2020-21 UNDERGRADUATE CATALOG

This Catalog provides detailed information for current and prospective students about traditional undergraduate programs at Penn as well as important academic policies and resources for undergraduate students. It also provides information about courses at all levels of study.

This Catalog is intended to provide general information about the University of Pennsylvania and is accurate as of May 2020. The University reserves the right to change, modify, or correct any information contained herein without prior notice, at any time.

The following list includes undergraduate programs. PhD, master’s, certificate, and other professional degree programs are listed in the Graduate Catalog (http://catalog.upenn.edu/graduate/).

A
- Accounting, BS (p. 228)
- Actuarial Mathematics, Minor (p. 140)
- Actuarial Science, BS (p. 228)
- Africana Studies, Minor (p. 141)
- Africana Studies: African American Studies, BA (p. 22)
- Africana Studies: African Diaspora Studies, BA (p. 23)
- Africana Studies: African Studies, BA (p. 24)
- American Public Policy, Minor (p. 141)
- American Sign Language and Deaf Studies, Minor (p. 141)
- Ancient History, BA (p. 24)
- Ancient History, Minor (p. 142)
- Anthropology, Minor (p. 142)
- Anthropology: Archaeology, BA (p. 25)
- Anthropology: Biological Anthropology, BA (p. 25)
- Anthropology: Cultural and Linguistic Anthropology, BA (p. 26)
- Anthropology: Environmental Anthropology, BA (p. 27)
- Anthropology: General Anthropology, BA (p. 27)
- Anthropology: Medical Anthropology & Global Health, BA (p. 28)
- Applied Positive Psychology, Certificate (p. 185)
- Archaeological Science, Minor (p. 142)
- Architectural History, Minor (p. 142)
- Architecture, Minor (p. 143)
- Architecture: Design (Intensive), BA (p. 28)
- Architecture: Design, BA (p. 29)
- Architecture: History and Theory, BA (p. 30)
- Asian American Studies, Minor (p. 143)

B
- Behavioral Economics, BS (p. 229)
- Biochemistry, BA (p. 30)
- Bioengineering, BSE (p. 193)
- Bioethics, Minor (p. 143)
- Biology, Minor (p. 144)
- Biology: Computational Biology, BA (p. 31)
- Biology: Ecology & Evolutionary Biology, BA (p. 32)
- Biology: General Biology, BA (p. 32)
- Biology: Mathematical Biology, BA (p. 33)
- Biology: Mechanisms of Disease, BA (p. 34)
- Biology: Molecular & Cell Biology, BA (p. 35)
- Biology: Neurobiology, BA (p. 35)
- Biomedical Science, BAS (p. 194)
- Biophysics, BA (p. 36)
- Biophysics, Minor (p. 144)
- Business Analytics, BS (p. 230)
- Business Economics and Public Policy, BS (p. 232)

C
- Chemical & Biomolecular Engineering, Minor (p. 208)
- Chemical and Biomolecular Engineering, BSE (p. 195)
- Chemistry, BA (p. 37)
- Chemistry, Minor (p. 145)
- Cinema and Media Studies, BA (p. 38)
- Cinema and Media Studies, Minor (p. 145)
- Classical Studies, Minor (p. 145)
- Classical Studies: Classical Civilizations, BA (p. 38)
- Classical Studies: Classical Languages and Literature, BA (p. 39)
- Classical Studies: Mediterranean Archaeology, BA (p. 39)
- Climate Change, Certificate (p. 185)
- Cognitive Science, Minor (p. 146)
- Cognitive Science: Cognitive Neuroscience, BA (p. 40)
- Cognitive Science: Computation and Cognition, BA (p. 41)
- Cognitive Science: Individualized, BA (p. 41)
- Cognitive Science: Language & Mind, BA (p. 42)
- Communication: Advocacy & Activism, BA (p. 43)
- Communication: Audiences & Persuasion, BA (p. 44)
- Communication: Communication & Public Service, BA (p. 46)
- Communication: Culture & Society, BA (p. 47)
- Communication: Data & Network Science, BA (p. 48)
- Communication: General Communication, BA (p. 50)
- Communication: Politics & Policy, BA (p. 51)
- Comparative Literature, Minor (p. 146)
- Comparative Literature: (Trans)national Literatures, BA (p. 52)
- Comparative Literature: Globalization, BA (p. 53)
- Comparative Literature: Theory, BA (p. 54)
- Computational Biology, BAS (p. 195)
- Computational Neuroscience, Minor (p. 146)
- Computer and Cognitive Science, BAS (p. 197)
- Computer Engineering, BSE (p. 198)
- Computer Science, BAS (p. 199)
- Computer Science, BSE (p. 200)
- Computer Science, Minor (p. 208)
- Consumer Psychology, Minor (p. 147)
- Creative Studies, BAAS (p. 174)
- Creative Writing, Certificate (p. 186)
- Creative Writing, Minor (p. 147)
- Criminology, BA (p. 54)

D
- Data Analytics and Psychological Sciences, BAAS (p. 175)
- Data Analytics and Social Sciences, BAAS (p. 176)
- Data Analytics, Certificate (p. 186)
- Data Science, Minor (p. 209)
- Design, BA (p. 55)
- Design, Minor (p. 148)
- Digital Humanities, Minor (p. 148)
- Digital Media Design, BSE (p. 201)
- Digital Media Design, Minor (p. 210)
- Dutch (Netherlandic), Minor (p. 149)

E
- Earth Science: Environmental Science, BA (http://catalog.upenn.edu/undergraduate/programs/earth-science-environmental-ba/)
- Earth Science: Geology, BA (p. 56)
- Earth Science: Paleobiology, BA (p. 57)
- East Asian Area Studies, Minor (p. 149)
- East Asian Languages and Civilizations: Chinese, Minor (p. 149)
- East Asian Languages and Civilizations: Dual Language, BA (p. 59)
- East Asian Languages and Civilizations: East Asian Area Studies, BA (p. 58)
- East Asian Languages and Civilizations: General East Asian Languages and Civilizations, BA (p. 59)
- East Asian Languages and Civilizations: Japanese, Minor (p. 150)
- East Asian Languages and Civilizations: Korean, Minor (p. 150)
- East Central European Studies, Minor (p. 150)
- Economic Policy, Minor (p. 151)
- Economics, BA (p. 59)
- Economics, Minor (p. 151)
- Electrical Engineering, BSE (p. 201)
- Electrical Engineering, Minor (p. 210)
- Energy & Sustainability, Minor (p. 211)
- Engineering Entrepreneurship, Minor (p. 211)
- English, Minor (p. 152)
- English: 18th/19th Centuries, BA (p. 60)
- English: 20th/21st Centuries, BA (p. 61)
- English: Africana Literatures & Culture, BA (p. 61)
- English: Africana Languages & Civilizations, BA (p. 61)
- English: Creative Writing, BA (p. 63)
- English: Drama, BA (p. 63)
- English: Gender/Sexuality, BA (p. 64)
- English: General English, BA (p. 64)
- English: Individualized, BA (p. 65)
- English: Literary Theory & Cultural Studies, BA (p. 66)
- English: Literature, Journalism and Print Culture, BA (p. 66)
- English: Medieval/Renaissance, BA (p. 67)
- English: Poetry and Poetics, BA (p. 67)
- English: The Novel, BA (p. 68)
- Environmental Humanities, Minor (p. 152)
- Environmental Policy & Management, BS (p. 233)
- Environmental Science, Minor (p. 153)
- Environmental Studies, Minor (p. 153)
- Environmental Studies: Environmental History and Regional Studies, BA (p. 69)
- Environmental Studies: Environmental Policy and Application, BA (p. 69)
- Environmental Studies: General Environmental Studies, BA (p. 70)
- Environmental Studies: Global Environmental Systems, BA (p. 71)
- Environmental Studies: Sustainability and Environmental Management, BA (p. 71)
- European Studies, Minor (p. 154)

F
- Finance, BS (p. 234)
- Fine Arts, BA (p. 72)
- Fine Arts, BFA (p. 178)
- Fine Arts, Minor (p. 154)
- French and Francophone Studies, BA (p. 73)
- French and Francophone Studies, Minor (p. 155)

G
- Gender, Sexuality & Women’s Studies: Feminist Studies, BA (p. 74)
- Gender, Sexuality & Women’s Studies: General, BA (p. 74)
- Gender, Sexuality & Women’s Studies: Health and Disability Studies, BA (p. 75)
- Gender, Sexuality & Women’s Studies: LGBTQ Studies, BA (p. 76)
- Gender, Sexuality & Women’s Studies: Self Designed, BA (p. 76)
- Gender, Sexuality, and Women’s Studies, Minor (p. 155)
- Geology, Minor (p. 156)
- German, BA (p. 77)
- German, Minor (p. 156)
- Global Analysis, BS (p. 235)
- Global Health, Minor (p. 222)
- Global Medieval Studies, Minor (p. 156)

H
- Health and Societies: Bioethics and Society, BA (http://catalog.upenn.edu/undergraduate/programs/health-societies-bioethics-society-ba/)
- Health and Societies: Disease and Culture, BA (http://catalog.upenn.edu/undergraduate/programs/health-societies-disease-culture-ba/)
- Health and Societies: Global Health, BA (http://catalog.upenn.edu/undergraduate/programs/health-societies-global-health-ba/)
- Health and Societies: Health Care Markets & Finance, BA (p. 77)
- Health and Societies: Health Policy & Law, BA (http://catalog.upenn.edu/undergraduate/programs/health-societies-health-policy-law-ba/)
- Health and Societies: Public Health, BA (p. 78)
- Health and Societies: Race, Gender and Health, BA (p. 79)
- Health Care Management and Policy, BS (p. 236)
- Health Care Management, Minor (p. 157)
- Health Communications, Minor (p. 222)
- Hispanic Studies, BA (p. 79)
- Hispanic Studies, Minor (p. 157)
- History of Art, BA (p. 80)
- History of Art, Minor (http://catalog.upenn.edu/undergraduate/programs/history-art-minor/)
- History, Health and the Humanities, Minor (p. 223)
- History, Minor (p. 157)
- History: American History, BA (p. 81)
- History: Diplomatic History, BA (p. 82)
- History: Economic History, BA (p. 82)
- History: European History, BA (p. 83)
- History: Gender History, BA (p. 84)
• History: General History, BA (p. 84)
• History: Intellectual History, BA (p. 85)
• History: Jewish History, BA (p. 86)
• History: World History, BA (p. 86)

I
• Individualized Major, BA (p. 87)
• Individualized Program, BAS (p. 203)
• Individualized, BAAS (p. 178)
• Individualized, BS (p. 237)
• International Development, Minor (p. 158)
• International Relations, BA (p. 87)
• International Relations, Minor (p. 158)
• Italian Studies: Italian Culture, BA (p. 88)
• Italian Studies: Italian Culture, Minor (p. 159)
• Italian Studies: Italian Literature, BA (p. 89)
• Italian Studies: Italian Literature, Minor (p. 159)

J
• Jewish Studies, BA (p. 89)
• Jewish Studies, Minor (p. 159)
• Journalistic Writing, Minor (p. 160)

L
• Landscape Studies, Minor (p. 160)
• Latin American & Latino Studies, BA (p. 90)
• Latin American and Latino Studies, Minor (p. 160)
• Law and Society, Minor (p. 160)
• Leadership & Communication, Certificate (p. 187)
• Leadership and Communication, BAAS (p. 179)
• Legal Studies & Business Ethics, BS (p. 238)
• Legal Studies & History, Minor (http://catalog.upenn.edu/undergraduate/programs/legal-studies-history-minor/)
• Linguistics, BA (p. 90)
• Linguistics, Minor (p. 161)
• Literature, Culture and Tradition, BAAS (p. 180)
• Logic, Information, & Computation, BA (p. 91)
• Logic, Information, & Computation, Minor (p. 161)

M
• Management: Entrepreneurship and Innovation Track, BS (p. 239)
• Management: General Track, BS (p. 240)
• Management: Multinational Management Track, BS (p. 242)
• Management: Organizational Effectiveness Track, BS (p. 243)
• Management: Strategic Management Track, BS (p. 244)
• Managing E-Commerce, BS (p. 244)
• Marketing & Communication, BS (p. 245)
• Marketing & Operations Management, BS (p. 246)
• Marketing, BS (p. 248)
• Materials Science and Engineering, BSE (p. 204)
• Materials Science and Engineering, Minor (p. 212)
• Mathematical Economics, BA (p. 92)
• Mathematics, Minor (p. 162)
• Mathematics: Biological Mathematics, BA (p. 93)
• Mathematics: General Mathematics, BA (p. 95)
• Mechanical Engineering and Applied Mechanics, BSE (p. 205)
• Mechanical Engineering and Applied Mechanics, Minor (p. 213)
• Medical Sociology, Minor (p. 162)
• Modern Middle East Studies, Certificate (p. 188)
• Modern Middle Eastern Studies, BA (p. 95)
• Modern Middle Eastern Studies, Minor (p. 163)
• Music, BA (p. 96)
• Music: Jazz and Popular Music, Minor (p. 163)
• Music: Music, Minor (p. 163)

N
• Native American and Indigenous Studies, Minor (p. 164)
• Near Eastern Languages & Civilizations: Ancient Near East, BA (p. 97)
• Near Eastern Languages & Civilizations: Ancient Near East, Minor (p. 164)
• Near Eastern Languages & Civilizations: Arabic & Hebrew Studies, BA (p. 97)
• Near Eastern Languages & Civilizations: Arabic & Hebrew Studies, Minor (p. 165)
• Near Eastern Languages & Civilizations: Arabic & Islamic Studies, BA (p. 98)
• Near Eastern Languages & Civilizations: Arabic & Islamic Studies, Minor (p. 165)
• Near Eastern Languages & Civilizations: Hebrew & Judaica, BA (p. 98)
• Near Eastern Languages & Civilizations: Hebrew & Judaica, Minor (p. 165)
• Near Eastern Languages & Civilizations: Persian Language & Literature, BA (p. 99)
• Near Eastern Languages & Civilizations: Persian Language & Literature, Minor (p. 166)
• Networked and Social Systems Engineering, BSE (p. 206)
• Neuroscience, BA (p. 100)
• Neuroscience, Certificate (p. 188)
• Neuroscience, Minor (p. 166)
• Nursing and Health Services Management, Minor (p. 223)
• Nursing, BSN (p. 218)
• Nutrition Science, BA (p. 100)
• Nutrition Science, BSN (p. 221)
• Nutrition, Minor (p. 166)
• Nutrition, Minor (p. 224)

O
• Operations, Information & Decisions: Decision Processes Track, BS (p. 249)
• Operations, Information & Decisions: General Track, BS (p. 250)
• Operations, Information & Decisions: Information Systems Track, BS (p. 251)
• Operations, Information & Decisions: Operations Management/Management Science Track, BS (p. 252)
• Organizational Anthropology, Certificate (p. 189)
• Organizational Studies, BAAS (p. 182)

P
• Philosophy, Minor (p. 167)
• Philosophy, Politics and Economics: Choice & Behavior, BA (p. 101)
• Philosophy, Politics and Economics: Distributive Justice, BA (p. 102)
• Philosophy, Politics and Economics: Ethics & Professions, BA (p. 103)
• Philosophy, Politics and Economics: Globalization, BA (p. 104)
• Philosophy, Politics and Economics: Public Policy & Governance, BA (p. 104)
• Philosophy, General Philosophy, BA (p. 105)
• Philosophy, Humanistic Philosophy, BA (p. 106)
• Philosophy, Philosophy and Schience, BA (p. 106)
• Philosophy, Political and Moral Philosophy, BA (p. 107)
• Physical & Life Sciences, BAAS (p. 183)
• Physics, Minor (p. 167)
• Physics: Astrophysics, BA (p. 108)
• Physics: Biological Science, BA (p. 108)
• Physics: Business & Technology, BA (p. 109)
• Physics: Chemical Principles, BA (p. 110)
• Physics: Computer Techniques, BA (p. 111)
• Physics: Physical Theory and Experimental Technique, BA (p. 112)
• Political Science, Minor (p. 167)
• Political Science: American Politics, BA (p. 113)
• Political Science: Comparative Politics, BA (p. 113)
• Political Science: General Political Science, BA (p. 114)
• Political Science: Individualized, BA (p. 115)
• Political Science: International Relations, BA (p. 116)
• Political Science: Political Economy, BA (p. 116)
• Political Science: Political Theory, BA (p. 117)
• Professional Writing, Certificate (p. 189)
• Psychoanalytic Studies, Minor (p. 168)
• Psychology, BA (p. 118)
• Psychology, Minor (p. 168)

R
• Real Estate, BS (p. 253)
• Religious Studies, BA (p. 119)
• Religious Studies, Minor (p. 168)
• Retailing, BS (p. 254)
• Romance Languages: French and Italian, BA (p. 119)
• Romance Languages: French and Spanish, BA (p. 120)
• Romance Languages: Italian and Spanish, BA (p. 121)
• Russian and East European Studies: Cinema, Arts and Letters, BA (p. 122)
• Russian and East European Studies: History, Politics and Society, BA (p. 122)
• Russian and East European Studies: Language, Literature and Culture, BA (p. 123)
• Russian and East European Studies: Russian Culture and History, Minor (p. 169)
• Russian and East European Studies: Russian Language, Literature and Culture, Minor (p. 169)

S
• Science, Technology and Society, Minor (p. 170)
• Science, Technology and Society: Biotechnology & Biomedicine, BA (p. 124)
• Science, Technology and Society: Energy and Environment, BA (p. 125)
• Science, Technology and Society: Global Science and Technology, BA (p. 125)
• Science, Technology and Society: Information and Organizations, BA (p. 126)
• Science, Technology and Society: Science/Nature/Culture, BA (p. 126)
• Social Impact & Responsibility, BS (p. 255)
• Sociology, Minor (p. 170)
• Sociology: Applied Research and Data Analysis, BA (p. 127)
• Sociology: Cities, Markets, and the Global Economy, BA (p. 128)
• Sociology: Culture and Diversity, BA (p. 129)
• Sociology: Family, Gender and Society, BA (p. 129)
• Sociology: Law and Society, BA (p. 130)
• Sociology: Medical Sociology, BA (p. 131)
• Sociology: Population and Immigration, BA (p. 132)
• Sociology: Structures of Opportunity and Inequality, BA (p. 132)
• South Asia Studies, BA (p. 133)
• South Asia Studies, Minor (p. 170)
• Statistics, BS (p. 256)
• Statistics, Minor (p. 170)
• Survey Research and Data Analytics, Minor (p. 171)
• Sustainability and Environmental Management, Minor (p. 171)
• Systems Science and Engineering, BSE (p. 207)
• Systems Science and Engineering, Minor (p. 213)

T
• Theatre Arts, BA (p. 134)
• Theatre Arts, Minor (p. 172)

U
• Urban Education, Minor (p. 172)
• Urban Real Estate and Development, Minor (p. 173)
• Urban Studies, BA (p. 135)
• Urban Studies, Minor (p. 173)

V
• Visual Studies: Architecture Practice and Technology, BA (p. 135)
• Visual Studies: Art and Culture of Seeing, BA (p. 136)
• Visual Studies: Art, Practice and Technology, BA (p. 137)
• Visual Studies: Philosophy and Science of Seeing, BA (p. 138)
SCHOOL OF ARTS & SCIENCES

In the tradition of its eighteenth-century founders, the College of Arts and Sciences (https://www.college.upenn.edu/) regards the enduring purpose of education as the liberation of the mind from ignorance, superstition, and prejudice. From its central position in an international research university, the College invites students to explore the broad spectrum of human knowledge and takes pride in its capacity to respond to the particular intellectual needs of those who join it. The College thrives on the diversity of scholars and students whose interests it sustains and whose intellectual goals it unites.

Study of the arts and sciences provides a solid basis for advanced scientific and scholarly research, for subsequent training in the professions, and for the informed exercise of the rights and responsibilities of citizenship. The College’s goal is to help students to become knowledgeable about the world and the complexities of today’s society, aware of moral, ethical, and social issues, prepared to exercise intellectual leadership, and enlivened by the use of their mind.

The College is committed to offering a broad education that will lay a durable foundation for critical and creative thinking. We believe that students should explore fundamental approaches to the acquisition and interpretation of knowledge through introduction to substantive bodies of current thought in the natural sciences, social sciences, and humanities. Equally important, they should learn to understand and evaluate the sources and methods from which this knowledge derives. In this way they can be led to appreciate the contingency of all knowledge and to participate in the ongoing excitement of intellectual discovery that is at the heart of the College.

We challenge our students to develop the skills of analysis and communication that will enable them to perceive pattern in complexity, render reasoned judgments, make wise choices under conditions of uncertainty, and join with others in the pursuit of common endeavors. They should, for example, be able to write and speak effectively and to use another people’s language as one means of access to the diversity of contemporary and historical culture.

A student’s emerging interests and talents find expression through an organized program of study in a major field. In the specialized context of the major, students investigate the traditions and contemporary status of an established branch of knowledge. The structured study of a discipline complements the general exploration of our intellectual heritage to provide the balance of educational breadth and depth to which the College is committed.

There is no single or easy path to the benefits of liberal education. A program of study must be shaped as a student grows. But the special strengths of the University of Pennsylvania—its combination of academic and professional excellence, its diverse and interdisciplinary tradition, its active community of scholars at all levels of experience—provide a setting in which the College can dedicate itself to nurturing honest, eager, and critical minds. The College welcomes those who seek to understand, appreciate, and contribute to the achievements of the human intellect.

The College of Arts and Sciences (https://www.college.upenn.edu/) is the full-time undergraduate division of the School of Arts and Sciences (SAS), which offers the Bachelor of Arts (B.A.) degree. Other divisions include:

- The Graduate School of Arts and Sciences which offers the advanced degrees of Master of Arts (M.A.), Master of Science (M.S.) and Doctor of Philosophy (Ph.D.);
- The College of Liberal and Professional Studies (LPS) is the home of lifelong learning at the University of Pennsylvania. It offers high school, undergraduate, post-baccalaureate, graduate, summer and online studies as well as customizable professional training with courses that span across disciplines. LPS also administers the Summer Sessions.

The twenty-seven departments in SAS represent the core disciplines of the liberal arts. They individually offer thirty-two major programs. In addition, through interdepartmental collaborations, the SAS faculty offer a number of interdisciplinary majors. Around SAS are grouped the various specialized professional schools, all of them drawing extensively on the intellectual resources provided by SAS. Two of these schools, the Annenberg School for Communication and the School of Design, offer undergraduate majors for College students through special collaborative relationships with SAS.

The College aims to provide its undergraduates with a broad general education that will lay the groundwork for critical and creative thinking in all fields. Ideally the graduate of the College will be well informed about the world and confident in today’s complex technological society. He or she will be willing and able to make critical judgments and to exercise intellectual leadership. The B.A. degree thus provides a solid basis for specialized scientific and scholarly research, for education for the professions, and for the informed exercise of the rights and responsibilities of citizenship.

The University of Pennsylvania is particularly well placed to provide its students with an education that links the theoretical and the practical. Within the College and the other schools is an extraordinary range of programs. The College alone offers over fifty different major programs. The College does its best to make all of the University’s resources accessible to its students, giving them wide latitude in planning their programs of study and in deciding on their areas of specialization.

In 1739, the noted evangelist George Whitefield preached to thousands of Philadelphians. His sermons were so impressive that, one year later, a ‘House of Public Worship’ and ‘Charity School’ were established at Fourth and Arch Streets for the religious education of young men. Whitefield supported the idea of forming a ‘Negro School,’ but it was never implemented due to lack of support. The ‘Charity School’ was not officially opened until 1749, when Benjamin Franklin and twenty-one leading citizens of Philadelphia founded an ‘Academy.’ By 1755, the academy had come to be known as the ‘College, Academy and Charitable School of Philadelphia in Pennsylvania.’ The first commencement took place on May 17, 1757, and graduated a class of seven.

Alumni of the College of Philadelphia were instrumental in the development of the nation and played vital roles in the American Revolution. Twenty-one members of the Continental Congress were graduates of the College; nine signers of the Declaration of Independence were either trustees or alumni; and eleven signers of the Constitution were associated with the College. In 1779, Pennsylvania’s state legislature decided that the College was a hotbed of loyalism and tried to abrogate its charter. The provost and trustees of the College refused to be unseated. This forced the legislature to transfer the assets and property to a new board of trustees of a ‘University of the State of Pennsylvania.’ After a ten-year legal battle, the College was allowed to reopen its doors in its old buildings. Meanwhile, the University continued down the block on Fifth and Chestnut Streets. This situation continued until 1791, when the two merged to form what we now know as the University of Pennsylvania, the first university in the United States.
During Benjamin Franklin's forty years on the board of trustees, his idea of combining practical and traditional education guided the curriculum of the University. Thanks to Franklin, Penn went beyond the traditional classical education and diversified into the sciences, mathematics, history, logic and philosophy. Franklin indicated his philosophy of education when, in establishing the University, he said, 'As to their Studies, it would be well if they could be taught every Thing that is useful . . . ' Regard being held to the several Professions for which they are intended.' This emphasis on the practical aspects of education distinguished the University of Pennsylvania from other colleges and universities of the era. The tradition has continued. For example, the first medical school (1765), the first law classes (1850) and the first business school (1881) in America were founded here.

The University arrived at its present location by twice moving west. In 1802, it moved from Fourth and Arch Streets into a mansion on Ninth and Chestnut Streets built for, but never occupied by, the President of the United States. It moved again in 1872 to a ten-acre spot of land located across the Schuylkill River that was purchased for $80,000. That plot of land was in a section called Blockley Township, a semi-rural area known mostly for its alm house and the Hamilton Grange, a farm.

The Pennsylvania courts ruled in 1877 that the University should provide scholarships to young men and 'instruction to female students so far as may be convenient and practicable in the University building.' Therefore, in 1878, the Towne Scientific School and the Music Department responded by admitting nine women into their programs. In 1879 George Whitefield's dream of a 'Negro School' was realized when Penn admitted one black student to the College, one to the Dental School and one to the Medical School. The Law School was the first major division of the University to admit women to its courses as degree candidates. The College of Liberal Arts for Women was established in 1933 to provide women with a liberal arts education instead of one designed specifically for teachers. The College for Women merged with the College of Arts and Sciences in 1974, thus forming our modern-day School of Arts and Sciences, which includes the Graduate School, the College of Liberal and Professional Studies and the College of Arts and Sciences.

The College is the largest of the undergraduate schools, enrolling 6,000 of the University's 10,000 undergraduates, and it teaches all of Penn's undergraduates. The study of the arts and sciences provides students with critical perspectives on their world and with the fundamental intellectual skills necessary for engaging it. As Franklin recognized, professional education relies on the sustenance provided by the arts and sciences and could not exist without them. The School of Arts and Sciences remains the heart and the soul of the modern University.

The fundamental purpose of the University as an academic community is the pursuit of knowledge. Essential to the success of this educational mission is a commitment to the principles of academic integrity. Academic work represents not only what we have learned about a subject but also how we have learned it. Values and beliefs about academic integrity have been adopted by scholars so that others may trace our honorable footsteps, verify what we have learned, and build upon our work. Every member of the University community is responsible for upholding the highest standards of honesty at all times.

As members of the University community, students are also responsible for adhering to the principles and spirit of the Code of Academic Integrity (http://catalog.upenn.edu/pennbook/code-of-academic-integrity/). Penn believes strongly in the importance of academic integrity. Students who violate its precepts are subject to punishment through the judicial system. Ignorance of the rules is no excuse. If a student is unsure whether his or her action(s) constitute a violation of the Code of Academic Integrity, it is that student's responsibility to consult with the instructor to clarify any ambiguity.

Curriculum
The Purpose of the Curriculum
A curriculum is often identified with a set of degree requirements: "What do I have to do to receive my degree?" But degree requirements are not themselves sufficient to define appropriate educational goals. One might fulfill all of the College's degree requirements and yet fail to get a good education. It would also be possible to acquire a good education but neglect to fulfill the degree requirements. Now, we certainly do want you to fulfill all of the degree requirements, and we will work with you to see that this happens. But you are not here fundamentally for the purpose of completing degree requirements. If you think of your education solely in those terms, the result will be dull and unsatisfying.

'Curriculum' comes from the Latin for 'course,' in the sense in which one might speak of the course of a journey. The term denotes a means rather than an end, but it suggests better than 'degree requirements' what it is to become educated. It denotes a movement from a starting point to a destination, a movement that proceeds along some path. You are not left to your own devices to figure out how to get from here to there. But neither is the path straight and narrow. You will have many choices to make as you negotiate the course of your education, but they will be informed by the experience of the faculty, who in the curriculum offer their considered advice for your educational journey.

The College's curriculum draws you toward two distinctive goals: toward general education across the wide range of the arts and sciences and toward specialized education in a major. A commitment to holding these two—general and specialized education—together has been the genius of American higher education since the early part of the last century. We continue to believe that these two elements constitute an education best suited to enabling intelligent individuals to live humane, productive and fulfilling lives in the 21st century.

The College of Arts and Sciences curriculum (https://www.college.upenn.edu/curriculum/) provides you with an academic framework for becoming an educated and successful citizen of the 21st century. Its flexible structure is designed to inspire curiosity and frame opportunities while drawing you toward two distinct goals: general education across the wide range of the arts and sciences and specialized education in a major. With help from academic advisors, you will select from a variety of courses to fulfill each element of the curriculum. You may also choose to expand your academic experience beyond the classroom through options like research or study abroad.

The elements of the College Curriculum are:
- The General Education Curriculum (p. 17)
- The Major (p. 20)
- Free Electives (p. 20)

Visit the College website (https://www.college.upenn.edu/curriculum-policy/) for policies governing the College Curriculum.

General Education Curriculum
The College's General Education Curriculum for its part has two broad objectives. It seeks to develop in you some general skills or approaches...
to knowledge and to engage you in the intellectual work of the disciplines in a variety of fields across the arts and sciences.

In following this curriculum, you will be guided by two kinds of degree requirements corresponding to these two objectives. One deals with foundational approaches, the other with specific disciplines and fields of knowledge. Within any given course, these two—an approach and a field of study—are integral to one another. An approach is learned by practice in relation to a field of knowledge: your ability to use a foreign language is developed through learning about the culture in which the language is rooted; understanding a work of art is acquired by learning how to write about it—that is, by learning how to use words to describe, compare, question and argue about works of art and the contexts in which they were created and are appreciated; you learn how to analyze quantitative data by thinking about what data mean for our knowledge of natural or social phenomena we observe. Some courses, however, give priority to developing skills and approaches, while others give priority to the field under investigation.

The General Education component of the Curriculum is comprised of two elements. Foundational Approaches (p. 18) develop key intellectual capabilities demanded in a variety of disciplines, while Sectors of Knowledge (p. 19) allow you to tailor your own education in the arts and sciences while gaining valuable knowledge across a broad range of disciplines.

Visit the College website (https://www.college.upenn.edu/curriculum/) for more information on the College curriculum.

**Foundational Approaches**

**Writing**

Writing is the primary medium through which the quality of a student’s intellectual work will be judged. The ability to express oneself clearly and persuasively in writing is fundamental for success across all academic disciplines, and throughout one’s personal and professional life.

For these reasons, writing plays a central role within the College curriculum. Students must take a writing seminar to fulfill the College’s Writing Requirement. It is recommended that students take this course during their first year of study. Students are also encouraged to continue development of their writing skills by participating in Penn’s writing programs.

**Foreign Language**

Competence in a foreign language is essential for an educated person. Participation in the global community is predicated on the ability to understand and appreciate cultural difference, and nothing brings this more sharply into focus than the experience of learning a foreign language. The foreign language not only affords unique access to a different culture and its ways of life and thought; it also increases awareness of one’s own language and culture. For this reason, College students are required to attain a certain degree of competency.

While students often opt to satisfy the Language Requirement by continuing to study the language that they have already begun in high school or earlier, the wealth of languages that the University offers is such that many students decide to explore a new culture and area of our globe by beginning a foreign language that they have never studied before. French, Spanish, and a few other languages are taught at the pre-collegiate level, but students are less likely to have been exposed to Arabic, Hindi or Japanese—let alone Uzbek or Hausa—and each of these languages is a mode of access to a fascinating culture and history.

**Quantitative Data Analysis**

In contemporary society, citizenship, work and personal decision-making all require sophisticated thinking about quantitative evidence.

Students in the College must complete a course that uses mathematical or statistical analysis of quantitative data as an important method for understanding another subject. Through such study, students learn to think critically about quantitative data and the inferences that can be drawn from these data. They also gain experience with the use of quantitative analysis to interpret empirical data and to test hypotheses.

Courses in calculus and computer science do not fulfill the requirement because these courses do not require students to analyze actual data sets with the goal of evaluating hypotheses or interpreting results. To count toward the Quantitative Data Analysis Requirement, a course must include such data analysis.

**Formal Reasoning and Analysis**

In contrast to Quantitative Data Analysis courses, which deal with inductive reasoning, courses designated for this requirement focus on deductive reasoning and the formal structure of human thought, including its linguistic, logical and mathematical constituents. These courses emphasize mathematical and logical thinking and reasoning about formal structures and their application to the investigation of real-world phenomena. In addition to courses in mathematics, this requirement includes courses in computer science, formal linguistics, symbolic logic and decision theory.

**Cross Cultural Analysis**

In our increasingly interconnected world, the Cross-Cultural Analysis Requirement aims to increase students’ knowledge and understanding of socio-cultural systems outside the United States.

College students are required to take at least one course to develop their ability to understand and interpret the cultures of peoples with histories different from their own. The focus may be on the past or the present and it should expose students to distinctive sets of values, attitudes and methods of organizing experience that may not be obtained from American cultures. This exposure to the internal dynamic of another society should lead students to understand the values and practices that define their own cultural framework.

**Cultural Diversity in the U.S.**

The Cultural Diversity in the U.S. Requirement complements the Cross-Cultural Analysis Requirement and aims to develop students’ knowledge of the history, dynamic cultural systems and heterogeneous populations that make up the national culture of the United States.

College students are required to take at least one course to develop the skills necessary for understanding the population and culture of the United States as it becomes increasingly diverse. Through historical inquiry, the study of cultural expressions and the analysis of social data, students will develop their ability to examine issues of diversity with a focus on race, ethnicity, gender, sexuality, class and religion. The goal is to equip graduates with the ability to become perceptive and engaged members of society.
Sectors

The sectors are intended to ensure breadth of education across the sectors or fields of knowledge, along with interdisciplinary explorations that link several fields of knowledge.

I. Society

This sector focuses on the structure and norms of contemporary human society, including their psychological and cultural dimensions.

Courses in this sector use many analytical techniques that have been developed to study contemporary society, with its complex relations between individuals and larger forms of mass participation. Some Society courses are largely devoted to the analysis of aggregate forms of human behavior (encounters, markets, civil society, nations, supranational organizations, and so on), while others may focus on the relations between individuals and their various societies. While historical materials may be studied, the primary objective of Society courses is to enable students to develop concepts and principles, test theories, and perfect tools that can be used to interpret, explain and evaluate the behavior of human beings in contemporary societies. This objective will be realized through the specific content of the various courses, but the emphasis in each course should be on developing in students a general capacity for social analysis and understanding.

II. History and Tradition

This sector focuses on studies of continuity and change in human thought, belief and action. Understanding both ancient and modern civilizations provides students with an essential perspective on contemporary life. Courses in this sector examine the histories of diverse civilizations, their cultures and forms of expression, their formal and informal belief systems and ideologies, and the record of their human actors. Students should learn to interpret primary sources, identify and discuss their core intellectual issues, understand the social contexts in which these sources were created, pose questions about their validity and ability to represent broader perspectives and utilize them when writing persuasive essays.

III. Arts & Letters

This sector encompasses the means and meaning of visual arts, literature and music, together with the criticism surrounding them.

Most courses in this sector are concerned with works of creativity—paintings, films, poetry, fiction, theatre, dance and music. They generally address a considerable breadth of material rather than an individual work or artist. The objective of Arts and Letters courses is to confront students with works of creativity; cultivate their powers of perception (visual, textual, auditory); and equip them with tools for analysis, interpretation and criticism. This objective will be realized through the specific content of the various courses, but the emphasis in each course should be on developing and strengthening in students a general capacity for understanding meaning and the ways in which it is achieved in its distinctive environment of culture and moment.

IV. Humanities & Social Science

This sector comprises courses that combine methods and approaches at work in at least two of the first three sectors.

Students will engage with diverse approaches to society, history, tradition and the arts more deeply than a single course from each domain can allow. Greater depth of experience is gained by bringing to bear several humanistic and social scientific perspectives upon a single issue or topic or by engaging directly in academically-based service or performance informed by these perspectives.

In this sector, students seek to broaden their perspective by taking a course in the humanities or social sciences that has been approved as a general education course but that cuts across two or more of sectors I, II, and III. Some courses approved for this sector will seek a more integrative approach by addressing a problem or topic from a variety of disciplinary perspectives. Others will combine disciplinary study with community service or activism, and constructively and reflectively connect the theoretical with the actual. Finally, some courses in the arts that combine creative or performance experience with reflection and grounding within a discipline may be found in this sector.

V. The Living World

This sector deals substantively with the evolution, development, structure and/or function of living systems.

Courses in this sector study the variety of approaches that are useful in understanding the diversity of living organisms, their interrelatedness, and their interactions with their environment. Analytical approaches employed range from analyses at the molecular and cellular level, to analyses of the cognitive and neural bases of behavior, to analyses of evolutionary processes and ecological systems. Students learn the methods used by contemporary natural science to study these topics, including ways in which hypotheses are developed, tested, and reformulated in light of new research findings. A full understanding of living organisms incorporates insights from approaches at many different levels.

VI. The Physical World

This sector focuses on the methodology and concepts of physical science.

Courses in this sector aim to provide insight into the content and workings of modern physical science. Some courses in this sector are part of a major, while others are designed primarily to provide an introduction to the field for non-science majors. Courses for non-science majors may include some discussion of the historical development of the subject as well as the most important conceptual notions and their mathematical expressions. All courses in this sector seek to demonstrate the generally accepted paradigm of modern science: experiment and observation suggest mathematically formulated theories, which are then tested by comparison with new experiments and observations.

All courses in this sector use a significant mathematical prerequisite (advanced high school algebra through introductory calculus) – that is, students will actually be expected to use mathematical methods and concepts to achieve an understanding of subjects in physical science.

VII. Natural Sciences & Mathematics

Students should engage with the diverse approaches to the natural sciences and mathematics more deeply than a single course from the physical and life sciences would allow. Greater depth of experience can be accomplished by either greater focus on one area, study in a related area, bringing various scientific perspectives to bear upon a single issue or topic, or engaging directly in academically-based activities informed by these perspectives.
In this sector, students broaden their perspective by taking a course in the natural sciences or mathematics that has been approved as a General Education course and that cuts across the two sectors. Other courses approved for this sector will seek a more integrative approach by addressing a problem or topic from a variety of disciplinary perspectives. Still others will combine disciplinary study with community service or activism, constructively and reflectively connecting the theoretical with the actual.

The Major

The Major provides an opportunity to know a segment of human knowledge deeply, with a sufficient grasp of its modes of thinking and analysis to make your own contribution.

The College offers more than 55 majors (p. 20) across the humanities, social sciences and natural sciences, and many programs provide options for concentrating in any number of specialty areas.

Visit the College website (https://www.college.upenn.edu/curriculum/) for more information on the College curriculum.

Free Electives

In addition to these structural elements, the curriculum provides space in your studies for a number of Free Electives. These give you the freedom to pursue interests that may lie outside your major and that extend beyond those addressed in the General Education Curriculum. Take a course in a field that you have not otherwise encountered. Use one or more Free Electives to explore further a subject introduced in a sector course or learn about a subject that sheds light on your major.

Visit the College website (https://www.college.upenn.edu/curriculum/) for more information on the College curriculum.

Academic Opportunities

Learning happens inside and outside of the traditional classroom.

The value of a rich liberal arts tradition extends beyond the curriculum itself to the far reaches of cutting edge research and real-world internships, community partnerships and study abroad.

- Penn is a world-class research institution where undergraduates have the opportunity to participate in the creation of knowledge.
- Students in the College integrate knowledge from a variety of specializations or dig deeply into a particular area of study.
- Through their work with local schools and organizations, students in Academically Based Community Service Courses combine classroom and community work to solve critical issues.
- Students in study abroad programs and internship experience diverse communities and real world challenges in and outside of Philadelphia.

Visit the College website (https://www.college.upenn.edu/courses-options/) for a comprehensive view of academic opportunities for College students.

Advising

College students need to choose courses, declare a major and define career goals. They will need to examine their performance in different courses, identify their skills and those they wish to develop, and decide what really matters to them. Much of this assessment they will do themselves, but faculty members, academic advisors, career counselors and peers can help.

Students in the College have a strong network of academic advisors available to assist them throughout their undergraduate careers.

- Pre-major advisors help first- and second-year students navigate their entrance into academic and intellectual life in the College beginning with the issues of incoming freshmen and continuing through the student’s exploration of a potential major.
- Peer advisors work with the pre-major advisor and are one of the first points of contact for incoming College students. They provide the perspective of an upperclass student in the College and assist first-year students in making the transition from high school to Penn by sharing their strategies for academic success and knowledge of campus resources.
- After declaring a major, students are assigned an academic advisor affiliated with the major department or program.
- All students are welcome and encouraged to speak with assistant deans for advising in the College Office. These advisors can help students explore the many options and opportunities available to College students, and are available by appointment or on a walk-in basis throughout the year.

For more information, visit the College website (https://www.college.upenn.edu/advising/).

Policies and Procedures

The College of Arts and Sciences Policies and Procedures are intended to provide guidelines for academic conduct and planning.

- Students are subject to the policies and procedures in place for the class into which they matriculated. Class-specific Policies and Procedures manuals can be found on the College site.
- Policies and procedures are subject to change throughout the year at the discretion of the University of Pennsylvania and the College of Arts and Sciences.
- Students are encouraged to consult with an academic advisor in the College Office for further information and clarification.

For class-specific manuals and current policies, visit the College website (https://www.college.upenn.edu/policies/).

Majors

**Africana Studies: African American Studies, BA**

Africana Studies is an interdisciplinary field of study devoted to the critical and systematic examination of the cultural, political, social, economic, and historical experiences of African Americans, Africans, and peoples of African descent around the world. Our course of study is designed to provide students with an integrated understanding and appreciation for a new global black studies. An undergraduate degree in Africana Studies prepares students for graduate work in the humanities, social sciences, and professional schools, as well as a range of careers in teaching, business, public service, and the arts, among others.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 32. Double majors may entail more course units.

African Language courses do not count toward the Major Requirements.

For more information: https://africana.sas.upenn.edu/department/undergraduate/ (https://africana.sas.upenn.edu/department/undergraduate/)

For information about the General Education requirements, please visit the College of Arts & Sciences Curriculum (https://www.college.upenn.edu/curriculum/) page.

## Africana Studies: African Diaspora Studies, BA

Africana Studies is an interdisciplinary field of study devoted to the critical and systematic examination of the cultural, political, social, economic, and historical experiences of African Americans, Africans, and peoples of African descent around the world. Our course of study is designed to provide students with an integrated understanding and appreciation for a new global black studies. An undergraduate degree in Africana Studies prepares students for graduate work in the humanities, social sciences, and professional schools, as well as a range of careers in teaching, business, public service, and the arts, among others.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 32. Double majors may entail more course units.

African Language courses do not count toward the Major Requirements.

### Core Requirements

| AFRC 001 | Introduction to Africana Studies | 1 |
| AFRC 190 | Introduction to Africa           | 1 |

### Category Requirements

#### Humanities Course

| AFRC 325 | Performance in the African Diaspora | 1 |
| AFRC 176 | Afro-American History 1550-1876     | 1 |
| AFRC 177 | Afro-American History 1876 to Present | 1 |

#### Social Science Course

| AFRC 006 | Race and Ethnic Relations           | 1 |
| AFRC 307 | Race, Science and Justice           | 1 |
| SOCI 006 | Race and Ethnic Relations           | 1 |
| SOCI 307 | Race, Science & Justice             | 1 |

### Methodology Course

| AFRC 120 | Social Statistics                   | 1 |
| SOCI 120 | Social Statistics                   | 1 |

### Research Course

| AFRC 322 | American Slavery and the Law (or similar) | 1 |

### Concentration

1. You may count no more than one course toward both a Major and a Sector requirement. For Exceptions, check the Policy Statement (http://www.college.upenn.edu/sectors-policy/).
2. Select a Research Course at the 300-400 level.
3. Must include one history course.

### Honors

A minimum GPA of 3.3 is required. Please consult with the Program Director for further details of requirements.

Anthropology: Archaeology, BA

Anthropology is the global social science. It is the study of the human condition everywhere; its cultural, linguistic, and biological diversity; and how it evolved and developed from the prehistoric past into the globalizing present. Anthropology is an interdisciplinary 14 credit major that intersects with programs and departments across the University. Students may major in anthropology as a whole (General Anthropology), or choose to concentrate in Biological Anthropology, Archaeology, Cultural and Linguistic Anthropology, or specialize in two thematic concentrations: Medical Anthropology and Environmental Anthropology.

Archaeology is the study of past societies through the excavation of material culture, from the Paleolithic into the early Historical periods. Students study excavation methods and techniques of analysis, and have opportunities to work with collections in the Penn Museum and its Center for the Analysis of Archaeological Materials (CAAM). Archaeology majors take introductory courses in all sub-fields of Anthropology, and complete the remainder of their coursework primarily in Archaeology.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 34. Double majors may entail more course units.

For more information: https://www.sas.upenn.edu/anthropology/

**Anthropology: Cultural and Linguistic Anthropology, BA**

Anthropology is the global social science. It is the study of the human condition everywhere; its cultural, linguistic, and biological diversity; and how it evolved and developed from the prehistoric past into the globalizing present. Anthropology is an interdisciplinary 14 credit major that intersects with programs and departments across the University. Students may major in anthropology as a whole (General Anthropology), or choose to concentrate in Biological Anthropology, Archaeology, Cultural and Linguistic Anthropology, or specialize in two thematic concentrations: Medical Anthropology and Environmental Anthropology.

Cultural and Linguistic Anthropology is the study of cultural, social, and semiotic variation in the modern world since the development of the ethnographic method in the late 19th century. Areas of study include comparisons of different cultural communities and their relationship to social and demographic factors, as well as communication and media. Cultural and Linguistic Anthropology majors take introductory courses in all sub-fields of Anthropology, and complete the remainder of their coursework primarily in Cultural and Linguistic Anthropology.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 34. Double majors may entail more course units.

Honors
Applicants must have a minimum GPA of 3.5 in the Major and write a senior thesis.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Anthropology: Environmental Anthropology, BA
Anthropology is the global social science. It is the study of the human condition everywhere; its cultural, linguistic, and biological diversity; and how it evolved and developed from the prehistoric past into the globalizing present. Anthropology is an interdisciplinary 14 credit major that intersects with programs and departments across the University. Students may major in anthropology as a whole (General Anthropology), or choose to concentrate in Biological Anthropology, Archaeology, Cultural and Linguistic Anthropology, or specialize in two thematic concentrations: Medical Anthropology and Environmental Anthropology.

Environmental Anthropology is a thematic concentration that investigates how human societies create and change geologies and climates up to a planetary scale, and the ways that anthropologists have questioned the division between cultures and nature. Students may choose to study topics from contemporary society to the impact of environmental change over long spans of time. Students have the opportunity to do original fieldwork, engage in research with the collections of the Penn Museum and the resources of the Center for the Analysis of Archaeological Materials (CAAM) and study abroad. After they fulfill the foundational course requirements in anthropology, students take three distribution electives from the four themes of Political Ecology, Science Technology, and the Environment, Material Worlds, Landscapes, Archaeology; and Biology, Environment, and Health.

For information about the General Education requirements, please visit the College of Arts & Sciences Curriculum (https://www.college.upenn.edu/curriculum/) page.

Anthropology: General Anthropology, BA
Anthropology is the global social science. It is the study of the human condition everywhere; its cultural, linguistic, and biological diversity; and how it evolved and developed from the prehistoric past into the globalizing present. Anthropology is an interdisciplinary 14 credit major that intersects with programs and departments across the University. Students may major in anthropology as a whole (General Anthropology), or choose to concentrate in Biological Anthropology, Archaeology, Cultural and Linguistic Anthropology, or specialize in two thematic concentrations: Medical Anthropology and Environmental Anthropology.

General Anthropology majors study all four anthropology sub-fields, acquiring an introduction to the full range of anthropological research. Students are required to take courses in Biological Anthropology, Archaeology, Cultural and Linguistic Anthropology, and Medical Anthropology.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 34. Double majors may entail more course units.

For more information: https://www.sas.upenn.edu/anthropology/
Anthropology: Medical Anthropology & Global Health, BA

Anthropology is the global social science. It is the study of the human condition everywhere; its cultural, linguistic, and biological diversity; and how it evolved and developed from the prehistoric past into the globalizing present. Anthropology is an interdisciplinary 14 credit major that intersects with programs and departments across the University. Students may major in anthropology as a whole (General Anthropology), or choose to concentrate in Biological Anthropology, Archaeology, Cultural and Linguistic Anthropology, or specialize in two thematic concentrations: Medical Anthropology and Environmental Anthropology.

Medical Anthropology applies anthropological methods to the study of global health, well-being, and disease. The concentration provides students with a theoretical and methodological foundation to address problems of global health inequality. Medical Anthropology majors take introductory courses in all sub-fields of Anthropology, and complete the remainder of their coursework primarily in Medical Anthropology.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 34. Double majors may entail more course units.

Architecture: Design (Intensive), BA

The Intensive Major in Architecture is for students in the Design Concentration who intend to pursue a graduate professional degree in architecture. Students in the Intensive Major enroll in their senior year in the technology courses offered in the first year of the Master of Architecture Professional Degree Program. Those accepted into the School of Design’s Master of Architecture Professional Degree Program are qualified to be admitted with advanced placement into the second
year of the graduate program, reducing the length of study from three to two years.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 36. Double majors may entail more course units.

**Application requirements:** At least Sophomore Standing. Please consult with the Undergraduate Chair for other important criteria.

**For more information:** [www.architecture.sas.upenn.edu](http://www.architecture.sas.upenn.edu)

For information about the General Education requirements, please visit the College of Arts & Sciences Curriculum (https://www.college.upenn.edu/curriculum/) page.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

### Architecture: Design, BA

The Major in Architecture is for students who intend to pursue a career in architecture or a related design discipline (e.g., landscape architecture, urban design, product design, etc.). The Major is a studio-based liberal arts program offering two concentrations. The Design Concentration includes a six-semester sequence of design studios and courses in the history and theory of art, architecture, and landscape architecture.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 36. Double majors may entail more course units.

**For more information:** [www.architecture.sas.upenn.edu](http://www.architecture.sas.upenn.edu)

For information about the General Education requirements, please visit the College of Arts & Sciences Curriculum (https://www.college.upenn.edu/curriculum/) page.

Architecture: History and Theory, BA

The Major in Architecture is for students who intend to pursue a career in architecture or a related design discipline (e.g., landscape architecture, urban design, product design, etc.). The Major is a studio-based liberal arts program offering two concentrations.

The History and Theory Concentration includes a four-semester sequence of design studios and courses in the history and theory of art, architecture, and landscape architecture followed by additional coursework and a written thesis in the history and theory of architecture.

The minimum total course units ([https://www.college.upenn.edu/credits-needed-major/] for graduation in this major is 34. Double majors may entail more course units.

Biochemistry, BA

Contemporary biological sciences are based on principles of chemistry and physics. The importance of this relationship is the basis of the Penn biochemistry major, which prepares students for advanced study in areas as diverse as biophysics, biotechnology, cell biology, genetic engineering, genomics, molecular biology, molecular genetics, nanotechnology, neurobiology, structural biology, systems biology, and biochemistry. It provides the basic science background for graduate and health professional schools and for prospective science teachers.

The minimum total course units ([https://www.college.upenn.edu/credits-needed-major/] for graduation in this major is 36. Double majors may entail more course units.

Honors

Applicants must have a minimum GPA of 3.25 in the major and the thesis must be approved by the departmental honors committee.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.
Biology: Ecology & Evolutionary Biology, BA

Ecology and evolutionary biology are among the most exciting and challenging fields in biology today. The Concentration in Ecology and Evolutionary Biology provides intensive training in both areas, along with essential background in the statistical and mathematical methods essential for understanding Ecological and Evolutionary research and field practices.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 36. Double majors may entail more course units.

With permission from the Undergraduate Chair, two course units away or LPS courses may count toward the Biology major. This limit does not apply to Study Abroad.

Honors

Applicants must have a minimum GPA of 3.25 in the Major and the Thesis must be approved by the departmental honors committee.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Biology: General Biology, BA

Studies in biology can serve as preparation for graduate study in the biological sciences, graduate training in health-related professions, teaching, or employment in a laboratory or conservation-related job. The Biology Department offers courses in many areas of biology, ranging from the workings of cells and cellular components to species interactions and ecosystem function. Penn’s curriculum keeps pace with recent developments in molecular biology and the study of evolutionary processes, including proteomics, computational genomics, molecular evolution, and epigenetics. The General Biology Major allows students to explore the wide range of topics in Biology, while also providing a strong foundation in core subject areas such as cell and molecular biology, genetics, physiology, and ecology and evolution.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 36. Double majors may entail more course units.
With permission from the Undergraduate Chair, two course units away or LPS courses may count toward the Biology major. This limit does not apply to Study Abroad.

For information about the General Education requirements, please visit the College of Arts & Sciences Curriculum page.
Biology: Mechanisms of Disease, BA

Among the most important and interesting areas of scientific investigation are the mechanisms that underlie disease. The study of this topic can be of great interest to those pursuing fundamental research, as well as to those drawn to medicine, biotechnology, law, and public health. The introductory and intermediate level course offerings of the Biology Department provide a foundation in understanding the fundamental principles underlying the mechanisms of disease. Advanced electives are selected from the fields of Microbes and Infectious Disease, Genetic Disease, Molecular Genetics and Genomics, and Biochemistry.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 36. Double majors may entail more course units.

With permission from the Undergraduate Chair, two course units away or LPS courses may count toward the Biology major. This limit does not apply to Study Abroad.

For more information: http://www.bio.upenn.edu/undergraduate/concentrations/mechanisms-disease/

For information about the General Education requirements, please visit the College of Arts & Sciences Curriculum (https://www.college.upenn.edu/curriculum/) page.

**College General Education Requirements and Free Electives** | Foundational Approaches + Sectors + Free Electives | 18

**Major Requirements**

**Introductory Biology**

- BIOL 121 Introduction to Biology - The Molecular Biology of Life 1

- BIOL 123 Introductory Molecular Biology Laboratory 0.5

**Chemistry**

- Select 4 course units of Chemistry 4

**Mathematics Requirement**

- Select 1 course unit of Calculus 1

- Select 1 course unit of Statistics 1

**Intermediate Biology**

- BIOL 204 Biochemistry 1

- BIOL 205 Cell Biology 1

- BIOL 221 Molecular Biology and Genetics 1

- Additional BIOL Elective (1 to 1.5 course units) 1.5

**Advanced Electives**

- Select 1 course unit of Microbes & Infectious Disease 1

- Select 2 course units of Genetic Disease 2

- Select 1 course unit of Molecular Genetics and Genomics 1

- Select 1 course unit of additional electives 1

**Research Requirement**

- BIOL 399 Independent Study 1

- SURB 2

Total Course Units 36

---

1 You may count no more than one course toward both a Major and a Sector requirement. For Exceptions, check the Policy Statement (http://www.college.upenn.edu/sectors-policy/).

**Honors**

Applicants must have a minimum GPA of 3.25 in the major and the thesis must be approved by the departmental honors committee.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.
Honors
Applicants must have a minimum GPA of 3.25 in the major and the thesis must be approved by the departmental honors committee.

Biology: Molecular & Cell Biology, BA

The concentration in Molecular and Cell Biology explores how the techniques of molecular biology and genetics are used to understand cell function. As with the previous Molecular Biology Concentration (https://www.bio.upenn.edu/undergraduate/concentrations/molecular-biology), this concentration allows Biology majors to focus on a molecular approach to biological problems by combining lecture and seminar coursework with training in laboratory research. The list of course electives is organized into two categories: Molecular and Cell Biology and Genetics and Genomics. Advanced Experimental Research is required for the concentration.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 36. Double majors may entail more course units.

With permission of the Undergraduate Chair, two course units away or LPS courses may count toward the Biology major. This limit does not apply to Study Abroad.

For information about the General Education requirements, please visit the College of Arts & Sciences Curriculum (https://www.college.upenn.edu/curriculum/) page.

2 Students in Track 2 need only 4 electives.

Honors
Applicants must have a minimum GPA of 3.25 in the major and have taken BIOL 399 Independent Study. Thesis must be approved by the departmental honors committee.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Biology: Neurobiology, BA

Neurobiology is one of the most exciting fields within biology today. The basis of neurological disease, molecular mechanisms of brain function, and behavior are major foci of research in medicine, biotechnology, and academia. The Neurobiology Concentration provides fundamental training in brain physiology, coupled with a background in molecular genetics that is essential for understanding the molecular mechanisms of brain function at the gene and protein levels.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 36. Double majors may entail more course units.

With permission from the Undergraduate Chair, two course units away or LPS courses may count toward the Biology major. This limit does not apply to Study Abroad.

Major Requirements

Introductory Biology

Select one of the following tracks: 2-3

Track 1:

- BIOL 121 Introduction to Biology - The Molecular Biology of Life
- BIOL 123 Introductory Molecular Biology Laboratory
- BIOL 124 Introductory Organismal Biology Lab

Track 2:

- BIOL 101 Introduction to Biology A
- BIOL 102 Introduction to Biology B

Physics Requirement

- PHYS 102 General Physics: Electromagnetism, Optics, and Modern Physics 1.5
  or PHYS 151 Principles of Physics II: Electromagnetism and Radiation

Chemistry Requirement

Select 3 course units of Chemistry courses 3

Math Requirement

Select 2 course units of Math courses 2

Required Biology Courses

- BIOL 221 Molecular Biology and Genetics 1
- BIOL 251 Molecular and Cellular Neurobiology 1

Select one of the following: 1

- BIOL 436 Molecular Physiology
- BIOL 442 Neurobiology of Learning and Memory
- BIOL 451 Neural Systems and Behavior

Chemistry Requirement

Select 3 course units of Chemistry courses 3

Math Requirement

Select 2 course units of Math courses 2

Required Biology Courses

- BIOL 221 Molecular Biology and Genetics 1
- BIOL 251 Molecular and Cellular Neurobiology 1

Select one of the following: 1

- BIOL 436 Molecular Physiology
- BIOL 442 Neurobiology of Learning and Memory
- BIOL 451 Neural Systems and Behavior

Research Requirement

- BIOL 399 Independent Study 1
- BIOL 499 Advanced Independent Study 1

Thesis

SURB

Total Course Units 35.5

Note: Though not a requirement of the major, participation in an independent research project is strongly encouraged.

For more information: https://www.physics.upenn.edu/biophysics/

Honors

Applicants must have a minimum GPA of 3.25 in the major and the thesis must be approved by the departmental honors committee.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Biophysics, BA

Bridging the biological sciences and the physical sciences, Biophysics is concerned with physical and chemical explanations of living processes, especially at the cellular and molecular levels. Detailed molecular descriptions are emerging for genetic elements and the mechanisms that control their propagation and expression. Biophysical studies include the investigation of protein structure, nucleic acid structure, enzyme mechanisms, the phenomena underlying cellular behavior, excitable phenomena in nerve, muscle and visual cells, and integrative neural phenomena.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 36. Double majors may entail more course units.

Note: Though not a requirement of the major, participation in an independent research project is strongly encouraged.

For more information: https://www.physics.upenn.edu/biophysics/

Major Requirements

Cell Biology and Biochemistry

- BIOL 204 Biochemistry 1
  or CHEM 251 Principles of Biological Chemistry
- BIOL 205 Cell Biology 1

Biophysics

- PHYS 280 Physical Models of Biological Systems 1
  or BCHE 280 Physical Models of Biological Systems

Select 1 course unit or two .5 course units of electives 1

Chemistry

- CHEM 101 General Chemistry I 1
  or CHEM 115 Honors Chemistry I
- CHEM 102 General Chemistry II 1
  or CHEM 116 Honors Chemistry II
CHEM 053 General Chemistry Laboratory I and General Chemistry Laboratory II
& CHEM 054 or CHEM 245 Experimental Organic Chemistry
CHEM 241 Principles of Organic Chemistry
CHEM 242 Principles of Organic Chemistry II
or CHEM 243 Organic Chemistry II: Principles of Org Chem with applications in Chem Biology

Select one of the following:
CHEM 221 Physical Chemistry I
& CHEM 222 and Physical Chemistry II
OR
PHYS 230 Principles of Physics III: Thermal Physics and Waves
& PHYS 240 and Principles of Physics IV: Modern Physics (without laboratory)
or PHYS 250 Principles of Physics IV: Modern Physics

1. Select one of the following:
   MATH 104 Calculus, Part I
   MATH 114 Calculus, Part II
   MATH 115 Calculus, Part II with Probability and Matrices
   MATH 116 Honors Calculus
   MATH 240 Calculus, Part III
   or MATH 260 Honors Calculus, Part II
   MATH 241 Calculus, Part IV
   Phys
   PHYS 150 Principles of Physics I: Mechanics and Wave Motion
   or PHYS 170 Honors Physics I: Mechanics and Wave Motion
   Select one of the following:
   PHYS 151 Principles of Physics II: Electromagnetism and Radiation
   or PHYS 171 Honors Physics II: Electromagnetism and Radiation
   PHYS 093 AP Credit for Principles I (PHYS 150)
   & PHYS 094 or AP Credit for Principles II (PHYS 151)
   & PHYS 364 and Laboratory Electronics
   PHYS 361 Electromagnetism I: Electricity and Potential Theory
   or PHYS 561 Electromagnetism I
   PHYS 362 Electromagnetism II: Magnetism, Maxwell’s Equations, and Electromagnetic Waves
   or PHYS 562 Electromagnetism II: Magnetism, Maxwell’s Equations, and Electromagnetic Waves

Total Course Units 36

1 You may count no more than one course toward both a Major and a Sector requirement. For Exceptions, check the Policy Statement (http://www.college.upenn.edu/sectors-policy/).

Honors
Applicant must have a minimum GPA of 3.3 in the major. Thesis required.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Chemistry, BA

The different disciplines of modern physical and biological sciences have much to offer each other through advances in technology. Aside from basic research, society continually generates fundamental scientific and technological challenges such as the need for new sources of energy, new synthetic and biotechnologies; new materials exhibiting unusual catalytic, metallic, or electrolytic properties; and developments in laser, computer, and communications technology. We consider these within the province of a unified field of molecular sciences, in which chemistry plays the central role.

Chemistry is concerned with the study of matter and the changes matter can undergo. The chemistry program provides a basic foundation for career opportunities in chemical research and teaching, in scientific communication and information transfer, and in the health professions. Students who want to prepare for advanced study in chemistry or allied fields where research experience is advantageous should complete the chemistry honors program.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 36. Double majors may entail more course units.

Those considering the Chemistry major should consult with the undergraduate chairman as soon as possible, preferably in the freshman year, especially if you have AP credit in Science and Mathematics from high school.

For more information: http://www.chem.upenn.edu/

For information about the General Education requirements, please visit the College of Arts & Sciences Curriculum (https://www.college.upenn.edu/curriculum/) page.
Cinema and Media Studies, BA

The Penn Cinema and Media Studies major and minor are traditional humanities programs involving the critical study of film and media history, theory, and aesthetics. Reflecting the hybrid nature of the field of Cinema and Media Studies, our faculty members are housed in departments across SAS and the university, and we cross-list courses with various departments and schools, including Africana Studies, Anthropology, Communications, East Asian Language and Civilizations, English, Fine Arts, German, History, History of Art, Near Eastern Languages and Civilizations, Romance Languages, Slavic Languages and Literatures, and Women's Studies. This truly interdisciplinary program will introduce students to the wide range of methodologies used to study film and media, and this intersection with other disciplines makes Cinema and Media Studies an ideal component of a double major.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 33. Double majors may entail more course units.

Classical Studies: Classical Civilizations, BA

Classical Studies encompasses the civilization of the ancient Greeks and Romans from prehistory to the Middle Ages, with emphasis on the literature, philosophy, and history of the classical Greek and Roman
periods. It includes economic, political, social, and intellectual history as well as philosophy, archaeology, religion, and myth. Students may choose a track that emphasizes the study of texts in Greek and/or Latin or opt for a program of courses that do not require any knowledge of the ancient languages. The Classical Studies Department provides extensive training at the Undergraduate level and graduate training in both Classical Studies and Ancient History. We also offer a special Post-Baccalaureate Program for students who wish to continue the study of Greek and Latin but who do not yet meet the requirements of a conventional graduate program.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 32. Double majors may entail more course units.

For more information: http://www.classics.upenn.edu/

You may count no more than one course toward both a Major and a Sector requirement. For Exceptions, check the Policy Statement (http://www.college.upenn.edu/sectors-policy/).

See COGS website for lists of approved courses.

Honors

Required: A Minimum Overall GPA of 3.0 and 3.5 in Major Related Courses

Cognitive Science: Individualized, BA

Cognitive science is the empirical study of intelligent systems, including the human mind. An interdisciplinary science, it combines results from biology, computer science, linguistics, mathematics, neuroscience, philosophy and psychology to the study of language processing, perception, action, learning, concept formation, inference and other activities of the mind, with applications for information technology and the study of artificial intelligence.
The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 36. Double majors may entail more course units.

For more information: https://web.sas.upenn.edu/cogsci/program/major/

For information about the General Education requirements, please visit the College of Arts & Sciences Curriculum (https://www.college.upenn.edu/curriculum/) page.

**Honors**

Required: A Minimum Overall GPA of 3.0 and 3.5 in Major Related Courses

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**Communication: Advocacy & Activism, BA**

General Comm Degree Description:

Communication is an interdisciplinary field that draws from the humanities, social sciences, and sciences. The undergraduate Communication program focuses on the theoretical, critical, and empirical examination of fundamental communication systems, institutions, processes, and effects. Comm majors gain deep insight into how communication shapes our individual and collective social, political, economic, and cultural lives; both historical and contemporary, local and global. Our majors learn and employ a range of theories and research methods, including quantitative approaches such as survey research, experiments, content analysis, and computational science; and qualitative approaches such as historical, textual and discourse analysis, focus groups, and ethnographic fieldwork. In doing so, they produce scholarship that is rigorous, relevant, and multi-modal.

The major in Communication is granted by the College of Arts and Sciences, but the major curriculum is designed, administered, and taught by the Annenberg School for Communication.

Majors may complete an optional concentration. Effective Fall 2020, Communication concentrations are as follows: Advocacy & Activism; Audiences & Persuasion; Culture & Society; Data & Network Science; and Politics & Policy. Alternatively, students may also choose to enroll in the Communication and Public Service (ComPS) program. Students interested in pursuing one of these concentrations or ComPS should make an appointment to meet with a member of the COMM Undergraduate Advising Team (https://www.asc.upenn.edu/academics/undergraduate-program/advising-appointments/).

See separate details on requirements for a Communication major concentration (https://www.asc.upenn.edu/academics/undergraduate-program/curriculum-and-major-requirements/concentrations/) or the ComPS program (https://www.asc.upenn.edu/academics/undergraduate-program/curriculum-and-major-requirements/communication-and-public-service/). COMM students with a concentration complete 14 courses for the major, including a total of 5 courses are required to complete a concentration (three of which are COMM courses, two of which are non-COMM elective courses). A list of approved COMM concentration courses can be found here (https://www.asc.upenn.edu/academics/undergraduate-program/curriculum-and-major-requirements/concentrations/). Non-COMM elective courses require pre-approval from a member of the COMM Undergraduate Advising Team (https://www.asc.upenn.edu/academics/undergraduate-program/advising-appointments/). Students may only complete one concentration.

**Advocacy & Activism**

Courses in this Concentration focus on the intersection of communication and social justice. Through this concentration students will explore vital communication-related questions about socio-political power, protest, and progress. Courses explore media institutions and the past, present, and evolving techniques and technologies of protest and social movements. Sample courses include: Media Activism Studies; Ethnography and Media for Social Justice; Global Digital Activism; Communication, Activism, and Social Change; and Digital Inequality.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 34. Double majors may entail more course units.
Students must meet the following minimum requirements prior to acceptance into the major:

1. Completion of at least two of the following introductory courses:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Course Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>COMM 123</td>
<td>Critical Approaches to Popular Culture</td>
<td>1</td>

<td>Introduction to Communication Behavior</td>
<td>1</td>
</tr>
<tr>
<td>COMM 130</td>
<td>Media Industries and Society</td>
<td>1</td>
</tr>
</tbody>
</table>

2. Completion of a third Communication course.

3. Cumulative GPA of 2.0 or higher in all University of Pennsylvania courses.

Major Requirements

Core Survey Courses

Select two of the following:

- COMM 123 Critical Approaches to Popular Culture
- COMM 125 Introduction to Communication Behavior
- COMM 130 Media Industries and Society

Research Methods Course

Select one:

- COMM 210 Quantitative Research Methods in Communication
- Or, Research Methods course from the approved list.

Elective Courses

Select five COMM specific courses.

Select one elective course from a department outside of COMM. The course must be related to the COMM major.

Concentration - Audiences & Persuasion

Select three COMM specific courses from the approved concentration list.

Select two elective courses from a department(s) outside of COMM related to the concentration.

Total Course Units 34

1. You may count no more than one course toward both a Major and a Sector requirement. For Exceptions, check the Policy Statement (http://www.college.upenn.edu/sectors-policy/).
2. Please visit the website (https://www.asc.upenn.edu/academics/undergraduate-program/curriculum-and-major-requirements/course-requirements/) for a listing of approved Research Method Courses.
3. 2 of the 5 COMM elective courses must be 300 to 499 level.
4. Study abroad and study away courses are normally assigned the number COMM298. Students can complete up to 3 COMM298 courses toward their COMM elective requirements.
5. Students with a 3.5 or higher cumulative GPA can elect to enroll in the yearlong 2 CU senior thesis course (COMM494 & COMM499).
6. The Non-COMM elective may be at the intermediate or advanced level. The course must be related to the student’s COMM major and be pre-approved by a member of the COMM Undergraduate Advising Team (https://www.asc.upenn.edu/academics/undergraduate-program/advising-appointments/).
7. 2 of the 3 COMM concentration courses must be 300 to 499 level. See the list here (https://www.asc.upenn.edu/academics/undergraduate-program/curriculum-and-major-requirements/concentrations/).
8. With department permission, COMM499 can be counted as one of your COMM specific courses.
Communication: Communication & Public Service, BA

General Comm Degree Description:

Communication is an interdisciplinary field that draws from the humanities, social sciences, and sciences. The undergraduate Communication program focuses on the theoretical, critical, and empirical examination of fundamental communication systems, institutions, processes, and effects. Comm majors gain deep insight into how communication shapes our individual and collective social, political, economic, and cultural lives; both historical and contemporary, local and global. Our majors learn and employ a range of theories and research methods, including quantitative approaches such as survey research, experiments, content analysis, and computational science; and qualitative approaches such as historical, textual and discourse analysis, focus groups, and ethnographic fieldwork. In doing so, they produce scholarship that is rigorous, relevant, and multi-modal.

The major in Communication is granted by the College of Arts and Sciences, but the major curriculum is designed, administered, and taught by the Annenberg School for Communication. In addition, the Comm curriculum also offers opportunities for thesis research (https://www.asc.upenn.edu/academics/undergraduate-program/curriculum-and-major-requirements/thesis-requirements/), independent study (https://www.asc.upenn.edu/academics/undergraduate-program/curriculum-and-major-requirements/independent-study/), internships (https://www.asc.upenn.edu/academics/undergraduate-program/academic-opportunities/internship-program-and-seminar/), and study abroad (https://www.asc.upenn.edu/academics/undergraduate-program/curriculum-and-major-requirements/study-abroad-and-transfering-credit/).

Communication and Public Service

A Communication major with a focus in Communication and Public Service (ComPS) offers students a special program that combines individual research opportunities with hands-on experience in the public arena. Classes, seminars, internships, field experiences, and individual research projects provide students with opportunities to meet and learn from current and former officeholders, journalists, and public servants who have been leaders in government and civil society. The program is closely matched to the undergraduate Communication major, and like the Communication major, ComPS students must complete 14 courses.

The minimum total course units (https://www.college.upenn.edu/credits-requirements/) for graduation in this major is 34. Double majors may entail more course units.

Students must meet the following minimum requirements as a condition of application to the major. Meeting these prerequisites is NOT a guarantee of admission to the major:

1. Completion of at least two of the following introductory courses:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Course Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>COMM 123</td>
<td>Critical Approaches to Popular Culture</td>
<td>1</td>
</tr>
<tr>
<td>COMM 125</td>
<td>Introduction to Communication Behavior</td>
<td>1</td>
</tr>
<tr>
<td>COMM 130</td>
<td>Media Industries and Society</td>
<td>1</td>
</tr>
</tbody>
</table>

2. Completion of a third Communication course. Students may submit the application for the major after enrollment in the third course.

3. Cumulative GPA at time of application should be at least 2.0.

For more information: https://www.asc.upenn.edu/communication-and-public-service/

For information about the General Education requirements, please visit the College of Arts & Sciences Curriculum (https://www.college.upenn.edu/curriculum/) page.

For information about the General Education requirements, please visit the College of Arts & Sciences Curriculum (https://www.college.upenn.edu/curriculum/) page.
The major in Communication is granted by the College of Arts and Sciences, but the major curriculum is designed, administered, and taught by the Annenberg School for Communication.

Majors may complete an optional concentration. Effective Fall 2020, Communication concentrations are as follows: Advocacy & Activism; Audiences & Persuasion; Culture & Society; Data & Network Science; and Politics & Policy. Alternatively, students may also choose to enroll in the Communication and Public Service (ComPS) program. Students interested in pursuing one of these concentrations or ComPS should make an appointment to meet with a member of the COMM Undergraduate Advising Team (https://www.asc.upenn.edu/academics/undergraduate-program/advising-appointments/).

See separate details on requirements for a Communication major concentration (https://www.asc.upenn.edu/academics/undergraduate-program/curriculum-and-major-requirements/concentrations/) or the ComPS program (https://www.asc.upenn.edu/academics/undergraduate-program/curriculum-and-major-requirements/communication-and-public-service/).

COMM students with a concentration complete 14 courses for the major, including a total of 5 courses are required to complete a concentration (three of which are COMM courses, two of which are non-COMM elective courses). A list of approved COMM concentration courses can be found here (https://www.asc.upenn.edu/academics/undergraduate-program/curriculum-and-major-requirements/concentrations/). Non-COMM elective courses require pre-approval from a member of the COMM Undergraduate Advising Team (https://www.asc.upenn.edu/academics/undergraduate-program/advising-appointments/). Students may only complete one concentration.

Culture & Society

Courses in this Concentration explore the complex relationships between communication and cultural practices. Through this concentration students will gain an understanding of the ways in which communication is central to the construction, maintenance, and transmission of culture, as well as to cultural resistance and change. Sample courses include: Media, Culture and Society in Contemporary China; Ritual Communication; History and Theory of Freedom of Expression; Critical Perspectives in Journalism; and Media Criticism.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 34. Double majors may entail more course units.

Students must meet the following minimum requirements prior to acceptance into the major.
1. Completion of at least two of the following introductory courses:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Course Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>COMM 123</td>
<td>Critical Approaches to Popular Culture</td>
<td>1</td>
</tr>
<tr>
<td>COMM 125</td>
<td>Introduction to Communication Behavior</td>
<td>1</td>
</tr>
<tr>
<td>COMM 130</td>
<td>Media Industries and Society</td>
<td>1</td>
</tr>
</tbody>
</table>

2. Completion of a third Communication course. Students may submit the application for the major after enrollment in the third course.

3. Cumulative GPA of 2.0 or higher in all University of Pennsylvania courses.

For more information: [https://www.asc.upenn.edu/academics/undergraduate-program](https://www.asc.upenn.edu/academics/undergraduate-program)

---

1. You may count no more than one course toward both a Major and a Sector requirement. For Exceptions, check the Policy Statement ([http://www.college.upenn.edu/sectors-policy/](http://www.college.upenn.edu/sectors-policy/)).

2. Please visit the website ([https://www.asc.upenn.edu/academics/undergraduate-program/curriculum-and-major-requirements/course-requirements/](https://www.asc.upenn.edu/academics/undergraduate-program/curriculum-and-major-requirements/course-requirements/)) for a listing of approved Research Method Courses.

3. 2 of the 5 COMM elective courses must be 300 to 499 level. See the list here ([https://www.asc.upenn.edu/academics/undergraduate-program/curriculum-and-major-requirements/concentrations/](https://www.asc.upenn.edu/academics/undergraduate-program/curriculum-and-major-requirements/concentrations/)).

4. Study abroad and study away courses are normally assigned the number COMM298. Students can complete up to 3 COMM298 courses toward their COMM elective requirements.

5. Students with a 3.5 or higher cumulative GPA can elect to enroll in the yearlong 2 CU senior thesis course (COMM494 & COMM499.)

6. The Non-COMM elective may be at the intermediate or advanced level. The course must be related to the student’s COMM major and be pre-approved by a member of the COMM Undergraduate Advising Team ([https://www.asc.upenn.edu/academics/undergraduate-program/advising-appointments/](https://www.asc.upenn.edu/academics/undergraduate-program/advising-appointments/)).

7. With department permission, COMM499 can be counted as one of your COMM specific courses.

8. 1 Non-COMM elective can be at the introductory level. Courses must be related to the student's concentration and preapproved by a member of the COMM Undergraduate Advising Team ([https://www.asc.upenn.edu/academics/undergraduate-program/advising-appointments/](https://www.asc.upenn.edu/academics/undergraduate-program/advising-appointments/)).

### Honors

A thesis project is completed over two semesters during the senior year. A credit is earned in both semesters. Students who achieve a cumulative grade point average of 3.5 or higher and earn an A- or higher on their project will graduate with honors.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

### Communication: Data & Network Science, BA

**General Comm Degree Description:**

Communication is an interdisciplinary field that draws from the humanities, social sciences, and sciences. The undergraduate Communication program focuses on the theoretical, critical, and empirical examination of fundamental communication systems, institutions, processes, and effects. Comm majors gain deep insight into how communication shapes our individual and collective social, political, economic, and cultural lives; both historical and contemporary, local and global. Our majors learn and employ a range of theories and research methods, including quantitative approaches such as survey research, experiments, content analysis, and computational science; and qualitative approaches such as historical, textual and discourse analysis, focus groups, and ethnographic fieldwork. In doing so, they produce scholarship that is rigorous, relevant, and multi-modal.

The major in Communication is granted by the College of Arts and Sciences, but the major curriculum is designed, administered, and taught by the Annenberg School for Communication.

Majors may complete an optional concentration. Effective Fall 2020, Communication concentrations are as follows: Advocacy & Activism; Audiences & Persuasion; Culture & Society; Data & Network Science; and Politics & Policy. Alternatively, students may also choose to enroll in the Communication and Public Service (ComPS) program. Students interested in pursuing one of these concentrations or ComPS should...
should make an appointment to meet with a member of the COMM Undergraduate Advising Team (https://www.asc.upenn.edu/academics/undergraduate-program/advising-appointments/).

See separate details on requirements for a Communication major concentration (https://www.asc.upenn.edu/academics/undergraduate-program/curriculum-and-major-requirements/concentrations/) or the ComPS program (https://www.asc.upenn.edu/academics/undergraduate-program/curriculum-and-major-requirements/communication-and-public-service/).

COMM students with a concentration complete 14 courses for the major, including a total of 5 courses are required to complete a concentration (three of which are COMM courses, two of which are non-COMM elective courses). A list of approved COMM concentration courses can be found here (https://www.asc.upenn.edu/academics/undergraduate-program/curriculum-and-major-requirements/concentrations/). Non-COMM elective courses require pre-approval from a member of the COMM Undergraduate Advising Team (https://www.asc.upenn.edu/academics/undergraduate-program/advising-appointments/). Students may only complete one concentration.

Data & Network Science

Courses in this Concentration focus on the role and analysis of data, complex systems, and networks in digital communication. Through this concentration students will gain an understanding of the role of digital media and social networks in disseminating information and influencing the communications, attitudes and behaviors of social groups. Students have the opportunity to learn computational social science techniques to support research in this area, including social network analysis and methods from data science (information visualization, social media collection and quantitative data and textual analysis) using various tools and programming languages (Python and R). Sample courses include: Computational Text Analysis for Communication Research; Communication in the Networked Age; Understanding Social Networks; The Impact of the Internet, Social Media, and Information Technology on Democracy; and Social Networks and the Spread of Behavior.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 34. Double majors may entail more course units.

Students must meet the following minimum requirements prior to acceptance into the major.

1. Completion of at least two of the following introductory courses:

2. Please visit the website (https://www.asc.upenn.edu/academics/undergraduate-program/curriculum-and-major-requirements/course-requirements/) for a listing of the approved Method Courses.

3. 4 of the 8 COMM elective courses must be 300 to a 499 level.

4. Study abroad and study away courses are normally assigned the number COMM298. Students can complete up to 3 COMM298 courses toward their COMM elective requirements.

5. Students with a 3.5 or higher cumulative GPA can elect to enroll in the yearlong 2 CU senior thesis course (COMM494 & COMM499.)

6. Only 1 non-COMM elective may be an introductory level. All Non-COMM electives must be related to the student’s COMM major and be pre-approved by a member of the COMM Undergraduate Advising Team (https://www.asc.upenn.edu/academics/undergraduate-program/advising-appointments/).

Honors

A thesis project is completed over two semesters during the senior year. A credit is earned in both semesters. Students who achieve a cumulative grade point average of 3.5 or higher and earn an A- or higher on their project will graduate with honors.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Communication: Politics & Policy, BA

General Comm Degree Description:

Communication is an interdisciplinary field that draws from the humanities, social sciences, and sciences. The undergraduate Communication program focuses on the theoretical, critical, and empirical examination of fundamental communication systems, institutions, processes, and effects. Comm majors gain deep insight into how communication shapes our individual and collective social, political, economic, and cultural lives; both historical and contemporary, local and global. Our majors learn and employ a range of theories and research methods, including quantitative approaches such as survey research, experiments, content analysis, and computational science; and qualitative approaches such as historical, textual and discourse analysis, focus groups, and ethnographic fieldwork. In doing so, they produce scholarship that is rigorous, relevant, and multi-modal.

The major in Communication is granted by the College of Arts and Sciences, but the major curriculum is designed, administered, and taught by the Annenberg School for Communication.

Majors may complete an optional concentration. Effective Fall 2020, Communication concentrations are as follows: Advocacy & Activism; Audiences & Persuasion; Culture & Society; Data & Network Science; and Politics & Policy. Alternatively, students may also choose to enroll in the Communication and Public Service (ComPS) program. Students interested in pursuing one of these concentrations or ComPS should make an appointment to meet with a member of the COMM Undergraduate Advising Team (https://www.asc.upenn.edu/academics/undergraduate-program/advising-appointments/).

See separate details on requirements for a Communication major concentration (https://www.asc.upenn.edu/academics/undergraduate-program/curriculum-and-major-requirements/concentrations/) or the ComPS program (https://www.asc.upenn.edu/academics/undergraduate-program/curriculum-and-major-requirements/communication-and-public-service/).

COMM students with a concentration complete 14 courses for the major, including a total of 5 courses are required to complete a concentration (three of which are COMM courses, two of which are non-COMM elective courses). A list of approved COMM concentration courses can be found here (https://www.asc.upenn.edu/academics/undergraduate-program/curriculum-and-major-requirements/concentrations/). Non-COMM elective courses require pre-approval from a member of the COMM Undergraduate Advising Team (https://www.asc.upenn.edu/academics/undergraduate-program/advising-appointments/). Students may only complete one concentration.

Politics & Policy

Courses in this Concentration explore communication among and between political elites and other policy influencers, the media, and citizens. Through this concentration students will gain an understanding of the attitudes, opinions, information-processing and behavior of citizens, political elites, political institutions and political systems. Sample courses include: Political Communication; Political Economy of Media; Communication and the Presidency; the Hidden World of Privacy Policies; and Public Opinion and the Voice of the People.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 34. Double majors may entail more course units.

Students must meet the following minimum requirements prior to acceptance into the major.
1. Completion of at least two of the following introductory courses:

<table>
<thead>
<tr>
<th>Code</th>

---

**Comparative Literature: (Trans)national Literatures, BA**

The undergraduate program in Comparative Literature welcomes students interested in the study of literature from theoretical, interdisciplinary, cross-cultural, and global perspectives. The core courses train students to appreciate the variety of meanings that texts acquire in different institutional and philosophical contexts and different socio-political frameworks. There are three concentrations within the major: National and Transnational Literatures (four courses in each of two languages), Theory, and Globalization.

Comparative Literature is a flexible program, allowing students to take courses in a variety of departments in the College. Students with interests in more than one national literature and in fields such as philosophy and political theory, art and aesthetics, and film and music will find the requirements congenial. The program provides students with a cosmopolitan intellectual background that is increasingly in demand today.

The minimum total course units [https://www.college.upenn.edu/credits-needed-major/](https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 34. Double majors may entail more course units.

Students with interests in more than one national literature and in fields such as philosophy and political theory, art and aesthetics, and film and music will find the requirements congenial. The program provides students with a cosmopolitan intellectual background that is increasingly in demand today.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 34. Double majors may entail more course units.

For more information: http://ccat.sas.upenn.edu/Complit/undergraduate.htm

For information about the General Education requirements, please visit the College of Arts & Sciences Curriculum (https://www.college.upenn.edu/curriculum/) page.

Code  Title  Course Units

Foundational Approaches + Sectors 1 + Free Electives  20

Major Requirements

Core Requirements

Core Course 1:

COML 100  Introduction to Literary Study  1
or COML 125  Narrative Across Cultures  1
or COML 191  World Literature  1

Core Course 2:

COML 094  Introduction to Literary Theory  1
or COML 396  History of Literary Criticism  1

Core Course 3: Capstone Seminar or Thesis  1

Select one of the following:

COML 399  Independent Study  1
COML 498  Honors Thesis  1
& COML 499  and Independent Study  1

Advanced Elective

Comparative Literature Electives 2
Select 3 COML Electives  3

Concentration Requirements

Select 8 course units in Literature or Film and Theory 3,4  8
Select 1 Post-colonial Theory course  1
Select 3 Globalization & Culture courses  1
Select 4 Advanced Literature or Film courses  5

Total Course Units  34

1  You may count no more than one course toward both a Major and a Sector requirement. For Exceptions, check the Policy Statement (http://www.college.upenn.edu/sectors-policy/).

2  Must be COML courses.

3  All Concentration courses to be chosen in consultation with the Undergraduate Chair.
4 4 course units must be courses that offer the student a theoretical or historical perspective on Globalization & Culture, and 4 course units must be Advanced Literature or Film courses.

5 4 course units must be Advanced Literature or Film courses, of which at least two must be taught in a language other than English, and one must be in non-western or in post-colonial literature.

**Honors**

Applicants must have an overall GPA of 3.4 and a GPA of 3.6 in major related courses.

</tr>
</tbody>
</table>

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**Comparative Literature: Theory, BA**

The undergraduate program in Comparative Literature welcomes students interested in the study of literature from theoretical, interdisciplinary, cross-cultural, and global perspectives. The core courses train students to appreciate the variety of meanings that texts acquire in different institutional and philosophical contexts and different socio-political frameworks. There are three concentrations within the major: National and Transnational Literatures (four courses in each of two languages), Theory, and Globalization.

Comparative Literature is a flexible program, allowing students to take courses in a variety of departments in the College. Students with interests in more than one national literature and in fields such as philosophy and political theory, art and aesthetics, and film and music will find the requirements congenial. The program provides students with a cosmopolitan intellectual background that is increasingly in demand today.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 34. Double majors may entail more course units.

For more information: http://ccat.sas.upenn.edu/Complit/undergraduate.htm

**Criminology, BA**

The major in Criminology enables students to acquire a theoretical and methodological framework for generating and assessing knowledge about crime and social control. The program draws upon disciplines from statistics to neuroscience to develop a liberal arts approach to the subject of crime.
The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 34. Double majors may entail more course units.

### Design, BA

The Fine Arts department is committed to cultivating global thought leaders in the fields of Art and Design. The Major in Design addresses a need for innovative pedagogy exploring the expansive nature of contemporary design and its relationship to the humanities, the sciences, and emerging technologies. The curriculum emphasizes an integrated understanding of design that brings together different disciplinary approaches that respond to complex social, cultural, and environmental challenges. Students will acquire contemporary representation, prototyping, and fabrication skills and engage with theoretical frameworks yielding advanced research and knowledge production.

Students begin the Design Major with two required core studios that introduce fundamental design methodologies, computational literacy, technological fabrication, and the study of contemporary digital culture. Majors then select from a series of theoretical and historical seminars that contextualize and expand their understanding of design practices including data-driven, speculative, and inquiry-based design. Majors also have the freedom to select from an expansive list of art and design electives that further their interdisciplinary expertise. The Design Major culminates in a year-long design project, researched design brief, public exhibition, and panel review with leading experts in the field.

A goal for students entering the major is to develop the ability to critically and resourcefully synthesize the expansive potentialities of design. These skill sets are gained through exposure to diverse approaches to design methodologies, histories, and theories. Learning outcomes are evident in the individual and collaborative conceptual, technological, and speculative projects that emerge from the core and integrative studios. Design electives and seminars enrich, complicate, and expand disciplinary modalities, while engaging in deeper explorations of positionality within a global climate. Ultimately, the Design Major seeks to guide students through a process of learning to independently question, interpret, and analyze integrative design.

For information about the General Education requirements, please visit the College of Arts & Sciences Curriculum (https://www.college.upenn.edu/curriculum/) page.

### Major Requirements

#### Core Studio Requirements ²

Students are encouraged to take these classes their freshman and sophomore years.

- DSGN 264 Art, Design and Digital Culture
- DSGN 306 Design 21

#### Integrative Design Studio Requirements

Select 4 courses:

- DSGN 266 Graphic Design
- DSGN 268 Biological Design
- DSGN 317 Cultures of Making
- DSGN 328 Functions for Form and Material
- DSGN 337 Inf Design & Visualization
- DSGN 378 Interfacing Cultures

### Art History and Theory Requirements

Select one of the following:

- ARTH 101 World Art and Civilization Before 1400
- ARTH 102 World Art: 1400 to Now
- ARTH 106 Architect and History
- ARTH 300 Undergraduate Methods Seminar

Select three of the following:

- ARCH 411 Theory I: Geometry in Architecture
Earth Science: Geology, BA

The Earth Science major provides graduates with a broad understanding of the physical and chemical processes that operate in and on the planet and how direct and indirect methods are used to examine and understand the structure, composition, and dynamics of the Earth. Graduates appreciate how humans and ecosystems interact with the dynamic Earth, and they have an in-depth knowledge of the atmosphere and climate change, the rock cycle, natural hazards, and the hydrologic and biogeochemical cycles. Additionally, they understand how to measure and use the structure, sequence, and properties of rocks, sediments, and fossils to reconstruct events in Earth’s history and identify potential natural hazards or earth resources.

Students in the Geology concentration learn the various processes at work within the planet and on its surface. Students gain hands-on experience with fossils, rocks, minerals, maps, aerial photographs, and satellite images in the laboratory and on field trips.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 35. Double majors may entail more course units.

### Earth Science: Paleobiology, BA

The Earth Science major provides graduates with a broad understanding of the physical and chemical processes that operate in and on the planet and how direct and indirect methods are used to examine and understand the structure, composition, and dynamics of the Earth. Graduates appreciate how humans and ecosystems interact with the dynamic Earth, and they have an in-depth knowledge of the atmosphere and climate change, the rock cycle, natural hazards, and the hydrologic and biogeochemical cycles. Additionally, they understand how to measure and use the structure, sequence, and properties of rocks, sediments, and fossils to reconstruct events in Earth’s history and identify potential natural hazards or earth resources.

Students in the Paleobiology concentration learn how the biological and physical conditions in deep time shaped the current conditions on Earth. Paleobiologists use image analysis and evolutionary theory to deduce the patterns of change in the biosphere.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 36. Double majors may entail more course units.

**For more information:** http://www.sas.upenn.edu/earth/earth-science/paleobiology-concentration (http://www.sas.upenn.edu/earth/earth-science/paleobiology-concentration/)

### East Asian Languages and Civilizations: Dual Language, BA

The undergraduate program in EALC offers language training and courses in the culture, history, literature, and archaeology of East Asia. Students will focus on two of our three language offerings to study Chinese, Japanese or Korean within the major and are welcome to take content courses about multiple countries/areas.

For information about the General Education requirements, please visit the College of Arts & Sciences Curriculum (https://www.college.upenn.edu/curriculum/) page.

Language
Select 6 CU of Chinese, Japanese or Korean chosen from:
CHIN 011 and above
KORN 011 and above
JPAN 011 and above
Select 6 CU in a language not already used including:
CHIN 011 or above, JPAN 011 or above, or KORN 011 or above

Content Courses
Select 2 CU ‘Gateway’ from the following (that correspond with languages taken above):
EALC 001 Introduction to Chinese Civilization
EALC 002 Introduction to Japanese Civilization
EALC 003 Introduction to Korean Civilization
Select 2 CU ‘Seminars’ from:
EALC 200-level and above
Select 2 CU ‘Electives’:
Any EALC course and/or 1 additional CHIN, JPAN, KORN course to continue beyond those language CUs used above
At least 1 CU must be from an area not already focused on (if a student takes Chinese, then the breadth must be either Japanese or Korean and could be an overlap with Seminars)

Total Course Units 36

Honors
Required 3.0 GPA in major courses and the following:

East Asian Languages and Civilizations: East Asian Area Studies, BA

East Asian Studies focuses on East Asia as a region of the world and human experience, and provides an integrated curriculum drawing on the approaches of the social sciences and the humanities. The program requires relevant courses in areas including history, international relations, political science, sociology, legal studies, and East Asian arts and cultures, while maintaining high standards in language study.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 32. Double majors may entail more course units.

3. One of the above may be a general East Asia course.
4. Can be fulfilled by other requirements.
5. To be chosen in consultation with the Major Advisor.

Honors
Required: A minimum overall GPA of 3.0 and 3.5 in major related courses.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.
East Asian Languages and Civilizations: General East Asian Languages and Civilizations, BA

The undergraduate program in EALC offers language training and courses in the culture, history, literature, and archaeology of East Asia. Students will focus on either Chinese, Japanese or Korean language study within the major but are welcome to take content courses about multiple countries/areas.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 32. Double majors may entail more course units.

For more information: http://www.sas.upenn.edu/ealc/

For information about the General Education requirements, please visit the College of Arts & Sciences Curriculum (https://www.college.upenn.edu/curriculum/) page.

Total Course Units 3

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

### Economics, BA

Economics is a social science and, as such, an important component of the liberal arts curriculum. At the core of economics are theories of how individuals, firms, and other organizations make choices and interact, taking into account constraints on their behaviors. Among the topics studied in economics are the determination of prices and quantities in various types of markets (from perfectly competitive commodity markets to highly regulated utility markets and internet auctions); the effects of taxes, subsidies, and regulations; the determination of aggregate economic activity (e.g., GDP, unemployment); inflation, monetary policy, and financial intermediation; economic growth and income distribution; and international trade and international finance (e.g., exchange rates).

The Economics Major provides training in economic principles and provides a useful background for students preparing for a career in public policy, business, or finance.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 32. Double majors may entail more course units.

For more information: http://economics.sas.upenn.edu/undergraduate-program/economics-major (http://economics.sas.upenn.edu/undergraduate-program/economics-major/)

Total Course Units: 32-34

* LPS academic year courses ECON 001 Introduction to Micro Economics, ECON 002 Introductory Economics: Macro, ECON 101 Intermediate Microeconomics, ECON 102 Intermediate Macroeconomics, or ECON 103 Statistics for Economists ONLY may be used for the Major.

1 You may count no more than one course toward both a Major and a Sector requirement. For Exceptions, check the Policy Statement (http://www.college.upenn.edu/sectors-policy/).

2 ECON 001 Introduction to Micro Economics and ECON 002 Introductory Economics: Macro are prerequisites for all economics courses. ECON 001 Introduction to Micro Economics is the prerequisite for ECON 002 Introductory Economics: Macro.

3 ECON Course Required if ECON 010 Introduction to Economics is taken.

4 ECON 101 Intermediate Microeconomics is a prerequisite for all 200-level economics courses & ECON 102 Intermediate Macroeconomics for many.

5 ECON Course required if STAT 430 Probability or STAT 430 Probability/STAT 431 Statistical Inference are taken.

**Honors**

Applicants must have a minimum GPA of 3.5 in Economics.

### English: 18th/19th Centuries, BA

Students deciding to pursue English at Penn study language, literature, literary history and theories of literary production in a thirteen-course major of flexible design. While completing the language and literature requirement and the five required courses in the literary historical 'core,' majors also pursue their own special literary interests in six-course concentrations of their own choosing. English offers more than twenty distinct concentrations, including several options for creative writers.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 33. Double majors may entail more course units.

**For more information:** [http://www.english.upenn.edu/Undergrad/](http://www.english.upenn.edu/Undergrad/)

For information about the General Education requirements, please visit the College of Arts & Sciences Curriculum (https://www.college.upenn.edu/credits-needed-major/). page.

While completing the language and literature requirement and the five required courses in the literary historical 'core,' majors also pursue their own special literary interests in six-course concentrations of their own choosing. English offers more than twenty distinct concentrations, including several options for creative writers.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 33. Double majors may entail more course units.

For more information: http://www.english.upenn.edu/Undergrad/

College General Education Requirements and Free Electives
Foundational Approaches + Sectors\(^1\) + Free Electives | 20

Major Requirements
Core Requirement
Select one course in each sector from ENGL 015-ENGL 099; 6
Sector 1 - Theory & Poetics
Sector 2 - Difference and Diaspora
Sector 3 - Medieval/Renaissance
Sector 4 - Literary of the Long 18th C (ca. 1640-1832)
Sector 5 - 19th Century Literature
Sector 6 - 20th Century Literature

The Junior Seminar
ENGL 200 Junior Research Seminar (Seminar 1) (may be double-counted in the core) 1

Seminars
Select one seminar in each area from ENGL 110-ENGL 599; 4
Sem 1: Literature Before 1700
Sem 2: Literature Before 1900
Sem 3: ENGL (may be double-counted in the core)
Sem 4: ENGL or Related (may be double-counted in the core)

Electives
Select 2-5 course units from ENGL 015-ENGL 599; 3 2-5

Concentration Requirements
Select 4 course units of Individualized Concentration courses with 2 course units 200-level seminar or higher 4

Total Course Units 33

1 You may count no more than one course toward both a Major and a Sector requirement. For Exceptions, check the Policy Statement (http://www.college.upenn.edu/sectors-policy/).
2 For up to three sectors, a seminar may be double-counted in the core.
3 Take additional 3 course units if Seminars 1, 2 and 3 are double-counted in core.
4 Concentration may be comprised from the 13 course units of the major, or other courses.

Honors
Applicants must have a 3.6 GPA in the Major. Thesis required.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.
## English: Literary Theory & Cultural Studies, BA

Students deciding to pursue English at Penn study language, literature, literary history and theories of literary production in a thirteen-course major of flexible design. While completing the language and literature requirement and the five required courses in the literary historical 'core,' majors also pursue their own special literary interests in six-course concentrations of their own choosing. English offers more than twenty distinct concentrations, including several options for creative writers.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 33. Double majors may entail more course units.

Environmental Studies: Environmental History and Regional Studies, BA

The Environmental Studies major provides graduates with the necessary skills to contribute to society and effectively work on challenging problems that face humanity. Students acquire knowledge in environmental economics, environmental health, sustainability, renewable resources, and environmental management. In addition, they have an in-depth understanding of the human-environment interconnection, knowledge of international and domestic environmental issues, and are well-versed in environmental policies and how these policies are set and changed.

Students in the Environmental History and Regional Studies concentration learn a temporal and spatial perspective to the study of the Environment.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 35. Double majors may entail more course units.

This concentration is for students with a background in the Arts or Social Sciences.

For more information: http://www.sas.upenn.edu/earth/environmental-studies/environmental-history-regional-studies-concentration

For information about the General Education requirements, please visit the College of Arts & Sciences Curriculum (https://www.college.upenn.edu/curriculum/) page.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Environmental Studies: Environmental Policy and Application, BA

The Environmental Studies major provides graduates with the necessary skills to contribute to society and effectively work on challenging problems that face humanity. Students acquire knowledge in environmental economics, environmental health, sustainability, renewable resources, and environmental management. In addition, they have an in-depth understanding of the human-environment interconnection, knowledge of international and domestic environmental issues, and are well-versed in environmental policies and how these policies are set and changed.

Students in the Environmental Policy and Application concentration acquire a background in the social and management aspects of environmental problems.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 35. Double majors may entail more course units.

This concentration is for students who have a second major in a Natural Science.

For more information: http://www.sas.upenn.edu/earth/environmental-studies/environmental-policy-application-concentration
Environmental Studies: General Environmental Studies, BA

The Environmental Studies major provides graduates with the necessary skills to contribute to society and effectively work on challenging problems that face humanity. Students acquire knowledge in environmental economics, environmental health, sustainability, renewable resources, and environmental management. In addition, they have an in-depth understanding of the human-environment interconnection, knowledge of international and domestic environmental issues, and are well-versed in environmental policies and how these policies are set and changed.

This is an individualized, specialized concentration designed for students who want to concentrate in an area not represented by the other concentrations. Formal proposals for this concentration must be developed and submitted for review and approved by both the EES program director and undergraduate chair before admittance into this concentration.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 35. Double majors may entail more course units.

Environmental Studies: Sustainability and Environmental Management, BA

The Environmental Studies major provides graduates with the necessary skills to contribute to society and effectively work on challenging problems that face humanity. Students acquire knowledge in
environmental economics, environmental health, sustainability, renewable resources, and environmental management. In addition, they have an in-depth understanding of the human-environment interconnection, knowledge of international and domestic environmental issues, and are well-versed in environmental policies and how these policies are set and changed.

The Sustainability and Environmental Management concentration is designed to help students understand the nature of environmental constraints which face organizations and individuals in the modern world, and to understand how these constraints can be effectively considered as part of the decision-making process in for-profit and non-profit organizations.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 35. Double majors may entail more course units.

This concentration is for students who have a background in either the Natural or the Social Sciences.

**Fine Arts, BA**

The Undergraduate Fine Arts Program combines studio practices, seminar courses, and interactions with visiting artists and professionals to provide an open intellectual framework in order to foster critical awareness and independent methods of artistic research and learning. The Fine Arts Department offers a diverse range of studio courses in the areas of animation and 3D modeling, ceramics, design, drawing and painting, photography, printmaking, sculpture, and video. The dynamic curriculum also provides students with the opportunity to thoroughly examine contemporary art, creative research, interactive design, and public art through seminar-based instruction.

A goal of the Undergraduate Fine Arts program is to facilitate an environment where the potentialities of art are considered in relation to the real life conditions of our students. Encouraged to test themselves against the rigors of divergent artistic approaches and their histories, our students develop a more complex set of skills to creatively and critically negotiate the turbulent shifts taking place globally in terms of human experiences.

The Fine Arts major is available for students in the College of Arts and Sciences and the School of Engineering, and the minor is available for undergraduate students across the university. The Fine Arts program works in conjunction with three interdisciplinary degree programs in Cinema Studies, Digital Media Design, and Visual Studies.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 36. Double majors may entail more course units.

For more information: http://www.design.upenn.edu/fine-arts/undergraduate/program (http://www.design.upenn.edu/fine-arts/undergraduate/program/)

For information about the General Education requirements, please visit the College of Arts & Sciences Curriculum (https://www.college.upenn.edu/curriculum/) page.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Gender, Sexuality, & Women's Studies: Feminist Studies, BA

A concentration with a broad range, Feminist Studies covers topics ranging from politics to policy, to research methods and methodologies. For example, students with a concentration in Feminist Studies may be interested in focusing on how feminist policy has shaped political life in the United States, researching the ways that feminist advocacy has shaped political movements in Latin America, or examining how feminist approaches to research methods have transformed data collection in particular fields.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 33. Double majors may entail more course units.

Honors
Students with an overall GPA of 3.4 and 3.6 or better in the major are eligible for honors.

Concentrations
Students may select one of five concentrations (https://www.sas.upenn.edu/gsws/content/concentrations/):

- Feminist Studies
- Global Gender and Sexuality Studies
- Health and Disability
- LGBTQ Studies
- Self-designed

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Gender, Sexuality, & Women's Studies: General, BA

The Gender, Sexuality, and Women's Studies Program (GSWS) is an interdisciplinary program that provides exciting intellectual opportunities to explore the role of gender in human affairs. The program offers over 50 courses each year, many cross-listed with other departments, as well as a major, a minor, and a graduate certificate.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 33. Double majors may entail more course units.

For more information: https://gsws.sas.upenn.edu/

For information about the General Education requirements, please visit the College of Arts & Sciences Curriculum (https://www.college.upenn.edu/curriculum/) page.

1 You may count no more than one course toward both a Major and a Sector requirement. For Exceptions, check the Policy Statement (http://www.college.upenn.edu/sectors-policy/).

### Honors

Students with an overall GPA of 3.4 and 3.6 or better in the major are eligible for honors.

### Concentrations

Students may select one of five concentrations (https://www.sas.upenn.edu/gsws/content/concentrations/):

- Feminist Studies
- Global Gender and Sexuality Studies
- Health and Disability
- LGBTQ Studies
- Self-designed

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

### Gender, Sexuality, & Women's Studies: Health and Disability Studies, BA

This concentration will be of interest to students who want to explore the intersections between history and health and the ways that disability and health are both shaped by, and experienced in, society. Courses are typically cross-listed with History and Sociology of Science, Sociology, Psychology, and English, but courses from other Departments can be approved on a case-by-case basis.

- Feminist Studies
- Global Gender and Sexuality Studies
- Health and Disability
- LGBTQ Studies
- Self-designed

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.
Gender, Sexuality, & Women's Studies: LGBTQ Studies, BA

LGBTQ Studies is a growing field that includes courses offered in Departments and Schools across the University. Students may even wish to do a sub-concentration within this field, for example in the areas of queer cinema studies, queer literature, or queer design. There are also a growing number of courses offered which aim to cultivate LGBTQ literacy in the education and medical fields. The Program is also in the early stages of developing more courses in the field of Trans Studies, and courses taken in this field would count toward this concentration.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 33. Double majors may entail more course units.

Gender, Sexuality, & Women's Studies: Self Designed, BA

This concentration could be met by taking 5 courses within a single field or department, or a combination of departments—such as Politics and Philosophy, or Sociology & Anthropology. Other concentrations might include Media and Communications, History and English, or thematic concentrations that could combine courses in a wide variety of fields such as Performance Studies, Migration Studies, Labor Studies, and so forth. Any self-designed concentration should be determined in consultation with the Associate Director of the program and subsequently approved by the Program's Curriculum Committee. Please note that the title of the self-designed concentration will not appear on transcripts.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 33. Double majors may entail more course units.

German, BA
The major and minor programs in the Department of Germanic Languages and Literatures provide deep understandings of language and cultures. Building from basic language competency to synthesizing significant literary works, historical context and current media and politics, the program offers a comprehensive education through engaged, active learning in a combination of core courses with a wide range of electives. Your learning experiences can be broadened and applied in study abroad as well as internship programs.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 32. Double majors may entail more course units.

Health and Societies: Health Care Markets & Finance, BA

The Health and Societies (HSOC) major examines health and medicine in social context, equipping students with the critical faculties and multidisciplinary skills that will prepare them for careers in public health, health services, and a variety of other arenas. The program is built on the foundation of three core disciplines: anthropology, history, and sociology. Methods and courses from other disciplines and fields—including epidemiology, political science, business/economics, law, environmental studies, and bioethics—supplement the core disciplines and provide majors with the variety of skills necessary to grasp the forces that have shaped our contemporary health landscapes. The Health and Societies graduate is a ‘multilingual’ scholar and citizen, fluent in the methods and perspectives of several social science disciplines - theoretically informed but practically minded, with a global outlook and local experience.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 34. Double majors may entail more course units.

### Hispanic Studies, BA

The demographic, economic and political realities of the United States, the articulation of a mainstream English culture with an ever-increasing diversity of Hispanic and Latino cultures, and the ongoing forging of strong cultural and economic ties throughout the Americas, have moved Spanish out of the bounds of the category of ‘foreign’ language and culture in the United States. Culture is the controlling category in this field; the program is orientated to the knowledge generated by new disciplines such as cultural studies, new historicism, ethnics and postcolonial studies. The major in Hispanic Studies orients itself to the types of knowledge generated by new disciplines such as cultural studies, new historicism, ethnics, and postcolonial studies. In order to reflect these changing realities, the Department of Romance Languages
has changed the name of its Spanish concentration from ‘Spanish’ to ‘Hispanic Studies.’

Hence, the knowledge of Spanish culture gives students much more than the ability to communicate in the third-most-spoken language of the world. It prepares them to account for an entirely different national, continental and global reality in all its complexity.

Majors in Hispanic Studies are overwhelmingly double majors. This means that they bring to their classes a dialogic perspective that engages in the study of Hispanic cultures informed by interest in other fields such as history, government, sociology, economics, medicine, and law. The richness and depth of these interests make for lively and intellectually rewarding classroom discussions.

The minimum total course units (https://www.college.upenn.edu/credits- needed-major/) for graduation in this major is 32. Double majors may entail more course units.

All courses must be at or above the 200 level.

2 Must be taken in the Department at Penn.

3 At least 3 course units must be taken in the Department at Penn.

**Honors**

Must have minimum 3.5 GPA in the major and a GPA of 3.3 overall.

---

**History of Art, BA**

The Major in the History of Art seeks to deepen students’ knowledge of artistic production and practice over the scope of human history, as well as to broaden awareness of the critical and interpretive aims of the discipline itself. Students develop skills in the analysis of works of art, sharpen their understanding of the social, cultural, and personal values embodied by works, and explore the relation of art history to other disciplines. The Department particularly encourages a broad geographic understanding of art production and encourages students to consider the relations and distinctions among different visual cultures.

Students are strongly advised to make an appointment each semester to discuss their progress through the major with the undergraduate chair. Majors are also encouraged to achieve an advanced level of French, German, or other languages as relevant to their subject interests. During their senior year majors may pursue independent research by writing an honors thesis and are invited to become regular participants in the department colloquium series.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 33. Double majors may entail more course units.

History: American History, BA

The Department of History offers a variety of courses dealing with the political, social, diplomatic, intellectual, economic, and cultural history of the Americas, Europe, Asia, and Africa, from the early medieval period to the present. The department seeks to give undergraduates both specific mastery of particular times, places, and aspects of the human condition and the critical skills to think historically about both long-term and modern phenomena, emphasizing the dynamics of change and continuity over time. The History Department at the University of Pennsylvania has a long tradition of distinction. Beginning as one of the first programs in the United States to offer doctoral study in history, the department continues to pioneer new areas of scholarship. In the last twenty years, faculty members of the departments in American, European, and World history have assumed a leading role in introducing and promoting new varieties of historical research and writing. Today, no other institution surpasses the Penn history department’s coverage of social history or equals the distinction of its faculty in that field.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 32. Double majors may entail more course units.

8 courses must be taken in History at the University of Pennsylvania.

Individualized Major, BA

The College recognizes that there are students who find that the standard majors do not satisfy their academic goals and interests. Thus, the individualized major offers an opportunity for exceptional, creative, self motivated students to explore innovative and multidisciplinary fields of knowledge.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 34. Double majors may entail more course units.

Applicants must earn a minimum GPA of 3.5.

