public Interest Workshop
This is a Public Interest Ethnography workshop (originally created by Peggy Reeves Sanday - Department of Anthropology) that incorporates an interdisciplinary approach to exploring social issues. Open to graduate and advanced undergraduate students, the workshop is a response to Amy Gutmann’s call for interdisciplinary cooperation across the University and to the Department of Anthropology’s commitment to developing public interest research and practice as a disciplinary theme. Rooted in the rubric of public interest social science, the course focuses on: 1) merging problem solving with theory and analysis in the interest of change motivated by a commitment to social justice, racial harmony, equality, and human rights; and 2) engaging in public debate on human issues to make research results accessible to a broader audience. The workshop brings in guest speakers and will incorporate original ethnographic research to merge theory with action. Students are encouraged to apply the framing model to a public interest research and action topic of their choice. This is an academically-based-community-service (ABCS) course that partners directly with Penn’s Netter Center Community Partnerships.

GSWS 517 Sociology of Work
The thinkers whose work formed the foundations of sociological theory considered the nature of the relationship between work and identity key to understanding social solidarity, power, and historical change. In recent years, the division of labor, structures of work, and employment relations have all been undergoing rapid change, necessarily affecting the possibilities for constructing identity through work. This seminar examines how changes in the nature and organization of work have reshaped the relationship between work and identity.

GSWS 518 Nursing and the Gendering of Health Care in the United States and Internationally, 1860-2000
This course examines changing ideas about the nature of health and illness; changing forms of health care delivery; changing experiences of women as providers and patients; changing role expectations and realities for nurses; changing midwifery practice; and changing segmentation of the health care labor market by gender, class and race. It takes a gender perspective on all topics considered in the course. A comparative approach is used as national and international literature is considered. This focus is presented as one way of understanding the complex interrelationships among gender, class, and race in health care systems of the United States and countries abroad.
Course usually offered in spring term
Also Offered As: NURS 518
Activity: Lecture
1.0 Course Unit
GSWS 520 Art, Sex and the Sixties
With a distinct emphasis on post World War II performance, film, sculpture and painting, this course explores the conjunction of the period’s systematic revamping of our social/sexual schema with the equally revolutionary ascendancy of an artistic postmodernity. And it seeks to explore this dynamic not only within the familiar confines of North America and Europe but towards Latin America and Asia, too, in what was a nearly simultaneous emergence of the erotic as a political force in the 60s. Reading a range of key voices from Brazilian theorist and poet Oswald de Andrade to Frankfurt School philosopher Herbert Marcuse, performance artists Carolee Schneemann, and Yoko Ono, Neo-Freudian theorist Norman O. Brown and lesbian feminist author Monique Wittig, we will examine how and why sex became a privileged form of politics at this historical juncture in a range of different contexts across the globe. Students interested in feminist, gender or queer theory, social revolution, performance studies, post war art and Frankfurt School thought should find the course particularly appealing, but it assumes no background in any of these fields.

GSWS 525 The Trouble with Freud: Psychoanalysis, Literature, Culture
For professionals in the field of mental care, Freud’s work is often regarded as outmoded, if not problematic psychologists view his work as non-scientific, dependent on theses that cannot be confirmed by experiments. In the realm of literary and cultural theory, however, Freud’s work seems to have relevance still, and is cited often. How do we understand the gap between a medical/scientific reading of Freud’s work, and a humanist one? Where do we locate Freud’s relevance today? The graduate course will concentrate on Freud’s descriptions of psychoanalytic theory and practice, as well as his writings on literature and culture. Prerequisite: Readings and discussions in English.

GSWS 527 Race, Gender and Auto/Biography
PRING 2017: Market Women, Madames, Mistresses & Mother Superior studies ender, labor, sexuality, and race in the Caribbean. In our historical examination of primary source documents alongside literature, and popular edia, we will question some of the iconic representations of Caribbean and Latin American women in order to understand the meaning, purpose and usages these women’s bodies as objects of praise, possession, obsession and/or ridicule by communities, governments and religions within and outside of their region. Beginning in the late-18th century and ending with contemporaryigration narratives, this course considers the relationship between slave society and colonial pacts on gender performance in the modern Caribbean, Latin America, and their diasporas. In our interrogation of gender meanings, we will consider the ways Caribbean women and men define themselves and each other, while considering the intersections of color, class, religion and culture on the political and social realities of the Caribbean and the region. The geographic scope of the course will extend to Haiti, the Dominican Republic, Jamaica, Cuba, Puerto Rico, Costa Rica and Trinidad & Tobago. The following interrelated questions will anchor our exploration of each text: How have representations of Caribbean and Latin American women informed historical constructions and rhetoric of the region and national identity? What political and social strategies have Caribbean women and men used to define themselves in their countries and throughout the region? How do the history and contemporary conditions of a post-colonial nation impact the gender construction of Caribbean identities? What is the relationship between modern Caribbean gender identities and the regional racial and economic politics?

Activity: Seminar
1.0 Course Unit
GSWS 528 Witchcraft and Gender in the Early Modern World
From the 15th century through the 18th century, social tensions erupted in Europe and the Atlantic colonies in the witch craze, a period when intense cultural concern over witchcraft was expressed through religious treatises and sermons, popular literature such as pamphlets and broadsides, legal accusations, trials, and, in some cases, executions. Although the number of people executed during the witch-hunts is a matter of scholarly debate, their importance in understanding early modern beliefs and responses to social tensions is clear. In this class, we will explore historians’ understandings of the causes underlying this cultural phenomenon. With special attention to gender, social position, and religious belief, we will join academic debates about the causes of these persecutions. We will also read some primary sources from the medieval through the early modern periods, including trial transcripts, sermons, and pamphlets. Were women the main target of witchcraft accusations and executions, and if so, was misogyny their most important cause? What role did sexual norms and beliefs have in the way that accusations were framed? Were there different patterns of accusations and executions across time and region, and if so, what social and cultural factors might explain them? In what ways were witchcraft accusations an effort to control marginal people in local communities, particularly in regard to gender, socio-economic position, and age? How might religious developments and conflicts have influenced elite and popular ideas about witchcraft? What challenges do historians face in analyzing primary sources about witchcraft and witchcraft trials? Through in class discussions and threaded discussion forums on primary sources, students will learn about the challenges involved in interpreting sources including treatises, trial transcripts, pamphlets, and images.

GSWS 529 History of Sexuality
In this online course, we will consider the impact of social, economic, and political conditions on social constructions of sexuality, from the classical world of Greece and Rome, to the early modern West, to the streets of Victorian London and 1920s New York. Topics of interest include: the prostitutes of New Orleans’ Storyville district; Jack the Ripper and sensational media accounts of crimes of passion; the history of sexual harassment in the American workplace; the history of witchcraft and witchcraft trials. Accusations and executions across time and region, and if so, what social and cultural factors might explain them? In what ways were witchcraft accusations an effort to control marginal people in local communities, particularly in regard to gender, socio-economic position, and age? How might religious developments and conflicts have influenced elite and popular ideas about witchcraft? What challenges do historians face in analyzing primary sources about witchcraft and witchcraft trials? Through in class discussions and threaded discussion forums on primary sources, students will learn about the challenges involved in interpreting sources including treatises, trial transcripts, pamphlets, and images.

GSWS 531 Gendered Constructions of Other Cultures in Western Travel Literature
Descriptions of peoples from foreign lands and faraway places have captured the imaginations of Europeans for centuries. Pilgrims and merchants, explorers and conquistadores, Victorians taking their Grand Tour and 21st-century travelers have preserved their observations, both in written form, in ethnographies and diaries, novels and travel narratives, and in visual form, in maps, illuminated manuscripts, engravings, and photographs. Through these media, these travelers have not simply captured their memories, but have also helped to shape Western representations of the people they encountered, often justifying Western political, economic, cultural, and social dominance as a result, although some travelers have critiqued the West instead. And in all these depictions, gender and sexuality have played central roles in the creation of these identities and relationships. In this online course, we will explore this topic by studying a variety of primary and secondary sources focusing on medieval Ireland and Wales; English, Spanish, and Portuguese texts representing the New World and indigenous Americans; orientalism through the lens of imperial representations of the Middle East, India, and Africa; and 20th- and 21st-century representations of a globalized world, focusing on political, economic and cultural tensions between the West and other regions of the world. Primary texts will include travel diaries and narratives, ethnographies and novels, as well as visual images. We will also examine how scholars from fields including anthropology, art history, cultural studies, history, and literary studies have analyzed these works, with attention to theories on colonialism and post-colonialism, gendered and queer readings, orientalism and othering, and globalization. Finally, we will also look at how some of the people who were described by the Western writers described Westerners themselves. Assignments will include weekly blogs in response to readings, primary source threaded discussions, live discussions every week in our online classroom, leading class discussion for two weeks, writing two response papers, and completing a final essay in several stages.

GSWS 533 Women Making History: The Penn Museum and the Centennial 2020
The year 2020 marks the 100th anniversary of the 19th Amendment to the U.S. Constitution, which declared that the right of citizens to vote ‘shall not be denied or abridged by the United States or by any State on account of sex’. To mark this centennial - to both celebrate it and critically assess its impact on American society - we will investigate the history of women at the Penn Museum as archaeologists, ethnographers, epigraphers, philanthropists, and more. At the same time, we will examine material in the Penn Museum that women collected, donated, or studied. Our goal will be to produce original research that may contribute to future exhibits and publications as well as to broader public forums. Sponsored by the Department of Near Eastern Languages and Civilizations, our seminar will focus heavily on western Asia, southeastern Europe, and North Africa - all zones that scholars have variously associated with the Near East or Middle East, and where the Penn Museum has been active since its foundation in 1887. To situate the Penn Museum and its collections within a global and comparative frame, we will also study select women who made major scholarly contributions to other parts of the world such as the Americas and Oceania. Among the figures we will study are Sarah Yorke Stevenson (Egypt), Katharine Woolley (Mesopotamia/Iraq), Harriet Boyd Hawes (Ottoman Crete and Greece), Florence Shiotridge (Alaska), Zelia Nuttall (Mexico and Russia), and Tatiana Prosokouriakoff (Guatemala). We will venture into many different kinds of history. In regional terms, our scope will be transnational and international: we will cover the United States and the Middle East in the wider world. In thematic and methodological terms, we will approach our subject through biography, oral history, and microhistory; material history and museum studies; cultural and intellectual history; women’s and gender studies; and the history of academic disciplines, especially archaeology and anthropology. Some background in Middle Eastern history; or Anthropology; or Women’s History; or Museum Studies recommended.
Taught by: Sharkey
Also Offered As: ANTH 351, ANTH 531, GSWS 331, NELC 331, NELC 531

1.0 Course Unit

GSWS 565 More Human Than Human
In early 2017, animal rights lawyer Steve Wise argued that two of his clients should be afforded the rights of ‘personhood.’ The clients in question were chimpanzees. This case suggests that ‘speciesism’ might soon be met with the same degree of suspicion as sexism and racism. This course will explore how such a shift could come about and what it might signal. We will begin by examining the western foundations of binaries such as human-animal, male-female, and self-other. From here we will explore recent attempts to dismantle these constructs by ecofeminists and post-humanists. We will also look at how such categories have manifested in social movements and cultural artifacts. Finally, we will investigate how our beliefs about who ‘we’ are and what ‘we’ are not can affect everything from the foods we eat to where and how we vacation.
Taught by: Sadashige
Course not offered every year
Activity: Online Course
1.0 Course Unit
GSWS 570 African-American Literature
This course treats some important aspect of African-American literature and culture. Some recent versions of the course have focused on the emergence of African-American women writers, on the relation between African-American literature and cultural studies, and on the Harlem Renaissance. This course is cross-listed with the English Department. See the English Department’s website at www/english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: AFRC 570, ENGL 570
Activity: Seminar
1.0 Course Unit

GSWS 572 Language and Gender
This course traces the development of research on language and gender, introducing key theoretical issues and methodological concerns in this area. Participants will consider how gender ideologies shape and are shaped by language use, with particular attention to how research findings can be applied to educational and other professional settings.
Taught by: Pomerantz
Course not offered every year
Also Offered As: EDUC 572
Activity: Lecture
1.0 Course Unit

GSWS 574 Masters in Liberal Arts Seminar
This MLA course in the history of art explores an aspect of Art History and Theory, specific course topics vary. Please see the College of Liberal and Professional Studies Course Guide for a description of current offerings.
Course not offered every year
Also Offered As: ARTH 505, CIMS 502, COML 510
Activity: Seminar
1.0 Course Unit

GSWS 575 Faces of Love: Gender, Sexuality, and the Erotic in Persian Literature
Beloved, Lover and Love are three concepts that dominate the semantic field of eroticism in Persian literature and mysticism. The interrelation among these concepts makes it almost impossible to treat any one of the concepts separately. Moreover, there exists various faces and shades of love in the works of classical and modern Persian literature that challenges the conventional heteronormative assumptions about the sexual and romantic relationships between the lover and the beloved. A sharp contrast exists between the treatment of homosexuality and queerness in Islamic law, on the one hand and its reflection in Persian literature, particularly poetry (the chief vehicle of Persian literary expression), on the other. This course introduces and explores different faces of love, eroticism and homoeroticism in the Persian literary tradition from the dawn of dawn of the Persian poetry in the ninth century all through to the twenty-first century. It offers a comprehensive study of representations and productions of heteronormativity, sexual orientation and gender roles with particular reference to the notion of love, lover and beloved in Persian literature.
Taught by: Shams
Course usually offered in fall term
Also Offered As: COML 275, COML 574, GSWS 275, NELC 290, NELC 574
Activity: Lecture
1.0 Course Unit
Notes: No prior knowledge of Persian is required as all literary works will be available in English translation. Students are expected to attend seminars and take part in discussions. Please note that this syllabus is subject to change.

GSWS 576 The Sexuality of Postmodern Art
This course is fundamentally concerned with why so many of the defining artists of the postwar generation were queer, indeed such that one could plausibly claim that postmodernism in American art was a queer innovation. Centrally, most of these artists raise the problem, as the above quotes underscore, of authoriality and its discontents. Deploying a combination of social-historical and theoretical texts, we will approach the problem of the disclaiming of authoriality in post war American art, focusing on the works of John Cage, Robert Rauschenberg, Jasper Johns, Cy Twombly, Robert Indiana, Louise Nevelson, Ellsworth Kelly, Agnes Martin, Leon Polk Smith and not least Andy Warhol. Central to this course will be the continuing salience of the ‘death of the author’ discourse, pioneered in literature by Barthes and Foucault, and in art by every one of the artists we will be examining. What, in short, is the relationship between the rise of an anti-biographical, anti-authorial theoretical framework, and the lived histories of so many queer authors? In asking this question, we are of course self-consciously violating the very premise of one key strand of postmodernist critique—and in so doing attempting to historicize a theoretical frame that is strikingly resistant to historical analysis. (Undergraduates interested in the course should contact Professor Katz.)

Course not offered every year
Also Offered As: ARTH 580
Activity: Seminar
1.0 Course Unit

GSWS 578 Learning from James Baldwin (1924-1987)
James Baldwin, one of the greatest writers of the twentieth century, spoke to the issues of his times as well as to our own. This class will examine the intellectual legacy that Baldwin left to present-day writers such as Toni Morrison, Charles Johnson, Ta-Nehisi Coates, Thulani Davis, Caryl Phillips and others. We will spend time reading and discussing Baldwin’s novels, short stories, plays and essays. In doing so, we will be considering the complex assumptions and negotiations that we make in our day-to-day lives around our identities and experiences built upon gender, sexual preference, the social-constructs called ‘race,’ and more. James Baldwin’s life and work will be the touchscreen that grounds our discussions. We will read Go Tell It on the Mountain, Another Country, The Fire Next Time, and Giovanni’s Room and see films I Am Not Your Negro, The Price of the Ticket and The Murder of Emmett Till. Students will research subjects of their own choosing about Baldwin’s life and art. For example, they may focus on the shaping influences of Pentecostalism; segregation; racism; homophobia; exile in Paris; the Civil Rights Movement; Black Power, Baldwin’s faith, or his return to America.
Taught by: Watterson
Also Offered As: AFRC 581, ENGL 581
Activity: Seminar
1.0 Course Unit
GSWS 581 Advanced Psychology of Women
The course is intended for those who already have a foundation in the study of the psychology of women and want to expand their understanding of the provision of psychological services to include a contextual, feminist, and relational perspective. Theoretical and applied practices regarding women's mental health, issues of diversity, sexuality and relationships for women will be addressed. Prerequisite: Introduction to Psychology and an undergraduate course in the Psychology of Women or approval by professor.
Also Offered As: EDUC 581
Activity: Lecture
1.0 Course Unit

GSWS 582 Gender, Power & Feminist Theory
This seminar will examine the theme of power as it engages questions of sex and gender. Subsidiary themes that will be developed over the course of the semester include: the modernism/postmodernism debate as it particularly relates to feminism; the intersectionality of race, gender, sexuality and class and how feminists can and do talk about 'women'; the relevance of feminist theory to policy issues, and which theoretical approaches are the most appropriate or have the most powerful potential. The readings will start with 'foundational' texts in feminist theory—texts that anyone who wants to work in or teach feminist theory needs to have in their repertoire, they set out the background and history of contemporary feminist theory, and they operate from a variety of disciplinary frameworks. We then will move onto some newer scholarship and some more specific political issues and topics, depending on what students in the course are interested in studying. This course is open to undergraduates who have had some prior course work in feminist theory, gender and sexuality studies, and/or political theory, in consultation with the professor.
Taught by: Hirschmann
Course not offered every year
Also Offered As: PSCI 582
Activity: Seminar
1.0 Course Unit

GSWS 584 Political Philosophy
An examination of basic theoretical problems of political science divided into three parts. First, specific features of social sciences will be examined and three most important general orientations of social sciences (analytical, interpretative and critical) will be compared and analyzed. Second, basic concepts of social and political sciences will be studied: social determination, rationality, social change, politics, power, state, democracy. Third, the problem of value judgments will be considered: Is there a rational, objective method for the resolution of conflicts in value judgments? Is morality compatible with politics?
Taught by: Hirschmann
Course not offered every year
Also Offered As: PSCI 584
Activity: Seminar
1.0 Course Unit

GSWS 585 Fashioning Gender
In 1901 the average American family spent 14% of their annual income on clothing. By 1929, the average middle-class woman owned a total of nine outfits. Fast forward to the early twenty-first century, where the relative price of clothing has dropped, clothing has become virtually disposable, and individuals post videos of their shopping hauls online. This course will examine how we got here, why fashion matters, and the far-reaching implications of our love affair with clothes. Readings and topics will include foundational theory about fashion; how clothes shape class, gender, and identity; the significance of revolutionary designers such as Vivienne Westwood and Rei Kawakubo; and the evolution of the clothing industry and its place in the global economy.
Taught by: Sadashige
Course usually offered in fall term
Activity: Online Course
1.0 Course Unit

GSWS 587 Race, Nation, Empire
This graduate seminar examines the dynamic relationships among empires, nations and states; colonial and post-colonial policies; and anti-colonial strategies within a changing global context. Using the rubrics of anthropology, history, cultural studies, and social theory, we will explore the intimacies of subject formation within imperial contexts—past and present—especially in relation to ideas about race and belonging. We will focus on how belonging and participation have been defined in particular locales, as well as how these notions have been socialized through a variety of institutional contexts. Finally, we will consider the relationships between popular culture and state formation, examining these as dialectical struggles for hegemony.
Taught by: Thomas
Course not offered every year
Also Offered As: AFRC 587, ANTH 587, LALS 588
Activity: Seminar
1.0 Course Unit

GSWS 588 The Politics of Women's Health Care
This course will utilize a multidisciplinary approach to address the field of women's health care. The constructs of women's health care will be examined from a clinical, as well as sociological, anthropological and political point of view. Topics will reflect the historical movement of women's health care from an obstetrical/gynecological view to one that encompasses the entire life span and life needs of women. The emphasis of the course will be to undertake a critical exploration of the diversity of women's health care needs and the past and current approaches to this care. Issues will be addressed from both a national and global perspective, with a particular focus on the relationship between women's equality/inequality status and state of health. This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.
Taught by: Lessner
Course usually offered in fall term
Also Offered As: NURS 588
Activity: Lecture
1.0 Course Unit

GSWS 589 Recent issues in Critical Theory
This course is a critical exploration of recent literary and cultural theory, usually focusing on one particular movement or school, such as phenomenology, psychoanalysis, the Frankfurt School, or deconstruction.
Course not offered every year
Also Offered As: CIMS 580, COML 590, ENGL 590, LALS 590
Activity: Seminar
1.0 Course Unit
GSWS 594 Topics in Contemporary Art
Topics vary. The primary for this course is the Art History Department. For a course description please see their website: http://www.sas.upenn.edu/arthistory/courses

Course not offered every year
Also Offered As: ARTH 596, CIMS 596, ENGL 596, FNAR 605
Activity: Seminar
1.0 Course Unit

GSWS 598 The Political Economy of Gender
Over the past two hundred years, with the rise industrial production, growing educational attainment, and availability of contraception, women have entered the formal labor market in vast numbers. Yet despite advances, there are still important disparities between the sexes, often exacerbated by class and racial politics. This course unpacks the elements of the transition in the political economy of gender and examines its limits. We set out to understand women's labor in emerging industrial and post-industrial economies; the causes and consequences of women's political inclusion; gendered opportunities in the labor force including the persistence of pay gaps; and the formation of economic and political preferences across the genders. Theoretically, we will engage with Marxian political economy, and new institutionalist approaches to understand how political and economic institutions reproduce or remedy contemporary problems including the gender gap in wages, in political representation, and in women's economic opportunities. Throughout the course we will pay special attention to challenges faced by minority groups and by women in developing countries.
Taught by: Teele
Course usually offered in fall term
Also Offered As: PSCI 530
Activity: Seminar
1.0 Course Unit

GSWS 599 Independent Study
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

GSWS 612 LGBT Counseling & Development
In the past quarter century, the awareness of the unique issues facing lesbian, gay, bisexual and transgender (LGBT) individuals has expanded and become essential knowledge in our work as educators, providers of psychological services, and other service provision fields. This course provides a contextual and applied understanding the interactional processes facing LGBT individuals.
Course not offered every year
Also Offered As: EDUC 612
Activity: Lecture
1.0 Course Unit

GSWS 620 Gender, Religion, and China
This course examines gender in Chinese religious culture from ancient to contemporary times. We will explore topics including the Buddhist accommodation of Chinese family system, Chinese transformation of the bodhisattva Guanyin, female deities in Daoist and popular religious pantheons, writings about religious women, female ghosts and fox spirits in literary imagination and folk tales, and the significance of yin force in Chinese medicine and Daoist alchemy. Through the case of China, we will look at how gender plays critical and constitutive roles in religious traditions, and how religion can be used both to reinforce and to challenge gender norms.
Taught by: Cheng
Course usually offered in fall term
Also Offered As: EALC 230, EALC 630, GSWS 234, RELS 237, RELS 630

GSWS 640 Studies in the Renaissance
Topics vary. This course will be cross-listed with GSWS when the topic includes, Gender, Sexuality and Women's Studies. Please see French department's website for current course description: https://www.sas.upenn.edu/french/pc
Course not offered every year
Also Offered As: COML 643, FREN 640
Activity: Seminar
1.0 Course Unit

GSWS 645 Topics in Black Political Thought: Difference And Community
This course is designed to familiarize graduate students with some of the key texts and debates in Africana Studies concerning the relationship between racial slavery, modernity and politics. Beginning with the Haitian Revolution, much of black political thought (thinking and doing politics) has advocated group solidarity and cohesion in the face of often overwhelming conditions of servitude, enslavement and coercion within the political economy of slavery and the moral economy of white supremacy. Ideas and practices of freedom however, articulated within the political economy of slavery and the moral economy of white supremacy, have been as varied as the routes to freedom itself. This course will engage with black political thought as having a single origin, genealogy or objective. Ideas and practices of freedom however, articulated within the political economy of slavery and the moral economy of white supremacy, have been as varied as the routes to freedom itself. Thus, ideas and practices of liberty, citizenship and political community within many African and Afro-descendant communities have revealed multiple, often competing forms of political imagination. The multiple and varied forms of political imagination, represented in the writings of thinkers like Eric Williams, Richard Wright, Carole Boyce Davies and others, complicates any understanding of black political thought as having a single origin, genealogy or objective. Students will engage these and other authors in an effort to track black political thought's consonance and dissonance with Western feminisms, Marxism, nationalism and related phenomena and ideologies of the 20th and now 21st century.
Taught by: Hanchard
Also Offered As: AFRC 655, LALS 656, PSCI 612
Activity: Seminar
1.0 Course Unit
GSWS 678 Gender and Sexuality in Education
This seminar gives an overview of the intersections and interplay among gender, sexuality, and education through theory, practice, current discussions, and analysis of varied contexts in English speaking countries (e.g. the United States, Canada, Great Britain, and Australia). After examining the theoretical foundations of genders and sexualities, we will look at their histories and effects in K-12 schools and colleges and universities as well as explore special topics.

Activity: Seminar
1.0 Course Unit

GSWS 771 Current Japanology
Major trends in scholarship as reflected in important recent publications, especially formative books and periodical literatures. The trajectory within certain disciplines as well as the interaction among them will be critically evaluated in terms of gains and losses. Implications of these theses in the planning of graduate and postgraduate research.
Prerequisite: Knowledge of reading Japanese.
Course not offered every year
Also Offered As: EALC 771
Activity: Lecture
1.0 Course Unit

GSWS 790 Recent Issues in Critical Theory
The primary for this course is the English Department. When the course content includes gender, sexuality and women's studies it will be cross-listed with GSWS. See additional information and description on the English Department's website: https://www.english.upenn.edu See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 790, ENGL 790
Activity: Seminar
1.0 Course Unit

GSWS 830 Conducting Research in Global Women's Health
An introduction to theoretical and methodological issues as they relate to conducting research in global women's health. Advanced analysis of historical, social, cultural, economic, political, technological and geographical contexts as they influence the health of girls and women across the lifespan and their relation to health care systems as both clients and providers. This includes contextual issues that constrain the provision & receipt of adequate healthcare. Prerequisites: Completion of course in Global Health (this may include a reputable online course eg: Coursera), or equivalent background (eg. global health field experience). Permission of Instructor. For graduate and professional students from any field with an interest in global women's health; Master students by permission of instructor. A critical examination of theoretical and methodological issues pertaining to research on women and girls conducted around the world across disciplines. A focused and intensive exploration of place as it pertains to women and girls formal and informal structures of health care delivery as those needing and/or seeking health care, and as those providing health care to others. Students will examine the multiple dimensions and qualities of these endeavors (e.g. activity, power, control, visibility, value, and remuneration) and the intersection of gender and health - locally, globally and across borders. Students will focus thier examination on the implcations of seeking and providing health care for women's and girls' health and well-being. By examining issues in local and global contexts and across geographical boundaries, students will have the opportunity to challenge gendered, class, political, and cultural assumptions related to women's health.
Course usually offered in fall term
Also Offered As: NURS 830
Activity: Seminar
1.0 Course Unit

Genetic Counseling (GENC)

GENC 510 Clinical Internship
In addition to course-based degree requirements, students participate in internships related to the field of genetic counseling. The clinical internships begin in the summer after the first year of coursework is completed, and continue through the spring of the second year. Internships give students the opportunity to learn in varying practice-based environments.
Taught by: Lisa Kessler, MS
Activity: Clinic
0.0 Course Units

GENC 601 Advanced Genetics and Genomics
This course will provide an extensive survey of molecular genetics including molecular and cellular biology and the regulation of gene expression. Applications to human clinical genetics through discussion of relevant case studies will be incorporated. The content of this course will facilitate an understanding of the application of concepts in molecular biology to genetic testing and diagnosis. Students will develop
Taught by: Laura Conway, PhD
Activity: Lecture
1.0 Course Unit
GENC 602 Mechanisms of Disease
Primary concepts in this course introduce the fundamental principles of developmental genetics, normal and abnormal embryological development. Development is covered by major organ system. Normal as well as abnormal physiology in all systems will be reviewed. The focus of the course will be on understanding the pathophysiology of human genetic diseases. The coursework serves as the background for understanding specific diseases as they present in clinical genetics and research that has led to improved therapy and treatment for patients. The class will be primarily lecture-based using case-based learning.
Taught by: Lewis Waber, MD, PhD
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

GENC 603 Introduction to Genetic Counseling
Genetic counseling students will be oriented to the profession through a review of the history of genetic counseling. Topics covered include medical terminology, the structure of genetic counseling sessions, discussion of the scope of practice and disability rights, instruction in obtaining family pedigrees, review of genetic testing practices, and the National Society of Genetic Counselors' Code of Ethics and Scope of Practice. Students will gain an appreciation for the lived experience of individuals with genetic diseases by reading novels and memoirs, reviewing online support groups, watching videos and performing role plays. The course will provide experiential learning about advocacy groups for patients and their families through first-hand interviews. Students will engage in role play scenarios throughout the course.
Taught by: Kathleen Valverde, MS
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

GENC 604 Reproductive and Developmental Genetics
A variety of topics in reproductive genetics will be covered in this course. Topics include a review of human development from gametogenesis and fertilization to organogenesis, emphasizing the genetic basis of these complex events and how teratogenic factors lead to abnormal development. The common indications for prenatal genetic counseling, including advanced maternal age, first-trimester screening, NIPS, ultrasound anomalies, diagnostic procedures, and prenatal complications, will be reviewed. Through the completion of assignments and role plays, students will demonstrate their abilities to critically think through cases, assess risk, and provide patient-centered care. The course will discuss psychosocial issues surrounding fertility counseling as well as perinatal bereavement and palliative care.
Taught by: Rose Giardine, MS, and Erica Schindewolf Bobenchik, MS
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GENC 611 Cancer Genetics
In this course, students will gain an understanding of cancer genetics. Topics covered include an overview of cancer biology and clinical oncology; diagnostics and predictive testing in cancer, including familial mutations in BRCA 1 and 2, and panel testing; cancer risk assessment; psychosocial aspects of cancer genetic testing and counseling. Students will examine specific inherited disorders predisposing individuals to malignancies and of counseling for familial cancers. Students will learn how to conduct a genetic counseling session for inherited cancer syndromes such as HBOC and Lynch syndrome and to identify when genetic testing panels are indicated. In addition, the course will cover somatic cancer NGS technology and its relevance in cancer genetic counseling.
Taught by: Dana Farengo Clark, MS; Danielle McKenna, MS, and Jacqueline Powers, MS
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GENC 612 Genetic Counseling Theory and Practice I
Students will learn the basic organization of a genetic counseling session including contracting, building rapport and eliciting patient goals in a patient encounter. Active listening and interviewing skills will be taught to allow students to respond empathically to patient concerns. Through lectures and various activities such as role play, students will demonstrate their abilities to organize a genetic counseling session. Students will learn to write encounter notes, patient and physician letters, and letters of medical necessity. Instruction to adapt genetic counseling service delivery using telephone genetic counseling and telegenetics models will be provided. Each student will be responsible for reviewing a Genetic Counseling Practice Guideline and sharing its content with the class. Students will gain an appreciation of appropriate professional interactions and expand their understanding of the impact of genetic disease on families. At the end of the semester, all students have the opportunity to complete a genetic counseling session with a standardized patient. Students work with the Experiential Learning and Assessment Center at the Perelman School of Medicine. The highly skilled staff ensures safe, measurable, and authentic learning with qualified standardized patients.
Taught by: Lisa Kessler, M.S.
Activity: Lecture
1.0 Course Unit
GENC 613 Foundations of Clinical Genetics and Genomic Technologies
In this course, students learn how genetic and molecular principles contribute to the etiology, clinical features, and expression of genetic conditions. They will appreciate how the natural history and variable expressivity of a variety of genetic diagnoses influence differential diagnoses, interpretation of dysmorphology, choices of genetic testing, and test report interpretation. Students will understand the importance of conveying to families the pathophysiology, inheritance pattern, recurrence risk, and management of genetic disorders. In this class, students will learn the principles of pedigree review and Bayesian analysis. The concepts and tools used to analyze and interpret data from next-generation sequencing (NGS) will be discussed, including the nature of mutations and variant analysis. This class will provide students with hands-on opportunities to utilize databases to systemically review and classify variants. Clinical case variant interpretation and clinical relevance will be discussed in terms of its importance in genetic counseling. Case-based learning will help students understand the complexities of genetic diseases and the importance of obtaining an accurate medical history.
Taught by: Cara Skraban, MD, Laura Conway, PhD, Elizabeth DeChene, MS, Livija Medne, MS, and Matthew Dulik, PhD
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

GENC 614 Introduction to Genetic Counseling Research
This course will familiarize students with research methodologies in clinical genetics. Students will gain an appreciation for the importance of well-designed research in advancing our understanding of diseases and how best to practice in genetic counseling. Topics include how to formulate testable hypotheses, design appropriate studies, and carry out an appropriate literature review. This course will introduce students to scientific writing and interpretation of the literature. Other topics covered include the IRB process, research ethics, and informed consent, which prepare students to conduct their own research projects. They will be required to obtain CITI training and to work with their thesis committees as they develop their proposals. Students will develop and refine their own IRB proposals before submitting an application to the IRB committee.
Taught by: Laura Conway, PhD
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GENC 620 Medical Genetics I
This year-long course presents a broad overview of concepts in medical genetics including natural history, management and counseling strategies for major pediatric and adult genetics diagnoses and syndromes. Topics covered include chromosomal conditions, hemoglobinopathies, biochemical genetics, cardiovascular genetics, psychiatric genetics, neurogenetics conditions, skeletal dysplasias, and ophthalmological disorders, as well as classic genetic conditions identified by the organ system involved, such as cystic fibrosis. Students will learn the methods available for genetic testing, diagnosis, and treatment of genetic conditions. They will be provided with a broad overview of metabolic and mitochondrial disorders as well as detailed reviews of specific conditions. Newborn screening will be covered in depth. Students will be exposed to future directions of clinical genetics and genetic counseling and its impact on the management and treatment of common conditions. Course directors will attend each class, and guest lecturers with relevant clinical expertise will be invited to share their clinical knowledge.
Taught by: Ian Krantz, MD; Sarah Raible, MS; Holly Dubbs, MS; Colleen Muraresku, MS; Elizabeth McCormick, MS
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

GENC 621 Genetic Counseling Theory and Practice II
In this class, students are taught the basic tenets of counseling theory and how they can be applied to genetic counseling sessions. Theories covered include person-centered counseling with its emphasis on genuineness, empathy and positive regard. Narrative Medicine will be covered in detail and students will be required to digitally record a narrative medicine interview with an individual or parent of a patient with a genetic disease. The recordings are then analyzed and critiqued. Standardized patient assessments will be performed to monitor students’ acquisition of more advanced counseling skills. Students will learn the integration of process in the genetic counseling session and to address sensitive patient issues. They will learn to use active listening and value-free communication to manage a genetic counseling session in a culturally responsive manner.
Taught by: Kathleen Valverde, MS
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
GENC 623 Ethical Issues in Genetic Counseling
In this introductory course on bioethics, the content will be tailored to issues that emerge in the context of clinical genetics and genetic research. Though hospital ethics boards advise on the most challenging ethical cases, they often play the simple but crucial role of slowing the conversation down, asking questions of team members, and facilitating calm, reasoned communication regarding the ethical quandaries that staff members pose. Accordingly, this course is taught from the perspective of narrative ethics, which represents moral choice within the detailed context of specific scenarios comprised of characters, motivations, and circumstances. This course will establish and maintain a space where students can develop clinical reasoning skills to consider the major bioethical principles as they relate to specific ethics cases. Class time will be devoted to short lectures and selected video excerpts, individual and group presentations and debates, and extensive discussion guided by a compendium of ethics cases and associated reading assignments that represent the diverse perspectives of different authors.
Taught by: Rebecca Mueller, MS
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

GENC 630 Medical Genetics II
This year-long course presents a broad overview of concepts in medical genetics including natural history, management and counseling strategies for major pediatric and adult genetics diagnoses and syndromes. Topics covered include chromosomal conditions, hemoglobinopathies, biochemical genetics, cardiovascular genetics, psychiatric genetics, neurogenetics conditions, skeletal dysplasias, and ophthalmological disorders, as well as classic genetic conditions identified by the organ system involved, such as cystic fibrosis. Students will learn the methods available for genetic testing, diagnosis, and treatment of genetic conditions. They will be provided with a broad overview of metabolic and mitochondrial disorders as well as detailed reviews of specific conditions. Newborn screening will be covered in depth. Students will be exposed to future directions of clinical genetics and genetic counseling and its impact on the management and treatment of common conditions. Course directors will attend each class, and guest lecturers with relevant clinical expertise will be invited to share their clinical knowledge.
Taught by: Ian Krantz, MD, and Sarah Raible, MS
Course usually offered in spring term
Prerequisite: GENC 620
Activity: Lecture
1.0 Course Unit

GENC 631 Genetic Counseling Theory and Practice III
This course provides students with advanced counseling skills such as advanced empathy and confrontation. Students will also explore counseling theories such as solution-focused brief therapy, cognitive behavioral therapy, and family systems models. Discussions regarding counselor issues such as self-disclosure and countertransference will be explored in detail. Additional skills and techniques from the counseling literature will be practiced in role plays to illustrate the usefulness of various counseling techniques in clinical genetics. This course includes an experiential component for the practice of techniques utilizing standardized patients. Students will analyze their standardized patient recordings and identify missed opportunities and areas in which they need to work on their counseling skills. Each student will analyze a case that they were involved with utilizing at least two theories discussed in class.
Taught by: Kathleen Valverde, MS
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GENC 640 Professional Development I
The goals of this seminar are to increase awareness of the many facets of genetic counseling as a career. The genetic counseling profession is rapidly evolving as new diagnostic technologies and treatments are developed. Skills learned by genetic counselors are applicable to many different job situations. Knowledge of these alternative ways in which counselors may work increases a student's ability to successfully pursue a career. Members of the genetics community from Philadelphia and the surrounding area provide lectures describing the current state of the profession. Selected topics include genetic counseling in a laboratory setting, new treatment options for genetic disease, and how to manage a clinical genetic counseling practice with issues surrounding billing reimbursement and credentialing. This seminar also helps prepare students for the demands of the genetic counseling profession by focusing on emotional well-being through a process group facilitated by a professional counselor. Students prepare essays reflecting on the essential components of an 'ideal job;' develop a curriculum vitae and cover letters.
Taught by: Laura Conway
Course usually offered in fall term
Activity: Lecture
0.0 Course Units
GENC 645 Professional Development II
In this continuation of GENC 640, the goals are to increase awareness of the many facets of genetic counseling as a career. The genetic counseling profession is rapidly evolving as new diagnostic technologies and treatments are developed. Skills learned by genetic counselors are applicable to many different job situations. Knowledge of these alternative ways in which counselors may work increases a student’s ability to successfully pursue a career. Members of the genetics community from Philadelphia and the surrounding area provide lectures describing the current state of the profession. Selected topics include genetic counseling in a laboratory setting, new treatment options for genetic disease, and how to manage a clinical genetic counseling practice with issues surrounding billing reimbursement and credentialing. This seminar also helps prepare students for the demands of the genetic counseling profession by focusing on emotional well-being through a process group facilitated by a professional counselor. Students prepare essays reflecting on the essential components of an ‘ideal job,’ develop a curriculum vitae and cover letters.
Taught by: Kathleen Valverde
Course usually offered in spring term
Prerequisite: GENC 640
Activity: Lecture
0.0 Course Units

GENC 650 Genetic Counseling Rounds I
Once a week, students participate in discussion of clinical cases and recent journal literature. Through their participation, students gain familiarity with the process of reviewing clinical material and providing clinical supervision for their classmates. Presenting clinical and scientific information for group discussion in clinic conferences and patient rounds is an important role for genetic counselors. This seminar provides these experiences in a supportive environment and thus permits skill building in this area. This activity introduces the students to a broad range of diagnoses and methods of managing a case. Discussions of case organization and tailoring a presentation to a specific patient is another aspect of this seminar.
Taught by: Lisa Kessler, M.S.
Activity: Lecture

Taught by: Lisa Kessler, M.S.
Course usually offered in spring term
Prerequisite: GENC 650
Activity: Lecture
0.0 Course Units

GENC 670 Internship
In addition to course-based degree requirements, students participate in internships related to the field of genetic counseling. These internships begin in the student’s first term. Internships give students the opportunity to learn in varying practice-based environments including observations with genetic counselors in clinical practice, rotations in a laboratory setting, and placements in a research and/or advocacy capacity with a specific organization or research protocol. Students document their experiences online daily and provide written summaries of their experiences for the Assistant Director to review. Students attend their internships once a week. Genetic counseling supervisors evaluate the students in each of the placements.
Taught by: Lisa Kessler
Activity: Clinic
0.0 Course Units

GENC 680 Clinical Internship
This experiential course will expose genetic counseling students to the genetic counselors’ role in different clinical settings. Clinical supervision is provided in a supportive environment that permits skill building. The courses will introduce students to a broad range of diagnoses and methods of effectively managing patient care. The course is required for all second year students. The clinical internships during the second year consists of four clinical placements in genetics clinics. Students will have a minimum of 20 days in each specialty. They will have exposure to cases representing a wide range of diagnoses and indications seen in a clinical genetics practice and collect at least 50 participatory encounters to satisfy the ACGC requirement. All cases will be supervised by certified genetic counselors to be acceptable for the core case log book. Students will log each case seen for program review including self-reflection about their performance. All students will be evaluated by their clinical supervisor and will prepare case analyses for the assistant director to review.
Taught by: Lisa Kessler

GENC 990 Thesis
Activity: Independent Study
1.0 Course Unit

Genomics & Comp. Biology (GCB)

GCB 493 Epigentics of Human Health and Disease
Epigenetic alterations encompass heritable, non-genetic changes to chromatin (the polymer of DNA plus histone proteins) that influence cellular and organismal processes. This course will examine epigenetic mechanisms in directing development from the earliest stages of growth, and in maintaining normal cellular homeostasis during life. We will also explore how diverse epigenetic processes are at the heart of numerous human disease states. We will review topics ranging from a historical perspective of the discovery of epigenetic mechanisms to the use of modern technology and drug development to target epigenetic mechanisms to increase healthy lifespan and combat human disease. The course will involve a combination of didactic lectures, primary scientific literature and research lectures, and student-led presentations.
Prerequisite: BIOL 483 recommended
Taught by: S Berger
Course offered spring; odd-numbered years
Also Offered As: BIOL 493, CAMB 493
Prerequisite: BIOL 221
Activity: Seminar
1.0 Course Unit
GCB 533 Statistics for Genomics and Biomedical Informatics
GCB 533 is an introductory course in probability theory and statistical inference for graduate students in Genomics and Computational Biology. The goal of the course is to provide foundation of basic concepts and tools as well as hands-on practice in their application to problems in genomics. At the completion of the course, students should have an intuitive understanding of basic probability and statistical inference and be prepared to select and execute appropriate statistical approaches in their future research.
Activity: Lecture
1.0 Course Unit

GCB 534 Experimental Genome Science
This course will survey methods and questions in experimental genomics, including next generation sequencing methods, genomic sequencing in humans and model organisms, functional genomics, proteomics, and applications of genomics methods. Students will be expected to review and discuss current literature and to propose new experiments based on material learned in the course. Prerequisite: Undergraduates and Masters students need BIOL 431.
Taught by: C. Brown, J. Murray
Also Offered As: PHRM 534
Prerequisite: BIOL 431
Activity: Lecture
1.0 Course Unit

GCB 535 Introduction to Bioinformatics
This course provides overview of bioinformatics and computational biology as applied to biomedical research. A primary objective of the course is to enable students to integrate modern bioinformatics tools into their research activities. Course material is aimed to address biological questions using computational approaches and the analysis of data. A basic primer in programming and operating in a UNIX environment will be presented, and students will also be introduced to Python R, and tools for reproducible research. This course emphasizes direct, hands-on experience with applications to current biological research problems. Areas include DNA sequence alignment, genetic variation and analysis, motif discovery, study design for high-throughput sequencing RNA, and gene expression, single gene and whole-genome analysis, machine learning, and topics in systems biology. The relevant principles underlying methods used for analysis in these areas will be introduced and discussed at a level appropriate for biologists without a background in computer science. The course is not intended for computer science students who want to learn about biologically motivated algorithmic problems; BIOL 437/GCB 536 and GCB/CIS/BIOL537 are more appropriate. Prerequisites: An advanced undergraduate or graduate level statistics taken previously or concurrently required; molecular biology and/or genetics courses; programming experience encouraged; permission of the instructor.
Taught by: B. Voight, C Greene
Course usually offered in spring term
Also Offered As: CIS 535, MTR 535, PHRM 535
Prerequisite: BIOL 421 OR BIOL 526 OR BIOL 527 OR BIOL 528 OR BIOL 540
Activity: Lecture
1.0 Course Unit

GCB 536 Fundamentals of Computational Biology
Introductory computational biology course designed for both biology students and computer science, engineering students. The course will cover fundamentals of algorithms, statistics, and mathematics as applied to biological problems. In particular, emphasis will be given to biological problem modeling and understanding the algorithms and mathematical procedures at the ‘pencil and paper’ level. That is, practical implementation of the algorithms is not taught but principles of the algorithms are covered using small sized examples. Topics to be covered are: genome annotation and string algorithms, pattern search and statistical learning, molecular evolution and phylogenetics, functional genomics and systems level analysis. Prerequisite: College level introductory biology required; undergraduate or graduate level statistics taken previously or concurrently required; molecular biology and/or genetics courses; programming experience encouraged; permission of the instructor.
Taught by: Kim
Course usually offered in fall term
Also Offered As: BIOL 536, CIS 536
Prerequisite: (BIOL 101 AND BIOL 102) OR BIOL 121) AND STAT 111 AND STAT 112
Activity: Lecture
1.0 Course Unit

GCB 557 Mathematical Computation Methods for Modeling Biological Systems
This course will cover topics in systems biology at the molecular/cellular scale. The emphasis will be on quantitative aspects of molecular biology, with possible subjects including probabilistic aspects of DNA replication, transcription, translation, as well as gene regulatory networks and signaling. The class will involve analyzing and simulating models of biological behavior using MATLAB. Prerequisite: Graduate standing or permission of the instructor.
One-term course offered either term
Also Offered As: AMCS 567, BE 567
Activity: Lecture
1.0 Course Unit

GCB 577 Advanced Epigenetics Technology
Second year students in GCB, CAMB (G&E), or IGG programs using genomics methods to measure transcriptomics and epigenomics changes in their experimental systems. The goal is to familiarize students with the latest cutting-edge genomics tools and cover solutions to major experimental and computational challenges in the investigation of genome-wide epigenetic data sets. Students will develop competence in (i) variations of experimental techniques improving resolution and throughput, (ii) issues related to the computational analyses closely related to the various genome-wide assays used to probe epigenetic processes and signals, (iii) computational approaches useful to overcome pitfalls associated to the analysis of a given epigenetic data modality, (iv) methods, techniques and studies on the integration of multi-layer epigenetic data sets.
Taught by: Golnaz Vahedi
Course usually offered in spring term
Also Offered As: CAMB 577, IMUN 577
Prerequisite: (BIOL 483 OR BIOL 493) AND GCB 534 AND (GCB 535 OR GCB 536)
Activity: Lecture
1.0 Course Unit
GCB 585 Wistar Institute Cancer Biology Course: Signaling Pathways in Cancer
This course is intended to provide foundational information about the molecular basis of cancer. When necessary the significance of this information for clinical aspects of cancer is also discussed. The main theme centers around cell cycle checkpoints with specific emphasis on the biochemistry and genetics of DNA damage signaling pathways, DNA damage checkpoints, mitotic checkpoints and their relevance to human cancer. The course is taught by the organizers and guest lecturers from universities and research institutions in the Northeast. Following every lecture, students present a research paper related to the topic of that lecture. The course is intended for first and second year graduate students but all graduate students are welcome to attend. Prerequisite: Undergraduates and Master's degree candidates require permission from the course directors.
Taught by: Skordalakes and Murphy
Course usually offered in fall term
Also Offered As: BMB 585
Activity: Lecture
1.0 Course Unit

GCB 699 Lab Rotation
Activity: Laboratory
1.0 Course Unit

GCB 752 Genomics
Recent advances in molecular biology, computer science, and engineering have opened up new possibilities for studying the biology of organisms. Biologists now have access to the complete genomic sequence and set of cellular instructions encoded in the DNA of specific organisms, including homo sapiens, dozens of bacterial species, the yeast Saccharomyces cerevisiae, the nematode C. elegans, and the fruit fly Drosophila melanogaster. The goals of the course include the following: 1. introduce the basic principles involved in sequencing genomes, 2. familiarize the students with new instrumentation, informative tools, and laboratory automation technologies related to genomics, 3. teach the students how to access the information and biological materials that are being developed in genomics and 4. examine how these new tools and resources are being applied to basic and translational research. This will be accomplished through in depth discussion of classic and recent papers. Prerequisite: Permission of Instructor.
Taught by: S Diskin
Course usually offered in spring term
Also Offered As: CAMB 752
Prerequisite: GCB 534
Activity: Seminar
1.0 Course Unit

GCB 899 Pre-Dissertation Research
Activity: Laboratory
1.0 Course Unit

GCB 995 Dissertation
One-term course offered either term
Activity: Dissertation
1.0 Course Unit

Geology (GEOL)

GEOL 100 Introduction to Geology
An introduction to processes and forces that form the surface and the interior of the Earth. Topics include, changes in climate, the history of life, as well as earth resources and their uses. Field trips required.
For BA Students: Physical World Sector
Taught by: Omar
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Field trips required.

GEOL 103 Natural Disturbances and Human Disasters
Natural disturbances play a fundamental role in sculpturing landscapes and structuring natural and human-based ecosystems. This course explores the natural and social science of disturbances by analyzing their geologic causes, their ecological and social consequences, and the role of human behavior in disaster reduction and mitigation. Volcanoes, earthquakes, floods, droughts, fires, and extraterrestrial impacts are analyzed and compared.
For BA Students: Physical World Sector
Taught by: Phipps
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

GEOL 109 Introduction to Geotechnical Science
Open to architectural and engineering majors as well as Ben Franklin Scholars. Field trips. Relations of rocks, rock structures, soils, ground water, and geologic agents to architectural, engineering, and land-use problems.
For BA Students: Physical World Sector
Taught by: Omar
Course usually offered in fall term
Activity: Lecture
1.5 Course Unit

GEOL 111 Geology Laboratory
Prerequisite: GEOL 100 preferably taken concurrently.
Taught by: Omar
One-term course offered either term
Prerequisite: GEOL 100
Activity: Laboratory
1.0 Course Unit
Notes: Field trips required.

GEOL 125 Earth and Life Through Time
Origin of Earth, continents, and life. Continental movements, changing climates, and evolving life.
For BA Students: Physical World Sector
Taught by: Perez-Rodriguez
One-term course offered either term
Activity: Lecture
1.0 Course Unit
GEOL 130 Oceanography
The oceans cover over 2/3 of the Earth's surface. This course introduces basic oceanographic concepts such as plate tectonics, marine sediments, physical and chemical properties of seawater, ocean circulation, air-sea interactions, waves, tides, nutrient cycles in the ocean, biology of the oceans, and environmental issues related to the marine environment.
For BA Students: Physical World Sector
Taught by: Dmochowski
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GEOL 201 Mineralogy
Crystallography, representative minerals, their chemical and physical properties. Use of petrographic microscope in identifying common rock-forming minerals in thin section.
Taught by: Omar
Course usually offered in fall term
Also Offered As: GEOL 531
Prerequisite: CHEM 101 AND GEOL 100
Activity: Lecture
1.0 Course Unit

GEOL 204 Global Climate Change
Public perceptions and attitudes concerning the causes and importance of global warming have changed. Global Climate Change provides a sound theoretical understanding of global warming through an appreciation of the Earth's climate system and how and why this has changed through time. We will describe progress in understanding of the human and natural drivers of climate change, climate processes and attribution, and estimates of projected future climate change. We will assess scientific, technical, and socio-economic information relevant for the understanding of climate change, its potential impacts and options for adaptation and mitigation.
Taught by: Marinov
Course usually offered in fall term
Prerequisite: ENVS 100 OR GEOL 100 OR GEOL 103 OR GEOL 125 OR GEOL 130
Activity: Lecture
1.0 Course Unit

GEOL 205 Paleontology
Geologic history of invertebrates and their inferred life habits, paleoecology, and evolution. Introduction to paleobotany and vertebrate paleontology. Two field trips required.
For BA Students: Living World Sector
Taught by: Sallan
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Two field trips required.

GEOL 206 Stratigraphy
Introductory sedimentary concepts, stratigraphic principles, depositional environments, and interpretation of the rock record in a paleoecological setting. Two field trips, field project.
Taught by: Jerolmack
Course usually offered in fall term
Also Offered As: GEOL 506
Prerequisite: GEOL 100
Activity: Lecture
1.0 Course Unit
Notes: Two field trips, field project

GEOL 208 Structural Geology
Introduction to deformation as a fundamental geologic process. Stress and strain; rock mechanics. Definition, measurement, geometrical and statistical analysis, and interpretation of structural features. Structural problems in the field. Maps, cross-sections, and three-dimensional visualization; regional structural geology. Three field trips required.
Prerequisite: PHYS 150 strongly recommended.
Taught by: Phipps
Course usually offered in spring term
Prerequisite: GEOL 100 AND GEOL 111
Activity: Lecture
1.0 Course Unit
Notes: Three field trips required

GEOL 299 Independent Study
Directed study for individuals or small groups under close supervision of a faculty member. May be repeated for credit.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: May be repeated for credit

GEOL 305 Earth Surface Processes
Patterns on the Earth's surface arise due to the transport of sediment by water and wind, with energy that is supplied by climate and tectonic deformation of the solid Earth. This course presents a treatment of the processes of erosion and deposition that shape landscapes. Emphasis will be placed on using simple physical principles as a tool for (a) understanding landscape patterns including drainage networks, river channels and deltas, desert dunes, and submarine channels, (b) reconstructing past environmental conditions using the sedimentary record, and (c) the management of rivers and landscapes under present and future climate scenarios. The course will conclude with a critical assessment of landscape evolution on other planets, including Mars.
Course usually offered in spring term
Also Offered As: GEOL 545
Activity: Lecture
1.0 Course Unit
Notes: This course includes two required weekend field trips, and a hands-on laboratory.

GEOL 317 Petrology and Petrography
Occurrences and origins of igneous and metamorphic rocks; phase equilibria in heterogeneous systems. Laboratory study of rocks and thin sections as a tool in interpretation of petrogenesis. Two field trips.
Taught by: Omar
Course usually offered in spring term
Also Offered As: GEOL 417
Prerequisite: GEOL 201
Activity: Lecture
1.0 Course Unit
Notes: Two field trips
GEOL 318 Glaciers, Ice & Climate
All forms of frozen water at Earth's surface define the cryosphere. These icy environments are an integral part of the global climate system, with important linkages and feedbacks resulting from their influences on surface energy and moisture fluxes, clouds, precipitation, hydrology, and circulation in the atmosphere and oceans. This course will survey the various components of the cryosphere and their interactions with climate, with a strong emphasis on the dynamics of glaciers and ice sheets. Broad topics to be covered are 1) the rudimentary mechanics of glacier and ice sheet flow, 2) fast-moving ice streams and factors limiting their motion, 3) ice-quakes and their origins, 4) the nature of climate data recorded in natural ice bodies, 5) the influence of climate on the stability of ice sheets and glaciers, and 6) glacier-like flow on other planetary bodies. This will be a lecture-based course with written assignments and problems sets.
Prerequisite: Students should have basic knowledge of Calculus.
Taught by: Goldsby
Prerequisite: MATH 114
Activity: Lecture
1.0 Course Unit

GEOL 399 Environmental Studies Research Seminar for Juniors
This seminar is designed to help Juniors prepare for the Senior Thesis research. Topic selection, advisor identification, funding options, and basic research methods will be discussed.
Taught by: Andrews
Course usually offered in spring term
Also Offered As: ENVS 399
Prerequisite: ENVS 100
Activity: Seminar
1.0 Course Unit

GEOL 400 Topics in Earth Science
In depth examination of special topics in Earth Science. Topics will change with instructor and course offerings.
Taught by: TBA
Activity: Seminar
1.0 Course Unit

GEOL 409 Intro to Remote Sensing
This course will introduce students to the principles of remote sensing, characteristics of remote sensors, and remote sensing applications. Image acquisition, data collection in the electromagnetic spectrum, and data set manipulations for earth and environmental science applications will be emphasized. We will cover fundamental knowledge of the physics of remote sensing; aerial photographic techniques; multispectral, hyperspectral, thermal, and other image analysis. Students will pursue an independent research project using remote sensing tools, and at the end of the semester should have a good understanding and the basic skills of remote sensing.
Taught by: Dmochowski
Also Offered As: GEOL 509
Prerequisite: MATH 114 AND PHYS 151
Activity: Seminar
1.0 Course Unit

GEOL 411 Intro Soil Science
Soil is considered the 'skin of the Earth', with interfaces between the lithosphere, hydrosphere, atmosphere, and biosphere. It is a mixture of minerals, organic matter, gases, liquids and a myriad of organisms that can support plant life. As such, soil is a natural body that exists as part of the environment. This course will examine the nature, properties, formation and environmental functions of soil.
Taught by: Plante
Prerequisite: GEOL 100
Activity: Lecture
1.0 Course Unit

GEOL 417 Advanced Petrology
Occurrences and origins of igneous and metamorphic rocks; phase equilibria in heterogeneous systems. Laboratory study of rocks and thin sections as a tool in interpretation of petrogenesis. Two field trips.
Taught by: Omar
Course usually offered in spring term
Also Offered As: GEOL 317
Prerequisite: GEOL 201
Activity: Lecture
1.0 Course Unit

GEOL 418 Geochemistry
This course provides a comprehensive introduction to theory and applications of chemistry in the earth and environmental sciences. Theory covered will include atomic structure, chemical bonding, cosmic abundances, nucleosynthesis, radioactive decay, dating of geological materials, stable isotopes, acid-base equilibria, salts and solutions, and oxidation-reduction reactions. Applications will emphasize oceanography, atmospheric sciences and environmental chemistry, as well as other topics depending on the interests of the class. Although we will review the basics, this course is intended to supplement, rather than to replace, courses offered in the Department of Chemistry. It is appropriate for advanced undergraduate as well as graduate students in Geology, Environmental Science, Chemistry and other sciences, who wish to have a better understanding of these important chemical processes.
Taught by: Giere
Course not offered every year
Activity: Lecture
1.0 Course Unit

GEOL 420 Introduction to Geophysics
This course will cover the application of geophysical investigation techniques to problems of the earth's planetary structure, local subsurface structure and mineral prospecting. The topics will include principles of geophysical measurements and interpretation with emphasis on gravity measurement, isostasy, geomagnetism, seismic refraction and reflection, electrical prospecting, electromagnetics and ground radar.
Prerequisite: If course requirement no met, request permission.
Taught by: Goldsby
Course not offered every year
Prerequisite: GEOL 100 OR GEOL 109
Activity: Lecture
1.0 Course Unit
**GEOL 421 Biogeochemistry**
Humans have an enormous impact on the global movement of chemical materials. Biogeochemistry has grown to be the principal scientific discipline to examine the flow of elements through the global earth systems and to examine human impacts on the global environment. This course will introduce and investigate processes and factor controlling the biogeochemical cycles of elements with and between the hydrosphere, lithosphere, atmosphere and biosphere. Students will apply principles learned in lectures by building simple computer-based biogeochemical models.

Taught by: Plante
Course usually offered in spring term
Also Offered As: GEOL 541
Prerequisite: ENVS 100 OR GEOL 100
Activity: Lecture
1.0 Course Unit

**GEOL 424 Geomicrobiology**
Microorganisms inhabit almost every conceivable environment on the planet’s surface, and extent the biosphere to depths of several kilometers into its crust. Significantly, the chemical reactivity and metabolic diversity displayed by microbial communities make them integral components of global elemental cycles, from mineral dissolution and precipitation reactions, to aqueous reduction-oxidation processes. In that regard, microorganisms have helped shape our planet over the past 4 billion years and made it habitable for higher forms of life. In this course we will evaluate the geological consequences of microbial activities, by taking an interdisciplinary and 'global' view of microbe-environment interactions.

Taught by: Perez-Rodriguez
Prerequisite: BIOL 101 OR CHEM 101
Activity: Lecture
1.0 Course Unit

**GEOL 430 Atmospheric Chemistry**
An introduction to the chemistry of the earth's atmosphere. Covers evolution of the earth's atmosphere, its physical and chemical structure, its natural chemical composition and oxidative properties, and human impacts, including photochemistry, and aerosols; stratospheric ozone loss, tropospheric pollution; climate change, and acidic deposition. Chemistry in the atmosphere of other planets in our solar system will be covered.

Taught by: Francisco
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

**GEOL 477 Introduction to Vertebrate Paleontology**
Taught by: Dodson
Course not offered every year
Prerequisite: GEOL 100 OR GEOL 205 OR BIOL 101
Activity: Lecture
1.0 Course Unit

**GEOL 479 Macroevolution**
Macroevolution, or evolution above the population level and on long timescales, as a field addresses fundamental questions about the origins of life, past and present. These include but are not limited to: How are highly dissimilar species related? Why are animals on distant continents so similar? How and when did major groups, like birds or mammals, originate? What drives evolutionary arms races? Why are there so many more species of beetle than crocodile? Why are there more species in the tropics than the arctic? Did dinosaurs prevent the diversification of mammals? Why do some animals survive mass extinction? How can invasive species spread so rapidly? Students will learn important concepts underlying our understanding of modern biodiversity and the fossil record, as well as how to use different methods and lines of evidence, including evolutionary trees (phylogeny), fossil databases, past climate and global events, mathematical modeling, and even modern genomics, to answer fundamental questions about the evolution of life.

Taught by: Lauren Sallan
Activity: Lecture
1.0 Course Unit

**GEOL 498 Senior Thesis**
The culmination of the Earth Science major. Students, while working with an advisor in their concentration, conduct research and write a thesis.

Prerequisite: GEOL 400-level and declaration of the EASC major. The Earth Science major, as of the fall of 2008, requires 1 semester of GEOL 399 and two semesters of GEOL 498.

Taught by: Dmochowski
Two terms. student may enter either term.
Activity: Senior Thesis
0.5 Course Units
Notes: The Earth Science major, as of the fall of 2008, requires 1 semester of GEOL399 and two semesters of GEOL498.

**GEOL 508 The Geology and Geography of Energy Resources**
This course will survey the way geology controls the formation and location of energy resources. Questions we'll address include, ‘How are oil and gas fields formed?’, 'Why does the Middle East have so much oil?', 'What are the best locations in the US for wind and solar energy generation, and why?'. We will discuss hydrocarbon, nuclear, solar, wind, and tidal energy sources. Prerequisite: Possible field trips.

Taught by: Phipps
Course not offered every year
Prerequisite: GEOL 100
Activity: Seminar
1.0 Course Unit
Notes: Possible field trips.
GEOL 509 Intro to Remote Sensing
This course will introduce graduate students to the principles of remote sensing, characteristics of remote sensors, and remote sensing applications. Image acquisition, data collection in the electromagnetic spectrum, and data set manipulations for earth and environmental science applications will be emphasized. We will cover fundamental knowledge of the physics of remote sensing; aerial photographic techniques; multispectral, hyperspectral, thermal, and other image analysis. Students will pursue an independent research project using remote sensing tools, and at the end of the semester should have a good understanding and the basic skills of remote sensing. Expectations for the graduate student independent research projects will be at the graduate level and can relate to their capstone or Ph.D. thesis research topics.
Taught by: Dmochowski
Also Offered As: GEOL 409
Prerequisite: MATH 114 AND PHYS 151
Activity: Seminar
1.0 Course Unit

GEOL 510 Geophysical Fluid Dynamics
This class will discuss physical principles fundamental to the theoretical, observational, and experimental study of geophysical fluids, the equations of motion for rotating fluids; hydrostatic and Boussinesq approximations; circulation theorem; conservation of potential vorticity; scale analysis, geostrophic wind, quasigeostrophic system; wave theory and applications, flow instabilities, geophysical boundary layers. Depending on student interest, the class will be adapted to include applications from Oceanography, Meteorology, Geophysics or Engineering.
Taught by: Nathan Paldor
Prerequisite: MATH 114
Activity: Lecture
1.0 Course Unit

GEOL 515 Evolution/Revolution of Land Ecosystems
Origin and diversification of land ecosystems. Interaction between plants and animals. Effects of past climatic change and other external factors. The importance of past changes in land ecosystems to our understanding of current global change.
Taught by: Sallan
Course not offered every year
Activity: Seminar
1.0 Course Unit

GEOL 516 Paleocology Discovering Lost Ecosystems
Paleocology, or ecology in the fossil record, is the study of how interactions between species have developed over time and how ecosystems and environmental change have shaped the evolution of life and biodiversity. It also involves rebuilding lost communities from fossil evidence to provide context for the origins of modern life and modern ecosystems. This seminar course will survey major topics in Paleocology, including of ecosystems, the long-term connections between habitat, life mode and biodiversity as well as the distribution of life (e.g. paleobiogeography), escalation between predators and prey, competition between invasive and resident species, and how we can infer the ecology and behavior of long-dead organisms. Students will lead discussions on select concepts and choose one topic to investigate in depth.
Course not offered every year
Activity: Seminar
1.0 Course Unit

GEOL 528 Aqueous Geochemistry
This course is designed to provide the graduate student with an understanding of the fundamentals of aqueous geochemistry. The chemistry of water, air, and soil will be studied from an environmental perspective. The nature, composition, structure, and properties of pollutants coupled with the major chemical mechanisms controlling the occurrence and mobility of chemicals in the environment will also be studied. Upon completion of this course, students should expect to have attained a broad understanding of and familiarity with aqueous geochemistry concepts applicable to the environmental field. Environmental issues that will be covered include acid deposition, toxic metal contamination, deforestation, and anthropogenic perturbed aspects of the earth's hydrosphere.
Taught by: Andrews
Course not offered every year
Prerequisite: GEOL 100
Activity: Lecture
1.0 Course Unit

GEOL 531 Advanced Mineralogy
Advanced crystallography, representative minerals, their chemical and physical properties. Use of petrographic microscope in identifying common rock-forming minerals in thin section.
Taught by: Omar
Course usually offered in fall term
Also Offered As: GEOL 201
Prerequisite: GEOL 100 AND (CHEM 001 OR CHEM 101)
Activity: Lecture
1.0 Course Unit

GEOL 540 Geotectonics
Bulk structure of the Earth. Plate tectonics and plate boundaries. Plumes, rifting, and intraplate tectonics. Geotectonics and seismicity.
Prerequisite: Field trip
Taught by: Phipps
Course not offered every year
Prerequisite: (GEOL 205 OR GEOL 206 OR GEOL 208 OR GEOL 317) AND GEOL 420
Activity: Lecture
1.0 Course Unit
Notes: Field trip

GEOL 541 Advanced Geochemistry
Taught by: Plante
Course usually offered in spring term
Also Offered As: GEOL 421
Activity: Lecture
1.0 Course Unit
GEOL 545 Advanced Earth Surface Processes
Pattern on the Earth's surface arise due to the transport of sediment by water and wind, with energy that is supplied by climate and tectonic deformation of the solid Earth. This course presents a treatment of the processes of erosion and deposition that shape landscapes. Emphasis will be placed on using simple physical principles as a tool for (a) understanding landscape patterns including drainage networks, river channels and deltas, desert dunes, and submarine channels, (b) reconstructing past environmental conditions using the sedimentary record, and (c) the management of rivers and landscapes under present and future climate scenarios. The course will conclude with a critical assessment of landscape evolution on other planets, including Mars.
Course usually offered in spring term
Also Offered As: GEOL 305
Activity: Lecture
1.0 Course Unit

GEOL 599 Independent Study
Directed study for individuals or small groups under supervision of a faculty member.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

GEOL 604 Geostatistical Analysis
Univariate and multivariate approaches to the analysis of spatial correlation and variability. Many disciplines, including geology, ecology and the environmental sciences regularly need to analyze and make predictions from data that is spatially autocorrelated. Mine reserve estimation, pollutant dispersal and the use of randomization tests in ecology are examples of where spatial statistics may be applied.
Prerequisite: BIOL 556 suggested or other Inferential Statistics course, covering uni- and multi-variate techniques.
Taught by: Vann
Course usually offered in fall term
Prerequisite: STAT 101
Activity: Lecture
1.0 Course Unit

GEOL 611 Field Study of Soils
Processes of soil development in a variety of temperate environments. Effects of lithology and climate on soil properties. Prerequisite: All day field trips.
Taught by: Plante
Course usually offered in spring term
Prerequisite: GEOL 511
Activity: Seminar
1.0 Course Unit
Notes: All day field trips

GEOL 615 Advanced Vertebrate Paleontology Seminar
Topics in vertebrate paleontology and paleoecology. May be repeated for credit.
Taught by: Dodson
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit

GEOL 618 Fundamentals of Air Pollution
This course will cover various topics related to Air Quality. Initial lectures will cover the history of air pollution, discussions of the Clean Air Act and composition of the atmosphere. We will then progress to discussion of atmospheric pollutants and sources of those pollutants. Additional topics will include: fate of atmospheric pollutants (transport and dispersion mechanisms), effects of air pollution (health and environmental effects), urban smog, acid rain, climate change, ozone depletion in the stratosphere, air quality criteria, and engineering controls.
Taught by: Andrews
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

GEOL 619 Instrumentation for the Geosciences
An introduction to the theory, operation and application of modern analytical instrumentation used in geo- and environmental sciences. Primarily focused on laboratory instrumentation such as mass spectroscopy, elemental analyses and x-ray techniques. Some field instruments will be introduced as well. Students will be expected to develop projects utilizing the various instruments.
Taught by: Vann
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GEOL 620 Applied and Environmental Geophysics
The application of geophysical investigation techniques to problems of the local and shallow subsurface structure of the earth. The application of geophysical measurements and interpretation for environmental site characterizations, locating buried structures, groundwater investigations, and identifying geotechnical hazards with emphasis on gravity methods, seismic refraction and reflection, electrical resistivity, electromagnetic methods, ground penetrating radar, and borehole nuclear logging.
Prerequisite: MSAG Required Course
Taught by: Sauder
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: MSAG Required Course

GEOL 621 Field Methods in Biogeochemistry
This field- and lab-based course will examine a set of methods for the study and quantification of biochemical processes in terrestrial and aquatic systems. We will focus on field-based measurements, as well as sample collection and laboratory analyses of fluxes of carbon and nutrient elements, including photosynthesis, respiration, dissolved and suspended nutrient fluxes in streams.
Taught by: Plante
Course usually offered summer term only
Activity: Seminar
1.0 Course Unit
GEOL 650 Environmental Due Diligence
Evaluation of environmental contamination and liability is an important tool during acquisition of real estate property, and a standard work product in the environmental consulting field. This course will cover the purpose and history of the Superfund law, the various classifications of Superfund liable parties, and protections against Superfund liability, specifically with regard to bona fide prospective purchasers (BFPP). In the context of the BFPP liability defense the course will focus on the performance of 'All Appropriate Inquiry' for the presence of environmental contamination (e.g. Phase I environmental site assessment). Our study of 'All Appropriate Inquiry' will include evaluation of historical maps and other resources, aerial photography, chain-of-title documentation, and governmental database information pertaining to known contaminated sites in the area of select properties on or near campus. Site visits will be performed to gain experience and knowledge for the identification of recognized environmental conditions. Students will prepare environmental reports for select properties and will have an opportunity to hone technical writing skills.
Taught by: Cron
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

GEOL 651 Geocomputations
Review and applications of selected methods from differential equations, advanced engineering mathematics and geostatistics to problems encountered in geology, engineering geology, geophysics and hydrology.
Taught by: Mastropaolo
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

GEOL 653 Introduction to Hydrology
Introduction to the basic principles of the hydrologic cycle and water budgets, precipitation and infiltration, evaporation and transpiration, stream flow, hydrograph analysis (floods), subsurface and groundwater flow, well hydraulics, water quality, and frequency analysis.
Taught by: Sauder
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

GEOL 654 Geomechanics: Solids
Mechanical properties of solid and fluid earth materials, stress and strain, earth pressures in soil and rock, tunnels, piles, and piers; flow through gates, weirs, spillways and culverts, hydraulics, seepage and Darcy's law as applied to the hydrologic sciences.
Taught by: Sauder
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

GEOL 656 Fate and Transport of Pollutants
This course covers basic groundwater flow and solute transport modeling in one-, two- and three-dimensions. After first reviewing the principles of modeling, the student will gain hands-on experience by conducting simulations on the computer. The modeling programs used in the course are MODFLOW (USGS), MT3D, and the US Army Corps of Engineers GMS (Groundwater Modeling System).
Taught by: Mastropaolo
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GEOL 658 Environmental Statistical Analysis
Statistical analysis of data from geological, geotechnical, and geohydrologic sources.
Taught by: Mastropaolo
One-term course offered either term
Activity: Seminar
1.0 Course Unit

GEOL 661 Environmental Groundwater Hydrology
This course is designed to introduce the major definitions and concepts regarding groundwater flow and contaminant transport. The theory and underlying concepts, including mathematical derivations of governing equations used to model groundwater flow and contaminant transport, will be discussed and applications to environmental problems addressed. Upon completion of this course, students should expect to have acquired the skills necessary to pursue course work in flow and transport numerical and analytical modeling.
Taught by: Mastropaolo
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GEOL 663 Geomechanics: Fluids
This course is designed to introduce the major concepts regarding geochemistry and geochemical modeling. The course introduces two United States Geological Survey (USGS) computer models, PHREEQC, a geochemical speciation model, and PHAST, a transport module which is coupled with PHREEQC output. These are highly respected, world-renowned models that are free-ware via the USGS, complete with documentation. Once familiar with the models, the student can continue to work with them beyond the course experience. PHREEQC is designed to perform a wide variety of aqueous geochemical calculations and can be used to simulate chemical reactions and transport processes in natural or polluted waters. PHREEQC is capable of modeling both equilibrium and kinetic reactions. Some of the simulations pursued during the course include: Speciation of precipitation water; Iron speciation; Zinc sorption onto hydrous ferric oxide; Oxidation of organic carbon and the sequence of electron donors in natural waters; Benzene advective transport in groundwater; TCE transport and degradation.
Taught by: Mastropaolo
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GEOL 666 Geology Field Work
Directed independent field work. Prerequisite: 4-8 weeks during the summer.
Taught by: Giegengack
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: 4-8 weeks during the summer.

GEOL 668 Geomechanics: Fluids
Static and Dynamic mechanical properties of fluid in earth materials, as applied to the Hydrologic Sciences; Principles of Fluid Mechanics and Hydraulics applied to open channel flow in earth materials; flow through gates, weirs, spillways, and culverts; Applications of Darcy’s Law to subsurface flow and seepage.
Taught by: Sauder
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
GEOL 670 Engineering Geology: Rock Mechanics
This course focuses on the rock mechanics aspects of Engineering Geology. The theme is characterization of the geologic environment for engineering and environmental investigations. Covered are the various exploration tools and methods, including: Collection and analysis of existing engineering data; Interpretation of remotely sensed imagery; Field and laboratory measurements of material properties; Measurement and characterization of rock discontinuities; Rock slope stability analysis; Stress, strain and failure of rocks and the importance of scale; Rock core logging; Rock mass rating; Rock support and reinforcement; Rock excavation, blasting and blast monitoring and control.
Taught by: Freed
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

GEOL 671 Engineering Geology: Surficial Materials & Processes
As the human population continues to grow, the environment and earth's resources become more important. This course will concentrate on the occurrence and distribution of earth's surficial materials and their engineering and environmental properties. The engineering classification, testing, and use of the earth materials will be emphasized. The geohazards of surficial processes will also be studied in the context of geologic history and the planning and use of the geologic environment.
Taught by: Freed
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GEOL 672 Landslides
Landslides are important geomorphic agents in mountainous terrain, mobilizing sediment and playing a key role in controlling relief and elevation. The work of landslides is often characterized by their magnitude-frequency, which also has direct implications for people, property, and infrastructure in mountainous terrain, and for the approaches taken to minimize the risk from landslides. This course will introduce students to a conceptual understanding of landslides at a range of spatial scales, including the mechanics of the processes governing landslides from trigger to deposition. Methods of slope monitoring and the varied approaches to landslide risk mitigation and management will be explored, with a range of geotechnical and environmental applications. This course includes lab-based sessions to demonstrate simple techniques to understand fundamental landslide processes, and applications of GIS technology to explore slope monitoring and failure prediction.
Taught by: Siobhan Whadcoat
Activity: Lecture
1.0 Course Unit

GEOL 680 Interpretation of Near-surface Geologic Structure for Engineering and Environment
The course introduces the basic principles of structural geology and their applications to engineering and environmental site characterization. Includes the mechanisms for the deformation and failure of the earth's crust, folded and faulted structures, and the orthogonal and stereographic solutions to characterize near-surface geologic structure. It also includes the construction and interpretation of geologic maps, geologic cross sections and block diagrams. Emphasis is placed on the graphical representation of subsurface data, including the use of selected computer programs, and the integration of the data to solve problems encountered in engineering and environmental projects.
Taught by: Freed
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GEOL 699 Project Design
This course is designed to prepare Master of Science in Applied Geosciences students to undertake their Project Design exercise. In this course, we discuss how to identify an appropriate research project, how to design a research plan, and how to prepare a detailed proposal. By the end of the course, each student is expected to have completed a Project Design proposal.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

GEOL 750 Topics in earth Science
This course will use the weekly EES seminar series to survey historic breakthrough papers or topics in the earth sciences, as well as modern papers - written by the seminar speakers - that often put the classics in perspective. Graduate students (Ph.D. only) in the Department of Earth and Environmental Science will engage in the material through reading, presentation, and discussion. The course has several goals. (1.) To engender an understanding and appreciation of major breakthroughs in our field. (2.) To develop skills in presenting and discussing scientific results. And (3.) to refine students’ understanding of what constitutes great science.
Taught by: Sallan
Activity: Seminar
1.0 Course Unit
Notes: Open only to PhD students

GEOL 999 Independent Study and Research
Directed study for individuals or small groups under supervision of a faculty member.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: Hours and credits to be arranged.
Germanic Languages (GRMN)

GRMN 011 Bad Taste
'Beauty is not a quality inherent to things: it only exists in the mind of the beholder.' (David Hume) Most of us can recognize bad taste as soon as we see it: Harlequin romances, Elvis on black velvet, lawn ornaments. But bad taste also has a history, and kitsch has been identified as a peculiarly modern invention related to capitalism and consumerism. Beginning with a discussion of taste in the eighteenth century, we will investigate under what conditions good taste can go bad, for example when it is the object of mass reproduction, and, on the other hand, why bad taste in recent times has increasingly been viewed in positive terms. Categories such as the cute, the sentimental, the popular, the miniature, kitsch, and camp will be explored. We will also ask what forms of ideological work have been done by this brand of aesthetics, for example in the connection between politics and kitsch, feminism and the low-brow, or camp and queer identity. Writers and film-makers to be discussed include: Hume, Kant, Goethe, Flaubert, Bourdieu, Sacher-Masoch, Thomas Mann, Nabokov, Benjamin, Greenberg, Sontag, John Waters.
Taught by: MacLeod
Course not offered every year
Activity: Seminar
1.0 Course Unit
Notes: Freshman seminar. All readings and lectures in English. No knowledge of German is required.

GRMN 016 Babylon Berlin: German Crime Books
Why are crime books and crime shows so popular? 2017 marked a moment in time when a serialized domestic TV show took off in Germany like wild fire. The first three episodes of 'Babylon Berlin' were seen by an average 7.8 million viewers on ARD last year, achieving a 24.5% share and reaching a peak of 8.5 million. On Sky, it boasted the best ratings ever for a non-English series and was only beaten overall by the seventh season of 'Game of Thrones.' Babylon Berlin is based on Volker Kutscher's crime books. Thus, this course will trace the success of German crime books as a best-selling genre by analyzing the appeal of the whodunit format and by questioning the transnational appeal of this genre. 'Babylon Berlin' exemplifies the success of German crime books because the treatment of historical events combined with a critical eye toward the Zeitgeist of cultural products sheds light on the representation of culture and its co-construction of a transnational identity.

GRMN 023 In Praise of the Small in Literature and the Arts
We can memorize aphorisms and jokes, carry miniature portraits with us, and feel playful in handling small objects. This seminar will ask us to pay attention to smaller texts, art works, and objects that may easily be overlooked. In addition to reading brief texts and looking at images and objects, we will also read texts on the history and theory of short genres and the small.
Taught by: Weissberg
Course not offered every year
Also Offered As: COML 023
Activity: Seminar
1.0 Course Unit
Notes: Freshman seminar. All readings and lectures in English. No knowledge of German is required.

GRMN 026 Jews and China: Views from Two Perspectives
Jews in China?? Who knew?? The history of the Jews in China, both modern and medieval, is an unexpected and fascinating case of cultural exchange. Even earlier than the 10th century. Jewish trader from India or Persia on the Silk Road, settled in Kaifeng, the capital of the Northern Song Dynasty, and established a Jewish community that lasted through the nineteenth century. In the mid-nineteenth century, Jewish merchants, mainly from Iraq, often via India, arrived in China and played a major role in the building of modern Shanghai. After 1898, Jews from Russia settled in the northern Chinese city of Harbin, first as traders and later as refugees from the Bolshevik Revolution and Russian Civil War. In the first decades of the twentieth century, a few Jews from Poland and Russia visited China as tourists, drawn by a combination of curiosity about the cultural exoticism of a truly foreign culture and an affinity that Polish Jewish socialists and communists felt as these political movements began to emerge in China. During World War II, Shanghai served as a port of refuge for Jews from Central Europe. In this freshman seminar, we will explore how these Jewish traders, travelers, and refugees responded to and represented China in their writings. We will also read works by their Chinese contemporaries and others to see the responses to and perceptions of these Jews. We will ask questions about cultural translation: How do exchanges between languages, religions, and cultures affect the identities of individuals and communities? What commonalities and differences between these people emerge?

