STSC 3217 Weird Science
What do we mean by "science"? How did we come to agree on a common definition? Do we agree on a common definition? What about when we don't? This course explores histories of heterodox science and the construction of sciences and pseudosciences. In doing so, we will focus on expertise, authority, and legitimacy in science, as well as public consumption of science. This course will also introduce students to fundamental questions in the philosophy of science, as well as offering instruction in reading and methods of historiography. Topics include: phrenology, parapsychology, cryptozoology, UFOs, climate change denial.
Also Offered As: HSOC 3217
1 Course Unit

STSC 3247 Why Not Magic? Magic, Esoterica, and the Occult in the History of Science
What is magic? How (or why) does it differ from "science?" What is the difference between preparing a medical recipe under a full moon, using amulets to heal a physical malady, casting horoscopes, or summoning demons? Many types of knowledge considered practically and intellectually "valid" in other times and cultures - divination, alchemy, use of talismans, summoning the aid of non-corporeal entities - have since been dismissed as magic or superstition. Yet often the boundaries between legitimate and illegitimate knowledge is extremely porous and hotly contested. Who decided what constitutes magic, and how do those definitions change over historical periods? What can those definitions tell us about historical constructions of knowledge, as well as issues of class and gender? How is magic related to philosophy and science, and to an understanding of the physical and metaphysical worlds? This course examines these questions with a focus on practices and beliefs in pre-modern Christendom and Islamdom.

1 Course Unit

STSC 3279 Nutritional Modernities: Food, Science, and Health in Global Context
How has food shaped the global transition to modernity? Columbus’ 1492 voyage to the Americas sparked a global process that transformed the eating habits and environments of humans throughout the world. Using approaches from food studies, STS, environmental history and global history, this class examines how the production, consumption, and study of food has been central to the emergence of the modern capitalist system and its discontents. Topics include the role of diet and food in European colonial conquest, the links between racial anxieties and the creation of modern nutritional standards, the rise of dietary ‘technologies of the self’ such as calorie-counting and the BMI index, and the emergence of microbial regimes of health.

STSC 3288 What is Prediction?
This course is an investigation into the notion of prediction from antiquity to the present. By looking closely at key practices from Homeric divination to modern acturial science and from early modern astrology to contemporary climate models, the course seeks to historicize the way we engage with the future. As part of the course, students also explore the role that methodology, models, causation and big data have played in predictive practices. The readings include a mixture of primary sources, modern scholarship and journalism.

1 Course Unit
STSC 3299 CSI Global: History of Forensic Science
Genetics may have transformed criminal detection, but it has built upon a long history of many different types of forensic science. The use of science in the pursuit of criminals has a long, complex and global history, involving diverse forms of knowledge and types of professionals. A range of skills and techniques ranging from trackers who followed traces in the mud to recover stolen cattle to criminal physiognomists who sought to read bodily signs of criminals, from Sherlock Holmes’ analysis of types of cigar ash in Victorian Britain to Charles Hardless’ chemical analysis of different types of ink in colonial India, have informed and influenced the development of our contemporary forensic modernity. This course will explore a range of different forensic techniques and their histories along with the rich cultural history, in the form of detective fiction and films from across the world.

STSC 3334 Hybrid Science: Nature, health, and society in Latin America
What role did science and medicine play in the creation and growth of the Spanish and Portuguese empires? And why was the creation of science and health institutions crucial to the revolutionary movements for independence in Latin America? This course examines science and medicine in Latin America by attending to the ways that knowledge of nature and health has been central to the political struggles of the countries in this region. A crucial dynamic shaping the history and culture of this region is the interplay between the healing practices and cosmologies of European settlers, indigenous Americans, and the descendants of African slaves. Bearing this interplay in mind, this course explores how Latin America has been a fertile site of scientific creativity. It also examines the ways in which Latin American scientists and medical experts have refashioned concepts and practices from Europe and North America to fit local circumstances.

STSC 3509 Bioethics and National Security
At least since Augustine proposed a theory of “just war,” armed conflict has been recognized as raising ethical issues. These issues have intensified along with the power and sophistication of weapons of war, and especially with increasing engineering capabilities and basic knowledge of the physical world. The life sciences have had their place in these developments as well, perhaps most vividly with the revelations of horrific experiments conducted by the Nazi and Imperial Japanese militaries, but with much greater intensity due to developments in fields like genetics, neuroscience and information science, and the widely recognized convergence of physics, chemistry, biology and engineering. The fields of bioethics and national security studies both developed in the decades following World War II. During the cold war little thought was given to the fact that many national security issues entail bioethical questions, but this intersection has been increasingly evident over the past two decades. In spite of the overlapping domains of bioethics and national security, there has been remarkable little systematic, institutional response to the challenges presented by these kinds of questions: - What rules should govern the conduct of human experiments when national security is threatened? - Is it permissible to study ways that viruses may be genetically modified in order to defeat available vaccines, even for defensive purposes? - What role may physicians or other health care professionals play in interrogation of suspected terrorists? - Must warfighters accept any and all drugs or devices that are believed to render them more fit for combat, including those that may alter cognition or personality? - What responsibilities does the scientific community have to anticipate possible “dual purpose” uses or other unintended consequences of its work? Deploying the resources of ethics, philosophy, history, sociology and theory, this course will address these and other problems.

STSC 3607 Data Dreams
The idea of solving problems by collecting as much data as possible about them is an old dream that has recently been revitalized. This course examines the hunger for data from a historical and social perspective, seeking to understand when, why, and how the collection of vast amounts of data has come to seem valuable and desirable, sometimes in ways that exceed any reasonable expectation of utility or feasibility. Topics include state surveillance, online tracking, the quantified self, citizen science, civic hacking, human genomics, bioinformatics, and climate science.
Fall or Spring
1 Course Unit

STSC 3627 Waters, Roads and Wires
This course studies infrastructures: how and why they develop, how they are maintained, how they reshape environments, and how they interconnect with other infrastructures. We begin by reading about infrastructure and about large technological systems, then explore some specific American structures. Possible topics: the electrical grid, the interstate highway system, hydroelectric dams, Amtrak, urban mass transit systems, disasters and infrastructure (Katrina, Harvey, etc.). As the semester progresses, students will spend more time in class on individual research topics of their choice, and in working groups producing a group project.
Fall or Spring
1 Course Unit
STSC 3657 Technology & Democracy
What is the relationship between technology and politics in global democracies? This course explores various forms of technology, its artifacts and experts in relation to government and political decision-making. Does technology “rule” or “run” society, or should it? How do democratic societies balance the need for specialized technological expertise with rule by elected representatives? Topics will include: industrial revolutions, factory production and consumer society, technological utopias, the Cold War, state policy, colonial and post-colonial rule, and engineers’ political visions.

1 Course Unit

STSC 3708 The Many Lives of Data: Population, Environment, and Planning in the United States
This is a class about the live(s) and afterlives of information from 1850 to the present. Not only can information be reproduced (in a variety of material conditions); it can be repurposed and funneled through a variety of different applications, some of them serving radically different purposes than the first purpose of gathering it. Thoreau’s journeys of plant flowering, for instance, have become important indicators of climate change. More controversial is the sale of biomedical information by personal genomics services for drug discovery, or the construction of forensic databases consisting of the DNA of suspects arrested as a result of racial profiling. We will study the ways in which data has become a way for us to understand and define change, stability, place, and time, beginning in the mid-nineteenth century, a period of accelerated and increasingly systematic gathering of data, particularly medical, forensic, and environmental data. The class will proceed both chronologically and thematically in three units, from the gathering and use of biomedical data as a way to make patient populations “legible” (to borrow from James Scott), to data as a way to make the environment understandable, and finally to data as a tool for producing and reproducing social relations. As a final project, students will trace a particular data set from its original gathering to its latest usage. Students will also have an opportunity to create their own course content in the final three weeks of class.
Fall or Spring
1 Course Unit

STSC 3709 Rifle and Compass
This course looks at the scientific and technological aspects of warfare during what is often called the Military Revolution. The main focus will be navigation and gunpowder warfare. The first part of this course will focus on magnetism, military drilling, architecture, geography and physics. The second part of the course will turn to case studies: the fall of Constantinople in 1453, the Ottoman-Austrian War of 1663-4 and the expansion of Russia in the early eighteenth century. Our goal generally is to interrogate the widespread belief that science and warfare are inextricably linked.
Fall
1 Course Unit

STSC 3766 Cultures of Surveillance
Developments in digital technology have generated urgent political discussions about the pervasive role of surveillance in our everyday life, from the mundane to the exceptional. But surveillance has a much longer history. In this course, students will learn to think and write critically about the historical, socio-cultural, and political dynamics that define surveillance today. This course asks: how can we historicize what we call surveillance to understand its political and social implications beyond what appears in the document caches of the NSA or on a Black Mirror episode? What role does identity and identification play in surveillance? How do surveillance and computational technologies produce racializing effects? Students will apply course concepts to technologies of daily use, such as self-tracking devices like fitbits or identity documents, and reflect on debates surrounding race, policing, imperialism, and privacy. Through primary source materials, films, podcasts, and key texts, we will engage in a cross-cultural exploration of the multi-faceted phenomena of surveillance technology. Through regular writing assignments, such as surveillancediaries, students will analyze and articulate how they understand surveillance to operate in various domains of everyday life. In this course, students will: (1) Apply course concepts to their lived experience, from securitized architecture to search engines, in order to understand how surveillance operates in everyday life; (2) Analyze how historical context has shaped the current configuration of securitization and surveillance on a global scale; (3) Use ethnographic approaches to study the interaction between individuals, their social relations, and technologies of surveillance.

1 Course Unit

STSC 3824 Animals in Science Medicine Technology
This course explores human-animal relationships: the wide range of these relationships, why they originated and how they have changed over time. How have humans classified, valued, utilized, consumed, behaved toward and understood animals? Where is the boundary between humans and other animals, and how do we know, since humans are also animals? How is that boundary been maintained and redefined? Are humans part of the animal “natural” world- or apart from it? How are humans similar to and different from other kinds of animals? How do we know about animals and what is it we know? To what extent are questions about animals really questions about humans? How has the meaning of animal changed over time? The course focuses in particular to the roles and relationships of animals within science and medicine, and as biotechnologies.
Fall or Spring
Also Offered As: HSOC 3824
1 Course Unit
STSC 3889 Trans Method
What are the subjects of trans studies? What does “trans” as a category afford us in looking at texts, people, systems, and objects? To what extent is trans an identity? What might it mean to think of it as a methodology? How might the tools of trans studies intervene in conversations and practices beyond the field itself? What are the stakes of such an expansive approach? This course introduces students to “trans” as a still-forming analytic that has emerged out of academic spaces, activist movements, and trans cultural production. We will engage with texts and questions that build on trans studies’ connections to (and divergences from) queer and feminist studies, history, critical race studies, disability studies, and science studies, among other fields, and we will also consider how trans knowledge can act beyond the theoretical.

Also Offered As: GSWS 3500, HSOC 3889
Prerequisite: GSWS 0002 OR GSWS 0003 OR ENGL 1300
1 Course Unit

STSC 3923 Animals and America
This course looks at animals in the American past, to find out what a focus on an individual animal, a species, or a kind of animal (such as work animals, food animals, wildlife, zoo animals, pets and pests) can reveal by exposing the inner workings of different periods and events. When we make animals the focus of how we look at the past, things change. Making animals visible makes other things visible; hidden, surprising or even shocking aspects of the past appear. Americans have always lived with and employed animals. They also have “thought with” animals, using animals to work out their understandings of society, nature and power. How Americans perceived, named, classified, behaved toward and worked with animals bares the workings of race, class and gender, uncovers power structures, and reveals environmental and legal choices. If we want to understand how the current world came to be, taking a critter approach to history provides a way to explain how we got to now. Changing our view of the past can change our ideas of what the present can be. Though animals are everywhere in the past, they are often hidden from view. We will embark on a hunt for animals, foraging through historical writing, political documents, literature, and primary sources. We will watch movies, examine photographs and study cartoons. We will draw on knowledge from the fields of science, technology, health and environments, and employ the classifications of race, class, gender, nature and culture. We’ll talk about evolution, domestication and wildlife. We will look at zoomorphism, when people or things are labeled as animals (calling people pigs or snakes, or talking about bull or bear stock markets), and anthropomorphism, when animals are thought of or portrayed as people. In this seminar, we’ll begin with case studies from the nineteenth century, then start seeking the animals of the twentieth and twenty-first centuries. Writing, much of it informal, will be a regular part of this course, as will research exercises. There will be different options for writing and for research projects. Course materials will focus on American history and society but projects and exercises may look at places and times from around the globe and across the centuries.
Fall

STSC 4000 Capstone Research Seminar in Science, Technology and Society
This is the capstone research seminar for STSC majors. It is designed to provide the scholarly tools necessary to undertake original research in the field of Science and Technology Studies. All students in the course will produce a research paper by the end of the term; those intending to write an honors thesis (who must take the course in the spring of their junior year) will also complete a proposal for further research. Each student will work on a specific topic of their own choosing, while also learning about general methods of historical and social scientific research and reading key texts in Science and Technology Studies.
Spring
1 Course Unit

STSC 4094 Science and Disability
How have ideas about ability and disability shaped the questions we ask about the world and the methods we use to answer them? How do assumptions about who can and ought to be a scientist, engineer, or physician intersect with constructions of disability and difference? How might studying the lived experiences of people with disabilities in the context of STEM(Medicine) help us begin to answer these questions? This course explores the exciting intersection between disability studies and the history and sociology of science and medicine through weekly readings, discussions, and original research. Using materials ranging from archival and online sources to oral history interviews and museum collections, students in this course will learn how scientific ideas and institutions have helped shape 20th- and 21st-century categories and experiences of disability as an embodied and socio-political identity. At the same time, students will learn how to use disability as a critical theoretical lens for investigating the cultures, tools, and institutions behind the creation and application of modern scientific and medical knowledge. Collaborative and analytical writing work throughout the course will build towards the completion of a final original research project.
Fall or Spring
Also Offered As: HSOC 4094
1 Course Unit
STSC 4114 Sports Science Medicine Technology
Why did Lance Armstrong get caught? Why do Kenyans win marathons? Does Gatorade really work? In this course, we won’t answer these questions ourselves but will rely upon the methods of history, sociology, and anthropology to explore the world of the sport scientists who do. Sport scientists produce knowledge about how human bodies work and the intricacies of human performance. They bring elite (world-class) athletes to their laboratories or their labs to the athletes. Through readings, discussions, and original research, we will find out how these scientists determine the boundary between "natural" and "performance-enhanced," work to conquer the problem of fatigue, and establish the limits and potential of human beings. Course themes include: technology in science and sport, the lab vs. the field, genetics and race, the politics of the body, and doping. Course goals include: 1) reading scientific and medical texts critically, and assessing their social, cultural, and political origins and ramifications; 2) pursuing an in-depth The course fulfills the Capstone requirement for the HSOC/STSC majors. Semester-long research projects will focus on "un-black-boxing" the metrics sport scientists and physicians use to categorize athletes' bodies as "normal" or "abnormal." For example, you may investigate the test(s) used to define whether an athlete is male or female, establish whether an athlete's blood is "too" oxygenated, or assess whether an athlete is "too" fast (false start). Requirements therefore include: weekly readings and participation in online and in-class discussions; sequenced research assignments; peer review; and a final 20+ page original research report and presentation.