For more information: https://www.college.upenn.edu/individualized-major (https://www.college.upenn.edu/individualized-major/)

For information about the General Education requirements, please visit the College of Arts & Sciences Curriculum (https://www.college.upenn.edu/curriculum/) page.

International Relations, BA

International Relations addresses the ways in which governments, private groups, and individuals relate to each other in the global political and economic systems. The program provides a solid grounding in the methodologies of political science, history, and economics. The curriculum draws on the best courses relevant to world politics, offers a well-rounded liberal arts education, and helps prepare students for law or business school, Ph.D. programs, and international careers.
Italian Studies: Italian Culture, BA

The Italian Studies section of the Romance Languages Department offers programs in language, literature, film, linguistics, cultural studies and civilization for students with or without a background in Italian. At the core of this program is the study of the Italian language, understood both in the narrow sense of verbal communication, but also in the larger sense of textual messages: literary, cinematic, historical, art-historical, and mass-cultural.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 32. Double majors may entail more course units.

1 You may count no more than one course toward both a Major and a Sector requirement. For Exceptions, check the Policy Statement (http://www.college.upenn.edu/sectors-policy/).

2 Courses should cluster around no more than 2 scholarly disciplines or periods in Italian civilization. At least 3 courses must be taken in Italian Studies in Romance Languages, including at least 2 at the 300-level in Italian. The disciplinary courses should include at least 2 in History, 1 of which may be an Art History course. No more than 6 elective courses can be taken abroad. Up to 8 courses taught in English may be chosen in Romance Languages or from courses in other departments if they have an Italian focus or an Italian cultural component.

Honors

Must have a minimum 3.5 GPA in the Major and a GPA of 3.3 overall.
Italian Studies: Italian Literature, BA

The Italian Studies section of the Romance Languages Department offers programs in language, literature, film, linguistics, cultural studies and civilization for students with or without a background in Italian. Jewish Studies, BA

The Jewish Studies Program provides an opportunity for students to study the Jewish experience from several perspectives including: language (Hebrew, Yiddish, and Ladino), literature in the original languages and in translation, the history and culture of the Jewish people from Biblical Israel to 21st-century America and modern Israel, the exploration of Jewish law, and the roles of gender and sex in Judaism. Students may specialize in Jewish Studies through a major or a minor, or though one of the following concentrations: Jewish History within the History Department, Hebraica/Judaica within the Department of Near Eastern Languages & Civilizations, and Judaism within the Department of Religious Studies.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 34. Double majors may entail more course units.

1 Must be completed in the Department at Penn.
Latin American & Latino Studies, BA

The Latin American and Latino Studies (LALS) Program offers an interdisciplinary major and minor to study the history, arts, languages, cultures, societies, politics, and/or regional organizations of Latin American and Caribbean countries as well as Latino communities and individuals in the United States. With courses offered across many departments in the School of Arts and Sciences, in study abroad programs taught throughout Latin American cities, and with academically based community service courses with Latino organizations in the Greater Philadelphia area, the LALS major and minor afford our students a very comprehensive approach to Latin American and Latino Studies as well as the possibility of a flexible curriculum, where students can pursue and combine their academic interests.

Linguistics, BA

The Linguistics Program is intended to acquaint students with the methods and findings of the scientific study of human language and its relationships to cognition, society, and history. It serves as a preparation for graduate training in linguistics or related areas, and as part of a rigorous general education. Linguistic training is relevant to work in anthropology, philosophy, psychology, and language and literature, as well as in careers in such fields as education, computer science, and law. Founded by Zellig Harris in 1947, the Penn Linguistics Department is the oldest modern linguistics department in the United States. We have outstanding programs in the core disciplines of syntax and phonology, as well as in sociolinguistics, semantics, discourse, historical linguistics, phonetics, and psycholinguistics. Penn is also the home of the Linguistic
Data Consortium (LDC), a compiler and distributor of linguistic materials for language engineering research. The graduate group in Linguistics at the University of Pennsylvania is an interdisciplinary team of faculty from the Department of Linguistics and related departments. Our program has strong concentrations in several areas and a tradition of collaboration among its faculty.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 34. Double majors may entail more course units.

Honors

Required: A minimum overall GPA of 3.0 and 3.5 in Major-related courses.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Logic, Information, & Computation, BA

Modern mathematical logic began with work by Cantor, Frege, and other mathematicians during the last three decades of the nineteenth century who were concerned with providing a sound basis for the development of mathematical analysis. In the wake of 'the crisis in the foundations of mathematics' precipitated by the discovery of various logical paradoxes at the turn of the twentieth century, mathematicians and philosophers such as Hilbert and Russell intensively pursued investigations into the logical foundations of mathematics. Connections between logic and the foundations of mathematics remained an important source for scientific developments in logic through the epochal results of Gödel in 1930 and 1931, which indicated both the scope and limits of the mechanization of mathematical reasoning. The great burst of scientific activity occasioned by Gödel's results led directly to Turing's mathematical characterization of mechanical computation in terms of simple devices, now known as Turing machines. The work of Gödel, Turing, and other logicians during the 1930s laid the scientific foundations for the revolution in computer and information technology that began in the last half of the twentieth century and continues today.

The Logic, Information, and Computation Program offers students the opportunity to engage in a systematic, integrative program of study within the School of Arts and Sciences. Logic remains one of the core disciplines in investigations of information and computation. Indeed, logic is playing a major role in advances in computer security, database technology, networking, and software engineering. Moreover, logic has expanded its role within mathematics beyond foundational studies and now enjoys rich connections with areas as diverse as algebra, analysis, and combinatorics. In light of the current importance of the investigation of computation and information from both a scientific and technological point of view, the Major and Minor in Logic, Information, and Computation will provide students with a strong background to pursue computational aspects of the natural, biological, and social sciences and prepare them for careers in information technology.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 36. Double majors may entail more course units.

Mathematical Economics, BA

Economics is a social science and, as such, an important component of the liberal arts curriculum. At the core of economics are theories of how individuals, firms, and other organizations make choices and interact, taking into account constraints on their behaviors. Among the topics studied in economics are the following:

- The determination of prices and quantities in various types of markets, from perfectly competitive commodity markets to highly regulated utility markets and internet auctions.
- The effects of taxes, subsidies, and regulations.
- The determination of aggregate economic activity (e.g., GDP, unemployment).
- Inflation, monetary policy, and financial intermediation.
- Economic growth and income distribution.
- International trade and international finance (e.g., exchange rates).

The Mathematical Economics Major is intended for students with a strong intellectual interest in both mathematics and economics and, in particular, for students who may pursue a graduate degree in economics. Advanced economics makes extensive use of formal mathematical models. The major introduces undergraduate students to rigorous theoretical-quantitative and empirical-quantitative approaches to the analysis of economic problems. In comparison to the Economics Major, the Mathematical Economics Major emphasizes a more formal mathematical analysis, preparing students for academic-style research in economics.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 36. Double majors may entail more course units.

For more information: http://economics.sas.upenn.edu/undergraduate-program/mathematical-economics-major (http://economics.sas.upenn.edu/undergraduate-program/mathematical-economics-major/)

</tr>
</tbody>
</table>

**ECON Core Requirement**

- Introduction to Micro and Macro Economics: 6
- ECON 001 Introduction to Micro Economics 1
- ECON 002 Introductory Economics: Macro 1
- Waiver Conversion Complete
- Intro Micro/Macro - For WHARTON Students Only:
  - ECON 010 Introduction to Economics for Business
  - Select an additional ECON course 7

**Intermediate Level Micro and Macro Economics**

- ECON 101 Intermediate Microeconomics 1
- ECON 102 Intermediate Macroeconomics 1
- ECON 681 Microeconomic Theory 1

**ECON Electives**

Select 3 courses from the following disciplines: 3

- Econometrics
  - ECON 104 Econometrics
  - ECON 221 Econometric Forecasting
- ECON 222 Advanced Econometric Techniques and Applications
- ECON 224 Statistical Learning and Causal Inference for Economics
- ECON 705 Econometrics I: Fundamentals 8

**Macroeconomics**

- ECON 241 Economic Growth
- ECON 242 Topics in Macroeconomics
- ECON 243 Monetary and Fiscal Policies
- ECON 244 Macro-Modeling
- ECON 246 Money and Banking

**Microeconomics/Game Theory**

- ECON 211 Social Choice Theory
- ECON 212 Game Theory
- ECON 235 Industrial Organization
- ECON 260 Decision Making Under Uncertainty
- ECON 262 Market Design
- ECON 682 Game Theory and Applications 8

**Independent Studies**

- ECON 199 Independent Study

At most one independent study (ECON 199) can substitute for a 200-level course in the major. Students wishing to enroll in an Independent Study must have their outline approved and be enrolled prior to the end of the Add Period. No Independent Studies will be accepted afterwards.

**Total Course Units** 36-37

1. You may count no more than one course toward both a Major and a Sector requirement. For Exceptions, check the Policy Statement (http://www.college.upenn.edu/sectors-policy/).
2. Students intending to major in Mathematical Economics are encouraged to take MATH 116 Honors Calculus and to consider MATH 260 Honors Calculus, Part II.
3. NOTE: These MATH and ECON courses count toward the MATH and ECON electives.
4. If ECON 103 Statistics for Economists is taken, one additional ECON or MATH course from the following: MATH 546 Advanced Probability, MATH 547 Stochastic Processes, ECON 104 Econometrics, ECON 221 Econometric Forecasting, or ECON 222 Advanced Econometric Techniques and Applications.
5. LPS academic year courses require approval of Undergraduate Chair EXCEPT for ECON 001 Introduction to Micro Economics & ECON 002 Introductory Economics: Macro.
6. ECON 001 Introduction to Micro Economics and ECON 002 Introductory Economics: Macro are prerequisites for all economics courses. ECON 001 Introduction to Micro Economics is the prerequisite for ECON 002 Introductory Economics: Macro.
7. ECON Course Required if ECON 010 Introduction to Economics for Business is taken.
8. Requires the permission of the instructor. Please contact the instructor and be prepared to share information about the ECON and MATH courses you have taken and the grades that you have obtained in these courses. Based on this information, the instructor will determine whether the course is suitable for you.

**Honors**

Applicants must have a minimum GPA of 3.5 and an A- or better in 3 graduate level courses:

**Mathematics: Biological Mathematics, BA**

At the core of modern theoretical science, mathematics has historically provided an expressive language and a theoretical framework for advances in the physical sciences. It has since become central in the
life and social sciences and in computer science. Mathematics at Penn embraces traditional core areas of mathematics and developing areas (Penn is one of the world’s leading centers in the application of logic to theoretical computer science). The goals of the major program are to assist students in acquiring both an understanding of mathematics and the ability to use it. The mathematics major provides a solid foundation for graduate study in mathematics and a background for study in economics, the biological sciences, the physical sciences, and engineering, as well as many non-traditional areas.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 36. Double majors may entail more course units.

Majors and prospective majors: Please email majoradvisor@math.upenn.edu. You will be assigned to one of the Math Major Advisors who will discuss your current and future plans with you. It is important that you see this advisor at least once per semester thereafter.

Below is a planning tool that is meant to help you but does not replace the web and advisor visit requirements.

For more information: https://www.math.upenn.edu/undergraduate/math-majors-and-minors/biological-mathematics-concentration-mathematics-major/)

Select one of the following Tracks: 8.5

Track 1:

|       | BIOL 121 Introduction to Biology - The Molecular Biology of Life       |              |
|       | BIOL 124 Introductory Organismal Biology Lab                           |              |

Select two of the following:

|       | BIOL 221 Molecular Biology and Genetics                                |              |
|       | BIOL 230 Evolutionary Biology                                          |              |
|       | BIOL 240 Ecology: From individuals to ecosystems                      |              |

Select three of the following:

|       | BIOL 410 Advanced Evolution                                           |              |
|       | BIOL 417 Theoretical Population Biology                                |              |
|       | BIOL 431 Genome Science and Genomic Medicine                          |              |
|       | BIOL 437 Introduction to Computational Biology & Biological Modeling  |              |
|       | BIOL 536 Fundamentals of Computational Biology                         |              |

Select one of the following additional science courses:

|       | CHEM 101 General Chemistry I & CHEM 053 and General Chemistry Laboratory I |              |
|       | CHEM 101 General Chemistry I & CHEM 054 and General Chemistry Laboratory II |          |
|       | PHYS 151 Principles of Physics II: Electromagnetism and Radiation       |              |

Track 2:

|       | BIOL 101 Introduction to Biology A                                    |              |
|       | BIOL 102 Introduction to Biology B                                    |              |

Select two of the following:

|       | BIOL 221 Molecular Biology and Genetics                                |              |
|       | BIOL 230 Evolutionary Biology                                          |              |
|       | BIOL 240 Ecology: From individuals to ecosystems                      |              |

Select two of the following:

|       | BIOL 410 Advanced Evolution                                           |              |
|       | BIOL 431 Genome Science and Genomic Medicine                          |              |
|       | BIOL 485 The RNA World: A functional and computational analysis       |              |

Select one of the following additional science courses:

|       | CHEM 101 General Chemistry I & CHEM 053 and General Chemistry Laboratory I |              |
|       | CHEM 101 General Chemistry I & CHEM 054 and General Chemistry Laboratory II |          |
|       | PHYS 151 Principles of Physics II: Electromagnetism and Radiation       |              |

Total Course Units 36-37
Mathematics: General Mathematics, BA

At the core of modern theoretical science, mathematics has historically provided an expressive language and a theoretical framework for advances in the physical sciences. It has since become central in the life and social sciences and in computer science. Mathematics at Penn embraces traditional core areas of mathematics as well as developing areas (Penn is one of the world’s leading centers in the application of logic to theoretical computer science). The goals of the major program are to assist students in acquiring both an understanding of mathematics and the ability to use it. The mathematics major provides a solid foundation for graduate study in mathematics and a background for study in economics, the biological sciences, the physical sciences, and engineering, as well as many non-traditional areas.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 33. Double majors may entail more course units.

Majors and prospective majors: Please email majoradvisor@math.upenn.edu. You will be assigned to one of the Math Major Advisors who will discuss your current and future plans with you. It is important that you see this advisor at least once per semester thereafter.

Below is a planning tool that is meant to help you but does not replace the web and advisor visit requirements.

For information about the General Education requirements, please visit the College of Arts & Sciences Curriculum (https://www.college.upenn.edu/curriculum/) page.

1. You may count no more than one course toward both a Major and a Sector requirement. For Exceptions, check the Policy Statement (http://www.college.upenn.edu/sectors-policy/).
2. Number of elective course units will vary based on the manner in which other requirements are fulfilled. Please consult your math major adviser when choosing math electives and cognates.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Modern Middle Eastern Studies, BA

The interdisciplinary Modern Middle Eastern Studies degree is designed to allow students to specialize in the Middle East as a region of the world and human experience by combining course work using both social scientific and humanistic approaches, underpinned by relevant language skills. Students will work with faculty committed to supporting interdisciplinary, applied, research-oriented advanced study. The major gives students opportunities to work on problems of politics, policy, history, ideology, social thought, economic development, and international relations.
The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 32. Double majors may entail more course units.

\[1\] You may count no more than one course toward both a Major and a Sector requirement. For Exceptions, check the Policy Statement (http://www.college.upenn.edu/sectors-policy/).

**Honors**

Candidates must have a minimum overall GPA of 3.3 and a GPA of 3.7 in the major.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**Music, BA**

The music major is founded on a balance in the core training between the fields of music history, ethnomusicology, theory, and composition. Through a series of requirements, you will acquire a foundation that introduces you to the sheer range of musical traditions available for study and to a series of specialist skills and tools that facilitate and deepen that study.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 34.0. Double majors may entail more course units.

Near Eastern Languages & Civilizations: Ancient Near East, BA

The major in Ancient Near East examines the languages, history, cultures, and archaeology of the Ancient Near East: from Prehistory through the early complex of civilizations in Mesopotamia, Egypt, and Levant. Because of the interdependence of language and culture an emphasis of the major is gaining facility of one or more ancient languages, alongside courses in history, religion, and archaeology.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 34. Double majors may entail more course units.

Near Eastern Languages & Civilizations: Arabic & Hebrew Studies, BA

The major in Arabic and Hebrew Studies explores the interrelationships between Arab and Hebrew cultures in the context of the modern and medieval Middle East. Emphasis includes facility in Arabic and/or Hebrew language, alongside courses in history, literature, and cultures of the medieval and modern Middle East.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 34. Double majors may entail more course units.

Introduction to the Ancient Near East 1

NELC 102
Introduction to the Middle East 1

Concentration Requirements 3
Select 5 course units of Concentration Requirement 5
Select 1 course unit of Concentration Paper 1

Total Course Units 34

1 You may count no more than one course toward both a Major and a Sector requirement. For Exceptions, check the Policy Statement (http://www.college.upenn.edu/sectors-policy/).
2 This requirement may be split: 4 course units of one language (Arabic or Hebrew) and two years of the other.
3 May focus on either Medieval or Modern Periods, to be chosen in consultation with the major advisor. NOTE: No more than one PSCI class may be taken as an elective.

Honors

Required: A minimum overall GPA of 3.0 and a GPA of 3.5 in major related courses.

Code Title Course Units
NELC 395 Senior Conference 1
NELC 399 Independent Study 1

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Near Eastern Languages & Civilizations: Hebrew & Judaica, BA

Arabic and Islamic Studies focuses on languages and cultures of the wider Middle East in the context of Islamic Civilization. Because of the interdependence of language and culture, a primary emphasis is on gaining mastery of Middle Eastern languages such as Arabic, Persian, and Turkish, alongside coursework in history, religion, and culture.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 34. Double majors may entail more course units.

For more information: http://www.sas.upenn.edu/nelc/undergrad_programs/nelc_major.html

For information about the General Education requirements, please visit the College of Arts & Sciences Curriculum (https://www.college.upenn.edu/curriculum/) page.

Near Eastern Languages & Civilizations: Hebrew & Judaica, BA

The major concentration in Hebrew and Judaica explores the development of Hebrew culture from the Biblical through Rabbinic and Medieval Periods through modern times. Because of the interrelationship between language and culture an emphasis is placed on gaining facility in the use of Hebrew language alongside courses in history, culture, literature, and religion of Judaism.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 34. Double majors may entail more course units.

Neuroscience, BA

Neuroscience (formerly Biological Basis of Behavior) is an interdisciplinary program in which students explore the relationship between behavior (both human and animal) and its organic bases. The Program offers courses in virtually all areas of neuroscience ranging from cellular neurobiology to cognitive neuropsychology and integrates these basic interdisciplinary courses with basic science requirements in biology, chemistry and psychology. Students also engaged in supervised research in areas as diverse as molecular neurobiology, chemical neuroanatomy, visual sciences and behavioral ecology.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 36. Double majors may entail more course units.

Core Requirements

Introductory Chemistry:

CHEM 101 General Chemistry I 1
or CHEM 001 Introductory Chemistry I 1

CHEM 102 General Chemistry II 1

Introductory Biology:

Select one of the following Options: 3

Option 1:

BIOL 101 Introduction to Biology A
BIOL 102 Introduction to Biology B

Option 2:

BIOL 121 Introduction to Biology - The Molecular Biology of Life
BIOL 123 Introductory Molecular Biology Laboratory
BIOL 124 Introductory Organismal Biology Lab

200-Level BIOL Course

Introduction to Brain & Behavior:

Select one of the following: 1

BIBB 109 Introduction to Brain and Behavior
BIOL 109 Introduction to Brain and Behavior
PSYC 109 Introduction to Brain and Behavior

Neural Systems and Behavior:

Select one of the following 200-level BIBB courses: 1

BIBB 217 Visual Neuroscience

Honors Option

Applicants are expected to have a minimum cumulative GPA of 3.5.

Nutrition Science, BA

Jointly sponsored by the College of Arts and Sciences and the School of Nursing, the second major in Nutrition Science builds on a student’s basic science skills with a deep dive into the science of nutrition. Linkages of nutritional compounds and dietary approaches with health and disease, novel approaches to the study of nutritional impact on health, and future avenues of exploration in the field are examined. Elective courses in anthropology, biology, economics, physiology, psychology, health care,
and public policy provide a rounded context for the study of nutrition science.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 34. Double majors may entail more course units.

For more information: https://www.nursing.upenn.edu/nutrition-major/

For information about the General Education requirements, please visit the College of Arts & Sciences Curriculum (https://www.college.upenn.edu/curriculum/) page.

---

### Philosophy, Politics and Economics: Choice & Behavior, BA

Philosophy, Politics and Economics allows undergraduates to study a variety of comprehensive analytical frameworks that have been developed to understand and justify political and economic structures, particularly constitutional democracy and the market system. The program prepares its graduates for careers in public policy, public services, business, and law among others.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 36. Double majors may entail more course units.

For more information: https://ppe.sas.upenn.edu/

For information about the General Education requirements, please visit the College of Arts & Sciences Curriculum (https://www.college.upenn.edu/curriculum/) page.

### Major Requirements

**Required Basic Science Courses**

- **Biology**
  - BIOL 121: Introduction to Biology - The Molecular Biology of Life
  - BIOL 123: Introductory Molecular Biology Laboratory
  - BIOL 124: Introductory Organismal Biology Lab

Recommended for students with A.P., I.B.:

- BIOL 121 Introduction to Biology - The Molecular Biology of Life

Recommended for students with one year of high school biology:

- BIOL 101 Introduction to Biology A
- BIOL 102 Introduction to Biology B

**Chemistry**

- CHEM 101 General Chemistry I
- CHEM 102 General Chemistry II
- CHEM 241 Principles of Organic Chemistry

**Biochemistry**

- BIOL 204 Biochemistry

**Required Nutrition Science Courses**

- NURS 112 Nutrition: Science & Applications
- NURS 312 Nutritional Aspects of Disease
- NURS 523 Advanced Nutrition: Molecular Basis of Nutrition
- NURS 524 Advanced Human Nutrition and Micronutrient Metabolism

**Elective Courses**

Select 4 course units of electives (see website for list of suggested courses)

Total Course Units: 34

---

¹ You may count no more than one course toward both a Major and a Sector requirement. For Exceptions, check the Policy Statement (http://www.college.upenn.edu/sectors-policy/).

² BIOL 123 Introductory Molecular Biology Laboratory must be concurrent with BIOL 121 Introduction to Biology - The Molecular Biology of Life.

³ 3 course units count as 2 for this major.

Total Course Units 36

Philosophy, Politics and Economics: Public Policy & Governance, BA

Philosophy, Politics, and Economics allows undergraduates to study a variety of comprehensive analytical frameworks that have been developed to understand and justify political and economic structures, particularly constitutional democracy and the market system. The program prepares its graduates for careers in public policy, public services, business, and law among others.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 36. Double majors may entail more course units.

For more information: http://www.sas.upenn.edu/ppe/

For information about the General Education requirements, please visit the College of Arts & Sciences Curriculum (https://www.college.upenn.edu/curriculum/) page.
The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

### Philosophy: General Philosophy, BA

Philosophy seeks to illuminate fundamental aspects of the world, of our relation to and knowledge of the world, and of our own nature as rational, purposive, and social beings. The study of philosophy aims at an appreciation of the ways this enterprise has been, is, and might be approached. It also provides a vantage point for reflecting on the nature and achievement of other disciplines, such as science, the arts, and the humanities. Philosophical topics can be divided roughly into practical (ethics, politics, aesthetics) and theoretical (epistemology, metaphysics, mind, and logic). The four concentrations available within the major allow students to emphasize different sets of questions.

The General Philosophy Concentration requires a balanced selection of coursework from within both practical and theoretical philosophy as well as the history of these enterprises.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 32. Double majors may entail more course units.

For information about the General Education requirements, please visit the College of Arts & Sciences Curriculum (https://www.college.upenn.edu/curriculum/) page.

### Honors

Applicants must have a minimum GPA of 3.6 in the major.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Philosophy: Humanistic Philosophy, BA

Philosophy seeks to illuminate fundamental aspects of the world, of our relation to and knowledge of the world, and of our own nature as rational, purposive, and social beings. The study of philosophy aims at an appreciation of the ways this enterprise has been, is, and might be approached. It also provides a vantage point for reflecting on the nature and achievement of other disciplines, such as science, the arts, and the humanities. Philosophical topics can be divided roughly into practical (ethics, politics, aesthetics) and theoretical (epistemology, metaphysics, mind, and logic). The four concentrations available within the major allow students to emphasize different sets of questions.

The Humanistic Philosophy Concentration emphasizes practical philosophy and its history; it pairs philosophy courses with courses in one or more humanistic disciplines.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 36. Double majors may entail more course units.

Required: 8 course units in Philosophy and 8 course units in Humanities and/or Political Science (Non-Philosophy courses need permission of the Undergraduate Chair).

For information about the General Education requirements, please visit the College of Arts & Sciences Curriculum (https://www.college.upenn.edu/curriculum/) page.

Philosophy: Philosophy and Science, BA

Philosophy seeks to illuminate fundamental aspects of the world, of our relation to and knowledge of the world, and of our own nature as rational, purposive, and social beings. The study of philosophy aims at an appreciation of the ways this enterprise has been, is, and might be approached. It also provides a vantage point for reflecting on the nature and achievement of other disciplines, such as science, the arts, and the humanities. Philosophical topics can be divided roughly into practical (ethics, politics, aesthetics) and theoretical (epistemology, metaphysics, mind, and logic). The four concentrations available within the major allow students to emphasize different sets of questions.

The Philosophy and Science Concentration emphasizes theoretical philosophy and philosophy of science; it pairs courses in philosophy with courses in one or more scientific disciplines.
The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 36. Double majors may entail more course units.

**Required:** 8 course units in Philosophy and 8 course units in either Natural or Social Science, or Science, Technology, and Society (STSC, previously HSSC).

For information about the General Education requirements, please visit the College of Arts & Sciences Curriculum (https://www.college.upenn.edu/curriculum/) page.

**Philosophy: Political and Moral Philosophy, BA**

Philosophy seeks to illuminate fundamental aspects of the world, of our relation to and knowledge of the world, and of our own nature as rational, purposive, and social beings. The study of philosophy aims at an appreciation of the ways this enterprise has been, is, and might be approached. It also provides a vantage point for reflecting on the nature and achievement of other disciplines, such as science, the arts, and the humanities. Philosophical topics can be divided roughly into practical (ethics, politics, aesthetics) and theoretical (epistemology, metaphysics, mind, and logic). The four concentrations available within the major allow students to emphasize different sets of questions.

The new Political and Moral Philosophy Concentration emphasizes the philosophical treatment of normative questions. Its coursework focuses on questions about ethics, morality, politics, and law.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 36. Double majors may entail more course units.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Physics: Astrophysics, BA

Physics and astronomy are fundamental sciences aimed at discovering the basic principles that govern our universe. Physicists study the interplay between space, time, matter, and energy. Complex behavior in nature is explained in terms of elementary relations between constituent elements and the forces that bind them, over distances ranging from subatomic to cosmic scale. Astronomy encompasses the entire physical universe beyond the earth: the solar system, stars, galaxies, galaxy clusters and superclusters, quasars, and the large-scale structure of the universe. The basic tools in physics and astronomy are mathematics and experimental investigation and observation of the world around us.

At Penn, the curriculum for undergraduate Physics majors, which includes extensive laboratory experience, is based on faculty strengths in Condensed Matter Physics, Elementary Particle Physics, and Astrophysics. Undergraduate teaching is linked to faculty research efforts in these areas, and participation by undergraduates in research is strongly encouraged.

This concentration is particularly appropriate for students planning to attend graduate school in Astrophysics. In addition to core Physics courses, students choose from a selection of courses in Astronomy and Astrophysics.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 36. Double majors may entail more course units.

For more information: http://www.physics.upenn.edu/

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Physics: Biological Science, BA

Physics and astronomy are fundamental sciences aimed at discovering the basic principles that govern our universe. Physicists study the
interplay between space, time, matter, and energy. Complex behavior in nature is explained in terms of elementary relations between constituent elements and the forces that bind them, over distances ranging from subatomic to cosmic scale. Astronomy encompasses the entire physical universe beyond the earth: the solar system, stars, galaxies, galaxy clusters and superclusters, quasars, and the large-scale structure of the universe. The basic tools in physics and astronomy are mathematics and experimental investigation and observation of the world around us.

At Penn, the curriculum for undergraduate Physics majors, which includes extensive laboratory experience, is based on faculty strengths in Condensed Matter Physics, Elementary Particle Physics, and Astrophysics. Undergraduate teaching is linked to faculty research efforts in these areas, and participation by undergraduates in research is strongly encouraged.

This concentration reflects increasing contributions of physicists (including members of our faculty) to implications of Physics to Biological Sciences. Undergraduate students choosing this concentration will prepare themselves for careers in scientific research or professional Medical Physics programs that have been instituted at Penn and other universities, among other possibilities.

The proposed concentration is distinct from the existing Biophysics Major, although the two share several required courses. The Biophysics Major requires much more chemistry, making it appropriate for students interested in protein science and other topics within the well-established field of Biophysics. The Physics major with a Concentration in Biological Physics and astronomy are fundamental sciences aimed at discovering the basic principles that govern our universe. Physicists study the interplay between space, time, matter, and energy. Complex behavior in nature is explained in terms of elementary relations between constituent elements and the forces that bind them, over distances ranging from subatomic to cosmic scale. Astronomy encompasses the entire physical universe beyond the earth: the solar system, stars, galaxies, galaxy clusters and superclusters, quasars, and the large-scale structure of the universe. The basic tools in physics and astronomy are mathematics and experimental investigation and observation of the world around us.

Applicants must have a minimum GPA of 3.3 in major-related courses.

Code | Title | Course Units
--- | --- | ---
PHYS 499 | Senior Honor Thesis (Semester 1) | 1
PHYS 499 | Senior Honor Thesis (Semester 2) | 1

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Physics: Business & Technology, BA

Physics and astronomy are fundamental sciences aimed at discovering the basic principles that govern our universe. Physicists study the interplay between space, time, matter, and energy. Complex behavior in nature is explained in terms of elementary relations between constituent elements and the forces that bind them, over distances ranging from subatomic to cosmic scale. Astronomy encompasses the entire physical universe beyond the earth: the solar system, stars, galaxies, galaxy clusters and superclusters, quasars, and the large-scale structure of the universe. The basic tools in physics and astronomy are mathematics and experimental investigation and observation of the world around us.
At Penn, the curriculum for undergraduate Physics majors, which includes extensive laboratory experience, is based on faculty strengths in Condensed Matter Physics, Elementary Particle Physics, and Astrophysics. Undergraduate teaching is linked to faculty research efforts in these areas, and participation by undergraduates in research is strongly encouraged.

This concentration is particularly appropriate for students whose ultimate goal is a career in modern industry involving both technical and managerial components. A student choosing this concentration will have a solid background in Physics, be comfortable with electronics and computers, and have some appreciation of modern business methods and economics.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 36. Double majors may entail more course units.

For more information: http://www.physics.upenn.edu/

For information about the General Education requirements, please visit the College of Arts & Sciences Curriculum (https://www.college.upenn.edu/curriculum/) page.

---

1 You may count no more than one course toward both a Major and a Sector requirement. For Exceptions, check the Policy Statement (http://www.college.upenn.edu/sectors-policy/).

### Physics: Chemical Principles, BA

Physics and astronomy are fundamental sciences aimed at discovering the basic principles that govern our universe. Physicists study the interplay between space, time, matter, and energy. Complex behavior in nature is explained in terms of elementary relations between constituent elements and the forces that bind them, over distances ranging from subatomic to cosmic scale. Astronomy encompasses the entire physical universe beyond the earth: the solar system, stars, galaxies, galaxy clusters and superclusters, quasars, and the large-scale structure of the universe. The basic tools in physics and astronomy are mathematics and experimental investigation and observation of the world around us.

At Penn, the curriculum for undergraduate Physics majors, which includes extensive laboratory experience, is based on faculty strengths in Condensed Matter Physics, Elementary Particle Physics, and Astrophysics. Undergraduate teaching is linked to faculty research efforts in these areas, and participation by undergraduates in research is strongly encouraged.

This concentration is particularly appropriate for students planning to enter the health professions. Such students should be aware that, although not part of the concentration requirements, laboratories in general and organic chemistry and lecture and laboratory work in biology are generally required by professional schools in the health area. The concentration may also be appropriate for other students pursuing double majors in Physics and Chemistry or Biochemistry.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 36. Double majors may entail more course units.

**Note:** For Biology concentration, see Biophysics track outlined below.

For more information: http://www.physics.upenn.edu/

For information about the General Education requirements, please visit the College of Arts & Sciences Curriculum (https://www.college.upenn.edu/curriculum/) page.
Applicants must have a minimum GPA of 3.3 in major-related courses.

Honors

Applicants must have a minimum GPA of 3.3 in major-related courses.
includes extensive laboratory experience, is based on faculty strengths at Penn, the curriculum for undergraduate Physics majors, which experimental investigation and observation of the world around us. The basic tools in physics and astronomy are mathematics and the universe beyond the earth: the solar system, stars, galaxies, galaxy clusters and superclusters, quasars, and the large-scale structure of the universe. The interplay between space, time, matter, and energy. Complex behavior in nature is explained in terms of elementary relations between constituent elements and the forces that bind them, over distances ranging from subatomic to cosmic scale. Astronomy encompasses the entire physical nature is explained in terms of elementary relations between constituent elements and the forces that bind them, over distances ranging from subatomic to cosmic scale. Astronomy encompasses the entire physical sectors. For Exceptions, check the Policy Statement (http://www.college.upenn.edu/sectors-policy/).

PhD 1. You may count no more than one course toward both a Major and a Sector requirement. For Exceptions, check the Policy Statement (http://www.college.upenn.edu/sectors-policy/).

2. See sample program in Physics Major Program.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Physics: Physical Theory and Experimental Technique, BA

Physics and astronomy are fundamental sciences aimed at discovering the basic principles that govern our universe. Physicists study the interplay between space, time, matter, and energy. Complex behavior in nature is explained in terms of elementary relations between constituent elements and the forces that bind them, over distances ranging from subatomic to cosmic scale. Astronomy encompasses the entire physical universe beyond the earth: the solar system, stars, galaxies, galaxy clusters and superclusters, quasars, and the large-scale structure of the universe. The basic tools in physics and astronomy are mathematics and experimental investigation and observation of the world around us. At Penn, the curriculum for undergraduate Physics majors, which includes extensive laboratory experience, is based on faculty strengths in Condensed Matter Physics, Elementary Particle Physics, and Astrophysics. Undergraduate teaching is linked to faculty research efforts in these areas, and participation by undergraduates in research is strongly encouraged.

This concentration is particularly appropriate for students contemplating graduate study in Physics. It provides a sound basis in Physics and Mathematics with ample opportunities to take elective or even graduate courses and participate in research.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 36. Double majors may entail more course units.

Political Science: American Politics, BA

Political Science explores systematic approaches to understanding politics. Students may choose to take a general approach to the subject or pursue a concentration in the sub-fields of American politics, comparative politics, international relations or political theory. In addition students may select a world region for an area studies concentration. The Political Science Department's course offerings span the discipline of political science, from American political institutions, to the politics of world regions, the emergence of a new international order, and recent and ancient political ideas. The Department's curriculum is divided into the four standard fields of American politics, comparative politics, international relations, and political theories. There are also other opportunities for study in political processes of elections and communications and public policy.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 32. Double majors may entail more course units.

A minimum of 9 course units in Political Science are required, of which 6 must be taken in the Political Science Department at the University of Pennsylvania (includes Washington, DC Semester). See Major Program Booklet for Transfer and AP credit restrictions.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**Psychology, BA**

Studies in psychology introduce students to contemporary understandings of how organisms perceive, learn, think and interact with one another, how they develop, how they are motivated and how, individually and as members of species, they may be compared with one another. Psychology at Penn is a diverse discipline, with topics ranging from neuroscience to psychopathology.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 33. Double majors may entail more course units.

A minimum GPA of 2.0 is required.

6 course units of Psychology courses must be taken at the University of Pennsylvania.

For more information: https://psychology.sas.upenn.edu/penn-undergraduate-psychology

For information about the General Education requirements, please visit the College of Arts & Sciences Curriculum (https://www.college.upenn.edu/curriculum/) page.

Religious Studies, BA

Religion is a complex network of ideas and actions (ethical and ritual) that express a group’s sense of ultimate meaning of life. The academic study of religion examines how the beliefs and values of contemporary and historical cultures shape and are shaped by societal factors, long-standing traditions, and distinctive forms of literary and artistic expression.

Because of the multi-faceted nature of the subject matter, the University of Pennsylvania’s Religious Studies major program of study is open to students looking to tailor their educational experience to fit with their own personal and academic areas of interest. Each undergraduate who wishes to major in Religious Studies will meet with the Chair of the Department prior to claiming the major to discuss their desired coursework and create a individualized plan of execution.

As our core faculty shares research foci and skills in the study of material culture (art, manuscripts, archaeology, inscriptions, and other primary historical sources), we are well-suited to lead serious students in intensive research to better prepare them for graduate study which requires research and evaluation skills.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 32. Double majors may entail more course units.

For more information: https://www.sas.upenn.edu/religious_studies/undergraduate/major (https://www.sas.upenn.edu/religious_studies/undergraduate/major/)

For information about the General Education requirements, please visit the College of Arts & Sciences Curriculum (https://www.college.upenn.edu/curriculum/) page.

Romance Languages: French and Italian, BA

The Dual Romance Languages Major allows students to pursue advanced course work across two Romance Languages: French, Spanish, and/or Italian. It is an 18-credit major, with nine advanced courses in each language. Interested students should contact the Undergraduate Coordinator or the appropriate undergraduate chairs for more information and guidance.

2020-21 Catalog | Generated 09/18/20
The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 36. Double majors may entail more course units.

Students are required to meet with the appropriate undergraduate chairs prior to beginning course work. Study Abroad courses must be pre-approved by the Undergraduate Chair to count for the major.

Russian and East European Studies: Cinema, Arts and Letters, BA

The major in Russian and East European Studies provides a program of study that enables a broad multi-disciplinary and multi-cultural understanding of the languages, literatures, cultures, histories, and societies of Russia, Central and Eastern European, and the Balkan and Baltic regions. For the language requirement, students can choose any regional language offered at Penn (i.e. Bosnian/Croatian/Serbian, Hungarian, Polish, Russian, Ukrainian) or in which they can demonstrate an equivalent proficiency. In addition to linguistic flexibility, the major allows students to pursue their specific disciplinary interests through three concentrations: Language, Literature, and Culture; History, Politics, and Society; and Cinema, Arts, and Letters. Majors are encouraged to complete a summer or semester abroad to gain first-hand understanding of the communities they study and to advance their language competency. The major offers an honors option.

Knowledge of Russian and East European languages and cultures is a marketable and impressive skill, whether you are in academia, arts, law, medicine, governmental service, public interest, business, or politics. Russian and East European majors and minors land jobs in a variety of settings. They go on to work in business as financial and policy analysts for American and foreign companies. They work for NGOs, publishing houses, or the media. They teach abroad and consult in marketing, advertising, aerospace, or computer engineering. And, of course, some work as educators in universities and schools and as employees of the US government.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 32. Double majors may entail more course units.

Science, Technology and Society: Biotechnology & Biomedicine, BA

Science, Technology & Society (STSC) examines the social contexts in which science and technology occur, the organizations of people and things that make up science and technology systems, and the social and cultural consequences of scientific and technological change over time. In a wide array of courses, STSC majors explore the relationship between scientific knowledge, technological innovations, technological systems, and society past and present.

This program equips students with sophisticated critical faculties, multidisciplinary skills, and wide knowledge that enables our graduates to go into business, law, government, journalism, research, and education. STSC provides a foundation for citizenship in a globalizing, diversifying world with rapid technological and scientific change.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 34. Double majors may entail more course units.

Science, Technology and Society: Energy and Environment, BA

Science, Technology & Society (STSC) examines the social contexts in which science and technology occur, the organizations of people and things that make up science and technology systems, and the social and cultural consequences of scientific and technological change over time. In a wide array of courses, STSC majors explore the relationship between scientific knowledge, technological innovations, technological systems, and society past and present.

This program equips students with sophisticated critical faculties, multidisciplinary skills and wide knowledge that enables our graduates to go into business, law, government, journalism, research, and education. STSC provides a foundation for citizenship in a globalizing, diversifying world with rapid technological and scientific change.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 34. Double majors may entail more course units.

### Sociology: Applied Research and Data Analysis, BA

The Sociology major helps students identify and explain patterns of social life and human behavior by emphasizing how large-scale social phenomena (such as class, race, and gender inequality) affect the everyday experiences of individuals and vice versa. The major prepares students for a career in a variety of fields such as law, medicine and healthcare, marketing, education, scholarly and applied social research, social work, demography, journalism and media, management in the public and private sectors, administration, and government. The program offers comprehensive advising and significant research and independent study opportunities. Our program is dedicated to nurturing a strong community of scholars, helping them grow academically and professionally under the large-scale mission of the College of Arts & Sciences.

Sociologists pursue knowledge in many ways, one of which is through the examination of society through surveys, demographic data, and statistical models. In this concentration, students will become familiar with quantitative and/or qualitative methods in sociology, both with respect to how to use them in general and how they are applied for specific topics.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 34. Double majors may entail more course units.

A minimum of 11 course units must be in Sociology.

The program offers comprehensive advising and significant research and independent study opportunities. Our program is dedicated to nurturing a strong community of scholars, helping them grow academically and professionally under the large-scale mission of the College of Arts & Sciences.

Neighborhoods, cities, and metropolitan areas are communities defined by geographic, economic, legal, political, cultural, and social boundaries. This concentration allows students to advance their knowledge on the intersection of these elements, the impact they have on populations and what is considered a 'market,' and the resulting economic impact on a global scale.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 34. Double majors may entail more course units.

A minimum of 11 course units must be in Sociology.

**Sociology: Family, Gender and Society, BA**

The family is one of the most important institutions in any society. It is critical to the socialization of each generation and to the stability and functioning of the larger society. Family systems vary across cultures and have changed dramatically in the United States in recent decades.
Our understanding of gender plays an important role in this. This concentration enables students to study this intersection between family and gender, and the impacts it has on society through aspects such as fertility, marriage, divorce, migration, and mortality.

Sociology: Law and Society, BA

The Sociology major helps students identify and explain patterns of social life and human behavior by emphasizing how large-scale social phenomena (such as class, race, and gender inequality) affect the everyday experiences of individuals and vice versa. The major prepares students for a career in a variety of fields such as law, medicine and healthcare, marketing, education, scholarly and applied social research, social work, demography, journalism and media, management in the public and private sectors, administration, and government. The program offers comprehensive advising and significant research and independent study opportunities. Our program is dedicated to nurturing a strong community of scholars, helping them grow academically and professionally under the large-scale mission of the College of Arts & Sciences.

Sociologists study institutions, and among the most important is the law. This concentration examines issues such as: What is deviance and how do we define it? What is the relationship between the law and other social institutions? The concentration is suitable for students with a variety of interests, but may be especially well-suited to those interested in careers in law and criminal justice.

The minimum total course units ([https://www.college.upenn.edu/credits-needed-major/](https://www.college.upenn.edu/credits-needed-major/)) for graduation in this major is 34. Double majors may entail more course units.

A minimum of 11 course units must be in Sociology.

Conceptions of health and illness, although not uniform the world over or even in any one society, are of fundamental importance in every society. In this concentration, students focus on the following topics: How health is defined in various societies; how the ill are viewed by the well; how illness is treated; who the healers are, how they are trained, and what their position is in society; the relationships among the religion, class, gender, and age of the ill and their healers; and when and how public health policies are inaugurated.

Sociology: Population and Immigration, BA

The Sociology major helps students identify and explain patterns of social life and human behavior by emphasizing how large-scale social phenomena (such as class, race, and gender inequality) affect the everyday experiences of individuals and vice versa. The major prepares students for a career in a variety of fields such as law, medicine and healthcare, marketing, education, scholarly and applied social research, social work, demography, journalism and media, management in the public and private sectors, administration, and government. The program offers comprehensive advising and significant research and independent study opportunities. Our program is dedicated to nurturing a strong community of scholars, helping them grow academically and professionally under the large-scale mission of the College of Arts & Sciences.

This concentration enables students to advance their knowledge on human migration and the social forces that have impacted various populations. The study of population patterns provides an opportunity to investigate the interactions between large social aggregates and the behavior of individuals.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 34. Double majors may entail more course units.

A minimum of 11 course units must be in Sociology.

Sociology: Structures of Opportunity and Inequality, BA

The Sociology major helps students identify and explain patterns of social life and human behavior by emphasizing how large-scale social phenomena (such as class, race, and gender inequality) affect the everyday experiences of individuals and vice versa. The major prepares students for a career in a variety of fields such as law, medicine and healthcare, marketing, education, scholarly and applied social research, social work, demography, journalism and media, management in the public and private sectors, administration, and government. The program offers comprehensive advising and significant research and
independent study opportunities. Our program is dedicated to nurturing a strong community of scholars, helping them grow academically and professionally under the large-scale mission of the College of Arts & Sciences.

What is the balance of individual self-determination and institutionalized constraint in shaping people's lives? Social institutions such as the educational system and the economy sort people and distribute rewards, but their workings are profoundly shaped by persistent inequalities of class, ethnicity, gender, age, race, and nationality. How and why do such inequalities persist? How might opportunities be more fairly distributed? What sorts of individual and collective action affect existing structures of constraint?

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 34. Double majors may entail more course units.

A minimum of 11 course units must be in Sociology.

</tr>
<tr>
<td></td>
<td>South Asia Studies is an interdisciplinary field focusing on the history, languages, society, literature, and art from India, Pakistan, Bangladesh, Nepal, Sri Lanka, Afghanistan, and Bhutan. We are America's oldest and arguably most distinguished South Asia regional studies program dealing with the past and contemporary life of one-fifth of the world's population and teaching more languages than any other South Asian studies program in the US. Having a deep knowledge of the country set to outpace the US as the second largest economy in the world in an increasingly competitive global job market gives graduates a competitive edge over others with more generic skills. Make your home in a department where you get to know your Faculty and they know you as an individual, whether as a major or double major. You don’t have to know anything about India or be South Asian to find a home with us; just be curious!</td>

**Theatre Arts, BA**

The Theatre Arts program focuses on all intellectual and creative aspects of theatre and performance studies. Our courses link academic approaches to the theatre such as the study of dramatic literature, theory, history, and criticism, to practical aspects of performance such as acting, directing, designing, devising, and playwriting. Special features of our program include faculty-directed productions, which are taught as courses for credit, and extracurricular programs such as workshops and talks with visiting artists, staged readings, and theatre outings. One special highlight of our program is the Edinburgh Project. On alternating years, majors are selected to enroll in a course that develops a performance piece that travels to the Edinburgh Festival Fringe in Scotland. The honors thesis is another special opportunity in which majors who are accomplished in both academic and production work are invited to work on honors thesis projects, which may be based on practice such as acting, directing, and design or on scholarly research.

Penn Theatre Arts graduates proceed to a wide array of successful careers, both in and out of the theatre. Our majors are well-prepared to enter professional MFA programs in acting, directing, or design, as well as doctoral programs. We also count among our alumni not only those who are successful in theatre and film as artists, producers, and business people, but also those who flourish in unrelated fields, such as medicine and law.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 33. Double majors may entail more course units.

Urban Studies, BA

Urban Studies students are interested in making a difference and connecting to real world issues. To do this well, students learn about urban history and current challenges. They come to understand how policy at the national level and global economic trends affect what we see at the local, even neighborhood level. In a broad, theoretical sense, the central intellectual frame of Urban Studies is about understanding people and place at different spatial scales. Individuals, groups, and public officials make decisions and design policy that in turn affects how people and resources are distributed in space and defines what kinds of places result. Urban Studies students take this understanding to explain the conditions of urban places and work towards creating places that foster equity, better health outcomes, environmental sustainability, and a better quality of life. In addition to urban studies coursework and coursework in a disciplinary concentration, all of our students complete an internship for credit and carry out an original research project.

The minimum total course units (https://www.sas.upenn.edu/visual-studies/) for graduation in this major is 34. Double majors may entail more course units.

Urban Studies is a flexible major and requires conferring with an advisor to tailor a set of courses that fit your interests. This online worksheet is meant as a planning tool; before you will be accepted to the major, you are required to meet with an Urban Studies advisor to go over your plans and address your questions.

Visual Studies: Architecture Practice and Technology, BA

Visual Studies at the University of Pennsylvania prepares students to forge innovative connections across the disciplines that study vision and images. Students acquire a critical awareness of seeing and the problems and possibilities for investigating, thinking, and writing about seeing in the 21st century. Fundamentally interdisciplinary, the Visual Studies Program partners with the Departments of Philosophy, Psychology, History of Art, Fine Arts, and Architecture. Students may also find interest in Penn Programs such as Cinema Studies and Gender, Sexuality, and Women's Studies or outside of the School of Arts and Sciences in the Annenberg School of Communication, and the School of Engineering and Applied Science.

Sector C enables students to develop skills in the making of art ranging from the two- and three-dimensional to digital and time-based media, and includes both fine arts and architecture tracks.

The minimum total course units (https://www.sas.upenn.edu/visual-studies/) for graduation in this major is 36. Double majors may entail more course units.

1 You may count no more than one course toward both a Major and a Sector requirement. For Exceptions, check the Policy Statement (http://www.college.upenn.edu/sectors-policy/).

2 Important - Check for Pre-Requisites on PSYC and some FNAR courses.

3 Four courses (4 course units) in your concentration and one course (1 course unit) from another Sector. (Note: No Stage 2 courses may be double-counted in Stage 3).

**Honors**

- Senior Project Completed (Grade of A)

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**Visual Studies: Art, Practice and Technology, BA**

Visual Studies at the University of Pennsylvania prepares students to forge innovative connections across the disciplines that study vision and images. Students acquire a critical awareness of seeing and the problems and possibilities for investigating, thinking, and writing about seeing in the 21st century. Fundamentally interdisciplinary, the Visual Studies Program partners with the Departments of Philosophy, Psychology, History of Art, Fine Arts, and Architecture. Students may also find interest in Penn Programs such as Cinema Studies and Gender, Sexuality, and Women's Studies or outside of the School of Arts and Sciences in the Annenberg School of Communications, and the School of Engineering and Applied Sciences.

Sector C enables students to develop skills in the making of art ranging from the two- and three-dimensional to the digital and time-based media, and includes both fine arts and architecture tracks.

The minimum total course units (https://www.college.upenn.edu/credits-needed-major/) for graduation in this major is 35. Double majors may entail more course units.

Actuarial Mathematics, Minor

Actuarial Science stands at the intersection of risk and money. Actuaries use their knowledge of mathematics and probability theory to define, analyze and solve complex business, financial and social problems. Actuaries evaluate individual and corporate risks, and design financially sound insurance and pension plans. Graduates from the University of Pennsylvania with an Actuarial Mathematics Minor are expected to be in great demand by the insurance and banking industry.

Africana Studies, Minor

Africana Studies is an interdisciplinary field of study devoted to the critical and systematic examination of the cultural, political, social, economic, and historical experiences of African Americans, Africans, and peoples of African descent around the world. Our course of study is designed to provide students with an integrated understanding and appreciation for a new global black studies. An undergraduate degree in Africana Studies prepares students for graduate work in the humanities, social sciences, and professional schools, as well as a range of careers in teaching, business, public service, and the arts, among others.

For more information: https://africana.sas.upenn.edu/department/undergraduate

African Language courses do not count toward the Minor Requirements.

American Public Policy, Minor

The minor in American Public Policy enables undergraduates interested in American Public Policy to construct an integrated program across the University. The minor — for students who do not major or concentrate in PSCI or BEPP — requires six courses, three from each department, in addition to the course work required for their major or concentration.

American Sign Language and Deaf Studies, Minor

The ASL/Deaf Studies Program at Penn offers ASL instruction grounded in Deaf cultural experiences and perspectives for the purpose of attaining ASL proficiency for real-world applications in both coursework and future professional endeavors. The course of study for the minor in ASL and Deaf Studies is interdisciplinary, with foundations in language, content, and theory-based courses. Furthermore, as our program has long-standing and steadfast commitment to working in and with local Deaf community organizations for meaningful, mutually beneficial outcomes, we partner with local Deaf community organizations to integrate academic rigor and Deaf cultural values into our coursework. We do so with two organizations primarily, the Deaf-Hearing Communication Centre in Swarthmore, PA and Pennsylvania School for the Deaf in the Germantown section of Philadelphia. Ultimately, these collaborative relationships manifest in a research-based capstone course, Academically Based Community Service in ASL and Deaf Studies, providing opportunities for merging research with practice in a Deaf community setting.

**Ancient History, Minor**

Classical Studies encompasses the civilization of the ancient Greeks and Romans from prehistory to the Middle Ages, with emphasis on the literature, philosophy and history of the classical Greek and Roman periods. It includes economic, political and social and intellectual history as well as philosophy, archaeology, religion and myth. Students may choose a track that emphasizes the study of texts in Greek and/or Latin, or they may opt for a program of courses that do not require any knowledge of the ancient languages.

**Archaeological Science, Minor**

The Minor in Archaeological Science consists of six course units. Of these six, four will be CAAM classes from introductory, intermediate and advanced levels; one must be an advanced class with an archaeological science research component (the capstone class); and one must be a class in the archaeology or culture of a relevant area.

To Declare:

Students interested in declaring a Minor in Archaeological Science should contact Dr. Marie-Claude Boileau at mboileau@upenn.edu.

For more information: [https://www.penn.museum/teachers-and-students/for-penn-students/caam/minor-in-archaeological-science](https://www.penn.museum/teachers-and-students/for-penn-students/caam/minor-in-archaeological-science)

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**Anthropology, Minor**

Anthropology is the global social science. It is the study of the human condition everywhere; its cultural, linguistic, and biological diversity; and how it evolved and developed from the prehistoric past into the globalizing present. The Anthropology minor is a 6 credit minor, in which students are encouraged to draw from all sub-fields of the discipline.

For more information: [https://www.sas.upenn.edu/anthropology/](https://www.sas.upenn.edu/anthropology/)

¹ No more than 4 courses from any one field (Cultural/Linguistic, Archaeology, Human Biology) can be applied to the minor.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**Architectural History, Minor**

The Architectural History Minor aims to deepen students’ knowledge of artistic production and practice over the scope of human history. A Minor program in architectural history may complement the student’s Major in a cognate field, or it may be unrelated to the student’s primary field instruction.

For more information: [http://www.sas.upenn.edu/arthistory/undergraduate/minor](http://www.sas.upenn.edu/arthistory/undergraduate/minor)

Asian American Studies, Minor

Asian American Studies explores the historical and contemporary experiences of Asian immigrants and of persons of Asian ancestry in North America, and the relevance of those experiences for understanding race and ethnicity in national and global contexts. The program introduces students to the methods and concerns of a wide spectrum of disciplines: anthropology and ethnography, economics, history, law, literature, sociology and demography, political science, and urban studies, as well as creative and expository writing.

Bioethics, Minor

The Penn Bioethics minor is designed to give students a broad overview of the methods, core content areas and central ethical questions in the field of bioethics. The Bioethics minor is an interdisciplinary program created through a collaboration of the Departments of Anthropology, History and Sociology of Science, Philosophy, Political Science, and Sociology in the College of Arts and Sciences, and Medical Ethics & Health Policy in the Perelman Medical School.

## Biology, Minor

The Biology minor introduces students to fundamental topics in the areas of cell and molecular biology, genetics, physiology, and ecology and evolution. This broad range of coursework is designed to provide students with a sufficient background to understand the basics underlying many of the current advances in the field.

## Biophysics, Minor

Bridging the biological sciences and the physical sciences, Biophysics is concerned with physical and chemical explanations of living processes, especially at the cellular and molecular levels. Detailed molecular descriptions are emerging for genetic elements and for the mechanisms that control their propagation and expression. Biophysical studies include the investigation of protein structure, nucleic acid structure, enzyme mechanisms, the phenomena underlying cellular behavior, excitable phenomena in nerve, muscle and visual cells, and integrative neural phenomena.

Chemistry, Minor

Chemistry is concerned with the study of matter and the changes matter can undergo. The chemistry program provides a basic foundation for career opportunities in chemical research and teaching, in scientific communication and information transfer, and in the health professions. The chemistry minor provides an introduction to several areas of chemistry, providing exposure to both lecture and laboratory courses.

Classical Studies, Minor

Classical Studies encompasses the civilization of the ancient Greeks and Romans from prehistory to the Middle Ages, with emphasis on the literature, philosophy and history of the classical Greek and Roman periods. It includes economic, political and social and intellectual history as well as philosophy, archaeology, religion and myth. Students may choose a track that emphasizes the study of texts in Greek and/or Latin, or they may opt for a program of courses that do not require any knowledge of the ancient languages. The Classical Studies Department provides extensive training at the Undergraduate level as well as graduate training in both Classical Studies and Ancient History.

For more information: http://www.classics.upenn.edu/

Please see Undergraduate Chair for for details on course approval.

---

**Cognitive Science, Minor**

Cognitive science is the empirical study of intelligent systems, including the human mind. An interdisciplinary science, it combines results from biology, computer science, linguistics, mathematics, neuroscience, philosophy and psychology to the study of language processing, perception, action, learning, concept formation, inference and other activities of the mind, with applications for information technology and the study of artificial intelligence.

---

**Comparative Literature, Minor**

The undergraduate program in Comparative Literature welcomes students interested in the study of literature from theoretical, interdisciplinary, cross-cultural, and global perspectives. The core courses train students to appreciate the variety of meanings that texts acquire in different institutional and philosophical contexts and different socio-political frameworks. There are three concentrations within the major: National and Transnational Literatures (four courses in each of two languages), Theory, and Globalization.

Comparative Literature is a flexible program, allowing students to take courses in a variety of departments in the College. Students with interests in more than one national literature and in fields such as philosophy and political theory, art and aesthetics, and film and music will find the requirements congenial. The program provides students with a cosmopolitan intellectual background that is increasingly in demand in an era of globalization.

The minor in Comparative Literature requires students to take an introductory course and a course in theory, along with an open selection of four literature and film courses.

Consumer Psychology, Minor

The goal of the Interschool Consumer Psychology minor is to create a program that fosters the natural link between psychology in the College and Marketing in Wharton. To fulfill the Minor in Consumer Psychology students must complete four courses from the Psychology Department in the College and four courses from the Marketing Department in Wharton, and the stats requirement. Both College and Wharton requirements will consist of core courses along with a set of elective courses. College students who wish to minor in Consumer Psychology must count two of the four required psychology (PSYC) courses towards only the Consumer Psychology minor (and towards no other major or minor).

For more information: https://psychology.sas.upenn.edu/more-information-minors or https://marketing.wharton.upenn.edu/programs/undergraduate/consumer-psychology-minor/ (https://marketing.wharton.upenn.edu/programs/undergraduate/consumer-psychology-minor/)

in the field and give them opportunities to craft their own original work. Students can minor in Creative Writing by completing four workshop courses and two courses in the study of literature.

Journalistic Writing is the study of nonfiction writing and literature with an emphasis on cultivating students’ own skills in reporting, editing, interviewing, investigative journalism, media scholarship, and writing for a range of platforms. Students can minor in Journalistic Writing by completing six workshop courses in journalism and creative nonfiction, including one required course in long-form journalism.

For more information: http://writing.upenn.edu/cw/

### Design, Minor

The Design Minor is a six-credit program available to undergraduate students in the College of Arts and Sciences, School of Engineering, Wharton and the School of Nursing. This minor introduces students to a broad range of design disciplines and methodologies with the ability to take multiple classes in one area of study.

¹ Course fulfills a College of Arts and Sciences sector requirement (Sector IV: Humanities and Social Sciences).

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

---

### Digital Humanities, Minor

The Undergraduate Minor in Digital Humanities is offered by the School of Arts and Sciences at the University of Pennsylvania. It has been designed for students who want to augment their disciplinary studies in the humanities or humanistic social sciences with advanced digital research techniques and in-depth engagement with theoretical and practical questions raised by digital humanities. Students who are not majoring in humanities fields are also welcome to complete the minor.

For more information: [https://pricelab.sas.upenn.edu/education/digital-humanities-minor](https://pricelab.sas.upenn.edu/education/digital-humanities-minor)

Students may also fulfill the Tier 3 requirement by completing a significant digital project as part of a class that is not an officially designated DH course. Students must receive permission from the instructor early in the semester and have their project approved by the director of the minor program. One Tier 3 courses may also be a project-centered independent study.

Total Course Units 6

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**Dutch (Netherlandic), Minor**

The Dutch-speaking Low Countries (the Netherlands and part of Belgium) are a unique cultural community of about 22 million speakers in Northwestern Europe. The names of famous Dutch artists readily come to mind: Rembrandt, Rubens, Breughel, Van Eyck, Mondriaan, as do some of the cities where they lived: Amsterdam, Brussels, Leyden, Maastricht. But artists do not flourish in a vacuum. Each of these artists assumes a cultural, political, economic, and historical context that is worthy of study in its own right. The resources in Dutch Studies at Penn offer students and faculty the ability to learn more about:

- The Dutch Economy
- The Dutch Language
- The Netherlands and Belgium During the Nazi Occupation
- The Literature and Culture of the Dutch Colonial Period

For more information: https://www.sas.upenn.edu/germanic/languages/dutch

Intensive Summer study in Zeist or Gent can also count toward Minor requirements.

**East Asian Area Studies, Minor**

East Asian Area Studies focuses on East Asia as a region of the world and human experience, and provides an integrated curriculum drawing on the approaches of the social sciences and the humanities. The program requires relevant courses in areas including history, international relations, political science, sociology, legal studies, and East Asian arts and cultures, while maintaining high standards in language study.

For more information: https://ceas.sas.upenn.edu/undergraduate/secondary-undergraduate-page

With intensive language courses (4 course units) the Minor will require 8 course units.

**East Asian Languages and Civilizations: Chinese, Minor**

All students minoring in the Department of East Asian Languages and Civilizations must fulfill a set of Basic Requirements. These requirements are to be met within one of three linguistic and cultural concentrations:

- Chinese Studies
- Japanese Studies
- Korean Studies

In addition to the Basic Requirements, there are further requirements specific to each concentration.
East Asian Languages and Civilizations: Japanese, Minor

All students minoring in the Department of East Asian Languages and Civilizations must fulfill a set of Basic Requirements. These requirements are to be met within one of three linguistic and cultural concentrations:

- Chinese Studies
- Japanese Studies
- Korean Studies

In addition to the Basic Requirements, there are further requirements specific to each concentration.

East Central European Studies, Minor

The Minor program in East Central European Studies offers students the opportunity for the interdisciplinary study of the language, history, politics, literature, and culture of Eastern and Central Europe. The minor requires a total of six courses (6 CU) beyond the language requirement (two semesters), which students can satisfy by choosing any regional language currently offered at Penn (i.e. Bosnian/Croatian/Serbian, Hungarian, Polish, Ukrainian, Yiddish), by completing language coursework through a study abroad program, or by demonstrating equivalent proficiency.

For more information: http://ccat.sas.upenn.edu/slavic/
Economic Policy, Minor

Economics is a social science and as such an important component of the liberal arts curriculum. At the core of economics are theories of how individuals, firms, and other organizations make choices and interact, taking into account constraints on their behaviors. Among the topics studied in economics are: the determination of prices and quantities in various types of markets (from perfectly competitive commodity markets to highly regulated utility markets and internet auctions); the effects of taxes, subsidies, and regulations; the determination of aggregate economic activity (e.g., GDP, unemployment); inflation, monetary policy, and financial intermediation; economic growth and income distribution; international trade and international finance (e.g., exchange rates). Economic policy questions stand at the center of public policy debates in the U.S. and countries all around the world. The goal of the Economic Policy Minor is to provide students who are not majoring in economics with the analytical tools that are necessary to participate in and shape public policy debates. The foundation for the minor is provided by the microeconomics and macroeconomics principles courses. After having completed the principles courses, the student can choose a minimum of four elective courses, which apply the basic tools of economic analysis to specific policy questions. The completion of the Economic Policy Minor does not require university-level calculus courses.

For more information: http://economics.sas.upenn.edu/undergraduate-program/economic-policy-minor

---

Economics, Minor

Economics is a social science and as such an important component of the liberal arts curriculum. At the core of economics are theories of how individuals, firms, and other organizations make choices and interact, taking into account constraints on their behaviors. Among the topics studied in economics are: the determination of prices and quantities in various types of markets (from perfectly competitive commodity markets to highly regulated utility markets and internet auctions); the effects of taxes, subsidies, and regulations; the determination of aggregate economic activity (e.g., GDP, unemployment); inflation, monetary policy, and financial intermediation; economic growth and income distribution; international trade and international finance (e.g., exchange rates). The Economics Minor is intended for students with a strong interest in rigorous economics who are majoring in related fields. For instance, this minor should be attractive for students who are majoring in political science or sociology, who are interested in quantitative data analysis, or students looking for an applied field that accompanies a major in mathematics.

For more information: http://economics.sas.upenn.edu/undergraduate-program/economics-minor

---

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

---
English, Minor

Students deciding to pursue English at Penn study language, literature, literary history and theories of literary production in a thirteen-course major of flexible design. While completing the language and literature requirement and the five required courses in the literary historical 'core,' majors also pursue their own special literary interests in six-course concentrations of their own choosing. English offers more than twenty distinct concentrations, including several options for creative writers.

For more information: http://www.english.upenn.edu/undergraduate/minor (http://www.english.upenn.edu/undergraduate/minor/)

Environmental Humanities, Minor

The minor in Environmental Humanities allows students to explore how attitudes and perceptions, ethics and social structures, arts, cultures and language respond to and shape our environments. The program places special emphasis on arts-driven inquiry into place, integrating the methods and modes of analysis traditionally associated with the arts and humanities with those of the social and natural sciences. The minor also emphasizes public research, training students to engage with publics outside the university in the processes of environmental knowledge-making. Students will complete both a customizable public engagement requirement and a final capstone project. The minor is open to undergraduates in all disciplines.

European Studies, Minor

European Studies at Penn is an interdisciplinary minor and an ideal addition to the study of many disciplines in the humanities and social sciences. It supplements majors in history, political science, sociology and art history as well as in French, German, English, Spanish, Italian and Slavic languages. It is designed to give students access to:

- An understanding of Europe as a historical and cultural entity and its world leadership in business, politics and culture.
- A great variety of countries, cultures and languages whose interaction with each other and with the United States is an essential part of transatlantic culture.
- The institutions of a new Europe—European Union, Council of Europe, European Court of Human Rights—reflecting the largest experiment in building a global system of governance in human history.

Fine Arts, Minor

The Undergraduate Fine Arts Program combines studio practices, seminar courses, and interactions with visiting artists and professionals in order to provide an open intellectual framework to foster critical awareness and independent methods of artistic research and learning. The Fine Arts Department offers a diverse range of studio courses in the areas of animation and 3D modeling, ceramics, design, drawing and painting, photography, printmaking, sculpture and video. The dynamic curriculum also provides students with the opportunity to thoroughly examine contemporary art, creative research, interactive design and public art through seminar-based instruction.

The Undergraduate Fine Arts Program offers a Fine Arts Major for students in the College of Arts and Sciences and School of Engineering, and a Fine Arts Minor for undergraduate students across the university. The Fine Arts program works in conjunction with three interdisciplinary degree programs in Cinema Studies, Digital Media Design and Visual Studies. Fine Arts courses are available to all students at the university to take as electives in order to enhance multidisciplinary learning.

A goal of the Undergraduate Fine Arts program is to facilitate an environment where the potentialities of art are considered in relation to the real life conditions of our students. Encouraged to test themselves against the rigors of divergent artistic approaches and their histories, our students develop a more complex set of skills to creatively and critically
negotiate the turbulent shifts taking place globally in terms of human experiences.

2 Must be taken in the Department at Penn.
3 At least one must be taken in the Department at Penn.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

French and Francophone Studies, Minor

French and Francophone Studies introduces students to the full span of historical and cultural traditions from France and the French-speaking world. Languages courses - from introductory to advanced - promote linguistic fluency, building on the skills students have acquired in high school or at Penn. Upper-level seminars explore a range of topics pertaining to literature, history, visual arts, and/or the media, and they offer majors and minors the opportunity to engage in research on French and global Francophone cultures across periods into contemporary times.

For more information: https://www.sas.upenn.edu/french/undergraduate/requirements-majors-and-minors/minor-french-francophone-studies/ (https://www.sas.upenn.edu/french/undergraduate/requirements-majors-and-minors/minor-french-francophone-studies/)

Gender, Sexuality, and Women's Studies, Minor

The Gender, Sexuality and Women's Studies Program is an interdisciplinary program that provides exciting intellectual opportunities to explore the role of gender in human affairs. The Gender, Sexuality and Women's Studies Program offers over 50 courses each year, many cross-listed with other departments. GSWS offers a major, a minor, and a graduate certificate.

Geology, Minor

The Geology minor is designed to provide the graduates with skills to determine the environmental and/or geologic events that have led to the structures and features of a location and to analyze a field site or geologic region. Areas of interest include mineralogy, petrology, volcanology, stratigraphy, economic geology and paleontology. Geology also includes subjects as varied as environmental geology, evolutionary biology, solid-state chemistry, oceanography, mineral economics and geochronology.

The minor program in Global Medieval Studies can easily be combined with a major in a language and literature tradition, philosophy, science, international relations, or even natural sciences, to name a few. As broadly educated historians and humanists, students of Global Medieval Studies can go on to a variety of occupations or continue their education in a range of graduate programs or professional schools.

German, Minor

The major and minor programs in the Department of Germanic Languages and Literatures provide deep understandings of language and cultures. Building from basic language competency to synthesizing significant literary works, historical context and current media and politics, the program offers a comprehensive education through engaged, active learning in a combination of core courses with a wide range of electives. Your learning experiences can be broadened and applied in study abroad as well as internship programs.

of the European Union. The Spanish transition to democracy in the 1970s fostered an environment of cultural, linguistic and political diversity that for half a century has served as a fascinating model for the rest of Europe, both east and west.

Hence, the knowledge of Spanish culture gives students much more than the ability to communicate in the third-most-spoken language of the world. It prepares them to account for an entirely different national, continental and global reality in all its complexity. Since culture is the controlling category in this field of studies, the major in Hispanic Studies orients itself to the types of knowledge generated by new disciplines such as cultural studies, new historicism, ethics, and postcolonial studies.

Majors in Hispanic Studies are overwhelmingly double majors. This means that they bring to their classes a dialogic perspective that engages in the study of Hispanic cultures informed by interest in other fields such as history, government, sociology, economics, medicine, and law. The richness and depth of these interests make for lively and intellectually rewarding classroom discussions.

International Development, Minor

The International Development minor is intended for students who wish to complement their primary area of study with an interdisciplinary focus on complex social problems associated with international development. The minor is intended to expand a student’s chosen major by focusing on critical development issues from several different academic perspectives. Approved courses emphasize problems of development in poor countries and poorer regions of wealthier countries. The interdisciplinary nature of the minor allows students to embrace a global perspective on the processes of change and development, critically assess internal and external influences on the development process, and gain a deeper perspective on the interconnectedness of complex problems.

International Relations, Minor

International Relations addresses the ways in which governments, private groups and individuals relate to each other in the global political and economic systems. The program provides a solid grounding in the methodologies of political science, history and economics. The curriculum draws on the best courses relevant to world politics, offers a well-rounded liberal arts education and helps prepare students for law or business school, Ph.D. programs and international careers.

**Italian Studies: Italian Culture, Minor**

The Italian Studies section of the Romance Languages Department offers programs in language, literature, film, linguistics, cultural studies and civilization for students with or without a background in Italian. At the core of this program is the study of the Italian language, understood both in the narrow sense of verbal communication, but also in the larger sense of textual messages: literary, cinematic, historical, art-historical, and mass-cultural.

---

**Jewish Studies, Minor**

The Jewish Studies Program provides an opportunity for students to study the Jewish experience from several perspectives including: language (Hebrew, Yiddish, and Ladino), literature in the original languages and in translation, the history and culture of the Jewish people from Biblical Israel to 21st-century America and modern Israel, the exploration of Jewish law, and the roles of gender and sex in Judaism. Students may specialize in Jewish Studies through a major or a minor, or though one of the following concentrations: Jewish History within the History Department, Hebraica/Judaica within the Department of Near Eastern Languages & Civilizations, and Judaism within the Department of Religious Studies.

consult with their academic program regarding final certifications and requirements for graduation.

Journalistic Writing, Minor

Creative Writing is the study of writing and literature with an emphasis on cultivating students’ own approach to craft. Students can choose from a range of workshops in fiction, creative nonfiction, poetry, screenwriting, playwriting, or journalism, all of which expose them to a range of writing in the field and give them opportunities to craft their own original work. Students can minor in Creative Writing by completing four workshop courses and two courses in the study of literature.

Journalistic Writing is the study of nonfiction writing and literature with an emphasis on cultivating students’ own skills in reporting, editing, interviewing, investigative journalism, media scholarship, and writing for a range of platforms. Students can minor in Journalistic Writing by completing six workshop courses in journalism and creative nonfiction, including one required course in long-form journalism.

Latin American and Latino Studies, Minor

The Latin American and Latino Studies (LALS) Program offers an interdisciplinary major and minor to study the history, arts, languages, cultures, societies, politics, and/or regional organizations of Latin American and Caribbean countries as well as Latino communities and individuals in the United States. With courses offered across many departments in the School of Arts and Sciences, in study abroad programs taught throughout Latin American cities, and with academically based community service courses with Latino organizations in the Greater Philadelphia area, the LALS major and minor afford our students a very comprehensive approach to Latin American and Latino Studies as well as the possibility of a flexible curriculum, where students can pursue and combine their academic interests.

Requirements: Language competence equal to two semesters of college study in Spanish or Portuguese.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Law and Society, Minor

The Law and Society Minor program gives students the opportunity to study and understand the law within a sociological framework, by examining both the factors that affect variations in the law, as well as how those variations affect individuals and populations differently. In addition to a theoretical foundation in Sociology, students in the minor will study issues involving the state, its relationship to other institutions such as religions, corporations, civil liberties, the organization of courts, punishment and detention, legislatures, international bodies and trade
agreements (such as NAFTA and the EU), race, class and gender and discrimination, reproductive rights, LGBT rights and the legal profession in general. Although the focus of this minor will be on U.S. laws and the U.S. society, laws and societies of other countries as well as international law and the international society will be used for comparative analysis.

The minor prepares students interested in the broad aspects of legal regulations and social organization. It is for students who are interested in graduate studies in law, applied community organizations, or business.

**Linguistics, Minor**

The Linguistics Program is intended to acquaint students with the methods and findings of the scientific study of human language and its relationships to cognition, society, and history. It serves as a preparation for graduate training in linguistics or related areas, and as part of a rigorous general education. Linguistic training is relevant to work in anthropology, philosophy, psychology, and language and literature, as well as to careers in such fields as education, computer science and law. Founded by Zellig Harris in 1947, the Penn Linguistics Department is the oldest modern linguistics department in the United States. We have outstanding programs in the core disciplines of syntax and phonology, as well as in sociolinguistics, semantics, discourse, historical linguistics, phonetics, and psycholinguistics. Penn is also the home of the Linguistic Data Consortium (LDC), a compiler and distributor of linguistic materials for language engineering research. The graduate group in Linguistics at the University of Pennsylvania is an interdisciplinary team of faculty from the Department of Linguistics and related departments. Our program has strong concentrations in several areas and a tradition of collaboration among its faculty.

The Logic, Information, & Computation Program offers students the opportunity to engage in a systematic, integrative program of study within the School of Arts and Sciences. Logic remains one of the core disciplines in investigations of information and computation. Indeed, logic is playing a major role in advances in computer security, database technology, networking, and software engineering. Moreover, logic has expanded its role within mathematics beyond foundational studies and now enjoys rich connections with areas as diverse as algebra, analysis, and combinatorics. In light of the current importance of the investigation of computation and information from both a scientific and technological point of view, the Major and Minor in Logic, Information, and Computation will provide students with a strong background to pursue computational aspects of the natural, biological, and social sciences and prepare them for careers in information technology.

For more information: http://logic.sas.upenn.edu/program.html
Mathematics, Minor

At the core of modern theoretical science, mathematics has historically provided an expressive language as well and theoretical framework for advances in the physical sciences. It has since become central in the life and social sciences and computer science. Mathematics at Penn embraces traditional core areas of mathematics as well as developing areas (Penn is one of the world's leading centers in the application of logic to theoretical computer science). The goals of the major program are to assist students in acquiring both an understanding of mathematics and an ability to use it. The mathematics major provides a solid foundation for graduate study in mathematics as well as background for study in economics, the biological sciences, the physical sciences and engineering, as well as many non-traditional areas.

Review the math minor first by visiting, http://www.math.upenn.edu/ugrad/minor.html. Below is a planning tool that is meant to help you but does not replace the web and adviser visit requirements.

1 Check: http://logic.sas.upenn.edu for pre-approved courses.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Medical Sociology, Minor

The Medical Sociology minor gives students the opportunity to engage in the sociological study of medicine and the health of populations. A sociological perspective on medicine allows students to critically engage with the social and cultural framing of what is defined as "illness"; the structural factors that may contribute to those illnesses; and the interactive dynamics between healthcare providers and patients.

Students will be able to critically connect the organization of social groups with the profession of medicine, the practice of medical care, and the social factors that contribute to sickness and well-being. Students who complete this minor will have a theoretical foundation in Sociology, and a dynamic perspective on health and healthcare in the world today.

For more information: https://sociology.sas.upenn.edu/medicalsociologyminor (https://sociology.sas.upenn.edu/medicalsociologyminor/)

- Bioethics and Medical Sociology minors cannot double count more than 1 course unit.
- HSOC majors and Medical Sociology minors cannot double count more than 1 course unit.
### Modern Middle Eastern Studies, Minor

The interdisciplinary Modern Middle Eastern Studies degree is designed to allow students to specialize in the Middle East as a region of the world and human experience by combining course work using both social scientific and humanistic approaches, underpinned by relevant language skills. Students will work with faculty committed to supporting interdisciplinary, applied, research-oriented advanced study. The minor gives students opportunities to work on problems of politics, policy, history, ideology, social thought, economic development, and international relations.

### Music: Music, Minor

There are two paths of study for the Music minor. One flexible path allows students to draw together five courses on a wide array of topics in History, Theory, and Ethnomusciology. The other path is the Interdisciplinary minor in Jazz and Popular music studies, which is intended for students who wish to integrate their interest in music in the contemporary world and in academically-based community service as a form of learning. This minor is also for music majors who wish to include knowledge of jazz and popular music performance into their degrees.

Total Course Units 6

1 Only 1 course unit of performance coursework may be used toward minor electives. Consult with the Minor advisor.

2 If MUSC 007 Ensemble Performance (0.5 course unit) is chosen as an elective, additional semesters are required.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Native American and Indigenous Studies, Minor

The Native American and Indigenous Studies (NAIS) Initiative at Penn features an inter-disciplinary Minor that focuses on the cultures and histories of Native Americans, First Nations, and other Indigenous peoples. Students can explore a diverse range of topics, including cross-cultural historical encounters, heritage landscapes, language recovery, cultural performance, law and sovereignty, museum anthropology, archaeology, decolonizing methods, and more. Many NAIS courses are cross-listed in more than one department (e.g., Anthropology, History). NAIS Faculty often use comparative case studies of Indigenous communities in different world settings, past and present, to illuminate current issues, locally and globally.

For more information: https://nais.sas.upenn.edu/

NAIS courses must be taken for a grade (not pass/fail). Students must achieve a grade no lower than a C in each course.

1 Please check the online description of the minor for the possible combinations of ancient language courses that can fulfill this requirement.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

### Near Eastern Languages & Civilizations: Arabic & Islamic Studies, Minor

Arabic and Islamic Studies focuses on languages and cultures of the wider Middle East in the context of Islamic Civilization. Because of the interdependence of language and culture, a primary emphasis is on gaining mastery of Middle Eastern languages such as Arabic and Turkish, alongside coursework in history, religion, and culture.

1 Normally fulfilled by 2nd-year level of Arabic and Hebrew. If already proficient in one language, you must choose the other language.

2 Must include courses on Arabic and Hebrew cultures: modern and/or medieval in history, literature and religion. NOTE: No more than one PSCI course may be taken as an elective.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

### Near Eastern Languages & Civilizations: Hebrew & Judaica, Minor

This concentration explores Hebrew culture from the Biblical through the Rabbinic and Medieval periods, and into modern times. Emphasis is on gaining facility in use of Hebrew language alongside courses in history, religion, literature and culture.

1 It is strongly recommended that Core A & B courses be taken prior to the Elective courses.
2 See website (http://www.nursing.upenn.edu/nutrition-minor/plans-of-study/) for list of approved elective courses.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.
Philosophy, Minor

Philosophy seeks to illuminate fundamental aspects of the world, of our relation to and knowledge of the world, and of our own nature as rational, purposive, and social beings. The study of philosophy aims at an appreciation of the ways this enterprise has been, is, and might be approached. It also provides a vantage point for reflecting on the nature and achievement of other disciplines, such as science, the arts, and the humanities. Philosophical topics can be divided roughly into practical (ethics, politics, aesthetics) and theoretical (epistemology, metaphysics, mind, and logic). The Philosophy Minor requires a Philosophy balanced selection of courses in the various fields of philosophy and its history.

Physics, Minor

The aim of physicists is to discover the most fundamental principles of nature. Their tools are mathematics and experiment. The physical world as we perceive it is very complex, yet the principles of physics are inherently simple. A physicist’s forte is the ability to analyze a problem, reduce its complexity, and arrive at an understanding of the underlying patterns of nature in terms of simple relationships among constituent elements. Learning to do this gives Physics minors an intellectual versatility that can serve them well in a variety of future activities ranging from research and teaching in Physics or related sciences to careers in law, the health professions, and high-technology companies.

Psychoanalytic Studies, Minor

Psychoanalytic ideas provide a coherent basis for understanding how people feel and think, and how they function as individuals and in groups. These ideas, centered on unconscious emotional processes and human relationships, continue to evolve and develop. They form a bridge across many disciplines throughout the humanities, social sciences, and some of the natural sciences. Penn is now one of very few schools in the country (and the world) to offer the exciting opportunity of a minor in Psychoanalytic Studies.

As it provides a unifying body of ideas, Psychoanalytic Studies comprises courses in many departments. The minor is designed in partnership with the Psychoanalytic Center of Philadelphia, and students who sign up for the minor also have the opportunity to meet monthly with a practicing psychoanalyst to learn about contemporary psychoanalytic theories and therapies. Students who complete six courses that count toward the minor as well as a series of meetings with a psychoanalytic mentor will receive both the minor on their transcript and a Certificate of Accomplishment from the Psychoanalytic Center of Philadelphia.

History, Psychology, Political Science, or even Nursing, Engineering, Pre-Med, Pre-Law, and Business. Students in Wharton or the College of Nursing have taken a Religious Studies minor to gain some fluency in matters of business ethics, bio-ethics, cross-cultural analysis, inter-religious affairs, and the like.

Every minor program must include six courses in at least two different religious traditions. At least two of the six courses must be taken with core Department faculty. Students wishing to focus on an individualized topic may work out a program with the Undergraduate Chair. RELS also offers many course options which can count towards College Sector requirements, which makes it easier to incorporate the RELS minor into a typical undergraduate course-load.

For more information: https://www.sas.upenn.edu/religious_studies/undergraduate/minor

**Russian and East European Studies: Russian Culture and History, Minor**

The Department of Slavic Languages and Literatures offers programs in Russian and, with the support of the Penn Language Center, courses in the Czech and Polish languages. The department also offers a series of courses for students who have spoken Russian at home and wish to gain literacy and/or improve their language skills or to pursue the study of Russian literature and culture in Russian. Students of Russian at Penn are invited to reside in the Russian House (which brings together students interested in daily use of the language) and encouraged to spend a semester of study abroad.

### Science, Technology and Society, Minor

Science, Technology & Society (STSC) examines the social contexts in which science and technology occur, the organizations of people and things that make up science and technology systems, and the social and cultural consequences of scientific and technological change over time. In a wide array of courses, STSC majors explore the relationship between scientific knowledge, technological innovations, technological systems, and society past and present.

### Sociology, Minor

The Sociology Minor program allows students to get an introduction to major sociological concepts and theories, along with methods for sociological research, and a broad foundation of substantive, empirical, and theoretical knowledge rooted in the discipline.

For more information: [https://sociology.sas.upenn.edu/sociologyminor](https://sociology.sas.upenn.edu/sociologyminor/)

### Statistics, Minor

The aim of statistical modeling is to empower effective decision making, and the field's unique contribution is its ability to incorporate multiple levels of uncertainty in the framing of wise decisions. Over the last few years, the development of new computational tools and the unprecedented evolution of "big data" have propelled statistical modeling to new levels. Today, statistical modeling and machine learning have reached a level of impact that no large organization can afford to ignore. The information landscape is changing as it has never changed before.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.
Students interested in this minor must have the prior approval of the Statistics Undergraduate Program Director, Professor Abraham Wyner (ajw@wharton.upenn.edu), to develop a curriculum for the minor that is appropriate for their interests. Wharton students are not eligible for this minor.

For more information: https://statistics.wharton.upenn.edu/programs/undergraduate/statistics-minor/

Statistics, Minor

This minor is for students outside of Wharton. Single-degree and dual-degree students with Wharton may pursue a statistics concentration instead.

1 The statistics prerequisite may also be satisfied with 2 course units of Economic Statistics, such as ECON 103 and 104. These students do not need to take any other introductory courses, but they must take all upper-level course from within the Statistics Department.

2 Since STAT 430 Probability is also a core course, students who complete STAT 430 Probability and STAT 431 Statistical Inference as an introductory sequence must complete four additional electives for the minor.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Survey Research and Data Analytics, Minor

The Survey Research and Data Analytics minor is intended for students who wish to complement their primary area of study with an interdisciplinary focus on using data and survey methods for conducting research and evaluating programs, policies, and outcomes in the social sciences.

For more information: http://pores.upenn.edu/students/survey-research-data-analytics-minor (http://pores.upenn.edu/students/survey-research-data-analytics-minor/)

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Sustainability and Environmental Management, Minor

The Sustainability and Environmental Management minor is focused on sustainability and it is designed to help students understand the nature of environmental constraints which face organizations and individuals in the modern world, and to understand how these constraints can be effectively considered as part of the decision-making process in for-profit and non-profit organizations.

Theatre Arts, Minor

The Theatre Arts Program offers a six-course minor, with three courses that focus on academic approaches to the theatre, such as the study of dramatic literature, theory, history and criticism, and three that focus practical aspects of performance, such as acting, directing, designing, devising, and playwriting. English majors concentrating on drama will find courses that cross-list; a diverse group of students with a wide array of major fields of study find it possible to pursue their interest in Theatre Arts with a minor.

For more information: http://theatre.sas.upenn.edu

Urban Education, Minor

The Urban Education Minor is open to undergraduates in all disciplines, and requires seven CUs. Students choose from among three concentrations depending on interest in pursuing teaching certification or deepening one's background in urban education policy: Elementary Education; Secondary Education; Urban Education Policy, Research, and Practice. Students in all three concentrations take three core courses. The additional four requirements vary depending on the track.

For more information: http://www.sas.upenn.edu/urban/students/urban-education-minor (http://www.sas.upenn.edu/urban/students/urban-education-minor/)
Urban Real Estate and Development, Minor

This minor, co-sponsored by Real Estate (Wharton) and Urban Studies (Arts and Sciences), is designed to enable students to combine an interest in Urban Studies and Real Estate Development. Students take a total of seven Urban Studies and Real Estate courses, in consultation with the minor advisor.

For more information: http://www.sas.upenn.edu/urban/students/real-estate-development-minor

Prequisite to taking any Wharton courses: ECON 001 Introduction to Micro Economics and ECON 002 Introductory Economics: Macro. Also, check prerequisites for Wharton courses and fulfill.

### Liberal and Professional Studies

The College of Liberal and Professional Studies (LPS) is the home of lifelong learning at the University of Pennsylvania. Housed within the School of Arts and Sciences, we offer high school, undergraduate, post-baccalaureate, graduate, summer and online studies as well as customizable professional training with courses that span across disciplines.

Our outstanding students—engaged, curious and driven—come to Penn from all over the world with diverse academic and professional backgrounds. Whether you want to learn English while immersed in an Ivy League institution, join the global classroom in a MOOC, spend your summer abroad or start a new career, LPS offers the very best opportunities.

No matter where you are in life, or in the world—preparing for college, living overseas, working full-time, active in the military or studying on-campus—the College of Liberal and Professional Studies opens the Ivy League to you.

For more information: https://www.sas.upenn.edu/lps/undergraduate

### Undergraduate Programs

- Creative Studies, BAAS (p. 174)
- Data Analytics and Psychological Sciences, BAAS (p. 175)
- Data Analytics and Social Sciences, BAAS (p. 176)
- Fine Arts, BFA (p. 178)
Creative Studies, BAAS

By studying the transformative creations of others in the social, cultural, and historical contexts in which they were produced, you can nurture your own creative expression and develop a deeper understanding of the creative process in action. A concentration in Creative Studies offered by Penn LPS Online combines experiential and applied humanities through the study of the creative arts, expanding your ability to critically analyze, compare, and evaluate the meanings and significance of creativity as expressed across a variety of media. In this degree concentration, you engage in individual and collaborative creative writing and explore a range of creative accomplishments in fields including literature, cinema studies, theater, and other arts.

For more information: https://lpsonline.sas.upenn.edu/academics/bachelors-degree/baas-concentrations/creative-studies

Curriculum

The Bachelor of Applied Arts and Sciences (BAAS) recognizes the power of an applied liberal arts education to provide students with strong communication skills, understanding of different cultures and perspectives, and the ability to apply their knowledge to nuanced, complex scenarios with insight, perspective, and empathy.

Overview of degree requirements

30 course units are required for the Bachelor of Applied Arts and Sciences degree.

### Undergraduate Certificates

- Applied Positive Psychology, Certificate (p. 185)
- Climate Change, Certificate (p. 185)
- Creative Writing, Certificate (p. 186)
- Data Analytics, Certificate (p. 186)
- Leadership & Communication, Certificate (p. 187)
- Modern Middle East Studies, Certificate (p. 188)
- Neuroscience, Certificate (p. 188)
- Organizational Anthropology, Certificate (p. 189)
- Professional Writing, Certificate (p. 189)

In addition to course requirements, BAAS students complete a capstone project in their degree concentration as well as an e-portfolio.

### Foundational requirements

The foundational requirements of the BAAS degree reflect the core competencies and values of Penn LPS Online: the skills and knowledge needed to understand and solve complex problems, the ability to communicate effectively with a wide variety of audiences and an appreciation for diverse cultures and traditions. Students can transfer a maximum of 4 course units of foundational courses from a regionally accredited institution. Our program team can also give a preliminary evaluation of transfer credits before students officially apply. Visit the Transfer Preparation & Policies page for more details.

### Concentrations

Just as a college major serves to focus your studies during a four-year degree, the BAAS concentrations enable students to tailor their undergraduate education to specific personal and professional goals. Concentrations progress from introductory-level courses to higher-level courses so that students develop skills and knowledge with greater complexity as they move through the curriculum. Many concentrations are interdisciplinary, to provide students with opportunities to explore their areas of interest from multiple perspectives and develop a flexible approach to solving complex problems in professional as well as academic contexts.

</tr>
</tbody>
</table>

BAAS students are only required to visit campus for two on-campus learning experiences, which may be as short as an extended weekend.
Electives

Electives are courses that do not apply toward your foundational or degree concentration requirements. You may choose to deepen your field of study by taking additional classes within your concentration, develop a new skill by completing all of the courses within a course block outside of your degree concentration, or discover new interests and abilities by taking individual courses that appeal to your interests. Students choose 10 electives from any of Penn LPS Online’s areas of study. Transfer students can apply a maximum of 8 course units from a regionally accredited institution toward this requirement.

* With input from an academic advisor (up to 3 courses can transfer with advisor’s approval).
** Creative Writing courses: https://lpsonline.sas.upenn.edu/academics/bachelors-degree/baas-course-blocks/creative-writing
Cinema Studies courses: https://lpsonline.sas.upenn.edu/academics/bachelors-degree/baas-course-blocks/cinema-studies
English Literature courses: https://lpsonline.sas.upenn.edu/academics/bachelors-degree/baas-course-blocks/english-literature

E-portfolio and capstone requirements

Throughout the BAAS degree, students draw on their coursework to build a digital collection of materials, or e-portfolio. The e-portfolio is a powerful tool to ensure that academic studies are aligned with professional, personal and academic goals. Developing the e-portfolio provides students with the opportunity to reflect on selected assignments and how they can be applied to the broader context of their current and future careers. Students can share their e-portfolios with prospective and current employers to provide evidence of the skills and knowledge they have developed through coursework.

One advanced course in each concentration will require students to complete a final project, or capstone, in which they integrate learning and skills from across the full concentration. Capstone projects will be graded as a requirement of the course and also will serve as the final culminating artifact for students’ e-portfolios. Students will have the option to come to campus to present their final projects and receive face-to-face feedback from fellow students as well as the course instructor. Students who choose this option can use it to fulfill their elective on-campus learning experience requirement.

On-campus learning experience requirements

BAAS students are only required to visit campus for two on-campus learning experiences, which may be as short as an extended weekend. In addition to course requirements, BAAS students complete a capstone project in their degree concentration as well as an e-portfolio.

Our program team can also give a preliminary evaluation of transfer credits before students officially apply. Visit the Transfer Preparation & Policies (https://lpsonline.sas.upenn.edu/admissions/baas-admissions/transfer-preparation-policies/) page for more details.

Data Analytics and Psychological Sciences, BAAS

The Data Analytics and Psychological Sciences concentration offers the opportunity to improve your data literacy while developing strategies that support personal, organizational, and community well-being. In this degree concentration, you learn how well-being is measured, what activities can increase human flourishing, and how to apply analytical and statistical methods to effectively interpret and communicate data.

Curriculum

The Bachelor of Applied Arts and Sciences (BAAS) recognizes the power of an applied liberal arts education to provide students with strong communication skills, understanding of different cultures and perspectives, and the ability to apply their knowledge to nuanced, complex scenarios with insight, perspective, and empathy.

Students who choose this option can use it to fulfill their elective on-campus learning experience requirement.

On-campus learning experience requirements

BAAS students are only required to visit campus for two on-campus learning experiences, which may be as short as an extended weekend. These face-to-face instructional experiences have been developed to provide students with opportunities for engagement with the Penn campus, while also providing students with choices for the experiences that best fit into their own schedules.

Data Analytics and Social Sciences, BAAS

Combine the analytical tools of data science with an applied understanding of the social sciences. The Data Analytics and Social Sciences concentration offers the opportunity to integrate data analytics with insight into historical, political, economic, or behavioral contexts. In this degree concentration, you develop statistical and data programming skills to address real-world problems, learn to make and persuasively communicate data-driven decisions, and customize your studies with courses in global and area studies, organizational anthropology, leadership, and other social sciences.

For more information: https://lpsonline.sas.upenn.edu/academics/bachelors-degree/baas-concentrations/data-analytics-and-social-sciences/

BAAS students are only required to visit campus for two on-campus learning experiences, which may be as short as an extended weekend. In addition to course requirements, BAAS students complete a capstone project in their degree concentration as well as an e-portfolio.

**Foundational requirements**

The foundational requirements of the BAAS degree reflect the core competencies and values of Penn LPS Online: the skills and knowledge needed to understand and solve complex problems, the ability to communicate effectively with a wide variety of audiences and an appreciation for diverse cultures and traditions. Students can transfer a maximum of 4 course units of foundational courses from a regionally accredited institution. Our program team can also give a preliminary evaluation of transfer credits before students officially apply. Visit the Transfer Preparation & Policies (https://lpsonline.sas.upenn.edu/admissions/baas-admissions/transfer-preparation-policies/) page for more details.

**Electives**

Electives are courses that do not apply toward your foundational or degree concentration requirements. You may choose to deepen your field of study by taking additional classes within your concentration, develop a new skill by completing all of the courses within a course block outside of your degree concentration, or discover new interests and abilities by taking individual courses that appeal to your interests. Students choose 10 electives from any of Penn LPS Online’s areas of study. Transfer students can apply a maximum of 8 course units from a regionally accredited institution toward this requirement.

**E-portfolio and capstone requirements**

Throughout the BAAS degree, students draw on their coursework to build a digital collection of materials, or e-portfolio. The e-portfolio is a powerful tool to ensure that academic studies are aligned with professional, personal and academic goals. Developing the e-portfolio provides students with the opportunity to reflect on selected assignments and how they can be applied to the broader context of their current and future careers. Students can share their e-portfolios with prospective and current employers to provide evidence of the skills and knowledge they have developed through coursework.

One advanced course in each concentration will require students to complete a final project, or capstone, in which they integrate learning and skills from across the full concentration. Capstone projects will be graded as a requirement of the course and also will serve as the final culminating artifact for students’ e-portfolios. Students will have the option to come to campus to present their final projects and receive face-to-face feedback from fellow students as well as the course instructor. Students who choose this option can count it toward their elective on-campus learning experience requirement.
On-campus learning experience requirements

BAAS students are only required to visit campus for two on-campus learning experiences, which may be as short as an extended weekend. These face-to-face instructional experiences have been developed to provide students with opportunities for engagement with the Penn campus, while also providing students with choices for the experiences that best fit into their own schedules.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Fine Arts, BFA

For nearly 100 years, the University of Pennsylvania has partnered with the Pennsylvania Academy of the Fine Arts to provide students with an unparalleled opportunity to pursue their artistic passions and intellectual pursuits in the Ivy League.

The Bachelor of Fine Arts offers self-motivated and committed students the chance to design a curriculum at the intersection of your interests. As a Penn BFA student, you have access to a broad range of more than 500 courses taught throughout the School of Arts and Sciences and more than 300 courses within the College of Liberal and Professional Studies, in more than 50 areas of study. The Bachelor of Fine Arts program prioritizes the power of personal connection—between students, teachers, and program staff.

For more information: https://www.sas.upenn.edu/undergraduate/bfa/

Curriculum

As a Bachelor of Fine Arts (BFA) student, you’ll have access to a broad range of courses taught within the College of Liberal and Professional Studies and have choices from throughout the School of Arts and Sciences. Upon acceptance into the program, you will be assigned an advisor who will help you choose your coursework.

To earn the Bachelor of Fine Arts degree at Penn, you must complete the 90-credit, three-year program at PAFA, as well as a minimum of 16 course units (CU)¹ at Penn.

Curriculum requirements at Penn include the completion of four course units chosen from within the History of Art Department and 12 free electives chosen from throughout the School of Arts and Sciences.

Participation in the joint Bachelor of Fine Arts degree program is a unique opportunity designed with specific curricular goals. As a result, some types of courses cannot be counted toward your degree. These include:

- Other Penn courses outside the School of Arts & Sciences (the School of Engineering and Applied Sciences, the Wharton School of Business, the School of Nursing, etc.)
- Studio-based courses offered by or cross-listed with the Fine Arts department at Penn
- Courses from any other educational institution

Minors

As a Bachelor of Fine Arts degree student, you may wish to complete a minor chosen from within the School of Arts and Sciences offerings. The number of courses required to complete a minor varies between departments but is usually between six and eight courses. If you would like to explore the possibility of minoring, please be sure to consult with your academic advisor in the College of Liberal Arts and an advisor in your minor department of interest. Once you have declared a minor, you will have a minor advisor assigned to you, who will provide guidance with appropriate course selection to meet requirements.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Individualized, BAAS

The Bachelor of Applied Arts and Sciences is designed to meet your unique needs—including the ability to design your own degree concentration to develop the knowledge and skills you need to fulfill your life goals and career ambitions. While most BAAS degree concentrations are interdisciplinary, combining areas of study to encourage greater complexity and flexibility as you explore your interests, the Individualized Studies concentration goes a step further. With input from your academic advisor, you can combine courses from any three certificates or course blocks for a highly personalized learning experience.

Curriculum

Students in the Bachelor of Applied Arts and Sciences degree will choose a concentration to tailor their undergraduate education to specific personal and professional goals. Courses within each concentration may be taken in any order, unless prerequisites are specified.

Students must complete foundational courses for the Bachelor of Applied Arts and Sciences degree. In addition, students in the Individualized Studies degree concentration can work with an academic advisor to focus their studies toward any three certificates or course blocks; complete four courses in each of your selected course blocks for a total of 12 courses (12 CU*).

Take four courses from any three of the following course blocks:

- Applied Positive Psychology (https://lpsonline.sas.upenn.edu/academics/bachelors-degree/baas-course-blocks/applied-positive-psychology/)
- Cinema Studies (https://lpsonline.sas.upenn.edu/academics/bachelors-degree/baas-course-blocks/cinema-studies/)
- Classics (https://lpsonline.sas.upenn.edu/academics/bachelors-degree/baas-course-blocks/classics/)
- Climate Change (https://lpsonline.sas.upenn.edu/academics/bachelors-degree/baas-course-blocks/climate-change/)
- Creative Writing (https://lpsonline.sas.upenn.edu/academics/bachelors-degree/baas-course-blocks/creative-writing/)
- Data Analytics (https://lpsonline.sas.upenn.edu/academics/bachelors-degree/baas-course-blocks/data-analytics/)
Leadership and Communication, BAAS

The Leadership and Communication concentration is an exciting skills-building and career-enhancing program designed by distinguished, award-winning Ivy League academic experts and researchers in consultation with top executives and leaders from the real worlds of business, government, and the nonprofit sector. An Ivy League degree path to effective, ethical and career-boosting leadership (subheading – same size as ‘Overview of degree requirements’ below). Drawing expertly on the social sciences, humanities, and data sciences, each of the twelve Leadership and Communication courses is scheduled especially for working adults and taught by dedicated and experienced Penn-affiliated scholars. Each Leadership and Communication course brings you one step closer to having the intellectual understanding and professional skills needed for effective, ethical, career-boosting leadership and communication. Each course meets for eight weeks in an accelerated semester format. The curriculum is divided into four parts: Leadership Foundations; Leading Across Sectors; Leading Positively; and Global Leadership.

For more information: https://lpsonline.sas.upenn.edu/academics/bachelors-degree/baas-concentrations/leadership-and-communication

The Bachelor of Applied Arts and Sciences (BAAS) recognizes the power of an applied liberal arts education to provide students with strong communication skills, understanding of different cultures and perspectives, and the ability to apply their knowledge to nuanced, complex scenarios with insight, perspective, and empathy.

Concentrations
Just as a college major serves to focus your studies during a four-year degree, the BAAS concentrations enable students to tailor their undergraduate education to specific personal and professional goals. Concentrations progress from introductory-level courses to higher-level courses so that students develop skills and knowledge with greater complexity as they move through the curriculum. Many concentrations are interdisciplinary, to provide students with opportunities to explore their areas of interest from multiple perspectives and develop a flexible approach to solving complex problems in professional as well as academic contexts.

Electives
Electives are courses that do not apply toward your foundational or degree concentration requirements. You may choose to deepen your field of study by taking additional classes within your concentration, develop a new skill by completing all of the courses within a course block outside of your degree concentration, or discover new interests and abilities by taking individual courses that appeal to your interests. Students choose 10 electives from any of Penn LPS Online's areas of study. Transfer students can apply a maximum of 8 course units from a regionally accredited institution toward this requirement.

E-portfolio and capstone requirements
Throughout the BAAS degree, students draw on their coursework to build a digital collection of materials, or e-portfolio. The e-portfolio is a powerful tool to ensure that academic studies are aligned with professional, personal and academic goals. Developing the e-portfolio provides students with the opportunity to reflect on selected assignments and how they can be applied to the broader context of their current and future careers. Students can share their e-portfolios with prospective and current employers to provide evidence of the skills and knowledge they have developed through coursework.

One advanced course in each concentration will require students to complete a final project, or capstone, in which they integrate learning and skills from across the full concentration. Capstone projects will be graded as a requirement of the course and also will serve as the final culminating artifact for students’ e-portfolios. Students will have the option to come to campus to present their final projects and receive face-to-face feedback from fellow students as well as the course instructor. Students who choose this option can use it to fulfill their elective on-campus learning experience requirement.

On-campus learning experience requirements
BAAS students are only required to visit campus for two on-campus learning experiences, which may be as short as an extended weekend. These face-to-face instructional experiences have been developed to provide students with opportunities for engagement with the Penn campus, while also providing students with choices for the experiences that best fit into their own schedules.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Literature, Culture and Tradition, BAAS
The humanities and social sciences help us to understand cultures through historical and contemporary lenses. In the Literature, Culture, and Tradition concentration, offered by Penn LPS Online, you study and analyze the worldviews of different cultures, exploring cultural change and continuity over time and place. Through historical, literary, and cultural analysis of sources and artifacts, you develop research skills
and learn to evaluate complex cultures and scenarios. You also apply the same analytical approaches to gain critical insights into current world challenges.

Organizational Studies, BAAS
The Organizational Studies concentration offered by Penn LPS Online provides you with the critical and interpersonal skills required to work effectively in any professional context. Through integrated and applied courses in writing, speaking, and group dynamics, you learn to identify your communication goals, understand your audience, and adapt your messaging and strategy to achieve a successful outcome. To meet the challenges of today’s complex work environments, you also develop the skills to build and work effectively in diverse teams, both in physical and virtual professional environments.

**On-campus learning experience requirements**

BAAS students are only required to visit campus for two on-campus learning experiences, which may be as short as an extended weekend. These face-to-face instructional experiences have been developed to provide students with opportunities for engagement with the Penn campus, while also providing students with choices for the experiences that best fit into their own schedules.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**Physical & Life Sciences, BAAS**

The physical and life sciences share fundamental principles that lie at the heart of scientific discovery and innovation. The Physical and Life Sciences concentration is a hybrid course of study including both online and on-campus courses. If you are enrolled in the Bachelor of Applied Arts and Sciences (BAAS) program and wish to declare a concentration in Physical and Life Sciences and enroll in some on-campus courses, you must take a diagnostic exam to be admitted. On-campus science courses become available to Physical and Life Sciences students beginning in Fall 2020.

While Penn LPS Online students may enroll in online courses within the Climate Change and Neuroscience course blocks without committing to the Physical and Life Sciences concentration, on-campus science courses are only available to BAAS degree students who have been admitted to the Physical and Life Sciences concentration.

For more information: https://lpsonline.sas.upenn.edu/academics/bachelors-degree/baas-concentrations/physical-and-life-sciences/

In addition to course requirements, BAAS students complete a capstone project in their degree concentration as well as an e-portfolio.

**Foundational requirements**
The foundational requirements of the BAAS degree reflect the core competencies and values of Penn LPS Online: the skills and knowledge needed to understand and solve complex problems, the ability to communicate effectively with a wide variety of audiences and an appreciation for diverse cultures and traditions. Students can transfer a maximum of 4 course units of foundational courses from a regionally accredited institution. Our program team can also give a preliminary evaluation of transfer credits before students officially apply. Visit the Transfer Preparation & Policies (https://lpsonline.sas.upenn.edu/admissions/baas-admissions/transfer-preparation-policies/) page for more details.

**Concentrations**
Just as a college major serves to focus your studies during a four-year degree, the BAAS concentrations enable students to tailor their undergraduate education to specific personal and professional goals. Concentrations progress from introductory-level courses to higher-level courses so that students develop skills and knowledge with greater complexity as they move through the curriculum. Many concentrations are interdisciplinary, to provide students with opportunities to explore their areas of interest from multiple perspectives and develop a flexible approach to solving complex problems in professional as well as academic contexts.

</tbody>
</table>

Electives are courses that do not apply toward your foundational or degree concentration requirements. You may choose to deepen your field of study by taking additional classes within your concentration, develop a new skill by completing all of the courses within a course block outside of your degree concentration, or discover new interests and abilities by taking individual courses that appeal to your interests. Students choose 10 electives from any of Penn LPS Online’s areas of study. Transfer students can apply a maximum of 8 course units from a regionally accredited institution toward this requirement.

* Mathematical Sciences courses: https://lpsonline.sas.upenn.edu/academics/bachelors-degree/baas-course-blocks/mathematical-sciences
** Climate Change courses: https://lpsonline.sas.upenn.edu/academics/bachelors-degree/baas-course-blocks/climate-change
*** Neuroscience courses: https://lpsonline.sas.upenn.edu/academics/bachelors-degree/baas-course-blocks/neuroscience
*** With input from an academic advisor (up to 3 courses can be transfer courses).

**E-portfolio and capstone requirements**
Throughout the BAAS degree, students draw on their coursework to build a digital collection of materials, or e-portfolio. The e-portfolio is a powerful tool to ensure that academic studies are aligned with professional, personal and academic goals. Developing the e-portfolio provides students with the opportunity to reflect on selected assignments and how they can be applied to the broader context of their current and future careers. Students can share their e-portfolios with prospective and current employers to provide evidence of the skills and knowledge they have developed through coursework.

One advanced course in each concentration will require students to complete a final project, or capstone, in which they integrate learning and skills from across the full concentration. Capstone projects will be graded as a requirement of the course and also will serve as the final culminating artifact for students’ e-portfolios. Students will have the option to come to campus to present their final projects and receive face-to-face feedback from fellow students as well as the course instructor. Students who choose this option can use it to fulfill their elective on-campus learning experience requirement.

**On-campus learning experience requirements**
BAAS students are only required to visit campus for two on-campus learning experiences, which may be as short as an extended weekend. These face-to-face instructional experiences have been developed to provide students with opportunities for engagement with the Penn campus, while also providing students with choices for the experiences that best fit into their own schedules.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.
Applied Positive Psychology, Certificate

Applied Positive Psychology is a discipline that examines the intersections of body, brain, culture, and science to develop tools and practices that enhance human flourishing and well-being. In this 4-course, 4 course unit course of study, you will be introduced to the field of positive psychology and will learn tools and practice strategies that support personal, organizational, and community well-being. The courses teach you the theoretical and empirical foundations of human flourishing, how well-being is measured, and what activities increase human flourishing in various contexts and settings.

Penn LPS Online courses in the Certificate in Applied Positive Psychology are offered on an accelerated (8-week) schedule. Courses in the certificate program are largely asynchronous with some optional synchronous sessions to be scheduled by the instructors. For more information about specific course dates, please visit the Course Schedule (https://lpsonline.sas.upenn.edu/academics/course-schedule/) page.

You have the option to enroll in individual courses without committing to the entire certificate, enjoying the flexibility and expertise offered by Penn LPS Online to suit your schedule and interests. Courses within the Certificate in Applied Positive Psychology may be applied to our Bachelor of Applied Arts and Sciences degree, but do not count toward Penn's Master of Applied Positive Psychology degree.

For more information: https://lpsonline.sas.upenn.edu/academics/certificates/applied-positive-psychology (https://lpsonline.sas.upenn.edu/academics/certificates/applied-positive-psychology/)

The Certificate in Applied Positive Psychology prepares you to:

- Learn the historical and empirical foundations of positive psychology and the science of well-being
- Explore key research themes (e.g., positive emotions, strengths, engagement, relationships, meaning, and accomplishment) and their relevance in personal and organizational settings
- Apply research in positive psychology by practicing strategies that influence well-being
- Investigate applications of positive psychology in different professional settings, including business, education, healthcare, and the nonprofit sector
- Learn the basics of research, measurement, and evaluation in positive psychology

Curriculum

It is strongly recommended that students earning the Certificate in Applied Positive Psychology first complete APOP 100 Introduction to Positive Psychology.

Courses are subject to change.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Climate Change, Certificate

Climate change represents one of the most controversial and least understood threats to human, economic and environmental well-being on a global scale. The study of climate change offers an opportunity to develop the skills and effective policies to reduce risk and better adapt to a changing environment. In this 4-course, 4 course unit certificate you gain an understanding of the Earth's climate system and how and why it has changed over time. Within the disciplines of oceanic and atmospheric science, you focus on the mechanisms that drive climate change, both natural and the result of human actions. You also develop the communication skills to more effectively share an understanding of climate change and its relevant policy implications with a broad audience.