**GRMN 027 Euro Zone Crisis - The EU in a Currency War for Survival?**

'Let me put it simply...there may be a contradiction between the interests of the financial world and the interests of the political world...We cannot keep constantly explaining to our voters and our citizens why the taxpayer should bear the cost of certain risks and not those people who have earned a lot of money from taking those risks.' Angela Merkel, Chancellor of Germany, at the G20 Summit, November 2010. In January 1999, a single monetary system united Germany, a core nation, with 10 other European states. Amidst the optimism of the euro’s first days, most observers forecast that Europe would progress toward an ever closer union. Indeed, in the ensuing decade, the European Union became the world’s largest trading area, the euro area expanded to include 17 member states, and the Lisbon Treaty enhanced the efficiency and democratic legitimacy of the Union. In 2009, Greece’s debt crisis exposed deep rifts within the European Union and developed into a euro zone crisis - arguably the most difficult test Europe has faced in the past 60 years. After two years of a more benign EURO debt situation, the risk of recession, EU sanctions against Russia, and a possible collision of a newly-elected Greek government with its creditors, the euro crisis returned with a vengeance in 2015. In addition, the pressure mounts for European leaders to find a solution to the refugee crisis which reached a peak in the fall of 2015. In 2016 the Brexit delivered the latest blow to the European Union, and the future of the European project without the UK looks bleak. The Economic and Monetary Union (EMU) is still fragile, and economic and political developments in 2017 could determine the future of the euro. Does the EU have what it takes to emerge from these crises? Will the European nations find a collective constructive solution that will lead to a fiscal union that implies further integration?

**Notes:** Freshman seminar. All readings and lectures in English. No knowledge of German is required.

---

**GRMN 101 Elementary German I**

Designed for the beginning student with no previous knowledge of German. German 101, as the first course in the first-year series, focuses on the development of language competence in listening, speaking, reading, and writing. By the end of the semester, students will be able to engage in simple conversations about familiar things, know greetings and everyday expressions, they will be able to count and tell time, and negate sentences in day-to-day contexts. Furthermore, students will be able to speak about events that happened in the immediate past and express plans for the future. In addition, students will have developed reading strategies that allow them to glean information from simple newspaper and magazine articles and short literary texts. Because cultural knowledge is one of the foci of German 101, students will learn much about practical life in Germany and will explore German-speaking cultures on the Internet.

**For BA Students:** Language Course
**One-term course offered either term**
**Also Offered As:** GRMN 501

**Activity:** Lecture

**1.0 Course Unit**

---

**GRMN 102 Elementary German II**

This course is a continuation of GRMN 101 and is designed to strengthen and expand students’ listening, speaking, reading, and writing competence and to deepen an understanding of German-speaking cultures. By the end of the course, students will be able to handle a variety of day-to-day needs in a German-speaking setting and engage in simple conversations about personally significant topics. Students can expect to be able to order food and beverages, purchase things, and to be familiar with the German university system, the arts, and current social topics. Students will begin to be able to talk about the past and the future, make comparisons, describe people and things in increasing detail, make travel plans that include other European countries, and make reservations in hotels and youth hostels. By the end of the course students will be able to talk about their studies and about their dreams for the future. In addition, students will develop reading strategies that should allow them to understand the general meaning of articles, and short literary texts. Furthermore, students will feel more able to understand information when hearing German speakers talking about familiar topics. Cultural knowledge remains among one of the foci of German 102, and students will continue to be exposed to authentic materials.

**For BA Students:** Language Course
**One-term course offered either term**
**Also Offered As:** GRMN 502

**Prerequisite:** GRMN 101

**1.0 Course Unit**

---

**GRMN 103 Intermediate German I**

This course is designed to improve students writing and speaking competence, to increase vocabulary, to deepen grammar usage, and to help develop effective reading and listening strategies in German across literary genres and media as students interpret and analyze cultural, political, and historical moments in German-speaking countries and compare them with their own cultural practices. This course is organized around content-based modules and prepares students well for GRMN 104 and a minor or major in German.

**For BA Students:** Language Course
**One-term course offered either term**
**Also Offered As:** GRMN 503

**Prerequisite:** GRMN 102

**Activity:** Lecture

**1.0 Course Unit**

---

**GRMN 104 Intermediate German II**

A continuation of GRMN 103. Expands students writing and speaking competence in German, increases vocabulary and helps students practice effective reading and listening strategies. Our in-class discussions are based on weekly readings of literary and non-literary texts to facilitate exchange of information, ideas, reactions, and opinions. In addition, the readings provide cultural and historical background information. The review of grammar will not be the primary focus of the course. Students will, however, expand and deepen their knowledge of grammar through specific grammar exercises. Students will conclude the basic-language program at PENN by reading an authentic literary text; offering the opportunity to practice and deepen reading knowledge and to sensitze cultural and historical awareness of German-speaking countries.

**For BA Students:** Last Language Course
**One-term course offered either term**
**Also Offered As:** GRMN 504

**Prerequisite:** GRMN 103

**Activity:** Lecture

**1.0 Course Unit**
GRMN 106 Accelerated Elementary German
This course is intensive and is intended for dedicated, highly self-motivated students who will take responsibility for their learning and creation of meaning with their peers. An intensive two credit course in which two semesters of elementary German (GRMN 101 & 102) are completed in one. Introduction to the basic elements of spoken and written German, with emphasis placed on the acquisition of communication skills. Readings and discussions focus on cultural differences. Expression and comprehension are then expanded through the study of literature and social themes.
For BA Students: Language Course
Course usually offered in fall term
Also Offered As: GRMN 505
Activity: Lecture
2.0 Course Units

GRMN 107 Accelerated Intermediate German
This course is intensive and is intended for dedicated, highly self-motivated students who will take responsibility for their learning and creation of meaning with their peers. This accelerated course is designed to improve students writing and speaking competencies, to increase vocabulary, to deepen grammar usage, and to help develop effective reading and listening strategies in German across literary genres and media as students interpret and analyze cultural, political, and historical moments in German-speaking countries and compare them with their own cultural practices. This course is organized around content-based modules. Students conclude the basic-language program at PENN by reading an authentic literary text; offering the opportunity to practice and deepen reading knowledge and to sensitize cultural and historical awareness of German-speaking countries.
For BA Students: Last Language Course
Course usually offered in spring term
Also Offered As: GRMN 514
Prerequisite: GRMN 102 OR GRMN 106
Activity: Lecture
2.0 Course Units

GRMN 134 Origins of Nazism: From Democracy to Race War and Genocide
Where did the Nazis come from? Was the Weimar Republic bound to fail? Did the Treaty of Versailles or the Great Depression catapult the Nazis into power? What was the role of racism, of Anti-Semitism? How did the regime consolidate itself? What was the role of ordinary people? How do we explain the Holocaust and what kind of a war was the Second World War? Grappling with these and more questions, the first half of the course focuses on Germany’s first democracy, the Weimar Republic and its vibrant political culture. In the second half, we study on the Nazi regime, how it consolidated its power and remade society based on the concepts of race and struggle. Discussions of race and race-making are crucial throughout the course. In the name of the ‘racial purity,’ the Nazi state moved ruthlessly against Germany’s Jewish population and cleansed German society of all ‘undesirable’ elements. These ideas and practices didn’t originate with the Nazis and they didn’t operate in a geopolitical vacuum. Thinking about Nazi racism and genocide in both its particular specifics and in a larger global historical context is the main goal of this course.

One-term course offered either term
Also Offered As: HIST 134
Activity: Recitation
1.0 Course Unit

GRMN 145 The Vikings
The Vikings were the terror of Europe from the late eight to the eleventh century. Norwegians, Danes and Swedes left their homeland to trade, raid and pillage; leaving survivors praying ‘Oh Lord, deliver us from the fury of the Norsemen!’ While commonly associated with violent barbarism, the Norse were also farmers, craftsmen, and merchants. As their dragon ships sailed the waterways of Europe and beyond, they also transformed from raiders to explorers, discoverers and settlers of found and conquered lands. This course will introduce students to various facets of the culture and society of the Viking world ranging from honor culture, gender roles, political culture, mythology, and burial practices. We will also explore the range of Viking activity abroad from Kiev and Constantinople to Greenland and Vineland, the Viking settlement in North America. We will use material and archeological sources as well as literary and historical ones in order to think about how we know history and what questions we can ask from different sorts of sources. Notably, we will be reading Icelandic sagas that relate oral histories of heroes, outlaws, raiders and sailors that will lead us to question the lines between fact and fiction, and myth and history.
Taught by: Kuskowski
One-term course offered either term
Also Offered As: HIST 303
Activity: Lecture
1.0 Course Unit

GRMN 150 Water Worlds: Cultural Responses to Sea Level Rise & Catastrophic Flooding
As a result of climate change, the world that will take shape in the course of this century will be decidedly more inundated with water than we’re accustomed to. The polar ice caps are melting, glaciers are retreating, ocean levels are rising, polar bear habitat is disappearing, countries are jockeying for control over a new Arctic passage, while low-lying cities and small island nations are confronting the possibility of their own demise. Catastrophic flooding events are increasing in frequency, as are extreme droughts. Hurricane-related storm surges, tsunamis, and raging rivers have devastated regions on a local and global scale. In this seminar we will turn to the narratives and images that the human imagination has produced in response to the experience of overwhelming watery invasion, from Noah to New Orleans. Objects of analysis will include mythology, ancient and early modern diluvalism, literature, art, film, and commemorative practice. The basic question we’ll be asking is: What can we learn from the humanities that will be helpful for confronting the problems and challenges caused by climate change and sea level rise?
For BA Students: Arts and Letters Sector
Taught by: Richter, Simon
Course not offered every year
Also Offered As: CIMS 150, COML 151, ENVS 150
Activity: Lecture
1.0 Course Unit
GRMN 151 Forest Worlds: Mapping the Arboreal Imaginary in Literature and Film
Can the humanities help us think differently about the forest? What happens if we imagine forests as the agents of their stories? At a time when humans seem unable to curb the destructive practices that place themselves, biodiversity, and the forests at risk, the humanities give us access to a record of the complex inter-relationship between forests and humanity. The course places a wide range of literature and film in which forests are strongly featured in relation to environmental history and current environmental issues.

Course not offered every year
Also Offered As: CIMS 152, COML 154, ENVS 151
Activity: Lecture
1.0 Course Unit

GRMN 152 Liquid Histories and Floating Archives
Climate change transforms the natural and built environments, and it is re-shaping how we understand, make sense, and care for our past. Climate changes history. This course explores the Anthropocene, the age when humans are remaking earth's systems, from an on-water perspective. In on-line dialogue and video conferences with research teams in port cities on four continents, this undergraduate course focuses on Philadelphia as one case study of how rising waters are transfiguring urban history, as well as its present and future. Students projects take them into the archives at the Independence Seaport Museum and at Bartram’s Garden. Field trips by boat on the Schuylkill and Delaware Rivers and on land to the Port of Philadelphia and to the John Heinz National Wildlife Refuge invite transhistorical dialogues about how colonial and then industrial-era energy and port infrastructure transformed the region’s vast tidal marshlands wetlands. Excursions also help document how extreme rain events, storms, and rising waters are re-making the built environment, redrawing lines that had demarcated land from water. In dialogue with one another and invited guest artists, writers, and landscape architects, students final projects consider how our waters might themselves be read and investigated as archives. What do rising seas subsume and hold? Whose stories do they tell? What floats to the surface?
Taught by: Wiggin

Activity: Lecture
1.0 Course Unit

GRMN 153 Is Europe Facing a Spiritual Crisis?
Is Europe Facing a Spiritual Crisis? On Contemporary Debates about Secularization, Religion and Rationality. Point of departure for this course is the difference between Europe and the US as to the role of religion in the unfolding of their respective ‘cultural identities’ (cf. Charles Taylor, A Secular Age, 522-530). As a rule, both the US and Western Europe are now defined as secularized cultures, even if their histories and specific identities are strongly rooted in the Christian heritage. Given this contemporary situation, four research questions will be dealt with in this course. 1) What is meant by secularization? In answer to that question, two secularization theories are distinguished: the classic versus the alternative secularization thesis; 2) What is the historical impact of the nominalist turning-point at the end of the Middle Ages in this process towards secularization? 3) How did the relation between rationality and religion develop during modern times in Europe? 4) What is the contemporary outcome of this evolution in so-called postmodern / post-secular Europe and US? We currently find ourselves in this so-called postmodern or post-secular period, marked by a sensitivity to the boundaries of (modern) rationality and to the fragility of our (modern) views on man, world and God. In this respect, we will focus on different parts of Europe (Western and Eastern Europe alike) and will refer to analogies and differences between Western Europe and US. This historical-thematic exposition is illustrated by means of important fragments from Western literature (and marginally from documents in other arts) and philosophy. We use these fragments in order to make more concrete the internal philosophical evolutions in relation to corresponding changes in diverse social domains (religion, politics, economy, society, literature, art...).
Taught by: Vanheeswijck
Course usually offered in spring term
Also Offered As: COML 153, DTCH 153
Activity: Lecture
1.0 Course Unit

GRMN 156 Queer German Cinema
Taught in English. This course offers an introduction into the history of German-language cinema with an emphasis on depictions of lesbian, gay, bisexual, trans and queer themes. The course provides a chronological survey of Queer German Cinema from its beginnings in the Weimar Republic to its most recent and current representatives, accompanied throughout by a discussion of the cultural-political history of gay rights in the German-speaking world. Over the course of the semester, students will learn not only cinematic history but how to write about and close-read film. No knowledge of German or previous knowledge required.

GRMN 180 German in Residence
The German House is a half-credit course with concentrations in German conversation, film, and culture. Though many students enroll for credit, others often come to select events. All interested parties are invited, and you do not have to actually live in the house to enroll for credit. Students from all different levels of language proficiency are welcome. Beginners learn from more advanced students, and all enjoy a relaxed environment for maintaining or improving their German language skills.
For BA Students: Other Language Courses
One-term course offered either term
Activity: Lecture
0.5 Course Units
GRMN 181 Comparative Cultures of Sustainability
Sustainability is more than science, engineering, policy, and design. Surveying the world, we see that the politics and practice of sustainability play out in different ways depending on cultural factors. Some cultures are more prone to pursue ecological goals than others. Why? Do the environmental history and experience of a nation affect policy? Do nature and the environment play a crucial role in the cultural memory of a nation? Can cultural components be effectively leveraged in order to win approval for a politics of sustainability? And what can we, as residents of a country where climate change and global warming are flashpoints in an enduring culture war, learn from other cultures? This course is designed to equip undergraduate students with the historical and cultural tools necessary to understand the cultural aspects of sustainability in two countries noted for their ecological leadership and cultural innovation, Germany and the Netherlands. Summer abroad course. This hybrid course combines online instruction with a short-term study abroad experience in Berlin and Rotterdam. During the pre-tip online portion of the course, students will become acquainted with the cultural histories of German and Dutch attitudes toward sustainability and the environment through a combination of recorded lectures by the instructor, reading assignments, viewing assignments (documentary and feature films), threaded discussions, and short written assignments. The goal of the pre-trip instruction are to help students develop tools for analyzing and interpreting cultural difference, construct working models of German and Dutch concepts of sustainability, and formulate hypotheses about the relation between culture and policy in Germany and the Netherlands. The class will spend a total of ten days in Europe: five days in Berlin and five days in the area of Rotterdam. The days will be jam-packed with visits to important sites of sustainable practice; discussion with policy makers, activists, and scientists; and immersion in the cultures of the Netherlands and Germany. Upon our return from Europe, the class will debrief and students will present online projects. There are no prerequisites or language requirements.
Taught by: Richter
Course usually offered summer term only
Also Offered As: ENVS 181
Activity: Lecture
1.0 Course Unit
Notes: Summer abroad course.

GRMN 203 Texts and Contexts
In this course, you will explore themes of cultural and historical significance in contemporary German-speaking countries through literature and nonfiction, through film and current event media coverage. Whether you wish to dive deeply into historical or political contexts, explore untranslatable cultural phenomena or the aesthetic rhythm and semantic complexity of the German language, GRMN 203 Texts and Contexts will inspire your imagination and deepen your understanding of German language, culture and literature. This is a required course for all courses taught in German at or above the 200 level.
For BA Students: Advanced Language Course

GRMN 219 Business German: A Macro Perspective
This course offers you insights into the dynamics of Business German, while taking a macro approach. Examples of various course topics include: economic geography and its diversity, the changing role of the European Union, and the economic importance of national transportation and tourism. In addition, the course emphasizes the development of students’ discourse competencies, Business German vocabulary and grammar. Course assignments include oral presentations on current events, class discussions, role-play, and collaborative group work.
Class time will be utilized to practice speaking, answering questions, reviewing exercises and holding group discussions on various topics. Class participation is a key component of this course. Prerequisite: No previous knowledge of economics or business required. Course taught in German.

GRMN 237 Berlin: History, Politics, Culture
What do you know about Berlin's history, architecture, culture, and political life? The present course will offer a survey of the history of Prussia, beginning with the eighteenth century, and the unification of the small towns of Berlin and Koelln to establish a new capital for this country. It will tell the story of Berlin's rising political prominence in the eighteenth century, and its position as a center of the German and Jewish Enlightenment. It will follow Berlin's transformation into an industrial city in the nineteenth century, its rise to metropolis in the early twentieth century, its history during the Third Reich, and the post-war cold war period. The course will conclude its historical survey with a consideration of Berlin's position as a capital in reunified Germany. The historical survey will be supplemented by a study of Berlin's urban structure, its significant architecture from the eighteenth century (i.e. Schinkel) to the nineteenth (new worker's housing, garden suburbs) and twentieth centuries (Bauhaus, Speer designs, postwar rebuilding, GDR housing projects, post-unification building boom). In addition, we will read literary texts about the city, and consider the visual art and music created in and about Berlin, and focus on Berlin's Jewish history. The course will be interdisciplinary with the fields of German Studies, history, history of art, urban studies, and German-Jewish studies. It is also designed as a preparation for undergraduate students who are considering spending a junior semester with the Penn Abroad Program in Berlin. All readings and lectures in English.
For BA Students: Humanities and Social Science S Taught by: Weissberg Course not offered every year Also Offered As: ARTH 237, COML 237, HIST 237, URBS 237 Activity: Lecture 1.0 Course Unit Notes: All readings and lectures in English.

GRMN 239 Sustainability & Utopianism
This seminar explores how the humanities can contribute to discussions of sustainability. We begin by investigating the contested term itself, paying close attention to critics and activists who deplore the very idea that we should try to sustain our, in their eyes, dystopian present, one marked by environmental catastrophe as well as by an assault on the educational ideals long embodied in the humanities. We then turn to classic humanist texts on utopia, beginning with More's fictive island of 1517. The 'origins of environmentalism' lie in such depictions of island edens (Richard Grove), and our course proceeds to analyze classic utopian texts from American, English, and German literatures. Readings extend to utopian visions from Europe and America of the nineteenth and twentieth centuries, as well as literary and visual texts that deal with contemporary nuclear and flood catastrophes. Authors include: Bill McKibben, Jill Kerr Conway, Christopher Newfield, Thomas More, Francis Bacon, Karl Marx, Henry David Thoreau, Robert Owens, William Morris, Charlotte Perkins Gilman, Ayn Rand, Christa Wolf, and others. Taught in English.
For BA Students: Humanities and Social Science S Taught by: Wiggin Course not offered every year Also Offered As: COML 209, ENGL 275, ENVS 239 Activity: Seminar 1.0 Course Unit Notes: Taught in English.

GRMN 240 Global Sustainableities
This research-oriented seminar focuses on the ways in which 'sustainability' and 'sustainable development' are linguistically and culturally translated into the world's languages. We may take the terms for granted, but they have only really been on the global stage since they were widely introduced in the 1987 United Nations report, Our Common Future. Seminar participants will first become acquainted with the cultural and conceptual history of the terms and the UN framework within which sustainability efforts directly or indirectly operate. Having established the significance of cultural and linguistic difference in conceiving and implementing sustainability, participants will collaboratively develop a research methodology in order to begin collecting and analyzing data. We will draw heavily on Penn's diverse language communities and international units. Seminar members will work together and individually to build an increasingly comprehensive website that provides information about the world's languages of sustainability.
Taught by: Richter Course not offered every year Also Offered As: COML 241 Activity: Seminar 1.0 Course Unit Notes: Benjamin Franklin Seminar. All readings and lectures in English.

GRMN 242 The Fantastic and Uncanny in Literature: Ghosts, Spirits & Machines
Do we still believe in spirits and ghosts? Do they have any place in an age of science of technology? Can they perhaps help us to define what a human being is and what it can do? We will venture on a journey through literary texts from the late eighteenth century to the present to explore the uncanny and fantastic in literature and life. Our discussions will be based on a reading of Sigmund Freud's essay on the uncanny, and extraordinary Romantic narratives by Ludwig Tieck, E.T.A. Hoffmann, Edgar Allan Poe, Nathaniel Hawthorne, Prosper Merimee, Villiers de Isle-Adam, and others. All readings and lectures in English.
For BA Students: Arts and Letters Sector Taught by: Weissberg Course not offered every year Also Offered As: COML 126, GWS 243 Activity: Lecture 1.0 Course Unit Notes: All readings and lectures in English.

GRMN 244 Metropolis: Culture of the City
An exploration of modern discourses on and of the city. Topics include: the city as site of avant-garde experimentation; technology and culture; the city as embodiment of social order and disorder; traffic and speed; ways of seeing the city; the crowd; city figures such as the detective, the criminal, the flaneur, the dandy; film as the new medium of the city. Special emphasis on Berlin. Readings by, among others, Dickens, Poe, Baudelaire, Rilke, Doeblin, Marx, Engels, Benjamin, Kracauer. Films include Fritz Lang's Metropolis and Tom Tykwer's Run Lola Run. All lectures and readings in English.
For BA Students: Arts and Letters Sector Taught by: MacLeod Course not offered every year Also Offered As: CIMS 244, COML 254, URBS 244 Activity: Lecture 1.0 Course Unit Notes: All readings and lectures in English.
GRMN 247 Free Radicals: Marx, Marxism, and the Culture of Revolution

'A spectre is haunting Europe—the spectre of Communism.' This, the famous opening line of The Communist Manifesto, will guide this course’s exploration of the history, legacy, and potential future of Karl Marx's most important texts and ideas, even long after Communism has been pronounced dead. Contextualizing Marx within a tradition of radical thought regarding politics, religion, and sexuality, we will focus on the philosophical, political, and cultural origins and implications of his ideas. Our work will center on the question of how his writings seek to counter or exploit various tendencies of the time; how they align with the work of Nietzsche, Freud, and other radical thinkers to follow; and how they might continue to haunt us today. We will begin by discussing key works by Marx himself, examining ways in which he is both influenced by and appeals to many of the same fantasies, desires, and anxieties encoded in the literature, arts and intellectual currents of the time. In examining his legacy, we will focus on elaborations or challenges to his ideas, particularly within cultural criticism, postwar protest movements, and the cultural politics of the Cold War. In conclusion, we will turn to the question of Marxism or Post-Marxism today, asking what promise Marx's ideas might still hold in a world vastly different from his own. All readings and lectures in English.

GRMN 248 Nietzsche's Modernity and the Death of God

'God is dead.' This famous, all too famous death sentence, issued by the 19th-century German philosopher Friedrich Nietzsche, also signaled the genesis of a radical challenge to traditional notions of morality, cultural life, and the structure of society as a whole. In this course we will examine both the 'modernity' of Nietzsche's thought and the ways in which his ideas have helped to define the very concept of Modernity (and, arguably, Postmodernity) itself. In exploring the origin and evolution of Nietzsche's key concepts, we will trace the ways in which his work has been variously revered or refuted, championed or co-opted, for more than a century. We will survey his broad influence on everything from philosophy and literature to art, theater and psychology, history and cultural theory, politics and popular culture. Further, we will ask how his ideas continue to challenge us today, though perhaps in unexpected ways. As we will see, Nietzsche wanted to teach us 'how to think. Weekly screenings with subtitles. All readings and discussions in English.

Activity: Seminar  
1.0 Course Unit  
Notes: Topics vary annually.

GRMN 253 Freud: The Invention of Psychoanalysis

No other person of the twentieth century has probably influenced scientific thought, humanistic scholarship, medical therapy, and popular culture as much as Sigmund Freud. This seminar will study his work, its cultural background, and its impact on us today. In the first part of the course, we will learn about Freud's life and the Viennese culture of his time. We will then move to a discussion of seminal texts, such as excerpts from his Interpretation of Dreams, case studies, as well as essays on psychoanalytic practice, human development, definitions of gender and sex, neuroses, and culture in general. In the final part of the course, we will discuss the impact of Freud's work. Guest lecturers from the medical field, history of science, psychology, and the humanities will offer insights into the reception of Freud's work, and its consequences for various fields of study and therapy.

GRMN 257 Fascist Cinemas

Cinema played a crucial role in the cultural life of Nazi Germany and other fascist states. As cinema enthusiasts, Goebbels and Hitler were among the first to realize the important ideological potential of film as a mass medium and saw to it that Germany remained a cinema powerhouse producing more than 1000 films during the Nazi era. In Italy, Mussolini, too, declared cinema 'the strongest weapon.' This course explores the world of 'fascist' cinemas ranging from infamous propaganda pieces such as The Triumph of the Will to popular entertainments such as musicals and melodramas. It examines the strange and mutually defining kinship between fascism more broadly and film. We will consider what elements mobilize and connect the film industries of the Axis Powers: style, genre, the aestheticization of politics, the creation of racialized others. More than seventy years later, fascist cinemas challenge us to grapple with issues of more subtle ideological insinuation than we might think. Weekly screenings with subtitles. All readings and discussions in English.

GRMN 258 German Cinema
An introduction to the momentous history of German film, from its beginnings before World War One to developments following the fall of the Berlin Wall in 1989 and German reunification in 1990. With an eye to film's place in its historical and political context, the course will explore the 'Golden Age' of German cinema in the Weimar Republic, when Berlin vied with Hollywood; the complex relationship between Nazi ideology and entertainment during the Third Reich; the fate of German film-makers in exile during the Hitler years; post-war film production in both West and East Germany; the call for an alternative to 'Papa's Kino' and the rise of New German Cinema in the 1960's. All readings and discussions in English.

GRMN 261 Jewish Films and Literature
From the 1922 silent film 'Hungry Hearts' through the first 'talkie,' 'The JazzSinger,' produced in 1927, and beyond 'Schindler's List,' Jewish characters have confronted the problems of their Jewishness on the silver screen for a general American audience. Alongside this Hollywood tradition of Jewish film, Yiddish film blossomed from independent producers between 1911 and 1939, and interpreted literary masterpieces, from Shakespeare's 'King Lear' to Sholom Aleichem's 'Tevye the Dairyman,' primarily for an immigrant, urban Jewish audience. In this course, we will study a number of films and their literary sources (in fiction and drama), focusing on English language and Yiddish films within the framework of three dilemmas of interpretation: a) the different ways we 'read' literature and film, b) the various ways that the media of fiction, drama, and film 'translate' Jewish culture, and c) how these translations of Jewish culture affect and are affected by their implied audience. All readings and lectures in English.

GRMN 262 Women in Jewish Literature
'Jewish woman, who knows your life? In darkness you have come, in darkness do you go.' J. L. Gordon (1890). This course will bring into the light the long tradition of women as readers, writers, and subjects in Jewish literature. All texts will be in translation from Yiddish and Hebrew, or in English. Through a variety of genres -- devotional literature, memoir, fiction, and poetry -- we will study women's roles and selves, the relations of women and men, and the interaction between Jewish texts and women's lives. The legacy of women in Yiddish devotional literature will serve as background for our reading of modern Jewish fiction and poetry from the past century. The course is divided into five segments. The first presents a case study of the Matriarchs Rachel and Leah, as they are portrayed in the Hebrew Bible, in rabbinic commentary, in pre-modern prayers, and in modern poems. We then examine a modern novel that recasts the story of Dinah, Leah's daughter. Next we turn to the seventeenth century Glikl of Hamel, the first Jewish woman memoirist. The third segment focuses on devotional literature for and by women. In the fourth segment, we read modern women poets in Yiddish, Hebrew, and English. The course concludes with a fifth segment on fiction written by women in Yiddish, Hebrew, and English. All readings and lectures in English.

1.0 Course Unit
Notes: All readings and lectures in English.

GRMN 263 Jewish American Literature
What makes Jewish American literature Jewish? What makes it American? This course will address these questions about ethnic literature through fiction, poetry, drama, and other writings by Jews in America, from their arrival in 1654 to the present. We will discuss how Jewish identity and ethnicity shape literature and will consider how form and language develop as Jewish writers 'immigrate' from Yiddish, Hebrew, and other languages to American English. Our readings, from Jewish American Literature: A Norton Anthology, will include a variety of stellar authors, both famous and less-known, including Isaac Mayer Wise, Emma Lazarus, Isaac Bashevis Singer, Celia Dropkin, Abraham Cahan, Anzia Yezierska, Saul Bellow, Philip Roth, Cynthia Ozick, and Allegra Goodman. Students will come away from this course having explored the ways that Jewish culture intertwines with American culture in literature. All readings and lectures in English.

GRMN 264 Translating Cultures: Literature on and in Translation

‘Languages are not strangers to one another,’ writes the great critic and translator Walter Benjamin. Yet two people who speak different languages have a difficult time talking to one another, unless they both know a third, common language or can find someone who knows both their languages to translate what they want to say. Without translation, most of us would not be able to read the Bible or Homer, the foundations of Western culture. Americans wouldn’t know much about the cultures of Europe, China, Africa, South America, and the Middle East. And people who live in or come from these places would not know much about American culture. Without translation, Americans would not know much about the diversity of cultures within America. The very fabric of our world depend upon translation between people, between cultures, between texts. With a diverse group of readings—autobiography, fiction, poetry, anthropology, and literary theory—this course will address some fundamental questions about translating language and culture. What does it mean to translate? How do we read a text in translation? What does it mean to live between two languages? Who is a translator? What are different kinds of literary and cultural translation? What are their principles and theories? Their assumptions and practices? Their effects on and implications for the individual and the society?

Activity: Lecture
1.0 Course Unit

GRMN 301 Handschrift-Hypertext: Deutsche Medien

This course will provide an introduction to German-language literary studies through exemplary readings of short forms: fables, fairy tales, aphorisms, stories, novellas, feuilletons, poems, songs, radio plays, film clips, web projects and others. Paying particular attention to how emergent technology influences genre, we will trace an evolution from Minnesang to rock songs, from early print culture to the internet age and from Handschrift to hypertext. Students will have ample opportunity to improve their spoken and written German through class discussion and a series of internet-based assignments. Readings and discussions in German. Prerequisite: This course will be offered every spring semester.

For BA Students: Arts and Letters Sector
Course usually offered in spring term
Prerequisite: GRMN 203
Activity: Lecture
1.0 Course Unit
Notes: This course will be offered every spring semester. Taught in German.

GRMN 302 Places of Memory. Lieux de memoire. Erinnerungsorte.

What is culture? What is German? Where are the borders between German, Austrian and Swiss culture? What is part of the ‘cultural canon’? Who decides and what role does memory play? Relying on the theory of collective memory (Halbwachs) and the concept of ‘places of memory’ (Erinnerungsorte, Nora, Francois/Schulze) and with reference to exemplary scholarly and literary texts, debates, songs, films, documents, and paintings from high and pop culture, this course will weave a mosaic of that which (also) constitutes German or German-language culture.

Prerequisite: This course will be offered every fall semester. Taught in German.
Course usually offered in fall term
Prerequisite: GRMN 203
Activity: Lecture
1.0 Course Unit
Notes: This course will be offered every fall semester. Taught in German.

Prerequisite: Taught in German.
Taught by: Hahmann, Lewis
Course not offered every year
Prerequisite: GRMN 301 OR GRMN 302
Activity: Lecture
1.0 Course Unit
Notes: Taught in German.

GRMN 323 Writing in Dark Times: German Literature

The rise of Hitler and the Nazis in 1933 radically disrupted the literary marketplace in Germany. Public book burnings were the most visible sign of a complete reorganization of the literary world. What was it like to be a writer in the Third Reich? How did censorship work? What kind of choices were writers forced to make? What political roles did writers adopt? Under what conditions could they publish? Who read their books and how did they read them? These are some of the questions we will ask as we become acquainted with German writers in ideological adherence or alliance, in exile throughout Europe and the Americas, in ‘inner emigration,’ even in concentration camps, and in hiding. By focusing on their writing, we will shed light on the value of literature in dark times.

For BA Students: Arts and Letters Sector
Course usually offered in spring term
Prerequisite: GRMN 303
Activity: Lecture
1.0 Course Unit
GRMN 324 German Ideas and Nazi Ideology

Right-wing movements are often considered to be a reservoir of those who are left behind and economic losers. This seems to apply as much today as it did to the fascist movements of the first half of the 20th century. Admittedly, the economic situation has had a considerable influence on the development and success of these movements and most intellectuals have obviously reacted with open rejection to the aggressive and racist policies, which has led to mass emigration, especially to the United States. It must be noted, however, that the movement itself was supported by a prominent conservative worldview from which it emerged and through which it is best understood. The notion of the 'Downfall of the West' (Oswald Spengler) or the prevailing view among the intellectual elite that 'Germany's soul is the place where Europe's spiritual oppositions are carried out' (Thomas Mann) and the resulting disdain for political business, are all expressions of the idea of a special historical responsibility of the Germans. Even though this intellectual elite was opposed to the National Socialist movement, it must be said that the most renowned thinkers not only arranged themselves with the regime, but even supported it at times. Three particularly important examples are Martin Heidegger, Carl Schmitt and Gottfried Benn. Today they are counted among the intellectual giants of the 20th century and their works are studied worldwide, including the University of Pennsylvania. In this seminar, the spirit of National Socialism will be explored. To this end, we will look at the intellectual background in Europe at the beginning of the 20th century, but especially at the period between the two wars, before we will then intensively deal with the National Socialist involvement of the three thinkers Heidegger, Schmitt, and Benn.

Taught by: Hahmann
Course not offered every year
Prerequisite: GRMN 301 OR GRMN 302
Activity: Lecture
1.0 Course Unit

GRMN 356 Crime and Detection - Dark Deeds

The detective story and the crime drama are time-honored genres of literature and popular culture. We are drawn to morbid scenes of violence and crime, and satisfied by the apprehension of criminals and their punishment. At the same time, the process of detection, of deciphering clues, is much like the process of reading and interpretation. Prerequisite: Taught in German. In this course we will read a variety of detective and crime stories, some by famous authors (e.g., Droste-Huelshoff, Fontane, Handke), others by contemporary authors that address interesting aspects of German culture (e.g., Turkish-Germans, gay and lesbian subcultures, DDR and Wende). We will also look at episodes from popular West, East, and post-reunification German TV crime shows (e.g., Tatort).

GRMN 361 Staging the 20th Century

Prerequisite: Topics vary annually. Course taught in German. Topic for Spring 2014: 'Staging the Middle Ages'.
Course not offered every year
Prerequisite: GRMN 301 OR GRMN 302
Activity: Seminar
1.0 Course Unit
Notes: Topics vary annually. Course taught in German. Topic for Spring 2014: 'Staging the Middle Ages'.

GRMN 363 Kant's Critical Project

This seminar is dedicated to Kant's critical philosophy. In particular, the Critique of pure Reason, which is the first of three Critiques, ranks amongst the most important texts of modern philosophy. Even in contemporary debates, Kantian claims still play a crucial role and basic knowledge of Kant's critical philosophy is often assumed. In this seminar we will deal with central passages from different works which, taken together, give a good picture of Kant's critical revision of classical metaphysics. We shall discuss important conceptions and ideas of Kant's mature philosophy, such as the nature of transcendental aesthetics and the resulting distinction between a thing-in-itself and appearance, the meaning and application of the categories, the justification and determination of human freedom, and the role of the moral law for Kant's so-called practical metaphysics.

GRMN 364 Topics vary annually. The topic for Spring 2015 is: Unhuman Encounters

Topics vary annually. The course description for Spring 2015 is as follows: Typically 'the Other' stands for a person or a group of people from another cultural background. But there have always been other encounters that forced people to distinguish themselves from an 'other'. Foremost, in order to define what is 'human', the 'unhuman' needed to be described. Initially, this meant distinguishing the human from the rest of nature. With the industrial revolution, the technological became a concern--machines as monsters. On a figurative level, we have the supernatural, ghosts, aliens, and cyborgs. In this course we will explore the ways in which real and imagined encounters with these 'other Others' are depicted in German language literature and culture. Prerequisite: Taught in German.

Activity: Seminar
1.0 Course Unit
Notes: Taught in German.

GRMN 373 Critical Theory of Christa Wolf: What remains?

Understood as one of the most prominent writers of the GDR, Christa Wolf's literary contributions shape cultural production of former East Germany and beyond. Nevertheless, her critical engagement with the writing process and the role that memory plays for identity formation and a collective historical process remain less known. This course will shed light on Wolf's iconographic text Die Dimension des Autors, in which she develops the notion of fossilization--medallions of memory--to unpack cultural and historical productions. Indeed, the course traces her most influential texts such as Storfall, Kassandra, Kindheitsmuster and Was bleibt? within her theoretical framework, thereby offering students an opportunity to connect East German literary production with critical theory. The course seeks to illuminate the intrinsic connections between cultural products, practices and perspectives. The course will be taught in German and could fulfill Cross-Cultural Analysis.

Activity: Seminar
1.0 Course Unit
GRMN 375 German Literature after 1945
Focus on the continuity of the literary tradition, innovation, and prominent themes related to coming-of-age in today's society, and specific stylistic experiments. Topics include: the changing literary perspective on German history and World War II; the representation of such prominent issues as individual responsibility, German reunification, and human relations in modern society. Prerequisite: Taught in German. Course not offered every year. Activity: Lecture 1.0 Course Unit Notes: Taught in German.

GRMN 379 Decadence
The period of the late nineteenth and turn to the twentieth century has often been described as a time of decadence—a decline in the 'standards' of morals and virtue. While Freud explored the nature of sexual desire, writers like Schnitzler or Wedekind made this exploration central for their stories or plays. The course will focus on the literature and culture of fin-de-siecle Vienna and Berlin, and consider a variety of texts as well as their later reception and translation into film. Prerequisite: Lectures and discussion in German. Taught by: Weissberg. Course not offered every year. Prerequisite: GRMN 301 OR GRMN 302 Activity: Lecture 1.0 Course Unit Notes: Lectures and discussions in German.

GRMN 381 Topics in German Culture
Fall 2017 description: Deutschland steht aktuell vor einer Vielzahl von Herausforderungen, die teils wesentlich gesellschaftliche Bereiche betreffen. Man muss davon ausgehen, dass die heute getroffenen Entscheidungen die deutsche, aber auch europäische Zukunft fuer eine nicht absehbare Zeit massgeblich beeinflussen werden. Viele der verhandelten Fragen und Probleme sind zum Teil eng miteinander verwoben und erfordern zur Bewältigung gesamtpolitisch übergreifende Lösungsstrategien. Diese verlangen gegebenenfalls einen tiefgreifenden gesellschaftlichen, politischen und oekonomischen Wandel der bestehenden Verhältnisse, da zum Teil grundlegende Strukturen und Ueberzeugungen weiter Teile der Bevolkerung betroffen sind. Aus diesem Grund werden Auffassungen, die lange Zeit als gesicherter Bestand des gesellschaftlichen Diskurses galten, infrage gestellt. Es ist daher nicht verwunderlich, dass die drohenden Veraenderungen reaktionare Kraefte provozieren, die um die Erhaltung bestehender Verhältnisse besorgt sind. Denn es ist zu vermuten, dass der anstehende Wandel nicht alle betroffenen Gruppen besser stellen wird und vielleicht groessere Opfer erfordert, als bislang eingestanden wurde. Prerequisite: Taught in German. Dieses Seminar wird einige der dringenden Fragestellungen thematisieren und somit versuchen, ein aktuelles Bild der bestehenden deutschen Verhältnisse zu vermitteln. Das eröffnet den Blick auf eine mogliche Zukunft Deutschlands, aber auch Europas. Taught by: Hahmann Course not offered every year. Prerequisite: GRMN 301 OR GRMN 302 Activity: Seminar 1.0 Course Unit Notes: Taught in German.

GRMN 401 Trans(l)its
Drawing on Goethe's musings on 'world literature', the course focuses on authors who have arrived at their German words via global, worldly itineraries. The course considers movements between languages, including those of the students themselves and encourages students to develop their own voice as authors via a series of critical and creative writing exercise. At the same time, students develop strategies to reflect on their own language learning. This course provides an important space for German-learners at Penn to draw on one another's experiences in the program and to build a sense of community. The course is required for all German majors in the Fall semester of their senior year. Prerequisite: This course will be offered every fall semester. Taught by: Wiggin, MacLeod. Course usually offered in fall term. Prerequisite: GRMN 301 OR GRMN 302 Activity: Lecture 1.0 Course Unit Notes: This course will be offered every fall semester.

GRMN 402 Independent Study-Senior.
One-term course offered either term. Activity: Independent Study 1.0 Course Unit

GRMN 507 Elementary Middle High German
Designed to familiarize the student with the principal elements of Middle High German grammar and to develop skills in reading and translating a major work of the twelfth century. Limited text interpretation. Prerequisite: Middle High German for Reading Knowledge will be taught in English. Course not offered every year. Activity: Seminar 1.0 Course Unit Notes: Middle High German for Reading Knowledge will be taught in English.
GRMN 509 Topics in Yiddish Literature - Modernist Jewish Poetry.
One version of this seminar considers works by Jewish women who wrote in Yiddish, Hebrew, English, and other languages in the late 19th through the 20th century. The texts, poetry and prose, will include both belles lettres and popular writings, such as journalism, as well as private works (letters and diaries) and devotional works. The course will attempt to define ‘Jewish writing,’ in terms of language and gender, and will consider each writer in the context of the aesthetic, religious, and national ideologies that prevailed in this period. Because students will come with proficiency in various languages, all primary texts and critical and theoretical materials will be taught in English translation. However, those students who can, will work on the original texts and share with the class their expertise to foster a comparative perspective. Because we will be discussing translated works, a secondary focus of the course will, in fact, be on literary translation’s process and products. Another version of this seminar presents Jewish modernism as an international phenomenon of the early 20th century. The course will attempt to define ‘Jewish modernism’ through the prism of poetry, which inevitably, given the historical events in Europe and America during this time, grapples with aesthetic, religious, and national ideologies and methods. The syllabus will focus mainly on poetry written in Yiddish and English, and will also include German, Russian, and Hebrew verse. All poetry, critical, and theoretical materials will be taught in English translation, although students who know the languages will work on the original texts and will bring to the table a comparative perspective. Because we will be discussing translated poems, a secondary focus of the course will, in fact, be on literary translation’s process and products.

Taught by: Hellerstein
Course not offered every year
Also Offered As: COML 509, GSWS 509, JWST 509, YDSH 509
Activity: Seminar
Notes: Topics vary annually.

GRMN 511 Stylistics
Textual analysis based on communication theory. Texts selected from literature and other disciplines. Emphasis placed on the development of the student’s own compositional and stylistic skills.
Course not offered every year
Prerequisite: GRMN 301 OR GRMN 302
Activity: Seminar
1.0 Course Unit
Notes: Graduate Seminar

GRMN 516 Teaching Methods
This course examines major foreign language methodologies, introduces resources available to foreign language teachers, and addresses current issues and concerns of foreign language teaching and learning, such as second language acquisition theory and application of technology.

Taught by: Frei
One-term course offered either term
Activity: Lecture
1.0 Course Unit

Although the starting point for the Anthropocene is still under discussion, there is broad agreement that the industrial revolution and the turn to fossil fuels mark an intensification of humanity’s impact on the Earth. It may not be a coincidence that Kant’s proclamation of the Copernican revolution in philosophy, according to which human reason replaces the natural light of traditional metaphysics, falls roughly in the same period. Human finite cognition became the measure for God and his creation. The dawn of the era of human freedom and the ramped up exploitation of resources coincide. It is against this background that the Naturphilosophie of F. W. J. Schelling can become particularly interesting. The genesis of German idealism is closely related with the opposition between freedom and necessity that lies at the heart of Kant’s critical project. Kant associated the former with man and the latter with nature. In trying to bridge the gap between them, Schelling reinstates nature as an autonomous actor in its own right. Schelling’s thinking about nature chimed with the literary and empirical-scientific work of his contemporary Johann Wolfgang von Goethe. In the productive interplay of poetry, science, religion, and philosophical thought, Goethe and Schelling offer a critical alternative to philosophy in the aftermath of the Copernican revolution that may be viable or useful today as humanity tries to come to terms with anthropogenically induced climate change. This co-taught interdisciplinary seminar will focus on works by Schelling (Ideas for a Philosophy of Nature, First Outline of a System of the Philosophy of Nature, On the World Soul) and Goethe (scientific writings, Faust I & II), in addition to engaging recent scholarship of Schelling and Goethe in relation to environmental humanities.

Activity: Seminar
1.0 Course Unit

GRMN 526 The Trouble with Freud: Psychoanalysis, Literature, Culture
For professionals in the field of mental care, Freud’s work is often regarded as outmoded, if not problematic psychologists view his work as non-scientific, dependent on theses that cannot be confirmed by experiments. In the realm of literary and cultural theory, however, Freud’s work seems to have relevance still, and is cited often. How do we understand the gap between a medical/scientific reading of Freud’s work, and a humanist one? Where do we locate Freud’s relevance today? The graduate course will concentrate on Freud’s descriptions of psychoanalytic theory and practice, as well as his writings on literature and culture. Prerequisite: Readings and discussions in English.

Taught by: Weissberg
Course not offered every year
Also Offered As: COML 523, GSWS 525
Activity: Seminar
1.0 Course Unit
Notes: Readings and discussions in English.
GRMN 527 Philosophy of Psychology
An investigation of issues that arise from scientific psychology and are investigated philosophically or have implications for philosophy. Specific topics vary by semester. In Spring 2019 the seminar will examine various instances of appealing to appearances in analyzing perception and its relation to an external world. Authors to be studied include Descartes, Hume, Russell, Sellars, and Chisholm.
Taught by: Hatfield
Course not offered every year

GRMN 534 History of Literary Theory
Over the last three decades, the fields of literary and cultural studies have been reconfigured by a variety of theoretical and methodological developments. Bracing-and-often confrontational-dialogues between theoretical and political positions as varied as Deconstruction, New Historicism, Cultural Materialism, Feminism, Queer Theory, Minority Discourse Theory, Colonial and Post-colonial Studies and Cultural Studies have, in particular, altered disciplinary agendas and intellectual priorities for students embarking on the /professional /study of literature. In this course, we will study key texts, statements and debates that define these issues, and will work towards a broad knowledge of the complex rewriting of the project of literary studies in process today. The reading list will keep in mind the Examination List in Comparative Literature. We will not work towards complete coverage but will ask how crucial contemporary theorists engage with the longer history and institutional practices of literary criticism. There will be no examinations. Students will make one class presentation, which will then be reworked into a paper (1200-1500 words) to be submitted one week after the presentation. A second paper will be an annotated bibliography on a theoretical issue or issues that a student wishes to explore further. The bibliography will be developed in consultation with the instructor; it will typically include three or four books and six to eight articles or their equivalent. The annotated bibliography will be prefaced by a five or six page introduction; the whole will add up to between 5000 and 6000 words of prose. Students will prepare 'position notes' each week, which will either be posted on a weblog or circulated in class.

Notes: Topics vary annually.

GRMN 535 The Elemental Turn
The unfolding effects of climate change—rising sea level, melting ice sheets, subsiding land masses, drought stricken regions, wild fires, air laden with greenhouse gases, and inundated cities—heighen our awareness of the elements: air, earth, fire and water. Within the context of the new materialism, philosophers, eco-critics, and writers are re-turning to the elements and encountering, at the same time, predecessor texts that assume new relevance. This seminar will place current thinking and writing about the elements into dialogue with older traditions ranging from the classical (Empedocles, Plato, Lucretius) to writers and thinkers of the eighteenth, nineteenth and twentieth centuries (e.g., Goethe, Novalis, Tieck, Stifter, Bachelard, Heidegger, Boehme).

Taught by: Hellerstein
Course not offered every year
Also Offered As: COML 519, JWST 537
Activity: Seminar
1.0 Course Unit

GRMN 541 Topics in Cultural History
Topic for Spring 2016: Making and Marking Time. What is time? In the late 19th century, the questions of how to define time, how to slow down time, and, above all, how to accelerate movement have become focus of the work by many European philosophers who have tried to come to terms with what is now termed as the Industrial Revolution, and the idea of 'progress.' And can time be understood as something continuous, or is it fragmented, proceeding in fits and burst? Such contemplations on time have deeply influenced writers. Marcel Proust was a reader of Henri Bergson and translated his theories of time into a concept of memory. Thomas Mann has tried to navigate timelessness in a novel set on a 'Magic Mountain.' Virginia Woolf and James Joyce have pictured an entire universe in a single day (Mrs. Dalloway, Ulysses) while early 20th century Italian Futurists made the contemplation of time part of their manifestos. With them, and with expressionist writers in Germany or writers from the DADA movement there elsewhere in Europe, a reckoning with time would also influence their choice of genre and form, writerly practice, and technique. Parallel to these literary experimentation, pictures were set into motion in scholarly studies by Eadweard Muybridge and finally in the new medium film; Impressionist painters insisted on picturing fleeting moments, and composers experimented with temporal sequences. We may be able to understand a reconsideration of time as driving force for the modern movement, or simply 'modernity.' In this seminar, we will study a selection of literary texts of the late 19th century and the modernist movement, consider the philosophical background and changes in historiography, and integrate a consideration of the visual arts and music.

GRMN 543 Environmental Humanities: Theory, Method, Practice
Environmental Humanities: Theory, Methods, Practice is a seminar-style course designed to introduce students to the trans- and interdisciplinary field of environmental humanities. Weekly readings and discussions will be complemented by guest speakers from a range of disciplines including ecology, atmospheric science, computing, history of science, medicine, anthropology, and the visual arts. Participants will develop their own research questions and a final project, with special consideration given to building the multi-disciplinary collaborative teams research in the environmental humanities often requires.

GRMN 544 Public Environmental Humanities
This broadly interdisciplinary course is designed for Graduate and Undergraduate Fellows in the Penn Program in Environmental Humanities (PPEH) who hail from departments across Arts and Sciences as well as other schools at the university. The course is also open to others with permission of the instructors. Work in environmental humanities by necessity spans academic disciplines. By design, it can also address and engage publics beyond traditional academic settings. This seminar, with limited enrollment, explores best practices in public environmental humanities. Students receive close mentoring to develop and execute cross-disciplinary, public engagement projects on the environment.

GRMN 545 Reading Benjamin Reading Kafka
Readings and discussions in English. Walter Benjamin's study of the works of Franz Kafka is as enlightening as it can be bewildering. Moving from philology to Marxism, metaphysics to messianism, Daoism to Talmud, this densely argued piece elliptically touches on almost all of Kafka’s published works in just four short sections. This seminar proposes a line-by-line reading Benjamin's 1934 'Franz Kafka on the Tenth Anniversary of His Death' with an eye to its literary, philosophical and religious contexts as well as to the rich history of its intellectual reception. Reading Kafka's works as the essay evokes them, we will situate this piece with regard to Benjamin's other writings, the essay's interlocutors (Brod, Scholem, Lukacs, Brecht) and its most illustrious interpreters (Adorno, Arendt, Celan, Hamacher).

GRMN 547 Writing in Dark Times: German Literature in the Nazi Era
The rise of Hitler and the Nazis in 1933 radically disrupted the literary marketplace in Germany. Public book burnings were the most visible sign of a complete reorganization of the literary world. What was it like to be a writer in the Third Reich? How did censorship work? What kind of choices were writers forced to make? What political roles did writers adopt? Under what conditions could they publish? Who read their books and how did they read them? These are some of the questions we will ask as we become acquainted with German writers in ideological adherence or alliance, in exile throughout Europe and the Americas, in 'inner emigration,' even in concentration camps, and in hiding. By focusing on their writing, we will shed light on the value of literature in dark times.

Activity: Seminar
1.0 Course Unit
Notes: Topics vary annually.
GRMN 556 What is Enlightenment?
The question ‘What is the Enlightenment?’ was posed for an essay competition in a journal, the Berlin Monatsschrift in 1784. At that point, French and English philosophers had already considered new ways of thinking, inventing the modern individual and the modern citizen (in contrast to a state's subject). German responses to this question were written by an established philosopher (Immanuel Kant), a Jewish resident of Berlin (Moses Mendelssohn), as well as concerned readers of recent philosophical treatises. In our course, we will consider this question by exploring this early discussion and the formation of Enlightenment thought in Europe and specifically Germany, including the German-Jewish Enlightenment (Haskalah), but also trace the historical transformation of this discussion, including Theodor W. Adorno's and Max Horkheimer's Dialectics of Enlightenment (1944/1947) and more recent criticism.

Notes: Graduate seminar.

GRMN 558 The Long Nineteenth Century: Literature, Philosophy, Culture
The present course will discuss German literature and thought from the period of the French Revolution to the turn of the twentieth century, and put it into a European context. In regard to German literature, this is the period that leads from the Storm and Stress and Romanticism to the political period of the Vormarz, Realism, and finally Expressionism; in philosophy, it moves from German Idealism to the philosophy of Schopenhauer, Nietzsche, and neo-Kantian thought. It is also the period that saw the rise of the novel, and new forms of dramatic works. Painting moved out of the studio into plein air; the invention of photography made an imprint on all arts, and the rise of the newspaper led to new literary genres such as the feuilleton. Economically, Germany experienced the industrial revolution; politically, it was striving for a unification that was finally achieved in 1871. The nineteenth century saw the establishment of the bourgeoisie, the emergence of the German working class, and the idea of the nation state; it also saw Jewish emancipation, and the call for women's rights. Readings will focus on a variety of literary, political, and philosophical texts; and consider a selection of art works.

GRMN 559 Myth Through Time and In Time
The textual and physical remains of Greek and Roman culture and belief as ‘myth’ entranced the post-antique European world and its neighbors. Makers, patrons and viewers manipulated those survivals to challenge and speak to a contemporary world. This course focuses on how and why artists and their patrons engaged the mythic and examines the various areas of political and religious life that sought animation through an evocation of narratives from the past. Readings and case studies will engage with very late antique, medieval, and early modern art, turning to the modern and contemporary as well. Moving to the modern lets us examine, among other things, how artists address the exclusionary histories of the past, to enable critiques of myths of supremacy by one gender, race, or culture over others.

Notes: Topics vary. The title for Fall 2017 is: Kant’s Philosophy of Religion

GRMN 561 The Long Eighteenth Century
The aim of this anchor course is to acquaint students with the literary, philosophical, and cultural complexity of the ‘long eighteenth century,’ roughly 1648-1806. Often associated with the enlightenment and the revolutions it inspired, the eighteenth century is a prolonged period in which institutions of power and knowledge come under pressure and are reconfigured. Old institutions are submitted to the critique of reason, while new institutions of governance, sociability, gender, race and class create new spaces for cultural production. Students will analyze representative works in context and in combination with current scholarship.

Activity: Seminar
1.0 Course Unit
Notes: Graduate course. Topics vary annually.
**GRMN 567 Topics in History of Philosophy**

Topics change annually. Topic title for Spring 2016 is: Schiller's Philosophical Writings. Today Friedrich Schiller is primarily known for his dramas and poems. However, during a period of several years (after he was appointed professor of History in Jena) he was also concerned with philosophical issues. The focus was mainly on questions of aesthetics and philosophy of history. With regard to both, it was Kant who was extremely influential for the development of Schiller's philosophical position. But Schiller did not simply copy or rearrange Kantian ideas, in fact, he evolved Kantian philosophy significantly in numerous respects. And even though Schiller later gave up with his philosophical ambitions—in a letter he even dismissed his philosophical efforts altogether as immature—his specific understanding of Kantian philosophy became extremely influential for the genesis of German idealism in general, but in particular shaped the reception of Kantian ideas by Hegel. In this seminar we will look at Schiller's most important philosophical writings and address both his conception of aesthetics and his approach to philosophy of history.

Taught by: Hahmann

Activity: Seminar
1.0 Course Unit
Notes: Seminar taught in English.

**GRMN 569 New German Fiction**

Our seminar will deal with contemporary German culture. What do German readers read? We will read nine novels that were published recently. While considering newspaper accounts of these books and their authors, we will try to come to our own judgments regarding the quality of these works, and their lasting impact. Instead of term papers, we will write book reviews—and all members of the seminar will be asked to review all the books in question. Prerequisite: Course taught in German.

Taught by: Weissberg
Course not offered every year
Prerequisite: GRMN 301 OR GRMN 302
Activity: Seminar
1.0 Course Unit
Notes: Course taught in German.

**GRMN 572 Materialism**

How do we recognize materialism? This seminar poses this question by acknowledging ‘materialism’ as a contested category with disparate and contradictory historical meanings: as a synonym for dogmatism, as the arch-enemy of reason and morality, as the scientific philosophy of the revolutionary workers’ movement, as an alternative to (idealist) metaphysics, as a poetic practice, or as a central concern for material nature and environment, among others. Less concerned with enumerating philosophical systems, we will search out ‘family resemblances’ and materialist tendencies among a wide range of texts. To this end, we will not only read the major historical texts of the so-called materialists (from Lucretius to Spinoza, from La Mettrie to Lenin), but also engage with materialism’s supposed critics and antagonists (from Plato to Kant and Hegel). A special emphasis will be placed on the attempts to recuperate materialism as a positive category in recent critical theory and continental philosophy, for example, in the reinventions of Marxist and Spinozist traditions. We will also survey the attempts that found new traditions, such as aleatory materialism or various new materialisms. By reading exemplary literary texts that engage with the problem of materialism the seminar will also ask: can one speak of materialist poetics?

Activity: Seminar
1.0 Course Unit

**GRMN 573 Topics in Criticism & Theory**

Topic for Spring 2021: Cultures of Reading in Imperial Russia What did it mean to be a reader in imperial Russia? What did people read, and to what ends? How was literacy cultivated, and what were the social implications? In this course, students will read several canonical works of nineteenth-century Russian literature that thematize and foreground the act of reading: as a pursuit undertaken for the betterment of self, society, nation, and world; as a light pastime for the bored or underemployed; but also as an enterprise fraught with potential for moral or civic ruin. In addition to closely investigating allusions to the specific texts and authors read by literary characters, we will also examine the reading habits of our own authors as both consumers and producers of literary culture. We will consider these dynamics against a backdrop of constant fluctuations in educational policies, the book market, and the circulation of texts within and beyond Russia as we work together to develop an understanding of the imperial Russian reading public(s).

GRMN 574 Politics and Societies in the Early Modern World
In this seminar, we will discuss how early modern globalization affected societies and the ways their members and rulers made politics. Following a historiographical introduction, it is divided in three sections. In the first, we will concentrate on empires and kings in order to detect common features of dynastic power across the globe and to explore how such characteristics influenced each other. Second, we will shift our attention to citizens and the ways they made politics in their city-states. For a long time, research on citizenship has been confined to the post-revolutionary nation states. However, recent research suggests that urban citizenship has far deeper roots in medieval and early modern cities. Up to now most research has focused on urban centers in Western Europe and more precisely on the so-called urban belt stretching from Central and North-Italy, over Switzerland and Southern Germany to the Rhineland and the Low Countries. Comparisons with urban centers in Asia and the colonial Americas will be needed to test that view. In the third section, we will study the people who provided information to societies and decision makers. Often, they held multiple identities or they acted as religious or ethnic outsiders. Therefore, we call them, with a term borrowed from anthropology ‘brokers’. Taken together, the analysis of these aspects will deepen our understanding of politics and societies in the globalizing early modern world. Thus, the seminar will contribute to a more comprehensive, less Europe-centered view on that period.

Activity: Seminar
1.0 Course Unit

GRMN 578 Topics in Northern Renaissance
Topic varies from semester to semester. For the Fall 2020 semester, the topic will be: Privacy and Society. Dutch Painting in the Seventeenth Century. How do paintings offer occasions for personal reflection, and how do they construct social bonds? This course will promote new critical approaches to interrogate three areas of Dutch ‘Golden Age’ painting: the development of landscape tradition; the pictorialization of interior domestic spaces; the concept of group portraiture. The burgeoning art market of the seventeenth offered both new forms of intimacy—inviting the beholder into domestic interiors to observe the events of everyday life—and public statements about leadership, social structures, and national identity. Freed from the patronage of churches and courts, Dutch artists produced pictures that could be purchased for the home—landscapes, moralizing genre scenes, still lifes, and portraits. They also made paintings for public spaces such as guild halls and charitable organizations, which map the relationships between members of civic organizations. The aim of this course is to develop a set of critical skills for analyzing the different ways in which seventeenth-century Dutch paintings drew upon shared social values, national identity and economic pride, how they appealed to individual buyer tastes, and how they established ideologies of land rights and concepts of gendered space that may today be critiqued as exclusionary. We will use our current circumstance of ‘social distancing’ as a way to look anew at the question of how paintings of this period used art to construct social bonds. Online in format, this course will address these matters by pairing recent interventions in art history with foundational texts. Part of our ongoing collective work will be the construction of a checklist of paintings, drawings, and prints in the Philadelphia area and its environs in the hopes that we may eventually view these works together or have a shared plan of which works to observe in person as time and access permits. In writing assignments, we will attend to the representation of space, considering domestic interiors, urban settings, church architecture, imperial arenas, and the politicization of landscapes both real and imagined.

GRMN 580 Topics In Aesthetics
Topic title for Spring 2018: Walter Benjamin. Walter Benjamin (1892-1940) is a philosopher whose writings on art, literature, and politics have had tremendous influence on many disciplines in the Humanities and Social Studies. He has been variously described as one of the leading German-Jewish thinkers, and a secular Marxist theorist. With the publication of a four-volume collection of this works in English, many more of his writings have been made accessible to a wider public. Our seminar will undertake a survey of his work that begins with his studies on language and allegory, and continues with his autobiographical work, his writings on art and literature, and on the imaginary urban spaces of the nineteenth-century.

GRMN 581 Topics in Jewish History
Reading and discussion course on selected topics in Jewish history. The instructors are visiting scholars at the Center for Advanced Judaic Studies. Topic and seminar title for Spring 2015: Topics in Jewish Studies: The Origins of Jewish Studies. Course description for Spring 2015: This is a reading course that grants seminar participants access to Katz Center fellows, some of the best scholars in Judaic studies from around the world. The aim of the course is to expose students to these scholars and their work, to get to know them as people, learn from them at high level, and understand their approach to the field. Over the course of the spring semester there will be four 3-session modules. Students will meet with 4 different fellows for 3 sessions each. The weekly 90-minute classes will be held at the Katz Center on Wednesdays from 10:30 am - 12 pm, and participants will be encouraged to then stay for lunch and the fellows' seminar which runs from 12:30 - 2:30 pm.

GRMN 605 Modern Literary Theory and Criticism
This course will provide an overview of major European thinkers in critical theory of the 20th and 21st centuries. We will pay particular attention to critical currents that originated in European avant-garde and early socialist contexts and their legacies and successors. Topics covered will include: Russian Formalism and its successors in Structuralism and Deconstruction (Shklovsky, Levi-Strauss, Jakobson, Derrida); Bakhtin and his circle, dialogism and its later western reception; debates over aesthetics and politics of the 1930s (Lukacs, Brecht, Adorno, Benjamin, Radek, Clement Greenberg); the October group; Marxism, new Left criticism, and later lefts (Althusser, Williams, Eagleton, Jameson, Zizek).
Taught by: Platt
One-term course offered either term
Also Offered As: COML 605, ENGL 605, FREN 605, REES 605

GRMN 612 Hannah Arendt: Politics-Philosophy-Literature
The seminar will consider Hannah Arendt's early Jewish writings. It will then center on Arendt's major work, The Origins of Totalitarianism (in particular, the sections on 'Antisemitism' and 'Imperialism'). Finally, we will discuss Arendt's controversial study on Eichmann in Jerusalem.

Notes: Graduate seminar.

GRMN 614 Weimar Landscapes
This new course is designed for students of literature, landscape architecture and urban planning, and cultural history in general. It will explore the ideas of, and attitudes towards, landscape in selected works by Johann Wolfgang Goethe, and consider his own considerable practical involvement in reshaping the town and gardens of Weimar. The course will provide the larger context of German literature, aesthetics and landscape taste, and politics of the later 18th and early 19th centuries. We will consider the development of new gardens and parks in a 'new' style (e.g. Woerlitz); they were regarded to be less formal and more 'natural' than their French predecessors. We will study the English models for this movement, and offer a particular attention to the major German theorist, C.C.L. Hirschfeld, who would soon become famous outside Germany as well. Students will be expected (but not required) to read in German. Translations of key works by Goethe, as well as of commentaries on German gardening history, are available to ensure that non-German speakers can readily follow the course. In final papers there will be the freedom to select topics that focus upon literary or landscape architecture, though it is anticipated that a comparativist perspective will be adopted in either approach.

Activity: Seminar
1.0 Course Unit
Notes: Readings and discussions in English.
GRMN 628 Topics 18th Century, vary annually.
Topic for Fall 2014 is: Wolfgangs Lehrjahre (1765-1774) The decade before the publication of Goethe's Die Leiden des jungen Werthers is full of literary ferment. The goal of this course is to gain a sense of the multiplicity of projects and perspectives in this crucial decade in order to break down any teleology that might see Werther as its crowning triumph. In other words, this is a course in the 'politics' of literature and literary aesthetics. Works to be read, discussed, and reported on include: Kant, Beobachtungen ueber das Gefuehl des Schoenen und Erhabenen; Klopstock, Salomo, ein Trauerspiel; Gleim, Lieder nach dem Anakreon; Herder, Fragmentueber di neuere deutsche Literatur; Lessing, Laokoon oder ueber die Grenzen der Mahleriery und Poesie; Wieland, Geschichte des Agathon; Lessing, Minna von Barnhelm; Mendelssohn, Phaedon oder ueber die Unsterblichkeit der Seele; von Gerstenberg, Ugolino; Wieland, Musarion; Klopstock, Oden und Elegien; La Roche, Geschichte des Fraeuleins von Sternheim; Herder, Abhandlung ueber den Ursprung der Sprache; Lavater, Von der Physiognomik; Lessing, Emilia Galotti; Goethe, Gotz von Berlichingen mit der eisernen Hand; Herder, Von deutscher Art und Kunst; Nicolai, Sebaldu Nothanker; Wieland, Alceste; Zimmerman, Von der Einsamkeit; Blankenburg, Versuch ueber den Roman, and, of course, Werther.

GRMN 657 Becoming Modern: The German-Jewish Experience
Yuri Slezkine described the twentieth century as a ‘Jewish Age’-to be modern would essentially mean to be a Jew. In German historical and cultural studies, this linkage has long been made—only in reference to the last years of the German monarchy and the time of the Weimar Republic. Indeed, what has become known as ‘modern’ German culture-reflected in literature, music, and the visual arts and in a multitude of public media-has been more often than not assigned to Jewish authorship or Jewish subjects. But what do authorship and subject mean in this case? Do we locate the German-Jewish experience as the driving force of this new ‘modernity’ or is our understanding of this experience the result of this new ‘modern’ world?

GRMN 677 The Life of Forms: Ontogenesis, Morphology, Literature
In recent years, the notions of form, formalism, and morphology have reentered contemporary debates across the humanities. This seminar considers the current resurgence of interest in form by tracing form’s evolving concepts throughout modernity. It departs from the observation that experimentation with and debates on form in art and literature are inextricably linked to various notions of life and the living. These debates-this is the provisional thesis of the seminar-are the battlefield where literary and art criticism undermine the major presuppositions of the western metaphysical tradition (e.g., determinations of inside-outside, form-content, living-inorganic). On the one hand, the seminar will explore a selective genealogy of various attempts to dynamize the concept of form through theories of 1) ontogenesis (e.g., Spinoza, Simonond, Malabou), 2) morphology (e.g., Goethe, Propp, Goldstein), and 3) aesthetics (e.g., Baumgarten, Schlegel brothers, Adorno). On the other hand, in order to investigate the political, ideological, and methodological implications of differing concepts of form, the seminar will bring together texts from different disciplines, including literary studies (literary morphology, Russian Formalism), art history (Focillon, Kubler), philosophy (Wittgenstein, Macherey), On the other hand, in order to investigate the political, ideological, and methodological implications of differing concepts of form, the seminar will bring together texts from different disciplines ranging from literary studies (e.g., Jolles, Russian Formalism, Jauss), art history (e.g., Panofsky, Focillon, Kubler), philosophy (e.g., Wittgenstein, Blumenberg, Macherey), history of science (e.g., Vygotsky, Varela), and sociology (e.g., Tarde, DeLanda). Finally, the seminar will engage in close reading of exemplary literary and art works, and situate the findings on the conjunction of form and life in current debates on New Formalisms (e.g., Levine, Levinson, Kornbluh) and New Materialisms (e.g., Bennett, Grosz).

GRMN 678 Realism: Literature and Theory
What is ‘realism’? What does it mean to depict the world as a ‘realist’ writer or artist? This seminar will consider these questions and concentrate on German literature and art of the second half of the nineteenth century. It will focus on writers such as Stifter, Storm, Raabe, and Fontane; but also on Stifter’s drawings and paintings, visual artists such as Menzel, and the vogue of historical painting. Finally, the seminar will consider the role of early photography in the development of the notion of ‘realism.’ Secondary literature will include studies by Michael Fried, Linda Nochlin, and others.

GRMN 684 Topics in Philosophy
This seminar explores political thought in Germany from the Imperial state of the early 20th century through its fragmentation and division and into the reunification of east and west Germany in 1992. Much of this period was ‘after idealism’ philosophically and politically, the preface to pessimism and ‘the passing of political philosophy’ as articulated in the Enlightenment (Shklar), but fascinating period of thought and argument. Among our texts are Habermas (philosophy), Weber (sociology), Schmitt (law), Juenger (literature) & their contemporaries. Students are not expected to read texts in the original, although having German will greatly expand your range and the depth of your reading.

Government Administration (GAFL)

GAFL 500 Half-Term Electives

--- GAFL 500 - 025: Empowering Communities through Real Estate Development --- This course introduces students to residential and commercial real estate development and its inherent risks and benefits. By understanding the development process, students will be better able to enact public policy that promotes the advantages brought by development while slowing the gentrification process. Using the successful JumpStart Germantown model, students will learn the 7 JumpSteps of real estate development beginning with creating a development strategy and ending with leasing or selling the property. JumpStart is a successful alternative to the boom and bust cycle of real estate development. It encourages slow growth, scattered site development, and a mix of price points - all of which act to slow gentrification and encourage healthy development that sustains and attracts local economic diversity. This course will include presentations by experts in the real estate industry, in-class discussions and projects, and a visit to a local construction site. Students interested in becoming real estate developers or wanting to learn the ins and outs of the development process will benefit from this course. The 7 JumpSteps of real estate development: 1. Create a Development Strategy & Identify Your Team; 2. Source a Property; 3. Do Your Due Diligence; 4. Find Your Financing; 5. Develop Design & Procure Permits; 6. Customize Construction; 7. Lease/Sell Your Property — GAFL 500 - 026: Economic Development, Equity and Inclusion — Virtually every U.S. city experienced a great decline in the second half of the twentieth century. As the manufacturing base of the industrial city deteriorated, as factories moved to the suburbs in search of cheaper land, a vicious cycle ensued. Following the jobs and taking advantage of racial preferences in the suburbs, working and middle class residents fled; as the tax base shrunk, cities were forced to raise taxes to support city services, leading to more job and residential flight. The ‘inner city’ became synonymous with blight and decline, with ominous racial undertones, as urban and suburban political priorities and sentiments began to diverge sharply. Yet by the turn of the 21st century, this process had bottomed out and in many so-called ‘post-industrial’ cities, some of these trends were beginning to reverse. In the 1990s and early 2000s in particular, civic and political leaders had to make tough decisions about prioritizing scarce public resources. Should they focus on revitalizing the downtown core to create jobs, create amenities to induce people with higher incomes to choose their city, grow a tourism economy? Or on rebuilding the most distressed and disinvested inner city neighborhoods? Or on shoring up the so-called ‘middle neighborhoods’ that were able to maintain some stability during the great decline? Layered on top of these issues were (and are) critical questions about who does and should benefit from economic development. Should we prefer ‘trickle down’ policies that focus on high-end development and presume that they will eventually lead to benefit for the less advantaged in the form of service sector or indirect jobs? Or should cities be more proactive and ensure that public and publicly-enabled investments leverage increases in human capital development, in public goods like parks and schools? This course will focus on case studies from several cities to explore the policy options available to leaders, to assess their decisions, and to consider whether it is possible to promote economic development that is robust and sustainable at the same time as it is equitable and inclusive. This is a half-credit course (0.5 CU) that meets in the first half of the semester. The first class session will meet on January 23, and the last class session will meet on March 13.

GAFL 509 Who Gets Elected and Why? The Science of Politics
What does it take to get elected to office? What are the key elements of a successful political campaign? What are the crucial issues guiding campaigns and elections in the U.S. at the beginning of the 21st century? This class will address the process and results of electoral politics at the local, state, and federal levels. Course participants will study the stages and strategies of running for political office and will discuss the various influences on getting elected, including: campaign finance and fundraising, demographics, polling, the media, staffing, economics, and party organization. Each week we will be joined by guest speakers who are nationally recognized professionals, with expertise in different areas of the campaign and election process. Students will also analyze campaign case studies and the career of the instructor himself. Edward G. Rendell is the former Mayor of Philadelphia, former Chair of the Democratic National Committee, and former Governor of Pennsylvania. Taught by: Rendell

GAFL 511 Re-inventing Nonprofits
Three nonprofit leaders walk into a bar. What’s the conversation? cross fields, focus, size, and target audiences, nonprofits often face similar challenges: public policy changes, evolving stakeholder expectations, new modalities to service requiring investment, rising competition, fickle funders and demographic shifts, all in a world where culture eats strategy for breakfast. Against this backdrop, nonprofits need to re-assess their mission, approach, position, organizational structure and revenue model. Why are some organizations able to pivot and reinvent themselves while others languish? Through readings to frame the issues, speakers offering firsthand accounts of successes and disappointments, projects with practitioners wrestling with real-ime issues, and group discussions to tie it all together;this course is intended to provide students with an intellectual construct, ideas, and experience to be better prepared to enter and advance in the field, and be part of the conversation.
Course offered summer, fall and spring terms
Activity: Lecture
1.0 Course Unit

GAFL 514 Public Finance and Public Policy
This course deals with how governments tax and spend. Students become familiar with the theoretical, empirical, and practical tools and methods used to create and analyze government budgets, as well as the flow of public resources. The course examines public revenues and expenditures within the context of fiscal federalism, in addition to budgeting and resource management and the social, economic, and political forces that shape the fiscal environment within which governments (particularly state and local governments) operate. Significant attention is paid to tax policy analysis and the fiscal crises confronting many large cities and states. Additional special topics covered include health care & social security, public education finance, public finance and the environment, bond markets & municipal finance, and public pensions.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

GAFL 515 Public Finance Leadership in the New Fiscal Reality
Several factors are intersecting upon U.S. local governments including: muted economic growth, demographics, technological change, ineffective monetary & fiscal policy, and political shenanigans. These are having a profound impact on local government financial health. Many local governments are struggling to structurally balance their budgets, even now several years into one of the longest U.S. post-WWII economic recoveries. Expenditure demand, especially because of rising employee pension and OPEB benefits, is rising faster than expected. Revenues are not rising as quickly as they have historically. This New Fiscal Reality is redefining the concept of municipal distress. Further, the options local governments have to respond to distress may be changing. It might be necessary for local governments to move away from typical solutions like distressed municipality programs and other state level aid. If the current financial trajectory continues, some local governments will not be able to deliver the same service-level they have in the past. New solutions are required. This class will 1) define the New Fiscal Reality; 2) review essential public finance concepts and relationships; 3) study past and recent examples of financial distress and prescribed solutions; 4) survey the current local government financial landscape; and 5) identify solutions public finance leaders can institute for the future. Several local government finance, political and policy experts will speak during the semester. A heavy amount of student engagement is expected to be completed in the form of research, group work, writing, and the critiquing of other students' work. Taught by: Kozlik
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GAFL 517 Quantitative Tools for Consulting
The purpose of the course is to study the theory and application of certain, key quantitative methods utilized in financial and fiscal decision-making in state and local governments: defining and measuring efficiency and equity; statistical analysis, multivariate analysis, linear and multiple regression; inter-temporal decision-making; and cost-benefit analysis. Primary emphasis will be on understanding the context and quantitative basics of these methods to prepare students for effective careers in state and local governments. Each student should have a basic understanding of market economics, the roles of government in our market economy, accounting/budgeting basics, and the Philadelphia metro area economy and government.
Activity: Hybrid Course
1.0 Course Unit
Notes: This is a 'hybrid' course, with synchronous, online meetings and once-monthly, on-campus meetings in Philadelphia, PA. Also, please note there is an additional $150 online course fee. Summer 2019 on-campus meetings will be held all day from 9:30 AM - 1:00 PM and 2:00 PM - 5:30 PM (break for lunch from 1 - 2) on the following 3 Saturdays: May 25 (Memorial Day weekend), June 22, and July 27. Class will also meet online weekly on Monday evenings from 7:45 - 8:45 PM. Fall 2019 on-campus meetings will be held on the following four (4) Fridays all day from 9:30 AM - 5:30 PM (break for lunch from 1 - 2 PM): September 6, October 4, November 1, and December 6. Class will also meet online weekly on Monday evenings from 7:45 - 8:45 PM. For permits into this course students should email Vincent George at vigeorge@sas.upenn.edu
GAFL 520 Marketing & Fundraising for Non-Profit Organizations
Fundraising and marketing are complementary tools for building revenue streams and fulfilling the program objectives of nearly every nonprofit organization. This course develops students’ ability to market a nonprofit to mission recipients and prospective donors and to solicit funds from individuals and organizations. Through lectures, readings, discussions, and assignments, students are actively engaged in learning how to help an organization achieve its mission and objectives. This includes but is not limited to the assessing an organization’s marketing and fundraising capabilities; identifying, segmenting, and creating relationships with target markets and donors; building infrastructure to properly seek and steward gifts; using technology to fulfill marketing and fundraising objectives; and focusing on fundraising and marketing methods such as social media, direct response, events, major gifts, planned giving, and others. This course emphasizes applications. Each student will complete a fundraising and/or marketing plan for a specific organization of their choosing, the structure of which will be derived from the term’s assignments. This course will meet in-person from 2:00-5:30pm on the following Fridays and Saturdays: September 9-10, October 14-15, November 18-19, December 2-3. This course will meet virtually Wednesdays 9:00-10:00pm.
Taught by: Hugg
Course usually offered in fall term
Activity: Hybrid Course
1.0 Course Unit
Notes: This is a ‘hybrid’ course, with synchronous, online meetings and once-monthly, on-campus meetings at the Fels Institute of Government in Philadelphia, PA. On-campus meetings vary by term. Please read the description for dates and times. Also, please note there is an additional $150 online course fee.

GAFL 521 Advanced Public Management
A wait list will be kept for this course. To be added to the wait list, please email Josh Power at joshuarp@upenn.edu. This is a ‘hybrid’ course, with synchronous, online meetings and once-monthly, on-campus meetings. Synchronous online meetings will be held on Mondays 6:30-7:30pm. On-campus meetings for Spring 2018 will be held on the following Friday afternoons (2-5:30pm) and Saturday mornings (9:30am-1pm): January 12-13, February 9-10, March 16-17, April 20-21. This course is designed to provide students with a scientific foundation of management and leadership theory to inform their actions as current and aspiring public leaders. We will draw from diverse disciplines within applied social science, including management science, positive psychology, organizational psychology, system thinking, and change management. Students will learn these theoretical frameworks and management strategies by applying these theoretical frameworks to their specific professional interests.