Also Offered As: HSOC 4114
1 Course Unit

STSC 4187 Sound in Science, Medicine and Technology
How do listening and knowing relate? This capstone will analyze sound as an object, an instrument, a product and a process of research in science, technology, and medicine. From anthropological field recordings to experiments in acoustics, readings will address the ways in which researchers have isolated and investigated sonic phenomena during the modern period. We will consider sound as a tool for knowing about other phenomena as well: bodily functions, seismic events, animal communication, and the like. Technologies of sound production, reproduction, storage, manipulation, and analysis will be front and center in this course. What can you do with magnetic tape that phonography does not allow? How might the hospital soundscape inform clinical decision-making? Why is Amazon's Alexa female? How has scientific communication changed over time? In addition to wrestling with questions like these, the course will provide undergraduate majors with the opportunity to research and execute an original paper of significant length in the humanistic social sciences. Students must be in their last three semesters for it to fulfill the capstone requirement, but any student may enroll.
Fall

STSC 4242 The History & Future of Genetic Medicine
Nearly twenty years after the Human Genome Project was completed, genetic research continues to garner attention and resources. From news coverage to governmental initiatives and commercial investment, genetics is a force in medicine, industry, and society more generally. Using scholarship from diverse disciplines, this capstone seminar focuses on how genetic medicine came into existence. We will explore the field’s early history in eugenics and its transformation via technological advancements like prenatal testing and targeted therapies. Through case studies of select genetic conditions, we will examine scientific innovations alongside the lived experience of those advancements, broaching critical questions about disability, race, and inequality. This will provide students with the opportunity to debate historical changes and continuities, taking on some of the most vexing questions in bioethics.

Also Offered As: HSOC 4288
1 Course Unit

STSC 4364 Biopiracy: Medicinal Plants and Global Power
Biopiracy has emerged as the name of conflict between multinational pharmaceutical companies attempting to get genetic patents on medicinal plants and indigenous communities in the Global South who have long known and used these plants for medicinal purposes. Today the story of Biopiracy is an unfolding story of plants, patents and power. The extraction and commercial exploitation of plants and knowledge about them from the Global South however is not new. It has been happening at increasing pace for at least the last two centuries. Both the anti-malarial drug quinine and the cancer drug vincristine for instance have their plant-origins in the Global South where local communities used them medicinally long before their discovery by biomedicine. This course will put the current debates around Biopiracy in context and explore how the entanglements of plants and power have changed or not changed.

Scientific Processes (SPRO)

SPRO 1000 Scientific Reasoning
Whether you are preparing for a degree concentration in the sciences or planning to specialize in creative pursuits, every course of study benefits from knowledge of scientific reasoning and logic. This introductory course provides an overview of the sources, tools, and history of scientific knowledge. Contextualizing products of scientific research such as theories, models, and laws of nature, the course examines the methods of producing scientific knowledge and explores how science is affected by questions of values, religion, objectivity, and public opinion. You also learn and practice the tools used to generate knowledge, including logic and probability.
1 Course Unit

Social Difference, Diversity, Equity and Inclusion (SDEI)

SDEI 1100 Introduction to Social Difference in American Society
In this course, we will consider matters relating to the origin, persistence, and change of social norms, the composition of diverse populations, and the meanings attached to the social construction of various social problems, including racial, class, and gender inequality. This course is designed to provide you with a broad introduction to social difference using contemporary America as a case study. We will engage with a collection of readings each week, which will highlight important issues, theories, concepts, and methodologies. We will focus on several aspects of American society including, race, education, gender, social class, the family, and poverty. In the long term, the exposure to the sociological approach to social problems will provide a more thorough and nuanced understanding of public issues that affect humans on both macro and micro levels. Foundational Requirements Contributions # Analytical and Critical Skills # Communication # Cross-Cultural Interactions & Diversity
Fall or Spring
1 Course Unit

SDEI 1500 Cultural Capital and Social Spaces
This course will explore the intersections of race, cultural capital, and social spaces, with a focus on professional and organizational spaces.
Fall or Spring
1 Course Unit

SDEI 1600 Race and Ethnicity in Organizations
As we adapt to meet our individual and collective needs within increasingly diverse organizations, it is important to study the ways race and ethnicity affect our day-to-day experiences. These critical concepts often impact how we build organizational culture. They can also influence where we find belonging—particularly within professional spaces that reflect larger societal structures. This course will focus on evidence-based examples that clarify why race and ethnicity matter for a variety of organizations. We will turn to historical case studies, contemporary reports, and ongoing research that help us identify practical strategies for advancing equity in the workplace. By the end of the course, students will build a collection of foundational approaches for exploring the social realities of race and ethnicity across organizations.
1 Course Unit
SDEI 1700 Gender and Sexuality in Everyday Life
It's no secret that gender and sexuality shape our social realities, even when we don't explicitly acknowledge their influence. Both can significantly affect where and with whom we build community, how we're compensated for our time and labor, how we're represented in popular culture, as well as impacting our lives in many other ways. In this course, we'll explore some of the ways gender and sexuality operate within diverse social contexts. We'll dig into examples of gender performances, sexual identities, intersectional experiences, and a spectrum of other concepts that show up in contemporary media, historical case studies, and ongoing research across the arts and sciences. Along the way, this course will help us think deeply about how we express power through everyday applications of gender and sexuality in society. It will also help us grow our capacity for critical reflection through daily practices that affirm who we are and how we care for each other. Essential Questions: To help model pathways for inquiry in this class, the course will revolve around five guiding questions, including: Why is it important to study gender and sexuality in different critical and creative contexts? What ways might we use existing research to explore how gender and sexuality show up within our personal and professional lives? How have gender and sexuality influenced media and popular culture? How can varying social locations and contexts impact the ways we think about identity, community, and communication? Which structural factors can we address to help advance sustainable forms of care and belonging in everyday life while centering gender and sexuality?
1 Course Unit

SDEI 2000 Organizational and Institutional Power
Power structures often order our personal and professional lives—from macro level institutional frameworks governed by collective laws and policies, to micro level organizational relationships shaped through individual actions and practices. Some of these structures are designed to offer clear, open, and equitable social benefits for diverse populations. Others are situated within systems that obscure their harmful effects on specific, historically marginalized, groups. This course will offer learners a critical lexicon for identifying, describing, and engaging with organizational and institutional expressions of power. In addition to examining mixed-methods research, historical examples, and contemporary case studies that demonstrate relationships between power, structural hierarchies, and difference, learners will participate in simulations that highlight the personal “power maps” each of us navigate in social landscapes—across real-world professional spaces—every day. Foundational Requirements Contributions: Analytical and Critical Skills # Communication # Cross-Cultural Interactions & Diversity # Historical Perspectives
Fall or Spring
1 Course Unit

SDEI 2500 Race, Place, and Space
In this course, our collective aims are to understand race as a dynamic social and political construct that evolves through time and space and to recognize how race as a social construct relates to social stratification, intergroup and intragroup relations, and economic and political hierarchies within U.S. society. The general purpose of this course is to introduce you to the study of race within the contemporary U.S. context and to provide a better understanding of how and why race continues to be such a powerful stratifying agent. We will explore the enduring persistence of racism and discrimination across Space and Place and how race as an ascribed, master status remains a key organizing principle in American society. We will focus on the power of Place as intrinsically linked to the social significance of race, racial identity, and racism for several underrepresented racial minority groups including Blacks, Indigenous Americans, Latinos, and Asian Americans; we will study how race affects these groups in different ways based on their historical and present-day positions within the racial hierarchy. For the purposes of this class, Place is defined as the permanent physical locations we inhabit throughout the life course and become socialized within including the family, school, neighborhood, and work. We will also explore in-depth the power of Space as those indefinite, liminal locations individuals construct and traverse daily based on their racial vantage points and interpretations of race as a significant factor in their upbringing, attitudes, worldview, and experiences as social and numerical minorities. To that end, we will explore how race and competing intersectional social identities such as gender, sexuality, social class, nativity, skin color and generational status affect individuals’ worldviews, racial consciousness, and self-concept, as well as their perceptions of racial climates, intraracial solidarity and hierarchies within their own racial groups and across the racial spectrum. In conclusion, we will analyze the power of intersectionality and the complexity of racialization along the color line for individuals within the aforementioned groups. Equally important, we will study the lexicon(s) of difference that individuals of all backgrounds must become fluent in to better understand the lived experiences of marginalized others in all contexts and to make meaningful, sustainable change to ensure equality for all. We will also host guest lecturers throughout the semester. Foundational Requirements Contributions: Analytical and Critical Skills - Communication - Cross-Cultural Interactions & Diversity - Historical Perspectives
No textbook is required. All course information is available on CANVAS. Students are required to take both SDEI 1100 and SDEI 2500 to take higher level SDEI courses.
Fall or Spring
1 Course Unit
SDEI 2600 Addressing Inequity through Art and Design
This course explores issues related to systemic inequality through the lens of art and design. We will closely observe and discuss works by contemporary artists who critique social inequity through painting, sculpture, video, and site-specific installation. Students will explore works by some of today's more important and impactful U.S. artists such as Kehinde Wiley, Kara Walker and others. Each week, the course will connect these contemporary artworks with artifacts of the past to visualize processes that created and continue to support systemic inequality. Weekly content is organized around key themes related to forms of inequity and inequality, including but not limited to: • Representation and power • The legacy of slavery • Immigration and the legacy of colonialism • Cultural appropriation • Indigeneity • Environmental and housing discrimination • Mass incarceration Our study is developed for students of diverse educational backgrounds and does not require specialized knowledge of art terminology. Key terms and explanation of art and design processes will be included in our study. Each weekly theme will incorporate an instructor-led video lecture, readings, videos, and podcasts. Optional weekly office hours will also be available.
1 Course Unit

SDEI 3000 Spaces of Creativity and Social Action
In this course, we will explore examples of spaces that support individual and collective social action through creativity, developing analytical tools to identify the ways in which these spaces and actions support goals of equity and inclusion.
Fall or Spring
1 Course Unit

SDEI 3500 Qualitative Methods
In this course, students will develop a foundation in understanding how researchers from the social sciences and humanities use qualitative methods to analyze and understand society and culture, with attention to empirical research in these areas focusing on social difference, diversity, equity, and inclusion. Students will learn the principles of sound qualitative research, and will be able to apply these principles to critical readings of published research literature.
Fall or Spring
1 Course Unit

SDEI 3550 Quantitative Methods
In this course, students will develop a foundation in understanding how researchers from the social sciences and humanities use quantitative methods to analyze and understand society and culture, with attention to empirical research in these areas focusing on social difference, diversity, equity, and inclusion. Students will learn the principles of sound quantitative research, and will be able to apply these principles to critical readings of published research literature.
Fall or Spring
1 Course Unit

SDEI 4000 Designing Critical Futures
In her Nebula award-winning novel Parable of the Talents, Octavia Butler writes that "(w)e can, each of us, do the impossible as long as we can convince ourselves that it has been done before." But what if this "before" is located somewhere in critical futures? Why should these futures matter to people who are concerned with practicable strategies for building a more just world? DIGC 320 invites students to imagine what "each of us" can do to reframe the possible by engaging with: (1) creative labor from sonic, literary, and visual artists; (2) critical labor from scholars, media experts, and non-profit professionals; and (3) social movement labor from activists, journalists, and civic participants. Along the way, students will design visions of critical futures that speak to the communities they hope to serve outside of the course. The course is organized around four essential units that each culminate in a creative project.
The first unit focuses on place-making efforts that connect speculative design to community organizing and civic engagement. The second thickens these connections through discussions of queer community, liberatory imagination, and feminist praxis. The third centers mutualistic collaboration and critical play as radical practices for advancing equity and affirming generative difference. These practices set up the final unit which invites students to make a digital object that engages with a critical future of their design. Each unit will frame speculative work and other materials as case studies for designing critical futures.
Fall or Spring
1 Course Unit

SDEI 4400 Intersectional History of Sexuality
In this course, we will consider the impact of social, economic, and political conditions on social constructions of sexuality, from the classical world of Greece and Rome, to the early modern West, to the streets of Victorian London and 1920s New York, to 21st-century movements for gender and sexual equity and inclusion. We will pay special attention to the ways that race, class, religion, ethnicity, and gender come together to shape power dynamics through the development, change, and continuity in sexual roles, norms, and relationships.