Penn LPS Online courses in the Certificate in Climate Change are offered on an accelerated (8-week) schedule. Courses in the certificate program are largely asynchronous with some optional synchronous sessions to be scheduled by the instructors. For more information about specific course dates, please visit the Course Schedule (https://lpsonline.sas.upenn.edu/academics/course-schedule/) page.

You have the option to enroll in individual courses without committing to the entire certificate, enjoying the flexibility and expertise offered by Penn LPS Online to suit your schedule and interests.

For more information: https://lpsonline.sas.upenn.edu/academics/certificates/climate-change (https://lpsonline.sas.upenn.edu/academics/certificates/climate-change/)

The Certificate in Climate Change prepares you to:

- Reconstruct the history and scales of climate changes
- Learn basic atmospheric and ocean dynamics to understand fundamental climatic processes and future changes
- Examine the mechanisms that act to drive climate change
- Analyze long-term natural climate variability on a global and regional scale
- Understand the importance of natural environmental change as a benchmark against which to assess human impacts, recent climate change, and future environmental change
- Deepen insights into methods of scientific inquiry
- Refine communication skills to effectively share an understanding of climate change, with a focus on both science and policy implications
Curriculum

Students must complete all four course from the list below to earn a Certificate in Climate Change.

Creative Writing, Certificate

The Certificate in Creative Writing offers an innovative, collaborative course of study for those who have always wanted to unlock their creativity. Each course is designed as a workshop in which you explore new ideas, tackle new writing tools, generate original insights and discover your own powers of expression. You create, collaboratively and individually, and revise your original writing with feedback from your instructors and your peers. You also engage with a range of assigned readings and multimedia that inform and grow your innovative practice.

The Certificate in Creative Writing offers both basic and advanced workshops and appeals to students new to creative writing as well as students with writing experience who want to learn new skills. Through a series of courses in fiction, poetry, creative nonfiction, and screenwriting, the Certificate in Creative Writing focuses on creative writing as a form of critical thinking as a way to reimagine audience and as a space of innovation. Taught by professionals in the field, our courses cultivate both individual and group learning, providing an overview of the field as well as deep dives into literary genres. These courses are designed as hands-on, intensive study of the subtleties and power of language.

The Certificate in Creative Writing is a 4-course, 4 course unit program of study taught by University of Pennsylvania faculty. To earn a certificate, students complete any four courses offered, in any order. Students who complete the basic certificate may pursue an advanced certificate (6-course, 6 course unit) by adding two additional courses from the advanced course list.

Penn LPS Online courses in the Certificate in Creative Writing are offered on accelerated (8-week) and classic (11- or 12-week) schedules. Courses in the certificate program are largely asynchronous with some optional synchronous sessions to be scheduled by the instructors. For more information about specific course dates, please visit the Course Schedule (https://lpsonline.sas.upenn.edu/academics/course-schedule/) page.

You have the option to enroll in individual courses without committing to the entire certificate, enjoying the flexibility and expertise offered by Penn LPS Online to suit your schedule and interests.

For more information: https://lpsonline.sas.upenn.edu/academics/certificates/creative-writing/

The Certificate in Creative Writing prepares you to:

- Understand how text conveys meaning across a variety of literary genres and styles
- Explore how to use innovation, flexibility, and collaboration to cultivate a creative writing practice
- Create, revise and edit your original writing in multiple literary genres, including poetry, fiction, nonfiction, and screenwriting

Curriculum

Certificate students who complete four of the courses listed below earn a Certificate in Creative Writing. Those students are then eligible to pursue an Advanced Certificate in Creative Writing by taking two additional courses.

Data Analytics, Certificate

We live in a data-centered world, and the ability to make data-driven decisions and craft strategy informed by an effective analysis of data are key elements of successful leadership in any work environment. The Certificate in Data Analytics is a 4-course, 4 course unit sequence designed to provide a reasonable point of entry for individuals to gain expertise in data analytics. The certificate’s four courses are scheduled at times to accommodate working adults, so you can improve your data literacy while working on your career. Courses are taught by experts and experienced practitioners, including members of the Penn faculty from the Penn Program on Opinion Research and Election Studies. You
don't need an extensive background in math, statistics, or programming to succeed in the data analytics program. The only prerequisites are a familiarity with using a computer, basic math skills, and a willingness to learn.

Prior to the start of the term, students in DATA 101 are required to complete a pre-course module that takes approximately 5-8 hours.

Penn LPS Online courses in the Certificate in Data Analytics are offered on an accelerated (8-week) schedule. Courses in this certificate program include a weekly synchronous session. For more information about specific course dates, please visit the Course Schedule page.

Although the courses can be taken sequentially to build your expertise in data analytics, you have the option to enroll in individual courses without committing to the entire certificate, enjoying the flexibility and expertise offered by Penn LPS Online to suit your schedule and interests.

The Certificate in Data Analytics prepares you to:

- Implement and interpret basic regression models
- Understand advanced predictive modeling and machine learning
- Implement and analyze surveys
- Design experiments and A/B tests to test solutions and address problems
- Develop skills in statistical programming and data analysis in R
- Apply skills and knowledge to solve real-world problems
- Visualize and communicate data clearly and persuasively

Curriculum

Certificate students who complete the basic courses listed below earn the Certificate in Data Analytics.

Leadership & Communication, Certificate

The Certificate in Leadership and Communication at Penn LPS Online is an exciting skills-building and career-enhancing program designed by distinguished, award-winning Ivy League academic experts and researchers in consultation with top executives and leaders from the real worlds of business, government, and the nonprofit sector. Drawing expertise on the social sciences, humanities, and data sciences, each of the five Leadership and Communication courses is scheduled especially for working adults and taught by dedicated and experienced Penn-affiliated scholars. It is designed, developed and delivered through a working partnership between the leaders and staff of Penn’s College of Liberal and Professional Studies (LPS), the Robert A. Fox Leadership Program, and those of Civic Enterprises, headquartered in Washington, DC.

The Certificate in Leadership and Communication is a 5-course, 5 course unit program of study taught by University of Pennsylvania faculty. Penn LPS Online courses in the Certificate in Leadership and Communication are offered on an accelerated (8-week) schedule. Courses in this certificate program include a weekly synchronous session. For more information about specific course dates, please visit the Course Schedule page.

You have the option to enroll in individual courses without committing to the entire certificate, enjoying the flexibility and expertise offered by Penn LPS Online to suit your schedule and interests.

Curriculum

To earn the Certificate in Leadership and Communication, students must successfully complete all five courses listed below and maintain a 3.0 overall grade point average (GPA).

Modern Middle East Studies, Certificate

Given today's interconnected, geopolitical environment, an in-depth understanding of the cultures, history, and politics of the contemporary Middle East has never been more important. Through interdisciplinary study across fields such as history, gender studies, religious studies, politics, and economics, this 4-course, 4 course unit certificate is designed to enhance your understanding of the Middle East as a complex, diverse region. You examine how history helped shape the contemporary Middle East and develop skills necessary to interpret primary texts and academic research to explore key issues in areas such as politics, policy, economic development, and international relations.

Penn LPS Online courses in the Certificate in Modern Middle Eastern Studies are offered on an accelerated (8-week) schedule. Courses in the certificate program are largely asynchronous with some optional synchronous sessions to be scheduled by the instructors. For more information about specific course dates, please visit the Course Schedule (https://lpsonline.sas.upenn.edu/academics/course-schedule/) page.

You also have the option to enroll in individual courses within this certificate without committing to the entire certificate, enjoying the flexibility and expertise offered by Penn LPS Online to suit your schedule and interests.

For more information: https://lpsonline.sas.upenn.edu/academics/certificates/modern-middle-eastern-studies

The Certificate in Modern Middle Eastern Studies prepares you to:

- Understand key themes and issues in Middle Eastern history from the medieval era to the present, with an emphasis on encounters and exchanges between the Middle East and the West
- Interpret key texts in Middle Eastern history, from the perspectives of gender, religion, politics, and economics
- Study the complex issues surrounding oil and politics in the Middle East, incorporating the perspectives from multiple disciplines, including history, economics, and politics
- Explore the diverse history of religion in the Middle East, from ancient societies to the present, and how this history informs contemporary Middle Eastern cultures, politics, and societies

Curriculum

Students must complete all four courses from the list below to earn a Certificate in Modern Middle Eastern Studies.

The total course units for this certificate are 4.

Courses are subject to change.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Neuroscience, Certificate

Understanding the intricate correlations between neural mechanisms and behavior is an important area of contemporary scientific research. The Certificate in Neuroscience is a 4-course, 4 course unit program of study that allows you to explore biological, psychological and clinical approaches to understand the nervous system as the biological basis of behavior. You apply studies in cognitive neuroscience, neurochemistry, and psychology as a basis for a better understanding of human behavior, focusing on areas including perception, memory, motivation, and emotion.

Penn LPS Online courses in the Certificate in Neuroscience are offered on an accelerated (8-week) schedule. Courses in the certificate program are largely asynchronous with some optional synchronous sessions to be scheduled by the instructors. For more information about specific course dates, please visit the Course Schedule (https://lpsonline.sas.upenn.edu/academics/course-schedule/) page.

You have the option to enroll in individual courses without committing to the entire certificate, enjoying the flexibility and expertise offered by Penn LPS Online to suit your schedule and interests.

The Certificate in Neuroscience prepares you to:

- Describe the structure and function of the vertebrate nervous system and its application to the neurobiology of behavior
- Understand the structures and functions of neurochemicals that are generated by and modulate the nervous system
- Examine the various roles played by the nervous and endocrine systems in controlling physiological processes and behavior, with a focus on sexual and parental behaviors, aggression, and ingestion
- Understand the form, function, and pathology of the adult nervous system in terms of antecedent development processes
- Critically evaluate research strategies and hypotheses in neuroanatomy, neurophysiology, neurochemistry, and neuropharmacology to understand psychiatric disorders from a biological perspective

For more information: https://lpsonline.sas.upenn.edu/academics/certificates/neuroscience

Curriculum

Certificate students and individual course takers must first complete Introduction to Neuroscience. Certificate students must complete three additional courses from the list below to earn the Certificate in
Neuroscience. Students who have earned a Basic Certificate can then earn an Advanced Certificate in Neuroscience by taking an additional two NEUR courses.

<table>
<thead>

* Students who complete the basic certificate may pursue an advanced certificate by adding two additional neuroscience courses.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Organizational Anthropology, Certificate

Today’s workplaces are characterized by high levels of diversity. Organizational leaders who can effectively manage interpersonal relationships within complex and varied team structures are in high demand across all professional environments. The Certificate in Organizational Anthropology at Penn LPS Online, a 4-course, credit-bearing program of study, is designed to develop your understanding of how teams, corporations and other organizations develop and reinforce culture, and how to apply this research to create stronger functioning groups. Beginning with an anthropological approach to organizational culture, you explore different theories of how culture forms and evolves in organizations and why it matters for performance. You learn strategies for influencing change in an increasingly digital workplace and getting alignment at the conversational level based on research into best practices in communication.

Penn LPS Online courses in the Certificate in Organizational Anthropology are offered on an accelerated (8-week) schedule. Courses in the certificate program are largely asynchronous with some optional synchronous sessions to be scheduled by the instructors. For more information about specific course dates, please visit the Course Schedule (https://lpsonline.sas.upenn.edu/academics/course-schedule/) page.

You have the option to enroll in individual courses without committing to the entire certificate, enjoying the flexibility and expertise offered by Penn LPS Online to suit your schedule and interests.

For more information: https://lpsonline.sas.upenn.edu/academics/certificates/organizational-anthropology/

The Certificate in Organizational Anthropology prepares you to:

- Understand current anthropological research on team, corporate, and organizational culture
- Explore the effects that modern corporations have on their surrounding environments, with attention to local, regional, national, and global effects
- Develop an understanding of theories of organizational culture, and how to apply those theories in specific professional and organizational contexts
- Examine underlying social and cultural influences on diverse teams, and learn how to apply theory to foster diversity and create inclusive cultures
- Identify the variables that underlie communication in virtual, internet-mediated spaces, and apply social science research to create strong collaborative professional relationships, even when working remotely

Curriculum

Students must complete all four courses listed below to earn a Certificate in Organizational Anthropology.

Professional Writing, Certificate

The Certificate in Professional Writing at Penn LPS Online gives you a scenario-based deep dive into the kinds of writing essential to business. Our courses offer a series of concepts and practical applications that provide an accelerated understanding of the subtle arts of communication, enhanced by tips to make anyone a power-writer—a master of grammar, concision, and clarity.

Whether you are in an entry-level position and want to ramp up your writing skills or are an accomplished writer ready to expand and refine your repertoire, our professional writing courses take you to the next level. We take you beyond the basics of structure and style. Our coursework emphasizes professional expertise and extensive feedback as we share and cutting-edge findings in the field of writing. Find out how
to incorporate your personal or corporate brand's story into every piece of communication and discover the best ways to identify and appeal to target audiences.

The Certificate in Professional Writing is a 4-course, 4 course unit program of study taught by University of Pennsylvania faculty. To earn the certificate, it is recommended that students enroll first in the Fundamentals of Professional Writing course, followed by any additional three professional writing courses.

Penn LPS Online courses in the Certificate in Professional Writing are offered on an accelerated (8-week) schedule. Courses in the certificate program are largely asynchronous with some optional synchronous sessions to be scheduled by the instructors. For more information about specific course dates, please visit the Course Schedule (https://lpsonline.sas.upenn.edu/academics/course-schedule/) page.

You also have the option to enroll in individual courses without committing to the entire certificate, enjoying the flexibility and expertise offered by Penn LPS Online to suit your schedule and interests. Students who complete the basic certificate may pursue an advanced certificate (6-course, 6 course unit) by adding two additional courses from the advanced course list.

For more information: https://lpsonline.sas.upenn.edu/academics/certificates/professional-writing (https://lpsonline.sas.upenn.edu/academics/certificates/professional-writing/)

The Certificate in Professional Writing prepares you to:

- Assess audience and purpose for communication targeted at achieving specific goals
- Analyze different audiences, scenarios, and contexts in order to shape your messaging most effectively whatever your audience
- Develop effective rhetorical strategies and skills to persuade specific audiences—personal, professional, and social—through visual, written, and multimedia communication
- Draft and revise written work for precision, clarity, and power
- Develop empathetic and analytic skills to integrate and build upon other viewpoints and perspectives
- Learn how readers, writers, and designers use complex multimedia texts incorporating language, image, sound, and gesture to produce a coherent, engaging message
- Explore how to engage the senses—visual, aural, and somatic—to convey information effectively through social media
- Understanding how to make complex information accessible to audiences through effective visualization

Curriculum
Certificate students who complete four of the five basic courses listed below earn the Certificate in Professional Writing. Those students are then eligible to pursue an Advanced Certificate in Professional Writing by adding two advanced courses.

SCHOOL OF ENGINEERING AND APPLIED SCIENCE

Penn School of Engineering is unlike any other. Traditionally untraditional. Pioneers in interdisciplinary education and research. Theory linked with real-world practice. The path for students who want to shape the future.

With the pace of innovation and technological advancement accelerating ever faster, engineers hold the keys to the next generation's routine wonders.

As an Ivy League institution — and the first university in the nation — Penn delivers a transformative experience in the classroom and laboratory, while ensuring its engineering and applied science students receive a fully rounded liberal arts education.

Penn Engineering is a pioneer in interdisciplinary education, allowing students the flexibility to craft a program that suits their individual interests, career, or graduate education plans. Both Bachelor of Science in Engineering (BSE) and Bachelor of Applied Science (BAS) degrees are offered, along with specialized dual-degree programs, an array of majors and minors, special programs, and study-abroad opportunities.

Penn Engineering students get valuable and extensive hands-on experience, conducting research and pursuing creative designs and new products alongside faculty renowned in their fields. The working relationship with faculty pervades Penn Engineering, where full-time faculty teach all core undergraduate courses, and each student has a faculty advisor.

As the global marketplace for technology grows, graduates go on to leadership roles in business, medicine, law, and academia. They leave armed with the technical knowledge, imagination, communication skills, and understanding of the social and human context of their work, all engendered with a fervor for the future nurtured at Penn Engineering.

Learn more about our history: http://www.seas.upenn.edu/about-seas/history.php.

Learn more about our school leadership: http://www.seas.upenn.edu/about/school-leadership/.

Two key elements distinguish the Penn Engineering experience from that provided by many other institutions: Exceptional academic programs, and practical design and research experience.

Our undergraduate programs emphasize both theory and practice while forming intellectual linkages across a breadth of disciplines. The opportunity for hands-on research, over the four years, allows undergraduates the chance to learn about the creation of knowledge, further explore their chosen field, and thereby become collaborators in the search for knowledge. The design experience over the four years, culminating in the senior design project, challenges students to utilize their academic training and problem-solving skills in practical ways, and provides them with direct experience with real-world problems that they will encounter as practicing engineers.

Technology is transforming our times and our lives, no longer on a scale of decades but of years and even months. A successful career through such changing times requires engineering graduates endowed with skills that are applicable to widely different technologies, skills that transcend the details of any one job. Such is the result of an education that pays much more attention to the fundamental than to the trendy, to the creative more than to the routine. Engineers must also be firmly educated as responsible citizens, concerned with the impact of their work on society.

Penn Engineering is an integral partner in Penn's initiatives to prepare students for leadership in a high-tech world. Our goal is to prepare students for leadership roles in engineering and applied science as well as in other fields, such as medicine, business, and law, for which creativity, critical quantitative thinking, effective communication skills, and a strong commitment to humane values are essential.

Mission of the School

1. The creation and dissemination of scholarly research in both basic and applied arenas to be an international center of engineering excellence and the regional catalyst for technological innovation;

2. The design and delivery of engineering education known for its rigor, breadth and relevance to prepare its students to become global leaders in technology-based fields.

Mission Statements of Bachelor of Science in Engineering Programs (ABET-accredited)

- Bioengineering (http://www.be.seas.upenn.edu/about-academics/)
- Chemical and Biomolecular Engineering (http://www.cbe.seas.upenn.edu/about-ugrad/)
- Computer Science (http://www.cis.upenn.edu/ugrad/abet.shtml/)
- Computer Engineering (http://www.seas.upenn.edu/cmpe/accreditation.php)
- Electrical Engineering (http://www.ece.upenn.edu/about-ugrad/)
- Materials Science and Engineering (http://www.mse.upenn.edu/about-ugrad/accreditation.php)
- Mechanical Engineering and Applied Mechanics (http://www.me.upenn.edu/about-ug-ed/accreditation.php)
- Systems Science and Engineering (http://www.cse.upenn.edu/about-ugrad/)

Our extraordinary faculty-to-student ratio provides great opportunities for undergraduate students to work in state-of-the-art research laboratories during the academic year and in the summer. Below are examples of student research, along with helpful information to guide undergraduates toward finding research positions at Penn Engineering.

For more information, visit: http://www.seas.upenn.edu/undergraduate/research/index.php (http://www.seas.upenn.edu/undergraduate/research/).

Finding a Research Mentor and Research Experiences

Students are encouraged to explore the Penn Engineering Faculty Expertise Directory (http://www.seas.upenn.edu/directory/departments.php), featuring the School's standing faculty and is searchable by department, research center affiliation, and research expertise keyword. Users can identify which faculty are conducting research in a specific area and contact faculty members whose research interests them.

The Engineering Dean's Advisory Board (EDAB) puts together a guide for fellow students that gives step-by-step instructions and tips on how to secure research positions as an undergraduate.
For Bioengineering majors, the Penn student chapter of the Biomedical Engineering Society (BMES) has assembled its own student guide on starting up research.

**Summer Undergraduate Research in Engineering (SURE)**

Penn Engineering’s world-acclaimed faculty, along with state-of-the-art research laboratories and highly interdisciplinary curricula, offers summer research opportunities for talented undergraduates who seek hands-on research experience. From robotics and computer animation, nanotechnology, genomics and biotechnology, Penn’s centers and institutes are at the forefront of research on multiple scientific and technological frontiers.

**International Summer Undergraduate Research in Engineering (iSURE)**

Opportunities for undergraduates are available during the summer to spend eight to 12 weeks on a research internship in one of Penn Engineering’s partner institutions abroad.

**Littlejohn Undergraduate Research Program**

Thanks to a generous gift by Angus Littlejohn, the School of Engineering is able to offer Summer Research Opportunities to Penn Engineering Students. The program is open to rising, sophomores, juniors and seniors.

The program intends to provide students the opportunity to get involved in hands-on engineering research under the supervision of a faculty member. Topics of research include all areas covered by the departments in the School of Engineering and Applied Science. Students will receive a stipend of $4,500 for a 10 week period.

**Rachleff Scholars Program**

This program offers Penn Engineering undergraduates the opportunity to gain valuable research experiences with standing faculty and to participate in a community of peers who share a common interest in research and scholarly inquiry.

The following BSE programs are accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org (http://www.abet.org/)).

- Bioengineering (http://www.be.seas.upenn.edu/about-academics/)
- Chemical and Biomolecular Engineering (http://www.cbe.seas.upenn.edu/about-ugrad/)
- Computer Science (http://www.cis.upenn.edu/ugrad/abet.shtml/)
- Computer Engineering (http://www.seas.upenn.edu/cmpe/accreditation.php)
- Electrical Engineering (http://www.ee.seas.upenn.edu/about-ugrad/)
- Materials Science and Engineering (http://www.mse.seas.upenn.edu/about-ugrad/accreditation.php)
- Mechanical Engineering and Applied Mechanics (http://www.me.upenn.edu/about-ug-ed/accreditation.php)
- Systems Science and Engineering (http://www.ee.upenn.edu/about-ugrad/)

The BSE program in Computer Science is accredited by the Computing Accreditation Commission of ABET (http://www.abet.org (http://www.abet.org/)).

For more information, visit: http://www.seas.upenn.edu/undergraduate/handbook/courses/ssh-requirements.php

Each student is assigned a faculty advisor with whom they are required to meet at least twice per year. No student is permitted to register for classes in any semester without first meeting with an advisor. Students who take the time to prepare for these meetings generally find them beneficial and informative. Faculty advisors are the best source of information about electives within the major, research opportunities, and options for graduate study.

For more information, visit: https://www.seas.upenn.edu/undergraduate/advising/.

**Curriculum**

Each major (p. 193) within the School of Engineering and Applied Science has its own curriculum. Specific curricular requirements for each major are listed by program.

However, all Engineering students must complete requirements in four specific tracks:

- core engineering courses within the chosen major
- professional electives
- social science/humanities (http://www.seas.upenn.edu/undergraduate/handbook/courses/ssh-requirements.php) and free electives (http://www.seas.upenn.edu/undergraduate/handbook/courses/free-elective.php)

A course planning guide exists for each major to assist with planning and keeping track of the requirements toward graduation.

In addition, all Engineering students must complete the following requirements.

**Writing Requirement**

Beginning with the Class of 2001, Penn Engineering has implemented a Writing Requirement. The Writing Requirement will not necessitate the completion of additional course units. Students can easily satisfy the requirement without altering the existing constraints of BAS or the BSE degrees.

Students are strongly encouraged to fulfill the Writing Requirement during the first two years of study because it becomes increasingly difficult to schedule first-year courses as one moves through the curriculum.

For more information, visit: http://www.seas.upenn.edu/undergraduate/handbook/courses/writing-requirement.php

**Engineering Ethics Requirement**

Beginning with the Class of 2017, Penn Engineering students must fulfill the Engineering Ethics requirement. The Ethics Requirement will not necessitate the completion of any additional course units in the existing BAS or the BSE degrees, as the requirement may be double-counted from the student’s SSH course requirements.

The Engineering Ethics requirement can be satisfied by taking EAS 203 Engineering Ethics. This course may be used (double-counted) for the Social Science requirement as well. **Students are strongly encouraged to take the Ethics Requirement course during the sophomore year.**
For more information, visit: http://www.seas.upenn.edu/undergraduate/handbook/courses/ethics-requirement.php.

Bioengineering, BSE

Bioengineering is a multidisciplinary area where the engineering sciences interface biology, biomedical sciences, and medicine, to advance human health. Bioengineering brings together the creation of new knowledge and understanding of biological systems through engineering analysis and experimentation, with the application of engineering design and practice principles for the development of devices, processes, methods and biotechnologies to improve medical practice and health care delivery.

Biomedical Science, BAS

Interface the engineering sciences, biology, biomedical sciences, and medicine to advance human health and solve problems in medicine and the biological sciences. The Bachelor of Applied Science degree offers students breadth and flexibility and allows them to combine a technology-based degree with considerable course work in the liberal arts, communications, business or fine arts. It is designed primarily for students whose interests are not oriented toward a professional engineering career. It is a popular degree option for those preparing for careers in medicine, business, and law. Many students who are pursuing dual degree programs opt for this degree.

Chemical and Biomolecular Engineering, BSE

Chemical Engineers apply concepts from the physical sciences (chemistry and physics) and life sciences (biochemistry and microbiology) to the design and optimization of processes for the efficient production of products ranging from fuels and chemicals to pharmaceuticals to advanced materials. Penn’s chemical engineering department provides students with both a strong foundation in engineering fundamentals and exposure to modern chemical engineering technologies. The program’s versatility allows our students to excel in diverse careers in the chemical industries, research, medicine, law, government, and education.

2. Must include a Writing Seminar (a list of approved Writing Seminars can be found in the SEAS Undergraduate Handbook (https://ugrad.seas.upenn.edu/student-handbook/courses-requirements/writing-courses/))

Concentrations

Students can select one of the following concentrations:

- Energy and the Environment
- Pharmaceutics and Biotechnology
- Polymers and Soft Matter Science and Engineering

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Computational Biology, BAS

The BAS in Computational Biology is an interdisciplinary area that crosses between the biological sciences, math, and computer science. More specifically, it requires that students augment a basic computer science curriculum with courses in biology, chemistry, genetics and statistics. The program is intended to train students in key areas of
Computational Biology and is also designed so that a student may focus on those areas of biology in which he or she wishes to specialize. A broad background in computer science, from programming to algorithms to database systems, is also required. This program has a year-long capstone course in computational biology that is co-taught by faculty in computer science, biology and genetics. The development of Computational Biology has been influenced by various factors. One main influence derives from the need to solve problems associated with the assimilation, storage, retrieval and analysis of data arising from the Human Genome Project and similar projects that involve massive data sets containing bibliographic information, DNA sequence information and testing methods and results. The analysis of such data involves the development and use of complex information modeling techniques, languages, visualization techniques, and computational methods. The second broad area of biology in which computational methods have for some time been used is in evolution and ecology. Many evolutionary processes when viewed from the genetic point of view involve equations of such complexity that ordinary algebraic and calculus methods are simply insufficient to solve them, and numerical methods entailing the use of a computer are necessary. The construction of phylogenetic trees of evolution has for a long time been carried out by computational methods. Many ecological processes similarly involve such complexities that computer methods offer the only way forward. Computational Biology is a field of current interest in biology to be able to understand the problems and computational opportunities in this domain. Employment opportunities are excellent at major pharmaceutical companies, biotech companies and research labs. For more information: https://www.seas.upenn.edu/prospective-students/undergrad/majors/bachelor-of-applied-science/

Total Course Units | 37 |

$^1$ A CIS elective is a CIS or NETS engineering course. The SEAS handbook defines all CIS and NETS classes numbered 1xx-5xx as engineering courses, with the following exceptions: CIS 105 Computational Data Exploration, CIS 106 Visualizing the Past, CIS 125 Technology and Policy, CIS 160 Mathematical Foundations of Computer Science, CIS 261 Discrete Probability, Stochastic Processes, and Statistical Inference, CIS 262 Automata, Computability, and Complexity, ESE 350 Embedded Systems/Microcontroller Laboratory can also be used to satisfy the CIS elective requirement. Please note: Students may count at most 1 CU of 1xx credit as a CIS Elective. Please note: Students may count at most 1 CU of 1xx credit as a CIS Elective.

Must include a Writing Seminar (a list of approved Writing Seminars can be found in the SEAS Undergraduate Handbook (https://ugrad.seas.upenn.edu/student-handbook/courses-requirements/writing-courses/))

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Computer and Cognitive Science, BAS

The BAS in Computer and Cognitive Science through the School of Engineering and Applied Science combines the application of theoretical insights from Computer Science, Linguistics, Neuroscience, Philosophy, and Psychology to the formal study of intelligence, perception, reasoning, and other properties of mind, and their application in the service of Information Technology. The degree combines a form grounding in relevant aspects of Computer Science, from programming to algorithms to artificial intelligence, with a concentration in specific courses from the contingent disciplines. The non-computer science courses have been selected for formal rigor and scientific relevance. The degree prepares students for a wide variety of careers in a number of distinct academic, industrial, and professional arenas relating to psychology, philosophy and linguistics. In particular, these careers pertain to the impact of knowledge and information technology on the professions, including those in Media and Communications, Software Development, and Education (among many others), in which a broad background in computer science must be combined with a deep understanding of the human mind. The BAS in Computer and Cognitive Science is intended to address the need for properly trained computer scientists who have sufficient understanding of these other disciplines to be able to solve the many open problems in applications, research, and development that must be addressed if we are to realize the full potential of information processing technologies in these domains. Employment opportunities for students going through such a program are excellent at major information technology companies, software houses, and research labs, as well as in the standard career structures in the areas identified above.

Computer Science, BAS

Computer scientists and engineers have revolutionized society and created the computer and telecommunications industries that are so important to human life and the world’s economy. As a result of this revolution, expertise in computer science is essential in many new areas, including computer and network service and consulting companies, financial institutions, health industries, natural science labs and medical research labs, and other contexts where intensive manipulation of information is important. As a result, opportunities for computer scientists and engineers have expanded greatly, both in specialized fields as well as in numerous dual-career opportunities in which computer expertise is combined with advanced degrees in business, communication, engineering, law, medicine, and science.

* CIS and Technical Electives must include a course from each of the following lists (courses listed can be in multiple lists):
  - Networking: NETS 150, NETS 212, CIS 331, CIS 455, CIS 505, CIS 553
  - Databases: CIS 450, CIS 455, CIS 545
  - Distributed Systems: NETS 212, CIS 441, CIS 450, CIS 505, CIS 545
  - Machine Learning/Artificial Intelligence: CIS 419, CIS 421, CIS 520, CIS 545, CIS 620
  - Project: NETS 212, CIS 341, CIS 350, CIS 441, CIS 450, CIS 455, CIS 460, CIS 505, CIS 555

1 A CIS elective is a CIS or NETS engineering course at the 100 level or above, or ESE 350 (NOTE: not all CIS/NETS courses are engineering courses; please see the SEAS undergraduate handbook. At most, one CU of 100-level courses may be used as a CIS Elective.

2 May contain at most one course numbered 100-level.

You may use:
1. courses from a declared concentration and/or
2. courses approved by the department. In general, approved courses will be advanced courses that are rigorous/quantitative and have at least one nontrivial prerequisite. See the CIS website for a list of approved courses.

3 Must include a Writing Seminar (a list of approved Writing Seminars can be found in the SEAS Undergraduate Handbook [https://undergrad.seas.upenn.edu/student-handbook/courses-requirements/writing-courses/]).

**Concentrations**

Students may select one of seven concentrations:

- Artificial Intelligence
- Cognitive Science (5 CU)
- Computational Biology (6 CU)
- Computer Vision
- Data Science
- Software Foundations
- Systems (5 CU)
The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Digital Media Design, BSE

The Digital Media Design (DMD) program is an interdisciplinary major in the School of Engineering and Applied Science at Penn. As a full-fledged Bachelors in Engineering and Science (BSE) degree, it combines major coursework in computer graphics within the Computer & Information Science Department, Communication theory courses from the Annenberg School and Fine Arts courses from Penn's School of Design. The program was designed for students who have an interest in computer graphics, animation, games, and the design of virtual reality environments and interactive technologies. The Digital Media Design Program was established in response to what we perceived as a growing rift within the computer graphics and animation industry.

For more information: https://www.seas.upenn.edu/prospective-students/undergrad/majors/digital-media-design/

DMD Electives

Advisor Approval Required

Select 4 DMD Electives 1

General Electives 2

Select 5 Social Science or Humanities courses 5
Select 2 Social Science or Humanities or Technology in Business & Society courses 2

Free Elective

Select 1 free electives 3 1

Total Course Units 37

1 Select courses from offerings in the following categories: COMM, FNAR, CIMS, DSGN, THAR, MKTG, ARTH, IPD, MUSC, EDUC. Courses from other categories require advisor approval.

2 Must include a Writing Seminar (a list of approved Writing Seminars can be found in the SEAS Undergraduate Handbook (https://ugrad.seas.upenn.edu/student-handbook/courses-requirements/writing-courses/))

3 Approval is required.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Electrical Engineering, BSE

Electrical engineering connects the physical world with the information world. Electrical engineers apply physics and chemistry in modern nanotechnology devices, encode and manipulate information in circuits
and networks, and mathematically understand and reason with large amounts of data in real time. This makes electrical engineering one of the broadest forms of engineering, resulting in a multitude of possible careers. The societal impact of electrical engineering can be found in numerous domains, from smartphones, 5G wireless, and medical imaging to electric/driverless cars and the Internet of Things. Electrical engineering includes the engineering of electrons, magnets, photons, electro-magnetic waves, quantum states, and electro-mechanical structures. Electrically engineering systems provide communication, sensing, actuation, display, storage, conversion, control, and computation. The electrical engineering discipline includes both the design and implementation of physical realizations (devices, circuits, antennas) and the mathematical tools for optimizing the exploitation of these systems (control theory, information theory, digital logic, signal processing). For more information: https://www.seas.upenn.edu/prospective-students/undergrad/majors/electrical-engineering/

### Electrical Engineering (EE) Major Requirements

Choose four advanced electives from the following lists:

#### Circuits and Computer Engineering:

- ESE 319 Fundamentals of Solid-State Circuits
- ESE 350 Embedded Systems/Microcontroller Laboratory
- ESE 370 Circuit-Level Modeling, Design, and Optimization for Digital Systems
- ESE 419 Analog Integrated Circuits
- ESE 516 IoT Edge Computing
- ESE 532 System-on-a-Chip Architecture
- ESE 568 Mixed Signal Design and Modeling
- ESE 578 RFIC (Radio Frequency Integrated Circuit) Design
- ESE 590 Systems Methodology
- ESE 672 Integrated Communication Systems

#### Nanodevices and Nanosystems:

- ESE 310 Electric and Magnetic Fields I
- ESE 321 Physics and Models of Semiconductor Devices
- ESE 330 Principles of Optics and Photonics
- ESE 336 Nanofabrication of Electrical Devices

- ESE 460 Principles of Microfabrication Technology
- ESE 510 Electromagnetic and Optical Theory
- ESE 521 The Physics of Solid State Energy Devices
- ESE 523 Quantum Engineering
- ESE 526 Photovoltaic Systems Engineering
- ESE 611 Nanophotonics: Light at the Nanoscale
- ESE 621 Nanoelectronics
- ESE 673 Integrated Photonic Systems

#### Information and Decision Systems:

- ESE 303 Stochastic Systems Analysis and Simulation
- ESE 305 Foundations of Data Science
- ESE 325 Fourier Analysis and Applications in Engineering, Mathematics, and the Sciences
- ESE 407 Introduction to Networks and Protocols
- ESE 500 Linear Systems Theory
- ESE 501 Networking - Theory and Fundamentals
- ESE 504 Intro to Linear, Nonlinear and Integer Optimization
- ESE 505 Feedback Control Design and Analysis
- ESE 512 Dynamical Systems for Engineering and Biological Applications
- ESE 520 Agent-Based Modeling and Simulation
- ESE 527 Design of Smart Systems
- ESE 528 Estimation and Detection Theory
- ESE 531 Digital Signal Processing
- ESE 545 Data Mining: Learning from Massive Datasets
- ESE 546 Principles of Deep Learning
- ESE 548 Transportation Planning Methods
- ESE 550 Advance Transportation Seminar
- ESE 567 Risk Analysis and Environmental Management
- ESE 590 Systems Methodology
- ESE 605 Modern Convex Optimization
- ESE 650 Learning in Robotics
- ESE 674 Information Theory

One of the Advanced Electives may be an Advanced ESE elective, BE 521 or CIS 471 or CIS 520

#### Design and Project Courses

- ESE 290 Introduction to Electrical and Systems Engineering Research Methodology and Introduction to Electrical and Systems Engineering Research and Design
- & ESE 291 or ESE 319 Fundamentals of Solid-State Circuits
- or ESE 336 Nanofabrication of Electrical Devices
- or ESE 350 Embedded Systems/Microcontroller Laboratory
- or ESE 421 Control For Autonomous Robots
- or BE 470 Medical Devices
- ESE 450 Senior Design Project I - EE and SSE
- ESE 451 Senior Design Project II - EE and SSE

#### Math and Natural Science

- MATH 104 Calculus, Part I

2020-21 Catalog | Generated 09/18/20
### Concentrations

Students may select one of six concentrations:

- Data Science
- Microsystems and Nanotechnology
- Mixed-Signal and RF Integrated Circuits
- Photonics and Quantum
- Robotics
- System-on-A-Chip Design

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

### Individualized Program, BAS

The individualized major offers an opportunity for exceptional, creative, self-motivated students to explore innovative and multi-disciplinary fields of knowledge. The individualized major is intended to foster a closer relationship between the student and the faculty advisors.

For more information: [https://www.seas.upenn.edu/prospective-students/undergrad/majors/individualized/](https://www.seas.upenn.edu/prospective-students/undergrad/majors/individualized/)

### Individualized Program Major Requirements

40 course units are required. Read more about the Undergraduate Student Handbook ([http://www.seas.upenn.edu/undergraduate/handbook/](http://www.seas.upenn.edu/undergraduate/handbook/)).

1 The Social Science & Humanities Depth, Writing & Ethics Requirement can be satisfied with the 7 total course units.

Materials Science and Engineering, BSE

The Materials Science and Engineering (MSE) program reflects the explosive growth of interest in the nano and bio sectors of engineering science and technology. MSE prepares students to use fundamental scientific principles to synthesize, manipulate, design and characterize the structural and functional properties of advanced engineering materials. The program offers students advantages seldom found in other MSE programs: the opportunity to tailor the curriculum to their own interests, guaranteed research experience and an excellent student-faculty ratio.

For more information: https://www.seas.upenn.edu/prospective-students/undergrad/majors/materials-science-and-engineering/

Mechanical Engineering and Applied Mechanics, BSE

Mechanical Engineering & Applied Mechanics is the study of forces, deformation, and motions of solid bodies and fluids (liquids and air), heat & energy generation and transport. Mechanical engineers are equipped with knowledge to design and develop everything you think of as a device, mechanism, or machine, including wind turbines, rocket engines, robots, 3D printers, micro-engines, nanomotors, and more. We assure safety in systems people use day to day, from transportation to appliances to medical devices.

Networked and Social Systems Engineering, BSE

The Rajendra and Neera Singh Program in Networked and Social Systems Engineering (NETS), is the world’s first course of study to fully integrate the disciplines needed to design and analyze the complex networks that are reshaping our society. This program prepares students to shape the technologies that underpin Internet-based search and electronic commerce, financial networks, social networks, and even such exchanges as the power grid. Graduates of this program will be prepared to engineer networks that work for both end-users and investors. Other graduates may become the policy-makers who are urgently needed to regulate these networks for the protection of commercial property and societal good.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Concentrations

Students may select one of five concentrations:

1. At least four courses from an approved depth area required. For the remaining courses you may use (1) courses from any approved depth area, and/or (2) courses approved by the department. In general, approved courses must be advanced courses that are rigorous/quantitative and have at least one nontrivial prerequisite. See the NETS website for a list of depth areas and approved courses.
2. Must include a Writing Seminar (a list of approved Writing Seminars can be found in the SEAS Undergraduate Handbook (https://ugrad.seas.upenn.edu/student-handbook/courses-requirements/writing-courses/))
• Data Science
• Economics and Networked Markets
• Networked and Cloud Services
• Technology and Society
• Theory of Networks and Dynamics

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Systems Science and Engineering, BSE

Systems Engineers provide technical management for societal-scale problems that often encompass the connections between the physical and the information world. Examples of the many cutting-edge applications include autonomous robotics, smart buildings, national power grid management, global networks, service optimization, and biological systems. Systems engineering is the set of reusable mathematics, intellectual tools, and methodologies for attacking large-scale engineering problems. These common tools are adaptable for problems in different engineering domains (e.g., electrical, mechanical, biological, chemical, and computing) and help us understand, design, and manage systems that contain elements from multiple domains. Systems engineering deals with how we extract useful, abstract models from lower level systems, use these models to analyze and predict behavior, and use the analysis to control behavior and optimize/synthesize solutions. System engineering helps us understand what happens when we compose many elements, each with their own behavior, and how to design and constrain the individual elements to engineer desired behavior for the composed system.

2020-21 Catalog | Generated 09/18/20
Concentrations

Students may select one of three concentrations:

- Data Science and Artificial Intelligence
- Decision Science
- Robotics

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Minors

- Chemical & Biomolecular Engineering, Minor (p. 208)
- Computer Science, Minor (p. 208)
- Data Science, Minor (p. 209)
- Digital Media Design, Minor (p. 210)
- Electrical Engineering, Minor (p. 210)
- Energy & Sustainability, Minor (p. 211)
- Engineering Entrepreneurship, Minor (p. 211)
- Materials Science and Engineering, Minor (p. 212)
- Mechanical Engineering and Applied Mechanics, Minor (p. 213)
- Systems Science and Engineering, Minor (p. 213)

Chemical & Biomolecular Engineering, Minor

Chemical Engineers apply concepts from the physical sciences (chemistry and physics) and life sciences (biochemistry and microbiology) to the design and optimization of processes for the efficient production of products ranging from fuels and chemicals to pharmaceuticals to advanced materials. Penn’s chemical engineering department provides students with both a strong foundation in engineering fundamentals and exposure to modern chemical engineering technologies. The program’s versatility allows our students to excel in diverse careers in the chemical industries, research, medicine, law, government, and education.

Chemical and Biomolecular, Minor

Electives

Select 6 CBE Courses 1

Total Course Units 6

1 The Minor in Chemical and Biomolecular Engineering consists of six engineering courses in CBE selected with the approval of the Undergraduate Curriculum chair.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Computer Science, Minor

Computer scientists and engineers have revolutionized society and created the computer and telecommunications industries that are so important to human life and the world’s economy. As a result of this revolution, expertise in computer science is essential in many new areas, including computer and network service and consulting companies, financial institutions, health industries, natural science labs and medical research labs, and other contexts where intensive
manipulation of information is important. As a result, opportunities for computer scientists and engineers have expanded greatly, both in specialized fields as well as in numerous dual-career opportunities in which computer expertise is combined with advanced degrees in business, communication, engineering, law, medicine, and science.

SEAS Second Major or Minor Option

Students interested in a second major (College students only) or minor with SEAS are required to meet with the Undergraduate Curriculum Chair from the major/minor department you wish to declare to discuss requirements and obtain approval on the Second Major or Minor form. The approved form must be returned to the SEAS Research and Academic Services Office, 109 Towne Building.

Electives

Select 2 Electives 1 2

Total Course Units 6

1 One CIS Elective must be 200 level or above.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Data Science, Minor

Data Science applies core concepts in computer science, statistics and mathematics to problems in a wide variety of fields, from physical, social, biomedical, and behavioral sciences to arts and humanities. The minor targets students with strong analytical abilities and some existing programming experience, and requires courses in statistics, data-centric programming, data management, and data analysis. It also points to courses across the University that deal with data in areas of importance to Data Science.

SEAS Second Major or Minor Option

Students interested in a second major (College students only) or minor with SEAS are required to meet with the Undergraduate Curriculum Chair from the major/minor department you wish to declare to discuss requirements and obtain approval on the Second Major or Minor form. The approved form must be returned to the SEAS Research and Academic Services Office, 109 Towne Building.

2020-21 Catalog | Generated 09/18/20
### Digital Media Design, Minor

The DMD minor is a programming-intensive exploration into interactive computer graphics. The interested student is encouraged but not required to take courses in Fine Arts (in the SEAS SSH category, for example) to gain the artistic knowledge and skills that would augment the DMD technology emphasis. Suggested relevant Fine Arts courses include Digital Design Foundations and 3D Modeling. The DMD minor also encourages exploration of the connections of computer graphics programming with human cognition and interactive experiences. A capstone EAS499 Integrative Project is required to link the DMD minor with the student’s major.

For more information: [http://cg.cis.upenn.edu/dmd-minor.html](http://cg.cis.upenn.edu/dmd-minor.html)

### SEAS Second Major or Minor Option

Students interested in a second major (College students only) or minor with SEAS are required to meet with the Undergraduate Curriculum Chair from the major/minor department you wish to declare to discuss requirements and obtain approval on the Second Major or Minor form. The approved form must be returned to the SEAS Research and Academic Services Office, 109 Towne Building.

For more information: [http://www.seas.upenn.edu/undergraduate/degrees/minors.php](http://www.seas.upenn.edu/undergraduate/degrees/minors.php)

### Electrical Engineering, Minor

Electrical engineering (EE) connects the physical world with the information world. Electrical engineers can apply physics and chemistry in modern nanotechnology devices, can encode and manipulate information in circuits and networks, and can mathematically understand and reason with large amounts of data in real time. Students can pursue an EE minor by completing a six courses that includes the conception, design, analysis, and implementation of devices, circuits, and signal processing.

For more information: [http://www.ese.upenn.edu/current-students/undergraduates/minors.php](http://www.ese.upenn.edu/current-students/undergraduates/minors.php)

An intermediate or Advanced ESE elective can be taken with department approval.

Advance ESE course required. An approved list can be found on the most recent EE worksheet.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Energy & Sustainability, Minor

The minor in Energy and Sustainability provides students with broad coverage of technical and societal issues in energy and sustainability. It is designed to help students become leaders in developing technologies for a more sustainable energy future.

For more information: http://www.seas.upenn.edu/undergraduate/degrees/minor-energy.php

SEAS Second Major or Minor Option

Students interested in a second major (College students only) or minor with SEAS are required to meet with the Undergraduate Curriculum Chair from the major/minor department you wish to declare to discuss requirements and obtain approval on the Second Major or Minor form. The approved form must be returned to the SEAS Research and Academic Services Office, 109 Towne Building.

For more information: http://www.seas.upenn.edu/undergraduate/degrees/minors.php

Energy and Sustainability Minor (ENSU)

Students participating in the minor are expected to have taken at least one semester of intro chemistry, mathematics and physics.

Engineering Entrepreneurship Minor (EENT)

This minor is designed for students majoring in engineering and applied science. However, it is open to all University undergraduates subject to class availability. Non-engineering students should check with their home school to determine their eligibility to take the EENT minor. All courses must be taken for grade (no Pass/Fail).

Total Course Units 6

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Materials Science and Engineering, Minor

The Materials Science and Engineering (MSE) program reflects the explosive growth of interest in the nano and bio sectors of engineering science and technology. MSE prepares students to use fundamental scientific principles to synthesize, manipulate, design and characterize the structural and functional properties of advanced engineering materials. The program offers students advantages seldom found in other MSE programs: the opportunity to tailor the curriculum to their own interests, guaranteed research experience and an excellent student-faculty ratio.

SEAS Second Major or Minor Option

Students interested in a second major (College students only) or minor with SEAS are required to meet with the Undergraduate Curriculum Chair from the major/minor department you wish to declare to discuss requirements and obtain approval on the Second Major or Minor form. The approved form must be returned to the SEAS Research and Academic Services Office, 109 Towne Building.

Mechanical Engineering and Applied Mechanics, Minor

Mechanical Engineering & Applied Mechanics (MEAM) is the study of forces, deformations and motions of solid bodies and fluids, heat generation and transport, and applications to analysis, design, and manufacture of components, machines, and systems. Students in mechanical engineering follow a program which contains basic groundwork in all aspects of mechanical engineering, but flexibility in the curriculum allows students to pursue elective programs in fields such as aeronautics, robotics, computers, electronics, automatic controls, and materials.

Electives

Select 1 Information Systems Elective 1 1
Select 1 Information Systems or Systems Design Elective 1 1

Total Course Units 6.5

Completion of 6 course units with a grade of ‘C’ or better. No pass/fail permitted. All MEAM courses (except MEAM 445 Mechanical Engineering Design Projects and MEAM 446 Mechanical Engineering Design Projects) can be used. Only (2) 100 level courses are permitted. Up to (2) approved Cognate courses can be substituted with department approval from the following list: BE 200 Introduction to Biomechanics, BE 330 Soft Materials, BE 510 Biomechanics and Biotransport, CBE 430 Introduction to Polymers, CBE 535 Interfacial Phenomena., MSE 330 Self-Assembly of Soft Materials, MSE 393 Materials Selection, MSE 405 Mechanical Properties of Macro/Nanoscale Materials, MSE 530 Thermodynamics and Phase Equilibria.

Systems Science and Engineering, Minor

System engineering (SSE) helps us to understand what happens when we compose many elements, each with their own behavior, and helps us understand how to design and constrain the individual elements to engineer desired behavior for the composed system. Students can pursue a SSE minor by completing six courses that includes decision making, data processing and modeling, simulation, and design of systems.

For more information: [http://www.ese.upenn.edu/current-students/undergraduates/minors.php](http://www.ese.upenn.edu/current-students/undergraduates/minors.php)

SEAS Second Major or Minor Option

Students interested in a second major (College students only) or minor with SEAS are required to meet with the Undergraduate Curriculum Chair from the major/minor department you wish to declare to discuss requirements and obtain approval on the Second Major or Minor form. The approved form must be returned to the SEAS Research and Academic Services Office, 109 Towne Building.

For more information: [http://www.seas.upenn.edu/undergraduate/degrees/minors.php](http://www.seas.upenn.edu/undergraduate/degrees/minors.php)
Approved elective lists can be found on the most recent SSE worksheet.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

### Academic Opportunities

Penn Engineering offers a number of academic opportunities for undergraduate students.

#### Global Opportunities

Experience in an international setting is an opportunity that Penn Engineering strongly encourages students to obtain. Spending time in another country allows students to develop their intercultural abilities, and increase their independence and confidence as they immerse themselves in a new environment – all while fulfilling their major requirements. Students can study abroad for a semester or a year, take part in a Global Service Learning project, enroll in a Global Immersion Course, or complete a summer internship.

Opportunities include:

- Study Abroad
- Global Service Learning
- Global Immersion

For more information, visit: [http://www.seas.upenn.edu/undergraduate/degrees/study-abroad.php](http://www.seas.upenn.edu/undergraduate/degrees/study-abroad.php).

#### Research Opportunities

Our extraordinary faculty-to-student ratio provides great opportunities for undergraduate students to work in state-of-the-art research laboratories during the academic year and in the summer. Below you can see examples of outstanding student research, along with helpful information to guide undergraduates toward finding research positions at Penn Engineering.

For more information, including summer and additional research programs available, visit the Penn Engineering Research section (p. 191).

#### Submatriculation

Penn undergraduates may begin an engineering master’s program while still completing their undergraduate program via the submatriculation application procedure.

For more information, visit the Submatriculation section (p. 277).

#### Dual Degrees

You may combine your BAS or BSE degree with a second degree in one of Penn’s other undergraduate schools. A Dual Degree is not to be confused with a Dual Major ([http://www.seas.upenn.edu/undergraduate/handbook/programs/dual-majors.php](http://www.seas.upenn.edu/undergraduate/handbook/programs/dual-majors.php)), where a student earns two majors within Penn Engineering, or with a Second Major ([http://www.seas.upenn.edu/undergraduate/degrees/two-majors.php](http://www.seas.upenn.edu/undergraduate/degrees/two-majors.php)).

For more information, visit: [http://www.seas.upenn.edu/undergraduate/degrees/dual-degrees.php](http://www.seas.upenn.edu/undergraduate/degrees/dual-degrees.php).
SCHOOL OF NURSING

Penn Nursing offers a number of resources and experiences not found at most other schools, including a state-of-the-art simulation lab with mannequins that respond as patients would, classrooms with the latest hospital-based electronic medical records (EMR) technology, and clinical experiences in The Children’s Hospital of Philadelphia and the Hospital of the University of Pennsylvania, two of the nation’s best hospitals. Penn Nursing is a premier academic and research institution renowned for advancing the frontiers of nursing science and patient care. Our students learn from the thought leaders in nursing research, education, and practice who ensure Penn Nursing remain one of the top schools of nursing in the world. At Penn Nursing, students become part of the next generation of healthcare leaders, prepared to care for patients, to conduct landmark research, and to make new strides in healthcare management and health policy.

Learn more about our history: http://www.nursing.upenn.edu/about/history/
Learn more about our school leadership: http://www.nursing.upenn.edu/about/our-leadership/

Mission

The mission of the University of Pennsylvania School of Nursing is to make a significant impact on health by advancing science, promoting equity, demonstrating practice excellence, and preparing leaders in the discipline of nursing.

Philosophy

The mission of the School of Nursing is aimed at meeting the health needs of society in a global and multicultural world. To this end, scholarship, research, education, and practice are integrated to create a culture of inquiry that values intellectual curiosity and diversity, and where faculty, clinicians, staff, and students thrive and learn from one another.

Scholarship and Research

We believe that integrating the arts and sciences is the basis for nursing knowledge and the framework for nursing practice and scholarship. Nursing knowledge encompasses empirical, philosophical, historical, ethical, and personal ways of knowing and is fundamental to the advancement of professional practice. Scholarship encompasses more than research, but also the integration of research into practice and health policy formation and the advancement and dissemination of nursing knowledge. Research is integral in every educational program and strengthened by participating in and contributing to the rich scholarly environment of the University and across national and international health policy organizations.

Nursing is scientifically based and carried out autonomously, as well as interdependently. The focus is development, dissemination, and utilization of knowledge about nursing actions that promote positive changes in patients, systems of care, and the larger society. Nurses collaborate with individuals, families, groups, communities, and other professions to achieve health and well-being for all people.

The School of Nursing is responsive to numerous influences that shape health care, including evolving models of care, consumer advocacy, demographic changes, and advances in science and technology. The faculty are committed to a scholarly agenda that pushes the boundaries of nursing science, in turn influencing education and shaping policy and practice.

Education

Education at the University of Pennsylvania facilitates the intellectual, personal and social development of students as they identify and attain academic and professional goals. Our educational environment fosters independence, ethical behavior, creative and critical thinking, increased breadth of knowledge, and sensitive interactions concerning cultures and viewpoints.

Programs, from baccalaureate to post-doctoral and lifelong learning, are enriched by the varied needs and perspectives of a culturally diverse population, as well as pressing needs for nursing leaders in a rapidly changing world. These leaders will be the clinical experts, health policy shapers, and nursing scholars of the future.

The baccalaureate program, including traditional and second degree students, focuses on professional nursing practice across the continuum of health care, with particular emphasis on vulnerable populations. The curriculum is dynamic and includes leadership skills, interdisciplinary collaboration, and content and clinical experiences that emphasize evidence-based practice. The curriculum also reflects changes in science and technology.

The Master’s programs focus on advanced practice nursing and administration, with an emphasis on specialty and subspecialty practice in concert with changing societal needs. Graduate nurses are prepared for advanced practice that creatively combines knowledge and skills in critical thinking and expert interventions across the lifespan. Special attention is given to clinical decision-making and management skills, as well as methods of evaluation of quality and cost of care.

Pre- and post-doctoral education is dedicated to advancing the discipline of nursing through research. The goal is to equip students with a foundation in nursing and a field of concentration to make substantive contributions to scholarship. Strong faculty mentorship is integral to the development of a critical cadre of future researchers, academicians, and leaders, nationally and internationally.

Practice

The primary goal of nursing practice is to optimize care and outcomes for patients and their family members. The practice of nursing is the foundation for informing educational pedagogies and for the generation of discipline-specific research. Practice is defined as the diverse and varied construction, application, and evaluation of knowledge and the action within the discipline of nursing, particularly for the recipients of nursing care. We believe it is the responsibility of academic nursing to serve as the fulcrum of modeling the intentional integration of education, research, and clinical care to improve the delivery of quality health services.

Nursing is an evidence-based, caring profession that improves the health and quality of life for individuals, families, and communities throughout the world. Nursing possesses a unique body of knowledge that guides its practice in both autonomous and collaborative health care settings. Penn Nursing serves as the model for nurses who care for society's needs in a global and multicultural context. Thus at Penn, we seek to promote health and alleviate suffering in every part of the world by preparing nurses to be responsive to the health-related issues and preferences, values, and needs of all societies. Our goals are to improve and maintain optimal health, prevent disease, enhance the quality of recovery from illness,
and support patients and families to cope with acute and chronic health problems. Penn Nursing serves as a model to direct the advancement of the translation of evidence-based knowledge toward culturally competent models of care.

Revised Mission and Philosophy approved by the School of Nursing Faculty Senate 2/3/03.

Revised Mission and Philosophy approved by the School of Nursing Faculty Senate 5/7/12.

Revised Practice statement approved by the School of Nursing Faculty Senate 4/8/13.

Revised Mission approved by the School of Nursing Faculty Senate 10/5/15.

The Office of Nursing Research (http://nursing.livewhale.net/research/onr/), along with our four research centers (http://nursing.livewhale.net/research/research-centers/) and partnerships across Penn, provide students with resources and support that are virtually unparalleled in our field. Students, from undergraduates to doctoral students, have numerous opportunities to engage in research and work alongside some of the most recognized researchers in their fields.

For more information, visit: https://www.nursing.upenn.edu/research/.

Accreditation is a hallmark of educational quality, and we are proud to share our credentials on our website: http://www.nursing.upenn.edu/about/accreditation/.

Penn Nursing students benefit from a dual advising structure. All students are assigned a faculty advisor and have access to the professional staff advisors in the Office of Student Affairs.

For more information, visit: http://www.nursing.upenn.edu/student-services/advising/accelerated/.

Curriculum

Baccalaureate Program Objectives

Leveled by Year

The faculty has defined behaviors that each student must achieve before progressing to the next level. The objectives are leveled by year: level 1 references freshman year; level 2 references sophomore year, and so on. Students are encouraged to refer to these objectives at the mid-point of the semester and again at the end of the semester to actively participate in the learning and self-evaluation processes.

End of Program. Synthesize knowledge from the humanities and the natural and social sciences as the basis for continuing personal, intellectual, social, and professional development.

Level 3. Apply knowledge from the humanities and the natural and social sciences in the development of the role of nurse in patient care situations in acute care settings.

Level 2. Articulate the relevance of knowledge from the humanities and the natural and social sciences to the evolving role of the nurse.

Level 1. Demonstrate knowledge of the interrelationship of the humanities and the natural and social sciences as a basis for the development of nursing practice and as a source of personal development.

End of Program. As a generalist, use theoretical and scientific bases for nursing to deliver nursing care to clients as individuals, families, communities, and organizations in a variety of settings at any level of wellness, illness, and risk.

Level 3. Apply theoretical and scientific bases for nursing practice related to individuals and families with potential or actual health-related problems in acute care settings.

Level 2. Demonstrate the use of theoretical and scientific bases for nursing practice related to risk assessment and health promotion activities to individuals within selected communities and healthcare agencies.

Level 1. Identify theoretical and scientific bases for nursing practice.

End of Program. Apply research findings to evaluate and improve nursing care and the healthcare system.

Level 3. Appraise the relevance, quality, and applicability of research in decision making related to patient care.

Level 2. Discuss the research implications for various nursing practice environments.

Level 1. Recognize the relationship between research and nursing practice.

End of Program. Assume responsibility for providing nursing care in a collaborative relationship with individuals and groups in a variety of settings.

Level 3. Participate in providing nursing care in a collaborative relationship with individuals and families in complex healthcare settings.

Level 2. Participate in providing nursing care in a collaborative relationship with individuals, selected communities, and healthcare agencies.

Level 1. Observe the process of how nurses collaborate with individuals.

End of Program. Participate in collaborative relationships with colleagues through referral, consultation, planning, and evaluation.

Level 3. Initiate a collaborative relationship with colleagues to facilitate consultation, referrals, planning, and evaluation in a complex healthcare setting.

Level 2. Participate in a collaborative relationship with colleagues by consultation, planning, and evaluating selected communities and healthcare agencies.

Level 1. Identify various interdisciplinary roles in healthcare.

End of Program. Demonstrate leadership and management skills through direction and support of clients and colleagues as individuals, families, communities, and organizations.
Level 3. Integrate an understanding of leadership and management skills through the direction and support of colleagues, individuals, and families in acute care settings.

Level 2. Provide peer support and management of individual clients in selected communities and healthcare agencies.

Level 1. Define leadership and management skills using professional organizations as a model.

End of Program. Participate as an agent of change in scientific, social, and political action for the advancement of research, healthcare, and policy at any level from local to international.

Level 3. Initiate change for the advancement of research and healthcare in an acute care setting.

Level 2. Participate as an agent of change to effect modification in health promotion behavior and level of wellness in selected local communities and healthcare agencies.

Level 1. Recognize the need for change related to healthcare reform and policymaking at the national level.

End of Program. Communicate coherently, comprehensively, and systematically in written and oral forms as they pertain to nursing care, collaboration, research, and policy.

Level 3. Analyze written and oral communication patterns and recommend modification if necessary as they pertain to nursing care, collaboration, and research.

Level 2. Demonstrate therapeutic and professional oral communication with individuals, groups, and peers in selected local communities and healthcare agencies.

Level 1. Demonstrate effective written communication skills.

End of Program. Perform clinical skills appropriate to generalist nursing practice, with competence and judgment within specific settings.

Level 3. Demonstrate advanced nursing skills with competence and judgment in acute care settings.

Level 2. Demonstrate and expected level of judgment in basic nursing skills in selected communities and healthcare agencies.

Level 1. Identify components of professional nursing practice.

BSN Undergraduate Curriculum
Organizing Framework and Vision
Class of 2015 and Beyond
(Accelerated BSN Class of December 2014 and Beyond)

Our Mission
Penn Nursing is committed to teach the art and science of nursing and to create opportunities for service, practice, leadership, and research. This is achieved through talented faculty, internationally recognized scholarship, respect for the diversity of our own community (of faculty, staff, and students), and a commitment to individualizing the pedagogical and material resources necessary for success.

Our Vision
Penn baccalaureate nursing graduates are broadly educated and socially engaged. They demonstrate the capacity for clinical expertise, leadership at the bedside and around the globe, and translating the science of the profession into practice. Our graduates have matured in the intellectual and social environment of both the University and the School of Nursing. This environment is built upon the values of civic engagement, critical inquiry, interdisciplinary knowledge, and the integration of research and practice. It has prepared our graduates to create and realize their own vision and ambition for themselves and their profession.

Our Values
- Respect for the diversity of individuals and their ideas
- Dedication to rigorous clinical inquiry as the basis of clinical judgment
- Commitment to collaboration with individuals, families, communities, and colleagues
- Responsible and engaged advocacy
- Recognition of the intersections of history, social context, culture, and economics in shaping a global society that seeks equity and access for all
- Respect for nursing science and its substantive contribution to health care
- Organizing Framework - One University, One School, One Curriculum

Penn's baccalaureate curriculum brings structure to the School's mission, vision, and values by centering on the primacy of nursing practice situated in caring relationships that facilitate health and healing. The baccalaureate curriculum builds on this conceptualization of nursing as it moves students toward increasingly contextualized understandings of individuals, families, communities, and populations living with health and illness. It also moves students into increasingly complex situations and care environments as they experience the dynamic nature of nursing's embeddedness in health care systems, social structures, and society.

The baccalaureate curriculum concentrates on four intersecting core themes that characterize the complex and contextual nature of nursing practice: engagement, inquiry, judgment, and voice. The competencies derived from this framework are not intended to be achieved in a sequential manner. Rather, this framework explicates competencies that are fluid, adapt to various learning experiences when presented in the curriculum, and essential to the formation of a graduate nurse's professional identity. The application of these themes is demonstrated in the following examples:

Engagement: The student understands the relationships among:
- Caring relationships with individuals, families, and patient populations
- Collegial intra-disciplinary, interdisciplinary, and multidisciplinary collaborative relationships
- Observer and participant in policies and politics
- Situational advocacy and civic commitment to social and political change

Inquiry: The student understands the relationships among:
• Knowledge use, acquisition, and development
• Scientific ways of knowing patients and families and multidimensional and contextual ways of knowing
• Knowledge and implementation of humanistic understandings in practice and research
• Evidence-based practices and the social and political processes of practice with less clear scientific rationales
• Knowledge of how to use and manipulate technological information systems to acquire meaningful data
• Knowledge use and ongoing clinical knowledge development
• Measures of quality in clinical care environments

**Judgment:** The student understands the relationships among:

• Acquisition of knowledge and skill and the integration of both within relational practices with individuals, families, communities, populations, and healthcare systems
• Knowledge of individuals and families and collective knowledge about communities, populations, and systems
• Core nursing knowledge and integrated knowledge
• Situated judgment and clinical know-how

**Voice:** The student understands the relationships among:

• Observer, advocate, and moral agent
• Facilitation of patient and family learning and advocacy affecting social and political practices
• Informal methods of dialogue, discourse, and debate and those necessary for formal writing and publication and for joining a community of scholars
• Vision for self and the profession

More information including individual course requirements can be found in the BSN Handbook (http://www.nursing.upenn.edu/student-services/resources/handbooks-forms-policies/bsn-handbook/degree-requirements/). (http://www.nursing.upenn.edu/student-services/resources/handbooks-forms-policies/bsn-handbook/degree-requirements/)

Students who are receiving their second bachelor's degree in nursing (known as 'second degree students' or 'BSN/MSN students') are not required to complete the liberal arts component while at Penn. All plans of study include an 11 course unit waiver for liberal arts requirements because students who have already completed one undergraduate degree are exempt from all sector requirements, the language requirement, the writing requirement, and free electives. If you have questions regarding your plan of study or the requirements specific to your program, please reach out to the Office of Academic Affairs: http://www.nursing.upenn.edu/student-services/advising/.

### Majors

- Nursing, BSN (p. 218)
- Nutrition Science, BSN (p. 221)

### Nursing, BSN

Penn Nursing combines the resources and opportunities of a large university with the intimacy and personal attention of a small college. Our traditional four-year BSN is a direct-entry program for graduating high school seniors.

At Penn Nursing, you will learn from a passionate faculty (http://www.nursing.upenn.edu/about/our-faculty/) whose accomplishments are recognized worldwide. You will benefit from the academic opportunities (http://www.nursing.upenn.edu/academics/bachelor-of-science-in-nursing-bsn/) of an Ivy League university while enjoying a fun and fulfilling campus life (http://www.nursing.upenn.edu/about/our-students/student-life/). You will gain clinical experience (http://www.nursing.upenn.edu/practice/practice-partners/) in some of the nation's top hospitals, located just steps from your classrooms. And you will have the chance to participate in faculty-driven research (http://www.nursing.upenn.edu/research/), supported by state-of-the-art technology (http://www.nursing.upenn.edu/academics/a-penn-nursing-education/learning-through-simulation/). Penn Nursing graduates are the leaders shaping the future of health care practice, policy, research, and education.

The nursing program begins in your freshman year with a combination of science, nursing, and liberal arts courses, and students are encouraged to take advantage of our flexible curriculum and take courses offered within Penn’s four undergraduate schools. Clinicals begin in the spring of your sophomore year, and students will have experiences in primary care, acute care, women’s health, and mental health settings working with patients from newborns to older adults.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

The following sample Plan of Study is just one possibility for undergraduate study. This plan may not be compatible with several academic options you might choose (e.g., study abroad, submatriculation, dual degree, etc.). If you are interested in pursuing any of the special academic options available to you during the course of your undergraduate experience and want to know how this will alter your plan of study, please contact your faculty advisor and/or the Office of Student Services at 215-898-6687 or advisor@nursing.upenn.edu. Please note that all plans of study are subject to curricular change.

First Year
Fall
NURS 061 Biologically-Based Chemistry 0.5
NURS 068 Integrated Cell Biology and Microbiology 1
NURS 101 The Nature of Nursing Practice 0.5
Critical Writing Requirement 1
Language Requirement (or free elective if level IV proficiency met) 1

Course Units 4.00

Spring
NURS 065 Fundamentals of Nutrition 1
NURS 163 Integrated Anatomy, Physiology, and Physical Assessment I 2
NURS 102 Situating the Practice of Nursing 0.5
Sector Requirement (e.g. Reasoning, Systems, & Relationships) 1
Language Requirement (or free elective if level IV proficiency met) 1

Course Units 5.50

Second Year
Fall
NURS 164 Integrated Human Anatomy, Physiology & Physical Assessment II 2
NURS 103 Psychological and Social Diversity in Health and Wellness 1
Sector Requirement (e.g. Arts and Letters) 1
Language Requirement (or free elective if level IV proficiency met) 1

Course Units 5.00

Spring
NURS 165 Integrated Pathophysiology, Pharmacology, and Therapeutics 2
NURS 215 Nursing of Women and Infants 2
Sector Requirement (e.g. Histories and Traditions) 1
Language Requirement (or free elective if level IV proficiency met) 1

Course Units 5.50
The Nursing Case Study can be taken during the junior or senior year (following completion of NURS 164 Integrated Human Anatomy, Physiology & Physical Assessment II). Only one course is required from the case study group. The Nursing Elective can be taken earlier in the plan of study depending upon the course selected.

Students must consult with an academic advisor prior to making revisions to the plan of study to ensure that the necessary curricular requirements are being met and to prevent delays in academic progression.

The following sample Plan of Study is just one possibility for second-degree students, and individual plans depend on what prerequisites students have fulfilled prior to matriculating at Penn. This plan may not be compatible with several academic options you might choose (e.g., submatriculation, study abroad, minors, etc.). If you are interested in pursuing any of the special academic options available to you during the course of your undergraduate experience and want to know how this will alter your plan of study, please contact your faculty advisor and/or the Office of Student Services at 215-898-6687 or advisor@nursing.upenn.edu. Please note that all plans of study are subject to curricular change.

Nutrition Science, BSN

Our Bachelor of Science in Nutrition Science major is an interdisciplinary collaboration with Penn’s School of Arts & Sciences. You will study concepts like dietary behaviors and metabolism, as well as scientific approaches to the physiological roles of nutrients in the diet, from the cellular to human level. You will explore the role of nutrition in cancer, cardiovascular diseases, diabetes, and obesity, which together account for nearly seventy percent of global mortality. We believe that the next generation of nurse researchers and clinicians need a well-rounded background in nutrition science, social sciences, and public health, and we built this innovative program with these goals in mind.

The major consists of 14 course units: six basic science courses (such as cellular biology, anatomy and physiology, and chemistry), four fundamental nutrition science courses, and four electives. Penn Nursing BSN undergrads can add this as a second major.

For more information: https://www.nursing.upenn.edu/nutrition-major/

|          | Total Course Units                                                | 40.50        |

1. There is some flexibility as to when these courses can be taken (fall vs. spring). Please consult with an advisor about your options and course offerings.
2. See the BSN Handbook (http://www.nursing.upenn.edu/student-services/resources/handbooks-forms-policies/bsn-handbook/) for an approved list of courses.

### Notes

1. All plans of study are subject to curricular change. Students must consult with an academic advisor prior to making revisions to the plan of study to ensure that the necessary curricular requirements are being met and to prevent delays in academic progression.
2. Clinical experiences may include evenings, weekends, and 12 hour shifts. Most clinical rotations are accessible by public transportation; however a car may be necessary for transportation to some clinical sites.
3. Course work outside the School of Nursing is not permitted, with the exception of approved non-nursing courses for the Health Care Ethics and Health Policy requirements.
4. 5.5 course units is the maximum course load for undergraduate nursing students. Students who wish to exceed this limit must seek approval from the Office of Student Services prior to the advance registration period for the semester in question. If approved, the Office of Student Services will increase the maximum course load accordingly in Penn in Touch.

Global Health, Minor

The ever-growing threat of pandemics, terrorism, natural disasters, and climate-related challenges has sharpened the need for skilled nurses who understand the global interconnectedness of health. We need nurses who are experienced both clinically and culturally, who are ready to meet the rapidly-changing needs of patients, no matter where they live.

Available exclusively to Penn Nursing students at both the undergraduate and graduate level, our Global Health minor is an opportunity to increase your knowledge of the world and the factors that contribute to the health of populations. We take a cross-disciplinary approach to help you integrate your knowledge of nursing, culture, and diversity to more effectively engage with patients locally, nationally, and around the world.

For more information: https://www.nursing.upenn.edu/global-health-minor/

The Global Health Minor requires a total of 6 course units.

Elective Courses

Select 3 course units

Total Course Units 6

1 See the website (https://www.nursing.upenn.edu/global-health-minor/plan-of-study-undergrad/) for a list of approved elective courses.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Health Communications, Minor

The Health Communication minor is a collaboration between the School of Nursing and the Annenberg School for Communication. This program expands students’ knowledge of the communication process, theory, and behavior, and it prepares them for roles as professionals who develop cutting edge models for health behavior intervention or implement patient education and health communications programs locally, nationally, and globally.

For more information: http://www.nursing.upenn.edu/health-communications-minor/

Health Communications Minor requires a total of 6 course units.

Minors

- Global Health, Minor (p. 222)
- Health Communications, Minor (p. 222)
- History, Health and the Humanities, Minor (p. 223)
- Nursing and Health Services Management, Minor (p. 223)
- Nutrition, Minor (p. 224)

BSN students are also eligible to complete no more than half of an MSN minor while enrolled as an undergraduate student. For more information, visit: https://www.nursing.upenn.edu/academics/master-of-science-in-nursing-msn/minors/.
The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**History, Health and the Humanities, Minor**

A number of universities have forged bridges between the humanities and sciences to nourish students intellectually, build self-awareness, consider social justice-related phenomena through a new lens, and help them develop empathy. The School of Nursing has launched a new minor in History, Health and the Humanities for undergraduate students. This innovative initiative provides students with the tools and perspectives to study clinical issues in ways different than the lens provided by natural or social sciences. It amplifies the humanities component of the Judgement, Inquiry, Voice, and Engagement pillars that define the "Penn Advantage." It offers formalized opportunities for writing, both reflective and analytical, beyond that available in the required nursing curriculum.

Student enrolled in this minor will be considered Bates’ Center associates and will be invited to lunches, dinners, and other events with visiting scholars and faculty.

**For more information:** [https://www.nursing.upenn.edu/academics/bachelor-of-science-in-nursing-bsn/minors/](https://www.nursing.upenn.edu/academics/bachelor-of-science-in-nursing-bsn/minors/)

The History, Health and the Humanities Minor requires a total of 6 course units.

For more information contact the director of the History, Health and the Humanities minor, Cynthia Connolly PhD RN FAAN at cac1@nursing.upenn.edu.

**Nursing and Health Services Management, Minor**

The delivery of health care increasingly involves decisions that entail considerations beyond clinical or medical issues. With the rise of managed care in the United States, it is critical for health professionals to understand not only the clinical factors that affect patients but also the business environment in which healthcare institutions function. This program, a partnership between the School of Nursing and The Wharton School, helps students understand both the nature of the economic and managerial constraints that healthcare organizations face, and how to effectively manage these constraints to provide the best possible health care for patients.

**For more information:** [http://www.nursing.upenn.edu/nursing-and-health-services-management-minor/](http://www.nursing.upenn.edu/nursing-and-health-services-management-minor/)

The Nursing and Health Services Management Minor requires a total of 8 course units.

Nutrition, Minor

Jointly sponsored by the Schools of Nursing and Arts and Sciences, the Nutrition Minor presents a broad view of the field and illustrates the pervasiveness of nutrition-related issues in such diverse fields as anthropology, economics, folklore, history, physiology, psychology, health care, and public policy.

For more information: http://www.nursing.upenn.edu/nutrition-minor/

The Nutrition Minor requires a total of 6 course units.

Academic Opportunities

Penn Nursing offers a wide variety of supplemental academic opportunities designed to enhance your academic experience and professional development.

For more information, visit: http://www.nursing.upenn.edu/student-services/advising/opportunities/.

Benjamin Franklin Scholars Program - Nursing (http://www.nursing.upenn.edu/academics/a-penn-nursing-education/undergraduate-honors-program/)

The Benjamin Franklin Scholars (BFS) Program for Nursing (http://www.nursing.upenn.edu/academics/a-penn-nursing-education/undergraduate-honors-program/) seeks to foster the development of the next generation of nurse achievers - scholars, leaders, and researchers - through intellectual rigor, academic excellence, and outstanding achievements. Scholars are required to complete four Benjamin Franklin Seminars - small, intensive classes in a wide range of disciplines across the liberal arts and sciences - and a Capstone Honors course in the Nursing school.

Dual Degrees (http://www.nursing.upenn.edu/academics/dual-degrees/)

We recognize the value of interdisciplinary learning, which is why student at all levels - undergraduate, masters, and doctoral - can pursue a dual degree with other schools across campus. Our Dual Degree (http://www.nursing.upenn.edu/academics/dual-degrees/) page provides a complete listing of our approved programs.

Global Opportunities (http://www.nursing.upenn.edu/global-health/student-opportunities/)

Penn Nursing offers a variety of international experiences for students in the BSN and MSN programs, which range from short-term opportunities that focus on comparative healthcare in international contexts, to full-semester clinical experiences.

Hillman Scholars Program in Nursing Innovation (http://www.nursing.upenn.edu/academics/accelerated-options/bsn-phd-hillman-scholars/)

The Hillman Scholars Program in Nursing Innovation (http://www.nursing.upenn.edu/academics/accelerated-options/bsn-phd-hillman-scholars/) is an integrated BSN-to-PhD program designed to educate a new cadre of nurse scientists and leaders to develop innovative solutions in healthcare. The program is available for current Penn Nursing undergraduate students, as well as students applying to the Accelerated Second Degree BSN program.

Minors (p. 222)

Penn Nursing offers a variety of minors in such in-demand areas as global health, palliative care, health services management, and oncology. Adding a minor allows students to complement their major by diving more deeply into a specific area of inquiry.
**Nutrition Major** (http://catalog.upenn.edu/undergraduate/programs/nutrition-bsn/)

Our Nutrition major (http://www.nursing.upenn.edu/nutrition-major/) is an interdisciplinary collaboration with Penn's School of Arts & Sciences. You will study concepts like dietary behaviors and metabolism, as well as scientific approaches to the physiological roles of nutrients in the diet, from the cellular to human level.

**Research Opportunities** (http://www.nursing.upenn.edu/research/student-research/)

Students have numerous opportunities to engage with research at Penn Nursing, whether that means participating in one of the school-supported research centers, applying for a prestigious fellowship through the Center for Undergraduate Research and Fellowships (http://www.upenn.edu/curf/) (CURF), or working one-on-one with a faculty mentor on a student-driven research project.

**Submatriculation** (http://www.nursing.upenn.edu/academics/a-penn-nursing-education/submatriculation/)

One of the most popular options at Penn Nursing, submatriculation allows undergraduate students the opportunity to apply to a graduate program and begin coursework while completing the BSN degree. Students can apply to any of the MSN / DNP majors (http://www.nursing.upenn.edu/academics/) here at Penn Nursing, or to Penn Law.

**School Policies**

The majority of Penn Nursing policies can be found in the Policies and Procedures (p. 281) section of the Catalog.

The following additional policies apply specifically to School of Nursing students:

- Statement of Personal Attributes and Capabilities (https://www.nursing.upenn.edu/live/files/218-statement-personal-attributes-and-capabilities/)

  The curricula leading to degrees in nursing require students to engage in diverse and complex experiences directed to the practice, refinement and full acquisition of essential nursing competencies and functions. Unique combinations of cognitive, behavioral, sensory, communication, psychomotor, and communication abilities are required to perform these functions in a satisfactory manner and to consistently demonstrate these competencies. In addition to being essential to the successful completion of the requirements for the respective nursing degree, these competencies and functions are necessary to ensure the health and safety of patients, fellow students, faculty and other health care providers. This statement describes the minimum competencies and functions necessary for entrance to, continuation in, and graduation from the nursing degree programs of the School of Nursing at the University of Pennsylvania. Candidates for nursing degrees must be able to meet these minimum standards with or without reasonable accommodation.

- Student Social Media Policy (https://www.nursing.upenn.edu/live/files/217-student-social-media-policy/)

  This document serves as the official policy for student use of social media at the SON. These guidelines apply to all students creating or contributing to any kind of social media affiliated with the SON. Please check back periodically to make sure you're up to date. We trust that you will adhere to these policies. If, for any reason an incident occurs that violates the policy, we expect you to bring it to our attention immediately so we can work together toward a resolution.

- Student Substance Abuse Policy (https://www.nursing.upenn.edu/live/files/219-student-substance-abuse-policy/)

  The School of Nursing recognizes the importance of educating its students about the problems of substance abuse because this significant health risk, and in many cases, criminal matter, is unfortunately prevalent among healthcare providers. Aside from impacting upon the personal and psychological integrity of the abusers, substance abuse may significantly impact the ability of healthcare providers to administer safe, competent patient care. Recognizing that substance abuse is both a disease and a professional hazard, the School of Nursing has incorporated substance abuse topical content areas into its curriculum. The School of Nursing has likewise established this substance abuse policy.

  This policy impacts upon and augments the student’s ability to maintain personal and professional integrity, and facilitates the student’s success both clinically and didactically. It promotes a healthy learning environment for the student. In the clinical setting, this policy enhances patient safety. It also fosters the development of professional nurses who are well educated about the prevalence and adverse outcomes of substance abuse.
THE WHARTON SCHOOL

Founded in 1881 as the world’s first collegiate business school, the Wharton School (https://www.wharton.upenn.edu/) of the University of Pennsylvania is shaping the future of business by incubating ideas, driving insights, and creating leaders who change the world. With a faculty of more than 235 renowned professors, Wharton has 5,000 undergraduate (https://undergrad.wharton.upenn.edu/), MBA (https://mba.wharton.upenn.edu/), executive MBA (https://executivemba.wharton.upenn.edu/), and doctoral (https://doctoral.wharton.upenn.edu/) students. Each year 13,000 professionals from around the world advance their careers through Wharton Executive Education’s (https://executiveeducation.wharton.upenn.edu/) individual, company-customized, and online programs. More than 99,000 Wharton alumni form a powerful global network of leaders who transform business every day.

For more information, visit www.wharton.upenn.edu (https://www.wharton.upenn.edu/).

The Wharton School of the University of Pennsylvania was a remarkable innovation when Joseph Wharton, a self-educated 19th-century industrialist, first proposed its establishment more than 135 years ago.

Wharton believed the role of business was to advance society as a whole, creating new wealth and economic opportunity for all people. He approached the Trustees of the University of Pennsylvania in 1880 to establish a new kind of institution specifically designed to prepare leaders for business and public service.

His suggestion was a radical one, but also remarkably prescient. With the admission in 1881 of the first class of students — just 13 undergraduates — Joseph Wharton and the University of Pennsylvania created a successful formula that forever changed the landscape of business and education. Now, more than 1 million students graduate each year from more than 13,000 graduate and undergraduate business programs around the world.

The Wharton School remains a leader in business education through a steadfast commitment to our founder’s vision of applying unparalleled intellectual resources to prepare young men and women for leadership in the global society. With programs on every continent, Wharton continues to educate and empower the best minds in business.

Research provides an individualized method of learning and an in-depth treatment of a topic of personal interest with input from a faculty expert. Research experience is helpful if applying for distinguished international fellowships and is important if going on to graduate studies in an analytical discipline. Research skills are useful for decision-making in the private and public sectors and are required in academic positions. Below you can find a variety of research opportunities and scholarship programs.

- Courses (https://undergrad-inside.wharton.upenn.edu/research/courses/) — Create “tools” in a research-methods course.
- Research assistantships (https://undergrad-inside.wharton.upenn.edu/research/assistantships/) — Learn by executing research-related tasks while working on a project for a faculty member.
- Summer programs (https://undergrad-inside.wharton.upenn.edu/research/summer-programs/) — Gain hands-on experience from proposal to presentation through a project commensurate with program duration.
- Scholars programs (https://undergrad-inside.wharton.upenn.edu/scholars-programs/) — Gain hands-on, in-depth experience from proposal to presentation via a senior thesis and other activities.
- Wharton PhD Submatriculation Program (http://doctoral-inside.wharton.upenn.edu/submatriculation/) — Submatriculate into a PhD program in Accounting, Finance, Health Care Systems, Insurance and Risk Management, Management, Marketing, Operations and Information Management, Business and Public Policy, or Statistics.

For more information, visit: https://undergrad-inside.wharton.upenn.edu/research/.

The University of Pennsylvania Wharton School is accredited by AACSB – the International Association for Management Education.

1916: AACSB founded initially as the Association of Collegiate Schools of Business (ACSB); constitution is adopted June 17, 1916. Founding members include the following: Columbia University • Cornell University • Dartmouth College • Harvard University • New York University • Northwestern University • Ohio State University • Tulane University • University of California, Berkeley • University of Chicago • University of Illinois • University of Nebraska • University of Pennsylvania • University of Pittsburgh • University of Texas • University of Wisconsin–Madison • Yale University

For more information, visit: http://www.aacsb.edu/.

The goal of the Wharton Undergraduate Division academic advising team is to help students make informed decisions about their educational plans and professional/life goals that are consistent with their interests, abilities, and values.

Advising by appointment, walk-in advising, and specialized advising (https://undergrad-inside.wharton.upenn.edu/advising-services/#specialized_advising) are services available in G95 Huntsman Hall to current Wharton undergraduate students.

Professional advisors (https://undergrad-inside.wharton.upenn.edu/advising-services/), concentration advisors (https://undergrad-inside.wharton.upenn.edu/concentration-advisors/), and peer advising fellows (https://undergrad-inside.wharton.upenn.edu/peer-advising/) are available to assist students.

For more information, visit: https://undergrad-inside.wharton.upenn.edu/advising-services/.

Curriculum

All Wharton single-degree undergraduate students must complete a minimum of 37 course units and meet the curricular requirements described below. Students enrolled in a coordinated dual-degree (https://undergrad-inside.wharton.upenn.edu/coordinate-dual-degree/) program should check with their program advisor to learn about their unique requirements. For a Wharton single-degree undergraduate student, the standard course load is 4 to 5 CUs per semester (see a sample course sequence (https://undergrad-inside.wharton.upenn.edu/sample-curriculum-2017/)).

The requirements of the Wharton single-degree curriculum are delineated on the academic planning worksheet (https://undergrad-inside.wharton.upenn.edu/download/academic-planning-

Accounting, BS

Although strong quantitative skills and attention to detail are important qualities for an accounting concentration, students need to acquire other skills as well. Many students find the accounting concentration to be useful preparation for careers in consulting, investment banking, general management, public accounting, and securities analysis.

¹ For students who take ECON 001 Introduction to Micro Economics and ECON 002 Introductory Economics: Macro in place of ECON 010 Introduction to Economics for Business of these courses can be slotted for ECON 010 on the worksheet. The second course may be used to fulfill a General Education Distribution or Unrestricted Elective requirement.

² Two can double-count as General Education Distribution courses.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

**Actuarial Science, BS**

Please note that this concentration may only be declared by students who entered Penn on or before fall 2019. Questions should be directed to the Statistics Department.

Actuarial science stands at the intersection of risk and money. Actuaries are experts in evaluating the likelihood and financial consequences of future events, designing creative ways to reduce the cost of undesirable events, and decreasing the impact of tragic events that do occur. They are in great demand by insurance companies, consulting firms, and financial institutions.
This concentration provides an intriguing blend of mathematics and business management for students with a strong mathematics aptitude. Ideally, students graduating from Wharton with an actuarial science concentration will be prepared to pass or will have passed many of the professional examinations given by the Society of Actuaries or the Casualty Actuarial Society.

### Behavioral Economics, BS

This new collaborative field, behavioral economics, has provided an understanding of how people's decisions deviate from "optimal" choices and the consequences of such deviations for consumers, managers, firms, and policy. This joint concentration between the Operations, Information, and Decisions Department and the Business Economics and Public Policy Department explores the behavioral aspects of economics and decision making.

This concentration provides students with the opportunity to develop an understanding of (a) the rational actor model, (b) modifications to that model that reflect the psychology of human behavior, and (c) implications of those modifications for decision-makers, markets, and public policy.
For more information: https://bepp.wharton.upenn.edu/programs/undergraduate/program-information/behavioral-economics/

Business Analytics, BS

The Business Analytics joint concentration between the OID and STAT departments is designed to build deep competency in the skills needed to implement and oversee data-driven business decisions, including (i) collecting, managing, and describing datasets, (ii) forming inferences and predictions from data, and (iii) making optimal and robust decisions. The concentration makes extensive use of statistical analysis, and the applications of business analytics span all functional areas.

Students choosing the Business Analytics concentration are ideally suited for the growing set of careers broadly defined under the header of “data science” with responsibilities for managing and analyzing data. In addition, the concentration provides an excellent complement to students who choose to focus on one of the functional areas of business (e.g., accounting, finance, marketing, operations).

Business Economics and Public Policy, BS

The Business Economics and Public Policy concentration offers a wide range of courses for students interested in the role of economics in business, competition and public policy. Our courses specialize in market structure and competition, insurance and risk management, behavioral economics, energy, public finance, business & international politics, and business and development. A concentration in Business Economics and Public Policy is vital for students planning a career in consulting, the public sector, industries with a high social impact factor, and anyone with a general interest in how economics interacts with law, policy, and politics.

Environmental Policy & Management, BS

The Undergraduate Concentration in Environmental Policy & Management is designed to provide in-depth foundations for those interested in the complex relationships between business and the natural environment, management of environmental risks, and the business and economics of energy. As global energy markets grow and change rapidly and environmental challenges rise, there is a strong need for a new generation of expert business leaders who understand the rapidly evolving trends in business models, technology, regulation, and financing. Students choosing this concentration are therefore ideally suited for the ever-expanding set of careers in energy companies, clean-tech investing, energy banking, consulting, the non-profit world, and the government. Students will gain insight into these challenges through an inter-disciplinary approach. Relevant courses are offered by departments including Business Economics and Public Policy, Finance, Legal Studies and Business Ethics, Management, Marketing, and Operations Information and Decisions. Up to one credit unit of coursework on business, energy, and the environment can be credited toward this concentration from the School of Arts and Sciences, the School of Engineering and Applied Science, or the School of Design, among other programs, as specified below.

The Undergraduate Concentration in Environmental Policy & Management requires four course units. At least three course units must be from the list of Wharton courses above. Up to one course unit may be from the following list of pre-approved non-Wharton courses (with prior approval of the Director of the Concentration).

EAS 301/505 Climate Policy and Technology
EAS 306/506 Electricity and Systems Markets

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.
If a student believes that a course is missing from this list, they may petition the Director of the Concentration to add the course to the list prior to the start of the semester in which the course will be taken, or at the latest, within the first two weeks of the semester. Requests after a course has been completed will not be granted. The request should include a copy of the syllabus for the course and a brief statement as to why the course should be added. Courses that are likely to be approved are non-Wharton courses in which the primary focus is on topics relating to energy, environment, and sustainability, such as those listed here: https://kleinmanenergy.upenn.edu/energy-courses/.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

The finance concentration develops the skills necessary to work at a high level of expertise in all areas of finance, including:

- Asset management
- Commercial and investment banking in an international context
- The financial management ("treasury function") of commercial and industrial enterprises and of financial institutions
- The financial aspects of venture capital, mergers, and acquisitions
- Most aspects of management consulting in both domestic and international sectors

Concentrating in finance also equips students well for careers in law and government in addition to the private sector.

1 For students who take ECON 001 Introduction to Micro Economics and ECON 002 Introductory Economics: Macro in place of ECON 010 Introduction to Economics for Business of these courses can be slotted for ECON 010 on the worksheet. The second course may be used to fulfill a General Education Distribution or Unrestricted Elective requirement.

2 Two can double-count as General Education Distribution courses.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Global Analysis, BS

The global analysis (GLAN) secondary concentration permits Wharton students to extend their understanding of the global economy as it applies to firms. One may think of it as a broad concentration in international business.

For more information: https://undergrad-inside.wharton.upenn.edu/concentrations/glan/

Global Analysis Concentration

Secondary concentration only.

Study Abroad for at least one semester.

Health Care Management and Policy, BS

The concentration in health care management and policy focuses on the management, financing, and economics of the health care sector. Students learn about health care markets and factors that significantly influence decision making both at the policy level and at the level of the firm or organization. The health care sector includes government agencies, non-profit institutions, major private corporations, medical practices and partnerships, and many small and early-stage health care service and product firms.

This concentration prepares students for careers as managers in health care companies or health care service firms such as consulting, banking or health care IT companies, or government agencies. Students planning careers in the health professions such as medicine, nursing, or dentistry have found the concentration very useful in understanding the context in which they will be working.

Individualized, BS

Students have the option to design an individualized concentration if they cannot find a standard concentration that aligns with their interests. An individualized concentration consists of four CU's that are united by a common theme. An established concentration may also be tailored, with approval from the concentration advisor, to specific student interests by replacing a required course with one not on the list of courses that traditionally defines the concentration.

Students should note that (1) at least three of the courses must be business courses, and (2) a faculty member from the Wharton academic department most closely associated with the individualized concentration must sign off on the proposal.

Individualized concentration proposals are considered by the Undergraduate Division Petitions Committee. Students who wish to pursue an individualized concentration should complete the following steps on this website (https://undergrad-inside.wharton.upenn.edu/concentrations/individualized/).

For more information: https://undergrad-inside.wharton.upenn.edu/concentrations/individualized/

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Legal Studies & Business Ethics, BS

The Legal Studies and Business Ethics Concentration focuses on the social values, moral concerns, and legal considerations that are essential aspects of business decision making in our global market system. The courses students take in this program help them explore how responsible business leaders can engage ethically and effectively with diverse cultures, corporate stakeholders, government regulators, and legal systems. Of special value to students seeking to broaden their business education, this concentration will help them acquire essential, non-quantitative reasoning skills that are required when leaders face difficult choices under conditions of empirical uncertainty and/or moral ambiguity – a frequent occurrence in fast-moving market economies.

Students pursuing this concentration will gain a number of analytic skills, including:

- Identifying moral and legal issues hidden within complex, culturally rich fact patterns
- Reasoning from moral principles to specific ethical and legal conclusions
- Reasoning by analogy between like cases and situations
- Arguing from authoritative rules and precedents to specific, logically consistent recommendations for action

1 Students may petition to substitute other courses toward the requirements of the major. Such requests will be expected to demonstrate that the student is pursuing a coherent plan of entrepreneurship and innovation studies at Wharton. Petitions should be sent in writing to the Entrepreneurship and Innovation academic advisor, Nellie Gaynor at nelliebk@wharton.upenn.edu. Other courses cannot exceed 1.0 cu equivalent of Wharton coursework. Only 1 cu of Independent Study Project or Advanced Student Project including Global Modular Courses or MKTG890, Global Consulting Practicum, can be counted toward the major and must have approval by the department.

¹ For students who take ECON 001 Introduction to Micro Economics and ECON 002 Introductory Economics: Macro in place of ECON 010 Introduction to Economics for Business of these courses can be slotted for ECON 010 on the worksheet. The second course may be used to fulfill a General Education Distribution or Unrestricted Elective requirement.

² Two can double-count as General Education Distribution courses.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.
Management: Strategic Management Track, BS

The specialization in Strategic Management prepares students who are interested in competitive and corporate strategy. A deeper understanding of strategy is useful for those who want to help companies with their strategies (e.g., through consulting), need to understand the strategies of companies (e.g., to make decisions of whether to invest in certain companies), and want to create new organizations and need to develop a strategy that would provide them with a competitive advantage in the marketplace.

Managing E-Commerce, BS

The secondary concentration in electronic commerce is intended to complement primary concentrations by providing students with an additional capability to understand, analyze, and participate in electronic commerce and electronic business activities in new and established
firms. To pursue the concentration in electronic commerce, students must have also declared a primary concentration.

For more information: https://undergrad-inside.wharton.upenn.edu/concentrations/ecom/

Marketing & Communication, BS

Marketing professionals must understand the communication process and the most effective methods of conveying information, regardless of whether they intend to focus on advertising, the development of web-based initiatives, or the conduct of market research. Students in this dual concentration will augment their understanding of the core concepts taught in their marketing courses and be better prepared for employment or graduate study. The dual concentration in marketing and communication allows Wharton students concentrating in marketing to take four courses in the Annenberg School of Communication and

**Marketing & Operations Management, BS**

The Marketing and Operations Management joint concentration emphasizes the importance of partnership between marketing and operations for new product development (NPD) in light of the fact that NPD is a critical company effort highly dependent on internal innovation processes. Given the complexity of these processes, the insights provided by cross-disciplinary collaboration can be particularly beneficial in many efforts, including:
Objective: To meet the requirements for a Marketing & Operations Management Concentration.

**Required OIDD Courses**
- Select two course units from the following: 2 units
  - OIDD 220 Introduction to Operations Management
  - OIDD 224 Analytics for Service Operations
  - OIDD 314 Enabling Technologies
  - OIDD 415 Product Design
  - OIDD 416 Design and Development of Web-Based Products and Services

**Required MKTG Courses**
- Select two course units from the following: 2 units
  - MKTG 221 New Product Management
  - MKTG 225 Principles of Retailing
  - MKTG 227 Digital Marketing and Electronic Commerce
  - MKTG 234 Idea Generation & the Systematic Approach for Creativity
  - MKTG 254 Pricing Policy
  - MKTG 262 New Product Development
  - MKTG 270 Digital Marketing, Social Media and E-Commerce
  - MKTG 271 Models for Marketing Strategy
  - MKTG 277 Marketing Strategy
  - MKTG 288 Pricing Strategies
  - MKTG 476 Applied Probability Models in Marketing

**Other Wharton Requirements**
- Total Course Units 37

---

1. You may not take both the mini course version (0.5 cu) and full term version (1.0 cu) of the same course topic for credit. Specifically, if you take MKTG 221 New Product Management, you may not also take MKTG 262 New Product Development. If you take MKTG 254 Pricing Policy you may not also take MKTG 288 Pricing Strategies. If you take MKTG 227 Digital Marketing and Electronic Commerce, you may not also take MKTG 270 Digital Marketing, Social Media and E-Commerce.

2. Two can double-count as General Education Distribution courses.

For more information: [https://marketing.wharton.upenn.edu/programs/undergraduate/marketing-and-operations-management-joint-concentration/](https://marketing.wharton.upenn.edu/programs/undergraduate/marketing-and-operations-management-joint-concentration/)
The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Marketing, BS

Students pursuing a concentration in marketing acquire a solid grounding in applying the basic disciplines (e.g., psychology, economics, statistics) essential for understanding consumer and organizational buying patterns and developing successful marketing strategies. They also gain practical experience applying these concepts and methods via half-semester mini-courses (e.g., new product development, advertising, retailing). Many students with a marketing concentration have gone on to work in brand management, advertising, sales, marketing research, consulting, and entrepreneurial ventures.

The second course may be used to fulfill a General Education Distribution or Unrestricted Elective requirement.

2  Two can double-count as General Education Distribution courses.

Operations, Information & Decisions: Decision Processes Track, BS

The Decision Processes (DP) track establishes rigorous scientific foundations for describing, predicting, and improving the processes through which individuals and groups collect data and information, form judgments, and make decisions. This program examines descriptive theories and empirical research on human behavior that identify systematic biases in judgment and heuristics, or rules of thumb, that individuals and groups use to cope with complex decision-making and negotiations environments. It also examines the ways in which individuals and groups can make better decisions given their biases and information-processing limitations.

Operations, Information & Decisions: General Track, BS

Computer-based management systems and analytic approaches to decision making are increasingly vital to effective management in a range of industries across public and private sectors. As organizations develop and implement sophisticated decision-support systems, they increase the demand for managers who have the expertise to understand, create, and profitably exploit rapidly developing management technology. There is also a growing demand for skilled professionals who can effectively manage the operations encompassing the manufacturing and distribution of products and services.

The Operations, Information and Decisions curriculum prepares students to meet these challenges by providing a rigorous foundation of coursework across different but complementary disciplines, including decision processes, information systems, and operations management/management science.

Operations, Information & Decisions: Information Systems Track, BS

The Information Systems track is designed to provide the necessary understanding of both technical and business issues relating to information systems. The program is ideal for students interested in managing information technology, either as a technologist, a general manager, or a consultant in technology-intensive industries. The program also provides a good supplement to engineering or other technologically-sophisticated students who wish to obtain greater exposure to managerial issues or students in finance or management who wish to better understand the role of technology in their core disciplines.

Operations, Information & Decisions: Operations Management/Management Science Track, BS

The Operations Management / Management Science track addresses central issues necessary to understand production and service operations in today's global economy. This program provides a rigorous foundation for immediate careers in consulting and analytic strategy support for companies, as well as future graduate studies in economics and business. The courses allow students to build a fundamental understanding of the tradeoffs to consider when managing the development of products and services, as well as the operations used to produce them and fulfill customer requirements.

The need to effectively manage the production of goods and services has also sparked the development of a number of useful mathematical tools. Besides their direct application to operational problems, these management science techniques have been broadly applied to a wide variety of other economic activities, from the pricing of financial instruments to decisions concerning markdown policies in retailing.

Real Estate, BS

The real estate concentration consists of one required course (REAL 209: Real Estate Investment: Analysis and Financing) and three electives. While the required course focuses on real estate finance, the electives allow students to explore a variety of issues related to real estate. These include real estate development, the legal aspects of real estate investment and financing, and the relationship between government policy and real estate development.

- Humanities
- Natural Science, Math & Engineering
- Social Science

Cross-Cultural Perspectives
Select 3 courses

Unrestricted Electives
Select five courses

Total Course Units

1 For students who take ECON 001 Introduction to Micro Economics and ECON 002 Introductory Economics: Macro in place of ECON 010 Introduction to Economics for Business of these courses can be slotted for ECON 010 on the worksheet. The second course may be used to fulfill a General Education Distribution or Unrestricted Elective requirement.

2 Two can double-count as General Education Distribution courses.

The degree and major requirements displayed are intended as a guide for students entering in the Fall of 2020 and later. Students should consult with their academic program regarding final certifications and requirements for graduation.

Social Impact & Responsibility, BS

The social impact & responsibility (SIR) concentration seeks to examine the question: “How should business enterprises and business thinking be engaged to improve society in areas not always associated with business?” SIR is an interdisciplinary field that encourages students to approach their core courses and primary concentration courses from a socially oriented perspective.

For more information: lgst.wharton.upenn.edu (http://lgst.wharton.upenn.edu)

Social Impact & Responsibility Concentration

Secondary concentration only.

A 2.5 minimum concentration GPA is required.

Statistics, BS

A key challenge facing managers is the interpretation of the vast amount of data generated by computing systems. As these data do not directly answer important business questions, managers must use data analysis and statistics to interpret them. Statistics courses develop the skills and insights required to make effective use of quantitative methods, select and apply techniques, and communicate statistical results. All courses provide skills that augment substantive managerial abilities, along with exposure to computer software that implements key techniques.

Minors

For Wharton Students

Students who wish to study a subject of interest in greater depth may choose to pursue a minor. Minors generally require six to eight courses in a particular field of study. A carefully planned program of study allows a Wharton student to complete a minor within the Wharton curriculum, capitalizing on potential overlap with General Education, Non-Business Elective, and Unrestricted Elective requirements. Students are encouraged to begin planning as early as possible to ensure the minor can be completed in a timely manner and without taking extra courses.

Wharton students have the option of pursuing either a departmental minor or a University Minor (https://undergrad-inside.wharton.upenn.edu/university-minors/).

For Non-Wharton Students

- Statistics, Minor (p. 170)

Academic Opportunities

In addition to a variety of global opportunities (https://undergrad-inside.wharton.upenn.edu/global-opportunities/), Wharton students can pursue interdisciplinary studies through coordinated dual-degree programs (https://upenn-preview.courseleaf.com/undergraduate/interdisciplinary/coordinated-dual-degree/), dual degrees, and minors (https://undergrad-inside.wharton.upenn.edu/minors/). Students also can accelerate their graduate pursuits while satisfying their undergraduate degree requirements through submatriculation programs (https://upenn-preview.courseleaf.com/undergraduate/academic-resources/submatriculation/#schoolprogramstext).

Students at Wharton can enrich their academic experience through independent study (https://undergrad-inside.wharton.upenn.edu/independent-study/) or the Wharton Industry Exploration Program (https://undergrad-inside.wharton.upenn.edu/wiep/), which provides the opportunity to study different business sectors in Los Angeles, the San Francisco Bay Area, and New York. Opportunities like the Wharton Field Challenge (https://undergrad-inside.wharton.upenn.edu/field-challenge/) and Wharton Research Scholars (https://undergrad-inside.wharton.upenn.edu/wrs/) only further enhance the academic experience at Wharton.

For more information, visit: undergrad-inside.wharton.upenn.edu/academic-opportunities.
INTERDISCIPLINARY STUDIES

Interdisciplinary opportunities at Penn allow students to explore their academic interests and discover new ways of integrating knowledge.

Dual Degree

Undergraduates can receive two Bachelor’s Degrees by completing the requirements for any two of the four undergraduate schools at the same time. A dual degree program has no prescribed course of study, and the student does not have to choose to participate prior to matriculation.

The application process for a dual degree varies among the undergraduate schools. Contact the advising office (p. 267) for the school to which you are applying for details on how to submit an application.

Coordinated Dual Degree Programs (p. 259)

Penn’s specialized dual degree programs offer students the opportunity to pursue an integrated curriculum jointly offered by two schools within the University. Program participants graduate from Penn with two degrees.

University Minors (p. 261)

In addition to minors completed within one school, several interdisciplinary minors combine coursework from the four undergraduate schools.

Coordinated Submatriculation Programs (p. 260)

Penn offers students many opportunities to begin a graduate program while completing an undergraduate degree. Students may apply for admission as submatriculants to a variety of the University’s graduate and professional areas of study. Submatriculation programs exist in the four undergraduate schools and in several of Penn’s graduate schools.

Featured Interdisciplinary Programs

Penn offers a number of opportunities for students to pursue an integrated curriculum jointly offered by two or more schools within the University, and graduate with a single degree. Examples of such programs include:

Digital Media Design

The Digital Media Design (DMD) program is an interdisciplinary major in the School of Engineering and Applied Science at Penn. As a full-fledged Bachelor’s in Engineering and Science (BSE) degree, it combines major coursework in computer graphics within the Computer & Information Science Department with Fine Arts courses from Penn’s School of Design. The program is designed for students who have an interest in the computer programming, mathematics, and design behind computer graphics, animation, games, virtual reality environments, and interactive technologies.

Integrated Studies Program

The Integrated Studies Program (ISP) is the freshman curriculum for Benjamin Franklin Scholars pursuing degrees in the College of Arts and Sciences.

Deeply rooted in the liberal arts tradition of acquiring and applying expansive knowledge, this residential academic program invites highly-motivated students to examine complex themes through the integration of multiple academic disciplines and methodologies. Students are guided through the semester by some of Penn’s leading faculty. By investigating the same ideas under three distinct lenses, drawing simultaneously from the humanities, social sciences, and sciences, students sharpen their focus on the similarities—and differences—between the disciplines’ habits of mind.

For more information, visit: https://www.college.upenn.edu/integrated-studies/.

Moelis Advance Access Program

The Moelis Advance Access Program is a deferred admission program that gives Penn undergraduates a guaranteed pathway to the Wharton MBA while they pursue work experience. Moelis Fellows access Wharton resources and network during their deferment period and can be considered for a $10,000 fellowship per year during the 2-year full-time MBA program. Beginning in 2018, the program will accept a highly selective cohort of Penn seniors whose academic and career interests expand traditional notions of business education. The program was established with a $10 million gift from Ken Moelis, W’80, WG’81, and Julie Taffet Moelis, W’81. The program is open to all Penn undergraduates, beginning with the Class of 2018, who aspire to set the stage early for their advanced education and highly successful careers.

Seniors in the College of Arts and Sciences, School of Engineering and Applied Science, School of Nursing, the Wharton School, and all coordinated dual degrees may apply.

For more information, visit: https://mba.wharton.upenn.edu/moelis-advance-access-program/.

Networked & Social Systems Engineering

The Rajendra and Neera Singh Program in Networked and Social Systems Engineering (NETS), formerly called Market and Social Systems Engineering (MKSE), is the world’s first course of study to fully integrate the disciplines needed to design and analyze the complex networks reshaping our society. This program prepares students to shape the technologies that underpin internet-based search and electronic commerce, financial networks, social networks, and even such exchanges as the power grid. Graduates of this program will be prepared to engineer networks that work for both end-users and investors. Other graduates may become the policy-makers urgently needed to regulate these networks for the protection of commercial property and societal good.

View Program Requirements (p. 206)

For more information, visit: http://www.nets.upenn.edu/.

Nutrition

The Nutrition major is an interdisciplinary collaboration between the School of Nursing and the School of Arts & Sciences, and it builds on a student’s basic science skills with a deep dive into the science of nutrition. Linkages of nutritional compounds and dietary approaches with health and disease, novel approaches to the study of nutritional impact on health, and future avenues of exploration in the field are examined.

For more information, visit: http://www.nets.upenn.edu/.

View Program Requirements (p. 201)
Penn offers the opportunity to study more than 40 languages at the Penn
contexts. Here are some of the opportunities available to undergraduates.

Penn offers many opportunities for interdisciplinary study in global
major/
the study of nutrition science.
psychology, health care, and public policy provide a rounded context for
Elective courses in anthropology, biology, economics, physiology,
experience. This combination enables students not only to understand
from both schools concurrently, creating a truly interdisciplinary learning

Undergraduate students enrolled in the M&T Program pursue degrees
principles. They pointed to the growing need for people who can bridge
academicians, emphasized that an understanding the engineering and
management and technical disciplines.
leaders in business and industry as a sound knowledge of management

Penn's specialized dual degree programs offer students the opportunity
to pursue an integrated curriculum jointly offered by two schools within
the University. Program participants graduate from Penn with two
degrees.

This program combines studies in computer science and engineering
with linguistics, mathematics, philosophy, or psychology, and students
receive a BSE or BAS degree from Penn Engineering and Bachelor of Arts
from the College of Arts and Sciences. Requirements for the program are
guided by the degree sought (BAS or BSE) and include 12-16 course units
in Linguistics, Mathematics, Philosophy, or Psychology and 4 course
units in a Foreign Language.

This innovative four-year joint degree program between the School of Arts
and Sciences and the Wharton School combines a business education,
liberal arts, and advanced language training in one of eleven languages of
focus. It prepares students for global leadership in career paths around
the world in diverse areas such as consulting, finance, medicine, politics,
diplomacy, the non-profit sector, and entrepreneurship. Students must
apply to the program when they apply to Penn; they cannot transfer into
the program. Admission is highly competitive.

The Jerome Fisher Program in Management & Technology (M&T)
is sponsored jointly by the School of Engineering and the Wharton
School. The impetus for this joint-degree program came from the Board
of Overseers of the School of Engineering and Applied Science. The
Board of Overseers, a distinguished group of corporate executives and
academicians, emphasized that understanding the engineering and
technology fundamentals is as essential to the background of future
leaders in business and industry as a sound knowledge of management
principles. They pointed to the growing need for people who can bridge
the management and technical disciplines.

Undergraduate students enrolled in the M&T Program pursue degrees
from both schools concurrently, creating a truly interdisciplinary learning
experience. This combination enables students not only to understand
engineering and business concepts but also the integration of the two and how this intersection distinctively shapes our world. M&T students pursue a Bachelor of Science in Economics from the Wharton School and either a Bachelor of Science in Engineering (BSE) or a Bachelor of Applied Science in Engineering (BAS) from Penn Engineering. The curriculum includes two special M&T linking courses that allow for added interdisciplinary learning opportunities. The common goal for all M&T students is the mastery of the technical and managerial skills necessary to define and solve problems in today’s complex technological society. The structure of the joint-degree program gives each student considerable flexibility in meeting this goal. Particular attention is directed to the importance and processes of innovation in our technology-based industries.