Course usually offered in spring term
Activity: Hybrid Course
1.0 Course Unit

GAFL 526 Municipal Bonds
The course provides a comprehensive overview of the $3.7 trillion municipal bond market, with a focus on public finance investment banking; capital project financing for state and local governments including water, sewer, mass transit and road projects, and non-profit financing for educational and healthcare institutions; the legal and regulatory framework governing the municipal bonds market; rating agency analysis; quantitative modeling; and investor perspectives.
Taught by: Steven Genyk
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

GAFL 527 Community Development and Qualitative Methods
Urban planning and community development involve attempting to understand (and then propose methods for solving) complex problems arising from our shared experience of living together in communities. These wicked problems (Rittel & Weber, 1973) often arise from multiple co-occurring influences; economic, socio-cultural, political, geographic/geological, psychological, etc. The fluid and multi-dimensional nature of these problems, therefore, calls for a fluid and multi-dimensional approach to understanding them. Nonetheless, for the better part of the last half a century the majority of efforts to approach such dilemmas has relied largely on quantitative research methods. While quantitative approaches to understanding community dynamics certainly have a demonstrated value, an over-reliance on such methods can come at the expense of the more nuanced understanding available through qualitative research approaches. Quantitative methods are useful in exploring questions such as where, when, who and how many. They are less effective, however, in answering questions of why and how. For answers to these sorts of questions we must turn to qualitative research methods. This course will introduce students to qualitative research approaches currently used in urban planning/community development, along with methods NOT currently in use, but that hold the potential to yield insights into community dynamics. In addition, this course will teach students how to apply these research techniques in the service of producing a professional-quality outcome, as opposed to producing a purely academic end result. To this end, attention will be given to the process by which these research methods are applied, or would be applied, in the professional consulting world and the language and concepts that would be used in that process and setting. Each student will leave the course with a firm understanding of terms and concepts such as: project scope, sub-deliverable(s); final deliverable(s); benchmarks; Notice to Proceed (NTP); project kick-off; out of scope services, front-end and best practices research; and other related professional concepts/terms.
Taught by: Terence Milstead
Activity: Seminar
1.0 Course Unit
GAFL 528 Critical Issues in Public Finance
The Course, Critical Issues in Public Finance will consider contemporary issues affecting the fiscal state of local governments. Covered will be issues that have distressed municipalities; the policies/initiatives that seek to rectify such including privatization/public private partnerships; reformation of municipal pensions; sustainable education funding alternatives; and tax policies aimed at promoting economic growth. Students will be assigned to a team, which will identify and provide a solution for an issue or issues plaguing a fictional economic growth. Each team will prepare a written report and make a presentation all of which will constitute the final project. Assignments will serve as the building blocks for the final written work product and presentation developed by each team. The class is divided into four modules. The first module will take a historical look at events behind fiscal distress in municipalities and then explore current day drivers that are causing the same today. Modules two, three and four will examine some of the tools that have been used successfully or otherwise to remediate the drivers of fiscal distress. In each module case studies will be used to further analyze the particular fiscal challenge of a municipality. Written assignments will be based on case studies. Spring 2020 on-campus meetings will be held all day from 9:30 AM - 1:00 PM and 2:00 PM - 5:30 PM (break for lunch from 1 - 2) on the following Saturdays: January 18, February 22, March 28, and April 25. Class will also meet online weekly on Monday evenings from 6:30-7:30 PM. This course has seats reserved for Fels’ students and gives priority to grad students. Non-Fels students should contact Vincent George at vigeorge@sas.upenn to request a permit. Seats are not guaranteed to post-bacc or undergraduate students.

Taught by: Matthew Stitt, Folasade Olanipekun-Lewis
Course usually offered summer term only
Activity: Hybrid Course

GAFL 529 Nonprofit Financial Management
The course is designed to provide the student with an understanding of the primary financial management issues and decisions that confront senior management in nonprofits and government. Students will examine financial analysis techniques from both a practical and strategic perspective as they examine operating and capital decisions. The objective of the course is to allow the student to understand how managers integrate the various discrete financial decisions within a broader framework that allows them to analyze, develop and execute a coherent overall financial strategy.

Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GAFL 530 Evidence Based Policies of Economic and Political Development
This class provides a 'hands-on' introduction to the promises and limitations of using Randomized Control Trials (RCTs) to inform policy makers, practitioners, and academics of the conditions under which policies likely would have a positive effect on economic and political outcomes, in the context of international development. This course has three parts: the first is devoted to understanding the 'nuts and bolts' of running field experiments / RCTs in developing countries. In part, we will be reading Glennester and Takavarasha's Running Randomized Evaluations: A Practical Guide. In addition, we will discuss core behavioral concepts from both behavioral economics and social psychology (prospect theory). The second part of the course will be devoted to demonstrating how schools have used RCTs to inform core policy debates (e.g. What are some effective ways to reduce corruption? How can we improve the performance of frontline service providers? How can politicians be more responsive to their constituents?) In the third part, students will be presenting their own research proposals, explicitly designed to address either a core policy question in the developing world or--for those interested--in the USA. Here students will have an opportunity to partner with the Social and Behavioral Sciences Team (https://sbst.gov), which is under the National Science and Technology Council.

GAFL 531 Data Science for Public Policy
In the 21st century, Big Data surround us. Data are being collected about all aspects of our daily lives. To improve transparency and accountability an increasing number of public organizations are sharing their data with the public. But data are not information. You need good information to make sound decisions. To be an effective public leader, you will need to learn how to harness information from available data. This course will introduce you to key elements of data science, including data transformation, analysis, visualization, and presentation. An emphasis is placed on manipulating data to create informative and compelling analyses that provide valuable evidence in public policy debates. We will teach you how to present information using interactive apps that feature software packages. As in all courses at Fels, we will concentrate on more practical skills than theoretical concepts behind the techniques. This course is designed to expand upon core concepts in data management and analysis that you are learning in GAFL 640: Program Evaluation and Data Analysis. This is a graduate level course and while GAFL 640 is not a prerequisite, students are expected to have a foundation of data management and analysis before beginning this course. Students should have taken a course with R. Fels and other graduate students receive registration preference, though undergraduate students may request registration via email: vigeorge@sas.upenn.edu.

GAFL 534 Infrastructure Investment and Economic Growth: Why, How, and When
Infrastructure is widely acknowledged to be critical for economic success, and infrastructure investments are promoted as leading to economic growth, either at the local or national level. Yet, investments in telecommunications, transportation, energy, or other infrastructure do not always yield the hoped public benefit. This course will help answer the question: Under what circumstances does infrastructure investment contribute to economic growth, and how do we know? Because government resources are limited, advocates often must be creative to find sufficient funding to get desirable projects completed. This course will also help answer the question: How do we pay for the infrastructure projects we want to build? The course will illustrate approaches to answering these questions using case studies of past and proposed investments.

GAFL 538 Human Rights, Access To Justice, and Public Policy
Law is central to effective and legitimate governance at all levels (local, national, regional, global). Law not only serves as a basis and frames governance and policy-making processes; it also offers tools and opportunities for public policy, as well as accountability mechanisms. Familiarity and understanding of legal frameworks, mechanisms and dynamics is thus essential for public and private actors involved in policy-making. This course combines theoretical insights as well as practical components. During the first portion of each class students will examine a wide spectrum of international legal frameworks and instruments which set standards for good governance on a variety of themes: eg. Children, women, refugees. This comparative perspective lays the context for US policies. During the second major portion of each class, students will explore how statutes, regulations and case law serve as tools for social change. Students will gain familiarity with relevant US legal frameworks at the Federal, State and Municipal level and at all three branches of government: legislative, executive and judicial. The third portion of every class will explore the role of the non government sector in public policy. Students will learn about core competencies needed to non profits effective such as: Boards, management leadership, and program activities (Mock senior staff discussions) and field assignments (pairing with area nonprofit leader and attendance at one of the organizations board meetings). This course has seats reserved for Fels’ students and gives priority to grad students. Non-Fels students should contact Vincent George at vigeorge@sas.upenn to request a permit. Seats are not guaranteed to post-bacc or undergraduate students.

GAFL 546 Social Enterprise Models and Social Impact Locally and Globally
If you believe in finding innovative ways to make a difference and solve social issues locally and globally, you will benefit from the Social Enterprise and Impact Locally and Globally Course (Social Enterprise). Social Enterprise is designed for those who have a practitioner’s interest in the development, leadership, and management of the evolving nonprofit sector and their intersection with the socially conscious private sector and government. The course takes the student through the process of developing a mock social enterprise including idea exploration, testing and plan execution and provides the student with essential strategies and tools to conduct in-depth analysis of a social enterprise leading to their application to a regional social enterprise. This course fulfills an elective for the MPA and the Certificate in Nonprofit Administration.
Taught by: Hansen-Turton, Tine; Torres, Nicholas
Course usually offered in spring term

1.0 Course Unit

GAFL 548 Grant Writing
This is a ‘hybrid’ course, with synchronous, online meetings and once-monthly, on-campus meetings in Philadelphia, PA. Also, please note there is an additional $150 online course fee. Spring 2019 on-campus meetings will be held on the following Fridays and Saturdays from 9:30 AM - 1:00 PM: January 18 & 19; February 15 & 16, March 15 & 16, and April 26 & 27. Class will meet online on Monday evenings from 7:45 PM - 8:45 PM. This course will provide students with the role of the foundation in philanthropy, what it does, how it does it, and what you need to know to be both an effective foundation manager and foundation grant seeker. From the foundation side, the course will include strategic planning, assessment of project results, and the responsibilities of the foundation grant program officer. From the grant seeker side, it will include identifying the appropriate foundations, making the connection to the foundation, grant writing, and relationship management.

GAFL 549 Leading Nonprofits
Leading Nonprofit Organizations is designed for those interested in leading and managing a nonprofit organization. It takes a practitioners perspective on strategic realities of modern practice. Each section will seek to rapidly orient a new manager to the complexities, strategic issues, & politics. The course is taught through a combination of theory and practice using selected readings, lectures, guest presentations, group activities (Mock senior staff discussions) and field assignments (pairing with area nonprofit leader and attendance at one of the organizations board meetings). This course has seats reserved for Fels’ students and gives priority to grad students. Non-Fels students should contact Vincent George at vigeorge@sas.upenn to request a permit. Seats are not guaranteed to post-bacc or undergraduate students.

1.0 Course Unit
Notes: Spring 2020 on-campus meetings will be held on the following Fridays from 9:30 AM - 1:00 PM and 2:00 PM - 5:30 PM (break for lunch from 1 - 2): January 17, February 21, March 27, and April 24. Class will meet online on Monday evenings from 7:45 PM - 8:45 PM.
GAFL 550 Organizational Diagnosis
This course will help participants learn the skills involved in conducting a systemic, organizational diagnosis. Applying organizational diagnosis skills can help organizations make more effective, evidence-based decisions; increase an organization's ability to learn and to apply these learnings; increase organizational effectiveness; and, often, save organizations from flawed and detrimental actions. The course places an emphasis on systems thinking, psychodynamic organizational theory, and appreciative inquiry as ways into understanding organizational issues and problems. Frequently, when organizations find themselves in trouble, e.g. problems in the system about such things as lack of leadership, poor communication, diminished productivity, low morale, etc., there is a tendency to frame the problem(s) simplistically and/or locate blame on a few difficult individuals or groups. However, upon closer examination, problematic issues are often found to be symptomatic and/or symbolic of multiple issues within the organization. This course will help participants to understand how problems, which appear, at one level of the system, (e.g. at the personal or interpersonal level) often represent problems at other levels of the system (e.g. at the group and/or institutional level), or signify a range of inter-related issues. Emphasis will be placed on the diagnostic skills needed to examine government agencies, non-profits, and bureaucracies. It will provide participants with the theoretical constructs and application skills necessary for identifying and framing problem areas, collecting data, and organizing feedback to client systems. Real-time examples will inform our discussions as we consider the relationship between diagnosis, organizational reflection, and appropriate action. Summer 2017 On-Campus Meetings: 9:00am-1:00pm Fridays June 23, July 21 and Saturdays May 20, June 24, and July 22.
Activity: Hybrid Course
1.0 Course Unit
Notes: This is a 'hybrid' course, with synchronous, online meetings and once-monthly, on-campus meetings at the Fels Institute of Government in Philadelphia, PA. Weekends vary by term. There is a $150 online course fee.

GAFL 555 Using the Political Process to Effect Organizational Change
At one time or another, each of us has said something like, 'I know what to do to make some really effective--and possibly even profitable--changes in this organization, but the politics make it almost impossible to get anything done.' The sense is that, although there are changes that should be made to improve organizational performance, politics (internal, external, governmental) simply obstructs our ability to make a difference. Frustrations notwithstanding, depending on how it is employed, politics can be either an impediment or, more importantly, a source of opportunities for improving organizations. Politics is the art and science of coordinating individuals, departments, management, markets--the entire organizational environment--to effect a balance between the organization's objectives and the methods used to achieve them. As with the other factors that are employed to affect organizational performance--the methods used to improve manufacturing, marketing, sales, finance, and so on--politics is a means that organizations can use to initiate and maintain critical personal and institutional relationships One of the seminar readings--Latimer's 'Why Do They Call It Business If It's Mostly Politics?' is used to provide illustrations of the ambiguous nature of much of what is regarded as organizational politics. What is critical to understand and appreciate from the outset, however, is that politics is not an external factor that is imposed on organizations. Politics is not only a means for achieving personal or institutional power; it is also a method for developing and maintaining personal and institutional relationships within and among individuals and organizations of all types. This seminar will discuss organizational politics and the ways that it is used to identify, characterize, and effect change--both within and among organizations. After reviewing several perspectives on organizations and the roles that political processes play in decision-making, a series of cases is presented that illustrate the contexts and conditions for effective political communication and coordination. Prerequisite: Course Permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit Taught by: Gale and Brady One-term course offered either term Also Offered As: DYNM 655
Activity: Seminar

GAFL 559 Social Enterprise
With an increasing competitive market, the landscape for private, non-profit, and government organizations nationally and globally is becoming more complex and diverse. Leaders across government, private, and non-profit sectors are being challenged to lead differently given the diversity and complexity of organizations that cross and blend the traditional organizations that cross and blend the traditional organizational legal structures. This course includes providing students with the essential competencies and tools to create, lead, and influence system and policy change utilizing Social Enterprise, Social Finance, and Collective Impact strategies and tools. The knowledge accumulated through this course will be translated to a working level knowledge of a Critical Thinking that hat is important for any leader or manager in government, private, or the non-profit sectors. Critical thinking involves making judgments based on reasoning: leaders consider options; analyze these using specific criteria; and draw conclusions and make judgments. Critical thinking competency encompasses a set of abilities that leaders use to examine their own thinking, and that of others, about information that they receive through observation, experience, and various forms of communication. This course has seats reserved for Fels’ students and gives priority to grad students. Non-Fels students should contact Vincent George at vigorge@sas.upenn to request a permit. Seats are not guaranteed to post-bacc or undergraduate students.

Notes: This is a ‘hybrid’ course, with synchronous, online meetings and once-monthly, on-campus meetings in Philadelphia, PA. Also, please note there is an additional $150 online course fee. Spring 2020 on-campus meetings will be held on the following Saturdays from 9:30 AM - 1:00 PM and 2:00 PM - 5:00 PM (break for lunch from 1 - 2): January 18, February 22, March 28, April 25. Class will meet online on Monday evenings from 6:30 PM - 7:30 PM

GAFL 561 Media Relations
This course is designed to help you better understand the role and practice of media relations and messaging in corporate, non-profit, and government organizations in this new media era. You will learn how to research media and reporters, develop messages, build strategic media plans, generate media coverage, serve as spokespersons, handle crisis situations, and use new media strategies. You will hear from public relations professionals on such topics as working with reporters, developing PR campaigns, and creating effective web outreach programs. Class discussions, reading assignments, research and writing projects, group projects, and case studies offer an engaging and interactive learning environment to expand and apply your knowledge of media relations and messaging. Summer 2017 On-Campus Meetings are 9:30am-1:00pm on Fridays–May 19, June 23, and July 21 and Saturdays–May 20, June 24, and July 22

GAFL 569 The Politics of Housing and Community Development
This course offers an exploration of how legislative action, government policymaking, and citizen advocacy influence plans for the investment of public capital in distressed urban neighborhoods. Course topics this semester will include an evaluation of the results of City of Philadelphia development policies under the administration of former Mayor Michael A. Nutter, as well as considerations of plans being undertaken by the administration of Mayor James F. Kenney, who took office in January. The course will also include an assessment of a large-scale property acquisition and development strategy being implemented by the Philadelphia Housing Authority in North Philadelphia and a review of recent and current reinvestment proposals for Camden’s waterfront and downtown-area neighborhoods.

GAFL 571 Children and Law Seminar
Activity: Seminar
1.0 Course Unit

GAFL 578 Legal Writing
This course addresses the contemporary interplay between government, religion, and politics with focus on issues during the COVID-19 pandemic and the 2020 presidential election. Due to the rise in statutory religious liberty statutes at the federal and state levels over the last 20 years— which have placed constraints on government beyond the First Amendment—adjustments between the government’s interest and religious liberty have become complicated. Public administrators need to anticipate challenges to government action, including the limits imposed by the First Amendment and these relatively new statutory constraints. This course will teach future public policy administrators how to assess the myriad of instances where policy determinations must take into account the likely impact of politically powerful and connected religious leaders and organizations on the public interest. This knowledge has never been more important than it is now with the COVID-19 pandemic and the 2020 presidential election occurring at the same time, both of which entail fascinating questions related to religious liberty and public safety.

Taught by: Marci Hamilton
Activity: Hybrid Course
1.0 Course Unit
Notes: UPDATED: This class will meet online for Fall 2020. Class will meet synchronously from 7:45-8:45pm on Mondays, from 9am-1pm on four Fridays: 9/11, 10/9, 11/13, 12/11 (12/11 will be 9-5pm meeting). This course has seats reserved for Fels’ students and gives priority to grad students. Non-Fels students should contact Vincent George at vigorge@sas.upenn.edu to request a permit.

GAFL 599 Independent Study
Activity: Independent Study
1.0 Course Unit
GAFL 611 Statistics for Public Policy
This course is GAFL 611, the required course in statistical analysis for students in the Fels school. This is the required course in statistical analysis for public policy/public administration. Increasingly, this is a quantitative field. Even if you think you'll someday just be (say) a city manager, and not likely to use quantitative analysis yourself, you will likely find yourself working with quantitative data. For example, ‘policy evaluation’ has become a buzzword in recent years in public management and examples involving Fels graduates-or their equivalents-abound. Did giving low-income children after-school tutoring improve their academic performance? Does expanding a free-lunch program reduce the number of student outbursts in classrooms? Did Philadelphia’s ‘big belly’ trash cans actually reduce the amount of litter on our streets? Answering any of these questions requires statistical analysis. This course aims to lay the groundwork for you to answer these (and many more) questions. The point here is not to convince you to adopt a quantitative design for your own work, or that quantitative designs are the ‘best’ designs for answering all questions. Rather, the goal is to give you a set of tools that will enable you to read, critique and eventually produce your own quantitative research. The course will introduce you to the logic of social scientific inquiry, and the basic statistical tools used to analyze politics and public policy.
Taught by: Claire Robertson Kraft
Course usually offered in fall term

Notes: This course has seats reserved for Fels’ students and gives priority to grad students. Non-Fels students should mindyzac@sas.upenn.edu to request a permit. Seats are not guaranteed to post-bacc or undergraduate students.

GAFL 612 Quantitative Methods for Policy Analysis
This course will help students learn how to make evidence-based decisions in a public sector context. The course will introduce important data analysis skills and help students evaluate the quality of studies undertaken to measure the impact of public policies and programs.
Taught by: Claire Robertson Kraft
Course usually offered in spring term
Activity: Hybrid Course
1.0 Course Unit
Notes: UPDATED: This class will meet online and in person for Fall 2020. Class will meet online (synchronously) from 9:30-4pm on Saturdays 9/12, 10/10, 11/14, 12/12 and Mondays from 6:30-7:30pm. The class will have in-person meetings which can be joined remotely) on Mondays 9/14, 10/12 and 11/16 from 6:30-7:30pm. This course has seats reserved for Fels’ students and gives priority to grad students. Non-Fels students should mindyzac@sas.upenn.edu to request a permit.

GAFL 621 Public Economics
This course provides students with the knowledge required to understand government operations in relation to the market economy. In theory of supply and demand, students explore the pricing mechanism, price elasticity, and the effects of price controls on markets. Efficiency is examined in connection with competition and again in connection with equity, and market failure is considered as a reason for government intervention. Cost-benefit analysis is examined in the context of selecting among public investment alternatives. The course also assists students in addressing issues connected with local public goods and economic development.

Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: This course has seats reserved for Fels’ students and gives priority to grad students. Non-Fels students should mindyzac@sas.upenn.edu to request a permit. Seats are not guaranteed to post-bacc or undergraduate students.

GAFL 622 Economic Principles of Public Policy
This course will introduce students to key economic concepts such as scarcity, efficiency, monopolies and cost-benefit. Students will practice applying these principles to the range of decisions that public sector executives have to make in order to understand the trade-offs inherent in any public policy or program.
Course not offered every year
Activity: Hybrid Course
1.0 Course Unit
Notes: This is a ‘hybrid’ course, with synchronous, online meetings and once-monthly, on-campus meetings in Philadelphia, PA. Also, please note there is an additional $150 online course fee.

GAFL 623 Leading People
Leading Diversity Organizations focuses on Strategic Human Resource Management (SHRM), the combination of human resource management (HRM) and the strategic direction of the organization, whether public or non-profit. This course will examine the theory and principles of SHRM as they relate to job analysis, recruitment and selection, compensation, benefits, training and career development, performance management, and labor-management relations. Learning to deal with the daily SHRM challenges makes leaders and managers more effective and more valuable to the organization. This course has seats reserved for Fels’ students and gives priority to grad students. Post-bacc students, contact Vincent George at vigorge@sas.upenn.edu for a permit. Undergraduate students, contact Vincent George 2 weeks before the start of the pertinent term to request a seat. Seats are not guaranteed to post-bacc or undergraduate students.
Course usually offered summer term only
Activity: Hybrid Course
1.0 Course Unit
Notes: This is a ‘hybrid’ course, with synchronous, online meetings and once-monthly, on-campus meetings in Philadelphia, PA. Also, please note there is an additional $150 online course fee. Spring 2019 on-campus meetings will be held on the following Fridays 9:30 AM - 1:00 PM and 2:00 PM - 5:30 PM (break for lunch from 1 - 2): January 18, February 15 & 16, March 15 & 16, and April 26 & 27. Class will meet online on Monday evenings from 7:45 PM - 8:45 PM.
GAFL 631 Policy Making & Public Institutions
This course introduces students to the theories and practice of the policy-making process. There are four primary learning objectives. First, understanding how the structure of political institutions matter for the policies that they produce. Second, recognizing the constraints that policy makers face when making decisions on behalf of the public. Third, identifying the strategies that can be used to overcome these constraints. Fourth, knowing the toolbox that is available to participants in the policy-making process to help get their preferred strategies implemented. While our focus will primarily be on American political institutions, many of the ideas and topics discussed in the class apply broadly to other democratic systems of government. The class will be a mix of lecture and cases. Cases are on a diverse set of policy topics, with a goal of illustrating broad themes about the policy-making process rather than the specifics of certain policy areas.
Activity: Lecture
1.0 Course Unit
Notes: This course has seats reserved for Fels’ students and gives priority to grad students. Non-Fels students should Mindy Zacharjasz at mindyzac@sas.upenn.edu to request a permit. Seats are not guaranteed to post-bacc or undergraduate students.

GAFL 640 Program Evaluations and Data Analysis
One of the trademarks of the 21st century public management is the usage of data and analysis in the decision-making process. A successful public leader will use empirical evidence to guide her decisions. She knows what types of data and analysis she should ask her analysts to collect and conduct, how to consume the results they generate, and how to transform the analytical results into effective communication with stakeholders. This class will help you become that 21st century public leader. At the end of this course, you will understand key principals of performance measures and program evaluation. In addition, you will be able to process, manage, and analyze quantitative data using R, a modern programming language optimized for statistical analysis. I picked R for many reasons: it is free, has many open-source visualization techniques and statistical models, and many statistical and quantitative method courses on campus use it as the language of choice. More importantly, knowing how to use R can be a unique and attractive skill for your employer.
Taught by: Russell, Lauren
Course usually offered in spring term
Prerequisite: GAFL 611
Activity: Lecture
1.0 Course Unit
Notes: This course is a requirement for MPA full-time students who started in Fall 2015 or later. It is an elective for MPA full-time students who started Fall 2014 or earlier.

GAFL 641 Program Evaluations & Data Analysis
This is a 'hybrid' course, with synchronous, online meetings and once-monthly, on-campus meetings in Philadelphia, PA. Also, please note there is an additional $150 online course fee. This course introduces program evaluation in the context of research methods. Students learn about design and the application of data collection skills to all phases of program/service delivery from needs assessment to analysis of findings to implementation of changes based on results. Students learn to appreciate how these skills can be used as practical tools for identifying problems to developing and implementing programs. This applied course provides students with practical experiences to apply guidelines of evaluation and research methods in actual program evaluation projects in Philadelphia.
Taught by: Claire Robertson-Kraft
Course usually offered summer term only
Prerequisite: GAFL 612
Activity: Hybrid Course
1.0 Course Unit
Notes: Spring 2020 on-campus meetings will be held on the following Saturdays from 9:30 AM - 1:00 PM and 2:00 PM - 5:30 PM (break for lunch from 1 - 2): January 18, February 22, March 28, April 25. Class will meet online on Monday evenings from 6:30 PM - 7:30 PM.

GAFL 651 Public Finance and Public Policy
This course deals with how governments tax and spend. Students become familiar with the theoretical, empirical, and practical tools and methods used to create and analyze government budgets, as well as the flow of public resources. The course examines public revenues and expenditures within the context of fiscal federalism, in addition to budgeting and resource management and the social, economic, and political forces that shape the fiscal environment within which governments (particularly state and local governments) operate. Significant attention is paid to tax policy analysis and the fiscal crises confronting many large cities and states. Additional special topics covered include health care & social security, public education finance, public finance and the environment, bond markets & municipal finance, and public pensions.
Taught by: Gershberg
Course usually offered in spring term
Also Offered As: CPLN 502
Activity: Lecture
1.0 Course Unit
Notes: This course satisfies a core requirement in the Master of Public Administration and the Certificate of Public Finance.
GAFL 652 Financial Management of Public and Nonprofit Organizations
This course provides an introduction to financial management principles for public and nonprofit organizations. The primary objective of this course is to demystify financial information and improve students' ability to effectively engage in financial discussions, regardless of their role in the organization. This course will be focused on the vocabulary and tools necessary to interpret, analyze, and properly communicate financial information in order to develop and execute an appropriate financial strategy. This is a 'hybrid' course, with synchronous, online meetings and once-monthly, on-campus meetings in Philadelphia, PA. Summer 2020 on-campus meetings will be held the following 3 Saturdays (9:30am - 5:30pm, with a break for lunch 1-2pm): May 30, June 27, August 1. Class will also meet online weekly on Monday evenings from 6:30 - 7:30 PM. This course has seats reserved for Fels students and gives priority to grad students. Please contact Mindy Zacharjasz at mindyzac@sas.upenn.edu to request a permit. Seats are not guaranteed to post-bacc or undergraduate students. NOTE: For Summer 2020, this class will meet remotely. The specific meeting times for this class may be updated to accommodate the new format.

Taught by: Melissa Neuman

Activity: Hybrid Course
1.0 Course Unit

GAFL 710 Negotiations
To influence public policy you need analytical skills to discover optimal solutions to problems, and good negotiation skills to tailor implementable solutions that address the needs and priorities of multiple stakeholders. What resources you want to invest, whom you engage in discussions, and what you expect to receive in return are open to explicit and implicit negotiations. This course will provide a working understanding of key negotiations concepts, including: Strategic elements of negotiations - interests, goals, positions, rights, power, value creation, high stakes, disputes; Preparation for and the details of negotiation processes; Ethical encounters and conundrums; Leveraging your strengths/understanding your negotiating personality. You will learn cooperative and competitive strategies, have a solid grasp of the decision-making science of negotiation, and better understand cognitive processes and emotional dynamics that affect the ways people negotiate.

Taught by: Naomi Wyatt
Course usually offered in fall term
Activity: Hybrid Course
1.0 Course Unit

Notes: UPDATED: This class will meet online for Fall 2020. Class will meet synchronously from 7-8:30pm on Wednesdays, and from 9am-3pm on four Fridays: 9/11, 10/9, 11/13, 12/11. This course has seats reserved for Fels' students and gives priority to grad students. Non-Fels students should Mindy Zacharjasz at mindyzac@sas.upenn.edu to request a permit.

GAFL 719 Advanced Budgeting
The course will build on the fundamentals taught in the introductory budgeting unit to help build students' competence in budgetary analysis. Using detailed data from a major city as a course-long case study, and incorporating excel skill-building exercises, students will develop hands-on understanding of budgets by working through such factors as economic drivers of fiscal performance, revenue analysis and forecasting, including tax policy considerations; expenditure analysis and projection, with an emphasis on workforce costs; and capital budgeting and financing. Students will also be introduced to key fiscal policies, budget monitoring and performance measurement, and the development of effective budget communications for various audiences.

Taught by: Nadol and Westerman
Course usually offered in fall term

1.0 Course Unit

GAFL 732 Public Management
This core MPA course is intended to help each student to learn more than he or she already knows about public management both as a profession and as a field of academic study and to enjoy the company of supportive peers, instructors, and special guests as he or she contemplates a post- MPA career in governance. This course satisfies a core requirement in the Master of Public Administration full-time program.

Taught by: DiIulio/Mulhern
Two terms. student may enter either term.
Activity: Seminar
1.0 Course Unit
GAFL 733 Public Management (MPA Executive Section)
This is a required course for the Executive MPA students in the Fels Institute of Government. The purpose of this course is to provide aspiring public managers with the tools necessary to work with and within organizations. Students will be introduced to public management concepts and gain the competencies required to address the unique challenges in the public sector. Public managers must have technical expertise in planning, staffing, and budgeting; however, technical skills alone are not sufficient to become an effective public manager. Effective public managers must learn to lead inclusive organizations that leverage diversity and defuse tensions among heterogeneous constituents and stakeholders. You must understand the socio-political context of your organization and your success will be dependent on your ability to analyze policy options and persuade stakeholders and supervisors, through effective communications, to pursue the policy options you recommend. Students will explore big questions related to managing and leading public sector organizations, such as: (1) What makes for an effective public manager? (2) Who does a public organization serve? (3) What is the internal and external operating environment of public organizations? (4) How do we know if public organizations are effective? This is accomplished through exploration of theory, concepts, and applications. We will use multiple learning methods including lectures, case studies, and group exercises, to provide students with a robust understanding of public management.
Taught by: Michael DiBerardinis
Course usually offered in fall term
Activity: Hybrid Course
1.0 Course Unit
Notes: UPDATED: This class will meet online and in person for Fall 2020. Class will meet online (synchronously) from 9:30-4pm on Fridays 9/11, 10/9, 11/13, 12/11 and Mondays from 7:45-8:45pm. The class will have in-person meetings which can be joined remotely) on Mondays 9/14, 10/12 and 11/16 from 6:30-7:30pm or 8:00-9:00pm. This class has seats reserved for Fels' students and gives priority to grad students. Non-Fels students should Mindy Zacharjasz at mindyzac@sas.upenn.edu to request a permit.

GAFL 735 The Performance Imperative
This course will examine the role of performance management within public organizations (government and nonprofit), including why measuring and managing performance is critically valuable to high-functioning organizations’ success. With the increasing pressures on nonprofit and government organizations to continue to produce more with less, performance management systems are becoming a staple within organizations looking to drive better outcomes for their constituents. The goal of a highly functioning performance management system within a public organization is to establish a system of continuous monitoring designed to routinely measure specific quantitative and qualitative indicators in real-time- Key Performance Indicators (KPIs) - in order to improve the organization’s ability to achieve specific outcomes through continuous improvement and timely, data-based decision-making. This course will use a diversity of course materials, including real-life examples and case studies to: (a) demonstrate how organizations have successfully implemented performance management systems, (b) indicate the importance of using real-time, valid and reliable data, and linking performance results with effective budget resource allocation (e.g., program and outcome-based budgeting) and constituent satisfaction, and (c) explore practices on how to best protect valuable aspects of performance management systems despite changes in leadership. This is a 'hybrid' course, with synchronous, online meetings and once-monthly, on-campus meetings in Philadelphia, PA. Summer 2020 on-campus meetings will be held the following 3 Fridays (9:30am - 5:30pm, with a break for lunch 1-2pm): May 29, June 36, July 31. Class will also meet online weekly on Monday evenings from 7:45-8:45 pm. This course has seats reserved for Fels students and gives priority to grad students. Please contact Mindy Zacharjasz at mindyzac@sas.upenn.edu to request a permit. Seats are not guaranteed to post-bacc or undergraduate students. NOTE: For Summer 2020, this class will meet remotely. The specific meeting times for this class may be updated to accommodate the new format.

GAFL 799 MPA Capstone II
Successful completion of a Capstone project is one of the academic requirements for the Master of Public Administration (MPA) at the University of Pennsylvanias Fels Institute of Government. This core course is designed to give students direct guidance as they apply and consolidate knowledge and skills gained across the curriculum through the completion of a rigorous Capstone project. Capstone students are responsible for designing and completing a public policy or public administration-related project and presenting a deliverable (described below) to the Fels community and other stakeholders.
Taught by: Claire Robertson-Kraft or Kasey Meehan
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: This is a "hybrid" course, with synchronous, online meetings and once-monthly, on-campus meetings in Philadelphia, PA. Also, please note there is an additional $150 online course fee. Summer 2019 on-campus meetings will be held all day from 9:30 AM - 1:00 PM and 2:00 PM - 5:30 PM (break for lunch from 1 - 2) on the following 3 Saturdays: May 25 (Memorial Day weekend), June 22, and July 27. Class will also meet online weekly on Monday evenings from 7:45 - 8:45 PM.

Graduate Arts & Sciences (GAS)

GAS 600 English Language Skills
For prospective International Teaching Assistants seeking English fluency certification, this course emphasizes the development of oral academic discourse skills and practices prominent features of spoken English that promote successful communication in academic settings, including intelligibility, active listening skills, grammar.
Taught by: Potter
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

GAS 601 Proseminar in Graduate Studies
An introduction to the methods of graduate study and research. To be conducted by individual graduate group faculty.
Taught by: Faculty
Activity: Seminar
1.0 Course Unit

Greek (GREK)

GREK 015 Elementary Modern Greek I
This course is designed for students with no prior knowledge of the modern Greek Language. Instructions are theme based and is supported by a Textbook as well as other written or audiovisual material. It provides the framework for development of all communicative skills (reading, writing, comprehension and speaking) at a basic level. The course also introduces students to aspects of Modern Greek culture that are close to students' own horizon, while it exposes them to academic presentations of Greek history, arts, and current affairs. Quizzes, finals and short individual work with presentation are the testing tools. The completion of this unit does NOT satisfy the language requirement. Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course
Taught by: Tsekoura
Course not offered every year
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center.

GREK 016 Elementary Modern Greek II
Continuation of Elementary Modern Greek I, with increased emphasis on reading and writing. Prerequisite: Offered through Penn Language Center. This section is reserved for heritage learners or by permission of instructor.
For BA Students: Language Course
Taught by: Tsekoura
Course not offered every year
Prerequisite: GREK 015
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center.

GREK 017 Intermediate Modern Greek I
This course is designed for students with an elementary knowledge of Demotic Modern Greek, and aims mainly at developing oral expression, reading and writing skills. Offered through Penn Language Center.
For BA Students: Language Course
Taught by: Tsekoura
Course not offered every year
Prerequisite: GREK 015 AND 016
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center.

GREK 018 Intermediate Modern Greek II
Further attention to developing oral expression, reading, and writing skills for students with knowledge of Demotic Modern Greek. Offered through Penn Language Center.
For BA Students: Last Language Course
Taught by: Tsekoura
Course not offered every year
Prerequisite: (GREK 015 OR GREK 016) AND GREK 017
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center.

GREK 101 Elementary Classical Greek I
Intensive introduction to Classical Greek morphology and syntax. This course includes exercises in grammar, Greek composition, and translation from Greek to English. Emphasis is placed upon developing the ability to read Greek with facility.
For BA Students: Language Course
Taught by: Nishimura-Jensen
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

GREK 102 Elementary Classical Greek II
Students complete their study of the morphology and syntax of Classical Greek. We begin the semester with continuing exercises in grammar and translation, then gradually shift emphasis to reading unadapted Greek texts.
For BA Students: Language Course
Taught by: Nishimura-Jensen
Course usually offered in spring term
Prerequisite: GREK 101
Activity: Seminar
1.0 Course Unit
GREK 112 Intensive Elementary Classical Greek
An introduction to the ancient Greek language for beginners, with explanation of basic grammatical concepts and intensive exercises in reading and writing. Ideal for undergraduates or graduate students from Penn or elsewhere with some background in learning other languages, or who need to learn Greek rapidly. The course covers the first year of college-level Greek, equivalent to GREK 101 + GREK 102 at more than twice the normal pace. For further information on Penn's Greek curriculum, visit the Classical Studies department website.
Course usually offered summer term only
Activity: Seminar
2.0 Course Units

GREK 115 Greek/Heritage Speakers I
This course is intended to help Heritage Speakers or student with prior knowledge of conversational modern Greek (or even Ancient Greek) to refresh or enrich their knowledge of modern Greek and who would not be a good fit for the elementary or intermediate classes. A theme based textbook and instructions along with a comprehensive overview of grammar as a whole is presented while original text, songs, video and other media are used in order to augment vocabulary and increase fluency in modern Greek. Students are expected to properly use the language, do theme-based research on the themes examined and provide written work on various subjects and make conversation in class. Presentations on researched topics account for final exam.
For BA Students: Language Course
Taught by: Tsekoura
One-term course offered either term
Activity: Lecture
1.0 Course Unit

GREK 116 Greek/Heritage Speakers II
It is the continuation of GREK 115 with completing Grammar (passive voice as well as unusual nouns and adjectives etc.) and adding more challenging reading and writing material. The completion of this course satisfies the language requirement. ALL students completing the HSI GREK 115 are eligible to enroll. ALL OTHERS will have to take a placement test.
For BA Students: Last Language Course
Taught by: Tsekoura
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

GREK 181 Elementary Biblical Greek: The Language of Early Christianity
This course provides a one-semester introduction to koine, the version of ancient Greek that was shared by many communities around the Mediterranean and was used in the composition of the Greek New Testament and much early Christian literature. Coursework will focus on grammar, vocabulary, and basic readings. The course prepares students for more extensive readings in biblical Greek literature, in the sequel course GREK 182 Readings in Biblical Greek. Students aiming to learn classical Greek should take instead GREK 101 Elementary Classical Greek I. This course does not prepare students for reading classical (Attic) Greek. Students aiming to read classical Greek should take instead GREK 101.
Taught by: Ker
Activity: Seminar
1.0 Course Unit

Notes: This course does not prepare students for reading classical (Attic) Greek. Students aiming to read classical Greek should take instead GREK 101.

GREK 203 Intermediate Classical Greek: Prose
This course is for those who have completed Ancient Greek 102, Greek 112 or equivalent. You are now ready to begin reading real Greek! We will read a selection of passages from Greek prose authors, focusing on language and style.
For BA Students: Language Course
Course usually offered in fall term
Prerequisite: GREK 102 OR GREK 112
Activity: Seminar
1.0 Course Unit

GREK 204 Intermediate Classical Greek: Poetry
An introduction to the reading, interpretation, and translation of Greek poetry and Homeric Greek through close attention to sections of Homer's Iliad.
For BA Students: Last Language Course
Taught by: Sheila Murnaghan
Course usually offered in spring term
Prerequisite: GREK 203
Activity: Seminar
1.0 Course Unit

GREK 212 Intensive Intermediate Greek
An introduction to the basic history and conventions of Greek prose and poetry, with continuous readings from classical authors accompanied by grammar review and exercises. Ideal for undergraduates or graduate students from Penn or elsewhere who have completed the equivalent of one year of Greek (e.g., GREK 112). The course covers the second year of college-level Greek, equivalent to GREK 203 + 204 at more than twice the normal pace. This is an online course. 2 c.u. Students are not required to be in Philadelphia. Course activities will involve a series of intensive online exercises completed each day according the students own schedule, plus one daily video-linked session 5.30-7.00pm EST (Monday thru Thursday). The instructor for summer 2020 is Maria Kovalchuk, a Ph.D. student in Classical Studies. For further information about the course, please contact Prof. James Ker (jker@sas.upenn.edu).
For BA Students: Last Language Course
Course usually offered summer term only
Activity: Seminar
2.0 Course Units

GREK 308 The Myth of Prometheus
In Greek mythology, human beings are indebted for their survival and their way of life to Prometheus, the powerful Titan and clever trickster who defies Zeus to give them the gift of fire and the various arts and technologies of civilization. We will trace the development of the Prometheus myth through a series of works in different genres by Hesiod, Aeschylus, and Plato.
Taught by: Sheila Murnaghan
Activity: Seminar
1.0 Course Unit

GREK 309 Hymnic Poetry
In this course, we will read the four major Homeric hymns and five Callimachean hymns, with briefer examinations of the minor Homeric hymns and Orphic hymns. Some of the questions that will arise from our readings include the contexts for which they were composed, the literary and religious relationship of humans and gods, mythopoetics, and the differences in dialect and language between the works.
Taught by: Nishimura-Jensen
Course not offered every year
Prerequisite: GREK 204
Activity: Seminar
1.0 Course Unit
GREK 310 Thucydides
In this class we will read excerpts from the Greek historian, Thucydides, whose account of the Peloponnesian War is one of the most influential and compelling examples of history writing from any culture. Thucydides is generally thought of as one of the more difficult Greek prose authors. We will read some basic narrative passages in order to become familiar with Thucydidean style, before moving to the more difficult speeches and editorial passages in which Thucydides expounds upon the goals and difficulties of writing history.
Taught by: McInerney
One-term course offered either term
Also Offered As: GREK 610
Activity: Seminar
1.0 Course Unit

GREK 312 Discovering the Family: Sophocles' Oedipus Tyrannos and Euripides' Ion
We will read in Greek two great Athenian tragedies focused on the workings of the god Apollo, and the shocking, gradual revelation of hidden family relationships: Sophocles' Oedipus Tyrannos, and Euripides' Ion.
Taught by: Wilson
Course not offered every year
Also Offered As: GREK 612
Activity: Seminar
1.0 Course Unit

GREK 313 Alcibiades and the Athenian Imagination
Political superstar, demagogue, desperate lover, brilliant general, and traitor, Alcibiades captured the imaginations of his fellow Athenians as well as thinkers and artists for centuries to come. This course offers students an opportunity to study democracy, sexuality, ethics, and youth through the perspectives on Alcibiades presented in comedy, historiography, philosophy, and oratory. In addition to preparing weekly translations, students will write individual papers presenting original close readings or research and will additionally collaborate on a digital project.
Taught by: Brassel
Also Offered As: GREK 613
Activity: Seminar
1.0 Course Unit

GREK 314 Greek Dialogue
In this course we will examine the various manifestations of dialogue in ancient Greek literature. We will read some whole dialogues (such as those by Plato and Lucian; some dialogues in drama and dialogue episodes in historiography). We will also study, and experiment with, the linguistic and discursive phenomena associated with dialogue. (Prior completion of intermediate 200-level Greek sequence or high-school equivalent is required.)
Taught by: Ker
Course not offered every year
Also Offered As: GREK 614
Activity: Seminar
1.0 Course Unit

GREK 510 The Greek Text: Language and Style
What do we need to read texts in ancient Greek? In this course we read just one prose text and one poetic text, or a very limited number of texts and passages, with a focus on language and formal analysis (such as diction, grammar, stylistics, metrics, rhetoric, textual criticism). A range of exercises will be used to develop these skills, including composition, lexical studies, recitation, memorization, exegesis, written close-readings, and sight-translation.
Course not offered every year
Activity: Seminar
1.0 Course Unit

GREK 541 Greek Literary History
Through selected readings from both poetry and prose, we will survey the range and evolution of ancient Greek literary practice.
Taught by: Rosen
Course not offered every year
Activity: Seminar
1.0 Course Unit

GREK 600 Aristophanes & Lucian
This seminar will explore the comic drama of Aristophanes and its influence on the comic prose of Lucian in the Imperial period. Aristophanes was an important literary model for Lucian, but Lucian read Aristophanes in his own way and for his own literary agenda. We will consider each author both in their own historical contexts, and comparatively, as parodists, satirists and cultural critics within a long and varied literary tradition.
Taught by: Rosen
One-term course offered either term
Activity: Seminar
1.0 Course Unit

GREK 601 Plato and Aristotle on Human Nature
The place of humans in the order of things was a perennial question for ancient philosophers. The puzzle typically begins with questions of humans' place within a hierarchy, setting them between inanimate things and non-human living things on the one side, and the divine on other. These categories, along with others like metabolism, growth and decay, death, sentience, cognition, and knowledge, will form the background against which we look closely at Plato's and Aristotle's views. We will read sections of Phaedo, Republic, and Timaeus, along with On the Soul, On the Motion of Animals, and On Divination During Sleep. The course will invite both broad synthetic thinking, and focused textual analysis. Students will be responsible for a class presentation, a stint as lead questioner, a presentation of work toward a research paper, and a final research paper.
Taught by: Struck
Course not offered every year
Also Offered As: PHIL 611
Activity: Seminar
1.0 Course Unit
GREK 604 Troy and Homer
An interdisciplinary seminar focusing on the city of Troy both as an archaeological site and as the setting of the legendary Trojan War. We will consider Homer's Iliad (with selected sections read in Greek) together with the topography and archaeology of the site of Troy in order to address a series of interrelated questions: What are the points of continuity and discontinuity between the stories told by the literary tradition and the material record? How do both types of evidence contribute to our understanding of political relations and cultural interactions between Greece and Anatolia in the Bronze Age? How do Hittite sources bear on our reconstruction of the events behind the Troy legend? How have the site and the poem contributed to each other's interpretation in the context of scholarly discovery and debate? We will give some attention to modern receptions of the Troy legend that deliberately combine material and textual elements, such as Cy Twombly’s ‘Fifty Days at Iliam’ and Alice Oswald’s 'Memorial: An Excavation of Homer's Iliad.' The seminar will include a visit to the site of Troy during the Spring Break.
Taught by: Murnaghan
Also Offered As: AAMW 604, CLST 604
Activity: Seminar
1.0 Course Unit

GREK 605 Herodotus
An overview of Herodotus’ Histories with attention both to its place in Greek literary history and to its uses and limitations as an historical source. We will consider the Histories in relation to questions of ethnic identity, cultural contact, and the construction of East and West. In their individual projects, students will explore the relevance of this protean, polyvocal text to their particular interests and scholarly perspectives.
Taught by: Murnaghan
Course not offered every year
Activity: Seminar
1.0 Course Unit

GREK 610 Thucydides
In this class we will read excerpts from the Greek historian, Thucydides, whose account of the Peloponnesian War is one of the most influential and compelling examples of history writing from any culture. Thucydides is generally thought of as one of the more difficult Greek prose authors. We will read some basic narrative passages in order to become familiar with Thucydidean style, before moving to the more difficult speeches and editorial passages in which Thucydides expounds upon the goals and difficulties of writing history.

Gujarati (GUJR)

GUJR 402 Beginning Gujarati Part I
During the first year of Gujarati, major emphasis is placed on acquiring phonetics, grammatical patterns, and basic vocabulary. These goals are accomplished through guided drills and conversations accompanied by formal instruction on Gujarati grammar. From the outset, students are also taught the Gujarati writing system, which is used for all materials. By the end of the first year of instruction, student should be able to carry on coherent conversations on selected topics, read simple texts and compose short pieces in Gujarati.
For BA Students: Language Course
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
GUJR 403 Beginning Gujarati Part II
During the first year of Gujarati, major emphasis is placed on acquiring phonetics, grammatical patterns, and basic vocabulary. These goals are accomplished through guided drills and conversations accompanied by formal instruction on Gujarati grammar. From the outset, students are also taught the Gujarati writing system, which is used for all materials. By the end of the first year of instruction, student should be able to carry on coherent conversations on selected topics, read simple texts and compose short pieces in Gujarati.
For BA Students: Language Course
Course usually offered in spring term
Prerequisite: GUJR 402
Activity: Seminar
1.0 Course Unit

GUJR 422 Intermediate Gujarati Part I
This course is designed as a continuation of beginning Gujarati. The course objectives are to expand the mastery of sentence patterns and augment vocabulary and its usage through intensive grammar and comprehension exercises. A special emphasis will be placed on greater cultural awareness. Upon completion of this course students should be able to interact socially with added confidence and greater expressiveness. Students should also experience a great improvement in their comprehension of spoken and written language. During the second year of Gujarati, students are introduced to progressively more difficult reading selections, along with additional instructions in the formal grammar of the language. To maintain and develop oral and aural command of the language, readings are discussed in Gujarati. To develop their writing abilities, students are also expected to compose short essays on their readings.
For BA Students: Language Course
Two terms. student must enter first term.
Activity: Lecture
1.0 Course Unit

GUJR 423 Intermediate Gujarati Part II
This course is designed as a continuation of intermediate Gujarati I. Course objectives are to expand the mastery of sentence patterns and augment vocabulary and its usage through intensive grammar and comprehension exercises. A special emphasis will be placed on greater cultural awareness. Upon completion of this course students should be able to interact socially with added confidence and greater expressiveness. Students should also experience a great improvement in their comprehension of spoken and written language. During the second year of Gujarati, students are introduced to progressively more difficult reading selections, along with additional instructions in the formal grammar of the language. To maintain and develop oral and aural command of the language, readings are discussed in Gujarati. To develop their writing abilities, students are also expected to compose short essays on their readings.
For BA Students: Last Language Course
Taught by: Desai, R
Course usually offered in spring term
Prerequisite: GUJR 422
Activity: Lecture
1.0 Course Unit

GUJR 442 Advanced Gujarati
A follow up semester to Advanced Gujarati I, focused on the comprehensive study in reading, writing, speaking, and comprehension to gain advanced knowledge of Gujarati. Instructor may use poetry and/or prose as tools to engage students while having them create their own written works. Contact instructor for details. Prerequisite: Proficiency in Gujarati. Contact instructor if you have questions about your proficiency level.
For BA Students: Advanced Language Course
Taught by: Suthar
Course usually offered in spring term
Activity: Lecture

HSOC 001 Emergence of Modern Science
During the last 500 years, science has emerged as a central and transformative force that continues to reshape everyday life in countless ways. This introductory course will survey the emergence of the scientific worldview from the Renaissance through the end of the 20th century. By focusing on the life, work, and cultural contexts of those who created modern science, we will explore their core ideas and techniques, where they came from, what problems they solved, what made them controversial and exciting and how they relate to contemporary religious beliefs, politics, art, literature, and music. The course is organized chronologically and thematically. In short, this is a 'Western Civ' course with a difference, open to students at all levels.
For BA Students: Hum/Soc Sci or Nat Sci/Math Sector
Taught by: Kucuk
Course usually offered in fall term
Also Offered As: STSC 001
Activity: Lecture
1.0 Course Unit
HSOC 002 Medicine in History
This course surveys the history of medical knowledge and practice from antiquity to the present. No prior background in the history of science or medicine is required. The course has two principal goals: (1) to give students a practical introduction to the fundamental questions and methods of the history of medicine, and (2) to foster a nuanced, critical understanding of medicine’s complex role in contemporary society. The course takes a broadly chronological approach, blending the perspectives of the patient, the physician, and society as a whole—recognizing that medicine has always aspired to ‘treat’ healthy people as well as the sick and infirm. Rather than history ‘from the top down’ or ‘from the bottom up,’ this course sets its sights on history from the inside out. This means, first, that medical knowledge and practice is understood through the personal experiences of patients and caregivers. It also means that lectures and discussions will take the long-discredited knowledge and treatments of the past seriously, on their own terms, rather than judging them by today’s standards. Required readings consist largely of primary sources, from elite medical texts to patient diaries. Short research assignments will encourage students to adopt the perspectives of a range of actors in various historical eras.
For BA Students: History and Tradition Sector
Taught by: Barnes
Course usually offered in fall term
Also Offered As: HIST 036, STSC 002
Activity: Lecture
1.0 Course Unit

HSOC 003 Technology & Society
Technology plays an increasing role in our understandings of ourselves, our communities, and our societies, in how we think about politics and war, science and religion, work and play. Humans have made and used technologies, though, for thousands if not millions of years. In this course, we will use this history as a resource to understand how technologies affect social relations, and conversely how the culture of a society shapes the technologies it produces. Do different technologies produce or result from different economic systems like feudalism, capitalism, and communism? Can specific technologies perpetuate democratic or authoritarian politics? Do they suggest or enforce different patterns of race, class or gender relations? Among the technologies we’ll consider will be large objects like cathedrals, bridges, and airplanes; small ones like guns, clocks and birth control pills; and networks like the electrical grid, the highway system and the internet.
For BA Students: Society Sector
Taught by: Benson
Course usually offered in spring term
Also Offered As: SOCI 033, STSC 003
Activity: Lecture
1.0 Course Unit

HSOC 010 Health and Societies
‘Two fundamental questions structure this course: (1) What kinds of factors shape population health in various parts of the world in the twenty-first century? and (2) What kinds of intellectual tools are necessary in order to study global health? Grasping the deeper ‘socialness’ of health and health care in a variety of cultures and time periods requires a sustained interdisciplinary approach. ‘Health and Societies: Global Perspectives’ blends the methods of history, sociology, anthropology and related disciplines in order to expose the layers of causation and meaning beneath what we often see as straightforward, common-sense responses to biological phenomena. Assignments throughout the semester provide a hands-on introduction to research stratagies in these core disciplines. The course culminates with pragmatic, student-led assessments of global health policies designed to identify creative and cost effective solutions to the most persistent health problems in the world today.’ Also fulfills General Requirement in Science Studies for Class of 2009 and prior.
For BA Students: Humanities and Social Science Sector
Taught by: McKay
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Also fulfills General Requirement in Science Studies for Class of 2009 and prior

HSOC 028 Medicine, Magic and Miracles
This course explores the nature of disease and the history of medical practice and healing in the medieval period, using methods from intellectual, cultural, and social history, as well as the life sciences, and incorporating material from Indonesia to England. The themes of this course include: 1) the diversity of healing practices and beliefs in this period; 2) specific rationalities of different methods of healing; 3) views of the human body and disease; 4) the wide array of practitioners that people turned to for medical care, including physicians, midwives, family members, herbalists, snake handlers, saints, and surgeons; 5) institutions of medicine, such as the hospital. Students will have their minds blown as they learn to question everything they thought they knew about how science and medicine work.
Taught by: Truitt
Course usually offered in fall term
Also Offered As: STSC 028
Activity: Seminar
1.0 Course Unit

HSOC 031 Addiction: Understanding How We Get Hooked and How We Recover
We will investigate the evolution of scientific theories and popular beliefs regarding the causes of addiction in the 20th and 21st centuries, and how they have shaped treatment approaches to these disorders. We will examine the crack cocaine epidemic of the 1980s and the current opioid epidemic, and consider sociocultural and political factors that contributed to the onset of and reaction to these crises. Finally, we will discuss research into the neurobiological, psychological, familial, social, and political factors that initiate and sustain addiction, and the efficacy of various treatment approaches.
Taught by: McKay
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
HSOC 041 Cane and Able: Disability in America
Disability is a near universal experience, and yet it remains on the margins of most discussions concerning identity, politics, and popular culture. Using the latest works in historical scholarship, this seminar focuses on how disability has been experienced and defined in the past. We will explore various disabilities including those acquired at birth and those sustained by war, those visible to others and those that are invisible. For our purposes, disability will be treated as a cultural and historical phenomenon that has shaped American constructions of race, class, and gender, attitudes toward reproduction and immigration, ideals of technological progress, and notions of the natural and the normal.
Taught by: Mandell
Course usually offered in fall term
Also Offered As: STSC 041
Activity: Seminar
1.0 Course Unit

HSOC 048 Epidemics in History
The twenty-first century has seen a proliferation of new pandemic threats, including SARS, MERS, Ebola, Zika, and most recently the novel coronavirus called COVID-19. Our responses to these diseases are conditioned by historical experience. From the Black Death to cholera to AIDS, epidemics have wrought profound demographic, social, political, and cultural change all over the world. Through a detailed analysis of selected historical outbreaks, this seminar examines the ways in which different societies in different eras have responded in times of crisis.
The class also analyzes present-day pandemic preparedness policy and responses to health threats ranging from influenza to bioterrorism.
Taught by: Barnes
Course usually offered in fall term
Also Offered As: STSC 048
Activity: Seminar
1.0 Course Unit

HSOC 052 Autism Epidemic
The CDC estimates that 1 in 150 children have autism. Three decades ago, this number was 1 in 5,000. The communities in which these children are identified in ever increasing numbers are ill prepared to meet their needs. Scientists have struggled to understand the causes of this disorder, its treatment, and why it appears to be rapidly increasing. Families, policy makers, schools and the healthcare system have argued bitterly in the press and in the courts about the best way to care for these children and the best ways to pay for this care. In this class, we will use autism as a case study to understand how psychiatric and developmental disorders of childhood come to be defined over time, their biologocal and environmental causes identified, and treatments developed. We will also discuss the identification and care of these children in the broader context of the American education and healthcare systems.
Taught by: Mandell
Course not offered every year
Activity: Seminar
1.0 Course Unit

HSOC 059 Medical Missionaries and Partners
Global health is an increasingly popular goal for many modern leaders. Yet critics see evidence of a new imperialism in various aid programs. We will examine the evolution over time and place of programs designed to improve the health of underserved populations. Traditionally categorized as public health programs or efforts to achieve a just society, these programs often produce results that are inconsistent with these goals. We will examine the benefits and risks of past programs and conceptualize future partnerships on both a local and global stage. Students should expect to question broadly held beliefs about the common good and service. Ultimately we will examine the concept of partnership and the notion of community health, in which ownership, control, and goals are shared between outside expert and inside community member.
Taught by: Bream
Course not offered every year
Activity: Seminar
1.0 Course Unit

HSOC 082 Sport Science in the World
This seminar is designed for first-year students who are interested in some big questions related to the topic of ‘sport science.’ Sport science may seem to be just a niche field where teams of physiologists, psychologists, geneticists, engineers and others work to make already very athletic people go faster, higher, stronger. On the other hand, the work of sport scientists intersects everyday with far-reaching questions about how categories of sex, age, race, disability, and nationality are defined, measured, challenged, or maintained. Sport scientists weigh in on debates over what kinds of physical activity or bodies are ‘clean,’ what kinds of performance are ‘natural’ or even human, and what kinds of sporting spaces or equipment are fair. In this class we’ll read and discuss historical and contemporary accounts of sport science in the world. My hope is that students will enter the class interested in sports and leave interested in sports and in gendered science, objectivity and standardization, the politics of big data and more.
Taught by: Johnson
Course usually offered in fall term
Also Offered As: STSC 082
Activity: Seminar
1.0 Course Unit

HSOC 100 Sociological Research Methods
One of the defining characteristics of all the social sciences, including sociology, is a commitment to empirical research as the basis for knowledge. This course is designed to provide you with a basic understanding of research in the social sciences and to enable you to think like a social scientist. Through this course students will learn both the logic of sociological inquiry and the nuts and bolts of doing empirical research. We will focus on such issues as the relationship between theory and research, the logic of research design, issues of conceptualization and measurement, basic methods of data collection, and what social scientists do with data once they have collected them. By the end of the course, students will have completed sociological research projects utilizing different empirical methods, be able to evaluate the strengths and weaknesses of various research strategies, and read (with understanding) published accounts of social science research.
Taught by: Wilde, Baker, Roth
One-term course offered either term
Also Offered As: SOCI 100
Activity: Lecture
1.0 Course Unit
**HSOC 102 Bioethics**
This course is intended to introduce students to the fundamental principles of bioethics and the many ethical issues that arise in the rapidly changing fields of biomedicine and the life sciences. The first half of the course will provide an overview of the standard philosophical principles of bioethics, using clinical case studies to help illustrate and work through these principles. In the second half of the course we will focus on recent biomedical topics that have engendered much public controversy including diagnostic genetics, reproductive technologies and prenatal screening, abortion, physician assisted suicide, human experiments, and end of life decision making. We will use the principles learned in the first half of the course to systematically think through these bioethical issues, many of which affect our everyday lives.
Taught by: Crnic,M
Course not offered every year
Also Offered As: SOCI 101
Activity: Lecture
1.0 Course Unit

**HSOC 111 Health ofPopulations.**
This course develops some of the major measures used to assess the health of populations and uses those measures to consider the major factors that determine levels of health in large aggregates. These factors include disease environment, medical technology, public health initiatives, and personal behaviors. The approach is comparative and historical and includes attention to differences in health levels among major social groups.
Taught by: Kohler
One-term course offered either term
Also Offered As: SOCI 111
Activity: Lecture
1.0 Course Unit

**HSOC 112 The Peoples Health**
While the scary threats of the moment in recent years, Ebola, MERS, swine flu, bioterrorism dominate media coverage of public health, most human suffering and death are driven by more mundane causes. This course critically addresses twenty-first-century public health science and policy by examining the long history (beginning with the plague epidemics of Renaissance Italy) that brought us to where we are today. Topics include responses to epidemics; socioeconomic, racial, and other disparities in health; occupational health; the rise of public health as a field of scientific inquiry; sanitary reform; the Bacteriological Revolution; the shift from disease causes to risk factors; and the social determinants of health.
Taught by: Barnes,D
One-term course offered either term
Activity: Lecture
1.0 Course Unit

**HSOC 131 Sustainability and Public Health**
We know that wild animal populations are only as healthy as their habitats, but what about humans? This course explores how the health of ecosystems is intertwined with health of human populations. It asks the question, ‘To what extent is sustainability the most important public health issue of our time? We will examine issues related to climate change, environmental toxins, ecosystem destruction, species extinction, water availability, and food production through the lens of how these affect human health. On a more positive note, we will learn about how applications of whole systems thinking are transforming our culture, creating a more sustainable and healthier society, and how these cultural trends will transform health policy in the future. Throughout the course, we will engage in contemplative and reflective practice with regard to our own beliefs and behaviors. What prevents us, collectively, from creating a more sustainable society? We will critically explore questions surrounding the concept of ‘sustainability’. What makes a system sustainable, in ecological terms? Are there guiding principles that we can follow? Is a sustainable system by definition a healthy system? In what ways do these concepts differ? Why do we create unsustainable systems, human-made processes that undermine the ecosystems we depend upon? What is the relationship between academic environmental studies and environmental activism? What is the relationship between industrial culture and indigenous culture? What are the differences, philosophically speaking? We will draw on a wide variety of sources, including medical journals such as JAMA, on-line publications, academic books, general audience books, and articles in the popular press. We will also have the opportunity to engage in active learning experiences that ground the concepts in real world activity.
Taught by: MacKenzie
Course usually offered summer term only
Activity: Seminar
1.0 Course Unit

**HSOC 135 The Politics of Food**
In this ABCS and Fox Leadership Program course students will use course readings and their community service to analyze the institutions, ideas, interests, social movements, and leadership that shape the politics of food in different arenas. Service sites include: the Agatston Urban Nutrition Initiative; the Greater Philadelphia Coalition Against Hunger; the West Philadelphia Recess Initiative; the Vetri Foundation’s Eatiquette Program; and Bon Appetit at Penn. Academic course work will include weekly readings, Canvas blog posts, several papers, and group projects. Service work will include a group presentation (related to your placement) as well as reflective writing during the semester. Typically one half of each class will be devoted to a discussion of the readings and the other either to group work and discussion of service projects, or to a course speaker. This course is affiliated with the Communication within the Curriculum (CWIC) program, and student groups are required to meet twice with speaking advisors prior to giving presentation.

1.0 Course Unit
HSOC 140 History of Bioethics
This course is an introduction to the historical development of medical ethics and to the birth of bioethics in the twentieth-century United States. We will examine how and why medical ethical issues arose in American society at this time. Themes will include human experimentation, organ donation, the rise of medical technology and euthanasia. Finally, this course will examine the contention that the current discipline of bioethics is a purely American phenomenon that has been exported to Great Britain, Canada and Continental Europe.

1.0 Course Unit

HSOC 145 Comparative Medicine
This course explores the medical consequences of the interaction between Europe and the 'non-West.' It focuses on three parts of the world Europeans colonized: Africa, South Asia, and Latin America. Today’s healing practices in these regions grew out of the interaction between the medical traditions of the colonized and those of the European colonizers. We therefore explore the nature of the interactions. What was the history of therapeutic practices that originated in Africa or South Asia? How did European medical practices change in the colonies? What were the effects of colonial racial and gender hierarchies on medical practice? How did practitioners of 'non-Western' medicine carve out places for themselves? How did they redefine ancient traditions? How did patients find their way among multiple therapeutic traditions? How does biomedicine take a different shape when it is practiced under conditions of poverty, or of inequalities in power? How do today’s medical problems grow out of this history? This is a fascinating history of race and gender, of pathogens and conquerors, of science and the body. It tells about the historical and regional roots of today’s problems in international medicine.

Taught by: Mukharji
Course usually offered in fall term
Also Offered As: HIST 146, STSC 145
Activity: Lecture
1.0 Course Unit

HSOC 150 American Health Policy
'American Health Policy' places the success or failure of specific pieces of U.S. health care legislation into social and political context. The course covers the time period from the U.S. Civil War to the 2010 Affordable Care Act (ACA), addressing two central questions: 1) Why was the United States one of the only industrialized nations to, until recently, have a private, non-nationalized, non-federalized health care system? 2) Why has U.S. health insurance historically been a benefit given through places of employment? Some topics addressed include: private health insurance, industrial health and workmen's compensation, the welfare state (in Europe, Canada, and the U.S.), maternal and infant care programs, Medicare and Medicaid. One of the main take-home messages of the course is that 20th-century U.S. health care policies both reflected and shaped American social relations based on race, class, gender, and age. This course is a combination lecture and ‘SAIL’ class. SAIL stands for ‘Structured, Active, In-Class Learning.’ During many class periods, students will work in small groups on a specific exercise, followed by a large group discussion and/or brief lecture. Students who choose to take this course, therefore, must be fully committed to adequately preparing for class and to working collaboratively in class. (Note: the 2015 format will be somewhat different from the 2014 format).

HSOC 152 Technology and Medicine in Modern America
Medicine as it exists in contemporary America is profoundly technological; we regard it as perfectly normal to be examined with instruments, to expose our bodies to many different machines; and to have knowledge produced by those machines mechanically/electronically processed, interpreted and stored. We are billed technologically, prompted to attend appointments technologically, and often buy technologies to protect, diagnose, or improve our health: consider, for example, HEPA-filtering vacuum cleaners; air-purifiers; fat-reducing grills; bathroom scales; blood pressure cuffs; pregnancy testing kits; blood-sugar monitoring tests; and thermometers. Yet even at the beginning to the twentieth century, medical technologies were scarce and infrequently used by physicians and medical consumers alike. Over the course of this semester, we will examine how technology came to medicine's center-stage, and what impact this change has had on medical practice, medical institutions and medical consumers - on all of us!
Taught by: Johnson
Course usually offered summer term only
Also Offered As: STSC 162
Activity: Seminar
1.0 Course Unit
HSOC 179 Environmental History
This course provides an introduction to environmental history—the history of the interrelationship between humans and the rest of nature. In the words of historian J.R. McNeill, ‘Human history has always and will always unfold within a larger biological and physical context, and that context evolves in its own right. Especially in recent millennia, that context has co-evolved with humankind.’ In this course we will study this co-evolution between human actors and non-human actors in global history, analyzing political, social, cultural and economic factors that affect ideas about nature and material effects on nature. We will consider the concept of the Anthropocene and study current environmental changes and challenges.
Taught by: Greene, A
Course not offered every year

Activity: Lecture
1.0 Course Unit

HSOC 202 Scientific Revolution
During the 16th and 17th centuries, something that resembled modern science emerged from something that did not. Though the nature and cause of that transition are contested, there were unquestionably many pivotal developments in the content and conduct of science, and it is in this period that many of the ‘founding’ figures of science, from Copernicus to Galileo to Newton, are identified. This course will examine the many elements that went into the transition, including the revolution in cosmology, the revolt against ancient natural philosophy, the rise of experimentalism, the new philosophies of inquiry, new social structures for natural inquiry and the conceptual foundations of classical physics.
Taught by: VOELKEL
Course not offered every year

1.0 Course Unit

HSOC 206 Doing Good?: Humanitarianism and Global Health
This course will explore the current context of health policy, health reform, and health service delivery in the developing world. After examining global economic and political context of health care, students will analyze the role that economic development plays in promoting or undermining health. Students will examine key disease challenges such as tuberculosis, malnutrition, and HIV/AIDS.
Taught by: McKay
Course not offered every year
Activity: Seminar
1.0 Course Unit

HSOC 209 Race and Gender in Global Science
This course critically examines the creation of scientific conceptions of ‘race’ and ‘sex’ in the modern era and their global impact. How did ‘race’ and ‘sex’ come to be the primary categories through which human variation has been classified in the modern West? What concepts of ‘race’ and ‘sex’ did colonial scientists, doctors, naturalists, and other experts invent, and how and why did they do this? How have scientific conceptions of ‘race’ and ‘sex’ been adapted to fit the sociopolitical projects of formerly colonized regions? And how have recent developments in genomic science sought to reinvent these categories? With these questions in mind, this course challenges us to think critically about the political contexts in which conceptions of ‘race’ and ‘sex’ have been crafted as well as how they have been contested and re-defined.

HSOC 216 Gender and Health
Women’s health is a constant refrain of modern life, prompting impassioned debates that speak to the fundamental nature of our society. Women’s bodies are the tableaux across which politicians, physicians, healthcare professional, activists, and women themselves dispute issues as wide-ranging as individual versus collective rights, the legitimacy of scientific and medical knowledge, the role of the government in healthcare, inequalities of care, and the value of experiential knowledge, among many others. Understanding the history of these questions is crucial for informed engagement with contemporary issues.
Taught by: Linker
Course not offered every year
Also Offered As: GSWS 216
Activity: Seminar
1.0 Course Unit
HSOC 219 Race, Science, and Globalization
This course examines how the practice of sorting humans into distinct races is connected to the rise of modern science and to the economic globalization sparked by Columbus’ arrival in the Americas in 1492. By examining the trajectory of race in science from the Iberian conquest of the Americas until the present, we will examine the ways in which colonial logics and structures persist into the present and the ways they’ve been disrupted by various revolutionary, anti-colonial, and anti-racist movements. Along the way, we will observe how cultural ideas about race have been woven into the conceptual fabric of modern scientific disciplines such as anthropology, biology, psychology, and sociology and how these disciplines have sought to redeem themselves from their racist pasts.

HSOC 230 Fundamentals of Epidemiology
This course introduces students to the basic tenets of epidemiology and how to quantitatively study health at the population level. Students learn about measures used to describe populations with respect to health outcomes and the inherent limitations in these measures and their underlying sources of data. Analytic methods used to test scientific questions about health outcomes in populations then are covered, again paying particular attention to the strength and weaknesses of the various approaches. Multiple large epidemiologic research and field studies are used as in-class exemplars.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

HSOC 231 Insect Epidemiology Pests, Pollinators and Disease Vectors
Malaria, Chagas disease, the Plague—some of the most deadly and widespread infectious diseases are carried by insects. The insects are also pernicious pests; bed bugs have returned from obscurity to wreak havoc on communities, invasive species decimate agricultural production and threaten forests across the United States. At the same time declines among the insects on which we depend—the honeybees and other pollinators—threaten our food security, while general declines of insects threaten ecosystems. We will study the areas where the insects and humans cross paths and explore how our interactions with insects can be cause, consequence or symptom of much broader issues. This course is not an entomology course but will cover a lot about insects. It is not a traditional epidemiology course but will explore the approaches and study designs that epidemiologists use to uncover associations and evaluate interventions. It is not a history course but will cover past epidemics and infestations that have changed the course of the history and reversed advancing armies.
Taught by: Levy
Course usually offered in spring term
Also Offered As: STSC 231

1.0 Course Unit

HSOC 239 Global Health: Anthropological Perspectives
In some parts of the world spending on pharmaceuticals is astronomical. In others, people struggle for survival amid new and reemerging epidemics and have little or no access to basic or life-saving therapies. Treatments for infectious diseases that disproportionately affect the world’s poor remain under-researched and global health disparities are increasing. This interdisciplinary seminar integrates perspectives from the social sciences and the biomedical sciences to explore 1) the development and global flows of medical technologies; 2) how the health of individuals and groups is affected by medical technologies, public policy, and the forces of globalization as each of these impacts local worlds. The seminar is structured to allow us to examine specific case material from around the world (Haiti, South Africa, Brazil, Russia, China, India, for example), and to address the ways in which social, political-economic, and technological factors—which are increasingly global in nature—influence basic biological mechanisms and disease outcomes and distribution. As we analyze each case and gain familiarity with ethnographic methods, we will ask how more effective interventions can be formulated. The course draws from historical and ethnographic accounts, medical journals, ethical analyses, and films, and familiarizes students with critical debates on globalization and with local responses to globalizing processes.

HSOC 240 Devices, Pills, People: American Medicine in the 20th and 21st Centuries
In this course, we approach some of the most pressing questions in the modern American medical marketplace, attempting to understand why it looks the way it does, how it developed, and what it offers (and takes) from patients. By the end of the course, we will also try to look forward and consider where current trends in American medicine might lead.

The course is organized around six topics: 1) demography (changing patterns of health, disease, and death); 2) the growing and changing role of institutions, like hospitals and universities, in medical education and patient care; 3) the development and increasing role of technology in medicine; 4) changes in medical and pharmaceutical research and regulation; 5) patient experiences of health, illness, and patient-practitioner relations; 6) the construction of disease, or the broader social context and cultural representation of health and illness, both in culture and particular groups of patients. You will examine these issues through a mixture of readings, lectures, class discussion, short essays and a research project.

Taught by: Womack
Activity: Seminar
Course usually offered in spring term

HSOC 248 Health, Politics, and Social Movements
What is the relationship between health and social movements for race, gender, or political justice? How do political, economic, and social struggles intersect with, impede, or give rise to new demands for health, changing medical practice, or intensified or ameliorated experiences of disease? Recently, such questions have animated news headlines and popular media as responses to COVID have occurred simultaneously with popular protest, social mobilizations, and heated debates regarding race, police violence, and social policy. Moreover, convergences of popular protest, health crises, and health action can be observed in historical accounts and in widely disparate geographical examples. This course asks what such instances have to offer our understandings of health politics today. It explores this through two questions: how have questions of health and medicine been taken up or influenced by political and social movements in diverse historical and geographical spaces? And, how have scholars thought about the relationship between social and political mobilizations and health access and practice? Drawing from examples from around the globe, the course will ask students to master conceptual tools and core questions used to analyze the relationship between health, political mobilizations, and social movements. Course materials will include scholarly readings, news media accounts, films, and popular and fictional writing.

Taught by: McKay
Activity: Seminar

1.0 Course Unit

HSOC 249 Foundations of Public Health
Many factors have shaped, and continue to shape, population health and public health policy. This course will explore the concept, mission, and core functions of public health. Students will have a chance to learn about its key methodological (epidemiology, biostatistics) and content (environmental health, social and behavioral sciences, health policy) areas. In addition, we will focus on topics of particular relevance to the current health of the public; topics likely will include the basics of life (food, water, and shelter) and topics of current interest (e.g., motor vehicle crashes, mental health, violence).

Taught by: Sorenson
Activity: Lecture
One-term course offered either term
1.0 Course Unit

HSOC 251 Foundations of Public Health
Digital tools and data-driven technologies increasingly permeate twenty-first century life. But how have they affected death? Do we conceive of death differently in a digitally mediated world? How do we mourn in the age of Facebook? How is 'big data' put to work in the medical world that seeks to diagnose and treat fatal illness? What new forms of death and violence have been imagined or developed with digital technologies in hand? And what of those who believe that they could live forever, defying death, by uploading 'themselves' into some new digital form? This course offers a historical exploration of these questions, looking at different intersections between data and death. We will work with a range of different sources ranging from science fiction to medical journals to the often-controversial death counts that follow natural and political disasters. Our goal will be to map the many contours of death in a digital world, but also to recognize the longer histories of counting, mourning, diagnosing, dreaming, and dying that have shaped them.

Taught by: Dick
Activity: Seminar
Also Offered As: STSC 252
1.0 Course Unit

HSOC 252 Data and Death
This course offers a historical exploration of these questions, looking at different intersections between data and death. We will work with a range of different sources ranging from science fiction to medical journals to the often-controversial death counts that follow natural and political disasters. Our goal will be to map the many contours of death in a digital world, but also to recognize the longer histories of counting, mourning, diagnosing, dreaming, and dying that have shaped them.

HSOC 256 Law and Medicine: Global Themes
The course will explore the complex relationship between Law and Medicine in the modern world. It will cover a range of themes such as the regulation of quackery, forensic science, medical malpractice, medical patents and biopiracy etc. The course will be historical in its orientation and roughly cover the period from the late seventeenth century to the present. It will also focus particularly on the Majority World, looking especially at case studies from Asia and Africa.

Taught by: Mukharji
Activity: Seminar
One-term course offered either term
1.0 Course Unit
HSOC 260 Social Determinants of Health
Over the last century, we have witnessed dramatic historical change in population health, e.g. rising numbers of obese Americans and dramatic declines in death from stomach cancer. There has also been highly visible social patterning of health and disease, such as socio-economic disparities in AIDS, substance abuse, and asthma in the U.S. to day or the association of breast cancer with affluence around the world. This course will explore the way researchers and others in past and present have tried to make sense of these patterns and do something about them. The course is historical and sociological. We will examine evidence and theories about how poverty, affluence and other social factors influence health AND we will examine how social and historical forces shape the ways in which health and disease are understood.
Taught by: Johnson,A
Course not offered every year
Also Offered As: SOCI 259
Activity: Seminar
1.0 Course Unit

HSOC 262 Environments and Public Health
This course explores the relationship between local environmental conditions and health. Using historical case studies, we will consider a variety of questions: What factors (employment, pollution, local flora and fauna, race, etc.) influence citizens’ environment and health? How have insects, landscapes, and diseases shaped cultures or events in history? Was eighteenth-and nineteenth-century Philadelphia actually a good place to live? What was going on with all those basements and cobblestone streets in Old City? Would you rather work in a coal mine or a uranium mine? You will examine these issues through a mixture of readings, lectures, class discussion, short essays and a research project.
Taught by: Womack
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

HSOC 271 Greek & Roman Medicine
This course will examine the ways in which the Greeks, and then the Romans, conceptualized the body, disease, and healing, and will compare these to medical culture of our time. We will consider sources from Hippocrates, Plato, and Aristotle to Galen and Soranus, and will juxtapose these writings with modern discourse about similar topics. We will also pay some attention to ancient pharmacology and religious healing, and will visit the Penn Museum to see their collection of ancient medical instruments. All readings will be in English and no previous background in Classical Studies is required. This course will be especially appealing (and useful) to Pre-med and Nursing students, and to students interested in the History of Science, Ancient Philosophy, and Classics.
Taught by: Rosen
Course not offered every year
Also Offered As: CLST 271
Activity: Seminar
1.0 Course Unit

HSOC 275 Medical Sociology
This course is designed to give the student a general introduction to the sociological study of medicine. Medical sociology is a broad field, covering topics as diverse as the institution and profession of medicine, the practice of medical care, and the social factors that contribute to sickness and well-being. While we will not cover everything, we will attempt to cover as much of the field as possible through four central thematic units: (1) the organization of development of the profession of medicine, (2) the delivery of health-care, (3) social cultural factors in defining health, and (4) the social causes of illness. Throughout the course, our discussions will be designed to understand the sociological perspective and encourage the application of such a perspective to a variety of contemporary medical issues.

HSOC 279 Nature’s Nation: Americans and Their Environment
The United States is ‘nature’s nation.’ Blessed with an enormous, resource-rich geographically diverse and sparsely settled territory, Americans have long seen ‘nature’ as central to their identity, prosperity, politics and power, and have transformed their natural environment accordingly. But what does it mean to be ‘nature’s nation?’ This course describes and explores how American ‘nature’ has changed over time. How and why has American nature changed over the last four centuries? What have Americans believed about the nation’s nature, what have they known about the environment, how did they know it and how have they acted on beliefs and knowledge? What didn’t or don’t they know? How have political institutions, economic arrangements, social groups and cultural values shaped attitudes and policies? How have natural actors (such landscape features, weather events, plants, animals, microorganisms) played roles in national history? In addition to exploring the history of American nature, we will look for the nature in American history. Where is ‘nature’ in some of the key events of American history that may not, on the surface, appear to be ‘environmental?’

HSOC 331 Reproductive Medicine: Societal Impact of New Technologies
Reproduction is essential for the survival of species. Adverse events during embryogenesis or pregnancy can not only have an immediate impact on the well-being of the developing embryo but also later in life as adolescents or adults. Startlingly, we are learning that environmental influences on the molecular mechanisms in germ cells over the reproductive lifespan of adults that regulate gene expression in eggs, sperm and embryos can have serious consequences on progeny and their progeny’s progeny - over generations. We have long sought to control our fertility, for example, from the timing of a pregnancy in our lives; of overcoming infertility; and of ensuring the health and well-being of our progeny from the very beginning of development. Assisted Reproductive Technologies (ART) are now having a significant impact on fertility and embryo viability and well-being. However, they are not without controversy and society must be involved in important policy issues. For example, embryo selection is being used eliminate or reduce genetic-based diseases, but now genome editing, a powerful tool for effectively and safely modifying our genome in perpetuity presents a viable alternative. Should we do it and for which conditions? Since the lifestyles of parents and even grandparents can affect the future health of offspring, how do we ensure that individuals are aware of lifestyle effects and make the right choices for future generations? We are in an era of many groundbreaking discoveries in reproductive medicine that will lead to more technologies that will continue to raise ethical concerns that affect some of society’s most basic social covenants and that will require major societal adjustments. How will society deal with innovations that enable many facing infertility to have genetic offspring; that improve the quality of life or permit life itself for a developing embryo; that ensure successful outcomes of pregnancy by identifying and addressing risk factors in the environment that adversely affect the developing fetus, potentially even the future offspring of a person exposed as a fetus to an adverse environment; and that will enable women to have children at what used to be grandparental ages? Society will also be faced with the possibility of germline interventions and altering our own evolution. How can we manage these technologies to make sure that patients can benefit while also allowing us to be comfortable in our humanity? This course will present the latest in reproductive technologies (and those on the horizon) so as to appreciate their importance for individuals and then focus on how we as a society should manage their use.