Social Welfare (SOCW)

SOCW 6300 Quantitative Reasoning/Social Statistics
The primary goals of this course are (1) to provide students with a solid understanding of the logic of social science research as well as (2) to provide students with an introduction to a broad range of statistical methods commonly used in social science research. The first portion of the semester concentrates on defining research problems, research design (including sampling, measurement, and causal inference), and assessing research quality. The latter portion of the semester focuses upon data analysis including descriptive statistics, measures of association for categorical and continuous variables, introduction to t-tests, ANOVA and regression, and the language of data analysis. Students will learn how to choose and apply statistical tools to data sources, how to interpret quantitative studies, and will gain experience using SPSS - a statistical software package.

1 Course Unit

SOCW 6680 Economics for Social Policy
Economics allows us to determine the costs and benefits of social policies like cash benefits, unemployment insurance, health insurance, pensions, education, etc. Policies typically affect the behavior of agents like individuals, families and firms, and we have to take these reactions into account when analyzing policy. Economics allows us to predict how policy is likely to affect behavior by understanding how the policy changes individuals' decisions, and what collective outcomes these myriad individual decisions bring about. For example, a universal basic income allows individuals to sustain themselves and their families when they are not working. At the same time, such guaranteed income has the potential to discourage people from looking for a job. If enough people are discouraged from looking for a job, employment in the economy will decrease, leading to lower production and lower tax revenues for the government. Policy makers have to take these phenomena into account in order to design a good income support system.

1 Course Unit

SOCW 8030 Advanced History and Philosophy of Social Welfare
This seminar traces the evolution of social welfare from ancient to modern times focusing on its implications for the development of contemporary social welfare in the United States. The course examines the development of social welfare systems and the underlying philosophies in the context of the social, economic, political, and cultural environments in which they emerged. Topics include the evolution of modern conceptions of the "welfare state," the role of public, private and voluntary sectors in the social services, trends in social and family history and their relationship to social welfare, the professionalization of social work, and methods of historical and social policy analysis.
Spring
1 Course Unit

SOCW 8110 Social Theory
Course reading consists of the original works of theorists who offer classical, contemporary and postmodern perspectives on social thought, social interaction and issues germane to social welfare. Through intensive examination of multiple theoretical frameworks, students are expected to increase their analytical and critical orientation to theory. This more nuanced understanding about epistemology, underlying assumptions, and theory construction can then be used to inform the student's substantive field of study and methodological orientation to research. This course is conducted in mixed lecture-seminar format. Students have the opportunity to practice pedagogical techniques and exercise class leadership.
Spring
1 Course Unit

SOCW 8520 Social Welfare Research Methods
This is the foundation course in social work research. It deals with the nature of scientific inquiry; theory and its relation to research design and hypothesis testing; and various models of data collection, sampling, and analysis of research and is supported in following personal interests within the structure of ethical scientific research. Each student prepares an original study which demonstrates integration of the semester's work. Students learn to work on their own. Students completing this class are prepared for more advanced coursework in research. Completion of concurrent enrollment in a course on introductory Social Statistics is required.
Fall
1 Course Unit

SOCW 8550 Advanced Social Welfare Research Methods
The methodology of accountability research in human service programs is studied. Emphasis is placed on social program evaluation, idiographic research, and secondary data analysis in policy research as specialized methods of social work research. Students undertake a laboratory experience in an ongoing program evaluation project.
Spring
Prerequisite: SOCW 8520
1 Course Unit
SOCW 8610 Advanced Policy Analysis Research Methods
This course examines how policy research methods are applied to the study of contemporary social issues. The course is intended for students with a basic knowledge of regression, and will be especially useful for students with practical experience in a policy setting who want to learn about advanced research methods. The course begins by exploring policy analysis frameworks, and the contexts of social policy and social policy research. The remainder of the course explores a variety of common approaches to the conduct of social policy research by looking at the types of questions social policy analysts most frequently ask, and the types of answers that they are most often able to provide. The policy analysis approaches we will examine include: needs assessment methodologies (e.g. the “epidemiology” of social problems); analyses of client-level service utilization patterns (e.g. creating “typologies”); modeling trends in demand for services over time (e.g. forecasting); locational and other spatial factors associated with need, service use, and resource allocation decisions (e.g. block grant formula funding); machine learning (e.g. predictive analytics); the roles of qualitative research methods in policy research; comparative research on social welfare policy; performance management applications of administrative data; and longitudinal, multisectoral research using integrated administrative data systems. The application of these various methods is illustrated with studies of mental health, homelessness, criminal justice, child welfare, housing and segregation, welfare reform, income inequality and social service planning. Students participate as discussants of weekly readings, and as presenters of an assigned paper.
Fall
Also Offered As: MSSP 8610
1 Course Unit

SOCW 8970 Applied Linear Modeling
This course deals with the underlying assumptions and applications of the general linear model with social science, education, and social policy related questions/data. The first half of the course begins by covering simple linear regression and the assumptions of the general linear model, assumption diagnostics, consequences of violation, and how to correct for violated assumptions. This will also include methods of incomplete case analysis (i.e. missing data analysis). Then various aspects of regression analysis with multiple independent variables will be covered including categorical explanatory variables (e.g. to estimate group differences), interaction effects, mediating effects (e.g. to estimate the indirect effect of social processes), and non-linear effects. The course will then cover some of the applications of the generalized linear model including logistic regression, some elements of path modeling (structural equation modeling), multilevel analysis (hierarchical linear modeling), and longitudinal modeling (growth modeling). The course will be taught using SAS, but students are welcome to use any statistical package of comfort. Introductory Graduate Statistics is a prerequisite.
Fall
Also Offered As: MSSP 8970
1 Course Unit

SOCW 9010 Proseminar
This course is a weekly, 90-minute (.5 course unit) proseminar. The course contains two main components: a research seminar (i.e., faculty and student presentations of their in-progress research) and skills training (e.g., how to write an abstract, software demonstrations). The two are interwoven throughout the academic year (e.g., 2 weeks of the month devoted to the research seminar and 2 weeks of the month devoted to skills training). The proseminar is required of all students until they successfully defend their dissertation proposal. Course is offered in fall and spring terms.
Fall, Spring, and Summer Terms
0.5 Course Units

SOCW 9950 Dissertation Status
All students on dissertation status are registered for year-long dissertation status courses. These courses will receive a temporary mark of PR in the fall to indicate the course is in progress and a permanent mark of S (satisfactory progress) or U (unsatisfactory) at the end of the spring semester (or fall semester if that is the student’s last enrolled term). The mark will be a reflection of the evaluation by the Graduate Group of the student’s progress based, in part, on the student’s Annual Progress Report.

Social Work (SWRK)

SWRK 5950 Effective Communication and Storytelling
Great leaders are storytellers. They are able to engage and entertain their communities, and tell a compelling narrative about how the world works. They use language powerfully and communicate in ways that uplift and inspire others. In this class, we will explore the power of telling great stories, and learn how to do it most effectively when promoting your campaigns to make the world a better place. We will also look at the skills of framing language in ways that will win over an audience. Finally, we will look at other key skills of effective communication, including the best strategies for persuasion, negotiation, and conflict resolution.
Summer Term
Also Offered As: NPLD 5950
1 Course Unit

SWRK 5960 Design and Incorporation of High Impact Nonprofits
Design and Incorporation of High Impact Not-For-Profits is designed for those who have a practitioner’s interest in the design, governance, leadership, and management of high impact not-for-profit organizations. This course is taught through learning best practice theory, applying this theory to a simulation experience, and providing students the opportunity to apply their new knowledge and experience in an interview with a current not-for-profit leader. Students, through the combination of theory and practice, are provided with the essential competencies and tools to design and incorporate a not-for-profit, conduct in-depth analysis of a not-for-profit’s effectiveness including, but not limited to, governance, leadership, social impact, financial sustainability, and systems and policy influence. Through the mock simulation process of designing, incorporating, and governing, students will leave with a “best practice” for not-for-profit manual that includes articles of incorporation, bylaws, governance deliverables, strategic business plan, organizational scorecard, 3-5 year budget, development plan and public policy strategy.
Spring

SWRK 6000 The Penn Experience: Racism, Reconciliation, and Engagement
This new non-credit asynchronous course, consisting of six Modules, aims to establish common language and concepts for incoming graduate and professional students to facilitate subsequent difficult conversations about race, racism and difference in the classroom and beyond. Using video interviews, presentations, short readings and podcasts, the course highlights the significance of Penn and Philadelphia’s history of racism and other forms of oppression, Penn’s evolving relationship to West Philadelphia, and Penn’s efforts toward greater engagement and inclusion. Modules also focus on implicit bias, intercultural communication gender identity and disparities in healthcare. A final module was designed primarily to address the antiracist work that must be done to dismantle white supremacy. All incoming SP2 master’s students are expected to spend 20 or more hours reviewing the six modules and completing short assessments prior to starting the fall semester. Other graduate and professional schools will assign modules to be completed based on their schools requirements. Fall, Spring, and Summer Terms
0 Course Units

SWRK 6010 History and Philosophy of Social Work and Social Welfare
This course traces the development of social welfare policy in the United States and its relationship to social work. It analyzes the values and assumptions that form the foundation of existing welfare programs and institutions and explores the social, economic, political and cultural contexts in which they have developed. The course examines the development of cash assistance and social services programs in light of the enduring legacy of poverty, racism, and sexism. The view of “outsiders” in U.S. society - low-income persons, people of color, gays and lesbians - allows us to gain perspective on the source of conflict and consensus in American history, which augments material about institutional racism learned in SWRK 603 and content about behavioral responses learned in SWRK 602. The course traces, as well, the roles that social workers have played in the formulation and implementation of social welfare policy and links these historical examples to contemporary policy practice. Fall
1 Course Unit

SWRK 6020 Human Behavior in the Social Environment
This course introduces the student to the individual and family components of social interaction in a variety of different milieus. Theories of self and personality are studied, along with theories related to traditional and non-traditional family styles, different social and ethnic groups, and of assimilation and acculturation. Emphasis is given to the impact of different cultures and traditions on individual functioning. Additional attention is given to selected social characteristics of the larger society, such as factors of socio-economic class which influence individual and family behavior and functioning. Fall
1 Course Unit

SWRK 6030 American Racism and Social Work Practice
This course explores racism in America as an historical and contemporary phenomenon. It emphasizes the development of evidence-based knowledge about institutional systems of racism, analytical skill in understanding the complexity of institutional racism and other forms of oppression more broadly defined, self-awareness, and the implications of racism for social work services and practices. Fall
1 Course Unit

SWRK 6040 Foundations of Social Work Practice I
This is the first of a four-course sequence designed to help students develop a professional stance and evidence-based framework for social work services to individuals, groups, families, and communities. It integrates the student’s theoretical learning with the experience in the field placement agency. The student is introduced to a holistic process-oriented approach to social work practice and to methods for implementation. The course emphasizes the social context for practice with special attention to agency purpose, functions and structure; the client system and its perceptions of need; goals and resources and the social worker as a facilitator of change. Fall
1 Course Unit

SWRK 6140 Foundations of Social Work Practice II
This is the second in a four-course sequence and continues to examine varied practice frameworks and methods for service delivery in working with individuals, groups, families and communities. It emphasizes the eradication of institutional racism and other forms of oppression along with the integration of a culturally-sensitive approach to social work practice. Attention is given to understanding client problems in the context of different social work practice approaches and service requirements and to increased use of professional values to guide and inform practice. Spring
Prerequisite: SWRK 6040
1 Course Unit

SWRK 6150 Introduction to Social Work Research
This course presents the broad range of research tools that social workers can use to improve the effectiveness and efficiency of their practice. The course emphasizes the process of theory development, conceptualization, and hypothesis formulation across a broad spectrum of social work practice situations. The course includes methodological considerations relating to concept operationalization; research design (experimental, survey, and field), sampling instrumentation, methods of data collection and analysis, and report preparation and dissemination. The course also emphasizes how social work research can help professionals better understand and more effectively impact problems of racism and sexism in contemporary American society. Spring

SWRK 6200 Integrative Seminar
All Advanced Standing students are required to take this non-credit Integrative Seminar in the summer upon beginning the program. The seminar meets weekly during the second summer session and supports students as they begin their field placement. In order to enroll in the fall, students must achieve satisfactory performance in the Integrative Practice Seminar and summer field placement. Advanced Standing MSW students only. Summer Term
0 Course Units
**SWRK 6260 Health and Social Justice**
This course considers various theoretical approaches to justice and health, motivated by the idea that a moral framework is needed to address the ethical challenges posed by inequalities in access, quality, financial burdens, and resource priorities, as well as rising health care costs. The course includes four parts. The first part examines ethical frameworks that involve various approaches to medical and public health ethics. The second part presents an alternative theory of justice and health, the health capability paradigm (HCP), grounded in human flourishing. The third part explores domestic health policy applications of HCP, including equal access, equitable and efficient health financing and insurance, rising costs and allocating resources. The fourth and final part of the course investigates domestic health reform, particularly a normative theory of health policy decision making grounded in political and moral legitimacy. The course scrutinizes the relevance of health justice for governing health at the domestic level, that is within countries, offers a new theory of health and social justice, the health capability paradigm, and of health governance, shared health governance, evaluating current domestic health systems and proposals for reforming them in light of these alternative theoretical frameworks.