For more information, visit: http://www.upenn.edu/fisher/.

**Nursing and Health Care Management Program (NHCM)**

School of Nursing/The Wharton School

Bachelor of Science in Economics/Bachelor of Science in Nursing (BSN)

Nurses with excellent clinical and administrative skills are in higher demand than ever. Our Nursing and Health Care Management Program (NHCM) gives you the chance to combine two of Penn’s greatest assets: Penn Nursing and The Wharton School. In the NHCM program, you’ll study simultaneously in both schools and graduate with a Bachelor of Science in Nursing and a Bachelor of Science in Economics. Your work will include science and clinical courses along with general education courses in the Arts and Sciences. We designed the curriculum to boost expertise in patient care and deepen your knowledge of how to manage the way that care is delivered. We also use a multidisciplinary approach that integrates nursing, business, and liberal arts. Students enrolled in the program have advisors at both Nursing and Wharton and complete this integrated academic and clinical program in five years.

For more information, visit: http://www.nursing.upenn.edu/nhcm/.

**Roy and Diana Vagelos Program in Life Sciences and Management (LSM)**

School of Arts & Sciences/The Wharton School

Bachelor of Arts (BA)/Bachelor of Science in Economics

On the surface, bioscience and business may seem like unrelated fields. But if the full benefits of science are to be realized, discoveries made at the laboratory bench must be taken to market and made accessible to society at large—a process that demands great skill both scientifically and managerially. Given the pace of recent advances in bioscience and biotechnology, never before has the need been so great for decision makers who can understand and advance scientific innovations as well as manage and promote them. It is with this in mind that the University of Pennsylvania launched the Vagelos Life Sciences & Management (LSM) program.

LSM is an undergraduate dual-degree program administered jointly between Penn’s College of Arts & Sciences and the Wharton School. Each year, the program enrolls approximately 25 exceptional students and offers them the opportunity to pursue an interdisciplinary curriculum combining bioscience and business, leading to the completion of two degrees: a Bachelor of Arts in a life science major and a Bachelor of Science in Economics. To ensure that every student learns how to apply their knowledge, the program provides the means for them to find two required, paid internships, one centered in scientific research and the other in business or public policy. Completion of the LSM program is an ideal starting point for students intent on careers in the life sciences sector by preparing them for advanced training, and we anticipate they will then go on to pursue through MD, PhD, MBA, JD, and/or other graduate programs. LSM is suited to students with interests in health care; biomedical, agricultural, and environmental research and development; public policy; and the financial and strategic management of life science organizations.

For more information, visit: https://lsm.upenn.edu/.

**Vagelos Integrated Program in Energy Research (VIPER)**

School of Arts & Sciences/School of Engineering & Applied Science

BA/BSE

The Vagelos Integrated Program in Energy Research (VIPER) enrolls talented, prepared, and motivated students interested in energy science and engineering. VIPER students receive instruction and state-of-the-art research experiences, enabling them to pursue advanced degrees in these fields and establish high-caliber research careers as innovators in the discovery and development of sustainable ways to harness, convert, and use energy. Candidates for the program apply as they seek admission to the University. A joint program of Penn’s School of Arts and Sciences (SAS) and the School of Engineering and Applied Science (SEAS), VIPER leads to dual Bachelor of Arts (BA) and Bachelor of Science in Engineering (BSE) degrees by combining majors from each school. Possible combinations include: Physics and Astronomy, Chemistry, Biology, or Mathematics from SAS and Chemical and Biomolecular Engineering, Electrical Engineering, Materials Science and Engineering, or Mechanical Engineering and Applied Mechanics from SEAS. Some students may also apply for a master’s degree through a fifth year of study.

For more information, visit: https://www.viper.upenn.edu.

**Coordinated Submatriculation Programs**

The University offers a number of coordinated, interdisciplinary submatriculation programs to undergraduate students.

For more information about submatriculation, click here (p. 277).

**BA/JD Program in Arts & Sciences and Law**

This rigorous program offers an opportunity for highly qualified and motivated students to apply to Penn Law School during what is generally the first semester of a student’s junior year (between 16 and 23.99 course units). If accepted, the student will submatriculate into the J.D. program in their senior year. Applicants must be committed to the study of law in its theoretical and practical aspects.

For more information, visit: https://www.college.upenn.edu/submatriculation/ (https://www.college.upenn.edu/submatriculation/).
Bio-Dental Program

Bio-Dental submatriculation is a seven-year joint program of the College and Penn’s School of Dental Medicine for students who will major in Biology and wish to enroll in the Dental School during their senior year in the College. Students must apply to the program when they apply to Penn, and applicants will be notified of their conditional acceptance into the program when they are notified of their admission to Penn. Full acceptance into the program is made after the student’s junior year and is based on academic performance during those three years and meeting the admissions standards of the Dental School.

For more information, visit: https://www.bio.upenn.edu/undergraduate/submatriculation/accelerated-dental-program (https://www.bio.upenn.edu/undergraduate/submatriculation/accelerated-dental-program/).

BSN/JD Program

Submatriculation allows students in traditional and accelerated BSN programs to formally enroll in the JD program (https://www.law.upenn.edu/academics/degrees.php) at Penn Law School while still undergraduates. The current climate of healthcare litigation and malpractice suits is well suited for professionals who combine nursing education and experience with legal expertise. A background in both nursing and law gives students a powerful and marketable skillset and prepares them to make an impact on the medical and legal professions. To submatriculate into Penn Law, students should take the LSAT and apply (https://www.law.upenn.edu/admissions/jd/) during their junior year. If a student is admitted, they will begin taking courses at the law school during their fourth year, completing both the BSN and JD degrees in six years instead of the usual seven.

Penn Engineering/Penn Law Program

Penn's Law School offers an opportunity for qualified juniors in Penn Engineering to apply early to the Law School and submatriculate into the JD program beginning their fourth year. The program is designed as a 3-year + 3-year accelerated program for highly qualified Engineering undergraduates either in the Bachelor of Applied Science (BAS) or Bachelor of Science in Engineering (BSE) degree programs.

For more information, visit: http://www.seas.upenn.edu/undergraduate/degrees/submatriculation-law.php.

Roy and Diana Vagelos Program in Molecular Life Sciences

Ambitious and highly motivated students interested in the molecular view of life should consider the Vagelos Scholars Program in Molecular Life Sciences. Students begin as freshmen and major in two sciences or submatriculate for a Master of Science degree in the standard four years. Students in this program plan to pursue scientific research careers. Scholars are invited from the admitted pool of high school seniors at the beginning of April at the discretion of the faculty director and the admissions committee.

For more information, visit: http://www.sas.upenn.edu/biochem/vspmls.html.

Wharton Law School Submatriculation Program

During the junior year, qualified Wharton undergraduate students may apply for admission to the Penn Law School and submatriculate into the Juris Doctor (JD) program. In this 3-year + 3-year accelerated program, the student’s fourth year of study is spent entirely at the Law School completing the first-year law curriculum. The remaining undergraduate and/or graduate degree requirements are then completed in the student’s fifth and sixth years of study.

For more information, visit: https://undergrad-inside.wharton.upenn.edu/submatriculation/.

University Minors

In addition to minors completed within one school, several interdisciplinary minors combine coursework from the four undergraduate schools.

Actuarial Mathematics

School of Arts & Sciences/The Wharton School

Actuarial Science stands at the intersection of risk and money. Actuaries use their knowledge of mathematics and probability theory to define, analyze, and solve complex business, financial, and social problems. Actuaries evaluate individual and corporate risks and design financially sound insurance and pension plans. Graduates from the University of Pennsylvania with an Actuarial Mathematics Minor are expected to be in great demand by the insurance and banking industry.

View Program Requirements (p. 140)

American Public Policy

School of Arts & Sciences/The Wharton School

This program enables undergraduates interested in American public policy to construct an integrated program between the School of Arts and Sciences and the Wharton School.

View Program Requirements (p. 141)

For more information, visit: https://bepp.wharton.upenn.edu/programs/undergraduate/program-information1/american-public-policy-minor/.

Biological Basis of Behavior and Health Services Management

School of Arts & Sciences/The Wharton School

The Biological Basis of Behavior Program and the Health Care Management Department of the Wharton School have jointly sponsored this effort. The objective is to provide students with exposure to two related areas: study in neuroscience and behavioral biology as a leading example of the bioscience enterprise, and health services management as the environment in which science innovation must be developed and managed. The minor consists of eight courses, four from the Biological Basis of Behavior Program and four from Wharton. Students must earn a minimum grade of C- in courses taken to fulfill the minor requirements.
Students must have a minimum of 3 courses that they count towards the minor and not towards any other major or minor.

View Program Requirements (p. 157)

For more information, visit: https://www.sas.upenn.edu/bbb/requirements/bbbbhsmminor/ (https://www.sas.upenn.edu/bbb/requirements/bbbbhsmminor/).

**Consumer Psychology**
*School of Arts & Sciences/The Wharton School*

The goal of the interschool Consumer Psychology Minor is to create a program that fosters the natural link between Psychology in the College and Marketing in Wharton. To fulfill the minor, students must complete four courses from the Psychology Department in the College, four courses from the Marketing Department in Wharton, and the stats requirement. Both College and Wharton requirements will consist of core courses along with a set of elective courses. College students who wish to minor in Consumer Psychology must count two of the four required psychology (PSYC) courses towards only the Consumer Psychology minor (and towards no other major or minor).

View Program Requirements (p. 147)

For more information, visit: https://psychology.sas.upenn.edu/more-information-minors (https://psychology.sas.upenn.edu/more-information-minors/).

**Legal Studies & History**
*School of Arts & Sciences/The Wharton School*

The University of Pennsylvania’s Wharton School and the College of Arts and Sciences are pleased to offer a unique program of study for undergraduate students that enables them to explore multiple perspectives on law as an inter-school supplement to their major field of study.

View Program Requirements (https://catalog.upenn.edu/undergraduate/programs/history-legal-studies-minor/)

For more information, visit: https://lgst.wharton.upenn.edu/minor-in-legal-studies-and-history/.

**Nursing and Health Services Management**
*School of Nursing/The Wharton School*

Increasingly, the delivery of health care involves decisions that entail considerations beyond clinical or medical issues. With the rise of managed care in the United States, it is critical for health professionals to understand not only the clinical factors that affect patients but also the business environment in which healthcare institutions function. This program, a partnership between the School of Nursing and The Wharton School, helps students understand both the nature of the economic and managerial constraints that healthcare organizations face, as well as how these constraints can be effectively managed to provide the best possible health care for patients.

View Program Requirements (p. 223)

For more information, visit: http://www.nursing.upenn.edu/nursing-and-health-services-management-minor/.

**Nutrition**
*School of Arts & Sciences/School of Nursing*

Jointly sponsored by the Schools of Nursing and Arts and Sciences, the Nutrition Minor presents a broad view of the field, and illustrates the pervasiveness of nutrition-related issues in such diverse fields as anthropology, economics, folklore, history, physiology, psychology, health care, and public policy.

View Program Requirements (p. 224)

For more information, visit: http://www.nursing.upenn.edu/nutrition-minor/.

**Sustainability and Environmental Management**
*School of Arts & Sciences/School of Engineering & Applied Science/The Wharton School*

The Sustainability and Environmental Management Minor is focused on sustainability and designed to help students understand the nature of environmental constraints that face organizations and individuals in the modern world, and to understand how these constraints can be effectively considered as part of the decision-making process in for-profit and non-profit organizations.

View Program Requirements (p. 171)

**Urban Education**
*School of Arts & Sciences/Graduate School of Education*

The crisis in American education continues to confound major sectors of American life. National attention has engaged various constituencies - non-profit business organizations; local, state and federal governments; teachers' unions; and universities - in trying to understand and improve public education. At Penn, students and faculty have become deeply involved in local schools through community service, research, teaching, and coursework. In response to student interest in community and education issues, the College of Arts and Sciences and the Graduate School of Education sponsor an interdisciplinary minor in Urban Education. This seven-course undergraduate minor offers students a unique opportunity to bridge learning between the classroom and community, and it features:

- Academically-based community service in local schools
- Deeper understanding of the complex factors affecting urban education
- Field-based research in an area of interest
- Hands-on opportunity to investigate a career in education
- Credit toward Pennsylvania teacher certification requirements

This minor is open to undergraduates in all disciplines. Students choose from among three concentrations depending on interest in pursuing teaching certification or deepening one’s background in urban education policy. Elementary Education; Secondary Education; Urban Education Policy, Research, and Practice.
Urban Real Estate and Development
School of Arts & Sciences/The Wharton School
This minor, co-sponsored by Real Estate (Wharton) and Urban Studies (Arts and Sciences), is designed to enable students to combine an interest in Urban Studies and Real Estate Development. Students take a total of seven Urban Studies and Real Estate courses, in consultation with the minor advisor.

View Program Requirements (p. 173)
For more information, visit: http://www.sas.upenn.edu/urban/students/real-estate-development-minor (http://www.sas.upenn.edu/urban/students/real-estate-development-minor/).
# Academic Resources

Penn offers a wide variety of resources, offices, and programs for undergraduate students to support them in all aspects of their Penn experience. The following list highlights some of the most commonly used resources and areas of interest relating to academics and educational opportunities. For more information about campus resources available to students, visit the Division of the Vice Provost for University Life (http://www.vpul.upenn.edu/).

- Academic Calendar (p. 264)
- Advising (p. 267)
- Career Services (p. 268)
- Community Engagement (p. 268)
- Enrollment & Degree Verification (p. 268)
- Fellowships and Prizes (p. 268)
- Financial Aid (p. 270)
- Foreign Language Study Opportunities (p. 270)
- Global Programs (p. 271)
- Information for Athletes (p. 271)
- Information for First-Generation, Low Income Students (http://catalog.upenn.edu/undergraduate/academic-resources/firstplus/)
- Information for International Students (p. 271)
- Learning Resources (p. 272)
- Libraries (p. 272)
- Quaker Consortium (p. 273)
- Registrar’s Office (p. 273)
- Research (p. 273)
- Scholars Programs (p. 275)
- Submatriculation (p. 277)
- Summer Sessions (p. 278)
- Transcripts (p. 278)
- Wellness (p. 279)

## Academic Calendar

**Notes:**

For the most up-to-date information about Fall 2020, visit https://fall-2020-planning.upenn.edu.

Graduate and professional programs may follow their own calendars; check the website for each School or program.

Rosh Hashanah, Yom Kippur, the first two days of Passover and Good Friday are religious holidays that affect large numbers of University community members and that fall during the academic year. View the University’s policy regarding these and other holidays (http://catalog.upenn.edu/pennbook/secular-religious-holidays/).

The University’s Three-Year Academic Calendar is subject to change. In the event that changes are made, the latest, most up-to-date version will be posted to the Almanac’s website (https://almanac.upenn.edu/penn-academic-calendar/).

### Advising

Each school has their own advising office with a network of academic advisors available to assist students. The structure of the advising varies by school; you can find the links to your school's advising office below.

### School of Arts and Sciences

College students need to choose courses, declare a major and define career goals. They will need to examine their performance in different courses, identify their skills and those they wish to develop, and decide what really matters to them. Much of this assessment they will do themselves, but faculty members, academic advisors, career counselors and peers can help.

Students in the College have a strong network of academic advisors available to assist them throughout their undergraduate careers.

- Pre-major advisors help first- and second-year students navigate their entrance into academic and intellectual life in the College beginning with the issues of incoming freshmen and continuing through the student’s exploration of a potential major.
- Peer advisors work with the pre-major advisor and are one of the first points of contact for incoming College students. They provide the perspective of an upperclass student in the College and assist first-year students in making the transition from high school to Penn by sharing their strategies for academic success and knowledge of campus resources.
- After declaring a major, students are assigned an academic advisor affiliated with the major department or program.
- All students are welcome and encouraged to speak with assistant deans for advising in the College Office. These advisors can help students explore the many options and opportunities available to College students, and are available by appointment or on a walk-in basis throughout the year.

For more information, visit the College website ([https://www.college.upenn.edu/advising/](https://www.college.upenn.edu/advising/)).

### School of Engineering and Applied Science

Each student is assigned a faculty advisor with whom they are required to meet at least twice per year. No student is permitted to register for classes in any semester without first meeting with an advisor. Students who take the time to prepare for these meetings generally find them beneficial and informative. Faculty advisors are the best source of information about electives within the major, research opportunities, and options for graduate study.

For more information, visit: [https://www.seas.upenn.edu/undergraduate/advising/](https://www.seas.upenn.edu/undergraduate/advising/).

### School of Nursing

Penn Nursing students benefit from a dual advising structure. All students are assigned a faculty advisor and have access to the professional staff advisors in the Office of Student Affairs.

For more information, visit: [http://www.nursing.upenn.edu/student-services/advising/accelerated/](http://www.nursing.upenn.edu/student-services/advising/accelerated/).
The Wharton School

The goal of the Wharton Undergraduate Division academic advising team is to help students make informed decisions about their educational plans and professional/life goals that are consistent with their interests, abilities, and values.

Advising by appointment, walk-in advising, and specialized advising (https://undergrad-inside.wharton.upenn.edu/advising-services/#specialized_advising) are services available in G95 Huntsman Hall to current Wharton undergraduate students.

Professional advisors (https://undergrad-inside.wharton.upenn.edu/advising-services/), concentration advisors (https://undergrad-inside.wharton.upenn.edu/concentration-advisors/), and peer advising fellows (https://undergrad-inside.wharton.upenn.edu/peer-advising/) are available to assist students.

For more information, visit: https://undergrad-inside.wharton.upenn.edu/advising-services/.

Career Services

Career Services helps students define their career goals and learn how to achieve them. The office helps students and alumni obtain permanent and short-term career-related employment and graduate and professional school admission through counseling sessions, workshops, alumni networks, a large career resource library and on-line information. Career Services also establishes and promotes contact between employers, graduate/professional schools, and the University; and hosts employer interviews through the on-campus recruiting program.

- Career Services Contacts for Undergraduates (http://www.vpul.upenn.edu/careerservices/undergrad/connectwithus.php)
- Undergraduate Career Workshops and Events (http://www.vpul.upenn.edu/careerservices/undergrad/events.php)
- Information about Graduate School Study (http://www.vpul.upenn.edu/careerservices/gradprof/)

For more information, visit: http://www.vpul.upenn.edu/careerservices/.

Community Engagement

The Barbara and Edward Netter Center for Community Partnerships (https://www.nettercenter.upenn.edu/) is Penn’s central administrative office for community partnership programs, including academically based community service, direct traditional service, and community development.

Penn’s hub for civic engagement, Civic House (http://www.admissions.upenn.edu/academics/civic-house/) supports student service and advocacy groups while providing resources, information, and meeting space for service-oriented efforts throughout campus and beyond.

The Robert A. Fox Leadership Program (http://www.admissions.upenn.edu/academics/fox-leadership-program/) prepares students for present and future leadership through hands-on experience, service, course work, and mentorship from successful leaders.

Enrollment & Degree Verification

The University Registrar’s office provides verification of dates a student attended Penn and degrees awarded by the Schools of the University. Details concerning Academic Certification may be found on the University Registrar web page (https://srfs.upenn.edu/student-records/enrollment-degree-verification/).

Fellowships and Prizes

The Center for Undergraduate Research and Fellowships (CURF) (https://www.curf.upenn.edu) serves as the University of Pennsylvania’s information clearinghouse and primary support office for Penn students and alumni considering applying for major grants and fellowships.

CURF’s Fellowships Team educates Penn students and alumni about fellowships and assists potential applicants in creating their strongest possible application through information sessions, conversations with fellowship recipients, and individual advising. CURF also supports and manages selection committees consisting of leading Penn faculty that evaluate applications and select applicants to endorse.

Fellowships provide funding for a wide range of activities:

- full tuition, fees, and a living stipend to earn a graduate degree abroad
- undergraduate or graduate study in the US
- conducting a research project abroad
- teaching English abroad
- internships abroad
- social engagement projects in the US or abroad

CURF aims to demystify these opportunities to help students determine the most appropriate awards for which to apply.

- Delta Sigma Pi Scholarship Key
- Financial Executives Institute Award
- Herbert S. Steuer Memorial Prize
- John J. Holahan Memorial Prize
- Louis Rudolph Accounting Award
- William D. Gordon Award
- Vice Dean’s Award for Service

University Prizes

The following academic prizes are awarded at the University level:

President’s Engagement Prizes (https://www.curf.upenn.edu/presidents-engagement-prizes/)

Competitively awarded on an annual basis, the President’s Engagement Prizes empower Penn seniors to design and undertake local, national or global engagement projects during the first year after they graduate.

President’s Innovation Prize (https://www.curf.upenn.edu/presidents-innovation-prize/)

Unique at both Penn and across higher education, the President’s Innovation Prize underscores the University’s considerable commitment to encouraging students to put their knowledge to work for the betterment of humankind.

Senior Awards

The University of Pennsylvania grants numerous undergraduate awards to outstanding graduating seniors, in addition to some sophomores and juniors. Eligibility and criteria vary by award.

The Senior Honor Awards (Spoon, Bowl, Cane and Spade for those who identify as men; Hottel, Harnwell, Goddard and Brownlee Awards for those who identify as women) (http://www.vpul.upenn.edu/osa/seniors.php)

Nominees must be members in good academic standing who have actively contributed to campus life through activities and leadership. All nominees are placed on a ballot (one for men, one for women) which is distributed to a committee of staff members and the Senior Class Board. This committee votes and narrows the candidate pool to 15 men and 15 women, who are then voted upon by the entire Senior Class. The top 4 men and 4 women receive the awards on Ivy Day.

 Granted to graduating students of color who demonstrate leadership, advance diversity at Penn through student activities or community service, and exemplify excellence.

 The James Howard Weiss Memorial Award and The Penn Student Agencies Award (http://www.vpul.upenn.edu/osa/seniors.php)

 Both awards recognize distinguished academic achievement (minimum G.P.A. of 3.7) and significant leadership in undergraduate activities by members of the senior class. A committee of students, faculty and staff makes the final selection from the list of candidates. Ideally, nominees should be the most outstanding members of group (1) above.

 The Sol Feinstone Undergraduate Awards (http://www.dolphin.upenn.edu/oslaf/feinstone.html)

 These awards may be presented to a sophomore, junior or senior who has contributed to 'orderly and constructive social and educational change within or outside the University community.' Past recipients have included the undergraduate who established the first mental health student group in the nation; the creators of a Saturday African-centered enrichment program for local children; the organizers of a pre-orientation leadership program for first-year students; and the founder of the first and the only youth-led LGBT statewide organization in the nation. Finalists are chosen by the same committee as in (2) above. (Keep in mind the fact that there must be a specific contribution, not just a list of activities).

 Student Award of Merit (http://www.dolphin.upenn.edu/oslaf/alumni.html)

 This award, sponsored by Penn Alumni, is presented to members of the Senior Class on the May graduation roster in recognition of their service to the University of Pennsylvania, which, in combination with other activities/endeavors, strengthens and enhances the University. The selection committee recognizes that University service takes many different forms, including but not limited to academic, co-curricular, athletic, and community service. Alumni relations and/or advancement experience is not required. Applicants are asked to use the brief essay portion of this application to describe the nature of their contributions to the Penn community and provide meaningful examples of the same. This award will be given to no fewer than one and no more than five members of the senior class. A committee comprised of alumni makes the final selection from the list of candidates. There is no minimum G.P.A. requirement.

 For more information, visit: http://www.vpul.upenn.edu/osa/seniors.php.

Undergraduate Cost of Attendance

The cost of attendance represents the cost of attending Penn for an academic year, and includes both direct costs that appear on a student’s bill such as tuition, fees, housing, and dining, and indirect costs that are not billed by Penn, such as books and supplies, transportation, and an allowance for personal expenses. Students should consider their cost of attendance as their budget for each academic year. Penn also uses the cost of attendance to help determine a student’s eligibility for financial aid.

View the 2020-2021 Cost of Attendance: http://www.sfs.upenn.edu/paying/cost-of-attendance.htm

Foreign Language Study Opportunities

The Penn Language Center offers over 40 world languages per semester to both undergraduate and graduate students and is a leader in the field of language education and pedagogy training language instructors in language methodology in accordance with the National Standards.

Penn Language Center: plc.sas.upenn.edu (http://plc.sas.upenn.edu/)

Some schools have foreign language requirements. Information about requirements and options for foreign language study varies by school:

• College of Arts and Sciences (https://www.college.upenn.edu/language-writing-speaking/)
• School of Nursing (https://www.nursing.upenn.edu/live/files/247-language-requirement2016pdf/)
• The Wharton School (https://undergrad-inside.wharton.upenn.edu/requirements-2017/foreign-language-requirement/)

The Penn Language Center maintains a list of languages (http://plc.sas.upenn.edu/languages/) offered at Penn:

• Afrikaans (http://plc.sas.upenn.edu/node/2538/)
• American Sign Language (http://plc.sas.upenn.edu/asl/)
• Amharic (http://plc.sas.upenn.edu/amharic/)
• Bengali (http://plc.sas.upenn.edu/bengali/)
• Cantonese (http://plc.sas.upenn.edu/cantonese/)
• Chichewa (http://plc.sas.upenn.edu/chichewa/)
• Chinese (http://plc.sas.upenn.edu/chinese/)
• Czech (http://plc.sas.upenn.edu/czech/)
• Filipino (http://plc.sas.upenn.edu/filipino/)
• Hausa (http://plc.sas.upenn.edu/hausa/)
• Hungarian (http://plc.sas.upenn.edu/hungarian/)
• Igbo (http://plc.sas.upenn.edu/igbo/)
• Indonesian (http://plc.sas.upenn.edu/indonesian/)
• Irish Gaelic (http://plc.sas.upenn.edu/irishgaelic/)
• Japanese (http://plc.sas.upenn.edu/japanese/)
• Judeo-Spanish (http://plc.sas.upenn.edu/judeospanish/)
• Kannada (http://plc.sas.upenn.edu/kannada/)
• Korean (http://plc.sas.upenn.edu/korean/)
• Malayalam (http://plc.sas.upenn.edu/malayalam/)
• Marathi (http://plc.sas.upenn.edu/marathi/)
• Modern Greek (http://plc.sas.upenn.edu/moderngreek/)
• Panjabi (http://plc.sas.upenn.edu/panjabi/)
In addition to the opportunities made available by Penn Abroad, other programs:

- Penn Global
- Penn Abroad

about 1,000 engage in a global opportunity through the office of Penn experience as part of their academic career at Penn. Of these students, Each year approximately 3,000 Penn students participate in a global

range of international destinations each year.

ISSS provides support to students in many different areas. Some examples include:

- Preparing students for arrival to the U.S.
- Helping get adjusted to life in Philadelphia
- Advising on maintaining status, travel, and immigration guidelines
- Providing integration opportunities such as social events, cultural trips and leadership roles
- Assisting with employment authorization before internships or jobs
- Assigned advisors and central online portal for requests and forms via the iPenn system (https://www.ipenn.oip.upenn.edu/)

Find out more information for:
Learning Resources

Center for Programs in Contemporary Writing (http://www.writing.upenn.edu/)
The Center for Programs in Contemporary Writing (http://www.writing.upenn.edu/) (CPCW) brings together all of Penn's writing programs, entities, and projects to form a collaborative whole. The Center presents writing courses, workshops, and a reading circle. In addition, it offers students an opportunity to perform their writing or to become involved as a tutor, mentor or editorial apprentice.

College Houses and Academic Services (http://www.collegehouses.upenn.edu/)
The eleven College Houses bring together undergraduates, faculty, staff, and graduate students to form vibrant residential communities within the larger context of our renowned urban campus, right in the heart of historic Philadelphia.

Communication within the Curriculum (http://www.sas.upenn.edu/cwic/)
Communication Within the Curriculum (CWIC)'s (http://www.sas.upenn.edu/cwic/) undergraduate speaking advisors help students develop their public speaking skills through workshops and one-on-one advising sessions during walk-in hours. CWIC also offers two critical speaking seminars and a number of affiliate courses.

Penn College Achievement Program (PENNCAP) (http://www.vpul.upenn.edu/eap/penncap/)
The Penn College Achievement Program (http://www.vpul.upenn.edu/eap/penncap/) works closely with a diverse group of students, many from low-income and/or first-generation backgrounds, to support their success at Penn. Among the many services offered are laptop and textbook loans, summer tuition grants, tutoring and advising.

Tutoring Center (http://www.vpul.upenn.edu/tutoring/)
The Tutoring Center (http://www.vpul.upenn.edu/tutoring/) offers Penn undergraduates a wide variety of free, accessible, and convenient options to supplement their academic experience.

Weingarten Learning Resources Center (http://www.vpul.upenn.edu/lrc/)
The Weingarten Center provides academic support services and programs for undergraduate, graduate, and professional students at the University of Pennsylvania through its two offices. The services and programs of both offices are free and confidential.

Office of Learning Resources (http://www.vpul.upenn.edu/lrc/lr/)
The Office of Learning Resources (http://www.vpul.upenn.edu/lrc/lr/) staff provide a wide range of programming and professional consultation services in university-relevant skills such as reading, writing, study strategies, and time management.

Student Disabilities Services (http://www.vpul.upenn.edu/lrc/sds/)
Student Disabilities Services (http://www.vpul.upenn.edu/lrc/sds/) staff work closely with students who self-identify with disabilities in order to ensure equal access to all University programs, activities and services.

Libraries
Penn has a large and service-oriented library system. The combined 15 libraries on campus contain over 4,500,000 volumes, subscribe to more than 33,000 serials, and offer a rapidly growing set of electronic services which can be accessed from home or office, as well as in the libraries.

Research

For Research Guides by subject, visit: https://guides.library.upenn.edu/hometabs (https://guides.library.upenn.edu/hometabs/).

To get help with research, students can submit questions online (http://faq.library.upenn.edu/ask/) or make an appointment for in-person assistance (http://faq.library.upenn.edu/widget_standalone.php?la_widget_id=3206).

Canvas
Canvas is the online learning management system used at Penn. A valid PennKey is required to login to the system.

For help with Canvas, visit: http://guides.library.upenn.edu/canvas_students (http://guides.library.upenn.edu/canvas_students/).
Quaker Consortium

University of Pennsylvania students have a unique opportunity to study at Bryn Mawr, Haverford, or Swarthmore Colleges during the fall and spring terms of the academic year.

School specific policies:

- College of Arts and Sciences (https://www.college.upenn.edu/quaker-consortium/)
- The Wharton School (https://undergrad-inside.wharton.upenn.edu/quaker-consortium/)

Registrar’s Office

The Office of the University Registrar (https://srfs.upenn.edu/registrar/) supports teaching and learning at the University of Pennsylvania by maintaining the integrity of academic policies and the student information system. We are the stewards of Penn’s student records from application to degree conferral in perpetuity.

We provide the following services to Students, Faculty, Alumni, Parents, Staff and many other constituents across our campus:

- Support Students and Departments during Registration
- Reserve Classrooms for Courses and Academic Events
- Schedule Final Exams
- Record and Report Enrollment and Final Grades
- Certify Attendance
- Manage Veterans Affairs Educational Benefits
- Issue Transcripts
- Verify Graduation and Degrees

A transcript is a representation of a student’s academic record while at the University of Pennsylvania.

Official transcripts are ordered through the Office of the University Registrar website (https://srfs.upenn.edu/student-records/transcripts/). Unofficial transcripts are available at anytime, online for students and alumni class of 1988 or later via the Penn in Touch portal (https://pennintouch.apps.upenn.edu/pennInTouch/jsp/fast2.do?_id=student&access=student&bhcp=1).

The University Registrar's office provides verification of dates a student attended Penn and degrees awarded by the Schools of the University. Details concerning Academic Certification may be found on the University Registrar web page (https://srfs.upenn.edu/student-records/enrollment-degree-verification/).

In accordance with Title 38 US Code 3679 subsection (e), the University of Pennsylvania adopts the following additional provisions for any students using U.S. Department of Veteran Affairs (VA) Post 9/11 G.I. Bill® (Ch. 33) or Vocational Rehabilitation and Employment (Ch. 31) benefits, while payment to the institution is pending from the VA. The University will not:

- Require student secure alternative or additional funding;
- Deny their access to any resources (access to classes, libraries, or other institutional facilities) available to other students who have satisfied their tuition and fee bills to the institution.

However, to qualify for this provision, such students may be required to:

- Provide Chapter 33 Certificate of Eligibility (or its equivalent) or for Chapter 31, VA VR&E’s contract with the school on VA Form 28-1905 by the first day of class.
- Chapter 33 students can register at the VA Regional Office to use E-Benefits to get the equivalent of a Chapter 33 Certificate of Eligibility. Chapter 31 student cannot get a completed VA Form 28-1905 (or any equivalent) before the VA VR&E case-manager issues it to the school.
- Provide written request to be certified;
- Provide additional information needed to properly certify the enrollment as described in other institutional policies.

GI Bill® is a registered trademark of the U.S. Department of Veterans Affairs (VA). More information about education benefits offered by VA is available at the official U.S. government website at www.benefits.va.gov/gibill (https://gcc01.safelinks.protection.outlook.com/?url=http%3A%2F%2Fwww.benefits.va.gov%2Fgibill&data=02%7C7C01%7Cramckinney40pa.gov%7C6f396242142c49d4d9ed868d8234ca6f%7C418e284101284d59b6c47fc5a9a1bde%7C0%7C0%7C53798157877210440&sdata=lVWEW1s0eJv6qYm3kGW%2FZocYrBiTvxbSO3K07nuVFM%3D&reserved=0).

Research

As one of the world’s leading research universities, Penn has a broad array of faculty conducting cutting-edge research in all disciplines. There are many routes into research involvement for undergraduates, including research-intensive courses, independent study with a faculty member, and summer programs of varying types and foci.

The Center for Undergraduate Research and Fellowships (https://www.curf.upenn.edu/research/) is a resource for undergraduates in all traditional programs who are interested in getting involved in research opportunities around campus and around the world. CURF helps Penn undergraduates become involved in research by helping you identify resources, narrow your search, and shape your initial inquiries so you can find appropriate faculty mentors and research funding.

- Penn Undergraduate Research Mentoring Program (https://www.curf.upenn.edu/content/penn-undergraduate-research-mentoring-program/)
- Research Opportunity Directory (https://www.curf.upenn.edu/research-opportunity-directory/)
- Research Grants (https://www.curf.upenn.edu/research/funding-opportunities/)
- Summer Humanities Research Internships (https://www.curf.upenn.edu/summer-humanities-internships/)

College of Arts and Sciences

Research reinforces and instills mastery of academic skills: how to formulate a question or hypothesis, how to gather evidence, and how to answer that question or test that hypothesis.
One of the major advantages of being an undergraduate at a research university is the wide variety of opportunities available for scholarship. Research in the College encompasses a range of activities. In some disciplines, such as English, philosophy and history, students read original works, or the primary literature, and look for new connections and interpretations of these writings. In areas such as anthropology or history of art, students study artifacts, works of art or ancient languages, gaining insights on earlier civilizations and the lives of those who contributed to them. Some students do research in biology, chemistry or psychology, seeking insights on genetic coding, molecular structure or animal behaviors.

Sometimes, students may receive College credit for research activities and scholarship, or receive work-study funds or stipends from faculty grants.

For more information, visit: https://www.college.upenn.edu/research/.

**School of Engineering and Applied Science**

Our extraordinary faculty-to-student ratio provides great opportunities for undergraduate students to work in state-of-the-art research laboratories during the academic year and in the summer. Below are examples of student research, along with helpful information to guide undergraduates toward finding research positions at Penn Engineering.

For more information, visit: http://www.seas.upenn.edu/undergraduate/research/index.php (http://www.seas.upenn.edu/undergraduate/research/).

**Finding a Research Mentor and Research Experiences**

Students are encouraged to explore the Penn Engineering Faculty Expertise Directory (http://www.seas.upenn.edu/directory/departments.php), featuring the School’s standing faculty and is searchable by department, research center affiliation, and research expertise keyword. Users can identify which faculty are conducting research in a specific area and contact faculty members whose research interests them.

The Engineering Dean’s Advisory Board (EDAB) puts together a guide for fellow students that gives step-by-step instructions and tips on how to secure research positions as an undergraduate.

For Bioengineering majors, the Penn student chapter of the Biomedical Engineering Society (BMES) has assembled its own student guide on starting up research.

**Summer Undergraduate Research in Engineering (SURE)**

Penn Engineering’s world-acclaimed faculty, along with state-of-the-art research laboratories and highly interdisciplinary curricula, offers summer research opportunities for talented undergraduates who seek hands-on engineering research. From robotics and computer animation, nanotechnology, genomics and biotechnology, Penn’s centers and institutes are at the forefront of research on multiple scientific and technological frontiers.

**International Summer Undergraduate Research in Engineering (iSURE)**

Opportunities for undergraduates are available during the summer to spend eight to 12 weeks on a research internship in one of Penn Engineering’s partner institutions abroad.

**Littlejohn Undergraduate Research Program**

Thanks to a generous gift by Angus Littlejohn, the School of Engineering is able to offer Summer Research Opportunities to Penn Engineering Students. The program is open to rising, sophomores, juniors and seniors.

The program intends to provide students the opportunity to get involved in hands-on engineering research under the supervision of a faculty member. Topics of research include all areas covered by the departments in the School of Engineering and Applied Science. Students will receive a stipend of $4,500 for a 10 week period.

**Rachleff Scholars Program**

This program offers Penn Engineering undergraduates the opportunity to gain valuable research experiences with standing faculty and to participate in a community of peers who share a common interest in research and scholarly inquiry.

**School of Nursing**

The Office of Nursing Research (http://nursing.livewhale.net/research/onr/), along with our four research centers (http://nursing.livewhale.net/research/research-centers/) and partnerships across Penn, provide students with resources and support that are virtually unparalleled in our field. Students, from undergraduates to doctoral students, have numerous opportunities to engage in research and work alongside some of the most recognized researchers in their fields.

For more information, visit: https://www.nursing.upenn.edu/research/.

**The Wharton School**

Research provides an individualized method of learning and an in-depth treatment of a topic of personal interest with input from a faculty expert. Research experience is helpful if applying for distinguished international fellowships and is important if going on to graduate studies in an analytical discipline. Research skills are useful for decision-making in the private and public sectors and are required in academic positions. Below you can find a variety of research opportunities and scholarship programs.

- Courses (https://undergrad-inside.wharton.upenn.edu/research/courses/) — Create “tools” in a research-methods course.
- Research assistantships (https://undergrad-inside.wharton.upenn.edu/research/assistantships/) — Learn by executing research-related tasks while working on a project for a faculty member.
- Summer programs (https://undergrad-inside.wharton.upenn.edu/research/summer-programs/) — Gain hands-on experience from proposal to presentation through a project commensurate with program duration.
- Scholars programs (https://undergrad-inside.wharton.upenn.edu/scholars-programs/) — Gain hands-on, in-depth experience from proposal to presentation via a senior thesis and other activities.
- Wharton PhD Submatriculation Program (http://doctoral-inside.wharton.upenn.edu/submatriculation/) — Submatriculate into a PhD program in Accounting, Finance, Health Care Systems, Insurance and Risk Management, Management, Marketing, Operations and Information Management, Business and Public Policy, or Statistics.

For more information, visit: https://undergrad-inside.wharton.upenn.edu/research/.
University Policies

- Guidelines for Research in the Community (http://catalog.upenn.edu/pennbook/guidelines-research-community/)
- Guidelines for Student Protection in Sponsored Research Projects (http://catalog.upenn.edu/pennbook/protection-sponsored-research/)
- Policy on Undergraduate Students, High School Students and Non-affiliates Participating in Research in Penn Research Facilities (http://catalog.upenn.edu/pennbook/undergraduates-in-research/)
- Procedures Regarding Misconduct in Research for Nonfaculty members of the Research Community (http://catalog.upenn.edu/pennbook/misconduct-non-faculty/)

Scholars Programs

The following programs are available to all undergraduate students.

Benjamin Franklin Scholars

The Benjamin Franklin Scholars (https://www.curf.upenn.edu/bfs/) are one of Penn’s most distinctive undergraduate communities.

Each year we welcome a group of extraordinary incoming students, committed to the transformative power of ideas. Benjamin Franklin Scholars are selected based on their interest in, and demonstrated capacity for, a deep engagement in the liberal arts and sciences, both as ends in themselves and as engines of change in the world. With unique course offerings, and under the guidance of extraordinary faculty and advisors, we encourage our students to pursue, in the spirit of Franklin himself, our guiding principles of breadth, curiosity, and a tinkering habit of mind.

We are a home for students who seek the advantages of wide-ranging knowledge, whatever particular educational path they choose. We look for spirited, independent people who find their own passions and are predisposed to explore their own ideas, wherever they might lead. We welcome restless minds who are not content just to appreciate great ideas as abstractions up on a shelf, but who see them as transformative; changing minds and so changing the world. We are a community of students and faculty who find value in the saying of the great classical writer Plutarch, from whom Franklin himself claims to have “read abundantly,” and see a truly great education as a kind of playing with fire.

BFS welcomes students in all the undergraduate schools: The College, Engineering, Wharton, and Nursing. Parts of the program, including admissions, work a bit differently in the different schools. For all our scholars, the BFS experience includes opportunities for overseas internships, a presentation of research to the BFS community, and our Seminars – a set of enriching opportunities to work on challenging topics, without requiring extensive prerequisites, both inside and outside of their major fields of study.

University Scholars

The University Scholars program (https://www.curf.upenn.edu/university-scholars/) provides an exceptional academic environment for intellectually dynamic students who have already demonstrated their commitment and dedication to research.

Through mentoring, research funding and scholarly events the program encourages and supports students to make the most of their undergraduate years, not only with in-depth research, but also by making an early start in graduate and professional courses, ranging widely or in some cases focusing narrowly on their curricular choices.

The focus of the University Scholars program is undergraduate research. In order to aid students in doing creative and in-depth research, the University Scholars has a fund with which to help students defray research expenses. Funding is meant to cover the expense of the research itself; this most often pertains to room and board costs over the summer months. Occasionally, students’ research will take them away from Penn. In those instances, the University Scholars program may be able to fund travel expenses as well.

Civic Scholars

Penn Civic Scholars (http://www.vpul.upenn.edu/civichouse/civicscholars/) is a unique program providing undergraduates with a sustained four-year experience in civic engagement and scholarship. The program culminates in certification upon graduation and designation as a Civic Scholar on the student’s transcript.

The Civic Scholars program is based on a few basic principles:

- Civic engagement and academic work are mutually reinforcing.
- Meaningful and sustained involvement in community affairs while at Penn is the base for lifelong civic commitments and contributions.
- Undergraduates can conduct significant applied social and public policy research through a multi-year preparatory process.
- Forming a community of dedicated students and faculty will encourage distinctive civic service and scholarship.

SNF Paideia Fellows Program

The SNF Paideia Fellows Program (http://snfpaideia.upenn.edu/) provides a select group of Penn undergraduates the opportunity to integrate wellness, service, citizenship, and dialogue through a structured combination of academic courses, co-curricular events, and hands-on leadership experiences. Students from any of the four undergraduate schools can apply to the SNF Paideia Fellows program in the spring of their first year. SNF Paideia Fellows participate in the program for three years, sophomore through senior year.

The SNF Paideia Fellowship supports students’ ability to integrate their public roles as community members into their academic, personal, and professional lives in healthy, sustainable, and fulfilling ways. The program organizes and highlights curricular and co-curricular experiences where students can acquire the tools necessary for effectively contributing to the local, national, and global communities of which they are a part. It also provides opportunities for students to practice robust and respectful civic dialogue with others across a wide range of political, social, and cultural differences.

SNF Paideia Fellows:

- enroll in a sophomore year and junior year seminar designed to build skills and community among the Fellows;
- take (3) Paideia designated courses focusing on relevant aspects of dialogue across differences, public service, and personal and social wellness; and
- complete a Senior Capstone project that integrates a Fellow’s major with civic dialogue, service, and/or wellness.

The following programs are available to students in a particular school.
College of Arts and Sciences
Integrated Studies Program
The Integrated Studies Program (ISP) (https://www.college.upenn.edu/integrated-studies/) is the freshman curriculum for Benjamin Franklin Scholars pursuing degrees in the College of Arts and Sciences.

Deeply rooted in the liberal arts tradition of acquiring and applying expansive knowledge, this residential academic program invites highly-motivated students to examine complex themes through the integration of multiple academic disciplines and methodologies.

Students are guided through the semester by some of Penn’s leading faculty. By investigating the same ideas under three distinct lenses, drawing simultaneously from the humanities, social sciences and sciences, students sharpen their focus on the similarities—and differences—between the disciplines’ habits of mind.

School of Engineering and Applied Science
Rachleff Scholars
The School Of Engineering and Applied Science is pleased to announce the Rachleff Scholars Program (https://www.seas.upenn.edu/undergraduate/research/rachleff-scholars.php). The Program offers Penn Engineering undergraduates the opportunity to gain valuable research experiences with standing faculty and to participate in a community of peers who share a common interest in research and scholarly inquiry.

The Rachleff Scholars Program is open to rising sophomores with at least a 3.4 Cumulative GPA and strong interests in engineering research. Each student accepted into the Rachleff Program is required to complete work in three separate areas: summer research experience, honors coursework, and scholarly community activities.

School of Nursing
Benjamin Franklin Scholar- Nursing
As a Benjamin Franklin Scholar - Nursing (https://www.nursing.upenn.edu/academics/a-penn-nursing-education/undergraduate-honors-program/), you will engage in an intensive academic experience, along with peers in the College of Arts and Sciences, the Wharton School and in the School of Engineering and Applied Science, to complete the undergraduate Nursing major with an intensive liberal arts component. In addition to a variety of campus-wide programs as part of BFS, you will be able to enroll in the justly famed BFS Seminars – course taught by expert faculty from across campus in a variety of topics.

The Wharton School
Joseph Wharton Scholars
Founded in 1988, the Joseph Wharton Scholars (https://undergrad-inside.wharton.upenn.edu/jws/) program is designed to emphasize the importance of scholarly research and the liberal arts and sciences within the framework of a business education. Students in the program are required to take scholars courses both in Wharton and outside of Wharton (in the College of Arts & Sciences, Nursing, and/or Engineering), engage in a significant research project, and participate in a variety of academic, career-oriented, and social activities.

The JWS program is the Wharton component of the Penn-wide Benjamin Franklin Scholars (https://undergrad-inside.wharton.upenn.edu/bfs/) program, through which students gain access to BFS Seminars. In addition to the course requirements, students must maintain a minimum 3.4 GPA.

Joseph Wharton Scholar students must take three non-Wharton BFS Seminars as well as four Wharton honors courses (which may include Wharton BFS Seminars). The Wharton courses include honors sections of BEPP 250, FNCE 100, FNCE 101, MKTG 101, MKTG/STAT 476, STAT 430, STAT 431, WH 399; and the Wharton BFS Seminars: LGST 101, LGST 210, and LGST 215. All JWS students must take WH150x—Evaluating Evidence as one of their four honors classes in Wharton.

Public Policy Research Scholars
The Public Policy Research Scholars (PPRS) (https://publicpolicy.wharton.upenn.edu/for-students/public-policy-research-scholars/) offers a unique opportunity for students to study and explore public policy.

PPRS is an interdisciplinary certificate program intended for undergraduates with a background in economics, who want to explore the impact of U.S. public policy on the domestic economy.

The PPRS program is not a major. Instead, it offers a supplemental course of study, focusing on the quantitative analysis of public policy at the federal level, that can be pursued alongside any major, in any of Penn’s undergraduate schools. Beyond the curriculum, students also are required to do at least one public policy summer internship, for which they will receive funding from the Penn Wharton Public Policy Initiative. They also will have opportunities to assist with faculty-led policy research on campus. Through PPRS, we aim to create a tight-knit cohort of undergraduates with a background in economics, who want to explore the field.

The core skills at the heart of PPRS include:

- Economic and political analysis of public policy, for assessing why, how, and with what degree of success the government designs and implements policy.
- Statistical thinking and quantitative analysis of economic data.
- Knowledge of the policymaking process.
- The application of theoretical and quantitative tools to practical, real-life policy questions.

Students that complete the program will have the designation “Public Policy Research Scholar” noted as an honor on their transcripts and will receive a certificate upon graduation.

Wharton Research Scholars
Wharton Research Scholars (https://undergrad-inside.wharton.upenn.edu/wrs/) is an intensive one-year research program for a select group of students who are interested in conducting research under the supervision of some of Wharton's preeminent faculty members. As part of the program, participants complete an honors thesis.

Students apply to work on a specific project they propose in consultation with a Wharton faculty member who agrees to act as their faculty mentor. Students are allowed to have more than one faculty mentor provided at least one is a member of the Wharton faculty.
Throughout the year, students convene to discuss progress, strategies, and challenges within their projects. This interaction fosters a strong scholarly community where students can learn from each other's experience. The research scholars also meet regularly with their faculty mentors who advise the students throughout the year. The program culminates with final presentations and publication of research papers on the University of Pennsylvania Libraries' ScholarlyCommons (http://repository.upenn.edu/wharton_research_scholars/).

**Submatriculation**

Penn offers students many opportunities to begin a graduate program while completing an undergraduate degree. Students may apply for admission as submatriculants to a variety of the University's graduate and professional areas of study. Submatriculation programs exist in the four undergraduate schools and in several of Penn's graduate schools.

Application for admission as a submatriculant is made within the regular deadlines and processes for application to the graduate program of interest, usually during the student's junior year. Prior to applying for admission as a submatriculant, a student should meet with an academic advisor in both the undergraduate school and in the intended graduate program.

Policies, options, and procedures for submatriculation vary depending on a student's undergraduate school:

- College of Arts and Sciences (https://www.college.upenn.edu/submatriculation/)
- School of Engineering and Applied Science (http://www.seas.upenn.edu/undergraduate/degrees/submatriculation.php)
- School of Nursing (https://www.nursing.upenn.edu/academics/a-penn-nursing-education/submatriculation/)
- The Wharton School (https://undergrad-inside.wharton.upenn.edu/submatriculation/)

For more information about interdisciplinary submatriculation opportunities, click here (p. 260).

**School of Arts and Sciences**

For a list of School of Arts and Sciences departments that consider submatriculation applications, visit: https://www.college.upenn.edu/submatriculation/.

In addition to submatriculating within a department, College undergraduates students are also eligible for the following specialized submatriculation programs:

**BA/JD Program in Arts & Sciences and Law**

This rigorous program offers an opportunity for highly qualified and motivated College students to apply to Penn Law School during what is generally the first semester of a student's junior year (between 16 and 23.99 course units). If accepted, the student will submatriculate into the JD program in their senior year. Applicants must be committed to the study of law in its theoretical and practical aspects.

For more information, visit: https://www.college.upenn.edu/submatriculation/(https://www.college.upenn.edu/submatriculation/).

**Bio-Dental Program**

Bio-Dental submatriculation is a seven-year joint program of the College and Penn's School of Dental Medicine for students who will major in Biology and who wish to enroll in the Dental School during their senior year in the College. Application to the program must be made at the time of application to Penn. Applicants will be notified of their conditional acceptance into the program when they are notified of their admission to Penn. Full acceptance into the program is made after the student's junior year and is based on academic performance during those three years and meeting the admissions standards of the Dental School.

For more information, visit: http://www.bio.upenn.edu/https%3A/%252Fwww.bio.upenn.edu/accelerated-dental-program (http://www.bio.upenn.edu/https%3A/%252Fwww.bio.upenn.edu/accelerated-dental-program/).

**Roy and Diana Vagelos Program in Molecular Life Sciences**

Ambitious and highly motivated students interested in the molecular view of life should consider the Vagelos Scholars Program in Molecular Life Sciences. Students begin as freshmen and major in two sciences or submatriculate for a Master of Science degree in the standard four years. Students in this program plan to pursue scientific research careers. Scholars are invited from the admitted pool of high school seniors at the beginning of April at the discretion of the faculty director and the admissions committee.

For more information, visit: http://www.sas.upenn.edu/biochem/vspmls.html.

**School of Engineering and Applied Sciences**

- Both BSE and BAS degree students in Penn Engineering may apply for submatriculation into engineering master’s programs. (Note that Engineering students are not permitted to submatriculate into the Master of Computer and Information Technology (MCIT) program.)
- Qualified undergraduates in Penn's other schools may apply to submatriculate into any of the Penn Engineering master's degree programs, subject to their home school's rules and regulations.

In addition to submatriculating within a department, Engineering undergraduate students are also eligible for the following specialized submatriculation program:

**Penn Engineering/Penn Law Program**

Penn's Law School offers an opportunity for qualified juniors in Penn Engineering to apply early to the Law School and submatriculate into the JD program beginning their fourth year. The program is designed as a 3-year + 3-year accelerated program for highly qualified Engineering undergraduates either in the Bachelor of Applied Science (BAS) or Bachelor of Science in Engineering (BSE) degree programs.

For more information, visit: http://www.seas.upenn.edu/undergraduate/degrees/submatriculation-law.php.

**School of Nursing**

Nursing undergraduate students are eligible for the following specialized submatriculation programs:

**BSN/JD Program**

Submatriculation allows students in traditional and accelerated BSN programs to formally enroll in the JD program (https://www.law.upenn.edu/academics/degrees.php) at Penn Law School while still undergraduates. The current climate of healthcare litigation and
malpractice suits is well suited for professionals who combine nursing education and experience with legal expertise. A background in both nursing and law gives students a powerful and marketable skillset, and prepares students to make an impact on the medical and legal professions.

To submatriculate into Penn Law, students should take the LSAT and apply (https://www.law.upenn.edu/admissions/jd/) during their junior year. If a student is admitted, they will begin taking courses at the law school during their fourth year, completing both the BSN and JD degrees in six years, instead of the usual seven.

BSN/MSN Program
The demand for nurses with MSN degrees is higher than ever. Submatriculation allows students in traditional and accelerated BSN programs to formally enroll in one of Penn Nursing’s MSN Programs (https://www.nursing.upenn.edu/academics/master-of-science-in-nursing-msn/) while still undergraduates. Students are encouraged to apply (https://www.applyweb.com/upenn/) as early as their junior year. If accepted, students will begin to take master’s level coursework, earning credit toward both degrees.

The Wharton School
Wharton undergraduate students are eligible for the following specialized submatriculation programs:

Wharton Law School Submatriculation Program
During the junior year, qualified Wharton undergraduate students may apply for admission to the Penn Law School and submatriculate into the Juris Doctor (JD) program. In this 3-year + 3-year accelerated program, the student’s fourth year of study is spent entirely at the Law School completing the first-year law curriculum. The remaining undergraduate and/or graduate degree requirements are then completed in the student’s fifth and sixth years of study.

For more information, visit: https://undergrad-inside.wharton.upenn.edu/submatriculation/.

Wharton MBA Submatriculation Program
Qualified juniors in the Wharton Undergraduate Program may apply for early entry (submatriculation) into the Wharton Master of Business Administration (MBA) Program. In this 3-year + 2-year accelerated program, students’ fourth and fifth years of study are spent entirely as part of the MBA Program. The program is designed to attract academically talented undergraduates with well-defined career goals and significant work experience. Students apply in the junior year.

For more information, visit: https://undergrad-inside.wharton.upenn.edu/submatriculation/.

Wharton PhD Submatriculation Program
The goal of the program is to allow selected Wharton undergraduates the opportunity to submatriculate into one of Wharton’s Ph.D. programs directly from the undergraduate program.

For more information, visit https://doctoral-inside.wharton.upenn.edu/submatriculation/.

Summer Sessions
Penn Summer (http://www.sas.upenn.edu/summer/) offers a wide variety of summer programs to current Penn students, with more than 300 classes available during the day or evening. Current Penn students are encouraged to take advantage of advising resources during the summer term in the same manner as during the fall and spring. Before enrolling in summer courses, students should consult with their academic advisor (p. 267) regarding their intended coursework to ensure adequate degree progress.

Penn Summer On-Campus
There are three academic sessions during Penn Summer On-Campus (http://www.sas.upenn.edu/summer/programs/on-campus/), and more than 300 courses are offered from academic departments across the university. Flexible day and evening classes are offered to fit students’ schedule and needs.

For more information, visit: http://www.sas.upenn.edu/summer/programs/on-campus (http://www.sas.upenn.edu/summer/programs/on-campus/).

Penn Summer Online
Not going to be in Philadelphia this summer? Consider taking one of Penn’s Summer Online (http://www.sas.upenn.edu/summer/programs/online/) courses. Online courses allow students to earn credit as they participate in real-time with their Penn instructor and peers while having 24/7 access to their virtual learning materials.

For more information, visit: http://www.sas.upenn.edu/summer/programs/online (http://www.sas.upenn.edu/summer/programs/online/).

Penn Summer Abroad
Students can earn Penn credit as they experience culture in another country with Penn Summer Abroad (http://www.sas.upenn.edu/summer/programs/abroad/). Students travel with Penn faculty and other undergraduates with accommodations and excursions planned for them, enjoying the flexibility of a short-term commitment and make the most of their summer break.

For more information, visit: http://www.sas.upenn.edu/summer/programs/abroad (http://www.sas.upenn.edu/summer/programs/abroad/).

Transcripts
A transcript is a representation of a student’s academic record while at the University of Pennsylvania.

Official transcripts are ordered through the Office of the University Registrar website (https://srfs.upenn.edu/student-records/transcripts/). Unofficial transcripts are available at anytime, online for students and alumni class of 1988 or later via the Penn in Touch portal.
Also coordinates auxiliary aids and services such as sign language accessible campus housing, and transportation and parking. SDS on a case-by-case basis, including academic adjustments, e-text, accommodations for all qualified students with documented disabilities eligibility according to program guidelines, and determine reasonable participation in University-sponsored programs. Professional self-identify with disabilities to ensure equal academic opportunities comprehensive, professional services and programs for students who Learning Resources Center.

The Office of Student Disabilities Services (SDS), part of the Weingarten Learning Resources Center (http://www.vpul.upenn.edu/lrc/), provides comprehensive, professional services and programs for students who self-identify with disabilities to ensure equal academic opportunities and participation in University-sponsored programs. Professional staff evaluate current documentation, determine individual students’ eligibility according to program guidelines, and determine reasonable accommodations for all qualified students with documented disabilities on a case-by-case basis, including academic adjustments, e-text, accessible campus housing, and transportation and parking. SDS also coordinates auxiliary aids and services such as sign language interpreters and Computer Aided Realtime Translation (CART) reporters, as well as the loan of equipment and assistive technologies.

Wellness

There are a wide variety of resources available to support students at Penn. Some of the most commonly used resources are listed below.

Wellness at Penn (https://www.wellnessatpenn.com/)
The Wellness at Penn initiative provides support, resources, and practical tools for wellness across the Penn community. It affirms wellness as a core priority and necessary driver of life on campus; and it offers a wide range of opportunities to reflect and engage on issues of wellness, stress, mental health, resilience, happiness, personal and academic goals, and the meaning of success.

Counseling and Psychological Services (CAPS) (http://www.vpul.upenn.edu/caps/)
215-898-7021 (Nights and weekends, ask for CAPS counselor on call.)

Counseling and Psychological Services (CAPS) provides professional psychological and psychiatric services to undergraduate, graduate, and professional students who need support in fulfilling their academic, social, and personal objectives. Along with health and wellness partners throughout the Penn community, CAPS directly supports student mental health through counseling, crisis management, consultation, education and outreach, and training.

Division of Public Safety (https://www.publicsafety.upenn.edu/)

A central source for information about police, fire, and emergency services, security services, including walking escorts, and special victim services. Public safety also manages the University’s extensive electronic security infrastructure.

Student Disabilities Services (http://www.vpul.upenn.edu/lrc/sds/)
(215) 573-9235; TDD: (215) 746-6320

The Office of Student Disabilities Services (SDS), part of the Weingarten Learning Resources Center (http://www.vpul.upenn.edu/lrc/), provides comprehensive, professional services and programs for students who self-identify with disabilities to ensure equal academic opportunities and participation in University-sponsored programs. Professional staff evaluate current documentation, determine individual students’ eligibility according to program guidelines, and determine reasonable accommodations for all qualified students with documented disabilities on a case-by-case basis, including academic adjustments, e-text, accessible campus housing, and transportation and parking. SDS also coordinates auxiliary aids and services such as sign language interpreters and Computer Aided Realtime Translation (CART) reporters, as well as the loan of equipment and assistive technologies.

Student Health Service (http://www.vpul.upenn.edu/shs/)
215-746-3535

Student Health Service is a state-of-the-art primary care center dedicated to the health and well-being of Penn students. Student Health provides accessible, cost-effective, culturally-sensitive, and student-focused healthcare, including care for acute and chronic health problems, preventive health services, and health and wellness education. The Health Service works in close collaboration with our partners in the University Life Division, and with our colleagues in the University of Pennsylvania Health System (http://www.pennmedicine.org/) to help ensure the health and wellness of the campus community.

Student Intervention Services (http://www.vpul.upenn.edu/intervention.php)
215-898-6081

Penn Student Intervention Services (SIS) assists the University community in handling emergencies or critical incidents involving the welfare and safety of students.

Office of the Chaplain (https://chaplain.upenn.edu/)
215-898-8456

The Office of the Chaplain (https://chaplain.upenn.edu/about-us/staff/) is available to students, faculty and staff for pastoral support, guidance, or informal advising and counseling. The Chaplain, an ordained clergy person, participates in campus ceremonies such as Convocation, Baccalaureate and Commencement and also officiates at weddings (https://chaplain.upenn.edu/about-us/weddings-blessings/) and campus memorial services. The office serves and supports a wide range of student organizations (https://chaplain.upenn.edu/student-organizations/), fellowships and religious communities on our campus. They also develop programming designed to improve interfaith understanding and build meaningful, collaborative relationships across religious difference.

Campus Health (http://www.vpul.upenn.edu/shs/campushealth/)

Part of Student Health Service, Campus Health (http://www.vpul.upenn.edu/shs/campushealth/) seeks to empower the Penn community to Live Well through advocacy, education, and action. Campus Health staff focus on a wide variety of healthy living topics including sleep, hygiene, stress reduction, nutrition, exercise, tobacco-free lifestyles and bike safety. Key initiatives include annual flu immunization clinics, which vaccinate more than 2,000 people, and yearlong sexual wellness education through events such as ‘Sex Camp’ and ‘Sex Jeopardy.’

Alcohol and Other Drug Program Initiatives (http://www.vpul.upenn.edu/alcohol/)

The Office of Alcohol and Other Drug Program Initiatives oversees critical areas of health and wellness that can challenge the academic success of Penn students. The office comprises alcohol policy initiatives, violence prevention, data collection, strategic project management,
and (in a collaboration with Student Intervention Services (http://www.vpul.upenn.edu/intervention.php)) proactive crisis management.
POLICIES AND PROCEDURES

The following policies and procedures relate to undergraduate academics at Penn, and are organized by topic.

Most academic policies and procedures at Penn are school-based. University policies (http://catalog.upenn.edu/pennbook/) are also often administered through the schools. Students should consult with their school or program academic advisors (p. 267) with questions or for help in understanding academic policies and procedures.

- Course and Exam-Related Policies (p. 281)
- Grade and GPA-Related Policies (p. 284)
- Graduation Policies (p. 285)
- Leaves of Absence (p. 286)
- Residency Requirement (p. 286)
- Transfer Policies (p. 286)

Course and Exam-Related Policies

Students should consult with their academic advisors (p. 267) about course and course-related policies and procedures.

- Add/Drop Period (p. 281)
- Auditing (p. 281)
- Class Attendance (p. 281)
- Course Load (p. 281)
- Course Numbering & Academic Credit (p. 281)
- External Exam Credit (p. 282)
- Independent Study (p. 282)
- Liberal and Professional Studies Course Credit (p. 282)
- Part Time Status (p. 283)
- Petitions (p. 283)
- Policy on Common Midterm Examinations (p. 283)
- Retaking Courses (p. 283)
- Rules Governing Final Examinations (p. 283)
- Withdrawing From a Course (p. 284)

Add/Drop Period

Courses may be added only during the first two weeks of each semester; course may be dropped through the fifth week of the semester. Students should consult with their advisors before dropping below a defined number of course units (generally 4), which may have adverse consequences.

Some courses may have different add/drop policies; students should consult with their school’s advising office for further details.

Add/drop deadlines for each semester can be found in the Academic Calendar (p. 264).

School specific policies:

- College of Arts and Sciences (https://www.college.upenn.edu/course-load/)
- School of Nursing (http://www.nursing.upenn.edu/student-services/resources/handbooks-forms-policies/bsn-handbook/courses-exam-related-policies/#course%20load)
- The Wharton School (https://undergrad-inside.wharton.upenn.edu/course-selection/

Course Load

Policies regarding minimum and maximum course loads vary by school.

School specific policies:

- College of Arts and Sciences (https://www.college.upenn.edu/course-load/)
- School of Nursing (http://www.nursing.upenn.edu/student-services/resources/handbooks-forms-policies/bsn-handbook/courses-exam-related-policies/#course%20load)
- The Wharton School (https://undergrad-inside.wharton.upenn.edu/course-load/)

Course Numbering & Academic Credit

Course Numbering

Courses are designated with a subject code and course number. The number assigned to a course generally denotes its level and may also indicate a course type.

- 1-399 Undergraduate courses
- 400-499 Mixed courses primarily for Undergraduate students
- 500-599 Mixed courses primarily for Graduate students
- 600-989 Graduate courses
- 990-999 Graduate individual study (thesis/dissertation) courses
External Exam Credit

The University of Pennsylvania may award credit or advanced course standing to students who have taken Advanced Placement (AP), International Baccalaureate (IB), or other internationally-recognized examinations. Scores warranting University credit vary by department.

Penn Admissions External Exam Credit Policy (http://www.admissions.upenn.edu/apply/freshman-admission/externalexamcredit/) (for prospective students)

School specific policies:

- College of Arts and Sciences (https://www.college.upenn.edu/placement/)
- School of Nursing (http://www.nursing.upenn.edu/student-services/resources/handbooks-forms-policies/bsn-handbook/courses-exam-related-policies/#AP%20Policies)
- The Wharton School (https://undergrad-inside.wharton.upenn.edu/apib-credit/)

Independent Study

Independent study allows students to pursue academic interests not available in regularly offered courses.

Students should approach their academic or departmental advisor to explore the possibility of pursuing independent study.

Further information about independent study procedures is available by school.

- College of Arts and Sciences (https://www.college.upenn.edu/research/)
- School of Nursing (http://www.nursing.upenn.edu/live/files/157-independent-study-form-ipdf/)
- The Wharton School (https://undergrad-inside.wharton.upenn.edu/independent-study/)

Liberal and Professional Studies Course Credit

The College of Liberal and Professional Studies (LPS) (http://www.sas.upenn.edu/lps/) is a division of the School of Arts and Sciences. LPS administers programs for adult, professional, and part-time students and offers late-afternoon, evening, and Saturday courses at the undergraduate, post-baccalaureate, and graduate levels. Traditional undergraduate students are eligible to take LPS courses. A certain number of spaces may be reserved for LPS students until the first week of classes, and some classes have restricted enrollments for LPS students only. Students should direct questions about enrollment policies and permits for specific LPS classes to LPS (http://www.sas.upenn.edu/lps/).
Part Time Status

Traditional undergraduate students are generally expected to maintain full-time status. Students should consult with their school advising office for further details.

Please note that dropping to part-time status may affect other considerations, such as visa status, athletic eligibility, financial aid, and/or insurance coverage.

School specific policies:
- College of Arts and Sciences (https://www.college.upenn.edu/part-time-policy/)
- School of Nursing (http://www.nursing.upenn.edu/student-services/resources/handbooks-forms-policies/bsn-handbook/courses-exam-related-policies/#course%20load)
- The Wharton School (https://undergrad-inside.wharton.upenn.edu/part-time-status/)

Petitions

Students who believe a special circumstance might warrant an exemption from a school policy and/or requirement may submit a petition. Petitions are subject to review by a school-based committee. Students should first consult with their academic advisor.

For petitions regarding course registration deadlines, see the Guidelines for Student Petitions Regarding Course Registration Deadlines (http://catalog.upenn.edu/pennbook/student-petitions/).

Policies and procedures regarding petitions vary by school.

School specific policies:
- College of Arts and Sciences (https://www.college.upenn.edu/petitions/)
- School of Nursing (http://www.nursing.upenn.edu/student-services/resources/handbooks-forms-policies/bsn-handbook/academic-regulations/#petition)
- The Wharton School (https://undergrad-inside.wharton.upenn.edu/petitions/)

Policy on Common Midterm Examinations

Instructors teaching a course with multiple sections who plan to schedule a common midterm examination outside the class’s regular meeting time must notify students of this event during the first week of the semester and be prepared to offer one or more make-up examinations to accommodate any student who is enrolled in a course that meets at the time of the common examination.

Students enrolled in a course that conflicts with the time of a common midterm examination must notify the instructor administering the common midterm examination of the conflict by the end of the course selection (add) period. Students may not be required to miss their regularly scheduled class.

(Source: Almanac – April 20, 2010, Volume 56, No. 30 (http://www.upenn.edu/almanac/volumes/v56/n30/provost.html))

Retaking Courses

Policies governing retaking a course vary by school.

School specific policies:
- College of Arts and Sciences (https://www.college.upenn.edu/retaking-courses/)
- School of Nursing (http://www.nursing.upenn.edu/student-services/resources/handbooks-forms-policies/bsn-handbook/academic-regulations/#a)
- The Wharton School (https://undergrad-inside.wharton.upenn.edu/retaking-courses/)

Rules Governing Final Examinations

1. No instructor may hold a final examination nor require the submission of a take-home final exam except during the period in which final examinations are scheduled. When necessary, exceptions to this policy may be granted for postponed examinations (see 3 and 4 below). No final examinations may be scheduled during the last week of classes or on reading days.
2. No student may be required to take more than two final examinations on any calendar day during the period in which final examinations are scheduled. If more than two are scheduled, the student may postpone the middle exam. If a take-home final exam is due on a day when two final examinations are scheduled, the take-home exam shall be postponed by one day.
3. Examinations that are postponed because of conflicts with other examinations, or because more than two examinations are scheduled in the same day, may be taken at another time during the final examinations period if the faculty member and student can agree on that time. Otherwise, they must be taken during the official period for postponed examinations.
4. Examinations that are postponed because of illness, a death in the family, for religious observance, or some other unusual event may be taken only during the official periods: the first week of the spring and fall semesters. Students must obtain permission from their Dean’s office to take a postponed exam. Instructors in all courses must be willing to offer a make-up examination to all students who are excused from the final examination.
5. No instructor may change the time or date of a final exam without permission from the appropriate Dean.
6. No instructor may increase the time allowed for a final exam beyond the scheduled two hours without permission from the appropriate Dean.
7. No classes or required class activities may be held during the reading period.
8. The first examination of the day begins at 9 a.m. and the last examination concludes by 8 p.m. There will be one hour between exam time blocks.
9. All students must be allowed to see their final examination. Exams should be available as soon as possible after being graded with access ensured for a period of at least one regular semester after the exam has been given. To help protect student privacy, a student should have access only to his or her own exam and not the exams of other students. Therefore, for example, it is not permissible to leave student exams (or grades or papers) in publicly accessible areas.

10. Students may not be asked for their Social Security Numbers. Instructors may not publicly display a student’s Penn ID or any portion of the Social Security Number, nor use names, initials, or any personally identifiable information to post grades. Even when an identifier is masked or absent, grades may not be posted in alphabetical order, to protect student privacy.

11. Final exams for College of Liberal and Professional Studies (LPS) courses must be given on the regular class meeting night during the week of final examinations. No change in scheduling is permitted without unanimous consent of all students in the class and the director of LPS. LPS final exams may not be administered during the last week of class or on a reading day.

In all matters relating to final exams, students with questions should first consult with their Dean’s offices. Faculty wishing to seek exceptions to the rules also should consult with their Dean’s offices. Finally, the Council of Undergraduate Deans and Student Committee on Undergraduate Education (SCUE) urge instructors to see that all examinations are actively proctored.

(Source: Almanac, April 17, 2018, Volume 64, No. 31)

Withdrawal From a Course

Students may withdraw from a course through the end of the tenth full week of the semester, with the permission of the instructor, and should consult the Academic Calendar (p. 264) for the official withdrawal deadline for each semester.

Summer courses and part-of-term courses have different deadlines. Consult with an academic advisor for more information.

Withdrawal procedures vary by school:

- College of Arts and Sciences (https://www.college.upenn.edu/withdrawal/)
- School of Nursing (http://www.nursing.upenn.edu/student-services/resources/handbooks-forms-policies/bsn-handbook/courses-exam-related-policies/#withdraw)
- The Wharton School (https://undergrad-inside.wharton.upenn.edu/withdrawal/)

Grade and GPA-Related Policies

Students should consult with their academic advisors (p. 267) about grading and GPA-related policies and procedures.

- Academic Standing (p. 284)
- Dean’s List (p. 284)
- Grade Grievance Process (p. 284)

- Grades (p. 285)
- Incomplete Grades (p. 285)
- Pass/Fail (p. 285)

Academic Standing

The University of Pennsylvania expects students to maintain a minimum level of academic performance or risk being placed on Academic Probation. The requirements for good academic standing vary by school; students enrolled in more than one undergraduate school are subject to the academic standing policies of both schools.

The requirements for good academic standing are:

- College of Arts and Sciences (https://www.college.upenn.edu/academic-standing/)
- School of Nursing (http://www.nursing.upenn.edu/student-services/resources/handbooks-forms-policies/bsn-handbook/academic-regulations/#Academic%20Standing)
- The Wharton School (https://undergrad-inside.wharton.upenn.edu/academic-standing/)

Dean’s List

The Dean’s List citation appears on the transcript and is awarded annually to any student who achieves a combined GPA of 3.7 for the fall and spring semesters, provided that during those two semesters, he or she has:

- Completed 6 or more credit units for letter grades
- Received no grades lower than C
- Completed all courses on time with no Incompletes, NRs, or GRs

A student who has received a sanction of probation or greater for a violation of the Code of Academic Integrity, the Code of Student Conduct, or the Sexual Violence, Relationship Violence, and Stalking Policy is not eligible for Dean’s List in the academic year in which the violation occurred. The Dean’s List citation will be removed from the transcript if the finding occurs after this honor has been posted or if the violation occurs during the summer term following the academic year in which this honor was awarded.

(Source: Almanac – April 20, 2010, Volume 56, No. 30)

Grade Grievance Process

Students who wish to have a course grade reviewed must first attempt to resolve the issue with the course instructor. For detailed policies and procedures, students should refer to the policies of the school in which the course was taken.

School specific policies:

- College of Arts and Sciences (https://www.college.upenn.edu/grade-review-policy/)
- School of Engineering and Applied Science
School specific policies:

- Students are advised to discuss the grading discrepancy/grievance directly with the course director/instructor. If the student is not satisfied with the conclusion of that meeting, the student can proceed to speak with the department chairperson about the grievance.
- School of Nursing (http://www.nursing.upenn.edu/student-services/resources/handbooks-forms-policies/bsn-handbook/grievance-policy/)
- The Wharton School (https://undergrad-inside.wharton.upenn.edu/grade-grievance/)

Grades

The grade point average (GPA) is calculated at the end of every term based on the following grading scale:

<table>
<thead>
<tr>
<th>Grade</th>
<th>GPA</th>
</tr>
</thead>
<tbody>
<tr>
<td>A+</td>
<td>4.0</td>
</tr>
<tr>
<td>A</td>
<td>4.0</td>
</tr>
<tr>
<td>A-</td>
<td>3.7</td>
</tr>
<tr>
<td>B+</td>
<td>3.3</td>
</tr>
<tr>
<td>B</td>
<td>3.0</td>
</tr>
<tr>
<td>B-</td>
<td>2.7</td>
</tr>
<tr>
<td>C+</td>
<td>2.3</td>
</tr>
<tr>
<td>C</td>
<td>2.0</td>
</tr>
<tr>
<td>C-</td>
<td>1.7</td>
</tr>
<tr>
<td>D+</td>
<td>1.3</td>
</tr>
<tr>
<td>D</td>
<td>1.0</td>
</tr>
<tr>
<td>F</td>
<td>0.0</td>
</tr>
</tbody>
</table>

*There is no D-. Policies regarding grades vary by school.

School specific policies:

- College of Arts and Sciences (https://www.college.upenn.edu/credits-grades-policy/)
- School of Nursing (http://www.nursing.upenn.edu/student-services/resources/handbooks-forms-policies/bsn-handbook/academic-regulations/#incompletes)
- The Wharton School (https://undergrad-inside.wharton.upenn.edu/incomplete/)

Pass/Fail

Students may be eligible to take certain courses pass/fail. Policies regarding pass/fail options vary by school and course.

School specific policies:

- College of Arts and Sciences (https://www.college.upenn.edu/pass-fail/)
- School of Nursing (http://www.nursing.upenn.edu/student-services/resources/handbooks-forms-policies/bsn-handbook/courses-exam-related-policies/#pass/fail)
- The Wharton School (https://undergrad-inside.wharton.upenn.edu/pass-fail/)

Graduation Policies

Students should consult with their academic advisors (p. 267) about graduation requirements, Latin honors, and the procedures for applying for graduation and participating in graduation ceremonies.

- Graduation Honors (p. 285)
- Graduation Requirements (p. 286)
- Maximum Time to Complete a Degree (p. 286)

Graduation Honors

In recognition of distinguished academic achievement and high standards of academic integrity, the University of Pennsylvania awards Latin honors to undergraduate students based on the cumulative GPA on their transcripts at the time of graduation:

- **Summa Cum Laude:** 3.80 or higher
- **Magna Cum Laude:** 3.60 or higher, but less than 3.80
- **Cum Laude:** 3.40 or higher, but less than 3.60

A student who has received a sanction of probation or greater for a violation of the Code of Academic Integrity, the Code of Student Conduct, or the Sexual Violence, Relationship Violence, and Stalking Policy is not eligible for Latin honors. Notation of Graduation Honors will be removed from the transcript if the finding occurs after this honor has been posted.

(Source: Almanac, April 20, 2010, Volume 56, No. 30 (http://www.upenn.edu/almanac/volumes/v56/n30/provost.html), updated May 3, 2016, Volume 62, No. 33 (http://www.upenn.edu/almanac/volumes/v62/n33/changes-to-policies.html))
Graduation Requirements

Students are responsible for fulfilling all the requirements of their curriculum as determined by their school in order to graduate.

School specific policies:

- College of Arts and Sciences (https://www.college.upenn.edu/graduation-policies/)
- School of Engineering and Applied Science (http://www.seas.upenn.edu/undergraduate/handbook/policy/course-requirements.php)
  - Students must complete all courses within their major, as addressed individually by each department.
- School of Nursing (http://www.nursing.upenn.edu/student-services/resources/handbooks-forms-policies/bsn-handbook/academic-honors/#graduation%20requirements)
- The Wharton School (https://undergrad-inside.wharton.upenn.edu/degree-requirements/)

Maximum Time to Complete a Degree

Some schools set a maximum period within which students must complete their degree. Students with questions should contact their school advising office.

School specific policies:

- School of Nursing (http://www.nursing.upenn.edu/student-services/resources/handbooks-forms-policies/bsn-handbook/academic-regulations/#completion)
- The Wharton School (https://undergrad-inside.wharton.upenn.edu/sunset-policy/)

Leaves of Absence

Students take time away from their studies for a wide variety of reasons, including to:

- Work on a political campaign
- Manage a medical concern
- Fulfill a family obligation
- Pursue career-related opportunities
- Complete military service
- Take a break

Students typically take a leave for a full academic year. Individual circumstances may require more or less time; the length of the leave is determined by the school. Students on leave should remain in contact with their advisor and update them about plan changes. The return from leave process supports students in a successful re-entry to academic life at Penn. When preparing to return, students must consult their school advising office to develop a plan that includes connection with appropriate resources.

While interrupting one's studies to take time away may seem intimidating, a leave is a means to the successful completion of a degree, not a barrier to graduating. Students considering a leave should take time to think carefully about their goals for the time away and for when they return. Speaking with an academic advisor is an important first step. Students should also consult others important to their decision-making process, such as family members or, if the student intends to address health concerns during the time away, their healthcare provider(s). Your school advising office will help you connect with other campus resources as you prepare to take a leave of absence, such as Student Financial Services, Housing, and International Student and Scholar Services.

Procedures for requesting a leave vary by school.

School specific policies:

- School of Arts and Sciences (https://www.college.upenn.edu/leave-of-absence/)
- School of Nursing (https://www.nursing.upenn.edu/live/files/216-leave-of-absence-policy/)
- The Wharton School (https://undergrad-inside.wharton.upenn.edu/leave/)

Residency Requirement

Residency requirement policies vary by school.

School specific policies:

- School of Arts and Sciences (https://www.college.upenn.edu/residency-requirement/)
- School of Nursing (http://www.nursing.upenn.edu/student-services/resources/handbooks-forms-policies/bsn-handbook/academic-regulations/#residency)
- The Wharton School (https://undergrad-inside.wharton.upenn.edu/transfer-residency/)

Transfer Policies

Students should consult their academic advisors (p. 267) about transferring within Penn or receiving credit for academic experiences at other universities. Students who are intending to transfer to another institution should speak with officials at their new institution.

When students receive credit for courses or other types of academic work done elsewhere, it is referred to as equivalent credit. Some of these credits will be the result of coursework taken before matriculation at Penn, but it is also possible to do a limited number of courses “away” after matriculation.

Credit earned before the student matriculates at Penn is referred to as Transfer Credit (p. 287). Credit earned at another institution while the student is enrolled at Penn (post-matriculation) is referred to as Credit Away (p. 287).

Policies regarding the types and amount of equivalent credit allowed vary by school.

Students who wish to apply for an internal transfer between any of the four undergraduate schools should meet with an advisor in their home school and an advisor from the school they wish to enter. Applicants should be prepared to discuss why the curriculum of the school to which
they are applying for transfer is a good fit for their academic interests and goals. Students applying for internal transfer must be in good academic standing in their home school and should have no NR’s, GR’s, or I’s on their record.

External transfers admitted to any of Penn’s undergraduate schools or divisions are not eligible to transfer again within the University.

Specific policies and procedures for transferring internally vary by school.

School specific policies:

- College of Arts and Sciences (https://www.college.upenn.edu/transfer-within-university/)
- School of Nursing (http://www.nursing.upenn.edu/student-services/resources/handbooks-forms-policies/bsn-handbook/leaves-transfers-and-withdraw/)
- The Wharton School (https://undergrad-inside.wharton.upenn.edu/itdd/)

These policies govern the transfer of credits taken before a student is officially enrolled at the University of Pennsylvania.

Penn Admissions Policy: http://www.admissions.upenn.edu/apply/transfer-admission/transfer-of-credits (http://www.admissions.upenn.edu/apply/transfer-admission/transfer-of-credits/)

School specific policies:

- College of Arts and Sciences (https://www.college.upenn.edu/credits-grades-policy/)
- School of Nursing (https://www.nursing.upenn.edu/student-services/registration/transfer-credit/)
- The Wharton School (https://undergrad-inside.wharton.upenn.edu/transfers/transfer-credits/)

These policies govern credits earned at another institution while enrolled at the University of Pennsylvania.

School specific policies:

- College of Arts and Sciences (https://www.college.upenn.edu/credits-grades-policy/)
- School of Nursing (https://www.nursing.upenn.edu/student-services/registration/transfer-credit/)
- The Wharton School (https://undergrad-inside.wharton.upenn.edu/transfer-credits/)
Accounting (ACCT)

ACCT 101 Accounting and Financial Reporting
This course is an introduction to the basic concepts and standards underlying financial accounting systems. Several important concepts will be studied in detail, including: revenue recognition, inventory, long-lived assets, present value, and long term liabilities. The course emphasizes the construction of the basic financial accounting statements - the income statement, balance sheet, and cash flow statement - as well as their interpretation.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

ACCT 102 Strategic Cost Analysis
Strategic Cost Analysis is the process of analyzing and managing costs in order to improve the strategic position of the business. This goal can be accomplished by having a thorough understanding of which activities and costs support support an organization’s strategic position and which activities and costs either weaken it or have no impact.
Subsequent cost management efforts can then focus on reducing or limiting expenditures on activities that add little or no strategic value, while increasing expenditures on activities that support the strategic position of the organization. Performance can then be evaluated to ensure that the chosen actions are taken, and that these actions are yielding improved strategic performance. Throughout the course, a strategic cost analysis and management framework will be applied across functions and organizations to highlight the cost analysis and performance evaluation methods available to forecast financial performance and improve strategic position.
Taught by: Chris Ittner
Course offered summer, fall and spring terms
Activity: Lecture
1.0 Course Unit

ACCT 212 Financial Measurement and Disclosure(X)
This course builds on the knowledge you obtained in your introductory financial accounting course. This is an intermediate level course on financial reporting which covers more complicated transactions than those found in ACCT 101. We will cover major valuation and financial reporting topics on all three major sections of the balance sheet-assets, liabilities, and equity-along with their consequences for net income and cash flows. Case studies and illustrative examples from the financial press will be used to increase your familiarity with actual firms’ financial statements and to emphasize the effect of financial accounting rules on the information presented in financial statements. After completing this course, you will have obtained many of the tools necessary to both prepare and analyze financial statements and accounting information provided by firms. You will acquire an understanding of both the ‘how’ of accounting procedures and the underlying reasons ‘why’ these practices are adopted. These skills are essential for pursuing a broad range of professions in accounting and finance.
Course usually offered in fall term
Prerequisite: ACCT 101
Activity: Lecture
1.0 Course Unit

ACCT 242 Accounting and Business Analysis
In the course, students learn how to analyze firms’ financial statements and disclosures to determine how a firm’s particular accounting choices reflect the underlying economics of the firm. As a result, the course strengthens students’ ability to use financial statements as part of an overall assessment of the firm’s strategy and valuation. The course is especially useful for anyone interested in working on the buy or sell side. The course provides both a framework for and the tools necessary to analyze financial statements. At the conceptual level, it emphasizes that preparers and users of financial statements have different objectives and incentives. At the same time, the course is applied and stresses the use of actual financial statements. For example, students learn how to detect when firms are managing earnings and/or balance sheets. It draws heavily on real business problems and uses cases to illustrate the application of the techniques and tools.
One-term course offered either term
Also Offered As: ACCT 742
Prerequisite: ACCT 101
Activity: Lecture
1.0 Course Unit

ACCT 243 Accounting for Mergers, Acquisitions, and Complex Financial Structures
The objective of this course is to discuss and understand the accounting that underlies merger, acquisition, and investment activities among firms that result in complex financial structures. Key topics include the purchase accounting method for acquisitions, the equity method for investments, the preparation and interpretation of consolidated financial statements, tax implications of mergers and acquisitions, earnings-per-share considerations, the accounting implications of intercompany transactions and non-domestic investments, etc.
Course usually offered in fall term
Also Offered As: ACCT 743
Prerequisite: ACCT 101 AND (ACCT 212 OR ACCT 242)
Activity: Lecture
1.0 Course Unit

ACCT 270 Forensic Analytics
Recent trends in Big Data and predictive analytics are revolutionizing the way stakeholders analyze financial data. This course teaches students the hands-on skills necessary to manipulate large-scale financial databases and build predictive models useful for strategic and investment decisions. The course will cover three applications of predictive analytics: (i) forecasting future earnings, (ii) predicting accounting fraud, and (iii) detecting insider trading. The course will draw on cutting-edge academic research in each area; introduce students to the basic SQL coding skills necessary to manipulate Big Data and conduct meaningful analyses; and leverage the datasets and computing power of Wharton Research Data Services. The course is organized as a hybrid of a traditional seminar course and a computer science course. The first few classes of each unit will cover the conceptual material and source material related to each topic. The later classes in each unit will cover the technical material and programming skills needed to manipulate the respective datasets, estimate predication models, and backtest algorithms.
Taught by: Dan Taylor
Course usually offered in spring term
Prerequisite: ACCT 101 AND STAT 102
Activity: Lecture
1.0 Course Unit
ACCT 297 Taxes and Business Strategy
The objective of this course is to develop a framework for understanding how taxes affect business decisions. The key themes of the framework - all parties, all taxes and all costs - are applied to decision contexts such as investments, compensation, organizational form, and mergers and acquisitions. The ultimate goal is to provide a new approach to thinking about taxes that will be valuable even as laws and governments change.
One-term course offered either term
Also Offered As: ACCT 897
Prerequisite: ACCT 101 AND FNCE 101
Activity: Lecture
1.0 Course Unit

ACCT 399 Supervised Study
Intensive reading and study with some research under the direction of a faculty member. Approval from one of the departmental advisers must be obtained before registration. Senior standing and 3.4 average in major related subjects required.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

ACCT 611 Fundamentals of Financial Accounting
The objective of this course is to provide an understanding of financial accounting fundamentals for prospective consumers of corporate financial information, such as managers, stockholders, financial analysts, and creditors. The course focuses on understanding how economic events like corporate investments, financing transactions and operating activities are recorded in the three main financial statements (i.e., the income statement, balance sheet, and statement of cash flows).
Along the way, students will develop the technical skills needed to analyze corporate financial statements and disclosures for use in financial analysis, and to interpret how accounting standards and managerial incentives affect the financial reporting process. This course is recommended for students who want a more in-depth overview of the financial accounting required for understanding firm performance and potential future risks through analysis of reported financial information, such as students intending to go into security analysis and investment banking.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

ACCT 613 Fundamentals of Financial and Managerial Accounting
This course provides an introduction to both financial and managerial accounting, and emphasizes the analysis and evaluation of accounting information as part of the managerial processes of planning, decision-making, and control. A large aspect of the course covers the fundamentals of financial accounting. The objective is to provide a basic overview of financial accounting, including basic accounting concepts and principles, as well as the structure of the income statement, balance sheet, and statement of cash flows. The course also introduces elements of managerial accounting and emphasizes the development and use of accounting information for internal decisions. Topics include cost behavior and analysis, product and service costing, and relevant costs for internal decision-making. This course is recommended for students who will be using accounting information for managing manufacturing and service operations, controlling costs, and making strategic decisions, as well as those going into general consulting or thinking of starting their own businesses.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

ACCT 706 Cost Management
This course covers managerial accounting and cost management practices that can be strategically applied across the various functions of a business organization to improve organizational performance. The course emphasizes the methods available to measure and evaluate costs for decision-making and performance evaluation purposes. It reviews a number of cost management issues relating to the design and implementation of strategic, marketing, value analysis, and other management models in modern firms; and identifies major contemporary issues in managerial accounting and financial decision-making. A variety of case studies in different industries and decision contexts are used to examine the application of these concepts.
One-term course offered either term
Prerequisite: ACCT 611 OR ACCT 613
Activity: Lecture
0.5 Course Units

ACCT 742 Financial Reporting and Business Analysis
This intensive one-semester course focuses on how to extract and interpret information in financial statements. The course adopts a user perspective of accounting by illustrating several specific accounting issues in a decision context.
One-term course offered either term
Also Offered As: ACCT 242
Prerequisite: ACCT 611 OR ACCT 613
Activity: Lecture
1.0 Course Unit

ACCT 743 Accounting for Mergers, Acquisitions and Complex Financial Structures
This class studies how complex financial structures account for their activities. Primary emphasis is on the application of purchase accounting for mergers and acquisitions, the equity method for investments, and preparing and interpreting consolidated financial statements. Other topics covered include translations and remeasurements for nondomestic investments, and earnings per share calculations for complex financial structures. Tax considerations and acquisition strategies are of only peripheral interest in this class, and students who are concerned primarily with those topics are advised to seek a different elective.
Course usually offered in fall term
Also Offered As: ACCT 243
Prerequisite: ACCT 611 OR ACCT 613
Activity: Lecture
1.0 Course Unit

ACCT 747 Financial Disclosure Analytics
This course focuses on the analysis of financial communications between corporate managers and outsiders, including the required financial statements, voluntary disclosures, and interactions with investors, analysts, and the media. The course draws on the findings of recent academic research to discuss a number of techniques that outsiders can use to detect potential bias or aggressiveness in financial reporting. FORMAT: Case discussions and lectures. Comprehensive final exam, group project, case write-ups, and class participation.
One-term course offered either term
Prerequisite: ACCT 611 OR ACCT 613
Activity: Lecture
1.0 Course Unit
ACCT 897 Taxes and Business Strategy
The objective of this course is to develop a framework for understanding how taxes affect business decisions. Traditional finance and strategy courses do not consider the role of taxes. Similarly, traditional tax courses often ignore the richness of the decision context in which tax factors operate. The key themes of the framework - all parties, all taxes and all costs - are applied to decision contexts such as investments, compensation, organizational form, regulated industries, financial instruments, tax-sheltered investments, mergers and acquisitions, multinational, and multistate. The ultimate goal is to provide a new approach to thinking about taxes (and all forms of government intervention) that will be valuable even as laws and governments change.
One-term course offered either term
Also Offered As: ACCT 297
Prerequisite: (ACCT 611 OR ACCT 613) AND FNCE 611
Activity: Lecture
1.0 Course Unit

ACCT 910 Accounting Theory Research
This is a theory course covering topics in agency theory, disclosure theory, and incentive design.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

ACCT 921 Empirical Research in Accounting I
This is an empirical literature survey course covering topics that include corporate disclosure, cost of capital, incentives, compensation, governance, financial intermediation, financial reporting, tax, agency theory, cost accounting, capital structure, international financial reporting, analysts, and market efficiency.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ACCT 922 Empirical Research in Accounting II
This is an empirical literature survey course covering topics that include corporate disclosure, cost of capital, incentives, compensation, governance, financial intermediation, financial reporting, tax, agency theory, cost accounting, capital structure, international financial reporting, analysts, and market efficiency.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ACCT 930 Empirical Design in Accounting Research
This is an empirical research design course covering topics related to empirical methodology, causal inference, econometric analysis, and panel data approaches. At least one graduate level course in econometrics is recommended.
Activity: Seminar
1.0 Course Unit

ACCT 981 Workshop Colloquium I
Students attend workshops in departments outside of accounting to provide student exposure to theory, research designs and methods that are being explored outside of accounting to provide breadth of exposure to foster innovative research ideas. Students are required to attend 15 non-accounting workshops over one academic year and write up a referee report for 8 of those workshop papers. They are also required to write up at least one research proposal that stems from theories or research methods gleaned from one or more of the workshops attended.
Activity: Seminar
1.0 Course Unit

ACCT 982 Workshop Colloquium II
Students attend workshops in departments outside of accounting to provide student exposure to theory, research designs and methods that are being explored outside of accounting to provide breadth of exposure to foster innovative research ideas. Students are required to attend 15 non-accounting workshops over one academic year and write up a referee report for 8 of those workshop papers. They are also required to write up at least one research proposal that stems from theories or research methods gleaned from one or more of the workshops attended.

1.0 Course Unit

Africana Studies (AFRC)

AFRC 001 Introduction to Africana Studies
The term Africana emerged in public discourse amid the social, political, and cultural turbulence of the 1960s. The roots of the field, however, are much older, easily reaching back to oral histories and writings during the early days of the Trans-Atlantic African slave trade. The underpinnings of the field continued to grow in the works of enslaved Africans, abolitionists and social critics of the nineteenth century, and evolved in the twentieth century by black writers, journalists, activists, and educators as they sought to document African descended people’s lives. Collectively, their work established African Studies as a discipline, epistemological standpoint and political practice dedicated to understanding the multiple trajectories and experiences of black people in the world throughout history. As an ever-transforming field of study, this course will examine the genealogy, major discourses, and future trajectory of Africana Studies. Using primary sources such as maps and letters, as well as literature and performance, our study of Africana will begin with continental Africa, move across the Atlantic during the middle passage and travel from the coasts of Bahia in the 18th century to the streets of Baltimore in the 21st century. The course is constructed around major themes in Black intellectual thought including: retentions and transferal, diaspora, black power, meanings of blackness, uplift and nationalism. While attending to narratives and theories that concern African descended people in the United States, the course is uniquely designed with a focus on gender and provides context for the African diasporic experience in the Caribbean and Latin America.
For BA Students: Humanities and Social Science S

AFRC 002 Introduction to Sociology
Sociology provides a unique way to look at human behavior and social interaction. Sociology is the systematic study of the groups and societies in which people live. In this introductory course, we analyze how social structures and cultures are created, maintained, and changed, and how they affect the lives of individuals. We will consider what theory and research can tell us about our social world.
For BA Students: Society Sector
Taught by: Imaogene, Zuberi

Activity: Lecture
1.0 Course Unit
AFRC 006 Race and Ethnic Relations
The course will focus on race and ethnicity in the United States. We begin with a brief history of racial categorization and immigration to the U.S. The course continues by examining a number of topics including racial and ethnic identity, interracial and interethnic friendships and marriage, racial attitudes, mass media images, residential segregation, educational stratification, and labor market outcomes. The course will include discussions of African Americans, Whites, Hispanics, and Asian Americans and Multiracials.
Taught by: Charles, Kao, Zuberi
One-term course offered either term
Also Offered As: ASAM 006, SOCI 006, URBS 160
Activity: Lecture
1.0 Course Unit

AFRC 008 Sociology of the Black Community
This course explores a broad set of issues defining important aspects of the Black/African American experience. In addition to the 'usual suspects' (e.g., race, socioeconomic status, poverty, gender, and group culture), we also think about matters of health and well-being, the family, education, and identity in Black/African American communities. Our goal is to gain a deeper sociological understanding and appreciation of the diverse and ever-changing life experiences of Blacks/African Americans.
Taught by: Charles
One-term course offered either term
Also Offered As: SOCI 028
Activity: Seminar
1.0 Course Unit
Notes: Freshman Seminar

AFRC 010 Freshman Seminar: The World After 1800
This course is cross-listed with PSCI 010 (Freshmen Seminar) when the subject matter is related to African American or other African Diaspora issues. Topics vary. A recent topic is 'Race, Crime, and Punishment.' See the Africana Studies Department's website at https://africana.sas.upenn.edu for a description of the current offerings.

Also Offered As: LALS 107, PSCI 010
Activity: Seminar
1.0 Course Unit

AFRC 015 Freshman Seminar in 20TH Century History
In this First Year Seminar we will use coming-of-age autobiographies to explore some of the most significant historical developments of the 20th century. By coming of age I mean autobiographies in which the author focuses primarily on the periods of childhood and adolescence into young adulthood. We will read books by people who lived during segregation in the South, the Great Depression, Japanese Internment during World War II, and the Civil Rights Movement of the 1960s. We will consider many issues, including: race, racism, immigration, religion, social class, and gender. We will contemplate questions about identity, family, honesty, and memory. As we read each book we will examine an individual life in a particular place and time, and we will move out beyond the confines of a person, family, or town to explore the broader historical moment in which the individual lived. To make this deeper contextualization possible, the course is divided into segments that will allow us to study the historical context of the autobiography as well as engage in focused discussion of the texts themselves.
Taught by: Williams
One-term course offered either term
Activity: Seminar
1.0 Course Unit

AFRC 017 Topics in Literature
SPRING 2018: This seminar will introduce students to the power of public art. Outdoor murals, painted poetry, poetry performed outdoors, anti-museum sculpture, and outdoor theater will be the focus of this seminar. How does public art make the very idea of art gain new dimensions such as art as an event (not an object) and art as a community intervention? Our starting point will be outdoor murals in Philadelphia and other very recent art reconsidering the meaning of public monuments. In addition to our focus on contemporary public art in Philadelphia, we will focus on the role of public art in the 1960s and 1970s Black Arts Movement. The seminar will unveil the power of outdoor space to create art that has urgency and the openness of radical experimentation. See the Africana Studies Department's website at https://africana.sas.upenn.edu for a description of the current offerings.
Taught by: Beavers, Tillet, Crawford

Also Offered As: COML 016, ENGL 016
Activity: Seminar
1.0 Course Unit
Notes: Freshman Seminar

AFRC 019 AFAM Freshman Seminar
This course will introduce students to a more hemispheric understanding of the American experience, through the writings of many authors from the New World, including the United States, on what it means to be an American. Students will read texts from many genres including but not limited to poetry, film, prose, political speeches and autobiography, to come to terms with histories of native Americans, African-Americans, Latinos, and whites in the United States, as well as peoples of South America and the Caribbean. In the process students will become familiar with scholarship across the social sciences and humanities that consider issues of race, culture, nation, freedom and inequality in the Americas, and how racial slavery and the Afro-American hemispheric experience has informed multiple American visions.
Taught by: Hanchard
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
AFRC 041 Homelessness & Urban Inequality
This freshman seminar examines the homelessness problem from a variety of scientific and policy perspectives. Contemporary homelessness differs significantly from related conditions of destitute poverty during other eras of our nation's history. Advocates, researchers and policymakers have all played key roles in defining the current problem, measuring its prevalence, and designing interventions to reduce it. The first section of this course examines the definitional and measurement issues, and how they affect our understanding of the scale and composition of the problem. Explanations for homelessness have also been varied, and the second part of the course focuses on examining the merits of some of those explanations, and in particular, the role of the affordable housing crisis. The third section of the course focuses on the dynamics of homelessness, combining evidence from ethnographic studies of how people become homeless and experience homelessness, with quantitative research on the patterns of entry and exit from the condition. The final section of the course turns to the approaches taken by policymakers and advocates to address the problem, and considers the efficacy and quandaries associated with various policy strategies. The course concludes by contemplating the future of homelessness research and public policy.

AFRC 047 That’s My Song!: Musical Genre as Social Contract
Music in American history has been fundamental to identity formation because, as one scholar notes, it comprises ‘the deepest feelings and qualities that make a group unique. Through moving and sounding together in synchrony, people can experience a feeling of oneness with others.’ This course examines how various musical genres have served as ‘social contracts’ among audiences throughout the process of this country’s nation building process. Within America’s melting pot ideal, communities of listeners have asserted their powerful convictions about social identity through musical praxis and its ‘rules of engagement.’ The discourses surrounding the notion of ‘genre’ have often made these meanings legible, audible and powerful for many. From Protestant church performance practices, to minstrelsy, to Tin Pan Alley to rock and hip-hop, the social agreements of musical genres help us understand the dynamism of American identities.

AFRC 050 World Musics and Cultures
This course examines how we as consumers in the ‘Western’ world engage with musical difference largely through the products of the global entertainment industry. We examine music cultures in contact in a variety of ways – particularly as traditions in transformation. Students gain an understanding of traditional music as live, meaningful person-to-person music making, by examining the music in its original site of production, and then considering its transformation once it is removed, and recontextualized in a variety of ways. The purpose of the course is to enable students to become informed and critical consumers of ‘World Music’ by telling a series of stories about particular recordings made with, or using the music of, peoples culturally and geographically distant from the US. Students come to understand that not all music downloads containing music from unfamiliar places are the same, and that particular recordings may be embedded in intriguing and controversial narratives of production and consumption. At the very least, students should emerge from the class with a clear understanding that the production, distribution, and consumption of world music is rarely a neutral process.

AFRC 053 Music of Africa
African Contemporary Music: North, South, East, and West. Come to know contemporary Africa through the sounds of its music: from South African kwela, jazz, marabi, and kwamit to Zimbabwean chimurenga; Central African soukous and pygmy pop; West African Fuji, and North African rai and hophop. Through reading and listening to live performance, audio and video recordings, we will examine the music of Africa and its intersections with politics, history, gender, and religion in the colonial and post colonial era. (Formerly Music 053).

AFRC 054 Sounding Poetry: Music and Literature
Never before has poetry been so inescapable. Hip hop, the soundtrack of our times, has made rhyme, meter, and word-play part of our daily lives. How did this happen? This course begins not on the page, but in the bardic traditions of Homer’s Iliad, which encoded many of the values of its time in oral formulas. Poetry was, however, no mere encyclopedia, but also a source of risk, as we will read in Plato’s warning against its hypnotic powers, and in the excesses of the Bacchae. We continue through 19th and 20th century attempts to recover these classic traditions (Wordsworth, Longfellow, Pound). Yet Europe was not the only center of poetic production. How does the Homeric tradition relate to living traditions of West African singing poets (griots) and Southern African praise songs? And what traces of these traditions can we hear in the blues? We will listen to early blues recordings and discuss the politics of collecting folklore, and the genius of African American modernists (Langston Hughes, Claude McKay, Georgia Douglas Johnson) who bought vernacular speech onto the page. We will read and listen to a number of 20th century poets inspired when page meets stage in jazz poetry, dub poetry, spoken word, and hip hop. Assignments will include 2 papers, 2 small-group performances, memorization exercises, and a creative adaptation of one poem. See the English Department’s website at www.english.upenn.edu for a description of current offerings.

AFRC 056 Seeing/Hearing Globally: Knowing People, Culture, and Places through Travel
Students are provided a general introduction to a country’s history, politics, environment, and performance through a range of resources: scholarly literature, film, music, and online resources; with particular focus on sites, communities, and events included in the 12 day intensive travel to that country (either Fall semester Intro with winter break travel; or spring semester Intro with late spring intensive travel). Students are given guidelines for writing about and representing live performances and experiences of exhibits and heritage sites for journaling and are expected to produce a written/creative project at the end of the travel. The itinerary and specific course content will vary according to the travel site and focus of each class.

AFRC 066 African American Drama: From the 1920's to the present
This course will introduce students to Pulitzer-prize winning plays such as Lynn Nottage’s Sweat, groundbreaking plays such as Ntozake Shange’s For Colored Girls, as well as less known plays that show the wide range of form and themes in 20th and 21st century African American drama. We will focus on performance as a mode of interpreting a script and performance as a way of understanding the intersections of race, class, and gender. In-class viewings of selected scenes in recorded productions of the plays will energize our analysis of the scripts. Short creative, performance-oriented writing assignments will produce the questions explored in the two critical essays. In addition to Sweat and For Colored Girls, our line-up may include Zora Neale Hurston’s Color Struck, Anna Deavere Smith’s Twilight: Los Angeles, 1992, Suzan-Lori Parks’ 100 Plays for the First Hundred Days, August Wilson’s Radio Golf, Lydia Diamond’s Harriet Jacobs, Amiri Baraka’s The Slave, and Claudia Rankine’s The White Card.

AFRC 070 Colonial Latin America
The year 1492 was pivotal in the history of the world. It precipitated huge population movements within the Americas and across the Atlantic - a majority of them involuntary as in the case of indigenous and African people who were kidnapped and enslaved. It led to cataclysmic cultural upheavals, including the formation of new cultures in spaces inhabited by people of African, European and indigenous descent. This course explores the processes of destruction and creation in the region known today as Latin America in the period 1400 - 1800. Class readings are primary sources and provide opportunities to learn methods of source analysis in contexts marked by radically asymmetrical power relationships.

AFRC 073 The African Diaspora: Global Dimensions
This class examines the cultural and social ramifications of the African diaspora on a global level. It is divided into two major sections. The first section provides the historical background to the African diaspora by focusing on the forced migration of Africans to Spanish and Portuguese colonies in the Americas. We will then delve into the black experience in French and British colonial spaces. In this section, we will also endeavor to move beyond the Atlantic-centric paradigm in studies of the African diaspora by examining free and unfree migrations of African people across the Indian Ocean to places as far away as India and the Philippines. The second half of the class devotes significant attention to the historical legacy of slavery and colonialism in places like Brazil, Cuba and the United States. In this section, we will discuss such issues as race relations, the struggle for civil rights for African-descent people as well as the emergence and the implementation of affirmative action policies in places like Brazil and the US.

AFRC 078 Faculty-Student Collaborative Action Seminar in Urban University-Community Rltn
This seminar helps students develop their capacity to solve strategic, real-world problems by working collaboratively in the classroom, on campus, and in the West Philadelphia community. Students develop proposals that demonstrate how a Penn undergraduate education might better empower students to produce, not simply ‘consume,’ societally-useful knowledge, as well as to function as caring, contributing citizens of a democratic society. Their proposals help contribute to the improvement of education on campus and in the community, as well as to the improvement of university-community relations. Additionally, students provide college access support at Paul Robeson High School for one hour each week.
Taught by: Harkavy
One-term course offered either term
Also Offered As: HIST 173, URBS 178
Activity: Seminar
1.0 Course Unit

AFRC 081 African-American Literature
An introduction to African-American literature, typically ranging across a wide spectrum of moments, methodologies, and ideological postures, from Reconstruction and the Harlem Renaissance to the Civil Rights Movement. Most versions of this course will begin in the 19th century; some versions of the course will concentrate only on the modern period. See the English Department’s website at www/english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: ENGL 081, GSWS 081
Activity: Lecture
1.0 Course Unit

AFRC 085 Contemporary American Literature
The readings for this course expose the student to a wide range of American fiction and poetry since World War II, giving considerable attention to recent work. Works may include All The King’s Men by Robert Penn Warren, Herzog by Saul Bellow, On The Road by Jack Kerouac, V by Thomas Pynchon, Of Love and Dust by Ernest J.Gaines, A Flag For Sunrise by Robert Stone, The Killing Ground by Mary Lee Settle, and selected poem by Ginsberg, Plath, and Walcott. Readings vary from term to term.
Course not offered every year
Also Offered As: CIMS 074, ENGL 074
Activity: Lecture
1.0 Course Unit
Notes: This course is cross-listed with ENGL 074 (Contemporary American Literature) when the course content is related to Afro-American issues. Topic vary. Consult the Africana Department website for a current course description.

AFRC 101 Study of an Author
This course introduces students to literary study through the works of a single author--often Shakespeare, but other versions will feature writers like Jane Austen, Geoffrey Chaucer, Herman Melville, and August Wilson. Readings an individual author across his or her entire career offers students the rare opportunity to examine works from several critical perspectives in a single course. What is the author’s relation to his or her time? How do our author’s works help us to understand literary history more generally? And how might we understand our author’s legacy through performance, tributes, adaptations, or sequels? Exposing students to a range of approaches and assignments, this course is an ideal introduction to literary study for those students wishing to take an English course but not necessarily intending to major. See the Africana Studies Department’s website at https://africana.sas.upenn.edu for a description of the current offerings.

Activity: Seminar
1.0 Course Unit
AFRC 112 Discrimination: Sexual and Racial Conflict
This course is concerned with the structure, the causes and correlates, and the government policies to alleviate discrimination by race and gender in the United States. The central focus of the course is on employment differences by race and gender and the extent to which they arise from labor market discrimination versus other causes, although racial discrimination in housing is also considered. After a comprehensive overview of the structures of labor and housing markets and of nondiscriminatory reasons (that is, the cumulative effects of past discrimination and/or experiences) for the existence of group differentials in employment, wages, and residential locations, various theories of the sources of current discrimination are reviewed and evaluated. Actual governmental policies and alternative policies are evaluated in light of both the empirical evidence on group differences and the alternative theories of discrimination. This course is concerned with the structure, the causes and correlates, and the government policies to alleviate discrimination by race and gender in the United States. The central focus of the course is on employment differences by race and gender and the extent to which they arise from labor market discrimination versus other causes, although racial discrimination in housing.

1.0 Course Unit
Notes: This course is not open to freshmen. Students wishing to take this course must submit a writing sample as part of the selection process.

AFRC 115 Religious Ethics and Modern Society
Religious beliefs of Malcolm X and MLK formed their social action during the Civil Rights for African Americans. This seminar will explore the religious biographies of each leader, how religion shaped their public and private personas, and the transformative and transgressive role that religion played in the history of the Civil Rights movement in the United States and abroad. Students in this course will leave with a clearer understanding of religious beliefs of Christianity, The Nation of Islam, and Islam, as well as religiously based social activism. Other course emphases include the public and private roles of religion within the context of the shaping of ideas of freedom, democracy, and equality in the United States, the role of the 'Black church' in depicting messages of democracy and freedom, and religious oratory as exemplified through MLK and Malcolm X.