1.0 Course Unit
HSOC 334 Birth Culture and Medical Technology
How we are born and give birth can vary more than most people realize. Until the rise of medical technology, women gave birth at home surrounded by other women. Now, the majority of Americans are born in hospitals, and a large percentage of those birth are the result of surgical interventions. This course will explore the medicalization of birth, as well as the movements dedicated to promoting home birth, natural birth, and midwifery. Many of the readings will examine birth from an unapologetically feminist and/or holistic perspective, and we will discuss the psychological, political, cultural and spiritual dimensions of birth practices. We will also consider the impact of increasingly sophisticated medical technology on conception and pregnancy, including in vitro fertilization, surrogate mothers, and extending the childbearing years well into late life. An important theme throughout will be the concept of ‘appropriate technology’ – which technologies are appropriate and who decides? Readings will be drawn from a number of sources, principally midwifery, nursing, and medical journals.

HSOC 337 Race and Medicine in the Global South
Racialized medical provisions under Apartheid in South Africa, theories of racial immunity to malaria in the Philippines and contemporary investigations of caste-based disease risks in India are some of the topics to be covered in this course. From the more straightforward issues of racial discrimination in medicine, to more complex issues of racial immunity or racial susceptibility to disease, medicine and race have been entangled together in multiple ways. More importantly these issues are far from being matters of the past. Genomic medicine and risk society have combined to make race and medicine one of the most potent contemporary issues. Outside the Western World, in the Global South, these issues are further refracted through local cultural, historical and political concerns. This course will take a long-term view of these contemporary issues.

HSOC 338 Hybrid Science: Nature, health, and society in Latin America
What role did science and medicine play in the creation and growth of the Spanish and Portuguese empires? And why was the creation of science and health institutions crucial to the revolutionary movements for independence in Latin America? This course examines science and medicine in Latin America by attending to the ways that knowledge of nature and health has been central to political struggles of the countries in this region. A crucial dynamic shaping the history and culture of this region is the interplay between the healing practices and cosmologies of European settlers, indigenous Americans, and the descendants of African slaves. Bearing this interplay in mind, this course explores how Latin America has been a fertile site of scientific creativity. It also examines the ways in which Latin American scientists and medical experts have refashioned concepts and practices from Europe and North America to fit local circumstances.

HSOC 339 Women in Medicine
Today in the US almost half of all medical students are women and female physicians comprise roughly one-third of the workforce. However, some statistics are still troubling, including the number of African American women who pursue advanced medical degrees. This course will trace the evolution of women practicing medicine over several centuries, exploring how various cultural, societal, and intellectual norms differed over time while challenging the assumption of linear progress towards equality. While the focus will be on American medicine, including field trips to archives and historical landmarks within Philadelphia, the coursework also includes international case studies and cultural comparisons to help position local issues within a wider and more complicated narrative. Considering both the historical and contemporary contexts for interconnected issues such as bias, motherhood, and burnout, we will analyze challenges and strategize potential solutions for the next generation of women seeking careers in medicine.

HSOC 344 The Future of Disability and the Afterlives of Epidemics
It has been less than a year since the emergence of a new and deadly virus, Sars-CoV-2, but already this novel disease has upended our lives and all indicators suggest that things may never be the same. Mired in the middle of this ongoing crisis, the stories we write, read, tell, and hear about the present and the future are rife with grief, uncertainty, and fear as illness and death seem to permeate the very air we breathe. From this standpoint, it is difficult to see beyond the powerful dichotomies of health/illness, sick/better, and life/death that frame our perspectives of the ongoing crisis. In this course, we will learn instead to examine stories of epidemics past and present through the lens of disability. In doing so, we will ask how epidemics in the past have shaped our ideas and experiences of disability, muddled our binary thinking about illness and wellness, and challenged the beliefs, epistemologies, and institutions that drive our approaches to the body, the mind, and the spirit. Through an exploration of primary and secondary source readings, we will interrogate how these eras of crisis, and their aftermaths, have historically influenced the ways we think about and experience disability and its relationship to identity, family, culture, religion, society, and citizenship in the days, weeks, months, years, and decades that follow in their wake. Ultimately, we will draw upon the insights of the past to develop better questions about our current situation and to think in novel and critical ways about how our ideas about wellness, disability, and society have already begun to shift as a result of COVID-19.

HSOC 348 Current Issues in Global Health
This course examines current world events through the lens of public health. The course will focus on six key questions: 1) What does health infrastructure look like in different parts of the world, and how is it working or failing different groups of people? 2) What public health opportunities and challenges are created by the rise of megacities? 3) What unique public health challenges are created by modern-day proxy wars and refugee flows, and what is the role of health professionals in responding to human disasters? 4) How are fertility patterns and changes in life expectancy impacting different societies? 5) How is climate change altering the global health landscape? 6) What might the next global pandemic look like? We will discuss these questions in class using a mixture of scholarly and popular texts, and you will conduct and present your own secondary research into one of these topics.

HSOC 352 Medical Mestizaje: Health and Development in Contemporary Latin America
Latin American nations as we know them today emerged in the nineteenth century after violent independence struggles against the Spanish Empire. Since independence, mestizaje has been an influential ideology that seeks to portray the identity of Latin American nations as comprised of a unique cultural and racial fusion between Amerindian, European, and African peoples. Through historical, anthropological, and STS approaches this course examines how concerns with racial fusion and purity have shaped the design and implementation of public health programmes in Latin America after independence and into the 20th century. Topics include: tropical medicine and race; public health and urbanization; toxicity and exposure in industrialized settings; biomedicine and social control; indigenous health; genomics and health; food and nutrition.
Taught by: GIL-RIANO
One-term course offered either term
Activity: Seminar
1.0 Course Unit

HSOC 358 The Human Subject
In this course, we will consider health and society from the perspective of the human subject. Because medicine is uniquely concerned with human bodies and minds, humans occupy a strange place in the medical landscape as both objects of care, but also of experimentation, and curiosity, and frustration, and agents, acting in a variety of roles (patient, researcher, doctor) and tasked with decision making in a complex technical and moral landscape. This course will explore the difficult ethical, practical, and technical questions that arise at that agent/object boundary by examining case studies from the nineteenth, twentieth, and twenty-first centuries. You will examine these issues through a mixture of readings, lectures, class discussion, short essays and a research project.

1.0 Course Unit
HSOC 370 The Many Lives of Data: Population, Environment, and Planning in the United States
This is a class about the live(s) and afterlives of information from 1850 to the present. Not only can information be reproduced (in a variety of material conditions); it can be repurposed and funneled through a variety of different applications, some of them serving radically different purposes than the first purpose of gathering it. Thoreau’s journals of plant flowering, for instance, have become important indicators of climate change. More controversial is the sale of biomedical information by personal genomics services for drug discovery, or the construction of forensic databases consisting of the DNA of suspects arrested as a result of racial profiling. We will study the ways in which data has become a way for us to understand and define change, stability, place, and time, beginning in the mid-nineteenth century, a period of accelerated and increasingly systematic gathering of data, particularly medical, forensic, and environmental data. The class will proceed both chronologically and thematically in three units, from the gathering and use of biomedical data as a way to make patient populations ‘legible’ (to borrow from James Scott), to data as a way to make the environment understandable, and finally to data as a tool for producing and reproducing social relations. As a final project, students will trace a particular data set from its original gathering to its latest usage. Students will also have an opportunity to create their own course content in the final three weeks of class.

HSOC 379 Animals in Science Medicine Technology
This course explores human-animal relationships: the wide range of these relationships, why they originated and how they have changed over time. How have humans classified, valued, utilized, consumed, behaved toward and understood animals? Where is the boundary between humans and other animals, and how do we know, since humans are also animals? How is that boundary been maintained and redefined? Are humans part of the animal ‘natural’ world- or apart from it? How are humans similar to and different from other kinds of animals? How do we know about animals and what is it we know? To what extent are questions about animals really questions about humans? How has the meaning of animal changed over time? The course focuses in particular to the roles and relationships of animals within science and medicine, and as biotechnologies.

Activity: Seminar
1.0 Course Unit

HSOC 381 Toxicity in Context
We live amidst a constant stream of messages, practices, and regulations about things, behaviors, or relationships deemed ‘toxic.’ Within environmental health in particular, all sorts of actors grapple with complex decisions about what it means to live with materials and anticipate the ways they can interact with human health and the environment - at present through the distant future. What exactly do we mean when we categorize some substances as toxic, and by extension others as safe? Are there other ways of managing uncertainty or conceptualizing harm? How are these concepts built into broader social structures, economics, and regulations? What other work are they used to do? In this course, we will explore major social science approaches to toxicity and apply these theories to our own analysis of examples from the contemporary United States, and in particular, to a robust oral history collection with residents, developers, and government scientists grappling with these questions just outside of Philadelphia. This course grows out of scholarship in the history and anthropology of environmental risk, and health, as well as direct ethnographic, historical, and oral history research at a site outside of Philadelphia grappling with the meaning of materials that remain on site after past industrial manufacturing. In this course, students will gain an introduction to oral history and analysis of in-depth interviews, and introduction to key approaches in theorizing toxicity. By connecting life experiences of residents, government scientists and others, at an actual site, with the literatures we read in class, students will think critically about the ways the literatures we engage do and do not fully encompass the experiences and concerns that are intertwined with toxicity for actual people grappling with making sense of uncertain harms amidst urban planning.
Taught by: Dahlberg
Also Offered As: STSC 381
Activity: Seminar
1.0 Course Unit

HSOC 382 Public Health & Violence
This course will address two health concerns of long-standing controversy: the role of guns in population health and violence in relationships. We will adopt a healthy skepticism about the assumptions and ideologies that currently dominate formal and informal discourse about these topics. A life span perspective - guns from design through use, and abuse from childhood through late life - will be grounded in a public health injury prevention framework. As a function of this approach, we will examine key aspects of the social context in which guns and abuse exist and within which related policies are formulated. Students are encouraged to examine their perceptions about these issues so that they can become more effective members of a society that appears to maintain a deep ambivalence about guns and about violence in relationships.

1.0 Course Unit
HSOC 391 Bioethics and National Security
At least since Augustine proposed a theory of 'just war,' armed conflict has been recognized as raising ethical issues. These issues have intensified along with the power and sophistication of weapons of war, and especially with increasing engineering capabilities and basic knowledge of the physical world. The life sciences have had their place in these developments as well, perhaps most vividly with the revelations of horrific experiments conducted by the Nazi and Imperial Japanese militaries, but with much greater intensity due to developments in fields like genetics, neuroscience and information science, and the widely recognized convergence of physics, chemistry, biology and engineering. The fields of bioethics and national security studies both developed in the decades following World War II. During the cold war little thought was given to the fact that many national security issues entail biotechnical questions, but this intersection has been increasingly evident over the past two decades. In spite of the overlapping domains of bioethics and national security, there has been remarkable little systematic, institutional response to the challenges presented by these kinds of questions: - What rules should govern the conduct of human experiments when national security is threatened? - Is it permissible to study ways that viruses may be genetically modified in order to defeat available vaccines, even for defensive purposes? - What role may physicians or other health care professionals play in interrogation of suspected terrorists? - Must warfighters accept any and all drugs or devices that are believed to render them more fit for combat, including those that may alter cognition or personality? - What responsibilities does the scientific community have to anticipate possible 'dual purpose' uses or other unintended consequences of its work? Deploying the resources of ethics, philosophy, history, sociology and theory, this course will address these and other problems.

1.0 Course Unit

HSOC 409 Science and Disability
How have ideas about ability and disability shaped the questions we ask about the world and the methods we use to answer them? How do assumptions about who can and ought to be a scientist, engineer, or physician intersect with constructions of disability and difference? How might studying the lived experiences of people with disabilities in the context of STEM(Medicine) help us begin to answer these questions? This course explores the exciting intersection between disability studies and the history and sociology of science and medicine through weekly readings, discussions, and original research. Using materials ranging from archival and online sources to oral history interviews and museum collections, students in this course will learn how scientific ideas and institutions have helped shape 20th- and 21st-century categories and experiences of disability as an embodied and socio-political identity. At the same time, students will learn how to use disability as a critical theoretical lens for investigating the cultures, tools, and institutions behind the creation and application of modern scientific and medical knowledge. Collaborative and analytical writing work throughout the course will build towards the completion of a final original research project.

HSOC 411 Sports Science Medicine Technology
Why did Lance Armstrong get caught? Why do Kenyans win marathons? Does Gatorade really work? In this course, we won't answer these questions ourselves but will rely upon the methods of history, sociology, and anthropology to explore the world of the sport scientists who do. Sport scientists produce knowledge about how human bodies work and the intricacies of human performance. They bring elite (world-class) athletes to their laboratories or their labs to the athletes. Through readings, discussions, and original research, we will find out how these scientists determine the boundary between 'natural' and 'performance-enhanced,' work to conquer the problem of fatigue, and establish the limits and potential of human beings. Course themes include: technology in science and sport, the lab vs. the field, genetics and race, the politics of the body, and doping. Course goals include: 1) reading scientific and medical texts critically, and assessing their social, cultural, and political origins and ramifications; 2) pursuing an in-depth The course fulfills the Capstone requirement for the HSOC/STSC majors. Semester-long research projects will focus on 'un-black-boxing' the metrics sport scientists and physicians use to categorize athletes' bodies as 'normal' or 'abnormal.' For example, you may investigate the test(s) used to define whether an athlete is male or female, establish whether an athlete's blood is 'too' oxygenated, or assess whether an athlete is 'too' fast (false start). Requirements therefore include: weekly readings and participation in online and in-class discussions; sequenced research assignments; peer review; and a final 20+page original research paper and presentation.

HSOC 418 Sound in Science, Medicine and Technology
How do listening and knowing relate? This capstone will analyze sound as an object, an instrument, a product and a process of research in science, technology, and medicine. From anthropological field recordings to experiments in acoustics, readings will address the ways in which researchers have isolated and investigated sonic phenomena during the modern period. We will consider sound as a tool for knowing about other phenomena as well: bodily functions, seismic events, animal communication, and the like. Technologies of sound production, reproduction, storage, manipulation, and analysis will be front and center in this course. What can you do with magnetic tape that phonography does not allow? How might the hospital soundscape inform clinical decision-making? Why is Amazon's Alexa female? How has scientific communication changed over time? In addition to wrestling with questions like these, the course will provide undergraduate majors with the opportunity to research and execute an original paper of significant length in the humanistic social sciences. Students must be in their last three semesters for it to fulfill the capstone requirement, but any student may enroll.

Activity: Seminar
1.0 Course Unit

HSOC 432 Medical Activism and the Politics of Health
During the second half of the twentieth century, overlapping waves of social reform movements agitating for civil rights, women's rights, peace, environmentalism, and gay rights reshaped the U.S. political and cultural landscape. Physicians, other health care professionals, and organized patient groups played important roles in all of these movements. This seminar investigates the history of this medical activism, making special use of the Walter Lear Collection in Penn Libraries' Kislak Center. Readings, discussions, and student research projects analyze the relationships between this history and the political dimensions of individual and population health in the late twentieth century.

Activity: Seminar
1.0 Course Unit

HSOC 436 Biopiracy: Medicinal Plants and Global Power
Biopiracy has emerged as the name of conflict between multinational pharmaceutical companies attempting to get genetic patents on medicinal plants and indigenous communities in the Global South who have long known and used these plants for medicinal purposes. Today the story of Biopiracy is an unfolding story of plants, patents and power. The extraction and commercial exploitation of plants and knowledge about them from the Global South however is not new. It has been happening at increasing pace for at least the last two centuries. Both the anti-malarial drug quinine and the cancer drug vincristine for instance have their plant-origins in the Global South where local communities used them medicinally long before their discovery by biomedicine. This course will put the current debates around Biopiracy in context and explore how the entanglements of plants and power have changed or not changed.
Taught by: Mukharji
Course not offered every year
Also Offered As: STSC 436

1.0 Course Unit

HSOC 448 Bodies, Gender, Science, and Medicine
Americans' ideas about gender and sex have changed dramatically since the 19th century-But what roles have science and medicine played in these changes? How have shifting biological, psychological, cultural and political ideas about femininity and masculinity shaped our experiences of health, illness, sex and reproduction? How have these ideas about gender and sexuality influenced the creation of, participation in, institutions, technologies and experiences of our modern healthcare system? Drawing from the history of science, medicine and technology as well as gender studies, bioethics and disability studies, students in this class will examine a wide array of topics that address these questions, exploring how deeply rooted historical, political and social forces have shaped the relationship between gender and medicine.
Taught by: Martucci
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

HSOC 452 Race and Medicine in America
Race has been, and remains, a central issue to the delivery and experience of healthcare in America. This course will examine a variety of issues and cases studies to examine how the patient-doctor has been negotiated, defined, and contested upon the basis of race. This course is designed to further develop students' research, analytical and writing skills in a collaborative atmosphere. Students will complete an original research paper through critical reading and step-wise assignments that will culminate in a final project. By the end of the course, students will have honed skills in primary and secondary source research, and the construction of an academic, analytical argument and paper. Students will build an argument based on their analysis of primary sources, and appropriately situate their argument within the literature of the core HSOC disciplines (anthropology, sociology, and history). In addition, student will continue to develop skills in critical analysis through weekly reading assignments

Activity: Seminar
1.0 Course Unit
HSOC 458 Environments and Health
Do classrooms’ fluorescent lights give you headaches? Have you ever felt invigorated by a mountain’s breeze? Have you ever sought to get a ‘healthy’ tan at the beach? Throughout history people have attributed their health -- good and bad-- to their physical surroundings. In this class we will explore how medical professionals, scientists and the general population have historically understood the ways in which the environment impacts different people, in different places, in different ways. We will interrogate medical theories that underpinned popular practices, like health tourism, public health campaigns, and colonial medical programs. We will also consider how people constructed and understood the physical environment, including farms and factories, cemeteries and cities, to be healthy or not. This course is designed to foster a collaborative atmosphere in which students will complete an original research paper through critical reading and step-wise assignments that will culminate in a final project.
Taught by: Crnic
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

HSOC 459 Defining Disability
Live long enough, and you are almost certain to experience some kind of disability if you haven’t already. What, then, does it mean to be ‘disabled?’ This capstone takes as its premise the idea that disability has meant different things to different stakeholders (e.g. activists, physicians, politicians, families, employers, artists, clergy, engineers) across cultures and over time. We will historicize and analyze these various definitions in order to better understand the complex socio-cultural construct of disability while simultaneously cultivating the research skills necessary for advanced work in the humanistic social sciences. Assignments will be scaffolded to help students write an original research paper of significant length by the end of the semester.
Taught by: Kaplan
Course usually offered in fall term

HSOC 462 Seeking Health: Tourism, Medicine in America 1800-2000
Summer camps, spring break, and trips to the beach, mountains, and national parks: vacations are an integral part of American culture. Often we talk and think about traveling for its ability to rejuvenate our tired bodies and spirits. Although tourism only developed over the past 100 years, the tradition of traveling for health has a much deeper history. This course will examine how different people in different times have understood the connections between travel and health, and how technologies have and continue to mediate those experiences. Over the course of the semester students will complete an original research paper through critical reading and step-wise assignments that will culminate in a final project. By the end of the semester, students will have honed their skills in primary and secondary source research, the construction of an academic argument and paper, and will continue to develop skills in critical analysis through weekly reading assignments.

Health Care Innovation (HCIN)

HCIN 600 The American Health Care System
This course surveys the historical development of the American health care system from the turn of the Twentieth Century to the present. We examine the logic, economics, and implementation of the system’s basic structural components from insurance, to hospitals, to models for compensating physicians and nurses. We review many attempts at reform, and discuss why they failed. We analyze in detail the passage of the Affordable Care Act, the Supreme Court’s rulings, and its provisions on access, cost control, quality, workforce, and financing. And we begin to consider some of the directions in which the American health care system may evolve next.

Activity: Online Course
1.0 Course Unit
HCIN 601 Health Care Operations
The word 'operations' derives from the Latin 'opus,' and opus means work. So by definition, operations is about work. This course offers an introduction to operations management: after completing the course, you will be able to use a systematic approach for analyzing and improving your work in health care settings. This will benefit patients, teams of care providers, and staff. The course includes an examination of inefficiencies resulting from the three system inhibitors: waste, variability, and inflexibility. And it provides strategies for engaging in the ongoing process of reducing these negative impacts without sacrificing quality of care. This course offers an introduction to operations management, examining inefficiencies from waste, variability, and inflexibility and providing strategies for engaging in the ongoing process of reducing these negative impacts without sacrificing quality of care. After completing the course, learners will be able to use a systematic approach for analyzing and improving their work in health care settings.
Activity: Online Course
1.0 Course Unit

HCIN 602 Behavioral Economics and Decision Making
Behavioral economics is a relatively new field at the intersection of economics and psychology. This course offers an introduction to behavioral economics and its applications to health and health care. In it, we will examine the key conceptual underpinnings of the field. We will discuss in detail the structure of the choice environment and the ways that people are influenced by how choices are structured. We will consider the design of incentives and various approaches used to ‘supercharge’ incentive programs using behavioral economics principles. We will consider the use of social incentives and social comparisons as a way of achieving better physician performance. We will conclude with a description of how behavioral economics is used in public policy, as well as the interesting question of when a ‘nudge’ becomes a shove.
Activity: Online Course
1.0 Course Unit

HCIN 603 Evaluating Health Policy and Programs
This course serves as an overview of fundamental concepts and empirical methods in the analysis of health policies and programs. It offers a pragmatic, applied approach to the subject, focusing on how the learner can use evaluation methods in practice. This course surveys key concepts in evaluation, such as confounding, selection bias, non-random assignment, the counterfactual, and matching. It examines the notions of internal versus external validity, and their influence on methodological choice. And it covers empirical methods including randomized controlled trials, regression discontinuity design, difference-in-differences or interrupted time series methods, matching, and instrumental variables. Real-world policies and evaluation examples illustrate concepts and applications of methods.
Taught by: Amol Navathe
Activity: Online Course
1.0 Course Unit

HCIN 604 Health Economics
Health economics applies economic principles to the health care sector. By recognizing the importance of scarcity and incentives, it focuses on the critical economic issues in producing, delivering, and financing health care. It analyzes determinants of demand for medical care, the unique role of physicians in resource allocation, the role of health insurance, and competition in medical care markets.
Activity: Online Course
1.0 Course Unit

HCIN 605 Applying Behavioral Economics
Analyze a case, define a behavioral economics intervention, sketch a behavioral roadmap, and write a proposal for the intervention.
Activity: Online Course
0.5 Course Units

HCIN 606 Applying Operations Management
Analyze 2 health care cases; through the process of forecasting, build a KPI tree; and recommend process improvements.
Activity: Online Course
0.5 Course Units

HCIN 607 Translating Ideas into Outcomes
This course applies state-of-the-art innovation methodologies to improve health care delivery for providers, and outcomes and experience for patients. It begins with an extended discussion of how we might apply principles of analytical and scientific thinking including rhetorical analysis and behavioral economics to operational problems in health care. And it examines strategies for identifying and solving those problems; including ethnographic research to reveal what others have missed; problem reframing to unlock teams from initial, less productive concepts; rapid hypothesis validation to learn quickly at low cost whether and how best to invest in scaling; and designing delightful experiences, which drive word-of-mouth and catalyze the spread of desirable behaviors.
Activity: Online Course
1.0 Course Unit

HCIN 608 Driving Value in the System & Health Insurance and Benefit Design
This is a pairing of two 3-week course topics. In 'Driving Value in the System,' you will engage in understanding the current goals of improving value--defined by quality over costs--in the health care system and drivers of improved value. After hearing from experts in the field about their experiences, you will be able to understand the different payor drivers to increase value, measure quality and cost, deliver an elevator speech for resources, and select tools to implement a value-improvement project. In 'Health Insurance and Benefit Design,' you will discuss some of the main challenges facing health insurers, efforts to reduce growth in entitlement spending, and research that muses on the effectiveness of different strategies to modify behavior through the use of incentives embedded within health insurance design.

<td>HCIN 610</td>
<td>Connected Health Care</td>
<td>Technology has allowed firms to fundamentally change how they connect with their customers. Rather than having occasional, episodic interactions—where customers realize they have an unmet need and then look for ways to fill it—firms are striving to be continuously connected to their customers, providing services and products as the needs arise, even before customers become aware of them. There is probably no other industry for which this development will be as transformative as in health care delivery. Wearable devices, smart pill bottles, and digestible sensors—all of these technologies, and many more, are associated with the promise of improving the quality of care while also making efficient use of resources. This course explores the impact of connected strategies in general, and in particular the opportunities associated with them in health care delivery. Taught by: Terwiesch</td>
</tr>
<tr>
<td>HCIN 611</td>
<td>Driving Value in the System</td>
<td>Engage in understanding the current goals of improving value—defined by quality over costs—in the health care system and of drivers of improved value. Most policy experts agree that by focusing on value then we will be able to unite the different groups within the health care delivery system to help fix our current issues. Students who successfully complete this course will be able to discuss the payer drivers to increase value, measure quality, measure cost, deliver an elevator speech for resources to improve value, and select tools to implement a project to improve value. Activity: Online Course</td>
</tr>
<tr>
<td>HCIN 612</td>
<td>Health Law Fundamentals &amp; Ethics in Health Care Innovation and Research</td>
<td>This is a pairing of two 3-week course topics. In ‘Health Law Fundamentals,’ you will examine the legal and regulatory aspects of the United States health care delivery and financing systems. After examining Supreme Court rulings and casebook readings, you will be able to describe the laws, regulations, common law, and market forces that shape the US health care system; explain the malpractice system and how it influences medical practice; and analyze legal aspects of the malpractice system and how it influences medical practice; and analyze legal aspects of the ACA. In ‘Ethics of Health Care Innovation and Research,’ you will explore a framework for conducting research, including process improvement experiments, in health care. After reviewing the history, federal regulations, and accepted evaluation frameworks surrounding research ethics, you will be able to critically evaluate the ethics of your research proposals and justify your proposals to participants, stakeholders, and review boards. Taught by: Ruger</td>
</tr>
<tr>
<td>HCIN 614</td>
<td>Health Law Fundamentals</td>
<td>Examine the legal and regulatory aspects of the United States health care delivery and financing systems. This course explores how statutes, regulations, common law, and market forces help or hinder three major goals of policy makers: increasing access, reducing cost, and improving quality. We will examine the Supreme Court’s rulings on the ACA and other legal aspects of modern health care reform. Casebook readings are supplemented by government publications, academic articles, and policy materials. The course also includes extensive additional readings on the Patient Protection and Affordable Care Act. Students who successfully complete this course will be able to describe the laws, regulations, common law, and market forces that shape our health care system and identify areas where ideas and innovation are needed; explain the malpractice system and how it influences medical practice; and analyze legal aspects of the ACA. Activity: Online Course</td>
</tr>
<tr>
<td>HCIN 615</td>
<td>Policymaking in Health Care</td>
<td>How is health policy developed, decided, and executed? We are cognizant of legislation in its final, enacted form—but what precedes it, and how is it shaped? This course will take students from the offices of policymakers to the floor of the House and Senate, to the offices of physicians and providers. The course will examine what foundational elements are necessary to pass any piece of legislation and the process through which a law comes to fruition. Key health care legislation—Medicare, ‘Clinton Care,’ CHIP, and the ACA—will all be examined through the lens of policy development. Upon completing the course, students will be able to define the specific decisions, actions, and agendas in order to, ultimately, propel health care policymaking. Activity: Online Course</td>
</tr>
<tr>
<td>HCIN 616</td>
<td>Health Disparities to Equity &amp; Health Care Leadership</td>
<td>This is a pairing of two 3-week course topics. In ‘From Health Disparities to Health Equity: Policy Implications,’ you will review the causes of and policy approaches for health disparities, and relate them to the specific discipline and interest of each student. We will explore health equity within the context of population health while examining some strategies for improving health equity through case studies and policy analysis. Understanding the role social determinants of health play in improving health status for populations is critical for health equity policies and will be examined in the course. Upon completion of this course, you will be able to identify health disparities and social determinants of health that adversely affect populations’ health due to their social, economic, and environmental conditions, and apply strategies for improving health equity and creating opportunities for all populations to live up to their full health potential. In ‘Health Care Leadership in an Era of Patient Empowerment,’ you will focus on concepts, experience, and skills for leading organizational development and change in hospitals, health centers, medical practices, and other health-care groups, administrations, and agencies. It draws on writings, cases, exercises, and your own experience to explore the foundations and techniques for organizational leadership. Upon completion of the course, you will be better able to exercise leadership in your work and community, apply leadership concepts in building teams and teams of teams, lead through crisis, design reward systems for motivating individuals and teams, and develop a high-performance architecture and culture. Taught by: Lavizzo-Mourey</td>

University of Pennsylvania Graduate Catalog 2020-21 Catalog | Generated 09/18/20
HCIN 617 Leading Change in Health Care
There has been no shortage of recommendations from executives, consultants, and self-declared experts on how to improve health care. But the success rate for implementation has been low, and health care systems still struggle with problems of quality, cost, and access—not to mention high employee turnover and provider burnout. However, across the country, there have been pockets of success in improving care delivery. A number of best practices show promise, including open access scheduling, care coordination and standardization, performance measurement and feedback, the expansion of palliative care, community health worker programs, and the integration of behavioral care. Through lectures, case studies presented by multiple expert faculty, and interviews with leaders in the field, you will examine these transformative practices, and the leadership techniques that have led to their success. You will identify organizations that are primed for transformation, potential directions for leading transformation, and ways to direct change within your organization.
Taught by: Ezekiel J. Emanuel, MD, PhD
Activity: Online Course
1.0 Course Unit

HCIN 618 Building a Case for Transformation
Analyze an existing case from a health care setting and identify an opportunity for change in your own professional context that you would develop in the following course.
Activity: Online Course
0.5 Course Units

HCIN 619 Pitching Innovation
Further define an innovation project and develop a written proposal and oral pitch geared toward stakeholders.
Activity: Online Course
0.5 Course Units

Health Care Management (HCMG)

HCMG 101 Health Care Systems
This introductory course takes a policy and politics angle to health care’s three persistent issues - access, cost and quality. The roles of patients, physicians, hospitals, insurers, and pharmaceutical companies will be established. The interaction between the government and these different groups will also be covered. Current national health care policy initiatives and the interests of class members will steer the specific topics covered in the course. The course aims to provide skills for critical and analytical thought about the U.S. health care system and the people in it. No pass/fail. Grade only.
Taught by: Harrington
One-term course offered either term
Activity: Lecture
1.0 Course Unit

HCMG 202 The Economics and Financing of Health Care Delivery
The course provides an application of economic models to demand, supply, and their interaction in the medical economy. Influences on demand, especially health status, insurance coverage, and income will be analyzed. Physician decisions on the pricing and form of their own services, and on the advice they offer about other services, will be considered. Competition in medical care markets, especially for hospital services, will be studied. Special emphasis will be placed on government as demander of medical care services. Changes in Medicare and regulation of managed care are among the public policy issues to be addressed. Prerequisite: If course requirement not met, permission of instructor required.
Taught by: Candon
One-term course offered either term
Also Offered As: ECON 039
Prerequisite: ECON 001 OR ECON 010
Activity: Lecture
1.0 Course Unit

HCMG 203 Clinical Issues in Health Care Management: Doctors, Patients and Managers in Modern Society
This course will explore the effects of the changing health care environment on the physician, patient and health care manager. It is intended for any undergraduate with an interest in how 1/6th of the American economy is organized as well as those planning careers as health care providers and managers. The course complements other health care courses (that take a societal perspective) by focusing on the individuals who participate in the health care enterprise. There are no prerequisites, as the course will stand on its own content. The course will be divided into modules that focus on the participants of the health care process and the process itself. We will analyze the patient, the doctor, and manager in light of the patient-doctor interaction, the turbulent health care marketplace, expensive new technologies, resource allocation, and ethics.
Taught by: Asch
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

HCMG 204 Comparative Health Care Systems
This course examines the structure of health care systems in different countries, focusing on financing, reimbursement, delivery systems and adoption of new technologies. We study the relative roles of private sector and public sector insurance and providers, and the effect of system design on cost, quality, efficiency and equity of medical services. Some issues we address are normative: Which systems and which public/private sector mixes are better at achieving efficiency and equity? Other issues are positive: How do these different systems deal with tough choices, such as decisions about new technologies? Our main focus is on the systems in four large, prototypical OECD countries—Germany, Canada, Japan, and the United Kingdom—and then look at other countries with interesting systems— including Italy, Chile, Singapore, Brazil, China and India. We draw lessons for the U.S. from foreign experience and vice versa.
Taught by: Lucarelli
Course usually offered in spring term
Also Offered As: HCMG 859
Activity: Lecture
1.0 Course Unit
HCMG 213 Health Care Strategy and Management: the Business of Health Care
This course presents an overview of the business of health and how a variety of health care organizations have gained, sustained, and lost competitive advantage amidst intense competition, widespread regulation, high interdependence, and massive technological, economic, social and political changes. Specifically, we evaluate the challenges facing health care organizations using competitive analysis, identify their past responses, and explore the current strategies they are using to manage these challenges (and emerging ones) more effectively. Students will develop generalized skills in competitive analysis and the ability to apply those skills in the specialized analysis of opportunities in producer (e.g. biopharmaceutical, medical product, information technology), purchaser (e.g. insurance), and provider (e.g. hospitals, nursing homes, physician) organizations and industry sectors. The course is organized around a number of readings, cases, presentations, and a required project.
Taught by: Burns
Course usually offered in fall term
Prerequisite: HCMG 101
Activity: Lecture
1.0 Course Unit

HCMG 215 Management and Economics of Pharmaceutical and Biotech Industries
This course provides an overview of the management, economic and policy issues facing the pharmaceutical and biotechnology industries. The course perspective is global, but with emphasis on the U.S. as the largest and most profitable market. Critical issues we will examine include: R&D intensive cost structure and rapid technological change; biotech startups and alliances with the pharma industry; pricing and promotion in a complex global marketplace where customers include governments and insurers, as well as physicians, pharmacists and consumers. We use Wharton and industry experts from various disciplines to address these issues.
Taught by: Alpert
Course usually offered in spring term
Prerequisite: HCMG 101 OR ECON 001 OR ECON 010
Activity: Lecture
1.0 Course Unit

HCMG 216 Health Insurance and Health Care Strategy
This course combines the insights of health economics with a strategic perspective on the business of health. The first section will consider the costs and benefits of medical interventions, while the second considers insurance theory and places special emphasis on the challenges facing firms in the face of the rising costs of health benefits as well as opportunities for private insurers operating in publically financed markets. The third section will analyze strategies of vertical and horizontal integration and their effect on the balance of power in local healthcare markets. Finally, the course will cover the effects of reform on firm incentives. The course will be taught using a mix of lectures and cases.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

HCMG 250 Health Care Reform and the Future of the American Health Care System
Under stress from COVID-19, this course provides students with a rigorous understanding of the current American health care system and how it is likely to evolve over the next decade. The course will focus on six topics: 1) the development of the current health care system; 2) challenges of health care costs, quality, and access; 3) lessons of previous attempts to reform the system including the Affordable Care Act (ACA); 4) analysis of current policies regarding provider payment, technology, and electronic health records and how various sectors (e.g. public health and hospitals) are evolving in the current system; 5) impact of COVID-19 on health care delivery and finance, and 6) future megatrends in American health care system. Throughout the course, lessons will integrate basic health economics, history, health policy, and politics to elucidate key principles for understanding the health care system. The course will also examine at least one other country’s health system for comparison. The course will end with a consideration of the long-term outlook for the structure of the US health system and potential reforms.
Taught by: Emanuel, Schwartz
Course usually offered in fall term
Also Offered As: BIOE 575, HCMG 850
Activity: Lecture
1.0 Course Unit

HCMG 302 Economics and Financing of Health Care Delivery
This course provides an application of economic principles to the health care sector. By recognizing the importance of scarcity and incentives, this course will focus on the critical economic issues in producing, delivering, and financing health care. In particular, the course will analyze determinants of demand for medical care, such as health status, insurance coverage, and income; the unique role of physicians in guiding and shaping the allocation of resources in medical care markets; and competition in medical care markets, especially among hospitals. Special emphasis will be placed on the evaluation of policy instruments such as government regulation, antitrust laws, ‘sin taxes’ on cigarettes and alcohol, and public health programs. This course is similar to HCMG 202, but uses more advanced quantitative methods and formal economic theory; knowledge of calculus and basic microeconomics is recommended. Students who take HCMG 302 may not also take HCMG 202 (ECON 039) for further credit.
Taught by: David
Course usually offered in fall term
Prerequisite: ECON 001 AND (ECON 002 OR BEPP 250)
Activity: Lecture
1.0 Course Unit
HCMG 352 Health Services Delivery: A Managerial Economic Approach
The purpose of this course is to apply economics to an analysis of the health care industry, with special emphasis on the unique characteristics of the US healthcare markets, from pre-hospital to post-acute care. This course focuses on salient economic features of health care delivery, including: the role of nonprofit providers, the effects of regulation and antitrust activity on hospitals, the degree of input substitutability within hospitals, the nature of competition in home health care, public versus private provision of emergency medical services, the effect of specialty hospitals and ambulatory surgery centers, the economics of direct-to-consumer advertising and its effect on drug safety, defining and improving medical performance in hospitals, specialization and investment in physical and human capital, and shifting of services between inpatient and outpatient settings and its effect on health care costs and quality.
Taught by: David
Course usually offered in spring term
Also Offered As: HCMG 852
Activity: Lecture
0.5 Course Units

HCMG 357 Healthcare Data and Analytics
In healthcare or anywhere else across science, or business, or sports, the importance of data and analytics is virtually unquestioned. That, however, does not mean that it needs no elucidation. In this course, we begin with a fundamental understanding of the state of data and analytics in healthcare and then move onto examples of its use in converting from business questions to implemented solutions. We 'sidestep' into the world of algorithms/machine-learning/AI and causal inference, but our focus is on business applications of these tools to the available data in the healthcare industry. As we discuss examples, we always seek to show how human creativity needs to be at the heart of the questions being probed. We highlight today's data universe in healthcare, the level of integration we have achieved, and the immensity of the remaining task, all with an eye to the business opportunities that exist now. We end with a showcasing of the art of the possible - in 2020 - and with (hopefully) a clear look ahead at what remains to be achieved. At the end of this course, students will: 1. Know the health care data landscape; 2. Understand the 'loop' that drives modern evidence-based businesses; 3. Dive into real health care data analytics problems, developing a first-hand familiarity with basic tools and concepts; 4. Anticipate the business opportunities evolving in health care data and analytics. Other experience in data science can serve as a substitute for the prerequisites. Knowledge of basic statistics is a must. Coding experience is a plus. Experience coding to solve data/statistics problems is ideal. Further training in data science is a plus, and we welcome those with more advanced preparation.
Taught by: Grennan, Mahadevan
Course usually offered in fall term
Also Offered As: HCMG 857
Prerequisite: STAT 101
Activity: Lecture
0.5 Course Units

HCMG 391 Health Care Entrepreneurship
Delivering basic health care advances worldwide and continuing to increase lifespan and quality (in an affordable manner) represent some of the major societal challenges of our time. Addressing these challenges will require innovation in both medical technology and the ways in which health services are delivered. Through readings, cases, guest lectures, and your own entrepreneurial work outside of class, we will examine the environment facing prospective health care entrepreneurs: (1) sources of health care innovation; (2) the many 'customers' in health care: patients, doctors, hospitals, insurers, and regulators; (3) the powerful established firms with developed clinical and sales expertise; (4) the investing community. Along the way we will develop a framework for thinking about what is different (and what is not) about the challenges of health care entrepreneurship.
Taught by: Grennan
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

HCMG 653 Health Care Field Application Project
This course focuses on leadership and management issues in health care organizations while providing students with a practice setting to examine and develop their own management skills. Each team acts as a consultant to a local healthcare organization which has submitted a project proposal to the course. The teams define the issue and negotiate a contract with the client organization. By the end of the semester, teams present assessments and recommendations for action to their clients and share their experience with the class in a series of workshops and cross-team consultations.
Course usually offered in spring term
Prerequisite: HCMG 841
Activity: Lecture
1.0 Course Unit
Notes: Seminar and workshop, a written and oral presentation of the team management study and an individual paper.

HCMG 841 Health Services System
This course provides an overview of the evolution, structure and current issues in the health care system. It examines the unique features of health care as a product, and the changing relationships between patients, physicians, hospitals, insurers, employers, communities, and government. The course examines three broad segments of the health care industry: payors, providers and suppliers. Within the payor segment, the course examines the sources and destinations of spending, managed care (HMOs, PPOs), employer based health insurance, technology assessment, payor strategy, and efforts to pay for the elderly, the poor & the medically indigent. Within the provider segment, the course examines the impact of cost containment and competition on hospitals and integrated delivery systems, long term care and disease management, and the important role of epidemiology in assessing population health needs and risks. Within the supplier segment, the course will examine developments in the biotechnology, pharmaceutical, medical devices, genomics and IT industries. NOTE: This is a required course for Wharton Graduate Health Care Management majors; it counts as an elective course for all other Wharton Graduate students. It is also open to Law School and Nursing School students with a joint Wharton Program.
Taught by: Burns
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
HCMG 845 US Payer and Provider Strategy
This course, co-taught with Brad Fluegel (former Chief Strategy Officer at Aetna, Anthem, and Walgreens and presently on the boards of several health care firms, including Fitbit and Premera Blue Cross), provides an overview of the challenges facing payers and providers in US healthcare as well as the strategies they use (or should use) to succeed. We cover all major aspects of the healthcare sector as seen from the perspective of payers and providers, starting from their core products and services (consumer preferences and health plan design, provider quality), the market environment they operate in (regulation and the role of public insurers, payment reforms, rising costs, and consolidation), and their strategic and operational responses (new organization models, mergers and acquisitions, and new ventures). The pedagogy is accordingly a mix of faculty lectures and talks by senior industry leaders to balance theory and practice.
Taught by: Gupta, Fluegel
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Lectures, cases, assignments, term project, and final presentation.

HCMG 849 Financial Management of Health Institutions
This course focuses on health care organizations' financing and financial decisions in the changing health care landscape. The course involves case analyses and lectures, including presentations by practitioners with extensive real-world experience. Students seeking careers in health care with minimal finance background will obtain a solid introduction to key areas of health care finance and financial decision making. Students with more background will extend and enhance their analytical skills in a variety of important areas.
Taught by: Harrington
Course usually offered in fall term
Prerequisite: FNCE 611 OR FNCE 614
Activity: Lecture
1.0 Course Unit

HCMG 850 Health Care Reform and the Future of the American Health Care System
Under stress from COVID-19, this course provides students with a rigorous understanding of the current American health care system and how it is likely to evolve over the next decade. The course will focus on six topics: 1) the development of the current health care system; 2) challenges of health care costs, quality, and access; 3) lessons of previous attempts to reform the system including the Affordable Care Act (ACA); 4) analysis of current policies regarding provider payment, technology, and electronic health records and how various sectors (e.g. public health and hospitals) are evolving in the current system; 5) impact of COVID-19 on health care delivery and finance, and 6) future megatrends in American health care system. Throughout the course, lessons will integrate basic health economics, history, health policy, and politics to elucidate key principles for understanding the health care system. The course will also examine at least one other country's health system for comparison. The course will end with a consideration of the long-term outlook for the structure of the US health system and potential reforms.

Course usually offered in fall term
Also Offered As: BIOE 575, HCMG 250
Activity: Lecture
1.0 Course Unit

HCMG 852 Health Services Delivery: A Managerial Economic Approach
The purpose of this course is to apply economics to an analysis of the health care industry, with special emphasis on the unique characteristics of the US healthcare markets, from pre-hospital to post-acute care. This course focuses on salient economic features of health care delivery, including: the role of nonprofit providers, the effects of regulation and antitrust activity on hospitals, the degree of input substitutability within hospitals, the nature of competition in home health care, public versus private provision of emergency medical services, the effect of specialty hospitals and ambulatory surgery centers, defining and improving medical performance in hospitals, specialization and investment in physical and human capital, shifting of services between inpatient and outpatient settings and its effect on health care costs and quality, and innovation in primary care from retail clinics to patient-centered medical homes and retainer-based medicine.
Taught by: David
Course usually offered in spring term
Also Offered As: HCMG 352
Activity: Lecture
1.0 Course Unit

HCMG 853 Management and Strategy in Medical Devices and Technology
Successful medical devices are an amalgamation of creative and innovative thinking, clinical expertise, and engineering know-how that endures intense regulatory and reimbursement scrutiny. This course will provide a foundation for understanding the nuances of the medical device industry. It will cover topics ranging from device design and discovery, regulatory issues, marketing, reimbursement, management, and strategy. Classroom activities will be supplemented with optional tours of hospitals, research and manufacturing facilities, and hands-on demonstrations of devices. Though the course is intended primarily for MBA students, it will be open to medical and engineering students as well as to hospital house staff.
Taught by: Grennan,Solomon
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

HCMG 855 Management and Strategy in Health Care Markets: A Managerial Economic Approach
This course, co-taught with Brad Fluegel (former Chief Strategy Officer at Walgreens and presently on the boards of several health care firms, including Fitbit and Premera Blue Cross), provides an overview of the challenges facing payers and providers in US healthcare as well as the strategies they use (or should use) to succeed. We cover all major aspects of the healthcare sector as seen from the perspective of payers and providers, starting from their core products and services (consumer preferences and health plan design, provider quality), the market environment they operate in (regulation and the role of public insurers, payment reforms, rising costs, and consolidation), and their strategic and operational responses (new organization models, mergers and acquisitions, and new ventures). 1.0 Course Unit
Notes: Lectures, cases, assignments, term project, and final presentation.
HCMG 855 Management of Health Care for the Elderly
This mini course is designed to provide students with an appreciation of the good, the bad and the ugly of how our current health care system cares for one of our nation’s most precious resources - our seniors! This course will review care provided to seniors within a variety of institutional settings (hospitals, nursing facilities, various senior housing levels) as well as outpatient and home care services. Special attention will be paid to nursing homes and senior housing options and their past, present and future role within the overall health care system in the United States. The course will start with an overview of the senior population with special attention to their health and social needs. Several classes will be held off campus at selected nursing facilities and senior housing complexes. In addition, a broad range of special programs and services will be reviewed such as sub-acute care, long term care insurance, Medicare Risk Programs, elderly housing, adult day care, managed care, Medicare Part D, case management, hospice and other recent developments. Throughout the course, emphasis will be placed on entrepreneurial opportunities to serve the senior market at all levels. Students are required to produce a paper for this course that focuses on a specific area impacting the senior market. This is a wonderful opportunity for students to select an area of personal interest and conduct an in depth review of that area including making direct contact with national experts within the topic selected. All student topics must be approved during the first two weeks of class and the depth of research required agreed upon by the by the student and the instructor. Interested students not in the HCMG major are urged to speak to the instructor before enrolling in the course.

HCMG 860 Managing Health Care Organizations
This course aims to improve enrollees’ ability to effectively manage and lead health care organizations (HCOs, including hospitals, medical groups, insurers, biopharmaceutical firms, etc.). The course is designed to integrate previous course work in general management, health care, and health policy to further participants’ understanding of organizational, managerial, and strategic issues facing HCOs and the health care workforce. The course will provide participants with a foundation for developing, implementing, and analyzing efforts to improve HCOs’ performance. A major objective of the course is to sharpen the leadership, problem-solving, and presentation skills of those who aim to hold operational and strategic positions in health care organizations. Another objective is to introduce enrollees to leading HCOs. Through case studies, readings, in-class exercises and class discussions, participants will learn analytic frameworks, concepts, tools and skills necessary for leading and managing organizational learning, quality improvement, innovation, and overall performance in HCOs.
Taught by: Nembhard
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

HCMG 863 Management and Economics of Pharmaceutical and Biotech Industries
This course provides an overview of the management, economic and policy issues facing the pharmaceutical and biotechnology industries. The course perspective is global, but with emphasis on the U.S. as the largest and most profitable market. Critical issues we will examine include: R&D intensive cost structure with regulation and rapid technological change; strategic challenges of biotech startups; pricing and promotion in a complex global marketplace where customers include governments and insurers, as well as physicians and consumers; intense and evolving M&A, joint ventures, and complex alliances; government regulation of all aspects of business including market access, pricing, promotion, and manufacturing. We use Wharton and industry experts from various disciplines to address these issues.
Taught by: Alpert
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

HCMG 866 E-Health: Business Models and Impact
Healthcare is in the early stages of extraordinary change in the business model of care delivery and financing. This transformation will lead to a system based on the proactive management of health, integration of care across the continuum, blurred boundaries between care providers and purchasers and the placement of the consumer at the center. As has been the case in other industries, this new business model will be based on a foundation of diverse, potent, and well implemented information technology. This course will help prepare students to lead a digital health future. Specifically, the course will cover three major areas. (1) The context of health care information technology: the size, composition and evolution of the digital health market; federal government agencies, and related regulations, that shape the market; leadership roles and factors that enable healthcare organizations to effectively implement and leverage information technology. (2) Emerging technologies that will fuel the transformation of healthcare: artificial intelligence and advanced analytics; interoperability; telehealth; consumer-directed digital health; use of behavioral economics to influence patient and provider decisions. (3) Digital health use by specific sectors of the healthcare industry: healthcare providers; health plans; retail-based primary care; life sciences; wellness and chronic disease management. The course will include lectures from industry leaders who will share their ideas and experiences.
Taught by: Glaser/Patel
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

HCMG 867 Health Care Entrepreneurship
The course focuses on the creation, funding, and management of digital health, biotech, medtech, and other health services enterprises. The course is designed to supplement other offerings in the Health Care Systems and Management Departments for those students with entrepreneurial interest in such ventures, and will focus on special issues surrounding the conceptualization, planning, diligence, and capitalization of these ventures and also includes management and compensation practices. In addition, course offers methods for self-assessment & development of business models and plans, techniques for technology assessment and strategy, develops foundation for capitalization and partnering strategies, and creates a basis for best practices in company launch and plan execution. Students must apply to take this course. Please see the Health Care Management Department for the application.
Taught by: Kurtzman,Libson
Course usually offered in spring term
Activity: Lecture
0.5 Course Units
HCMG 868 Private Sector Role in Global Health
Issues surrounding global health have captivated the attention of the public sector and foundations for many decades. Many of their initiatives are realizing progress on the health-related Millennium Development Goals. The private sector has become less engaged in global health, but has a significant role to play in providing resources and in building infrastructure, human resource capacity and sustainability. This course explores entrepreneurial and other private sector solutions for health services and access to medicines and technologies in the developing world and other underserved areas. The course also encompasses study of creative programs to engage the private sector in development of vaccines and medicines for tropical and neglected diseases. Furthermore, the course addresses novel care systems and therapeutic strategies for the rapidly growing burden of chronic, non-communicable diseases in the developing world. In short, the course builds on the content of conventional global health courses from a managerial and entrepreneurial perspective. Learning is driven through readings, class discussion and a series of guest speakers representing a wide range of global health issues. Evaluation is largely based on a student group project.

Taught by: Sammut
Course usually offered in spring term
Activity: Seminar
0.5 Course Units

HCMG 890 Advanced Study Project: Management of Health Care Service Businesses
HCMG 890-001: This course examines issues related to the Services Sector of the health care industry. For those interested in management, investing, or banking into the health care industry, the services sector will likely be the largest and most dynamic sector within all of health care. We will study key management issues related to a number of different health care services businesses with a focus on common challenges related to reimbursement, regulatory, margin, growth, and competitive issues. We will look at a number of different businesses and subsectors that may have been unfamiliar to students prior to taking the course. We will make extensive use of outside speakers, many of whom will be true industry leaders within different sectors of the health care services industry. Speakers will address the current management issues they face in running their businesses as well as discuss the career decisions and leadership styles that enable them to reach the top of their profession. Students will be asked to develop a plan to both buyout and manage a specific health care services business of their choosing and will present their final plans to a panel of leading Health Care Private Equity investors who will evaluate their analysis. Prerequisites: HCMG 841. Health Care Management MBA majors only Senior healthcare executives and policy leaders will be engaged as guest speakers.

Taught by: Present
Course usually offered in fall term
Also Offered As: WH 217
Activity: Seminar
1.0 Course Unit

HCMG 899 INDEPENDENT STUDY
Arranged with members of the Faculty of the Health Care Systems Department. For further information contact the Department office, Room 204, Colonial Penn Center, 3641 Locust Walk, 898-6861.
Activity: Independent Study
1.0 Course Unit

HCMG 900 Proseminar in Health Economics: Models and Methods
This course is intended to provide entering doctoral students with information on the variety of health economics models, methods, topics, and publication outlets valued and used by faculty in the HCMG doctoral program and outside of it. The course has two main parts: the first, to acquaint students with theoretical modeling tools used frequently by health economists. This part of the course involves a number of lectures coupled with students’ presentations from the health economics, management and operations research community at Penn on a research method or strategy they have found helpful and they think is important for all doctoral students to know.

Taught by: David
One-term course offered either term
Activity: Lecture
1.0 Course Unit

HCMG 901 Proseminar in Health Economics: Health Econometrics
This course will cover empirical methods used in economics research with an emphasis on applications in health care and public economics. The methods covered include linear regression, matching, panel data models, instrumental variables, regression discontinuity, bunching, qualitative and limited dependent variable models, count data, quantile regressions, and duration models. The discussion will be a mix of theory and application, with emphasis on the latter. The readings consist of a blend of classic and recent methodological and empirical papers in economics. Course requirements include several problem sets, paper presentations, an econometric analysis project and a final exam. The course is open to doctoral students from departments other than Health Care Management with permission from the instructor.

Taught by: Gupta
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

HCMG 902 Special Topics in Health Economics: The Industrial Organization of Health Care
This advanced PhD seminar will explore topics in the industrial organization of health care and structural econometric approaches in health economics. The focus in this course is the development of advanced econometric tools. The (tentative) topics covered include health insurance and hospital demand estimation, the analysis of hospital competition, insurer competition, quality competition, technology adoption, models of entry and exit and dynamic oligopoly games. The readings will focus on recent advances in economics. Students are required to present recent research from the field and write an empirical research paper that broadly based on the topics covered in the course.

With the permission of the instructor, the seminar is open to doctoral students from departments other than Health Care Management.

Taught by: Lucarelli
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
HCMG 903 Economics of Health Care and Policy
This course applies basic economic concepts to analyze the health care market and evaluate health policies. The course begins with a discussion of productivity in health care and of the theoretical and empirical effects of asymmetric information and market failure. The second part of the course explores several topic areas in the health care economics literature: health insurance and the labor market; health policy interventions; and health as human capital. The third part of the course examines competition and the behavior of health care providers, with emphasis on the impact of policy on competition, behavior, and finally, bringing us full circle, health care productivity.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

HCMG 904 Doctoral Seminar in Organizational Behavior and Theory in Health Care
This course introduces students to organizational behavior and theory (OBT) by examining key issues in OBT, different perspectives on key issues, and how OBT informs health services research and practice. This course examines 'micro' theories (i.e., social psychological theories of organizational behavior) and 'macro' theories (i.e., theories focused on the structural and environmental aspects of organizations). We will examine the strengths and weaknesses of various theories, how they can be used as a foundation for research, methods used to study them, and the implications for health policy and management. Examples of published health services research grounded in OBT will be discussed so that students become familiar with the theories-in-use and various publication outlets for health care management (HCM) research.
Taught by: Nembhard
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

Health Policy Research (HPR)

HPR 501 Economics of Health Care Delivery
This course examines how medical care is produced and financed in private and public sectors, economic models of consumer and producer behavior, applications of economic theory to health care. Prerequisite: Course only open to Masters of Science in Heath Policy Research students.
Taught by: Dr. Mark Pauly
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

HPR 504 Principles and Practice of Healthcare Quality Improvement
Healthcare delivery is complex and constantly changing. A primary mission of leading healthcare organizations is to advance the quality of patient care by striving to deliver care that is safe, effective, efficient, timely, cost-effective, and patient-centered (Institute of Medicine). The goal of this interprofessional course is to provide students with a broad overview of the principles and tools of quality improvement and patient safety in healthcare as well address the knowledge, skills and attitudes as defined by the Quality and Safety Education for Nurses (QSEN) guidelines. It will provide a foundation for students or practicing clinicians who are interested in quality improvement and patient safety research, administration, or clinical applications. Content will address the history of the quality improvement process in healthcare, quality databases and improvement process tools and programs. Through the use of case studies and exercises students will become familiar with the use of several quality improvement programs and tools. For example, the Plan-Do-Study-Act (PDSA) cycle, Six Sigma and the Toyota Production System known as Lean Production processes will be addressed. Students can use this course to identify the tools and design the methods that they plan to employ in a quality improvement or patient safety project in their area of interest.
Taught by: Myers, J.; Burke, K.
Course usually offered in fall term
Also Offered As: NURS 612
Activity: Lecture
1.0 Course Unit

HPR 503 Qualitative Methods in Health Research
The purpose of this course is to expose students to a variety of qualitative approaches/methodologies that may be used in health services/policy research. In didactics we will discuss the pros and cons of a range of qualitative Methods, how the method is actually implemented (with multiple experts presenting approaches), and pair the presentation with a broader discussion in which students compare and contrast health oriented articles in which the method was used. Students will have the opportunity to apply the theoretical approaches to their own research interests with direct input from the faculty and their peers.
Prerequisite: Permission needed from Instructor.
Taught by: Drs. Frances Barg and Judy Shea
Course usually offered summer term only
Also Offered As: PUBH 538
Activity: Lecture
1.0 Course Unit

HPR 550 Clinical Economics and Clinical Decision Making
This course focuses on the application of decision analysis and economic analysis to clinical and policy research. The course begins with material about the selection, use, and analysis of diagnostic tests using two by two tables, likelihood ratios, and ROC curves. The course continues with the introduction of more general tools for decision analysis, including decision trees and other mathematical models. Special emphasis is placed on the assessment and use of utilities in these models. A major focus of the course is the application of economic principles to the evaluation of health outcomes. During seminars, students will carry out practical exercises that include problem solving, critically analyzing published articles, and learning to use computer software that facilitates decision and economic analyses. Prerequisite: Permission of instructor
Taught by: Glick,Williams
Course usually offered in spring term
Also Offered As: EPID 550
Activity: Lecture
1.0 Course Unit
HPR 580 Outcomes Research
This course is divided into two main parts. The first part addresses issues related to the measurement of quality in health care. Included is a review of the classical structure-process-outcome quality paradigm. The paradigm's strengths and limitations are addressed. This part especially focuses on outcome measures of quality and examines the validity of alternative measures. The second part deals with observational, or quasi-experimental, research studies. It addresses the advantages and limitations of alternative designs, and covers the role of clinical risk adjustment in observational studies of medical interventions. It focuses on the problem of selection bias, and reviews recent methods for dealing with this bias, such as instrumental variables. Prerequisite: Introductory course in statistics including regression methods. Permission of instructor if prerequisite is not met.
Taught by: Silber
Course usually offered in fall term
Also Offered As: EPID 580
Activity: Lecture
1.0 Course Unit

HPR 588 Advanced Leadership Skills in Community Health
Grounded in a social justice perspective, this course aims to provide the student with a foundational overview of the field of community health and leadership skills in public health advocacy. The course encourages critical thinking about health outcomes framed by the broad context of the political and social environment. This course analyzes the range of roles and functions carried out by leaders in healthcare advocacy for marginalized communities; integrates knowledge of health policy and the key influence of government and financing on health outcomes; explores community-based participatory research and interventions as tools for change; and discusses ways to develop respectful partnerships with community organizations. An assets-based approach that draws upon the strengths of communities and their leaders provides a foundation for community-engagement skill building. The course emphasizes the development of skills and techniques to lead effective, collaborative, health-focused interventions for disenfranchised groups, including residents of urban neighborhoods. Prerequisite: Undergraduates with permission of the instructor
Taught by: Klurasitz
Course usually offered in spring term
Also Offered As: NURS 587, PUBH 588
Activity: Lecture
1.0 Course Unit

HPR 600 Health Services Research and Innovation Science
This course will provide students with an introduction to health services and health policy research. First, faculty representing various departments and and schools at the University of Pennsylvania will introduce students to a number of "hot topics," including health disparities, medical decision making, neighborhoods and health, quality of care, access to care, behavioral incentives, and cost effectiveness research. Second, the course will offer an introduction to various career paths in the research and policy domains. Third, the course will provide a brief overview of practical issues such as grant opportunities, data options, publishing, and dissemination. Prerequisite: This course is only open to Masters of Science in Health Policy Research students.
Taught by: Drs. Zachary Meisel and Raina Merchant
Course usually offered in fall term only
Activity: Seminar
1.0 Course Unit

HPR 603 Health Services and Policy Research Methods I: Primary Data Design and Collection
This course will introduce students to commonly used primary data collection methods and provide multiple examples of how they have been used in health services research. Through the course students will define a primary data collection research project and develop the methods necessary to conduct the project. To get the full benefit of this course, students should use this course to develop the methods they plan to employ in their primary data collection project. Prerequisite: Permission needed from instructor.
Taught by: Drs. Marilyn Schapira and Judy Shea
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

HPR 604 Introduction to Statistics for Health Policy
This is the first semester of a two-semester sequence. It is an introductory statistics course covering descriptive statistics, probability, random variables, estimation, hypothesis testing, and confidence intervals for normally distributed and binary data. The second semester stresses regression models. Prerequisite: Permission needed from Instructor.
Taught by: Dr. Kevin Lynch
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

HPR 606 Fundamentals of Health Policy
While academic researchers often think of health policy in terms of research evidence and outcomes, politics and political processes also play important roles. The purpose of this course is to provide those pursuing careers in health services research and health policy with an understanding of the political context from which U.S. health policy emerges. This understanding is important for researchers who hope to ask and answer questions relevant to health policy and position their findings for policy translation. This understanding is important as well to policy leaders seeking to use evidence to create change. The class provides an overview of the U.S. health care system and then moves on to more comprehensive understanding of politics and government, including the economics of the public sector, the nature of persuasion, and techniques and formats for communication. The course emphasizes reading, discussion and applied policy analysis skills in both written and oral forms. Concepts will be reinforced with case studies, written assignments and a final policy simulation exercise where students will be placed in the position of political advisors and policy researchers. Prerequisite: Permission needed from Instructor.
Taught by: Dr. David Grande
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
HPR 607 Health Services and Policy Research Methods II: Causal Inference Using Secondary Data
Empirical research for health care policy frequently involves the analysis of observational data—information that is not primarily collected for research purposes. With the rapid increase in U.S. health information technology capacity, future opportunities for research using these ‘secondary data’ appear promising. The objective of this course is to teach the skills necessary to conduct quality health policy research using secondary data. These skills include formulating research aims and applying appropriate study designs for achieving these aims. The course will also include a survey of the content and structure of several commonly used administrative and public databases available to researchers and workshops to develop the skills to access and manipulate these valuable resources. Prerequisite: Permission needed from Instructor.
Taught by: Dr. Rachel M. Werner
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

HPR 608 Applied Regression Analysis for Health Policy Research
This course deals with the work-horse of quantitative research in health policy research—the single outcome, multiple predictor regression model. Students will learn how to 1) select an appropriate regression model for a given set of research questions/hypotheses, 2) assess how adequately a given model fits a particular set of observed data, and 3) how to correctly interpret the results from the model fitting procedure. After a brief review of fundamental statistical concepts, we will cover analysis of variance, ordinary least squares, and regression models for categorical outcomes, time to event data, longitudinal and clustered data. We will also introduce the concepts of mediation, interaction, confounding and causal inference. Prerequisite: Permission needed from Instructor.
Taught by: Dr. Nandita Mitra
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

HPR 611 Implementation Science in Health and Health Care
This course presents a survey of the field of implementation science in health. The structure of the course will include two parts. In the first part, we will introduce the field of implementation science, with an emphasis on theory, design and measurement. In the second part, we will focus on applied implementation science which will include examples of research programs in implementation science as well as applying insights of implementation science to practical implementation. An emphasis on qualitative and mixed methods approaches is included. Prerequisite: permission needed from Instructor.
Taught by: Drs. Rinad Beidas and Meghan Lane-Fall
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

HPR 612 Advanced Topics in Implementation Science in Health
This seminar course offers an opportunity for students to advance their understanding of the thorniest methodological challenges in implementation science. Broadly, topics include study design, study execution, and tensions in the field. The intention will be for attendees to directly apply their learnings to their ongoing or proposed implementation research. This half credit course is intended for those who have already been exposed to the foundational content of implementation science. This can be achieved via HPR 611, the Penn Implementation Science Institute, or other training opportunities such as the NIH TIDIRH/TIDIRC or mentored K awards. Instructor permission is required for enrollment. Additional prerequisites: the Penn Implementation Science Institute, or other training opportunities such as the NIH TIDIRH/TIDIRC or mentored K awards.
Taught by: Rinad Beidas, Meghan Lane-Fall
Course usually offered summer term only
Prerequisite: HPR 611
Activity: Seminar
0.5 Course Units

HPR 625 Pragmatic Clinical Trials in Healthcare
This seminar course offers an opportunity for students to understand what a pragmatic randomized controlled trial (RCT) is, how it differs from explanatory RCTs, why it is relevant, and key methodological and analytic issues that arise in the conduct of pragmatic trials. The student will also learn about ethical issues in pragmatic trials, nesting relevant studies within a trial, and trial reporting requirements. The intention will be for attendees to be able to directly apply their learnings to their ongoing or future clinical research.
Taught by: Katherine R. Courtright
Activity: Seminar
0.5 Course Units

HPR 637 Advocacy & Public Health
This course is designed to provide the foundational context and practical skills necessary to effectively advocate for evidence-based policy change in furtherance of public health objectives. the class will be interactive in nature and will require participation in public health advocacy exercises in order to hone advocacy skills. there will also be a focus on persuasive communication, both oral and written. we will explore the entire advocacy process from the identification of a problem and evaluation of possible policy solutions to utilizing the full range of advocacy tools to promote policy change.
Course usually offered in spring term
Also Offered As: PUBH 637
Prerequisite: PUBH 505 OR PUBH 507
Activity: Lecture
1.0 Course Unit
HPR 640 Coaching in Quality Improvement Work
The purpose of this course is to provide participants with the skills and tools to successfully guide learners in experiential quality improvement (QI) work in healthcare while developing a network of educators with similar roles. Faculty will be placed into groups based upon their level of experience and confidence in teaching and advising learners in this field. Both groups will discuss topics such as QI project selection, using QI frameworks to structure teaching sessions, key organizational and team factors, providing feedback, common teacher and learner pitfalls in QI, and many others. This will be a blended course with two in-person workshops and monthly asynchronous online educational components with assignments. Prerequisite: Prior knowledge and/or experience in Quality Improvement is required to enroll in this course. Examples of prior knowledge and/or experience include completion of: (1) one or more years of practical experience leading and/or advising a QI project team, (2) a local, regional, or national course in which QI methods and skills were taught (minimum of 4 hours), (3) Completion of the Institute for Healthcare Improvement's Open School Certificate Program, (4) CHOP's Improvement Leader Course, (5) Penn's performance Improvement in Action (PIIA) Course, (6) HPR 504: Principles and Practice of Quality Improvement Course. Faculty who wish to enroll who do not meet 1 or more of the above criteria should contact one of the course directors for discussion and guidance.
Taught by: Jennifer Myers, Neha Patel, Elena Huang
Course usually offered in fall term
Activity: Online Course
0.5 Course Units

HPR 650 Systems Thinking in Patient Safety
This blended online/in-classroom graduate level course integrates principles of systems thinking with foundational concepts in patient safety. Utilizing complexity theories, students assess healthcare practices and identify factors that contribute to medical errors and impact patient safety. Using a clinical microsystem framework, learners assess a potential patient safety issue and create preventive systems. Lessons learned from the science of safety are utilized in developing strategies to enhance safe system redesign. Core competencies for all healthcare providers including, but not limited to, nurses, pharmacists, physicians, social workers and healthcare administrators, and may be taken as an elective by non-majors.
Taught by: Susan Keim
Course usually offered in spring term
Also Offered As: NURS 650
Activity: Lecture
1.0 Course Unit

HPR 660 Applied Predictive Modeling for Health Services Research
The course offers an introduction to the principles and applications of predictive modeling. It is geared toward health services researchers with an emphasis on clinical and policy scenarios and the use of electronic health record and administrative claims data. The primary goals of this course are to help each student understand (1) the fundamental concepts of predictive modeling and what distinguishes it from traditional causal inference approaches in statistics, (2) the different evaluation metrics for model performance and their appropriate use and (3) the role of domain knowledge in developing a statistical plan for model development with the end-user in mind. Students will be building their own predictive models by the end of the course and may elect to use R, STATA or Python for coding exercises. No prior programming experience is required. A background in basic statistical principles would be helpful. Prerequisite: Permission needed from Instructor.
Taught by: Dr. Gary Weissman
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

HPR 670 Health Care Strategic Leadership and Business Acumen
The weeklong intensive course aims at developing essential business acumen and leadership skills required to thrive in a constantly changing health care ecosystem. Taught by invited faculty who have experience working with health care leaders, this course will focus on actionable knowledge in financial acumen, strategic decision making, innovation and building high-performance teams. Through interactive mixed-mode delivery methods, faculty will share tools and frameworks, always with a focus on how to apply them, both personally and within an organizational context. Prerequisite: Permission needed from Instructor.
Taught by: Drs. Guy David and David Grande
Course usually offered summer term only
Activity: Lecture
1.0 Course Unit

HPR 714 Grant Writing/Review
This course will assist students in the design of an NIH grant (F-32, K, R21 or R01) for submission by enhancing their appreciation of the specifics of the grant writing process and in understanding the grant review process. This course is designed to provide background, training, and practice with the writing and submitting of NIH style grants. As a minimum all students who enroll will be expected to write and submit a reasonable draft of a full NIH style grant proposal by the end of the term. During the process, the portions of each proposal will be reviewed as a group by the other students in the course. In response to each review, students are expected to revise their grant sections. Prerequisite: If course requirement not met, permission of instructor required.
Taught by: Farrar,Gerber
Course usually offered summer term only
Also Offered As: EPID 714
Prerequisite: EPID 510 AND EPID 526 AND EPID 560 AND EPID 570
Activity: Seminar
0.5 Course Units

HPR 799 Independent Study
This course is designed to provide the student with an opportunity to gain or enhance knowledge and to explore an area of interest related to health policy research under the guidance of a faculty member. Prerequisite: Permission of Program Director and Faculty Member.
Taught by: Faculty
Course offered summer, fall and spring terms
Activity: Independent Study
1.0 Course Unit
HPR 951 Health Policy Research Thesis I
Each student completes a mentored research project that includes a thesis proposal and a thesis committee and results in a publishable scholarly product. Prerequisite: Course only open to Masters of Science in Health Policy Research students.
Taught by: Faculty
One-term course offered either term
Activity: Masters Thesis
1.0 Course Unit

HPR 952 Health Policy Research Thesis II
Each student completes a mentored research project that includes a thesis proposal and a thesis committee and results in a publishable scholarly product. Prerequisite: Course only open to Masters of Science in Health Policy Research students.
Taught by: Faculty
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

Hebrew (HEBR)

HEBR 051 Elementary Modern Hebrew I
An introduction to the skills of reading, writing, and conversing in modern Hebrew. This course assumes no previous knowledge of Hebrew. A grade of B- or higher is needed to continue in the language.
For BA Students: Language Course
One-term course offered either term
Also Offered As: HEBR 651, JWST 051
Activity: Lecture
1.0 Course Unit

HEBR 052 Elementary Modern Hebrew II
A continuation of first semester Elementary Modern Hebrew, which assumes basic skills of reading and speaking and the use of the present tense. Open to all students who have completed one semester of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.
For BA Students: Language Course
One-term course offered either term
Also Offered As: HEBR 652, JWST 052
Prerequisite: HEBR 051
Activity: Lecture
1.0 Course Unit

HEBR 053 Intermediate Modern Hebrew III
Development of the skills of reading, writing, and conversing in modern Hebrew on an intermediate level. Open to all students who have completed two semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.
For BA Students: Language Course
One-term course offered either term
Also Offered As: HEBR 653, JWST 053
Prerequisite: HEBR 052
Activity: Lecture
1.0 Course Unit

HEBR 054 Intermediate Modern Hebrew IV
This course constitutes the final semester of Intermediate Modern Hebrew. Hence, one of the main goals of the course is to prepare the students for the proficiency exam in Hebrew. Emphasis will be placed on grammar skills and ability to read literary texts. Open to all students who have completed three semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.
For BA Students: Last Language Course
One-term course offered either term
Also Offered As: HEBR 654, JWST 054
Prerequisite: HEBR 053
Activity: Lecture
1.0 Course Unit

HEBR 059 Advanced Modern Hebrew: Conversation & Writing
In this course students are introduced to the vibrant world of contemporary Israeli culture by reading some of the best plays, poems, short stories and journalism published in Israel today. They also watch and analyze some of Israel's most popular films, TV programs, and videos. Themes include Jewish-Arab relations, the founding of the State, family ties and inter generational conflict, war and society, and the recent dynamic changes in Israel society. Students must have taken four semesters of Hebrew at Penn or permission of instructor. Since the content of this course may change from year to year, students may take it more than once (but only once for credit).
For BA Students: Advanced Language Course
One-term course offered either term
Also Offered As: HEBR 552, JWST 059
Prerequisite: HEBR 054
Activity: Lecture
1.0 Course Unit

HEBR 151 Elementary Biblical Hebrew I
This course is an introduction to Biblical Hebrew. It assumes no prior knowledge, but students who can begin to acquire a reading knowledge of the Hebrew alphabet before class starts will find it extremely helpful. The course is the 1st of a 4-semester sequence whose purpose is to prepare students to take courses in Bible that demand a familiarity with the original language of the text.
For BA Students: Language Course
Taught by: Carasik
Course usually offered in fall term
Also Offered As: HEBR 451, JWST 171, JWST 471
Activity: Lecture
1.0 Course Unit

HEBR 152 Elementary Biblical Hebrew II
A continued introduction to the grammar of Biblical Hebrew, focusing on the verbal system, with an emphasis on developing language skills in handling Biblical texts. A suitable entry point for students who have had some Modern Hebrew. Prerequisite: If course requirement not met, permission of instructor required.
For BA Students: Language Course
Taught by: Carasik
Course usually offered in spring term
Also Offered As: HEBR 452, JWST 172, JWST 472
Prerequisite: HEBR 151
Activity: Lecture
1.0 Course Unit
HEBR 153 Intermediate Biblical Hebrew I
This course will focus on using the grammar and vocabulary learned at the introductory level to enable students to read Biblical texts independently and take advanced Bible exegesis courses. We will also work on getting comfortable with the standard dictionaries, concordances, and grammars used by scholars of the Bible. We will concentrate on prose this semester, closely reading Ruth, Jonah, and other prose selections. We will begin to translate from English into Biblical Hebrew, and there will also be a unit on the punctuation marks used in the Bible. This is a suitable entry point for students who already have strong Hebrew skills. Prerequisite: If course requirement not met, permission of instructor required. Successful completion of HEBR 152 or permission of the instructor. This course is the prerequisite for HEBR 154 (no one is ‘permitted’ into that semester; you must take the previous semester course).
For BA Students: Language Course
Taught by: Carasik
Course usually offered in fall term
Also Offered As: HEBR 453, JWST 173, JWST 473
Prerequisite: HEBR 152
Activity: Lecture
1.0 Course Unit

HEBR 154 Intermediate Biblical Hebrew II
This course is a continuation of the fall semester’s Intermediate Biblical Hebrew I. No one will be admitted into the course who has not taken the fall semester. It will continue to focus on using the grammar and vocabulary learned at the introductory level to enable students to read biblical texts independently and take advanced Bible exegesis courses. We will concentrate this semester on various selections of Biblical poetry, including Exodus 15 and Job 28. We will also continue to translate English prose into Biblical Hebrew.
For BA Students: Last Language Course
Taught by: Carasik
Course usually offered in spring term
Also Offered As: HEBR 454, JWST 174, JWST 474
Prerequisite: HEBR 153
Activity: Lecture
1.0 Course Unit

HEBR 451 Elementary Biblical Hebrew I
This course is an introduction to Biblical Hebrew. It assumes no prior knowledge, but students who can begin to acquire a reading knowledge of the Hebrew alphabet before class starts will find it extremely helpful. The course is the 1st of a 4-semester sequence whose purpose is to prepare students to take courses in Bible that demand a familiarity with the original language of the text.
For BA Students: Language Course
Taught by: Carasik
Course usually offered in fall term
Also Offered As: HEBR 151, JWST 171, JWST 471
Activity: Lecture
1.0 Course Unit

HEBR 452 Elementary Biblical Hebrew II
A continued introduction to the grammar of Biblical Hebrew, focusing on the verbal system, with an emphasis on developing language skills in handling Biblical texts. A suitable entry point for students who have had some Modern Hebrew. Prerequisite: If course requirement not met, permission of instructor required.
For BA Students: Language Course
Taught by: Carasik
Course usually offered in spring term
Also Offered As: HEBR 152, JWST 172, JWST 472
Prerequisite: HEBR 451
Activity: Lecture
1.0 Course Unit

HEBR 453 Intermediate Biblical Hebrew I
This course will focus on using the grammar and vocabulary learned at the introductory level to enable students to read Biblical texts independently and take advanced Bible exegesis courses. We will also work on getting comfortable with the standard dictionaries, concordances, and grammars used by scholars of the Bible. We will concentrate on prose this semester, closely reading Ruth, Jonah, and other prose selections. We will begin to translate from English into Biblical Hebrew, and there will also be a unit on the punctuation marks used in the Bible. This is a suitable entry point for students who already have strong Hebrew skills.
For BA Students: Language Course
Taught by: Carasik
Course usually offered in fall term
Also Offered As: HEBR 153, JWST 173, JWST 473
Prerequisites: This course will focus on using the grammar and vocabulary learned at the introductory level to enable students to read Biblical texts independently and take advanced Bible exegesis courses. We will also work on getting comfortable with the standard dictionaries, concordances, and grammars used by scholars of the Bible. We will concentrate on prose this semester, closely reading Ruth, Jonah, and other prose selections. We will begin to translate from English into Biblical Hebrew, and there will also be a unit on the punctuation marks used in the Bible. This is a suitable entry point for students who already have strong Hebrew skills. Prerequisite: If course requirement not met, permission of instructor required. Successful completion of HEBR 152 or permission of the instructor. This course is the prerequisite for HEBR 154 (no one is ‘permitted’ into that semester; you must take the previous semester course).
Activity: Lecture
1.0 Course Unit

HEBR 454 Intermediate Biblical Hebrew II
This course is a continuation of the fall semester’s Intermediate Biblical Hebrew I. No one will be admitted into the course who has not taken the fall semester. It will continue to focus on using the grammar and vocabulary learned at the introductory level to enable students to read biblical texts independently and take advanced Bible exegesis courses. We will concentrate this semester on various selections of Biblical poetry, including Exodus 15 and Job 28. We will also continue to translate English prose into Biblical Hebrew.
For BA Students: Last Language Course
Taught by: Carasik
Course usually offered in spring term
Also Offered As: HEBR 154, JWST 174, JWST 474
Prerequisite: HEBR 153
Activity: Lecture
1.0 Course Unit
HEBR 486 Rabbinic Writers on Rabbinic Culture
This course traces reflections on rabbinic culture produced within Jewish legal literature of the classic rabbinic period - Midrash, Mishna, and Talmud - and in later juridical genres - Talmudic commentary, codes and responses. Attention will be paid to the mechanics of different genres, the role of the underlying proof text, the inclusion or exclusion of variant opinions, the presence of non-legal information, the balance between precedent and innovation. Prerequisite: Reading knowledge of Hebrew is required.
Taught by: Fishman
Course not offered every year
Activity: Seminar
1.0 Course Unit

HEBR 552 Advanced Modern Hebrew: Conversation & Writing
After four semesters of language study, it’s time to enter the vibrant world of contemporary Israeli culture. In this course students read some of the best plays, poems, short stories, and journalism published in Israel today. They also watch and analyze some of Israel’s most popular films, TV programs, and videos. Themes include Jewish-Arab relations, the founding of the State, family ties and intergenerational conflict, war and society, and the recent dynamic changes in Israel society. HEBR 054 or permission of instructor. Since the content of this course may change from year to year, students may take it more than once (but only once for credit).
For BA Students: Advanced Language Course
Taught by: Engel
One-term course offered either term
Also Offered As: HEBR 059, JWST 059
Prerequisite: HEBR 054
Activity: Lecture
1.0 Course Unit

HEBR 557 Seminar in Rabbinic Literature
Most of the foundational writings of rabbinic Judaism corpora of Midrash, Mishna, and the two Talmuds were in existence by the end of the sixth century CE. Yet, for several centuries thereafter, there is little evidence attesting to the lived nature of rabbinic culture and society. Course will focus on writings by Jews and about Jews, produced between the 7th and 10th centuries, complemented by secondary sources. Texts will include selections from archaeological inscriptions; Midrash; liturgical poetry; Targum; Masora; geonic responsa, writings by Muslims and by Church Fathers. While students must be able to read Hebrew, much class time will be devoted to the improvement of reading and comprehension skills. Undergraduates should seek permission of the instructor. Prerequisite: Proficiency in Hebrew and/or Greek recommended. Undergraduates need permission to enroll. May be repeated for credit.
Course usually offered in spring term
Also Offered As: JWST 553, NELC 557
Activity: Seminar
1.0 Course Unit

HEBR 583 Studies in Medieval Jewish Culture
Through close reading of primary sources in the original Hebrew, participants in this seminar will explore historical circumstances that engaged and shaped medieval Jews in both Christian and Muslim lands, along with the enduring cultural projects that Jews themselves produced. Topics will include Geonica, Karaism, the encounter of Reason and Revelation; the Christian 'Other': the Muslim 'Other'; legal codification; the Tosafist project; Rhineland Pietism; Minhag (custom); family life; the aesthetic dimension; Kabbalah; conversos; messianism. Students should be able to comfortably read unpointed Hebrew.
Taught by: Fishman
Course usually offered in fall term
Also Offered As: JWST 523, RELS 523
Activity: Seminar
1.0 Course Unit

HEBR 651 Elementary Modern Hebrew I
An introduction to the skills of reading, writing, and conversing in Modern Hebrew. This course assumes no previous knowledge of Hebrew.
For BA Students: Language Course
One-term course offered either term
Also Offered As: HEBR 051, JWST 051
Activity: Lecture
1.0 Course Unit

HEBR 652 Elementary Modern Hebrew II
A continuation of HEBR 051, First Year Modern Hebrew, which assumes basic skills of reading and speaking and the use of the present tense. Open to all students who have completed one semester of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.
For BA Students: Language Course
Also Offered As: HEBR 052, JWST 052
Prerequisite: HEBR 651
Activity: Lecture
1.0 Course Unit

HEBR 653 Intermediate Modern Hebrew III
Development of the skills of reading, writing, and conversing in Modern Hebrew on an intermediate level. Open to all students who have completed two semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.
For BA Students: Language Course
One-term course offered either term
Also Offered As: HEBR 053, JWST 053
Prerequisite: HEBR 652
Activity: Lecture
1.0 Course Unit

HEBR 654 Intermediate Modern Hebrew IV
This course constitutes the final semester of Intermediate Modern Hebrew. Hence, one of the main goals of the course is to prepare the students for the proficiency exam in Hebrew. Emphasis will be placed on grammar skills and ability to read literary texts. Open to all students who have completed three semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.
One-term course offered either term
Also Offered As: HEBR 054, JWST 054
Prerequisite: HEBR 653
Activity: Lecture
1.0 Course Unit
HEBR 999 Independent Study
An independent study in Hebrew language for PhD students
Activity: Independent Study
1.0 Course Unit

Hindi (HIND)

HIND 400 Beginning Hindi-Urdu Part I
This introductory course core proficiency in Hindi-Urdu up to the intermediate level. It is designed for students with little or no prior exposure to Hindi or Urdu. The course covers all four language skills (speaking, listening, reading, and writing) and all three models of communication (interpersonal, presentational, interpretive). Students will develop literacy skills in the primary script of their choice (Hindi or Urdu script). All written materials will be provided in both scripts. All meetings are interactive and students acquire the language by using it in realistic contexts. Culture is embedded in the activities and is also introduced through various authentic materials.
For BA Students: Language Course
Taught by: Pien
Course usually offered in fall term
Also Offered As: NELC 401, URDU 401
Activity: Lecture
1.0 Course Unit

HIND 401 Beginning Hindi-Urdu Part II
This introductory course core proficiency in Hindi-Urdu up to the intermediate level. It is designed for students with little or no prior exposure to Hindi or Urdu. The course covers all four language skills (speaking, listening, reading, and writing) and all three models of communication (interpersonal, presentational, interpretive). Students will develop literacy skills in the primary script of their choice (Hindi or Urdu script). All written materials will be provided in both scripts. All meetings are interactive and students acquire the language by using it in realistic contexts. Culture is embedded in the activities and is also introduced through various authentic materials.
For BA Students: Language Course
Taught by: Pien
Course usually offered in spring term
Also Offered As: NELC 402, URDU 402
Prerequisite: HIND 400
Activity: Lecture
1.0 Course Unit

HIND 420 Intermediate Hindi Part I
In Intermediate Hindi the student continues to develop the four language skills, with an emphasis on real-life situations—through hearing and practicing conversation on everyday topics, reading a variety of authentic texts ranging from advertisements to short stories, watching segments of current films, and carrying out short research projects using Hindi sources. There is a strong emphasis on vocabulary development and on using contextually appropriate styles of spoken and written Hindi.
For BA Students: Last Language Course
Taught by: Pien
Course usually offered in fall term
Prerequisite: HIND 400 OR HIND 401
Activity: Lecture
1.0 Course Unit

HIND 421 Intermediate Hindi Part II
In Intermediate Hindi the student continues to develop the four language skills, with an emphasis on real-life situations—through hearing and practicing conversation on everyday topics, reading a variety of authentic texts ranging from advertisements to short stories, watching segments of current films, and carrying out short research projects using Hindi sources. There is a strong emphasis on vocabulary development and on using contextually appropriate styles of spoken and written Hindi.
For BA Students: Last Language Course
Taught by: Pien
Course usually offered in spring term
Prerequisite: HIND 420
Activity: Lecture
1.0 Course Unit

HIND 430 Advanced Hindi
Advanced Hindi aims at systematically developing higher level linguistic functions and cultural nuances. Students learn to describe, narrate and support opinions in informal and formal styles. The objective of the course is to promote a meaningful interaction with written literature and with native speakers in a socially acceptable manner in a variety of simple and complicated situations. A variety of authentic materials are used, such as short stories, plays, newspapers, magazines, videos, television and radio broadcasts, and interviews. Every semester the course materials and foci vary depending on the needs and interests of students in the class.
For BA Students: Advanced Language Course
Taught by: Pien
Course usually offered in fall term
Prerequisite: HIND 420 OR HIND 421
Activity: Lecture
1.0 Course Unit

HIND 520 Intermediate Hindi I for Graduate Students Only
In Intermediate Hindi the student continues to develop the four language skills, with an emphasis on real-life situations—through hearing and practicing conversation on everyday topics, reading a variety of authentic texts ranging from advertisements to short stories, watching segments of current films, and carrying out short research projects using Hindi sources. There is a strong emphasis on vocabulary development and on using contextually appropriate styles of spoken and written Hindi.
Two terms. student must enter first term.
Prerequisite: HIND 400 OR HIND 401
Activity: Lecture
1.0 Course Unit

HIND 530 Advanced Hindi for Graduate Students Only
Advanced Hindi aims at systematically developing higher level linguistic functions and cultural nuances. Students learn to describe, narrate and support opinions in informal and formal styles. Every semester the course materials and foci vary depending on the needs and interests of students in the class.
Two terms. student may enter either term.
Prerequisite: HIND 400 OR HIND 401
Activity: Lecture
1.0 Course Unit

**Historic Preservation (HSPV)**

**HSPV 521 American Architecture**
This course is a survey of architecture in the United States. The organization, while broadly chronological, emphasizes themes around which important scholarship has gathered. The central purpose is to acquaint you with major cultural, economic, technological, and environmental forces that have shaped buildings and settlements in North America for the last 400 years. To that end, we will study a mix of 'high-style' and 'vernacular' architectures while encouraging you to think critically about these categories. Throughout the semester, you will be asked to grapple with both the content of assigned readings (the subject) and the manner in which authors present their arguments (the method). Louis Sullivan, for instance, gives us the tall office building 'artistically considered' while Carol Willis presents it as a financial and legal artifact. What do you make of the difference? Finally, you will learn how to describe buildings. While mastery of architectural vocabulary is a necessary part of that endeavor, it is only a starting point. Rich or 'thick' description is more than accurate prose. It is integral to understanding the built environment - indeed, to seeing it at all.