**Fall**
1 Course Unit

**SWRK 6270 Global Health Justice and Governance**
This course considers various theoretical approaches to global justice and global governance and analyzes their implications for global health. The course includes two parts. The first part examines accounts of cosmopolitanism, nationalism and other theories of global justice, critically assessing duties ascribed by each that may be owed universally to all persons or confined within associative boundaries of communities or nations. The second part explores applications to global health governance encompassing consideration of human rights and the operation and accountability of global institutions such as the United Nations, the World Bank, and the World Health Organization and national health systems. The course scrutinizes the relevance of global justice for governing the global health realm, proposes a new theory of global health justice, provincial globalism, and of global health governance, shared health governance, evaluating the current global health system and proposals for reforming it in light of these alternative theoretical frameworks.

**Spring**
1 Course Unit

**SWRK 6290 Health Capability**
This course considers various theoretical approaches to justice and health, motivated by the idea that a moral framework is needed to address the ethical challenges posed by inequalities in access, quality, financial burdens, and resource priorities, as well as rising health care costs. The course includes four parts. The first part examines ethical frameworks that involve various approaches to medical and public health ethics. The second part presents an alternative theory of justice and health, the health capability paradigm (HCP), grounded in human flourishing. The third part explores domestic health policy applications of HCP, including equal access, equitable and efficient health financing and insurance, rising costs and allocating resources. The fourth and final part of the course investigates domestic health reform, particularly a normative theory of health policy decision making grounded in political and moral legitimacy. The course scrutinizes the relevance of health justice for governing health at the domestic level, that is within countries, offers a new theory of health and social justice, the health capability paradigm, and of health governance, shared health governance, evaluating current domestic health systems and proposals for reforming them in light of these alternative theoretical frameworks.

**Fall**
1 Course Unit

**SWRK 7010 Health and Mental Health Policy**
Effective social policy and practice strategies promote social justice and ensure all individuals, groups, and communities have access to high quality, comprehensive, affordable health and social support services. In this course, we use a health equity lens to critically analyze how health and mental health policies are developed and implemented, and how such policies relate to social work practice, program planning, and research. A broad perspective is used in thinking about health and well-being, accounting for intersectional health equity considerations deriving from race, ethnicity, disability or gender. Key policy issues such as financing, cost, access, and the allocation of resources are explored in the context of existing systems and health reform proposals. Students learn about health and mental health policy through inquiry related to the social construction of illness, stigma, social determinants of health, health and behavioral health integration, and specific population groups such as children, families, LGBTQ individuals, or those with specific health conditions, among other topics.

**Spring**
1 Course Unit

**SWRK 7020 Social Work Practice in Health Care**
This course focuses on key issues in social work practice in health care settings. Social aspects of health and illness, including cultural variations, health beliefs and behavior, and the impact of illness on the patient and the family, are examined and their relevance for practice is discussed. Appropriate theoretical models for practice are identified and applied to practice in the areas of prevention, primary care, chronic and long-term care. New roles for social work in varied health delivery systems and inter-professional collaboration are explored.

**Fall or Spring**
1 Course Unit
SWRK 7030 Impacting Government: Policy Analysis & Coalition Building
This course focuses on developing a theoretical foundation for actionable skills in policy analysis and coalition building across a wide range of constituencies. The material begins with a structured focus on the ideological underpinnings of social welfare in the United States and the ways in which these perspectives shape our conception of equity, equality, and allocation of resources along the lines of race, class, gender, immigration status, and other identities. We will then utilize this basis for developing analysis frameworks, policy briefs, and media messaging that students will utilize when working with legislative bodies to advocate for and with the populations they serve. Distinct emphasis is placed on becoming conversant across differential systems, ideas, values, and assumptions while remaining grounded in relevant research and empirical approaches.
Not Offered Every Year
1 Course Unit

SWRK 7040 Advanced Clinical Social Work Practice I
Clinical Social Work Practice I and Field Practice builds on the generalist model of practice established in the foundation social work practice courses. The course work and assignments are closely linked to the students' learning objectives and experiences in the field. This course has students critically examine and deepen their understanding of advanced theoretical frameworks and specific skills to be applied in clinical practice with children, adolescents, adults, and families. Students begin with classic and modern formulations of psychodynamic work and use this as a foundation for understanding theoretically and empirically drive models of family intervention. In addition, use of self and social work values and ethics and working with diverse clients are addressed at an advanced level.
Fall
1 Course Unit

SWRK 7060 Policies for Children and Their Families
This course examines policies for children and their families with a specific focus on child welfare policy. The course examines the interrelationship between: the knowledge base on child abuse and neglect; evaluations of interventions; programs and policies designed to protect maltreated children; and child welfare policy at the state and national level. The course also examines federal and state laws that govern the funding and operation of child welfare systems; the history of child welfare policies; the operation of child welfare systems; and the legal, political and social forces that influence the structure and function of child welfare systems in the United States.
Spring
1 Course Unit

SWRK 7080 Advanced Macro Social Work Practice I
Advanced Macro Social Work Practice I and Field builds on the foundation social work practice courses and focuses on three areas: (1) context of macro practice; (2) organizational structure with a focus on nonprofits; and (3) program design and development. The course begins with providing theoretical frameworks for macro practice and then moves to focus on delivery of services at the community level. Knowledge and skill development focuses primarily on social work practice within communities and organizations. Students learn how to organize and build relationships with communities and develop, plan, manage, fund and assess/evaluate community-based programs. Specific skill development includes learning how to research, develop, write, and pitch a grant proposal. Course content is integrated with fieldwork and is specific to the service needs of the populations with whom students are working in their field agencies.
Fall
1 Course Unit

SWRK 7100 Supervision Seminar
Students in the Employed Practitioners Program are required to take this non-credit seminar in the fall and spring terms of their second year of study. The class meets every other week. In a limited number of cases, advanced-year students may be placed in agencies where there is no available MSW field instructor. In such instances, the student is required to attend the Clinical or Macro Supervision Seminar (depending on their concentration), which meets every other week during the academic year. Students who are required to participate in the clinical or macro supervision seminars will be given 1.5 hours of compensatory time off from their field placement every other week.
Fall, Spring, and Summer Terms
0 Course Units

SWRK 7110 Contemporary Social Policy
This course introduces students to the analysis of contemporary social welfare policy. Several social welfare policy areas, including social inequality, poverty, health care, and housing are examined. Each topic area is also used to illustrate a component of the policy analysis process, including the analysis of ideologies and values as they shape policy formulation, the process by which legislation is proposed and enacted, the roles of advocacy and lobbying organizations, and the challenges of policy implementation and evaluation.
Fall or Spring
1 Course Unit

SWRK 7130 Understanding Social Change: Issues of Race and Gender
This course builds upon the foundation of historical, psychological, sociological, economic, political, and personal knowledge about institutionalized forms of racism and discrimination developed in SWRK 6030, American Racism and Social Work Practice. The course uses understanding elements of oppression to critically examine strategies for addressing racism and sexism in organizations and communities through systematic assessment and planning for social change. The course examines change at three levels: organizations, communities, and social movements.
Spring
Prerequisite: SWRK 6030
1 Course Unit
SWRK 7140 Advanced Clinical Social Work Practice II  
The focus of learning in this semester is theories and skills related to clinical practice with individuals and groups, differential intervention, and the broadening of the professional role and repertoire. The course content and assignments are closely linked with the students’ learning objectives and experiences in the field. Students extend and refine their practice knowledge and skills and learn to intervene with cognitive, behavioral, and narrative modalities. This semester focuses also on work with complex trauma across systems and populations. Students consolidate their identification as professionals and learn to constructively use the environment to effect systems changes.  
Spring  
Prerequisite: SWRK 7040  
1 Course Unit  

SWRK 7170 Art and Social Work: Art and the Ecology of Justice  
How can the arts help us build a more just society? How can the arts transform social structures and systems? Public health crises involving clean water (Flint), police violence (Baltimore), and a lack of economic and educational opportunity following reentry (Philadelphia) make legible the need for a new visual language that critiques these conditions and challenges entrenched structural inequalities. We will engage the work of creative practitioners who are mapping new relationships between art and social justice and directly impacting individual and communal well-being. In so doing, the course seeks to challenge traditional constructions of public health, which often isolate individual histories from their social life and their relation to families, communities, and geographies. Readings will build upon disciplinary perspectives in the arts, humanities, and social policy. Requirements include weekly readings, class participation, and a collaborative final project. The course will meet in the Health Ecologies Lab at Slought Foundation, an arts organization on campus.  
Spring  
Also Offered As: FNAR 5057  
Mutually Exclusive: FNAR 3090  
1 Course Unit  

SWRK 7180 Advanced Macro Social Work Practice II  
Advanced Macro Social Work Practice II and Field helps students broaden and deepen the specific knowledge and skills required to become an effective and creative social work practitioner. The course focuses on five areas of macro practice: (1) community assessment and practice; (2) policy advocacy; (3) fiscal management and fundraising; (4) global human rights; and (5) emerging areas of macro practice. Students learn how to conduct a community practice analysis, engage in policy advocacy, develop an idea for a social enterprise, write an agency fundraising plan, and conduct an agency fiscal evaluation. Students learn to utilize administrative skills to promote social change within a variety of systems that influence the lives of client populations. Course content is integrated with fieldwork and is specific to the service needs of the populations with whom students are working in their field agencies.  
Spring  
Prerequisite: SWRK 7080  
1 Course Unit  

SWRK 7210 Social Work Healthcare Proseminar  
This is a mandatory, year long, bi-monthly, non-credit course for all students enrolled in the Social Work in Health Care Specialization (SWIHCS). SWIHCS aims to prepare students for successful careers across practice settings and with diverse populations and conditions. Grounded in the tenets of biopsychosocial approaches to direct practice, the specialization bridges systems of practice and introduces students to inter-professional collaboration and leadership skills. This proseminar will serve two functions for students in the specialization. First, the cohort will meet together monthly for case conceptualization, and consideration of challenges unique to health-related placements in both macro and direct practice settings. Second, students will meet monthly for special learning opportunities, guest lectures, and professional development. Topics may include, but are not limited to: direct practice work with children, families, the elderly, and communities coping with chronic and terminal illness, palliative and end of life care, health care advocacy, policy development and evaluation, and inter-disciplinary collaboration. Two Term Class, Student must enter first term; credit given after both terms are complete  
0 Course Units  

SWRK 7220 Practice with Children and Adolescents  
This course provides a foundation for social work practice with children and adolescents. Beginning with an overview of normative child and adolescent development and psychosocial developmental theory, the course covers various methods for helping at-risk children and adolescents and their families. Emphasizing the complex interplay between children and adolescents and their social environments, consideration will be given to biological, temperamental, and developmental status; the familial/cultural context; the school context; and other aspects of the physical and social environment. Particular attention is paid to working with socially, emotionally, financially, and physically challenged and deprived children and adolescents and their families.  
Fall or Spring  
1 Course Unit  

SWRK 7230 LGBTQ Certificate Proseminar  
This is a monthly, non-credit course for all students enrolled in the LGBTQ Certificate. The LGBTQ Certificate provides supplemental content and skills to existing professional master’s degrees at Penn with specialized courses and fieldwork addressing the legal, physical and mental health care, social service, and educational needs of LGBTQ communities and issues of gender and sexuality, more generally, across the lifespan. Because students can enroll in a variety of courses across schools to meet the certificate requirements, the proseminar is designed to serve as a shared community building and peer mentorship experience for each certificate cohort. The instructor will also provide an additional layer of mentorship for integrating field placement into the academic social work experience. The proseminar will take on different formats over the course of the semester including case review, guest lectures, and in-depth discussion of issues relating to ethics, identity, and cross-professional collaboration.  
Two Term Class, Student may enter either term; credit given after both terms are complete  
0 Course Units
SWRK 7240 Developmental Disabilities
This course enhances the students' ability to practice social work with and on behalf of people with developmental disabilities and their families. The course provides a base of knowledge about developmental disabilities and differences, their causes and characteristics. Students learn how disabilities and learning differences impact personal, familial, educational, social, and economic dimensions for the individual, family and society, with attention to the person's special life cycle needs and characteristics. The course also emphasizes legislative, programmatic, political, economic, and theoretical formulations fundamental to service delivery.
Fall
1 Course Unit

SWRK 7250 Relationship Theory
The goal of this course is to introduce the participants to the basic principles and practice of couple therapy. With its rich history as a distinct discipline integrating both individual and systemic theory, students will explore a broad range of theoretical and clinical approaches within this field. Issues such as intimacy, gender, power, class, race, orientation, family of origin, affairs, separation, divorce, domestic violence, sex, parent-child relationships, and money will be discussed.
Fall
1 Course Unit

SWRK 7260 Brief Treatment and Crisis Intervention
This course focuses on theory and practice of planned brief treatment in social work practice, primarily with individuals but with attention to couples, families and other groupings. The course covers the history of and different approaches to brief treatment. Topics include treatment issues such as criteria for selection of clients, understanding the importance of time in the treatment relationship, the use of history, the importance of focusing, the process of termination and other issues related to brief interventions. Particular attention will be paid to the use of brief treatment approaches in crisis situations. The course presents various methods of assessing an individual's crisis and of helping clients mobilize their strengths to utilize customary methods of coping and learn newer ways of coping.
Summer Term
1 Course Unit