Also Offered As: RELS 112
Activity: Lecture
1.0 Course Unit

AFRC 116 Caribbean Culture and Politics
This course offers anthropological perspectives on the Caribbean as a geo-political and socio-cultural region, and on contemporary Caribbean diaspora cultures. We will examine how the region’s long and diverse colonial history has structured relationships between race, ethnicity, class, gender and power, as well as how people have challenged these structures. As a region in which there have been massive transplantation of peoples and their cultures from Africa, Asia, and Europe, and upon which the United States has exerted considerable influence, we will question the processes by which the meeting and mixing of peoples and cultures has occurred. Course readings include material on the political economy of slavery and the plantation system, family and community life, religious beliefs and practices, gender roles and ideologies, popular culture, and the differing ways national, ethnic, and racial identities are expressed on the islands and throughout the Caribbean diaspora.
Taught by: Thomas
Course not offered every year

0.0 Course Units

AFRC 121 Writing for Children
We will read our favorite kids' books, determine the kinds of books we love to read and write, and then write them, aiming at a clear voice appropriate to the story, and as much order or misrule as each writer's kid-muse demands. For inspiration, we'll visit the Maurice Sendak Collection at the Rosenbach Museum and Library and have a nostalgia wallow in the kids' section at the library. Then students write, fast-fast, drafts of stories to workshop, mull and revise. Yes, fun is required. For sure we'll critique, but first we'll try to outrun our interior grown-up! Workshop happens first with student writer colleagues, and then with the real kids in schools, through our partner West Philadelphia Alliance for Children. Reading to children will give studentwriters a chance to hear where children laugh, see where they look scared, or notice when they begin to fidget. Returning with revisions will be a promise fulfilled, and an important marker in the literary life of everyone involved. Our class will act as a team of editors, then, to submit stories-and illustrations by authors and/or kids-on the upcoming website, SafeKidsStories.org.

May be repeated for credit with a different instructor.
AFRC 122 Popular Culture and Youth in Africa
All across the continent, Africa is alive with the energies of young people, expressed in music, art, fashion, drama, video, poetry, protest, and urban legends. In this course, we take a close look at the wide variety of popular forms produced and consumed by young people in a diverse context, urban and rural, elite and marginal, mainstream and transgressive. We will examine how popular culture draws from African tradition to craft innovative versions of modernity and futurity. We will explore themes of democracy, inequality, and social justice threaded through popular genres as well as experiences of joy, anger, fear, and hilarity. We will see how popular culture provides escape and entertainment for young people while also working to transform African societies.

Course usually offered in spring term
Also Offered As: ANTH 120
Activity: Lecture
1.0 Course Unit

AFRC 124 Writing and Politics
This is a course for students who are looking for ways to use their writing to participate in the 2020 election. Student writers will use many forms—short essay, blogs, social media posts, mini video- or play scripts, podcasts—and consider lots of topics as they publish work, in real time, with #VoteThatJawn. This multi-media platform popped up in 2018 to support youth registration and voting in Philadelphia's 2018 mid-term elections. Registration of 18-year-olds that year doubled: from 3,300 to nearly 7,000. This year university, high school, and media partners across the city aim to hit 10K. Imagine that. Imagine a Creative Writing class that answers our desire to live responsibly in the world and to have a say in the systems that govern and structure us. Plus learning to write with greater clarity, precision, and whatever special-sauce Jawn your voice brings. The course is designed as an editorial group sharing excellent, non-partisan, fun, cool, sometimes deadly earnest content for and about fresh voters. In addition, you will gain experience in activities that writers in all disciplines need to know: producing an arts-based event, a social media campaign, working with multi-media content, and collaborating with other artists. English 124 will sometimes work directly with diverse populations of youth from other colleges and high schools throughout the city. Because you will engage with a common reading program about the ground-breaking Voting Rights Act of 1965, the class is cross-listed with Africana Studies 124. In addition, the work of #VoteThatJawn performs a civic service; therefore it is listed as an Academically Based Community Service (ABCS) course with the university. Don't sit out this momentous electoral season because you have so much work. Use your work to bring other youth to the polls.
Taught by: Cary
Also Offered As: ENGL 124
Activity: Seminar
1.0 Course Unit

AFRC 134 Creative Non-Fiction Writing
A workshop course in the writing of creative nonfiction. Topics may include memoir, family history, travel writing, documentary, and other genres in which literary structures are brought to bear on the writing of nonfiction prose. May be repeated for credit with a different instructor.
Taught by: Cary, Watterson
One-term course offered either term

Activity: Lecture
1.0 Course Unit

AFRC 141 Histories of Race and Science in Philadelphia
The history of race and science has its American epicenter in Philadelphia. Throughout this Academically-Based Community Service (ABCS) course, we will interrogate the past and legacy of racial science in the United States; the broad themes we broach will be met concretely in direct engagement with Penn and the Philadelphia community. As an extended case study, students will undertake independent research projects using primary source documents from local archives, tracing the global history of hundreds of human skulls in the 19th century Samuel G. Morton cranial collection at the Penn Museum, a foundational and controversial anthropological collection in the scientific study of race. These projects will be formed through an ongoing partnership with a Philadelphia high school in which Penn students will collaborate with high school students on the research and design of a public-facing website on the Morton collection and the legacy of race and science in America. In our seminar, we will read foundational texts on the study of racial difference and discuss anti-racist responses and resistance to racial science from the 19th century to the present. Throughout, we will work directly with both primary and secondary sources, critically interrogating how both science and histories of science and its impacts on society are constructed. Throughout this course, we will explore interrelated questions about Penn and Philadelphia's outsize role in the history of racial science, about decolonization and ethics in scholarly and scientific practice, about the politics of knowledge and public-facing scholarship, and about enduring legacies of racial science and racial ideologies. All students are welcome and there are no prerequisites, save for intellectual curiosity and commitment to the course. This course will be of particular interest to those interested in race, American history and the history of science, anthropology, museum studies, education, and social justice.
Taught by: Mitchell
Also Offered As: ANTH 140, HIST 154, STSC 140

AFRC 147 Studies in African American Music
This course explores aspects of the origins, style development, aesthetic philosophies, historiography, and contemporary conventions of African-American musical traditions. Topics covered include: the music of West and Central Africa, the music of colonial America, 19th century church and dance music, minstrelsy, music of the Harlem Renaissance, jazz, blues, gospel, hip-hop, and film music. Special attention is given to the ways that black music produces ‘meaning’ and to how the social energy circulating within black music articulates myriad issues about American identity at specific historical moments. The course will also engage other expressive art forms from visual and literary sources in order to better position music making into the larger framework of African American aesthetics.
Taught by: Ramsey
Course not offered every year
Also Offered As: MUSC 235

AFRC 175 Society and Culture of Brazil
With its booming economy, the recent inauguration of its first female president, and its selection as host to the 2012 World Cup and Olympic games, Brazil is growing in global prestige. But amid all these exciting developments are devastating socioeconomic inequalities. Access to safe living conditions, livable wages, higher education, and overall social mobility remain painfully out of reach to many Brazilians, the majority of whom are the descendants of slaves. Why do these problems persist in a country that has had such an enduring and widespread reputation as a ‘racial democracy’? What are the possibilities of closing the equality gap in Brazil?
Course not offered every year

AFRC 185 Africa and the Transatlantic Slave Trade
This course focuses on the history of selected African societies from the sixteenth through the mid-nineteenth centuries. The primary goal is to study the political, economic, social, and cultural history of a number of peoples who participated in the Atlantic slave trade or were touched by it during the era of their involvement. The course is designed to serve as an introduction to the history and culture of African peoples who entered the diaspora during the era of the slave trade. Its audience is students interested in the history of Africa, the African diaspora, and the Atlantic world, as well as those who want to learn about the history of the slave trade. Case studies will include the Yoruba, Akan, and Fon, as well as Senegambian and West-central African peoples.
Taught by: Ferreira

Activity: Lecture
1.0 Course Unit
AFRC 187 Topics in Africana Studies
Topics Vary. See the Africana Studies Program’s website at www.sas.upenn.edu/africana for a description of the current offerings. SPRING 2017: The history of the women and men of African Descent who have studied, taught, researched, and worked at the University of Pennsylvania provides a powerful window into the complex history of Blacks not only in America but throughout the Diaspora. This class will unpack, uncover, and present this history through close studies of texts and archived records on and at the university, as well as through first hand accounts by alumni and past and present faculty and staff members. These stories of the trials and triumphs of individuals on and around this campus demonstrate the amazing and absurd experience that Blacks have endured both at Penn and globally. Emphasis will be placed on the research process with the intent of creating a democratic classroom where all are students and all are instructors. Students will become familiar with archival historical research (and historical criticism) as well as with ethnographic research. Far more than just a survey of historical moments on campus and in the community, students will meet face to face with those who have lived and are presently living history and they will be faced with the challenge of discerning the most effective ways of documenting, protecting, and representing that history for future generations of Penn students.

AFRC 190 Introduction to Africa
This course provides an introduction to the study of Africa in all its diversity and complexity. Our focus is cultural, geographical, and historical: we will seek to understand Africa’s current place in the world political and economic order and learn about the various social and physical factors that have influenced the historical trajectory of the continent. We study the cultural formations and empires that emerged in Africa before European colonial invasion and then how colonialism reshaped those sociocultural forms. We’ll learn about the unique kinds of kinship and religion in precolonial Africa and the changes brought about by the spread of Islam and Christianity. Finally, we’ll take a close look at contemporary issues such as ethnic violence, migration, popular culture and poverty, and we’ll debate the various approaches to understanding those issues.
For BA Students: Society Sector
Taught by: Hasty
Course usually offered in fall term
Also Offered As: ANTH 190
Activity: Lecture
1.0 Course Unit

AFRC 201 Divinities, Diviners and Divinations: Religions of the African Diaspora
This undergraduate course is designed to provide students with a broad introduction to major themes within African Diasporic Religions. This is an interdisciplinary course. We will be drawing upon various theoretical methods, i.e. historical, ethnographical, and autobiographical. Additionally, we will be examining visual media to understand the presence and value of African Diasporic Religions in the 20th/21st century. Special attention will be given to Vodou, Santeria, and Candomble in the Americas. Thematicall, we will work through concepts of the diaspora; memory, myth and authenticity; ritual and material practices; borders, migration, gender and sexuality, religious commodities and exchange. As we traverse through these various religious traditions, it is through the readings, lectures, invited speakers, films and class discussions that we will develop a complex understanding of integrative religious worldviews that impacts every aspect of life: family structure, gender relations, education, healing, economics, politics, arts, and so on. It is with the hopes that we can apprehend how these traditions are indeed an American Religion.
Taught by: Nwokocha
One-term course offered either term
Also Offered As: GSWS 201
Activity: Lecture
1.0 Course Unit

AFRC 202 Spirit possession in Caribbean Religions
This course is designed to provide students with a broad introduction to possession experiences in Caribbean Religions. Through historical, ethnographic, autobiographical, literary and visual texts this course examines complex, gendered practices within the possession process, the vibrant spiritual energy that sustains communal connections during religious ceremonies, and the transnational imaginations that animate Caribbean religious practices in the Americas. Special attention will be given to Santeria, Candomble, Vodou, Myal, Palo Monte, and Revival Zion in the Americas. Possession is a process through which gender and sexuality can be performed, contesting national and regional discourses of sexuality, gender, and race in the Caribbean. Thematically, we will work through concepts of memory, community, adornment, ritual, borders, and the senses. We will investigate religious ritual practices to understand various religious worldviews that shape communities' religious and social lives.

1.0 Course Unit

AFRC 215 The World After 1800: Advanced Benjamin Franklin Seminar
This course is cross listed with HIST 214 (America after 1800: Advanced Benjamin Franklin Seminar) when the subject matter is related to African, African American or African diaspora issues. See the Africana Studies Program’s website at www.sas.upenn.edu/africana for a description of the current offerings.
One-term course offered either term
Also Offered As: HIST 216, JWST 216, URBS 220
Activity: Seminar
1.0 Course Unit
AFRC 218 Diversity and the Law
The goal of this course is to study the role the law has played, and continues to play, in addressing the problems of racial discrimination in the United States. Contemporary issues such as racial profiling, affirmative action, and diversity will all be covered in their social and legal context. The basis for discussion will be assigned texts, articles, editorials and cases. In addition, interactive videos will also be used to aid class discussion. Course requirements will include a term paper and class case presentations.
Taught by: Anderson

Also Offered As: LGST 218
Activity: Lecture
1.0 Course Unit

AFRC 222 African Women's Lives: Past and Present
Restoring women to African history is a worthy goal, but easier said than done. The course examines scholarship over the past forty years that brings to light previously overlooked contributions. African women have made to political struggle, religious change, culture preservation, and economic development from pre-colonial times to present. The course addresses basic questions about changing women's roles and human rights controversies associated with African women within the wider cultural and historical contexts in which their lives are lived. It also raises fundamental questions about sources, methodology, and representation, including the value of African women's oral and written narrative and cinema production as avenues to insider perspectives on African women's lives.
Taught by: Blakley
Course not offered every year
Also Offered As: LALS 222
Activity: Lecture
1.0 Course Unit

AFRC 225 African Languages and Culture
The aim of the course is to provide an overall perspective on African languages and linguistics. No background in linguistics is necessary. Students will be introduced to theoretical linguistics-its concepts, theories, ways of argumentation, data collection, data analysis, and data interpretation. The focus will be on the languages and linguistics of Africa to provide you with the knowledge and skills required to handle the language and language-related issues typical of African conditions. We will cover topics related to formal linguistics (phonology/phonetics, morphology, syntax, and semantics), aspects of pragmatics as well as the general socio-linguistic character of African countries. We will also cover language in context, language and culture, borrowing, multilingualism, and cross-cultural communication in Africa.

Also Offered As: ASAM 203, HIST 231
Activity: Seminar
1.0 Course Unit

AFRC 232 Race and Ethnic Politics
This course examines the role of race and ethnicity in the political discourse through a comparative survey of recent literature on the historical and contemporary political experiences of the four major minority groups (Blacks or African Americans, American Indians, Latinos or Hispanic Americans, and Asian Americans). A few of the key topics will include assimilation and acculturation seen in the Asian American community, understanding the political direction of Black America in a pre and post Civil Rights era, and assessing the emergence of Hispanics as the largest minority group and the political impact of this demographic change. Throughout the semester, the course will introduce students to significant minority legislation, political behavior, social movements, litigation/court rulings, media, and various forms of public opinion that have shaped the history of racial and ethnic minority relations in this country. Readings are drawn from books and articles written by contemporary political scientists.
Taught by: Gillion
Course not offered every year
Also Offered As: LALS 232, PSCI 231
Activity: Recitation
1.0 Course Unit

AFRC 233 World History: Africa or the Middle East
SPRING 2018: African cities in the past contributed to dynamic and prosperous civilizations. What happened? This course examines Africans’ aspirations of modernity through the lens of African urban history using fiction, film and current scholarship in several disciplines. Each class will explore two temporalities—the precolonial history of African cities, and the colonial and postcolonial histories of economic, social and political progress which goes by the name of development. Grounded in the case studies of both ancient and modern cities, this course explores the emergence and decline of trading centers, the rise of colonial cities, and the dilemmas of postcolonial economies and politics.
Taught by: Babou, Powell
Course usually offered in fall term
Also Offered As: GSWS 232, HIST 232, NELC 282
Activity: Seminar
1.0 Course Unit

Also Offered As: ARTH 369, EALC 141, GSWS 233, HIST 233, LALS 233
Activity: Seminar
1.0 Course Unit
AFRC 235 Law and Social Change
Beginning with discussion of various perspectives on social change and law, this course then examines in detail the interdependent relationship between changes in legal and societal institutions. Emphasis will be placed on (1) how and when law can be an instrument for social change, and (2) how and when social change can cause legal change. In the assessment of this relationship, emphasis will be on the laws of the United States. However, laws of other countries and international law relevant to civil liberties, economic, social and political progress will be studied. Throughout the course, discussions will include legal controversies relevant to social change such as issues of race, gender and the law. Other issues relevant to State-Building and development will be discussed. A comparative framework will be used in the analysis of this interdependent relationship between law and social change.
Taught by: Fetni
One-term course offered either term
Also Offered As: SOCI 235

Activity: Seminar
1.0 Course Unit

AFRC 238 Modalities of Black Freedom and Escape: Ships
The course circulates around ships and boats. The course combines methods from environmental humanities, visual arts and history to consider multi-modal practices of black freedom and escape. From free black sailors in the eighteenth century Caribbean Sea, to twentieth and twenty-first century West African fishing boats, notions of Haiti’s ‘boat people’, Parliament Funkadelic’s mothership, and sinking boats with Somali and Ethiopian migrants off Yemen’s coast, ships have been and remain technologies of containment and freedom for communities of African descent. In the face of environmental vulnerabilities and the reality of water ways as systems of sustenance and imminent death, this course asks: how do black people use the ship and the process and practice of shipping as vessels for freedom, escape, and as a site to experiment with futures? Using the city of Philadelphia and the Schuylkill and Delaware rivers as our primary site of interrogation, the course attends to the threats that black people experience following natural disaster (New Orleans, Haiti, Puerto Rico) and everyday engagement with the local and global state structures regarding water (Flint, MI). In this context, we also look to shipping as a site to theorize and account for black innovation, meanings of (non-)sovereignty, and alternative futures.
Taught by: Johnson
Course not offered every year
Also Offered As: ANTH 231
Activity: Seminar
1.0 Course Unit

AFRC 245 Dancing the African Diaspora
This seminar/studio course introduces students to theories, debates, and critical frameworks in African Diaspora Dance Studies. It asks: What role does dance play throughout the African diaspora? What makes a dance ‘black’? How do conceptualizations of gender and sexuality inform our reading of dancing bodies? Using African diaspora, critical dance, performance, and black feminist frameworks, we will examine the history, politics, and aesthetics of ‘black dance’. Through a keywords format, we’ll construct both a vocabulary: a body of words used to describe a phenomena, and a grammar: a body of rules that lay bare the operations between terms. This course recognizes the fluidity of meaning between words depending on the context, geography, and circumstance of their evocation. Our key terms will allow us to examine a number of dancers, choreographers, companies, and movement practices. Moving across an African diasporic map, this course explores the politics of black choreography, and the political significance of black bodies in motion.
Taught by: Johnson
Activity: Seminar
1.0 Course Unit

AFRC 248 The Haitian Revolution
In August 1791, enslaved Africans on the northern plain of Saint Domingue (colonial Haiti) rose up in a coordinated attack against their French colonial masters and plantation overseers, launching the initial revolt in what would come to be known as the Haitian Revolution. In the years that followed, their actions forced the legal abolition of racial discrimination, and then the abolition of slavery, throughout the French Empire. Ultimately, when Napoleon Bonaparte threatened to return slavery to Saint Domingue, they waged a war for independence. After defeating the Napoleonic army, these former slaves then declared the world’s first ‘Black Republic,’ the independent state of Haiti, in 1804. This seminar will examine some of the major themes and debates surrounding Haiti’s colonial and revolutionary history. We will begin by considering the colonial paradox: France’s leading role in the intellectual movement called the ‘Enlightenment’ coincided with its ascent as a slaveholding colonial power. The seminar will also explore parallels and points of connection between the revolutionary movements in France and Saint Domingue. When the Haitian Revolution began in 1791, the French Revolution was already two years old: how did the increasingly radical ideas and widespread violence in France shape events in the Caribbean? Likewise, how did west African traditions and political ideologies influence insurgents? And how, in turn, did the revolution in Saint Domingue impact the revolution in France? From a diplomatic perspective, we will also consider relations between the Haitian Revolutionary leadership and French officials, examining their respective goals, which overlapped and diverged at different moments. Finally, we will ask how the revolution in Saint Domingue and the birth of Haiti-impacted ideas about liberty, sovereignty and freedom throughout the Atlantic world. We will read a combination of primary and secondary materials each week. Students are encouraged to read primary documents in the original French if they are able. A final research paper will be required of all students, drawing on the Kislak Center’s rich collection of revolutionary-era documents.

1.0 Course Unit
AFRC 253 Music and Performance of Africa
This class provides an overview of the most popular musical styles and discussion of the cultural and political contexts in which they emerged in contemporary Africa. Learning to perform a limited range of African music/dance will be part of this course. No prior performance experience required.
Taught by: Muller
Course not offered every year
Also Offered As: ANTH 263, MUSC 256
Activity: Lecture
1.0 Course Unit

AFRC 258 Latin American Music
This survey course considers Latin American musics within a broad cultural and historical framework. Latin American musical practices are explored by illustrating the many ways that aesthetics, ritual, communication, religion, and social structure are embodied in and contested through performance. These initial inquiries open onto an investigation of a range of theoretical concepts that become particularly pertinent in Latin American contexts—concepts such as post-colonialism, migration, ethnicity, and globalization. Throughout the course, we will listen to many different styles and repertories of music and then work to understand them not only in relation to the readings that frame our discussions but also in relation to our own, North American contexts of music consumption and production. (Formerly Music 158).
Taught by: Rommen

AFRC 268 Contemporary Issues in African Society
This class provides an overview of the most popular musical styles and discussion of the cultural and political contexts in which they emerged in contemporary Africa. Learning to perform a limited range of African music/dance will be part of this course. No prior performance experience required.
Taught by: Imoagene, Zuberi
Also Offered As: SOCI 268
Activity: Lecture
1.0 Course Unit

AFRC 269 Constitutional Law: Public Power & Civil Rights to 1912
This course explores the creation and transformations of the American constitutional system's structures and goals from the nation's founding through the period of Progressive reforms, the rise of the Jim Crow system, and the Spanish American War. Issues include the division of powers between state and national governments, and the branches of the federal government; economic powers of private actors and government regulators; the authority of governments to enforce or transform racial and gender hierarchies; and the extent of religious and expressive freedoms and rights of persons accused of crimes. We will pay special attention to the changing role of the Supreme Court and its decisions in interpreting and shaping American constitutionalism, and we will also read legislative and executive constitutional arguments, party platforms, and other influential statements of American constitutional thought.
Taught by: Smith
One-term course offered either term

1.0 Course Unit

AFRC 274 Faces of Jihad in African Islam
This course is designed to provide the students with a broad understanding of the history of Islam in Africa. The focus will be mostly on West Africa, but we will also look at developments in other regions of the continent. We will explore Islam not only as religious practice but also as ideology and an instrument of social change. We will examine the process of islamization in Africa and the different uses of Jihad. Topics include: prophetic jihad, jihad of the pen and the different varieties of jihad of the sword throughout the history in Islam in sub-Saharan Africa.

One-term course offered either term
Also Offered As: HIST 275
Activity: Lecture
1.0 Course Unit

AFRC 276 African American Life and Culture in Slavery
This course will examine the lives of enslaved African Americans in the United States, both in the North and the South. We will engage historiographical debates, and tackle questions that have long concerned historians. For example, if slaves were wrenched from families and traded, could they sustain family relationships? If slaves worked from sun-up until sun-down, how could they create music? We will engage with primary and secondary sources to expand our understandings of values, cultural practices, and daily life among enslaved people. Topics will include: literacy, family, labor, food, music and dance, hair and clothing, religion, material culture, resistance, and memories of slavery. Several disciplines including History, Archaeology, Literature, and Music, will help us in our explorations. Written, oral, and artistic texts for the course will provide us with rich sources for exploring the nuances of slave life, and students will have opportunities to delve deeply into topics that are of particular interest to them. This course will also count as the AFRC 176 requirement for the AFRC major.
Taught by: Williams
Course not offered every year
Also Offered As: HIST 274
Activity: Seminar
1.0 Course Unit
Notes: This course will also count as the AFRC 176 requirement for the AFRC major.
AFRC 277 Penn Slavery Project Research Seminar
This research seminar provides students with instruction in basic historical methods and an opportunity to conduct collaborative primary source research into the University of Pennsylvania’s historic connections to slavery. After an initial orientation to archival research, students will plunge in to doing actual research at the Kislak Center, the University Archives, the Historical Society of Pennsylvania, the American Philosophical Society, the Library Company, and various online sources. During the final month of the semester, students will begin drafting research reports and preparing for a public presentation of the work. During the semester, there will be opportunities to collaborate with a certified genealogist, a data management and website expert, a consultant on public programming, and a Penn graduate whose research has been integral to the Penn Slavery Project.
Taught by: Brown
One-term course offered either term
Also Offered As: HIST 273
Activity: Field Work
1.0 Course Unit

AFRC 279 (T)rap Music
This course examines the coming to pass of trap music from several perspectives: 1) that of its technological foundations and innovations (the Roland 808, Auto-tune, FL Studio (FruityLoops), etc.); 2) that of its masters/mastery (its transformation of stardom through the figures of the producer (Metro Boomin) and the rock star (Future)); 3) that of its interpretability and effects (what does the music say and do to us). We will thus engage with this music as a practice of art and form of technosociality that manifests uncanny and maximal attunement with the now.

Course not offered every year
Also Offered As: ENGL 282
Activity: Seminar
1.0 Course Unit

AFRC 281 Topics in African American Literature
In this advanced seminar, students will be introduced to a variety of approaches to African American literatures, and to a wide spectrum of methodologies and ideological postures (for example, The Black Arts Movement). The course will present an assortment of emphases, some of them focused on geography (for example, the Harlem Renaissance), others focused on genre (autobiography, poetry or drama), the politics of gender and class, or a particular grouping of authors. Previous versions of this course have included 'African American Autobiography,' 'Backgrounds of African American Literature,' 'The Black Narrative' (beginning with eighteenth century slave narratives and working toward contemporary literature), as well as seminars on urban spaces, jazz, migration, oral narratives, black Christianity, and African-American music. See Africana Studies Department’s website at https://africana.sas.upenn.edu for a description of the current offerings.
Taught by: Beavers, Davis, Jackson, Tillet
Course not offered every year
Also Offered As: ENGL 281
Activity: Seminar
1.0 Course Unit
Notes: Spaces will be reserved for English Majors.

AFRC 283 Modern Art
The history of modern art is closely tied to and largely unfolds from the history of Western Imperialism. While the technologies made possible by colonial resource extraction produced new ways of looking, modern conceptions of the self and how to represent it developed in dialogue with racialized notions of the other. This course focuses on encounters between the cultures of Africa and Europe, from 1880 to 1960, and on the visual practices that emerged on both continents as a result. Topics of special interest will include racial difference and the birth of photography, colonial masquerade, impressionism, symbols of power in royal arts, cubism, mass marketing and colonial self-fashioning. West African studio photography, world’s fairs and the Musee de l’Homme, Dada and surrealism, Negritude and interwar Paris, anti-aesthetics, colonial arts education, National art schools in the age of African independence, humanism and South African photography under Apartheid.
Taught by: Roach
Course not offered every year
Also Offered As: ARTH 285, ARTH 685
Activity: Lecture
1.0 Course Unit

AFRC 286 Topics in Race and Ethnicity - No Bench by the Road: Monuments, Memory, and the Afterlife of Slavery
SPRING 2018: In 1989, as she reflected on her magnum opus, Beloved, Toni Morrison declared "There is no place you or I can go, to think about or not think about, to summon the presences of, or recollect the absences of slaves. She went on, There is no suitable memorial, or plaque, or wreath, or wall, or park, or skyscraper lobby. There's no 300-foot tower, there's no bench by the road.' And because such a place doesn't exist...the book had to.' Today, there are significantly more markers of slavery in the public sphere as well as new novels, films, and television shows that directly take up the history and remnants of slavery in our lives. Looking at Colson Whitehead's novel, The Underground Railroad and WGN's tv series 'The Underground,' the remaking of the Whitney Plantation in Louisiana as well as considering the debates about confederate flags and monuments in places like New Orleans, Virginia, and South Carolina, this course will examine the meaning and movements behind these contemporary engagements with American slavery today. See the Africana Studies Program's website at www.sas.upenn.edu/africana for a description of the current offerings.
Taught by: Beavers, Tillet
Course not offered every year
Also Offered As: ENGL 284
Activity: Seminar
1.0 Course Unit

AFRC 287 Religion and Society in Africa
In recent decades, many African countries have perennially ranked very high among the most religious. This course serves as an introduction to major forms of religiosity in sub-Saharan Africa. Emphasis will be devoted to the indigenous religious traditions, Christianity and Islam, as they are practiced on the continent. We will examine how these religious traditions intersect with various aspects of life on the continent. The aim of this class is to help students to better understand various aspects of African cultures by dismantling stereotypes and assumptions that have long characterized the study of religions in Africa. The readings and lectures are will be drawn from historical and a few anthropological, and literary sources.
For BA Students: History and Tradition Sector
Taught by: Amponsah

Activity: Lecture
1.0 Course Unit
AFRC 290 Topics In Gender, Sexuality, and Literature
See the Department of Africana's website at www.sas.upenn.edu/africana for a description of the current offerings.
One-term course offered either term
Also Offered As: COML 290, ENGL 290, GSWS 290
Activity: Seminar
1.0 Course Unit

AFRC 294 Facing America
This course explores the visual history of race in the United States as both self-fashioning and cultural mythology by examining the ways that conceptions of Native American, Latino, and Asian identity, alongside ideas of Blackness and Whiteness, have combined to create the various cultural ideologies of class, gender, and sexuality that remain evident in historical visual and material culture. We also investigate the ways that these creations have subsequently helped to launch new visual entertainments, including museum spectacles, blackface minstrelsy, and early film, from the colonial period through the 1940s.
Taught by: Shaw, Staff
Course not offered every year
Also Offered As: ARTH 274, ARTH 674, ASAM 294, CIMS 293, LALS 274
Activity: Lecture
1.0 Course Unit

AFRC 302 Sustainable Entrepreneurship
This course is designed to introduce students to the multiple methods of engaging Africana entrepreneurship, public service and philanthropy. Alongside a thorough review of both popular and independent activist media, students will be trained to use accessible technology to participate in international communications networks. 'Big ideas,' will be translated into succinct artistic statements. We will look intimately at the architecture of David Adjaye, Adjaye Associates; the initiatives of Majora Carter for Sustainable South Bronx and Majora Carter Group; the philanthropic equity of Vista Equity Partners and C.E.O. Robert Smith, and the political work of Mayor Ras Baraka, City of Newark among other examples from the public and private sector throughout the African Diaspora. Prior to the development of our own app ideas, we will focus on the urban market advertising strategies of majority companies that are lauded for their sustainable initiatives including Nike, Hewlett-Packard and Apple. We will also use as secondary resources macro approaches to sustainability from the United Nations Foundation. This course makes an argument for inclusion of race, class and gender equity in the evolving definition of sustainability. Our argument, consistent with the growth of so many of these professionals inside of and clearly influenced by hip-hop culture, is that they are best prepared, culturally, to 'make something out of nothing.'
Taught by: Gilliam
Course not offered every year
Activity: Seminar
1.0 Course Unit

AFRC 305 Housing, Race, and Community in the United States
One's home is the first site of self-identity, socialization, and notions of citizenship. In the United States, neighborhoods are the basic units of political organization, educational options, and familial wealth. This course explores the intersections between race and housing in the United States with a specific focus on the experiences of African-Americans in urban centers. The intersectional housing experiences of Asian, Latinx, first-generation immigrants, Arab, and indigenous communities will also be analyzed. This course represents both a timely and nuanced opportunity to address housing as a focal point of existing racial tensions and deepening socio-economic inequalities in the U.S. Increasingly, housing has become a contested subject, with heated debates concerning its status as a human, and potentially constitutional, right. Students will explore urban governance values, the commodification of urban landscapes, and the institutional dimensions of race in the United States. Students will develop a critical understanding of the underlying structural causation for the issues faced by minority populations seeking adequate, affordable, and safe housing in the U.S. Prior knowledge of urban planning, housing, or social policy is not necessary for this course. Students will finish the course equipped with a broad knowledge base of associated development topics including globalization, commodification, and social justice.
Taught by: Redden
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

AFRC 307 Race, Science and Justice
This course draws on an interdisciplinary body of biological and social scientific literature to explore critically the connections between race, science, and justice in the United States, including scientific theories of racial inequality, from the eighteenth century to the genomic age. After investigating varying concepts of race, as well as their uses in eugenics, criminology, anthropology, sociology, neuroscience, and medicine, we will focus on the recent expansion of genomic research and technologies that treat race as a biological category that can be identified at the molecular level, including race-specific pharmaceuticals, commercial ancestry testing, and racial profiling with DNA forensics. We will discuss the significance of scientific investigations of racial difference for advancing racial justice in the United States.

Also Offered As: HIST 376
Activity: Seminar
1.0 Course Unit
AFRC 316 Africa and Roman Literature
In this course, we will explore race and ethnicity in the Roman world by focusing on the life and works of Roman Africans and the ways in which non-African Romans engaged with and presented the peoples of Africa. The course covers Roman literature in translation from the comedies of Plautus produced in the late 3rd - 2nd centuries BCE, to African Christian writing of the 5th century CE. It also covers a wide range of genres: we will examine how Roman writers articulate questions of race in comedy and satire, epic, history, biography, and elegy among others. We will read African writers (Apuleius, Augustine) and ask how their Africanness influences their works. We will read Roman accounts of journeys to Africa, wars with Africa, and encounters with Africans to ask how the Romans saw themselves as different from or similar to Africans. The course will also explore in more general terms how Romans talk about race: did racism exist? What aspects of different cultures and peoples did Romans choose to emphasize when they talked of non-Romans?
Taught by: Lewis

1.0 Course Unit

AFRC 321 Understanding African Conflict
The end of colonial rule was the springboard for the start of cold wars in various regions of Africa. Where peace could not be maintained, violence erupted. Even where secession has been attained, as in the new country of South Sudan, the threat of civil war lingers. While domestic politics have led to the rise of armed conflicts and civil wars in many African countries, the external factors should also not be ignored. Important in all current conflicts is the concern to international peace and security. Overall this course will: (1) investigate the general nature of armed conflicts in Africa (2) provide in-depth analysis of the underlying factors (3) and discuss the regional and the international responses to these conflicts and their implications. Special emphasis will be placed upon African conflicts and civil wars in: great Lakes area, Mali, Nigeria, Senegal, Sudan, Somalia, South Sudan, and Uganda.
Taught by: Ali-Dinar
One-term course offered either term
Activity: Seminar
1.0 Course Unit

AFRC 322 American Slavery and the Law
In this course, we will work both chronologically and thematically to examine laws, constitutional provisions, and local and federal court decisions that established, regulated, and perpetuated slavery in the American colonies and states. We will concern ourselves both with change over time in the construction and application of the law, and the persistence of the desire to control and sublimate enslaved people. Our work will include engagement with secondary sources as well as immersion in the actual legal documents. Students will spend some time working with murder cases from the 19th century South. They will decipher and transcribe handwritten trial transcripts, and will historicize and analyze the cases with attention to procedural due process as well as what the testimony can tell us about the social history of the counties in which the murders occurred. Students will have the opportunity to choose a topic and conduct original research using both primary and secondary sources, resulting in a 20-page research paper. We will spend a good deal of time throughout the semester learning how to research, write, and re-write a paper of this length. At the end of the semester students will present the highlights of their research to the class.
Taught by: Williams
Course usually offered in spring term

1.0 Course Unit

AFRC 324 Dress and Fashion in Africa
Throughout Africa, social and cultural identities of ethnicity, gender, generation, rank and status were conveyed in a range of personal ornamentation that reflects the variation of African cultures. The meaning of one particular item of clothing can transform completely when moved across time and space. As one of many forms of expressive culture, dress shape and give forms to social bodies. In the study of dress and fashion, we could note two distinct broad approaches, the historical and the anthropological. While the former focuses on fashion as a western system that shifted across time and space, and linked with capitalism and western modernity; the latter approach defines dress as an assemblage of modification the body. The Africanist proponents of this anthropological approach insisted that fashion is not a dress system specific to the west and not tied with the rise of capitalism. This course will focus on studying the history of African dress by discussing the forces that have impacted and influenced it overtime, such as socio-economic, colonialism, religion, aesthetics, politics, globalization, and popular culture. The course will also discuss the significance of the different contexts that impacted the choices of what constitute an appropriate attire for distinct situations. African dress in this context is not a fixed relic from the past, but a live cultural item that is influenced by the surrounding forces.

AFRC 325 Performance in the African Diaspora

The purpose of this course is to engage students in the rigorous process of mining experiences for material that can be transformed into a public performance piece. In-class writing, group discussions, and field work in the Philadelphia area. AUGUST WILSON AND BEYOND. The people need to know the story. See how they fit into it. See what part they play. - August Wilson, King Hedley II. In this seminar, students will read groundbreaking playwright August Wilson’s 20th Century Cycle: ten plays that form an iconic picture of African American traumas, triumphs, and traditions through the decades, told through the lens of Pittsburgh’s Hill District neighborhood. Other readings include supporting material on Wilson’s work and African American theatre, the works of contemporary playwrights whom Wilson has influenced (such as Suzan-Lori Parks and Tarell Alvin McCraney), and context on Penn’s relationship with West Philadelphia. As an Academically Based Community Service (ABCS) course, this seminar gives students the opportunity to enhance their understanding of the plays, and history and culture that shaped them, by forming meaningful relationships with West Philadelphia residents. Wilson’s plays provide the bridge between the two groups. The course culminates with students writing an original theatre piece piece that they will share at an end-of-semester performance.

AFRC 327 Fashioning the Black Body

The fundamental query underlying this course is what is the relationship between dress, adornment, and corporeal figuring and race, specifically blackness? This course will draw upon a number of disciplines and fields including history, performance theory, cultural studies, gender studies, and queer studies to examine how blackness is fashioned, and refashioned within the United States and globally. Throughout the course we will investigate how not only race—attendant issues of gender, sexuality and citizenship have all been constructed and contested through dress. Finally, we will explore what new and more nuanced insights might fashion, dress, adornment, and corporeal figuring offer us for understanding black subjectivities more broadly.

AFRC 332 North Africa: History, Culture, Society

This interdisciplinary seminar aims to introduce students to the countries of North Africa, with a focus on the Maghreb and Libya (1830-present). It does so while examining the region’s close economic and cultural connections to sub-Saharan Africa, Europe, and the Middle East. Readings will include histories, political analyses, anthropological studies, and novels, and will cover a wide range of topics such as colonial and postcolonial experiences, developments in Islamic thought and practice, and labor migration. This class is intended for juniors, seniors, and graduate students. Prerequisite: A university-level survey course in Middle Eastern, African, or Mediterranean history.

AFRC 336 Africa and the Indian Ocean World

The Indian Ocean region represents an area with interwoven centuries of interactions, politically, historically, geographically and culturally. This area has witnessed continuous migrations of peoples, the circulation of goods and ideas, and the interaction with foreign forces. The Indian Ocean world has served as an epicenter of global economy in pre-modern world and as such, it gave rise to trading networks and political empires. As part of the Indian Ocean World, the eastern and southern shores of Africa are both the recipients and the transmitters of cultural and political icons. The existence of many islands that separate Africa from Asia stand as hybrid cultures that are influenced by forces from different continents. Political and cultural relations between African regions and the rest of the Indian Ocean world are evident with the presence of African-descent populations in these places, as well as the prevalent of cultural practices of African origin. Signs of interaction between the Indian Ocean world and the African shores are apparent in several archeological sites, as well as in the cultural practices of religion, language, architecture and modes of dress. The European colonial expansion, has allowed the populations in the Indian Ocean world to share strategies during their independence movements to thwart western political hegemony. With the current advanced forms of globalization, this region is moving more towards economic and political cooperation and in addressing the transnational natural and man-made threats.

AFRC 338 Exhibiting Black Bodies

This course concerns the exhibiting of Black Bodies in Museums and gallery spaces. We will trace the evolution of public history from the ‘Cabinets of Curiosity’ in 18th and 19th Century Europe, through to the current institutional confirmation of the vindications traditions represented by Museu Afro Brasil (Sao Paulo, Brazil), National Museum of African American History and Culture (Washington, D.C.), and the Museum of Black Civilization (Dakar, Senegal). We will give particular attention to ‘why these representations at these times in these places?’ In the process of addressing these questions we will give voice to the figures who conceived the curatorial content from those with the colonial mentality, to those with the abolitionist and nationalist and Pan-African visions.

Taught by: Zuberi

AFRC 340 Money, Power, Respect: Funding Social Change

This course is about how to apply a race, gender and LGBTQ lens to support contemporary social justice movements in the U.S. and globally, including Black Lives Matter, #MeToo, transgender equality, and disability justice. We will explore intersectionality as a theoretical framework, and how it is practically applied to support social justice organizations and leaders, and fund social change. Over the course of the semester, Professor of Practice Roz Lee, a black lesbian feminist and lifelong racial, gender, LGBTQ and economic justice advocate, and who currently serves as Vice President of Strategy and Programs at the Ms. Foundation for Women, will be joined by movement leaders and philanthropy colleagues to discuss and analyze what’s happening on the frontlines of movements for equity, justice and freedom.

AFRC 345 Sinners, Sex and Slaves: Race and Sex in Early America
This course explores the lost worlds of sinners, witches, sexual offenders, rebellious slaves, and Native American prophets from the seventeenth to nineteenth centuries. Using the life stories of unusual individuals from the past, we try to make sense of their contentious relationships with their societies. By following the careers of the trouble-makers, the criminals, and the rebels, we also learn about the foundations of social order and the impulse to reform that rocked American society during the nineteenth century.

AFRC 346 Bodies, Race and Rights: Sex and Citizenship in Modern American History
What did it mean to be a man or woman in the post-Civil War United States? Was being a man the same as being a citizen? If African-American men were to be fully embraced as both men and citizens in the aftermath of slavery, where did that leave women, white and black? Why did a nation built on immigration become so hostile to certain groups of immigrants during this period? In this course, we consider how the meanings and experiences of womanhood, manhood, citizenship, and equality before the law changed from the period immediately after the Civil War until the present day. We look at political battles over the meaning of citizenship, the use of terror to subdue African Americans politically and economically, and the fears of white Americans that they would lose their political and economic dominance to immigrant groups they deemed irreconcilably different from themselves. We also consider the repercussions of these conflicts for medical, legal, and economic efforts to regulate the bodies of women, children, poor people, immigrants, working class laborers, military men, and African Americans. Throughout the course, we will follow the state's changing use of racial, sexual, and economic categories to assess the bodily and intellectual capacities of different groups of citizens. We will also note some of the popular cultural expressions of manhood, womanhood, and citizenship. The lectures and reading assignments are organized around a series of historical problems, dynamic leaders, and controversies that illuminate these issues.

AFRC 354 Art, Medicine, & Magic: Bodily Remedies
In this activity-centric course, you will explore art, medicine, and magic as entangled approaches for healing human bodies across time, space, and societies. At first glance, artists, doctors, and religious leaders may seem to address questions about bodies and healing in very different ways. Yet, in practice, art, magic, and medicine have been in deep conversation with one another for millennia. 4,000 years ago in Mesopotamia, medical doctors were professionals who had offices, hospital beds, and pharmacological and surgical equipment expertise, but they often worked hand in hand with diviners and exorcists. In rural Haiti today, Haitian Vodou priestesses collect herbs, craft sculptures, and sing as they clean wounds and dispense antibiotics within the course of a single ‘remed’ (remedy). In the United States, megachurches send thousands of doctors on evangelical medical missions each year, while in Colombia, contemporary artists are called on to assuage profound social trauma related to decades of military conflict. Examples like these show that art, magic, and medical practice have long been entangled technologies; sometimes working together, sometimes at odds with one another, these practices have always been in dialog about what ‘healing’ is and how it can be achieved. Attending to these entanglements this course asks ‘what does healing look like and feel like - in what ways do humans transform affliction?’ Together, we will investigate how everyday bodily experiences of ‘wellbeing’ and ‘illness’ are configured through art, magic, and medical practices across human communities, shaping how people understand and manage disorders from COVID-19 to schizophrenia, from ancestral trauma to breast cancer. Throughout the course, you will use ethnographic case studies & in-class activities to work through three aspects of the core class question: 1) how do art, magic, and medicine work in communities? 2) how are they experienced in communities (who has access to what kind of healing and who doesn’t have access; who can be a healer and who can’t be; what should and does healing/sickness feel like?) 3) how do they approach inequalities? (e.g. how and why are illnesses unequally distributed; what illnesses matter more (and less) than others; which communities should be saved (and which sacrificed).)

AFRC 357 Undergraduate Topics In African Studies
SPRING 2017 - UNDERSTANDING AFRICA: This course will explore the economic, social, and political realities facing sub-Saharan Africa today by placing them in historical and global contexts. Key themes will include colonial and precolonial history, nationalist movements and cold war politics, economic development and foreign aid, ethnic and political conflicts, media representation and popular culture. The course will focus on local and global dynamics that have a role in shaping the present day Africa.
One-term course offered either term
Activity: Lecture
1.0 Course Unit
AFRC 368 Kinesthetic Anthropology
This class, team-taught by CEE Visiting Fellow Reggie Wilson and Deborah Thomas, investigates various forms of contemporary performance in relationship to Africanist forms and functions of dance, movement and action. We will concern ourselves with how the body knows, and with how we learn to identify the structures of movement that provide context, meaning and usefulness to various Africanist communities across time and space. Grounding ourselves within a history of ethnographic analyses of the body in motion, and within Africana theorizing about the affective power of the body, we will consider what people are doing when they are dancing. In other words, we will train ourselves to recognize the cultural values, social purposes, and choreographic innovations embedded in bodily action and motion. While we will attend to these phenomena in a range of locations throughout the African diaspora, we will also highlight aspects of the Shaker and Black Shout traditions in Philadelphia. The course will be divided between discussions centered on close reading of primary and secondary material (both text and video) and creative writing/movement exploration (no previous movement experience necessary).

Activity: Seminar
1.0 Course Unit

AFRC 372 Africa and the Mid-East
This seminar will explore the historical relationship between these two regions from the early modern age to the present. We will examine the history of trade, particularly the slave trade, and its cultural and political legacy. We will compare the experiences of European imperialism--how the scramble for Africa dovetailed with the last decades of the Ottoman Empire--with an eye to how this shaped nationalist movements in both regions. The course will also explore the decades of independence with a special eye towards pan-Africanism and pan-Arabism. We will also study the ramifications of the Arab-Israeli conflict on the relationship between African and Middle-Eastern countries, from Uganda to Ethiopia, from OPEC to Darfur. This course will pay close attention to migrations through the regions, whether forced or economic or religious. Whenever possible we will explore, through film and literature, how people in Africa and the Middle East see their connections, and their differences.

1.0 Course Unit

AFRC 373 The History of Foreign Aid and Intervention in Africa
This course examines the history, politics, and significance of foreign aid to Africa since the late 19th century. While we do not typically think about the European colonial period in Africa in terms of ‘foreign aid,’ that era introduced ideas and institutions which formed the foundations for modern aid policies and practices. So we start there and move forward into more contemporary times. In addition to examining the objectives behind foreign assistance and the intentions of donors and recipients, we will look at some of the consequences (intended or unintended) of various forms of foreign aid to Africa over the past century. While not designed to be a comprehensive history of development theory, of African economics, or of international aid organizations, the course will touch on all of these topics. Previous course work on Africa is strongly advised.

1.0 Course Unit

AFRC 377 Black Speculative Futures
Why do black cultural producers turn to the speculative? What, in turn, is speculative about blackness? These questions frame this seminar’s exploration of how black artists, theorists, and activists imagine different futures, often in the service of critiquing power asymmetries and creating radical transformation in the present. We will explore how the speculative works differently across black literature, visual culture and performance. Additionally, inspired by the multi-disciplinary work that we encounter in the course, we will experiment with crafting our own embodied speculative art in order to better understand its function as both art practice and politics. The course will be divided between discussions centered on close reading of primary and secondary material and creative writing/movement exploration (no previous movement experience necessary). Occasional guest lectures with visiting artists will provide additional fodder for our critical and creative work.

Also Offered As: ARTH 384, LALS 384
Activity: Seminar
1.0 Course Unit
AFRC 387 Topics in Africana Studies
Topics vary: Black Feminist Approaches to History & Memory - The term black feminism emerged in public discourse amid the social, political, and cultural turbulence of the 1960s. The roots of black feminism, however, are much older, easily reaching back to the work of black women abolitionists and social critics of the nineteenth century. The concept continued to grow and evolve in the work of twentieth century black women writers, journalists, activists, and educators as they sought to document black women's lives. Collectively, their work established black feminism as a political practice dedicated to the equality of all people. More recently, black feminism has been deployed as a tool for theoretical and scholarly analysis that is characterized by an understanding that race, class, gender, and sexuality are inextricably interconnected. Using materials such as slave narratives, social criticism, and archival sources, this course will explore the theoretical and practical applications of black feminist thought in nineteenth and twentieth century North American culture and politics. In particular, we will consider the symbols and practices (storytelling, myth-making, art, archival research) that black women use to document lives. We will ask: how do these methods of documentation inform our understanding of the past and the production of historical knowledge? How can we understand black feminism as both theory and practice? And what are the implications of black feminist approaches for current research and scholarship? We will give particular attention to concepts such as gender, race, memory, the archive, and embodied knowledge to complicate our understanding of historical documentation, epistemology, and authenticity. The course material will include scholarship by Harriet Jacobs, Audre Lorde, Saidiya Hartman, Hazel Carby, Hershini Young, Evelyn Brooks Higginbotham, Toni Morrison, and others. AFRC 400 Seminar in Africana Studies

This course is an examination and analysis of the changing images and achievements of African Americans in motion pictures and television. The first half of the course focuses on African-American film images from the early years of D.W. Griffith's 'renegade bucks' in The Birth of a Nation (1915); to the comic servants played by Steppin Fetchit, Hattie McDaniel, and others during the Depression era; to the post-World War II New Negro heroes and heroines of Pinky (1949) and The Defiant Ones (1958); to the rise of the new movement of African American directors such as Spike Lee (Do the Right Thing), Julie Dash (Daughters of the Dust), Charles Burnett, (To Sleep With Anger) and John Singleton (Boyz N the Hood). The second half explores television images from the early sitcoms 'Amos 'n Andy' and 'Beulah' to the 'Cosby Show,' 'Fresh Prince of Bel Air,' and 'Martin.' Foremost this course will examine Black stereotypes in American films and television—and the manner in which those stereotypes have reflected national attitudes and outlooks during various historical periods. The in-class screenings and discussions will include such films as Show Boat (1936), the independently produced 'race movies' of the 1930s and 1940s, Cabin in the Sky (1943), The Defiant Ones (1958), Imitation of Life (the 1959 remake) & Super Fly (1972).

Also Offered As: CIMS 370
Activity: Seminar
1.0 Course Unit

AFRC 404 Black Geographies and the Meaning of Land Rights

This course will interweave issues of land dispossession and land rights, both in Africa and in the Americas, with endogenous concepts and practices of space and place. Specifically, this course will trace the the concept of property, as developed among Europeans and European descendants, and explore how this concept interacted with the formation of the concept of race in order to established forms of social control and domination. The first part of this course will focus on Africa generally using Kenya as a case study. The material will cover the impact of colonialism and its legacy on land rights after independence. This first part will also explore contemporary forms of land dispossession happening through international land investments, often termed land grabs. The second part of the course will turn to the experiences of African descendants in the Americas. Using a few case studies, this section will examine different countries, histories, and rural and urban areas to unravel how different types of control over land interact with social relationships and specifically with the formation of race and racism. In both sections, we will also look at forms of resistance and resilience as local populations demand not only access to and control over land, but also impose their own ideologies of what it means to occupy space. By the end of this course, students should be able to more fully articulate the significance of control over land as it impacts and effects social relationships and specifically how it relates to the formation and continuation of inequalities along racial lines. Students will apply the concepts learned throughout the course to their own independent research done on an area in Philadelphia or Pennsylvania.

Taught by: Franzen
Course not offered every year
Activity: Seminar
1.0 Course Unit

AFRC 405 Religion, Social Justice & Urban Development

Urban development has been influenced by religious conceptions of social and economic justice. Progressive traditions within Judaism, Christianity, Islam, Buddhism, Hinduism, Jainism, Baha'i, Humanism and other religions and systems of moral thought have yielded powerful critiques of oppression and hierarchy as well as alternative economic frameworks for ownership, governance, production, labor, and community. Historical and contemporary case studies from the Americas, Europe, Africa, Asia, and the Middle East will be considered, as we examine the ways in which religious responses to poverty, inequality, and ecological destruction have generated new forms of resistance and development.

1.0 Course Unit

AFRC 406 Existence in Black

Racial, colonial, and other political formations have encumbered Black existence since at least the fifteenth-century. Black experiences of and reflections on these matters have been the subject of existential writings and artistic expressions ranging from the blues to reggae, fiction and non-fiction. Reading some of these texts alongside canonical texts in European existential philosophy, this class will examine how issues of freedom, self, alienation, finitude, absurdity, race, and gender shape and are shaped by the global Black experience. Since Black aliveness is literally critical to Black existential philosophy, we shall also engage questions of Black flourishing amidst the potential for pessimism and nihilism.

Activity: Seminar
1.0 Course Unit

AFRC 420 Advanced Topics in Africana Studies

Topics vary. See the Africana Studies Department's course list at https://africana.sas.upenn.edu for a description of the current offering. After an examination of the philosophical, legal, and political perspectives on Human Rights, this course will focus on US policies and practices relevant to Human Rights. Toward that end, emphasis will be placed on both the domestic and the international aspects of Human Rights as reflected in US policies and practices. Domestically, the course will discuss (1) the process of incorporating the International Bill of Human Rights into the American legal system and (2) the US position on and practices regarding the political, civil, economic, social, and cultural rights of minorities and various other groups within the US. Internationally, the course will examine US Human Rights policies toward Africa. Specific cases of Rwanda, Kenya, South Africa and Egypt, as well as other cases from the continent, will be presented in the assessment of US successes and failures in the pursuit of its Human Rights strategy in Africa. Readings will include research papers, reports, statutes, treaties, and cases.

Also Offered As: LALS 420, SOCI 460
Activity: Lecture
1.0 Course Unit
AFRC 431 Mobilizing Decolonial Arts and Practice in the Black Atlantic and Beyond
This course will define CHOICE by looking at the transnational linkages connecting artistic, curatorial, personal, and political choices. An overarching question of the course will be 'how do artists, activist, curators, and communities, question, select, translate, and disseminate the information needed to incite large-scale movements and global change and how can we, as a class, do the same through our own choices?' Students will examine the significance of theories arising from museum studies, curatorial studies, global social justice movements, as well as dance and diaspora studies. As a way of emphasizing the perspectives, artistic practices, the political engagement of marginalized groups, and the work of activists in the global south, this class will explore rituals, performances, and visual and expressive cultures. Looking closely at altar-making practices, ritual performances, religious coalitions, and resistant narratives, we will learn how artists, activists, and communities seek economic gain, resist oppression, express political opinions, and create tenable lives in difficult situations. The class is divided into sections including: Geographies, Bodies, Spaces, Words, Futures so that students can begin to deconstruct the colonial frameworks that structure their thinking in these areas. The assignments of the class will also afford students opportunities to learn from the work of local curators, activists, artists, exhibitions, and initiatives, including those at the Penn Museum, The Philadelphia Museum of Art, and Philadelphia Assembled.

Activity: Seminar
1.0 Course Unit

AFRC 436 Africana Studies Undergraduate Seminar
On the stage of modern world history, Haiti plays the unique role as both the exceptionally victorious and tragic character. This course interrogates archival documents, oral histories, historical texts, and prose created within the nation and her diaspora in order to establish a nuanced image of the projection of Haiti’s modern history. Using two classic Haitian texts, Marie Vieux-Chauvet’s Love, Anger, Madness (1968) and Michel-Rolph Trouillot’s Silencing the Past: Power and the Production of History (1995), this course examines how, why, and to what end Haiti’s history and popular narratives about the country have served to construct and dismantle global movements, popular culture, and meanings of race, gender, and citizenship in the Americas. In our historical examination, we will question some of the iconic representations of Haiti through literature that deepen the affective historical profile of Haiti with interrogations of culture, sexuality, political, and media performance. Students will become familiar with the post-colonial history of Haiti and the region, meanings of race, and the production of history. The course is a research and historical methods seminar. Students will conduct archival research and write narratives from primary source material. This course qualifies as a ‘methods’ course for Africana Studies undergraduate majors and minors.
Taught by: Johnson
Course usually offered in spring term

1.0 Course Unit

AFRC 437 Race & Criminal Justice
Why are African Americans and some other minority groups disproportionately incarcerated and subjected to penal sanctions? What are the political, social and economic consequences for individuals, communities, and the wider society of mass incarceration in the United States? What types of reforms of the criminal justice system are desirable and possible? This advanced seminar analyzes the connection between race, crime, punishment, and politics in the United States. The primary focus is on the role of race in explaining why the country's prison population increased six-fold since the early 1970s and why the United States today has the highest incarceration rate in the world. The class will likely take field trips to a maximum-security jail in Philadelphia and to a state prison in the Philadelphia suburbs.

AFRC 480 Liberation and Ownership
Who is going to own what we all have a part of creating? The history of the Americas, and of all peoples everywhere, is an evolving answer to the question of ownership. Ownership is about: the ties that bind and those that separate; production, participation, and control; the creation of community and the imposition of hierarchies—racial, sexual, and others; dreams of possessing and the burdens of debt and ecological despoliation; dependency and the slave yearning to breathe free. Of all the issues relevant to democracy, oppression, injustice, and inequality, ownership is arguably the most important and least understood. Utilizing a variety of disciplinary perspectives—with a particular emphasis on radical and critical theories of liberation, and by focusing on particular global sites and processes of capitalism, students will assess and refine their views regarding ownership and liberation in light of their own social, political, religious, aesthetic, and ethical commitments.

AFRC 506 Existence in Black
Racial, colonial, and other political formations have encumbered Black existence since at least the fifteenth-century. Black experiences of and reflections on these matters have been the subject of existential writings and artistic expressions ranging from the blues to reggae, fiction and non-fiction. Reading some of these texts alongside canonical texts in European existential philosophy, this class will examine how issues of freedom, self, alienation, finitude, absurdity, race, and gender shape and are shaped by the global Black experience. Since Black aliveness is literally critical to Black existential philosophy, we shall also engage questions of Black flourishing amidst the potential for pessimism and nihilism.

AFRC 514 Africa and the Indian Ocean
The Indian Ocean region represents an area with interwoven centuries of interactions, politically, historically, geographically and culturally. This area has witnessed continuous migrations of peoples, the circulation of goods and ideas, and the interaction with foreign forces. The Indian Ocean world has served as an epicenter of global economy in pre-modern world and as such, it gave rise to trading networks and political empires. As part of the Indian Ocean World, the eastern and southern shores of Africa are both the recipients and the transmitters of cultural and political icons. The existence of many islands that separate Africa from Asia stand as hybrid cultures that are influenced by forces from different continents. Political and cultural relations between African regions and the rest of the Indian Ocean world are evident with the presence of African-descent populations in these places, as well as the prevalent of cultural practices of African origin. Signs of interaction between the Indian Ocean world and the African shores are apparent in several archeological sites, as well as in the cultural practices of religion, language, architecture and modes of dress. The European colonial expansion, has allowed the populations in the Indian Ocean world to share strategies during their independence movements to thwart western political hegemony. With the current advanced forms of globalization, this region is moving more towards economic and political cooperation and in addressing the transnational natural and man-made threats.

AFRC 518 Topics in American Religion
From Marvin Gaye, to Tammy Faye Baker, to Sarah Palin and James Baldwin, Pentecostalism has influenced many, including politicians, preachers, writers, and the media. One of the fastest growing religious movements in the world, Pentecostalism continues to have a profound effect on the religious landscape. Pentecostalism’s unique blend of charismatic worship, religious practices, and flamboyant, media-savvy leadership, has drawn millions into this understudied and often controversial religious movement. This course will chronicle the inception and growth of Pentecostalism in the United States, giving particular attention to beliefs, practices, gender, ethnicity, and Global Pentecostalism.
Taught by: Butler
Course not offered every year

AFRC 527 Market Women and Madames
Market Women, Madames, Mistresses & Mother Superior studies gender, labor, sexuality, and race in the Caribbean. In our historical examination of primary source documents alongside literature, and popular media, we will question some of the iconic representations of Caribbean and Latin American women in order to understand the meaning, purpose and usages of these women’s bodies as objects of praise, possession, obsession and/or ridicule by communities, governments and religions within and outside of the region. Beginning in the late-18th century and ending with contemporary migration narratives, this course considers the relationship between slave society and colonial pasts on gender performance in the modern Caribbean, Latin America, and their diasporas.
Taught by: Sanders Johnson
One-term course offered either term
Also Offered As: GSWS 527, LALS 527
Activity: Seminar
1.0 Course Unit

AFRC 530 Black Performance Theory
In his 1995 documentary Black Is, Black Ain’t Marlon Riggs traces a black cultural tradition while simultaneously destabilizing the very notion of blackness itself. He testifies that: Black is black, and black is blue. Black is bright. Black is you. Black can do you in. In Riggs configuration, black is a color, black is a feeling, black is a sound, black is materiality, and black is a life sentence. In an effort to raise critical questions around blackness, performance, race, and feeling, this course follows in the tradition of Riggs work. In other words, this graduate level course examines the notion of blackness through theorizations of performance. It pursues the following questions: What is blackness? How is blackness embodied, felt, heard, represented, and seen through performance? How is black performance political? Discussions and written work will interrogate the slipperiness of, desire for, and policing of blackness in order to trouble conceptions of race as a biological essence. Organized by keywords in the field of Black Performance Theory - and exploring varying performance forms (the play, the dance, the film, the photograph, the performance of everyday life, the television program, the exhibit, and even the tweet) - This course foregrounds the micro-politics through which black racialized subjects are shaped in the realm of culture. Performances will be consulted each meeting which we will use to interpret and complicate the day’s readings. In examining blackness through a number of performance mediums, we will consider the politics of black creative labor and the processes of racialization produced through black bodies.

Activity: Seminar
1.0 Course Unit

AFRC 531 Mobilizing Decolonial Arts and Practice in the Black Atlantic and Beyond
This course will define CHOICE by looking at the transnational linkages connecting artistic, curatorial, personal, and political choices. An overarching question of the course will be ‘how do artists, activist, curators, and communities, question, select, translate, and disseminate the information needed to incite large-scale movements and global change and how can we, as a class, do the same through our own choices?’ Students will examine the significance of theories arising from museum studies, curatorial studies, global social justice movements, as well as dance and diaspora studies. As a way of emphasizing the perspectives, artistic practices, the political engagement of marginalized groups, and the work of activists in the global south, this class will explore rituals, performances, and visual and expressive cultures. Looking closely at altar-making practices, ritual performances, religious coalitions, and resistant narratives, we will learn how artists, activists, and communities seek economic gain, resist oppression, express political opinions, and create tenable lives in difficult situations. The class is divided into sections including: Geographies, Bodies, Spaces, Words, Futures so that students can begin to deconstruct the colonial frameworks that structure their thinking in these areas. The assignments of the class will also afford students opportunities to learn from the work of local curators, activists, artists, exhibitions, and initiatives, including those at the Penn Museum, The Philadelphia Museum of Art, and Philadelphia Assembled.

AFRC 535 Sociology of Race and Ethnicity  
Race and ethnicity are, above all, both converge as system of ideas by which men and women imagine the human body and their relationships within society. In this course we will question the concept of race and ethnicity and their place in modern society (1500 - 2020). While the course reviews the pre-1500 literature our focus will be on the last 500 years. This course reviews the research that has contributed to the ideas about ethnicity and race in human society. The review covers the discourse on race in political propaganda, religious doctrine, philosophy, history, biology and other human sciences.  
Taught by: Zuberi  
Also Offered As: SOCI 533  
Activity: Seminar  
1.0 Course Unit  

AFRC 538 Topics in Medieval Art  
Topic varies from semester to semester. For the Fall 2020 semester, the topic will be Migrating Materiality: Ivory Carving Around the Mediterranean. The craft of ivory carving around the Mediterranean is contingent upon the availability of imported elephant tusks, from either South East Asia or, more frequently, from the African continent. The shifting winds of trade routes offer an interpretive paradigm with which to analyze ivory objects from a variety of different cultural groups: the lack or abundance of ivory and the resulting desire for or surfeit of the material shapes its meaning and use around the Mediterranean basin. The study of ivory objects as they migrate around the Mediterranean allows us to investigate the rich intercultural interactions between Eastern and Western Christians, and both of these with the Islamic world. This course focuses on an object-oriented knowledge of ivory artifacts, with a strong emphasis on the collections at the Penn Museum, the Philadelphia Museum of Art, and other area collections.

AFRC 542 Archiving Jazz: Visuality And Materiality In The Phila Jazz Community 1945-2019  
This seminar will be organized around three distinct pathways. First, it will serve as an introduction to Jazz Studies and thus be attentive to the ways that jazz music has sparked an interdisciplinary conversation that is wide-ranging and ongoing. Second, we will be partnering with the African American Museum of Philadelphia to consider jazz within the realm of visual art. In light of efforts to map the 'black interior,' how have visual artists (e.g. painters, sculptors, filmmakers, and photographers) sought to represent jazz? Third, we will endeavor to develop partnerships with the Philadelphia (and beyond) jazz community, especially as it pertains to creating and sustaining an archive that serves as way to understand jazz as an instrument of placemaking and also as a vehicle for jazz musicians to take ownership of their narratives. The seminar will meet at the African American Museum of Philadelphia and be team taught with members of the Museum staff. The course will culminate with a virtual exhibit of visual works and archival materials centering on Philadelphia's jazz community and (if funding is available) a free concert to be held at AAMP. Undergraduates are welcome to register for the course with permission of the instructor.

AFRC 550 Critical Ethnography  
'This graduate course introduces students to theories, practices, and critiques of critical ethnography. Ethnography -- an approach to the study of culture which anthropologist James Clifford described as a process that 'translates experiences into text' - will have our full attention. This process of translation, although seemingly straightforward, requires layers of interpretation, selection, and the imposition of a viewpoint or politics. While ethnography is often narrowly conceived of as a methodology, this course considers ethnography as a mode of inquiry, as a philosophy, as an ongoing question and performance. We wrestle with notions of 'the self' and 'the other' at the intersection of imbricated cultural and performance worlds. Together we'll ask: How is ethnography both critical and performative? What is the relationship between theory and method? How can we evaluate ethnographic work? And finally, what kinds of ethnographers do we want to be? This course considers a range of ethnographic examples in order to analyze both the craft and the stakes of 'translating experiences into text.'

Course not offered every year
Also Offered As: ENGL 569
Activity: Seminar
1.0 Course Unit
Notes: This is an English topics course in 20th Century American Literature. The course is cross-listed with English 569 when the course content includes significant African American or other African Diaspora literatures. Content varies with the instructor. A frequent topic is ‘A Love Supreme: Literatures of Jazz’

AFRC 570 African-American Literature
Spring 2018: The aim of this seminar can be described as trying to figure out how poetry and poetics figure into the effort to theorize the African American subject in the 21st Century. At a time when the sheer number of African American poets publishing today (to say nothing of the major prizes they are winning) has exploded exponentially, why does poetry continue to be so marginal in African American literary and cultural studies? As we make our way through recently published anthologies of African American poetry, then turn to works of individual poets, we will consider issues of influence, intertextual periodization, stylization, and tradition as they impact approaches to form, structure, and craft. Ultimately, however, we will focus on the question of why are these poets writing these poems at this particular time? Technologies like PennSound and You Tube will provide time? Technologies like PennSound and You Tube will provide important critical tools in our endeavors and at various points during the term, guest lecturers will join our discussions.

AFRC 571 Visualizing W.E.B.DU BOIS
This seminar will focus on a project that views history as a result of our contemporary society in which biographical truths are constantly shifting. So the historical biographers write about the way they remembered and visualize the past, and not about the way that it happened. We will take Du Bois’s biography in his own words and interrogate his narrative with the visual narratives of his life and influence produced by others. ‘Visualizing W.E.B Du Bois’ focuses on photographic, film, and video representations intended to present some aspect of Du Bois’s reality, primarily for the purposes of instruction or maintaining a historical record. Such projects include photos, materials originally shot on film stock, and digital images that can be either displayed in a book or magazine, and moving images made into a film or video for a TV show or released for screening in cinemas, or other broadcast mediums like YouTube and Vimeo.

Activity: Seminar
1.0 Course Unit

AFRC 581 Learning from James Baldwin (1924-1987)
James Baldwin, one of the greatest writers of the twentieth century, spoke to the issues of his times as well as to our own. This class will examine the intellectual legacy that Baldwin left to present-day writers such as Toni Morrison, Charles Johnson, Ta-Nehisi Coates, Thulani Davis, Caryl Phillips and others. We will spend time reading and discussing Baldwin’s novels, short stories, plays and essays. In doing so, we will be considering the complex assumptions and negotiations that we make in our day-to-day lives around our identities and experiences built upon gender, sexual preference, the social-constructs called ‘race,’ and more. James Baldwin’s life and work will be the touchstone that grounds our discussions. We will read Go Tell It on the Mountain, Another Country, The Fire Next Time, and Giovanni’s Room and see films I Am Not Your Negro, The Price of the Ticket and The Murder of Emmett Till. Students will research subjects of their own choosing about Baldwin’s life and art. For example, they may focus on the shaping influences of Pentecostalism; segregation; racism; homophobia; exile in Paris; the Civil Rights Movement; Black Power, Baldwin’s faith, or his return to America.
Taught by: Watterson
Also Offered As: ENGL 581, GSWS 580
Activity: Seminar
1.0 Course Unit

AFRC 587 Race, Nation, Empire
This graduate seminar examines the dynamic relationships among empires, nations and states; colonial and post-colonial policies; and anti-colonial strategies within a changing global context. Using the rubrics of anthropology, history, cultural studies, and social theory, we will explore the intimacies of subject formation within imperial contexts—past and present—especially in relation to ideas about race and belonging. We will focus on how belonging and participation have been defined in particular locales, as well as how these notions have been socialized through a variety of institutional contexts. Finally, we will consider the relationships between popular culture and state formation, examining these as dialectical struggles for hegemony.
Taught by: Thomas
Course usually offered in spring term

Notes: An introduction to major literary movements and authors from five areas of Francophonie: the Maghreb, West Africa, Central Africa, the Caribbean and Quebec.

AFRC 594 Post-Colonialism Literature
This course covers topics in Post-Colonial literature with emphasis determined by the instructor. The primary focus will be on novels that have been adapted to film. See the Department’s website at www.africana.upenn.edu for a complete description of the current offerings
Course not offered every year
Also Offered As: CIMS 595, ENGL 595
Activity: Seminar
1.0 Course Unit

AFRC 602 Stereotype Threat, Impostor Phenomenon, and African Americans
This course critically examines stereotype threat and impostor phenomenon as they relate to African Americans. Both stereotype threat and impostor phenomenon negatively affect African Americans. The apprehension experienced by African Americans that they might behave in a manner that confirms an existing negative cultural stereotype is stereotype threat, which usually results in reduced effectiveness in African Americans’ performance. Stereotype threat is linked with impostor phenomenon. Impostor phenomenon is an internal experience of intellectual phoniness in authentically talented individuals, in which they doubt their accomplishments and fear being exposed as a fraud. While stereotype threat relies on broad generalization, the impostor phenomenon describes feelings of personal inadequacy, especially in high-achieving African Americans. This course will explore the evolving meanings connected to both stereotype threat and impostor phenomenon in relation to African Americans.
Taught by: Abiola
Course usually offered in fall term

AFRC 606 The Interpretation of Oral Traditions
Topics may draw on methodologies derived from jazz studies, chant studies, and ethnomusicology. See department website (under course tab) for current term course description: https://music.sas.upenn.edu
Taught by: Ramsey
Course not offered every year
Also Offered As: MUSC 606
Activity: Seminar
1.0 Course Unit
AFRC 620 Exhibiting Black Bodies
This course concerns the exhibiting of Black Bodies in Museums and gallery spaces. We will trace the evolution of public history from the 'Cabinets of Curiosity' in 18th and 19th Century Europe, through to the current institutional confirmation of the vindications traditions represented by Museu Afro Brasil (Sao Paulo, Brazil), National Museum of African American History and Culture (Washington,D.C), and the Museum of Black Civilization (Dakar, Senegal). We will give particular attention to 'why these representations at these times in these places?' In the process of addressing these questions we will grapple with the figures who conceived the curatorial content from those with the colonial mentality, to those with the abolitionist and nationalist and Pan-African visions.
Taught by: Zuberi
One-term course offered either term
Also Offered As: AFRC 338, SOCI 338, SOCI 660
Activity: Seminar
1.0 Course Unit
Notes: See the Africana Studies Department's course list at <a href='https://africana.sas.upenn.edu'>https://africana.sas.upenn.edu</a> for a description of the current offering.

AFRC 624 Race, Poverty, & Place
In recent years, long-disinvested cities have become the site of renewed investment, population growth, and economic development in a phenomenon often described as gentrification. Nonetheless, socioeconomic inequality between races, ethnicities, genders, and places within the larger metropolitan area continue to persist, suggesting that a rising tide does not raise all boats. Planners must grapple with these issues of inequality and inequity, particularly the implementation of plans and policies that may in theory provide benefits to all, but in practice continue to accumulate benefits for a select few. This course examines the construction of race, the making of a place, and the persistence of poverty in racialized places in the city. This course will engage in a critical discussion of the aforementioned themes, such that the normative notions of race, capitalism, urbanism, gender, power, and space are upended to privilege more marginalized perspectives of these processes. Taught by: Drake-Rodriguez
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

AFRC 632 North Africa: History, Culture, Society
This interdisciplinary seminar aims to introduce students to the countries of North Africa, with a focus on the Maghreb and Libya (1830-present). It does so while examining the region's close economic and cultural connections to sub-Saharan Africa, Europe, and the Middle East. Readings will include histories, political analyses, anthropological studies, and novels, and will cover a wide range of topics such as colonial and postcolonial experiences, developments in Islamic thought and practice, and labor migration. This class is intended for juniors, seniors, and graduate students.

AFRC 645 Graduate Research Seminar
SPRING 2019: This seminar is suitable for graduate students in any discipline in which historical research may be relevant. We will work with both secondary and primary sources, and students will have the opportunity to visit and undertake research in an archive.
Taught by: Williams
One-term course offered either term
Also Offered As: HIST 645
Activity: Seminar
1.0 Course Unit

AFRC 655 Topics in Black Political Thought: Difference And Community
This course is designed to familiarize graduate students with some of the key texts and debates in Africana Studies concerning the relationship between racial slavery, modernity and politics. Beginning with the Haitian Revolution, much of black political thought (thinking and doing politics) has advocated group solidarity and cohesion in the face of often overwhelming conditions of servitude, enslavement and coercion within the political economy of slavery and the moral economy of white supremacy. Ideas and practices of freedom however, articulated by political actors and intellectuals alike, have been as varied as the routes to freedom itself. Thus, ideas and practices of liberty, citizenship and political community within many African and Afro-descendant communities have revealed multiple, often competing forms of political imagination. The multiple and varied forms of political imagination, represented in the writings of thinkers like Eric Williams, Richard Wright, Carole Boyce Davies and others, complicates any understanding of black political thought as having a single origin, genealogy or objective. Students will engage these and other authors in an effort to track black political thought's consonance and dissonance with Western feminisms, Marxism, nationalism and related phenomena and ideologies of the 20th and now 21st century.
Taught by: Hanchard
Also Offered As: GSWS 655, LALS 656, PSCI 612
Activity: Seminar
1.0 Course Unit
AFRC 677 Black Speculative Futures
Why do black cultural producers turn to the speculative? What, in turn, is speculative about blackness? These questions frame this seminar’s exploration of how black artists, theorists, and activists imagine different futures, often in the service of critiquing power asymmetries and creating radical transformation in the present. We will explore how the speculative works differently across black literature, visual culture and performance. Additionally, inspired by the multi-disciplinary work that we encounter in the course, we will experiment with crafting our own embodied speculative art in order to better understand its function as both art practice and politics. The course will be divided between discussions centered on close reading of primary and secondary material and creative writing/movement exploration (no previous movement experience necessary). Occasional guest lectures with visiting artists will provide additional fodder for our critical and creative work.
Taught by: Knight
Course not offered every year

AFRC 720 Graduate Prospectus and Grant-Writing Seminar
Prerequisite: Graduate student must be ‘All But Dissertation’ (ABD). This course is intended to help students to write a strong dissertation proposal/prospectus. A proposal is a detailed plan for a long journey of of conceptualization, research, and writing that will lead to the first major, independent scholarly contribution. Students will work closely with advisors, peers, and the professor in the course, to develop the questions, methodological approaches, and theoretical perspectives that will guide their research and writing. At the end of the semester, each student will have completed a proposal, and will be ready to defend it.
Taught by: Williams
One-term course offered either term
Activity: Seminar
1.0 Course Unit
Notes: Graduate student must be ‘All But Dissertation’ (ABD).

AFRC 723 Multicultural Issues in Education
This course examines critical issues, problems, and perspectives in multicultural education. Intended to focus on access to literacy and educational opportunity, the course will engage class members in discussions around a variety of topics in educational practice, research, and policy. Specifically, the course will (1) review theoretical frameworks in multicultural education, (2) analyze the issues of race, racism, and culture in historical and contemporary perspective, and (3) identify obstacles to participation in the educational process by diverse cultural and ethnic groups. Students will be required to complete field experiences and classroom activities that enable them to reflect on their own belief systems, practices, and educational experiences.
Taught by: Gadsden
Course usually offered in fall term
Also Offered As: EDUC 723
Activity: Lecture
1.0 Course Unit
AFRC 770 Afro-American American Literature
How does Elizabeth Alexanders poem Praise Song for the Day, written for the inauguration of Barack Obama, relate to Amiri Barakas 9/11 poem Somebody Blew America? This seminar will explore the unnaming and experimentation that shape African American literature and theory in the early years of the 21st century. frameworks of the seminar will include the post-9/11 novel, the poetics of the black, black abstraction, twenty-first century practices of the black diaspora Age of Obama turn to the satirical. Critical texts such as How to See a Work Total Darkness and Abstractionist Aesthetics will be as central as cutting edges such as The Psychic Hold of Slavery and signature essays such as On Failing to the Past Present. This course will focus on the new literary voices that have the 21st century and, also, writers whose 21st century art is the late stage of literary trajectory. Special attention will be given to Toni Morrison, Colson Whitehead,Octavia Butler, Claudia Rankine, Mat Johnson, and Paul Beatty.

AFRC 791 African Film and Media Pedagogy
This graduate seminar offers an intensive, critical, and collaborative study of contemporary African film and media production. The past three decades have seen an unprecedented shift in the African media landscape. Not only has the wide availability of satellite media across the continent made international film and television programing part of African popular culture, but moreover the growing film industries within the continent, most notably Nollywood, have altered how Africans are carving an image of themselves on the big and small screens. In partnership with local, regional, and international film and media centers, we will study a range of films--features, shorts, documentaries, and television shows--paying close attention to the means and sites of production as well as the formal qualities that distinguish these works. Many of the films we will analyze stand out both for their exceptional aesthetic quality as well as their remarkable ability to confront pressing political and social themes. But we will also think about trash: what counts as trashy media, and for whom? Who watches it, where, and why? Other questions we will ask include: What particular indigenous modes of storytelling do African films employ? What categories begin to emerge under the umbrella category of ‘African film and media,’ and where do diasporan film and media practitioners and critics fit in this landscape? How are these films tackling some of the urgent questions of our times, including migration and globalization; ethnic, political, and economic polarization; gender and sexuality; and massive urbanization and industrialization sweeping Africa and other parts of the Global South? What role do festivals in various countries play in shaping media production and distribution? How important is the concept of authorship in this context? And how do these films challenge the dominant western trope of Africa as a spectacle, instead offering novel ways of picturing everyday African experiences that we rarely glimpse in western media? To explore these questions, we will visit multiple sites of film production, distribution, exhibition, and education, including Scribe Video Center in Philadelphia, Sankofa Films in Washington, D.C., and the College of Performing and Visual Art at Addis Ababa University in Ethiopia. Location and knowledge production are inextricably connected, and by considering African media production from these multiple sites, and collaborating with multiple stakeholders, this course offers a directly engaged pedagogy of the complex artistic, cultural, social, and political dynamics of African audiovisual creation. The travel component of this course entails a day trip to Washington, D.C. during the semester (tentative date: April 2, 2020) and a week-long trip to Addis Ababa at the end of the spring term (students applying for this course should be prepared to travel to Addis Ababa May 30, 2020-June 7, 2020). All expenses for travel, accommodation, and food will be covered, but students will need to hold a passport. Ultimately, this course aims to use film and media production to intervene in a larger discourse on how Africa is figured in the global humanities, not as an absent or passive actor but one actively engaged in producing art and humanistic knowledge that has much to teach us and the world. Admission to the course will be by permission only and students are required to submit a short statement of interest (max. 250 words) to dagw@english.upenn.edu and redkaren@sas.upenn.edu.
Students must be prepared to travel to Addis Ababa and Washington D.C. as described in the syllabus, and must hold a passport.

AFRC 799 Topics in American Literature
An advanced topics course in American literature, with the curriculum fixed by the instructor. See the Africana Studies website at www.africana.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: ENGL 799
Activity: Seminar
1.0 Course Unit

American Sign Language (ASLD)

ASLD 071 American Sign Language I
Introduction to American Sign Language (ASL). Introduces ASL in a contextualized and conversational manner. Course includes receptive and expressive readiness activities, sign vocabulary and grammar, and an introduction to important topics and people within Deaf communities and Deaf culture. Offered through the Penn Language Center
For BA Students: Language Course
One-term course offered either term
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

ASLD 072 American Sign Language II
Increased communication skill in American Sign Language (ASL). Expressive and receptive abilities are expanded upon via a contextualized and conversational manner Important topics to Deaf communities and Deaf culture are continued within online and in-class discussion. Offered through the Penn Language Center.
For BA Students: Language Course
One-term course offered either term
Prerequisite: ASLD 071
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

ASLD 073 American Sign Language III
American Sign Language (ASL) at the Intermediate I level. Expressive and receptive abilities are expanded upon via a contextualized and conversational manner, including, but not limited to, narrative production. Important topics to Deaf communities and Deaf culture are continued within online and in-class discussion. Offered through the Penn Language Center.
For BA Students: Language Course
One-term course offered either term
Prerequisite: ASLD 072
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

ASLD 074 American Sign Language IV
American Sign Language (ASL) at the Intermediate II level. Expressive and receptive abilities are expanded upon via a contextualized and conversational manner, including, but not limited to, narrative production. Important topics to Deaf communities and Deaf culture are continued within online and in-class discussion. Offered through Penn Language Center.
For BA Students: Last Language Course
One-term course offered either term
Prerequisite: ASLD 073
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

ASLD 075 American Sign Language V
This is an advanced ASL course in which students expand their conversational and narrative range. While receptive readiness activities continue to be an important part of the class, the emphasis moves toward honing expressive sign skills through narrative presentation and ASL-only class discussions. Various aspects of Deaf culture and cultural behavior rules will be incorporated into the course. A large component of the course is a unit on Deaf history in which students read and discuss major events and famous deaf people via readings, film, class lectures and discussions, and other outside resources. Offered through Penn Language Center.
For BA Students: Advanced Language Course
One-term course offered either term
Prerequisite: ASLD 074
Activity: Lecture
1.0 Course Unit
Notes: Offered through the Penn Language Center

ASLD 076 Deaf Literature, Performance, Art, and Film
This course is an advanced/conversational ASL course that explores several key topics related to Deaf culture and the Deaf experience’s influence on literature (both written and signed), theatre, fine and visual arts, and film - both Deaf and hearing directed and acted. Using only ASL in class, students learn about various perspectives and approaches to each of the themes and topics of the course. Some questions to explore and answer in this course will be: What is Deaf Literature? The Deaf Lens: What is it? How is it different from a hearing perspective on film? How is Deafness expressed differently in each of the arts discussed in this course? Analysis and discussion will come from readings as well as viewings of various types of Deaf arts.
For BA Students: Advanced Language Course
Taught by: Draganac-Hawk
Course usually offered in spring term
Prerequisite: ASLD 074
Activity: Lecture
1.0 Course Unit
ASLD 077 ASL/Deaf Studies - ABCS
For this course, students will attend Pennsylvania School for the Deaf on a weekly basis where they will participate in and contribute to the school community via tutoring or other mutually agreeable activities. Students will also have formal class on a weekly basis with discussions and activities centering on reflection of community experiences through linguistic as well as cultural lenses. Additionally, drawing from the required Linguistics and other ASL/Deaf Studies coursework, students will develop an inquiry question and conduct preliminary community-based research to analyze sociolinguistic variations of ASL and Deaf cultural attitudes, behaviors, and norms. Ongoing reflections and discussions formal and informal on Deaf cultural/theoretical topics drawing from readings as well as community experiences will be integral to the course experience. LING 078, Topics in Deaf Culture and permission from the instructor, are required for this course. Anyone considering taking this course should contact the ASL Program Coordinator early in the semester prior to enrollment (Spring) to ensure adequate time to obtain clearances and appropriate placement. Prerequisite: Anyone considering taking this course should contact the ASL Program Coordinator early in the semester prior to enrollment (Spring) to ensure adequate time to obtain clearances and appropriate placement. Participation in this class requires students to have in place the mandatory clearances for working in schools before the semester starts. Students should also be in contact with the department during the advanced registration period in order to secure a placement in the community. Prerequisite: If course requirement not met, permission of instructor required. Participation in this class requires students to have in place the mandatory clearances for working in schools before the semester starts. Students should also be in contact with the department during the advanced registration period in order to secure a placement in the community. Prerequisite: Anyone considering taking this course should contact the ASL Program Coordinator early in the semester prior to enrollment (Spring) to ensure adequate time to obtain clearances and appropriate placement. Participation in this class requires students to have in place the mandatory clearances for working in schools before the semester starts. ASLD 078 Deaf Culture
For BA Students: Advanced Language Course
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ASLD 079 Disability Rights and Oppression: Experiences within Global Deaf Communities
This course explores the linguistic and social statuses of global Deaf communities with respect to language rights and efforts toward parity with spoken language communities. We will begin by providing some background and context for understanding Deaf communities and people as both linguistic and cultural minorities as well as members of a disability group. We then explore various examples of oppression born by Deaf people throughout history and today, with an emphasis on the Milan Conference of 1880, from which several decrees mandated that sign languages be banned in all instruction of Deaf students worldwide. The impacts of said decrees were catastrophic for the linguistic and social rights of Deaf people; effects of these experiences are pernicious and long lasting. Since then, global Deaf communities have fought to gain the legal rights and social recognition that are typically afforded hearing members of their respective communities. There are some Deaf communities that have attained said rights, where others are still left far behind. We explore the lasting effects of the Milan Congress in global terms, using the United States and North American Deaf communities as a standard for comparative measurement. Application required through Penn Global: https://global.upenn.edu/pennabroad/pgs Do note that this course will include a module on Italian Sign Language (LIS) and will give opportunities to learn and use LIS in and amongst Italian deaf community members while in Italy. Application required through Penn Global: https://global.upenn.edu/pennabroad/pgs
Taught by: Fisher
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ASLD 091 American Sign Language III/IV
Expanded instruction of American Sign Language (ASL) on the Intermediate I and II levels. Includes receptive and expressive readiness activities, sign vocabulary and grammar growth, fingerspelling practice and narrative skills. Topics on Deaf cultural are also included in the course readings and discussions. Increases the emphasis on more abstract and challenging conversational and narrative range.
For BA Students: Last Language Course
Course not offered every year
Prerequisite: ASLD 072
Activity: Lecture
2.0 Course Units
Notes: Offered by Penn Language Center; permit from Penn Language Center required for admission.

Amharic (AMHR)

AMHR 240 Elementary Amharic I
The Elementary Amharic I course can be taken to fulfill a language requirement, or for linguistic preparation to do research on Ethiopia/Africa-related topics. The course emphasizes communicative competence to enable the students to acquire linguistic and extralinguistic skills in Amharic. The content of the course is selected from various everyday life situations to enable the students to communicate in predictable common daily settings. Culture, as it relates to language use, is also part of the course content. Offered through Penn Language Center.
For BA Students: Language Course
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center
AMHR 241 Elementary Amharic II
Continuation of Elementary Amharic I. Amharic belongs to the southern branch of Hemato-Semitic languages, which is also referred to as 'Afrasian.' Amharic is the official language of Ethiopia and is spoken by 14 million native Amharas and by approximately 18 million of the other groups in Ethiopia. This course continues to introduce basic grammar, vocabulary, and the reading and writing of Amharic to new speakers. Prerequisite: If course requirement not met, permission of instructor required. Offered through Penn Language Center.
For BA Students: Language Course
Taught by: Hailu
Course usually offered in spring term
Prerequisite: AMHR 240
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

AMHR 242 Intermediate Amharic I
Offered through Penn Language Center
For BA Students: Language Course
Taught by: Hailu
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

AMHR 243 Intermediate Amharic II
Offered through Penn Language Center.
For BA Students: Last Language Course
Taught by: Hailu
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
Notes: Offered through Penn Language Center

AMHR 247 Advanced Amharic
An advanced Amharic course that will further sharpen the students' knowledge of the Amharic language and the culture of the Amharas. The learners communicative skills will be further developed through listening, speaking, reading and writing. There will also be discussions on cultural and political issues. Offered through Penn Language Center.
For BA Students: Advanced Language Course
Taught by: Zemichael

Anatomy (ANAT)

ANAT 505 Structural Adaptations to Function
Veterinary gross anatomy course. The basic principles of mammalian and avian anatomy are studied in a veterinary context. The laboratory periods are given to the dissection of the dog, cat, horse, various ruminants, various laboratory animals, chicken and fish. Prerequisite: Permission of instructor in Veterinary School
Taught by: Dr Orsini and Staff
Course usually offered in fall term
Activity: Lecture
2.0 Course Units

ANAT 512 Human Anatomy: Cardiovascular, Respiratory, Digestive, and Musculoskeletal Systems
This human anatomy course will cover anatomy, embryology, histology, and imaging of the: cardiovascular system; respiratory system; digestive system; and musculoskeletal system, including the limbs, vertebral column, and back. This course is open to LPS Post-Baccalaureate students only. Please contact Kimberly Halscheid (battilo@upenn.edu) if you have question. Cardiovascular and Respiratory Systems. The objectives are to: 1) define and discuss the structures that participate in the process of respiration; 2) compare and contrast structures situated in the chest (thorax and mediastinum); 3) describe anatomic differences of the right versus the left lung, structures in each lung, and how each lung functions; 4) summarize the anatomic differences in the atria and ventricles of the heart and how these chambers contract, resulting in the opening and closing of the atrioventricular and semilunar valves; 5) compare and contrast the histology of the heart, bronchi, bronchioles, and lung alveoli; 6) analyze and identify anatomic structures in plain films and/or other imaging modalities; and 7) discuss the embryology of the heart and lungs, including fetal and postnatal circulation and common congenital heart malformations. Digestive System. The objectives are to: 1) define the embryological basis for the formation of the gastrointestinal tract; 2) define and discuss the anatomic structures that make up the digestive system, including the mouth, larynx, esophagus, stomach, small intestine, large intestine, liver, and biliary tract; 3) compare and contrast the arterial blood supply and the functional and histologic differences in various parts of the gastrointestinal tract; and 4) analyze and identify anatomic structures in plain films and/or other imaging modalities. Musculoskeletal System. The objectives are to: 1) discuss the anatomic structures that make up the major parts of the musculoskeletal system, which are the vertebral column and back, upper limbs, and lower limbs; 2) identify the blood supply, innervation, and musculature of the upper limbs, including the shoulder, elbow, wrist, and hand; 3) identify the blood supply, innervation, and musculature of the lower limbs, including the hip, knee, ankle, and foot; 4) define the components of the nervous system that affect the musculoskeletal system, limbs, vertebral column, and back and discuss nerve lesions; 5) discuss how herniated disks, fractures of the upper and lower limbs, and impingement of nerve roots can result in musculoskeletal abnormalities, and 6) analyze and identify anatomic structures in plain films and/or other imaging modalities.
Taught by: White, James S.
Activity: Online Course
0.5 Course Units
ANAT 513 Human Anatomy: Cardiovascular and Respiratory Systems
This 0.5 CU human anatomy course will cover anatomy, embryology, histology, and imaging of the cardiovascular and respiratory systems. The objectives are to: 1) define and discuss the structures that participate in the process of respiration; 2) compare and contrast structures situated in the chest (thorax and mediastinum); 3) describe anatomic differences of the right versus the left lung, structures in each lung, and how each lung functions; 4) summarize the anatomic differences in the atria and ventricles of the heart and how these chambers contract, resulting in the opening and closing of the atroventricular and semilunar valves; 5) compare and contrast the histology of the heart, bronchi, bronchioles, and lung alveoli; 6) analyze and identify anatomic structures in plain films and/or other imaging modalities; and 7) discuss the embryology of the heart and lungs, including fetal and postnatal circulation and common congenital heart malformations. This course is open to LPS Post-Baccalaureate students only. Please contact Kimberly Halscheid (battillo@upenn.edu) if you have questions.
Taught by: James S. White, PhD
Activity: Online Course
0.5 Course Units

ANAT 514 Human Anatomy: Digestive System
This 0.5 CU human anatomy course will cover anatomy, embryology, histology, and imaging of the digestive system. The objectives are to: 1) define the embryological basis for the formation of the gastrointestinal tract; 2) define and analyze the anatomic structures that make up the digestive system, including the mouth, larynx, esophagus, stomach, small intestine, large intestine, liver, and biliary tract; 3) compare and contrast the arterial blood supply and the functional and histologic differences in various parts of the gastrointestinal tract; and 4) analyze and identify anatomic structures in plain films and/or other imaging modalities. This course is open to LPS Post-Baccalaureate students only. Please contact Kimberly Halscheid (battillo@upenn.edu) if you have questions.
Taught by: James S. White, PhD
Activity: Online Course
0.5 Course Units

ANAT 515 Human Anatomy: Musculoskeletal System
This 1.0 CU human anatomy course will cover anatomy, embryology, histology, and imaging of the musculoskeletal system, including the limbs, vertebral column, and back. The objectives are to: 1) discuss the anatomic structures that make up the major parts of the musculoskeletal system, which are the vertebral column and back, upper limbs, and lower limbs; 2) identify the blood supply, innervation, and musculature of the upper limbs, including the shoulder, elbow, wrist, and hand; 3) identify the blood supply, innervation, and musculature of the lower limbs, including the hip, knee, ankle, and foot; 4) define the components of the nervous system that affect the musculoskeletal system, limbs, vertebral column, and back and discuss nerve lesions; 5) discuss how herniated disks, fractures of the upper and lower limbs, and impingement of nerve roots can result in musculoskeletal abnormalities, and 6) analyze and identify anatomic structures in plain films and/or other imaging modalities. Please contact Kimberly Halscheid (battillo@upenn.edu) if you have questions. Students who have completed ANAT 512 are NOT eligible for this course.
Taught by: James S. White, PhD
Activity: Online Course
1.0 Course Unit

ANAT 516 Human Anatomy: Endocrine and Reproductive Systems
This 0.5 CU human anatomy course will cover anatomy, embryology, histology, and imaging of the endocrine and reproductive systems. The objectives are to: 1) define mechanisms of hormonal signaling; 2) describe the anatomic relationships and gross structure of major endocrine and reproductive organs, including the hypothalamus, pituitary glands, thyroid gland, parathyroid glands, pancreas, adrenal glands, gonads, breasts, and male and female reproductive systems; 3) characterize the microscopic anatomy of major endocrine and reproductive organs; 5) assess the regulation of major hormonal axes and intuit pathophysiologic effects of hormonal dysregulation; 6) explain the effects of significant hormones on their respective target tissues; 7) trace the embryologic origins of the endocrine and reproductive organs, including the pharyngeal apparatus. This course is open to LPS Post-Baccalaureate students only. Please contact Kimberly Halscheid (battillo@upenn.edu) if you have questions.
Activity: Online Course
0.5 Course Units

ANAT 517 Anatomy of the Head and Neck: Cranial Nerves and Their Distribution
This 0.5 CU human anatomy course will cover anatomy, embryology, histology, and imaging of the head and neck with emphasis on the cranial nerves and their distribution. The objectives are to: 1) identify major bone and cartilage components of the neck and skull and how they develop; 2) describe sources of innervation to face, CN V and VII; 3) name cranial nerve innervations of extraocular muscles of the eyes; 4) name major elements that make up naso-, oro-, and laryngeal pharynx; 5) name the cranial nerves involved in swallowing; 6) identify the signs and symptoms of lesions of each of the cranial nerves; and 7) identify structures on CT and plain film imaging of head and neck. This course is open to LPS Post-Baccalaureate students only. Please contact Kimberly Halscheid (battillo@upenn.edu) if you have questions. This course is open to LPS Post-Baccalaureate students only. Please contact Kimberly Halscheid (battillo@upenn.edu) if you have questions.
Taught by: Dr. James S. White
Activity: Online Course
0.5 Course Units
ANAT 518 Brain and Spinal Cord: Longitudinal Neural Pathways
This course, covering the anatomy, development, and cytology of the central nervous system, including a detailed examination of the functional and clinical neuroanatomy of the spinal cord, prepares students to: - Compare and contrast the differences in how the neural tube and neural crest develop, and list their postnatal derivatives. - Compare the malformations that result in open versus closed neural tube defects, including the ability to distinguish the different forms of spina bifida. - List the major excitatory and inhibitory neurotransmitters used by neurons in the central and peripheral nervous system. - Compare the functions of Schwann cells and Oligodendrocytes in forming myelin and the differences in autoimmune diseases (MS and Guillain Barre) associated with each. - Recall the basic anatomy of the spinal cord including the vertebral level where the cord end and meninges end, what makes up the conus medullaris and cauda equina, and which cord segments innervate the upper and lower limbs. - Contrast the two divisions of the ANS in terms of locations of pre and post ganglionic neuron cell bodies, neurotransmitters utilized and receptors that they bind to. - Describe the names and locations of the two neurons that generate voluntary versus reflex contractions of skeletal muscle, and be able to draw and label a cord section with these neurons. - Recall the differences between the myotatic and inverse myotatic reflexes. - Describe how these two sensory systems utilize three neurons to process sensory information. - Draw out the three neurons that are components of the DC/ML System and label the modalities of their dorsal roots, their course and sites of termination. - Draw out the three neurons that are components of the Anterolateral System and label the modalities of their dorsal roots, their course and sites of termination. - Summarize the major signs and symptoms of the 7 common spinal cord diseases and clinical conditions including Polio, Tabes dorsalis, ALS, Subacute Combined Degeneration, Syringomyelia, Anterior cord syndrome, Brown Sequard Syndrome
Taught by: James S. White, PhD
Activity: Online Course
1.0 Course Unit

ANAT 519 Brain and Spinal Cord: Motor and Sensory Functional Systems
This course, covering the anatomy of the central nervous system, including a detailed examination of the functional and clinical neuroanatomy of the brainstem, cerebellum, diencephalon, visual system, auditory system and cerebral cortex, prepares students to: - Describe the cerebellar connectional anatomy that permits the right side of the cerebellum to promote fine-tuning of skeletal muscles on the right side of the body. - Recall how cerebellar lesions cause tremor with movement and how hemisphere lesions of the cerebellum differ from vermis lesions. - Identify which lesions result in dysmetria, disdiadochokinesis, and gait ataxia. - Describe the major components of the Direct and Indirect Basal Ganglia Pathways, the neurotransmitters that they use and their roles in initiating movement or suppressing unwanted movement. - Contrast the signs and symptoms of those with a direct (Parkinson's) and indirect (Huntington's) basal ganglia disease and how each causes different forms of resting tremors. - Name the 4 major tracts that traverse the brainstem and the signs and symptoms if each is lesioned. - Discuss how motor and sensory nuclei of brainstem cranial nerves are organized into functional longitudinal columns in the brainstem and note how this organization correlates with the entry and exit points of cranial nerves. - Distinguish the gaze malfunctions that result from lesions to the Frontal Eye Field, PPRF, and MLF. - Trace the path of a visual stimulus from the nasal and temporal parts of the retina to the cuneus and temporal gyrus of visual cortex. - Draw out the different visual field deficits and the causes evident in lesions to the optic nerve, optic chiasm, optic tract, optic radiations and visual cortex. - Describe the three components of the ear and how the organ of Corti transduces mechanical energy into generator potentials. - Distinguish between the lesion sites and causes of a sensorineural versus a conductive hearing loss and how one uses the Weber and Rinne tests to determine the nature of the hearing loss. - Differentiate the major nuclei of the thalamus and their functions. - Describe the different embryonic origins of the pituitary and the nuclei in the hypothalamus that control or contribute to the functional activity of each pituitary component. - Name the lobes that make up the cortex and distinguish the vascular territories of the anterior, middle and posterior cerebral arteries. - Describe how the dominant hemisphere differs functionally from the non dominant hemisphere. - List four different lesion sites in the dominant hemisphere that result in an aphasia and list the signs and symptoms of that aphasia. - Name the major components of the Papez circuit and how they contribute to memory consolidation. - List the signs and symptoms of lesions to each of the cranial nerves. - Distinguish the signs and symptoms of various lateral versus medial brainstem vascular lesions, the vessels involved and the cranial nerves affected.

ANCIENT HISTORY (ANCH)

ANCH 025 Ancient Middle Eastern History and Civilization
A cultural history of Middle Eastern civilization from the invention of writing to the rise of Islam.
For BA Students: History and Tradition Sector
Course usually offered in fall term
Also Offered As: HIST 024, NELC 101
Activity: Lecture
1.0 Course Unit
ANCH 026 Ancient Greece
The Greeks enjoy a special place in the construction of western culture and identity, and yet many of us have only the vaguest notion of what their culture was like. A few Greek myths at bedtime when we are kids, maybe a Greek tragedy like Sophokles’ Oidipous when we are at school: these are often the only contact we have with the world of the ancient Mediterranean. The story of the Greeks, however, deserves a wider audience, because so much of what we esteem in our own culture derives from them: democracy, epic poetry, lyric poetry, tragedy, history writing, philosophy, aesthetic taste, all of these and many other features of cultural life enter the West from Greece. The oracle of Apollo at Delphi had inscribed over the temple, ‘Know Thyself.’ For us, that also means knowing the Greeks. We will cover the period from the Late Bronze Age, c. 1500 BC, down to the time of Alexander the Great, concentrating on the two hundred year interval from 600-400 BC.
For BA Students: History and Tradition Sector
Taught by: McInerney
Course usually offered in fall term
Also Offered As: CLST 026, HIST 026
Activity: Lecture
1.0 Course Unit

ANCH 027 Ancient Rome
At its furthest extent during the second century CE, the Roman Empire was truly a ‘world empire’, stretching from northern Britain to North Africa and Egypt, encompassing the whole of Asia Minor, and bordering the Danube in its route from the Black Forest region of Germany to the Black Sea. But in its earliest history it comprised a few small hamlets on a collection of hills adjacent to the Tiber river in central Italy. Over a period of nearly 1500 years, the Roman state transformed from a mythical Kingdom to a Republic dominated by a heterogeneous, competitive aristocracy to an Empire ruled, at least notionally, by one man. It developed complex legal and administrative structures, supported a sophisticated and highly successful military machine, and sustained elaborate systems of economic production and exchange. It was, above all, a society characterized both by a willingness to include newly conquered peoples in the project of empire, and by fundamental, deep-seated practices of social exclusion and domination. This course focuses in particular upon the history of the Roman state between the fifth century BCE and the third century CE, exploring its religious and cultural practices, political, social and economic structures. It also scrutinizes the fundamental tensions and enduring conflicts that characterized this society throughout this 800-year period.

Taught by: Cam Grey
Course usually offered in spring term
Also Offered As: CLST 027, HIST 027
Activity: Lecture
1.0 Course Unit

ANCH 046 Myths and Religions of the Ancient World
This course will survey the religions of the ancient Middle East, situating each in its historical and socio-cultural context and focusing on the key issues of concern to humanity: creation, birth, the place of humans in the order of the universe, death, and destruction. The course will cover not only the better-known cultures from the area, such as Egypt and Mesopotamia, but also some lesser-known traditions, such as those of the Hurrians, or of the ancient Mediterranean town of Ugarit. Religion will not be viewed merely as a separate, sealed-off element of the ancient societies, but rather as an element in various cultural contexts, for example, the relationship between religion and magic and the role of religion in politics will be recurring topics in the survey. Background readings for the lectures will be drawn not only from the modern scholarly literature, but also from the words of the ancients themselves in the form of their myths, rituals, and liturgies.
For BA Students: History and Tradition Sector
Taught by: Frame
Course usually offered in spring term

1.0 Course Unit

ANCH 104 Race and Ethnicity in the Ancient World
Modern political and artistic movements often appeal to an ancient past in order to construct their own social and racial identities. But how did ancient peoples understand themselves and others? How should we understand race and ethnicity in the ancient past? And how are perceptions of the past used today to construct or dismantle structures of power? This course explores both ancient and modern representations of race and ethnicity in antiquity. We will investigate both how ancient peoples around or near the Mediterranean (e.g. Greeks, Romans, Egyptians, Persians, and Nubians) understood difference and also how modern eras have appropriated ancient identities. Our dialogues will include ancient ethnographies, literature, and visual arts as well as modern theories and media, with an emphasis on active learning and collaboration. Students will be encouraged to produce both analytical and creative responses to our materials.

ANCH 133 The History of God
This course introduces the history of God as understood by modern scholars of religion. Why do people believe in gods in the first place? How did so many people come to believe that there was only one god, and how is that god different from earlier gods? How is the God of Judaism different from that venerated by Christians and Muslims. And what is the future of God in a world shaped by secularism, capitalism, and climate-change? This course will address these and other questions in light of anthropology, psychology, intellectual history, and other approaches that scholars uses to illumine religion.

ANCH 136 The Ancient Economy
This class presents an introduction to economies before economics, a study of economic activity in the Greco-Roman world. Ancient Greece and Rome have been called some of the first ‘global’ economies - they engaged in long-distance trade, introduced the first coinage systems, and built and manufactured at large scales. At the same time, they remained agrarian societies, with majority peasant populations, high levels of inequality and social systems that often placed social capital ahead of profit. Using textual sources, archaeology and techniques from the natural and social sciences, this class will not only look at basic elements of economic activity in the ancient world - demographics, trade, monetization, industry - but also ask critical questions about how - or if - modern economic methods can be applied to the distant past. No previous knowledge of the ancient world or economics is necessary.

ANCH 146 Ancient Mediterranean Empires
What constituted an empire in antiquity and how was imperialism legitimized? Which measures were used to maintain and organize imperial power? How did foreign rule affect the daily life of people all over the Mediterranean? In this course we will discuss and compare ancient empires from Achaemenid Persia to Alexander the Great and the Hellenistic kingdoms of his successors to the emergence of Rome as one of the most successful and influential empires in world history. Topics that will be discussed include ancient ideas and concepts of imperial rule, patterns of political, economic and cultural power and their interrelations as well as imperial crises and local resistance. All texts will be discussed in translation. There are no prerequisites.

ANCH 202 Cleopatra
Cleopatra VII (70/69 30 BCE) is one of the most famous women in world history. She has been remembered, admired, and reproached as a power-hungry Hellenistic queen, as the last pharaoh of Egypt, as a self-confident female ruler, and as the vicious seductress of Julius Caesar and Mark Antony. Her supposedly extravagant lifestyle, her political schemes, but also her integrity in choosing suicide over submission have inspired poets, artists, and historians from her own time to the modern world. In this seminar, we will take a closer look at some of the common perceptions and stereotypes that have shaped the image of Cleopatra for more than 2000 years. The main focus, however, will be on the historical queen, her biography, and the political and cultural contexts of her life. We will use ancient literary texts, papyri, inscriptions, coins, and archaeological evidence to analyze Cleopatra’s rise to power, how she presented herself to her subjects, and how she was perceived by others, as well as her role in the tumultuous events that led to the end of the Hellenistic period and the rise of imperial Rome under the rule of Augustus. No prerequisites, but some background in Hellenistic and/or Roman history will be helpful.

ANCH 227 Age of Caesar
A course on Roman culture and society in a period of tumultuous political change, the lifetime of Julius Caesar (100-44BCE). Focuses on the interplay between shifting political and military realities and developments in social organization and literary production at Rome and in the wider Mediterranean world. The reception of Caesar in later ages will also be considered. Readings (all in translation) will include Catullus, Cicero, Lucretius, Plutarch, Sallust, Suetonius, and, of course, Caesar himself.

ANCH 257 Religion and the Polis
This class is designed to introduce students to the study of Greek religion with particular attention to the notion of polis religion, a recent model used to understand the function and structure of Greek religion. In this class we will look at the major institutions of Greek religion, notably sacrifice, festivals, and processions, but will also examine the importance of sanctuaries and temples in the heart of the city, on the edges of its territory and in the countryside. We will also examine religion as a system of belief and action, and will consider the intersection of local, state and international religious institutions.

ANCH 261 Ancient Iranian Empires

Iran - as a landmass and a political entity - was central to the ancient world in a variety of ways. Ancient Iranian Empires were of central importance to - and centrally located in - the ancient world. It was the successor kingdom to the Assyrians and Babylonians; the power against which Greece and Rome defined themselves; and the crucible in which various communities and models of rule developed. This course offers a survey of the history of the ancient Persianate world, focusing in particular on the political and imperial entities that rose to power, the cultural, political, mercantile, and other contacts they shared with their neighbors to the East and West, and the communities and religious groups that arose and flourished within their lands. Ancient Iranian empires rivaled the Greek and Roman Empires to their West, and the central and eastern Asian Empires to their east, and the ongoing history of diplomacy, cultural contact, and war between these regions was formative to each and to the ancient world as a whole. Iran was home to and similarly formative for a variety of religions, including Zoroastrianism, Judaism, Christianity, Manichaecism, and Islam, and a central question Ancient Iranian political powers sought to address was how to negotiate and address the variety of populations under their control. The course will conclude by studying how, rather than a simplistic story of decline, the strategies, policies, institutions, and memory of the Iranian Empires continued to shape early Islam, medieval imagination, and modern political regimes.

ANCH 301 Lies My Ancient History Teacher Told Me

The neat, comforting narratives that we construct of the histories of ancient Greece and Rome cover up a collection of controversies and debates that continue to rage in contemporary scholarship. Can we use the Homeric epics as sources of early Greek history? Who was responsible for the Peloponnesian War? How can we best explain Rome’s acquisition of empire? How new was the political revolution of Augustus? What were the main reasons for the rise of Christianity? In this course, we explore these and other controversies, focusing on both modern scholarship and the ancient sources. All texts will be discussed in translation. No prior knowledge of Ancient History is required, although it would be useful to have taken ANCH 026 and/or ANCH 027.

ANCH 303 Power and Peril: The Paradox of Monarchy among Ancient Greeks, Romans, and Jews

We imagine ancient Greece and Rome as the cradles of democracy and republicanism, early Judea as a pious theocracy, but monarchy was the most common and prevalent form of government in antiquity (and the premodern world in general). In this class, we will take a special look at kinship among the Jews, Greeks, and Romans to assess and discuss similarities, differences, and mutual influences. In all these cultures, the king was a polarizing figure in reality and in conception. On the one hand, some revered the monarch as ideal leader, and monarchy provided the language with which to describe and even imagine the very gods. On the other, monarchs were widely reviled in both theory and practice, from the Greek tyrants to biblical Saul. The Emperor Augustus loudly denied his own affinity to the office of king, even as he ruled alone and was revered as a god. In other words, kings stood both for the ideal and the worst form of government. This class confronts the paradox of monarchical rule and will, through the lens of the king, explore ideas of god, government, human frailty, and utopianism.

ANCH 305 Jewish Diaspora in the Roman Empire

Under the Roman Empire, Jewish communities developed and flourished especially in the cities of the Eastern Mediterranean, in Egypt, Syria, Asia Minor, Greece, Northern Africa, and Italy proper. In many of these cities, the Jews formed a considerable part of the population; they influenced the cultural, social, and political communal life and developed an identity that was distinctively different from that in Judea. In this seminar, we will trace Jewish life in the Diaspora under Roman rule. How did Jews and non-Jews interact? What was the legal status of Jewish communities under the Roman Empire? What caused conflicts and how were they solved? What can the history of Jewish Diaspora communities tell us about minorities in the Roman Empire in general? We will use literary texts, inscriptions, papyri, and archaeological material to answer these questions and many more.