Course usually offered in fall term  
Activity: Lecture  
1.0 Course Unit

**HSPV 528 American Vernacular Architecture**  
This course explores the form and development of America's built landscape—its houses, farm buildings, churches, factories, and fields—as a source of information on folk history, vernacular culture, and architectural practice.

Course not offered every year  
Also Offered As: HIST 528  
Activity: Seminar  
1.0 Course Unit

**HSPV 531 American Domestic Interiors**  
This course will examine the American domestic interior from the seventeenth through the twentieth centuries with emphasis on the cultural, economic, and technological forces that determined the decoration and furnishing of the American home. Topics covered include the evolution of floor plans; changes in finish details and hardware; the decorative arts; floor, wall, and window treatments; and developments in lighting, heating, plumbing, food preparation and service, as well as communication and home entertainment technologies. In addition to identifying period forms and materials, the course will offer special emphasis on historic finishes. The final project will involve re-creation of a historic interior based on in-depth documentary household inventory analysis, archival research, and study. Students will create a believable house interior and practice making design and furnishing choices based on evidence. Several class periods will be devoted to off-site field trips.

Taught by: Keim  
Course usually offered in spring term  
Activity: Lecture  
1.0 Course Unit

**HSPV 534 Public History - Theory and Practice**  
This seminar is required for students wishing to concentrate on the Public History of the Built Environment while pursuing an MS in Historic Preservation. It builds on skills developed in HSPV 521 (American Architecture), HSPV 600 (Documentation), and HSPV 606 (Site Management); only HSPV 600 is a prerequisite. Unlike many public history courses, this one focuses on interpretation of the built environment. While proficiency in archival research is required, an understanding of form and chronology in American architecture is helpful. Fundamentally, this course is about community, memory, and their relationship to built form. As such, it examines oral history methodology and includes readings in sociology and ethnography. It acknowledges that while buildings and landscapes are in one sense simply larger forms of material culture than furniture or other movable objects, they also 'work' differently by dint of being inhabited, occupied, and publicly encountered, forming de facto frameworks for private and public life. More than other courses, this one grapples with interpretation and dissemination—everything from signage and monuments to websites and exhibits. It is not, however, a tutorial in the use of those media so much as a chance to reflect critically on their strengths and weaknesses in different contexts.

Course usually offered in spring term  
Prerequisite: HSPV 600  
Activity: Seminar  
1.0 Course Unit

**HSPV 538 Cultural Landscapes and Landscape Preservation**  
The course surveys and critically engages the field of cultural landscape studies. Over the semester, we will explore cultural landscape as a concept, theory and model of preservation and design practice; we will read cultural landscape historiography and creative non-fiction; we will examine a range of types (national parks, community gardens, designed landscapes, informal public spaces), and we will map the alternative preservation, planning and design methods that ground cultural landscape studies practically. Readings, class discussions, and projects will draw on cultural geography, environmental history, vernacular architecture, ecology, art, and writing.

Taught by: Randall Mason  
Course not offered every year  
Also Offered As: LARP 738  
Activity: Lecture  
1.0 Course Unit

**HSPV 551 Building Pathology**  
This course addresses the subject of deterioration of buildings, their materials, assemblies and systems, with the emphasis on the technical aspects of the mechanisms of deterioration and their enabling factors, material durability and longevity of assemblies. Details of construction and assemblies are analyzed relative to functional and performance characteristics. Lectures cover: concepts in durability; climate; psychrometric, soils & hydrologic; conditions; physics of moisture in buildings; enclosure, wall and roof systems; structural systems; and building services systems with attention to performance, deterioration, and approaches to evaluation of remedial interventions.

Course usually offered in spring term  
Prerequisite: HSPV 555  
Activity: Seminar  
1.0 Course Unit
HSPV 552 Building Diagnostics and Monitoring
Building diagnostics pertain to the determination of the nature of a building's condition or performance and the identification of the corresponding causative pathologies by a careful observation and investigation of its history, context and use, resulting in a formal opinion by the professional. Monitoring, a building diagnostic tool, is the consistent observation and recordation of a selected condition or attribute, by qualitative and/or quantitative measures over a period of time in order to generate useful information or data for analysis and presentation. Building diagnostics and monitoring allow the building professional to identify the causes and enabling factors of past or potential pathologies in a building and building systems, thus informing the development appropriate interventions or corrective measures. In the case of heritage buildings, the process informs the selection of interventions that satisfy the stewardship goals for the cultural resource. In the case of recently constructed buildings, the process informs the identification of envelope and systems interventions for improved performance and energy efficiency.
Taught by: Henry
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

HSPV 555 Conservation Science
This course presents the basic principles of conservation science of architectural materials and serves as the foundation for subsequent conservation courses such as HSPV738 - Wood, HSPV739 - Masonry, and HSPV740 - Architectural Surface Finishes, as well as, related courses such as HSPV551 - Building Pathology and HSPV552 - Building Diagnostics and Monitoring. The format includes lectures, demonstrations, and laboratories and is designed to provide a fundamental understanding of architectural materials with respect to their composition, properties, and performance. Beginning with a general discussion of mechanical properties such as strength, modulus, toughness, creep, and fatigue of all architectural materials, the course moves to porous building materials such as stone, brick, terra cotta, mud brick, concrete, cast stone, and mortar and focuses on the evaluation of their properties and their identification through an exploration of composition and texture using hand specimens and polarizing light microscopy. Rounding out the discussion of inorganic architectural materials is the examination of the unique set of properties of metals including their identification using methods of elemental analysis. The course then shifts to the important organic architectural materials such as wood and finishes and begins with an overview of basic organic chemistry and follows with a more in-depth exploration of the properties and performance of wood, adhesives, and clear finishes for wood; the chemistry of pigments and paint media; and the identification of pigments, paint media, and clear finishes using several analytical methods. Knowledge of basic college level chemistry is required.
Taught by: Wheeler
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

HSPV 572 Preservation Through Public Policy
This course explores the intersection between historic preservation, design and public policy, as it exists and as it is evolving. That exploration is based on the recognition that a challenging and challenged network of law and policy at the federal, state and local level has direct and profound impact on the ability to manage cultural resources, and that the pieces of that network, while interconnected, are not necessarily mutually supportive. The fundamental assumption of the course is that the preservation professional must understand the capabilities, deficiencies, and ongoing evolution of this network in order to be effective. The course will look at a range of relevant and exemplary laws and policies existing at all levels of government, examining them through case studies and in-depth analyses of pertinent programs and agencies at the local, state and federal level.
Taught by: Hollenberg
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

HSPV 600 Documentation, Research, Recording I
The goal of this course is to help students learn to contextualize the history of buildings and sites. In order to gain first-hand exposure to the actual materials of building histories, we will visit a half-dozen key archival repositories. Students will work directly with historical evidence, including maps, deeds, the census, city directories, insurance surveys, photographs, and many other kinds of archival materials. After discussing each type of document in terms of its nature and the motives for its creation, students will complete a series of projects that develop their facility for putting these materials to effective use. Philadelphia is more our laboratory than a primary focus in terms of content, as the city is rich in institutions that hold over three centuries of such materials; students will find here both an exposure to primary documents of most of the types they might find elsewhere, as well as a sense of the culture of such institutions and of the kinds of research strategies that can be most effective. The final project is the completion of an historic register nomination.
Taught by: Ammon
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

HSPV 601 Documentation, Research, Recording II
Documentation, Research, Recording II. This course provides an introduction to the survey and recording of historic buildings and sites. Techniques of recording include traditional as well as digitally-based methods including field survey, measured drawings, photography and rectified photography. Emphasis is placed on the use of appropriate recording tools in the context of a thorough understanding of the historical significance, form and function of sites. Required for first-year MSHP students; others by permission.
Course usually offered in spring term
Activity: Studio
1.0 Course Unit
HSPV 606 Historic Site Management
This course focuses on management, planning, decision making, and interpretation for heritage sites, from individual buildings and historic sites to whole landscapes and historic objects. Class projects ask students to analyze historic site operations and interpret objects. Course material will draw on model approaches to management, as well as a series of domestic and international case studies, with the goal of understanding the practicalities and particularities of site management. Topics to be examined in greater detail might include histories of historic sites, collections and conservation policies, interpretation, tourism, social justice, community engagement, strategic planning, in addition to fundraising and financial management. The course emphasizes making historic sites meaningful, relevant and sustainable in the present.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

HSPV 620 Seminar in American Architecture
An examination of a specific topic related to the history of American architecture and planning. Following introductory lectures, students participate through detailed reports and informal discussion. The topic under investigation varies each semester the seminar is offered.
Taught by: Aaron Wunsch
Course usually offered in spring term
Also Offered As: LARP 771
Activity: Seminar
1.0 Course Unit

HSPV 621 Heritage and Social Justice
How do historic preservation and other design and humanities professionals contribute to more equitable and just societies? How can our work be organized to result in greater equity, access and social justice? This seminar will explore connections between heritage, historic preservation (and related design, planning and artistic practices) and the pursuit of social justice. Our investigations will focus on both conceptual and theoretical constructions (how we think about built heritage and social change; how we conceptualize social justice) and practical examples of advancing social outcomes through preservation and design. We'll draw on work by: geographers, anthropologists and other social scientists and theorists; historians; public intellectuals; design practitioners; heritage organizations; artists; and more. Subjects will include public interest design, creative placemaking, public art, memorialization, and methods of practice and institutional organization; cases will be drawn from the US and abroad. The course will progress through a series of weekly topics, often including guest practitioners and scholars. Students will have significant agency in helping flesh out the topics and cases; final projects (individual and group) will be envisioned as a statement (in the form of a book or exhibit) of how social justice concerns have reshaped practice and how they could reshape our fields in the future.
Taught by: Mason
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

HSPV 624 Digital Media for Historic Preservation I
A required praxis course designed to introduce students to the techniques and application of digital media for visual and textual communication. Techniques will be discussed for preservation use including survey, documentation, relational databases, and digital imaging and modeling. This course requires a weekly laboratory period (1.5 hours).
Taught by: Hinchman
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

HSPV 625 Preservation Economics
The primary objective is to prepare the student, as a practicing preservationist, to understand the language of the development community, to make the case through feasibility analysis why a preservation project should be undertaken, and to be able to quantify the need for public/non-profit intervention in the development process. A second objective is to acquaint the student with the measurements of the economic impact of historic preservation and to critically evaluate 'economic hardship' claims made to regulatory bodies by private owners.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

HSPV 627 Digital Media for Historic Preservation II
A required praxis course designed for students to further explore the techniques and applications of digital media for visual and textual communication. Techniques will be discussed for preservation use including survey, documentation, relational databases, and digital imaging and modeling.
Taught by: Hinchman
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

HSPV 638 Topics in Historic Preservation
This seminar concentrates on a selected topic in the social and cultural history of the built environment. Past themes have included photography and the American city and the relationship between cities and sound. For full spring 2019 course description, please visit: https://www.design.upenn.edu/historic-preservation/courses
Course usually offered in spring term
Also Offered As: CPLN 687
Activity: Seminar
1.0 Course Unit
HSPV 640 Contemporary Design in Historic Settings
Contemporary design can add value and meaning to historic settings of any age or scale, from individual landmarks to landscapes and neighborhoods. Rigorous dialogue with history and context enriches contemporary design. This seminar immerses designers, planners and preservationists in the challenges of design with existing structures and sites of varying size and significance. Readings of source materials, lectures and discussions explore how design and preservation theory, physical and intangible conditions, and time have shaped design response, as well as the political, cultural and aesthetic environments that influence regulation. Through sketch analytical exercises set in Philadelphia and outstanding case studies from around the world, students will learn to communicate their understanding of historic places, to critique and generate a range of responses to historic contexts.
Taught by: Hawkes
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

HSPV 660 Theories of Historic Preservation
Theories of historic preservation serve as models for practice, integrating the humanistic, artistic, design, scientific and political understandings of the field. This course examines the historical evolution of historic preservation, reviews theoretical frameworks and issues, and explores current modes of practice. Emphasis is placed on literacy in the standard preservation works and critical assessment of common preservation concepts. In addition to readings and lectures, case studies from contemporary practice will form the basis for short assignments. Professional ethics are reviewed and debated. The instructor’s permission is required for any student not registered in the Graduate Program in Historic Preservation. Note: This course continues in the second half of the spring semester for another 0.5 CU. Prerequisite: Instructor’s permission required for any student not registered in the Graduate Program in Historic Preservation.
Taught by: Mason
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

HSPV 661 Theories of Historic Preservation II
Theories of historic preservation serve as models for practice, integrating the humanistic, artistic, design, scientific and political understandings of the field. HSPV 661 builds on HSPV 660, which examines the historical evolution of historic preservation, reviews theoretical frameworks and issues, and explores current modes of practice. HSPV 661 engages advanced topics such as cultural landscape theory, economics of preservation, sustainability and environmental conservation, social justice, and urban design. In addition to readings and lectures, case studies from contemporary practice will be used to examine theories in practice. The principal assignment will be short position papers. Students from outside the Graduate Program in Historic Preservation are welcome; instructor’s permission is required for any non-HSPV student. (Note that the course is the second of two parts; the first half, on the basics of preservation theory is taught in the fall semester.)
Taught by: Mason
Course usually offered in spring term
Activity: Seminar
0.5 Course Units

HSPV 671 Historic Preservation Law
Introduction to the legal framework of urban planning and historic preservation, with special emphasis on key constitutional issues, zoning, historic districts, growth management, and state and local laws for conserving historic buildings.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

HSPV 701 Historic Preservation Studio
The Preservation Studio is a practical course making architectural, urban and landscape conservation operations, bringing to bear the wide range of skills and ideas at play in the field of historic preservation. As part of the core MSHP curriculum the Studio experience builds on professional skills learned in the first-year core. The work requires intense collaboration as well as individual projects. The Preservation Studio centers on common conflicts between historic preservation, social forces, economic interests, and politics. Recognizing that heritage sites are complex entities where communities, cultural and socio-economic realities, land use, building types, and legal and institutional settings all closely interrelated, the main goals of the studio are (1) understanding and communicating the cultural significance of the built environment, (2) analyzing its relation to other economic, social, political and aesthetic values, and (3) exploring the creative possibilities for design, conservation and interpretation prompted by cultural significance. Studio teams undertake documentation, planning and design exercises for heritage sites and their communities, working variously on research, stakeholder consultation, comparables analysis, writing policies and designing solutions. Students work in teams as well as on individual projects. Study sites in Fall 2020 are expected to be located in both Philadelphia and Detroit.
Taught by: Mason
Course usually offered in fall term
Activity: Studio
2.0 Course Units
HSPV 703 Urban Regeneration in the Americas: The Conservation and Dev. of Urban Areas
This advanced topic seminar will focus on the challenges confronted by the conservation and urban planning professions in turning the urban heritage into a social and economic development resource for cities in developing countries. The preservation of the urban heritage is moving to a new paradigm of intervention responding to: a growing interest in communities for preserving their intangible and tangible urban heritage; rising development pressures on historic neighborhoods; the generalization of adaptive rehabilitation as a conservation strategy; and recent international agreements calling for expanding the role of the urban heritage in the social and economic development of the communities. This is a problem that is in the cutting edge of the research and practice of heritage conservation and urban planning and has conservation, planning and design implications making it ideally suited to a multi-discipline seminar approach. The course is modeled on successful 1-CU spring seminars conducted in recent years—the Gordion Site Planning Studio (2011), Parks for the People (2012), and the Regeneration of Historic Areas in the Americas (2012, 2014, 2016, 2018)—that attracted students from across the School and fit easily with core studios and thesis projects. Students from multiple departments are encouraged to participate in the course; enrollment will be kept to about 12. The course will combine seminar and field study methodologies in ways that they support each other. The knowledge acquired through the seminar work will be put to use in a field study exercise whose objective is to allow the students to work on topics of their interest and pursue research or urban development and heritage conservation interventions for expanding the contribution of the historic center of Cartagena in Colombia to the social and economic development of the city.
Taught by: Hector Eduardo Rojas
Course usually offered in spring term
Also Offered As: CPLN 773
Activity: Seminar
1.0 Course Unit
Notes: Course is open to second year Master of Science Historic Preservation and Master of Science in Design: Historic Preservation concentration students. All others need approval of the instructor to enroll.

HSPV 705 Topical Studio/Seminar: Interpretation in the Future Tense
The interpretation of heritage places is a core concern of historic preservation professionals, no matter what their area of specialization. Explicit and implicit interpretation is embedded deeply in the field’s theory, history and contemporary practice. In contemporary practice, site interpretation is challenged to draw on traditional preservationist modes of practice (based in historical scholarship and formal analysis) as well as new ideas about representation, communication, visitor experience, and information design shared by other fields (including museum studies, art, exhibit design, educational psychology, community development/social justice, and digital media design). This hybrid seminar-studio explores next-generation ideas and practices of heritage place interpretation: first, by building on a thorough program of research and analysis of contemporary best-practices in site interpretation; second, by experimenting along lines suggested by new audiences and innovative thinkers and designers inside and outside the preservation field. The course will include a series of guest presenters from design, public history, management and other fields; exercises to analyze the theoretical bases, best practices and issues facing contemporary practice; and prototyping of new/experimental approaches.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

HSPV 707 HISTORIC PRESERVATION POST-PROFESSIONAL STUDIO
Master of Design Capstone Studio. This intensive on-site studio will explore advanced topics in preservation theory, planning and design as applied to the challenges of a landmark historic site. Readings will focus on background research completed for the site as well as theoretical and local approaches to preservation and site management, supplemented by lectures, workshops, field trips and on-site investigations. Students will prepare a written report as well as design studies. Permission of department required to enroll. Course usually offered in summer term. Course usually offered summer term only
Activity: Studio
2.0 Course Units

HSPV 710 Thesis I
The Graduate Program in Historic Preservation's Thesis course is a two semester 2 CU capstone. The goal of the Thesis is demonstrated mastery of the research process by exploring a question of academic/professional relevance to the preservation field and presenting the results of the study in accordance with the highest standards of scholarly publishing. The Thesis spans the academic year, beginning with HSPV 710/Thesis I in the fall semester and continues in the spring with HSPV 711/Thesis II. Students are required to successfully complete 9-10 CUs (the first year of the curriculum) to qualify for Thesis. Dual degree students are expected to enroll in HSPV 710 before undertaking thesis studio in their respective dual program in their final year.
Taught by: Matero
Course usually offered in fall term
Activity: Independent Study
1.0 Course Unit

HSPV 711 Thesis II
Students are admitted to thesis after completion of two semesters or their equivalent in the graduate program. Theses should be based on original research and relate to each student’s elected concentration. Thesis guidelines, available in the Historic Preservation office, describe other details.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
HSPV 713 Professional Practice for Historic Preservation
This course is intended to introduce students to the professional practice of historic preservation and, more specifically, how preservation professionals fit into the larger fields of design and construction. It will expose students to the types of roles they may play once they enter the professional world, as well as the skills and knowledge they will be expected to have. Through a series of lectures, in-class exercises, and case studies of current or recently completed preservation projects, students will learn how projects are developed from inception through design and construction. There will be discussion of some of the inherent challenges in designing projects that involve existing historic buildings, as well as how architectural conservation is incorporated into such projects. It will also discuss the phasing of and ‘players’ involved with typical preservation projects. A significant portion of the course will be dedicated to preservation project management from the perspectives of the architectural conservator, the architect and the contractor – from writing a proposal to managing a complex project to project delivery methods. The course should be of particular interest to architects who anticipate being involved with historic buildings, architectural conservators, as well as planners and individuals interested in managing historic sites that might undergo preservation projects.

Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

HSPV 738 Conservation Seminar: Wood
Prior to the twentieth century, most structures found in the built environment relied upon wood as a primary material for both structural members and decorative features. An understanding of the physical properties as well as the historic application of this organic material provides the basis for formulating solutions for a wide spectrum of conversation issues. As the scope of preserving wooden structures and wooden architectural elements is continually broadened, new methods and technology available to the conservator together allow for an evolving program - one that is dependent upon both consistent review of treatments and more in-depth study of craft traditions. This course seeks to illustrate and address material problems typically encountered by stewards of wooden cultural heritage - among them structural assessment, bio-deterioration, stabilization and replication techniques. Through a series of lectures and hands-on workshops given by representative professionals from the fields of wood science, conservation, entomology, engineering, and archaeology, theoretical and practical approaches to retaining wooden materials will be examined with the goal to inform the decision-making process of future practicing professionals.

Taught by: Andrew Fearon
Course usually offered in spring term
Prerequisite: HSPV 555
Activity: Seminar
1.0 Course Unit

HSPV 739 Conservation Seminar: Masonry
This seminar will offer an in-depth study of the conservation of masonry buildings and monuments with a particular focus on American building stone. Technical and aesthetic issues will be discussed as they pertain to the understanding required for conservation practice. Part 1 will address a broad range of building stone, masonry construction technologies, and deterioration phenomenon; Part 2 will concentrate on conservation methodology as well as past and current approaches for the treatment of stone masonry structures. The subject will be examined through published literature and case studies. Students will gain practical experience through lab and field exercises and demonstrations. The subject matter is relevant to interested students of conservation and preservation, architecture, landscape architecture, architectural history, and archaeology. Prerequisite: HSPV 555 Conservation Science and permission needed from department.

Taught by: Ingraffia
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

HSPV 740 Conservation Seminar: Finishes
The seminar will advance students' knowledge of and skills at researching, analyzing and interpreting historic architectural finishes. Lectures, demonstrations, hands-on exercises, case studies, and site visits will consider the history, technology, analysis, deterioration, and treatment of historic finishes. Guest lecturers will enlarge the subject with discussion and demonstrations of archival research of finishes, advanced methods of scientific analysis and presentation of a long-term project to analyze and conserve historic finishes at the US Treasury Building (Robert Mills). The course will also address historic plaster with a guest lecture and demonstration of plaster materials, application, and casting for ornamental plaster. We will make and apply paints and other finishes in class. A visit to the decorative arts studio and Philadelphia sites displaying decorative painting will complement lectures and assignments. Bartram's Garden, the eighteenth-century home of botanist John Bartram in West Philadelphia, will serve as a case study and subject for the final assignment.

Taught by: Catherine Meyers
Course usually offered in spring term
Prerequisite: HSPV 555
Activity: Seminar

Two terms. student may enter either term.
Activity: Seminar
1.0 Course Unit
HSPV 747 Conservation of Archaeological Sites and Landscapes
This seminar will address the history, theories, principles, and practices of the preservation and interpretation of archaeological sites and landscapes. The course will draw from a wide range of published material and experiences representing both national and international contexts. Topics will include site and landscape documentation and recording; site formation and degradation; intervention strategies including interpretation and display, legislation, policy, and contemporary issues of descendent community ownership and global heritage. Depending on the site, students will study specific issues leading toward the critique or development of a conservation and management program in accordance with guidelines established by ICOMOS/ ICAHM and other official agencies.
One-term course offered either term
Also Offered As: ANTH 508
Activity: Seminar
1.0 Course Unit

HSPV 748 Preservation Case Studies
Preservation Case Studies will bring cutting-edge theoretical debates, current issues and the latest work of faculty and guests into the HSPV curriculum. Coordinated by the Chair, but populated with a number of other faculty, practitioners and guest scholars, the course will sample and explore current theoretical, conceptual, political and practical issues facing the historic preservation field.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

HSPV 750 Architectural Conservation Praxis: Traditional Buildings / Traditional Practice
Architectural Conservation Praxis is an intensive 3-week summer course designed for students pursuing studies in architectural conservation and builds on Penn Preservation's core curriculum and the first-year conservation courses. The syllabus is organized around project fieldwork supplemented by lectures, demonstrations, exercises, and site visits that will allow students to experience firsthand the design and construction of vernacular buildings and the application of traditional craft-based methods to preserve them.
Course usually offered summer term only
Prerequisite: HSPV 540 AND HSPV 541 AND HSPV 555
Activity: Studio
1.0 Course Unit

HSPV 760 Preservation Planning Praxis
Hong Kong will be the venue for this year’s HSPV 760-901 Heritage Praxis. Collaborators in Hong Kong have already been signed on including iDiscover, an innovative firm that has been doing citizen-based, bottom-up mapping of heritage precincts throughout Southeast Asia. Other university, NGO, and government collaborators are currently being recruited. The course will run from May 27 through June 6, 2019 and students should plan to arrive on May 25 or May 26 and depart on June 7. The first week will be lectures and tours. During the second week all participants will work in teams to conduct original research in under-recognized historic neighborhoods in Hong Kong. Through individual interviews, focus groups, and other social research tools, participants will first identify the ‘values’ assigned by local residents, business and property owners, and others to the neighborhood. This qualitative information will then be matched with GIS-based quantitative data. Using this qualitative + quantitative approach, participants will attempt to estimate the economic values of non-economic value components. Each of the teams will be made up of PennDesign graduate students, PennDesign alumni, and young professionals from Hong Kong. Course is open to all PennDesign graduate students.
Course usually offered summer term only
Activity: Studio
1.0 Course Unit

HSPV 790 Historic Preservation Summer Institute
The Summer Institute is a required orientation course designed to prepare incoming, first-year graduate students for the intense coursework of their first semester. Generally, the Institute orients students to the issues and methods of the core MSHP curriculum, begins familiarizing students to the resources of Philadelphia, and begins skill-building exercises, especially in the area of digital media. This non-credit course employs lectures, exercises, and field trips to introduce some of the important skills, questions, and issues that will be at the center of first year’s work in the Program. The Summer Institute also constitutes an extended introduction to the Program’s faculty and the students in first-year and second-year cohorts. Course enrollment is by permit only.
Course usually offered summer term only

HSPV 999 Independent Study
An opportunity for a student to work on a special project under the guidance of a faculty member.
One-term course offered either term
Activity: Independent Study
2.0 Course Units
History & Sociology of Science (HSSC)

HSSC 502 Public History
Many scholars find it challenging to explain and present their work to nonacademic audiences. There are also relatively few opportunities for scholars to put their skills to work in the service of improving the communities around them. This seminar considers ways of addressing these challenges through an examination of the many varieties of public history (and public humanities more broadly). The course includes hands-on projects in the Philadelphia area. Three primary themes orient the readings, discussions, and assignments of the course: 1) Places and Presentation: How can museums, historic sites, and other arenas in which audiences encounter history become more relevant and appealing to diverse audiences? 2) Authority: Who produces history for the public, in whose name, and based on what principles? 3) Engagement: How can history and related disciplines make a difference in the world, on small, medium, and large scales?
Taught by: Barnes
Course not offered every year
Activity: Seminar
1.0 Course Unit

HSSC 503 Current Issues in the History of Medicine
This seminar surveys a variety of popular and scholarly approaches to the study of medicine and its history, ranging from traditional physician-centered narratives to more recent cultural and epistemological methodologies. The potential values of journalistic, sociological, anthropological, geographical and other approaches to the historical study of health, disease, and health care will be explored.
Taught by: Barnes
Course not offered every year
Activity: Seminar
1.0 Course Unit

HSSC 504 Reading Seminar in History of Science
Survey of major themes and figures in the history of western science, technology, and medicine since the Renaissance, through reading and discussion of selected primary and secondary sources. Topics include: Kepler, Galileo, Bacon, Newtonainism, Pasteur, the Industrial Revolution, the rise of German science, etc. Concurrent attendance at STSC 1 lectures is recommended.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

HSSC 505 Seminar in the History and Sociology of Science
Seminar for first-year graduate students, undergraduate majors, and advanced undergraduates. Reading will introduce the student to current work concerning the effect of social context on science, technology, and medicine.
Taught by: Linker/Benson
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

HSSC 506 Readings in Race and Science
What accounts for the persistence and resilience of racial conceptions in science? In this course we will look for answers to this and other questions by examining the historiography of race, colonialism, and science. The standard historiography has focused on the rise and fall of racial typologies in the north Atlantic and their contributions to troublesome political projects such as the Atlantic slave trade, Jim Crow policies, the eugenics movement, and the Holocaust. More recent histories have taken inspiration from postcolonial studies, standpoint theories, and indigenous studies to insist on a more global reckoning of race and science. If we focus on the southern hemisphere, for instance, we can see scientific racial conceptions enrolled for a different though not necessarily less innocent set of projects: the dispossession of indigenous lands and effacement of indigenous peoples, the glorification of race-mixing as a tool of nation building, and the cultivation of whiteness as a means to modernity. By examining classic and recent approaches to race and science we will grapple with the following questions: Is ‘race’ a product of 18th century French and English science? Or can we find earlier iterations in the idioms of conquest of Spanish America during the early modern period? Do the standard narratives concerning the history of racial conceptions in science change when looked at from the frame of the global south? Does race get ‘buried alive’ after WWII? And do recent developments in human genomics bring ‘race’ back from the dead, albeit in an anti-racist form?
Taught by: Gil-Riano, Sebastian
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

HSSC 508 Knowledge in Motion
This course provides a broad, interdisciplinary introduction to the movement of knowledge across space and time. In particular, we will be focusing on the economic models of knowledge movement, on comparative and trans-cultural views on science, on translation, and finally, on the global turn in the history of science. Since the movement of knowledge is inseparable from the production of knowledge, we will also start our discussion by looking back at some of the literature that constitutes the intellectual foundations of the history and sociology of science.
Taught by: Kucuk
Course not offered every year
Activity: Seminar
1.0 Course Unit
HSSC 510 READING SEM STS
This course will review major developments in biomolecular sciences and many historians of science, technology, and medicine have embraced the study of popular culture in recent years. They have drawn on a rich literature in mainstream history, on the history of reading, of the book, of museums, of oral culture, journalism, theater, and of the mass media including radio and television. Some have even proposed that popular culture provides insights into elite knowledge systems that are not accessible in other kinds of sources, thus privileging what is publicly known over the traditional private textual, visual and material records of the archive or museum. In this graduate seminar we will be exploring the relevance of the study of popular culture to the history of science, technology and medicine. Participants will write an original research paper in which they draw on popular culture as a resource for the interpretation of practices, theories, and material resources in natural knowledge systems. Readings will generally focus on surveys that explicitly discuss methods, though we will also read some primary sources possibly including science fiction texts, memoirs of patients, engineers, physicians and scientists, gee-whiz popular science books, and didactic books intended for children.
Taught by: BENSON

HSSC 517 Gender and Technical Knowledge
In this graduate seminar, we explore how technical knowledge systems have historically intersected with identity and social order. The materials emphasize gender, but our discussions and readings will also engage at times with disability, race, class and other social categories that have shaped participation in technical endeavors and been the focus of technical study. Our goal is to understand how embodiment and expertise intersect. We will explore why certain kinds of people have been understood to be unreliable knowers, pathologically embodied, untrustworthy, or dangerously linked to emotion, incompetence or confusion, while other kinds of people have been socially marked as embodying reliability, trustworthiness, or epistemological neutrality. These embodiments bear on the historical development of technical knowledge as a social system for the establishment of consensus about the nature of reliable truth. They are also relevant at many different levels to embodied social experiences of scientific information, personal health, reproduction and everyday technology. This course will give students the tools and insights needed to draw on feminist/gender/queer theory when it is useful to their research. That is the purpose of all of our readings. We begin with an exploration of some key ideas in feminist scholarship of the last few decades. Then we turn to three broad, interconnected queries, relating to the social organization of science, technology and medicine (who has been excluded, who favored? What kinds of work have been understood to belong to different kinds of people?); to the intellectual content of expertise (how have experts made technical sense of social and bodily difference? How have technologies expressed and performed gender?); and to the philosophical debate about the nature of technical knowledge, particularly science, as a fundamentally gendered (masculine) endeavor which privileges hierarchical explanations in ways that mimic the social order.

HSSC 525 Darwin and Evolution: New Perspectives
In this graduate reading seminar, we consider evolution as a cluster of sometimes mismatched theories about nature and time, a political resource in emerging debates about human difference and social order, and a theological conundrum that persists into the twenty-first century. We consider primary source materials by Lamarck, Chambers, Darwin, Wallace, Mayr, and other naturalists; and explore the contexts of their production and their meanings through the work of scholars including Browne, Secord, Keller, Richards (both Robert and Eveleen), Smocovitis, Graham and many others. Our goal is to develop new perspectives on ‘the Darwin Industry’ and think critically about how to move the field forward drawing on the most exciting new scholarly work in this area.

HSSC 528 Gender and Science
With a special focus on methods, this course explores the rich literature on gender and technical knowledge.
Taught by: Lindee
Course not offered every year
Activity: Seminar
1.0 Course Unit

This seminar will challenge students to encounter and interpret the city around them in unconventional ways. At a time when public commemoration has vigorously and sometimes violently re-entered our country’s public discourse, we wish to re-examine how monuments, memory, politics, and our senses shape our understandings of Philadelphia’s past, present, and possible futures. Our focus is on two intertwined themes: How we remember and What we remember. Treating monuments, films, and historical texts as key forms of interpretation - the building blocks of an official if unstable ‘public past’; we will likewise attend to the ‘backdrop’ of such written and built statements: everyday urban and domestic life as well as more public histories that have remained silent or risen to the surface at key moments.

Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

HSSC 561 Disability: History and Theory
Disability is the ‘next academic frontier,’ argues historian Douglas Baynton, ‘an analytic category with the transformative potential of race, class, sexuality, and gender.’ The purpose of this course will be explore recent literature on the history and theory of disability, focusing primarily on the history of physical disability. Throughout the semester, we will approach this literature with an eye to how disability studies relates to the fields of the history of science, medicine, and technology. Topics will include: the sociology of deviance, the medical vs. social model of disability, chronic illness and disease, genetics and disability, the role of disability in health care policy, as well as the politics of design and assistive technologies.
Taught by: Linker
Course not offered every year
Activity: Seminar
1.0 Course Unit
HSSC 564 History of Technology
In this course we read influential classic and recent works in the history and the philosophy of technology, tackling the ways in which the fields are analytically structured as well as their relation to each other. We also discuss approaches and methodological questions in general history and general philosophy. We start with Karl Marx, arguably the most influential historian and philosopher of technology of the modern era, and discuss him in relation to what has been one of the most visible debates in the historiography of technology - the question of technological determinism. We then travel in a roughly chronological order through key periods and methodological issues in the fields. During our journey we encounter the Middle Ages and historical theoreticians of the Annales School, the early modern period and questions about gender and microhistory, and the so-called Industrial Revolution and the questions it raises about what’s modern about modern technology. Mid-way through the class, we discuss two classics in the philosophy of technology, Martin Heidegger and Jürgen Habermas, who grapple precisely with the question about the modern element in industrial technology. As we enter the nineteenth and twentieth centuries, we expand our methodological horizon to include examples from the cultural history of technology and applications of the social constructivism debate to the history of technology. We end the class with works on the recently emerging fields of biotechnology and nanotechnology and with a set of monographs written in the nascent sub-discipline in the history and philosophy of technology, engineering studies.

HSSC 568 Minds and Machines
There is a plaque at Dartmouth College that reads: ‘In this building during the summer of 1956 John McCarthy (Dartmouth College), Marvin L. Minsky (MIT), Nathaniel Rochester (IBM), and Claude Shannon (Bell Laboratories) conducted the Dartmouth Summer Research Project on Artificial Intelligence as a research discipline to proceed on the basis of the conjecture that every aspect of learning or any other feature of intelligence can in principle be so precisely described that a machine can be made to simulate it.’ The plaque was hung in 2006, in conjunction with a conference commemorating the 50th anniversary of the Summer Research Project, and it enshrines the standard myth that Artificial Intelligence was born in 1955 when these veterans of early military computing applied to the Rockefeller Foundation for a summer grant to fund the workshop that in turn shaped the field. However, like so many myths, this one obfuscates the long-entangled histories that have come together in contemporary Artificial Intelligence research – including histories of labor, histories of automation, histories of intelligence, histories of mathematics, and histories of technology. This course surveys the historical scholarship that has investigated the intersections of minds and machines.

HSSC 588 Humans Beyond the Human
The humanities are once again influx as scholars experiment with a variety of new techniques and conceptual frameworks. In recent years many of these experiments have involved turning away from longstanding questions of representation, language, epistemology, and human exceptionalism and toward questions of enactment, materiality, ontology, and the nonhuman. In this seminar we will examine a variety of manifestations of this turn as they have emerged in history, anthropology, literary studies, and philosophy under names such as new materialism, multi-naturalism, big/deep history, multispecies ethnography, and object-oriented ontology. We will try to situate these recent turns in longer intellectual genealogies, drawing especially on works in science studies and the history of science that seek to provide contingent, situated accounts of what exists and what we can know about it. Objects of inquiry will include dogs, mushrooms, cyborgs, seeds, mosquitoes, bacteria, stones, jugs, pictures, hormone disruptors, and the cosmos.

Taught by: Benson
Course not offered every year

1.0 Course Unit

HSSC 597 Other Reasons
This course seeks to destabilize a monolithic vision of science as a singular, homogenous body of knowledge by revisiting its plural, heterogeneous histories. This course is particularly interested in exploring the historical entanglements between the sciences and the enchanted world of intangible entities such as spirits, ghosts and gods. The course will look at the theoretical critiques of ‘Enlightenment Rationality’ and ‘Science’ in post colonial theory; at a detailed and loosely chronological examination of the multifaceted entanglements of science and technology with the paranormal in the 19th and 20th centuries; and at the performative aspects of scientific rationality in colonial and postcolonial contexts in a bid to understand the background that led to postcolonial theorization.

HSSC 618 Cold War Science
Taught by: LINDEE
Course not offered every year
Activity: Seminar
1.0 Course Unit

HSSC 624 Experience and Experiment
This course will examine the role of sensory knowledge relative to the creation of scientific knowledge, and to the creation of ‘scientific knowledge’ as a category of knowledge. We will consider the entangled histories of proof, trial, and observation in conjunction with histories of particular and accumulated experience. How can singular phenomena be understood as illustrative of a universal law? How do experience and experiment fit into hierarchies or taxonomies of knowledge at different times, and in different cosmologies? Whose experience or experimentation is authoritative, and what makes it so? Readings will include theoretical and historical perspectives, as well as such topics as medieval and early modern optics and astral science, artisanal knowledge, and exploration.
Taught by: Truitt

HSSC 626 Research Seminar in History of Technology
This graduate seminar provides a structured environment in which each student executes an independent research project. Early class meetings focus on the craft of researching and writing scholarly articles. Later meetings are devoted to discussion of students progress on their research projects. Each student defines their own research topic in the history of technology, subject to the Professor’s approval.
One-term course offered either term
Activity: Seminar
1.0 Course Unit

HSSC 629 Genetics and Genomics
This course is called ‘Genetics and Genomics,’ but we are defining those terms broadly to potentially encompass historical studies of biomedicine, evolution, race theory, biological anthropology, reproduction, agriculture, animal breeding, psychiatry, social sciences, and so on. We are thinking about knowledges of embodiment and what they teach us about social and technical order—about systems, institutions, technologies, hierarchies, theories, practices, networks, and so on. The goal of the semester will be for each student to produce a first draft of a publishable research paper. Many of our readings are calibrated to complement the available archival collections at the American Philosophical Library, the University of Pennsylvania archives, the Academy of Natural History collections, the Chemical Heritage Foundation, Wagner Free Institute of Science, College of Physicians of Philadelphia, Hagley Museum and Library, and collections held in striking distance of Philadelphia, in New York, Princeton, Baltimore, and Washington DC. While APS will be a special focus of attention, given the remarkable collections there, students should make a special effort to become familiar with the many other resources that are available in the region, some of which have not been the focus of significant historical attention.

HSSC 665 Research Seminar im the History of Medicine
This course is focused on comparing and contrasting ethnographic and historical approaches to health and medicine. We will engage ethnographic and historical approaches to health and medicine to explore the methodological, empirical, and theoretical stakes of thinking medicine, disease, and the body across and within disciplines. Taking a methodological and comparative approach, the course will explore ethnographic and historical approaches to such themes as the body, disease, pharmaceuticals, and biomedical knowledge-production in global and historical context. We aim to develop skills and knowledge for critically reading anthropological, historical, and sociological literatures on medicine, the body, and disease. As such, students will develop a research project, which may be in either the history or anthropology of medicine and/or science, or a project, which combines such approaches, utilizing the comparative and methodological frameworks of the course to develop an original analysis on a topic of their choosing.

Course not offered every year
Activity: Seminar
1.0 Course Unit
HSSC 667 Capitalism: Theorizing economy in sci & med
What are the relationships between capitalism and the practice and experience and experience of medicine? How have historians and anthropologists theorized capitalism and political economy in accounts of health and medicine? What do such theories account for and what is foreclosed? This research seminar examines theories of capitalism as they are taken up in historical and ethnographic accounts of science, health, healing, and medicine. Exploring how contemporary and classic accounts have sought to analyze and unpack the relationship between economy and health, we will examine how political economic approaches to health and medicine have informed historical and ethnographic accounts of health and illness -- asking, for instance, how theories of neoliberalism have been used to explain health inequalities (and vice versa) -- and will analyze how scholars have linked practices of financialization, speculation, and investment to changing dynamics of health, medicine, healing, and the generation of medical knowledge. Course time will also be devoted to independent research through which students will develop and write up a research paper on an area of interest related to the course theme.

HSSC 688 Research Seminar in History of Human Sciences
This concentrated research seminar provides graduate students with time, support, and space to hone their writing skills. Thematically, the seminar closely examines historiographic trends within the history of human sciences - namely the stylistic, methodological, and investigative strategies adopted by prize-winning articles in the field. By carefully dissecting the architecture of these articles, our aim is to identify models that we can use in our own scholarly endeavors and to draft an article with these in mind. Accordingly, a significant portion of the course is devoted to examining archival and primary source resources in the region, to discussing research strategies, and to workshopping our work-in-progress. Students can use the course to significantly revise an already written paper or to draft a new paper. The course's overarching purpose is to create the scaffolding necessary for students to produce a substantial research paper in the history of human sciences (broadly conceived) that is potentially publishable as a journal article.

HSSC 697 Other Reasons
Postcolonial Theories, building largely on Frankfurt School theorists, have critiqued the totalizing aspirations of what it calls 'Enlightenment Rationality'. Such critiques have also fed a range of critiques of Science. At the heart of such critiques is a rather restricted and plastic idea of Science as a singular, homogenous body of knowledge that has steadily promoted the disenchantment of the world. In this course we seek to destabilize this monolithic vision of science by revisiting its plural, heterogeneous histories. The course is particularly interested in exploring the historical entanglements between the sciences and the enchanted world of intangible entities such as spirits, ghosts and gods. The course will be divided into three broad sections. The first will deal with the theoretical critiques of 'Enlightenment Rationality' and 'Science' in postcolonial theory. The second will undertake a detailed and loosely chronological examination of the multifaceted entanglements of science and technology with the paranormal in the 19th and 20th centuries. Finally, the last section will explore the performative aspects of scientific rationality in colonial and postcolonial contexts in a bid to understand the background that led to the postcolonial theorization.

HIST 001 Making of the Modern World
How did the world we now live in come to be? Is globalization a recent development or does it have a history of its own? At what point can we say that a world economy emerged and what sort of relations of production and distribution linked it together? When did people start thinking and acting as citizens of nations rather than as subjects of rulers or members of religious or ethnic communities, and what were the consequences? How should we conceptualize the great revolutions (French, American, Russian, Chinese) that would determine the landscapes of modern global politics? This course is designed to help us think about the 'making of the modern,' not by means of an exhaustive survey but by exploring a range of topics from unusual perspectives: piracy, patriotism, prophecy; global struggles for political and human rights, drivers of war and peace, capitalism, nationalism, socialism, fascism, fundamentalism; communication and culture.

HIST 009 Introduction to Digital Humanities
This course provides an introduction to foundational skills common in digital humanities (DH). It covers a range of new technologies and methods and will empower scholars in literary studies and across humanities disciplines to take advantage of established and emerging digital research tools. Students will learn basic coding techniques that will enable them to work with a range data including literary texts and utilize techniques such as text mining, network analysis, and other computational approaches.

HIST 011 Deciphering America
This course examines American history from the first contacts of the indigenous peoples of North America with European settlers to our own times by focusing on a few telling moments in this history. The course treats twelve of these moments. Each unit begins with a specific primary document, historical figure, image, location, year, or cultural artifact to commence the delving into the American past. Some of these icons are familiar, but the ensuing deciphering will render them as more complicated; some are unfamiliar, but they will emerge as absolutely telling. The course meets each week for two 50-minute team-taught lectures and once recitation session. Course requirements include: in-class midterm and final exams; three short paper assignments; and punctual attendance and participation in recitations.

HIST 027 Ancient Rome
At its furthest extent during the second century CE, the Roman Empire was truly a ‘world empire’, stretching from northern Britain to North Africa and Egypt, encompassing the whole of Asia Minor, and bordering the Danube in its route from the Black Forest region of Germany to the Black Sea. But in its earliest history it comprised a few small hamlets on a collection of hills adjacent to the Tiber river in central Italy. Over a period of nearly 1500 years, the Roman state transformed from a mythical Kingdom to a Republic dominated by a heterogeneous, competitive aristocracy to an Empire ruled, at least notionally, by one man. It developed complex legal and administrative structures, supported a sophisticated and highly successful military machine, and sustained elaborate systems of economic production and exchange. It was, above all, a society characterized both by a willingness to include newly conquered peoples in the project of empire, and by fundamental, deep-seated practices of social exclusion and domination. This course focuses in particular upon the history of the Roman state between the fifth century BCE and the third century CE, exploring its religious and cultural practices, political, social and economic structures. It also scrutinizes the fundamental tensions and enduring conflicts that characterized this society throughout this 800-year period.

HIST 030 The Emergence of Modern Europe
This course traces the formation of European society, politics and culture from its earliest days through the era of the Reformation, ca. 1000-1600 CE. Major themes will include: politics and power; law and the state; economics and trade; religion; learning and the rise of universities; social organization; everyday life. The reading and analysis of primary sources from each era will be important in understanding Europe's key features and development.

HIST 031 Making and Breaking European Hegemony
HIST 031 will trace the dramatic rise and fall of Europe's global hegemony during the period roughly from 1450 to 1950. Among the major themes we will examine are: states and power; borders and resistance, race and genocide, economies and oppression, ideas and revolution, the building and change of hierarchies of gender and power. Truly, a dramatic story. The objectives of the course are: 1) To serve as an introduction to the study of history for majors and non-majors alike, and to teach the critical analysis of historical sources; 2) to teach substantive knowledge of European history; 3) to provide a foundation for further study of the European past. No previous background in European or World history is required.

HIST 046 Portraits of Soviet Society: Literature, Film, Drama
How can art and literature open a window on Russian lives lived over the course of the tumultuous twentieth century? This course adopts a unique approach to questions cultural and social history. Each week-long unit is organized around a medium-length film, text, or set of texts by some of the most important cultural figures of the era (novella, play, memoir, film, short stories) which opens up a single scene of social history: work, village, avant-garde, war, Gulag, and so on. Each cultural work is accompanied by a set of supplementary materials: historical readings, paintings, cultural-analytical readings, excerpts from other literary works, etc. We will read social history through culture and culture through history. Prerequisite: All readings and lectures in English.
For BA Students: Humanities and Social Science S
Taught by: Platt

Also Offered As: REES 187
Activity: Lecture
1.0 Course Unit
Notes: All readings and lectures in English

HIST 047 Portraits of Russian Society Society: Arts, Fiction, Drama
This course covers 19C Russian cultural and social history. Each week-long unit is organized around a single medium-length text (novella, play, memoir) which opens up a single scene of social history: birth, death, duel, courtship, tsar, and so on. Each of these main texts is accompanied by a set of supplementary materials: paintings, historical readings, cultural-analytical readings, excerpts from other literary works, etc. The object of the course is to understand the social codes and rituals that informed nineteenth-century Russian life, and to apply this knowledge in interpreting literary texts, other cultural objects, and even historical and social documents (letters, memoranda, etc.). We will attempt to understand social history and literary interpretation as separate disciplines yet also as disciplines that can inform one another. In short: we will read the social history through the text, and read the text against the social history.

HIST 048 The Rise and Fall of the Russian Empire, 1552-1917
How and why did Russia become the center of the world's largest empire, a single state encompassing eleven time zones and over a hundred ethnic groups? To answer this question, we will explore the rise of a distinct political culture beginning in medieval Muscovy, its transformation under the impact of a prolonged encounter with European civilization, and the various attempts to re-form Russia from above and below prior to the Revolution of 1917. Main themes include the facade vs. the reality of central authority, the intersection of foreign and domestic issues, the development of a radical intelligentsia, and the tension between empire and nation.

1.0 Course Unit

Out of an obscure, backward empire, the Soviet Union emerged to become the great political laboratory of the twentieth century. This course will trace the roots of the world's first socialist society and its attempts to recast human relations and human nature itself. Topics include the origins of the Revolution of 1917, the role of ideology in state policy and everyday life, the Soviet Union as the center of world communism, the challenge of ethnic diversity, and the reasons for the USSR's sudden implosion at the end of the century. Focusing on politics, society, culture, and their interaction, we will examine the rulers (from Lenin to Gorbachev) as well as the ruled (peasants, workers, intellectuals, Russians and non-Russians). The course will feature discussions of selected texts, including primary sources in translation.

HIST 050 England and the British Isles to 1707
The subject of this course is the history of the British Isles from the Roman Conquest in 43AD to the creation of the United Kingdom in 1707. Between these two dates the various societies and cultures in the British Isles were brought into the orbit of the Roman Empire, converted to Latin Christianity, and developed distinctive cultures and strong ties with the Continent. From the twelfth century on, the kingdom of England began to exert its power over Wales, Ireland, and Scotland, although English power waxed and waned in these areas between the twelfth and the seventeenth centuries. The Anglo-Norman continental empire of the Plantagenet dynasty also played a large part in shaping the English monarchy, as did the playing out of the Hundred Years War, the internal divisions in fifteenth-century English society, and the rise of the Tudor-Stuart dynasty.

HIST 051 Modern Britain, 1700-present: Empire, Industry and Democracy
In this course, we will investigate the extraordinary story of Britain’s rise to global predominance and the question of its ‘decline’ in the twentieth century. Our readings and discussions will engage with dominant ideas, social processes, and popular beliefs; we will look at the structure of government and the texture of everyday lives. We will encounter Britons in all corners of the world even as we explore the complexities of metropolitan British history. Big ideas were born there: industrial capitalism, political liberalism, and scientific racism. Britain’s political system, with its early form of (limited) democracy, gave shape to party politics around the world. We begin in the early eighteenth century—focusing on the agricultural and social changes that accompanied the onset of the Industrial Revolution. We’ll examine the rise of the Hanoverian fiscal-military state, and its consolidation and transformation in the course of the Napoleonic Wars. We end in the present day, looking at a Britain which may have lost an Empire, but which retains a strong welfare state, a global cultural presence, and a permanent seat on the UN Security Council. Should we understand its rise and subsequent retraction as a store of an ascent and a decline? We will interrogate that narrative throughout the semester. The course moves roughly chronologically, but by way of discrete units that provide different perspectives on British politics, economics, and culture.

HIST 055 Reading the Classics
In this course we will study the early roots of Western culture—the Biblical, Greek and Roman traditions—as well as how sixteenth- and seventeenth-century European authors reproduced, rethought and reshaped these early traditions. Instead of reading and discussing the required texts according to the date when they were written (first the early traditions and ending with the Renaissance views), we will focus our attention on a few themes that were central concerns to those living in Classic and Renaissance times, and that continue to influence modern ways of thinking and acting in Western societies: conceptions of God and the place of religion in society; nature of power and authority, and individuals’ rights and duties; good, evil, and ethical philosophy; views on women, their nature and roles in society; ethnography and the perception of other cultures and societies. In addition to reading and discussing several of the biblical books—Genesis, Exodus, the Book on Revelation—we will study other seminal classical works—Sophocles’ Antigone, Aristotle’s Politics and Ethics, Herodotus’ The Histories; Plato’s Apology—and works by Michel de Montaigne, Maria de Zayas y Sotomayor, Marie de Gournay, Christopher Marlowe, William Shakespeare, and several others. We will also work with books published in the last decades, analyzing the classics and and their reception in various periods of history, but also books that analyze what the classics tell us today—Dreyfus and Kelly’s All things shining, Reading the Western Classics to find meaning in a secular Age; Anthony Grafton’s Bring Out Your Dead: the Past as Revelation; James Miller, Examined Lives, from Socrates to Nietzsche; and Sarah Bakewell, How to Live: Or a Life of Montaigne in One Question and Twenty Attempts at an Answer.

HIST 060 Global Environmental History from Paleolithic to the Present
This course explores the changing relationships between human beings and the natural world from early history to the present. We will consider the various ways humans across the globe have interacted with and modified the natural world by using fire, domesticiating plants and animals, extracting minerals and energy, designing petrochemicals, splitting atoms and leaving behind wastes of all sorts. Together we consider the impacts, ranging from population expansion to species extinctions and climate change. We examine how human interactions with the natural world relate to broader cultural processes such as religion, colonialism and capitalism, and why it is important to understand the past, even the deep past, in order to rise to the challenges of the present.

HIST 070 Colonial Latin America
The year 1492 was pivotal in the history of the world. It precipitated huge population movements within the Americas and across the Atlantic - a majority of them involuntary as in the case of indigenous and African people who were kidnapped and enslaved. It led to cataclysmic cultural upheavals, including the formation of new cultures in spaces inhabited by people of African, European and indigenous descent. This course explores the processes of destruction and creation in the region known today as Latin America in the period 1400 - 1800. Class readings are primary sources and provide opportunities to learn methods of source analysis in contexts marked by radically asymmetrical power relationships.

HIST 071 Modern Latin America, 1808-Present
This course examines central themes of Latin American history, from independence to the present. It engages a hemispheric and global approach to understand the economic and social transformations of the region. We will explore the anti-imperial struggles, revolutions, social movements, and global economic crises that have given rise to new national projects for development, or have frustrated the realization of such goals. Taking a historical perspective, we ask: What triggers imperial breakdown? How did slaves navigate the boundary between freedom and bondage? Was the Mexican Revolution revolutionary? How did the Great Depression lead to the rise of state-led development? In what ways have citizens mobilized for equality, a decent standard of living, and cultural inclusion? And what future paths will the region take given uneasy export markets and current political uncertainty?

HIST 073 Colonial Pasts and Indigenous Futures: A History of Belize and Central America
The small country of Belize (formerly British Honduras) represents the past history and ongoing story of Central America and the region. Belize has a colonial past and present with strong ties to the UK and emerging connections to the US. At the same time, there is a growing post-colonial debate within the country about the role of indigenous Maya people in the past, present and future of the country. This course will be the first of two courses which will lead to active work in Belize during the summer of 2021 with the development and creation of a Community Museum within the Maya village of Indian Creek in southern Belize. This course will be taught by Richard M. Leventhal who has worked in Belize for the past 20 years. Leventhal will be joined by 3 Maya activists from Belize who will co-teach the class for 5-6 weeks out of the semester.

HIST 076 The African Diaspora: Global Dimensions
This class examines the cultural and social ramifications of the African diaspora on a global level. It is divided into two major sections. The first section provides the historical background to the African diaspora by focusing on the forced migration of Africans to Spanish and Portuguese colonies in the Americas. We will then delve into the black experience in French and British colonial spaces. In this section, we will also endeavor to move beyond the Atlantic-centric paradigm in studies of the African diaspora by examining free and unfree migrations of African people across the Indian Ocean to places as far away as India and the Philippines. The second half of the class devotes significant attention to the historical legacy of slavery and colonialism in places like Brazil, Cuba and the United States. In this section, we will discuss such issues as race relations, the struggle for civil rights for African-descent people as well as the emergence and the implementation of affirmative action policies in places like Brazil and the US.

HIST 086 History, Culture, and Religion in Early India
This course surveys the culture, religion and history of India from 2500 BCE to 1200 CE. The course examines the major cultural, religious and social factors that shaped the course of early Indian history. The following themes will be covered: the rise and fall of Harappan civilization, the 'Aryan Invasion' and Vedic India, the rise of cities, states and the religions of Buddhism and Jainism, the historical context of the growth of classical Hinduism, including the Mahabharata, Ramayana and the development of the theistic temple cults of Saivism and Vaisnavism, processes of medieval agrarian expansion and cultic incorporation as well as the spread of early Indian cultural ideas in Southeast Asia. In addition to assigned secondary readings students will read select primary sources on the history of religion and culture of early India, including Vedic and Buddhist texts, Puranas and medieval temple inscriptions. Major objectives of the course will be to draw attention to India's early cultural and religious past and to assess contemporary concerns and ideologies in influencing our understanding and representation of that past.

HIST 088 From Oil Fields to Soccer Fields: The Middle East in the 20th Century
How did the Middle East become modern? This seemingly simple question requires a complex appraisal of civic society. Life changed in spectacular ways for the denizens of the Middle East in the span of a century. Oil -- once considered a scarce natural commodity -- was discovered and exported in substantial quantities that altered the economic landscape of the region and the world. Movie theaters, sewage systems, and public housing projects changed the urban backdrop of Middle Eastern cities and towns. Soccer, swimming, and volleyball became some of the new-fangled sports embraced by Middle Eastern communities. This course will traverse these fascinating and fraught cultural transformations of the Middle East in the twentieth century. Although inclusive of the military battles and conflicts that have affected the region, this class will move beyond the cliches of war to show the range of issues and ideas with which intellectuals and communities grappled. The cultural politics and economic value of oil as well as the formation of a vibrant literate life will be among the topics covered. By considering illustrative cultural moments that shed light on the political history of the period, this course will develop a nuanced framework to approach the history of the U.S. involvement in the region, the Iran-Iraq war, the Arab/Israeli conflict, and the current crises in the Persian Gulf.

HIST 090 Knights with Katanas: Medieval Japan and Europe Compared
This course aims to provide an overview of some of the main themes and problems in the history and historiography of medieval Japan by drawing on comparisons with European counterparts and interpretive models. To this end, each week’s readings on Japan are paired with one or more works on medieval Europe dealing with a similar theme. The primary purpose is not only to draw comparisons between the two civilizations and their development but also to use the great riches of scholarship on the European Middle Ages to shed light on possible new avenues of inquiry and perspectives on Japan.

HIST 096 Late Imperial China
This lecture course -- the first of a two-part sequence -- examines the history of late imperial China through the early 19th century. We begin with the Song dynasty transformation: the rise of gentry society and imperial absolutism, the institution of Confucian orthodoxy, the shift of the population and the economic center of gravity to the south, the commercialization of the economy, and change in the relative status of women and men. We then trace China's subsequent political and social history, including the following themes: inner vs. outer court politics; law, government, and society; intellectuals and political dissent; gender, family, and kinship practices; patterns of peasant life and rebellion; traditional foreign relations and first contacts with the West; internal sources of the decline of imperial order.

1.0 Course Unit

HIST 097 History of Modern China
From an empire to a republic, from communism to socialist-style capitalism, few countries have ever witnessed so much change in a hundred year period as China during the twentieth century. How are we to make sense out of this seeming chaos? This course will offer an overview of the upheavals that China has experienced from the late Qing to the Post-Mao era, interspersed with personal perspectives revealed in primary source readings such as memoirs, novels, and oral accounts. We will start with an analysis of the painful transition from the last empire, the Qing Dynasty (1644-1911), to a modern nation state, followed by exploration of a century-long tale of incessant reform and revolution. The survey will focus on three main themes: 1) the repositioning of China in the new East Asian and world orders; 2) the emergence of a modern Chinese state and nationalistic identity shaped and reshaped by a series of cultural crises; and finally, 3) the development and transformation of Chinese modernity. Major historical developments include: the Opium War and drug trade in the age of imperialism, reform and revolution, the Nationalist regime, Mao's China, the Cultural Revolution, and the ongoing efforts of post-Mao China to move beyond Communism. We will conclude with a critical review of the concept of 'Greater China' that takes into account Taiwan, Hong Kong, and the Chinese diaspora in order to attain a more comprehensive understanding of modern China, however defined, at the end of the last century.

HIST 108 American Origins
The United States was not inevitable. With that assumption as its starting point, this course surveys North American history from about 1500 to about 1850, with the continent's many peoples and cultures in view. The unpredictable emergence of the U.S. as a nation is a focus, but always in the context of wider developments: global struggles among European empires; conflicts between indigenous peoples and settler-colonists; exploitation of enslaved African labor; evolution of distinctive colonial societies; and, finally, independence movements inspired by a transatlantic revolutionary age.

HIST 109 Hamilton's America: US History 1776-1800
In this course, students will learn about the political, constitutional, and social history of the United States from 1776 (the year the colonies declared their independence from Great Britain) to 1800 (the year Thomas Jefferson won the presidency in a heated partisan election for the presidency). Alexander Hamilton, an influential American statesman during this time, will be our guide to the many events and transformations that occurred during these years. The course is not, however, a biographical course about Hamilton. Topics covered include: the politics of independence, the Revolutionary War, the development of state and national republics, the creation of the U.S. Constitution, the role of ordinary people in the politics of the time period, the problem of slavery in the new nation, Native American power and loss, diplomatic affairs, and the rise of partisan politics.

HIST 118 Witchcraft and Possession
This course explores world witchcraft and possession from the persecutions of the early seventeenth century through the rise of Wicca in the twentieth century. The mere mention of these terms, or of such close cousins as demonology, sorcery, exorcism, magic, and the witches Sabbath, raises clear ethnographic and historical challenges. How can the analysis of witchcraft—including beliefs, patterns of accusation, the general social position of victims, the intensity and timing of witch hunts, and its relation to religious practice, law, language, gender, social marginalization, and property—lead us to a more humane understanding of belief and action? Films such as The Exorcist, The Blair Witch Project, The Crucible, and Three Sovereigns for Sarah will focus discussion.

HIST 121 Silver and Gold in the Americas from pre-history to the present
Precious metals have shaped economies and socio-cultural processes in the Americas for thousands of years. Students will work with pre-Columbian gold objects held by the University Museum and be introduced to the long history of indigenous metallurgy. We will also analyze the way gold and silver sent from the ‘New World’ to the ‘Old World’ played a key role in changing economies around the globe. Locally, mining centers were places marked by forced labor, conspicuous consumption, and the destruction of ecosystems. Internationally, gold and silver prices had outsized effects on monetary and trade policies. This course uses case studies to delve into the fascinating history of precious metals and mining in North and South America. We will analyze documents describing the gold objects ransacked by Spanish conquistadors, examine 17th Century proto-industrial silver mining at Potosi, Bolivia, trace the impact and human cost of the huge gold strikes in Minas Gerais, in colonial Brazil, read new work on the California and Yukon moments of ‘rush’, and briefly discuss the role of precious metals in money laundering. An introductory unit focuses on the history of the gold standard in the United States and internationally.

HIST 123 Economic History of Europe I
This course concentrates on the economy of Europe in the Early Modern Period, 1450-1750. It was a time of great transition. Europe developed from an agriculturally-based to an industrially-based economy, with attendant changes in society and culture. From subsistence-level productivity, the European economy expanded to create great surfeits of goods, with attendant changes in consumption and expectation. Europe grew from a regional economic system to become part–some would say the heart–of a global economy, with attendant changes in worldview and identity. Economic intensification, expansion, globalization, and industrialization are our topics, therefore. Beginning with economic organizations and practices, we will consider how these changed over time and influenced society and culture. The course takes as its point of departure the experience of individual, working men and women: peasants and artisans, merchants and landlords, entrepreneurs and financiers. Yet, it argues outward: from the particular to the general, from the individual to the social, from the local to the global. It will suggest ways in which the economy influenced developments or changes that were not in themselves economic, shaped, and deflected economic life and practice.

HIST 126 Modern Europe, 1789-1919
It's old, it's new. It's unfamiliar, it's recognizable. This course investigates the collapse of the ‘old regime’ and the birth of something like the Europe we recognize. The long nineteenth century witnessed the development of political, economic, and cultural phenomena we often see as characteristic of modern society. Topics considered include political revolution, industrialization, liberalism, imperialism, and new ideologies of gender, race, and class. Our focus will be consistently transnational. Where did Europe begin and end? How did borders and boundaries operate at the edge of nations, but also within societies? We will investigate these questions as we follow European history from the violence and optimism of the French Revolution to the chaos of the First World War.

HIST 127 The Material Past in a Digital World
The material remains of the human past—objects and spaces—provide tangible evidence of past people’s lives. Today’s information technologies improve our ability to document, study, and present these materials. But what does it mean to deal with material evidence in a virtual context? In this class, students will learn basic digital methods for studying the past while working with objects, including those in the collections of the Penn Museum. This class will teach relational database design and 3D object modeling. As we learn about acquiring and managing data, we will gain valuable experience in the evaluation and use of digital tools. The digital humanities are a platform both for learning the basic digital literacy students need to succeed in today’s world and for discussing the human consequences of these new technologies and data. We will discuss information technology’s impact on the study and presentation of the past, including topics such as public participation in archaeological projects, educational technologies in museum galleries and the issues raised by digitizing and disseminating historic texts and objects. Finally, we will touch on technology’s role in the preservation of the past in today’s turbulent world. No prior technical experience is required, but we hope students will share an enthusiasm for the past.

HIST 131 Financial Meltdown, Past and Present
Economic history is increasingly recognized as a crucial source of policy advice and is invoked with growing frequency in public debates. In particular, the subprime crisis in 2008 and after has generated a demand for ‘historical perspective’ that would improve the understanding of the causes of financial turmoil and facilitate the prevention of comparable catastrophes. This course begins with a review of the principal features of the subprime crisis of 2008 and asks, so to speak, ‘how did we get there?’ It answers by providing historical insights that shed light on crucial aspects of financial disasters. This is a history course, engaging with topics pertaining to economics, law and politics (national and international). Students with diverse backgrounds are expected to benefit from this course through acquiring a concrete knowledge of the historical evolution of fundamental institutions of financial capitalism. Ultimately, students enrolling in this course are expected to achieve proficiency in historically informed discussion of the mechanisms that were played out in the subprime crisis and beyond.

HIST 133 Free Speech and Censorship
This course will explore the idea of free speech—its justification, its relationship to various forms of censorship, and its proper limits—as a historical, philosophical, legal, and ultimately, political question. In the first half of the course, we will explore the long history across the West of the regulation of various kinds of ideas and their expression, from malicious gossip to heresies, and read classic arguments for and against censorship, copyright protections, and standards of taste and decency and of truth. In the second part of the seminar, after looking at how the idea of freedom of speech came to seem an existential prerequisite for democracy as well as individual liberty, we will take up the historical and philosophical questions posed by such recent dilemmas as whether or not hate speech deserves the protection of the First Amendment, the distinction between art and pornography from the perspective of freedom of expression, speech during wartime, and the transformative effects of the internet on the circulation and regulation of ideas. We will end the semester by thinking about the globalization of the idea of free speech as a human right and its implications, both positive and negative. Readings will range from Robert Darnton’s The Forbidden Best-Sellers of Pre-Revolutionary France, to D. H. Lawrence’s Lady Chatterley’s Lover, to documents concerning the cartoons of Charlie Hebdo and law review articles about Citizens United v. FEC. We will also make considerable use of local resources, from museums to the library.

HIST 134 Origins of Nazism: From Democracy to Race War and Genocide
Where did the Nazis come from? Was the Weimar Republic bound to fail? Did the Treaty of Versailles or the Great Depression catapult the Nazis into power? What was the role of racism, of Anti-Semitism? How did the regime consolidate itself? What was the role of ordinary people? How do we explain the Holocaust and what kind of a war was the Second World War? Grappling with these and more questions, the first half of the course focuses on Germany’s first democracy, the Weimar Republic and its vibrant political culture. In the second half, we study on the Nazi regime, how it consolidated its power and remade society based on the concepts of race and struggle. Discussions of race and race-making are crucial throughout the course. In the name of the ‘racial purity’, the Nazi state moved relentlessly against Germany’s Jewish population and cleansed German society of all ‘undesirable’ elements. These ideas and practices didn’t originate with the Nazis and they didn’t operate in a geopolitical vacuum. Thinking about Nazi racism and genocide in both its particular specifics and in a larger global historical context is the main goal of this course.

HIST 135 Cold War: Global History
The Cold War was more than simply a military confrontation between the United States and the Soviet Union; it was the frame within which the entire world developed (for better or worse) for nearly five decades. This course will examine the cold War as a global phenomenon, covering not only the military and diplomatic history of the period, but also examining the social and cultural impact of the superpower confrontation. We will cover the origins of the conflict, the interplay between periods of tension and detente, the relative significance of disagreements within the opposing blocs, and the relationship between the ‘center’ of the conflict in the North Atlantic/European area and the global ‘periphery’. HIST 139 Jews and Judaism in Antiquity
A broad introduction to the history of Jewish civilization from its Biblical beginnings to the Middle Ages, with the main focus on the formative period of classical rabbinic Judaism and on the symbiotic relationship between Judaism, Christianity, and Islam. For BA Students: History and Tradition Sector Taught by: Dohrmann Course usually offered in spring term Also Offered As: JWST 156, NELC 051, NELC 451, RELS 120 Activity: Lecture 1.0 Course Unit

HIST 140 Medieval and Early Modern Jewry
Follow the journey of one global diaspora over a millennium of cultural, intellectual, social, and religious change. From the rise of Islam in the seventh century to the separation of church and state in the seventeenth, Jewish people were intimate parts of, and at the same time utterly othered by, the many societies in which they lived. This basic duality is at the heart of this course, exploring how Jewish religion and culture evolved in relationship with Muslim and Christian majorities. Students will develop an understanding of the rich dynamism of premodern Judaism and Jewish life, with an emphasis on global diversity and internal differentiation as well as change over time. We will look for threads of continuity and moments of transformation, decode illustrative texts, images, and documents (in English), and ask how the Judaism that faced modernity had been shaped by a staggering array of different cultural circumstances after antiquity. The course includes attention to anti-Jewish phenomena like expulsion and blood libel, but also at coexistence and creative cultural synthesis, avoiding any simplistic narrative and asking about their legacy in the present day. It will look at the Jewish past from the inside, including less familiar dimensions including philosophy, magic, messianism, and family life. For BA Students: History and Tradition Sector Taught by: Oravetz Albert Course usually offered in fall term Also Offered As: JWST 157, NELC 052, RELS 121 Activity: Lecture 1.0 Course Unit

HIST 141 Jews in the Modern World
This course offers an intensive survey of the major currents in Jewish culture and society from the late middle ages to the present. Focusing upon the different societies in which Jews have lived, the course explores Jewish responses to the political, socio-economic, and cultural challenges of modernity. Topics to be covered include the political emancipation of Jews, the creation of new religious movements within Judaism, Jewish socialism, Zionism, the Holocaust, and the emergence of new Jewish communities in Israel and the United States. No prior background in Jewish history is expected. HIST 143 Foundations of European Thought: from Rome to the Renaissance
This course offers an introduction to the world of thought and learning at the heart of European culture, from the Romans through the Renaissance. We begin with the ancient Mediterranean and the formation of Christianity and trace its transformation into European society. Along the way we will examine the rise of universities and institutions for learning, and follow the humanist movement in rediscovering and redefining the ancients in the modern world. For BA Students: History and Tradition Sector Taught by: Moyer One-term course offered either term Also Offered As: COML 143 Activity: Lecture 1.0 Course Unit

HIST 145 Discover the Middle Ages
This course offers a broad introduction to the history of medieval Europe roughly from the fourth century CE, when Roman civilization faced a series of crises that led to its eventual fall in the West and ushered in the Middle Ages, to the sixteenth century, when European society entered a new early-modern phase. As this is a long period, we will focus on themes that will help us explore some of the most important historical problems related to the period: why was it that a sophisticated and militarily superior Roman empire could fall to ‘barbarians’? How did political power transform into a feudal model? What did it mean to be a medieval knight? The Middle Ages are known as ‘an age of faith’ but, at the same time, it was an age of questioning that invented the modern university—what roles did faith and knowledge play in the medieval world? It was also a time where many cultures, races and religions came into contact, both at home and in efforts at exploration and conquest. How did medieval culture handle difference, and how did that influence early-modern and even modern approaches? The class will involve a mixture of lecture and discussion, and will include visits to local museum and manuscript collections to provide students first-hand contact with the visual and material culture of medieval Europe. HIST 148 Warriors, Concubines & Converts: the Ottoman Empire in the Middle East & Europe
For almost six hundred years, the Ottomans ruled most of the Balkans and the Middle East. From their bases in Anatolia, Ottoman armies advanced into the Balkans, Syria, Egypt, and Iraq, constantly challenging the borders of neighboring European and Islamicate empires. By the end of the seventeenth century, Constantinople, Jerusalem, Cairo, Baghdad, Sarajevo, Budapest, and nearly Vienna came under Ottoman rule. As the empire expanded into Europe and the Middle East, the balance of imperial power shifted from warriors to converts, concubines, and intellectuals. This course examines the expansion of the Ottoman sultanate from a local principality into a sprawling empire with a sophisticated bureaucracy; it also investigates the social, cultural, and intellectual developments that accompanied the long arc of the empire’s rise and fall. By the end of the course, students will be able to identify and discuss major currents of change in the Ottoman Empire and the Middle East. The student will have a better understanding of the roles of power, ideology, diplomacy, and gender in the construction of empire and a refined appreciation for diverse techniques of historical analysis.

HIST 151 Race, Space and Place in American History
This course provides with a historical introduction to America’s racial and ethnic groupings by examining the social, spatial and historical forces that have defined these groups. Weekly lectures and readings trace American racial formations, identities and experiences from the age of Columbus to the present day. Following the work of historians and geographers who emphasize the importance of space and place in constructions of racial and ethnic identity, most of the class readings chart the evolution of such identities within specific regions or communities. Early readings illuminate the origins of categories such as ‘white,' black, ‘Native American’ and ‘Asian' by exploring the colonial encounters in which these identities first took shape; while later readings trace how these identities have been maintained and/or changed over time. Less a product of racial attitudes than of economic and political interests, early American conceptions of race first took shape amidst contests over land and labor that pitted European immigrants against the indigenous peoples of North America, and ultimately led to the development of racial slavery. Colonial legal distinctions between Christians and Heathens were supplanted by legislation that defined people by race and ethnicity. Over time these distinctions were reinforced by a variety of other forces. Distinctive from place to place, America’s racial and ethnic groupings have been shaped and reshaped by regional economies such as the slave South, political initiatives such as Indian Removal and Chinese Exclusion Acts, a changing national immigration policy, and sexual and social intermixture and assimilation. Course readings will examine the links between race, region, labor, law, immigration, politics, sexuality and the construction and character of racialized spaces and places in America.