SWRK 7270 Practice with Families
This course provides students with assessment and intervention skills for social work practice with varied family/partner configurations. The course begins with a grounding in family systems theory and proceeds to explore patterns of interaction in terms of the wide range of problems that families and partners bring to social agencies. Emphasis is given to exploring ways of supporting change in interaction patterns. Readings are augmented by videotapes of family sessions and simulations of clinical situations from students' field practice.
Fall or Spring
1 Course Unit

SWRK 7280 Taking Down the Prison Industrial Complex
The U.S. incarcerates more people than any other country, and more than any nation has ever done in history. The racial disparities that mark this carceral regime have led scholars to describe the prison industrial complex as a new form of Jim Crow. Philadelphia has one of the highest incarceration rates in the country, and one of the largest populations on parole and probation. This class explores structural and individual-level pathways to re-engage the vast population of recently incarcerated people who cycle through prisons, jails, juvenile homes, and other detention centers. Drawing on practice informed by critical race, postcolonial, feminist, and queer theories, the class prepares the conceptual and practice foundations for a prison abolitionist orientation in social work engagement with this community. Utilizing a daily workshop format that incorporates members of the Philadelphia decarcerate landscape, students will be trained in direct and macro practice, to engage with people and the carceral systems they are embedded in. The class will engage students with the innovative psychotherapeutic and macro practices being implemented in the Center for Carceral Communities at SP2, alternative programs in Philadelphia’s municipal and federal courts, educational degree programs at community colleges in Philadelphia, co-operative business initiatives for people emerging from incarceration, and social movements such as Black Lives Matter that are shaping the prison abolition landscape. The class blends morning sessions dedicated to discussions of texts with afternoon sessions dedicated to hands-on implementation workshops. At the end of the class, students will be prepared to immediately start engaging with members of the community emerging from incarceration.
Fall
1 Course Unit

SWRK 7290 Social Statistics
This course provides students with a broad range of statistical methods and applications. It introduces social work students to the use of quantitative data for planning and evaluating social programs and social policy. Course topics include conceptualization and measurement of variables and basic techniques and concepts for exploring and categorizing data, for generalizing research findings and testing hypotheses, and for statistical data processing. Students will gain experience in using a Windows-based statistical software package on personal computers. Emphasis is placed on the practical application of data to address social policy and social work practice issues. Students have the opportunity to critique the application of data analysis and presentation in technical reports and professional journals.
Fall
1 Course Unit
**SWRK 7310 Clinical and Macro Child Welfare Practice**

Students enrolled in this course will learn about the various contexts in which child welfare practice and policy services take place and the skills and modalities that are used with children, youth, and families who are the focus of child welfare intervention. Students learn about the social conditions and unmet needs that have typically precipitated child welfare policy and ideological debates informing child welfare policy. How to structure organizations and implement planning in support of strengthening front-line practice is also addressed. Taking stock of these policies and organizational factors, students gain a firm understanding of how they influence, shape, and govern direct clinical practice in child protection and casework. Particular attention will be devoted to developing students’ practice skills in safety assessment and safety planning, risk assessment, and permanency planning. Implementation of evidence-based, trauma-informed interventions to promote positive developmental outcomes among the racially/ethnically diverse pool of children and adolescents placed in out-of-home care will also be a focus of attention. Other topics include separation, loss, and identity development; disproportionality and disparity; and self-care in child welfare practice. In the spirit of bridging connections between macro and clinical practice, course content will delve into how direct casework services influence dependency actions in the juvenile courts. How these direct practices or interventions influence case outcomes as reported by a number of federal data reporting systems will also be discussed. A social justice framework will be applied to understand how child welfare policies and organizational services sustain child and family inequalities, especially for historically oppressed and marginalized populations who are disproportionally represented in the child welfare system.

Fall
1 Course Unit

**SWRK 7320 Integrative Seminar in Child Welfare**

This capstone course in the Child Well-Being and Child Welfare specialization will integrate direct/micro and macro levels of practice; research in child welfare and related fields, as the research relates to all levels of practice; the relationship of child maltreatment and other social problems; and perspectives from several disciplines, specifically social work, other mental health professions, law, and medicine, as these disciplines address problems of child maltreatment and child welfare. The seminar will highlight issues of social justice, disproportionality; particularly the over-representation of children and families of color in the child welfare system, and disadvantaged populations, including children in general and poor children in particular. Faculty from other disciplines will be features as guest speakers throughout the course.

Spring
1 Course Unit

**SWRK 7330 Supporting LGBTQ+ Individuals Across the Lifespan**

As recognition and acceptance of individuals across and beyond both the sexual orientation and gender identity spectrums continues to progress within the United States, clinical theory and applications for working with lesbian, gay, bisexual, transgender, and queer plus (LGBTQ+) individuals has also expanded. This course will explore the clinical theories and treatment approaches geared towards affirming and supporting LGBTQ+ individuals within their romantic and/or sexual relationships, families of origin, and families of choice. Areas of development will be addressed across the lifespan including specific milestones related to gender and sexuality development as well as psychological, sociocultural, and spiritual influences upon development. Centering on a social justice approach, learners will be encouraged to critically examine systemic factors impacting LGBTQ+ individuals as well as the intersectionality of various identities including race, ethnicity, gender identity, sexual orientation, age, ability/disability, socioeconomic status, educational attainment, mental and physical health, and other identities (both self-assigned and externally applied) that can impact development. Each stage of development will include multiple cases for review and consideration of potential practice implications at the individual, relationship, family, community, and systemic levels. Upon conclusion of the course, learners will have a stronger understanding of the practice theories that exist, the practice models that best fit their professional style, and clear understanding of practice application in regards to affirming and supporting LGBTQ+ individuals.

Fall or Spring
1 Course Unit

**SWRK 7360 Building Community Capacity**

This course provides an introduction to community organization and community capacity building. The course encompasses strategies, models, and techniques for the creation of organizations, the formation of federations of existing organizations; and coalition-building, all designed to address problems requiring institutional or policy changes or reallocation of resources to shift power and responsibility to those most negatively affected by current socio-economic and cultural arrangements. The course emphasizes development of strategies and techniques to organize low-income minority residents of urban neighborhoods, and to organize disenfranchised groups across geographic boundaries as the first required steps in an empowerment process.

Fall or Spring
1 Course Unit

**SWRK 7370 Bioethics in Social Work in Diverse Healthcare Settings**

As medical technology develops and evolves, ethical dilemmas are occurring more frequently in many diverse healthcare settings. Social workers play an integral and unique role in bioethics: primarily as patient advocates but also as guardians of autonomy and dignity. This can come into direct conflict with decisions patients, families, and healthcare teams are asked to make on a daily basis in healthcare settings. This course will explore many of the major ethical challenges confronting medicine, social work, and biomedical sciences. We will examine legal, institutional and personal positions, beliefs, and values as we consider and debate opposing arguments. You will be challenged to think and write critically, utilizing philosophical, bioethical, and social work frameworks to structure your arguments and ethical decision making. This course will prepare students to actively participate in ethics committees, mediation, patient/family conferences with diverse populations and interdisciplinary collaborative discussions regarding ethical issues in medical settings.

1 Course Unit
SWRK 7380 Anxiety and Depression
Anxiety and depression are two of the most common mental disorders seen in social work clients, and frequently they occur concurrently. This course describes the medical and "physical" concomitants and psychosocial factors associated with both conditions and introduces diagnostic and assessment procedures and methods of intervention that social workers use in working with clients with these conditions. The course also considers how culture, social class, gender, and other social differences affect the expression of these disorders and their concomitant treatment.
Fall or Spring
1 Course Unit

SWRK 7390 Illness and Family Caregiving
This course focuses on social work practice in medicine and the relationships between physical health, social environments, and psychosocial functioning. Student learning will be grounded in the biopsychosocial-spiritual model, and will address a number of domains, including the impact of illness on families over the course, the impact of a diagnosis on family functioning, medical decision making, coping, health beliefs and spirituality, culture and social class. Classroom content will include conceptualization of illness challenges from the presentation/prevention of symptoms to the end of life, in addition to writing case material, building self-awareness and identifying clinical interface issues, and the compilation of a "clinician's toolbox" for direct practice on the front lines. Activities will include the unique opportunity to participate in hands-on, interdisciplinary training at the Simulation Center in the School of Nursing.
Fall
1 Course Unit

SWRK 7400 Strategic Planning & Resource Development for Public & Nonprofit Organizations
Resilient organizations engage in a continuous process of self-review and refocusing. Referred to as "strategic planning," this process requires the active participation of a broad range of agency "stakeholders" who, in their work together, seek to realign the organization's goals, structures, and programs to make them more responsive to the changing needs of their service populations. Building on the content of foundation practice foundation courses, "Strategic Planning and Resource Development" has been designed to strengthen the student’s leadership capacity for engaging in strategic planning and resource development practice across a broad range of governmental (GOs) and civil society organizations (CSOs). The importance of organizational flexibility, innovation, and the creation of cooperative public-private partnerships is emphasized throughout the course.
Fall or Spring
1 Course Unit

SWRK 7410 Gender & Social Policy
Gender and Social Policy develops an advanced understanding of social policies through the lens of gender - a socially constructed classification system based on ideals of femininity and masculinity, which are most commonly understood to be binary, mutually exclusive categories corresponding to sex (female and male). (Gender is) a concept that pervades all aspects of culture: structuring institutions, social identities, cultural practices, political positions, historical communities, and the shared human experience of embodiment*. The class provides students with the opportunity to explore how social policies respond (and contribute) to the needs and risks of different groups of people based on gender classifications. Rather than a survey of "gender" policy, students will be introduced to key feminist and trans concepts and frameworks that can be applied to any social issue and policy intervention. Policy examples may include reproduction, state violence, exclusionary/inclusive space, and national emergencies. The topics and specific readings may change based on the course's interests and current events. Class assignments are designed to provide an opportunity to practice applying gender theory, as well as for each student to examine a policy issue of import to them through a gendered lens. *paraphrasing Garland-Thomson, 2002, "Integrating Disability, Transforming Feminist Theory", NWSA Journal, 14(3): pg. 4.

Also Offered As: MSSP 7410
1 Course Unit

SWRK 7420 Practice with Youth Who are Marginalized
The discourse on juvenile justice in the United States, once driven by themes of treatment and rehabilitation, has been dominated in recent years by vocabularies of punishment and incapacitation. The juvenile court, an enterprise founded by social reformers and the social work profession at the turn of the century to "save children," is now under severe political and legislative pressure to impose harsher penalties on younger and younger offenders who are increasingly portrayed as violent "super-predators," while its most vulnerable segments, children and youth, stand in greatest need of what a social service system can offer. Not surprisingly, those most likely to wind up under supervision are economically poor, under-educated, disproportionately of color and disproportionately at-risk to become victims of violent crimes. How does the profession situate itself in this discourse and what are individual social workers to do?
Fall
1 Course Unit

SWRK 7430 Action Research
Action research is a form of social research that combines research with intervention. It is characterized by a collaborative relationship between the researcher and a client organization that is in an immediate problematic situation. The research process is directed toward addressing the problem situation and producing knowledge that contributes to the goals of social science. Action research is compatible with many of the values and principles of social work. This course also addresses issues of social work ethics and values encountered by the action researcher.
Fall or Spring
Prerequisite: SWRK 6150
1 Course Unit
SWRK 7440 Direct Practice Research
This course provides graduate social work students with research knowledge and skills aimed at enhancing their direct practice with clients. The course examines methods of assessment, methods for choosing and evaluating techniques of intervention, methods for determining the effectiveness of practice and the use of research in social work decision-making. A successful outcome of the course will be that students perceive a more positive relationship between research and social work practice and possess a set of tools that they will be able to utilize in their future careers as social workers. The course starts from an assumption that students have some familiarity with research and are primarily engaged in direct practice with individuals, families or groups.
Fall
Prerequisite: SWRK 6150
1 Course Unit

SWRK 7450 Critical Race Theory
This course explores Critical Race Theory (CRT). CRT refers to a body of work that emerged during the 1980s and 90s among legal educators to try and explain why there seemingly has been racial progress on the one hand through laws and court decisions that outlaw the most visible symbols of racial discrimination, but growing signs of racial inequality on the other in education, health, criminal justice, housing, politics, and other areas. During the past ten years, fields such as women's studies, sociology, education, gender studies, history, criminology, and postcolonial studies have begun to look to the insights developed by critical race theorists. Without a doubt, CRT has spawned and/or influenced new areas of inquiry such as Latino/a critical studies, queer studies, critical race feminism, and critical white studies. Although social work researchers have begun to use CRT ideas such as intersectionality, the application of Critical Race Theory to the field remains largely unexplored.
Fall
1 Course Unit

SWRK 7460 Political Social Work
This course focuses on the role of social workers and the social work profession in advocacy and the political arena. It examines the methods of advocacy (e.g., case, class, and legislative) and political action through which social workers can influence social policy development and community and institutional change. The course also analyzes selected strategies and tactics of change and seeks to develop alternative social work roles in the facilitation of purposive change efforts. Topics include individual and group advocacy, lobbying, public education and public relations, electoral politics, coalition building, and legal and ethical dilemmas in political action.
Fall or Spring
1 Course Unit

SWRK 7470 Social Policy and the LGBTQ Community
The course will explore and analyze the development of social policy within the context of LGBTQ social movements both assimilationist and liberationist. Among the policies examined are HIV/AIDS, Defense of Marriage Act, Don’t Ask, Don’t Tell, Same-Sex Marriage, Adoption of Children, the DSM and Pathologizing the LGBT Community, Legal Issues, Non-Discrimination, and Hate Law Legislation. Social Services for the LGBTQ community will be discussed as well as support for LGBTQ youth. The particular difficulties confronting transpeople and their acceptance will be examined in the context of the social construction of gender; in this, the work of philosophers Judith Butler and Michel Foucault will be introduced. Questions of social justice will be threaded throughout the course, as will social work advocacy and coalition building.
Spring
1 Course Unit