Activity: Seminar
1.0 Course Unit
ANCH 311 Disasters in the Ancient World

Natural disasters occupy a powerful place in our imagination. Stories of floods, plagues, earthquakes, and storms excite and horrify us, and communities mobilize their resources quickly in response to these events. In the ancient Mediterranean world, natural disasters could take on potent meaning, indicating the anger or disfavor of the gods, acting as warnings against certain courses of action, or confirmations of individuals' fears or suspicions about the world in which they lived. In this course, we explore the evidence for some disasters in the ancient Mediterranean world, the ways in which contemporaries reacted to those disasters and interpreted their causes. This project is, of necessity, multidisciplinary, involving textual, archaeological, geological, and comparative materials and drawing on methodologies from history, political and archaeological science, and the emerging field of disaster studies. In the process, we will gain an appreciation of the social structures of communities in the period, the thought-world in which they operated, and the challenges and opportunities that attend a project of this sort. No prior knowledge of Ancient History is required, although it would be useful to have taken an introductory survey course. Texts will be discussed in translation.

ANCH 315 Kinship and Connectivity in the Roman World

An individual's life course is often reflected, enhanced, and defined by their relations to other individuals. This course will investigate the concept of kinship in the Roman world through textual, visual, and archaeological evidence. We will explore relationships at all levels of society from the imperial family to the slaves and freedmen who were part of larger households, in order to understand how different relationships shaped and structured interactions in Roman society. Together, we will explore the following questions: how were relationships and bonds represented in the ancient world? What structures were in place for families to perpetuate themselves through biological or adoptive means? How could non-Roman citizens create family connections through formal and informal channels? How could relationships be celebrated in life and commemorated in death? We will use written evidence from ancient historians, visual evidence like the Altar of Peace, and archaeological evidence from cemeteries to examine how Roman notions of kinship shaped life and death in different social milieus.

1.0 Course Unit

ANCH 316 Africa and Roman Literature

In this course, we will explore race and ethnicity in the Roman world by focusing on the life and works of Roman Africans and the ways in which non-African Romans engaged with and presented the peoples of Africa. The course covers Roman literature in translation from the comedies of Plautus produced in the late 3rd - 2nd centuries BCE, to African Christian writing of the 5th century CE. It also covers a wide range of genres: we will examine how Roman writers articulate questions of race in comedy and satire, epic, history, biography, and elegy among others. We will read African writers (Apuleius, Augustine) and ask how their Africanness influences their works. We will read Roman accounts of journeys to Africa, wars with Africa, and encounters with Africans to ask how the Romans saw themselves as different from or similar to Africans. The course will also explore in more general terms how Romans talk about race: did racism exist? What aspects of different cultures and peoples did Romans choose to emphasize when they talked of non-Romans?

ANCH 323 Greek World After Alexander the Great

This class is designed as a detailed investigation of the world created by Alexander the Great. We will cover the three hundred year period known as the Hellenistic Age from the career of Alexander the Great (354-323 BC) until the defeat of Antony and Cleopatra at the Battle of Actium (31 BC). This was a period during which the world of the Greeks underwent extraordinary and far-reaching changes, as Greek culture was established as far afield as northwestern India, central Asia and Egypt. In the same period kingdoms controlled by Alexander's Successors used Greek culture to define their rule, establishing a Greek culture of the elite in regions which previously had been dominated by the Persians. As Greek and non-Greek worlds collided, a new interpretation of Greek culture emerged, giving rise, among other things, to universities and professional schools, state subsidized health care, triumphalist architecture, the heroization of the noble savage, coinage with royal portraits, the deification of men and a multitude of other social, artistic and political forms familiar to us. It was an age of radical change, dislocation, as Greek populations colonized regions previously unknown to them.

1.0 Course Unit
ANCH 330 The Rise and Decline of Macedonia
In this course, we will study the rise and development of Macedonia from a tiny kingdom on the northern fringes of the Greek world to one of the major powers of the region and beyond. Regarded by the Greeks as an at least semi-barbarian culture on the periphery, Macedonia became the dominant power in the Greek world during the fourth century BC and its king Alexander the Great set out to conquer the world. After his death, Macedonia was one of the Hellenistic kingdoms competing for power and influence in the Mediterranean until it finally came under Roman control. Topics that will be discussed include questions of ethnicity and identity, Macedonian kingship, culture and society (including the role of women) and the role of Macedonian traditions in the Hellenistic era in general. Special emphasis will therefore be laid on critical reading and interpretation of ancient literary texts, documentary evidence and archaeological material. that will be discussed include questions of ethnicity and identity, Macedonian kingship, culture and society (including the role of women) and the role of Macedonian traditions in the Hellenistic era in general.

ANCH 363 Foreigners in Rome
According to the stories the Romans told about the origins of their city, Rome began as a community of immigrants. As a growing metropolis and, eventually, the center of an empire, the city remained a magnet for people from other parts of the Empire and beyond. Foreigners came to the city as merchants and travelers, they settled here seeking a different and better life, pursuing a career, or escaping hardships in their home communities. Others were brought to Rome against their will, as prisoners or slaves. In this seminar, we will explore the different communities of foreigners and immigrants that shaped Rome. How and why did they move to the city? How did they experience their new home? How did they adapt to life in Rome and how, in turn, did they influence what we define as 'Roman' today? Finally, what can the legal, social, political, and social status of immigrants tell us about Roman society in general? To answer these questions (and more), we will look at a wide array of primary sources, including literary texts, inscriptions, and material culture.

1.0 Course Unit

ANCH 384 The Hellenistic and Roman Near East
In this course we will study the history of the Hellenistic and Roman period from a Near Eastern perspective. From the conquests of Alexander the Great to the end of Roman rule in late antiquity, this region was the scene of conflicts, but also of peaceful and fruitful interactions between Greeks, Romans, Egyptians, Jews, Syrians, Arabs and many other societies. What was the impact of Greek and Roman rule and how did the peoples of the region react to these fundamental changes? On the other hand, how did they influence the culture and worldview of their conquerors? We will use historical texts, documents and archaeological evidence to discuss these political, cultural and religious encounters that made the Near East to a key region of Greco-Roman history. All texts will be discussed in translation. No prerequisites, although it would be useful to have some background in Hellenistic and/or Roman history.

ANCH 535 Problems in Greek: Archaic and Classical
This seminar is designed to introduce students to the major issues and problems in the early history of Ancient Greece, from approximately 776 BC until the reign of Alexander the Great nearly four hundred and fifty years later. A number of these issues have been the subject of academic investigation for decades: the historicity of Homeric society, the origins of democracy, the reforms of Kleisthenes, the population of Athens, for example. The investigation of many of these problems, however, has received fresh impetus from newer approaches: demographic studies of the Aegean islands, the dating of 5th century inscriptions, the study of Solons poetry have all yielded new insights and transformed our understanding of Greek culture and history. In this seminar we will explore many older questions from newer perspectives, with attention to such recent topics as gender, ethnicity and subaltern studies. The result is a view of Greece that is both more familiar and yet equally more alien.

ANCH 604 Provincial Perspectives
Most of the primary sources available to us are commonly taken to reflect the ideology, concepts, and realities of Roman imperial rule through the lenses of the central power. However, a number of sources provide insights into how provincials and imperial subjects perceived the empire and their own status within its political, cultural, and social frameworks. In this seminar, we will focus on how ethnic, religious, cultural, and regional identities were developed, maintained, adapted, and interpreted within and in reaction to the empire in concept and reality. Historiographical and auto-ethnographic works, orations, philosophical, and religious texts reflect different attitudes towards the imperial center, ranging from open hostility and frustrated acceptance to praise and identification. Texts to be discussed include canonical works (Polybius, Dionysius of Halicarnassus, Second Sophistic) as well as lesser-known texts and authors. Special emphasis will be laid on scholarly approaches, including concepts of identity, hybridization and cultural change, the dynamics of imperial integration, and the (de-)construction of modern narratives of Romanization.

ANCH 612 The Flavian Era
The time of the Flavians (69-96 BCE) holds a special place in Roman history and culture as it marks the transition from the Julio-Claudian period to the High Empire. Historically, the rule of Rome's second dynasty saw a stabilization of the imperial power system, the consolidation of social and political hierarchies, and an increasing integration of the empire. Major construction projects reshaped the city of Rome, topographically and ideologically. The literary production in various genres reached a new peak, developed new forms, and explored new topics. The unusually high number of Greek and Latin texts and documents preserved allow us to analyze such changes closely; our focus will be on the interrelation and conjunction of these developments. Final projects will take the form of papers suitable for presentation at the SCS Annual Meeting.

ANCH 616 Ancient Economies
Scholars have long debated the nature of the ancient economy, the terms in which it can best be approached, and the decision-making processes that underpinned economic behavior in antiquity. In particular, controversy has surrounded the extent to which the economies of Greco-Roman antiquity can be modeled using contemporary tools of analysis. In recent scholarship, many of the tenets laid down by Moses Finley in his The Ancient Economy have been re-evaluated, with the result that the field is currently in a state of intellectual ferment. It is the purpose of this course to explore the terms in which contemporary debates over ancient economic systems are formulated, with reference to a variety of societies and periods, from the palace economies of the Mycenaean period to the system of taxation introduced in the early fourth century by the emperor Diocletian and his colleagues in the Tetrarchy.

ANEL 646 The Land of Sumer: Writing, Language, and Culture
This self-contained course sets the Sumerian language, writing system and use of writing in their social and historical context. The aim is to provide students of ancient history and culture from diverse disciplines with a good grounding in Sumerian culture, familiarity with the Sumerian language and cuneiform writing system and the requisite knowledge for critical assessment of published translations and of the secondary literature. The course is organized as two threads, culture on the one hand and language on the other. The two threads are united by taking examples in the language exercises, vocabulary assignments, etc., as far as possible from the domain of the week’s cultural topics. The net effect is to examine the culture both through contemporary secondary literature and through direct contact with elementary primary texts of relevance to the various topics of discussion. The language component of the course will be carried out in a combination of transliteration and cuneiform, with an expectation that all students will gain familiarity with at least the core 80 syllabic signs, and about 100 additional logographic signs.
Taught by: Tinney

Anthropology (ANTH)

ANTH 001 Archaeology: Window to the Human Past
This course will introduce students to the methods and theory of archaeology by exploring how we turn archaeological data into statements about cultural behavior. We will discuss the place of archaeology in the broader field of anthropology and debate issues facing the discipline today. The course will rely on case studies from around the world and from many different time periods to introduce students to the research process, field and lab methods, and essential questions of archaeological anthropology. Students will have the opportunity to work hands-on with archaeological materials through visiting the galleries and working with Penn Museum collections.
For BA Students: History and Tradition Sector
Course usually offered in fall term
Activity: Recitation
1.0 Course Unit
ANTH 002 Anthropology, Race, and the Making of the Modern World
Anthropology as a field is the study of human beings - past, present, and future. It asks questions about what it means to be human, and whether there are universal aspects to human existence. What do we share and how do we differ? What is 'natural' and what is 'cultural'? What is the relationship between the past and the present? This course is designed to investigate the ways anthropology, as a discipline, emerged in conjunction with European (and later, American) imperialism, the trans-Atlantic slave trade, and the will to know and categorize difference across the world. We will probe the relationships between anthropology and modern race-making by investigating how anthropologists have studied key institutions and systems that structure human life: family and kinship, inequality and hierarchy, race and ethnicity, ritual and symbolic systems, gender and sexuality, reciprocity and exchange, and globalization and social change. The course fundamentally probes how the material and ideological constellations of any given moment shape the questions we ask and the knowledge we produce about human existence.
For BA Students: Society Sector
Course usually offered in fall term
Activity: Recitation
1.0 Course Unit

ANTH 003 Introduction to Human Evolution
How did humans evolve? When did humans start to walk on two legs? How are humans related to non-human primates? This course focuses on the scientific study of human evolution describing the emergence, development, and diversification of our species, Homo sapiens. First we cover the fundamental principles of evolutionary theory and some of the basics of genetics and heredity as they relate to human morphological, physiological, and genetic variation. We then examine what studies of nonhuman primates (monkeys and apes) can reveal about our own evolutionary past, reviewing the behavioral and ecological diversity seen among living primates. We conclude the course examining the 'hard' evidence of human evolution - the fossil and material culture record of human history from our earliest primate ancestors to the emergence of modern Homo sapiens. You will also have the opportunity, during recitations, to conduct hands-on exercises collecting and analyzing behavioral, morphological, and genetic data on both humans and nonhuman primates working with the Department of Anthropology's extensive collection of fossil casts.
For BA Students: Living World Sector
Course usually offered in fall term
Activity: Recitation
1.0 Course Unit

ANTH 004 The Modern World and Its Cultural Background
An introduction to the diversity of cultures in the world. This course is divided into two parts. The first briefly examines different models of understanding human diversity: ethnicities, religions, languages, political forms, economic structures, cultures, and 'civilizations'. Students will learn to think about the world as an interconnected whole, and know the significance of culture on a global scale. The second part is an introduction to area studies, in which we undertake a survey of the different regions of the world. We conduct the survey paying attention to the different aspects of human diversities, which we examine in the first part of this course. Students will acquire a greater appreciation and understanding of cultural differences in the more comprehensive social context.
For BA Students: Humanities and Social Science S
Course usually offered in spring term
Activity: Recitation
1.0 Course Unit

ANTH 005 Great Transformations
This course explores the history and archaeology of the last 20,000 years from the development of agriculture to the industrial revolution. Why did people across the world abandon foraging for farming? How and why did cities and states develop? Why did societies succeed or fail? How have humans transformed themselves and the natural world, including the landscape and the climate? We will explore the methods that archaeologists use to consider these questions and analyze evidence for social and economic change from the Middle East, the Americas, Asia, Africa, Australia and Europe. In addition, students will have a chance to conduct hands-on exercises with artifacts from the Penn Museum during practicums.
For BA Students: History and Tradition Sector
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ANTH 012 Globalization And Its Historical Significance
This course describes and analyses the current state of globalization and sets it in historical perspective. It applies the concepts and methods of anthropology, history, political economy and sociology to the analysis and interpretation of what is actually happening in the course of the semester that relates to the progress of globalization. We focus on a series of questions not only about what is happening but about the growing awareness of it and the consequences of the increasing awareness. In answering these questions we distinguish between active campaigns to cover the world (e.g. Christian and Muslim proselytism, free-trade agreements, democratization) and the unplanned diffusion of new ways of organizing trade, capital flows, tourism and remote interaction via the Internet. The body of the course deals with particular dimensions of globalization, reviewing both the early and recent history of each. The overall approach is historical and comparative, setting globalization on the larger stage of the economic, political and cultural development of various parts of the modern world. The course is taught collaboratively by an anthropologist, an historian, and a sociologist, offering the opportunity to compare and contrast distinct disciplinary approaches. It seeks to develop a general social-science-based theoretical understanding of the various historical dimensions of globalization: economic, political, social and cultural.

1.0 Course Unit
ANTH 022 World Musics and Cultures
This course examines how we as consumers in the ‘Western’ world engage with musical difference largely through the products of the global entertainment industry. We examine music cultures in contact in a variety of ways—particularly as traditions in transformation. Students gain an understanding of traditional music as live, meaningful person-to-person music making, by examining the music in its original site of production, and then considering its transformation once it is removed, and recontextualized in a variety of ways. The purpose of the course is to enable students to become informed and critical consumers of ‘World Music’ by telling a series of stories about particular recordings made with, or using the music of, peoples culturally and geographically distant from the US. Students come to understand that not all music downloads containing music from unfamiliar places are the same, and that particular recordings may be embedded in intriguing and controversial narratives of production and consumption. At the very least, students should emerge from the class with a clear understanding that the production, distribution, and consumption of world music is rarely a neutral process. Fulfills College Cross Cultural Foundational Requirement.

ANTH 026 Behind the Iron Curtain
This first-year seminar provides an introduction to the histories, cultures, and societies of Central and Eastern Europe, including Poland, the Czech Republic, Slovakia, Hungary, Romania, Bulgaria, Albania, and the successor states of Yugoslavia. Through a selection of articles and essays written by anthropologists and sociologists and based on their extended fieldwork in the region, students will explore both the ethnographic method and the experience of everyday life during and after the communist era. Topics will include: popular music under socialism, food and wine, environmental concerns, the status of Muslim minorities, socialist aesthetics, public memory and cultures of commemoration, privatization, advertising, women’s rights, gender and sexuality, emergent nationalisms, and the rise of income inequality and homelessness. All readings and assignments in English.

Course not offered every year
Also Offered As: REES 026
Activity: Seminar
1.0 Course Unit

ANTH 031 The ‘Rights of Nature’ in Times of Conflict and Transition
In less than half a decade, the idea that ‘nature’ possesses inalienable rights akin to human rights has gone from a strictly theoretical concept to the basis of policy changes in several countries and U.S. municipalities. This first-year seminar will introduce students to current legal, political, ethical, and practical debates about the implementation and impacts of granting ‘rights to nature’ in these different contexts. We will begin by examining how the Community Environmental Legal Defense Fund (CELDF) supported citizens of Tamaqua, Pennsylvania to write the world’s first local ‘rights of nature’ ordinance. We will then go on to compare the politics of ‘rights of nature’ cases in Ecuador, New Zealand, India, and Colombia. We will pay particular attention to the way biocentric constitutional moves may transform concepts and understandings of environmental justice and socio-environmental conflicts. In particular, how the recognition of ‘nature’ as a victim of war may transform understandings of violence, and hence, approaches to constructing peace and engaging and reparative and restorative practices within the larger framework of planetary and community efforts to mitigate climate change. Lastly, we will explore the possibilities and tensions between community decision-making, the ‘rights of nature,’ and national level policies regarding the intensification of extractive activities and questions of territorial ordinance.

1.0 Course Unit

ANTH 045 How Our Environment Has Shaped Us
From our earliest ancestors to the recent warming of our planet, the history and future of humans is fundamentally influenced by our relationship with the world around us. This intimate connection makes it a necessity for us to understand how humans have used, adapted to, altered and are in turn affected by our environment. How has climate change affected the development of human society? How have people adapted to their environments in the past and how have they shaped these environments in turn? What does it mean to develop ‘sustainable’ approaches to our environments over the short and long term? Environmental archaeology is the study of these questions. By the end of this course you will have the tools to interpret human-environment interactions in the past and the present, and suggest ways we can change our thinking and actions in the future.

Course not offered every year
Activity: Seminar
1.0 Course Unit
ANTH 053 Music in Troubled Places

In this class, we go beyond the headlines to discuss the history and cultures of peoples who have had to endure terrible suffering, particularly through ethnic conflict and civil war. We will focus on a curious phenomenon: populations typically defined as separate from one another (e.g., Israelis and Palestinians) often have a history of shared or related cultural practices, of which music is a prime example. We will survey a number of current and recent conflict zones and use music as a way to deepen our understanding of the identities and relationships between the peoples involved including through a consideration of my own fieldwork in Sri Lanka. Querying the very definitions of music, trouble, and place, the course then broadens out to consider how musicians have been affected by and/or responded to important global problems like slavery, sexual violence, climate change and other ecological disasters, like Hurricane Katrina. Regions to be considered in our lectures and/or readings include: Afghanistan, Iraq, Syria (including Kurdish musics), Israel-Palestine, Sri Lanka, the Maldives, Myanmar/Burma, Uganda, Sierra Leone, North and South Korea, the Marshall Islands, Cambodia, Mexico, and the United States.

ANTH 056 Seeing/Hearing Globally: Knowing People, Culture, and Places through Travel

Students are provided a general introduction to a country’s history, politics, environment, and performance through a range of resources: scholarly literature, film, music, and online resources; with particular focus on sites, communities, and events included in the 12 day intensive travel to that country (either Fall semester Intro with winter break travel; or spring semester Intro with late spring intensive travel). Students are given guidelines for writing about and representing live performances and experiences of exhibits and heritage sites for journaling and are expected to produce a written/creative project at the end of the travel. The itinerary and specific course content will vary according to the travel site and focus of each class.

ANTH 058 Freshman Seminar

This interdisciplinary course introduces students to qualitative research methods and frameworks in the social sciences and humanities. The goals of the semester will be for each student to develop their own research proposal for a specific project that they could imagine pursuing over the summer or later in their undergraduate career, and to develop a web-based exhibit of one Penn-based research collection of interest. Students will be introduced to a range of textual, archival and media collections and databases available at Penn, with particular attention to South Asia and other specific regions of interest to course participants. The class will visit the Penn Museum object collections and archives, the Art library, the Kislak Center for Rare Books and Manuscripts, Film Archives, and other special collections on campus, and meet with a representative from the Center for Undergraduate Research Funding (CURF). Students will learn how to frame an effective research question, situate it in relation to existing research, select the most appropriate methods for addressing the question, and develop an effective research plan. Each week students will be introduced to a new set of frameworks for analysis, see specific examples of their application drawn from anthropological, historical, and related scholarship and have opportunities to practice applying and evaluating the strengths and weaknesses of specific methodological tools. Students will also have the opportunity to identify sources of funding for summer research projects and prepare applications for these opportunities as part of the course.

The course is ideal as an introduction to both the excellent libraries and research collections housed at Penn, and to a wide range of intellectual frameworks for engaging with these collections - a great way to kick off your undergraduate experience at Penn! Prerequisite: Topic varies by semester, see subtitle and Professor.

ANTH 086 Desire and Demand: Culture and Consumption in the Global Marketplace

Does consumption shape culture or does culture shape consumption? As even the most mundane purchase becomes socially symbolic and culturally meaningful we can persuasively argue that the concept of ‘need’ has been transformed. Analyzing a variety of physical and virtual consumer venues, the goal of this seminar is to understand and to analyze historical and contemporary issues related to a culture of consumption. We investigate social and political-economic factors that impact when and how people purchase goods and argue that behavior attached to consumption includes a nexus of influences that may change periodically in response to external factors. Readings and research assignments are interdisciplinary and require a critical analysis of global/local linkages. The city of Philadelphia becomes the seminar’s laboratory as we ask: how have issues of culture, consumption, and global capitalism become intertwined around the world?

Notes: Freshman Seminar
ANTH 091 Sustainable Development and Culture in Latin America
This interdisciplinary course exposes students to the three dimensions of sustainable development—environmental, economic, and social—through an examination of three products—peyote, coca, and coffee—that are crucial in shaping modern identity in areas of Latin America. The course integrates this analysis of sustainable development in relation to cultural sustainability and cultural practices associated with peyote, coca, and coffee and their rich, traditional heritage and place in literature, film, and the arts.

ANTH 104 Sex and Human Nature
This course is an introduction to the scientific study of sex in humans. Within an evolutionary framework, the course examines genetic, physiological, ecological, social and behavioral aspects of sex in humans. After providing the basic principles of evolutionary biology, the course delves into the development of sexual anatomy and physiology. Among the subjects to be explored are sex determination, the nature of orgasms, and the sexual development of females and males from birth to adulthood. The role of ecology and social life in shaping human mating patterns is also evaluated using ethnographic and cross-cultural materials from a variety of human cultures. In particular, the course examines why humans marry or pair bond, whether there is a biological basis of love, which biological and psychological factors produce jealousy. Finally, the course explores topics relevant to human sexuality today, such as the ‘hook-up culture’, contraception and abortion, sex work, sexual transmitted diseases, and the ethical and legal dimensions of human sexuality.
For BA Students: Living World Sector
Taught by: Schurr
Course not offered every year

Activity: Lecture
1.0 Course Unit

ANTH 105 Human Adaptation
This course concerns evolutionary processes using humans (Homo sapiens) as a case study. Through a study of the anatomical, genetic, and behavioral adaptations in our species, we will explain and explore our biology through mammalian, primate, and hominid evolutionary histories. Through evolutionary theory, we explore why humans are imperfectly adapted and not an end product of evolutionary change, and how we create and modify, not just respond to, evolutionary pressures. Through this approach, we gain insights into how and why our biology functions (and sometimes malfunctions) in the way that it does. Then, we will explore topics including human birth, growth, locomotion, reproduction, and diet as part of human biocultural adaptation. This course will involve the analysis of hominin fossil casts and human skeletal material from the Penn Museum Physical Anthropology section.
Taught by: Mitchell
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANTH 109 Anthropology of the Senses
Smelling, seeing, hearing, tasting, and touching are the foundation of our empirical knowledge of the world, providing the most basic information we have. These senses are biological yet our sense perception how we see, smell, taste, hear, and touch is both shaped by and shapes our different cultures. As a result, they provide a useful framework to investigate a classic problem in anthropology, the intersection between biology and culture. This class investigates the senses as cultural and historical phenomena, drawing on readings from a range of disciplines, including anthropology, history, psychology, musicology, and cultural studies.

1.0 Course Unit
ANTH 110 Water in the Middle East Throughout History
Water scarcity is one of most important problems facing much of the Middle East and North Africa today. These are arid regions, but human and natural systems have interacted to determine relative water scarcity and abundance at different times and places. This course examines the distribution of water resources throughout the Middle East and the archaeology and anthropology of water exploitation and management over the last 9000 years, looking at continuities and changes through time. Students will learn to make basic digital maps representing Middle Eastern hydro-geography and arguments about modern and historic water resources in the region. The class will cooperatively play an ‘irrigation management game’ designed to familiarize personnel involved in the operation of irrigation schemes with the logistical and social issues involved in water management. We will engage with a variety of media, including academic readings, popular journalism, films, satellite imagery, and digital maps, in our quest to explore whether or not the past can inform present efforts to better manage modern water resources. The course is structured in units focused on each of the major hydro-environmental zones of the Middle East: the river valleys of Mesopotamia, Egypt, and the Levant, the internal basins of western Central Asia and the Levant, the deserts of Arabia and North Africa, highland zones in Yemen and Iran, and coastal marsh areas along the Persian Gulf. We will examine irrigation systems, water supply systems, and ways of life surrounding water sources known from ethnographic studies, history, and archaeological excavations. These data will allow us to engage with debates in Middle Eastern anthropology, including those concerning the relationship between water and political power, the environment in which the world’s earliest cities arose, and the relevance of ‘lessons of the past’ for present and potential future water crises and ‘water wars.’ In our final weeks, we will discuss archaeology and historical anthropology’s contribution to conceptions of water ‘sustainability’ and examine attempts to revive traditional/ancient technologies and attitudes about water.

ANTH 111 Introduction to Mediterranean Archaeology
The cultures of Greece and Rome, what we call classical antiquity, span over a thousand years of multicultural achievement in the Mediterranean. This course tells the story of what it was like to live in the complex societies of ancient Greece and Rome. This story is told principally using the art, architecture, pottery and coins produced by these societies. We will examine both the bold and sexy, and the small and humble, from the Parthenon to wooden huts, from the Aphrodite of Knidos to the bones of a fisherman named Peter.

1.0 Course Unit

ANTH 112 Sacred Stuff: Religious Bodies, Places, and Objects
Does religion start with what’s in our heads? Or are religious commitments made, shaped and strengthened by the people, places, and things around us? This course will explore how religion happens in the material world. We’ll start with classical and contemporary theories on the relationship of religion to stuff. We’ll then consider examples of how religion is animated not just by texts, but through interactions with objects, spaces, bodies, monuments, color, design, architecture, and film. We’ll ask how these material expressions of religion move beyond private faith and connect religion to politics and identity.

One-term course offered either term
Also Offered As: ARTH 339, RELS 102
Activity: Seminar
1.0 Course Unit

ANTH 114 Migration and Borders
We live in an interconnected world of ever-intensifying flows of people, goods, and ideas. Rather than giving rise to a ‘borderless world,’ however, these flows have instead led to the proliferation and elaboration of borders on a planetary scale. This introductory course explores this paradox, evaluating the links between migration and borders in different contexts across the globe. We ask a number of related questions: What is migration? What is a border? What is the relationship between migration and borders? How might anthropology - the study of what it means to be human - shed light on this relationship? In so doing, we explore a number of case studies from archaeological, biological, cultural, and linguistic perspectives to better understand migration and borders as conjoined anthropological phenomena.
Taught by: Carruthers
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANTH 116 Caribbean Culture and Politics
This course offers anthropological perspectives on the Caribbean as a geo-political and socio-cultural region, and on contemporary Caribbean diaspora cultures. We will examine how the region’s long and diverse colonial history has structured relationships between race, ethnicity, class, gender and power, as well as how people have challenged these structures. As a region in which there have been massive transplantations of peoples and their cultures from Africa, Asia, and Europe, and upon which the United States has exerted considerable influence, we will question the processes by which the meeting and mixing of peoples and cultures has occurred. Course readings include material on the political economy of slavery and the plantation system, family and community life, religious beliefs and practices, gender roles and ideologies, popular culture, and the differing ways national, ethnic, and racial identities are expressed on the islands and throughout the Caribbean diaspora.
Taught by: Thomas
Course not offered every year
Also Offered As: AFRC 116, LALS 116
Activity: Lecture
1.0 Course Unit
ANTH 118 Witchcraft and Possession
This course explores world witchcraft and possession from the persecutions of the early seventeenth century through the rise of Wicca in the twentieth century. The mere mention of these terms, or of such close cousins as demonology, sorcery, exorcism, magic, and the witches Sabbath, raises clear ethnographic and historical challenges. How can the analysis of witchcraft— including beliefs, patterns of accusation, the general social position of victims, the intensity and timing of witch hunts, and its relation to religious practice, law, language, gender, social marginalization, and property—lead us to a more humane understanding of belief and action? Films such as The Exorcist, The Blair Witch Project, The Crucible, and Three Sovereigns for Sarah will focus discussion.

1.0 Course Unit

ANTH 120 Popular Culture and Youth in Africa
All across the continent, Africa is alive with the energies of young people, expressed in music, art, fashion, drama, video, poetry, protest, and urban legends. In this course, we take a close look at the wide variety of popular forms produced and consumed by young people in a diversity of contexts, urban and rural, elite and marginal, mainstream and transgressive. We will examine how popular culture draws from African tradition to craft innovative versions of modernity and futurity. We will explore themes of democracy, inequality, and social justice threaded through popular genres as well as experiences of joy, anger, fear, and hilarity. We will see how popular culture provides escape and entertainment for young people while also working to transform African societies.
Taught by: Hasty
Course usually offered in spring term

Activity: Lecture
1.0 Course Unit

ANTH 121 Origin and Culture of Cities
The UN estimates that 2.9 of the world’s 6.1 billion people live in cities and that this percentage is rapidly increasing in many parts of the world. This course examines urban life and urban problems by providing anthropological perspectives on this distinctive form of human association and land use. First we will examine the ‘origin’ of cities, focusing on several of the places where cities first developed, including Mesopotamia and the Valley of Mexico. We will then investigate the internal structure of non-industrial cities by looking at case studies from around the world and from connections between the cities of the past and the city in which we live and work today.
For BA Students: History and Tradition Sector
Taught by: Zettler
Course usually offered in fall term

Activity: Lecture
1.0 Course Unit

ANTH 122 Becoming Human
Human evolutionary studies is a composite product of the fieldwork of both Paleolithic archaeology and human paleontology (or what we refer to as ‘stones and bones’). This marriage of two subdisciplines of anthropology produces a unique set of data that is intellectually managed and driven by theories within anthropology as a whole and even beyond — to fields such as biology, psychology, and primate ethology, as we try to understand the origins of language, culture, and our unique physical characteristics. In this course, we will jointly discuss and debate the actual evidence of human evolution, describing what the actual evidence is and exploring how far can we take these interpretations.
For BA Students: Natural Science and Math Sector
One-term course offered either term
Activity: Lecture
1.0 Course Unit

ANTH 123 Communication & Culture
The course looks at varieties of human expression — such as art, film, language and song — as communicative practices that connect persons together to form a common culture. Discussion is centered around particular case studies and ethnographic examples. Examination of communicative practices in terms of the types of expressive signs they employ, their capacity to formulate and transmit cultural beliefs and ideals (such as conceptions of politics, nature, and self), and to define the size and characteristics of groups and communities sharing such ideals. Discussion of the role of media, social institutions, and technologies of communication (print, electronic). Emphasis on contemporary communicative practices and the forms of culture that emerge in the modern world.

ANTH 124 Archaeology & The Bible
Archaeology and the Bible is a chronological survey of the long span of human occupation in the Land of the Bible, known by the names of the modern nation-states and political entities that occupy the area, as well as various short hands such as Levant and Syria-Palestine, from ca. 10,000 BCE; when humans first began to farm and herd animals through the time of the Divided Monarchy of Israel and Judah. While archaeology has moved beyond a primary concern with illuminating the Bible, NELC 155 will investigate the broader import of archaeological discoveries for our understanding of ancient Israel and its neighbors.
Taught by: Zettler
Course not offered every year
Also Offered As: NELC 155
Activity: Lecture
1.0 Course Unit
ANTH 127 The Material Past in a Digital World
The material remains of the human past - objects and spaces - provide tangible evidence of past people’s lives. Today’s information technologies improve our ability to document, study, and present these materials. But what does it mean to deal with material evidence in a virtual context? In this class, students will learn basic digital methods for studying the past while working with objects, including those in the collections of the Penn Museum. This class will teach relational database design and 3D object modeling. As we learn about acquiring and managing data, we will gain valuable experience in the evaluation and use of digital tools. The digital humanities are a platform both for learning the basic digital literacy students need to succeed in today’s world and for discussing the human consequences of these new technologies and data. We will discuss information technology’s impact on the study and presentation of the past, including topics such as public participation in archaeological projects, educational technologies in museum galleries, and the issues raised by digitizing and disseminating historic texts and objects. Finally, we will touch on technology’s role in the preservation of the past in today’s turbulent world. No prior technical experience is required, but we hope students will share an enthusiasm for the past.
Also Offered As: ARTH 127, CLST 127, HIST 127, NELC 187
Activity: Lecture
1.0 Course Unit

ANTH 131 Small Business Anthropology
With a focus on minority-owned small businesses in the City of Philadelphia, this class will introduce students to the work of anthropologists who have made their careers in the business world using the tools they acquired through training in anthropology. By bringing anthropological perspectives into the workplace, business anthropologists seek to promote well-being for employees and owners, as well as consumers and the communities in which businesses operate. The class will also introduce students to Philadelphia from the point of view of minority owned small businesses. One of the two class days each week will focus on business anthropology as a profession and include readings on organizational culture, design anthropology, and the role of anthropologists in marketing and advertising, as well as in globalization processes and entrepreneurship. The second of the two days each week will focus on the city of Philadelphia and the role of small businesses within it. We will study the spatial layout of the city, the kinds of small businesses that are operative within the city and where they are located, the relationship of business to ethnicity, gentrification and its impact on small business, and the role of government and community groups in relationship to small businesses and their owners and employees. As part of the class, students will engage in guided research on specific small businesses, with the aim of developing an ethnographic understanding of the experiences of owners and employees, the opportunities they have seized upon and the problems they have confronted. We hope in the course of the semester to provide an ethnographic profile of a sampling of small businesses from different industries, which can in turn contribute to understanding larger social and cultural patterns within Philadelphia. Through a class blog or other means, we hope as well to contribute to the ability of minority small business owners to voice their experiences, as well as their fears and hopes for the future, to members of the University community and beyond.
Taught by: Urban
Also Offered As: URBS 131
Activity: Seminar
1.0 Course Unit

ANTH 134 Making the Natural World: An Introduction to Political Ecology
What are the limits of nature? When do natural systems become human or socio-natural systems? In this course, we examine the human construction of nature both conceptually, through ideas about environment, ecosystem, organism, and ecology, and materially, through trajectories of direct action in and on the landscape. Beginning with a consideration of foundational concepts in human ecology, we will discuss current problems and approaches, centering on political ecology. Readings and case studies are drawn from human-environmental contexts in Oceania, South Asia, Southeast Asia, Sub-Saharan Africa, Latin America, Europe, and North America. We will also consider topics including a) the relationship between indigenous and technocratic knowledge and resource governance, b) environmental movements themselves as objects of ethnographic study; c) justice and sustainability as environmental goals; d) inequality, displacement and violence as environmental problems; and e) fair trade and food security or sovereignty.
Taught by: Lycett
Course usually offered in fall term

ANTH 139 Ancient Civilizations of the World
This course explores the archaeology (material culture) of early complex societies or civilizations in Egypt, Mesopotamia, and the Aegean. According to the traditional paradigm, civilization first emerged during the fourth millennium BCE in Egypt and Mesopotamia. In the Mediterranean, state-level societies first appeared in Crete and mainland Greece in the early second millennium BCE. This course investigates how and why these civilizations developed, as well as their appearance and structure in the early historic (or literate) phases of their existence. A comparative perspective will illustrate what these early civilizations have in common and the ways in which they are unique. This course will consist largely of lectures which will outline classic archaeological and anthropological theories on state formation, before turning to examine the available archaeological (and textual) data on emerging complexity in Egypt, Mesopotamia, and the Aegean. This course does not presuppose any knowledge of archaeology or ancient languages; the instructor will provide any background necessary. Because this is a course on material culture, some of the class periods will be spent at the Penn Museum of Archaeology and Anthropology. These will consist of a guided tour of a relevant gallery, as well as a hands-on object-based lab with archaeological materials selected by the instructor. This course meets the General Education Curriculums Cross Cultural Analysis foundational approach, whose aim is to help students understand and interpret the cultures of peoples (even long-dead peoples) with histories different from their own; it also fulfills the History and Tradition Sector breadth requirement.

ANTH 140 Histories of Race and Science in Philadelphia
The history of race and science has its American epicenter in Philadelphia. Throughout this Academically-Based Community Service (ABCS) course, we will interrogate the past and legacy of racial science in the United States; the broad themes we broach will be met concretely in direct engagement with Penn and the Philadelphia community. As an extended case study, students will undertake independent research projects using primary source documents from local archives, tracing the global history of hundreds of human skulls in the 19th century Samuel G. Morton cranial collection at the Penn Museum, a foundational and controversial anthropological collection in the scientific study of race. These projects will be formed through an ongoing partnership with a Philadelphia high school in which Penn students will collaborate with high school students on the research and design of a public-facing website on the Morton collection and the legacy of race and science in America. In our seminar, we will read foundational texts on the study of racial difference and discuss anti-racist responses and resistance to racial science from the 19th century to the present. Throughout, we will work directly with both primary and secondary sources, critically interrogating how both science and histories of science and its impacts on society are constructed. Throughout this course, we will explore interrelated questions about Penn and Philadelphia’s outsized role in the history of racial science, about decolonization and ethics in scholarly and scientific practice, about the politics of knowledge and public-facing scholarship, and about enduring legacies of racial science and racial ideologies. All students are welcome and there are no prerequisites, save for intellectual curiosity and commitment to the course. This course will be of particular interest to those interested in race, American history and the history of science, anthropology, museum studies, education, and social justice.
Taught by: Mitchell
Also Offered As: AFRC 141, HIST 154, STSC 140
Activity: Seminar
1.0 Course Unit

ANTH 141 Public Policy, Museums, and the Ethics of Cultural Heritage
This course will focus upon and examine the ethics of international heritage and the role that Museums play in the preservation of identity and cultural heritage. The mission of this course will be to inform and educate students about the role of Museums within the 21st century. What is the role and position of antiquities and important cultural objects in Museums? How should Museums acquire these objects and when should they be returned to countries and cultural groups? Examples from current issues will be included in the reading and discussions along with objects and issues within the Penn Museum.
Taught by: Leventhal

ANTH 143 Explorations in Human Biology
This course is an exploration of human biology from a biocultural and evolutionary perspective. The class will provide you with a better understanding of what it means to be human, how humans came to exhibit such a wide range variation, and what biological anthropology can contribute to your understanding of the world. In this class students will learn to integrate the theory and methods used in human biology research through lectures, assignments, and lab sessions. This course will explore topics including human genetics, growth and development, nutrition, disease, and reproduction. We will also use the course as an opportunity to introduce you to the important contributions of biological anthropologists to the study of race, inequality, sex and gender, and health among others.

ANTH 148 Food and Fire: Archaeology in the Laboratory
This course will let students explore the essential heritage of human technology through archaeology. People have been transforming their environment from the first use of fire for cooking. Since then, humans have adapted to the world they created using the resources around them. We use artifacts to understand how the archaeological record can be used to trace breakthroughs such as breaking stone and bone, baking bread, weaving cloth and firing pottery and metals. The seminar will meet in the Penn Museum's Center for the Analysis of Archaeological Materials. Students will become familiar with the Museum's collections and the scientific methods used to study different materials. Class sessions will include discussions, guest presentations, museum field trips, and hands-on experience in the laboratory.

ANTH 149 Introduction to Native American and Indigenous Studies
This course offers a broad introduction to evolving scholarship in the combined fields of Native American Studies and Indigenous Studies worldwide. Students will examine the various ways that Indigenous peoples and academic researchers are currently engaging with Indigenous knowledges, while also exploring the lingering impacts of settler colonialism and the influence of decolonizing methodologies. Students will gain foundational understandings of the cross-disciplinary nature of Native American and Indigenous Studies (NAIS), by studying theoretical interpretations of Indigenous peoples in academic and historical contexts, and by examining practical approaches to Indigenous research in diverse worldwide settings. Students will approach topics from a variety of disciplinary traditions, utilizing historical texts, ethnological studies, oral literature, material culture, and modern media, including websites and databases produced by and for Indigenous communities. Readings will include the work of researchers who bridge the disciplines of anthropology, history, folklore, art, law, science, etc. Students will watch a selection of films by Indigenous filmmakers, and attend lectures by a selection of Indigenous guest speakers. NAIS faculty advisors from various schools at Penn (e.g., School of Arts and Sciences, Education, Law, Nursing) will also present several guest lectures to highlight their unique experiences and research projects with Indigenous communities. Special case studies will focus on: new directions in collaborative research; issues in museum representation and repatriation; heritage site protection and Indigenous archaeology; legal interventions and protections for Indigenous rights; and innovative projects in language restoration and cultural recovery.

ANTH 150 Sport and Society: The Anthropology of Sports
Sport and Society introduces students to the broad field of anthropology in order to understand the interrelatedness of sport and society. We first review the evolutionary foundations of sport in play and ritual, and the biological underpinnings for athletics. We then discuss the broad range of sports across global history, and highlight how archaeologists have studied sports in the past. The final section of the class will explore the ways in which contemporary major sports entangled with broader social and cultural phenomena. Drawing on examples from the U.S. and around the world, we focus on questions of gender, race, and nationality.

ANTH 151 Archaeology of American History: The Colonial Period
Anthropology 151/752 is a lecture-seminar that is open to all students. This course will explore American history through a different range of information. Over the last seventy five years the new field of Historical Archaeology (academically first developed at Penn) has excavated numerous sites dating from the 16th, the 17th, and the 18th centuries in what is now the United States. Recovered archaeological remains combined with archival sources are giving us a different view of the rise of America as a distinctive society. This class is focused on the Colonial Period from the earliest explorations by Europeans to the eve of the American Revolution. Discoveries of early European intrusions into the continent, especially the Spanish and English, will be reviewed along with the reaction of Native Peoples to such contact. Successful settlements on the East Coast in La Florida and at Jamestown as well as in the Rio Grande Valley in the Southwest will be explored along with later colonization of the Middle Atlantic and New England regions. Mature 18th century colonial society as seen in Philadelphia and Annapolis along with the distinctive subject of African American sites will also be covered.

ANTH 154 Liquid Histories and Floating Archives
Climate change transforms the natural and built environments, and it is re-shaping how we understand, make sense, and care for our past. Climate changes history. This course explores the Anthropocene, the age when humans are remaking earth’s systems, from an on-water perspective. In on-line dialogue and video conferences with research teams in port cities on four continents, this undergraduate course focuses on Philadelphia as one case study of how rising waters are transfiguring urban history, as well as its present and future. Students projects take them into the archives at the Independence Seaport Museum and at Bartram’s Garden. Field trips by boat on the Schuylkill and Delaware Rivers and on land to the Port of Philadelphia and to the John Heinz National Wildlife Refuge invite transhistorical dialogues about how colonial and then industrial-era energy and port infrastructure transformed the region’s vast tidal marshlands wetlands. Excursions also help document how extreme rain events, storms, and rising waters are re-making the built environment, redrawing lines that had demarcated land from water. In dialogue with one another and invited guest artists, writers, and landscape architects, students final projects consider how our waters might themselves be read and investigated as archives. What do rising seas subsume and hold? Whose stories do they tell? What floats to the surface?

ANTH 159 Population and Public Health in Eastern Europe
Since the collapse of communism in 1989 in Eastern Europe (and 1991 in the Soviet Union), many of the countries in the region have experienced public health crises and demographic catastrophe. Below replacement fertility rates and massive out migration have decimated the populations of these countries even as populations age and place unsustainable strains on pension systems and medical services. The demographic collapse has also been accompanied by falling male life expectancy and the rise of alcoholism, depression, domestic violence, and suicide. The economic exigencies of the transition from communism to capitalism dismantled welfare states at the exact moment when health services were most needed, leaving charities and nongovernmental organization to try to fill in the gaps. Through a combination of readings from the fields of epidemiology, demography, and medical anthropology, this course examines the public health implications of poverty and social dislocation in post-communist states. All readings and assignments are in English.
Taught by: GHODSEE
Also Offered As: REES 159, SOCI 159
Activity: Lecture
1.0 Course Unit

ANTH 160 Sex and Socialism
This seminar examines classic and current scholarship and literature on gender and sexuality in contemporary Eastern Europe, and examines the dialogue and interchange of ideas between East and West. Although the scholarly and creative works will primarily investigate the changing status of women during the last three decades, the course will also look at changing constructions of masculinity and LGBT movements and communities in the former communist bloc. Topics will include: the woman question before 1989; gender and emerging nationalisms; visual representations in television and film; social movements; work; romance and intimacy; spirituality; and investigations into the constructed concepts of 'freedom' and 'human rights.'

1.0 Course Unit

ANTH 169 Merchants, Saints, Slaves and Sojourners: the Worlds of the Indian Ocean
Do oceans serve to divide and demarcate distinct cultures and regions? Or do they facilitate exchange, connection and cosmopolitanism? This course will explore the manner in which the Indian Ocean has played both roles throughout history, and how the nature of those divisions and connections has changed over time from the ancient to the modern world. We will reconstruct the intertwined mercantile, religious and kinship networks that spanned the Indian Ocean world, across the Middle East, East Africa, South Asia, Southeast Asia and China, illuminating the histories of Hinduism, Buddhism and Islam, while also considering the role of successive imperial political formations, from Rome to Britain. Throughout the semester we will seek to understand the Indian Ocean through the people who lived and worked in its milieu - from consuls and military commanders, to traders, brokers, sailors, prisoners and slaves. Course materials will draw on a variety of disciplines (anthropology, archaeology, material culture, religious studies) to construct the cultural, economic, and environmental history of the Indian Ocean.

ANTH 177 Colonial Pasts and Indigenous Futures: A History of Belize and Central America
The small country of Belize (formerly British Honduras) represents the past history and ongoing story of Central America and the region. Belize has a colonial past and present with strong ties to the UK and emerging connections to the US. At the same time, there is a growing post-colonial debate within the country about the role of indigenous Maya people in the past, present and future of the country. This course will be the first of two courses which will lead to active work in Belize during the summer of 2021 with the development and creation of a Community Museum within the Maya village of Indian Creek in southern Belize. This course will be taught by Richard M. Leventhal who has worked in Belize for the past 20 years. Leventhal will be joined by 3 Maya activists from Belize who will co-teach the class for 5-6 weeks out of the semester.

ANTH 180 From Ayahuasca to Zoloft: Anthropological Approaches to Drugs and Drug Use
In this course we will consider the cultural, social, political, medical, and biological aspects of drugs (legal, illegal, pharmaceutical, botanical, and otherwise) through space and time. We will take a broad approach, thinking critically about what, who, and under what circumstances a given substance becomes a 'drug.' In doing so, we will be able to interrogate the linguistic dimensions of drugs, considering the way in which language creates social worlds and social meanings. We will explore different kinds of drugs, their origins, biochemical properties, and the biological pathways through which they affect us. We will also think about how drugs and drug use has changed over time, taking a cross-cultural and materialist perspective to investigate drug use past and present. Topics we will address include debates over the commercialization, criminalization, and decriminalization of hallucinogenic plants such as marijuana, the recent use of drugs ranging from LSD to magic mushrooms to treat depression and other mental illnesses, the legacies of colonialism and botanical migrations, the ethics of the pharmaceutical industry, and comparative explorations of the language about and approaches to addressing both the 'crack epidemic' of the early 80s and 90s and the current opioid crisis. We will read both classic anthropological texts including ethnographies as well as works from other disciplines including science studies, biology, history, ethnobotany, and sociology.
Taught by: Hoke
Course offered fall; even-numbered years

ANTH 190 Introduction to Africa
This course provides an introduction to the study of Africa in all its diversity and complexity. Our focus is cultural, geographical, and historical: we will seek to understand Africa's current place in the world political and economic order and learn about the various social and physical factors that have influenced the historical trajectory of the continent. We study the cultural formations and empires that emerged in Africa before European colonial invasion and then how colonialism reshaped those sociocultural forms. We'll learn about the unique kinds of kinship and religion in precolonial Africa and the changes brought about by the spread of Islam and Christianity. Finally, we'll take a close look at contemporary issues such as ethnic violence, migration, popular culture and poverty, and we'll debate the various approaches to understanding those issues.
For BA Students: Society Sector

ANTH 199 Independent Study in Anthropology
A study under faculty supervision of a problem area or topic not included in the formal curriculum. Junior or senior standing and written permission of instructor and undergraduate chair required to enroll.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

ANTH 202 Language, Migration, Diaspora
Centering on the relation between language, migration, and diaspora, this course uses linguistic anthropological approaches to understand how the 'very big' is reflected in the 'very small.' We will approach language use as a process that unfolds in the microclimate of everyday interaction, but whose effects extend to and shape large-scale social processes. We will ask a number of interrelated questions: How does language use shape global phenomena like transnationalism and diasporic populations? How do globalizing forces impact and shape language structure and use? How are mobility and (im)migration enabled or constrained through everyday communicative interaction? We begin by exploring the ideologies inherent in everyday speech, evaluating how language is linked to social identities like class, race, gender, and sexuality, and to social personae like 'the migrant,' 'the refugee,' 'the foreigner,' or to the 'diasporic subject' more generally. We then explore the cultural politics of languages in and across nation-states, attending to their uses and values in unprecedented global flows of information, goods, and people.
Taught by: Carruthers
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANTH 205 American Folklore
This course will examine American expressive culture, including everyday speech, narrative, music, foodways, religion, public celebrations, and material culture through an exploration of the multiple and changing avenues of diversity in the United States. Folklore can be considered the unofficial culture that exists beneath and between the institutions of power that we read about in our history books, and that is what we will be studying—the 99% of American life that goes unseen and unnoticed in other college courses. Some of the topics we will examine are: campus folklore; body art and adornment; contemporary (urban) legends and beliefs; public celebrations and rituals; and the adaptation and commodification of folk culture in popular media.
One-term course offered either term
Also Offered As: FOLK 201
Activity: Recitation
1.0 Course Unit
ANTH 209 Indigenous Communities and Community Museums: Directions for the Future
Community museums are becoming more commonplace within indigenous communities throughout the Americas. These museums are created internally, by and for communities, as a way of framing self-identity and representation. The development of these museums is focused upon the need to define and highlight identity and differences between indigenous communities and the surrounding world. These community museums contrast dramatically with other cultural museums where the stories and histories of groups tend to be controlled by the nation-state and professional curators. This course will focus on the nature of indigenous communities, cultural representation, and identity with a focus upon the modern Maya communities of southern Belize. In addition, museums and community museums, world-wide, will be examined and analyzed. What are the different models of community museums and what is the process for the development of such museums? Is the only de-colonized museum one created and framed within and by the community? Seminar format with weekly discussions, readings, and a final research paper. There are no pre-requisites for this course and a background in anthropology is not required. This course will be connected to a community museum project in Indian Creek, Belize where travel and work will be initiated over the summer of 2021. This course is recommended but not required for participation in summer research program in Belize
Taught by: Leventhal
Course not offered every year

1.0 Course Unit

ANTH 210 Death: Anthropological Perspectives
This course will cover the topic of DEATH from a bio/cultural perspective including the evolution of life history (aging and demography - mortality) as well as from an archaeological perspective (prehistory) and early history of mortuary practices. Nothing in the lifespan of humans is so revealing on the interface of culture and biology as is death and the experience of death. This course is not concerned specifically with how an individual experiences death, but in the ways that culture and biology have come to define and deal with physical death and the death experience.
Taught by: Monge
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANTH 211 Religion and Ecology
This class will introduce the overlaps between religion and ecology. Rather than assuming that there is a necessary positive or negative relationship between religion and ecology, we will look at how these relationships have materialized in complicated ways at different moments in history. We'll consider perspectives and case studies from a range of different moments in history. We'll consider perspectives and case studies from a range of different traditions, with a special attention paid to the genesis of the field of Religion and Ecology in critiques of Christian attitudes toward the environment in the 1960s and 1970s.

Also Offered As: ENVS 211, RELS 211
Activity: Lecture
1.0 Course Unit
ANTH 215 The Ancient Maya: Integrating Material, Text, and Image

Ancient Maya studies is one of the most dynamic and innovative fields in world archaeology today. Emerging as a true historical archaeology only in the past three decades, the decipherment of Maya script now provides a powerful complement and counterpoint to both traditional excavation data and new remote sensing technologies. Equally, the reading of images, and their interaction with texts and artifacts, forms a vital part of our interest in the broader humanistic concerns of worldview and the transcendent—where our primary interest lies in gaining access to past mentalities. This course will provide a comprehensive introduction into current knowledge of the Ancient Maya, with a recurring methodological focus on how different types of evidence are integrated to assemble a persuasive 'portrait of the past.' This scope of this process is unique in the ancient Americas, since only the Maya offer us the opportunity to read their own descriptions of the world two millennia or more in the past. Geographically, we will be looking at the greater Yucatan Peninsula, which today covers parts of southeastern Mexico, the whole of Guatemala and Belize, and the western extremities of Honduras and El Salvador. Since archaic times (before 1200 BCE) this has been occupied by speakers of the Mayan language group, and millions of people identified as Maya by that means continue to do so today (despite popular notions to the contrary, they have never 'disappeared'). No prior knowledge of archaeology or art history is necessary. The course structure is one 3-hour session per week, consisting of a lecture followed by group discussion in seminar-style. Additionally, in Week 6 there will be a virtual tour of the new Mexico and Central American Gallery at Penn Museum. This will introduce the class to the issues of disseminating scholarship and building narratives that are accessible to the wider public.

ANTH 219 Archaeology Field Project

First-hand participation in research project in historical archaeology in Southern New Jersey. Transportation provided by the university. Students will assist in excavations and archival research on local archaeological sites. Class is open to all undergraduates; no previous archaeological experience is required. Attendance will involve Fridays or Saturdays, all day from 8:00 to 5:00 including travel time to the excavations and back to the University Museum. Students enroll for only one day (F or S). Enrollment is limited so specific permission of the instructor is required (Robert L. Schuyler: schuyler@sas.upenn.edu; (215)898-6965; U Museum 412). A follow up laboratory course (Anth 220 in the spring semester) will also be available during which the artifacts and documentary sources collected in the fall will be analyzed at the University Museum. Course may be repeated for credit.

ANTH 221 Material World in Archaeological Science

By focusing on the scientific analysis of inorganic archaeological materials, this course will explore processes of creation in the past. ANTH 221/521 will take place in the Center for the Analysis of Archaeological Materials (CAAM) and will be team taught in three modules: analysis of lithics, analysis of ceramics and analysis of metals. Each module will combine laboratory and classroom exercises to give students hands-on experience with archaeological materials. We will examine how the transformation of materials into objects provides key information about past human behaviors and the socio-economic contexts of production, distribution, exchange and use. Discussion topics will include invention and adoption of new technologies, change and innovation, use of fire, and craft specialization.

ANTH 231 Modalities of Black Freedom and Escape: Ships
The course circulates around ships and boats. The course combines methods from environmental humanities, visual arts and history to consider multi-modal practices of black freedom and escape. From free black sailors in the eighteenth century Caribbean Sea, to twentieth and twenty-first century West African fishing boats, notions of Haitian ‘boat people,’ Parliament Funkadelic’s mothership, and sinking boats with Somali and Ethiopian migrants off Yemen’s coast, ships have been and remain technologies of containment and freedom for communities of African descent. In the face of environmental vulnerabilities and the reality of water ways as systems of sustenance and imminent death, this course asks: how do black people use the ship and the process and practice of shipping as vessels for freedom, escape, and as a site to experiment with futures? Using the city of Philadelphia and the Schuylkill and Delaware rivers as our primary site of interrogation, the course attends to the threats that black people experience following natural disaster (New Orleans, Haiti, Puerto Rico) and everyday engagement with the local and global state structures regarding water (Flint, MI). In this context, we also look to shipping as a site to theorize and account for black innovation, meanings of (non-)sovereignty, and alternative futures. Taught by: Johnson

ANTH 234 Pharmaceuticals and Global Health
In some parts of the world, spending on pharmaceuticals is astronomical. In others, people do not have access to basic or life-saving drugs. Individuals struggle to afford medications; whole populations are neglected, considered too poor to constitute profitable markets for the development and distribution of necessary drugs. This seminar analyzes the dynamics of the burgeoning international pharmaceutical trade and the global inequalities that emerge from and are reinforced by market-driven medicine. Questions about who will be treated and who will not filter through every phase of pharmaceutical production --from preclinical research to human testing, marketing, distribution, prescription, and consumption. Whether considering how the pharmaceutical industry shapes popular understandings of mental illness in North America and Great Britain, how Brazil has created a model of HIV/AIDS prevention and treatment program, or how the urban poor in Delhi understand and access healthcare, the seminar draws on anthropological case studies to illuminate the roles of corporations, governments, non-governmental organizations, and individuals in relation to global pharmaceuticals. As we analyze each case and gain familiarity with technographic methods, we will ask how individual and group health is shaped by new medical technologies and their evolving regulatory regimes and markets. The course familiarizes students with critical debates on globalization and with local responses to globalizing processes; and it contributes to ethical and political debates on the development and access to new medical technologies.

ANTH 236 Iraq: Ancient Cities and Empires
Iraq: Ancient Cities and Empires is a chronological survey of the ancient civilization that existed in the drainage basin of the Tigris and Euphrates Rivers from the early settled village farming communities of the 7th millennium BCE to the middle of the 1st millennium BCE, when Nebuchadnezzar II ruled Babylon and much of the Middle East. Though organized period by period, NELC 241 explores various social, political, economic, and ideological topics, exposing students to various strands of evidence, including settlement survey data, excavated architectural remains, artifacts, and documentary sources, as well as an eclectic mix of theoretical perspectives. The course aims to provide students with a strong foundation for the further study of the ancient and pre-modern Middle East.

1.0 Course Unit

ANTH 241 Performing History
This seminar concentrates on the ways that various peoples in the world make their history by means other than relying on written texts alone. Over the course of the semester, we therefore may be examining such different public events and civic rituals as parades, political and religious processions, local historical pageants, carnivals, historic preservation, museums, military reenactments, and history theme parks. The emphasis in each of these forms, places, and semiotic processes will be on their identity and function as key performances that transform consciousness, shift individuals alternately into both actors and spectators, reframe the everyday as the metaphysical, and intensify the status of cultural values in the histories they present to view. Course requirements: a seminar paper, the topic of which you will discuss with me no later than week five of the course; and a working annotated bibliography and statement of your paper’s main thesis. I will say more about these assignments as they approach.
Course not offered every year
Also Offered As: ARTH 395, HIST 241

1.0 Course Unit
ANTH 242 Music, Religion, Ritual in South and Southeast Asia.
What role does music play in articulating religious identities and spaces? What is the importance of ritual musics as they persist and change in the modern world? How does music reflect and articulate religious ways of thinking and acting? In this course, we explore these and other questions about the interrelations between music, religion, and ritual in South and Southeast Asia. Focusing on India, Sri Lanka, Malaysia, and Indonesia, the course emphasizes musics from Hindu, Buddhist, Muslim and Christian traditions; nevertheless, it draws widely to touch upon sacred musics in Pakistan, Nepal, Burma, Thailand, Vietnam, and among some indigenous peoples in the region. Throughout, we explore ontologies of sound; sonic occurrences in religious structures, public processions, and pilgrimage sites; the construction of religion and ritual as ideas forged through colonial encounter and modern scholarship on religion; the politics of sacred sounds in today’s public spaces and contemporary media, such as television and online; and the surprising fluidity between popular and sacred musical genres.

ANTH 244 Disease and Human Evolution
This course will explore the role played by disease in human evolution, from the emergence of the human lineage to the present day. We will evaluate both infectious and non-infectious diseases and examine the way in which populations and disease organisms have co-evolved. Related issues to be explored include the nature of the virulence and pathogenicity of infectious agents, and the impact of vaccination on pathogen evolution. In addition, we will discuss the epidemiological transition and the rise of complex diseases of modernization (e.g., diabetes, cancer) that has occurred in the past several centuries. Overall, the course will provide a broader understanding of the influence of disease processes on the evolution of the human species.
Taught by: Schurr
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANTH 245 Environment in India: Nature, Culture, & Conservation in the Western Ghats
India, one of the world’s most populous countries, also ranks as one of the most important centers of biodiversity, conservation, and environmental movements. Despite pervasive scholarly and popular narratives of inevitable ecological damage associated with population growth, human land use has, at times, enhanced biodiversity, preserved existing environments, and created new ones. In this course, students will examine long-term human and natural histories from a number of perspectives to develop more accurate, historically-informed understandings of how India’s natural spaces have developed and how the spaces can be best sustained. them. During the travel component, students will visit India and work with local partners who are actively engaged in protecting human livelihoods, reducing human-wildlife conflict, and conserving biodiversity in the Western Ghat Mountains, a biodiversity hotspot.
Taught by: Morrison
Course not offered every year
Activity: Seminar
1.0 Course Unit

ANTH 246 Molecular Anthropology
In this course, we will explore the molecular revolution in biological anthropology. In particular, we will examine how molecular data can be used to illuminate anthropological question concerning human origins, evolution and biological variation. Some of the specific topics to be covered in this course are the phylogenetic relationships among primates, kinship in apes and monkeys, the hominoid trichotomy, modern human origins and migrations, Neanderthal and Denisovan admixture with modern humans, biogeonetics of skin color, and physiological, phenotypic and disease adaptations.
Taught by: Schurr
Course not offered every year
Also Offered As: ANTH 649
Activity: Seminar
1.0 Course Unit

ANTH 248 Food and Feasting: Archaeology of the Table
Food satisfies human needs on many levels. ANTH 248 explores the importance of food in human experience, starting with the nutritional and ecological aspects of food choice and going on to focus on the social and ritual significance of foods and feasts. Particular attention will be paid to the way that archaeologists and biological anthropologists find out about food use in the past. Contemporary observations about the central significance of eating as a social activity will be linked to the development of cuisines, economies, and civilizations in ancient times. The course will use lectures, discussions, films, food tastings, and fieldwork to explore the course themes.
Taught by: Moore
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANTH 249 Evolutionary Medicine
Evolutionary medicine is the application of modern evolutionary theory to studies of health and disease in humans. In taking this approach, the course will explore the role that disease played in human evolution. We will examine both infectious and non-infectious diseases, and assess the way in which populations and disease organisms have co-evolved. Related issues to be examined are the nature of the virulence and pathogenicity of infectious agents, and their efforts to subvert the immune system’s responses to infection. We will also explore the evolved responses that enable individuals to protect, heal and recuperate themselves from infections and injuries, such as fever and sickness behavior, and the fitness enhancing aspects of these processes. Finally, we will study how past adaptations of early humans to their environments now affects modern humans, who have very different diets, life expectancy, activity patterns, and hygiene than their ancestors.
Taught by: Schurr
Course not offered every year
Activity: Seminar
1.0 Course Unit
ANTH 253 Violence, Tolerance, Freedom
This seminar examines how the adjective ‘religious’ has been used to modify the nouns ‘violence’, ‘tolerance’, and ‘freedom’. It traces the historical development of liberal ideas of tolerance and human rights, interrogates the common assumption that religion exerts a pervasive influence on politics and vice versa, critically examines the concept of terrorism, and connects the neoliberal ideal of unfettered free markets to the idea of being ‘spiritual but not religious.’ Previous courses in RELS or ANTH recommended.
Taught by: Thomas
Course usually offered in spring term
Also Offered As: RELS 254
Activity: Seminar
1.0 Course Unit

ANTH 254 Archaeology of the Inca
The Inca created a vast and powerful South American empire in the high Andes Mountains that was finally conquered by Spain. Using Penn’s impressive museum collections and other archaeological, linguistic, and historical sources, this course will examine Inca religion and worldview, architecture, sacred temples, the capital of Cuzco, ritual calendar, ceque system, textiles, metalworking, economic policies and expansionist politics from the dual perspectives of Inca rulers and their subjects. Our task is to explain the rise, dominance, and fall of the Incas as a major South American civilization.
For BA Students: History and Tradition Sector

Activity: Seminar
1.0 Course Unit

ANTH 255 Modern Southeast Asia
This freshman-friendly course provides a broad introductory overview of modern Southeast Asia, surveying the region's extraordinary diversity and ongoing social, economic, and political transformations. Centering on the nation-states that have emerged following the second World War, we will assess elements of Southeast Asian geography, history, language and literature, cosmologies, kinship systems, music, art and architecture, agriculture, industrialization and urbanization, politics, and economic change. We will remain particularly attentive to the ways Southeast Asians negotiate and contend with ongoing challenges with modernization, development, and globalization.
Taught by: Carruthers
Also Offered As: SAST 266
Activity: Lecture
1.0 Course Unit

ANTH 256 Caribbean Music and Diaspora
This course considers Caribbean musics within a broad and historical framework. Caribbean musical practices are explored by illustrating the many ways that aesthetics, ritual, communication, religion, and social structure are embodied in and contested through performance. These initial inquiries open onto an investigation of a range of theoretical concepts that become particularly pertinent in Caribbean contexts—concepts such as post-colonialism, migration, ethnicity, hybridity, syncretism, and globalization. Each of these concepts, moreover, will be explored with a view toward understanding its connections to the central analytical paradigm of the course—diaspora. Throughout the course, we will listen to many different styles and repertories of music ranging from calypso to junkanoo, from rumba to merengue, and from dance hall to zouk. We will then work to understand them not only in relation to the readings that frame our discussions but also in relation to our own North-American contexts of music consumption and production. (Formerly Music 258).
Taught by: Rommen
Course not offered every year
Also Offered As: LALS 258, MUSC 257
Activity: Lecture
1.0 Course Unit

ANTH 258 Visualizing the Past
Most people’s information about the Past is drawn from coffee table picture books, popular movies, video games, documentaries about discoveries of ‘ancient, mysterious, and lost’ civilizations, and tours often lead by guides of limited or even dubious credentials. How are these ideas presented, formed, and circulated? Who creates and selects the information presented in this diverse media? Are these presentations accurate? Do they promote or hurt scientific explanations? Can the artistic, aesthetic, and scientific realms be bridged to effectively promote and interpret the past? How can modern technologies be applied to do a better job at presenting what is difficult to experience firsthand? This class will focus on case studies, c and methods of how archaeology and the past are created, presented and used in movies, museums, games, the internet, and art. Each year, the studio-seminar focuses on a project. In addition to exploring general concepts of archaeology and the media, students will work in teams to produce an interactive, digital media exhibit using the latest modeling visualization programs for presenting the past. Discoveries of ‘ancient, mysterious, and lost’ civilizations, and tours often lead by guides of limited or even dubious credentials. How are these ideas presented, formed, and circulated? Who creates and selects the information presented in this diverse media? Are these presentations accurate? Do they promote or hurt scientific explanations? Can the artistic, aesthetic, and scientific realms be bridged to effectively promote and interpret the past? How can modern technologies be applied to do a better job at presenting what is difficult to experience firsthand? This class will focus on case studies, c and methods of how archaeology and the past are created, presented and used in movies, museums, games, the internet, and art. Each year, the studio-seminar focuses on a project. In addition to exploring general concepts of archaeology and the media, students will work in teams to produce an interactive, digital media exhibit using the latest modeling visualization programs for presenting the sacred landscape of the Inca capital of Cuzco, Peru. Cuzco is one of the most important UNESCO World Heritage sites and visited by nearly a million tourists a year. Potential class projectinclude fly-throughs of architectural and landscape renderings, simulations of astronomy and cosmology, modeling of human behavior within architectural and landscape settings, and study artifacts in the Penn Museum. One-term course offered either term
Also Offered As: CIS 106
Activity: Lecture
1.0 Course Unit
ANTH 260 Cultures of Science and Technology
Science and technology figure centrally in the economic, political, and socio-cultural changes that impact our worlds. Happenings in the life sciences, including the discovery of new genes, pathways, and processes, are redefining concepts of the body and human nature and refiguring social and politcial relations. The seminar starts from the premise that scientific facts are made, not things existing a priori in the world and that are merely picked up by researchers and consumed by lay audiences. Likewise, technologies are created through a process of intense negotiation between producers and their sophisticated users. Focusing on the biosciences, we explore the production of science and technology and how they 1) affect individuals, self-identities, subjectivity, kinship, and social relationships; 2) have interacted with or reinforced political programs, racial classifications, and unequal access to knowledge, and patterns of social injustice; 3) inform contemporary institutional structures, strategies of governance, and practices of citizenship. We will combine methods and perspectives from social and cultural anthropology, and the social sciences of science and technology, and will draw from historical case studies, contemporary ethnographies of science, scientific and medical journals, documentary films and media reports.
Taught by: Petryna
Course not offered every year
Activity: Seminar
1.0 Course Unit

ANTH 263 Music and Performance of Africa
This class provides an overview of the most popular musical styles and discussion of the cultural and political contexts in which they emerged in contemporary Africa. Learning to perform a limited range of African music/dance will be part of this course. No prior performance experience required.
Taught by: Muller
Course not offered every year
Also Offered As: AFRC 253, MUSC 256
Activity: Lecture
1.0 Course Unit

ANTH 267 Living World in Archaeological Science
By focusing on the scientific analysis of archaeological remains, this course will explore life and death in the past. It takes place in the Center for the Analysis of Archaeological Materials (CAAM) and is team taught in three modules: human skeletal analysis, analysis of animal remains, and analysis of plant remains. Each module will combine laboratory and classroom exercises to give students hands-on experience with archaeological materials. We will examine how organic materials provide key information about past environments, human behavior, and cultural change through discussions of topics such as health and disease, inequality, and food.
Taught by: White, Monge, Moore
Course not offered every year
Also Offered As: ANTH 567, CLST 568, NELC 286, NELC 586
Activity: Lecture
1.0 Course Unit

ANTH 268 Anthropology of Museums
This course examines museums as sites where issues of Indigenous identity, memory, place and power intersect. Museums have long been engaged in the selective preservation, representation, and contextualization of Indigenous objects, cultures, and histories. We will examine antiquarian impulses that inspired the collecting of curiosities, scientific studies that drove the collection of biological specimens, and nationalist ideals that shaped monuments to house imperialist memories. Museums are now sites for complex, often contentious discourse around Indigenous collections. Students will review histories of local and national collecting processes, with a particular focus on Native American collections and concerns. We will also consider how Indigenous curators and new kinds of museums have developed innovative displays and interpretations.
Taught by: Bruchac
Activity: Seminar
1.0 Course Unit

ANTH 271 Ancient Mexico and Central America
This course will provide an overview of the diverse cultures of ancient Mesoamerica. Across the landscape that is now Mexico and Central America, the societies that inhabited highlands and tropical lowlands developed agricultural lands, built towering pyramids and cities, and forged great civilizations all before the arrival of Europeans to the New World. In this course, students will learn about these diverse civilizations and the many similarities and continuities among them. They will also learn about the legacy left by these cultures on today’s modern peoples of Central Mexico and Central America.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANTH 273 Global Health: Anthropological Perspectives
In some parts of the world spending on pharmaceuticals is astronomical. In others, people struggle for survival amid new and reemerging epidemics and have little or no access to basic or life-saving therapies. Treatments for infectious diseases that disproportionately affect the world’s poor remain under-researched and global health disparities are increasing. This interdisciplinary seminar integrates perspectives from the social sciences and the biomedical sciences to explore 1) the development and global flows of medical technologies; 2) how the health of individuals and groups is affected by medical technologies, public policy, and the forces of globalization as each of these impacts local worlds. The seminar is structured to allow us to examine specific case material from around the world (Haiti, South Africa, Brazil, Russia, China, India, for example), and to address the ways in which social, political-economic, and technological factors -- which are increasingly global in nature -- influence basic biological mechanisms and disease outcomes and distribution. As we analyze each case and gain familiarity with ethnographic methods, we will ask how more effective interventions can be formulated. The course draws from historical and ethnographic accounts, medical journals, ethical analyses, and films, and familiarizes students with critical debates on globalization and with local responses to globalization processes.
Taught by: Petryna
One-term course offered either term
Also Offered As: HSOC 239
Activity: Seminar
1.0 Course Unit
ANTH 276 Ethnographic Approaches to Urban Athletics and Human Movement
Rooted in the rubric of public interest social science, the course focuses on bridging theory and practice motivated by a commitment to social justice through original ethnographic research. In particular, this course will focus on kinesiology and the anthropology of sports and well-being through intense analysis of the Young Quakers Community Athletics (YQCA) program, a collaboration between the Netter Center for Community Partnerships and Penn Athletics. In guest lecturers from multiple disciplines will help to round out the course. The core learning objective is to bring a broad range of specialized expertise to foster a holistic examination of a complex institutional partnership intended to promote positive social transformation and improved human health and well-being.
Taught by: Frank Johnston, Gretchen Suess
Activity: Seminar
1.0 Course Unit

ANTH 294 Global Cities: Urbanization in the Global South
This course examines the futures of urbanization in most of the world. With cities in 'developing' countries set to absorb 95% of urban population growth in the next generation, the course explores the plans, spaces and social experiences of this dramatic urban century. How do proliferating urban populations sustain themselves in the cities of Latin America, Africa and Asia? What kinds of social and political claims do these populations make more just and sustainable cities? The course investigates the ongoing experiences in urban planning, infrastructure development and environmental governance in cities of the Global South. In so doing, it imagines new forms of citizenship, development and sustainability that are currently unfolding in these cities of the future.

Also Offered As: URBS 294
Activity: Seminar
1.0 Course Unit

ANTH 300 Research Seminar in Anthropology
ANTH 300 is a Research Seminar for anthropology majors. It defines the Penn anthropology major by bringing together and inter-relating major threads from the different subfields of the Penn anthropology curriculum. Each session includes contributions from members of the standing faculty and seminar discussions of a research theme in which anthropological knowledge is currently progressing.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
Notes: Open to junior and senior anthropology majors

ANTH 301 Senior Thesis
Individual research under faculty supervision culminating in a thesis.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Notes: Permit required

ANTH 303 Research Methods in Cultural Anthropology
This undergraduate seminar is about how ethnographers do research. It introduces fundamental concepts and techniques - research design, participant observation, interviews, questionnaires, field notes, archives, data collection and analysis. It also addresses ethical and legal issues - cultural protocols, intellectual property rights, collaborative anthropology, and institutional review boards. Students will conduct original ethnographic research in partnership with the Netter Center.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ANTH 305 Anthropology and Policy: History, Theory, Practice
From the inception of the discipline, anthropologists have applied their ethnographic and theoretical knowledge to policy issues concerning the alleviation of practical human problems. This approach has not only benefited peoples in need but it has also enriched the discipline, providing anthropologists with the opportunity to develop new theories and methodologies from a problem-centered approach. The class will examine the connection between anthropology and policy, theory and practice (or 'praxis'), research and application. We will study these connections by reading about historical and current projects. As an ABCS course, students will also volunteer in a volunteer organization of their choice in the Philadelphia area, conduct anthropological research on the organization, and suggest ways that the anthropological approach might support the efforts of the organization.
Course not offered every year
Also Offered As: ANTH 609
Activity: Seminar
1.0 Course Unit

ANTH 307 Contemporary Native Americans
This course examines the social and political lives of contemporary Native American Indians in the United States and Canada. Topics include: Indigenous identity; homelands and natural resources; popular culture and media; Indigenous arts and cultural expression; museum representations; athletics; gender relations; tribal recognition and sovereignty; and resistance movements. We will consider the origins of federal programs and legislation that have become essential to the protection of Native American freedoms. Students can expect to gain an appreciation of the complexity and cultural diversity of Native communities and tribal nations and insights into their interactions with other cultures over time.

Course not offered every year
Also Offered As: ANTH 607
Activity: Lecture
1.0 Course Unit
ANTH 308 Ethnohistory of the Native Northeast
Ethnohistory is a multi-disciplinary form of ethnographic study and documentary research that employs both anthropological and historical approaches. This course examines the foundations of the ethnohistorical method as a means to interpret cross-cultural colonial interactions and conflicts, and to better understand the complex histories of Native American Indian peoples from Pennsylvania and northward and eastward. Students will develop skills and strategies for interpreting and contextualizing primary and secondary source materials, oral traditions, colonial records, historical maps, and material culture. Hands-on study will include visits to local archives and historical sites to view relevant documents and landscapes.

Taught by: Bruchac
Course not offered every year
Activity: Seminar
1.0 Course Unit

ANTH 309 Psychoanalysis and Anthropology
This course will introduce students to the rich literature that has grown up around the encounter between psychoanalysis and anthropology, from totem and taboo, to studies of the Oedipus complex, child-rearing practices, ritual symbolism, mythology, and dreams. The class will also look to the future, endeavoring to examine as well such issues as the role of computers (are they self objects?) and the internet (including such online games as ‘Second Life’), dreams in space alien abduction narratives, sexuality in advertising, political psychology, and other contemporary issues. This course counts towards the Psychoanalytic Studies (PSYS) Minor.

Taught by: Urban/Blum
Course not offered every year
Also Offered As: ANTH 519
Activity: Seminar
1.0 Course Unit

ANTH 310 Transdisciplinary Environmental Humanities
Emergent transdisciplinary fields, such as the environmental humanities, reflect a growing awareness that responses to contemporary environmental dilemmas require the collaborative work of not only diverse scientists, medical practitioners, and engineers, but also more expansive publics, including artists, urban and rural communities, social scientists, and legal fields. This course is inspired by the need to attend to environmental challenges, and their health, justice, and knowledge production implications, as inherently social concerns. The class is co-taught by faculty from the School of Arts and Sciences and the School of Medicine, and will address the challenges and possibilities of working across disciplinary boundaries, building collaborative affinities, and negotiating frictions between diverse methodologies and epistemological approaches. Dr. Kristina Lyons from the Department of Anthropology brings years of experience collaborating with soil scientists, small farmers, indigenous communities, lawyers, and judges in Colombia on watershed restoration projects, soil degradation, toxicity, and the implementation of socio-ecological justice. Dr. Marilyn Howarth is a medical doctor from the Center of Excellence in Environmental Toxicology of the School of Medicine and has experience engaging the public, legislators and regulators around environmental health issues affecting the quality of air, water, soil and consumer products. Through their different lenses, they will foster interdisciplinary environmental collaboration and scholarship by engaging students in discussions and research that bring together the arts and sciences regarding issues of urban air pollution, soil remediation, deforestation, and water contamination, among other environmental health problems. This inaugural course seeks to explore environmental humanities on the global scale. Using Dr. Lyons’ deep insight and valuable connections to communities in Colombia, we will explore the experience of environmental degradation, opportunities and challenges for mitigation, and socio-environmental health implications there while placing these issues in conversation with U.S. public health, regulatory and political frameworks and community experiences on similar issues. A comparative exploration of environmental justice in both Colombia and the U.S. will be infused into much of the discussion. This class offers a unique opportunity for students from engineering, natural and social sciences, humanities and the arts to learn to converse and collaborate around pressing socio-environmental and public health issues.

Taught by: Lyons
Course usually offered in spring term
Also Offered As: LALS 310
Activity: Seminar
1.0 Course Unit
ANTH 315 Kinship and Connectivity in the Roman World
An individual's life course is often reflected, enhanced, and defined by their relations to other individuals. This course will investigate the concept of kinship in the Roman world through textual, visual, and archaeological evidence. We will explore relationships at all levels of society from the imperial family to the slaves and freedmen who were part of larger households, in order to understand how different relationships shaped and structured interactions in Roman society. Together, we will explore the following questions: how were relationships and bonds represented in the ancient world? What structures were in place for families to perpetuate themselves through biological or adoptive means? How could non-Roman citizens create family connections through formal and informal channels? How could relationships be celebrated in life and commemorated in death? We will use written evidence from ancient historians, visual evidence like the Altar of Peace, and archaeological evidence from cemeteries to examine how Roman notions of kinship shaped life and death in different social milieus.

Taught by: Brent
Also Offered As: AAMW 514, ANCH 315, CLST 315, CLST 515
Activity: Seminar
1.0 Course Unit

ANTH 317 The Politics of Matter and the Matter of Politics
What is nature? What is culture? What kinds of practices and actors constitute what we call science? Who and what constitute the sphere we refer to as politics? A number of theoretical developments in cultural anthropology, political theory, critical geography, and feminist science studies have problematized the modernist ontological divide between Nature and Culture and a whole series of binary oppositions (such as objects/subjects, matter/form, bio/geo) that follow from it. Taking inspiration from this literature and placing it in conversation with Native and Indigenous scholarship and a series of contemporary socio-environmental struggles occurring in Latin America and beyond, this course will discuss the conceptual-methodological tools that a concern with politics of matter has generated. The epistemic and political implications of these tools go beyond their analytical usefulness as innovative devices to explore novel phenomena. They complicate well-established fields of inquiry, such as political ecology and economy, environmental studies, ethics, social justice, and modern politics; and, indeed, the singular ontology that these fields may inadvertently and explicitly sustain. We will explore how it is that things, stuff, matter, 'nature' came to fall outside modern politics as such, and the kinds of ethico-political repercussions that problematizing this division may produce.

Taught by: Kristina Lyons
One-term course offered either term
Also Offered As: LALS 317
Activity: Seminar
1.0 Course Unit

ANTH 322 Bodies of Water: Conflicts and Collaborations around Wetlands and Watersheds
In less than half a decade, the idea that 'nature' possesses inalienable rights akin to human rights has gone from a strictly theoretical concept to the basis of policy changes in several countries and U.S. municipalities. This seminar will introduce students to current legal, political, ethical, and practical debates about the implementation and impacts of granting 'rights to nature' in these different contexts with a particular focus on the rights associated with bodies of water. We will begin by examining how the Community Environmental Legal Defense Fund (CELDF) supported citizens of Tamaqua, Pennsylvania to write the world's first local 'rights of nature' ordinance. We will then go on to compare the politics of 'rights of nature' cases in Ecuador, New Zealand, India, and Colombia paying special attention to the cases of rivers. We will focus on the ways biocentric constitutional moves may transform concepts and understandings of environmental justice and socio-environmental conflicts. In particular, how the recognition of 'nature' as a victim of war may transform understandings of violence, and hence, approaches to constructing peace and engaging and reparative and restorative practices within the larger framework of planetary and community efforts to mitigate climate change, deforestation, and the degradation of watersheds and wetlands. Lastly, we will explore the possibilities and tensions between community decision-making, the 'rights of nature,' and national level policies regarding the intensification of extractive activities and questions of territorial ordinance as they relate to multiple bodies of water.

Taught by: Lyons
Course not offered every year
Activity: Seminar
1.0 Course Unit

ANTH 323 Origins of Art / Origins of Writing
Each of the earliest systems of writing had intimate and enduring ties to pictorial traditions. This seminar addresses the fundamental relationship between texts and visual imagery in the Mesopotamian, Egyptian, Chinese, and Maya traditions. The class will take a comparative approach to examine the parallel development of scripts and images, extending from their earliest beginnings to their on-going lives as mature systems. As the individual scripts became more capable of representing speech, the subject matter, composition, and function of images changed, and one goal of this class is to identify these processes. Emphasis will be put on seeing text and image as collaborative and interactive constructions, in which parts of a single message can be encoded and presented in different ways. The class will make extensive use of the collections and the curatorial expertise of the Penn Museum.

Taught by: Pittman

Also Offered As: ARTH 323, NELC 323
Activity: Seminar
1.0 Course Unit
ANTH 325 Who Owns the Past? Archaeology and Politics in the Middle East
This course explores the role of cultural heritage and archaeological discoveries in the politics of the Middle East from the nineteenth century to the recent aftermath of the Arab Spring. We will explore how modern Middle East populations relate to their pasts and how archaeology and cultural heritage have been employed to support particular political and social agendas, including colonialism, nationalism, imperialism, and the construction of ethnic-religious identities. Although it was first introduced to the Middle East as a colonial enterprise by European powers, archaeology became a pivotal tool for local populations of the Middle East to construct new histories and identities during the post-World War I period of intensive nation-building after the dissolution of the Ottoman Empire. To understand this process, we will first look at the nineteenth-century establishment of archaeology by institutions like the Penn Museum. Then we will move on to individual case studies in Turkey, Iraq, Egypt, Israel/Palestine, Iran, and the republics of former Soviet Transcaucasia to look at the role of archaeology and cultural heritage in the formation of these countries as modern nation-states with a shared identity among citizens. We will conclude with an examination of the recent impact of the Islamic State on material heritage in Syria and Iraq, the changing attitudes of Middle Eastern countries toward foreign museums, and the role of UNESCO in defining Middle Eastern sites of world heritage. The course will also include field trips to the Penn Museum.

ANTH 328 Performing Culture, Native American Arts
This course analyzes cultural performances as sites for the formation, expression, and transmission of social identity. Students will read ethnographies, critiques, and reports of performance genres including ritual, theater, music, dance, art, and spoken word, with a particular focus on Native American and Indigenous arts and expressions. Topics include: expressive culture as survivance; debates around authenticity and invented traditions; public identity and sexuality; political resistance; the effects of globalization; transnationalism and hybridity; cultural appropriation; and the transformation of folk performances in the wake of modern media.
Taught by: Bruchac
One-term course offered either term
Activity: Lecture
1.0 Course Unit

ANTH 329 Psychoanalytic and Anthropological Perspectives on Childhood
How do people become who they are, both similar to others and uniquely individual? How might these similarities and differences be shaped by childhood experiences in family, community, and societies around the world? How do children develop emotionally? Morally? What features of human development, expression of emotions, and relational patterns are universal for our species? What features are not universal? And what is and is not known about these questions? In this course, we will consider these and many other questions. We will read about and discuss complex and dynamic interactions between culture and individual psychology, and between nature and nurture from birth to adulthood. We will carefully examine various phases of human development as described by psychoanalysts and anthropologists. The course includes anthropologic and psychoanalytic readings and videotapes, as well as literature, fairy tales, and mythologies from cultures around the world. The instructors are both psychoanalysts, one a psychiatrist and one a pediatrician. The course counts towards the Psychoanalytic Studies (PSYS) Minor.
Taught by: Blum/Shapiro
Course not offered every year
Also Offered As: ANTH 529
Activity: Seminar
1.0 Course Unit

ANTH 332 Medicine and the Language of Pain
Pain can be a particularly complex and morally charged object of biomedicine. The interiority of pain- the deeply private nature of pain experience- complicates its communication. Pain, particularly its chronic form, defies purely biological explanation, troubling fundamental biomedical distinctions between mind and body, subject and object. And decisions about analgesia are fraught, as doctors and patients pursue relief from pain amidst a widespread epidemic of opiate abuse that infuses their interaction with concerns about addiction, drug seeking, culpability, and responsibility. This seminar seeks to shed light on these issues by using concepts from linguistic and medical anthropology to explore how we experience, think about, and talk about pain. As an interdisciplinary endeavor, the course is of relevance not only to anthropology but also to medical sociology, medical ethics, public health, health policy, and science and technology studies.

Course not offered every year
Activity: Seminar
1.0 Course Unit
ANTH 334 Feminist Ethnography
This course will investigate the relationships among women, gender, sexuality, and anthropological research. We will begin by exploring the trajectory of research interest in women and gender, drawing first from the early work on gender and sex by anthropologists like Margaret Mead and Ruth Benedict; moving through the 1970s and 1980s arguments about gender, culture, and political economy; arriving at more current concerns with gender, race, sexuality, and empire. For the rest of the semester, we will critically read contemporary ethnographies addressing pressing issues such as nationalism, militarism, neoliberalism and fundamentalism. Throughout, we will investigate what it means not only to 'write women's worlds', but also to analyze broader socio-cultural, political, and economic processes through a gendered lens. We will, finally, address the various ways feminist anthropology fundamentally challenged the discipline's epistemological certainties, as well as how it continues to transform our understanding of the foundations of the modern world. Prerequisite: Should have some functional knowledge of Cultural Anthropology.

Activity: Seminar
1.0 Course Unit

ANTH 336 The Peopling of the Americas
The peopling of the Americas is a question that has intrigued scholars and laymen for over 500 years. The origin of Native Americans was also a seminal issue during the emergence of American Anthropology as a discipline at the turn of the 20th century, with research on this topic animating current studies of ethnohistory, indigenous archaeology, post-colonialism and repatriation. The proposed course will review the scholarship dedicated to describing this long history from an interdisciplinary perspective. It will explore their roots in the expansion of modern humans into Eurasia, evaluate the new archeological and genetic research that has fundamentally altered our understanding of the migration history and diversity of indigenous peoples in the American continents, and examine issues of identity, ethnicity and cultural heritage in contemporary Native populations that extend from this knowledge.
The course will further draw on the instructor's fieldwork experience working with indigenous communities in Alaska, Canada, the Lower 48, Mexico and the Caribbean, as well as native Siberians in Russia, where the cultural and biological roots of ancestral Native American populations lie.
Taught by: Schurr
Course not offered every year
Also Offered As: ANTH 536

ANTH 337 Applying Anthropology Methods in Policy and Practice
This course will introduce students to applied anthropology methods for doing research that can change policy and practices. Examples of policy and practice change include clinical practices in health care settings, social welfare policy, and legal advocacy. Students will be trained in multiple anthropology research methods, including brief participant-observation, presentation of self in the field, entering the field in diverse cultural environments, qualitative interviewing, life story interviewing, and ethnographic content analysis of textual material. Students will also learn how to use NVivo software for analyzing qualitative and some quantitative data from their field notes, interviews, and analysis of popular articles/websites. Finally, students will practice writing products for non-academic audiences, such as policymakers, the media, and the general public. The course will emphasize using anthropology research methods to address real-world problems in policy and practice in diverse cultural contexts. This course is a service learning class affiliated with the Netter Center and a Benjamin Franklin Scholars course.

ANTH 342 Dress and Fashion in Africa
Throughout Africa, social and cultural identities of ethnicity, gender, generation, rank and status were conveyed in a range of personal ornamentation that reflects the variation of African cultures. The meaning of one particular item of clothing can transform completely when moved across time and space. As one of many forms of expressive culture, dress shape and give forms to social bodies. In the study of dress and fashion, we could note two distinct broad approaches, the historical and the anthropological. While the former focuses on fashion as a western system that shifted across time and space, and linked with capitalism and western modernity; the latter approach defines dress as an assemblage of modification the body. The Africanist proponents of this anthropological approach insisted that fashion is not a dress system specific to the west and not tied with the rise of capitalism. This course will focus on studying the history of African dress by discussing the forces that have impacted and influenced it overtime, such as socio-economic, colonialism, religion, aesthetics, politics, globalization, and popular culture. The course will also discuss the significance of the different contexts that impacted the choices of what constitute an appropriate attire for distinct situations. African dress in this context is not a fixed relic from the past, but a live cultural item that is influenced by the surrounding forces.
Taught by: Ali-Dinar
Course usually offered in spring term
Also Offered As: AFRC 324, ARTH 324
Activity: Lecture
1.0 Course Unit
ANTH 344 Documentary Experiments in Urban Research
What can video art, experimental documentary, and sensory ethnography teach us about the practice of urban research? How can we build on the traditions of first person and essay cinema to produce compelling documents of our own questions and findings? This course surveys a range of film and video works on themes such as the production of space, urban nature, infrastructure, and collective memory. Taken as a genre, these time-based works provide a powerful model for training scholars’ observational skills, conceptualizing scales of analysis, and engaging broader publics in urban research. In this course, we will explore this audiovisual genre in dialogue with selected theoretical, ethnographic, and case study readings in urban studies. As an advanced theory-practice course, it combines seminar readings and discussion with regular screenings and a series of workshops on photo, video, audio, and postproduction skills. The course will provide a general fluency in contemporary urban research, with particular emphasis on urban political ecology. In dialogue with this scholarship, students will develop and situate their own experimental documentary research projects.

Course not offered every year
Also Offered As: CIMS 344, URBS 344
Activity: Seminar
1.0 Course Unit

ANTH 346 GIS for the Digital Humanities and Social Sciences
This course introduces students to theory and methodology of the geospatial humanities and social sciences, understood broadly as the application of Geographical Information Systems (GIS) and spatial analysis techniques to the study of social and cultural patterns in the past and present. By engaging with spatial theory, spatial analysis case studies, and technical methodologies, students will develop an understanding of the questions driving, and tools available for, humanistic and social science research projects that explore change over space and time. We will use ESRI’s ArcGIS software to visualize, analyze, and integrate historical, anthropological, and environmental data. Techniques will be introduced through the discussion of case studies and through demonstration of software skills. During supervised laboratory sessions, the various techniques and analyses covered will be applied to sample data and also to data from a region/topic chosen by the student.
Taught by: Hammer
Course usually offered in fall term
Also Offered As: AAMW 646, NELC 346, NELC 646
Activity: Lecture
1.0 Course Unit

ANTH 347 Anthropology of Corporations
Modern business corporations can be characterized as having their own internal cultures, more or less distinct from one another. They also exist within encompassing cultures and cultural flows. At the same time, corporations are producers and disseminators, and thus have effects on their surrounding environments, effects that extend from the local to the global. This course examines modern corporations from these three perspectives through theoretical and ethnographic readings, guest speakers from the corporate world, and independent research conducted by the students. Course requirements include student presentations of their research and readings; one or more take-home exams; and a final research paper.

1.0 Course Unit

ANTH 348 Colonialism and its Legacies
In this course we explore the history and long-term consequences of European colonial expansion, with a primary focus on Eurasia and on the British Empire, though we will range further afield as needed. Rather than attempting a comprehensive historical overview, we will use a series of case studies to illustrate changing understandings of colonialism and associated processes, including anti-colonial movements, decolonization, postcoloniality, and the enduring effects of colonialism in the present. This is a seminar-style course.

1.0 Course Unit

ANTH 350 Archaeology of Civilizations in South America
This course provides a basic survey of the archaeology of civilizations of South America (the Andean region of the central highland and coastal areas that today are Peru and Bolivia and parts of Ecuador, Chile, and Argentina). Topics include the history of South American archaeology, peopling of the continent, origins and evolution of agriculture, early village life, ceremonial and domestic architecture, prehistoric art and symbolism, Andean cosmology and astronomy, indigenous technology, the historical ecology of landscapes, outside contacts and relationships, economics and trade, social and political structure, state formation and urbanism, and early contacts with Europeans. The lectures and readings are based on recent archaeological investigations and interpretations combined with appropriate analogy from ethnohistory and ethnography. The prehistory of the Amazonian lowlands and northern South America will be covered in other courses.

1.0 Course Unit
ANTH 351 Women Making History: The Penn Museum and the Centennial 2020
The year 2020 marks the 100th anniversary of the 19th Amendment to the U.S. Constitution, which declared that the right of citizens to vote ‘shall not be denied or abridged by the United States or by any State on account of sex’. To mark this centennial - to both celebrate it and critically assess its impact on American society - we will investigate the history of women at the Penn Museum as archaeologists, ethnographers, epigraphers, philanthropists, and more. At the same time, we will examine material in the Penn Museum that women collected, donated, or studied. Our goal will be to produce original research that may contribute to future exhibits and publications as well as to broader public forums. Sponsored by the Department of Near Eastern Languages and Civilizations, our seminar will focus heavily on western Asia, southeastern Europe, and North Africa - all zones that scholars have variously associated with the Near East or Middle East, and where the Penn Museum has been active since its foundation in 1887. To situate the Penn Museum and its collections within a global and comparative frame, we will also study select women who made major scholarly contributions to other parts of the world such as the Americas and Oceania. Among the figures we will study are Sarah Yorke Stevenson (Egypt), Katharine Woolley (Mesopotamia/Iraq), Harriet Boyd Hawes (Ottoman Crete and Greece), Florence Shotridge (Alaska), Zelia Nuttall (Mexico and Russia), and Tatiana Proskouriakoff (Guatemala). We will venture into many different kinds of history. In regional terms, our scope will be transnational and international: we will cover the United States and the Middle East in the wider world. In thematic and methodological terms, we will approach our subject through biography, oral history, and microhistory; material history and museum studies; cultural and intellectual history; women’s and gender studies; and the history of academic disciplines, especially archaeology and anthropology. Some background in Middle Eastern history; or Anthropology; or Women’s History; or Museum Studies recommended.
Taught by: Sharkey

Also Offered As: ANTH 531, GSWS 331, GSWS 533, NELC 331, NELC 531
Activity: Seminar
1.0 Course Unit

ANTH 354 Art, Medicine, & Magic: Bodily Remedies
In this activity-centric course, you will explore art, medicine, and magic as entangled approaches for healing human bodies across time, space, and societies. At first glance, artists, doctors, and religious leaders may seem to address questions about bodies and healing in very different ways. Yet, in practice, art, magic, and medicine have been in deep conversation with one another for millennia. 4,000 years ago in Mesopotamia, medical doctors were professionals who had offices, hospital beds, and pharmacological and surgical equipment expertise, but they often worked hand in hand with diviners and exorcists. In rural Haiti today, Haitian Vodou priestesses collect herbs, craft sculptures, and sing as they clean wounds and dispense antibiotics within the course of a single ‘remed’ (remedy). In the United States, megachurches send thousands of doctors on evangelical medical missions each year, while in Colombia, contemporary artists are called on to assuage profound social trauma related to decades of military conflict. Examples like these show that art, magic, and medical practice have long been entangled technologies; sometimes working together, sometimes at odds with one another, these practices have always been in dialog about what ‘healing’ is and how it can be achieved. Attending to these entanglements this course asks ‘what does healing look like and feel like – in what ways do humans transform affliction?’ Together, we will investigate how everyday bodily experiences of ‘wellbeing’ and ‘illness’ are configured through art, magic, and medical practices across human communities, shaping how people understand and manage disorders from COVID-19 to schizophrenia, from ancestral trauma to breast cancer. Throughout the course, you will use ethnographic case studies & in-class activities to work through three aspects of the core class question: 1) how do art, magic, and medicine work in communities? 2) how are they experienced in communities (who has access to what kind of healing and who doesn’t have access; who can be a healer and who can’t be; what should and does healing/sickness feel like?) 3) how do they approach inequalities? (e.g. how and why are illnesses unequally distributed; what illnesses matter more (and less) than others; which communities should be saved (and which sacrificed).

Also Offered As: AFRC 354
Activity: Seminar
1.0 Course Unit
ANTH 359 Nutritional Anthropology
The course is an introduction to nutritional anthropology, an area of anthropology concerned with human nutrition and food systems in social, cultural and historical contexts. On the one hand, nutritional anthropologists study the significance of the food quest in terms of survival and health. On the other hand, they also know that people eat food for a variety of reasons that may have little, if anything, to do with nutrition, health, or survival. While the availability of food is dependent upon the physical environment, food production systems, and economic resources, food choice and the strategies human groups employ to gain access to and distribute food are deeply embedded in specific cultural patterns, social relationships, and political and economic systems. Thus, nutritional anthropology represents the interface between anthropology and the nutritional sciences, and as such, can provide powerful insights into the interactions of social and biological factors in the context of the nutritional health of individuals and populations. Because food and nutrition are quintessential biocultural issues, the course takes a biocultural approach drawing on perspectives from biological, socio-cultural and political-economic anthropology. Course content will include: a discussion of approaches to nutritional anthropology; basics of human nutrition; food systems, food behaviors and ideas; methods of dietary and nutritional assessment; and a series of case studies addressing causes and consequences to nutritional problems across the world.

Taught by: Hoke
Course not offered every year
Also Offered As: LALS 359, URBS 359
Activity: Lecture
1.0 Course Unit

ANTH 361 Global Food Security
This is an interdisciplinary course on the problems of food demand and consumption, production and supply in our increasingly globalized and urbanizing world. Special attention will be given to the intersections of current technologies of food production, current nutritional problems, environmental change and resource degradation, and the changing quality of human social life under globalization. Where and how will sufficient nutritious food be produced sustainably and how can the politics and economics of equitable distribution in such large urban populations be achieved? (Previously ANTH 561)

ANTH 362 Intro to Digital Archaeology
Digital methodologies are now an integral part of archaeological practice and archaeologists are now expected to possess basic computing skills and be familiar with a range of data collection, analysis and visualization techniques. This course will use case studies and applied learning opportunities centered on a course project to explore a broad array of digital approaches in archaeology. The technological underpinnings, professional procedures, and influences on archaeological practice and theory will be discussed for each method covered in the course. Applied learning opportunities in digital data collection methods will include aerial and satellite image analysis, global navigation satellite system (GNSS) survey, 3D scanning methods, close-range photogrammetry, and near-surface geophysical prospection. Students will also have opportunities for practical experience in digital database design and management, geographic information science (GIS) and 3D visualization. Students will communicate the results of the course project in a digital story that will be presented at the end of the term. Prior archaeological classwork and/or experience preferred.

Activity: Lecture
1.0 Course Unit

ANTH 368 Kinesthetic Anthropology
This class, team-taught by CEE Visiting Fellow Reggie Wilson and Deborah Thomas, investigates various forms of contemporary performance in relationship to Africanist forms and functions of dance, movement and action. We will concern ourselves with how the body knows, and with how we learn to identify the structures of movement that provide context, meaning and usefulness to various Africanist communities across time and space. Grounding ourselves within a history of ethnographic analyses of the body in motion, and within Africana theorizing about the affective power of the body, we will consider what people are doing when they are dancing. In other words, we will train ourselves to recognize the cultural values, social purposes, and choreographic innovations embedded in bodily action and motion. While we will attend to these phenomena in a range of locations throughout the African diaspora, we will also highlight aspects of the Shaker and Black Shout traditions in Philadelphia. The course will be divided between discussions centered on close reading of primary and secondary material (both text and video) and creative writing/movement exploration (no previous movement experience necessary).

Taught by: Wilson

Activity: Seminar
1.0 Course Unit
ANTH 377 Black Speculative Futures
Why do black cultural producers turn to the speculative? What, in turn, is speculative about blackness? These questions frame this seminar’s exploration of how black artists, theorists, and activists imagine different futures, often in the service of critiquing power asymmetries and creating radical transformation in the present. We will explore how the speculative works differently across black literature, visual culture and performance. Additionally, inspired by the multi-disciplinary work that we encounter in the course, we will experiment with crafting our own embodied speculative art in order to better understand its function as both art practice and politics. The course will be divided between discussions centered on close reading of primary and secondary material and creative writing/movement exploration (no previous movement experience necessary). Occasional guest lectures with visiting artists will provide additional fodder for our critical and creative work.

Activity: Seminar
1.0 Course Unit

ANTH 386 Desire and Demand II: Culture, Production, and Consumption in the Global Marketplace
The goal of this course is to understand and to investigate both historical and contemporary issues related to a culture of consumption. Reading topics cover both contemporary and scholarly issues in cultural anthropology, popular culture, consumer behavior, off-shore production, social networking, media and communications, financial and real estate markets and marketing. Class distinctions are equally interdisciplinary as we focus on investigating and identifying critical global/local linkages. We analyze the various ways in which Philadelphia and other ‘global cities’ are competing for consumer revenues. We ask what factors have led contemporary society reaching its current stage of mass consumption and how have certain goods and services been reconfigured, packaged or re-packaged to attract new consumers. In order to better understand the link between consumption and production factors we explore the relationship between outsourcing and/or offshore production and modern consumption. Approximately sixty percent of the seminar takes place in the classroom and will include lecture, class discussion, and films. The remaining portion of the class meetings will involve local and regional travel. Research assignments emphasize the use of anthropological participant-observation techniques to investigate the relationships between culture and contemporary mass consumption within the contexts of re-gentrification, urbanization, and globalization.

Taught by: Diggs-Thompson
Also Offered As: ANTH 586
Activity: Seminar
1.0 Course Unit

ANTH 391 Multi-Modal Ethnography: Anthropology Beyond Text
What does the digital age mean for humanistic, social scientific, and professional inquiry and practice? How do non-text based formats - such as film, dance and other kinds of performance, creative writing, and soundscapes - transform both the processes and products of research? How do they inform and transform our disciplines, and what might this mean for the communities with which we work? This advanced undergraduate seminar will address these (and other related) questions. Taught by the invited Fellows from the Center for Experimental Ethnography, this course will take shape differently each semester according to the Fellow’s area of expertise and practice. Students will be encouraged to explore alternative formats of representation that move beyond text while still being grounded in ethnographic research, and they will develop skills in relevant media. https://www.sas.upenn.edu/anthropology/courses/topics-courses

ANTH 402 Applied Research Skills in Global Community Health
While political borders remain, social and human borders fall with the increasing movement of people, ideas, and resources across geographies. What is global becomes local. While biomedical and counting sciences advance, the human experience and influence remain core to understanding behavior, beliefs, and awareness. What is human remains paramount. The Maya Western Highlands of Guatemala are undergoing health changes (trauma, maternal-infant health, diabetes, mental health) through economic development and continued human migration to and from the US. The Cobbs Creek neighborhood in West Philadelphia is also facing epidemics of non-communicable diseases. In this context, Applied Skills in Global Community Health will provide academic and professional skills development in comparing the role of culture, history and politics in the health of a population in transition (demographic, nutritional, epidemiologic, economic) in both settings. Classroom work will occur in the spring of each year combined with a short (1 wk) field experience in the Western Highlands of Guatemala. In addition students will examine health and community research in the Cobbs Creek neighborhood of West Philadelphia. Students may substitute 10 week field work as part of the companion course ANTH 403 for the 1 week experience.

Taught by: Barg/Bream
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ANTH 403 Field Experience in Global Community Health
The Maya Western Highlands of Guatemala are undergoing health changes (trauma, maternal-infant health, diabetes, mental health) through economic development and continued human migration to and from the US. The communities of Santiago Atitlan, Solola, San Juan Sacatepequez, and Coatepeque have community based infrastructures (public health clinics, private NGOs, and research projects) that work to address these health changes. In this context, the Field Experience in Global Community Health will provide applied academic and professional skills development in data collection, analysis, and reporting. Field work will occur in the summer of each year combined with a campus based skills development experience.