HIST 154 Histories of Race and Science in Philadelphia
The history of race and science has its American epicenter in Philadelphia. Throughout this Academically-Based Community Service (ABCS) course, we will interrogate the past and legacy of racial science in the United States; the broad themes we broach will be met concretely in direct engagement with Penn and the Philadelphia community. As an extended case study, students will undertake independent research projects using primary source documents from local archives, tracing the global history of hundreds of human skulls in the 19th century Samuel G. Morton cranial collection at the Penn Museum, a foundational and controversial anthropological collection in the scientific study of race. These projects will be formed through an ongoing partnership with a Philadelphia high school in which Penn students will collaborate with high school students on the research and design of a public-facing website on the Morton collection and the legacy of race and science in America. In our seminar, we will read foundational texts on the study of racial difference and discuss anti-racist responses and resistance to racial science from the 19th century to the present. Throughout this course, we will explore interconnected narratives about Penn and Philadelphia’s outsized role in the history of racial science, about decolonization and ethics in scholarly and scientific practice, about the politics of knowledge and public-facing scholarship, and about enduring legacies of racial science and racial ideologies. All students are welcome and there are no prerequisites, save for intellectual curiosity and commitment to the course. This course will be of particular interest to those interested in race, American history and the history of science, anthropology, museum studies, education, and social justice.

HIST 162 The American West
This course explores the social and cultural history and current views of the many Wests we think we know. In 1872, President Grant established Yellowstone National Park, only the first of many national and state nature reserves in the west. Even while the Parks were widely celebrated, in 1876 Grant allowed miners and land speculators into the Black Hills, or Paha Sapa, land long considered sacred by the Lakota peoples and ‘protected’ for them as recently as 1868 Treaty of Laramie. From this pairing of events in the 1870s spring the many overlapping themes this course will address: Native peoples, their beliefs and material cultures, pressured by the arrival of scattered industries (gold rushes, silver and copper mining); irregular sources of industrial and banking capital from England, New York, Chicago, and elsewhere; the arrival of the US Army in 1851, then a break removing troops for the Civil War, then their renewed and constant appearance from 1866 on and the making and breaking of other treaties; the irregular scattering of land speculators and dirt farmers, even while the US government insisted the Sioux and Cheyennes, among other peoples, not disturb the passage of planters on the Oregon Trail, even as their hunting grounds were enclosed by the Union Pacific and North Pacific railroads by 1870. Naturalists, hikers, and artists arrived by rail to the western parks: Yellowstone, Yosemite (1890), and the Grand Canyon (1919). By 1900, American tourists went west to see wild West Indian shows and wonder at the new parks. They ate at restaurants serving western food, wore western ware and cowboy boots, and listened to western music that finally reached its high point when folklorist Hal Cannon founded the National Cowboy Poetry Gathering in Elko, Nevada, in 1984, still active today with offshoots in Durango, Montana, and Texas.

1.0 Course Unit

HIST 163 Modern American Culture
Through the twentieth century, American culture took on new forms and meanings, spurred by technological innovation, commerce, and institutions, and shaped by an ever-changing population. In the process, American culture became self-consciously ‘modern’—embraced, contested, repudiated, and continually redefined. This course explores the history of American culture from the 1890s to the 1990s, with a focus on the following questions: Why did culture become such an important part of American economic, social, and political life in the twentieth century? How has culture been created, understood, and mobilized by different groups in American society at different times? What have been the politics of culture over the twentieth century? Topics include the rise of ‘culture industries’ and mass entertainment, including amusement parks, film, radio, and television; the growth of consumer culture; the impact of gender in such arenas as sports and fashion; the role of working-class peoples, African Americans, and immigrants in American culture; the cultural response to the Depression and World War II; and popular activism. The course emphasizes the study of primary documents: journalism, fiction, letters and diaries, music, photographs, and film as a means of understanding the past.

HIST 164 American Monuments: Landscape, Memory, Power
Disputes over Confederate monuments expose a truth: The landscape of memory is a field of power. This place-based course examines U.S. public memory as expressed in the built environment—its making in the long nineteenth century, and its remaking in the long twentieth century. Lectures and readings cover a variety of memorial practices and structures, including obelisks, statues, edifices, cemeteries, battlefields, massacre sites, landmark buildings, and historic trees. (Museum collections, though important, will not be emphasized.) Drawing on cultural history, political history, and legal history, the instructor will help to explain the historic inscription of settler colonialism onto the nation’s memorial landscape, and contextualize current efforts to decolonize U.S. public memory. For their part, students will have opportunities to do research on the monuments of Philadelphia.
Taught by: Farmer
Activity: Lecture
1.0 Course Unit

HIST 166 Arab/Israeli Conflict in Literature and Film
This course will explore the origins, the history and, most importantly, the literary and cinematic art of the struggle that has endured for a century over the region that some call the Holy Land, some call Eretz Israel and others call Palestine. We will also consider religious motivations and interpretations that have inspired many involved in this conflict as well as the political consequences of world wars that contributed so greatly to the reconfiguration of the Middle East after the fall of the Ottoman Empire, and after the revelations of the Holocaust in Western Europe. While we will rely on a textbook for historical grounding, the most significant material we will use to learn this history will be films, novels, and short stories. Can the arts lead us to a different understanding of the lives lived through what seems like an enduring crisis?

HIST 174 Capitalism, Socialism and Crisis in the 20th Century Americas
From the crisis of the Great Depression through the 1970s, the United States and Latin America produced remarkable efforts to remake society and political economy. This course analyzes the Cuban and Guatemalan revolutions, as well as social movements that transformed the United States: the black freedom movement, the labor movement, and changing forms of Latino politics. In all three countries, Americans looked for ways to reform capitalism or build socialism; address entrenched patterns of racism; define and realize democracy; and achieve national independence. They conceived of these challenges in dramatically different ways. Together, we'll compare national histories and analyze the relationships between national upheavals. In studying the US and Latin America together, the class allows students to explore central questions in both regions' histories. What did capitalism, socialism, and communism amount to? What did democracy mean? What were the roots of racial inequality and how did Americans address it? Why were Americans so enticed by economic growth, and how did they pursue it? How did the Cold War shape social movements? What purposes did unions serve? How did Christianity inform movements for and against social change? Studying these regions together also allows us to explore international interactions. How did the black freedom movement in the US relate to the Cuban revolution? How did Latin American immigration shape the US labor movement? How did US Cold War policy influence Latin American revolutionary movements? The goal of this class is for you to interpret the readings and decide what you think. What you learn in this class, and the quality of our experience together, depends on your reading closely, coming to class with informed ideas and questions, and being prepared to help your classmates answer theirs. We will read approximately 100 pages per week. No background is required. For BA Students: History and Tradition Sector

HIST 175 History of Brazil: Slavery, Inequality, Development
In the past decade, Brazil has emerged a leading global power. As the
defined as the World’s largest country by area, 5th largest by GDP, Brazil exerts tremendous influence on international politics and
globally, seen in its position as an emerging Brics nation and
and a regional heavyweight in South America. Brazil is often in the news for
and political instability. It is also a nation of deep contradictions, in which myth of
rivalry. The longstanding creed that Brazilian society has
escaped racial discrimination – functions alongside pervasive social
inequality, state violence, political corruption, and an unforgiving penal
This course examines six centuries of Brazilian history. It
highlights the interplay between global events – colonialism, slavery
and emancipation, capitalism, and democratization – and the local
geographies, popular cultures, and social movements that have shaped
this multi-ethnic and expansive nation. In particular, the readings will
highlight Brazil’s place in Latin America and the Lusophone World, as
as well as the ways in which Brazil stands as a counterpoint to the United
States, especially in terms of the legacy of slavery and race relation.
In this lecture, we will also follow the current political and economic
crises unfolding in Brazil, at a moment when it has become all the more
important to evaluate just how South America’s largest nation has
shaped and been shaped by global events.

HIST 178 The Foundations of the Early Modern Atlantic World 1450-1800
The purpose of this course is to provide students with a solid knowledge of Atlantic history during the early modern period (XV-XVIII centuries).
Through readings of primary and secondary texts we will discuss the
cultural, religious, intellectual, and economic developments of Europe, Africa, and the Americas, as well as the connections, struggles, and
mutual influences between the peoples of these three continents.
Throughout the semester we will study several important topics:
medieval precedents of early modern expansion; theories of empire;
ideas and systems of conquest and colonization; the relevance of
race and slavery to the understanding of the early modern Atlantic world;
how different peoples perceived others and themselves; how European
imperialism and colonization affected the internal development of
Africa and America; the role played by religion in the Atlantic world;
persistence and continuity of Native cultures and beliefs during an age of
expansion; the creation of new identities; the role played by African
nations in the creation of the Atlantic world; and the creation of an
Atlantic economy.

HIST 179 The Rise and Fall of the Spanish Empire 1450-1700
This course will provide students with a solid knowledge of the history of
early modern Spain (1450-1700). Through readings of primary and
secondary texts that offer a complex vision of the cultural, religious,
intellectual, and economic contexts and processes, students will be able
to appreciate the intricacies of Spain’s historical evolution. The course
focuses on the rise and decline of the Spanish monarchy: the conditions
that enabled Spain to become the most powerful monarchy in early
modern times, and the conditions that led to its decline. This course also
touches upon other important aspects critical to understanding early
modern Spain: relationships among Christians, Muslims, and Jews in the
Iberian Peninsula; the conquest and colonization of the New World; and
early modern debates about Spain’s rights to occupy America and the so-called ‘destruction of the Indies.’

HIST 187 Africa and the Transatlantic Slave Trade
This course focuses on the history of selected African societies from the
sixteenth through the mid-nineteenth centuries. The primary goal is to
study the political, economic, social, and cultural history of a number of
peoples who participated in the Atlantic slave trade or were touched by
it during the era of their involvement. The course is designed to serve as
an introduction to the history and culture of African peoples who entered
the diaspora during the era of the slave trade. Its audience is students
interested in the history of Africa, the African diaspora, and the Atlantic
world, as well as those who want to learn about the history of the slave
case studies will include the Yoruba, Akan, and Fon, as well as
Senegambian and West-central African peoples.

HIST 188 Civilizations at odds? The United States and the Middle East
Foe or friend, Satan or saint - America has often been depicted in the Middle East either as a benevolent superpower or an ill-meaning enemy. In America, too, stereotypes of the Middle East abound as the home of terrorists, falafels, and fanatics. This undergraduate lecture course will explore the relationship between the United States and the Middle East by moving beyond such facile stereotypes. Our goal is to understand why a century of interaction has done little to foster greater understanding between these two societies. By reading novels, memoirs, and historical accounts, we will examine the origins of this cultural and diplomatic encounter in the twentieth century. The readings will shed light on America’s political and economic involvement in the Middle East after the Second World War. We will consider the impact of oil diplomacy on U.S.- Middle East relations, as well as the role of ideology and religion, in our effort to comprehend the current challenges that face these societies.

HIST 209 Industrial Metropolis
Although we no longer think of most U.S. cities as industrial cities, metropolitan areas today are all products of industrial economies, technologies, and social systems. This course explores the industrialization and deindustrialization of American cities within their evolving global context from the era of European colonization to the present. It includes weekly readings and discussion, regular response papers and walking tours, in-class exercises, and a research paper using primary sources. Themes include energy and ecology, labor and production, inner city and suburban development, globalization, and economic restructuring. Ultimately, the class aims to give students a broad knowledge of 1) the history of industrial capitalism, 2) its effects on cities and regions over the past three centuries, and 3) analytical tools for understanding the past, present, and future of metropolitan economies, geography, and society.

HIST 220 Russia and the West
This course will explore the representations of the West in eighteenth- and nineteenth-century Russian literature and philosophy. We will consider the Russian visions of various events and aspects of Western political and social life - Revolutions, educational system, public executions, resorts, etc. - within the context of Russian intellectual history. We will examine how images of the West reflect Russia’s own cultural concerns, anticipations, and biases, as well as aesthetic preoccupations and interests of Russian writers. The discussion will include literary works by Karamzin, Pushkin, Gogol, Dostoevsky, Leskov, and Tolstoy, as well as non-fictional documents, such as travelers’ letters, diaries, and historiosophical treatises of Russian Freemasons, Romantic and Positivist thinkers, and Russian social philosophers of the late Nineteenth century. A basic knowledge of nineteenth-century European history is desirable. The class will consist of lectures, discussion, short writing assignments, and two in-class tests.

HIST 235 Berlin: History, Politics, Culture  
What do you know about Berlin's history, architecture, culture, and political life? The present course will offer a survey of the history of Prussia, beginning with the seventeenth century, and the unification of the small towns of Berlin and Koelln to establish a new capital for this country. It will tell the story of Berlin's rising political prominence in the eighteenth century, and its position as a center of the German and Jewish Enlightenment. It will follow Berlin's transformation into an industrial city in the nineteenth century, its rise to metropolis in the early twentieth century, its history during the Third Reich, and the post-war cold war period. The course will conclude its historical survey with a consideration of Berlin's position as a capital in reunified Germany. The historical survey will be supplemented by a study of Berlin's urban structure, its significant architecture from the eighteenth century (i.e. Schinkel) to the nineteenth (new worker's housing, garden suburbs) and twentieth centuries (Bauhaus, Speer designs, postwar rebuilding, GDR housing projects, post-unification building boom). In addition, we will read literary texts about the city, and consider the visual art and music created in and about Berlin, and focus on Berlin's Jewish history. The course will be interdisciplinary with the fields of German Studies, history, history of art, urban studies, and German-Jewish studies. It is also designed as a preparation for undergraduate students who are considering spending a junior semester with the Penn Abroad Program in Berlin. All readings and lectures in English.

HIST 241 Performing History  
This seminar concentrates on the ways that various peoples in the world make their history by means other than relying on written texts alone. Over the course of the semester, we therefore may be examining such different public events and civic rituals as parades, political and religious processions, local historical pageants, carnivals, historic preservation, museums, military reenactments, and history theme parks. The emphasis in each of these forms, places, and semiotic processes will be on their identity and function as key performances that transform consciousness, shift individuals alternately into both actors and spectators, reframe the everyday as the metaphysical, and intensify the status of cultural values in the histories they present to view. Course requirements: a seminar paper, the topic of which you will discuss with me no later than week five of the course; and a working annotated bibliography and statement of your paper's main thesis. I will say more about these assignments as they approach.

HIST 242 Life Stories in America, 1730-1830  
This seminar explores the social and cultural history of America by focusing on the lives of specific individuals, ranging from Jesuit priests in early Quebec to Philadelphia politicians to Saramaka slaves to Maine midwives. One of the people in Philadelphia who we will discuss is Benjamin Franklin, Penn's founding father. As we examine biography and autobiography as two of history's most powerful narrative frames, we will concentrate on the spaces and places in the social landscape that shaped individual understandings of work, sense of self, gender, beliefs, and political power.

HIST 243 American Feminist and LGBT Movements, 1960s-1980s  
This seminar explores the history of the feminist and LGBT movements from the mid-1960s to mid-1980s in Philadelphia. Although there will be some attention to national organizations, we will focus on social and political activism as it was made in local groups and spaces. We will explore the social and cultural web that fostered activism, for example, in gay and lesbian coffee houses, campus women's centers, bookstores, and radio shows. We will also pay attention to groups and actions that may not have been self-consciously defined as 'feminist' or 'gay liberationist,' but had important effects on social change related to gender and sexuality; these include African American, Latino/a, and working-class organizations. This is a hands-on research seminar, with students exploring local archives and special collections to document and analyze these complex movements. Each student will conduct an oral history, analyze a set of published and printed sources, and write a paper based on archival research.

HIST 245 Petrosylvania: Reckoning with Fossil Fuel
Fossil fuel powered the making—now the unmaking—of the modern world. As the first fossil fuel state, Pennsylvania led the United States toward an energy-intensive economy, a technological pathway with planetary consequences. The purpose of this seminar is to perform a historical accounting—and an ethical reckoning—of coal, oil, and natural gas. Specifically, students will investigate the histories and legacies of fossil fuel in connection to three entities: the Commonwealth of Pennsylvania, the City of Philadelphia, and the University of Pennsylvania.
Under instructor guidance, students will do original research, some of it online, much of it in archives, on and off campus, in and around Philadelphia. Philly-based research may also involve fieldwork. While based in historical sources and methods, this course intersects with business, finance, policy, environmental science, environmental engineering, urban and regional planning, public health, and social justice. Student projects may take multiple forms, individual and collaborative, from traditional papers to data visualizations prepared with assistance from the Price Lab for Digital Humanities. Through their research, students will contribute to a multi-year project that will ultimately be made available to the public.

HIST 248 The Haitian Revolution
In August 1791, enslaved Africans on the northern plain of Saint Domingue (colonial Haiti) rose up in a coordinated attack against their French colonial masters, launching the initial revolt in what would come to be known as the Haitian Revolution. In the years that followed, their actions forced the abolition of racial discrimination and slavery throughout the French Empire. When Napoleon Bonaparte threatened to return slavery to Saint Domingue, they waged a war for independence, declaring Haiti the world’s first ‘Black Republic’ in 1804. This seminar will examine some of the major themes and debates surrounding Haiti’s colonial and revolutionary history. We will begin by considering the colonial paradox: France’s leading role in the intellectual movement called the ‘Enlightenment’ coincided with its ascent as a slaveholding colonial power. The seminar will also explore parallels and points of connection between the revolutionary movements in France and Saint Domingue: how did increasingly radical ideas in France shape events in the Caribbean? Likewise, how did West African traditions and political ideologies influence insurgents and their leaders? And how, in turn, did revolution in the Caribbean impact the revolution in France? Finally, we will ask how the Haitian Revolution influenced ideas about liberty, sovereignty and freedom throughout the Atlantic World. We will read a combination of primary and secondary materials each week. A final research paper will be required of all students.

HIST 253 Freud: The Invention of Psychoanalysis
No other person in the twentieth century has probably influenced scientific thought, humanistic scholarship, medical therapy, and popular culture as much as Sigmund Freud. This course will study his work, its cultural background, and its impact on us today. In the first part of the course, we will learn about Freud’s life and the Viennese culture of his time. We will then move to a discussion of seminal texts, such as excerpts from his Interpretation of Dreams, case studies, as well as essays on psychoanalytic practice, human development, definitions of gender and sex, neuroses, and culture in general. In the final part of the course, we will discuss the impact of Freud’s work. Guest lecturers from the medical field, history of science, psychology, and the humanities will offer insights into the reception of Freud’s work, and its consequences for various fields of study and therapy.

HIST 258 Extreme Heat: White Nationalism in the Age of Climate Change
The Amazon is burning. The glaciers are melting. Heat waves, hurricanes, earthquakes, floods, wildfires, and droughts devastate ever larger swaths of the earth, producing crop failures, air pollution, soil erosion, famine and terrifying individual hardship. At the same time, the so-called Western World is literally walling itself off from the millions who are fleeing from disaster and war with what little they can carry. White militants chant ‘blood and soil’ and ‘Jews will not replace us,’ social media spreads memes and talking points about ‘white genocide’ and ‘white replacement’ and online ideologues fantasize about building white ethnostates. Are these developments connected? Is there a causal relationship? Or are these conditions purely coincidental? Increasingly, arguments about limits to growth, sustainability, development and climate change have come to stand in competitive tension with arguments for social and racial equality. Why is that case? What are the claims and underlying anxieties that polarize western societies? How do white nationalist movements relate to populist and fascist movements in the first half of the 20th century? What is new and different about them now? What is the relationship between environmentalism, rightwing populism and the climate crisis? And how have societies responded to the climate crisis, wealth inequality, finite resources and the threat posed by self-radicalizing white nationalist groups?

HIST 261 A People's History of Pakistan
This course asks what Pakistan's history would look like when told from the perspective of the most marginalized groups in the country. Such an approach would demand that we jettison state-centered narratives and geopolitical frameworks. Instead, the course prioritizes the ethical imperative to tell the history of a place by including the voices and experiences of its people. It explores questions about how the state might appear differently in such narratives, as also about the impact of colonialism on the nation-state and its oppressed. Over the semester, we will investigate the responses, resistances, and revolts of marginalized groups that are facing intensified and intersecting oppression in a global and national context of surveillance, militarization, and capitalist exploitation. This course explores these urgent questions about the forces shaping the present through the histories of the region, women, peasants, displaced persons, labor, and students in Pakistan.

HIST 274 African American Life and Culture in Slavery
This course will examine the lives of enslaved African Americans in the United States, both in the North and the South. We will engage historiographical debates, and tackle questions that have long concerned historians. For example, if slaves were wrenched from families and traded, could they sustain family relationships? If slaves worked from sun-up until sun-down, how could they create music? We will engage with primary and secondary sources to expand our understanding of values, cultural practices, and daily life among enslaved people. Topics will include: literacy, family, labor, food, music and dance, hair and clothing, religion, material culture, resistance, and memories of slavery. Several disciplines including History, Archaeology, Literature, and Music, will help us in our explorations. Written, oral, and artistic texts for the course will provide us with rich sources for exploring the nuances of slave life, and students will have opportunities to delve deeply into topics that are of particular interest to them. This course will also count as the AFRC 176 requirement for the AFRC major.

HIST 287 Religion and Society in Africa
In recent decades, many African countries have perennially ranked very high among the most religious. This course serves as an introduction to major forms of religiosity in sub-Saharan Africa. Emphasis will be devoted to the indigenous religious traditions, Christianity, and Islam, as they are practiced on the continent. We will examine how these religious traditions intersect with various aspects of life on the continent. The aim of this class is to help students to better understand various aspects of African cultures by dismantling stereotypes and assumptions that have long characterized the study of religions in Africa. The readings and lectures will be drawn from historical and a few anthropological, and literary sources.

HIST 303 The Vikings
The Vikings were the terror of Europe from the late eight to the eleventh century. Norwegians, Danes and Swedes left their homeland to trade, raid and pillage; leaving survivors praying ‘Oh Lord, deliver us from the fury of the Norsemen!’ While commonly associated with violent barbarism, the Norse were also farmers, craftsmen, and merchants. As their dragon ships sailed the waterways of Europe and beyond, they also transformed from raiders to explorers, discoverers and settlers of found and conquered lands. This course will introduce students to various facets of the culture and society of the Viking world ranging from honor culture, gender roles, political culture, mythology, and burial practices. We will also explore the range of Viking activity aboard from Kiev and Constantinople to Greenland and Vineland, the Viking settlement in North America. We will use material and archeological sources as well as literary and historical ones in order to think about how we know history and what questions we can ask from different sorts of sources. Notably, we will be reading Icelandic sagas that relate oral histories of heroes, outlaws, raiders and sailors that will lead us to question the lines between fact and fiction, and myth and history.

HIST 306 Gunpowder, Art and Diplomacy: Islamic Empires in the Early Modern World
In the sixteenth century, the political landscape of the Middle East, Central Asia, and India changed with the expansion and consolidation of new Islamic empires. Gunpowder had transformed the modes of warfare. Diplomacy followed new rules and forms of legitimation. The widespread use of Persian, Arabic and Turkish languages across the region allowed for an interconnected world of scholars, merchants, and diplomats. And each imperial court, those of the Ottomans, the Safavids, and the Mughals, found innovative and original forms of expression in art and literature. The expansion of these Islamic empires, each of them military giants and behemoths of bureaucracy, marked a new phase in world history. The course is divided in four sections. The first section introduces the student to major debates about the so-called gunpowder empires of the Islamic world as well as to comparative approaches to study them. The second section focuses on the transformations of modes of warfare and military organization. The third section considers the cultural history and artistic production of the imperial courts of the Ottomans, the Mughals, and the Safavids. The fourth and final section investigates the social histories of these empires, their subjects, and the configuration of a world both connected and divided by commerce, expansion, and diplomacy.

HIST 307 Love, Lust and Violence in the Middle Ages
Medieval Europe was undoubtedly gruff and violent but it also gave birth to courtly culture - raw worries transformed into knights who performed heroic deeds, troubadours wrote epics in their honor and love songs about their ladies, women of the elite carved out a place in public discourse as patrons of the arts, and princely courts were increasingly defined by pageantry from jousting tournaments to royal coronations. This course will trace the development of this courtly culture from the eleventh to the sixteenth century, from its roots in Southern France to its spread to Northern France and then to various kingdoms in Europe. Central themes will include the transformation of the warrior into the knight, the relationship between violence and courtliness, courtly love, cultural production and the patronage, and the development of court pageantry and ceremonial. This is a class cultural history and, as such, will rely on the interpretation of objects of art and material culture, literature as well as historical accounts.

HIST 311 The Tudors
This course examines the history of England from the accession of Henry (VII) Tudor in 1485 to the death of Elizabeth I in 1603, with emphases on the political and personal history of this colorful dynasty, the religious revolution known as the Protestant Reformation, the arts and literature known as the English Renaissance, imperial and trade ventures overseas, and aspects of popular culture including the witch craze. Unlike most English histories of the period, we will also look closely at the other realms of the British Isles, Scotland, Wales, and Ireland. Readings consist of a textbook with a British scope, and an array of primary sources, some in book form and others (marked with an asterisk on the syllabus) attached to Blackboard or distributed in class. Books are available at the Penn Book Center, except for biographies associated with film critiques. Most of the films noted in the syllabus will be available on PVN; otherwise, they can be viewed at the library or through Netflix. Assignments in square brackets are optional.

HIST 312 Britain's Century of Revolution

England, Ireland, Wales and Scotland experienced revolutions in the first half of the seventeenth century that abolished monarchy and hereditary aristocracy, and carried out the first judicial execution of a monarch in European history. England was re-constructed as a republic, then with Scotland became the United Commonwealth of Great Britain, then declined into a military dictatorship, and finally invited the king back. In 1688, however, the Glorious Revolution deposed that king and declared Britain a strictly constitutional monarchy. This course will explore what motivated ordinarily obedient British subjects to take up arms against their rulers. The works of Milton and Marvell, Cromwell, Hobbes and Locke, and many lesser-known writers of diaries, autobiographies, sermons, statutes, and letters will illuminate the issues. The focus will be on how law, politics and religion interacted in the onset of war and defining of settlement, but with an eye to the larger social and cultural setting in which revolutions happened: this is also an era of both witchcraze and scientific revolution, puritanism and the slave trade, the near-destruction of London by fire and plague and its re-birth as the capital of a commercial empire.

HIST 313 The French Revolution and the Origins of Modern Politics

This course will examine the social, cultural, intellectual, economic, and especially political history of France and its Empire from the end of the Old Regime through the Napoleonic period. The origins, development, and outcome of the French Revolution, followed by the Haitian Revolution and the Napoleonic Wars, will be our main focus. Particular attention will be paid to the global legacy of these late 18th and early 19th century revolutions in terms of such key modern political concepts as human rights, nationalism, social welfare, feminism, democracy, terrorism, abolitionism, capitalism, and revolution itself. Throughout the course, we will also emphasize the different and often conflicting ways in which historians have interpreted the meaning and consequences of this critical moment of upheaval. Readings will be a mixture of primary and secondary sources, and classes will combine lecture and discussion.

Requirements will be one mid-term examination (15%), one short paper (15%), one final paper (30%), and one final examination (30%), as well as class participation (10%).

HIST 314 Victorian Britain: Spaces, Places, and Pests

In this course, we will examine the nooks and crannies of Victorian society. It was a period of squalor, but also innovation, devastating diseases, and crucial advances in public health and medical science. Its cities featured depressing slums and lurid crimes, but also new kinds of spectacles, entertainments, and commodities. It was, in many ways, as one of its greatest authors wrote, 'the best of times, and the worst of times.' Units under study will include 'The Docks,' 'The Germs,' 'The Empire,' 'The Church,' and 'the Museum.' We'll investigate killer diseases like cholera and typhus, dazzling buildings like the Crystal Palace, imperial wars and crises, and new scientific movements like Darwinism and mesmerism. Along the way, we will encounter proper and eminent Victorians as well as scandalous and marginalized ones. The aim will be to understand Victorian mentalities and ideas by looking at a diverse array of institutions and inventions. Readings will include novels, stories, pamphlets, essays, and cartoons as well as secondary literature. Classes will be a mixture of lecture and discussion, and no previous experience in British history is necessary.

HIST 320 Nature's Nation: Americans and Their Environment

The United States is 'nature's nation.' Blessed with an enormous, resource-rich geographically diverse and sparsely settled territory, Americans have long seen 'nature' as central to their identity, prosperity, politics and power, and have transformed their natural environment accordingly. But what does it mean to be 'nature's nation? This course describes and explores how American 'nature' has changed over time. How and why has American nature changed over the last four centuries? What have Americans believed about the nation's nature, what have they known about the environment, how did they know it and how have they acted on beliefs and knowledge? What didn't or don't they know? How have political institutions, economic arrangements, social groups and cultural values shaped attitudes and policies? How have natural actors (such landscape features, weather events, plants, animals, microorganisms) played roles in national history? In addition to exploring the history of American nature, we will look for the nature in American history. Where is 'nature' in some of the key events of American history that may not, on the surface, appear to be 'environmental?'

Course not offered every year
Also Offered As: ENVS 279, HSOC 279, STSC 279
Activity: Seminar
1.0 Course Unit
HIST 322 American Slavery and the Law
In this course, we will work both chronologically and thematically to examine laws, constitutional provisions, and local and federal court decisions that established, regulated, and perpetuated slavery in the American colonies and states. We will concern ourselves both with change over time in the construction and application of the law, and the persistence of the desire to control and sublimate enslaved people. Our work will include engagement with secondary sources as well as immersion in the actual legal documents. Students will spend some time working with murder cases from the 19th century South. They will decipher and transcribe handwritten trial transcripts, and will historicize and analyze the cases with attention to procedural due process as well as what the testimony can tell us about the social history of the counties in which the murders occurred. Students will have the opportunity to choose a topic and conduct original research using both primary and secondary sources, resulting in a 20-page research paper. We will spend a good deal of time throughout the semester learning how to research, write, and re-write a paper of this length. At the end of the semester students will present the highlights of their research to the class.

HIST 331 American Diplomatic History Since 1776
Survey course tracing the origins and evolution of the great traditions of U.S. foreign policy, including Exceptionalism, Unilateralism, Manifest Destiny, Wilsonianism, etc., by which Americans have tried to define their place in the world. Three hours of lecture per week, extensive reading, no recitations.
Taught by: McDougall
One-term course offered either term
Activity: Lecture
1.0 Course Unit

HIST 332 Napoleonic Era & Tolstoy
In this course we will read what many consider to be the greatest book in world literature. This work, Tolstoy’s War and Peace, is devoted to one of the most momentous periods in world history, the Napoleonic Era (1789-1815). We will study both the novel and the era of the Napoleonic Wars: the military campaigns of Napoleon and his opponents, the grand strategies of the age, political intrigues and diplomatic betrayals, the ideologies and human dramas, the relationship between art and history. How does literature help us to understand this era? How does history help us to understand this great novel? This semester marks the 200th anniversary of Napoleon’s attempt to conquer Russia and achieve world domination, the campaign of 1812. Come celebrate this Bicentennial with us! Because we will read War and Peace over the course of the entire semester, readings will be manageable and very enjoyable.
Taught by: Holquist/Vinitsky
One-term course offered either term
Also Offered As: COML 236, REES 240
Activity: Lecture

HIST 333 Nineteenth Century European Intellectual History
Starting with the dual challenges of Enlightenment and Revolution at the close of the eighteenth century, this course examines the emergence of modern European thought and culture in the century from Kant to Nietzsche. Themes to be considered include Romanticism, Utopian Socialism, early Feminism, Marxism, Liberalism, and Aestheticism. Readings include Kant, Hegel, Burke, Marx, Mill, Wollstonecraft, Darwin, Schopenhauer, and Nietzsche.
Taught by: Breckman

HIST 335 Sinners, Sex and Slaves: Race and Sex in Early America
This course explores the lost worlds of sinners, witches, sexual offenders, rebellious slaves, and Native American prophets from the seventeenth to nineteenth centuries. Using the life stories of unusual individuals from the past, we try to make sense of their contentious relationships with their societies. By following the careers of the trouble-makers, the criminals, and the rebels, we also learn about the foundations of social order and the impulse to reform that rocked American society during the nineteenth century.

Course usually offered in fall term
Also Offered As: AFRC 345, GSWS 345
Activity: Recitation
1.0 Course Unit
HIST 346 Bodies, Race and Rights: Sex and Citizenship in Modern American History
What did it mean to be a man or woman in the post-Civil War United States? Was being a man the same as being a citizen? If African-American men were to be fully embraced as both men and citizens in the aftermath of slavery, where did that leave women, white and black? Why did a nation built on immigration become so hostile to certain groups of immigrants during this period? In this course, we consider how the meanings and experiences of womanhood, manhood, citizenship, and equality before the law changed from the period immediately after the Civil War until the present day. We look at political battles over the meaning of citizenship, the use of terror to subdue African Americans politically and economically, and the fears of white Americans that they would lose their political and economic dominance to immigrant groups they deemed irreconcilably different from themselves. We also consider the repercussions of these conflicts for medical, legal, and economic efforts to regulate the bodies of women, children, poor people, immigrants, working class laborers, military men, and African Americans. Throughout the course, we will follow the state's changing use of racial, sexual, and economic categories to assess the bodily and intellectual capacities of different groups of citizens. We will also note some of the popular cultural expressions of manhood, womanhood, and citizenship. The lectures and reading assignments are organized around a series of historical problems, dynamic leaders, and controversies that illuminate these issues.
Taught by: Brown
Course usually offered in spring term
Also Offered As: AFRC 346, GSWS 346
Activity: Recitation
1.0 Course Unit

HIST 347 Gender History and American Film
More than any other medium, the motion pictures fostered new ideals and images of modern womanhood and manhood in the United States. Throughout the twentieth century, gender representations on the screen bore a complex relationship to the social, economic, and political transformations marking the lives and consciousness of American men and women. This course explores the history of American gender through film. It treats the motion pictures as a primary source that, juxtaposed with other kinds of historical evidence, opens a window onto gendered work, leisure, sexuality, family life, and politics. We will view a wide range of Hollywood motion pictures since 1900, as well as films by blacklisted artists, feminists, and independent producers.

Also Offered As: CIMS 347, GSWS 347
Activity: Seminar
1.0 Course Unit

HIST 348 American Military History
This course surveys military history in the United States from 1735 to the present day. It considers American military history from five perspectives: national security, military strategy, military technology, military organizations, and military history and society. This course explores the development of the military establishment, from the nation's early days to the present day. It illuminates the impact of military history on society and the role of military history in the development of American democracy.

Course usually offered in spring term
Also Offered As: AFRC 346, GSWS 346
Activity: Recitation
1.0 Course Unit

HIST 349 History of Sexuality in the U.S.
This course introduces students to a relatively new field of inquiry, the history of sexuality in the U.S. It explores the past to consider why sexuality has been so central to American identities, culture, and politics. Primary documents and other readings focus on the history of sexual ideology and regulation; popular culture and changing sexual practices; the emergence of distinct sexual identities and communities; the politics of sexuality; and the relationship between sexual and and other forms of social difference, such as gender, race, ethnicity, age, and class. Topics include many with continuing relevance to contemporary public debate: among them, sexual representation and censorship, sexual violence, adolescent sexuality, the politics of reproduction, gay and lesbian sexualities and sexually transmitted diseases.
Taught by: Peiss

Also Offered As: GSWS 349
Activity: Lecture
1.0 Course Unit

HIST 350 United States History, 1600-1865
This course surveys United States history from 1600 to 1865. It considers the development of the nation from its colonial origins to the outbreak of the Civil War. The course examines the political, economic, social, and cultural forces that shaped this period, as well as the ways in which these forces interacted with one another. It considers the role of immigration in shaping the nation, the impact of economic development on society, and the role of popular culture in shaping public opinion and political discourse. The course also considers the nature of the nation's internal divisions, and the ways in which these divisions were resolved or exacerbated by political and social change.

HIST 355 Gender, Race, and Rights in Modern America
This course surveys the development of gender, race, and rights in modern America. It examines the ways in which the United States has changed over time, and the ways in which these changes have been reflected in the gender, race, and rights landscape. The course considers the role of immigration in shaping the nation, the impact of economic development on society, and the role of popular culture in shaping public opinion and political discourse. The course also considers the nature of the nation's internal divisions, and the ways in which these divisions were resolved or exacerbated by political and social change.
Taught by: Brown
Course usually offered in spring term
Also Offered As: AFRC 346, GSWS 346
Activity: Recitation
1.0 Course Unit

This course explores significant political and social developments that shaped the final decades of twentieth century U.S. history, an era notable for declining faith in political institutions, ideological and partisan polarization, and a variety of new rights claims by marginalized citizens. Until very recently, scholars have characterized this period as one of conservative political resurgence spurred by its most towering figure, Ronald Reagan, the nation's 40th president. While Reagan is an essential actor in this class, the course will consider a variety of perspectives, developments, and movements across the political spectrum as well as others that defy easy ideological or partisan categorization. In addition to tracing the transformation of the major political parties and ideologies, topics may include the evolution of the post-1960s civil rights movement and the rise of the incarceration crisis; the rise and transformation of the religious right; the AIDS crisis and the LGBTQ movement; the financialization of the global economy and the mortgage crisis of 2008; and the emergence of the concept of the 'free market' as an idealized way of reordering not just social and political commitments but society itself.

Activity: Lecture
1.0 Course Unit
HIST 360 French Literature of the 18th Century
Topics vary. For current course description, please see the department’s webpage: https://www.sas.upenn.edu/french/pb Prerequisite: Two 200-level French courses taken at Penn or equivalent.
Course not offered every year
Also Offered As: FREN 360
Activity: Seminar
1.0 Course Unit

HIST 367 Philadelphia, 1700-2000
Using Philadelphia as a lens, this course will examine the transformation of American cities from the colonial period to the present. Through readings, lectures, and tours, we will consider urbanization and suburbanization, race, class, and ethnicity, economic development, poverty and inequality, housing and neighborhood change, urban institutions, and politics and public policy.
One-term course offered either term
Also Offered As: URBS 367
Activity: Lecture
1.0 Course Unit

HIST 370 North Africa: History, Culture, Society
This interdisciplinary seminar aims to introduce students to the countries of North Africa, with a focus on the Maghreb and Libya (1830-present). It does so while examining the region's close economic and cultural connections to sub-Saharan Africa, Europe, and the Middle East. Readings will include histories, political analyses, anthropological studies, and novels, and will cover a wide range of topics such as colonial and postcolonial experiences, developments in Islamic thought and practice, and labor migration. This class is intended for juniors, seniors, and graduate students. Prerequisite: A university-level survey course in Middle Eastern, African, or Mediterranean history.
Taught by: Sharkey
Course usually offered in spring term
Also Offered As: AFRC 332, AFRC 632, NELC 332, NELC 632
Activity: Seminar
1.0 Course Unit

HIST 371 Africa and the Mid-East
This seminar will explore the historical relationship between these two regions from the early modern age to the present. We will examine the history of trade, particularly the slave trade, and its cultural and political legacy. We will compare the experiences of European imperialism—how the scramble for Africa dovetailed with the last decades of the Ottoman Empire—with an eye to how this shaped nationalist movements in both regions. The course will also explore the decades of independence with a special eye towards pan-Africanism and pan-Arabism. We will also study the ramifications of the Arab-Israeli conflict on the relationship between African and Middle-Eastern countries, from Uganda to Ethiopia, from OPEC to Darfur. The course will pay close attention to migrations through the regions, whether forced or economic or religious. Whenever possible we will explore, through film and literature, how people in Africa and the Middle East see their connections, and their differences.
Taught by: Troutt-Powell
One-term course offered either term
Also Offered As: AFRC 372, NELC 334
Activity: Seminar
1.0 Course Unit

HIST 376 Medicine, Health, and Healing in Africa
This seminar course will examine how sub-Saharan Africans have interpreted and dealt with issues of health, healing, and medicine under colonial and postcolonial regimes. It will also look at how various social, economic, religious, and political factors have impacted health and healing on the continent and shaped African responses. Class discussions will center around both general themes affecting health and healing in Africa as well as case studies drawn from historical and anthropological works.
Taught by: Cassanelli
One-term course offered either term
Also Offered As: AFRC 373
Activity: Lecture
1.0 Course Unit

HIST 377 The History of Foreign Aid and Intervention in Africa
This course examines the history, politics, and significance of foreign aid to Africa since the late 19th century. While we do not typically think about the European colonial period in Africa in terms of 'foreign aid,' that era introduced ideas and institutions which formed the foundations for modern aid policies and practices. So we start there and move forward into more contemporary times. In addition to examining the objectives behind foreign assistance and the intentions of donors and recipients, we will look at some of the consequences (intended or unintended) of various forms of foreign aid to Africa over the past century. While not designed to be a comprehensive history of development theory, of African economics, or of international aid organizations, the course will touch on all of these topics. Previous course work on Africa is strongly advised.
Taught by: Cassanelli
One-term course offered either term
Also Offered As: AFRC 373
Activity: Lecture
1.0 Course Unit

HIST 378 Modern Jewish Intellectual and Cultural History
An overview of Jewish intellectual and cultural history from the late 18th century until the present. The course considers the Jewish enlightenment Reform, Conservative and Neo-Orthodox Judaism, Zionist and Jewish Socialist thought, and Jewish thought in the 20th century, particularly in the context of the Holocaust. Readings of primary sources including Mendelsohn, Geiger, Hirsch, Herzl, Achad-ha-Am, Baeck, Buber, Kaplan, and others. No previous background is required.
Taught by: Ruderman
One-term course offered either term
Also Offered As: JWST 380, RELS 320
Activity: Lecture
1.0 Course Unit
**HIST 385 Human-Animal Relationships in Historical Perspective**

We live in a paradoxical moment in the history of people’s relationships with animals. Certain species suffer today more than ever due to environmental degradation and modern food production practices. Yet other mammalian species are subject to a degree of sentimental attention (perhaps) unprecedented in history. This paradox is related to an unresolved tension in Western cultures: do the commonalities that bind humans to other animals unite them more or less than the differences that divide them? The course is organized around three main segments: animal domestication; modes of interaction (hunting, husbandry, pets, science) in early modern Europe; and contemporary science. We will conclude with a consideration of current philosophical and ethical perspectives of our treatment of non-human animals. By considering a variety of disciplinary approaches but with an emphasis on historians’ methodologies, we will investigate these questions through careful reading of primary sources as well as secondary sources.

Taught by: Norton
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

**HIST 390 China & USSR Compared**

A comprehensive and multi-faceted survey of China and Russia, mostly in the twentieth century, through examining preludes and postludes, but focusing above all on their time as Communist states and sometimes quarreling Cold War allies. Of course we will cover the history, the geography, the economics, the leaders (Stalin, Mao), and the great events - not least the Second World War in each - always comparing, contrasting, and drawing linkages. We will also examine, however, daily life and work for ordinary people, developments in society, and not least their common attempts at revolution, at somehow creating new and unprecedented polities, having populations of radically transformed new people. This informative, fascinating quest will take us from folklore to literature and the arts to dissent and religion and ecology, among other topics. As far as possible we will let their people speak for themselves, by assigning mostly translations of original sources including novels and memoirs, as possible we will let their people speak for themselves, by assigning mostly translations of original sources including novels and memoirs, even poetry. A comprehensive assessment of the strategically critical Asian heartland - which at over 14 million square miles is larger than Canada, the United States, and Western Europe combined. Lectures, readings, midterm, short paper, and in-class final.

Taught by: Waldron
Course usually offered in spring term
Also Offered As: REES 390
Activity: Lecture
1.0 Course Unit

**HIST 391 The Vietnam War**

A thorough historical, military, and social history of the Vietnam war, which lasted in one form or another from the end of WWII in 1945 to 1975, in which occurred the longest and most humiliating defeat in our history. Since that time the Vietnamese have published hundreds of documents, some in English, which provide an entirely new perspective on what we believed during the war. These, supplemented by other primary and secondary materials, as much as possible written by Vietnamese or by Americans having first-hand knowledge, will form the backbone of the course. The various American and Vietnamese strategies will be scrutinized carefully, and a good deal said about the home front in America. The actual fighting, that determined the outcome, will not be slighted. We expect at least some guest speakers having long diplomatic or military experience in Vietnam. The present will be our conclusion.

Lectures TTH 12:10-1:30; midterm in class, short paper, an irregular final. If you want to understand the world you now live in, this course a good place to start.

Taught by: Waldron
One-term course offered either term
Also Offered As: EALC 196
Activity: Lecture
1.0 Course Unit

**HIST 393 20th Century China: Ideas, Politics, States**

Since 1900 four types of states have ruled China: dynastic, elective parliamentary, authoritarian nationalist, and communist. We will trace each from its intellectual origins to conclusion. By doing so we will present a solid and wide-ranging narrative of China’s past century, introducing newly discovered material, some controversial. Above all we will dig into the issues raised by the century’s mixture of regimes. Right now China is a dictatorship but once it was an imperfect democracy. Does this prove that Chinese are somehow incapable of creating democracy? That sadly it is just not in their DNA? Or only that the task is very difficult in a country nearly forty times the size of England and developing rapidly? That without dictatorship the Chinese almost inevitably collapse into chaos? Or only that blood and iron have been used regularly with harsh effectiveness? You will be given a solid grounding in events, and also in how they are interpreted, right up to the present. Readings will be mostly by Chinese authors (translated), everything from primary sources to narrative to fiction. We will also use wartime documentary films. Two lectures per week, regular mid-term and final exams, and a paper on a topic of your own choice. No prerequisites.

Taught by: Waldron
Course usually offered in fall term
Also Offered As: EALC 145
Activity: Lecture
1.0 Course Unit
Notes: Two lectures per week, regular mid-term and final exams, and a paper on a topic of your choice.
HIST 394 China and the World: Modern Times
History 394 is a comprehensive introduction to the last hundred years of China's relations with the world, with emphasis on American-Chinese relations, but within the necessary context of China's relations with other countries from Asia to Europe to Africa and elsewhere (as well as Washington's changing relations with Beijing). China's role in the world can be understood only when the full background and international context is made clear. This course has no prerequisites: freshmen and others lacking background will find it manageable and interesting. Students who have successfully completed this course will be well positioned to understand some of the most important of current events, and if they like, pursue the topics as careers (there will be no shortage, I assure you). Although much will be said about diplomacy, and Chinese diplomatic strategy in particular, the mile-posts of the course will be a series of wars: World War I and its effects on China; the heroic Chinese war of resistance against Japan (1937-1945) in which, effectively without allies, the Chinese avoided defeat; the bitter Civil War that followed almost immediately (1946-1949) and brought Mao Zedong and his Communists to power while the predecessor Nationalist government fled to the island of Taiwan; then the Korean War (1950-1953) and the close Chinese-Soviet alliance that followed; The Taiwan Straits Crises (1954-1955, 1958, 1996); the Chinese-Indian war (1962) the origin of a situation now heating up; the Sino-Soviet border conflicts (1969); the Vietnam War (1955-1975) which changed the United States profoundly while reorientating China internationally; the (at the time) little noticed Chinese invasion of Vietnam (1979) - and finally the increasingly tense situation today, between China and India, and China and her maritime neighbors from Japan to Indonesia, many U.S. allies.
Taught by: Waldron
Also Offered As: EALC 044
Activity: Lecture
1.0 Course Unit

HIST 395 East Asian Diplomacy
Home to four of the five most populous states and four of the five largest economies, the Asia/Pacific is arguably the most dynamic region in the twenty-first century. At the same time, Cold War remnants (a divided Korea and China) and major geopolitical shifts (the rise of China and India, decline of the US and Japan) contribute significantly to the volatility of our world. This course will examine the political, economic, and geopolitical dynamism of the region through a survey of relations among the great powers in Asia from the sixteenth century to the present. Special emphasis will be given to regional and global developments from the perspective of the three principal East Asian states--China, Japan and Korea. We will explore the many informal, as well as formal, means of intercourse that have made East Asia what it is today. Graduate students (EALC 505) should consult graduate syllabus for graduate reading list, special recitation time and graduate requirements.
Taught by: Dickinson
Course usually offered in fall term

Activity: Recitation
1.0 Course Unit

HIST 398 Junior Honors in History
Open to junior honors candidates in history. Introduction to the study and analysis of historical phenomena. Emphasis on theoretical approaches to historical knowledge, problems of methodology, and introduction to research design and strategy. Objective of this seminar is the development of honors thesis proposal.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

HIST 400 Senior Honors in History I
Open to senior honors candidates in history who will begin writing their honors thesis during this seminar.
Two terms. student must enter first term.
Activity: Seminar
1.0 Course Unit

HIST 406 Existence in Black
Racial, colonial, and other political formations have encumbered Black existence since at least the fifteenth-century. Black experiences and reflections on these matters have been the subject of existential writings and artistic expressions ranging from the blues to reggae, fiction and non-fiction. Reading some of these texts alongside canonical texts in European existential philosophy, this class will examine how issues of freedom, self, alienation, finitude, absurdity, race, and gender shape and are shaped by the global Black experience. Since Black aliveness is literally critical to Black existential philosophy, we shall also engage questions of Black flourishing amidst the potential for pessimism and nihilism.
Taught by: Amponsah
Course usually offered in spring term
Also Offered As: AFRC 406, AFRC 506, PHIL 555
Activity: Seminar
1.0 Course Unit

HIST 411 Introduction to Written Culture, 14th - 18th Centuries
Taught by: Chartier/Stallybrass

Also Offered As: COML 411, ENGL 234
Activity: Seminar
1.0 Course Unit

HIST 412 Topics in World History
One-term course offered either term
Also Offered As: EALC 442
Activity: Seminar
1.0 Course Unit

HIST 414 Human Rights and History
The idea of universal, inalienable rights--once dismissed by the philosopher Jeremy Bentham as 'nonsense upon stilts'--has become the dominant moral language of our time, the self-evident truth par excellence of our age. Human rights have become a source of inspiration to oppressed individuals and groups across the world, the rallying cry for a global civil society, and not least, a controversial source of legitimation for American foreign policy. This seminar asks: how did all this come to be? We will investigate human rights not only as theories embodied in texts, but as practices embedded in specific historical contexts. Are human rights the product of a peculiarly European heritage, of the Enlightenment and protestantism? How did Americans reconcile inalienable rights with the reality of slavery? Did human rights serve as a 'civilizing' mask for colonialism? Can universal rights be reconciled with genuine cultural diversity? Through case studies and close readings, the seminar will work toward a genealogy of human rights.
Taught by: Nathans
One-term course offered either term
Activity: Seminar
1.0 Course Unit
HIST 418 European Intellectual History since 1945
This course concentrates on French intellectual history after 1945, with some excursions into Germany. We will explore changing conceptions of the intellectual, from Sartre's concept of the 'engagement' to Foucault's idea of the 'specific intellectual'; the rise and fall of existentialism; structuralism and poststructuralism; and the debate over 'postmodernity.
Taught by: Breckman
Course usually offered in spring term
Also Offered As: COML 418
Activity: Seminar
1.0 Course Unit

HIST 420 European International Relations from the Age of Enlightenment to the Great War
This course will examine the international politics of Europe in the 18th and 19th centuries, up to the outbreak of World War I. During these centuries, the European great powers experienced significant internal transformations and also a revolution in their relations, both of which reinforced and accelerated each other. In the process, Europe asserted a dominant position in world politics, but also sowed the seed for the terrible catastrophes of the 20th Century. The course will address this transformation of European diplomacy with special attention to the rivalries between the great powers, the impact of nationalism and emerging mass politics, the interplay between military and economic power, and the relationship between the European powers and the rest of the world.
Taught by: McDougall
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

HIST 421 Europe and the World since 1914
This course looks at Europe's interactions with other world regions throughout the twentieth century. Over the course of roughly a hundred years, Europeans have shaped the fates of peoples living beyond the western world, for instance through the impact of two world wars, European colonialism, and the global Cold War. At the same time, European societies 'at home' were not left unaffected by these interactions. Even today, Europeans are facing the legacies of some of these histories in immigration and the politics of religion and secularism for example. The past century also saw a dramatic shift in Europe's position in the world - from dominance to a loss of influence in the shadow of the United States and more recently, China. The course spends significant time covering the histories of world regions other than Europe. It furthermore considers some interactions and exchanges between world regions from a social and cultural point of view. Because the class spans roughly a century, the content has to remain introductory and general, although a very basic familiarity with 20th-century international history is helpful.
Taught by: Ogle
Two terms. student may enter either term.
Activity: Lecture
1.0 Course Unit

HIST 425 World War I
This survey course examines the outbreak, conduct, and aftermath of the First World War. The First World War put an end to the world of the 19th century and laid the foundations of the 20th century, the age of destruction and devastation. This course will examine the war in three components: the long-term and immediate causes of the First World War; the war’s catastrophic conduct, on the battlefield and on the home front; and the war’s devastating aftermath. While we will discuss military operations and certain battles, this course is not a military history of the war; it covers the social, economic, political and diplomatic aspects that contributed to the war’s outbreak and made possible its execution over four devastating years. No preliminary knowledge or coursework is required.
Taught by: Holquist
Two terms. student may enter either term.
Activity: Recitation
1.0 Course Unit

HIST 441 North American Colonial History
A survey of the development of American colonial society, 1607-1750, with emphasis on the regional differences between life in early New England, the Mid-Atlantic, and the South, as well as the relationships between British colonists, Native Americans, and African Americans.
Taught by: Brown
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

HIST 447 Histories of the Information Economy
This course provides a perspective on the role of information as a historical actor. Moving beyond common narratives of the progress of the information economy driven by technological factors, the course underscores the significance of what may be called the political economies of information. We will approach major works, dealing with the historical importance of information (Foucault, Cohn, Habermas) and simultaneously engages with the history of institutions to store and circulate information. We will emphasize the importance of value (social, political, economic) which is at the heart of information gathering and producing. In particular, we will discuss the rise and fall of institutions to store and circulate information. We will study the importance of information in historical processes such as imperialism and colonization, state building, propaganda, the Enlightenment, as well as the informational aspects of the rise of global NGOs and international organization, police and spying. Information may be accumulated or lost; it can be safeguarded or debased; it can confer power or undermine it. In the age of fake news, these are issues worthy of a closer interest.
Taught by: Flandreau
One-term course offered either term
Activity: Lecture
1.0 Course Unit
HIST 451 The U.S. and the World since 1898
This class examines the emergence of the U.S. as a world power since 1898, and considers both the international and domestic consequences of U.S. foreign relations. In one respect, the twentieth century was a strange time to become a global empire: it was the period when colonial systems centered in Europe, Russia, Japan, and Turkey collapsed, and new nations emerged throughout Africa and Asia. This class explores the changing strategies of military, economic, and political intervention that the U.S. pursued as colonization lost legitimacy. Within that framework, the class invites students to think about several questions: How did the idea and practice of empire change over the twentieth century? How did the United States relate to new visions of independence emerging in Africa, Asia, and Latin America? How did global interactions both inform and reflect racial ideology in the United States? Finally, how did international affairs transform U.S. politics and social movements?

Taught by: Offner

Also Offered As: LALS 451
Activity: Lecture
1.0 Course Unit

HIST 463 History of American Education
This course will examine the growth and development of American schools, from the birth of the republic into the present. By 1850, the United States sent a greater fraction of its children to school than any other nation on earth. Why? What did young people learn there? And, most of all, how did these institutions both reflect and shape our evolving conceptions of 'America' itself? In an irreducibly diverse society, the answers were never simple. Americans have always defined their nation in a myriad of contrasting and often contradictory ways. So they have also clashed vehemently over their schools, which remain our central public vehicle for deliberating and disseminating the values that we wish to transmit to our young. Our course will pay close attention to these education-related debates, especially in the realms of race, class, and religion. When immigrants came here from other shores, would they have to relinquish their old cultures and languages? When African-Americans won their freedom from bondage, what status would they assume? And as different religious denominations fanned out across the country, how would they balance the uncompromising demands of faith with the pluralistic imperatives of democracy? All of these questions came into relief at school, where the answers changed dramatically over time. Early American teachers blithely assumed that newcomers would abandon their old-world habits and tongues; today, 'multicultural education' seeks to preserve or even to celebrate these distinctive patterns. Post-emancipation white philanthropists designed vocational curricula for freed African-Americans, imagining blacks as loyal serfs; but blacks themselves demanded a more academic education, which would set them on the road to equality. Protestants and Catholics both used the public schools to teach their faith systems until the early 1960s, when the courts barred them from doing so; but religious controversies continue to hound the schools, especially on matters like evolution and sex education. How should our public schools address such dilemmas? How can the schools provide a 'common' education, as Horace Mann called it, melding us into an integrated whole while still respecting our inevitable differences?

Activity: Seminar
1.0 Course Unit

HIST 575 Politics and Societies in the Early Modern World
In this seminar, we will discuss how early modern globalization affected societies and the ways their members and rulers made politics. Following a historiographical introduction, it is divided in three sections. In the first, we will concentrate on empires and kings in order to detect common features of dynastic power across the globe and to explore how such characteristics influenced each other. Second, we will shift our attention to citizens and the ways they made politics in their city-states. For a long time, research on citizenship has been confined to the post-revolutionary nation states. However, recent research suggests that urban citizenship has far deeper roots in medieval and early modern cities. Up to now most research has focused on urban centers in Western Europe and more precisely on the so-called urban belt stretching from Central and North Italy, over Switzerland and Southern Germany to the Rhineland and the Low Countries. Comparisons with urban centers in Asia and the colonial Americas will be needed to test that view. In the third section, we will study the people who provided information to societies and decision makers. Often, they held multiple identities or they acted as religious or ethnic outsiders. Therefore, we call them, with a term borrowed from anthropology 'brokers'. Taken together, the analysis of these aspects will deepen our understanding of politics and societies in the globalizing early modern world. Thus, the seminar will contribute to a more comprehensive, less Europe-centered view on that period.

HIST 645 Graduate Research Seminar
SPRING 2019: This seminar is suitable for graduate students in any discipline in which historical research may be relevant. We will work with both secondary and primary sources, and students will have the opportunity to visit and undertake research in an archive. The principal interpretive questions will resolve around two clusters of issues. One cluster involves evidence and standards of verification; the other involves the ethics and rhetoric of cultural translation/representation.

Hungarian (HUNG)

HUNG 121 Elementary Hungarian I
The elementary Hungarian I course focuses on providing reading, writing, listening and reading-comprehension skills on basic level Hungarian. Interactive class activities and authentic Hungarian material will enable students to develop language skills so they could talk about themselves and their families, discuss every day and weekend routines, express likes and dislikes, converse about school and family activities, and get acquainted with Hungarian holidays and cultural traditions. Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course
Taught by: Mizsei
Two terms. student may enter either term.
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center.

HUNG 122 Elementary Hungarian II
Continuation of EEUR121. The second semester of elementary Hungarian course continues on providing functional language competency in basic grammar, vocabulary, comprehension, reading, writing and speaking in Hungarian. Students will continue to learn communicating in everyday life situations as well as in organizing a trip to Hungary, staying in a hotel, ordering meals, buying goods, and participating in cultural activities by using authentic Hungarian online resources and interactive class activities. Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course
Taught by: Mizsei
Two terms. student may enter either term.
Prerequisite: EEUR 121
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center.
HUNG 123 Intermediate Hungarian I
The Intermediate Hungarian I course builds on and continues the course material in Elementary Hungarian I-II. Course activities, authentic audio and video material along with Hungarian online resources will enable students to further develop their reading, writing, listening comprehension and conversational skills. Students will practice their skills by discussing and writing about their interests, student lives, travel and cultural experiences, life on campus as well as learning about Hungarian seasonal traditions, cultural events, and Hungarian student life. Prerequisite: Offered through the Penn Language Center.
For BA Students: Language Course
Taught by: Mizsei
Two terms, student may enter either term.
Prerequisite: EEUR 122
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

HUNG 124 Intermediate Hungarian II
The intermediate Hungarian II course continues EEUR123. Class documents and activities enable students to develop functional intermediate Hungarian competency by exploring Hungary and its culture, reading authentic online news sources, practicing listening and comprehension skills via video and audio material, researching cultural events and traditions, and exploring Hungarians' everyday lives. At the end of the semester, students will be able to participate and pass their Oral Competency Exit Interview on intermediate level and discuss topics, such as student life, family, friends, academic and student life activities, interests, travel, shopping, and cultural events. Prerequisite: Offered through Penn Language Center.
For BA Students: Last Language Course
Taught by: Mizsei
Two terms, student may enter either term.
Prerequisite: EEUR 123
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center.

HUNG 299 Independent Study in Hungarian
This is an independent study course for students who select to do individual language and culture projects in Hungarian under the guidance of the Hungarian language instructor; students need to be done with the four semesters of Hungarian prior to requesting such course.
Taught by: Mizsei
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

Igbo (IGBO)

IGBO 490 Elementary Igbo I
The main objective of this course is to allow students to study an African language of their choice, depending on the availability of the instructor. The course will provide students with linguistics tools which will facilitate their research work in the target country. Cultural aspects of the speakers of the language will be introduced and reinforced. Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

IGBO 491 Elementary Igbo II
Continuation of AFST 490. Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

IGBO 492 Intermediate Igbo I
Intermediate level courses in a variety of African languages: Igbo, Shona, Wolof, Malagasy, Chichewa, Setswana, Manding, Afrikaans, Setswana. Focus on oral proficiency and productive language skills. All course are language specific and follow ACTFL proficiency guidelines. Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

IGBO 493 Intermediate Igbo II
Continuation of AFST 492. Prerequisite: Offered through Penn Language Center.
For BA Students: Last Language Course
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

IGBO 494 Advanced Igbo I
Language specific sections for students interested in doing country-specific research in a target language. Courses cover project-based skills for AFST research. Prerequisite: Offered through Penn Language Center.
For BA Students: Advanced Language Course
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

IGBO 495 Advanced Igbo II
Continuation of AFST 494. Prerequisite: Language will be specified in each section.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Languages will be specified in each section.

IGBO 496 Igbo Language and Culture
Aspects of the targeted language's history, language, and culture. Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center
Immunology (IMUN)

IMUN 506 Immune Mechanisms
This is an introductory graduate course which surveys most areas of immunology. It is assumed that students have a background in biochemistry and molecular biology, and at least some familiarity with immunological concepts. Topics covered include the major histocompatibility complex, structure of antibodies and T cell receptors, antigen-antibody interactions, the generation of diversity of immunoglobulins and B cells, antigen presentation, and immunological tolerance. There will be two exams, both of which will require assessment and interpretation of experimental data and/or readings from the primary literature. Prerequisite: Permission of instructor.
Taught by: Michael May
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

IMUN 507 Immunopathology
The relationship between basic immunology and clinical immunologic diseases is emphasized. Course lecturers represent University faculty who are established investigators in immunological research and established clinical immunologists. Course topics include plasma protein systems; B cell, T cell, macrophage immunology; immunohematology; tumor immunology; benign and malignant, immunoproliferative disorders; neuroimmunology; pulmonary immunology; renal immunology; immune complex disease and immunoregulatory abnormalities. Prerequisite: Permission from instructor.
Taught by: Michael May and Erica Stone
Course usually offered in fall term
Prerequisite: IMUN 506
Activity: Lecture
1.0 Course Unit

IMUN 520 Tutorials in Immunology
This tutorial course is designed to provide students with an in-depth knowledge of a specific branch of Immunology. The tutorial can be used to enable students to become more deeply acquainted with the literature related to their thesis projects or to expand on a topic that the student found interesting in one of their basic courses. The course is currently the only immunology elective and is, therefore, required for all Immunology Graduate Group students. It is also open as an elective to BGS students who meet the prerequisite. The tutorial course will be examined by the program director and the tutorial leader and the grade will be based on a written paper on the subject studied (5 to 10 typewritten pages) and by an oral presentation of the paper (15 to 20 minutes). Prerequisite: A senior undergraduate, graduate or professional school course in Immunology.
Taught by: Randy Cron, M.D., Ph.D.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

IMUN 577 Advanced Epigenetics Technology
Second year students in GCB, CAMB (G&E), or IGG programs using genomics methods to measure transcriptomics and epigenomics changes in their experimental systems. The goal is to familiarize students with the latest cutting-edge genomics tools and cover solutions to major experimental and computational challenges in the investigation of genome-wide epigenetic data sets. Students will develop competence in (i) variations of experimental techniques improving resolution and throughput, (ii) issues related to the computational analyses closely related to the various genome-wide assays used to probe epigenetic processes and signals, (iii) computational approaches useful to overcome pitfalls associated to the analysis of a given epigenetic data modality, (iv) methods, techniques and studies on the integration of multi-layer epigenetic data sets.
Taught by: Golnaz Vahedi
Course usually offered in spring term
Also Offered As: CAMB 577, GCB 577
Prerequisite: (BIOL 483 OR BIOL 493) AND GCB 534 AND (GCB 535 OR GCB 536)
Activity: Lecture
1.0 Course Unit

IMUN 601 Molecular Immunology
The purpose of this course is to provide examples in which the cell biology topics covered in BIOM 600 are studied in the context of immune cells or used to explain immune system function. This course will help students become proficient at reading and critically assessing the published literature and encourage students to actively participate in scientific discussion with their peers.
Taught by: Drs. Paula Oliver and Jan Burkhardt
Course not offered every year
Activity: Lecture
0.5 Course Units

IMUN 607 Grant Writing
This course will introduce the student to basic principles of grant writing. In this regard a primary objective of the course is to teach you how to describe your ideas and experimental objectives in a clear and concise manner within the standard NIH grant format. To accomplish this, you will be required to write an NIH, ‘RO1’ type grant proposal based on your current laboratory project. Prerequisite: Permission from instructor.
Taught by: Andrew Wells, Bruce Freedman, Michael Cancro
Course usually offered in spring term
Prerequisite: IMUN 506 AND IMUN 507
Activity: Seminar
1.0 Course Unit
**IMUN 609 Vaccines and Immune Therapeutics**
Vaccination is perhaps the most successful medical technological intervention. The goal of this course is to expand on students’ general understanding of the immune system and to focus this understanding towards the application of modern vaccines and immune therapies in the 21st century. The course will provide the student with a sense of how these principles are applied to a vaccine and immune therapeutic development. The course covers basic vaccine science and describes how this science is translated through clinical, regulatory, ethical, and political issues to result in a final vaccine product. The courses’ goal is to leave the student with an understanding of the implications of modern vaccines/immunotherapies and their impact on world health. Initial lectures review immune mechanisms believed to be responsible for vaccine-induced protection from disease. Subsequent lectures build on this background to explore the science of vaccines for diverse pathogens, including agents of bioterrorism, as well as vaccines and immunotherapies for cancer. An appreciation for the application of laboratory science to the clinical development and clinical trials of vaccines are provided. An important focus on the regulatory, safety, and ethical implications of vaccines in different world situations based on true world examples are presented. The financial implications of specific vaccines with these implications for global health is a focus of the course. The course is presented in a lecture-style consisting of multiple distinguished guest lecturers who are experts in their particular area of vaccine development. There are required readings to provide the student context and background for the diverse lectures. Students are graded on course participation and a final project/exam which the students will present. The project is to design a vaccine strategy for a current disease or pathogen of importance that does not as yet have an effective vaccine or immune therapy and present this to the class. Strategies used should build on the material presented in the class lectures. The course is intended for graduate students or medical students in various MS, Ph.D., or MD/Ph.D. programs on the campus, as well as local scientists and professionals in the community. As a prerequisite, students should have taken biology, biochemistry, or immunology courses at the advanced college level. This course is offered in the fall semester. Prerequisite: Biology, Biochemistry at the advanced college level, college-level immunology is recommended. Not limited to CAMB students, however first options are to CAMB students, the permission of the instructors via email.
Taught by: David Weiner, Paul Offit, Stanley Plotkin
Course usually offered in fall term
Also Offered As: CAMB 609
Activity: Lecture
1.0 Course Unit

**IMUN 699 Laboratory Rotation**
Laboratory research conducted under a faculty advisor. Three different rotations covering usually the fall semester of the first year through the fall semester of the second year are required of all Immunology Ph.D. students. Students will defend the rotation research in their Preliminary Exams. Prerequisite: Permission of instructor and immunology chair.
Taught by: Immunology Graduate Group Faculty
One-term course offered either term
Activity: Laboratory
1.0 Course Unit

**IMUN 799 Independent Study**
Activity: Independent Study
1.0 Course Unit

**IMUN 899 Pre-Dissertation Lab**
Activity: Laboratory
1.0 Course Unit

**IMUN 995 Dissertation**
Activity: Dissertation
1.0 Course Unit

---

**Indonesian (INDO)**

**INDO 150 Elementary Indonesian I**
Elementary Indonesian I course is designed for both beginners and those who may have some previous experience with the language. This course will focus on developing and using the four foundational language skills (speaking, listening, reading, and writing) in a communicative format. Students will develop not only their ability to use and understand contemporary Indonesian, but also their knowledge of Indonesian history and culture. By the end of the semester, students will be able to engage in simple conversations about familiar things such as family, friends and daily activities. They will know every day expressions, will be able to tell time, to negate sentences and to build questions. Students will develop reading strategies and learn about the practical life and the cultural practices in Indonesia and compare them with their own.
For BA Students: Language Course
One-term course offered either term
Activity: Lecture
1.0 Course Unit

**INDO 151 Elementary Indonesian II**
Elementary Indonesian II course is the second course in the first-year series. It is designed to strengthen and expand students Indonesian language competencies in listening, speaking, reading, and writing to deepen their understanding of Indonesian culture. By the end of the semester, students will be able to engage in more detail conversations about familiar things and topics pertinent to them. Students will know everyday expressions and will be able to describe their cities, to tell story about their friends, family, about celebration and family tradition. Furthermore, students will be able to talk about events that happened in the past and in the future, will be able to make comparisons, to express their preference, describe people, things, or an important experience in increasing detail. Furthermore, students will be able to make plan for a party or a trip, write and retell a story or fairy tale.
For BA Students: Language Course
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

**INDO 250 Intermediate Indonesian I**
This course is designed to improve students writing and speaking competencies, to increase their vocabulary, to deepen grammar usage, and to help them develop effective reading and listening strategies in Indonesian. The authentic Indonesian reading texts and videos provide cultural and historical background information. In class, students will practice grammar, interpret reading texts, analyze and discuss Indonesian cultural practices and compare them with their own.
For BA Students: Language Course
One-term course offered either term
Activity: Lecture
1.0 Course Unit
IPD 501 Integrated Computer-Aided Design, Manufacturing and Analysis
The majority of today's engineered products move through an advanced computer-aided workflow which greatly speeds design and process time. This course will explore the fundamental components of this workflow through a combination of lectures, hands-on exercises, and a semester design project. General course topics include: fundamental design principles, project definition and needfinding, advanced computer-aided design, rapid prototyping techniques, computer-controlled machining, and an in-depth exploration of the modern analysis and simulation tools that have revolutionized the way in which products are designed. Enrollment is limited.
Course not offered every year
Prerequisites: MEAM 101, MEAM 150, and MEAM 210, or graduate standing in the School of Engineering, Design, or Wharton with similar experience
Activity: Lecture
1.0 Course Unit

IPD 504 Rehab Engineering and Design
Students will learn about problems faced by disabled persons and medical rehabilitation specialists, and how engineering design can be used to solve and ameliorate those problems. The course combines lectures, multiple design projects and exercises, and field trips to clinical rehabilitation facilities. Students will have substantial interaction with clinical faculty, as well as with patients. Prerequisite: Graduate students or permission of the instructor.
Course usually offered in fall term
Also Offered As: BE 514
Activity: Lecture
1.0 Course Unit
IPD 509 Needfinding
Needfinding is an approach that puts people and their needs at the center of product development and business strategy creation. Over 90% of new products introduced into the marketplace fail. A good portion of these failures are due to lack of understanding of end consumers and their needs. To develop truly successful new products, it’s not enough just to ask people what they need or want. Designers and engineers need tools and techniques to get beyond what people can explicitly state and determine their implicit needs. Needfinding is an approach for developing deep insights that provide strategic direction for corporations and open up new possibilities for product development. In this class students will gain a toolset from which to develop their own approaches to conducting research for design: learning how to think about other people, about culture, and about new perspectives. They will also learn tactical skills: how to define research questions, how to conduct observations and interviews, how to interpret results, how to synthesize them into fodder for design, and how to communicate their findings in a way that is compelling and actionable for designers, marketers, and business strategists. This class is designed for graduate students and upper level undergrads with a specific interest in product design or design thinking.

One-term course offered either term
Activity: Lecture
1.0 Course Unit

IPD 511 Creative Thinking and Design
This is a creative & iterative problem solving course that uses a series of mechanical design challenge projects to move students into the broad realm of unpredictable often incalculable time-constrained problem solving. It explores a wide variety of problem definition, exploration and solving ‘tools,’ and a variety of surrounding ‘design thinking’ topics, such as ethics and the design of experience. Drawing and prototyping are used in the projects for ideation, iteration, speculation and communication. Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: It is recommended that undergraduates take MEAM 101 prior to this course.

IPD 514 Design for Manufacturability
This course is aimed at providing current and future product design/development engineers, mechanical engineers, and product development managers with an applied understanding of Design for Manufacturability (DFM) concepts and methods. The course content includes materials from multiple disciplines including: engineering design, manufacturing, marketing, finance, project management, and quality systems. Prerequisite: Senior or graduate standing in the School of Design, Engineering, or Business with completed product in development and/or design engineering core coursework or related experience.
Course usually offered in spring term
Also Offered As: MEAM 514
Prerequisites: MEAM 101, 210
Activity: Lecture
1.0 Course Unit

IPD 515 Product Design
This course provides tools and methods for creating new products. The course is intended for students with a strong career interest in new product development, entrepreneurship, and/or technology development. The course follows an overall product design methodology, including the identification of customer needs, generation of product concepts, prototyping, and design-for-manufacturing. Weekly student assignments are focused on the design of a new product and culminate in the creation of a prototype, which is launched at an end-of-semester public Design Fair. The course project is a physical good - but most of the tools and methods apply to services and software products. The course is open to any Penn sophomore, junior, senior or graduate student.
Also Offered As: MEAM 415, OIDD 415, OIDD 515
Activity: Lecture
1.0 Course Unit

IPD 516 Advanced Mechatronic Reactive Spaces.
This course combines performance art and advanced mechatronics concepts that include the design and implementation of large-scale actuation, advanced sensing, actuation and control. This course pairs design school and engineering students to form interdisciplinary teams that together design and build electro-mechanical reactive spaces and scenic/architectural elements in the context of the performing arts. The two disciplinary groups will be treated separately and receive credit for different courses (ARCH746 will be taught concurrently and in some cases co-located) as they will be learning different things. Engineering students gain design sensibilities and advanced mechatronics in the form of networked embedded processing and protocols for large scale actuation and sensing. Design students learn elementary mechatronics and design reactive architectures and work with engineering students to build them. The class will culminate in a some artistic performance (typically with professional artists) such as a Shakespeare play, robotic ballet, a mechatronic opera.
Course not offered every year
Also Offered As: MEAM 516
Prerequisite: MEAM 510
Activity: Lecture
1.0 Course Unit

IPD 519 Real-Time Embedded Systems
The use of distributed wireless sensor networks has surged in popularity in recent years with applications ranging from environmental monitoring, to people- and object-tracking in both cooperative and hostile environments. This course is targeted at understanding and obtaining hands-on experience with the state-of-the-art in such wireless sensor networks which are often composed using relatively inexpensive sensor nodes that have low power consumption, low processing power and bandwidth. The course will span a variety of topics ranging from radio communications, network stack, systems infrastructure including QoS support and energy management, programming paradigms, distributed algorithms and example applications. Some guest lectures may be given. Prerequisite: One course in computer networks and Senior or Graduate standing
Course usually offered in fall term
Also Offered As: ESE 519
Prerequisite: CIS 120 AND ESE 350
Activity: Lecture
1.0 Course Unit
IPD 521 Designing Smart Objects for Play and Learning
Today's children enjoy a wide array of play experiences, with stories, learning, characters and games that exist as physical stand-alone objects or toys enhanced with electronics or software. In this course, students will explore the domain of play and learning in order to develop original proposals for new product experiences that are at once tangible, immersive and dynamic. They will conduct research into education and psychology while also gaining hands-on exposure to new product manifestations in a variety of forms, both physical and digital. Students will be challenged to work in teams to explore concepts, share research and build prototypes of their experiences in the form of static objects that may have accompanying electronic devices or software. Final design proposals will consider future distribution models for product experiences such as 3D printing, virtual reality and software/hardware integration. Instruction will be part seminar and part workshop, providing research guidance and encouraging connections will subject matter experts throughout the Penn campus.
Course usually offered in fall term
Also Offered As: ARCH 721
Activity: Seminar
1.0 Course Unit

IPD 525 Ergonomics/Human Factors Based Product Design
Human Factors and Ergonomics knowledge is a critical component of a product designer or design engineer's toolbox. This course teaches the direct application of existing human factors/ergonomic data to the creation of new product designs. Applying human factors knowledge to problem solving for product design happens throughout the design process. It is a useful input as initial ideas begin to take shape and as a way to verify completed concepts through directly documented user testing and design iteration. The course would be a mini-lecture/studio style course in which the students will work in class on assigned projects, finding, analyzing, extrapolating and applying data to design solutions and creating mockups, modeland prototypes for user testing of their designs.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

IPD 527 Industrial Design I
This course provides an introduction to the ideas and techniques of Industrial Design, which operates between Engineering and Marketing as the design component of Integrated Product Development. The course is intended for students from engineering, design, or business with an interest in multi-disciplinary, needs-based product design methods. It will follow a workshop model, combining weekly lectures on design manufacturing, with a progressive set of design exercises.
Course usually offered in spring term
Also Offered As: ARCH 727
Activity: Lecture
1.0 Course Unit

IPD 528 Design of Contemporary Products: Mass Customization
Personalization is quickly becoming the norm for mass production in a variety of consumer-centric industries. From retail to food, the idea of designing and making custom-made products tailored to fit one's lifestyle will be our exploration. Utilizing digital design innovations, we are able to incubate ideas, prototype, test and be entrepreneurial in design to create these individualized products. Cues from these industries will be used to shift both cultural and experiential product design from a regional discovery to a global focus. This course will embrace digital design and utilize its engagement with manufacturing solutions for a physical output. Through research and a series of design exercises, the approach will be built upon several strategies including adaptability, materiality, fabrication, modularity, and human-centric design. The final project will interpret the research and result in the creation of a design strategy for a mass customized product or system. This course will explore product design solutions through a combination of physical and digital design methods. Beginning with an examination of case studies, students will gain a sense of the breadth of product and interaction design practice as it applies to smart objects. Through a series of lectures and hands-on studio exercises, students will explore all aspects of smart object design including expressive behaviors (light, sound and movement), interaction systems, ergonomics, data networks and contexts of use. The course will culminate in a final project that considers all aspects of smart object design within the context of a larger theme.
Course usually offered in spring term
Also Offered As: ARCH 728
Activity: Seminar
1.0 Course Unit

IPD 529 Designing Connected Objects and Experiences
The objective of this course is to introduce students to a more conceptual, creative, and meaningful approach to creating interactive functional objects utilizing analog, digital, and electronic skillsets acquired through the core engineering curriculum. This course will cover basics of design as an art form, wearsables design, electronic sensors, and creating connected devices. Students will be challenged to create 3 pieces of work both individually and in teams culminating in a gallery show of the students' work. Visit the course website at www.ipd529.com to view previous student work.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

IPD 544 Postdigital Craft
As we have entered a postdigital era, the dominance of a purely technological approach as a vehicle for design innovation has waned. Questions of substance and disciplinary autonomy have found their way back into the contemporary cultural discourse, enriching the way we examine and deploy advanced technologies towards novel expressions in architecture. This seminar will investigate, through the production of estranged objects, opportunities for design that are being generated at the intersection of machinic and human minds, and speculate on possible futures in which concepts of nature and technology have been inseparably intertwined.
Course usually offered in spring term
Also Offered As: ARCH 744
Activity: Seminar
1.0 Course Unit
IPD 545 Engineering Entrepreneurship I
Engineers and scientists create and lead great companies, hiring managers when and where needed to help execute their vision. Designed expressly for students having a keen interest in technological innovation, this course investigates the roles of inventors and founders in successful technology ventures. Through case studies and guest speakers, we introduce the knowledge and skills needed to recognize and seize a high-tech entrepreneurial opportunity - be it a product or service - and then successfully launch a startup or spin-off company. The course studies key areas of intellectual property, its protection and strategic value; opportunity analysis and concept testing; shaping technology driven inventions into customer-driven products; constructing defensible competitive strategies; acquiring resources in the form of capital, people and strategic partners; and the founder's leadership role in an emerging high-tech company. Throughout the course emphasis is placed on decisions faced by founders, and on the sequential risks and determinants of success in the early growth phase of a technology venture. The course is designed for, but not restricted to, students of engineering and applied science and assumes no prior business education. Prerequisite: Third or Fourth year or Graduate standing
One-term course offered either term
Also Offered As: EAS 545
Activity: Lecture
1.0 Course Unit

IPD 551 Design Processes
This course is structured for IPD students as an intensive, interdisciplinary exploration of Design as purposeful for Integrated Product Design. The goal of the studio is to give students a firsthand experience of various processes involved in creating successful integrated product designs. This first semester of the four-semester studio sequence focuses on giving students experience in developing designs from a range of starting points: form, function, materiality and manufacturing process. Students will practice design through rigorous, consistent processes for thinking through the evolution of their ideas. In this course, they will go through an entire design process from conceptualization to design to producing prototypes. They will be taught to focus on the specifics of their designs, causing them to be conscious of what drives their choices as designers and providing them with a wider range of tools to design from in successive projects. Course work will involve readings, assignments, class participation, in-class exercises, a mid-term presentation and a final submission.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

IPD 552 Problem Framing
In the second semester of the four-semester studio sequence, we ask students to take a step back from what and how they are designing and ask the question of why they are designing it. We will teach them a rigorous process for understanding stakeholder needs and for translating those needs into implications for product design. They will begin to develop greater awareness of the personal, social, competitive and technological contexts that their products fit into, and to learn how to design for those contexts. They will develop the ability to dive into a topic and frame a design problem, and to understand the implications of how they frame the problem on what they design. Ideally, they will use this process to identify a problem or opportunity to work on for their final project. Course work will involve readings, assignments, class participation, in-class exercises, and a final submission.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

IPD 558 Integrative Design Studio: Biological Design
This course is a research-based design studio that introduces new materials, fabrication, and prototyping techniques to develop a series of design proposals in response to the theme: Biological Design. The studio introduces life sciences and biotechnologies to designers, artists, and non-specialists to develop creative and critical propositions that address the social, cultural, and environmental needs of the 21st century. The course will be a pilot study of the first biodesign challenge organized by CUT/PASTE/GROW. The final projects will be submitted to a competition and the winning entry will be featured at Biofabricate in Summer 2017.
One-term course offered either term
Also Offered As: FNAR 268, FNAR 568
Activity: Studio
1.0 Course Unit

IPD 572 Design Thinking
Creating new product concepts was once a specialized pursuit exclusively performed by design professionals in isolation from the rest of an organization. Today’s products are developed in a holistic process involving a collaboration among many disciplines. Design thinking - incorporating processes, approaches, and working methods from traditional designers’ toolkits - has become a way of generating innovative ideas to challenging problems and refining those ideas. Rapid prototyping techniques, affordable and accessible prototyping platforms, and an iterative mindset have enabled people to more reliably translate those ideas into implementable solutions. In this course, students will be exposed to these techniques and learn how to engage in a human-centered design process.
Course usually offered in fall term
Also Offered As: ARCH 725
Activity: Seminar
1.0 Course Unit

IPD 590 Special Topics in Integrated Product Design
This course will be offered when demand permits. The topics will change due to the interests and specialties of the instructor(s). Some topics could include: Advanced Manufacturing, Design of Interactive Objects, Medical Devices and Sustainable Products.