SWRK 7480 Microfinance and Women's Empowerment in India
This course examines microfinance and its engagement with marginalized communities such as those in India. It is designed to provide students with an understanding of the phenomena of microfinance and its role in poverty alleviation. By studying the use of self-help groups with NGO facilitation, their impact on women’s empowerment will be examined and understood through interaction with women engaged in microfinance activities.
Spring
1 Course Unit

SWRK 7490 Civil Society Addressing Conflict in Israel/Palestine
This course offers a unique opportunity to experience the challenges and complexities of coexistence in Israel, the Holy Land for Christians, Jews and Muslims; a key point of interest and dispute for the international community, and the homeland shared and claimed by both Israelis and Palestinians. The course will focus on activities carried out by nonprofit organizations operating within the Israeli civil society, dealing with issues related to coexistence and to the protection and advancement of the civil and social rights of different populations, with special emphasis on the Arab-Palestinian population in Israel. These activities include educational and social services programs, community work and advocacy activities, aimed at creating dialogues and building coexistence among the different populations in the Israeli society and Palestine.
Summer Term
1 Course Unit
SWRK 7500 Social Policy and the LATINX Community
In this course on social policy and the Latinx immigrant community in the US, students will develop a broad understanding of how social policy at the local, state, and federal levels affect Latinx immigrants’ access to and interactions with social services. After developing a critical understanding of the diversity of the Latinx immigrant community and of the sociopolitical and –historical context for the development of social policies impacting this community, students will explore social policy and related social services around immigration, health, education, and labor that deeply affect the lived experiences of Latinx immigrants. Students will then investigate Latinx immigrants’ participation in the development of social policies as well as the ways in which Latinx grassroots movements and organizations influence national debates on public policy and social services for the Latinx immigrant community. Students will also learn about this group’s economic contributions to funding at local, state, and national levels to the U.S. social welfare system, as well as new and current initiatives promoting social policies geared towards social and economic justice for Latinx immigrants. Through course readings, lectures and discussions students will develop tools for critical thinking and analysis about how social services and the daily lived experiences of Latinx immigrants are mediated by policy and its implementation at local, state, and federal levels. Students will also develop skills in case study analysis through interactions and interviews with invited guests – local Latinx immigrant community members and social leaders – who will share their own perspectives, knowledge and firsthand experience around issues related to social policy and Latinx immigrants. Over the course of the semester, students will formulate plans for social policy advocating for social justice and human rights within the Latinx immigrant community.
1 Course Unit

SWRK 7510 Spirituality and Social Work Practice
Spirituality is a critical anchor of a holistic approach to social work, which views individuals, couples, families, groups, and communities in a bio-psycho-social-spiritual context. It varies in extent to which spiritual aspects of social work practice have been addressed explicitly in social work education. In a post September 11th, 2001 world, however, drawing from the wellsprings of spirituality seems more widespread, and even more crucial. Current trends in social work education, including the Council on Social Work Education’s Educational Policy and Accreditation Standards support the inclusion of content on religious and spiritual diversity. Accordingly, this course is an advanced clinical practice elective that focuses on spiritual aspects of social work practice. The professional values of client self-determination and empowerment will be stressed as diverse spiritual perspectives are explored. This course will strive to seek a balance of exploring the universalistic as well as the particularistic in relationship to spirituality. Some particularistic religious and/or spiritual traditions will be studied as they exemplify commitments of spirituality and as they intersect with a more universalistic spirituality. The impacts of spiritual and religious systems in relation to diversity (e.g. by gender, social class, ethnicity, culture, and sexual orientation) will be considered. As a practice elective, this course will make linkages directly to students’ practice experience in the field as well as to other curriculum areas such as human behavior theory, social policy, and research.
Spring
1 Course Unit

SWRK 7520 The Social Entrepreneurial Approach to Community Reintegration
In this course, students work closely with the instructor and partner agencies to experiment a social entrepreneurial approach to community reintegration for formerly incarcerated people. This course provides a unique and flexible opportunity for students to work together on an ongoing SP2-driven initiative called Penn Restorative Entrepreneurship Program (PREP). Founded by Prof. Charlotte Ren and currently led by Prof. Chao Guo, PREP identifies a small group of formerly incarcerated individuals based on survey and interview results and selects students from various schools at Penn to offer ten-week intensive training on starting and running a small business. After the curriculum training, PREP continues to provide a support system to help them turn business ideas into reality. Through PREP we hope to develop and demonstrate a sustainable and replicable model to effectively transition formerly incarcerated individuals back to the community.

1 Course Unit

SWRK 7530 Constructing America: A Socio-Legal History of Immigration
From the 1790 Act that restricted the right of naturalization to “free whites,” to the quota Acts of the 1920s that limited the entry of non-Nordic immigrants, to the reinvigorated restrictionism of the post-9/11 era, the laws of the nation and the discourses of immigration and immigrants that have enabled them have been key terrains in and through which legitimate and de-legitimized identities have been forged, and populations demarcated as viable participants in society or as undesirable Others to be excluded from full participation. Because immigration has been a central discriminating mechanism through which this selective peopling of the nation has been accomplished, the history of immigration and immigrants is a site par excellence for the examination of the mechanisms through which to examine contemporary issues of diversity, “difference,” and marginalization of populations. Social work’s development as a profession coincided with the period in U.S. history marked by the largest waves of immigration. The strategies the early U.S. social workers and social reformers devised to improve the poor and their communities were interventions located in and focused on immigrants and their neighborhoods. Work with poor immigrants in urban settings, shaped the nature and the direction of social work in these crucial early years of the profession. Moreover, in this work with the largely white immigrants—formulated and accomplished in the context of the rapidly developing social and physical sciences—social work cut its teeth, not only on the abiding issues of race, heredity, and culture, but on the still contested links between the individual and the environment. Examining the history of immigration—the history of the organic past which has constructed the particular demographic makeup of the present-day communities—is indispensable to understanding the profession’s current practices and future aspirations. This seminar will examine the socio-legal history of immigration. We will review major U.S. legislation concerning immigrants and immigration, refugees and asylum, and citizenship and naturalization. The legal codes, as well as the political and social discourses of identity that undergird and enabled those codes, will be analyzed through the lens of poststructuralist theories.
Spring
1 Course Unit
SWRK 7540 Play Therapy
Play is the method children use to master and understand their worlds. When working with children and adolescents, social workers often utilize play as a primary treatment intervention. This course will provide students with a foundation in play therapy theories, techniques, and practice intervention models. Play therapy philosophies will be critically analyzed. Play therapy will be presented for application in a variety of practice settings as well as with individuals, families, and groups. Students will be taught how to apply play therapy to address issues such as trauma, loss, mood disturbance, relational stress, anxiety, and academic performance. Emphasis will be placed on approaching play therapy from perspectives of multicultural competence, empowerment, social justice, and inclusion.

1 Course Unit

SWRK 7560 Human Sexuality
The aim of this course is to increase students’ ability to deal more comfortably with the sexual aspect of human functioning. Readings, written assignments, and classroom presentations are directed to realizing the diversity, complexity, and range of human sexual expression. Current information about sexuality from the biological and physiological sciences is reviewed to increase comfort and skill in discussion and handling of sex-related behavior, personal and societal attitudes will be explored. A variety of sex-related social problems encountered by social workers in family, education, health, and criminal justice settings are discussed. Diagnostic interviewing and treatment methods are presented in role play, group exercises and case studies.
Spring
1 Course Unit

SWRK 7570 Loss through the Life Cycle
This course considers loss as a central theme throughout the life cycle. Content focuses on the physical, psychosocial, spiritual, and cultural aspects of loss, dying and bereavement processes and the interaction among individuals, families and professionals. Students examine historical trends of family, community, and institutional support for the terminally ill and those experiencing traumatic loss and learn ways to advocate for a system of services that supports full decision-making on the part of the client. Course materials, journals, and special projects identify how self and other factors impact service delivery to individuals, families, and communities experiencing loss, including ethical considerations prompted by cost, technology, and end of life issues.
Spring
1 Course Unit

SWRK 7590 Substance Use Interventions
This course addresses intervention approaches used in social work practice with individuals, families, and groups who misuse addictive substances themselves or are affected by another’s misuse. Students learn about addictive substances, models of intervention, how to engage and assess clients, and how to intervene and evaluate the effectiveness of their interventions. The course incorporates theory and research findings on various strategies of intervention.
Fall
1 Course Unit

SWRK 7600 Mental Health Diagnostics
This course familiarizes students with mental health and mental disorders within the context of the life cycle, viewed from a biopsychosocial perspective. Prevalent categories of psychiatric disorders are considered with respect to their differentiating characteristics, explanatory theories, and relevance for social work practice, according to the DSM and other diagnostic tools. The course includes biological information and addresses the impact of race, ethnicity, social class, age, gender, and other sociocultural variables on diagnostic processes.
Fall, Spring, and Summer Terms
1 Course Unit

SWRK 7620 Social Work Practice with Groups
Group work is an essential part of social work direct practice. Every social service agency utilizes groups, and social workers will engage with a variety of groups during the course of their careers. Given the fact that collective group processes are especially salient for marginalized communities, group work is essential to direct practice that is embedded in the principles of social justice. Moreover, group work has been shown to be a superior form of intervention for clients battling chronic conditions, entrenched behaviors and social stigma. In an era of evidence-based practice, successful and cost-effective group skills are a vital component of every social worker’s toolkit. Students will learn about different types of groups and modalities, facilitate groups in class and in field settings, and engage with social workers who have implemented group interventions in various communities in diverse contexts. The class will train students to facilitate therapeutic, psychoeducational, task, and decision groups, while helping them to explore how to start, manage and terminate groups in various social work settings.
Spring
1 Course Unit
**SWRK 7630 Global Human Rights & US Immigration: Implications for Policy & Practice**

This course will begin with the history of migration to the US, as well as legal definitions of newcomers, including obtaining documents for lawful permanent residence, refugee status, as well as grounds for exclusion and deportation, and paths to naturalized citizenship. We will then review how a framework of cultural competence, and a strength or asset-based approach can inform service to immigrant clients. The core portion of the course will then focus first on the intersection of immigrants and health, mental health, employment, crimes, public entitlements, and public education. The course will conclude with family issues relevant to immigrant families: women, children, lesbian and gay, and elderly immigrants. Public policy issues will be integrated throughout, and the course will end with specific suggestions on systems change at various levels. By the end of the course students should be able to identify strategies for individual clients advocacy (micro); agency and community strategies (mezzo), and government advocacy (macro) to empower immigrant clients to become full community participants.

Spring
1 Course Unit

**SWRK 7650 Supervision and Leadership in Human Services Organizations**

This course builds on social work knowledge, values, and skills gained in foundation practice courses and links them to the roles and functions of social workers as supervisors and managers in human service organizations. Course focus is on providing students with an overview of basic supervisory and human resource development concepts so they may be better prepared as professional social workers to enter agencies and provide direct reports (supervisees) with meaningful and appropriate direction, support, and motivation.

Not Offered Every Year
1 Course Unit

**SWRK 7660 Enhancing Relationships: Interpersonal, Group and Organizational Transformation**

SWRK 766 is for those seeking to increase their interpersonal, group, organizational, leadership and followership skills. It is assumed that participants will have the basics. Therefore the course is designed to uncover, explore and build new ways of understanding. This requires a set of logics that are readily available to us, but are rarely used. In SWRK 766 we will use three ways of thinking: the left-brain, digital, so-called "rational" logic; the right-brain, analogical, paradoxical logic; the links between our emotions and how we individually and collectively think and act. These forms of reasoning will help us recognize when a crisis is a genuine problem, as opposed to a decaying prelude to an emergent transformation. We will study people such as Mother Teresa, Nelson Mandela and Abraham Lincoln, ordinary folk who managed to create relationships at the interpersonal, group and organizational levels that were amazingly transformational. We will examine relationships that need to be reformed. And we will strive to develop enhanced leadership skills that can be applied in all of our endeavors. Members of all Penn graduate programs are welcome. SWRK 766 is designed for those: managing work groups; strengthening new ties with people from different walks of life; facilitating groups in reparative settings; dealing with societal disparities; conducting support groups; leading project groups; chairing committees; functioning as a classroom educator; serving on special task forces; addressing the pernicious societal isms; creating new enterprises; taking up leadership positions; building community resilience; advocating for those located in under-resourced enclaves; celebrating the many successful transformations constantly occurring; bringing latent possibility to life; or engaging in transformation that is sustainable and scalable.

Spring
1 Course Unit

**SWRK 7680 Social Policy Through Literature**

Also Offered As: MSSP 7680
1 Course Unit

**SWRK 7690 Aging: The Intersection of Policy and Practice**

This course examines a variety of social welfare policies that affect the rights and interests of older adults. These include policies related to economic security, health, long term care, and civil rights. In addition, the course reviews the policy-making process with a discussion of the influence of legislative sanctions and case law in establishing aging policy in the U.S. The focus of the course is on critical analysis of the key assumptions driving policy and policy change, e.g. social responsibility vs. individual responsibility. Finally, the course includes a critical examination of the intersection between policy and practice, that is, the influence that policy has on the design of interventions and service delivery practices at the state and local level and the impact of changing policies on communities, providers, and older adults.