Taught by: Barg/Bream
Course usually offered in fall term
Activity: Independent Study
0.5 Course Units
ANTH 404 Introduction to the Human Skeleton
An introduction to the anatomy and biology of the human skeleton. Laboratory work will be supplemented by lectures and demonstrations on the development structure, function, and evolution of the human skeleton.
Taught by: Monge
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANTH 407 Human Evolution
An examination of fossils and other evidence documenting human evolution. Lectures and readings are supplemented with slide and fossil reproduction materials.
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANTH 415 Archaeology of Animals
This course introduces the study of animal bones from archaeological sites. Faunal analysis is an interdisciplinary science which draws methods from archaeology, biology, and paleontology. Bones, shells, and other remains yield evidence for the use of animals by humans, and evidence for the biology of animals and for past environments. The course will focus on research approaches to important transitions in human-animal relationships: the development of human hunting and fishing, animal domestication, early pastoralism, and the emergence of market economies in animal products. Class presentations will include lectures and discussion concerning research design and archaeological case material, with additional videos, slidework with field and laboratory equipment, and supervised work identifying and describing archaeological materials from the University Museum's collections. This class is taught in the Zooarchaeology Laboratory of the Center for the Analysis of Archaeological Materials.
Taught by: Moore
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANTH 419 Mining Archaeology
In ancient times, materials such as stone and metals were used to produce artifacts including pigments, jewelry, tools, and weapons. This course is designed to introduce students to research on the early exploitation of mineral resources. Which techniques were used to access and process raw materials in antiquity? Which archaeological methods can be used to investigate these features and artifacts? The course will provide worldwide examples through time, ranging from Stone Age flint mining, Iron Age rock salt mining to Medieval silver mining. Ethnographic studies and hands-on activities will contribute to our understanding of mining in archaeology, and artifacts from the Museum's collections will undergo scientific analysis in the Center for the Analysis of Archaeological Materials. Prerequisite: Desired but not mandatory.
ANTH 221/521 Material World in Archaeological Science
Taught by: Jansen
Course usually offered in spring term
Also Offered As: CLST 419, NELC 419
Activity: Seminar
1.0 Course Unit

ANTH 421 Anthropology In and Of Environmental Health
Anthropology provides a critical lens through which we can understand the multiple ways that environmental toxins affect human health and well-being. In this course, we will explore ways that politics, economics, social dynamics and communication strategies affect the uneven distribution of risk from environmental hazards. We will examine issues related to community engagement, environmental justice, risk perception, citizen science and environmental stigma. Students will have an opportunity to visit a local Superfund site.
Taught by: Barg
Course offered fall; odd-numbered years
Activity: Seminar
1.0 Course Unit

ANTH 424 Political Ecologies of the City
Cities have been centres of aspiration for much of human history. They have provided a limited yet critical focus for social mobility, both in political and economic terms. As large agglomerations of political and economic power, urban residents have also consumed growing proportions of the earth's mineral, food and water resources from the national (and international) body. The contradictory aspects of urban aspiration frame this course. Drawing on the frameworks of political ecology, in this course we think through the cities of the global south to understand how cities are made. To do this, we will first focus on the construction on the liberal city and how it has been occupied, both formally and informally, by urban subjects in most of the world. Next, we will learn about projects through which natural resources have been directed to and through the city. Finally we will conclude with a particular attention to how urban resources are claimed by marginalized migrants, and the particular sorts of governance institutions these practices engender.
Taught by: Anand
Course not offered every year
Also Offered As: URBS 424
Activity: Seminar
1.0 Course Unit

ANTH 429 Anthropology of the Environment
This seminar draws from social scientific and scientific literatures to explore current themes in the anthropology of the environment. We will investigate the links between climate change science and social science, and the ways in which anthropologists can contribute via in-depth fieldwork methodology and long engagement in issues of society-environment interactions. We will also explore how potential environmental, social, and biological impacts of global warming on the future are being assessed through conceptual paradigms linked to risk, probability, scenario forecasting, tipping points, planetary boundaries, and extinction.
Taught by: Petryna
Activity: Seminar
1.0 Course Unit

ANTH 433 Andean Archaeology
Consideration of the culture history of the native peoples of the Andean area, with emphasis on the pre-conquest archaeology of the Central-Andean region.
Taught by: Erickson
Course not offered every year
Also Offered As: CLST 419, NELC 419
Activity: Lecture
1.0 Course Unit
ANTH 440 Plants and Society
Interactions between humans and the living landscape around us have played - and continue to play - a fundamental role in shaping our worldview. This course is designed to introduce students to the diverse ways in which humans interact with plants. We will focus on the integration of ethnographic information and archaeological case studies in order to understand the range of interactions between humans and plants, as well as how plants and people have profoundly changed one another. Topics will include the origins of agriculture; cooking and plant processing; human health and the world of ethnomedicine; and poisonous and psychoactive plants. We will examine ancient plant material firsthand at the Center for the Analysis of Archaeological Materials (CAAM) and will handle botanical ecofacts from the Penn Museum's collections. Students will also carry out a substantial research project focused on an archaeological culture and plant species of their own interest.
Taught by: WHITE
Course not offered every year
Also Offered As: CLST 441
Activity: Seminar
1.0 Course Unit

ANTH 444 Human Growth and Development
In this course we will examine key issues and the processes involved in human growth and development. By their very nature, growth and development are biocultural processes that require an integrated analysis of social construction and biological phenomena. As such, we will incorporate insight from evolutionary theory, ecology, developmental biology, psychology, human biology, and cultural anthropology in our study of growth and development. Such an integrated perspective will help students to see that development is not just a biological unfolding from birth through adolescence and adulthood. Rather, development is best understood as a process that is deeply intertwined with the environment within which the organism develops. Additionally, we will apply these biocultural and socio-ecological insights to emerging health challenges associated with various developmental stages. The study of human growth and development is useful to all students in biological, health-related, and social sciences. Course enrollment is restricted to juniors, seniors, and graduate students only.
Taught by: Hoke
Course not offered every year
Activity: Seminar
1.0 Course Unit

ANTH 451 Historical Archaeology
Archaeology of the Modern World from the Columbian voyage (1492) to the 20th century. Topics such as the rise of early modern Europe, European exploration and colonization, African American Archaeology, Asian American Archaeology, the rise of colonial society, contact with native peoples, the Industrial Revolution, and the archaeology of the 20th century will be covered.
Taught by: Schuyler
Course not offered every year
Also Offered As: ANTH 751
Activity: Seminar
1.0 Course Unit

ANTH 454 Quantitative Analysis of Anthropological Data
This course is designed to provide students with a basic understanding of how to work with and present quantitative data. Topics include graphical display of numerical data, probability, sampling, descriptive and inferential statistics (parametric and non-parametric two-and three group tests, regression and correlation). Using examples drawn from the social sciences and anthropology, the focus is on teaching the logic behind quantitative arguments and statistical tests, rather than on the mathematical formulas, making the course especially relevant for students who do not have a strong background in mathematics. This course fulfills the Colleges Quantitative Data Analysis requirement.
One-term course offered either term
Activity: Lecture
1.0 Course Unit

ANTH 508 Conservation of Archaeological Sites and Landscapes
This seminar will address the history, theories, principles, and practices of the preservation and interpretation of archaeological sites and landscapes. The course will draw from a wide range of published material and experiences representing both national and international contexts. Topics will include site and landscape documentation and recording; site formation and degradation; intervention strategies including interpretation and display, legislation, policy, and contemporary issues of descendent community ownership and global heritage. Depending on the site, students will study specific issues leading toward the critique or development of a conservation and management program in accordance with guidelines established by ICOMOS/ ICAHM and other official agencies.
One-term course offered either term
Also Offered As: HSPV 747
Activity: Seminar
1.0 Course Unit

ANTH 511 Ethics, Archaeology, and Cultural Heritage
This seminar will explore some of the most important issues that are now a central part of archaeological, anthropological and historical research throughout the world. The identification and control of cultural heritage is a central part of the framework for research within other communities. Issues for this course will also include cultural identity, human rights, repatriation, colonialism, working with communities and many other topics. Field research today must be based upon a new series of ethical standards that will be discussed and examined within this class. Major topics include: cultural heritage - definitions and constructs, cosmopolitanism and collecting, archaeology and looting, cultural heritage preservation, museums - universal and national, museum acquisition policies, cultural identity, international conventions (including underwater issues), national laws of ownership, community based development, cultural tourism, development models, and human rights.
Taught by: Leventhal
Course not offered every year
Also Offered As: LALS 511
Activity: Seminar
1.0 Course Unit
ANTH 514 Petrography of Cultural Materials
Introduction to thin-section petrography of stone and ceramic archaeological materials. Using polarized light microscopy, the first half of this course will cover the basics of mineralogy and the petrography of igneous, metamorphic and sedimentary rocks. The second half will focus on the petrographic description of ceramic materials, mainly pottery, with emphasis on the interpretation of provenance and technology. As part of this course, students will characterize and analyze archaeological samples from various collections. Prior knowledge of geology is not required.
Taught by: Boileau
Course not offered every year
Also Offered As: AAMW 512, CLST 512
Activity: Seminar
1.0 Course Unit

ANTH 519 Psychoanalysis and Anthropology
This course will introduce students to the rich literature that has grown up around the encounter between psychoanalysis and anthropology, from totem and taboo, to studies of the Oedipus complex, child-rearing practices, ritual symbolism, mythology, and dreams. The class will also look to the future, endeavoring to examine as well such issues as the role of computers (are they self objects?) and the internet (including such online games as ‘Second Life’), dreams in space alien abduction narratives, sexuality in advertising, political psychology, and other contemporary issues. This course counts towards the Psychoanalytic Studies (PSYS) Minor.
Taught by: Urban/Blum
Course not offered every year
Also Offered As: ANTH 309
Activity: Seminar
1.0 Course Unit

ANTH 521 Material World in Archaeological Science
By focusing on the scientific analysis of inorganic archaeological materials, this course will explore processes of creation in the past. ANTH 221/521 will take place in the Center for the Analysis of Archaeological Materials (CAAM) and will be team taught in three modules: analysis of lithics, analysis of ceramics and analysis of metals. Each module will combine laboratory and classroom exercises to give students hands-on experience with archaeological materials. We will examine how the transformation of materials into objects provides key information about past human behaviors and the socio-economic contexts of production, distribution, exchange and use. Discussion topics will include invention and adoption of new technologies, change and innovation, use of fire, and craft specialization.
Taught by: Boileau/Dibble/Jansen
Course not offered every year
Also Offered As: ANTH 221, ARTH 230, CLST 244, NELC 284, NELC 584
Activity: Lecture
1.0 Course Unit

ANTH 527 Cultural Heritage and Conflict
Intentional destruction of cultural heritage is designed to erase the presence of a people in history and has become an all too familiar feature of the devastation wrought by contemporary violence and ‘ethnic cleansing.’ Recent cases appear frequently in news headlines and include such well-known examples as the 2001 demolition of the Bamiyan Buddhas in Afghanistan, the 2012 destruction of Sufi shrines in Timbuktu, Mali, and the recent obliteration of historic sites across Syria and Iraq. This course explores this phenomenon by examining such questions as: Why is cultural heritage targeted in conflict? Under what circumstances? By whom? In so doing, we will engage with readings that discuss the historical development of the international laws and norms that aim to protect cultural heritage during conflict and examples successful and unsuccessful humanitarian interventions.
Taught by: Brian Daniels
Course not offered every year
Activity: Lecture
1.0 Course Unit

ANTH 529 Psychoanalytic and Anthropological Perspectives on Childhood
How do people become who they are, both similar to others and uniquely individual? How might these similarities and differences be shaped by childhood experiences in family, community, and societies around the world? How do children develop emotionally? Morally? What features of human development, expression of emotions, and relational patterns are universal for our species? What features are not universal? And what is and is not known about these questions? In this course, we will consider these and many other questions. We will read about and discuss complex and dynamic interactions between culture and individual psychology, and between nature and nurture from birth to adulthood. We will carefully examine various phases of human development as described by psychoanalysts and anthropologists. The course includes anthropologic and psychoanalytic readings and videotapes, as well as literature, fairy tales, and mythologies from cultures around the world. The instructors are both psychoanalysts, one a psychiatrist and one a pediatrician. The course counts towards the Psychoanalytic Studies (PSYS) Minor.

ANTH 531 Women Making History: The Penn Museum and the Centennial 2020

The year 2020 marks the 100th anniversary of the 19th Amendment to the U.S. Constitution, which declared that the right of citizens to vote 'shall not be denied or abridged by the United States or by any State on account of sex'. To mark this centennial - to both celebrate it and critically assess its impact on American society - we will investigate the history of women at the Penn Museum as archaeologists, ethnographers, epigraphers, philanthropists, and more. At the same time, we will examine material in the Penn Museum that women collected, donated, or studied. Our goal will be to produce original research that may contribute to future exhibits and publications as well as to broader public forums. Sponsored by the Department of Near Eastern Languages and Civilizations, our seminar will focus heavily on western Asia, southeastern Europe, and North Africa - all zones that scholars have variously associated with the Near East or Middle East, and where the Penn Museum has been active since its foundation in 1887. To situate the Penn Museum and its collections within a global and comparative frame, we will also study select women who made major scholarly contributions to other parts of the world such as the Americas and Oceania. Among the figures we will study are Sarah Yorke Stevenson (Egypt), Katharine Woolley (Mesopotamia/Iraq), Harriet Boyd Hawes (Ottoman Crete and Greece), Florence Shotridge (Alaska), Zelia Nuttall (Mexico and Russia), and Tatiana Proskouriakoff (Guatemala). We will venture into many different kinds of history. In regional terms, our scope will be transnational and international: we will cover the United States and the Middle East in the wider world. In thematic and methodological terms, we will approach our subject through biography, oral history, and microhistory; material history and museum studies; cultural and intellectual history; women’s and gender studies; and the history of academic disciplines, especially archaeology and anthropology. Some background in Middle Eastern history; or Anthropology; or Women’s History; or Museum Studies recommended.

Also Offered As: ANTH 351, GSWS 331, GSWS 533, NELC 331, NELC 531
Activity: Seminar
1.0 Course Unit

ANTH 533 Archaeobotany Seminar

In this course we will approach the relationship between plants and people from archaeological and anthropological perspectives in order to investigate diverse plant consumption, use, and management strategies. Topics will include: archaeological formation processes, archaeobotanical sampling and recovery, lab sorting and identification, quantification methods, and archaeobotany as a means of preserving cultural heritage. Students will learn both field procedures and laboratory methods of archaeobotany through a series of hands-on activities and lab-based experiments. The final research project will involve an original in-depth analysis and interpretation of archaeobotanical specimens. By the end of the course, students will feel comfortable reading and evaluating archaeobotanical literature and will have a solid understanding of how archaeobotanists interpret human activities of the past.

ANTH 536 The Peopling of the Americas

The peopling of the Americas is a question that has intrigued scholars and laymen for over 500 years. The origin of Native Americans was also a seminal issue during the emergence of American Anthropology as a discipline at the turn of the 20th century, with research on this topic animating current studies of ethnohistory, indigenous archaeology, post-colonialism and repatriation. The proposed course will review the scholarship dedicated to describing this long history from an interdisciplinary perspective. It will explore their roots in the expansion of modern humans into Eurasia, evaluate the new archeological and genetic research that has fundamentally altered our understanding of the migration history and diversity of indigenous peoples in the American continents, and examine issues of identity, ethnicity and cultural heritage in contemporary Native populations that extend from this knowledge. The course will further draw on the instructor's fieldwork experiences working with indigenous communities in Alaska, Canada, the Lower 48, Mexico and the Caribbean, as well as native Siberians in Russia, where the cultural and biological roots of ancestral Native American populations lie.

ANTH 543 Public Environmental Humanities

This broadly interdisciplinary course is designed for Graduate and Undergraduate Fellows in the Penn Program in Environmental Humanities (PPEH) who hail from departments across Arts and Sciences as well as other schools at the university. The course is also open to others with permission of the instructors. Work in environmental humanities by necessity spans academic disciplines. By design, it can also address and engage publics beyond traditional academic settings. This seminar, with limited enrollment, explores best practices in public environmental humanities. Students receive close mentoring to develop and execute cross-disciplinary, public engagement projects on the environment.

Activity: Seminar
1.0 Course Unit

ANTH 546 Global Citizenship

This course examines the possibilities and limitations of conceiving of and realizing citizenship on a global scale. Readings, guest lecturers, and discussions will focus on dilemmas associated with addressing issues that transcend national boundaries. In particular, the course compares global/local dynamics that emerge across different types of improvement efforts focusing on distinctive institutions and social domains, including: educational development; human rights; humanitarian aid; free trade; micro-finance initiatives; and the global environmental movement. The course has two objectives: to explore research and theoretical work related to global citizenship, social engagement, and international development; and to discuss ethical and practical issues that emerge in the local contexts where development initiatives are implemented.

ANTH 547 Anthropology and Education
An introduction to the intent, approach, and contribution of anthropology to the study of socialization and schooling in cross-cultural perspective. Education is examined in traditional, colonial, and complex industrial societies.
Taught by: Hall or Posecznick
Course offered summer, fall and spring terms
Also Offered As: EDUC 547, URBS 547
Activity: Lecture
1.0 Course Unit

ANTH 548 Colonialism and its Legacies
In this course we explore the history and long-term consequences of European colonial expansion, with a primary focus on Eurasia and on the British Empire, though we will range further afield as needed. Rather than attempting a comprehensive historical overview, we will use a series of case studies to illustrate changing understandings of colonialism and associated processes, including anti-colonial movements, decolonization, postcoloniality, and the enduring effects of colonialism in the present. This is a seminar-style course.

ANTH 551 Experimental Ethnography at the Interfaces of the Arts & Sciences
This course takes inspiration from conversations and practices occurring at the interfaces of cultural anthropology, the environmental humanities, and feminist science studies. Anthropologist Stuart McLean (2017) has asked: 'What might become of anthropology if it were to suspend its sometime claims to be a social science? What if it were to turn instead to exploring its affinities with art and literature as a mode of engaged creative practice carried forward in a world heterogeneously composed of humans and other than humans? At the same time, the emergence of the environmental humanities as an academic discipline in the twenty-first century reflects the growing conviction on the part of diverse sectors that 'environmental' problems cannot be solved by science and technology alone. Instead, cultivation of experimental methods and alliance building between the arts and social and natural sciences has become ever more important strategy in terms of fomenting public engaged scholarship. In this course, we will not necessarily suspend the social scientific claims of anthropology, and ethnography more specifically, but we will push our methodological premises and conceptual work to experiment with our objects of study, matters of concern, and the diverse materialities that emerge from and participate in our ethnographic work.
Taught by: Lyons
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ANTH 557 Seminar in Archaeological Theory and Method: Archaeology of Landscapes
Advanced seminar for potential professional archaeologists. Course will examine critically main past and present theoretical issues in archaeological research and interpretation, and consider various methodologies utilized towards these interpretive ends. Prerequisite: If course requirement not met, permission of instructor required.
Taught by: Erickson

ANTH 559 Audio Ethnography
This is an intensive, graduate-level, practice-based course in which students will record, edit, and produce anthropologically informed audio works that record and interpret culture and lived experience. Projects in this class will look beyond conventional linguistic or musical codes to sounds whose semiotic or affective value may be less immediately evident. Through the process of making location recordings, analyzing those recordings, composing them into autonomous works, and critiquing every step of the way, this course will engage with questions of ethnographic representation through the medium of sound. In parallel with contextualizing readings and sound projections, throughout the semester students will work intensively on audio projects, receiving training on recording techniques, audio editing, and basic post-production techniques. The course is an opportunity to open up the question of what might constitute 'audio documentary' or 'ethnographic audio'. Presentation strategies for final projects will be discussed and decided on individual bases. Projects will be situated in relationship to cognate fields, including the anthropology of the senses, interdisciplinary sound studies, ethnomusicology, ethnographic cinema, sound art, sound mapping, soundscape composition, and experimental nonfiction media practices which involve location recording. Through weekly sound projections and home listening, students will also gain a familiarity with existing genres and uses of nonfiction audio in anthropology and related fields.

Activity: Seminar
1.0 Course Unit
ANTH 560 Critical Ethnography
This graduate course introduces students to theories, practices, and critiques of critical ethnography. Ethnography – an approach to the study of culture which anthropologist James Clifford described as a process that ‘translates experiences into text’ - will have our full attention. This process of translation, although seemingly straightforward, requires layers of interpretation, selection, and the imposition of a viewpoint or politics. While ethnography is often narrowly conceived of as a methodology, this course considers ethnography as a mode of inquiry, as a philosophy, as an ongoing question and performance. We wrestle with notions of 'the self' and 'the other' at the intersection of imbriicated cultural and performance worlds. Together we'll ask: How is ethnography both critical and performative? What is the relationship between theory and method? How can we evaluate ethnographic work? And finally, what kinds of ethnographers do we want to be? This course considers a range of ethnographic examples in order to analyze both the craft and the stakes of ‘translating experiences into text.’

ANTH 562 Intro to Digital Archaeology
Digital methodologies are an integral part of contemporary archaeological practice, and demand that archaeologists hold a new set of skills and knowledge fundamentals. This course will expose students to a broad range of digital approaches through a review of relevant literature and through applied learning opportunities centered on a course project. The technological underpinnings, best practices, and influences on archaeological practice and theory will be discussed for each method covered in the course. Applied learning opportunities in digital data collection methods will include: aerial and satellite remote sensing, global navigation satellite system (GNSS) survey, 3D scanning methods, close-range photogrammetry, and near-surface geophysical prospection. Students will also have opportunities for practical experience in digital database design and management, geographic information science (GIS) and 3D modeling and visualization. Students will communicate the results of the course project in a digital story that will be presented at the end of the term. Prior archaeological classwork and/or experience preferred.

Also Offered As: AAMW 562, ANTH 362, CLST 362, CLST 562, NELC 362
Activity: Lecture
1.0 Course Unit

ANTH 564 Colonial Ecologies
This seminar explores the historical ecology of European colonial expansion in a comparative framework, concentrating on the production of ‘periphery’ and the transformation of incorporated societies and environments. We begin with a discussion of the theoretical frameworks, sources of evidence, and analytical strategies employed by researchers to address the conjunction of environmental and human history in colonial contexts, including underdevelopment and global systems of circulation; political ecology, and ecological imperialism. We then discuss the circulation of persons, crops, invasives, and microbes as fundamental conditions of emerging global systems. Drawing on these elements, we discuss landscapes as sites of misrecognition, rationalization, and cultural production. This discussion sets the stage for an examination of novel forms of economic and ecological production, including the emergence of the ‘drug foods’, the transformation of forest products, and the rise of the plantation. We then consider the political ecology of crisis in colonial settings, including agrarian collapse, famine, and ‘ecological poverty.’
Taught by: Lycett
Course not offered every year
Activity: Seminar
1.0 Course Unit

ANTH 567 Living World in Archaeological Science
By focusing on the scientific analysis of archaeological remains, this course will explore life and death in the past. It takes place in the Center for the Analysis of Archaeological Materials (CAAM) and is team taught in three modules: human skeletal analysis, analysis of animal remains, and analysis of plant remains. Each module will combine laboratory and classroom exercises to give students hands-on experience with archaeological materials. We will examine how organic materials provide key information about past environments, human behavior, and cultural change through discussions of topics such as health and disease, inequality, and food.

Also Offered As: ANTH 267, CLST 268, CLST 568, NELC 286, NELC 586
Activity: Lecture
1.0 Course Unit

ANTH 572 Geophysical Prospection for Archaeology
Near-surface geophysical prospection methods are now widely used in archaeology as they allow archaeologists to rapidly map broad areas, minimize or avoid destructive excavation, and perceive physical dimensions of archaeological features that are outside of the range of human perception. This course will cover the theory of geophysical sensors commonly used in archaeological investigations and the methods for collecting, processing, and interpreting geophysical data from archaeological contexts. We will review the physical properties of common archaeological and paleoenvironmental targets, the processes that led to their deposition and formation, and how human activity is reflected in anomalies recorded through geophysical survey through lectures, readings, and discussion. Students will gain experience collecting data in the field with various sensors at archaeological sites in the region. A large proportion of the course will be computer-based as students work with data from geophysical sensors, focusing on the fundamentals of data processing, data fusion, and interpretation. Some familiarity with GIS is recommended.

Activity: Laboratory
1.0 Course Unit
ANTH 576 Anthromedialities: Experimental Theory and Practice
In recent years much has been made of the 'beyond text' turn in anthropology, specifically the need to re-evaluate the singular authority of 'writing culture.' Several new approaches advocate for non-textual mediations, with representations originating in both sonovisual media and performance. Less, however, has been theorized and advocated about intermediality and the multicompositional practices of transmediality and plurimediability, specifically their more transgressive multisensory epistemology. This course will examine these radical approaches to interacting textual, visual, sonic and performative mediations, theorizing their epistemic and ethical implications, collaborative potentials, affordances in narrative and non-narrative representation, and political and aesthetic investments. Students will both critically engage histories of transmedial anthropology, and produce projects that are multicompositional.

1.0 Course Unit

ANTH 577 Everyday States: The Anthropology of Power and Politics
While anthropologists have long been interested in political systems, they have in recent years made the modern state a critical site of ethnographic analysis. By focusing on everyday practice of officials in the Global North and South, anthropologists have drawn attention to the creative ways in which state actors and subjects of rule make and maintain its powerful institutions. Even as bureaucracies are formalized and instituted as sites of rational order and even-handed administration, scholars of everyday state formation have drawn attention to the ways that state authority depends on and reproduces racialized, gendered and geopolitical inequality. Indeed, like many other social institutions, racialized states are constituted through differentiated relations between government workers and the governed, through everyday rituals of violence and sovereignty, discipline and improvement. The class begins with a review of some influential theorizations of the modern state. Next, we focus on how political authority and social difference are produced by the everyday work of states. We attend to the colonial, racialized and gendered workings of states—particularly through their efforts to discipline black and brown bodies through sovereign violence and differentiated plans and programs of development. Finally, we will conclude the class by attending to the political work of subordinated groups as they demand distributive justice, equity and full citizenship in 'most of the world.'

Course offered spring; odd-numbered years
Activity: Seminar
1.0 Course Unit

ANTH 580 Domestication
Domestication: one of the most frequently cited 'major transitions' in our global past. The story of domestication is not consigned to deep time though - it is interwoven with current movements. Rewilding, feralization, paleodiet, and GMO, all have intersections with the concept of domestication, and are politicised through the lens of the archaeology and anthropology of the 'domesticated'. Traditionally, study of the domestication process has been the exclusive domain of archaeologists and agricultural scientists; today it is an increasingly a multidisciplinary enterprise involving specialists across the sciences and humanities and, importantly, multiple voices that are changing the way we think about this as a single 'process'. In this seminar series we are going to unpick this term: what is 'domestication', how did (or does) it unfold, when did it start and has it ended? And perhaps most importantly, should we even be using this term at all? We will look back to the origins of the ideas, explore the influence of Darwinian thinking, 19th century philosophy, and explore alternative ideas such as familiarisation and multi-species thinking to question the dominance of 'domestication' in the archaeological and anthropological literature. The course is appropriate for graduate students interested in exploring this topic in a dynamic conversation. Students will be expected to lead discussions of specific works, as well as explore beyond the reading list or present aspects of their own present or proposed future research.
Taught by Bates
Course not offered every year
Activity: Seminar
1.0 Course Unit

ANTH 583 Ethnographic Filmmaking
This ethnographic methodology course considers filmmaking/videography as a tool in conducting ethnographic research as well as a medium for presenting academic research to scholarly and non-scholarly audiences. The course engages the methodological and theoretical implications of capturing data and crafting social scientific accounts/narratives in images and sounds. Students are required to put theory into practice by conducting ethnographic research and producing an ethnographic film as their final project. In service to that goal, students will read about ethnography (as a social scientific method and representational genre), learn and utilize ethnographic methods in fieldwork, watch non-fiction films (to be analyzed for formal properties and implicit assumptions about culture/sociality), and acquire rigorous training in the skills and craft of digital video production. This is an ABCS course, and students will produce short ethnographic films with students in Philadelphia high schools as part of a partnership project with the School District of Philadelphia. Due to the time needed for ethnographic film production, this is a year-long course, which will meet periodically in both the fall and spring semesters.
Taught by Hall,Kathleen & Das,Amit
Two terms. student must enter first term.
Also Offered As: EDUC 586
Activity: Seminar
1.0 Course Unit
ANTH 586 Desire and Demand II: Culture, Production, and Consumption in the Global Marketplace
The goal of this course is to understand and to investigate both historical and contemporary issues related to a culture of consumption. Reading topics cover both contemporary and scholarly issues in cultural anthropology, popular culture, consumer behavior, off-shore production, social networking, media and communications, financial and real estate markets and marketing. Class distinctions are equally interdisciplinary as we focus on investigating and identifying critical global/local linkages. We analyze the various ways in which Philadelphia and other ‘global cities’ are competing for consumer revenues. We ask what factors have led contemporary society reaching its current stage of mass consumption and how have certain goods and services been reconfigured, packaged or re-packaged to attract new consumers. In order to better understand the link between consumption and production factors we explore the relationship between outsourcing and/or offshore production and modern consumption. Approximately sixty percent of the seminar takes place in the classroom and will include lecture, class discussion, and films. The remaining portion of the class meetings will involve local and regional travel. Research assignments emphasize the use of anthropological participant-observation techniques to investigate the relationships between culture and contemporary mass consumption within the contexts of re-gentrification, urbanization, and globalization.

ANTH 589 It was the Law at the Time: Museums, Colonialism, and the Question of Property
Current discussions about who owns cultural property, especially in relation to objects acquired under and during Europe’s colonial project, form their arguments, limits and possibilities around international legal instruments such as UNESCO’s conventions on cultural property. Like broader claims for reparations by formally colonized peoples, legal demands for reparations or restitution with regard to cases of colonial injustice often run up against responses such as ‘it was the law at the time’ or ‘it was a long, long time ago and therefore there are no legal venues for claimants today’. The CARICOM-claim regarding reparations for slavery submitted by a number of Caribbean states, as well as demands regarding cultural treasures looted in the late 19th century in different parts of Africa and elsewhere, are clear examples of this phenomenon. Proposed solution for these conflicts almost always circumvent questions of ownership (at the time) or other legal possibilities. They are sought in extra-legal ways. Increased attention for these and similar cases have fueled new research into the histories of slavery and colonialism, and into the provenance of colonial cultural objects in Western museums. Similarly there is an increasing number of research projects that explore, for example, the fate of colonial objects in Europe, in relation to the fate of Nazi-looted art. While the legal limits of current claims form part of the investigation of many of these studies, they often fail to pay serious attention to the relationship between the law and the colonial project itself. Importantly, they also fail to explore the relationship between the law, questions of property and the ‘creation’ of the colonized subject. This seminar will focus on this nexus and will interrogate the role of law within the colonial era, especially with regard to the legal fashioning of hierarchies of colonial subjects and colonial objects. In what ways is the law implicated the colonial project itself, and what role did it place in the fashioning of colonial subjects and colonial objects? Moreover, what role should an attentiveness at the law play in today's debates around reparation or restitution/ These are some of the key questions that the course will explore. Bringing together readings from legal and political philosophy, material culture and critical heritage studies, this course explores some of the key debates and texts surrounding questions of law, philosophy, colonialism and questions around reparations or restitution of cultural objects. Students will be introduced to the works of some of the key thinkers on which contemporary notions of ownership, the legal subject and (cultural) property are based, probing their genealogy in relation to the racial hierarchies established under the colonial project. We will explore both the history and application of legal frameworks that governed colonial subjects and (cultural) objects alike and their basis in legal philosophy. Is there reason to rethink the role of law within debates around reparations and restitution? And, last but not least: are there reasons to rethink the idea of property itself? What other genealogies of the law can we trace to think differently about ownership of (cultural) property?
Taught by: Modest

ANTH 591 Multi-Modal Ethnography: Anthropology Beyond Text
What does the digital age mean for humanistic, social scientific, and professional inquiry and practice? How do non-text based formats - such as film, dance and other kinds of performance, creative writing, and soundscapes - transform both the processes and products of research? How do they inform and transform our disciplines, and what might this mean for the communities with which we work? This advanced undergraduate seminar will address these (and other related) questions. Taught by the invited Fellows from the Center for Experimental Ethnography, this course will take shape differently each semester according to the Fellow’s area of expertise and practice. Students will be encouraged to explore alternative formats of representation that move beyond text while still being grounded in ethnographic research, and they will develop skills in relevant media. https://www.sas.upenn.edu/anthropology/courses/topics-courses
Taught by: Varied
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ANTH 593 Natural and Cultural Heritage in Global Perspective
This seminar will explore the ideas surrounding the theories, discourses, and practices surrounding natural and cultural heritage. Heritage has become inscribed in the planning of urban and rural landscapes, designed as tourist destinations, and considered a universal good in global cosmopolitan society. But it would be well to ask: what kind of ‘nature’ and ‘culture’ has been labeled as heritage? What kind of organizations, economics, and politics are necessary to sustain it? How are these put in place? By whom? For whom? Over the course of the semester, students will engage with readings that discuss how cultural and natural heritage is communicated to the public and the relationship between academic critique and pragmatic social engagement. This seminar is further grounded by a partnership between the Penn Cultural Heritage Center and the U.S. Mission to UNESCO focused on the assessment of World Heritage Sites, and students will have the opportunity to learn from and participate in specific case studies.
Taught by: Daniels
Course not offered every year
Activity: Seminar
1.0 Course Unit

ANTH 598 The Economics of Heritage
Governmental resources for archaeological and heritage sites are declining worldwide while commercial and economic development initiatives are threatening the fabric of heritage and the larger landscape environment to ever greater degrees. As a consequence, the competition for resources to protect and preserve heritage is intensifying, as is the challenge to articulate the value of heritage resources vs. competing commercial or public projects. This is the context for understanding the issues surrounding the definition of the value of cultural heritage assets and the tools available for their measurement and management. This course explores in some depth issues relating to the economic analysis of heritage and culture. It is designed to provide students with a foundational understanding of the economics of heritage-related projects, the tools and techniques available for their analysis and the ethical and practical issues of public policy and private actions that determine the future of heritage resources. Readings and case studies will explore technical, practical and ethical issues that arise in cultural heritage economics. Relevant analytical techniques will be introduced and particular emphasis will be placed on commercial, government and community issues unique to heritage-related activities. Special emphasis will be placed upon developing pertinent strategies for the tourist industry. Students will produce one case-study project intended to integrate the technical and practical aspects of the course.
Taught by: Peter Gould

1.0 Course Unit

ANTH 600 Contemporary Archaeology in Theory
This graduate seminar addresses contemporary anthropological archaeology and considers the varied ways inferences are made about past and present human behavior from the archaeological record. It reviews such fundamental topics as the use of analogy, Middle Range theory, symbolism and meaning, social and cultural evolution, ideology and power, feminism and gender, and indigenous (non-Western) perspectives. It also foregrounds basic issues regarding heritage, looting, and ethics.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
Notes: First-year anthropology graduate students.

ANTH 602 Evolutionary Anthropology
This course will explore various subfields of biological anthropology to better understand what it means to be human. Special attention will be paid to current issues and problems in these subfields, and the different ways in which researchers are attempting to understand and uncover the details of human evolution. Among the areas that are explored in this course are paleoanthropology, primatology, human biology, molecular anthropology, evolutionary medicine, epigenetics, and human life history. Specific issues to be explored include the primate roots of human behavior, brain and language evolution, new fossil hominins, the origins of anatomically modern humans, and modern human migration history.
Taught by: Schurr
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
Notes: First-year anthropology graduate students.
ANTH 603 Language in Culture and Society
First-year anthropology graduate students or Instructor Permission. Examination of properties of human language which enable social persons to interpret the cultural world and to act within it. Topics include: principles of lexical and grammatical organization; the role of language structure (grammar) and linguistic context (indexicality) in discursive activity; referential uses of language; social interaction; markers of social role, identity, and group-belonging; criteria by which models of linguistic form and function are formulated; the empirical limits within which different models have explanatory value.

ANTH 607 Contemporary Native Americans
This course examines the social and political lives of contemporary Native American Indians in the United States and Canada. Topics include: Indigenous identity; homelands and natural resources; popular culture and media; Indigenous arts and cultural expression; museum representations; athletics; gender relations; tribal recognition and sovereignty; and resistance movements. We will consider the origins of federal programs and legislation that have become essential to the protection of Native American freedoms. Students can expect to gain an appreciation of the complexity and cultural diversity of Native communities and tribal nations and insights into their interactions with other cultures over time.

Activity: Independent Study
1.0 Course Unit
Notes: May be repeated for credit

ANTH 621 Directed Field Training and Research
This course examines the manner in which humans encounter the continuous and gradable features of phenomena in social life - sensory qualities of objects, people's aspirations and affect, pitch movement during voiced talk, monsoons and sea breezes, biological growth and environmental degradation, migratory flows in transnational settings - and attempt to evaluate or convert them into discrete dimensions of social life. We examine how intensities and gradients are managed in everyday life as well as in institutional settings - through government policies, scientific protocols, surveillance regimes, infrastructural agendas - and we survey the ways in which everyday and institutional practices reflect and shape each other in societies across the world. In particular, we explore the question of what an anthropology of intensity might look like, and how it may reconfigure approaches to the ethnographic study of human affairs.
Taught by: Carruthers
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit

ANTH 626 Intensity
This course examines the manner in which humans encounter the continuous and gradable features of phenomena in social life - sensory qualities of objects, people's aspirations and affect, pitch movement during voiced talk, monsoons and sea breezes, biological growth and environmental degradation, migratory flows in transnational settings - and attempt to evaluate or convert them into discrete dimensions of social life. We examine how intensities and gradients are managed in everyday life as well as in institutional settings - through government policies, scientific protocols, surveillance regimes, infrastructural agendas - and we survey the ways in which everyday and institutional practices reflect and shape each other in societies across the world. In particular, we explore the question of what an anthropology of intensity might look like, and how it may reconfigure approaches to the ethnographic study of human affairs.
Taught by: Carruthers
Activity: Seminar
1.0 Course Unit

ANTH 628 Language in Culture and Society: Special Topics
The course is devoted to a single research topic of contemporary interest in linguistic anthropology. Topics vary from year to year. Readings locate current debates in relation to longstanding assumptions in the literature and new directions in contemporary research.
Taught by: Agha
Course not offered every year
Activity: Seminar
1.0 Course Unit
ANTH 630 Intensive Language Training in Anthropology
This course is designed to allow graduate students to obtain in-depth training in a scholarly language that will be utilized for dissertation fieldwork and satisfying the language exam for the Department of Anthropology Graduate Program. Through this intensive training in the oral and written forms of a language, students will accelerate their competency in it, while also potentially preparing themselves for advanced language training through tutorials or summer immersion programs.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit

ANTH 633 Forensic Anthropology
This course will investigate and discuss the various techniques of analysis that biological anthropologists can apply to forensic cases. Topics include human osteology, the recovery of bodies, the analysis of life history, the reconstruction of causes of death, and various case studies where anthropologists have contributed significantly to solving forensic cases. Discussions will include the limitations of forensic anthropology and the application of DNA recovery to skeletal/mummified materials.
Taught by: Monge
Course not offered every year
Also Offered As: ANTH 230, CRIM 230
Activity: Lecture
1.0 Course Unit

ANTH 634 Feminist Ethnography
This course will investigate the relationships among women, gender, sexuality, and anthropological research. We will begin by exploring the trajectory of research interest in women and gender, drawing first from the early work on gender and sex by anthropologists like Margaret Mead and Ruth Benedict; moving through the 1970s and 1980s arguments about gender, culture, and political economy; arriving at more current concerns with gender, race, sexuality, and empire. For the rest of the semester, we will critically read contemporary ethnographies addressing pressing issues such as nationalism, militarism, neoliberalism and fundamentalism. Throughout, we will investigate what it means not only to ‘write women’s worlds’, but also to analyze broader socio-cultural, political, and economic processes through a gendered lens. We will, finally, address the various ways feminist anthropology fundamentally challenged the discipline's epistemological certainties, as well as how it continues to transform our understanding of the foundations of the modern world. Prerequisite: Should have some functional knowledge of Cultural Anthropology.
Taught by: Thomas
Course not offered every year
Also Offered As: AFRC 334, AFRC 634, ANTH 334, GSWS 334, GSWS 634
Activity: Seminar
1.0 Course Unit

ANTH 636 Iraq: Ancient Cities and Empires
Iraq: Ancient Cities and Empires is a chronological survey of the ancient civilization that existed in the drainage basin of the Tigris and Euphrates Rivers from the early settled village farming communities of the 7th millennium BCE to the middle of the 1st millennium BCE, when Nebuchadnezzar II ruled Babylon and much of the Middle East. Though organized period by period, NELEC 241 explores various social, political, economic, and ideological topics, exposing students to various strands of evidence, including settlement survey data, excavated architectural remains, artifacts, and documentary sources, as well as an eclectic mix of theoretical perspectives. The course aims to provide students with a strong foundation for the further study of the ancient and pre-modern Middle East.
Taught by: Zettler
Course not offered every year
Also Offered As: ANTH 236, NELEC 241, NELEC 641, URBS 236
Activity: Lecture
1.0 Course Unit

ANTH 642 Ethnographies in Linguistic Anthropology
This course provides graduate students in linguistic anthropology and allied fields an opportunity for sustained, critical engagement with ethnographic monographs in linguistic and semiotic anthropology. Readings vary yearly, but run the gamut from the classical or ‘canonical’ to the contemporary or ‘experimental’. Recurring concerns include: the nature of the ethnographic monograph as text-artifact; the presentation and exposition of ethnographic and linguistic particulars; questions of ‘authorial voice’; and the registers, genres, and styles of ethnographic representation obtaining in the linguistic anthropological tradition.
Taught by: Carruthers
Course usually offered in spring term
Prerequisite: ANTH 603
Activity: Seminar
1.0 Course Unit

ANTH 643 Globalization And Its Historical Significance
Globalization is one of the most comprehensive topics of our time, and also one of the most controversial. This course assesses the current state of globalization, considering it in terms of economic, political, and cultural change, and follows its progress through the semester. The class will be led through the main topics and debates, introduced to conceptual and empirical tools for framing academic discussion and research about its dynamics, how and when it began, and (most particularly) how it differs from earlier episodes of historical change.
Taught by: Spooner
Course not offered every year
Activity: Seminar
1.0 Course Unit
ANTH 649 Molecular Anthropology
In this course, we will explore the molecular revolution in biological anthropology. In particular, we will examine how molecular data can be used to illuminate anthropological questions concerning human origins, evolution, and biological variation. Some of the specific topics to be covered in this course are the phylogenetic relationships among primates, kinship in apes and monkeys, the hominoid trichotomy, modern human origins and migrations, Neanderthal and Denisovan admixture with modern humans, biogeogenetics of skin color, and physiological, phenotypic, and disease adaptations.

Taught by: Schurr
Course not offered every year
Also Offered As: ANTH 592
Activity: Seminar
1.0 Course Unit

ANTH 654 Topics in Anthropology and the Modern World
This course relates anthropological models and methods to current problems in the Modern World. The overall objective is to show how the research findings and analytical concepts of anthropology may be used to illuminate and explain events as they have unfolded in the recent news and in the course of the semester. Each edition of the course will focus on a particular country or region that has been in the news.

Taught by: Spooner
Course usually offered in fall term
Also Offered As: ANTH 100, NELC 281, NELC 681, SAST 161
Activity: Lecture
1.0 Course Unit

ANTH 655 Methods and Grantwriting for Anthropological Research
This course is designed for third- and fourth-year graduate students in anthropology who are working on their dissertation research proposals and submitting grants. Graduate students from other departments who will be submitting grant proposals that include an ethnographic component are also welcome. Students will develop their proposals throughout the course of the semester, and will meet important fall submission deadlines. They will begin by working with various databases to search funding sources relevant to the research they plan to conduct. In-class sessions, they will also work with the professor and their peers to refine their research questions, their methods, the relationship of any previous research to their dissertation fieldwork, and the broader theoretical and ‘real-world’ significance of their proposed projects. Finally, students will also have the opportunity to have live ‘chats’ with representatives from funding agencies, thereby gaining a better sense of what particular foundations are looking for in a proposal.

Taught by: Thomas
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

ANTH 658 Discourse-Centered Research Seminar
This seminar explores the interface between discourse, culture, and social processes. It is designed for graduate students in anthropology and related disciplines who (1) wish to study the current literature in linguistic anthropology concerned with discourse-centered approaches to culture; and (2) themselves have or will acquire during the semester discourse materials (texts, recordings, ethnographic data, etc.) that they wish to analyze from an anthropological point view. The instructor will spend time discussing his own past and current research. Class sessions will also include discussion of the writings of contemporary anthropologists investigating culture through discourse. The seminar is designed for maximum flexibility in accommodating students’ research interests and needs.

Taught by: Urban
One-term course offered either term
Activity: Seminar
1.0 Course Unit

ANTH 663 Independent Study in South Asian Archaeology
This course provides a broad overview of the archaeology and early history of South Asia, a region that includes present-day India, Pakistan, Bangladesh, Sri Lanka, Nepal, Myanmar, Bhutan, and the Maldives. Beginning with a brief overview of the Paleolithic, we will discuss the multiple origins of early agriculture, the development of early states in the Indus river basin and beyond, the second urbanization, the expansion of institutionalized forms of religion, long-distance trade, social differentiation, and the rise of states as empires. No background in archaeology is required. The class will produce a collaborative spatial database of archaeological sites for selected time periods and will produce a document describing some of the major historical changes in South Asia as illustrated by the archaeological database.

Taught by: Morrison
Course not offered every year
Activity: Independent Study
1.0 Course Unit

ANTH 668 Kinesthetic Anthropology
This class, team-taught by CEE Visiting Fellow Reggie Wilson and Deborah Thomas, investigates various forms of contemporary performance in relationship to Africanist forms and functions of dance, movement, and action. We will concern ourselves with how the body knows, and with how we learn to identify the structures of movement that provide context, meaning, and usefulness to various Africanist communities across time and space. Grounding ourselves within a history of ethnographic analyses of the body in motion, and within Africana theorizing about the affective power of the body, we will consider what people are doing when they are dancing. In other words, we will train ourselves to recognize the cultural values, social purposes, and choreographic innovations embedded in bodily action and motion. While we will attend to these phenomena in a range of locations throughout the African diaspora, we will also highlight aspects of the Shaker and Black Shout traditions in Philadelphia. The course will be divided between discussions centered on close reading of primary and secondary material (both text and video) and creative writing/movement exploration (no previous movement experience necessary).

Taught by: Wilson
Also Offered As: AFRC 368, ANTH 368, COMM 368, FNAR 368
Activity: Seminar

ANTH 677 Black Speculative Futures
Why do black cultural producers turn to the speculative? What, in turn, is speculative about blackness? These questions frame this seminar's exploration of how black artists, theorists, and activists imagine different futures, often in the service of critiquing power asymmetries and creating radical transformation in the present. We will explore how the speculative works differently across black literature, visual culture and performance. Additionally, inspired by the multi-disciplinary work that we encounter in the course, we will experiment with crafting our own embodied speculative art in order to better understand its function as both art practice and politics. The course will be divided between discussions centered on close reading of primary and secondary material and creative writing/movement exploration (no previous movement experience necessary). Occasional guest lectures with visiting artists will provide additional fodder for our critical and creative work.
Taught by: Knight

Activity: Seminar
1.0 Course Unit

ANTH 684 Religion and Society in World History
Anthropologists have never found a society that did not have ideas, rituals and practice that falls easily into our category of 'religion' (a term coined in Roman times to cover everything relating to assumptions about supernatural forces in any cultural context). So how can we define religion now, over two thousand years since the end of the 'Axial Age' (800-200 BCE) that produced all the major religious ideas, that would allow us to include all the forms we know not only of Judaism, Buddhism, Christianity and Islam, but also Confucianism, Hinduism, Jainism, Shinto, Sikhism, Taoism, and Zoroastrianism, and the religions of the small isolated communities we found during the colonial period in Africa and Australia? And why has religious practice been declining in the Western world since the middle of the 20th century? Is the anthropology of religion a different subject now than what it was a hundred years ago? The religions that we know historically, because they are based on texts, especially Christianity and Islam, have obviously changed in many ways since their early days, and it is easy to see a relationship between the way they changed and what was going on in the societies that carried them: Christianity spread through the Roman Empire; Islam spread from Mesopotamia along trade routes, west to Egypt and North Africa, and east into central Asia and north China. It will be interesting to study the various constituents of religion (e.g. Faith, Law, Authority, Ritual, Sacraments, morality, spirituality) comparatively between each of the religions for which we have sufficient data, religious wars, and see the historical significance of (for example) the French Revolution, the Pope, and Ayatollah Ruhollah Khomeini.
Taught by: Spooner
Course not offered every year
Activity: Seminar
1.0 Course Unit
ANTH 704 Culture/Power/Subjectivities
This doctoral level course will introduce students to a conceptual language and theoretical tools for analyzing and explaining the complex intersection of racialized, ethnic, gendered, sexual, and classed differences and asymmetrical social relations. The students will examine critically the interrelationships between culture, power, and subjectivity through a close reading of classical and contemporary social theory. Emphasis will be given to assessing the power of various theories for conceptualizing and explaining mechanisms of social stratification as well as the basis of social order and processes of social change.
Taught by: Hall
Course not offered every year
Also Offered As: EDUC 706, URBS 706
Prerequisite: EDUC 547
Activity: Lecture
1.0 Course Unit

ANTH 706 State, Society, and Culture in South Asia
This interdisciplinary course introduces graduate students to both classic and more recent theoretical frameworks used in understanding and analyzing society, culture, and the state, with particular reference to South Asia. Topics include bureaucracy and the state; power and performance; hierarchy and individualism; caste, community, and domination; money and markets; credit and debt; globalization and consumption; economic liberalization and political transformations; local and trans-local contexts of meaning; the environment, politics, and urban and rural ecologies; and culture and the changing shape of politics. Particular emphasis will be placed on the ways in which recent ethnographic and historical monographs have positioned their interventions in relation to broader debates and scholarship, both within the South Asia and more generally.
Taught by: Mitchell
Course not offered every year
Also Offered As: SAST 704
Activity: Seminar
1.0 Course Unit

ANTH 707 Craft of Ethnography
This course is designed to follow after Ethnographic Research Methods (EDUC 721). In the introductory course, students learned how to use qualitative methods in conducting a brief field study. This advanced level course focuses on research design and specifically the craft of ethnographic research. Students will apply what they learn in the course in writing a proposal for a dissertation research project. Prerequisite: Must have completed EDUC 721 or equivalent introductory qualitative methods course.
Taught by: Hall
Course not offered every year
Also Offered As: EDUC 700
Activity: Lecture
1.0 Course Unit

ANTH 719 Archaeology Field Project
This is a parallel course to ANTH 219, but on the graduate level. It will only be open to select graduate students (i.e. historical archaeology students and some CGS MA students). Specific permission of the instructor is required in each case.
Taught by: Schuyler
Course usually offered in fall term
Also Offered As: ANTH 219
Activity: Seminar
1.0 Course Unit
Notes: Permission of instructor required.

ANTH 720 Historical Archaeology Laboratory
Parallel graduate course to ANTH 220. Lab class will meet in three hour sections on Fridays and Saturdays and will involve the analysis of artifacts, documentary records, oral historic sources and period illustrations collected on Southern New Jersey historic sites and Silver Reef, a ghost town in Southwestern Utah. No Previous archaeological or lab experience is required. Course may be repeated for credit.
Taught by: Schuyler
Course usually offered in spring term
Also Offered As: ANTH 220
Activity: Laboratory
1.0 Course Unit

ANTH 730 Readings & Research In Linguistic Anthropology
The course is designed for students and faculty interested in discussing current research and/or research topics in any area of linguistic or semiotic anthropology. The primary intent of the course is to familiarize students with the literature on selected research topics and to develop their own research agendas in the light of the literature. Students may enroll on an S/U basis for 0.5 CU per semester. The course may be repeated for credit up to 4 times.
Taught by: Agha
Two terms. student may enter either term.
Activity: Seminar
1.0 Course Unit

ANTH 733 Colloquium Seminar
This graduate seminar is a full year course open to second year anthropology graduate students. Other interested students should contact the instructors for permission before enrolling. Topic changes each year, corresponding to the Penn Anthropology Department Colloquium series.
Two terms. student may enter either term.
Activity: Seminar
1.0 Course Unit

ANTH 741 Anthropology of Affect
This course draws upon three anthropological literatures pertaining to affect. One, growing out of Darwin’s observations in The Expression of Emotions in Man and Animals, looks at the evolutionary and neurobiological bases of affect. A second developed in connection with psychoanalysis, and centers upon insights gained through empathic and introspective processes. A third arose with cultural studies and reactions within anthropology to structuralism, including research on cross-cultural variation in the conceptualization of emotions. The course is appropriate for graduate students interested in exploring the linkages among these literatures, and who envision or are already actively undertaking research for which knowledge of them is pertinent. Students will be expected to lead discussions of specific works, as well as present aspects of their own present or proposed future research. Students outside of the Anthropology Department should contact the instructor to request a permit.
Taught by: Urban
Course not offered every year
Activity: Seminar
1.0 Course Unit
ANTH 751 Historical Archaeology
Archaeology of the Modern World from the Columbian voyage (1492) to the 20th century. Topics such as the rise of early modern Europe, European exploration and colonization, African American Archaeology, Asian American Archaeology, the rise of colonial society, contact with native peoples, the Industrial Revolution, and the archaeology of the 20th century will be covered.
Taught by: Schuyler
Course not offered every year
Also Offered As: ANTH 451
Activity: Seminar
1.0 Course Unit
Notes: May be repeated for credit

ANTH 752 Archaeology of American History: The Colonial Period
Over the last fifty years archaeologists have been exploring historic sites in the United States dating from both the Colonial Period and the 19th/20th centuries. What can archaeology now tell us about the origins of American society, the invasion of North America by various European peoples (Spanish, English, Dutch), the impact on native peoples, the rise of African American and Asian American cultures, major crisis (e.g. the revolution, Civil War, and the Great Depression), the settlement of the Far American West, and the final emergence of a truly national culture in the 20th century? A basic question will be how an American history based on both archaeology and archival sources is different and more complete than an image of the past drawn only from written sources.
Taught by: Schuyler
Course not offered every year
Also Offered As: ANTH 151
Activity: Seminar
1.0 Course Unit

ANTH 753 Arch Amer Hist 1790-2000
Also Offered As: ANTH 152
Activity: Seminar
1.0 Course Unit

Applied Math & Computational Science (AMCS)

AMCS 510 Complex Analysis
Complex numbers, DeMoivre’s theorem, complex valued functions of a complex variable, the derivative, analytic functions, the Cauchy-Riemann equations, complex integration, Cauchy’s integral theorem, residues, computation of definite integrals by residues, and elementary conformal mapping.
Taught by: Staff.
One-term course offered either term
Also Offered As: MATH 410
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit

AMCS 514 Advanced Linear Algebra
Topics will include: Vector spaces, Basis and dimension, quotients; Linear maps and matrices; Determinants, Dual spaces and maps; Invariant subspaces, Cononical forms; Scalar products: Euclidean, unitary and symplectic spaces; Orthogonal and Unitary operators; Tensor products and polylinear maps; Symmetric and skew-symmetric tensors and exterior algebra.
Also Offered As: MATH 314, MATH 514
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit

AMCS 520 Ordinary Differential Equations
After a rapid review of the basic techniques for solving equations, the course will discuss one or more of the following topics: stability of linear and nonlinear systems, boundary value problems and orthogonal functions, numerical techniques, Laplace transform methods.
One-term course offered either term
Also Offered As: MATH 420
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit

AMCS 525 Partial Dif Equations
Method of separation of variables will be applied to solve the wave, heat, and Laplace equations. In addition, one or more of the following topics will be covered: qualitative properties of solutions of various equations (characteristics, maximum principles, uniqueness theorems), Laplace and Fourier transform methods, and approximation techniques.
Course usually offered in fall term
Also Offered As: MATH 425
Prerequisite: MATH 240
Activity: Lecture
1.0 Course Unit

AMCS 567 Mathematical Computation Methods for Modeling Biological Systems
This course will cover topics in systems biology at the molecular/cellular scale. The emphasis will be on quantitative aspects of molecular biology, with possible subjects including probabilistic aspects of DNA replication, transcription, translation, as well as gene regulatory networks and signaling. The class will involve analyzing and simulating models of biological behavior using MATLAB. Prerequisite: Graduate standing or permission of the instructor.
One-term course offered either term
Also Offered As: BE 567, GCB 567
Activity: Lecture
1.0 Course Unit
AMCS 584 The Mathematics of Medical Imaging and Measurement
The last several decades have seen major revolutions in both medical and non-medical and imaging technologies. Underlying all of these advances are sophisticated mathematical tools to model the measurement process and reconstruct images. This course begins with an introduction of the mathematical models and then proceeds to discuss the integral transforms that underlie these models: the Fourier transform, the Radon transform and the Laplace transform. We discuss how each of these transforms is inverted, both in theory and in practice. Along the way we study interpolation, sampling, approximation theory, filtering and noise analysis. This course assumes a thorough knowledge of linear algebra and a knowledge of analysis at the undergraduate level (Math 314 and Math 360 and Math 361, or Math 508 and Math 509).
Taught by: Staff.
Course not offered every year
Also Offered As: BE 584, MATH 584
Prerequisite: MATH 114 AND MATH 360 OR MATH 361 OR MATH 509
Activity: Lecture
1.0 Course Unit

AMCS 599 Independent Study
Activity: Independent Study
1.0 Course Unit

AMCS 602 Algebraic Techniques for Applied Mathematics and Computational Science, I.
We turn to linear algebra and the structural properties of linear systems of equations relevant to their numerical solution. In this context we introduce eigenvalues and the spectral theory of matrices. Methods appropriate to the numerical solution of very large systems are discussed. We discuss modern techniques using randomized algorithms for fast matrix-vector multiplication, and fast direct solvers. Topics covered include the classical Fast Multipole Method, the interpolative decomposition, structured matrix algebra, randomized methods for low-rank approximation, and fast direct solvers for sparse matrices. These techniques are of central importance in applications of linear algebra to the numerical solution of PDE, and in Machine Learning. The theoretical content of this course is illustrated and supplemented throughout the year with substantial computational examples and assignments.
Course not offered every year
Activity: Lecture
1.0 Course Unit

AMCS 603 Algebraic Techniques for Applied Mathematics and Computational Science, II.
We begin with an introduction to group theory. The emphasis is on groups as symmetries and transformations of space. After an introduction to abstract groups, we turn our attention to compact Lie groups, in particular SO(3), and their representations. We explore the connections between orthogonal polynomials, classical transcendental functions and group representations. This unit is completed with a discussion of finite groups and their applications in coding theory.
Course not offered every year
Activity: Lecture
1.0 Course Unit

Also Offered As: MATH 610
Prerequisite: MATH 608 OR MATH 609
Activity: Lecture
1.0 Course Unit

AMCS 999 Independent Study & Research
Study under the direction of a faculty member.
Activity: Independent Study
1.0 Course Unit
**Applied Positive Psychology (APOP)**

**APOP 100 Introduction to Positive Psychology**
In the 20th century, the field of psychology made enormous and important strides in addressing mental health challenges. Today research in the field has expanded, inspired, in part, by Martin E.P. Seligman’s 1998 APA presidential address, to include the scientific study of optimal functioning and what helps people live full lives. This course focuses on the science of thriving—what does it mean to be ‘happy,’ and how can one cultivate well-being at the individual and community level? Students explore the foundations of this science, understand a conceptual framework for well-being, and actively engage in activities that help to cultivate well-being. Drawing upon theory, empirical research, ancient and collective wisdom, we examine these topics critically and experientially and together build an engaged learning community. For those pursuing a Certificate in Applied Positive Psychology, this course is strongly recommended as a prerequisite for the other three courses.

Taught by: na
Also Offered As: LEAD 340
Activity: Online Course
1.0 Course Unit

**APOP 120 Human Flourishing: Strengths and Resilience**
What does it mean to flourish? What are we like when we are at our best? What helps us bounce back from challenges and adversity? Continuing the exploration of the science of positive psychology, students delve deeply into the study of character strengths as a framework for building positive character and well-being, and explore the concept of resilience, or the ability to overcome challenging situations. In this course, we explore how we can leverage our strengths to more effectively contribute to the greater world and enhance our own well-being. We also study the physical and psychological protective factors that constitute resilience, and how they are cultivated. Students learn about these topics from a scientific and experiential perspective, both as individuals and within our learning community. This course will have required synchronous sessions and the instructor will offer a choice of times. Students will have a more robust learning experience in this course if they first complete Introduction to Positive Psychology.

Also Offered As: LEAD 350
Activity: Online Course
1.0 Course Unit

**APOP 200 Positive Psychology at Work**
If flourishing is related to our lived daily experience, and approximately 50% of our waking hours are spent working, how do our workplaces contribute to, and diminish, our ability to thrive? Students are exposed to an array of research-informed strategies that have been applied in a variety of disciplines and workplaces, including business, education, health care, and nonprofit organizations. Exploration of case studies and salient research topics such as relationships at work, positive leadership, prosocial behavior, and our sense of meaning and purpose, guide our learning. Students gain an understanding of the variables that contribute to our ability to flourish at work and understand how we both experience and shape our work environments through our individual contributions. This course will have required synchronous sessions and the instructor will offer a choice of times.

Taught by: Meredith Myers
Also Offered As: LEAD 360
Activity: Online Course
1.0 Course Unit

**APOP 220 Flourishing with Others: Building Thriving Relationships**
Interpersonal relationships are key for happiness and well-being. Christopher Peterson, one of the pioneers of positive psychology used to say that the field could be summarized in three words: ‘Other people matter.’ In this course, we will take a deep dive into the research on relationships that work well and foster well-being. We will study positive relationships at different levels, from the closest ones, like families and romantic partnerships, to friendships, relationships between colleagues and in teams at work, to broader communities, and our relationship with nature and our planet. For each of these domains, we will learn practical ways to nurture and improve relationships and to help people flourish through them. This class will combine academic rigor with experiential learning, and it will provide many opportunities for self-reflection, conversation in small teams and applied ‘experiments’ in students’ lives.

Taught by: Margarita Tarragona
Activity: Online Course
1.0 Course Unit

**APOP 300 The Scientific Method in Positive Psychology**
How do we both understand and measure well-being, and the psychological characteristics that contribute to it? Understanding the scientific basis of these important questions requires an understanding of the scientific methods that inform them. You will learn the basics of the scientific method, and foundational descriptive statistics used in positive psychology and social sciences. You will explore how concepts related to positive psychology are operationalized and measured, and learn the basics of developing hypotheses, research design, and practicing open science. This is not a statistics course—the goal is to equip you to be critical and informed consumers of research in positive psychology and beyond. This course also involves weekly synchronous recitation sessions (scheduling varies). This course substitutes as a Scientific Process requirement for the BAAS degree. Students will have a more robust learning experience in this course if they first complete Introduction to Positive Psychology.

Taught by: Robertson-Kraft
Activity: Online Course
1.0 Course Unit

**APOP 320 Morality and the Good Life**
Morality pervades everyday life. Far from being confined to the ivory tower, we make moral decisions and engage in moral behavior every day, ranging from the ordinary (e.g., whether to volunteer or return a lost wallet) to the extreme (e.g., whether to donate one’s kidney to a stranger or fight and die for a cause). Morality is central to our evaluations of ourselves and others, and to the wellbeing of ourselves and the societies in which we live. In this course, you will learn about psychological research on morality. We will cover topics such as (1) How people make moral judgments, (2) How and why people have differing judgments of everything from tax rates to dietary preferences, (3) Psychological factors contributing to moral (e.g., altruistic) behavior, and (4) Intersections between moral psychology and our ideals, aspirations and well-being at the individual and societal level. This course aims to introduce you to the psychology of morality, to enable you to be more aware of and effective in navigating moral challenges in daily life.

Taught by: Damien Crone
Activity: Online Course
1.0 Course Unit
Arabic (ARAB)

**ARAB 031 Elementary Arabic I**
This is the beginners course in Modern Standard Arabic (MSA). It will introduce you to the speaking, listening, reading and writing skills in the standard means of communication in the Arab World. The course is proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. Evaluation is done by the more traditional testing methods (vocabulary tests, dictations, grammar and translation exercises). We anticipate that by the end of this course, students will range in proficiency from Novice High to Intermediate Low on the ACTFL scale; in other words (using the terminology of the government’s Foreign Service Institute), from ‘incipient survival’ to ‘full’ survival in the native-speaking environment.

For BA Students: Language Course
Course usually offered in fall term
Also Offered As: ARAB 631
Activity: Lecture
1.0 Course Unit

**ARAB 032 Elementary Arabic II**
This course is a continuation of first semester Elementary Arabic, and builds on the speaking, listening, reading and writing skills in the standard means of communication in the Arab World. Evaluation is done by the more traditional testing methods (vocabulary tests, dictations, grammar and translation exercises). We anticipate that by the end of this course, students will range in proficiency from Novice High to Intermediate Low on the ACTFL scale.

For BA Students: Language Course
Course usually offered in spring term
Also Offered As: ARAB 632
Prerequisite: ARAB 031
Activity: Lecture
1.0 Course Unit

**ARAB 033 Intermediate Arabic III**
This is the continuation of the Elementary course in Modern Standard Arabic (MSA). This course is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment. Evaluation is done by the more traditional testing methods (vocabulary tests, grammar and translation exercises). We anticipate that students range from Intermediate Low to Intermediate High according to the ACTFL scale.

For BA Students: Language Course
Course usually offered in fall term
Also Offered As: ARAB 633
Prerequisite: ARAB 032
Activity: Lecture
1.0 Course Unit

**ARAB 034 Intermediate Arabic IV**
This is the continuation of the first semester Intermediate Arabic. This course is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment. Evaluation is done by the more traditional testing methods (vocabulary tests, grammar and translation exercises). We anticipate that students will achieve Intermediate High according to the ACTFL scale.

For BA Students: Last Language Course
Course usually offered in spring term
Also Offered As: ARAB 634
Prerequisite: ARAB 033
Activity: Lecture
1.0 Course Unit

**ARAB 035 Advanced Intermediate Arabic I**
This is a proficiency-based course which builds on the lessons from Intermediate Arabic. Emphasis continues to be on all four language skills: Speaking, Listening, Reading, & Writing. The readings for the class are chosen from actual texts from both medieval and modern Arabic in a variety of fields and subjects. Students will be expected to give classroom presentations and to write short essays in Arabic. Evaluation will be both Achievement- and proficiency-based.

For BA Students: Advanced Language Course
Course usually offered in fall term
Also Offered As: ARAB 635
Prerequisite: ARAB 034
Activity: Lecture
1.0 Course Unit

**ARAB 036 Advanced Intermediate Arabic II**
This course is a continuation of first semester Advanced Intermediate Arabic. Emphasis continues to be on all four language skills: Speaking, Listening, Reading, & Writing. The readings for the class are chosen from actual texts from both medieval and modern Arabic in a variety of fields and subjects. Students will be expected to give classroom presentations and to write short essays in Arabic. Evaluation will be both Achievement- and proficiency-based.

For BA Students: Advanced Language Course
Course usually offered in spring term
Also Offered As: ARAB 636
Prerequisite: ARAB 035
Activity: Lecture
1.0 Course Unit

**ARAB 037 Advanced Arabic and Syntax I**
Advanced syntax through the reading of Arab grammarians. This course is designed to give the student experience in reading whole works in Arabic and giving reports on them. Readings are by medieval and modern writers.

For BA Students: Advanced Language Course
Course usually offered in fall term
Also Offered As: ARAB 637
Prerequisite: ARAB 036
Activity: Lecture
1.0 Course Unit
ARAB 039 Colloquial Arabic
A one-semester, introductory course to the spoken Arabic of one of the regions of the Arab world, chosen according to the dialect of instructor.
One-term course offered either term  
Also Offered As: ARAB 639  
Prerequisite: ARAB 032  
Activity: Lecture  
1.0 Course Unit

ARAB 041 Beginning Arabic I
This is a beginner course in Modern Standard Arabic (MSA). It will introduce you to the speaking, listening, reading, and writing skills in the standard means of communication in the Arab world. The course is proficiency-based, implying that all activities are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. Evaluation is done by the more traditional testing methods (vocabulary tests, dictations, grammar and translation exercises). We anticipate that by the end of this course (ARAB 041) students will range in proficiency from Novice High to Intermediate Low on the ACTFL scale; in other words (using the terminology of the government’s Foreign Service Institute), from ‘incipient survival’ to ‘full survival’ in the native-speaking environment. Prerequisite: See the LPS Course Guide. **This course does not fulfill the College/Wharton language requirement.  
Course usually offered in fall term  
Activity: Lecture  
1.0 Course Unit  
Notes: See the LPS Course Guide. **This course does not fulfill the College/Wharton language requirement.

ARAB 042 Beginning Arabic II  
Prerequisite: If course requirements not met, permission of instructor required. **This course does not fulfill the College language requirement.  
For BA Students: Language Course  
Course usually offered in spring term  
Prerequisite: ARAB 041  
Activity: Lecture  
1.0 Course Unit

ARAB 043 Continuing Arabic III
This is the continuation of ARAB041 and ARAB 042, the elementary course in Modern Standard Arabic (MSA). This course is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. As in ARAB 041-042, evaluation is done by the more traditional testing methods (vocabulary tests, grammar and translation exercises). Completion of this course fulfills the College of Liberal and Professional Studies language requirement in Arabic but not for the School of Arts and Sciences. However, it should be emphasized that you will need a longer period of study to achieve proficiency in Arabic. We anticipate that students range from Intermediate Low to Intermediate High according to the ACTFL scale. Prerequisite: See the CLPS Course Guide. **This course does not fulfill the College language requirement.  
Course usually offered in fall term  
Activity: Lecture  
1.0 Course Unit  
Notes: See the CLPS Course Guide. **This course does not fulfill the College language requirement.

ARAB 044 Continuing Arabic IV
Prerequisite: If course requirements not met, permission of instructor required. See the LPS Course Guide. **This course does not fulfill the College language requirement.  
Course usually offered in spring term  
Prerequisite: ARAB 043  
Activity: Lecture  
1.0 Course Unit  
Notes: See the LPS Course Guide. **This course does not fulfill the College language requirement.

ARAB 131 Intensive Elementary Arabic I&II
This is a six-week intensive beginners’ course in Modern Standard Arabic (MSA). It will introduce the student to speaking, listening, reading, and writing skills in the standard means of communication in the Arab world. The course is proficiency-based, implying that all activities are aimed at placing the student in the context of the native-speaking environment from the very beginning. Evaluation is done by the more traditional testing methods (vocabulary tests, dictations, grammar and translation exercises). We anticipate that by the end of this course (ARAB 041) students will range in proficiency from Novice High to Intermediate Low on the ACTFL scale; in other words (using the terminology of the government’s Foreign Service Institute) survival to ‘full survival’ in the native-speaking environment. Prerequisite: Offered through the College of Liberal and Professional Studies Summer Session I.  
For BA Students: Language Course  
Course usually offered summer term only  
Activity: Lecture  
2.0 Course Units  
Notes: Offered through the College of Liberal and Professional Studies Summer Session I.

ARAB 133 Intensive Intermediate Arabic I&II
This is a six-week intensive course offered in the summer through LPS; see the Penn Summer Course Guide. This is the continuation of ARAB031-32 or ARAB 131, the elementary course in Modern Standard Arabic (MSA). This course is also proficiency-based, implying that all activities within the course are aimed at placing the student in the context of the native-speaking environment from the very beginning. As in ARAB 031-032 or ARAB 131, evaluation is done by the more traditional testing methods (vocabulary tests, grammar and translation exercises). Completion of this course fulfills the College of Arts and Sciences language requirement in Arabic. However, it should be emphasized that the student will need a longer period of study to achieve proficiency in Arabic. We anticipate that students range from Intermediate Low to Intermediate High according to the ACTFL scale. Prerequisite: Offered through the College of Liberal and Professional Studies Summer Session I.  
For BA Students: Last Language Course  
Course usually offered summer term only  
Activity: Lecture  
2.0 Course Units  
Notes: Offered through the College of Liberal and Professional Studies Summer Session I.
ARAB 135 Intensive Advanced Intermediate Arabic I&II
This is a six-week intensive course offered in the summer through LPS; see Penn Summer Course Guide. It continues from the first intermediate course, ARAB 033/034 or ARAB 133. Emphasis continues to be on all four language skills: speaking, listening, reading, and writing. Students will be expected to give classroom presentations and to write short essays in Arabic. Evaluation will be both achievement-based and proficiency-based. There is no Oral Proficiency Interview at the end of this session, but we anticipate that by the end of this, third year students will range in proficiency from Intermediate High to Advanced Mid on the ACTFL scale. Prerequisite: Offered through the College of Liberal and Professional Studies Summer Session I.
For BA Students: Advanced Language Course
Course usually offered summer term only
Activity: Lecture
2.0 Course Units
Notes: Offered through the College of Liberal and Professional Studies Summer Session I.

ARAB 235 The Adab Tradition
Taught by: Fakhreddine, H.
Course not offered every year
Also Offered As: ARAB 735
Activity: Seminar
1.0 Course Unit

ARAB 331 Advanced Spoken Standard Arabic
The course will concentrate on the reading and speaking skills at the advanced level. Students will be assigned reading and audio-visual materials on which to prepare oral classroom presentations. Final examination in the course will be based on performance in the oral proficiency interview. Taught in MSA with writing assignments in MSA.
For BA Students: Advanced Language Course
One-term course offered either term
Also Offered As: ARAB 531
Prerequisite: ARAB 036
Activity: Lecture
1.0 Course Unit

ARAB 333 Readings in the Qur’an and Tafsir
This course has two goals: to introduce undergraduate students to reading the Qur’an in Arabic, and to enhance the speaking, listening, and writing skills in MSA. Through the reading and study of selected major Qur’anic narratives and commentary (tafsir), students will become familiar with Qur’anic vocabulary, style, recitation practices, and other intricacies of the Qur’anic text. All students will also memorize a short sura of their choice and practice reciting it in an aesthetically appropriate manner (typically suras 1, 112, 113, or 114). Taught in MSA with writing assignments in MSA.
Taught by: Lowry
Course offered spring; even-numbered years
Prerequisite: ARAB 035
Activity: Seminar
1.0 Course Unit

ARAB 433 Arabic Readings in the Social Sciences and the Media
This course trains students to be proficient with written materials and media in MSA. This class will explore the Middle East through timely analysis of Arabic media as well as original analysis of the ideological, intellectual, social, cultural, and religious background to current events, including the Arab Spring and its aftermath. It is intended that, upon completion of this course, students will be able to work independently with a variety of media texts at different levels. Taught in MSA with writing assignments in MSA.
Course offered spring; odd-numbered years
Prerequisite: ARAB 036 OR ARAB 636
Activity: Lecture
1.0 Course Unit

ARAB 434 Readings in Arabic Literature
Through engaging with authentic texts, this advanced class aims to activate the language skills students have learned in previous language courses. We will read selections from the modern Arabic short story and will respond to them in writing, discussion and translation. We will focus on close reading, relying on our knowledge of grammar. We will also work to develop writing, comprehension, and speaking skills through short critical responses and oral presentations. All class discussions will be conducted in Arabic.
Course not offered every year
Activity: Seminar
1.0 Course Unit

ARAB 436 Introduction to Pre-Modern Arabic Texts
This course aims to provide incoming graduate students and advanced undergraduate students with an introduction to issues in Arabic grammar and syntax that commonly arise in pre-modern Arabic texts. Students will also be introduced to, and expected to consult, the standard reference works used as aids in reading such texts. Students will be expected to prepare a text or set of texts assigned by the instructor for each session. It is intended that, upon completion of this course, students will be able to work independently with a wide variety of pre-modern Arabic texts. Although the texts in this course are pre-modern, the course reinforces MSA reading skills. May be taken twice for credit with instructors permission.
Taught by: Lowry
Course offered fall; even-numbered years
Prerequisite: ARAB 036 OR ARAB 636
Activity: Seminar
1.0 Course Unit
Notes: May be taken twice for credit with instructors permission.

ARAB 437 History & Fiction in Arabic
This course trains students to be proficient with written materials and media in MSA. This class will explore the Middle East through timely analysis of Arabic media as well as original analysis of the ideological, intellectual, social, cultural, and religious background to current events, including the Arab Spring and its aftermath. It is intended that, upon completion of this course, students will be able to work independently with a variety of media texts at different levels. Taught in MSA with writing assignments in MSA.
Course offered spring; odd-numbered years
Prerequisite: ARAB 036 OR ARAB 636
Activity: Lecture
1.0 Course Unit

ARAB 438 Readings in Belles-Lettres
This course aims to improve reading skills and vocabulary by introducing students to extensive passages taken from a variety of Arabic literary genres from all periods. Taught in MSA with writing assignments in MSA.
Course usually offered in fall term
Also Offered As: COML 432
Prerequisite: ARAB 036 OR ARAB 636
Activity: Seminar
1.0 Course Unit
ARAB 531 Advanced Spoken Standard Arabic
The course will concentrate on the reading and speaking skills at the advanced level. Students will be assigned reading and audio-visual materials on which to prepare oral classroom presentations. Final examination in the course will be based on performance in the oral proficiency interview. Taught in MSA with writing assignments in MSA. For BA Students: Advanced Language Course Course usually offered in fall term Also Offered As: ARAB 331 Prerequisite: ARAB 036 OR ARAB 636 Activity: Lecture 1.0 Course Unit

ARAB 533 Readings in Islamic Law
This advanced readings course provides students with the opportunity to study Arabic-language Islamic legal texts from all periods, including the Qur'an, Hadith, premodern and Ottoman-period texts, and modern positive legislation and constitutions to the extent that they are related to or invoke Islamic law. Taught by: Lowry Course not offered every year Prerequisite: ARAB 036 OR ARAB 636 Activity: Seminar 1.0 Course Unit

ARAB 534 Arabic: Reading Historical Manuscripts
Arabic language is used by many societies not only in communication but also in correspondence and in documenting the affairs of their daily lives. Arabic script is adopted by many groups who native languages are not Arabic, in writing their language before some moved to the Roman alphabet. In many historical documents specific style of writing and handwriting are dominant. This specificity is influenced by the dialectical variations, the historical development of each region and the level of Arabic literacy and use. Taught by: Dinar Course not offered every year Activity: Seminar 1.0 Course Unit

ARAB 631 Elementary Arabic I
This is the beginner course in Modern Standard Arabic (MSA). It will introduce you to the speaking, listening, reading and writing skills in the standard means of communication in the Arab World. The course is proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. Evaluation is done by the more traditional testing methods (vocabulary tests, dictations, grammar and translation exercises). We anticipate that students range from Novice High to Intermediate Low according to the ACTFL scale. For the second semester: completion of the first semester or permission of the instructor. For BA Students: Language Course Two terms. student must enter first term. Also Offered As: ARAB 031 Prerequisite: ARAB 036 OR ARAB 636 Activity: Lecture 1.0 Course Unit

ARAB 632 Elementary Arabic II
This course is a continuation of ARAB 031/631. For the second semester: completion of the first semester or permission of the instructor. For BA Students: Language Course Two terms. student must enter first term. Also Offered As: ARAB 032 Prerequisite: ARAB 631 Activity: Lecture 1.0 Course Unit

ARAB 633 Intermediate Arabic I
This is the continuation of the Elementary course in Modern Standard Arabic (MSA). This course is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. Taught by: Lowry Course not offered every year Prerequisite: ARAB 036 OR ARAB 636 Activity: Seminar 1.0 Course Unit

ARAB 634 Intermediate Arabic IV
This course is a continuation of ARAB 033/633. For the second semester: completion of the first semester or permission of the instructor. For BA Students: Language Course Two terms. student must enter first term. Also Offered As: ARAB 034 Prerequisite: ARAB 633 Activity: Lecture 1.0 Course Unit

ARAB 635 Advanced Intermediate Arabic I
This is a proficiency-based course which continues from the first intermediate course, ARAB 033/034. Emphasis continues to be on all four language skills: Speaking, Listening, Reading, & Writing. The readings for the class are chosen from actual texts from both medieval and modern Arabic in a variety of fields and subjects. Students will be expected to give classroom presentations and to write short essays in Arabic. Evaluation will be both Achievement- and proficiency- based. For the second semester: completion of the first semester or permission of the instructor. For BA Students: Language Course Also Offered As: ARAB 035 Prerequisite: ARAB 634 Activity: Lecture 1.0 Course Unit
ARAB 636 Advanced Intermediate Arabic II
This course is a continuation of ARAB 035/635. For the second semester: completion of the first semester or permission of the instructor.
For BA Students: Advanced Language Course
Two terms. student must enter first term.
Also Offered As: ARAB 036
Prerequisite: ARAB 635
Activity: Lecture
1.0 Course Unit

ARAB 637 Advanced Arabic and Syntax I
Advanced syntax through the reading of Arab grammarians. Development of reading in bulk. Emphasis on classical Arabic read in works by medieval and modern writers. This course is designed to give the student experience in reading whole works in Arabic and giving reports on them. For the second semester: completion of the first semester or permission of the instructor.
For BA Students: Advanced Language Course
One-term course offered either term
Also Offered As: ARAB 037
Prerequisite: ARAB 636
Activity: Lecture
1.0 Course Unit

ARAB 639 Colloquial Arabic
A one-semester, introductory course to the spoken Arabic of one of the regions of the Arab world, chosen according to the dialect of instructor.
Course not offered every year
Also Offered As: ARAB 039
Prerequisite: ARAB 032
Activity: Lecture
1.0 Course Unit

ARAB 731 Topics in Islamic Studies
Topics vary from year to year in accordance with the interests and needs of students. Although this course typically focuses on premodern Arabic texts, the readings reinforce MSA reading skills.
Taught by: Lowry
One-term course offered either term
Prerequisite: ARAB 436
Activity: Seminar
1.0 Course Unit
Notes: ARAB 436 or equivalent

ARAB 733 Arabic Texts in Islamic History
This is a graduate seminar course in which different genres of premodern Arabic texts are covered at the advanced graduate level. Students in this course are expected to be able to read and prepare (vowel, parse, and translate) passages from Arabic texts on a weekly basis and to be able to discuss them critically during the class itself. Topics are chosen to reflect student interest. Recent and potential topics include: Geographers and travel accounts; biographical dictionaries; chronicles; heresiography; poetry; memoir and sira. Although this course typically focuses on premodern Arabic texts, the readings reinforce MSA reading skills.
Taught by: Cobb
Course not offered every year
Prerequisite: ARAB 036
Activity: Seminar
1.0 Course Unit

ARAB 734 Selected Topics in Arabic Literature
This is a survey of Arabic poetry from the Pre-Islamic era until today. Readings will be selected to trace major thematic and formal developments in Arabic poetry. Readings also include excerpts from modern critical scholarship on the topic in Arabic. This class aims to introduce students to the basics of academic research and writing in Arabic. The class is taught in MSA with oral presentations and writing assignments in MSA.
Taught by: Fakhreddine
Course not offered every year
Activity: Seminar
1.0 Course Unit

ARAB 735 The Adab Tradition
This is a survey of pre-modern Arabic prose. Selections will be made from major books of Adab, compilations of akhbār, the Qurʾān, the sūrat, and critical treatise. Readings will be accompanied by excerpts from modern critical scholarship on the topic in Arabic. The class is taught in MSA with oral presentations and writing assignments in MSA.
Taught by: Fakhreddine, H.
Course not offered every year
Also Offered As: ARAB 235
Activity: Seminar
1.0 Course Unit

Architecture (ARCH)

ARCH 102 Introduction to Design
An exploration of the design process utilizing drawing and model-making techniques. Skills of representation and fabrication are introduced in the context of the development of each student's capacity to observe, interpret, and translate design concepts into physical form. The course includes a weekly lecture and a biweekly studio component.
Taught by: Faculty
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ARCH 111 Architecture in the Anthropocene
This course will use architecture and as a lens to investigate the emerging field of the environmental humanities. Our goal is to analyze and understand these new intellectual frameworks in order to consider the relationship between global environmental challenges and the process of constructing a just and equitable world. As such, we move between social and political theory, environmental history, architectural history and theory, and explorations of urban change. Issues of importance will include: theories of risk, the role of nature in political conflicts; environmental communication; the culture and technology of energy transition; and the relationship between speculative design and other narratives of the future. These conceptual frameworks will be read alongside creative projects in art, literature, and architecture, and will be amplified through presentations and discussions with numerous visitors to the course.
Taught by: Daniel Barber
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit
ARCH 201 Design Fundamentals I
This studio course develops drawing and model-making skills with emphasis on digital representation and digital fabrication. The capacity of nature-inspired design is explored as a foundation for the creative production of new forms of expression.
Taught by: Faculty
Course usually offered in fall term
Prerequisite: ARCH 102
Activity: Studio
1.5 Course Unit

ARCH 202 Design Fundamentals II
A studio course exploring the relationship between two-dimensional images and three-dimensional digital and physical models. This studio course develops advanced techniques in digital representation and fabrication through an investigation of the theme of inhabitation in architecture.
Taught by: Faculty
Course usually offered in spring term
Prerequisite: ARCH 201
Activity: Studio
1.5 Course Unit

ARCH 301 Design I
An introduction to the design of architecture in the city. Students explore the relationships between two-dimensional patterns and their corresponding three-dimensional interpretations through the orthographic drawings of plan, section, and elevation and three-dimensional digital and physical models.
Taught by: Faculty
Course usually offered in fall term
Prerequisite: ARCH 202
Activity: Studio
2.0 Course Units

ARCH 302 Design II
An introduction to the design of architecture in the landscape. Issues of mapping, placement, scale, and construction are explored through studio design projects, site visits, and discussions. Course work focuses on the preparation and presentation of design projects emphasizing analytical skills along with the development of imaginative invention and judgment.
Taught by: Faculty
Course usually offered in spring term
Prerequisite: ARCH 301
Activity: Studio
2.0 Course Units

ARCH 303 Design Fundamentals
The creation of a successful product requires the integration of design, engineering, and marketing. The purpose of this intensive studio course is to introduce basic concepts in the design of three-dimensional products. For purposes of the course, design is understood as a creative act of synthesis expressed through various modes of 2-dimensional and 3-dimensional representation. The course develops basic design skills ranging from hand sketching to the use of digital modeling software and rapid prototyping. Fulfills the requirement for a design background course in the interdisciplinary graduate program in Integrated Product Design (IPD).
Taught by: Wesley
Course usually offered summer term only
Also Offered As: IPD 503
Activity: Studio
1.0 Course Unit

ARCH 318 Topographical Stories: Architecture, Literature, and Cities
This course will argue a simple thesis: that the spaces of our lives record the stories of our lives. Architecture and literature will be studied, through built works and texts, the latter from both author-architects and fiction writers (novelists, short story writers, and poets). Urban settings throughout the world will occupy our attention, in Berlin, New York, Paris, Milan, London, Venice, Vienna, Chicago, and Shanghai. In much the same way that literacy is both cultivated and preserved in books, cultural memory obtains legible shape in buildings, persisting as long as they do. In a time when so much in life seems in flux social norms, family structures, political allegiances, and so on the power of architecture to give practical affairs orientation and stability is especially important. This course will study how architectural settings provide palpable structure for the events of our lives, particularly those events that occur in cities and their institutions, for cities have always been and remain culture’s most efficient and eloquent articulation. Unlike literature, film, or advertising, architecture performs its signifying role rather quietly and unobtrusively; but this fact does not diminish its capacity to allow us to feel ‘at home’ in many and varied settings. This will be clear to non-architects as soon as they reflect on the role played by domestic arrangements, for even the most prosaic events cannot unfold unless the settings in which they are to occur are ‘in order’. Less clear perhaps, but no less important is the role that architecture plays in our understanding and experience of community, civility, and the common good. The course will be structured in two parts. The first part, much shorter than the second, will be thematic and a-historical. In the opening lectures the basic topics of the course will be introduced, as will be the questions to be asked of the writings, images, buildings, and cities taken up in part two. The second group of studies will look at a number of cities in Europe, the USA, and China. To make the volume of study materials manageable, we will concentrate on developments in the last hundred to hundred and fifty years. The writings of author architects will provide us with some insight into the ways architecture has served a ‘narrative’ function in these cities, but we will also read stories, poems, and parts of novels that augment and enrich those architectural accounts. The idea is that stories about spaces will clarify the ways that spaces are stories.
Taught by: Leatherbarrow
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ARCH 401 Advanced Design
Content and technique are explored in this studio course through the vehicle of a design project focused on the development of a critical understanding of geometries and mathematics in the representation and fabrication of contemporary architecture.
Taught by: Faculty
Course usually offered in fall term
Prerequisite: ARCH 302
Corequisite: ARCH 411
Activity: Studio
2.0 Course Units
ARCH 411 Theory I: Geometry in Architecture
Following a brief historical overview of Euclidean, stereotomic, projective and descriptive geometry in pre-modern architecture, the course examines the writings and works of early 20th-century modern architects who used regulating lines and numerical harmonic scales to generate and regulate architectural form in accordance with the golden section ratio and the dynamic symmetry of root rectangles. Also examined are works of mid 20th-century architecture based on traditional geometric constructions—conic sections (circles, ellipse, hyperbola and parabola) and ruled surfaces (cylinders, cones, hyperboloids, and hyperbolic paraboloids), as well as those derived from polyhedral and geodesic structures. Following an introduction to the geometry of free-form curves characteristic of the digital turn in late 20th-century architecture—including Bezier, B-spline, NURBS (non-uniform rational B-spline), and developable surfaces—the course concludes with an overview of recent efforts to utilize curvature in contemporary architecture within a set of more definitive geometrical and disciplinary boundaries.
Taught by: Faculty
Course usually offered in fall term
Corequisite: ARCH 401
Activity: Lecture
1.0 Course Unit

ARCH 412 Theory II: Architecture as Cultural Ecology
This course will study and argue a single thesis: that the architects of the early 20th century did not neglect the environmental and cultural context of their buildings because they were narrowly focused on the production of free-standing and radically new objects of design, but developed designs that combined attention to environmental issues with both imaginative approaches to social and cultural purposes and a new understanding of aesthetic content. A review of contemporary ecological mandates will begin the course. That will then be contrasted with historical and ancient conceptions. In depth studies of specific buildings will follow, viewed as cultural ecologies. The course will then turn to the materials and elements of architecture that have been used to construct cultural ecologies. With a more nuanced view of our inheritance we will ask what is not only possible but necessary for architecture in our time, in both its landscape and urban contexts.
Taught by: Faculty
Course usually offered in spring term
Prerequisite: ARCH 411
Activity: Lecture
1.0 Course Unit

ARCH 431 Construction I
Course explores basic principles and concepts of architectural technology and describes the interrelated nature of structure, construction and environmental systems. Open to Intensive Majors only.
Taught by: Faculty
Course usually offered in fall term
Also Offered As: ARCH 531
Activity: Lecture
0.5 Course Units

ARCH 432 Construction II
A continuation of Construction I, focusing on light and heavy steel frame construction, concrete construction, light and heavyweight cladding systems and systems building. Open to Intensive Majors only.
Taught by: Faculty
Course usually offered in spring term
Also Offered As: ARCH 532
Activity: Lecture
1.0 Course Unit

ARCH 433 Building Systems Integration
What makes buildings livable and buildable. After the initial concept design and massing studies are complete the next step is detailing. This seminar will examine the detail, how they can inform and enhance a building's design. The primary goals of a building is that it stands up to external forces, protects inhabitants from the elements and provides a healthy environment. This course will look at the individual components of structure, skin and systems. More importantly though, it will examine the connections between them. The class will begin with lectures examining the different systems and then progress into applying these ideas as a whole to individual studio projects. The final results of this course will be a 3D wall section with accompanying details. These details will be developed in a variety of software as chosen by the student. Recommended options are Revit, Rhino, AutoCAD.
Taught by: Faculty
Course usually offered in fall term
Activity: Seminar

ARCH 435 Structures I
Theory applied toward structural form. A review of one-dimensional structural elements; a study of arches, slabs and plates, curved surface structures, lateral and dynamic loads; survey of current and future structural technology. The course comprises both lectures and a weekly laboratory in which various structural elements, systems, materials and technical principles are explored. Open to Intensive Majors only.
Taught by: Faculty
Course usually offered in fall term
Also Offered As: ARCH 535
Activity: Lecture
0.5 Course Units

ARCH 436 Structures II
A continuation of the equilibrium analysis of structures covered in Structures I. The study of static and hyperstatic systems and design of their elements. Flexural theory, elastic and plastic. Design for combined stresses; prestressing. The study of graphic statics and the design of trusses. The course comprises both lectures and a weekly laboratory in which various structural elements, systems, materials and technical principles are explored. Open to Intensive Design majors only.
Taught by: Faculty
Course usually offered in spring term
Also Offered As: ARCH 536
Activity: Lecture
0.5 Course Units

ARCH 498 Senior Honors Thesis
Taught by: Faculty
Course usually offered in spring term
Prerequisite: ARCH 401
Activity: Independent Study
1.0 Course Unit
Notes: Permission of the Undergraduate Chair
ARCH 500 Summer Preparatory Design Studio
The Summer Preparatory Studio offers an intensive drawing and design experience to candidates for admission to the Graduate Program in Architecture who have not completed the necessary design studio prerequisites or who are required to have additional design experience to qualify for matriculation into the Master of Architecture Professional Degree Program in September. Enrollment in this program does not count towards the Master of Architecture degree. The intent of the drawing component of the course is to familiarize the student with primarily black and white mediums (pencil, charcoal, ink, etc.). Exercises are designed to sharpen the student's ability to see selectively and to transform image to paper through both line and tonal renderings in freehand sketch form. Exercises will also familiarize the student with basic drafting skills necessary for architectural communication and provide an introduction to computer-aided design through applications of the intensive Rhino and Illustrator tutorials given in the Digital Navigation course. The design part of the course presents a rhythm of basic three-dimensional design studies and simple architectural studio investigations. These are intended to build fundamental skills and acquaint the student with the architectural issues of form/space, conceptualization, transformation of scale, simple functional and constructional problems and a sensitivity to context. Course enrollment is by permit only.
Course usually offered summer term only
Activity: Studio
2.0 Course Units

ARCH 501 Design Studio I
An introductory architectural design studio through which students develop critical, analytical and speculative design abilities in architecture. Students develop representational techniques for the analysis of social and cultural constructs, and formulate propositions for situating built form in the arena of the urban and suburban environment. The studio initiates innovation through a sequence of projects, spatial models and rule sets that introduce each student to rule-based design processes--in which a reversal of expectations leads to the creation of novel spaces and structures. It introduces computation, geometric techniques, and digital fabrication. Projects explore the formation of space in relation to the body, and the developments of small scale public programs.
Course usually offered in fall term
Corequisite: ARCH 521
Activity: Studio
2.0 Course Units

ARCH 502 Design Studio II
This studio explores urban architecture as an embodiment of cultural values. Siting, enclosure of space and tectonic definition are stressed in order to challenge students to project relevant and inventive architectural situations.
Course usually offered in spring term
Corequisite: ARCH 522
Activity: Studio
2.0 Course Units

ARCH 511 History and Theory I
The first of three required courses in the history and theory of architecture, this is a lecture course with discussion groups that meet weekly with teaching assistants. The course explores fundamental ideas and models of architecture that have emerged over the past three hundred years.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ARCH 512 History and Theory II
How do architecture, urbanism, and the environment reflect the dominant social, economic, and political changes of the twentieth and twenty-first centuries and how did its vast geopolitical shifts such as Imperialism, Fascism, the Cold War, Neoliberalism, the 'War on Terror,' and Nationalism reshape architecture culture? How might architecture culture respond and help construct its resistant variants, anti-fascism, anti-imperialism, decolonization, and making 'quieter places' in Donna Haraway’s sense? How do critical frameworks to rethink positivism, efficiency, standardization, and even utopian thinking become revised through the lenses of queer, postcolonial, critical race, and eco-feminist theory in postwar architectural production? And how do these frameworks allow us to conceive of more equitable ways of being in the world while thinking with a varied pasts? This course provides twelve discursive and theoretical frameworks to rethink architectural history in the twentieth and twenty-first century. Through twelve lectures the course traces critical questions confronting architectural modernity from the violence of settler colonialism to the possibilities of making kin. While we will trace instances of architecture, city planning, landscape and infrastructural developments that corresponded to dominant ways of conceiving modernity and its analog progress narratives, the course is mainly interested in considering resistant paradigms that elide attempts to speak of a unified or homogenous notion of modernity. The course will be active and interactive and will include building a collaborative dictionary of architectural terms.
Taught by Sophie Hochhausl
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ARCH 521 Visual Studies I
The study of analysis and projection through drawing and computer visualization
Course usually offered in fall term
Corequisite: ARCH 501
Activity: Laboratory
0.5 Course Units

ARCH 522 Visual Studies II
A continuation of the study of analysis and projection through drawing and computer visualization.
Course usually offered in spring term
Corequisite: ARCH 502
Activity: Laboratory
0.5 Course Units

ARCH 531 Construction I
Lecture course exploring the basic principles of architectural technology and building construction. The course is focused on building material, methods of on-site and off-site preparation, material assemblies, and the performance of materials. Topics discussed include load bearing masonry structures of small to medium size (typical row house construction), heavy and light wood frame construction, sustainable construction practices, emerging + engineered materials, and integrated building practices. The course also introduces students to Building Information Modeling (BIM) via the production of construction documents.
Course usually offered in fall term
Also Offered As: ARCH 431
Activity: Lecture
0.5 Course Units
ARCH 532 Construction II
A continuation of Construction I, focusing on light and heavy steel frame construction, concrete construction, light and heavyweight cladding systems and systems building.
Course usually offered in spring term
Also Offered As: ARCH 432
Activity: Lecture
1.0 Course Unit

ARCH 535 Structures I
Theory applied toward structural form. A review of one-dimensional structural elements; a study of arches, slabs and plates, curved surface structures, lateral and dynamic loads; survey of current and future structural technology. The course comprises both lectures and a weekly laboratory in which various structural elements, systems, materials and technical principles are explored.
Course usually offered in fall term
Also Offered As: ARCH 435
Activity: Lecture
0.5 Course Units

ARCH 536 Structures II
A continuation of the equilibrium analysis of structures covered in Structures I. The study of static and hyperstatic systems and design of their elements. Flexural theory, elastic and plastic. Design for combined stresses; prestressing. The study of graphic statics and the design of trusses. The course comprises both lectures and a weekly laboratory in which various structural elements, systems, materials and technical principles are explored.
Course usually offered in spring term
Also Offered As: ARCH 436
Activity: Lecture
0.5 Course Units

ARCH 601 Design Studio III
In this studio, students engage architecture in its role as a cultural agent and examine the way buildings establish and organize dynamic relationships between site, program and material. The design of a complex building of approximately 50,000 SF provides the pedagogical focus for this research. Students extend skills in geometrical organization, site analysis and building massing/orientation to relate to program organization, circulation and egress, building systems and materials. The conceptual focus centered on the program of dwelling and how this program can be employed to develop and promote dynamic relationships and conditions through time, both within the building and between the building and the context. Through research and experimentation students integrate ecological processes into their design methodology to support design innovations in the building’s structure, its construction assemblies, environmental systems, and materials. Students work towards a high level of design resolution and visual representation, including the articulation of the building structure and its material assembly/enclosure.
Course usually offered in fall term
Corequisite: ARCH 621
Activity: Studio
2.0 Course Units

ARCH 602 Design Studio IV
This studio enables students to develop and resolve the design of a building in terms of program, organization, construction and the integration of structures, enclosure and environmental systems as well as life safety issues. Students select from a range of individually-directed studios within this overall framework. Each instructor develops a different approach and project for their section of this studio. Studios incorporate the expertise of external consultants in advanced areas of technology, engineering and manufacturing.
Course usually offered in spring term
Activity: Studio
2.0 Course Units

ARCH 611 History and Theory III
This is the third and final required course in the history and theory of architecture. It is a lecture course that examines selected topics, figures, projects, and theories from the history of architecture and related design fields during the 20th century. The course also draws on related and parallel historical material from other disciplines and arts, placing architecture into a broader socio-cultural-political-technological context. Seminars with teaching assistants complement the lectures.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units
Notes: This is the third and final required course in the history and theory of architecture. It is a lecture course that examines selected topics, figures, projects, and theories from the history of architecture and related design fields during the 20th century. The course also draws on related and parallel historical material from other disciplines and arts, placing architecture into a broader socio-cultural-political-technological context. Seminars with teaching assistants complement the lectures.

ARCH 621 Visual Studies III
The final of the Visual Studies half-credit courses. Drawings are explored as visual repositories of data from which information can be gleaned, geometries tested, designs refined and transmitted. Salient strengths of various digital media programs are identified and developed through assignments that address the specific intentions and challenges of the design studio project.
Course usually offered in fall term
Corequisite: ARCH 601
Activity: Laboratory
0.5 Course Units

ARCH 631 Technology Case Studies I
A study of the active integration of various building systems in exemplary architectural projects. To deepen students' understanding of the process of building, the course compares the process of design and construction in buildings of similar type. The course brings forward the nature of the relationship between architectural design and engineering systems, and highlights the crucial communication skills required by both the architect and the engineer.
Taught by: Franca Trubiano
Course usually offered in fall term
Activity: Lecture
0.5 Course Units
ARCH 633 Environmental Systems I
An introduction to the influence of thermal and luminous phenomenon in the history and practice of architecture. Issues of climate, health and environmental sustainability are explored as they relate to architecture in its natural context. The classes include lectures, site visits and field exploration.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

ARCH 634 Environmental Systems II
Considers the environmental systems of larger, more complex buildings. Contemporary buildings are characterized by the use of systems such as ventilation, heating, cooling, dehumidification, lighting, communications, and controls that not only have their own demands, but interact dynamically with one another. Their relationship to the classic architectural questions about building size and shape are even more complex. With the introduction of sophisticated feedback and control systems, architects are faced with conditions that are virtually animate and coextensive at many scales with the natural and man-made environments in which they are placed.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

ARCH 636 Material Formations
Material Formations introduces robotic production and material dynamics as active agents in design rationalization and expression. The course investigates opportunities for designers to synthesize multiple performance criteria within architecture. Theory, Case-Studies and practical tutorials will focus on the incorporation of analytical, simulation, generative computation and robot fabrication concerns within design. While production is traditionally viewed as an explicit and final act of execution, the course explores the potential for all aspects of building production and use to participate within the creative design process, potentially producing performance and affect. Students will develop skills and experience in computer programming, physics-based simulation, and robot motion planning. A design research project will be undertaken through a number of discrete assignments that require the synthetization or structural performance along with material and robotic production constraints. The course will explore design as the outcome of materially formative processes of computation and production. Structure: the course will commence with weekly lectures and computer-based tutorials, and culminate in a series of intensive incremental learning, and prepare groups to work on a final assignment which involves the robotic fabrication of a small design prototype.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ARCH 671 Professional Practice I
The course consists of a series of workshops that introduce students to a diverse range of practices. The course goal is to gain an understanding of the profession by using the project process as a framework. The course comprises a survey of the architectural profession - its licensing and legal requirements; its evolving types of practice, fees and compensation; its adherence to the constraints of codes and regulatory agencies, client desires and budgets; and its place among competing and allied professions and financial interests. The workshops are a critical forum for discussion to understand the forces which at times both impede and encourage innovation and leadership. Students learn how architects develop the skills necessary to effectively communicate to clients, colleagues, and user groups. Trends such as globalization, ethics, entrepreneurship, sustainability issues and technology shifts are analyzed in their capacity to affect the practice of an architect.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

ARCH 685 Environmental Readings
In this seminar, we will explore this green thread and analyze its influence on how we shape our environments through design and planning. The course has three parts. Throughout, the influence of literature on design and planning theory will be explored. The first part will focus on three most important theorists in environmental planning and landscape architecture: Frederick Law Olmstead Sr., Charles Eliot and Ian McHarg. The second part of the course will critically explore current theories in environmental planning and landscape architecture. The topics include: frameworks for cultural landscape studies, the future of the vernacular, ecological design and planning, sustainable and regenerative design, the languages of landscapes, and evolving views of landscape aesthetics and ethics. In the third part of the course, students will build on the readings to develop their own theory for ecological planning or, alternatively, landscape architecture. While literacy and critical inquiry are addressed throughout the course, critical thinking is especially important for this final section.
Taught by: Dean Steiner
Course usually offered in fall term
Also Offered As: CPLN 685, LARP 685
Activity: Seminar
1.0 Course Unit

ARCH 698 Architectural Association (AA), London
An advanced Architectural Design Studio taught by Homa Farjadi in London at the Architectural Association's School of Architecture. Topics engage aspects of urban life and urban form in London, and vary from year to year. During the fifth term of the Master of Architecture program, up to fifteen students a year may enroll for the semester abroad program in London, England. This is coordinated by Prof. Homa Farjadi and is housed at the Architectural Association (AA), located on Bedford Square in the heart of Bloomsbury. Students enroll in a special design studio, ARCH 702, taught by Prof. Farjadi, and in two elective courses offered by the faculty at the AA.
Course usually offered in fall term
Activity: Lecture
2.0 Course Units
ARCH 701 Studio V

These advanced elective studios provide opportunities for focused exploration of particular themes in contemporary landscape architecture. Important emerging and accomplished designers, often from divergent points-of-view, interests and backgrounds, are invited to run these studios. Collaborative options (between Landscape and the Departments of Architecture or City Planning) are sometimes offered across the School. In addition to our own faculty who offer some of these studios (Fabiani Giannetto, Gouverneur, Marcinkoski, Mathur, M'Clokey, Neises, Olin, Pevzner, Sanders, Tomlin), visitors have included Paolo Burgi (Switzerland), Peter Latz (Munich), Bernard Lassus (Paris), Margie Ruddick (Philadelphia), Chris Reed (Boston), Peter Beard (London), Nicholas Quennell (New York), Ken Smith (New York), Raymond Gastil (New York), Alessandro Tagliolini (Italy), Ignacio Bunster (Philadelphia), Perry Kulper (Los Angeles), James Wines (New York), Lee Weintraub (New York), Charles Waldheim (Chicago), Stanislaus Fung (Australia), Dennis Wedlick (New York), Sandro Marpillero (New York), Peter Connolly (Australia), and former associate professor Anita Berrizbeitia. More recent visitors have been Claire Fellman (New York), Catherine Mosbach (Paris), Nanako Umemoto/Neil Cook (New York), Valerio Morabito (Italy), Carol and Colin Franklin (Philadelphia), Keith Kaseman (Philadelphia), Silvia Benedito (New York), Claudia Taborda (Lisbon), Mark Thomann (New York), Jerry Van Eyck (New York), and Martin Rein-Cano (Berlin).

Taught by: Faculty

ARCH 703 Advanced Architectural Design Studio

An Advanced Architectural Design Studio specifically tailored to post-professional students. Through this studio, students engage in the challenges and opportunities presented by changes in society, technology, and urban experience. Through design projects, they explore alternative modes and markets for practice, along with new directions and new tools for design.

Course usually offered in fall term
Activity: Studio
2.0 Course Units

ARCH 704 Advanced Design: Research Studio

In the final semester of the program, students select from three options: 1) an elective design studio, selected from among the advanced architectural design studios offered by the Department of Architecture; 2) a research studio, the exploration of a topic or theme established by an individual faculty member or group of faculty members; or 3) an independent thesis, the exploration of a topic or theme under the supervision of a thesis advisor.

Course usually offered in spring term
Activity: Studio
2.0 Course Units

ARCH 705 MSD-AAD Design Research Studio

Students learn from industry leaders by electing their Design research Studio. The second semester design research studio focuses on large scale detail leading to a building design.

Taught by: Ali Rahim
Activity: Studio
2.0 Course Units

ARCH 706 Independent Thesis

In the final semester of the program, students select from three options; 1) An elective design studio; selected from among the advanced architectural design studios offered by the Department of Architecture; 2) a research studio, the exploration of a topic or theme established by an individual faculty member or group of faculty members; or 3) an independent thesis, the exploration of a topic or theme under the supervision of a thesis advisor.

Course usually offered in spring term
Activity: Independent Study
2.0 Course Units

ARCH 707 AAD Fabrication Studio

The final studio course in the MSD-AAD sequence. Through this studio, students engage in the challenges and opportunities presented by changes in society, technology, and urban experience. Through design projects, they explore alternative modes and markets for practice, along with new directions and new tools for design.

Course usually offered summer term only
Activity: Studio
2.0 Course Units

ARCH 708 Bioclimatic Design Studio

An advanced design studio for the MSD-EBD program that synthesizes the concepts and techniques of environmental building design. Topics and materials for the studio are developed in Arch 752: EBD Research Seminar, and summarized in a research report at the end of studio.

Taught by: Dorit Aviv
Course usually offered summer term only
Prerequisite: ARCH 751 AND ARCH 752 AND ARCH 753
Activity: Studio
2.0 Course Units

ARCH 709 Environmental Building Design Research Studio

Architecture is a process of discovery, of deciding what to work on, before it ever becomes a matter of design (disegno, drawing). For environmental building design, the process of discovery is even more profound, involving issues of resource consumption, modes of living and working, and of ecological interconnection that have to be explored before questions of performance can even be addressed. This design studio uses research at multiple scales to identify the topic of the studio, then student teams develop design for buildings of maximum (ecological) power.

Course usually offered in fall term
Prerequisite: ARCH 708 AND ARCH 751 AND ARCH 752 AND ARCH 753
Activity: Studio
2.0 Course Units
ARCH 710 Contemporary Theory 1989-Present
A chronological overview of the approaches and attitudes adopted by architects, theorists and inter-disciplinary writers from 1993- today that have shaped the current discourse of architecture. This course will introduce and contextualize key projects, and polemics over the last 25 years. Central themes in this course include the impact of digital technologies and methods of design, production and materiality. These are explored through texts, movements, projects and buildings that help form an overview that has shaped the contemporary condition that we live in. There have been a myriad of different approaches and through a select set of readings and lectures students will be exposed to crucial texts, projects and buildings making students versatile and knowledgeable in the important concepts that shape our current discourse. A focus will be the organization, configuration and articulation of buildings and the conceptual and cultural arguments they are associated. Formal, organizational and material characteristics of this period will be explored. This class will develop students’ knowledge and provide a platform from which they can continue the discussions surrounding architectural thought and practice. The students will learn to communicate their ideas verbally and in writing. Contemporary topics in architecture theory and projects are introduced in a weekly lecture format critical to the shaping of our discipline today. A weekly recitation session allows students to engage with the readings critically in the subject matter. A mid-term and final paper are required to pass this class. (Topics to be covered: Seminal projects and buildings in the last 25 years, situating the architects work within a culture of debate and discourse identifying the important readings surrounding each building/project.)
This course is a requirement of the MSD-AAD curriculum.
Course usually offered in spring term
Activity: Lecture

ARCH 712 Topics in Architecture Theory II
A seminar on advanced topics in architectural design and theory. Topics and instructors will vary.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ARCH 713 Ecological Thinking in Art and Architecture
This seminar will address the diverse narratives of ecological thinking in the history of art, architecture, and urban planning during the 20th century. The course will contextualize and interrogate contemporary disciplinary discourses as well as historical assumptions related to ecological thinking in art and architectural history and environmentally-conscious practices. By mapping received trajectories of Eco Art, Ecocritical Art History, and Ecological Histories of Architecture and Urban Planning, the course will work from a subtly hidden foundation of eco-historical knowledge that connects these fields of inquiry, while also critiquing these trajectories and seeking to provide more focused and robust alternatives for knowledge production in the present. It aims to attract students from the School of Arts and Sciences and the Weitzman School of Design in a discussion on the interconnected histories of art and architecture during the 20th century.
Taught by: Zarmakoupi
Also Offered As: ARTH 577
Activity: Seminar
1.0 Course Unit

ARCH 714 Museum as Site: Critique, Intervention and Production
In this course, we will take the museum as a site for critique, invention, and production. As architecture, cultural institution, and site of performance, the museum offers many relevant opportunities. Students will visit, analyze, and discuss a number of local exhibitions and produce their own intervention in individual or group projects. Exhibition design, design of museum, the process of curating, producing artworks ranging from paintings to installation and performance, as well as attention to conservation, installation, museum education, and the logistics and economics of exhibitions will be discussed on site and in seminar. These topics and others will be open for students to engage as part of their own creative work produced for the class and an online exhibition.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ARCH 715 Contemporary Aesthetic Theory
This course offers a framework for a provocative history of ideas about beauty as they relate to contemporary thinking and their production of form in architecture. In a world increasingly defined by visuality, the concepts of beauty and visual sensation are not mere intellectual exercises but standards that define the very nature of design practice across disciplines, and that are essential to the worlds of objects, automobiles, furniture and architecture in the twenty-first century. Aesthetic theory is about beauty and about form and how it affects us every day. As architecture practice changes, the tools that are used to create form change due to new technologies, new materials and new tools for fabrication and aesthetics gives us an important way in to understanding the relationship between the object created and the user. This occurs in contemporary cultural landscapes in which we exist, and aesthetics is the organizing element. Through lectures and discussions of aesthetics readings in recitations focused on the object, students will work on a term paper that brings a clear understanding of aesthetics and its role in participating in culture through the objects of the automobile, furniture and architecture industries.
Activity: Seminar
1.0 Course Unit
ARCH 718 History and Theory of Architecture and Climate
This seminar will explore the history of buildings as mechanisms of climate management, and the theoretical and conceptual frameworks that pertain. In particular, we will examine how visual and mediatic interventions became a crucial aspect of architectural engagement with climate systems, and how, simultaneously, architectural image-making techniques became an important interdisciplinary site for understanding the cultural effects of scientific knowledge.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ARCH 719 Archigram and Its Legacy: London, A Technotopia
Acknowledging the ubiquitous proliferation of ‘Hi-Tech’ architecture in contemporary London, this research seminar examines the scope of technology as it emerges and re-emerges in the work of various architects currently dominating the city. This scope includes the last strains of post-war urbanism which spawned a legacy of radical architecture directly contributing to the Hi-Tech; a particular focus of the course will be the contributing and contrasting influence provided by the counter-cultural groups of the 60’s - Archigram, Superstudio, the Metabolists and others. Using the premise of Archigram’s idea of infrastructure, both literal and of event, the course will attempt to discover relational networks between works of the present day (Rogers, Foster, Grimshaw, etc.). As this work practices upon and within public space, an understanding of the contribution of technology to urban theatricality will evolve which is relevant to contemporary spheres of technological design practices. Students will be required to produce and present a term research paper.
Taught by: Faculty
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ARCH 720 Visual Literacy and its Culture
The digital turn in the creative fields resulted in profound transformations of techniques, aesthetics and underlying concepts in the development of contemporary visual culture. The dissemination and consumption of information through images through all types of media platforms influence and re-define (for better or worse) all aspects of our culture and reality. It is vital to develop a deep knowledge of the current visual concepts and techniques in arts, photography, cinema, product design and architecture to claim a critical stance through which we can positively contribute to the evolution of contemporary culture. The discipline of architecture has been deeply influenced by the digital shift in modes of design and visualization which yielded a wide array of directions within the architectural discourse, especially with questions and problems regarding representation. One clear outcome of this transformational period is the diversity of new representational strategies to seek alternative modes of visualization. It is clear that no one representational medium can be defined as the locus of architectural thought and architecture, as a cultural practice, can no longer be defined through the output of a single medium. The reality of our discipline is that we work through collective mediums and conventions of drawings, models, images, simulations, texts, prototypes and buildings to visualize architectural concepts. These mediums all require degrees of expertise in techniques that are necessary for their execution: they all involve conceptual depth that define their disciplinary positions; they all require translations across each other to enable subjective work-flows; they all require aesthetic attitudes to influence the development of visual culture in architecture. This course will introduce the AAD majors to contemporary topics of visualization in arts, photography, cinema and architecture. They will explore multiple mediums of representation to help them gain the vital visual literacy to excel in the program. Students will be introduced to discursive background and contemporary concepts of line drawing, fabricated object and constructed image as they work through 3 distinct projects during the semester. Each exercise will be initiated by a topical lecture and be followed by weekly pin ups to advance student projects. (Topics to be covered: Discourse of Contemporary Line Drawing, Multi-part 3D Printing, Vacuform/CNC Milling, Digital/Analog Surface Articulation, Rendering, Abstraction and Realism, Montage/Collage/Photorealism)
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit
ARCH 721 Designing Smart Objects for Play and Learning
Today's children enjoy a wide array of play experiences, with stories, learning, characters and games that exist as physical stand-alone objects or toys enhanced with electronics or software. In this course, students will explore the domain of play and learning in order to develop original proposals for new product experiences that are at once tangible, immersive and dynamic. They will conduct research into education and psychology while also gaining hands-on exposure to new product manifestations in a variety of forms, both physical and digital. Students will be challenged to work in teams to explore concepts, share research and build prototypes of their experiences in the form of static objects that may have accompanying electronic devices or software. Final design proposals will consider future distribution models for product experiences such as 3D printing, virtual reality and software-hardware integration. Instruction will be part seminar and part workshop, providing research guidance and encouraging connections will subject matter experts throughout the Penn campus. Course usually offered in fall term
Also Offered As: IPD 521
Activity: Seminar
1.0 Course Unit

ARCH 724 Technology in Design
The aim of this course is to understand the new medium of architecture within the format of a research seminar. The subject matter of new media is to be examined and placed in a disciplinary trajectory of building design and construction technology that adapts to material and digital discoveries. We will also build prototypes with the new media, and establish a disciplinary knowledge for ourselves. The seminar is interested in testing the architecture-machine relationship, moving away from architecture that looks like machines into architecture that behaves like machines: An intelligence (based on the conceptual premise of a project and in the design of a system), as part of a process (related to the generative realm of architecture) and as the object itself and its embedded intelligence. Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ARCH 725 Design Thinking
Creating new product concepts was once a specialized pursuit exclusively performed by design professionals in isolation from the rest of an organization. Today's products are developed in a holistic process involving a collaboration among many disciplines. Design thinking - incorporating processes, approaches, and working methods from traditional designers' toolkits - has become a way of generating innovative ideas to challenging problems and refining those ideas. Rapid prototyping techniques, affordable and accessible prototyping platforms, and an iterative mindset have enabled people to more reliably translate those ideas into implementable solutions. In this course, students will be exposed to these techniques and learn how to engage in a human-centered design process. Course usually offered in fall term
Also Offered As: IPD 572
Activity: Seminar
1.0 Course Unit

ARCH 726 Furniture Design Strategic Process
Like architecture, furniture exists at the intersection of idea and physical form. Due to the specific scale that furniture occupies, however, this physical form relates not only to the environment in which the furniture is set, but also intimately to the physical bodies that interact with and around it. Additionally, as a manufactured product, often specified in large quantities, furniture must also address not only poetic considerations, but practical and economic ones as well. Instead of being seen as one-off objects, the furniture created in this seminar focuses on furniture development as a strategic design process where the designer's role is to understand the various responsibilities to each stakeholder (client/manufacturer, market/customer, environment) and the additional considerations (materials, processes, manufacturability, etc.), and ultimately translate these points into a potentially successful product. In order to approach furniture in this manner, the course will be structured around specific design briefs and clustered into three distinct but continuous stages. First, through focused research into stakeholder needs and potential market opportunities, students will craft tailored design proposals and development concepts accordingly. Next, students will work toward visualizing a concept, complete with sketches, small mock-ups, scale-model prototypes, technical drawings, connections and other pertinent details in order to refine their proposals and secure a real world understanding of the manufacturing processes and the potential obstacles created by their decisions. From insights gained and feedback from these steps, students will ultimately develop a final design proposal for a piece, collection, or system of furniture that successfully leverages their understanding of a thoughtful and deliberate design strategy. Taught by: Mike Avery and Brad Ascalon
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ARCH 727 Industrial Design I
This course provides an introduction to the ideas and techniques of Industrial Design, which operates between Engineering and Marketing as the design component of Integrated Product Development. The course is intended for students from engineering, design, or business with an interest in multi-disciplinary, needs-based product design methods. It will follow a workshop model, combining weekly lectures on design manufacturing, with a progressive set of design exercises. Course usually offered in spring term
Also Offered As: IPD 527
Activity: Lecture
1.0 Course Unit
ARCH 728 Design of Contemporary Products: Mass Customization
Personalization is quickly becoming the norm for mass production in a variety of consumer-centric industries. From retail to food, the idea of designing and making custom-made products tailored to fit one's lifestyle will be our exploration. Utilizing digital design innovations, we are able to incubate ideas, prototype, test and be entrepreneurial in design to create these individualized products. Cues from these industries will be used to shift both cultural and experiential product design from a regional discovery to a global focus. This course will embrace digital design and utilize its engagement with manufacturing solutions for a physical output. Through research and a series of design exercises, the approach will be built upon several strategies including adaptability, materiality, fabrication, modularity, and human-centric design. The final project will interpret the research and result in the creation of a design strategy for a mass customized product or system. This course will explore product design solutions through a combination of physical and digital design methods. Beginning with an examination of case studies, students will gain a sense of the breadth of product and interaction design practice as it applies to smart objects. Through a series of lectures and hands-on studio exercises, students will explore all aspects of smart object design including expressive behaviors (light, sound and movement), interaction systems, ergonomics, data networks and contexts of use. The course will culminate in a final project that considers all aspects of smart object design within the context of a larger theme.
Course usually offered in spring term
Also Offered As: IPD 528
Activity: Seminar
1.0 Course Unit

ARCH 730 Techniques, Morphology, and Detailing
The course will focus on design, morphology detailing, and the construction of a pavilion on a chosen site. The course will develop through hands-on workshops and will focus on acquiring knowledge through making, (Techne), understanding the morphological transformation of a given geometric packing, and building using readily available materials. The process consists of building and testing physical models that simulate the actual pavilion in order to ultimately realize the desired design. The second half of the semester will focus on using lightweight construction materials to fabricate the pavilion’s actual components, including structural elements, molded components, and joints, which are required for the pavilion’s final assembly. Additionally, students will learn to organize design and fabrication teams, control design and production schedules, and work with a set budget, which requires keeping track of construction costs and forecasting required procurements, including material quantities takeoff, ordering materials and scheduling deliveries.
Course usually offered in spring term
Activity: Lecture
1.0 Course Unit

ARCH 731 Experiments in Structures
This course studies the relationships between geometric space and those structural systems that amplify tension. Experiments using the hand (touch and force) in coordination with the eye (sight and geometry) will be done during the construction and observation of physical models. Verbal, mathematical and computer models are secondary to the reality of the physical model. However these models will be used to give dimension and document the experiments. Team reports will serve as interim and final examinations. In typology, masonry structures in compression (e.g., vault and dome) correlate with 'Classical' space, and steel or reinforced concrete structures in flexure (e.g., frame, slab and column) with 'Modernist' space. We seek the spatial correlates to tensile systems of both textiles (woven or braided fabrics where both warp and weft are tensile), and baskets (where the warp is tensile and the weft is compressive). In addition to the experiments, we will examine Le Ricolais’ structural models held by the Architectural Archives.