Integrated Studies (INTG)

INTG 261 Emerging Technologies and the Future of the World
Technological change is always occurring, but the rate of change seems to be accelerating. Advances in robotics, artificial intelligence, cyber, biotechnology, and other arenas generate promise as well as peril for humanity. Will these emerging technologies unleash the innovative capacity of the world, generating new opportunities that help people live meaningful lives? Alternatively, are automation and other technologies chipping away at the labor market in a way that could create severe generational dislocation at best, and national and international turmoil at worst? These questions are important, and have consequences for how we live our lives, how nations interact, and the future of the world writ large. Emerging technologies could shape public policy at the local, national, and international level, and raise questions of fairness, ethics, and transparency. This course takes a unique approach, combining insights from engineering, political science, and law in an interdisciplinary way that will expose students both to the key technologies that could shape the future and ways to think about their potential politics, and society.

Taught by: Horowitz

Activity: Seminar
1.0 Course Unit

INTG 344 Curiosity: Ancient and Modern Thinking about Thinking
This course will examine two approach to the skill unanswered question of what happen when we humans come up with new knowledge. How should we describe the impulse, or set of impulses, that leads us to seek it? What is happening when we achieve it? And how do we describe the new state in which we find ourselves after we have it? We will study the work of contemporary physicists and cognitive scientists on these questions along side the approaches developed by the two most powerful thinkers from antiquity on the topic, Plato and Aristotle.

Course not offered every year

Intercultural Communication (ICOM)

The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates/).

ICOM 100 Intercultural Communication
Language is a complex and multifaceted phenomenon, simultaneously communicative, creative, and cultural. An intercultural perspective is vital to learning a new language and engaging meaningfully with speakers of other languages and cultures. Focusing on the key ideas of intercultural practices, reflections, and strategies, this course offers students a foundation for understanding language, culture, and communication as well as the intricate relationship between them. Registration limited to BAAS degree candidates. Program fee of $175 for On Campus Learning Experience.

Activity: Online Course
1.0 Course Unit

International Relations (INTR)

INTR 101 Transnational Issues in Global Politics
This course is designed to provide students with an introduction to transnational issues and world politics and to acquaint them with some of the leading issues, theories, concepts and processes, and history that shape and define world events. It is suitable for students embarking on long-term study of international affairs as well as for students with other majors and intellectual interest who simply want to know more about how the world works and how the material covered in this class affects their lives. It is expected that students taking the course will gain an ability to analyze, understand objectively evaluate and appreciate the complex dynamics that affect ‘global politics’ writ large, including issues relating to trade, diplomacy, people-to-people and business transactions, and shifts in demography, borders, international institutions and global governance. In addition to issues of diplomacy, statecraft, and security we will assess some of the major international issues of our time (i.e. climate change, proliferation of weapons of mass destruction, genocide and human trafficking) and debate the prospects for bringing peace and prosperity to a world that is rife with conflict and poverty.

One-term course offered either term
Activity: Lecture

Notes: An application is required to register this course. Please refer to the syllabus or click on the link under additional course information above.
INTR 350 Research Methods/Practice in IR
International Relations is concerned with both theory and practice so we employ a range of analytical tools to examine actors and events in world politics. The purpose of this course is to introduce students to the various research methods utilized by students and scholars in the field of IR including: case studies, historical - comparative and archival research, survey research, interviewing techniques, simulations, quantitative and statistical analysis.
One-term course offered either term
Prerequisite: PSCI 150
Activity: Lecture
1.0 Course Unit
Notes: MAJORS ONLY

INTR 390 Senior Seminar for Thesis Research
Seminar in International Relations. A two semester sequence including review of advanced International Relations theory and research methods for the preparation of the senior thesis.
Course usually offered in fall term
Prerequisite: INTR 350 AND PSCI 150
Activity: Seminar
1.0 Course Unit
Notes: MAJORS ONLY

INTR 391 Senior Seminar For Thesis Research
Seminar in international relations. Second semester of a two semester sequence including review of advanced international relations theory and research methods for the preparation of the senior thesis.
Course usually offered in spring term
Prerequisite: INTR 390
Activity: Seminar
1.0 Course Unit
Notes: MAJORS ONLY

INTR 395 Senior Project I
This seminar will prepare students to plan, implement, and present their senior research project. Students will draw on the experience and insight they have gained in the course of their fieldwork or internship to develop defensible policy recommendations for their target audience. As such, the seminar will introduce students to the policy formation process as they develop the practical skills needed to formulate and produce actionable policy recommendations. Students will produce a formal report and will present their findings to relevant stakeholders at the conclusion of the Seminar. This class will ensure that students develop the skills necessary to undertake a substantive research project.
Course usually offered in fall term
Prerequisite: INTR 350 AND PSCI 150
Activity: Seminar
1.0 Course Unit
Notes: MAJORS ONLY

INTR 396 Senior Project II
This course is a continuation of INTR-395, culminating with the production of a policy research paper and presentation.
Course usually offered in spring term
Prerequisite: INTR 395
Activity: Seminar
1.0 Course Unit
Notes: MAJORS ONLY

INTR 399 Independent Study for Thesis Research
One-term course offered either term
Activity: Independent Study

Notes: MAJORS ONLY

Irish Gaelic (IRIS)

IRIS 081 Beginning Irish Gaelic I
Irish Gaelic, spoken primarily on the west coast of Ireland, is rich in oral traditions, song, poetry and literature. Knowledge of this language provides a foundation to understanding Celtic folklore and linguistics and also enhances the study of Anglo-Irish literature and history. The first-year course will include reading, conversation, listening and speaking.
Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course
Taught by: Blyn-LaDrew
Two terms. student may enter either term.
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

IRIS 082 Beginning Irish Gaelic I
Irish Gaelic, spoken primarily on the west coast of Ireland, is rich in oral traditions, song, poetry and literature. Knowledge of this language provides a foundation to understanding Celtic folklore and linguistics and also enhances the study of Anglo-Irish literature and history. The first-year course will include reading, conversation, listening and speaking.
Prerequisite: Offered through Penn Language Center.

ITAL 081 Film Music in Post 1950 Italy: Nino Rota and Ennio Morricone
An exploration of cinematic sound through the lens of specific composer/director collaborations in post-1950 Italy, examining scores, soundtracks, and the interaction of diegetic and non-diegetic music with larger soundscapes. Composers Nino Rota and Ennio Morricone serve as case studies, in partnership with directors Fellini, Visconti, Leone, Pontecorvo, Pasolini, and Coppola. Highlights include several excerpts from the Fellini/Rota collaboration, including The White Sheik, I vitelloni, The Road, Nights of Cabiria, La dolce vita, 8 1/2, Juliet of the Spirits, Satyricon, The Clowns, Roma, Amarcord, Casanova, and Orchestra Rehearsal. Rota's music for Visconti will be examined in Senso, The Leopard, and Rocco and his Brothers, along with his Transatlantic collaboration for The Godfather. Morricone's work with various directors will be discussed in The Good, the Bad, and the Ugly, The Battle of Algiers, and Teorema, as well as for American films such as Malick's Days of Heaven and Tarantino's The Hateful Eight. Weekly screenings required. Open to all: music majors, minors, and non-majors; will count toward requirements for music minor. Knowledge of music and Italian helpful but not required. All readings and lectures in English.
Taught by: Samuel
Also Offered As: CIMS 081, MUSC 081
Activity: Seminar
1.0 Course Unit

ITAL 101 Italian Survival Kit: The Language and Culture of getting around in Italy
This course provides content that is taught efficiently in order to be used practically. If you are going to Italy and questioning how you will survive your total immersion experience, this course will provide you with the linguistic and cultural skills you will need to effectively function in Italy and fully enjoy its wonders. In this course, you will learn and practice the language you need to talk about: yourself, others; travel; public transportation; housing; food; shopping; technology; health; money, etc. Students participate in conversations that replicate day-to-day life in Italy thereby developing the skills needed for face-to-face and online situations. This course does not count toward fulfillment of the language requirement. Students wishing to continue in Italian 120 should register for Italian 110 rather than Italian 101. This course is open to students who have never taken Italian and who don't intend to satisfy the language requirement by taking courses in Italian.
Taught by: Lillyrose Veneziano Broccia
Course usually offered in spring term
Activity: Seminar
0.5 Course Units

ITAL 105 Sicilian Language and Culture
Occupied over the centuries by the Greeks, Romans, Arabs, Normans, French, and Spaniards, Sicily is a region of many histories and many traditions. Birthplace and crossroad of cultures and artistic movements, the Sicilian land has shaped the imagination of its inhabitants and has never ceased to fascinate its visitors. Its language and culture have also been exported abroad, through the many Sicilians who left the island and settled all over the world. This course is an introduction to Sicilian Language and Culture. We will study spoken Sicilian and cultural artifacts ranging from film to literature, to music and food, in order to learn to recognize and understand the unique sounds and features of 'siciliano' and to converse in Sicilian with native speakers and with one another. Class sessions include lectures and interactive discussions. Between classes, the learning experience is extended through assignments, lectures and discussions.
Taught by: Lillyrose Veneziano Broccia
Course usually offered in fall term
Activity: Seminar
0.5 Course Units

ITAL 100 Topics: Freshman Seminar
Topics vary. See the Department’s website at https://www.sas.upenn.edu/italians/courses for a description of current offerings.
One-term course offered either term
Also Offered As: CIMS 014, COML 107
Activity: Seminar
1.0 Course Unit
ITAL 112 Accelerated Elementary Italian
An intensive two-credit course covering the first and second semester of the elementary year for students who have never studied Italian before but have already fulfilled the language requirement in another modern language, preferably a romance language. Students who have fulfilled the language requirement in a language other than a romance language will be considered on an individual basis. All students must have departmental permission to register. Prerequisite: Proficiency in another foreign language. Class work emphasizes the development of spontaneous discourse skills and interactional competence. Out-of-class homework required.
For BA Students: Language Course
One-term course offered either term
Activity: Seminar
2.0 Course Units

ITAL 120 Elementary Italian II
This course is the continuation of the elementary-level sequence designed to develop functional competence in the four skills. Class work emphasizes the further development of spontaneous discourse skills and interactional competence. Out-of-class homework required.
For BA Students: Language Course
Taught by: Veneziano Broccia
One-term course offered either term
Prerequisite: ITAL 110
Activity: Seminar
1.0 Course Unit

ITAL 130 Intermediate Italian I
Italian 130 is the first half of a two-semester intermediate sequence designed to help you attain a level of proficiency that will allow you to function comfortably in an Italian-speaking environment. The course will build on your existing skills in Italian, increase your confidence and your ability to read, write, speak and understand the language, and introduce you to more refined lexical items, more complex grammatical structures, and more challenging cultural material. You are expected to have already learned the most basic grammatical structures in elementary Italian and to review these. The course materials will allow you to explore culturally relevant topics and to develop cross-cultural skills through the exploration of similarities and differences between your native culture and the Italian world.
For BA Students: Language Course
One-term course offered either term
Prerequisite: ITAL 120
Activity: Seminar
1.0 Course Unit

ITAL 134 Accelerated Intermediate Italian
Italian 134 is the intensive and accelerated course that combines in one semester the intermediate sequence (130 and 140). It will build on your existing skills in Italian, increase your confidence and your ability to read, write, speak and understand the language, and introduce you to more refined lexical items, more complex grammatical structures, and more challenging cultural material. The course will allow you to explore culturally relevant topics and to develop cross-cultural skills through the exploration of similarities and differences between your native culture and the Italian world.
For BA Students: Last Language Course
One-term course offered either term
Prerequisite: ITAL 112
Activity: Seminar
2.0 Course Units

ITAL 140 Intermediate Italian II
Italian 140 is the second half of a two-semester intermediate sequence designed to help you attain a level of proficiency that will allow you to function comfortably in an Italian-speaking environment. The course will build on your existing skills in Italian, increase your confidence and your ability to read, write, speak and understand the language, and introduce you to more refined lexical items, more complex grammatical structures, and more challenging cultural material. The course will allow you to explore culturally relevant topics and to develop cross-cultural skills through the exploration of analogies and differences between your native culture and the Italian world. The course will move beyond stereotypical presentations of Italy and its people to concentrate on specific social issues together with cultural topics.
For BA Students: Last Language Course
One-term course offered either term
Prerequisite: ITAL 130
Activity: Seminar
1.0 Course Unit

ITAL 180 Italian Conversation
The course materials and nature of assignments and projects complement the Italian Studies curriculum by supporting the cultural content, linguistic functions, and types of assignments students may have already been exposed to in other Italian courses. This course will serve not only as a gateway to inspire students to take Italian Studies courses in the future, but will also accompany classes they may be taking simultaneously. The learning objectives of the works studied in this course will mirror and support the goals of the Italian Studies Curriculum while paying particular attention to oral expression, communication, and fostering a community of students of Italian both inside and outside the classroom. Knowledge of Italian Language at any level is prerequisite.
Taught by: Lillyrose Veneziano Broccia
Two terms. student may enter either term.
Activity: Seminar
0.5 Course Units

ITAL 201 Advanced Italian I
Italian 201 will focus on contemporary Italian culture following its development since the 1960s. Pertinent films, literary texts, articles, as well as material in other media will complement the analysis of films and allow in-depth discussion. The cultural material explored in the course will be also used as a basis for a review of linguistic structures and vocabulary. Prerequisite: Open to students who have satisfied the language requirement in Italian. ITAL 201 or equivalent is a prerequisite for all other courses taught in Italian at the 200/300 level. Audiovisual materials develop students' comprehension and production in Italian and enable them to function in an academic setting. Class work will center primarily on conversation to improve students' fluency, vocabulary, and accuracy in speaking. Homework will consist of research and writing assignments in written Italian. Additionally, students will be required to prepare presentations. Students will write a final essay.
For BA Students: Advanced Language Course
One-term course offered either term
Activity: Seminar
1.0 Course Unit
ITAL 202 Advanced Italian II
In Italian 202, students will strengthen their communication skills, while continuing to explore significant aspects of contemporary Italian culture and history. Students will take further steps towards being able to understand in depth and to contextualize authentic Italian documents. Films, songs, and a variety of readings, will be used as windows on particular historical periods, cultural movements, political issues, and social customs. They will serve as a tool to investigate the many facets of Italian identity and, at the same time, as a way to prepare those students who will continue their study of Italian literature and culture in higher-level courses. Prerequisite: Open to students who have completed ITAL 201. Please see the Undergraduate Chair if you have any questions. Students are expected to participate in conversations and all other class activities in order to improve their oral and written ability to narrate, express opinion, hypothesize, and discuss a variety of topics, using rich, appropriate vocabulary and grammar, and organizing well-structured discourses, be they oral presentations, weekly compositions or the final essay. To reach these goals, speaking, listening, reading and writing activities -- role plays, discussions, oral presentations, journals, grammar reviews -- will be based on audio-visual material and written texts and/or proposed by the students themselves, based on their independent explorations and research.
For BA Students: Advanced Language Course
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ITAL 203 Masterpieces-Italian Literature
This course surveys the history of Italian literature through its major masterpieces. Beginning with Dante's Divine Comedy, Petrarca's love poems, and Boccaccio's Decameron, we will follow the development of Italian literary tradition through the Renaissance (Machiavelli’s political theory and Ariosto’s epic poem), and then through Romanticism (Leopardi’s lyric poetry and Manzoni's historical novel), up to the 20th century (from D’Annunzio’s sensual poetry to Calvino’s post-modern short stories). The course will provide students with the tools needed for analyzing the texts in terms of both form and content, and for framing them in their historical, cultural, and socio-political context. Classes and readings will be in Italian. ITAL 203 is mandatory for Minors in Italian Literature and Majors in Italian Literature. If necessary, ITAL 201 can be taken at the same time as ITAL 203. Prerequisite: Open to students who have completed ITAL 201 or equivalent.
For BA Students: Arts and Letters Sector
One-term course offered either term
Also Offered As: COML 203
Prerequisite: ITAL 201
Activity: Seminar
1.0 Course Unit

ITAL 204 Italian History on Screen: How Movies Tell the Story of Italy
How has our image of Italy arrived to us? Where does the story begin and who has recounted, rewritten, and rearranged it over the centuries? In this course, we will study Italy’s rich and complex past and present. We will carefully read literary and historical texts and thoughtfully watch films in order to attain an understanding of Italy that is as varied and multifaceted as the country itself. Group work, discussions and readings will allow us to examine the problems and trends in the political, cultural and social history from ancient Rome to today. We will focus on: the Roman Empire, Middle Ages, Renaissance, Unification, Turn of the Century, Fascist era, World War II, post-war and contemporary Italy. Lectures and readings are in English.
For BA Students: Arts and Letters Sector
One-term course offered either term
Also Offered As: CIMS 206, COML 206
Activity: Seminar
1.0 Course Unit

ITAL 205 Sicily on Page and Screen
What images come to mind when we hear the words Sicily and Sicilians? Often our thoughts range from scenic vacation spots, delicious seafood and cannoli, and sweet grandmothers dressed in black, to mafia violence, vendettas, and the deep-rooted code of silence, omerta. But, how did these ideas get to us? Is there truth in them? Is there more to this island and its people? Through careful analysis of literary and cinematic representations of this Italian region, and those that do and have inhabited it, we will trace and analyze how Sicilians have represented themselves, how mainland Italians have interpreted Sicilian culture, how outsiders have understood these symbols, how our own perceptions shaped what we thought we knew about this place and, finally, how our own observations will have evolved throughout our studies. We will watch films such as Tornatore's Cinema paradiso and Coppola's The Godfather II, and read texts such as Lampedusa’s The Leopard and Maraini's Bagheria. This course aims to increase students’ understanding and knowledge of the Sicilian socio-cultural system. It will help students develop their ability to understand and interpret Sicilian culture through close analysis of its history, values, attitudes, and experiences, thereby allowing them to better recognize and examine the values and practices that define their own, as well as others’, cultural frameworks. Taught by: Broccia
Course usually offered summer term only
Also Offered As: CIMS 204, COML 208, ENGL 083

ITAL 208 Business Italian
The course is conducted entirely in Italian and should be taken after completion of Italian 201 or equivalent. It is designed to enable students to acquire language proficiency in the current Italian business and labor world. Business terminology will be used in specific business situations such as banking, trade, communications, etc. The course will examine Italian business practices, cultural differences such as the attitude towards money, work, leisure and consumerism through websites, newspaper and magazine articles and video clips. Students will learn to read business publications, write and compose business texts, and participate in business-related conversations. Additionally, guest lecturers from the local business world with ties to Italy will provide students with information about internship and job opportunities and the knowledge necessary to navigate international and Italian commercial routes. All reading and lectures in Italian. Prerequisite: Open to students who have completed ITAL 201 or equivalent.

ITAL 257 Fascist Cinemas
Cinema played a crucial role in the cultural life of Nazi Germany and other fascist states. As cinema enthusiasts, Goebbels and Hitler were among the first to realize the important ideological potential of film as a mass medium and saw to it that Germany remained a cinema powerhouse producing more than 1000 films during the Nazi era. In Italy, Mussolini, too, declared cinema ‘the strongest weapon.’ This course explores the world of ‘fascist’ cinemas ranging from infamous propaganda pieces such as The Triumph of the Will to popular entertainments such as musicals and melodramas. It examines the strange and mutually defining kinship between fascism more broadly and film. We will consider what elements mobilize and connect the film industries of the Axis Powers: style, genre, the aestheticization of politics, the creation of racialized others. More than seventy years later, fascist cinemas challenge us to grapple with issues of more subtle ideological insinuation than we might think. Weekly screenings with subtitles. All readings and discussions in English.

ITAL 333 Dante's Divine Comedy
In this course we will read the Inferno, the Purgatorio and the Paradiso, focusing on a series of interrelated problems raised by the poem: authority, fiction, history, politics and language. Particular attention will be given to how the Commedia presents itself as Dante's autobiography, and to how the autobiographical narrative serves as a unifying thread for this supremely rich literary text. Supplementary readings will include Virgil's Aeneid and selections from Ovid's Metamorphoses. All readings and written work will be in English. Italian or Italian Studies credit will require reading Italian texts in their original language and writing about their themes in Italian. This course may be taken for graduate credit, but additional work and meetings with the instructor will be required. When crosslisted with ENGL 323, this is a Benjamin Franklin Seminar. Course not offered every year
Also Offered As: COML 333, ENGL 323

ITAL 511 A Black Seed (He) Sowed: An Introduction to Paleography & History of Books
Writing and reading are common actions we do every day. Nonetheless they have changed over the centuries, and a fourteenth century manuscript appears to us very different from a Penguin book. The impact of cultural movements such as Humanism, and of historical events, such as the Reformation, reshaped the making of books, and therefore the way of reading them. The course will provide students with an introduction to the history of the book, including elements of paleography, and through direct contact with the subjects of the class: manuscripts and books. Furthermore, a section of the course will focus on digital resources, in order to make students familiar with ongoing projects related to the history of book collections (including the 'Philosophical Libraries' and the 'Provenance' projects, based at the Scuola Normale Superiore in Pisa and at Penn). The course will be conducted in English; a basic knowledge of Latin is desirable but not required. The class will meet in Van Pelt.

ITAL 531 Dante's Commedia I
Please check the department's website for the course description at: http://www.sas.upenn.edu/italians/graduate/courses Dante Visualizing: Dante Visualizing and Dante Visualized. Dante's Commedia has inspired art, but at the same time art is present within the Comedy itself, through images, metaphors, descriptions and even more concrete examples. This course aims at discussing these aspects, taking into consideration also the philosophical, political and religious background of these motifs. While analyzing images in and from the Commedia, we will look at illustrations and artistic interpretations, spanning from medieval illuminations and Renaissance printed books (mainly from Van Pelt Library) to contemporary examples, and focusing on artists such as Giotto, Botticelli, Michelangelo, Blake, Dore, and Dali. The course will be taught in English.

ITAL 540 Plato and Aristotle in the Renaissance
In one of the most evocative frescoes of the Renaissance, Raphael juxtaposes Plato and Aristotle. The pairing would seem obvious, since the two thinkers had been for centuries symbols of philosophy and wisdom. But only the recent revival of Plato, begun in the mid-fifteenth century, had allowed Latin West to gain a better understanding of Platonic philosophy and therefore to compare Plato's doctrines directly to those of Aristotle. Were master and disciple in harmony? And if not, which of the two should be favored? Such questions were less innocent than one might think, and the answers to them had implications for philosophy, theology, speculation on the natural world, and even politics. The course will offer an overview of Renaissance philosophy and culture by focusing on the different ways in which Plato and Aristotle were read, interpreted and exploited between the fifteenth and seventeenth centuries. The course will be conducted in English; a basic knowledge of Latin is desirable but not required.

ITAL 541 Transalpine Tensions: Franco-Italian Rivalries in the Renaissance
In the Middle Ages and Early Modern period, France and the Italian States were bound together by linguistic, economic, political, and religious ties, and intellectual developments never flowed unilaterally from one country to the other. On the contrary, they were transnational phenomena, and French and Italian thinkers and writers conceived of themselves and their work both in relation to and in opposition to one another. This course will consider the most fundamental aspects of Franco-Italian cultural exchange in the medieval and early modern period, with an emphasis on humanism, philosophical and religious debates, political struggles, and the rise of vernacular languages in literary and learned discourse. Authors to be studied include Dante, Petrarch, Boccaccio, Ficino, Pico della Mirandola Castiglione, Bembo, Rabelais, Marguerite de Navarre, Du Bellay, Machiavelli, and Montaigne. In addition to learning the material covered in the course, students will gain expertise in producing professional presentations and research papers, and will also have the opportunity to consult original material from the Kislak Center. This course is open to undergraduates with permission of the instructors. It counts toward the undergraduate minor in Global Medieval Studies and the graduate certificate in Global and Medieval Renaissance Studies. Undergraduates must obtain permission from instructor to enroll.

ITAL 594 Theories of Nationalism
You cannot build a wall to stop the free flow of literary and creative ideas. But in constructing narratives of national identity, states have long adopted particular texts as ‘foundational.’ Very often these texts have been epics or romances designated ‘medieval,’ that is, associated with the period in which specific vernaculars or ‘mother tongues’ first emerged. France and Germany, for example, have long fought over who ‘owns’ the Strasbourg oaths, or the Chanson de Roland; new editions of this epic poem, written in French but telling of Frankish (Germanic) warriors, have been produced (on both sides) every time these two countries go to war. In this course we will thus study both a range of ‘medieval’ texts and the ways in which they have been claimed, edited, and disseminated to serve particular nationalist agendas. Particular attention will be paid to the early nineteenth century, and to the 1930s. Delicate issues arise as nations determine what their national epic needs to be. Russia, for example, needs the text known as The Song of Igor to be genuine, since it is the only Russian epic to predate the Mongol invasion. The text was discovered in 1797 and then promptly lost in Moscow’s great fire of 1812; suggestions that it might have been a fake have to be handled with care in Putin’s Russia. Similarly, discussing putative Mughal (Islamic) elements in so-called ‘Hindu epics’ can also be a delicate matter. Some ‘uses of the medieval’ have been exercised for reactionary and revisionist causes in the USA, but such use is much more extravagant east of Prague. And what, exactly, is the national epic of the USA? What, for that matter, of England? Beowulf has long been celebrated as an English Ur-text, but is set in Denmark; is full of Danes (and has been claimed for Ulster by Seamus Heaney). Malory’s Morte Darthur was chosen to provide scenes for the queen’s new robing room (following the fire that largely destroyed the Palace of Westminster in 1834), but Queen Victoria found the designs unacceptable: too much popery and adultery. Foundations of literary history still in force today are rooted in nineteenth-century historiography: thus we have The Cambridge History of Italian Literature and The Cambridge History of German Literature, each covering a millennium, even though political entities by the name of Italy and Germany did not exist until the later nineteenth century. What alternative ways of narrating literary history might be found? Itinerary models, which do not observe national boundaries, might be explored, and also the cultural history of watercourses, such as the Rhine, Danube, or Nile. The exact choice of texts to be studied will depend in part on the interests of those who choose to enroll. Faculty with particular regional expertise will be invited to visit specific classes.

ITAL 641 Topics in Southern Renaissance Art
Topic varies from semester to semester. For the Fall 2020 semester, the topic will be 'Figure and Ground.' We owe the Renaissance picture more than the idealized human figure. For figure, depends on ground, here defined in at least three senses: 1) the ground as the material preparation of the support; 2) the plane where figures anchor their place in the pictorial world; and 3) the field in and against which figuration occurs, namely the background. In this graduate seminar, we will attempt to discuss, debate, and formulate ideas and methods to interpret the Renaissance picture according to these three semantic areas of ground. We will begin with gold grounds in the fourteenth century and conclude with the darkened grounds of tenebrist painters such as Caravaggio. In addition to reading current art historical scholarship grappling with several 'turns' (material, global, ecocritical) as well as Anne Cheng's notion of 'ornamentalism' that draws from critical race and gender theory, we will also focus our attention on those Renaissance writers who described and prescribed the look of the picture in ways not usually accommodated by standard art historical approaches. Rather than recuperating the ground as an integral category, we will instead consider the acute dilemma of the ground’s theoretical exception.

Japanese (JPAN)

JPAN 001 Introduction to Spoken Japanese I
Intended for students who have no Japanese background. The major emphasis is on oral communication skills, although some reading and writing instructions are given. Japanese pop-culture will also be incorporated. Prerequisite: See LPS Course Guide. **This course does not fulfill the language requirements the College.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: See LPS Course Guide. **This course does not fulfill the language requirement in the College.

JPAN 002 Introduction to Spoken Japanese II
Although some reading/writing instruction is given, the major emphasis is on oral communication skill. Prerequisite: See LPS Course Guide.
**This course does fulfill the language requirement the College.
Course usually offered in spring term
Prerequisite: JPAN 001
Activity: Lecture
1.0 Course Unit
Notes: See LPS Course Guide. **This course does not fulfill the language requirement in the College.

JPAN 003 Beginning Japanese I
Intended for students who have no Japanese background. All four skills, speaking/listening/writing/reading, are equally emphasized. Hiragana/ Katakana (Two sets of Japanese syllabic letters) and some Chinese characters (Kanji) are introduced. Textbooks: Genki I (Lesson 1- Lesson 7). Kanji: reproduction-approx.70/recognition-approx.110
For BA Students: Language Course
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
JPAN 012 Beginning Japanese II
A continuation of Beginning Japanese I, this course continues the introduction of the Japanese language. All four skills, speaking/listening/reading/writing, are equally emphasized. Hiragana/Katakana (Two sets of Japanese syllabic letters) and some Chinese characters (Kanji) are introduced. Textbooks: Genki I (Lesson 8- Lesson 12) and Genki II (Lesson 13- Lesson 14) Kanji: reproduction-approx. 170/recognition-approx. 250
For BA Students: Language Course
Course usually offered in spring term
Prerequisite: JPAN 011
Activity: Lecture
1.0 Course Unit

JPAN 021 Intensive Beginning Japanese I
Intended for students who have little or no background in Japanese who wish to finish the language requirement in one year. This is equivalent to Beginning Japanese I & II in one semester, 2 CU. Textbooks: Genki I (Lesson 1-Lesson 12) and Genki II (Lesson 13-Lesson 14) Kanji: reproduction-approx.170/recognition-approx.250
For BA Students: Language Course
Course usually offered in fall term
Activity: Lecture
2.0 Course Units

JPAN 022 Intensive Beginning Japanese II
A continuation of Intensive Beginning Japanese I, this class is equivalent to Beginning Japanese III and Beginning Japanese IV in one semester, 2CU, and completes the College language requirement. Textbooks: Genki II (Lesson 13- Lesson 23) and Tobira: Gate way to Advanced Japanese (Unit 1-Unit 3) Kanji: Approximately 140 new Kanji will be introduced. Overall Kanji knowledge will be about approx. 400.
For BA Students: Last Language Course
Course usually offered in spring term
Prerequisite: JPAN 012 OR JPAN 021
Activity: Lecture
2.0 Course Units

JPAN 111 Beginning Japanese III
This course is a continuation of Beginning Japanese II and focuses on the development of the elementary grammatical structures of the Japanese language through aural-oral practices. The course also aims to develop the four basic skills: listening, speaking, reading, and writing. The course also introduces aspects of Japanese culture and customs, knowledge that is necessary for behaving in a socio-culturally appropriate manner. Students will learn and practice skills to communicate in situations they might face in real life. Example topics and functions are travel, part-time job, work, asking for favors, asking permission, stating your intension/opinion, reporting what you heard, and various speech styles including Keigo (respectful speech).Textbooks: Genki II (Lesson 15-Lesson 21) will be covered, and around 100 new Kanji will be introduced. Overall kanji knowledge will be 286.
For BA Students: Language Course
Course usually offered in fall term
Prerequisite: JPAN 012 OR JPAN 021
Activity: Lecture
1.0 Course Unit

JPAN 112 Beginning Japanese IV
Prerequisites: Completion of JPAN 111 or the equivalent This course completes the College language requirement. Textbooks: Genki II (Lesson 22- Lesson 23) and Tobira: Gate way to Advanced Japanese (Unit 1-Unit 3) Kanji: Approximately 140 new Kanji will be introduced. Overall Kanji knowledge will be about approx. 400.
For BA Students: Last Language Course
Course usually offered in spring term
Prerequisite: JPAN 111
Activity: Lecture
1.0 Course Unit

JPAN 211 Intermediate Japanese I
A continuation of Japanese language beyond the language requirement. Textbooks: Tobira: Gateway to Advanced Japanese (Unit 4-Unit 8) Kanji:reproduction-approx.400/recognition-approx.550
For BA Students: Advanced Language Course
Course usually offered in fall term
Prerequisite: JPAN 112 or JPAN 022
Activity: Lecture
1.0 Course Unit

JPAN 212 Intermediate Japanese II
A continuation of Japanese language at the intermediate level. Textbooks: Tobira: Gateway to Advanced Japanese (Unit 9-Unit 15) Kanji:reproduction-approx.470/recognition-approx.650
For BA Students: Advanced Language Course
Course usually offered in spring term
Prerequisite: JPAN 211
Activity: Lecture
1.0 Course Unit

JPAN 311 Intermediate Japanese III
This course is a continuation of Japanese language at the upper intermediate level, and authentic materials and video clips will be used.
For BA Students: Advanced Language Course
Taught by: Takami
Course usually offered in fall term
Prerequisite: JPAN 212
Activity: Lecture
1.0 Course Unit

JPAN 312 Intermediate Japanese IV
PREREQUISITES Completion of JPAN 311 or the equivalent. Authentic materials and video clips will be used
For BA Students: Advanced Language Course
Taught by: Takami
Course usually offered in spring term
Prerequisite: JPAN 311
Activity: Lecture
1.0 Course Unit

JPAN 381 Japanese for the Professions
For BA Students: Advanced Language Course
Taught by: Takami
Course usually offered in fall term
Prerequisite: JPAN 212
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center.
JPAN 382 Japanese for the Professions II
For BA Students: Advanced Language Course
Taught by: Takami
Course usually offered in spring term
Prerequisite: JPAN 381
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

JPAN 411 Advanced Japanese I
Minimum 600 - 700 kanji knowledge is expected. A continuation of Japanese language beyond the intermediate level.
For BA Students: Advanced Language Course
Course usually offered in fall term
Prerequisite: JPAN 312 OR JPAN 382
Activity: Lecture
1.0 Course Unit

JPAN 412 Advanced Japanese II
A continuation of Japanese language at the advanced level. Authentic materials and video clips will be used.
For BA Students: Advanced Language Course
Course usually offered in spring term
Prerequisite: JPAN 411
Activity: Lecture
1.0 Course Unit

JPAN 481 Advanced Japanese for Proficiency I
This course is for students with an advanced background in Japanese, who are interested in taking at least the Level 2 Japanese Proficiency Test. Solid grammar, an extensive vocabulary, and the knowledge of at least 800-900 Chinese characters is required. This course is not continuous with any existing intermediate or advanced-level Japanese course; therefore, your grade from any of those courses does not qualify you to take this class. Eligibility will be determined through an interview and placement test taken in the first meeting. All students who take this course are required to take the Japanese Proficiency Test in December. Since the JLPT is administered in December every year, if you wish to fully prepare for the test, the instructor strongly recommends that you take Advanced Proficiency II in the same calendar year. For example, if you plan to take the test in December, take Advanced Proficiency II the prior spring and take Advanced Proficiency I in the fall. Different from other courses, this full-year course begins in the spring and ends in the fall, because the test is given in December. However, participation in 482 is optional.
For BA Students: Advanced Language Course
Course usually offered in fall term
Prerequisite: JPAN 312 OR JPAN 382
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center.

JPAN 482 Advanced Japanese for Proficiency II
This course is for students with an advanced-low or advanced-mid background in Japanese, aiming to strengthen the four language skills (speaking, reading, writing, and listening) and to deepen their understanding of Japanese culture. The class will use authentic Japanese through media, such as newspapers, television, and articles, regarding Japanese culture and society as well as current news. Students will narrate, describe, and express their opinions with details, examples, and strong reasoning, using sophisticated terms and phrases related to such topics. Prerequisite: Japanese proficiency test and permission of instructor. Offered through the Penn Language Center.
For BA Students: Advanced Language Course
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

JPAN 491 Readings in Classical Japanese I
Readings in classical texts drawn from the Heian, Kamakura, Muromachi, and Edo periods. Introduction to the different styles of classical Japanese, and to classical Japanese as a whole.
For BA Students: Advanced Language Course
Taught by: Chance, L.
Course usually offered in fall term
Also Offered As: EALC 251, EALC 651
Prerequisite: JPAN 212
Activity: Lecture
1.0 Course Unit

JPAN 511 Readings in Advanced Japanese
Readings in advanced literary and journalistic texts written in modern Japanese.
For BA Students: Advanced Language Course
Course usually offered in fall term
Prerequisite: JPAN 412
Activity: Lecture
1.0 Course Unit

JPAN 512 Readings Advanced Japanese II
Readings in advanced literary and journalistic texts written in modern Japanese.
For BA Students: Advanced Language Course
Course usually offered in spring term
Prerequisite: JPAN 511
Activity: Lecture
1.0 Course Unit

JPAN 515 Japanese-English Translation
In this course, students learn basic techniques and skills in translation through hands-on practices. Depending on the interests of enrolled students, both literary and non-literary texts are drawn from a wide range of fields, including popular culture (e.g. manga, animation, film, game, music, and short story), religion, law, and medicine. As students read papers pertinent to principles and problems of translation from Japanese to English, they acquire practical experience in translation tasks and approaches, learn cultural and communicative differences between Japanese and English, and familiarize themselves with ethics and resources.
Taught by: Nishimura
Course usually offered in fall term
Prerequisite: JPAN 412
Activity: Lecture
1.0 Course Unit
Jewish Studies Program (JWST)

**JWST 026 Jews and China: Views from Two Perspectives**
Jews in China??? Who knew?? The history of the Jews in China, both modern and medieval, is an unexpected and fascinating case of cultural exchange. Even earlier than the 10th century, Jewish trader from India or Persia on the Silk Road, settled in Kaifeng, the capital of the Northern Song Dynasty, and established a Jewish community that lasted through the nineteenth century. In the mid-nineteenth century, Jewish merchants, mainly from Iraq, often via India, arrived in China and played a major role in the building of modern Shanghai. After 1898, Jews from Russia settled in the northern Chinese city of Harbin, first as traders and later as refugees from the Bolshevik Revolution and Russian Civil War. In the first decades of the twentieth century, a few Jews from Poland and Russia visited China as tourists, drawn by a combination of curiosity about the cultural exoticism of a truly foreign culture and an affinity that Polish Jewish socialists and communists felt as these political movements began to emerge in China. During World War II, Shanghai served as a port of refuge for Jews from Central Europe. In this freshman seminar, we will explore how these Jewish traders, travelers, and refugees responded to and represented China in their writings. We will also read works by their Chinese contemporaries and others to see the responses to and perceptions of these Jews. We will ask questions about cultural translation: How do exchanges between languages, religions, and cultures affect the identities of individuals and communities? What commonalities and differences between these people emerge?

Taught by: Hellerstein
Course not offered every year
Also Offered As: GRMN 026
Activity: Seminar
1.0 Course Unit
Notes: Benjamin Franklin Seminar

**JWST 031 Beginning Yiddish I**
Yiddish is a 1000-year-old language with a rich cultural heritage. YDSH 101, the first in the Beginning Yiddish language series, introduces the student who has no previous knowledge of the language to the skills of reading, writing, and speaking Yiddish. Starting with the alphabet, students study grammar, enriched by cultural materials such as song, literature, folklore, and film, as well as the course's on-line Blackboard site, to acquire basic competency. By the end of the first semester, students will be able to engage in simple conversations in the present tense, know common greetings and expressions, and read simple texts, including literature, newspapers, songs, and letters. Students are encouraged to continue with YDSH 102/ JWST 032/ YDSH 501 in the Spring. Four semesters of Yiddish fulfill the Penn Language Requirement.

For BA Students: Language Course
Course usually offered in fall term
Also Offered As: YDHS 101, YDHS 501
Activity: Lecture
1.0 Course Unit

**JWST 032 Beginning Yiddish II**
In this course, you can continue to develop basic reading, writing and speaking skills. Discover treasures of Yiddish culture: songs, literature, folklore, and films.

For BA Students: Language Course
Course usually offered in spring term
Also Offered As: YDHS 102, YDHS 502
Prerequisite: JWST 031
Activity: Lecture
1.0 Course Unit

**JWST 033 Intermediate Yiddish I**
A continuation of JWST 032/ YDHS 102, Beginning Yiddish II, this course develops the skills of reading, writing, and speaking Yiddish on the intermediate level through the study of grammar and cultural materials, such as literature, newspapers, films, songs, radio programs.

For BA Students: Language Course
Taught by: Hellerstein
Course usually offered in fall term
Also Offered As: YDHS 103, YDHS 503
Prerequisite: GRMN 402
Activity: Lecture
1.0 Course Unit

**JWST 034 Intermediate Yiddish II**
Continuation of JWST 033; emphases in reading texts and conversation.

For BA Students: Last Language Course
Taught by: Hellerstein
Course usually offered in spring term
Also Offered As: YDHS 104, YDHS 504
Prerequisite: GRMN 403
Activity: Lecture
1.0 Course Unit

**JWST 041 Israel in Middle East**
Also Offered As: NELC 034
Activity: Seminar
1.0 Course Unit

**JWST 051 Elementary Modern Hebrew I**
An introduction to the skills of reading, writing, and conversing in modern Hebrew. This course assumes no previous knowledge of Hebrew. A grade of B- or higher is needed to continue in the language.

For BA Students: Language Course
One-term course offered either term
Also Offered As: HEBR 051, HEBR 651
Activity: Lecture
1.0 Course Unit

**JWST 052 Elementary Modern Hebrew II**
A continuation of first semester Elementary Modern Hebrew, which assumes basic skills of reading and speaking and the use of the present tense. Open to all students who have completed one semester of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.

For BA Students: Language Course
One-term course offered either term
Also Offered As: HEBR 052, HEBR 652
Prerequisite: HEBR 051
Activity: Lecture
1.0 Course Unit

**JWST 053 Intermediate Modern Hebrew III**
Development of the skills of reading, writing, and conversing in modern Hebrew on an intermediate level. Open to all students who have completed two semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.

For BA Students: Language Course
One-term course offered either term
Also Offered As: HEBR 053, HEBR 653
Prerequisite: HEBR 052
Activity: Lecture
1.0 Course Unit
JWST 054 Intermediate Modern Hebrew IV
This course constitutes the final semester of Intermediate Modern Hebrew. Hence, one of the main goals of the course is to prepare the students for the proficiency exam in Hebrew. Emphasis will be placed on grammar skills and ability to read literary texts. Open to all students who have completed three semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.
For BA Students: Last Language Course
One-term course offered either term
Also Offered As: HEBR 054, HEBR 654
Prerequisite: HEBR 053
Activity: Lecture
1.0 Course Unit

JWST 059 Advanced Modern Hebrew: Conversation & Writing
In this course students are introduced to the vibrant world of contemporary Israeli culture by reading some of the best plays, poems, short stories and journalism published in Israel today. They also watch and analyze some of Israel's most popular films, TV programs, and videos. Themes include Jewish-Arab relations, the founding of the State, family ties and inter generational conflict, war and society, and the recent dynamic changes in Israeli society. Students must have taken four semesters of Hebrew at Penn or permission of instructor. Since the content of this course may change from year to year, students may take it more than once (but only once for credit).
For BA Students: Advanced Language Course
One-term course offered either term
Also Offered As: HEBR 059, HEBR 552
Prerequisite: HEBR 054
Activity: Lecture
1.0 Course Unit

JWST 100 Themes Jewish Tradition: Iberian Conversos: Jew-Christian?
Course topics will vary; they have included The Binding of Isaac, Responses to Catastrophes in Jewish History, Holy Men & Women (Ben-Amos); Rewriting the Bible (Dohrmann); Performing Judaism (Fishman); Jewish Political Thought (Fishman); Jewish Esotericism (Lorberbaum) Democratic culture assumes the democracy of knowledge - the accessibility of of knowledge and its transparency. Should this always be the case? What of harmful knowledge? When are secrets necessary? In traditional Jewish thought, approaching the divine has often assumed an aura of danger. Theological knowledge was thought of as restricted. This seminar will explore the ‘open’ and ‘closed’ in theological knowledge, as presented in central texts of the rabbinic tradition: the Mishnah, Maimonides and the Kabbalah. Primary sources will be available in both Hebrew and English.
For BA Students: History and Tradition Sector
Taught by: Ben-Amos/Dohrmann/Fishman
Course not offered every year
Also Offered As: FOLK 252, NELC 252, NELC 552, RELS 129
Activity: Seminar
1.0 Course Unit

JWST 102 Jewish Humor
In modern American popular culture Jewish humor is considered by Jews and non-Jews as a recognizable and distinct form of humor. Focusing upon folk-humor, in this course we will examine the history of this perception, and study different manifestation of Jewish humor as a particular case study of ethnic in general. Specific topics for analysis will be: humor in the Hebrew Bible, Jewish humor in Europe and in America, JAP and JAM jokes, Jewish tricksters and pranksters, Jewish humor in the Holocaust and Jewish humor in Israel. The term paper will be collecting project of Jewish jokes.
For BA Students: Arts and Letters Sector
Taught by: Ben Amos
Course not offered every year
Also Offered As: COML 259, FOLK 296, NELC 254
Activity: Lecture
1.0 Course Unit

JWST 103 The Messianic Impulse in Jewish History
Taught by: Ruderman
One-term course offered either term
Also Offered As: HIST 101
Activity: Seminar
1.0 Course Unit

JWST 122 Religions of the West
This course surveys the intertwined histories of Judaism, Christianity, and Islam. We will focus on the shared stories which connect these three traditions, and the ways in which communities distinguished themselves in such shared spaces. We will mostly survey literature, but will also address material culture and ritual practice, to seek answers to the following questions: How do myths emerge? What do stories do? What is the relationship between religion and myth-making? What is scripture, and what is its function in creating religious communities? How do communities remember and forget the past? Through which lenses and with which tools do we define 'the West'?
For BA Students: History and Tradition Sector
Taught by: Durmaz
One-term course offered either term
Also Offered As: RELS 002
Activity: Lecture
1.0 Course Unit

JWST 126 Jewish Mysticism
Survey of major periods of development of mystical speculation and experience within Judaism. Mystical symbolism as a basis for theosophical interpretations of Torah, Immanentist theologies, mystical ethics. Types of experiences and practices which were cultivated by Jewish mystics in order to achieve intimate communion with the Divine and to facilitate a sacred transformation of themselves and the world. Includes 'Riders of the Chariot', The Zohar (Book of Splendor), Lurianic Kabbalah, Hasidism.
Course not offered every year
Also Offered As: NELC 186, RELS 126
Activity: Lecture
1.0 Course Unit
JWST 128 Spirituality in Contemporary Israel
This course maps out spiritual and religious life in Israel today, ranging from state-supported orthodox communities to groups that practice alternative forms of spirituality. What role do tradition, custom and ritual practice play in the construction of contemporary Israeli identity? How does the State shape religious and spiritual life? What forms of spiritual life are emerging beyond orthodoxy? The course will explore these and other questions through the examination of various media including newspapers, movies, and online conversations with Israeli religious leaders and important figures in popular culture.
Taught by: Ben Lulu
Course offered fall; even-numbered years
Also Offered As: RELS 128
Activity: Lecture
1.0 Course Unit

JWST 130 American Jewish Experience
This course offers a comprehensive survey of American Jewish history from the colonial period to the present. It will cover the different waves of Jewish immigration to the United States and examine the construction of Jewish political, cultural, and religious life in America. Topics will include: American Judaism, the Jewish labor movement, Jewish politics and popular culture, and the responses of American Jews to the Holocaust and the State of Israel.
Taught by: Wenger
Course usually offered in fall term
Also Offered As: HIST 150, RELS 124
Activity: Lecture
1.0 Course Unit

JWST 131 How to Read the Bible
The aim of this course is to explore what the Bible means, and why it means such different things to different people. Why do people find different kinds of meaning in the Bible. Who is right in the struggle over its meaning, and how does one go about deciphering that meaning in the first place? Focusing on the book of Genesis, this seminar seeks to help students answer these questions by introducing some of the many ways in which the Bible has been read over the ages. exploring its meaning as understood by ancient Jews and Christians, modern secular scholars, contemporary fiction writers, feminist activists, philosophers and other kinds of interpreter.
Taught by: WEITZMAN
Also Offered As: NELC 153, RELS 130
Activity: Seminar
1.0 Course Unit

JWST 132 The History of God
This course introduces the history of God as understood by modern scholars of religion. Why do people believe in gods in the first place? How did so many people come to believe that there was only one god, and how is that god different from earlier gods? How is the God of Judaism different from that venerated by Christians and Muslims. And what is the future of God in a world shaped by secularism, capitalism, and climate-change? This course will address these and other questions in light of anthropology, psychology, intellectual history, and other approaches that scholars uses to illuminate religion.
Taught by: Weitzman
Course not offered every year
Also Offered As: ANCH 133, RELS 132
Activity: Seminar
1.0 Course Unit

JWST 136 Death and the Afterlife in Ancient Judaism and Christianity
This course surveys the development of concepts about death and the afterlife in Judaism and Christianity, exploring the cultural and socio-historical contexts of the formation of beliefs about heaven and hell, the end of the world, martyrdom, immortality, resurrection, and the problem of evil. Readings cover a broad range of ancient sources, including selections from the Hebrew Bible and New Testament, as well as other Jewish and Christian writings (e.g., 'apocrypha,' 'pseudepigrapha,' Dead Sea Scrolls, classical rabbinic literature, Church Fathers, 'gnostic' and 'magical' materials). In the process, this course introduces students to formative eras and ideas in the history of Judaism, Christianity, and Western culture.
One-term course offered either term
Also Offered As: RELS 136
Activity: Lecture
1.0 Course Unit

JWST 141 The Israeli Soul: Religion and Psychology in Modern Israel
This course aims to introduce what it means to be an Israeli today by exploring how Israeli identity relates to politics, religion, violence and trauma. Taught by an anthropologist, the course is focused on being Israeli not as a national identity but as a psychological experience, and aims to illumine the religious, cultural, social and political forces that are shaping that experience.
Taught by: Friedman-Peleg

Activity: Lecture
1.0 Course Unit
JWST 151 Great Books of Judaism (Fall 2018: Lifecycle in the Talmud)
The Babylonian Talmud, known simply as the Bavli, is the foundational legal and ethical document of rabbinic Judaism. It is one of the best read works of world literature, and it is the most widely disseminated and revered rabbinic work. It not only contains legal discussions and rulings but rather it also presents the worldview of the rabbis. This course will analyze and contextualize the perspectives of the Talmud towards the important phases of life. We will examine in-depth several Talmudic passages relating to the various stages of the human lifecycle: birth and naming of the child; circumcision; bar/bat mitzva and adulthood; earning a livelihood and choosing a career; marriage and divorce; procreation and raising children; death, burial, mourning and the belief in the resurrection of the dead among others. We will evaluate these teachings in light of other traditions and in their broader late antiquity and contemporary contexts. All texts will be read in their English translation but originals will also be provided.
For BA Students: Arts and Letters Sector
Taught by: Bergmann
Course usually offered in fall term

JWST 153 Jewish Literature in the Middle Ages in Translation
Course explores the cultural history of Jews in the lands of Islam from the time of Mohammed through the late 17th century (end of Ottoman expansion into Europe) –in Iraq, the Middle East, al-Andalus and the Ottoman Empire. Primary source documents (in English translation) illuminate minority-majority relations, internal Jewish tensions (e.g., Qaraism), and developments in scriptural exegesis, rabbinic law, philosophy, poetry, polemics, mysticism and liturgy. Graduate students have additional readings and meetings. Spring 2015
Taught by: Fishman
One-term course offered either term
Also Offered As: COML 257, NELC 158, NELC 458
Activity: Seminar
1.0 Course Unit

JWST 154 Modern Hebrew Literature and Film in Translation: Autobiography
This course examines cinematic and literary portrayals of childhood. While Israeli works constitute more than half of the course’s material, European film and fiction play comparative roles. Many of the works are placed, and therefore discussed, against a backdrop of national or historical conflicts. Nonetheless, private traumas (such as madness, abuse, or loss) or an adult’s longing for an idealized time are often the central foci of the stories. These issues and the nature of individual and collective memory will be discussed from a psychological point of view. Additionally, the course analyzes how film, poetry and prose use their respective languages to reconstruct the image of childhood; it discusses the authors and directors struggle to penetrate the psyche of a child and to retrieve fragments of past events.

Activity: Lecture
1.0 Course Unit

JWST 157 Medieval and Early Modern Jewry
Follow the journey of one global diaspora over a millennium of cultural, intellectual, social, and religious change. From the rise of Islam in the seventh century to the separation of church and state in the seventeenth, Jewish people were intimate parts of, and at the same time utterly othered by, the many societies in which they lived. This basic duality is at the heart of this course, exploring how Jewish religion and culture evolved in relationship with Muslim and Christian majorities. Students will develop an understanding of the rich dynamism of premodern Judaism and Jewish life, with an emphasis on global diversity and internal differentiation as well as change over time. We will look for threads of continuity and moments of transformation, decode illustrative texts, images, and documents (in English), and ask how the Judaism that faced modernity had been shaped by a staggering array of different cultural circumstances after antiquity. The course includes attention to anti-Jewish phenomena like expulsion and blood libel, but also to coexistence and creative cultural synthesis, avoiding any simplistic narrative and asking about their legacy in the present day. It will look at the Jewish past from the inside, including less familiar dimensions including philosophy, magic, messianism, and family life.
For BA Students: History and Tradition Sector
Taught by: Oravetz Albert

JWST 158 Jews in the Modern World
This course offers an intensive survey of the major currents in Jewish culture and society from the late middle ages to the present. Focusing upon the different societies in which Jews have lived, the course explores Jewish responses to the political, socio-economic, and cultural challenges of modernity. Topics to be covered include the political emancipation of Jews, the creation of new religious movements within Judaism, Jewish socialism, Zionism, the Holocaust, and the emergence of new Jewish communities in Israel and the United States. No prior background in Jewish history is expected.

JWST 160 The Making of Scripture: From Revelation to Canon
The Bible as we know it is the product of a lengthy process of development, elaboration, contest, and debate. Rather than a foregone conclusion, the process by which the texts and traditions within the Bible, and the status ascribed to them, was turbulent and uncertain. This course examines that process, examining the Bible, traditions and communities from the Second Temple Period - such as the Dead Sea Scrolls and Community - that rewrote, reconsidered, revised, or rejected now well-recognized figures and stories, and constructed distinct ideas of what was considered scripture and how it should be approached. Even as the Bible began to resemble the corpus as we now know it, interpretive strategies rendered it entirely different, such as Hellenistic Allegorizers, working from the platonic tradition, rabbinc readers who had an entirely different set of hermeneutics, early Christians, who offered different strategies for reading the 'Old' and 'New' Testaments alongside one another (and employing categories like 'Old' and 'New,' themselves constituting a new attitude and relationship to and between these texts), and early Muslim readers, who embraced many of the stories in the Bible, altered others, and debated the status of these corpuses under Islam.

Activity: Seminar
1.0 Course Unit
Notes: English Seminar taught by member of the standing faculty. Freshman seminar.

JWST 171 Elementary Biblical Hebrew I
This course is an introduction to Biblical Hebrew. It assumes no prior knowledge, but students who can begin to acquire a reading knowledge of the Hebrew alphabet before class starts will find it extremely helpful. The course is the 1st of a 4-semester sequence whose purpose is to prepare students to take courses in Bible that demand a familiarity with the original language of the text.
For BA Students: Language Course
Taught by: Carasik
Course usually offered in fall term
Also Offered As: HEBR 151, HEBR 451, JWST 471
Activity: Lecture
1.0 Course Unit

JWST 172 Elementary Biblical Hebrew II
A continued introduction to the grammar of Biblical Hebrew, focusing on the verbal system, with an emphasis on developing language skills in handling Biblical texts. A suitable entry point for students who have had some modern Hebrew. Prerequisite: If course requirement not met, permission of instructor required.
For BA Students: Language Course

Course usually offered in spring term
Also Offered As: HEBR 152, HEBR 452, JWST 472
Prerequisite: HEBR 151
Activity: Lecture
1.0 Course Unit

JWST 173 Intermediate Biblical Hebrew I
This course will focus on using the grammar and vocabulary learned at the introductory level to enable students to read Biblical texts independently and take advanced Bible exegesis courses. We will also work on getting comfortable with the standard dictionaries, concordances, and grammars used by scholars of the Bible. We will concentrate on prose this semester, closely reading Ruth, Jonah, and other prose selections. We will begin to translate from English into Biblical Hebrew, and there will also be a unit on the punctuation marks used in the Bible. This is a suitable entry point for students who already have strong Hebrew skills. Prerequisite: If course requirement not met, permission of instructor required. Successful completion of HEBR 152 or permission of the instructor. This course is the prerequisite for HEBR 154 (no one is 'permitted' into that semester; you must take the previous semester course).
For BA Students: Language Course
Taught by: Carasik
Course usually offered in fall term

Prerequisite: HEBR 152
Activity: Lecture
1.0 Course Unit

JWST 207 Jews, Race and Religion
Contemporary Jewish identity exists at an uneasy cross-section of race, religion and ethnicity. This course aims to expose students to the diversity of Jewish experience through the lenses of race and religion, examining the various ways these categories intersect and complicate each other. How can the study of race and religion help us to understand the present and future of Jewish life? How do Jews figure in the study of race and race relations in North America and Israel? Of what relevance is the category of whiteness for understanding Jewish identity, and what does their association in the U.S. mask about Jews and Jewish life today? And what are the roles of Jews in the continuing struggle for racial justice now underway in the world? This course aims to address these questions in light of a range of intellectual perspectives and disciplinary approaches. It will be built around a series of weekly guest lectures by leading scholars of Jews, race and/or religion, and will include among the questions and topics that it explores opportunities to explore connections among scholarship, personal experience and activism.
Taught by: Weitzman

1.0 Course Unit

JWST 244 Miracles to Mindfulness
In 1902, the most famous philosopher in America, William James, revolutionized the study of religion by analyzing religion as an experience rather than as a set of doctrines or scriptures. In this course, we will pick up the inquiry that James and scholars such as Sigmund Freud began by exploring new approaches to the science and philosophy of religious experience. We will invite a series of experts from a wide range of fieldsneuroscience, psychoanalysis, phenomenology, psychology, anthropology, to name only a fewto present their cutting-edged research on the nature of religious experience. How can religious experience be studied? What does the research reveal about religious experience? And what can we learn from such experiences about the workings of the human mind and human society? The course has two components: 1) a discussion-centered mini-seminar from 3:30-5:00 will open consideration of the subject with help from relevant readings 2) a guest lecture series every Tuesday from 5:00-6:30, nary angles or in light featuring leading scholars who approach religious experience from different disciplinary angles or in light of different questions. JWST 249 Ultimate Meanings
Does life have some ultimate meaning? In their search for an answer to this question, people tell stories--stories about the creation of the world, about great human beings confronted with the mysteries of existence, about what happens to people after death. To explore the role of stories in finding meaning in life, we will focus on some of the most meaningful stories ever composed: the biblical stories of Adam and Eve, Abraham and his family, the Exodus, Job and his friends, and the life and death of Jesus. One of our goals is to try to retrieve the original meaning of these narratives, what their authors intended, but we will also explore what they have come to mean for readers in our own day for believers and skeptics, scientists and artists, fundamentalists and feminists. For BA Students: Arts and Letters Sector Taught by: Ben-Amos
Also Offered As: RELS 259
Activity: Seminar
1.0 Course Unit

JWST 255 The Bible in Translation
This course introduces students to one specific Book of the Hebrew Bible. 'The Bible in Translation' involves an in-depth reading of a biblical source against the background of contemporary scholarship. Depending on the book under discussion, this may also involve a contextual reading with other biblical books and the textual sources of the ancient Near East. Although no prerequisites are required, this class is a perfect follow-up course to 'Intro to the Bible.' Taught by: Cranz
One-term course offered either term
Also Offered As: COML 380, NELC 250, NELC 550, RELS 224
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit.

JWST 259 Introduction to Modern Hebrew Literature: Short Story Reinvented
The objective of this course is to develop an artistic appreciation for literature through in-depth class discussions and text analysis. Readings are comprised of Israeli poetry and short stories. Students examine how literary language expresses psychological and cultural realms. The course covers topics such as: the short story reinvented, literature and identity, and others. Because the content of this course changes from year to year, students may take it for credit more than once. This course is conducted in Hebrew and all readings are in Hebrew. Grading is based primarily on participation and students' literary understanding. For BA Students: Arts and Letters Sector Taught by: Gold

1.0 Course Unit
JWST 261 Topics in Jewish-American Literature
From the 1922 silent film 'Hungry Hearts' through the first 'talkie,' 'The Jazz Singer,' produced in 1927, and beyond 'Schindler's List,' Jewish characters have confronted the problems of their Jewishness on the silver screen for a general American audience. Alongside this Hollywood tradition of Jewish film, Yiddish film blossomed from independent producers between 1911 and 1939, and interpreted literary masterpieces, from Shakespeare's 'King Lear' to Sholom Aleichem's 'Teyve the Dairyman,' primarily for an immigrant, urban Jewish audience. In this course, we will study a number of films and their literary sources (in fiction and drama), focusing on English language and Yiddish films within the framework of three dilemmas of interpretation: a) the different ways we 'read' literature and film, b) the various ways that the media of fiction, drama, and film 'translate' Jewish culture, and c) how these translations of Jewish culture affect and are affected by their implied audience.

1.0 Course Unit

JWST 262 Jewish Literature in Translation
The course explores an aspect of 20th-century literature intensively; specific course topics will vary from year to year. Fall 2016 - REPRESENTATION OF THE HOLOCAUST IN LITERATURE AND FILM: This discussion-centered course is about the enormous difficulties faced by those who felt the urgent need to describe their own or others' experiences during the genocide of the European Jews, 1933-1945. We will explore the complex options they have faced as narrators, witnesses, allegorists, memoirists, scholars, teachers, writers and image-makers. Some linguistically (or visually) face the difficulty head on; most evade, avoid, repress, stutter or go silent, and agonize. One purpose of the course is for us to learn how to sympathize with the struggle of those in the latter group. This is not a history course, although the vicissitudes of historiography will be a frequent topic of conversation. Students will write frequent short papers, called position papers, due before class, in order to provide a basis for discussion. Students need not know anything about the Holocaust, although enrollees should consider historical reading over the summer.

JWST 268 Women in Jewish Literature

‘Jewish woman, who knows your life? In darkness you have come, in darkness do you go.’ J. L. Gordon (1890). This course will bring into the light the long tradition of women as readers, writers, and subjects in Jewish literature. All texts will be in translation from Yiddish and Hebrew, or in English. Through a variety of genres – devotional literature, memoir, fiction, and poetry -- we will study women’s roles and selves, the relations of women and men, and the interaction between Jewish texts and women’s lives. The legacy of women in Yiddish devotional literature will serve as background for our reading of modern Jewish fiction and poetry from the past century. The course is divided into five segments. The first presents a case study of the Matriarchs Rachel and Leah, as they are portrayed in the Hebrew Bible, in rabbinic commentary, in pre-modern prayers, and in modern poems. We then examine a modern novel that recasts the story of Dinah, Leah’s daughter. Next we turn to the seventeenth century Gil’al of Hamel, the first Jewish woman memoirist. The third segment focuses on devotional literature for and by women. In the fourth segment, we read modern women poets in Yiddish, Hebrew, and English. The course concludes with a fifth segment on fiction written by women in Yiddish, Hebrew, and English. All readings and lectures in English.

JWST 270 Middle Eastern Jews in Israel

This undergraduate seminar offers an in-depth look at the history of Middle Eastern and North African Jews, focusing in particular on their place in Israel and the Arab world, and will, through the lens of the king, explore ideas of god, government, and power. This class confronts the paradox of monarchical rule and will, through the lens of the king, explore ideas of god, government, and power. This class confronts the paradox of monarchical rule and will, through the lens of the king, explore ideas of god, government, and power. JWST 277 Jewish American Literature

What makes Jewish American literature Jewish? What makes it American? This course will address these questions about ethnic literature through fiction, poetry, drama, and other writings by Jews in America, from their arrival in 1654 to the present. We will discuss how Jewish identity and ethnicity shape literature and will consider how form and language develop as Jewish writers ‘immigrate’ from Yiddish, Hebrew, and other languages to American English. Our readings, from Jewish American Literature: A Norton Anthology, will include a variety of stellar authors, both famous and less-known, including Isaac Mayer Wise, Emma Lazarus, Isaac Bashevis Singer, Celia Dropkin, Abraham Cahan, Anzia Yezierska, Saul Bellow, Philip Roth, Cynthia Ozick, and Allegra Goodman. Students will come away from this course having explored the ways that Jewish culture intertwines with American culture in literature. All readings and lectures in English.

JWST 305 Jewish Diaspora in the Roman Empire
Under the Roman Empire, Jewish communities developed and flourished especially in the cities of the Eastern Mediterranean, in Egypt, Syria, Asia Minor, Greece, Northern Africa, and Italy proper. In many of these cities, the Jews formed a considerable part of the population; they influenced the cultural, social, and political communal life and developed an identity that was distinctively different from that in Judea. In this seminar, we will trace Jewish life in the Diaspora under Roman rule. How did Jews and non-Jews interact? What was the legal status of Jewish communities under the Roman Empire? What caused conflicts and how were they solved? What can the history of Jewish Diaspora communities tell us about minorities in the Roman Empire in general? We will use literary texts, inscriptions, papyri, and archaeological material to answer these questions and many more.
Taught by: Wilker
Also Offered As: ANCH 305
Activity: Seminar
1.0 Course Unit

JWST 320 Spirit and Law
While accepting 'the yoke of the commandments', Jewish thinkers from antiquity onward have perennially sought to make the teachings of revelation more meaningful in their own lives. Additional impetus for this quest has come from overtly polemical challenges to the law, such as those leveled by Paul, medieval Aristotelians, Spinoza and Kant. This course explores both the critiques of Jewish Law, and Jewish reflections on the Law's meaning and purpose, by examining a range of primary sources within their intellectual and historical contexts. Texts (in English translation) include selections from Midrash, Talmud, medieval Jewish philosophy and biblical exegesis, kabbalah, Hasidic homilies, Jewish responses to the Enlightenment, and contemporary attempts to re-value and invent Jewish rituals.

JWST 337 Jewish Magic: Defense Against the Dark Arts
The Hebrew Bible legislates against magic and witchcraft. But Jewish literature is replete with demons, witches, spells and incantations. This course will examine the phenomenon of Jewish magic in the longue durée. We will explore a wide array of sources describing ancient Jewish magical practices, and attempt to reconstruct the various aspects of ancient Jewish magic. We will start with demonology and exorcism in biblical and Second Temple literature. Then we will examine rabbinic attitudes towards magic and sorcery and rabbinic magical recipes. We then turn to material artifacts: late antique Jewish amulets and magic bowls. Finally we will survey the large corpus of magical texts from the Cairo Geniza and Hebrew manuscripts of magic from the middle ages. During the course we will consider broader questions such as the relationships between magic and religion, the identity of the Jewish magicians and their clients, relationship between Jewish and contemporary non-Jewish magic, and the role of women in magical practice.
Taught by: Gross
Also Offered As: NELC 337
Activity: Lecture
1.0 Course Unit

JWST 359 Seminar in Modern Hebrew Literature
This course introduces students to selections from the best literary works written in Hebrew over the last hundred years in a relaxed seminar environment. The goal of the course is to develop skills in critical reading of literature in general, and to examine how Hebrew authors grapple with crucial questions of human existence and national identity. Topics include: Hebrew classics and their modern 'descendents,' autobiography in poetry and fiction, the conflict between literary generations, and others. Because the content of this course changes from year to year, students may take it for credit more than once. This course is conducted in Hebrew and all readings are in Hebrew. Grading is based primarily on participation and students' literary understanding.
For BA Students: Arts and Letters Sector
Taught by: Gold
Course usually offered in spring term
Also Offered As: COML 359, JWST 659, NELC 359, NELC 659
Prerequisite: HEBR 059
Activity: Seminar
1.0 Course Unit

JWST 380 Modern Jewish Intellectual and Cultural History
An overview of Jewish intellectual and cultural history from the late 18th century until the present. The course considers the Jewish enlightenment Reform, Conservative and Neo-Orthodox Judaism, Zionist and Jewish Socialism thought, and Jewish thought in the 20th century, particularly in the context of the Holocaust. Readings of primary sources including Mendelsohn, Geiger Hirsch, Herzl, Achad-ha-Am, Baeck, Buber, Kaplan, and others. No previous background is required.
Taught by: Ruderman
One-term course offered either term
Also Offered As: HIST 380, RELS 320
Activity: Lecture
1.0 Course Unit

JWST 390 Senior Research Seminar
JWST 390 is required of all students majoring in the Interdisciplinary Jewish Studies major, but all majors and minors in the various departmental programs are encouraged to take the seminar. Students will conduct independent research and complete a 20-30 page paper.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
Notes: Permit required

JWST 399 Senior Honors Thesis
Jewish Studies Honors majors must take JWST 399 in which they will design, with the guidance of an advisor, an individualized directed reading program culminating in the writing of an honors thesis.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
JWST 438 Readings in Modern Yiddish Literature
This course will survey modern Yiddish literature through readings of Yiddish prose and poetry from the end of the 19th century through the late 20th century. The class will be conducted in both Yiddish and English. Reading knowledge of Yiddish is required, although some texts will be available in English translation. Authors include I.L. Peretz, Isaac Bashevis Singer, Moyshe-Leyb Halpern, and Kadya Molodowsky. Taught by: Hellerstein
Course not offered every year
Also Offered As: YDSH 108, YDSH 508
Prerequisites: Reading knowledge of Yiddish.
Activity: Lecture
1.0 Course Unit

JWST 471 Elementary Biblical Hebrew I
This course is an introduction to Biblical Hebrew. It assumes no prior knowledge, but students who can begin to acquire a reading knowledge of the Hebrew alphabet before class starts will find it extremely helpful. The course is the 1st of a 4-semester sequence whose purpose is to prepare students to take courses in Bible that demand a familiarity with the original language of the text.
For BA Students: Language Course
Taught by: Carasik
Course usually offered in fall term
Also Offered As: HEBR 151, HEBR 451, JWST 171
Prerequisite: For the second semester: Completion of the first semester or permission of the instructor
Activity: Lecture
1.0 Course Unit

JWST 472 Elementary Biblical Hebrew II
A continued introduction to the grammar of Biblical Hebrew, focusing on the verbal system, with an emphasis on developing language skills in handling Biblical texts. A suitable entry point for students who have had some modern Hebrew. Prerequisite: If course requirement not met, permission of instructor required.
For BA Students: Language Course
Taught by: Carasik
Course usually offered in spring term
Also Offered As: HEBR 152, HEBR 452, JWST 172
Prerequisite: HEBR 151
Activity: Lecture
1.0 Course Unit

JWST 473 Intermediate Biblical Hebrew I
This course will focus on using the grammar and vocabulary learned at the introductory level to enable students to read Biblical texts independently and take advanced Bible exegesis courses. We will also work on getting comfortable with the standard dictionaries, concordances, and grammars used by scholars of the Bible. We will concentrate on prose this semester, closely reading Ruth, Jonah, and other prose selections. We will begin to translate from English into Biblical Hebrew, and there will also be a unit on the punctuation marks used in the Bible. This is a suitable entry point for students who already have strong Hebrew skills. Prerequisite: If course requirement not met, permission of instructor required. Successful completion of HEBR 152 or permission of the instructor. This course is the prerequisite for HEBR 154 (no one is 'permitted' into that semester; you must take the previous semester course).
For BA Students: Language Course
Taught by: Carasik
Course usually offered in fall term
Also Offered As: HEBR 153, HEBR 453, JWST 173
Prerequisite: HEBR 152
Activity: Lecture
1.0 Course Unit

JWST 490 Topics in Jewish History
Reading and discussion course on selected topics in Jewish history. One-term course offered either term
Activity: Seminar
1.0 Course Unit

JWST 509 Modernist Jewish Poetry
One version of this seminar considers works by Jewish women who wrote in Yiddish, Hebrew, English, and other languages in the late 19th through the 20th century. The texts, poetry and prose, will include both belles lettres and popular writings, such as journalism, as well as private works (letters and diaries) and devotional works. The course will attempt to define ‘Jewish writing, ‘ in terms of language and gender, and will consider each writer in the context of the aesthetic, religious, and national ideologies that prevailed in this period. Because students will come with proficiency in various languages, all primary texts and critical and theoretical materials will be taught in English translation. However, those students who can, will work on the original texts and share with the class their expertise to foster a comparative perspective. Because we will be discussing translated works, a secondary focus of the course will, in fact, be on literary translation's process and products.
Course not offered every year

Course not offered every year
Also Offered As: COML 519, GRMN 537
Activity: Seminar
1.0 Course Unit

JWST 553 Seminar in Rabbinic Literature
Most of the foundational writings of rabbinic Judaism corpora of Midrash, Mishna, and the two Talmuds were in existence by the end of the sixth century CE. Yet, for several centuries thereafter, there is little evidence attesting to the lived nature of rabbinic culture and society. Course will focus on writings by Jews and about Jews, produced between the 7th and 10th centuries, complemented by secondary sources. Texts will include selections from archaeological inscriptions; Midrash; liturgical poetry; Targum; Masora; geonic responsa, writings by Muslims and by Church Fathers. While students must be able to read Hebrew, much class time will be devoted to the improvement of reading and comprehension skills. Undergraduates should seek permission of the instructor. Prerequisite: Proficiency in Hebrew and/or Greek recommended. Undergraduates need permission to enroll. May be repeated for credit.
Course usually offered in spring term
Also Offered As: HEBR 557, NELC 557
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit

JWST 565 Reading Benjamin Reading Kafka
Readings and discussions in English. Walter Benjamin’s study of the works of Franz Kafka is as enlightening as it can be bewildering. Moving from philology to Marxism, metaphysics to messianism, Daoism to Talmud, this densely argued piece elliptically touches on almost all of Kafka’s published works in just four short sections. This seminar proposes a line-by-line reading Benjamin’s 1934 ‘Franz Kafka on the Tenth Anniversary of His Death’ with an eye to its literary, philosophical and religious contexts as well as to the rich history of its intellectual reception. Reading Kafka’s works as the essay evokes them, we will situate this piece with regard to Benjamin’s other writings, the essay’s interlocutors (Brod, Scholem, Lukacs, Brecht) and its most illustrious interpreters (Adorno, Arendt, Celan, Hamacher).
Taught by: Fleishman

JWST 582 Topics in Aesthetics
Topic title for Spring 2018: Walter Benjamin. Walter Benjamin (1892-1940) is a philosopher whose writings on art, literature, and politics have had tremendous influence on many disciplines in the Humanities and Social Studies. He has been variously described as one of the leading German-Jewish thinkers, and a secular Marxist theorist. With the publication of a four-volume collection of this works in English, many more of his writings have been made accessible to a wider public. Our seminar will undertake a survey of his work that begins with his studies on language and allegory, and continues with his autobiographical work, his writings on art and literature, and on the imaginary urban spaces of the nineteenth-century.