Spring
1 Course Unit
SWRK 7720 Postcolonial Social Work Practice: International Social Welfare in India
In this course, students examine the global welfare system and its engagement with severely marginalized communities. This six-week course centers around a 700,000-strong sex workers’ collaborative based in Sonagachi, Kolkata, India, one of Asia’s largest red-light districts. Collaborative engagement with the collective and its grassroots movement is combined with research projects and class discussions (in open classrooms that at times include community members, as well as feminist and queer theory scholars from Indian Universities) in which students engage with texts on HIV, sex work, feminist postcolonial theory and international social work. The class counts for the Human Rights Certificate, as well as macro, direct practice, and NPL electives. As of this year, this course is also part of a campus-wide group of classes that has been put together by faculty involved in #PoliceFreePenn, that thoughtfully and intentionally foregrounds police state abolition. 
Summer Term
1 Course Unit

SWRK 7730 Mental Health Challenges in Childhood and Adolescence
This course will be an opportunity for the student and the instructor to explore the concept “psychopathology” as it has been and is applied to childhood and adolescence. There are some psychopathological challenges that are unique to childhood and some which can manifest themselves throughout childhood into adolescence and adulthood. The social worker/practitioner will encounter a wide range of symptomatic presentations among his/her clients. At this time in the fields of clinical social work, psychology, psychiatry, and psychotherapy there are numerous frameworks available to the practitioner to aid in an understanding of symptoms in children and adolescents. During the next several weeks three conceptual frameworks will be articulated. These three frameworks will elucidate the possible meaning, origin, and/or function of the symptoms and offer to the student a vocabulary with which to engage the situation. At the turn of the 19th century into the 20th century, psychoanalysis emerged in Europe as a method of understanding symptoms from the point of view of internal conflict within the child or adolescent. After World War II in the U.S.A., a model of understanding symptoms from a systemic/cybernetic point of view revolutionized the diagnostic processes involved in working with children and adolescents. Since the late 1980’s, postmodern ideas, primarily from Europe and Australia, have greatly influenced and informed the understanding of psychopathology in children and adolescents. Narrative, social constructivist, and linguistic usage patterns have become a common vocabulary in the discourse on psychopathology. This course is not intended to be a reading of the history of child psychopathology. It is intended to expose the student to the most influential paradigms in the field of child psychopathology.
Fall or Spring
1 Course Unit

SWRK 7740 Program Evaluation
This course introduces students to theoretical and practical aspects of social service program evaluation. Students learn about the design and implementation of all phases of an evaluation, from needs assessment to analysis of findings. Skills such as survey construction and budgeting are introduced. Intensive analysis of existing studies illustrates how evaluations are designed and how findings affect social programs and policy.
Fall or Spring
Prerequisite: SWRK 6150
1 Course Unit

SWRK 7750 Intimate Partner Violence
Intimate partner violence (IPV), defined as physical, sexual or psychological harm imposed by a current or former intimate partner, is a public health problem leading to increased morbidity and mortality worldwide. The purpose of this course is to familiarize students with the definition, theories, dynamics, scope, consequences of, and interventions to prevent and address, violence among intimate partners. Through this course, students will gain insight into the epidemiology of IPV across the life course, including risk and protective factors and examine unique considerations for vulnerable populations. The course will highlight current measurement issues in the field of IPV assessment and address IPV-related policies to address screening, prevention, and response to IPV. Using a social-ecological framework, we will examine the issue of IPV prevention and intervention from the individual, relationship, community, and societal perspectives, and explore approaches to and need for screening, as well as universal, selected, and indicated prevention efforts.

1 Course Unit

SWRK 7770 Cognitive Behavioral Therapy
CBT is offered in both a one-week intensive and semester-long format, with the two formats usually offered in various terms throughout the year. The one-week format requires students to start a pre-course assignment approximately 2 months prior to the first day of the course. Students will receive an information request from the instructor during course registration and must reply in a timely fashion. Cognitive Behavioral Therapy (CBT) is the world’s most effective, empirically-based psychotherapy with strong scientific evidence. CBT is a collaborative and empowering psychotherapy that educates and helps clients to motivate themselves, set goals, develop, and implement treatment plans to reach those goals. This experiential/didactic advanced clinical skills course will present a CBT model to evidence-based practice that can serve as a conceptual framework for clinical applications to a wide variety of presenting problems and populations. The purpose of this course is to introduce graduate students to the theory of CBT and to begin to apply the basic principles through the stages of a self-directed case.

1 Course Unit

SWRK 7780 Dialectical Behavioral Therapy
In this course we will examine the underlying theories, empirical foundations, and fundamental skill sets associated with dialectical behavioral therapy (DBT). Students will be expected to participate in role plays, lead mindfulness exercises, and carry out chain analyses.
Fall or Spring
1 Course Unit
SWRK 7800 Policy and Difference in Postmodernity
Social constructions of "difference" permeate the institutions, spaces, and assumptions of our society. These social constructions include but are not limited to the racialized, gendered, sexed, classed, and dis/abled constructions of the body. By leaning on postmodern thinkers such as Iris Marion Young, Pierre Bourdieu, Judith Butler, Jacques Derrida, Ernesto Laclau, and Michel Foucault, this seminar course will begin by engaging the questions of what is "difference" and how is "difference" discursively constructed and reproduced in society. Using a postmodern lens, the remainder of the course will engage various social science texts that deal with the varieties of "difference" (i.e. race, gender, class, sexuality) and the explicit and/or implicit policy implications of these works. Thus, we will critically engage policies such as welfare, affirmative action, economic policies of taxation, and same-gender marriage, among others. The underlying questions throughout the course will be to what extent does social policy enable the possibilities of freedom, justice, and democracy for the "Other", the deviant, the abject, the marginalized, those of assumed "difference"? And, to what extent does policy constrain those possibilities at the same time? This course does assume familiarity with social theory and is an introduction to postmodern thought on the law, the political, and policy.

1 Course Unit

SWRK 7810 Qualitative Research in Social Work
Qualitative research encompasses a variety of methods that enable the researcher to enter into the "lived experience" of research participants. These methods are particularly sensitive to the voices of populations whose perspectives are silenced by dominant societal discourses. The course begins by giving attention to underlying philosophical issues and traditions of qualitative research and proceeds to examine qualitative research design, methods of data collection, strategies to ensure rigor, data analysis, and presentation of findings. Students will learn about research interviewing, focus groups, and participant observation and ways in which qualitative research can be used to inform and evaluate social work practice and programs. Students will have the opportunity to apply qualitative research methods to in-class activities and individual or group projects.
Fall
Prerequisite: SWRK 6150
1 Course Unit

SWRK 7830 Advanced Mental Health Practice with U.S. Veterans
Although this course is open to all students, it is designed for students in the clinical concentration and is required for students in the Cohen Veterans Network Scholars program. The course will focus on clinical knowledge and evidence-based practice skills for common mental health problems in veteran settings. The course will introduce students to the assessment and treatment of Post-Traumatic Stress Disorder (PTSD), Depression and Anxiety Disorders, Substance Abuse, Military Sexual Trauma (MST) and Suicide Assessment and Management among veteran populations. Other topics may include cultural competency, homelessness, and combat stress disorders. Since this is a seminar course, some classes will be taught by social workers/psychologists from the Veterans Hospital in Philadelphia and the Cohen Veterans Outpatient Clinic.
Fall
1 Course Unit

SWRK 7850 Criminal Justice Policies: Implications for Social Work
The United States prison population has risen more than three hundred percent in the last three decades. More people are currently incarcerated than at any other point in the history of the United States, and that of the world. This unprecedented period of incarceration has gone largely invisible although it represents one of the greatest social epidemics in the history of the United States. This course provides a critical analysis of the criminal justice system in the United States from a historical and contemporary perspective. It examines the implications of significant criminal justice policies such as the Rockefeller Drug Laws, 3-Strike Legislations, and Mandatory Minimums on the current state of incarceration, and the phenomenon of "Reentry" and "Recidivism". The intersections of criminal justice and social work practice are unmistakable when examining staples of social work practice such as homelessness, mental health and substance abuse, thus the course is intended to facilitate a more informed/holistic practice for all social work students.
Spring
1 Course Unit

SWRK 7860 Addressing Trauma in Practice
This course integrates trauma theory and practice and expands practice knowledge to include the treatment and assessment of the survivors of trauma. Emphasis is placed on differentiating PTSD from Complex Trauma in order to identify appropriate, evidence-based intervention strategies. Topics covered in the course include an historical overview of the development of our understanding of trauma and the exploration of various types of trauma including war trauma, domestic violence, childhood sexual and physical abuse, natural disasters, the experiences of political refugees and organizational trauma. Among the interventions covered in this course are CBT, EMDR, group and psychodynamic treatment. Students will consider issues that affect those treating the survivors of trauma, such as vicarious trauma, and will explore approaches to self-care. This is an advanced clinical course. Through assignments and class discussions, students are encouraged to use their experiences in the field to deepen their understanding of the material covered in the course.
Fall or Spring
1 Course Unit

SWRK 7870 Leadership Theory and Practice
This course will present the evolution of leadership theory beginning with classical trait theories and ultimately focusing on more modern perspectives such as adaptive, authentic, and shared leadership models that engage more critical understandings of traditional leadership theory. Ultimately, we frame leadership as socially constructed, collective experience that is generated by complex group dynamics. We will examine leadership in nonprofit organizations, government, and social movements. Readings will include a formal overview of leadership theory as well as contemporary feminist and futurist perspectives. The practice focus is on developing new relational capabilities that include deep listening, self-reflection, and adaptive problem solving. "There is nothing so practical as good theory" – Kurt Lewin, Organizational Psychologist "All models are wrong, but some are useful" – George Box, Statistician "To learn which questions are unanswerable, and not to answer them, this skill is most needful in times of stress and darkness." – Ursula K. Le Guin
Spring
1 Course Unit
SWRK 7880 Harm Reduction on the Borders: Substance Use and HIV Treatment in Puerto Rico
This course examines the U.S.-based substance use and HIV treatment systems, and its engagement with injection drug users in Fajardo, Puerto Rico. It is designed to provide the students with an understanding of the political economy of harm reduction initiatives, and the manner in which it is shaped by the complicated relationship between Puerto Rico and the U.S. Students are expected to gain an understanding of Puerto Rico's welfare environment, the role of social welfare and social work professionals in such a context, and the interweaving of social control and social change embedded in welfare initiatives in "borderlands" such as Fajardo. During the four week course in Fajardo, students will complete a placement in a needle exchange program, and engage with texts on HIV, substance use, postcolonial theory and international social work.
Summer Term
1 Course Unit

SWRK 7910 Internal Family Systems
This course offers in depth study of basic theory, techniques and clinical applications of the Internal Family System's (IFS) model of care. Together we will explore the foundational skills of the model and how to use it to support growth and healing in diverse client population and communities. This highly experiential course will emphasize mastery of the concepts as well as application of these concepts with clients. Students will be prepared to use core aspects of this model with clients in brief and long term treatment, group settings and community interventions. This class will meet virtually 10 times and will have two 5-hour, in-person Saturday class commitments. Please join this class only if you can attend both Saturday classes. In this course students will: 1) Develop an understanding of the concept of multiplicity of mind, interpersonal neurobiology and impact of family systems on individuals; 2) Learn conceptual framework of the IFS model; 3) Use this model to explore aspects of clients and one's own internal family system; 4) Recognizing which parts become triggered when working with different clients; 5) Assess and develop treatment strategies for their clients using the IFS model; and 6) Locate this model within the framework of anti-oppressive social work practices.
Fall
1 Course Unit

SWRK 7920 Psychodynamic Theory
The purpose of this course is to review the evolution of psychodynamic theory and consider key concepts in psychoanalysis, ego psychology, object relations theory, self-psychology, attachment theory, relational and intersubjective theories and current findings in cognitive neuroscience. Participants will explore human psychological functioning as explained by these various psychodynamic theories and through the biopsychosocial lens that informs social work practice. Students will examine how external factors such as race, class, gender, culture and biology are interwoven with often unconscious, internal psychological determinants, creating the complexities of human behavior that challenge us in our clinical work. Case presentations by students, the instructor and guest lecturers will demonstrate how concepts from psychodynamic theory can be applied to social work practice with diverse clients in varied settings.
Spring
1 Course Unit

SWRK 7930 Global Health Policy & Delivery
This participatory, interdisciplinary seminar course examines contemporary issues in global health policy and delivery. Students will develop skills in policy analysis, development of evidence-based policy, and effective delivery of global health interventions. The class will explore the health delivery and policy process using a variety of contemporary global health case studies, which focus on content areas such as maternal health, HIV policy, global child health, family planning and medication access. At the completion of this course, the student will be able to: (1) critically examine key issues in global health policy and delivery; (2) understand how epidemiology and various factors influence the design of evidence-based policy and interventions; (3) analyze frameworks for effective health intervention delivery in low-resource and middle-income countries; (4) develop skills to assess policy and program impact for continuous improvement and best practice dissemination.

SWRK 7940 Practice with Older Adults and Families
This course focuses on practice with older adults and families within a life course and resiliency perspective. It examines the nature of the aging process, needs and life issues, the ways in which persons adapt to changes, and the ways in which interventions may assist with these adaptations. Students learn assessment, case management, and intervention skills, including the use of rapid assessment and diagnostic tools, needed to work effectively with older populations and family caregivers in a variety of community-based and institutional settings. The course emphasizes evidence-based practices that enhance quality of life, dignity, respect for differences, and maximum independent functioning.
Fall
1 Course Unit

SWRK 7960 Family Economic Mobility: Problems and Policies
The experiences and voices of mothers, fathers, children, employers, children's teachers, human service workers, job training providers, policymakers and others in cities across America graphically show us the "real life" challenges to economic mobility facing today's families and organizations. These voices particularly illustrate how economic, social, and cultural policies, practices, and beliefs intersect to perpetuate economic inequality for low-income and many middle-income working families alike. The labor market, welfare and workforce programs, public schools and government are some of the institutions implicated in this intersection. In the course we deconstruct concepts such as the "work ethic," "family-friendly workplace," and "good jobs" in terms of economic, racial and cultural inequalities and, more broadly, in terms of their meaning, aims and rhetoric. At base, this course examines occupational mobility in America within the broad framework of capitalism, democracy, race, ethnicity and gender. Students from GSE, SAS, City Planning, and Communications often join SP2 students to read and critique classic and contemporary literature from multiple disciplines and explore generative roles for "meso-oriented" social change professionals.