ARCH 733 New Materials and Methods
The primary goal of this course is to help students formulate a robust research proposal for their culminating design studio in digital large-scale fabrication and robotics manufacturing using new materials such as carbon fiber and other composites. The course provides a forum for critical discussion of contemporary design practices that is exploratory and speculative in nature. In addition to collaborative thinking and debate students will develop their own research interests to formulate contemporary positions in the making of architecture through the research of materials and their fabrication methods.
Course usually offered in fall term
Corequisite: ARCH 720

ARCH 734 Ecological Architecture - Contemporary Practices
Architecture is an inherently exploitive act - we take resources from the earth and produce waste and pollution when we construct and operate buildings. As global citizens, we have an ethical responsibility to minimize these negative impacts. As creative professionals, however, we have a unique ability to go farther than simply being 'less bad.' We are learning to design in ways that can help heal the damage and regenerate our environment. This course explores these evolving approaches to design - from neo-indigenous to eco-tech to LEED to biomimicry to living buildings. Taught by a practicing architect with many years of experience designing green buildings, the course also features guest lecturers from complementary fields - landscape architects, hydrologists, recycling contractors and materials specialists. Coursework includes in-class discussion, short essays and longer research projects.

ARCH 737 Semi-Fictitious Realms
The pursuit of immersive digital experiences has long been a goal of the computing industry. Early wearable displays designed in the 1960s depicted simple three dimensional graphics in ways that had never been seen before. Through trial and error, digital pioneers reframed the relationship between user and machine, and over the last five decades, have made strides that advanced both the input and output mechanisms we are so comfortable with today. As a field, architecture has been reliant on these advancements to design and document buildings, but these tools still leave the architect removed from the physicality of the design, with their work depicted as 2D lines or 3D planes alone. This course will study the evolutionary advancements made that now allow us to fully inhabit digital worlds through Virtual Reality. Using the HTC Vive and Unreal Engine, students will generate immersive, photorealistic models of unbuilt architectural works and explore digital/physical interactivity. From the terraces of Paul Rudolph's Lower Manhattan Expressway to Boullee's Cenotaph for Newton, the goal of this course is to breathe new life into places and spaces that have, until this time, never been built or occupied. ARCH 738 The Modern House: Technology Then and Now
In the current age of new fabrication methodologies, methods are emerging for the conception and design of the contemporary house which have radical potential for enclosure, habitation and practices of daily life. This course begins by examining the canonical houses of the original avant-garde - Adolf Loos, Frank Lloyd Wright, Le Corbusier, Mies van der Rohe and Alvar Aalto - on the premise that their houses were working manifestos for rethinking space, form and indeed ideas of life itself - all of which were prompted by new concepts of construction. From this spectrum of issues, contemporary houses and contemporary methods and materials will be studied extensively to develop equally new ideas between matter and quotidian life. As the primary task of the course, students will work in teams to develop highly detailed constructional proposals for a portion of a speculative home. Course usually offered in spring term

1.0 Course Unit

ARCH 739 New Approaches to an Architecture of Health
Health care is taking on a new role in our society - with a refocusing from episodic care for those who are ill or symptomatic to providing life-long care geared towards maintaining wellness. These changes are evident across numerous areas of design, from wearable technologies that track and analyze, to large scale building initiatives that aim to create healthier environments and improve lives through strategic planning initiatives. A concrete, physical representation of this paradigm shift can be found within the hospital building itself and in the new manner in which hospitals are looking to serve their patients and care for their clinicians. Simultaneously both public and private spaces, hospitals are complex systems in which sickness, health, hospitality, technology, emergency, and community share space and compete for resource. In order to frame our present day understanding of the role of architecture (and design) in fostering health for individuals and within communities, this seminar will begin with an exploration of the historical and contemporary perspectives on the role of the architect and built environment on health. (Parallels between design and our ever-changing understanding of the biological, social, and environmental causes of sickness and disease will also be explored.) During this conversation, students will read articles and study recently constructed projects in order to examine the ways in which the architects approached these topics through built form. Following from this foundation, students will craft arguments for a new approach to the individual, the community, health, and architecture through a written response and architecturally designed scenario that argues for their perspective on how architecture can and should shape the health of those who inhabit it. Throughout the course, students will engage in weekly readings (and discussions) of critical texts exploring ideas around the role and impact of architecture on health. Various content experts will be included in the course to provide additional insights into key areas of theory and practice in order to lend additional perspectives and ground the conversation. ARCH 741 Architecture Design Innovation
The mastery of techniques, whether in design, production or both, does not necessarily yield great architecture. As we all know, the most advanced techniques can still yield average designs. Architects are becoming increasingly adept at producing complexity & integrating digital design and fabrication techniques into their design process - yet there are few truly elegant projects. Only certain projects that are sophisticated at the level of technique achieve elegance. This seminar explores some of the instances in which designers are able to move beyond technique, by commanding them to such a degree as to achieve elegant aesthetics within the formal development of projects.

ARCH 742 Function of Fashion in Architecture
The Function of Fashion in Architecture will survey the history of fashion and the architectural parallels starting from Ancient Civilization to Present. The focus will be on the relevance of garment design, methods and techniques and their potential to redefine current architecture elements such as envelope, structure, seams, tectonics and details. The functional, tectonic and structural properties of garment design will be explored as generative platforms to conceptualize very specific architectural elements. One of the challenges in the course is the re-invention of a means of assessment, the development of notations and techniques that will document the forces and the production of difference in the spatial manifestations of the generative systems.

Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ARCH 743 Form and Algorithm
The critical parameter will be to develop the potential beyond finite forms of explicit and parametric modeling towards non-linear algorithmic processes. We will seek novel patterns of organization, structure, and articulation as architectural expressions within the emergent properties of feedback loops and rule-based systems. This seminar will accommodate both introductory and advanced levels. No previous scripting experience is necessary. It will consist of a series of introductory sessions, obligatory intensive workshops, lectures followed by suggested readings, and will gradually focus on individual projects. Students will be encouraged to investigate the limits of algorithmic design both theoretically and in practice through a scripting environment.

Activity: Seminar
1.0 Course Unit

ARCH 744 Postdigital Craft
As we have entered a postdigital era, the dominance of a purely technological approach as a vehicle for design innovation has waned. Questions of substance and disciplinary autonomy have found their way back into the contemporary cultural discourse, enriching the way we examine and deploy advanced technologies towards novel expressions in architecture. This seminar will investigate, through the production of estranged objects, opportunities for design that are being generated at the intersection of machinic and human minds, and speculate on possible futures in which concepts of nature and technology have been inseparably intertwined.
Course usually offered in spring term
Also Offered As: IPD 544
Activity: Seminar
1.0 Course Unit

ARCH 746 Cinema and Architecture in Translation
Cinema and Architecture in Translation is a seminar that will survey key cinematic moments and techniques within the history of film and find new intersections between architecture and narratives. The focus will be on the relevance of mise-en-scene, the background and building figures of architecture and future speculations of the city, yet in relation to narrative dynamics. One of the challenges is to consider techniques that will affect both conceptualization and the production of spatial manifestations using potent visual platforms. Current pre and post-production techniques in film making methods are converging with architectural digital representation. This is an opportunity that provides fertile ground for architects to re-examine the ‘digital’ in a variety of scales in relation to impactful narratives and visualizations. These tools, specifically the technique of ‘matte-painting’ will be explored in this course. There is a rich history in constructing images, speculative worlds and scenes for the film industry. We will explore the parallels between the tools and strategies of cinematic visualization as it relates to advanced architectural image making. Students will have the opportunity to analyze filmic scene making, learn advanced representation and techniques in matte painting and zbrush. Above all this course will engage students in the conceptual as well as practical complementarities of architecture and cinema, while watching some of the best films ever made and the most provocative and insightful books to help process them. An important aspect of this course will be to explore the differences between ‘real’ architecture and the cinematic architecture. The expansive Space and Time in which cinematic architecture is located, creates an incubator where true innovated speculation can occur. This is an advanced representation course that produces 2D images and narrative texts.

1.0 Course Unit

ARCH 747 Robotic Fabrication
Automation and robotics have helped manufacturing increase productivity by 1,500% since 1945 (McKinsey 2017). In contrast, however, construction productivity has remained relatively stagnant during the same time. The construction industry is facing pressure to change. For the robotics industry, construction presents potential use cases and unique applications that can utilize a variety of evolving technologies from drones, ground robotics, teleoperation, machine vision, additive manufacturing, and assistive robotics. These technologies take advantage of the digital revolution and utilize ideas in automobile and aerospace engineering. Our interest in these technologies is that they open new opportunities for design. Robotic fabrication will explore the theory and design of a project that will form a component of the culminating design studio for the MSD AAD program. Theory will be explored through a series of lectures and the design component will focus on a one to one scale fabrication of a project determined by the design studio curriculum.
Course usually offered summer term only
Activity: Seminar
1.0 Course Unit
ARCH 748 Architecture and the New Elegance
This design seminar will define and elaborate on the following topics for the digital discourse - the contemporary diagram, technique, structural thinking, systemic thinking and aesthetic projections. Technological innovations establish new status quos and updated platforms from which to operate and launch further innovations. Design research practices continually reinvent themselves and the techniques they use to stay ahead of such developments. Reinvention can come through techniques that have already been set in motion. Mastery of techniques remains important and underpins the use of digital technologies in the design and manufacturing of elegant buildings. But, ultimately, a highly sophisticated formal language propels aesthetics. The repositioning of design intent and the complex order generated by the behavioral techniques of multi-agent systems has implications for the affects which are generated as well as the nature of hierarchy within architecture. The distributed non-linear operation of swarm systems intrinsically resists the discrete articulation of hierarchies within Modern architecture and contemporary parametric component logic. The bottom-up nature of swarm systems refocuses tectonic concerns on the assemblage at the micro scale rather than the sequential subdivision of program or form. The seminar will explore strategies for high population agent models through the use of lightweight algorithmic environments, in particular the Java-based platform Processing.

ARCH 749 Indeterminate Delineations
Architecture has always been closely entangled with modes of vision. Devices ranging from Durer’s perspective machine to the photographic eye have strongly shaped the way we think and design the built environment of our cities. A strange loop is in place here: our world-views provide the development of specific modes of representation, of engagement with the world, and in turn they begin to have an impact in that same world, becoming an active element in the way we understand it. Put more simply, it is the technologies through which we see and experience the built environment that define the way we construct it. In this class, we will focus on visual and physical points as anchors to tie modes of vision with modes of construction. Points play an important role in the history of visuality: if during Impressionism and Pointillism they were devised to delineate the contrast and alignments between what we see and how we see it in an attempt to investigate the mechanics of vision, it was during the post war period that Max Wertheimer’s work at the Berlin School of Gesalt Psychology leveraged them as graphic elements to understand part to whole relationships central to Bauhaus’ design pedagogy. Today, imaging technologies are once again placing points as central elements in the construction of our contemporary visual language, transforming ever-growing datasets of partial images in three dimensional machine readable survey models: it is with points and aggregated clouds that we are constructing the figure of our cities. As such, they become a necessary site of design investigation to move beyond monolithic views of the world. This class leverages the bi-product of scanning technologies - point clouds and image making - to explore inclusive modes of delineations: a visual sensibility to engage with the multifaceted nature of the built environment.

ARCH 750 Parafictional Objects
This representation/design seminar explores the aesthetics of estrangement in realism through various mediums. The reality of the discipline is that architecture is a post-medium effort. Drawings, Renderings, Models, Prototypes, Computations, Simulations, Texts, and Buildings are all put forward by architects as a speculative proposal for the reality of the future. Students will explore the reconfiguration of a ‘found object’ in multiple mediums and represent parafictional scenarios in various techniques of realism. At a time when rendering engines enable the production of hyper-realistic images within the discipline without any critical representational agenda, it has become ever more imperative to rigorously speculate on realism.

ARCH 751 Ecology, Technology, and Design
This course will examine the ecological nature of design at a range of scales, from the most intimate aspects of product design to the largest infrastructures, from the use of water in bathroom to the flow of traffic on the highway. It is a first principle of ecological design that everything is connected, and that activities at one scale can have quite different effects at other scales, so the immediate goal of the course will be to identify useful and characteristic modes of analyzing the systematic, ecological nature of design work, from the concept of the ecological footprint to market share. The course will also draw on the history of and philosophy of technology to understand the particular intensity of contemporary society, which is now characterized by the powerful concept of the complex, self-regulating system. The system has become both the dominant mode of explanation and the first principle of design and organization. The course will also draw on the history and philosophy of technology to understand the particular intensity of contemporary society, which is now characterized by the powerful concept of the complex, self-regulating system. The system has become both the dominant mode of explanation and the first principle of design and organization.

ARCH 754 Performance Design Workshop
The workshop applies simulation and diagramming techniques to a series of discrete design projects at different scales. The emphasis is on refinement and optimization of performance-based building design. Performance analysis techniques can provide enormous amounts of information to support the design process, acting as feedback mechanisms for improved performance, but careful interpretation and implementation are required to achieve better buildings. Energy, lighting, and air flow are the three main domains covered in the workshop. Students will learn how to utilize domain tools at an advanced level, and utilize them as applications to examine the environmental performance of existing buildings. Using the results of analytical techniques, the students will develop high-performance design strategies in all three domains. Lectures will be given on specific topics each week. A series of analytical class exercises will be assigned to provide students with hands-on experience in using the computer models. A case-study building will be provided at the beginning of the course and students will model different components each week throughout the semester. Every week students present the progress of their work, which will be used to correct methodological and technical issues. ARCH 762 Design and Development
This newly reconstituted course will introduce designers and planners to practical methods of design and development for major real estate product types. Topics will include product archetypes, site selection and obtaining entitlements, basic site planning, programming, and conceptual and basic design principles. Project types will include, among others; infill and suburban office parks, all retail forms, campus and institutional projects. Two-person teams of developers and architects will present and develop high-performance design strategies in all three domains. Lectures will be given on specific topics each week. A series of analytical class exercises will be assigned to provide students with hands-on experience in using the computer models. A case-study building will be provided at the beginning of the course and students will model different components each week throughout the semester. Every week students present the progress of their work, which will be used to correct methodological and technical issues.

ARCH 768 Real Estate Development
This course evaluates ‘ground-up’ development as well as re-hab, re-development, and acquisition investments. We examine raw and developed land and the similarities and differences of traditional real estate product types including office, R & D, retail, warehouses, single family and multi-family residential, mixed use, and land as well as ‘specialty’ uses like golf courses, assisted living, and fractional share ownership. Emphasis is on concise analysis and decision making. We discuss the development process with topics including market analysis, site acquisition, due diligence, zoning, entitlements, approvals, site planning, building design, construction, financing, leasing, and ongoing management and disposition. Special topics like workouts and running a development company are also discussed. Course lessons apply to all markets but the class discusses U.S. markets only. Throughout the course, we focus on risk management and leadership issues. Numerous guest lecturers who are leaders in the real estate industry participate in the learning process. Format: predominately case analysis and discussion, some lectures, project visits.
Taught by: Alan Feldman
One-term course offered either term
Also Offered As: REAL 321, REAL 821
Prerequisite: REAL 721 OR FNCE 721
Activity: Lecture
1.0 Course Unit
Notes: Notes: Predominately case analysis, discussion, some lectures, and project visits.

ARCH 771 Professional Practice II
A continuation of ARCH 671. Further study of the organizational structures of architectural practices today, especially those beyond the architect’s office. The course is designed as a series of lectures, workshops and discussions that allows students and future practitioners the opportunity to consider and develop the analytical skills required to create buildings in the world of practice.

ARCH 791 ARCH Summer Institute: Digiblast
This is a non-credit course for entering Master of Architecture students. The course will cover digital modeling and workflow and will prepare students for techniques used in PennDesign’s 500 and 600 level design studios. Course fee: $750.00. Note: course fees apply only to students who are NOT enrolled in ARCH-500. Course enrollment is by permit only.
Course usually offered summer term only
Activity: Studio
0.0 Course Units
ARCH 792 ARCH Summer Institute: Advanced Architectural Design Digital Workshop
This is a non-credit course for entering Master of Science in Design: Advanced Architectural Design students. The Digital Methods workshop provides a comprehensive introduction to four elements critical to the workflow of the graduate studios at PennDesign: 3D modeling, scripting, visualization and fabrication. Short daily lectures situating digital technologies in contemporary design practice are followed by hands-on tutorials in Maya and Rhinoceros. The first half of the workshop provides an operative knowledge of the many geometry types, modeling techniques, scripting languages and simulation tools available for studio work. Visualization techniques are also introduced, and students will learn to efficiently produce presentation-quality renderings, animations and technical line drawings from digital models. Students also learn protocols for transferring data between various design software packages and how to create data compatible with PennDesign’s digital fabrication equipment. Course fee: $750.00. Course enrollment is by permit only.
Course usually offered summer term only

ARCH 800 Introduction to 3D Programming
ARCH 800 is a two week required introductory course for matriculating RAS students. This course introduces computer programming (Python, Grasshopper, etc.) within a 3D modelling/simulation environment, and introduces students to Penn’s ARI Robotics Lab.
Taught by: Ezio Blasetti
Activity: Laboratory
0.0 Course Units

ARCH 801 Material Agencies: Robotics & Design Lab I
The Fall Material Agencies course consists of two half-semester long sections and is supported by two aligned Core Technical Seminars of half-semester length each. Students will typically work in pairs. Section 1: Programmed Matter. Introduces students to a generative approach to digital design and robotic manufacturing with the goal of unifying design and production within one creative process. The studio will commence with students gaining first-hand experience programming and operating Penn’s industrial robots. 3d design models will be developed in parallel to fabrication experiments and digital simulations. The design brief will focus on a small scale design prototype that is explored at a micro-scale of resolution relative to normative architectural practice. Material placement and material affect will be considered intrinsic to design expression and integral to considerations of space, form, structure and production concerns. The brief will focus on a small scale object or architectural part design with ornamental features. The course introduces material dynamics, robot programming, 3d modelling and computer programming within design. Section 2: Manipulative Matter explores both robotic fabrication and the use of sensors and actuators within responsive fabricated objects or architectural elements. Design Prototyping involving manipulation-based Manufacture. Eg. Sheet metal folding. This will complement the first studio by requiring more pre-determined design intent, fabrication rationalization and robot sensor and electrical integration. A final design prototype will demonstrate embodied material intelligence - through an integrative approach to material organization, electronic circuity, production and design. Electronic wiring and parts will be integrated within larger material prototypes through fabrication methods such as: inlays, additive manufacturing, casting, soldering, painting, laser-cutting, or milling.
Activity: Studio
2.0 Course Units
ARCH 802 Material Agencies: Robotics & Design Lab II
This course will leverage knowledge gained by students in the Fall and set ambitious aims for the experimentation, development and demonstration of a robotically manufactured design prototype that is intrinsically related to a bespoke production process. The end product will involve a 1:1 part or whole, physically fabricated work that will be accompanied by either a live demonstration or video production. During the first half of the semester students will engage in the development of bespoke robotic tooling, sensor and programming capabilities in order to create novel manufacturing processes that explore ideas of intelligent or autonomous manufacturing with an emphasis on responsive or manipulation based processes. Industry processes will be leveraged yet re-cast through creative engagement with manufacturing materials, tools and production operations. Participants will follow a brief that specifies a line of inquiry or scenario, whilst allowing some degree of self-direction. Projects will engage in a speculative and critical approach to architectural design, production and use while leveraging robotics platforms, methods for machine vision, sensing and learning, in addition to an engagement with material dynamics and computer programming within design research. A successful project is expected to: demonstrate a rigorously crafted design artifact; explore novel approaches to design, material fabrication and user engagement, questioning the role and nature of architecture’s physical and cultural contribution; and explore novel forms of robotic production and representation. Some proposals will involve live or filmed demonstrator performances. All projects will require a computer simulation or animation that demonstrates a temporal consideration for design, manufacture or use. The course introduces robot tooling, sensor-feedback procedures, 1:1 material prototyping, and building design with tectonic considerations. Examples of potentially relevant industry processes include: sheet-metal bending, incremental metal forming, additive and subtractive manufacturing.

ARCH 803 General Overview of Algorithmic Design and Robotic Fabrication
Directly supports ARCH 801 Material Agencies I: Section 1. This seminar will teach students computer and robot programming skills that will be utilized to deliver a complimentary and integral aspect of design-prototyping and fabrication work. Topics will vary in application to suit the studio brief. Participants will be introduced to the Robotics Lab, and will learn to set up ABB Industrial Robot tasks. Design algorithms will be developed that establish a conceptual relationship to the manufacturing process and attempt to leverage it for creative forms of design expression whilst addressing material and production performance constraints. Examples include computer programming that simulates a material placement and robotic manufacturing process such as additive manufacturing, filament winding or weaving, and utilizes these tasks in a generative design methodology, where design character, variation in material organization is evaluated relative to performance criteria such as material quantities, production time, etc. Submissions will be technical in nature and will also be implemented within ARCH 801 prototypes. The course provides a foundation for more specialist technical development in Semester 2.

Activity: Seminar
0.5 Course Units

ARCH 804 Advanced RAS Programming
This course will support ARCH 802 Material Agencies II with a greater level of technical competency and detail. More ambitious functionality will be developed that will enable student’s greater degrees of freedom and creativity in their engagement with design and production processes. While students will not engage in science/engineering development, research and software developed in such disciplines will be applied within design, fabrication and user occupation orientated scenarios. Topics will vary in application to suit studio briefs and shifting capabilities within industry and academia. Examples include mechanical and electrical design for bespoke robot tooling, use of Computer Vision for real-time sensing and live behavior-based adaptation, machine learning in design or fabrication applications, or deeper engagement in robot communication and control (E.g. Linux ROS Robot programming framework).

Activity: Seminar
1.0 Course Unit

ARCH 805 Introduction to Micro-controllers, Sensor and Actuator Systems
Directly supports ARCH 801 Material Agencies I: Section 2. This seminar will teach participants to design and assemble electronic circuits using sensors/actuators and micro-controllers, and to program digital and analogue means of data exchange. Students will develop a closed or open loop reactive system that consists of embedded sensor systems that will operate within the Design Studio project prototype, and utilizes feedback from sensors to drive designed affects (E.g. kinetic, lighting, variations in porosity). The course will consider degrees of control, feedback, energy and force in relation to interactions of matter, space and active bodies (human and non-human). Participants will learn how to design electric circuits, solder and weld these and to integrate circuits with micro-processors, sensors and actuators. Exact equipment and methods will vary over time as these technologies evolve rapidly. At present possible micro-controllers utilized include Arduino, Raspberry Pi, Odroid, Intel Nuc, Atom and others. Sensors such as flex, pressure and proximity sensors will be utilized. Possible forms of actuation include servo and stepper motors, linear actuators, NiTiNol muscle wire, pneumatic actuators. A Programming Language will be utilized to for the writing of simple control algorithms that clarify how input and output data is processed and acted upon, with a particular focus on leveraging physical world actions within a designed control loop where possible.

Activity: Seminar
0.5 Course Units

ARCH 806 Experimental Matter
This course aims to extend knowledge into state of the art materials, material applications and fabrication methods and contribute research and experimental results towards ARCH 802 Material Agencies II course prototypical projects. Operating predominantly through research and controlled physical experiments, students will develop a material strategy for their ARCH 802 Material Agencies II work, investigating scientific research papers, industry publications and precedent projects in order to develop know-how in materials and material applications. A material application method will be proposed and experimented with to evaluate and develop use within a robotic fabrication process. Submissions will incorporate experimental test results, methods and precedent research documentation.

Activity: Seminar
1.0 Course Unit
ARCH 807 RAS Theory
This seminar provides a theoretical context to the program, relating autonomous robotics and fabrication research to architectural discourse, philosophy, science and technology. The course commences with a historical overview of scientific topics including cybernetics, complexity theory, emergence/self-organization, evolution/developmental biology, behaviour-based robotics. The course also critically assesses present and future societal trajectories in relation to technology, exploring socio-political, ethical and philosophical arguments that concern a broader technological shift that has occurred during the last decade which has given rise to our unquestioned reliance on algorithms within our everyday lives (social media, shopping, navigation), and similar impact from Urban OS’s, Industry 4 and driverless car technologies. Readings cover philosophy, computer science, cybernetics, robotics, sociology, psychology, and will be discussed in relation to their consideration within the domain of architectural design and building technology. Examples include: Blaise Aguera y Arcas, Maurice Conti, Norbert Weiner, Kevin Kelly, Ray Kurzweil, Ed Finn, Donna Haraway, Andre Gorz, Bruce Sterling, Daniel Kahneman, Timothy Morton, Levi Bryant. A theoretical written statement related to ARCH 801 Material Agencies I Section 1 or 2 will be produced by participants within this core seminar.

1.0 Course Unit

ARCH 808 Scientific Research and Writing
Following a framing of architectural design-research and theory in Semester 1, this course aims to provide students with knowledge of state of the art robotics and design taking place in the research community and to introduce methods to evaluate and demonstrate academic research that encompasses both creative and technical work. Submissions will include a technical written statement related ARCH 802 Material Agencies II work, which will be produced by participants under direction within this core seminar. This will train students for additional technical career opportunities and raise the level of discourse and prospects for further research from the program and its participants to a level suitable for continuation within PhD studies.
Activity: Seminar
1.0 Course Unit

ARCH 811 Theories of Architecture
The purpose of this course is to provide to students who are embarking on careers in teaching and scholarship in architecture a re-introduction to some of the principal issues and writings of the architectural theory, as they developed historically from antiquity to the present. In addition to introducing recurring themes and primary texts, this course aims to help students develop the practices that are typical of scholarship, the forms and habits of scholarly inquiry. It is a required course for all incoming Ph.D. and M.S. students.
Course usually offered in fall term
Activity: Seminar
1.0 Course Unit

ARCH 812 Methods In Architectural Research
Methods in Architectural Research is a seminar aimed at first year, second semester PhD and MS students in Architecture who aim to develop their field definition (biblio + statement) and/or research proposal in pursuit of their advanced research degree. The course is also of interest to M.Arch students interested in advanced forms of academic research. The course will cover the full context of research methods in both the humanities and sciences attendant to architecture. Students will be tasked with identifying and naming a field of study, an initial research question to investigate, a methodology they will employ, and a value proposition for their work.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ARCH 813 Qualifying Research
This is an independent study course for first year Ph.D. and M.S. students, supervised by a member of the Graduate Group in Architecture. A course of readings and advisor sessions throughout the semester will result in an independent study paper, which will also be used as the student's qualifying paper for the Qualifying Examination. This research paper will be prepared as if for scholarly publication.
Course usually offered in spring term
Activity: Independent Study
1.0 Course Unit

ARCH 814 The Concept of an Avant-Garde
No historian of architecture has written as intensely about the contradictions of architecture in late-modern society or reflected as deeply on the resulting problems and tasks of architectural historiography as Manfredo Tafuri (1935-1994). For many, the Italian historian's dismissal of 'hopes in design' under conditions of advanced capitalism produced a disciplinary impasse. This in turn led to call tooublier Tafuri - to move beyong his pessimistic and lacerating stance. The seminar will undertake a close reading of one of Tafuri's most complexly conceived and richly elaborated books, The Sphere and the Labyrinth: Avant-Gardes and Architecture form Piranesi to the 1970s. Initially published in Italian in 1980 and translated into English in 1987, the book represents the first effort to define and historicize the concept of an avant-garde specifically in architecture. Its content centers on the radical formal and urban experiments of the first three decades of the twentieth century. Yet Tafuri surprisingly begins his account with the eighteenth-century inventions of Piranesi, and he concludes with an examination of the 'neo-avant-garde' of his own day. In addition to traversing The Sphere and the Labyrinth chapter by chapter - starting with the extraordinary methodological introduction, 'The Historical 'Project'"-we shall also read a number of primary and secondary sources on the historical contexts under discussion and consider a number of important intertexts that shed light on Tafuri's position. The objectives of the course are at once historical and historiographic: we shall be concerned both with actual events and with how they have been written into history. Finally, we shall reassess the role of an avant-garde in architecture and compare Tafuri's conception to that advanced in other disciplines. Is the concept of an avant-garde still viable today? Or should it be consigned to the dustbin of twentieth-century ideas? Assignment for first class: read the introduction to The Sphere and the Labyrinth, pp. 1-21, "The Historical 'Project". A copy of the book is on reserve at the library. Note: the book is out of print. For future classes please make every effort to purchase a used copy or obtain one via interlibrary loan. Copies of individual chapters will also be made available on our class website.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit
ARCH 815 Research Report
The candidate for the M.S. in Architecture degree shall prepare a research report in his or her subject of study. The topic of this report must be approved by an advisor. This report will be developed in the independent study courses, undertaken after the eight units of course work has been completed, normally in the summer semester. The purpose of these courses is to give the student an opportunity to synthesize their previous coursework at Penn. Course enrollment is by permit only. Please contact Sarah Lam (ARCH Dept.) at sarahlam@design.upenn.edu.
Course usually offered in fall term
Activity: Independent Study
2.0 Course Units

ARCH 816 Advanced Topics in Architecture Culture from World War II through 2001
This seminar will be taught as an advanced section of ARCH 512. It is primarily for students who are in their first year of the PhD program in Architecture but it is open to other upper-level students with instructor permission. In addition to the weekly discussion-format seminar on Tuesday afternoons (1.5 hours), students are also expected to attend the lectures associated with ARCH 512 on Tuesday mornings (10:30-12). Assigned readings will go beyond those on the 512 syllabus to include more complex and sophisticated source material. The subject of both ARCH 512 and 812 is the evolution of the culture of architecture from World War II to the turn of the twenty-first century. Starting with the period of wartime planning and postwar reconstruction in the 1940s, we will move decade by decade up to the present century, considering the transformations of modernist culture under the impact of social, political, technological, and urban changes. We will address the challenges posed to architecture from inside as well as outside the discipline and from around the world, attending to material and ideological developments and to relations between individual protagonists and larger historical and institutional forces. Among the wide range of issues at stake are the impact of research and technology coming out of the world war; the intensifying critique of interwar functionalism and debates over monumentalhumanism, regionalism, history, aesthetics; the effects of suburbanization, expanded mobility, changing demographics, and environmental factors; the phenomena of consumer culture and mass media; the impact of the Cold War and decolonization; the emergence of a ‘global village’ and its intensifying cultural exchanges; the rise of a new architectural avant-garde in the 1960s and the advent of postmodernism; plus more recent ramifications. At the level of theory and methodology, the seminar will be especially concerned with issues of periodization and documentation. We will discuss and debate the question of how 'architecture culture’ is produced and reproduced at particular moments in history. Seminar discussions will be focused around specific case studies, some to be determined by the instructor, the rest based on in-depth individual research products to be carried out by the members of the class. Each student will work on his or her case-study project over the course of the semester, leading to an in-class presentation and a term paper of 25 pages.
Course usually offered in spring term
Activity: Seminar
1.0 Course Unit

ARCH 851 Field Bibliography
This course is essentially an independent study, undertaken by doctoral students in preparation for the Candidacy Examination. This course should be taken in conjunction with ARCH 852 after all other courses have been completed. Normally a member of the student's Dissertation Committee supervises this course.
Two terms. student may enter either term.
Activity: Independent Study
1.0 Course Unit

ARCH 852 Dissertation Proposal
This course is essentially an independent study, undertaken by doctoral students in order to write the Proposal for the Dissertation. The Proposal is prepared before and defended during the Candidacy Examination. This course should be taken in conjunction with ARCH 851 after all other courses have been completed. Normally a member of the student's Dissertation Committee supervises this course.
Two terms. student may enter either term.
Activity: Independent Study
1.0 Course Unit

ARCH 995 Dissertation
Two terms. student may enter either term.
Activity: Dissertation
1.0 Course Unit

ARCH 998 Independent Thesis Study
Activity: Independent Study
1.0 Course Unit

ARCH 999 Independent Study
This course enables students to undertake self-directed study on a topic in Architecture, under the supervision of a faculty member. Students are required to make a proposal for the study to the Department Chair, outlining the subject and method of investigation, and confirming the course supervisor at least two weeks prior to the beginning of the semester.
One-term course offered either term
Activity: Independent Study
1.0 Course Unit
Art & Archaeology of Mediterranean World (AAMW)

AAMW 425 Late Antique Arts
What is 'Late Antiquity'? In 312 when Roman emperor Constantine inaugurated a Christian empire, 'Roman' culture was centuries old. The period ca. 200-650 CE saw profound transformations that launched Medieval, Byzantine and Islamic traditions. In this epoch of economic and political upheaval destruction was frequent but partial: Rome long survived, Constantine's 'new Rome,' Constantinopole flourished, and around the Empire both proto-global visual culture and local forms prospered. Roman cultural models authorized both innovation and passion for tradition, in forms and styles: we critique art-historical models for Late Antique 'decline', analyse habits of material reuse and curation, and look at new Christian and Jewish roles for Roman things as well as polytheist visual survival. Foreign allies and enemies, and new peoples invading an already polyethnic Empire, interacted with Greco-Roman Late Antiquity: we visit arts of Sasanian and Islamic empires east and south, and 'barbarian' domains in Africa, Europe, Britain. Media discussed, for sacred, courtly, domestic, funerary, political and civic spaces and structures include not just 'monumental' painting, mosaic, sculpture, but also objects of silver, ceramic, ivory, figural textile, glass; painted books; jewelry; mass-media artifacts like coins and pilgrimage tokens. We also study Late Antique texts on art, objects, space and viewership.

Taught by: Ann Kuttner
Course not offered every year
Also Offered As: ARTH 425, CLST 425
Activity: Lecture
1.0 Course Unit

AAMW 427 Roman Sculpture
Survey of the Republican origins and Imperial development of Roman sculpture - free-standing, relief, and architectural - from ca. 150 BC to 350 AD. We concentrate on sculpture in the capital city and on court and state arts, emphasizing commemorative public sculpture and Roman habits of decorative display; genres examined include relief, portraits, sarcophagai, luxury and minor arts (gems, metalwork, coinage). We evaluate the choice and evolution of styles with reference to the functions of sculptural representation in Roman culture and society.

Taught by: Kuttner, Rose
Course not offered every year
Also Offered As: ARTH 427, CLST 427
Activity: Lecture
1.0 Course Unit

AAMW 428 Hellenistic Art and Spectacle
Hellenistic usually names art in the age of Mediterranean culture from the 4th century BCE and the rise of Alexander the Great's Macedon, and the Greco-Macedonian conquest of the Persian Empire, to Cleopatra of Egypt's defeat by Rome at the end of the Republic. Our course looks also at the age of Augustus and his successors, 1st century CE. While Greek and Macedonian practice in city-states and kingdoms is our launching point, this course also looks at international culture and cultural interaction among peoples from North Africa and Etrusco-Roman Italy, Egypt, (Etrusco) Anatolia, the Mideast and Central Asia. We probe art, artifacts, and visual display from a range of settings, from sanctuary to house, palace and parade, and in all media, from marble monuments to pottery and jewelry. Our archaeology of Hellenistic visual culture also looks at the rich body of Hellenistic and Roman texts of art history, art criticism, and the description of objects and image, to better understand the Hellenistic maker, patron, and viewer. No prerequisites. It is desirable for undergraduates to have experience of research. Of interest to students in AAMW, ARTH, ANCH, CLST, VLST, NELC, RELS and ANTH.

Taught by: Kuttner
Course not offered every year
Also Offered As: ARTH 428
Activity: Lecture
1.0 Course Unit

AAMW 435 Medieval Islamic Art & Architecture
An introduction to the major architectural monuments and trends, as well as to the best-known objects of the medieval (seventh-to fourteenth-century) Islamic world. Attention is paid to such themes as the continuity of late antique themes, architecture as symbol of community and power, the importance of textiles and primacy of writing. Suitable for students of literature, history, anthropology as well as art history.

Taught by: Holod
Course not offered every year
Also Offered As: ARTH 435, NELC 489
Activity: Lecture
1.0 Course Unit

AAMW 509 Curatorial Seminar
Curatorial seminars expose students to the complexity of studying and working with objects in the context of public display. With the guidance of faculty and museum professionals, students learn what it means to curate an exhibition, create catalogues and gallery text, and/or develop programming for exhibitions of art and visual/material culture. Students in this curatorial seminar will participate in planning the exhibition of Japanese illustrated books from the Tress collection to be held in the Kislak Center in spring 2021. Japanese illustrated books are celebrated for their high technical and aesthetic achievements and the collection spans all genres and formats over more than three hundred years. In this course, students will be thinking through how we can tell the story of the illustrated book in Japan in the space of the exhibition. We will think through how these materials related to their broad and largely literate audiences, and we'll pay close attention to artists, genres, technologies, and subjects. Students will conduct research, prepare didactic labels, write entries for the catalogue, and develop the website and symposium as part of their curatorial practice. There will be extensive hands-on engagement with examples from the Kislak collections as well as practical training in papermaking, materials, and binding. By permission only.

Course not offered every year
Also Offered As: ARTH 501, NELC 501
Activity: Seminar
1.0 Course Unit
AAMW 512 Petrography of Cultural Materials
Introduction to thin-section petrography of stone and ceramic archaeological materials. Using polarized light microscopy, the first half of this course will cover the basics of mineralogy and the petrography of igneous, metamorphic and sedimentary rocks. The second half will focus on the petrographic description of ceramic materials, mainly pottery, with emphasis on the interpretation of provenance and technology. As part of this course, students will characterize and analyze archaeological samples from various collections. Prior knowledge of geology is not required.
Course not offered every year
Also Offered As: ANTH 514, CLST 512
Activity: Seminar
1.0 Course Unit

AAMW 514 Kinship and Connectivity in the Roman World
An individual's life course is often reflected, enhanced, and defined by their relations to other individuals. This course will investigate the concept of kinship in the Roman world through textual, visual, and archaeological evidence. We will explore relationships at all levels of society from the imperial family to the slaves and freedmen who were part of larger households, in order to understand how different relationships shaped and structured interactions in Roman society. Together, we will explore the following questions: how were relationships and bonds represented in the ancient world? What structures were in place for families to perpetuate themselves through biological or adoptive means? How could non-Roman citizens create family connections through formal and informal channels? How could relationships be celebrated in life and commemorated in death? We will use written evidence from ancient historians, visual evidence like the Altar of Peace, and archaeological evidence from cemeteries to examine how Roman notions of kinship shaped life and death in different social milieus.
Taught by: Brent
Also Offered As: ANCH 315, ANTH 315, CLST 315, CLST 515
Activity: Seminar
1.0 Course Unit

AAMW 519 Ancient Greek Colonies
This seminar examines the archaeology of Greek colonization from the Late Bronze Age to ca. 600 B.C. These colonies were highly diverse in their motivations, physical settings, and political and social structures, as well as their relationships with mother cities and the new worlds they inhabited. Emphasis is placed on the colonial experience as a cross-cultural and negotiated process. In addition to archaeological and epigraphic evidence, literary and historical traditions are examined. Colonies from the southern Balkan peninsula, Black Sea, Ionia, northern Africa, and Magna Graecia will be the focus of reading, reports, and discussion.
Taught by: Tartaron
Course not offered every year
Also Offered As: CLST 532
Activity: Seminar
1.0 Course Unit

AAMW 520 Topics in Aegean Bronze Age
Topic varies from semester to semester. This Fall 2019 seminar will discuss The Architecture of Akrotiri, Thera. Around 3,500 years ago a culture thrived on the small island of Thera in the Cycladic islands of Greece. Excavations have revealed a portion of a sophisticated town with multi-storied buildings decorated with elaborate fresco programs and equipped with all the necessities to support a cosmopolitan community with trade contacts reaching throughout the Mediterranean, Egypt, and the Ancient Near East. Due to the Bronze Age eruption of the volcano at the center of the island, Akrotiri is known as the best-preserved Late Cycladic site in the Aegean. In this class, we will examine the architecture and frescoes, or wall paintings, of Akrotiri and explore what they reveal to us about this unique group of people. Students will write and present two research papers to the class.
Course not offered every year
Also Offered As: ARTH 520
Activity: Seminar
1.0 Course Unit

AAMW 522 Topics in Ancient Iranian Art
Topic varies. Spring 2018: This seminar will focus on the environmental, archaeological and textual record for settlement in the Persian/Arabian Gulf region from the Neolithic to the pre-Islamic Late Antique. Emphasis will be on the settlement history and material culture. Special attention will be paid to the close interaction of the local communities on the Arabian side of the Gulf with those on the Iranian/Indus valley side. The patterns of sea faring trade and interaction from Mesopotamia, Iran, Indus Valley and beyond will be considered. It is possible that this class will take a site trip to the UAE during the spring break, if the logistics can be arranged. Instructors: Professors Holly Pittman (Penn), Peter Magee (Bryn Mawr College).
Taught by: Pittman
Course not offered every year
Also Offered As: ARTH 522
Activity: Seminar
1.0 Course Unit

AAMW 523 Narrative in Ancient Art
Art history, and its cousins in religious, social, political and literary studies, have long been fascinated with the question of narrative: how do images engage time, tell stories? These are fundamental questions for ancient Near Eastern, Egyptian and Mediterranean art history and archaeology, whose rich corpus of narrative images is rarely considered in the context of ‘Western’ art. Relations between words and things, texts and images, were as fundamental to the ancient cultures we examine as they are to modern studies. As we weigh classic modern descriptions of narrative and narratology, we will bring to bear recent debates about how (ancient) images, things, monuments, and designed spaces engage with time, space, and event, and interact with cultural memory. We will ask 'who is the story for, and why?' for public and private narratives ranging from political histories to mythological encounters. Our case studies will be drawn from the instructors’ expertise in Mesopotamian visual culture, and in the visual cultures of the larger Mediterranean world from early Greek antiquity to the Hellenistic, Roman, and Late Antique periods. One central and comparative question, for instance, is the nature of recording history in pictures and texts in the imperial projects of Assyria, Achaemenid Persia, the Hellenistic kingdoms, and Rome.
Taught by: Kuttner/Pittman
Also Offered As: ARTH 523, CLST 523, NELC 523
Activity: Seminar
1.0 Course Unit
AAMW 524 Penn Museum Curatorial Seminar: Reconfiguring the Classical World Galleries
The Greek galleries in the Penn Museum were opened in 1994, and the Etruscan and Roman galleries in 2003. The world was very different then, and many of the themes used to frame the artifacts in the galleries are not especially relevant to contemporary students, scholars, and visitors. In this course we will completely reorganize and reinstall the galleries digitally, creating a series of websites that will highlight the new layout and themes. We will work extensively with the Greek Etruscan, and Roman artifacts themselves to reconfigure the galleries, which will highlight the connections between antiquity and the contemporary world, focusing on themes such as armed conflict, trauma, migration, xenophobia, and wealth and poverty.
Taught by: Rose
Also Offered As: ARTH 525, CLST 521
Activity: Seminar
1.0 Course Unit

AAMW 525 Topics in Greek and Roman Art
Topics vary from semester to semester. For the Spring 2020 semester, the topic will be Violence and Ancient Mediterranean Art. The Greek and Roman world was fascinated by representing humans and beasts enduring physical and psychological pain, and images of violence inflicted by mortal and supernatural beings alike. These images occur in art of all kinds, consumed both privately and publically, emerging in the domestic, religious, military and political sphere. They had a range of aims, from affording emotional catharsis, building political cohesion or enforcing social norms, to generating religious awe or confidence in empire — and giving entertainment. As we explore this corpus, we can ask: what might be the roots of such preoccupation with the art of violence and pain in the 'Classical tradition' and its post-antique legacy? Many modern cultures exhibit similar fascination: how far can modern reactions to and theories about such images be guides to reconstructing ancient viewership? How can ancient texts and histories help us in this interdisciplinary project?
Taught by: Kuttner
Course not offered every year
Also Offered As: CLST 524
Activity: Seminar
1.0 Course Unit

AAMW 526 Material & Methods in Mediterranean Archaeology
This course is intended to familiarize new graduate students with the collections of the University of Pennsylvania Museum of Archaeology and Anthropology and the wide range of scholarly interests and approaches used by faculty at Penn and neighboring institutions, as well as to provide an introduction to archaeological methods and theory in a Mediterranean context. Each week, invited lecturers will address the class on different aspects of archaeological methodology in their own research, emphasizing specific themes that will be highlighted in readings and subsequent discussion. The course is divided into five sections: Introduction to the Mediterranean Section; Collections; Method and Theory in Mediterranean Archaeology; Museum Work; and Ethics. The course is designed for new AAMW graduate students, though other graduate students or advanced undergraduate students may participate with the permission of the instructor.
Taught by: Tartaron
Course usually offered in fall term

Activity: Seminar
1.0 Course Unit

AAMW 529 Topics in Roman Architecture
Topic varies. Spring 2018: This seminar offers a critical assessment of digital Roman architecture studies. What has been accomplished and learned over the last generation since the Digital Turn, and where is the field of Roman architecture being taken? Points of focus include several landmark case studies, such as digital reconstructions of the city of ancient Rome, and threatened cultural heritage sites in Syria. The course will involve readings of significant texts, in class discussions and presentations lead by the seminar’s participants, and testing and critiquing of a limited set of digital tools.
Taught by: Stinson
Course not offered every year
Also Offered As: ARTH 529
Activity: Seminar
1.0 Course Unit

AAMW 530 Topics in Byzantine Art
Topic varies from semester to semester. For the Fall 2020 semester, the topic will be: The Icon. This seminar explores the Byzantine icon and its legacy. Spanning nearly two millennia, from the emergence of Christian sacred portraiture to the reception of icon painting by the early twentieth-century Russian avant-garde, the seminar will introduce you to the history, historiography, and theories of the icon. While our focus will be on Byzantium and the wider world of Orthodox Christianity, especially in the Slavic Balkans and Eastern Europe, the seminar will also engage with fundamental questions concerning the nature, status, and agency of images across cultures. Topics to be addressed include iconoclasm and the problem of idolatry; the social and ritual lives of icons; authorship, originality, and replication; viewer response and the cultural construction of vision; the frontier between art and the sacred image; and the afterlife of the icon in modernity.
Taught by: Drpic
Course not offered every year
Also Offered As: ARTH 532
Activity: Seminar
1.0 Course Unit

AAMW 533 Topography and Monuments of Ancient Rome
An intensive exploration of Rome's urban topography during the Republican and Imperial periods (6th c. B.C. through 4th c. A.D.) Using archaeological and textual sources, including the Etruscan and Roman collections of the Penn Museum, the goal will be to reconstruct the built environment and decoration of Rome over the course of a millennium. Of interest to students of classics, archaeology, art history, and architecture. Some familiarity with Rome will be a plus, but is not required.
Taught by: Rose
Course not offered every year
Also Offered As: CLST 328, CLST 533
Activity: Seminar

AAMW 534 Problems in Greek and Roman History: Archaeic and Classical
This seminar is designed to introduce students to the major issues and problems in the early history of Ancient Greece, from approximately 776 BC until the reign of Alexander the Great nearly four hundred and fifty years later. A number of these issues have been the subject of academic investigation for decades: the historicity of Homeric society, the origins of democracy, the reforms of Cleisthenes, the population of Athens, for example. The investigation of many of these problems, however, has received fresh impetus from newer approaches: demographic studies of the Aegean islands, the dating of 5th century inscriptions, the study of Solon’s poetry have all yielded new insights and transformed our understanding of Greek culture and history. In this seminar we will explore many old questions from newer perspectives, with attention to such recent topics as gender, ethnicity and subaltern studies. The result is a view of Greece that is both more familiar and yet equally more alien.
Taught by: McNerney
Course not offered every year
Also Offered As: ANCH 535
Activity: Seminar
1.0 Course Unit

AAMW 536 Archaeology of Anatolia
This class is devoted to the archaeology and history of Anatolia (ancient Turkey) from the beginning of the Bronze Age (3000 BC) to the end of the Byzantine period (1453 AD). Emphasis will be placed on the great empires in Anatolia (Hittite, Phrygian, Lydian, Urartian, Persian, Roman, and Byzantine), and on the great cities (Troy, Sardis, Ephesus, Constantinople). The course is intended to complement the major exhibit on Gordion, the Phrygians, and Anatolian archaeology that will open at the Penn Museum in February of 2016 and run for 10 months.
Taught by: Brian Rose
Course not offered every year
Also Offered As: ARTH 421, CLST 336, NELC 121, NELC 521
Activity: Lecture
1.0 Course Unit

AAMW 539 Archaeobotany Seminar
In this course we will approach the relationship between plants and people from archaeological and anthropological perspectives in order to investigate diverse plant consumption, use, and management strategies. Topics will include: archaeological formation processes, archaeobotanical sampling and recovery, lab sorting and identification, quantification methods, and archaeobotany as a means of preserving cultural heritage. Students will learn both field procedures and laboratory methods of archaeobotany through a series of hands-on activities and lab-based experiments. The final research project will involve an original in-depth analysis and interpretation of archaeobotanical specimens. By the end of the course, students will feel comfortable reading and evaluating archaeobotanical literature and will have a solid understanding of how archaeobotanists interpret human activities of the past.
Taught by: Chantel White
Course not offered every year
Also Offered As: ANTH 533, CLST 543, NELC 585
Activity: Seminar
1.0 Course Unit

AAMW 540 Topics in Medieval Art
Topic varies from semester to semester. For the Fall 2020 semester, the topic will be Migrating Materiality: Ivory Carving Around the Mediterranean. The craft of ivory carving around the Mediterranean is contingent upon the availability of imported elephant tusks, from either South East Asia or, more frequently, from the African continent. The shifting winds of trade routes offer an interpretive paradigm with which to analyze ivory objects from a variety of different cultural groups: the lack or abundance of ivory and the resulting desire for or surfeit of the material shapes its meaning and use around the Mediterranean basin. The study of ivory objects as they migrate around the Mediterranean allows us to investigate the rich intercultural interactions between Eastern and Western Christians, and both of these with the Islamic world. This course focuses on an object-oriented knowledge of ivory artifacts, with a strong emphasis on the collections at the Penn Museum, the Philadelphia Museum of Art, and other area collections.
Taught by: Guerin
Course not offered every year
Also Offered As: AFRC 538, ARTH 540
Activity: Seminar
1.0 Course Unit

AAMW 542 Ancient Seafaring
This course explores ships, seafaring, and seafarers of the ancient Greek World from the Bronze Age (Minoans and Mycenaeans) to the Age of Alexander (Hellenistic period). Sources include shipwrecks and related artifacts, artistic representations, and ancient documents and literature. The emphasis is not so much on the technical aspects of shipbuilding and navigation as on the ways that seafaring shaped Greek history and connected the Greeks to a wider world through trade, warfare, colonization, and adventure.
Taught by: Tartaron

AAMW 546 Museum Internship
The Museum Internship in the spring consists of a research project with Penn Museum collections based on a proposal designed and approved during the fall AAMW Proseminar (AAMW 526). It is offered to, and is a requirement for, first-year AAMW graduate students only. Course usually offered in spring term
Prerequisite: AAMW 526
Activity: Independent Study
1.0 Course Unit
AAMW 550 Archaeologies of Subalternity
This course addresses the various areas and approaches to ‘otherness’ in ancient Mediterranean archaeology, and the power dynamics of oppression. We’ll not only examine disempowerment around cultural identity, class, gender and sexuality, and race/ethnicity, but we’ll spend equal time pondering how those subjects have been studied - or ignored - by classical archaeologists. The power relationships both inherent in the subjugation of various kinds of people in the ancient world, and in the academic discourses around them, are the themes of the course. While this course will be focused on the Bronze Age through late antique Mediterranean, those with other period/interests are most welcome. Students will be asked to bring their own interests to the course, which help shape the course. Upper-level courses in archaeology, anthropology, or ancient history are recommended prior to enrollment.
Taught by: Bowes
Course not offered every year
Also Offered As: CLST 305, CLST 605
Activity: Seminar
1.0 Course Unit

AAMW 552 Archaeometallurgy Seminar
This course is designed to provide an in-depth analysis of archaeological metals. Topics to be discussed include: exploitation of ore and its transformation to metal in ancient times, distribution of metal as a raw materials, provenance studies, development and organization of early metallurgy, and interdisciplinary investigations of metals and related artifacts like slag and crucibles. Students will become familiar with the full spectrum of analytical procedures, ranging from microscopy for materials characterization to mass spectrometry for geochemical fingerprinting, and will work on individual research projects analyzing archaeological objects following the analytical methodology of archaeometallurgy.
Taught by: Moritz Jansen
Also Offered As: ANTH 552, CLST 552, NELC 587
Activity: Seminar
1.0 Course Unit

AAMW 557 Seminar in Archaeological Theory and Method: Archaeology of Landscapes
Advanced seminar for potential professional archaeologists. Course will examine critically main past and present theoretical issues in archaeological research and interpretation, and consider various methodologies utilized towards these interpretive ends.
Taught by: Erickson
Course not offered every year
Also Offered As: ANTH 557, LALS 557
Prerequisite: ANTH 241 OR ANTH 600
Activity: Seminar
1.0 Course Unit

AAMW 559 Myth Through Time and In Time
The textual and physical remains of Greek and Roman culture and belief as ‘myth’ entranced the post-antique European world and its neighbors. Makers, patrons and viewers manipulated those survivals to challenge and speak to a contemporary world. This course focuses on how and why artists and their patrons engaged the mythic and examines the various areas of political and religious life that sought animation through an evocation of narratives from the past. Readings and case studies will engage with very late antique, medieval, and early modern art, turning to the modern and contemporary as well. Moving to the modern lets us examine, among other things, how artists address the exclusionary histories of the past, to enable critiques of myths of supremacy by one gender, race, or culture over others.
Taught by: Kuttner, Brisman
Also Offered As: ARTH 559, CLST 559, COML 559, GRMN 559
Activity: Seminar
1.0 Course Unit

AAMW 562 Intro to Digital Archaeology
Digital methodologies are an integral part of contemporary archaeological practice, and demand that archaeologists to hold a new set of skills and knowledge fundamentals. This course will expose students to a broad range of digital approaches through a review of relevant literature and through applied learning opportunities centered on a course project. The technological underpinnings, best practices, and influences on archaeological practice and theory will be discussed for each method covered in the course. Applied learning opportunities in digital data collection methods will include: aerial and satellite remote sensing, global navigation satellite system (GNSS) survey, 3D scanning methods, close-range photogrammetry, and near-surface geophysical prospection. Students will also have opportunities for practical experience in digital database design and management, geographic information science (GIS) and 3D modeling and visualization. Students will communicate the results of the course project in a digital story that will be presented at the end of the term. Prior archaeological classwork and/or experience preferred.
Taught by: Herrmann
Also Offered As: ANTH 362, ANTH 562, CLST 362, CLST 562, NELC 362
Activity: Lecture
1.0 Course Unit
AAMW 572 Geophysical Prospection for Archaeology
Near-surface geophysical prospection methods are now widely used in archaeology as they allow archaeologists to rapidly map broad areas, minimize or avoid destructive excavation, and perceive physical dimensions of archaeological features that are outside of the range of human perception. This course will cover the theory of geophysical sensors commonly used in archaeological investigations and the methods for collecting, processing, and interpreting geophysical data from archaeological contexts. We will review the physical properties of common archaeological and paleoenvironmental targets, the processes that led to their deposition and formation, and how human activity is reflected in anomalies recorded through geophysical survey through lectures, readings, and discussion. Students will gain experience collecting data in the field with various sensors at archaeological sites in the region. A large proportion of the course will be computer-based as students work with data from geophysical sensors, focusing on the fundamentals of data processing, data fusion, and interpretation. Some familiarity with GIS is recommended.
Taught by: Herrmann
Course offered spring; even-numbered years
Also Offered As: ANTH 572, CLST 572, NELC 572
Activity: Laboratory
1.0 Course Unit

AAMW 604 Troy and Homer
An interdisciplinary seminar focusing on the city of Troy both as an archaeological site and as the setting of the legendary Trojan War. We will consider Homer's Iliad (with selected sections read in Greek) together with the topography and archaeology of the site of Troy in order to address a series of interrelated questions: What are the points of continuity and discontinuity between the stories told by the literary tradition and the material record? How do both types of evidence contribute to our understanding of political relations and cultural interactions between Greece and Anatolia in the Bronze Age? How do Hittite sources bear on our reconstruction of the events behind the Troy legend? How have the site and the poem contributed to each other's interpretation in the context of scholarly discovery and debate? We will give some attention to modern receptions of the Troy legend that deliberately combine material and textual elements, such as Cy Twombly's 'Fifty Days at Iliam' and Alice Oswald's 'Memorial: An Excavation of Homer's Iliad.' The seminar will include a visit to the site of Troy during the Spring Break.
Taught by: Murnaghan
Also Offered As: CLST 604, GREK 604
Activity: Seminar
1.0 Course Unit

AAMW 606 Pastoral Nomadism in the Past and Present
Pastoral nomadism is a 'third way' of human subsistence separate from farming and foraging. It is a sustainable human adaptation to grassland and arid environments practiced through particular technologies and domesticated animals. This course begins by examining the human ecology and social organization that emerge from mobile ways of life, drawing on modern, ethnographic, and archaeological examples of pastoral nomadic groups in the Middle East and Central Asia. Academic readings and ethnographic films will form the basis of discussions about several larger themes, including: the origins of pastoral nomadism and horse riding; the development of dairy-based foods and human adaptations allowing the digestion of lactose; the historical relationship between mobile groups of pastoralists and territorial states; popular perceptions of nomads in various forms of historical and modern media; and the influence of ideas about nomads on modern senses of heritage and nationalism in the Middle East and Central Asia.
Taught by: Hammer
Also Offered As: ANTH 108, NELC 106, NELC 606
Activity: Seminar
1.0 Course Unit

AAMW 611 Greek Epigraphy
An introduction to the principles and practices of Greek Epigraphy. Study of selected Greek inscriptions.
Taught by: McInerney
Course not offered every year
Also Offered As: ANCH 611, CLST 611, GREK 611
Activity: Seminar
1.0 Course Unit

AAMW 613 Landscapes and Seascapes of the Ancient Mediterranean
The Mediterranean environment is both diverse and unique, and nurtured numerous complex societies along its shores in antiquity. This seminar offers a primer on theoretical and methodological approaches to studying landscapes and seascapes of the Mediterranean from the Bronze Age to the early modern era, at scales from local to international and on land and underwater. Concepts from processual, post-processual, and current archaeologies will be considered, and field techniques including excavation and surface survey, remote sensing and geophysics, GIS modeling, and ethnography/ethnoarchaeology are examined. Course content and discussion focus on case studies that illustrate how these tools are used to reconstruct the appearance and resources of the natural environment; overland and maritime routes; settlement location, size, function, and demography; social and economic networks; and agricultural, pastoral, and nomadic lifeways. Seminar participants will develop case studies of their own geographical and chronological interest.
Taught by: Tartaron
Course not offered every year
Also Offered As: CLST 313, CLST 613
Activity: Seminar
1.0 Course Unit

AAMW 618 Art and Architecture in Ancient Egypt
This course will be an introduction to the art, architecture and minor arts that were produced during the three thousand years of ancient Egyptian history. This material will be presented in its cultural and historical contexts through illustrated lectures and will include visits to the collection of the University Museum.
Taught by: Silverman
Also Offered As: ANCH 068, ARTH 218, ARTH 618, NELC 068, NELC 668
Activity: Lecture
1.0 Course Unit
AAMW 622 Art of Ancient Iran
This course offers a survey of ancient Iranian art and culture from the painted pottery cultures of the Neolithic era to the monuments of the Persian Empire. Particular emphasis is placed on the Early Bronze Age. Taught by: Kuttner
Course not offered every year
Also Offered As: ARTH 222, ARTH 622, NELC 222, NELC 622
Activity: Lecture
1.0 Course Unit

AAMW 624 Art of Mesopotamia
The class presents a survey of the art and archaeology of Mesopotamia beginning with the appearance of the first cities and ending with the fall of the Assyrian Empire in the seventh century BCE. It presents the major artistic monuments of Mesopotamian culture, embedding them in their historical context. Focus is placed in particular on the interactions with surrounding cultures of Iran, Central Asia, the Caucasus, the Persian Gulf and Anatolia in order to decenter the discourse from a strictly Mesopotamian perspective. The format is lecture; assignments involve reading response papers; there are in class midterm and final exams. Taught by: Pittman
Course not offered every year
Also Offered As: ARTH 224, ARTH 624, NELC 224, NELC 624
Activity: Lecture
1.0 Course Unit

AAMW 625 Greek Art and Artifact
This course surveys Greek art and artifacts from Sicily to the Black Sea from the 10th century BCE to the 2nd century BCE, including the age of Alexander and the Hellenistic Kingdoms. Public sculpture and painting on and around grand buildings and gardens, domestic luxury arts of jewelry, cups and vases, mosaic floors, and cult artefacts are discussed. Also considered are the ways in which heroic epic, religious and political themes are used to engaged viewers' emotions and served both domestic and the public aims. We discuss the relationships of images and things to space and structure, along with ideas of invention and progress, and the role of monuments, makers and patrons in Greek society. Taught by: Kuttner
Course not offered every year
Also Offered As: ARTH 225, ARTH 625, CLST 220
Activity: Lecture
1.0 Course Unit

AAMW 626 Hellenistic and Roman Art and Artifacts
This course surveys the political, religious and domestic arts, patronage and display in Rome’s Mediterranean, from the 2nd c. BCE to Constantine’s 4th-c. Christianized empire. Our subjects are images and decorated objects in their cultural, political and socio-economic contexts (painting, mosaic, sculpture, luxury and mass-produced arts in many media). We start with the Hellenistic cosmopolitan culture of the Greek kingdoms and their neighbors, and late Etruscan and Republican Italy; next we map Imperial Roman art as developed around the capital city Rome, as well as in the provinces of the vast empire. Taught by: Kuttner
Course not offered every year
Also Offered As: ARTH 226, ARTH 626, CLST 221
Activity: Lecture
1.0 Course Unit

AAMW 628 Greek Architecture and Urbanism
Introduction to the art of building and city planning in the ancient Greek world, 7th-1st c. BC. Emphasis on concepts of organizing space, on issues of structure, materials, decoration, proportion, and the Mycenean and eastern heritage as well as on theory and practice of urbanism as reflected in ancient cities (Athens, Pergamon, Alexandria) and writings (Plato, Aristotle, and others). Excursions to the Penn Museum and Philadelphia. No prerequisites. Taught by: Zarmakoupi
Course not offered every year
Also Offered As: ARTH 228, ARTH 628, CLST 245
Activity: Lecture
1.0 Course Unit

AAMW 630 Etruscan Art & Archaeology in the Penn Museum
The Etruscans, who spoke a language unlike any others known, were cast by their Greek and Roman rivals as outsiders and enemies: pirates, lovers of luxury, loose women. Today we must rely on the archaeological evidence of painted tombs, decorated Tuscan temples and massive engineering works to correct the picture. The course will survey a millennium (1st millennium BCE) of Etruscan culture through archaeological sites, works of art and everyday material culture, especially illustrated with objects in the collection of the Penn Museum. An additional insight into Italic culture comes from tomb groups excavated for the Museum at the Faliscan settlement of Narce. Students will gain familiarity with the societies of pre-Roman Italy through close study of their vases, jewels, arms, armor, textiles and tools, and even their very bones, and discover a surprising amount of Etruscan heritage surviving today. Taught by: Turfa
Course not offered every year
Also Offered As: CLST 335, CLST 635
Activity: Lecture
1.0 Course Unit

AAMW 632 Byzantine Art and Architecture
This course offers a wide-ranging introduction to the art, architecture, and material culture of Byzantium—a Christian, predominantly Greek-speaking civilization that flourished in the Eastern Mediterranean for over a thousand years. Positioned between the Muslim East and the Latin West, Antiquity and the Early Modern era, Byzantium nurtured a vibrant and highly sophisticated artistic culture. With emphasis placed upon paradigmatic objects and monuments, we will examine an array of artistic media, from mosaic and panel painting to metalwork, ivory carving, book illumination, and embroidery. We will consider the making, consumption, and reception of Byzantine art in a variety of contexts: political, devotional, ritual, and domestic. Topics include the idea of empire and its visual articulation; court culture; the veneration of images and relics; patronage, piety, and self-representation; authorship and artistic agency; materiality and the sensory experience of art; the reception of the pagan Greco-Roman past; and the changing nature of Byzantium’s interactions with neighboring cultures. Taught by: Drpic
Course not offered every year
Also Offered As: ARTH 232, ARTH 632
Activity: Lecture
1.0 Course Unit
AAMW 633 Eastern Medieval Architecture
This lecture course examines major architectural developments in the eastern Mediterranean between the 4th and 14th centuries CE. The focus is on the Byzantine Empire, with its capital at Constantinople. Lectures also devote to related developments in the Caucasus (Armenia and Georgia), early Russia, the Balkans (Bulgaria and Serbia), Sicily and under the Normans, the Crusader states. Parallel developments in early Islamic architecture are used for comparative purposes. The course examines evidence for religious and secular buildings, as well as urbanism and settlement patterns.
Taught by: Ousterhout
Course not offered every year
Also Offered As: ARTH 233, ARTH 633
Activity: Lecture
1.0 Course Unit

AAMW 635 Introduction to Visual Culture of the Islamic World
A one-semester survey of Islamic art and architecture which examines visual culture as it functions within the larger sphere of Islamic culture in general. Particular attention will be given to relationships between visual culture and literature, using specific case studies, sites or objects which may be related to various branches of Islamic literature, including historical, didactic, philosophical writings, poetry and religious texts. All primary sources are available in English translation.
Course not offered every year
Also Offered As: ARTH 235, ARTH 635, NELC 285, NELC 685, VLST 235
Activity: Lecture
1.0 Course Unit

AAMW 640 Medieval Art
An introductory survey, this course investigates painting, sculpture, and the 'minor arts' of the Middle Ages. Students will become familiar with selected major monuments of the Late Antique, Byzantine, Carolingian, Romanesque, and Gothic periods, as well as primary textual sources. Analysis of works emphasizes the cultural context, the thematic content, and the function of objects. Discussions focus especially on several key themes: the aesthetic status of art and the theological role of images; the revival of classical models and visual modes; social rituals such as pilgrimage and crusading; the cult of the Virgin and the status of women in art; and, more generally, the ideology of visual culture across the political and urban landscapes.
Course not offered every year
Also Offered As: ARTH 240, ARTH 640
Activity: Lecture
1.0 Course Unit

AAMW 646 GIS for the Digital Humanities and Social Sciences
This course introduces students to theory and methodology of the geospatial humanities and social sciences, understood broadly as the application of Geographical Information Systems (GIS) and spatial analysis techniques to the study of social and cultural patterns in the past and present. By engaging with spatial theory, spatial analysis case studies, and technical methodologies, students will develop an understanding of the questions driving, and tools available for, humanistic and social science research projects that explore change over space and time. We will use ESRI’s ArcGIS software to visualize, analyze, and integrate historical, anthropological, and environmental data. Techniques will be introduced through the discussion of case studies and through demonstration of software skills. During supervised laboratory sessions, the various techniques and analyses covered will be applied to sample data and also to data from a region/topic chosen by the student.
Taught by: Hammer
Course usually offered in fall term
Also Offered As: ANTH 346, NELC 346, NELC 646
Activity: Lecture
1.0 Course Unit

AAMW 647 Archaeological Fieldwork in Southern Iraq
After several decades of closure to foreign researchers, the heartland of the world’s earliest cities (southern Iraq) has reopened for archaeological expeditions. This course is a seminar for graduate students who will conduct fieldwork in Spring 2019 at two major Mesopotamian cities, Ur (Tell al-Muqayyar) and Lagash (Tell al-Hiba), as part of Penn-led teams. Leading up to fieldwork, we will conduct a critical review of past investigations at these and other contemporary Mesopotamian sites of the fifth-second millennium BC. We will discuss how recent work in northern Mesopotamia (Syria, SE Turkey, Kurdistan), Anatolia, and South Caucasus provides new archaeological approaches to be applied, new questions to be answered, and new models to be tested in southern Iraq. In the field, students will work alongside the instructor and other archaeological project staff to learn and hone excavation and survey techniques. During and following fieldwork, each student will conduct an independent project on material excavated and surveyed in the field at Ur and/or Lagash. This project should align with the student’s interests and will further the research program of the archaeological teams at Ur and Lagash.
Taught by: Hammer
Course offered spring; odd-numbered years
Also Offered As: NELC 645
Activity: Seminar
1.0 Course Unit

AAMW 698 Prospectus Workshop
Designed to prepare graduates in any aspect of study in the ancient world to prepare for the dissertation prospectus. Course will be centered around individual presentations and group critique of prospectus’ in process, as well the fundamentals of large-project research design and presentation.
Taught by: Wilker
Course usually offered in spring term
Also Offered As: CLST 698
Activity: Seminar
1.0 Course Unit
Notes: Graduate students in Classical Studies, Ancient History, and AAMW
AAMW 700 Geoarchaeology
In this course, students will learn the basic concepts of earth systems and explore the ways that archaeologists use various environmental sciences (e.g., geomorphology, limnology, palynology, and dendroclimatology) and paleoecological modeling in their research. The course will include lectures and laboratory activities on the basics of geology, including surficial geology, rock and mineral identification, geomorphology and soils, sedimentation and stratigraphy, as well as a systematic review of depositional environments and their archaeological potential. A series of archaeological case studies will illustrate the application of these concepts in real-world field archaeology.
Taught by: Tartaron and Magee
Also Offered As: CLST 700
Activity: Seminar
1.0 Course Unit

AAMW 701 Proseminar In Methods in the History of Art
The means we ascribe to art works of any culture or time period are a direct result of our own preoccupations and methods. This colloquium will give both a broad overview of contemporary debates in the history of art—including such issues as technologies of vision, feminism, gender and sexuality studies, globalization, the pictorial turn or material/visual culture—and locate these methods within art history’s own intellectual history, as well as the history of aesthetics. The course will consist of wide-ranging weekly readings and discussion, and also clarify such key terms as iconography, formalism, connoisseurship, and the Frankfurt and Vienna Schools.
Course not offered every year
Also Offered As: ARTH 701
Activity: Seminar
1.0 Course Unit

AAMW 702 Greek Sanctuaries
Sanctuaries remain an important focal point for the study of Greek religion. Both as sites for worship, dedication, oracular activity and other cult activity and as sites for the mediation of elite and state competition sanctuaries are, along with the polis, the most essential structuring institutions of Greek life. This seminar takes a selection of larger and smaller extra-urban sanctuaries and examines their growth, articulation and function.
Taught by: McInerney
Course not offered every year
Also Offered As: ANCH 702, CLST 702
Activity: Seminar
1.0 Course Unit

AAMW 705 Ethnoarchaeology: Greece
Ethnoarchaeology involves distinctive theoretical and methodological approaches to the study of living societies for the explicit purpose of shedding light on archaeological questions. In this seminar, we will review the intellectual history of ethnoarchaeology in North America and Europe, and explore case studies from Greece, the wider Mediterranean, and beyond. Among the topics will be analogy, cross-cultural comparison, experimental archaeology, oral history research, and archaeologically oriented ethnographic fieldwork. Students will create a proposal for ethnoarchaeological fieldwork in their area of interest in NSF or Wenner-Gren format, to be critiqued by the instructor and their peers.
Course not offered every year
Also Offered As: CLST 705
Activity: Seminar
1.0 Course Unit

AAMW 706 Archaeology of the Hellenistic Period in Italy, Greece, and Asia Minor
A survey of the archaeology of the Hellenistic period (331-31 BCE) across the Mediterranean, with a focus on Rome, Magna Graecia, Greece, and western Asia Minor. The course will stress the interactions among cities and kingdoms during the Roman Republic and Greek Hellenistic periods, especially the second century B.C. Students will work with relevant objects in the Penn Museum’s Mediterranean Section.
Taught by: Rose
Course not offered every year
Also Offered As: ARTH 706, CLST 706
Activity: Seminar
1.0 Course Unit

AAMW 715 Archaeology of Troy
An introduction to the archaeology of Troy, in northwestern Turkey. The course will focus on the results of excavations at the site in 1988, although the earlier excavations of Schliemann, Dorpfeld, and Blegen will also be considered. The course will cover a broad chronological span—from the early Bronze age through the late Roman period, and will include Greek, Roman, and Medieval attitudes toward Troy and the Trojan legend.
Taught by: Rose
Course not offered every year
Also Offered As: CLST 715
Activity: Seminar
1.0 Course Unit

AAMW 720 Topics in Aegean Art
Topic varies. Fall 2018: The choices made by groups of people with regard to the treatment of their dead can be reflective of a society’s beliefs and social structure. In this course, we will examine the burial traditions of the people of the Prehistoric Aegean from the Neolithic through the end of the Bronze Age, circa 7,000-1,100 BCE. We will focus on burial architecture, grave goods, burial rituals, mortuary variability, and the symbolic meaning of death and burial in Prehistoric Greece. Particular attention will be paid to recent discoveries on Crete, the Mainland, and the Cycladic islands. Students will write two papers, and these papers will be presented to the class. The first paper will be circa 15 pages long with footnotes, bibliography, and images (presented via powerpoint) and the second will be a 20-25 page paper with footnotes, bibliography, and images presented via powerpoint.
Taught by: Shank
Course not offered every year
Also Offered As: ARTH 720, CLST 720
Activity: Seminar
1.0 Course Unit

AAMW 723 Topics in the Art of the Ancient Near East
Topic varies. Fall 2019: During the short period of the Neo Sumerian Empire at the end of the third millennium BCE, Mesopotamian concepts of kingship were crystallized through images, buildings, and textual creations. This seminar will examine this central institution from many points of view that invite cross historical and cross-cultural consideration.
Taught by: Pittman
Course not offered every year
Also Offered As: ARTH 723, NELC 740
Activity: Seminar
1.0 Course Unit
AAMW 726 The Archaeology of Greece and Asia Minor in the Archaic and Classical Periods
An examination of new discoveries and conflicting interpretations in the archaeology of Greece and Asia Minor between the seventh and fourth centuries B.C.E. Both sides of the Aegean will receive equal attention, and emphasis will be placed on sanctuaries, settlements, and cemeteries. Taught by: Rose
Course not offered every year
Also Offered As: ARTH 726, CLST 711
Activity: Seminar
1.0 Course Unit

AAMW 732 Topics in Byzantine Art and Architecture
Topic varies. Spring 2018: The recent ‘return’ to the object across the humanities and social sciences has brought to the fore concerns with the nature of material things, their operation in the world, and their entanglement with humans. This seminar will introduce you to some of the key theoretical writings on the object and material culture and will ask you to interrogate their relevance for the discipline of art history. Our focus will be on the Middle Ages, but depending on the specific interests of the seminar participants, we may venture into other historical periods and cultural domains. Topics to be addressed include the social life of things; agency; materiality; the relic; the gift; the miniature; and the question of the human/nonhuman divide. Taught by: Drpic
Course not offered every year
Also Offered As: ARTH 732
Activity: Seminar
1.0 Course Unit

AAMW 737 Islamic Architecture
This seminar will address the problems of studying architecture in the Islamic world. Considered will be issues of architectural design, regional and trans-regional constructional traditions, structural knowledge and innovation, patronage and use. The examples discussed will be mainly religious and social service complexes. Attention will be paid to the manner of transmission of architectural design knowledge and constructional skill. Taught by: Holod
Also Offered As: ARTH 737
Activity: Seminar
1.0 Course Unit

AAMW 738 Topics in Islamic Archaeology
Topic varies. Spring 2017: This seminar will trace the development of the field from one that was centered largely on the recovery of major monuments to one in which issues of daily life, demography, chronology and the study of settlement patterns have come to play a major role. The seminar will review work in the major zones of the Islamic world: Central Asia, Iran, Iraq, Anatolia, Syria, Palestine, Egypt, North Africa I (Libya-Tunisia), North Africa II (Algeria-Morocco), Spain. Of special interest this semester will be the study of landscape archaeology and settlement patterns. The seminar will discuss changes in patterns of settlement, trade and material culture 650 - 1300 CE in different areas of the Islamic world, concentrating on sites in Iran, Syria and North Africa. Taught by: Holod
Course not offered every year
Also Offered As: ARTH 738, NELC 731
Activity: Seminar
1.0 Course Unit

AAMW 740 Topics in Medieval Art
Topic varies. Spring 2015: Among the functional genres shaping religious imagery in the Middle Ages and Renaissance, the altarpiece is arguably the most important, and many of the most famous panel paintings that hang today in museums originated as components of altarpieces. The altarpiece in the Latin church bridged the divide between clergy and laypeople, between cult and devotion, between public acclaim and private interests. Such altarpieces developed into extraordinarily dynamic vehicles for staging the religious image, akin to mural painting (in its potential for narrative elaboration), and manuscript illumination (in its potential for interchanging and juxtaposing imagery). As an umbrella for diverse research projects in both medieval and Renaissance art, this seminar affords an overview of the origins, development and articulation of the altarpiece as a functional and pictorial genre in European art, on both sides of the Alps. It also seeks to provide students with the materials and practical training—technical, scholarly, interpretative—required to study altarpieces as visual, narrative, and material totalities. Course not offered every year
Also Offered As: ARTH 740, RELS 702
Activity: Seminar
1.0 Course Unit

AAMW 751 Participation in Archaeological Excavations
Opportunities for qualified students to join in current expeditions. Credit allowed will depend on the length of time spent in the field. Course usually offered summer term only
Activity: Independent Study
1.0 Course Unit

AAMW 800 Pedagogy
Activity: Independent Study

Notes: May be repeated for credit

Art History (ARTH)

ARTH 070 Latina/o Literature and Culture
This course offers a broad introduction to the study of Latina/o/x culture. We will examine literature, theater, visual art, and popular cultural forms, including murals, poster art, graffiti, guerrilla urban interventions, novels, poetry, short stories, and film. In each instance, we will study this work within its historical context and with close attention to the ways it illuminates class formation, racialization, and ideologies of gender and sexuality as they shape Latino/a/xs’ experience in the U.S. Topics addressed in the course will include immigration and border policy, revolutionary nationalism and its critique, anti-imperialist thought, Latinx feminisms, queer latinitades, ideology, identity formation, and social movements. While we will address key texts, historical events, and intellectual currents from the late 19th century and early 20th century, the course will focus primarily on literature and art from the 1960s to the present. All texts will be in English. Taught by: Sternad Ponce de Leon
Course not offered every year
Also Offered As: COML 070, ENGL 070, GSWS 060, LALS 060
Activity: Lecture
1.0 Course Unit
ARTH 100 Freshman Seminar
The primary goal of the freshman seminar program is to provide every freshman the opportunity for a direct personal encounter with a faculty member in a small sitting devoted to a significant intellectual endeavor. Specific topics will be posted at the beginning of each academic year. Please see the College Freshman seminar website for information on current course offerings https://www.college.upenn.edu/node/403.
One-term course offered either term
Also Offered As: CIMS 016, ENGL 017, URBS 106
Activity: Seminar
1.0 Course Unit
Notes: For Freshmen Only

ARTH 101 World Art and Civilization Before 1400
This course serves as a double introduction to the History of Art. First it is a survey of the ancient world that lays the foundation for the History of Art across the whole Eastern Hemisphere. Across this enormous timespan and geographical spread, an emphasis will be placed on moments of interaction, as well as analogies. Secondly, through this overview of the Ancient world up to around 1400, the basic skills that serve the student in the study of the History of Art will also be developed: close looking, understanding plans, the basics of iconography, questions of stylistic development, among others. This course fulfills Sector III: Arts and Letters and counts towards the History of Art major and minor requirements.
Course usually offered in fall term
Activity: Lecture
1.0 Course Unit

ARTH 102 World Art: 1400 to Now
This course is an introduction to the visual arts in a global context over the period from the early 1400s to the present. The content of the class varies according to the expertise of the instructors but will introduce students to selected and significant moments in artistic production in both the Western and Eastern hemispheres. Offering a broad historical overview of key techniques, movements, and artists, this course will cover aspects of art production around the world during an era of increasing economic exchange, colonization, and industrialization. Looking at painting, sculpture, architecture, and prints, as well as new media such as photography and film, the course will respond to the following questions: How does artistic practice change in this period? Who owns art? What is the role of the artist in society, and where is art made, exhibited, and consumed? Other topics to be covered are art’s crucial role in the period’s political debates and social transformations, including modernization and technological advances, as well as art criticism’s import in forming public opinion. An introduction to art history, this course offers a wholly new perspective on the arts and cultures in this era of artistic innovation. This course fulfills Sector III: Arts and Letters and counts towards the History of Art major and minor requirements.
For BA Students: Arts and Letters Sector
Taught by: Dombrowski, Kim, Shaw, Davis
Course usually offered in spring term
Also Offered As: VLST 232
Activity: Lecture
1.0 Course Unit

ARTH 103 Art and Civilization in East Asia
Introduction to major artistic traditions of China and Japan and to the methodological practices of art history. Attention given to key cultural concepts and ways of looking, in such topics as: concepts of the afterlife and its representation; Buddhist arts and iconography; painting styles and subjects; and more broadly at the transmission of styles and cultural practices across East Asia. Serves as an introduction to upper level lecture courses in East Asian art history cultures. If size of class permits, certain sessions will be held in the Penn Museum or the Philadelphia Museum of Art.
For BA Students: Arts and Letters Sector
Taught by: Davis, Steinhardt
Course not offered every year
Also Offered As: EALC 013, VLST 233
Activity: Lecture
1.0 Course Unit

ARTH 104 Introduction to Art in South Asia
This course is a survey of sculpture, painting and architecture in the Indian sub-continent from 2300 B.C., touching on the present. It attempts to explore the role of tradition in the broader history of art in India, but not to see India as ‘traditional’ or unchanging. The Indian sub-continent is the source for multi-cultural civilizations that have lasted and evolved for several thousand years. Its art is as rich and complex as that of Europe and diverse. This course introduces the full range of artistic production in India in relation to the multiple strands that have made the cultural fabric of the sub-continent so rich and long lasting.
For BA Students: Arts and Letters Sector
Course not offered every year
Also Offered As: SAST 200, SAST 500, VLST 234
Activity: Lecture
1.0 Course Unit

ARTH 106 Architect and History
The built environment shapes our lives and this course tackles its underpinning design principles and qualities as well as social and cultural contexts. It is an interpretative look at the built environment or, more precisely, at the ways in which monuments and cities are designed, represented, perceived and construed over time. It introduces students to the interrelated fields of architecture, art history, and urbanism and explores great architectural monuments and cities from the modern to the ancient period, from the US across Europe and from the Mediterranean to Asia. We will assess the built environment as culturally meaningful form and examine a body of historical and cultural material relevant to its interpretation. In doing so, the course seeks to foster a critical understanding of the cultural and artistic processes that have influenced architectural and urban design. The focus will be on understanding these works as results of skilled workmanship as well as social and cultural products. We will tackle ancient and modern perceptions of these monuments and cities by analyzing form, design, structure and by addressing their perceptual qualities through 3D reconstructions and virtual environments, as well as sketchbook assignments. This course fulfills Sector IV, Humanities and Social Sciences. It cannot be taken pass/fail and must be taken for a regular grade. All assignments (6 sketchbook assignments and 2 papers) have to be completed and both exams attended, in order to pass the course.
For BA Students: Humanities and Social Science S

ARTH 127 The Material Past in a Digital World
The material remains of the human past -objects and spaces- provide tangible evidence of past people’s lives. Today’s information technologies improve our ability to document, study, and present these materials. But what does it mean to deal with material evidence in a virtual context? In this class, students will learn basic digital methods for studying the past while working with objects, including those in the collections of the Penn Museum. This class will teach relational database design and 3D object modeling. As we learn about acquiring and managing data, we will gain valuable experience in the evaluation and use of digital tools. The digital humanities are a platform both for learning the basic digital literacy students need to succeed in today’s world and for discussing the human consequences of these new technologies and data. We will discuss information technology’s impact on the study and presentation of the past, including topics such as public participation in archaeological projects, educational technologies in museum galleries, and the issues raised by digitizing and disseminating historic texts and objects. Finally, we will touch on technology’s role in the preservation of the past in today’s turbulent world. No prior technical experience is required, but we hope students will share an enthusiasm for the past.
Also Offered As: ANTH 127, CLST 127, HIST 127, NELC 187
Activity: Lecture
1.0 Course Unit

ARTH 212 Cities and Temples in Ancient India
The wooden architecture of ancient India’s cities is represented in relief carvings from Buddhist religious monuments of the early centuries A.D. and replicated in remarkable excavated cave cathedrals. This course will trace that architectural tradition, its transformation into a symbolic vocabulary for a new structure, the Hindu temple, and the development of the temple in India from ca. 500-1500 A.D.
Taught by: Meister
Course not offered every year
Also Offered As: ARTH 612, SAST 201, SAST 501
Activity: Lecture
1.0 Course Unit

ARTH 213 Arts of Japan
This course introduces the major artistic traditions of Japan, from the Neolithic period to the present, and teaches the fundamental methods of the discipline of art history. Special attention will be given to the places of Shinto, the impact of Buddhism, and their related architectures and sculptures; the principles of narrative illustration; the changing roles of aristocratic, monastic, shogunal and merchant patronage; the formation of the concept of the artist over time; and the transformation of tradition in the modern age.
Taught by: Davis
Course not offered every year
Also Offered As: ARTH 613, EALC 157, EALC 557
Activity: Lecture
1.0 Course Unit

ARTH 214 Arts of China
A broad survey of Chinese architecture, sculpture, and painting from the Neolithic age through the nineteenth century. Topics include excavated material from China’s Bronze Age, Chinese funerary arts, Buddhist caves and sculpture (including works in the University Museum), the Chinese city, the Chinese garden, and major masterpieces of Chinese painting. Prerequisite: Graduate students may take this course as EALC 527 and should see the instructor to discuss additional requirements for graduate credit.
Taught by: Steinhardt, Davis
One-term course offered either term
Also Offered As: ARTH 614, EALC 127, EALC 527
Activity: Lecture
1.0 Course Unit

ARTH 217 Chinese Painting
Study of Chinese painting and practice from the earliest pictorial representation through the late twentieth century. Painting style forms the basis of analysis, and themes such as landscape and narrative are considered with regard to larger social and cultural issues. The class pays particular attention to the construction of the concepts of the ‘artist’ and ‘art criticism’ and their impact on the field into the present. Visits to look at paintings at the University of Pennsylvania Museum, PMA and/or local collections.
Taught by: Steinhardt
Course not offered every year
Also Offered As: ARTH 617, EALC 227, EALC 627
Activity: Lecture
1.0 Course Unit
Notes: Also fulfills General Requirement in History & Tradition for Class of 2009 and prior.

ARTH 218 Art and Architecture in Ancient Egypt
This course will be an introduction to the art, architecture and minor arts that were produced during the three thousand years of ancient Egyptian history. This material will be presented in its cultural and historical contexts through illustrated lectures and will include visits to the collection of the University Museum.
Taught by: Silverman
Course not offered every year
Also Offered As: AAMW 618, ANCH 068, ARTH 618, NELC 068, NELC 668
Activity: Lecture
1.0 Course Unit
ARTH 220 The Ancient Maya: Integrating Material, Text, and Image
Ancient Maya studies is one of the most dynamic and innovative fields in world archaeology today. Emerging as a true historical archaeology only in the past three decades, the decipherment of Maya script now provides a powerful complement and counterpoint to both traditional excavation data and new remote sensing technologies. Equally, the reading of images, and their interaction with texts and artifacts, forms a vital part of our interest in the broader humanistic concerns of worldview and the transcendent—where our primary interest lies in gaining access to past mentalities. This course will provide a comprehensive introduction into current knowledge of the Ancient Maya, with a recurring methodological focus on how different types of evidence are integrated to assemble a persuasive ‘portrait of the past.’ This scope of this process is unique in the ancient Americas, since only the Maya offer us the opportunity to read their own descriptions of the world two millennia or more in the past. Geographically, we will be looking at the greater Yucatan Peninsula, which today covers parts of southeastern Mexico, the whole of Guatemala and Belize, and the western extremities of Honduras and El Salvador. Since archaic times (before 1200 BCE) this has been occupied by speakers of the Mayan language group, and millions of people identified as Maya by that means continue to do so today (despite popular notions to the contrary, they have never ‘disappeared’). No prior knowledge of archaeology or art history is necessary. The course structure is one 3-hour session per week, consisting of a lecture followed by group discussion in seminar-style. Additionally, in Week 6 there will be a virtual tour of the new Mexico and Central American Gallery at Penn Museum. This will introduce the class to the issues of disseminating scholarship and building narratives that are accessible to the wider public.
Taught by: Martin
Course not offered every year
Also Offered As: ANTH 215, LALS 215
Activity: Lecture
1.0 Course Unit

ARTH 222 Art of Ancient Iran
This course offers a survey of ancient Iranian art and culture from the painted pottery cultures of the Neolithic era to the monuments of the Persian Empire. Particular emphasis is placed on the Early Bronze Age. Taught by: Pittman
Course not offered every year
Also Offered As: AAMW 622, ARTH 622, NELC 222, NELC 622
Activity: Lecture
1.0 Course Unit

ARTH 224 Art of Mesopotamia
The class presents a survey of the art and archaeology of Mesopotamia beginning with the appearance of the first cities and ending with the fall of the Assyrian Empire in the seventh century BCE. It presents the major artistic monuments of Mesopotamian culture, embedding them in their historical context. Focus is placed in particular on the interactions with surrounding cultures of Iran, Central Asia, the Caucasus, the Persian Gulf and Anatolia in order to decenter the discourse from a strictly Mesopotamian perspective. The format is lecture; assignments involve reading response papers; there are in class midterm and final exams.
Taught by: Pittman
Course not offered every year
Also Offered As: AAMW 624, ARTH 624, NELC 224, NELC 624
Activity: Lecture
1.0 Course Unit

ARTH 225 Greek Art and Artifact
This course surveys Greek art and artifacts from Sicily to the Black Sea from the 10th century BCE to the 2nd century BCE, including the age of Alexander and the Hellenistic Kingdoms. Public sculpture and painting on and around grand buildings and gardens, domestic luxury arts of jewelry, cups and vases, mosaic floors, and cult artefacts are discussed. Also considered are the ways in which heroic epic, religious and political themes are used to engaged viewers’ emotions and served both domestic and the public aims. We discuss the relationships of images and things to space and structure, along with ideas of invention and progress, and the role of monuments, makers and patrons in Greek society.
Taught by: Kuttner
Course not offered every year
Also Offered As: AAMW 625, ARTH 625, CLST 220
Activity: Lecture
1.0 Course Unit

ARTH 226 Hellenistic and Roman Art and Artifacts
This course surveys the political, religious and domestic arts, patronage and display in Rome’s Mediterranean, from the 2nd c. BCE to Constantine’s 4th-c. Christianized empire. Our subjects are images and decorated objects in their cultural, political and socio-economic contexts (painting, mosaic, sculpture, luxury and mass-produced arts in many media). We start with the Hellenistic cosmopolitan culture of the Greek kingdoms and their neighbors, and late Etruscan and Republican Italy; next we map Imperial Roman art as developed around the capital city Rome, as well as in the provinces of the vast empire.

Course not offered every year
Also Offered As: AAMW 626, ARTH 626, CLST 221
Activity: Lecture
1.0 Course Unit

ARTH 232 Byzantine Art and Architecture
This course offers a wide-ranging introduction to the art, architecture, and material culture of Byzantium—a Christian, predominantly Greek-speaking civilization that flourished in the Eastern Mediterranean for over a thousand years. Positioned between the Muslim East and the Latin West, Antiquity and the Early Modern era, Byzantium nurtured a vibrant and highly sophisticated artistic culture. With emphasis placed upon paradigmatic objects and monuments, we will examine an array of artistic media, from mosaic and panel painting to metalwork, ivory carving, book illumination, and embroidery. We will consider the making, consumption, and reception of Byzantine art in a variety of contexts: political, devotional, ritual, and domestic. Topics include the idea of empire and its visual articulation; court culture; the veneration of images and relics; patronage, piety, and self-representation; architecture and artistic agency; materiality and the sensory experience of art; the reception of the pagan Greco-Roman past; and the changing nature of Byzantium’s interactions with neighboring cultures.
Taught by: Drpic
One-term course offered either term

Activity: Lecture
1.0 Course Unit
**ARTH 233 Eastern Medieval Architecture**
This lecture course examines major architectural developments in the eastern Mediterranean between the 4th and 14th centuries CE. The focus is on the Byzantine Empire, with its capital at Constantinople. Lectures also devoted to related developments in the Caucasus (Armenia and Georgia), early Russia, the Balkans (Bulgaria and Serbia), Sicily and under the Normans, the Crusader states. Parallel developments in early Islamic architecture are used for comparative purposes. The course examines evidence for religious and secular buildings, as well as urbanism and settlement patterns.

**ARTH 237 Berlin: History, Politics, Culture**
What do you know about Berlin's history, architecture, culture, and political life? The present course will offer a survey of the history of Prussia, beginning with the seventeenth century, and the unification of the small towns of Berlin and Koelln to establish a new capital for this country. It will tell the story of Berlin's rising political prominence in the eighteenth century, and its position as a center of the German and Jewish Enlightenment. It will follow Berlin's transformation into an industrial city in the nineteenth century, its rise to metropolis in the early twentieth century, its history during the Third Reich, and the post-war cold war period. The course will conclude its historical survey with a consideration of Berlin's position as a capital in reunified Germany. The historical survey will be supplemented by a study of Berlin's urban structure, its significant architecture from the eighteenth century (i.e. Schinkel) to the nineteenth (new worker's housing, garden suburbs) and twentieth centuries (Bauhaus, Speer designs, postwar rebuilding, GDR housing projects, post-unification building boom). In addition, we will read literary texts about the city, and consider the visual art and music created in and about Berlin, and focus on Berlin's Jewish history. The course will be interdisciplinary with the fields of German Studies, history, history of art, urban studies, and German-Jewish studies. It is also designed as a preparation for undergraduate students who are considering spending a junior semester with the Penn Abroad Program in Berlin. All readings and lectures are in English.

Notes: All readings and lectures are in English.

**ARTH 240 Medieval Art**
An introductory survey, this course investigates architecture, painting, sculpture, and the 'minor arts' of the Middle Ages. Students become familiar with selected major monuments of the Romanesque and Gothic periods, primarily in Western Europe as well as relevant sites around the Mediterranean. Analysis of works emphasizes the cultural context, the thematic content, and the function of objects and monuments. Discussions focus especially on several key themes: the role of luxury in the medieval west, the theological role of images; the revival of classical models and visual modes; social rituals such as pilgrimage and crusading; the cult of the Virgin and the status of women in art; and, more generally, the ideology of visual culture across the political and urban landscapes.
Taught by: Guerin
Course not offered every year
Also Offered As: AAMW 640, ARTH 640
Activity: Lecture
1.0 Course Unit

**ARTH 245 Gothic Architecture: Gold and Stone**
Key monuments of the Middle Ages, the Gothic cathedrals of Western Europe present a synthesis of the theological, economic, and social developments of the twelfth through fourteenth centuries. A harmonious marriage between technology and aesthetics, of political power and imagination, these immense and ingenious structures are as famous for their sculptural programs as they are for the liturgies that animated their spaces. Students will also be introduced to local uses of Gothic in Philadelphia architecture to better understand the lived experiences of these built manifestations of transcendence.
Taught by: Guerin
Course not offered every year
Also Offered As: AAMW 645, ARTH 645
Activity: Lecture
1.0 Course Unit

**ARTH 250 Michelangelo and the Art of the Italian Renaissance**
An introduction to the work of the Renaissance artist Michelangelo (1475-1564)–his sculptures, paintings, architecture, poetry, and artistic theory–in relation to his patrons, predecessors, and contemporaries, above all Leonardo and Raphael. Topics include artistic creativity and license, religious devotion, the revival of antiquity, observation of nature, art as problem-solving, the public reception and function of artworks, debates about style, artistic rivalry, and traveling artists. Rather than taking the form of a survey, this course selects works as paradigmatic case studies, and will analyze contemporary attitudes toward art of this period through study of primary sources.
Taught by: Kim
Course not offered every year
Also Offered As: ARTH 650
Activity: Lecture
1.0 Course Unit
ARTH 254 Global Renaissance and Baroque
An introduction to transcultural encounters within and beyond early modern Europe, 1450-1600. Topics include: the theory and historiography of global art; artistic relations between Venice, the Byzantine and Ottoman Empires, and islands in the Eastern Mediterranean; Portugal's overseas mercantile network in Africa and Asia; and the Baroque in Latin America, with emphasis upon Brazil. Our discussions focus on these paradigmatic case studies so as to question the language and terms we use to characterize confrontations between native and foreign, the self and the other.

Course not offered every year
Also Offered As: ARTH 654
Activity: Lecture
1.0 Course Unit

ARTH 258 Early Modern Japanese Art and the City of Edo
Study of the major art forms and architecture of Tokugawa (or Edo) period (1603-1868). In this course, we will consider how the arts of this era occur within an increasingly urban and modern culture, particularly with regard to the city of Edo. Issues of the articulation of authority in the built environment, the reinvention of classical styles, and patronage will be raised. May include some visits to PMA, Penn Museum, or other local collections.
Taught by: Davis
Course not offered every year
Also Offered As: ARTH 658, EALC 150, EALC 550
Activity: Lecture
1.0 Course Unit

ARTH 261 Northern Renaissance Art
This course critically examines concepts traditionally associated with the Renaissance by focusing on the exchange of artistic ideas throughout the Holy Roman Empire and across different media, such as the altarpieces of Jan van Eyck, the expressive drawings of Albrecht Dürer and Hans Baldung Grien, the peasant studies of Pieter Bruegel and the prints of satirists who wished to remain anonymous. The material is organized thematically around four topics: religious art as piety and politics; antiquity as a source of tradition and imagination; the formulation of a public discourse that exposed social threats; and the distinctiveness of artistic claims of individual achievement. A motif throughout the course is the question of how the survival of fragments may be presented in museum contexts as parts standing in for an absent whole. We will also consider how historians approach designs for works of art now lost or never completed. Encouraging encounters with art and artifacts around the city, assignments focus on objects in Philadelphia collections.
Taught by: Brisman
Course not offered every year
Also Offered As: ARTH 661
Activity: Lecture
1.0 Course Unit

ARTH 262 Netherlandish Art
Dutch and Flemish painting in the 15th and 16th centuries with special emphasis on the contributions of Robert Campin, Jan van Eyck and Roger van der Weyden, Bosch, and Bruegel. Also included are topics on the development of prints as well as the dialogue with Italian art.
Course not offered every year
Also Offered As: ARTH 662, DTCH 261
Activity: Lecture
1.0 Course Unit

ARTH 267 Latin American Art
The numerous traditions of Latin American art have been formed from the historical confluence of Indigenous, European, African, and Asian cultural traditions, each one impacting the others. This course serves as an introduction to these hybrid New World art forms and movements by both providing a large chronological sweep (1492-present) and focusing on several specific countries, including Brazil, Mexico, Cuba, Peru, and Argentina.
Taught by: Shaw, Kim
Course not offered every year
Also Offered As: ARTH 667, LALS 267, LALS 667
Activity: Lecture
1.0 Course Unit

ARTH 270 The Modern City
A study of the European and American city in the eighteenth, nineteenth, and twentieth centuries. Emphasis is placed on the history of architecture and urban design; political, sociological, and economic factors also receive attention. The class considers the development of London, St. Petersburg, Washington, Boston, Paris, Vienna and Philadelphia.
Taught by: Brownlee, D
Course not offered every year
Also Offered As: ARTH 670, URBS 276
Activity: Lecture
1.0 Course Unit

ARTH 271 Modern Architecture, 1700-1900
The history of western architecture, ca. 1700-1900, when architecture was transformed to serve a world that had been reshaped by political and industrial revolutions. Topics to be considered include the Rococo, the English Garden, Palladianism, Romanticism, neo-classicism, the Picturesque, the Greek and Gothic Revivals, and the search for a new style.
Taught by: Brownlee, D
One-term course offered either term
Also Offered As: ARTH 671
Activity: Lecture
1.0 Course Unit

ARTH 273 History of Photography
A history of photography and theories of photography from 1839 to the present. Photography's origins are rooted both in artistic desire and technological ingenuity. Some of photography's inventors identified more as artists than engineers. At many points in the history of the medium, the question remains open whether new forms of artistic expression are driven by new technologies, or whether new technologies emerge to fulfill the desires of artistic imagination. This class will address photography's relationship with painting, print, and drawing. It will examine the effect of photography on portraiture, landscape, depictions of motion, and abstraction. We will also investigate the changing cultural perception of photography as an artistic medium from the 19th to the 21st century.
Taught by: Vershbow
Course not offered every year
Also Offered As: ARTH 673, VLST 273
Activity: Lecture
1.0 Course Unit
ARTh 274 Facing America
This course explores the visual history of race in the United States as both self-fashioning and cultural mythology by examining the ways that conceptions of Native American, Latino, and Asian identity, alongside ideas of Blackness and Whiteness, have combined to create the various cultural ideologies of class, gender, and sexuality that remain evident in historical visual and material culture. We also investigate the ways that these creations have subsequently helped to launch new visual entertainments, including museum spectacles, blackface minstrelsy, and early film, from the colonial period through the 1940s.
Taught by: Shaw, Staff
Course not offered every year
Also Offered As: ARTH 674, ASAM 294, CIMS 293, LALS 274
Activity: Lecture
1.0 Course Unit

ARTh 276 Impressionism
Impressionism opened the pictorial field to light, perception, science, modernity, bourgeoisie leisure and famously the material qualities of paint itself. This course will survey the movement’s major contexts and proponents—Manet, Monet, Morisot, Cezanne, Gauguin, Van Gogh, Rodin—from its origins in the 1860’s to its demise in the 1890’s, as well as its subsequent adaptions throughout the world until World War I. Particular attention is paid to the artists’ critical reception and the historical conditions which allowed one nation, France, to claim the emergence of early Modernism so firmly for itself. The course also analyzes the effects of the rapidly changing social and cultural fabric of Paris, and its affects on artistic developments. We also look outside of France’s borders to Germany and Britain.
Taught by: Dombrowski
One-term course offered either term
Also Offered As: ARTH 676
Activity: Lecture
1.0 Course Unit

ARTh 277 The Rise of Modernity: Arts of the 19th Century
The nineteenth century is often considered as fast-paced, politically volatile and new-media obsessed as our own age. This course explores the nineteenth century’s claim to have produced the first truly modern culture, focusing on the visual arts and metropolitan spaces of Europe and North America in their intellectual and social contexts. Stretching from the American and French Revolutions to the eve of World War I, topics to be covered include: the rise of capitalist and industrialist culture, art and revolutionary upheaval, global travel and empire, the origins of modernist art and architecture, and new media such as stereoscopes, iron and glass construction, and photography. Major artistic personalities of the age, from Jacques-Louis David and Gustave Courbet to Claude Monet and Vincent Van Gogh, and from Friedrich Schinkel and, Baron Haussmann to Frank Furness and Frank Lloyd Wright, are discussed. Each lecture will be followed by a brief period of discussion, and regular field trips take students to examine art and architecture first hand, in the museums and on the streets of Philadelphia.
Taught by: Brownlee, Dombrowski
Course not offered every year
Also Offered As: ARTH 677
Activity: Lecture
1.0 Course Unit

ARTh 278 American Art
This course surveys the most important and interesting art produced in the United States (or by American artists living abroad) up through the 1950s. This period encompasses the history of both early and modern art in the U.S., from its first appearances to its rise to prominence and institutionalization. While tracking this history, the course examines art’s relation to historical processes of modernization (industrialization, the development of transportation and communications, the spread of corporate organization in business, urbanization, technological development, the rise of mass media and mass markets, etc.) and to the economic polarization, social fragmentation, political conflict, and the cultural changes these developments entailed. In these circumstances, art is drawn simultaneously toward truth and fraud, realism and artifice, science and spirituality, commodification and ephemerality, nationalism and cosmopolitanism, individualism and collectivity, the past and the future, professionalization and popularity, celebrating modern life and criticizing it.
Taught by: Leja, Shaw
One-term course offered either term
Also Offered As: ARTH 678
Activity: Lecture
1.0 Course Unit
Notes: Satisfies Cultural Diversity in the U.S. requirement.

ARTh 281 Modern Architecture,1900-Present
The architecture of Europe and America from the late nineteenth century until the present is the central subject of this course, but some time is also devoted to Latin American and Asian architecture and to the important issues of modern city planning. Topics discussed include the Arts and Crafts movement, Art Nouveau, Expressionism, Art Deco, the International Style, and Post-modernism. The debate over the role of technology in modern life and art, the search for a universal language of architectural communication, and the insistent demand that architecture serve human society are themes that are traced throughout the course. Among the important figures to be considered are Frank Lloyd Wright, Walter Gropius, Le Corbusier, Louis Kahn, Robert Venturi, and Denise Scott Brown. The course includes weekly discussion sessions and several excursions to view architecture in Philadelphia.
Taught by: Brownlee
One-term course offered either term
Also Offered As: ARTH 681
Activity: Lecture
1.0 Course Unit
Notes: Fulfills Cross-Cultural Analysis Requirement
ARTH 285 Modern Art
The history of modern art is closely tied to and largely unfolds from the history of Western Imperialism. While the technologies made possible by colonial resource extraction produced new ways of looking, modern conceptions of the self and how to represent it developed in dialogue with racialized notions of the other. This course focuses on encounters between the cultures of Africa and Europe, from 1880 to 1960, and on the visual practices that emerged on both continents as a result. Topics of special interest will include racial difference and the birth of photography, colonial masquerade, impressionism, symbols of power in royal arts, cubism, mass marketing and colonial self-fashioning, West African studio photography, world's fairs and the Musee de l'Homme, Dada and surrealism, Negritude and interwar Paris, anti-aesthetics, colonial arts education, National art schools in the age of African independence, humanism and South African photography under Apartheid.
Taught by: Roach
Course not offered every year