Kannada (KAND)

KAND 407 Beginning Kannada I
This is a systematic introduction to the Kannada language and culture for beginners. The course aims at developing listening and comprehension and a real life interactive speaking ability in a variety of everyday topics. The Kannada script is introduced from the beginning and the language is presented in its socio-cultural context for achieving a meaningful and operational control of the language. Students acquire basic rules for structural and socio-cultural appropriateness. Students learn vocabulary related to a variety of topics during the semester. Class activities include watching videos, role-playing, language games and group work. Evaluation is based on class participation, performance in quizzes and tests and completed assignments. Prerequisite: Offered through Penn Language Center.
For BA Students: Language Course

Korean (KORN)

KORN 001 Spoken Korean I
This class is for those that have little to no knowledge of Korean. The main focus is the development of Korean communication skills by exploring a variety of everyday topics beyond school settings. Students will improve their Korean communication skills by engaging in a variety of interactive activities, role plays, and presentations. Class topics include, but are not limited to, introducing oneself, describing one's surroundings, discussing daily activities and past events, talking about common objects and people, etc. We will also introduce cultural topics in order to deepen students’ understanding of Korea’s culture and language. NOTE: This course does not count toward the language requirement or the EALC major or minor. Offered through the Penn Language Center.
Taught by: Lee
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

KORN 002 First-year Spoken Korean II
Offered through the Penn Language Center. A continuation of KORN 001, this course aims to further develop oral communication skills by exploring a variety of topics, such as shopping, hobbies, family, and future plans. Class activities include interactive tasks, role plays, and presentations. Cultural topics (including short & full-length movies) will also be incorporated in order to further deepen students’ understanding of Korea’s culture and language. Upon completion of the course, students will be able to comprehend and carry on basic conversations; exchange information on a variety of topics in the past, present, and future tenses; and achieve a proficiency level of Novice High based on the ACTFL (American Council on the Teaching of Foreign Languages) proficiency scale. NOTE: This course does not count toward the language requirement or the EALC major or minor.
Taught by: Lee
Course usually offered in spring term
Prerequisite: KORN 001
Activity: Lecture
1.0 Course Unit

KORN 011 Elementary Korean I
This course is designed for students who have little or no knowledge of Korean. This course aims to develop foundational reading, writing, listening, and speaking skills through meaningful communicative activities and tasks. Upon successful completion of this course, students should be able to comprehend and carry on simple daily conversations and create simple sentences in the past, present, and future tenses. Students will learn how to introduce themselves, describe their surroundings, talk about daily lives, friends and relatives, and talk about past and future events.
For BA Students: Language Course
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

KORN 012 Elementary Korean II
This is a continuation of KORN 011. This course aims to further develop the four language skills of students to the novice-high level by building on materials covered in KORN 011. Students will learn how to use three speech styles (polite formal, informal, and intimate) appropriately in a given context. Upon successful completion of this course, students should be able to handle simple and elementary needs of daily lives and talk (and write) about a variety of topics such as family, college life, birthday celebration, shopping, Korean food, etc.
For BA Students: Language Course
Course usually offered in spring term
Prerequisite: KORN 011
Activity: Lecture
1.0 Course Unit

KORN 021 Intensive Elementary Korean I & II
This is an intensive Korean course that covers the material from Elementary Korean I and Elementary Korean II in an intensive format, designed for novice learners who have little or no knowledge of Korean. This course aims to develop a solid foundation for reading, writing, listening, and speaking skills through meaningful communicative activities and tasks in cultural context. Upon completion of the course, students should be able to handle simple and elementary needs of daily lives and be able to talk and write about a variety of topics such as mood and personalities, clothing, weather, illness, Korean food, etc. Students will also learn how to use three speech styles (polite formal, informal, and intimate) appropriately in a given context. Students are also expected to obtain the Novice High level of proficiency based on the ACTFL (American Council on the Teaching of Foreign Languages) proficiency scale. During the summer, this course will be given in an online format that provides a communicative learning environment through Adobe Connect and Canvas. Students will be required to view PowerPoint slide shows and do homework questions in Canvas before each class, and class time will be mostly spent on communicative activities. After class, students will practice four language skills with the online exercises on Canvas, class blogs, and Voice Thread. This online course requires access to a reliable computer with high-speed internet and good quality headsets with a microphone. This course is offered through the Penn Language Center.
Course usually offered summer term only
Activity: Lecture
2.0 Course Units

KORN 111 Intermediate Korean I
This is a continuation of Elementary Korean II. This course is designed to develop students’ Korean language proficiency to the intermediate-low level of the ACTFL Proficiency Guidelines. Authentic materials, as well as various student-centered activities that are highly contextualized in everyday interactions will be used. Upon completion of the course, students will be able to present and exchange information on a variety of topics such as weather, fashion, travel, mailing, housing, public transportation, and shopping.
For BA Students: Language Course
Course usually offered in fall term
Prerequisite: KORN 012
Activity: Lecture
1.0 Course Unit
KORN 112 Intermediate Korean II
This is a continuation of Intermediate Korean I. This course is designed to develop students’ Korean language proficiency to the intermediate-mid level of the ACTFL Proficiency Guidelines. This course expands student’s competence by dealing with more functions in various contexts that students can frequently encounter in everyday interactions. In order to prepare students for social contexts, students are encouraged to engage in conversations by personalizing the topics, functions or contexts. Students will perform in an interpersonal way by providing and obtaining information, expressing feelings and emotions, and exchanging opinions on a variety of topics such as birthday parties, recreation and hobbies, Korean holidays, marriage, cultural differences, education and jobs. This course completes the College language requirement.
For BA Students: Last Language Course
Course usually offered in spring term
Prerequisite: KORN 111
Activity: Lecture
1.0 Course Unit

KORN 131 Korean for Heritage Speakers I
This course is designed for heritage speakers who have a strong background in everyday Korean. This course focuses on enhancing linguistic accuracy (spelling, grammar, vocabulary, pronunciation) and fluency (idiomatic and figurative expressions, narrative structure, discursive practice) in both spoken and written Korean, as well as gaining a deeper understanding of Korean culture. Upon completion of the course, students will be able to express themselves more accurately and participate in Korea-related communities more meaningfully. This course and its subsequent course KORN 132 complete the College language requirement. Prerequisite: Restricted to students who have previous knowledge in Korean. Students are required to take the Korean placement test.
Taught by: Jung
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

KORN 132 Korean for Heritage Speakers II
This course is a continuation of Korean for Heritage Speakers I, and aims to further develop students’ linguistic and cultural competence by building on materials covered in that class. In addition to gaining a deeper understanding of Korean culture, the course focuses on enhancing linguistic accuracy and fluency in both spoken and written Korean. Particular emphasis will be placed on building a meaningful Korean-speaking community, as well as consolidation of grammar structures, and expansion and enhancement of vocabulary. Topics include preparing for a trip to Korea, finding housing, college culture in Korea, entertainment and participating in various social events. Upon completion of this course, students will be able to express themselves more accurately and participate in Korea-related communities more meaningfully. This course completes the College language requirement.
For BA Students: Last Language Course
Course usually offered in spring term
Prerequisite: KORN 131
Activity: Lecture
1.0 Course Unit

KORN 211 Advanced Korean I
This course aims to develop functional proficiency in Korean at the intermediate-high level. Students will develop competence in fluency, grammatical accuracy and socio-linguistic/cultural appropriateness through a variety of activities and assignments. In addition, students will learn to communicate using more sophisticated grammatical structures and advanced vocabulary on various topics. The development of each of the four language skills (speaking, listening, reading and writing) is equally emphasized.
For BA Students: Advanced Language Course
Taught by: Cho
Course usually offered in fall term
Prerequisite: KORN 112 OR KORN 132
Activity: Lecture
1.0 Course Unit

KORN 212 Advanced Korean II
This is a continuation of Advanced Korean I. Students continue to develop functional proficiency in Korean at the advanced-low level. The topics include literature, culture, Korean customs, and social issues in contemporary Korea.
For BA Students: Advanced Language Course
Taught by: Cho
Course usually offered in spring term
Prerequisite: KORN 211
Activity: Lecture
1.0 Course Unit

KORN 281 Business Communication in Korean
Offered through the Penn Language Center. This course is designed to help students improve their Korean language proficiency by learning essential communication skills necessary to engage in business in Korea. Students will also develop their knowledge of and competence in Korean business culture and practice. The course objectives include: (1) to learn essential business terms, advanced grammar structures and communication strategies in business transactions; (2) to learn Korean business customs and culture, work norms, and business etiquette that students need to successfully communicate in a Korean business context. Topics include job application, business correspondence and reports, discussion and presentation in business meetings, communication styles and strategies in business contexts, current business culture, etc.
Taught by: Cho
Course usually offered in fall term
Prerequisite: KORN 112 AND KORN 132
Activity: Lecture
1.0 Course Unit

KORN 311 Topics in Advanced Korean
This course aims to develop an in-depth understanding of Korean culture and society through the analysis of spoken and written Korean discourse. Students will engage with key sociolinguistic concepts of politeness, hierarchy, solidarity, power, age, and gender, and enhance their advanced vocabulary and grammar. Students will also develop their abilities in conversation management, self-presentation, socialization, and sense of socio-cultural appropriateness, and gain a better understanding of how native speakers’ cultural practices are reflected in language use and how interpersonal relationships are built and maintained through language.
For BA Students: Advanced Language Course
Course usually offered in fall term
Prerequisite: KORN 212
Activity: Lecture
1.0 Course Unit
KORN 331 Current Korean Media I
Offered through the Penn Language Center. This course aims to develop a deeper understanding of the contemporary Korean society through critical analysis of language use and viewpoints expressed in various types of media including the Internet, TV, films and newspapers. This course will provide students with a rich opportunity to relate what they have learned in previous Korean language courses to the larger context of Korean culture and society. The course is conducted entirely in Korean and utilizes both written and audiovisual materials to develop students’ reading/listening comprehension and critical thinking. The course also involves in-depth class discussion and writing short compositions to enhance conversation and writing skills.
One-term course offered either term
Prerequisite: KORN 212
Activity: Lecture
1.0 Course Unit

KORN 332 Current Korean Media II
Offered through the Penn Language Center. Current Korean Media II aims at a deeper understanding of the contemporary Korean society, through critical analysis of language use and viewpoints expressed in various types of media including the Internet, TV, films, magazines and newspapers. This course will focus on cultural products and practices such as popular culture, media culture, and entertainment. By catering to the needs and interests of individual learners of Korean, the course will provide them with a rich opportunity to relate what they have learned in previous Korean language courses to the larger context of Korean culture and society. In addition, students will have an in-depth discussion on topics related to Korean society as well as Penn news. This course is conducted entirely in Korean.
Course usually offered in fall term
Prerequisite: KORN 331
Activity: Lecture
1.0 Course Unit

KORN 381 Business Korean I
Offered through the Penn Language Center. Business Korean I is designed for students who want to sharpen their Korean language skills to the advanced-high level by focusing their study on Korean business and economy. Students will learn business/economy-related terminologies and concepts. They will also take an in-depth look at the issues related to business practices and environment in Korea. Students will improve and refine their language skills through actively participating in discussions, research, and presentations.
For BA Students: Advanced Language Course
Taught by: Cho
Course not offered every year
Prerequisite: KORN 212
Activity: Lecture
1.0 Course Unit

KORN 382 Business Korean II
Offered through the Penn Language Center. A continuation of the material offered in KORN 381. Business Korean I. Students further develop their Korean language proficiency at the advance-high level by studying case studies, participating in discussions, and doing research and giving presentations on the topic of current Korean business and economy.
For BA Students: Advanced Language Course
Taught by: Cho
Course not offered every year
Prerequisite: KORN 212
Activity: Lecture
1.0 Course Unit

KORN 381 Advanced Readings in Modern Korean I
This course is designed for advanced level students. Based on literary pieces in the form of short stories, essays, and novels, students are to gain an in-depth, multi-faceted and critical understanding of Korean people, society, and culture. These objectives are achieved primarily through 1) close reading and discussion of original literary texts by 20th-century Korean writers; and 2) regular writing exercises. Some Korean films that are related to the topics of the reading text will be used.
For BA Students: Advanced Language Course
Taught by: Jung
Course not offered every year
Prerequisite: KORN 311
Activity: Lecture
1.0 Course Unit

KORN 382 Advanced Readings in Modern Korean II
This course allows development of creative and analytical thinking through introduction of more organized thematic topics such as family, human relationships, and the reflection of self-images, and individual’s mental status while the society changes in time.
For BA Students: Advanced Language Course
Taught by: Jung
Course not offered every year
Prerequisite: KORN 311
Activity: Lecture
1.0 Course Unit

KORN 431 Advanced Readings in Modern Korean I
Offered through the Penn Language Center. This course aims to develop students’ advanced language proficiency and simultaneously deepen their knowledge and understanding of specific areas related to Korean business and economy such as an expansion of business into Asian markets and globalization strategies. Through research, discussion and presentation on various case studies and other business-related materials, students will enhance their critical thinking skills and gain an in-depth perspective on issues related to contemporary Korean business operations and practices.
For BA Students: Advanced Language Course
Course usually offered in fall term
Prerequisite: KORN 311
Activity: Lecture
1.0 Course Unit

KORN 432 Advanced Readings in Modern Korean II
Offered through the Penn Language Center. This course allows development of creative and analytical thinking through introduction of more organized thematic topics such as family, human relationships, and the reflection of self-images, and individual’s mental status while the society changes in time.
For BA Students: Advanced Language Course
Taught by: Jung
Course not offered every year
Prerequisite: KORN 311
Activity: Lecture
1.0 Course Unit

KORN 481 Advanced Business Korean I
Offered through the Penn Language Center. This course aims to develop students’ advanced language proficiency and simultaneously deepen their knowledge and understanding of specific areas related to Korean business and economy such as an expansion of business into Asian markets and globalization strategies. Through research, discussion and presentation on various case studies and other business-related materials, students will enhance their critical thinking skills and gain an in-depth perspective on issues related to contemporary Korean business operations and practices.
For BA Students: Advanced Language Course
Course not offered every year
Prerequisite: KORN 311
Activity: Lecture
1.0 Course Unit

KORN 482 Advanced Business Korean II
Offered through the Penn Language Center. A continuation of the material offered in Advanced Business Korean I. Students continue to closely follow the current topics of business and financial markets of Korea by actively participating in discussions, research, and presentations.
For BA Students: Advanced Language Course
Course usually offered in spring term
Prerequisite: KORN 311
Activity: Lecture
1.0 Course Unit
KORN 511 Advanced Academic Korean I
This course aims to assist students who wish to improve their knowledge of the advanced Korean language skills required to conduct academic research. Students will critically read, analyze, and discuss academic and other relevant texts, written in either Korean or mixed scripts. Readings include, but are not limited to, academic journal articles and book chapters are important in the field of each student's research, as well as major primary sources, such as periodicals, government documents, and other authentic texts from the late nineteenth century to the present. Students will develop familiarity with these texts and a deeper understanding of academic writing styles in Korean. In addition, students will expand their proficiency in Sino-Korean vocabulary and Hanja (Chinese characters), both essential to developing their academic language skills in Korean. This course will be conducted in Korean.
Taught by: Lee
Course offered fall; even-numbered years
Prerequisite: KORN 432
Activity: Lecture
1.0 Course Unit

KORN 512 Adv Academic Korean II
This course aims to further develop and enhance the language and critical thinking skills required for conducting academic research in Korean studies or relevant disciplines. Through a historical lens, students will have the opportunity to explore a variety of topics, such as culture, gender, international relations, politics, the economy, and religion from early times to the nineteenth century. Students will continue to read critically, evaluate, analyze, and discuss these academic texts (both primary and secondary sources), written in Korean or mixed scripts, and will broaden and expand their repertoires of the Sino-Korean vocabulary and Hanja (Chinese characters) common in academic disciplines. Course materials will include academic journal articles, book chapters, and primary sources pertaining to the fields of each student’s research, as well as Korean historical movies and documentaries. This course will be conducted in Korean.
Taught by: Lee
Course offered fall; odd-numbered years
Prerequisite: KORN 432
Activity: Lecture
1.0 Course Unit

LARP 501 Studio I
The focus of this foundation studio is to explore ways of recording and representing landscape - with an emphasis on material, space, rhythm and measure - through a range of drawings and constructions. The studio attempts to create a sensibility toward landscape where the act of surveying a site is as much an imaginative endeavor as is the crafting of an artifact or the construction of a path in a landscape. Emphasis is placed on visual and manual skills in two-dimensional and three-dimensional constructions (drawing, fabrications, model-making, etc.), while developing ways to 'see' landscape.
Taught by: Faculty
Course usually offered in fall term
Activity: Studio
2.0 Course Units

LARP 502 Studio II
This foundation design studio explores the relationship among sites, drawings, models and the making of landscape architectural projects. Sites are fairly large in size and present a complex set of issues, including fragmentation, lack of access, and contamination. Through the design of a park, students test and refine the relationship among project concept, modes of visualization, and project formation (organizational and material). The objective for the studio is to develop an informed and imaginative response to the site in order to create new relationships among the site, its immediate edges and the larger neighborhood or region.
Taught by: M'Closkey/Faculty
Course usually offered in spring term
Prerequisite: LARP 501
Activity: Studio
2.0 Course Units

LARP 511 Workshop I: Ecology and Built Landscapes
This workshop explores a sequence of sites extending from the Atlantic Ocean to the Appalachian Mountains that illustrates the changing geology and topography of the regional physiographic provinces including the Atlantic Coastal Plain, Piedmont, and Valley and Ridge. In moving westward along the transect, field trips to natural areas and constructed sites will highlight the diversity of regional plant communities ranging from primary dune to salt marsh, serpentine Virginia pine-oak forest to seepage wetland, and more. Analysis of the inter-connections between the underlying geology, topography, hydrology, soils, vegetation, wildlife, and human interventions will reveal patterns reflecting process and demonstrate key ecological and cultural systems and processes through the production of field notebooks as well as large-scale measured drawings. Ultimately students will develop a vocabulary (recognition, identification and nomenclature) of the materials of landscape, its substance, its ecology, and its changing nature owing to place and time. NOTE: COURSE MEETS IN ASSIGNED CLASSROOM FROM 9-1PM. CLASS MEETING FROM 2-5PM IS DEDICATED TO FIELD WORK.
Taught by: Willig and Popowsky
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
LARP 512 Workshop II: Landform and Planting Design
Workshop II combines two of the most elemental tools in the practice of landscape architecture: landform and planting design. Grading - the shaping and sculpting of the landform - is both art and science, and thus Workshop II aims to provide an appreciation of landform as an evocative component in the design vocabulary as well as a critical tool in solving difficult design problems. The basic techniques and strategies of grading design (slopes, terraces, water management, grade change devices) will be introduced, practiced and reinforced, so that grading design becomes an integral part of the students’ design approach. Lecture, field trips, modeling, in-class exercises, and group projects will be used. The Planting component provides students with a working overview of the principles and processes of planting design. Plants will be considered both as individual elements and as part of larger dynamic systems. The natural distribution of plants, concepts of plant community and successional patterns, and the relationship of planting an topography will be used as the initial framework for planting design. Planting design typologies will be examined as an outgrowth of these ‘natural’ patterns. The role of plants as a key element in the structural design of the landscape will be explored through a combination of modeling, plan and section drawing, temporal studies, writing, field trips and case studies. Emphasis will be placed on process and evolution: the temporality of planting (daily, seasonal and annual changes), establishment and maintenance of plantings, and the process of planting design. During the first week of May, a five-day field ecology course focuses on techniques of urban revitalization, sustainable land use, reclamation, and restoration. The field trips offer insight into the diversity of approaches to using plants to promote positive environmental change.
Taught by: Olgyay
Course usually offered in spring term
Prerequisite: LARP 511
Activity: Lecture
1.0 Course Unit

LARP 533 Media I: Drawing and Visualization
Drawing is the ability to experience deeply things we see and envision. It allows us, not only to represent things or images seen, but, to discover and construct space and depth on the two dimensions of drawing surface. Expanding the tools of drawing, this course presents inquiries into applied media providing a basis for envisioning the speculative and developing an economy of expression. Work will be closely related to work in Studio I. Students will be introduced to the formal syntax of drawing (line, contour, structure, texture, chiaroscuro), graphic grammar (orthographic, oblique, perspective projection drawings and free-hand sketching) alongside exercises in material expression (collage, assemblage).
Taught by: Faculty
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

LARP 535 Theory I: The Culture of Nature
Landscape architecture, architecture and visual art are all mediations between nature and culture. This course is designed to help students form their own view regarding our relationship with the ‘natural’ world around us in an age of ecological crisis. To achieve this, the course provides a stimulating historical and contemporary survey of ideas of nature. We explore ways ‘nature’ has been understood mythically, theologically, ideologically, philosophically, scientifically, and artistically through the ages, with an emphasis on contemporary culture. We survey the way in which the polarity of culture and nature has been historically constructed and more recently, deconstructed. The pedagogical philosophy of this course is that an appreciation of the broad pattern of history and the ideas that have shaped it are foundational to living a critical and ethical life and central to the process of making contemporary art, architecture, and landscape architecture.
Taught by: Weller
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

LARP 540 Theory II: Landscape Architecture History and Theory
This course unfolds several contemporary issues that shape the profession, such as giving form to environmental values, balancing science and art, ecology and design, reconsidering the need for the beautiful vis-a-vis the many sites challenged by pollution and abuse. Among the topics of discussion, this course will also take into account how recent phenomena such as the late twentieth-century increase in world population, sprawl, and environmental pollution, and how these have changed the reality described by the very word ‘nature’ and have contributed to expand the domain of landscape architecture. The discussion of topics will integrate contemporary ideas and their roots in earlier theoretical formulation. The past will be presented as a way to illuminate, receive, and critique the present. Course objectives are to become familiar with the social and cultural processes that inform the landscape architectural discourse and to be able to discuss in an informed manner the impact of the latter upon design trends; to be able to trace the roots of contemporary ideas in earlier theoretical formulations; and to be able to think critically and to enhance synthesis and augmentation skills.
Taught by: Fabiani Giannetto
Course usually offered in spring term
Also Offered As: LARP 770
Activity: Lecture
1.0 Course Unit

LARP 542 Media II: Digital Visualization
Continuing the sequence of the Landscape Architecture media classes, this course will provide students with the techniques to explore and examine precision surface profiles and land forming strategies, in both physical and digital models. These models provide a basis to speculate on what processes and programs might be engendered or instigated. Rhino will be the primary modeling platform. Associated plug-ins of Grasshopper, Rhino Terrain, Sonic, and Bongo will help extend the toolset. GIS will facilitate the collection and analysis of extent data. The Adobe Creative Cloud will also be used for documenting and expressing modeling processes through static and time-based visualizations.
Taught by: VanDerSys
Course usually offered in spring term
Prerequisite: LARP 533
Activity: Lecture
1.0 Course Unit
LARP 543 Media III: Flows: Linear / Non-Linear
This course is the third in the media sequence and is required of all MLA students at the 600 level. This course engages the generative potential of the dynamic and temporal attributes of the landscape medium. Time-based visualizations are used to investigate landscape organizations shaped through the dynamic interplay of varying processes and their spatial consequences. Emphasis will parallel the LARP 601 on urban ecology and landscape systems.
Taught by: VanDerSys/Faculty
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

LARP 544 Media IV: Futures: Trends and Trajectories
This course is the fourth in the media sequence and is required of all MLA students at the 600 level. This course exposes students to parametric tools as mechanisms for analyzing and generating both predictable and emergent terrain dependent urban morphologies. Rather than inert lines of shapes, space infrastructure are visualized as products of force and flow. Emphasis will parallel the LARP 602 studio on forms of urbanization. This course is open to Landscape Architecture students only. Students outside of Landscape Architecture will need instructor permission to enroll in this course.
Taught by: Freee
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

LARP 601 Studio III
This studio brings together both two-year and three-year MLA students for a landscape studio problem that works at a regional scale, as well as multiple design scales. LARP 601 - the Green Stimuli studio - emphasizes rigorous site analysis, the strategic organization of living material, and the potential of design to produce a wide range of effects. Studio problems are 'live' - local leaders and experts are actively trying to solve them, there is an audience for student work outside the University, and projects have the potential to stimulate debate and new directions. The Green Stimuli studio takes on design problems where soil, terrain, geology, mineral resources, climate, water, plants, wildlife, and living systems interactions are major drivers. Studio projects explore one or more of these dimensions in depth to reach high levels of design exploration, strategic thinking, technical resolution and physical expression. The studio's topics intersect with a broader universe of practical concerns, including land use, local and regional economies, real estate development and public policy, as well as philosophical and artistic questions about nature and ecology. The intent is that designed Green Stimuli make new connections between the material of landscape and the economic, infrastructural, scientific, social, cultural and creative attributes of a region.
Taught by: Faculty
Course usually offered in fall term
Activity: Studio
2.0 Course Units

LARP 602 Studio IV
This studio is the fourth and final studio in the core sequence and is designed to introduce students to essential competencies related to contemporary problems in urban design. The studio operates in what have been referred to as 'global cities' - contexts in which there are significant pressures on the physical form of a metropolis from substantial population and economic growth (both ongoing and projected). These pressures induce considerable demands for the development of new contexts. The studio is focused on managing and negotiating these pressures through landscape-driven strategies capable of guiding and organizing this urbanization. Students develop individual design strategies through a process of mapping, modeling, scenario building and fieldwork that lead to both conceptual and physical proposals for the development of new urban districts and metropolitan agendas.
Taught by: Marcinkoski/Faculty
Course usually offered in spring term
Activity: Studio
2.0 Course Units

LARP 611 Workshop III: Site Engineering and Water Management
Building upon the skills and concepts developed in Workshops I and II, this intermediate workshop focuses on technical aspects of site design, with an emphasis on landscape performance. Functional considerations related to landscapes and their associated systems - including circulation, drainage and stormwater management, site stabilization and remediation - will be explored as vital and integral components of landscape design, from concept to execution. Lectures, case studies, field trips, and focused design exercises will enable students to develop facility in the tools, processes and metrics by which landscape systems are designed, evaluated, built and maintained. In concert with the concurrent design studio, students will consider the means by which functional parameters can give rise to the conceptual, formal, and material characteristics of designed landscapes.
Taught by: Faculty
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

LARP 612 Workshop IV: Advanced Landscape Construction
Advanced Landscape Construction: The Art and Craft of Design Documentation and Detailing introduces students to the process of landscape documentation as means of strengthening design intent through careful material selection and articulation of form. The course builds upon Workshop III by expanding the concept of site systems to the full range of drawings, details, specifications, and contracts used by landscape designers in the creation of the man-made environment. The course features lectures, case studies and field walks, exploring documentation from initial concept through construction administration. Topics will include materials and their use in exterior environments, documentation phases and their role in a projects evolution and the art of detailing to ensure beautiful, durable landscapes that define cohesive design.
Taught by: Burrell
Course usually offered in fall term
Prerequisite: LARP 611
Activity: Lecture
1.0 Course Unit
LARP 660 Fundamentals of Urban Design
This course is a requirement for students enrolled in Certificate in Urban Design and for Master of City Planning students enrolled in the Urban Design concentration. How should urban designers give shape to the city? What urban design methods could they apply? This course helps students acquire the principles that can inform urban design practice. It has three major pedagogical objectives. First, it helps students understand the contemporary city through a series urban design tools. Second, it covers both historical and modern urban design principles. Finally, it includes all the scales in which urban designers operate, ranging from the fundamentals of social interaction in public space, to the sustainability of the region. This course is open to other interested PennDesign students if there is space and with permission of the instructor.
Taught by: Lin, Zhongjie
Course usually offered in spring term
Also Offered As: CPLN 660
Activity: Studio
2.0 Course Units

LARP 685 Environmental Readings
In this seminar, we will explore this green thread and analyze its influence on how we shape our environments through design and planning. The course has three parts. Throughout, the influence of literature on design and planning theory will be explored. The first part will focus on three most important theorists in environmental planning and landscape architecture: Frederick Law Olmstead Sr., Charles Eliot and Ian McHarg. The second part of the course will critically explore current theories in environmental planning and landscape architecture. The topics include: frameworks for cultural landscape studies, the future of the vernacular, ecological design and planning, sustainable and regenerative design, the languages of landscapes, and evolving views of landscape aesthetics and ethics. In the third part of the course, students will build on the readings to develop their own theory for ecological planning or, alternatively, landscape architecture. While literacy and critical inquiry are addressed throughout the course, critical thinking is especially important for this final section.
Taught by: Dean Steiner
Course usually offered in fall term
Also Offered As: ARCH 685, CPLN 685
Activity: Seminar
1.0 Course Unit

LARP 701 Studio V
These advanced elective studios provide opportunities for focused exploration of particular themes in contemporary landscape architecture. Important emerging and accomplished designers, often from divergent points-of-view, interests and backgrounds, are invited to run these studios. Collaborative options (between Landscape and the Departments of Architecture or City Planning) are sometimes offered across the School. In addition to our own faculty who offer some of these studios (Fabiani Giannettto, Gouverneur, Marcinkoski, Mathur, M‘Closkey, Neises, Olin, Pevzner, Sanders, Tomlin), visitors have included Paolo Burgi (Switzerland), Peter Latz (Munich), Bernard Lassus (Paris), Margie Ruddick (Philadelphia), Chris Reed (Boston), Peter Beard (London), Nicholas Quennell (New York), Ken Smith (New York), Raymond Gastil (New York), Alessandro Tagliolini (Italy), Ignacio Bunster (Philadelphia), Perry Kulper (Los Angeles), James Wines (New York), Lee Weintraub (New York), Charles Waldheim (Chicago), Stanislaus Fung (Australia), Dennis Wedlick (New York), Sandro Marpillero (New York), Peter Connolly (Australia), and former associate professor Anita Berrizbeitia. More recent visitors have been Claire Fellman (New York), Catherine Mosbach (Paris), Nanako Umemoto/Neil Cook (New York), Valerio Morabito (Italy), Carol and Colin Franklin (Philadelphia), Keith Kaseman (Philadelphia), Silvia Benedito (New York), Claudia Taborda (Lisbon), Mark Thomann (New York), Jerry Van Eyck (New York), and Martin Rein-Cano (Berlin).

LARP 704 Urban Design Research Studio
This course is a requirement for students enrolled in the Certificate of Urban Design. The Urban Design Research Studio (UDRC) is a capstone educational experience open to students of architecture, planning, landscape architecture and historic preservation in PennDesign. The studio's focus is how design intelligence can be applied to complex urban problems which are at once systemic and spatial. Reaching across scales and across disciplines the studio immerses students in the social, economic, political, ecological and aesthetic complexity of the contemporary city in a way that interweaves the speculative quality of the design process with the analytical and evidence-based empiricism of urban research. Interdisciplinary collaboration is the studio's modus operandi and its purpose is to develop techniques and strategies by which contemporary cities can become not only metabolically more efficient but also more edifying of the human spirit in the 21st century. Acceptance into the studio is based on interview and portfolio with priority placements given to students enrolled in the Urban Design Certificate Program.
Taught by: Gouverneur
Course usually offered in spring term
Activity: Studio
2.0 Course Units

LARP 710 Implementation of Urban Design
This course is a requirement for students enrolled in the Certificate of Urban Design. With a focus on contemporary major cities this subject charts the various ways in which urban design is typically conceived, procured, administered and ultimately delivered. From the very conception of a project to its completion, the various methods and avenues through which contemporary cities are planned, designed, and constructed are examined from multiple perspectives so that students become familiar with the myriad issues and main actors involved in urban development. Though exemplary case studies the subject offers a comprehensive understanding of the complexities and contingencies of contemporary city making, placing a particular emphasis on the role of the urban designer as a practical, ethical and visionary agent of change. This course may open to other interested PennDesign students if there is space and with permission of the instructor.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

LARP 720 Topics in Representation
In these advanced representation courses the work extends to new ways of documenting and seeing landscape. These courses are open to all interested School of Design students who have previous drawing experience or have taken foundation studios. Recent topics have been: Traces and Inscriptions (spring 2013), instructors: Anuradha Mathur, Matthew Neff; Landscape Representation (fall annually), instructors: Valerio Morabito; Landscape Drawing (spring annually), instructor: Laurie Olin; Landscape Drawing (spring 2008), instructors: David Gouverneur, Trevor Lee; Shifting Landscapes: A Workshop in Representation (spring 2005, 2004), instructor: Anuradha Mathur; and The Agile Pencil and Its Constructs (spring 2004) instructor: Mei Wu.
Taught by: Faculty
One-term course offered either term
Also Offered As: FNAR 720
Prerequisite: LARP 501 OR LARP 533 OR LARP 601 OR ARCH 501 OR ARCH 532 OR ARCH 601
Activity: Seminar
1.0 Course Unit

LARP 730 Topics in Professional Practice
These seminar courses explore ideas and methods in current landscape architectural practice. They include instruction in professional procedures, office management, project development, contracts, and collaborative ventures. They include visits to construction sites, professional offices and archives. Recent topics have been: Transformational Leadership (fall 2015), instructor: Lucinda Sanders, Office Practice (spring 2003-2015) instructor: Lucinda Sanders.
Taught by: Sanders
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: Fall 2016: course offering is limited to LARP majors or by permission of the instructor.

LARP 734 Designing a Green New Deal: From Concept to Program
This advanced social science and design seminar is about mobilizing expert knowledge to develop transformative policy ideas to make the Green New Deal come alive. We'll look at cutting edge social science and design scholarship on the problems we're trying to solve, and the successes and failures of past efforts at transformative policy. And we'll focus in particular on the built environment. How might a Green New Deal make the physical changes to our infrastructures, homes, energy landscapes, transportation systems, public recreation amenities, care facilities, and more, in ways that slash carbon emissions, increase resiliency, and abolish inequalities of race, class, gender, and nation? That's not a rhetorical question: in this class, we'll assemble knowledge, get into teams, and come up with concrete proposals.
Taught by: Daniel Cohen and William Fleming
Also Offered As: SOCI 434
Activity: Seminar
1.0 Course Unit

LARP 738 Cultural Landscapes and Landscape Preservation
The course surveys and critically engages the field of cultural landscape studies. Over the semester, we will explore cultural landscape as a concept, theory and model of preservation and design practice; we will read cultural landscape historiography and creative non-fiction; we will examine a range of types (national parks, community gardens, designed landscapes, informal public spaces), and we will map the alternative preservation, planning and design methods that ground cultural landscape studies practically. Readings, class discussions, and projects will draw on cultural geography, environmental history, vernacular architecture, ecology, art, and writing.
Taught by: Randall Mason
Course not offered every year
Also Offered As: HSPV 538
Activity: Lecture
1.0 Course Unit
LARP 740 Topics in Digital Media
These courses offer advanced instruction in the uses and applications of various digital media, including Geographical Information Systems, 3-D modeling, video, animation, and web-design. These courses are open to all interested School of Design students who already have a working knowledge of basic digital graphic techniques and with permission of the instructor. Recent topics have been: Simulated Natures (fall 2015, 2014), instructors Keith VanDerSys, Joshua Freese; Digital Fabrication (spring 2009-2013), instructor Keith VanDerSys; Non-Static Representation: Video, Animation, and Interactive Media (fall 2013, 2012), instructor: Todd Montgomery; Interoperable Terrains (fall 2008-2013), instructor: Keith Kaseman; Kino-Eye: Intro to Spatial Filmmaking (fall 2011, 2010), instructor: Richie Gelles; Geometry Clouds, Fluid Landscapes (fall 2002-2006), instructor: David Ruy; Tactical Surfaces / Topographic Modeling (fall 2002), instructor: Charles McGloughlin.
Taught by: Faculty
One-term course offered either term
Prerequisite: LARP 543
Activity: Lecture
1.0 Course Unit

LARP 741 Modeling Geographic Space
This course explores the nature and use of raster-oriented (i.e. image-based) Geographic Information Systems (GIS) for the analysis and synthesis of spatial patterns and processes. Previous experience in GIS is not required.
Taught by: Tomlin
Course usually offered in spring term
Also Offered As: CPLN 632
Activity: Lecture
1.0 Course Unit

LARP 743 Geospatial Software Design
The purpose of this course is to equip students with a selected set of advanced tools and techniques for the development and customization of geospatial data-processing capabilities. It is open to any student with experience equivalent to that of an entry-level class on GIS.
Taught by: Tomlin
Course usually offered in fall term
Also Offered As: CPLN 670
Activity: Seminar
1.0 Course Unit

LARP 745 Advanced Topics in GIS
This course offers students an opportunity to work closely with faculty, staff, local practitioners, and each other in conducting independent projects that involve the development and/or application of Geographic Information System (GIS) technology. The course is open to all students who can demonstrate sufficient experience, expertise, or initiative to pursue a successful term project.
Taught by: Tomlin
Course usually offered in spring term
Also Offered As: CPLN 680
Activity: Seminar
1.0 Course Unit

LARP 750 Topics in Construction, Horticulture and Planting Design
These courses explore relevant topics in construction, horticulture and planting design as they relate to contemporary landscape architecture. The aim is to supplement fundamental skills and ideas explored in the core curriculum workshops with more advanced, cutting-edge research, technology and case studies. The teaching faculty are leading practitioners and researchers in the field. These courses are open to all interested School of Design students. Recent topics have been: Urban Horticulture and Planting Design (fall annually since 2009), instructor: David Ostrich; Detailing New Urban Landscapes (spring 2012, 2011), instructor: Tom Ryan; Building New Urban Landscapes, Construction, and Planting Design (fall 2009, 2008), instructor: Tom Ryan; Urban Horticulture: Designing and Managing Landscape Plantings in Stressful Environments (1998-2003), instructor: Paul Meyer; Advanced Planting Design, instructors: Rodney Robinson (2003-2009), Dennis McGlade (fall 2006), Sheila Brady; and Sustainable Large Scale Planting of Trees, Shrubs, Perennials and Grasses (fall 2001), instructor: Wolfgang Oehme.
Taught by: Faculty
One-term course offered either term
Activity: Laboratory
1.0 Course Unit

LARP 755 Arboretum Management I: Understanding Plants
In this course, students will learn about plants from an oraganismal perspective, an applied/practical perspective, an aesthetic perspective, an environmental perspective, and an evolutionary perspective. Utilizing the plant collection of the Morris Arboretum as a living laboratory and the expertise of arboretum staff, this course will bring students, novices and experts alike, to a better understanding of plants. Session topics integrate both theoretical and hands-on practical work. Course assessment will be based on weekly practical assignments and two exams. Please note that this course takes place at the Morris Arboretum in the Chestnut Hill section of Philadelphia and students are responsible for transporting themselves to and from the arboretum on their own for class each week. For further information about the course, students may contact Cynthia Skema (cskema@upenn.edu).
Taught by: Skema
Course usually offered in fall term
Activity: Laboratory
1.0 Course Unit
**LARP 756 Arboretum Management II: Evaluating Public Gardens**
This interdisciplinary course looks at public gardens as a whole, studying these public institutions and their performance in the four major services they undertake: research, horticultural display, conservation and education/outreach. Students, of any level or discipline, begin the course by learning what arboretum and botanic gardens are, how they function, and what role they fill in our society through a series of lecture sessions at the Morris Arboretum. For the remainder of the semester, the students take that knowledge into the field to apply what they have learned and evaluate some of the many public gardens in 'America's Garden Capital,' the Philadelphia region, with expert instructors from the Morris Arboretum as guides. Course assessment will be based on one exam, and a series of essays pertaining to their garden evaluations. Garden evaluations and the written work can be tailored to a particular subject of interest to a student, if pertinent within the public garden realm. Please note that this course takes place at the Morris Arboretum in the Chestnut Hill section of Philadelphia and students are responsible for transporting themselves to and from the arboretum on their own or to other Philadelphia area public gardens as required for class each week. For further information about the course, students may contact Cynthia Skema (cskema@upenn.edu).

Taught by: Skema  
Course usually offered in spring term  
Activity: Laboratory  
1.0 Course Unit

**LARP 760 Topics in Ecological Design**
These elective courses explore relevant topics in ecological design and new technologies as they relate to contemporary landscape architecture. The courses explore topics such as ecology, sustainability, habitat restoration, hydrology, green roof and green architecture technology, soil technology, and other techniques pertinent to the construction of ecologically dynamic, functioning landscapes. The teaching faculty are leading practitioners and researchers in the field. These courses are open to all interested PennDesign students. Recent topics have been: Large-Scale Land Reclamation Projects (annually since 2005), instructor: William Young; Green Roof Systems (spring 2010-2014), instructor: Susan Weiler; Restoration Ecology (fall biennially since 2004), instructor: David Robertson; Sustainable Development: The Queen Elizabeth Olympic Park, London (fall 2012), instructor: John Hopkins; Ecological Economies and Infrastructure (spring 2012), instructor: John Hopkins; Contemporary Issues in Sustainability: The London 2012 Olympic Park and Other European Examples (fall 2011), instructor: John Hopkins; James Ludwig (spring 2004); Sustainable Landscape Design for Watershed Protection (fall 2008, 2006, 2005, 2004,2003, 2002), instructor: Katrin Scholz-Barth; and Ecological Restoration in the Urban Context (spring 2002, 2001), instructor: Deborah Marton.

Taught by: Faculty  
One-term course offered either term  
Activity: Lecture  
1.0 Course Unit

**LARP 761 Urban Ecology**
This course introduces students to the core concepts, processes, and vocabulary of contemporary urban ecology. It aims to provide a conceptual framework and grounding in an understanding of ecological processes, in order to empower students to develop and critique the function and performance of landscape interventions. Urban ecology describes the interaction of the built and natural environment, looking at both ecology in the city, as well as ecology of the city. Lectures, case studies, critical reading and design exercises will enable students to increase their ability to analyze and interpret ecological systems and processes. By analyzing the application of ecological concepts in the design management of urban landscapes, urban ecology will be explored as a dynamic, human-influenced system. Registration is limited to MLA students in the LARP 601 studio.

Taught by: Carlisle/Pevzner  
Course usually offered in fall term  
Activity: Lecture  
1.0 Course Unit

**LARP 770 Theory II: Landscape Architecture History and Theory**
This course unfolds several contemporary issues that shape the profession, such as giving form to environmental values, balancing science and art, ecology and design, reconsidering the need for the beautiful vis-a-vis the many sites challenged by pollution and abuse. Among the topics of discussion, this course will also take into account how recent phenomena such as the late twentieth-century increase in world population, sprawl, and environmental pollution, and how these have changed the reality described by the very word ‘nature’ and have contributed to expand the domain of landscape architecture. The discussion of topics will integrate contemporary ideas and their roots in earlier theoretical formulation. The past will be presented as a way to illuminate, receive, and critique the present. Course objectives are to become familiar with the social and cultural processes that inform the landscape architectural discourse and to be able to discuss in an informed manner the impact of the latter upon design trends; to be able to trace the roots of contemporary ideas in earlier theoretical formulations; and to be able to think critically and to enhance synthesis and augmentation skills.

Taught by: Fabiani Giannetto  
Course usually offered in spring term  
Also Offered As: LARP 540  
Activity: Lecture  
1.0 Course Unit

**LARP 771 Seminar in American Architecture**
An examination of a specific topic related to the history of American architecture and planning. Following introductory lectures, students participate through detailed reports and informal discussion. The topic under investigation varies each semester the seminar is offered.

Taught by: Aaron Wunsch  
Course usually offered in spring term  
Also Offered As: HSPV 620  
Activity: Seminar  
1.0 Course Unit
LARP 780 Topics in Theory and Design
These advanced seminars explore advanced ideas in contemporary landscape architectural design and theory. A special link is made between the analysis of built work and text to design practice and the making of projects. Topics include the intersections of art, nature and creativity; practices of analysis and criticism; ideas of urbanism and infrastructure; collaborative ventures and cross-disciplinarity; vision and visuality; and representational structures, both verbal and visual. These courses fulfill the Landscape Architecture Theory III requirement and are open to all interested School of Design students. Spring 2017: Environmental Readings. In this seminar, we will explore this green thread and analyze its influence on how we shape our environments through design and planning. The course has three parts. Throughout, the influence of literature on design and planning theory will be explored. The first part will focus on three most important theorists in environmental planning and landscape architecture: Frederick Law Olmstead Sr., Charles Eliot and Ian McHarg. The second part of the course will critically explore current theories in environmental planning and landscape architecture. The topics include: frameworks for cultural landscape studies, the future of the vernacular, ecological design and planning, sustainable and regenerative design, the languages of landscapes, and evolving views of landscape aesthetics and ethics. In the third part of the course, students will build on the readings to develop their own theory for ecological planning or, alternatively, landscape architecture. While literacy and critical inquiry are addressed throughout the course, critical thinking is especially important for this final section. Recent topics have been: Classics Considered: The Craft and Criticism of Landscape Architecture (fall 2015), instructors: Laurie Olin, Raffaella Fabiani Giannetto; Designing with Risk (spring 2016, 2015), instructors: Matthijs Bouw, Ellen Neises (2015); WORK: Aspects and Topics in Landscape Architecture (spring 2016, 2015), instructor: Laurie Olin; Edge Operations (spring 2014), instructor: Meg Studer; Landscape Thinking Research Seminar (spring 2013), instructor: Richard Weller; Designed Ecologies (fall 2011-2013), instructor: Ellen Neises; Environment Regimes (spring 2013, fall 2011, 2010, 2009, spring 2007, 2006), instructor: Dipil da Cunha; Case Studies in Urbanism, Landscape and Design (spring 2004-2014) instructor: David Gouverneur; Landscape Production and Visual Culture (spring 2009), instructor: Claudia Taborda; Landscape and Globalization (spring 2010), instructor: Claudia Taborda; Concepts & Theories in Contemporary Landscape Architecture (fall 2008, 2007, 2006, 2004, 2003), instructor: Anita Berrizbeitia; Paradoxical Spaces (spring 2008), instructors: Linda Pollak and Sandro Marpiller; Contemporary European Landscape Architecture (fall 2007), instructor: Joseph Disponzio; Taught by: Faculty

1.0 Course Unit

LARP 781 Contemporary Urbanism
This course will expose students to a wide array of case studies in planning, urban design, and landscape architecture including notions of sustainable development, the interplay between open space and built form, the rehabilitation of existing areas as historic districts, commercial corridors, and the improvement of squatter settlements. Also, it will focus on city expansions and new towns, housing, mix-use developments, and areas of new centrality. The program will also address territorial planning, the improvement of open space systems, and site specific interventions of parks, plazas, streetscape and gardens. Cases will provide the proper ground for analysis and interpretation of issues related to the design and implementation of ‘good’ landscape and urban form. Class discussions will be complemented with short design exercises. We will also enjoy the presence of outstanding visiting lecturers who will share with us cutting-edge information, derived from their professional practice and research. Registration is limited to MLA students in the LARP 602 studio and to students in the Urban Design Certificate program.
Taught by: Weller/Gouverneur

1.0 Course Unit

LARP 789 LARP Summer Institute: Intro to Design Languages (3-year students)
This one-week course is for entering three-year MLA students who do not have a background in architectural, or landscape architectural design or related design fields. The workshop introduces students to architectural terminology, concepts and conventions, as well as to basic analog and digital drawing techniques, in order to bring all students to a minimum level of proficiency, prior to the start of the more intensive Summer Institute coursework. Exemption from this requirement will be granted upon request, based on academic record, professional experience and admissions portfolio. Course enrollment is by permit only. Please contact Darcy Van Buskirk (LARP Dept.) at darcyv@design.upenn.edu.
Taught by: Faculty
Course usually offered summer term only
Activity: Studio
0.0 Course Units
Notes: Course fee: $500.00

LARP 790 LARP Summer Institute: Natural Systems (3-year Students)
This one-week session for entering three-year MLA students will provide an introduction to the varied physiographic provinces and associated plant communities of the greater Philadelphia region. Through a review of available mapping and on-site study we will characterize and consider the connections between climate, geology, topography, hydrology, soils, vegetation, wildlife, and disturbance, both natural and anthropogenic. With a focus on plants students will begin to develop a familiarity with the local flora (native and non-native) including plant species identification, preferred growing conditions, and potential for use. Field trips will include visits to the Inner Coastal Plain and Piedmont. Course enrollment is by permit only. Please contact Darcy Van Buskirk (LARP Dept.) at darcyv@design.upenn.edu.
Taught by: Willig
Course usually offered summer term only
Activity: Studio
0.0 Course Units
Notes: Course fee: $500.00
LARP 791 LARP Summer Institute: Landscape Operations (3-year Students)
This one-week course, for entering three-year MLA students, introduces concepts and techniques for analyzing, representing, and operating on landform, the fundamental medium of landscape architecture. Students will learn representational and model-making techniques for conveying topography, and will describe a series of landscape interventions on a topographic surface. Through models and drawings, students will develop an appreciation for the spatial implications of landform, for landscape narrative, for the movement of water and people across the landscape, and for the operation of reshaping the ground. An introduction to the Fine Arts Library will also be included. Course enrollment is by permit only. Please contact Darcy Van Buskirk (LARP Dept.) at darcyv@design.upenn.edu.
Taught by: Faculty
Course usually offered summer term only
Activity: Studio
0.0 Course Units
Notes: Course fee: $500.00

LARP 792 LARP Summer Institute: Introduction to Digital Media (3-year Students)
This four-day introductory course is intended to enable students to orient themselves to digital media facilities, programs, and workflows. The course is focused around daily projects building up to a final pinup. Each daily project illustrates a different set of work paths between digital programs, as well as teaches students how to use different software applications key to the practice of landscape architecture today. The focus of this course is to enable students to understand what each digital software application offers to the landscape process, and how to build change and iteration into digital workflows. Course enrollment is by permit only. Please contact Darcy Van Buskirk (LARP Dept.) at darcyv@design.upenn.edu.

0.0 Course Units
Notes: Course fee: $500.00

LARP 793 LARP Summer Institute: Landform and Grading Workshop
The reading and shaping of landform is an elemental tool in the practice of landscape architecture. The act of grading design - the shaping and sculpting of landform - is both art and science. This four-day session for entering two-year MLA students aims to provide an appreciation of landform as both an evocative component in the design vocabulary and as a critical tool in resolving difficult design problems. Basic techniques and strategies of grading design are introduced and reinforced, so that grading design becomes an integral part of the student’s design approach. This session is intended to provide a concise overview of the principles and process of landform and grading design, and is designed to prepare the entering two-year students for Workshop III. Course enrollment is by permit only. Please contact Darcy Van Buskirk at darcyv@design.upenn.edu.
Taught by: Olgyay

Notes: Course fee: $500.00

LARP 794 LARP Summer Institute: Natural Systems (2-year students)
This five-day session for entering two-year MLA students will provide an introduction to the varied physiographic provinces and associated plant communities of the greater Philadelphia region. Through a review of available mapping and on-site study we will characterize and consider the connections between climate, geology, topography, hydrology, soils, vegetation, wildlife, and disturbance, both natural and anthropogenic. With a focus on plants students will begin to develop a familiarity with the local flora (native and non-native) including plant species identification, preferred growing conditions and potential for use. Field trips will include visits to the Coastal Plan and Piedmont of New Jersey and Pennsylvania. Course enrollment is by permit only. Please contact Darcy Van Buskirk (LARP Dept.) at darcyv@design.upenn.edu.
Taught by: Willig
Course usually offered summer term only
Activity: Lecture
0.0 Course Units
Notes: Course fee: $500.00

LARP 795 LARP Summer Institute: Computing Introduction (2-year Students)
The Intro to Computing session introduces students to the facilities of digital media as the primary mode of design visual communication. The course provides a short, yet intensive, hands-on inquiry into the production and expression of digital media that is essential for all designers. Through a series of working labs, students learn various software applications and associated techniques to execute precise two-dimensional representations of three-dimensional concepts. Students also learn the PennDesign systems, network basics and computer lab procedures. In the Academic Writing session, students will also receive a basic introduction to research methods, research resources, academic writing, citation formats and standards expected by the School of Design. Course enrollment is by permit only. Please contact Darcy Van Buskirk at darcyv@design.upenn.edu.
Taught by: VanDerSys/Fleming
Course usually offered summer term only

Notes: Course fee: $500.00

LARP 796 Independent Studio
An independent studio may be undertaken in the final semester but is not required. The independent studio is intended to provide highly motivated students who have demonstrated their ability to work independently with the opportunity to pursue topics that extend the boundaries of the profession. For permission, students must prepare a written proposal in the preceding semester and apply for approval from the faculty. Details available in Landscape Architecture department office.
Taught by: Faculty
Course offered summer, fall and spring terms
Activity: Independent Study
1.0 Course Unit

LARP 999 Independent Study
An independent study may be taken for elective credit at any point during the degree program for a letter grade. For permission, students must prepare a written proposal in the preceding semester and obtain a Landscape Architecture faculty advisor to oversee their work. Details are available in the Landscape Architecture department office.
Taught by: Faculty
Course offered summer, fall and spring terms
Activity: Independent Study
1.0 Course Unit
Latin (LATN)

**LATN 101 Elementary Latin I**  
An introduction to the Latin language for beginners. Students begin learning grammar and vocabulary, with practical exercises in reading in writing. By the end of the course students will be able to read and analyze simple Latin texts, including selected Roman inscriptions in the Penn Museum.  
For BA Students: Language Course  
Course usually offered in fall term  
Activity: Seminar  
1.0 Course Unit

**LATN 102 Elementary Latin II**  
Prerequisite(s): LATN 101 or equivalent. Completes the introduction to the Latin language begun in 101. By the end of the course students will have a complete working knowledge of Latin grammar, a growing vocabulary, and experience in reading simple continuous texts.  
For BA Students: Language Course  
Course usually offered in spring term  
Prerequisite: LATN 101  
Activity: LATN 101  
1.0 Course Unit

**LATN 112 Intensive Elementary Latin**  
An introduction to the Latin language for beginners, with explanation of basic grammatical concepts and intensive exercises in reading and writing. Ideal for undergraduates or graduate students from Penn or elsewhere who need to learn Latin rapidly. The course covers the first year of college-level Latin, equivalent to LATN 101 + 102 at more than twice the normal pace. This is an online course. 2 c.u. Students are not required to be in Philadelphia. Course activities will involve a series of intensive online exercises completed each day according to the student's own schedule, plus one daily video-linked session 5.30-7.00pm EST (Monday thru Thursday). The textbook is Learn to Read Latin (Keller & Russell; textbook only, not workbook). The instructor for summer 2020 is Daniel Mackey, a Ph.D. student in Classical Studies. For further information about the course, please contact Prof. James Ker (jker@sas.upenn.edu).  
For BA Students: Language Course  
Course usually offered summer term only  
Activity: Seminar  
2.0 Course Units

**LATN 203 Intermediate Latin Prose**  
Prerequisite(s): LATN 102 or equivalent (such as placement score of 550). Introduction to continuous reading of unadapted works by Latin authors in prose (e.g., Cornelius Nepos, Cicero, Pliny), in combination with a thorough review of Latin grammar. By the end of the course students will have thorough familiarity with the grammar, vocabulary, and style of the selected authors, will be able to tackle previously unseen passages by them, and will be able to discuss questions of language and interpretation.  
For BA Students: Language Course  
Course usually offered in fall term  
Prerequisite: LATN 102  
Activity: Seminar  
1.0 Course Unit

**LATN 204 Intermediate Latin Poetry**  
Prerequisite(s): LATN 203 or equivalent (such as placement score of 600). Continuous reading of several Latin authors in poetry (e.g., Ovid, Virgil, Horace) as well as some more complex prose, in combination with ongoing review of Latin grammar. By the end of the course students will have thorough familiarity with the grammar, vocabulary, and style and style of the selected authors, will be able to tackle previously unseen passages by them, and will be able to discuss language and interpretation. Note: Completion of Latin 204 with C- or higher fulfills Penn's Foreign Language Requirement.  
For BA Students: Last Language Course  
Course usually offered in spring term  
Prerequisite: LATN 203  
Activity: Seminar  
1.0 Course Unit

**LATN 212 Intensive Intermediate Latin**  
An introduction to the basic history and conventions of Latin prose and poetry, with continuous readings from classical authors accompanied by grammar review and exercises. Ideal for undergraduates or graduate students from Penn or elsewhere who have completed the equivalent of one year Latin (e.g., LATN 112). The course covers the second year of college-level Latin, equivalent to LATN 203 + 204 at more than twice the normal pace. This is an online course. 2 c.u. Students are not required to be in Philadelphia. Course activities will involve a series of intensive online exercises completed each day according to the students' own schedule, plus one daily video-linked session 5.30-7.00pm EST (Monday thru Thursday). The focus of the course will be Romans and Carthaginians, combining readings on Hannibal and the second Punic war (mostly in prose, focusing on Cornelius Nepos' Life of Hannibal) with readings from the story of Dido (mostly in poetry, focusing on Ovid's Heroides). The instructor for summer 2020 is Zachary Elliott, a Ph.D. student in Classical Studies. For further information about the course, please contact Prof. James Ker (jker@sas.upenn.edu).  
For BA Students: Last Language Course  
Course usually offered summer term only  
Activity: Seminar  
2.0 Course Units

**LATN 298 Study Abroad**  
This course code is assigned to a course taken abroad that lacks an equivalent course on the Penn roster.  
Activity: Seminar  
1.0 Course Unit
LATN 301 Latin Prose Composition
For this introduction to Latin prose composition we will be using Bradley’s Arnold, Latin Prose Composition, edited and revised by J. F. Mountford, which offers a thorough grammar review and challenging exercises. The exercises will give you an active command of Latin syntax: you’ll be asking ‘how do I say X?’ rather than ‘what does this author mean by X?’ This is an important step towards awareness of the variety of possible expressions for any given X. And awareness of this variety is one of the things that will help you appreciate an author’s style. What advantage does a participle have over a clause? or vice versa? Why use an abstract noun rather than an indirect question? or vice versa? Gerund vs. gerund-replacing gerundive? Repraesentatio? We will also read passages from a variety of Latin prose authors with an eye to their style. My aim in this course, which is open to undergraduate and graduate students alike, is that your ability to read and appreciate Latin prose improve substantially.
Saved by: Ker
Course not offered every year
Also Offered As: LATN 501
Activity: Seminar
1.0 Course Unit

LATN 308 Latin Love Letters
In this course we look at an intersection between emotion and rhetoric, reading ancient theorists and practitioners in the art of love-letter writing. Readings will include Cicero, Ovid, Propertius, Horace, Seneca, and Petronius. ‘Love’ will include the full breadth of affections from intellectual friendship to erotic desire, and ‘letters’ will include the whole spectrum of written communication, both formal and informal. A special goal of this course will be to gently develop our speaking and writing skills in Latin. Final projects will be flexible, ranging from a traditional term-paper to creative experiments in speaking and writing Latin.

LATN 309 Triangulating Augustanism: Livy, Horace, and Ovid
What is a Roman? How does the rise of Augustus Caesar change the meaning of Romanness? In this course, we will read selections from the historian Livy and the poets Horace and Ovid as they try (and sometimes fail) to navigate and accommodate the new regime. Livy’s prose history of Rome, Ab Urbe Condita, looks to the past for moral guidance and attempts to draw lessons for the imperial future. Horace’s Odes veer from ironic to patriotic (and back again) as he works out the new reality and his place in it. Ovid’s Fasti, written during the poet’s exile from Rome, report the origins of Rome’s sacred festival calendar. Through close readings of these three texts, this course will consider Augustanism from several angles and distances, and attempt to construct a richer picture of a complicated and vibrant period. Prerequisite: Reading knowledge of Latin or permission of instructor.

LATN 310 Seneca, On the Brevity of Life and other essays
Seneca was the most important writer of Latin in the early imperial period. In addition to poetry, satire, and natural philosophy, he wrote ethical philosophy in the form of letters, dialogues, and essays. His works ‘On the Brevity of Life’ and ‘On Leisure’ speak both the ethical issues of his own time and those of many others, including our own. In this course we will read both these essays with the goals of becoming familiar with Seneca’s thought and style of expression, both as an individual and as a writer representative of his age. Students will have the opportunity to respond to Seneca in the form of critical essays, essyastic or epistolary responses, or other forms of their choosing.

Activity: Seminar
1.0 Course Unit

LATN 311 Plague and Pestilence in Latin Literature
Plagues and pestilences were a common feature of life in the ancient world. As such, they fueled the literary imagination. Historians, doctors, poets, and others have left many accounts of diseases, both endemic and epidemic. This literature can be considered a kind of literary genre with its own conventions, literal and metaphorical frames of reference, and intertextual relations. We will focus on a few representative examples in Latin literature to read in the original, and will read others Greek and Roman accounts in translation to gain familiarity with the broader context. Students will gain experience in reading upper-level Latin while broadening their knowledge of Latin literature and literary history.

Activity: Seminar
1.0 Course Unit

LATN 541 Latin Literary History
In this course we survey an extensive range of readings in a variety of authors in both prose and poetry, and consider the problems and opportunities involved in literary history.
Course not offered every year
Activity: Seminar
1.0 Course Unit

LATN 600 Tacitus’ Annals
In this seminar we will read Tacitus’ Annals, a work replete with stirring history presented in a style that eschews complacency. Through careful study of this work and selected passages of its predecessor, the Histories, we will develop a richly detailed understanding of Tacitus’ historiographical method, principles, and practice. Consideration of surviving epigraphic parallels will allow us to see a particularly important element of his historiographical practice, namely, his awareness of but deviation from the official record of events. Each class session will involve close reading of the text and student-led discussion of important features of Tacitus work. As a group project we will produce a variorum edition of the Annals for on-line publication. Final projects will take the form of papers suitable for presentation at the SCS Annual Meeting.
Topics will vary.

LATN 605 The Mostly Latin Epigram
In this seminar we will explore the themes and aesthetics of the Latin epigram, a genre (or is it?) best known for its brevity and wit but one whose precise nature is tantalizingly elusive. After orienting ourselves in the epigrams of Hellenistic Greek epigrammatists and late Republican authors like the so-called Neotics (Catullus, Cinna, Calvus, Caeser), we will turn our attention to the poetry of Martial, whose accounts of Rome, its inhabitants, and their foibles exerted a profound influence on subsequent epigrammatists. Among the themes we will engage are: epigram as a genre; persona in tessellated textual collections; the interaction of refined and obscene language; and the artistic and intellectual implications of replication, anthology, and remix.

Activity: Seminar
1.0 Course Unit

LATN 607 Roman Humor and Invective
This seminar will explore Roman humor in epigram, iambic, oratory, and satire as a method of constructing and policing norms of sexuality, the body, and social identity. We will read from a wide range of authors including Catullus, Martial, Cicero, Quintilian, Petronius, and Juvenal, as well as texts that discuss or depict laughter and ridicule. Beyond focused analysis of the works at hand, we will evaluate modern theories of humor and laughter according to the ancient evidence and develop models for understanding Roman humor. In addition to weekly readings, students will be responsible for class presentations, contributing to works-in-progress workshops, and a final research paper.

Notes: Freshman Seminar
LALS 060 Latina/o Literature and Culture
This course offers a broad introduction to the study of Latina/o/x culture. We will examine literature, theater, visual art, and popular cultural forms, including murals, poster art, graffiti, guerrilla urban interventions, novels, poetry, short stories, and film. In each instance, we will study this work within its historical context and with close attention to the ways it illuminates class formation, racialization, and ideologies of gender and sexuality as they shape Latino/a/xs' experience in the U.S. Topics addressed in the course will include immigration and border policy, revolutionary nationalism and its critique, anti-imperialist thought, Latinx feminisms, queer Latinidades, ideology, identity formation, and social movements. While we will address key texts, historical events, and intellectual currents from the late 19th century and early 20th century, the course will focus primarily on literature and art from the 1960s to the present. All texts will be in English.

1.0 Course Unit

LALS 070 Colonial Latin America
The year 1492 was pivotal in the history of the world. It precipitated huge population movements within the Americas and across the Atlantic - a majority of them involuntary as in the case of indigenous and African people who were kidnapped and enslaved. It led to cataclysmic cultural upheavals, including the formation of new cultures in spaces inhabited by people of African, European and indigenous descent. This course explores the processes of destruction and creation in the region known today as Latin America in the period 1400 - 1800. Class readings are primary sources and provide opportunities to learn methods of source analysis in contexts marked by radically asymmetrical power relationships.
For BA Students: History and Tradition Sector

Notes: Fulfills History & Tradition Distribution Requirement

LALS 071 Modern Latin America, 1808-Present
This course examines central themes of Latin American history, from independence to the present. It engages a hemispheric and global approach to understand the economic and social transformations of the region. We will explore the anti-imperial struggles, revolutions, social movements, and global economic crises that have given rise to new national projects for development, or have frustrated the realization of such goals. Taking a historical perspective, we ask: What triggers imperial breakdown? How did slaves navigate the boundary between freedom and bondage? Was the Mexican Revolution revolutionary? How did the Great Depression lead to the rise of state-led development? In what ways have citizens mobilized for equality, a decent standard of living, and cultural inclusion? And what future paths will the region take given uneasy export markets and current political uncertainty?
For BA Students: History and Tradition Sector

Course usually offered in spring term
Also Offered As: HIST 071
Activity: Recitation
1.0 Course Unit

LALS 072 Introduction to Latin American and Latino Studies
Designed to introduce students to the interdisciplinary field of Latin American and Latino Studies, this is a seminar oriented toward first and second year students. Readings will range widely, from scholarly work on the colonial world that followed from and pushed back against the 'conquest'; to literary and artistic explorations of Latin American identities; to social scientists' explorations of how Latinos are changing the United States in the current generation.
Taught by: Dr. Ann Farnsworth-Alvear
Course usually offered in spring term
Also Offered As: HIST 072
Activity: Lecture
1.0 Course Unit

LALS 078 The African Diaspora: Global Dimensions
This class examines the cultural and social ramifications of the African diaspora on a global level. It is divided into two major sections. The first section provides the historical background to the African diaspora by focusing on the forced migration of Africans to Spanish and Portuguese colonies in the Americas. We will then delve into the black experience in French and British colonial spaces. In this section, we will also endeavor to move beyond the Atlantic-centric paradigm in studies of the African diaspora by examining free and unfree migrations of African people across the Indian Ocean to places as far away as India and the Philippines. The second half of the class devotes significant attention to the historical legacy of slavery and colonialism in places like Brazil, Cuba and the United States. In this section, we will discuss such issues as race relations, the struggle for civil rights for African-descent people as well as the emergence and the implementation of affirmative action policies in places like Brazil and the US.
Taught by: Ferreira
Course usually offered in spring term
Also Offered As: AFRC 073, HIST 078
Activity: Lecture

LALS 091 Sustainable Development and Culture in Latin America
This interdisciplinary course exposes students to the three dimensions of sustainable development - environmental, economic, and social - through an examination of three products - peyote, coca, and coffee - that are crucial in shaping modern identity in areas of Latin America. The course integrates this analysis of sustainable development in relation to cultural sustainability and cultural practices associated with peyote, coca, and coffee and their rich, traditional heritage and place in literature, film, and the arts.
Taught by: Gimenez
Course offered fall; even-numbered years
Also Offered As: ANTH 091, ENVS 091, SPAN 091
Activity: Seminar
1.0 Course Unit
LALS 092 Corona Capitalism: Crisis and Inequality Across the Americas
The coronavirus pandemic has exacerbated existing social inequalities. It has also accelerated the pace of history so sharply that the course of events has become nearly impossible to predict. This CWIC critical speaking seminar takes as its starting point our shared participation in the experience of uncertainty. At the same time, in looking to Latin America and the US, it articulates the fact that COVID-19 is anything but a ‘great equalizer’: its impact varies widely and decisively across race, class, and gender. As the world confronts multiple layers of wreckage, not only biological but also ecological and economic, how can we frame and communicate both uncertainty and truth in a thoughtful way? We will examine social problems that have been laid bare by the pandemic and have since become sites of ethical and political reevaluation, namely health disparities, ecological racism, the distribution of labor, and criminal justice. This seminar’s aim is to collaboratively assess one fundamental question: How can we understand COVID-19 not as an exceptional moment in history, but as a crisis of racial capitalism? By studying media, activism, policy, and scholarship produced during the pandemic alongside foundational critical theory, students will gain the analytical tools to contextualize its disproportionate global impact on poor communities and people of color, and to envision a just post-pandemic recovery. We will engage Marxist, feminist, and anti-racist theoretical approaches, and while familiarity with these methods is not necessary, an openness to them is. Self-examination is crucial to the success of the course, which requires students reflect on their own political, intellectual, and emotional investments in racialized inequality. This is a speaking intensive seminar intended to improve students’ oral communication and listening skills through class discussions, prepared presentations, and mixed-media communication projects. Conducted in English.

Also Offered As: SPAN 092
Activity: Seminar
1.0 Course Unit

LALS 116 Caribbean Culture and Politics
This course offers anthropological perspectives on the Caribbean as a geo-political and socio-cultural region, and on contemporary Caribbean diaspora cultures. We will examine how the region’s long and diverse colonial history has structured relationships between race, ethnicity, class, gender and power, as well as how people have challenged these structures. As a region in which there have been massive transplantations of peoples and their cultures from Africa, Asia, and Europe, and upon which the United States has exerted considerable influence, we will question the processes by which the meeting and mixing of peoples and cultures has occurred. Course readings include material on the political economy of slavery and the plantation system, family and community life, religious beliefs and practices, gender roles and ideologies, popular culture, and the differing ways national, ethnic, and racial identities are expressed on the islands and throughout the Caribbean diaspora.
Taught by: Thomas, D.
Course not offered every year
Also Offered As: AFRC 116, ANTH 116
Activity: Lecture
1.0 Course Unit

LALS 121 Silver and Gold in the Americas from pre-history to the present
Precious metals have shaped economies and socio-cultural processes in the Americas for thousands of years. Students will work with pre-Columbian gold objects held by the University Museum and be introduced to the long history of indigenous metallurgy. We will also analyze the way gold and silver sent from the ‘New World’ to the ‘Old World’ played a key role in changing economies around the globe. Locally, mining centers were places marked by forced labor, conspicuous consumption, and the destruction of ecosystems. Internationally, gold and silver prices had outsized effects on monetary and trade policies. This course uses case studies to delve into the fascinating history of precious metals and mining in North and South America. We will analyze documents describing the gold objects ransacked by Spanish conquistadors, examine 17th Century proto-industrial silver mining at Potosi, Bolivia, trace the impact and human cost of the huge gold strikes in Minas Gerais, in colonial Brazil, read new work on the California and Yukon moments of ‘rush’, and briefly discuss the role of precious metals in money laundering. An introductory unit focuses on the history of the gold standard in the United States and internationally.
Taught by: Farnsworth-Alvear
Course usually offered in spring term

LALS 107 Freshman Seminar: The World After 1800
Freshmen seminars are small, substantive courses taught by members of the faculty and open only to freshmen. These seminars offer an excellent opportunity to explore areas not represented in high school curricula and to establish relationships with faculty members around areas of mutual interest. See www.college.upenn.edu/admissions/freshmen.php
One-term course offered either term
Also Offered As: AFRC 012, PSCI 010
Activity: Seminar
1.0 Course Unit
LALS 157 Accordion of the New World
This course focuses on the musical genres and styles (both traditional and popular) that have grown up around the accordion in the New World. We will begin our explorations in Nova Scotia and move toward the Midwest, travelling though the polka belt. From there, our investigation turns toward Louisiana and Texas--toward zydeco, Cajun, and Tex-Mex music. We will then work our way through Central and South America, considering norteno, cumbia, vallenato, tango, chamame, and forro. Our journey will include in the Caribbean, where we will spend some time thinking about merengue and rake-n-scrape music. Throughout the semester, the musical case studies will be matched by readings and films that afford ample opportunity to think about the ways that music is bound up in ethnicity, identity, and class. We will also have occasion to think about the accordion as a multiply meaningful instrument that continues to be incorporated into debates over cultural politics and mobilized as part of strategies of representation through the New World.
Taught by: Rommen, T.

Also Offered As: AFRC 157, FOLK 157, MUSC 255
Activity: Lecture
1.0 Course Unit

LALS 158 Latin American Music
This survey course considers Latin American musics within a broad cultural and historical framework. Latin American musical practices are explored by illustrating the many ways that aesthetics, ritual, communication, religion, and social structure are embodied in and contested through performance. These initial inquiries open onto an investigation of a range of theoretical concepts that become particularly pertinent in Latin American contexts--concepts such as post-colonialism, migration, ethnicity, and globalization. Throughout the course, we will listen to many different styles and repertories of music and then work to understand them not only in relation to the readings that frame our discussions but also in relation to our own, North American contexts of music consumption and production. (Formerly Music 158).

LALS 174 Capitalism, Socialism and Crisis in the 20th Century Americas
From the crisis of the Great Depression through the 1970s, the United States and Latin America produced remarkable efforts to remake society and political economy. This course analyzes the Cuban and Guatemalan revolutions, as well as social movements that transformed the United States: the black freedom movement, the labor movement, and changing forms of Latino politics. In all three countries, Americans looked for ways to reform capitalism or build socialism; address entrenched patterns of racism; define and realize democracy; and achieve national independence. They conceived of these challenges in dramatically different ways. Together, we'll compare national histories and analyze the relationships between national upheavals. In studying the US and Latin America together, the class allows students to explore central questions in both regions' histories. What did capitalism, socialism, and communism amount to? What did democracy mean? What were the roots of racial inequality and how did Americans address it? Why were Americans so enticed by economic growth, and how did they pursue it? How did the Cold War shape social movements? What purposes did unions serve? How did Christianity inform movements for and against social change? Studying these regions together also allows us to explore international interactions. How did the black freedom movement in the US relate to the Cuban revolution? How did Latin American immigration shape the US labor movement? How did US Cold War policy influence Latin American revolutionary movements? The goal of this class is for you to interpret the readings and decide what you think. What you learn in this class, and the quality of our experience together, depends on your reading closely, coming to class with informed ideas and questions, and being prepared to help your classmates answer theirs. We will read approximately 100 pages per week. No background is required.

LALS 175 Society and Culture in Brazil
With its booming economy, the recent inauguration of its first female president, and its selection as host to the 2012 World Cup and Olympic games, Brazil is growing in global prestige. But amid all these exciting developments are devastating socioeconomic inequalities. Access to safe living conditions, livable wages, higher education, and overall social mobility remain painfully out of reach to many Brazilians, the majority of whom are the descendants of slaves. Why do these problems persist in a country that has had such an enduring and widespread reputation as a 'racial democracy'? What are the possibilities of closing the equality gap in Brazil?

LALS 177 Colonial Pasts and Indigenous Futures: A History of Belize and Central America
The small country of Belize (formerly British Honduras) represents the past history and ongoing story of Central America and the region. Belize has a colonial past and present with strong ties to the UK and emerging connections to the US. At the same time, there is a growing post-colonial debate within the country about the role of indigenous Maya people in the past, present and future of the country. This course will be the first of two courses which will lead to active work in Belize during the summer of 2021 with the development and creation of a Community Museum within the Maya village of Indian Creek in southern Belize. This course will be taught by Richard M. Leventhal who has worked in Belize for the past 20 years. Leventhal will be joined by 3 Maya activists from Belize who will co-teach the class for 5-6 weeks out of the semester.

LALS 180 From Ayahuasca to Zoloft: Anthropological Approaches to Drugs and Drug Use
In this course we will consider the cultural, social, political, medical, and biological aspects of drugs (legal, illegal, pharmaceutical, botanical, and otherwise) through space and time. We will take a broad approach, thinking critically about what, who, and under what circumstances a given substance becomes a 'drug.' In doing so, we will be able to interrogate the linguistic dimensions of drugs, considering the way in which language creates social worlds and social meanings. We will explore different kinds of drugs, their origins, biochemical properties, and the biological pathways through which they affect us. We will also think about how drugs and drug use has changed over time, taking a cross-cultural and materialist perspective to investigate drug use past and present. Topics we will address include debates over the commercialization, criminalization, and decriminalization of hallucinogenic plants such as marijuana, the recent use of drugs ranging from LSD to magic mushrooms to treat depression and other mental illnesses, the legacies of colonialism and botanical migrations, the ethics of the pharmaceutical industry, and comparative explorations of the language about and approaches to addressing both the 'crack epidemic' of the early 80s and 90s and the current opioid crisis. We will read both classic anthropological texts including ethnographies as well as works from other disciplines including science studies, biology, history, ethnobotany, and sociology.
Taught by: Hoke

Activity: Lecture
1.0 Course Unit

LALS 187 Africa and the Transatlantic Slave Trade
This course focuses on the history of selected African societies from the sixteenth through the mid-nineteenth centuries. The primary goal is to study the political, economic, social, and cultural history of a number of peoples who participated in the Atlantic slave trade or were touched by it during the era of their involvement. The course is designed to serve as an introduction to the history and culture of African peoples who entered the diaspora during the era of the slave trade. Its audience is students interested in the history of Africa, the African diaspora, and the Atlantic world, as well as those who want to learn about the history of the slave trade. Case studies will include the Yoruba, Akan, and Fon, as well as Senegambian and West-central African peoples.
Taught by: Ferreira

Also Offered As: AFRC 186, HIST 187
Activity: Lecture
1.0 Course Unit

LALS 208 International Organizations in Latin America
International Organizations (IOs) play a powerful role in mitigating conflict at the global level. What role do they play in solving problems related to global politics, economic development, corruption, inequality and civil society in Latin America? How much power, influence and control do they possess in the region? This course examines the role and impact international organizations have had on Latin America since the mid-20th century. After a review of theoretical and methodological perspectives on the significance of IOs in international relations, students will examine the workings, issues and often controversies surrounding IOs in Latin America, including the IMF, World Bank, UN, OAS and ICC as well as regional organizations such as the Inter-American Court of Human Rights and area trade blocs and agreements of Mercosur, NAFTA and others. There will be a special focus on the Organization of American States in preparation for the Washington Model OAS students will be invited to attend from April 6-10, 2020 in Washington, D.C. Students attending this simulation will represent the delegation of Dominican Republic. In addition, the course hosts policymakers and scholars as guest speakers throughout the semester.

LALS 209 Latino/as and the Law
Based in concepts and principles of Constitutional law, this course explores the interpretation and impact of seminal court cases in U.S. history as applied to Latino/as in the United States and abroad. With a particular focus on the 20th century, students will examine how court decisions have affected civil rights, immigration policies, welfare, political incorporation and identity and other important issues affecting Latino/as. Students will also explore additional themes including the status and treatment of Latinos in the criminal justice system, representation of Latino/as in the judiciary, and how Supreme Court decisions have also affected U.S. foreign policy with Latin America. Students will be introduced to a number of guest speakers who are academic experts and practitioners in the field.
Taught by: Bartch
Also Offered As: PSCI 202
Activity: Lecture
1.0 Course Unit
LALS 210 Indigenous Communities and Community Museums: Directions for the Future

Community museums are becoming more commonplace within indigenous communities throughout the Americas. These museums are created internally, by and for communities, as a way of framing self-identity and representation. The development of these museums is focused upon the need to define and highlight identity and differences between indigenous communities and the surrounding world. These community museums contrast dramatically with other cultural museums where the stories and histories of groups tend to be controlled by the nation-state and professional curators. This course will focus on the nature of indigenous communities, cultural representation, and identity with a focus upon the modern Maya communities of southern Belize.

In addition, museums and community museums, world-wide, will be examined and analyzed. What are the different models of community museums and what is the process for the development of such museums? Is the only de-colonized museum one created and framed within and by the community? Seminar format with weekly discussions, readings, and a final research paper. There are no pre-requisites for this course and a background in anthropology is not required. This course will be connected to a community museum project in Indian Creek, Belize where travel and work will be initiated over the summer of 2021. This course is recommended but not required for participation in summer research program in Belize

LALS 213 Latin American Politics

This course examines the dynamics of political and economic change in twentieth century Latin America, with the goal of achieving an understanding of contemporary politics in the region. We will analyze topics such as the incorporation of the region to the international economy and the consolidation of oligarchic states (1880s to 1930s), corporatism, populism, and elict pacts (1930s and 1940s), social revolution, democratic breakdown, and military rule (1960s and 1970s), transitions to democracy and human rights advocacy (1980s) market-oriented reforms (1990s), and the turn to the left of current governments (2000s). The course will draw primarily from the experiences of Argentina, Brazil, Colombia, Chile and Mexico. No prior knowledge of the region is required.

Taught by: Falleti

1.0 Course Unit

LALS 215 The Ancient Maya: Integrating Material, Text, and Image

Ancient Maya studies is one of the most dynamic and innovative fields in world archaeology today. Emerging as a true historical archaeology only in the past three decades, the decipherment of Maya script now provides a powerful complement and counterpoint to both traditional excavation data and new remote sensing technologies. Equally, the reading of images, and their interaction with texts and artifacts, forms a vital part of our interest in the broader humanistic concerns of worldview and the transcendent—where our primary interest lies in gaining access to past mentalities. This course will provide a comprehensive introduction into current knowledge of the Ancient Maya, with a recurring methodological focus on how different types of evidence are integrated to assemble a persuasive 'portrait of the past.' This scope of this process is unique in the ancient Americas, since only the Maya offer us the opportunity to read their own descriptions of the world two millennia or more in the past. Geographically, we will be looking at the greater Yucatan Peninsula, which today covers parts of southeastern Mexico, the whole of Guatemala and Belize, and the western extremities of Honduras and El Salvador. Since archaic times (before 1200 BCE) this has been occupied by speakers of the Mayan language group, and millions of people identified as Maya by that means continue to do so today (despite popular notions to the contrary, they have never ‘disappeared’). No prior knowledge of archaeology or art history is necessary. The course structure is one 3-hour session per week, consisting of a lecture followed by group discussion in seminar-style. Additionally, in Week 6 there will be a virtual tour of the new Mexico and Central American Gallery at Penn Museum. This will introduce the class to the issues of disseminating scholarship and building narratives that are accessible to the wider public.

1.0 Course Unit

LALS 227 Educating for Democracy in Latin America and the U.S.

What does it mean to educate for a democracy, and for what type of democracy should we educate for? This course will examine these central questions and others pertaining to citizenship, democracy, and education as it relates to Latin America and Latino/as in the U.S. The course will first examine theories of education for democracy comparing and contrasting the works of persons including U.S. progressive-era writer John Dewey, Brazilian scholar Paolo Freire, and Penn President and political scientist Amy Gutmann. The course will delve into a civic and political education curriculum and pedagogies that have been carried out in institutions, inequality, and culture in the region. The latterpart of the course will examine civic education practices of Latino/as here in the U.S. from primary schools to higher education. This course offers a service-learning component where students will be encouraged to volunteer with educational organizations in the Philadelphia community.

Activity: Seminar
1.0 Course Unit

LALS 232 Race and Ethnic Politics
This course examines the role of race and ethnicity in the political discourse through a comparative survey of recent literature on the historical and contemporary political experiences of the four major minority groups (Blacks or African Americans, American Indians, Latinos or Hispanic Americans, and Asian Americans). A few of the key topics will include assimilation and acculturation seen in the Asian American community, understanding the political direction of Black America in a pre and post Civil Rights era, and assessing the emergence of Hispanics as the largest minority group and the political impact of this demographic change. Throughout the semester, the course will introduce students to significant minority legislation, political behavior, social movements, litigation/court rulings, media, and various forms of public opinion that have shaped the history of racial and ethnic minority relations in this country. Readings are drawn from books and articles written by contemporary political scientists.

LALS 235 Latinos in United States
This course presents a broad overview of the Latino population in the United States that focuses on the economic and sociological aspects of Latino immigration and assimilation. Topics to be covered include: construction of Latino identity, the history of U.S. Latino immigration, Latino family patterns and household structure, Latino educational attainment. Latino incorporation into the U.S. labor force, earnings and economic well-being among Latino-origin groups, assimilation and the second generation. The course will stress the importance of understanding Latinos within the overall system of race and ethnic relations in the U.S., as well as in comparison with previous immigration flows, particularly from Europe. We will pay particular attention to the economic impact of Latino immigration on both the U.S. receiving and Latin American sending communities, and the efficacy and future possibilities of U.S. immigration policy. Within all of these diverse topics, we will stress the heterogeneity of the Latino population according to national origin groups (i.e. Mexican, Puerto Rican, Cuban, and other Latinos), as well as generational differences between immigrants and the native born.

LALS 250 U.S. Intervention in Latin America
Why has the United States government participated in regime change in Latin America? How have these interventions affected Latin American political and economic outcomes? How have they helped or hurt U.S. interests in the region? This lecture course provides an introduction to the history and politics of U.S. participation in regime change in Latin America since 1949. For each event, the course will help students understand (1) the goals of the U.S. government; (2) the historical and political context of the intervention; and (3) the outcomes and consequences, both in Latin America and for the United States. One set of short writing assignments will train students to identify the main argument of a reading and assess the quality of the evidence presented in support of that argument; a second set of short writing assignments will train students to make and defend their own argument (see draft syllabus for details).
Taught by: Kronick
Course offered spring; even-numbered years
Also Offered As: PSCI 250

LALS 254 Archaeology of the Inca
The Inca created a vast and powerful South American empire in the high Andes Mountains that was finally conquered by Spain. Using Penn’s impressive Museum collections and other archaeological, linguistic, and historical sources, this course will examine Inca religion and worldview, architecture, sacred temples, the capital of Cuzco, ritual calendar, quechua system, textiles, metalworking, economic policies and expansionist politics from the dual perspectives of Inca rulers and their subjects. Our task is to explain the rise, dominance, and fall of the Incas as a major South American civilization.

Also Offered As: ANTH 254
Activity: Seminar
1.0 Course Unit

LALS 258 Caribbean Music and Diaspora
This course considers Caribbean musics within a broad and historical framework. Caribbean musical practices are explored by illustrating the many ways that aesthetics, ritual, communication, religion, and social structure are embodied in and contested through performance. These initial inquiries open onto an investigation of a range of theoretical concepts that become particularly pertinent in Caribbean contexts—concepts such as post-colonialism, migration, ethnicity, hybridity, syncretism, and globalization. Each of these concepts, moreover, will be explored with a view toward understanding its connections to the central analytical paradigm of the course—diaspora. Throughout the course, we will listen to many different styles and repertories of music ranging from calypso to junkanoo, from rumba to merengue, and from dance hall to zouk. We will then work to understand them not only in relation to the readings that frame our discussions but also in relation to our own North-American contexts of music consumption and production. (Formerly Music 258).
Taught by: Rommen
Course not offered every year
Also Offered As: ANTH 256, MUSC 257
Activity: Lecture
1.0 Course Unit

LALS 273 The Immigrant City
This course focuses on immigrant communities in United States cities and suburbs. We survey migration and community experiences among a broad range of ethnic groups in different city and suburban neighborhoods. Class readings, discussions, and visits to Philadelphia neighborhoods explore themes including labor markets, commerce, housing, civil society, racial and ethnic relations, integration, refugee resettlement, and local, state, and national immigration policies. The class introduces students to a variety of social science approaches to studying social groups and neighborhoods, including readings in sociology, geography, anthropology, social history, and political science. Ultimately, the class aims to help students develop: 1) a broad knowledge of immigration and its impacts on U.S. cities and regions; 2) a comparative understanding of diverse migrant and receiving communities; and 3) familiarity with policies and institutions that seek to influence immigration and immigrant communities.

Also Offered As: SOCI 270, URBS 270
Activity: Seminar
1.0 Course Unit

LALS 274 Facing America
This course explores the visual history of race in the United States as both self-fashioning and cultural mythology by examining the ways that conceptions of Native American, Latino, and Asian identity, alongside ideas of Blackness and Whiteness, have combined to create the various cultural ideologies of class, gender, and sexuality that remain evident in historical visual and material culture. We also investigate the ways that these creations have subsequently helped to launch new visual entertainments, including museum spectacles, blackface minstrelsy, and early film, from the colonial period through the 1940s.