1 Course Unit
SWRK 7990 Independent Study
Independent studies provide a flexible opportunity for standing faculty and students to work together in pursuing a topic of special interest that is not sufficiently covered by other courses in the curriculum. The content of independent studies is highly specialized and, as such, requires a plan of study developed jointly by the student(s) and the supervising standing faculty member. Part-time faculty members are not eligible to offer independent studies.
1 Course Unit

SWRK 9010 Proseminar
This course is a weekly, 90-minute (.5 course unit) proseminar. The course contains two main components: a research seminar (i.e., faculty and student presentations of their in-progress research) and skills training (e.g., how to write an abstract, software demonstrations). The two are interwoven throughout the academic year (e.g., 2 weeks of the month devoted to the research seminar and 2 weeks of the month devoted to skills training). The proseminar is required of all students until they successfully defend their dissertation proposal.
Fall or Spring
0.5 Course Units

SWRK 9100 Quantitative Research Methods
The purpose of this course is to teach the basics of practice research, with an emphasis on intervention research. This course will focus on research ethics, building a conceptual framework, source credibility, question and hypothesis formulation, design, sampling, measurement, and scale construction and selection. Special emphasis will be placed on the development of designing feasible and practical research studies to answer questions of importance to social work practice. The course will emphasize the selection and development of outcome measures, intervention manuals, and fidelity measures. It will closely examine the use and development of practice guidelines, evidence-based practice and meta-analytic procedures. Course is restricted to Doctorate in Clinical Social Work (DSW) students.
Fall
1 Course Unit

SWRK 9120 Qualitative Research Methods
This course will cover the essentials of qualitative research. Students will learn how to "situate themselves" in the research process so as to best capture the lived experience of the subjects under investigation. The course will explore the appropriate use of intensive interviews, grounded theory and ethnography. Mixed methods that employ both qualitative and quantitative approaches, will also be covered. Course is restricted to Doctorate in Clinical Social Work (DSW) students.
Spring
Prerequisite: SWRK 9100
1 Course Unit

SWRK 9130 Clinical Theory I
The purpose of this course is to broaden and deepen participants' mastery of several theories of development, personality, and behavior that have contributed to social work's knowledge base across the decades and continue to inform clinical social work epistemology today. Drawing primarily from original sources, we will consider key assumptions, constructs, and propositions of each theory in terms of its congruence with social work's principles, values, and mission and in relation to the profession's person-in-environment perspective. In this first semester, we will study the evolution of theories central to psychodynamic thought, from Freud's early biological model of the mind, through various relational perspectives, to contemporary work in the fields of attachment and interpersonal neurobiology. This examination will constitute a case study of the manner in which theories are socially constructed and will lay the foundation for critical inquiry into the social and political biases inherent in the Western European intellectual tradition from which most theories of human behavior have emerged. Course is restricted to Doctorate in Clinical Social Work (DSW) students.
Fall
1 Course Unit

SWRK 9140 Clinical Theory II
The purpose of Clinical Theory II is two-fold: to broaden and deepen students' mastery of theories of behavior and cognition and to develop understanding of psychotherapy integration. We will begin by establishing a clear rationale for the two-fold nature of the course. Then, we will review the history and fundamentals of behavioral theory, and its iterations, to ground students firmly in a tradition that emphasizes empirical research. Students will have opportunities to expand their knowledge base of these theories through application to clinical practice with case conceptualizations and choice of focus in assignments. This process will involve critically examining the empirical support and indications for the use of various cognitive-behavioral therapy (CBT) approaches, including culturally adapted CBT. We will consider key assumptions, constructs, and propositions of behavioral and cognitive theories from the lens of social work's principles, values, and mission with oppressed and marginalized people. Finally, we will focus on psychotherapy integration approaches which involve the flexible application of various theories and techniques for a diverse range of people and concerns based on the strengths and needs of each client. Course is restricted to Doctorate in Clinical Social Work (DSW) students.
Spring
Prerequisite: SWRK 9130
1 Course Unit

SWRK 9150 Dissertation Seminar
This seminar is designed to prepare participants for dissertation proposal writing and defense. Each component of this workshop moves the student closer to the two culminating assignments: a concisely crafted and well-supported 15-25 page written draft of the dissertation proposal and a presentation of the proposal with accompanying PowerPoint. Course is restricted to Doctorate in Clinical Social Work (DSW) students.
Fall
1 Course Unit
SWRK 9170 Applied Statistics
This course is designed to provide students with a range of statistical methods and applications used for research in human services and clinical practice settings. Topics covered include types of measurement and variables, and basic concepts and techniques for exploring and categorizing data, for generalizing data from sample to population and tests of significance. An emphasis will be placed on the practical applications of data to address social work practice issues. Students will learn how to choose and apply statistical tools to data sources, when and how statistical tools can be used to analyze data, and how to interpret others’ quantitative studies. Students will gain hands-on experience in using windows-based statistical software to manage and analyze quantitative data. Course is restricted to Doctorate in Clinical Social Work (DSW) students.
Fall
1 Course Unit

SWRK 9180 The Trauma Spectrum and Its Treatment: The PRISM Meta-Model
Research findings document that trauma is a ubiquitous human experience with many types and variations. It is often a highly personalized exposure or experience (individual, group, and collective) that has a wide range of psycho-social and neuro-physiological consequences. Both the types of trauma and types of response make up the trauma spectrum. This course will introduce this spectrum and contemporary trauma theory and findings. Due to the large number of traumatized individuals who seek services for current and past symptoms, social workers and other mental health (and medical) professionals can expect to treat a variety of traumatized clients over the course of their careers. Course is restricted to Doctorate in Clinical Social Work (DSW) students.
Fall
1 Course Unit

SWRK 9190 Teaching Social Work
This class will focus on classroom dynamics, class culture and instructor skills using an organismic model in which the class has a life of its own and is capable of growth and development. In addition, students will learn underlying theories, research, practice wisdom, etc. that we need to communicate to our students. The course should be helpful in thinking about issues that are central to effective teaching regardless of the practice models you present to your students or the content of courses including policy, research, etc. Students will have an opportunity to share their current or past teaching with a particular emphasis on those difficult moments when they had second thought about classroom teaching as a career. Examples will be used to help illustrate the theoretical content and the readings and bring the ideas to life as they address the real day-to-day issues we all face in teaching. Course is restricted to Doctorate in Clinical Social Work (DSW) students.
Fall
1 Course Unit

SWRK 9200 Advanced Topics in Social Work Practice
Topics vary. The second and final year of DSW coursework culminates in two electives selected by the student cohort completed as a group. Previous topics include: Neuropsychology of Trauma, Substance Use Interventions, Introduction to Sex Therapy, Clinical Practice with Adolescents and Young Adults, Ethics in Mental Health Care, Trauma Informed Supervision and Leadership for Change. Course is restricted to Doctorate in Clinical Social Work (DSW) students.
Spring
0.25-1 Course Unit

SWRK 9210 Culture, Race, and Identity
White supremacy and institutional racism are deep and pervasive parts of the American experience. They influence the daily experience of Black/African American people and other persons of color. Encounters with institutional oppression based in ideas about race are a defining element of social work practice. Racial profiling, inequity in access to health care, and segregation in housing, education, and work are the realities faced by people of color with whom social workers interact. This course explores the complexities of racism in America: the construction of racial and ethnic categories, the impact of racism and discrimination on identity, individuals and social institutions, and the influence of ideology and oppressive policies and practices on social welfare systems and their clients. The relationship between Blacks/African Americans and Americans of European descent provides a commonly understood history and social experience from which to analyze the experiences of oppression based on ascribed or inherent characteristics. We will discuss the assigned scholarship, and consider the congruence of the policies and practices with the ethics and values of clinical social work, and the social work profession more broadly. Course is restricted to Doctorate in Clinical Social Work (DSW) students.
Spring
0.25-1 Course Unit

SWRK 9220 Family Based Interventions
This course reviews contemporary theories of Couples and Family Therapy within a historical perspective. Family approaches reviewed include systemic, structural, experiential, attachment-based, narrative, and psycho-educational models. Couples models include the Gottman Method, Emotionally-Focused Couples Work, Imago, and Cognitive Behavioral Work. Case studies, films, and critical discussions will be used to deepen students’ understanding of different models. The course will also include an understanding of economic constraints, cultural differences, sexual orientation, and larger systemic influences. Course is restricted to Doctorate in Clinical Social Work (DSW) students.
Spring
1 Course Unit

SWRK 9230 Social Construction and Social Work Practice: Transforming Dialogues
This course will focus on the application of a social constructionist orientation to social work practice with an emphasis on its transforming potential. A primary objective of this course is to encourage you to reflect on and critically analyze traditional and contemporary issues germane to social work by using social constructionist ideas to explore how assumptions and dominant understandings of these issues are connected to policies and practices and the possibilities for transformative change. Course is restricted to Doctorate in Clinical Social Work (DSW) students.

SWRK 9240 Leadership
This course will present the evolution of leadership theory beginning with classical trait theories and ultimately focusing on more modern perspectives such as adaptive, authentic, and shared leadership models that engage more critical understanding of traditional leadership theory. Ultimately, we frame leadership as a social-constructed, collective experience that is generated by complex group dynamics. We will examine leadership in non-profit organizations, government, and social movements. Readings will include a formal overview of leadership theory as well as contemporary feminist and futurist perspectives. The practice focus is on developing new relational capabilities that include deep listening, self-reflection, and adaptive problem interpretation. Course is restricted to Doctorate in Clinical Social Work (DSW) students.
Spring
0.5 Course Units

SWRK 9250 Supervision
Supervision is foundational to social work practice. It is a source of education and support in the profession's practice as well as during the pursuit of the BSW/MSW degree and clinical licensure. While the profession holds up supervision as an essential component of ethical and effective practice, there is little provided by way of training or education of clinical supervision on social work practice. This course will explore the structure, practice and barriers to providing supervision in an agency/organizational setting. The course material explores the changing context of supervision in the social work field, highlights supervision as a means to teach clinical material, support supervisees impacted by organizational dynamics, and spotlight strategies for managing compassion fatigue, secondary trauma, and burnout in the context of social work practice. This course will invite you to think about the role of clinical supervision in your career and your own style and model preference.
Spring
1 Course Unit

SWRK 9900 DSW Dissertation
All students on dissertation status are registered for year-long dissertation status courses. These courses will receive a temporary mark of PR in the fall to indicate the course is in progress and a permanent mark of S (satisfactory progress) or U (unsatisfactory) at the end of the spring semester (or fall semester if that is the student’s last enrolled term). The mark will be a reflection of the evaluation of the student’s progress based, in part, on the student’s Annual Progress Report.

Sociology (SOCI)

SOCI 0001 Poverty and Inequality
What does it mean to live in poverty in the "land of plenty" and experience inequality in the "land of opportunity?" This First-Year Seminar explores these questions and others related to poverty and inequality in contemporary America. The first part of this course focuses on poverty. We will examine topics such as poverty perceptions and measurement, poverty trends, causes of poverty, poverty-related outcomes, and anti-poverty policy. The second part of this course focuses on inequality more broadly. We will examine how inequality is defined and what it looks like in the U.S. We will compare the “Haves” and the "Have Nots" and discuss social class, mobility, wealth, and privilege. Lastly, we will explore how different domains (e.g. education, the labor market, health, the justice system) produce, maintain, and reproduce inequalities. Throughout the semester, we will consider the roles of race/ethnicity, gender, age, and place, and how they help deepen our understanding of poverty and inequality.

1 Course Unit

SOCI 0002 Social Inequality and Health - First Year Seminar
Eat well. Exercise regularly. Get 7-9 hours of sleep. We have all been bombarded with this type of advice for achieving and maintaining optimal health. But how are our health behaviors and outcomes shaped, influenced, and constrained by social factors? How does where we live influence how— and how long— we live? And how do racism, gender inequality, and other forms of social exclusion, oppression, and domination impact health and well-being? This course provides an introduction into how social forces, broadly, and social inequality, specifically, impact individual and population health. We will begin by learning about how health is more than the product of individual lifestyle choices and genetic factors by exploring the social determinants of health. We will then examine how social inequality— particularly along lines of race, immigration status, social class, and gender— contributes to population health differences. We will analyze how racism, gender inequality, and other forms of social stratification both shape access to health promoting resources and opportunities such as well-paying jobs and healthy and affordable foods and also pattern exposure to harmful stressors and toxins such as discrimination and violence. Finally, we will discuss and debate policy and programmatic approaches aimed at reducing population health disparities. In this course, we will examine concepts related social inequality and health through a process called “active learning,” which involves activities such as watching and reacting to films, reading about and responding to current events, and active dialogue and debate with classmates.
Fall or Spring
1 Course Unit
SOCI 0003 Sociology of Race and Ethnicity
This course will provide a foundation on the sociological perspectives of race and ethnicity in the United States. It begins by developing a working definition of race and ethnicity and examining racial categorization in the U.S. The first part of the course examines major themes including racial and ethnic identity, assimilation of immigrants, immigrants’ legal status, forms of racism and bias, white privilege, and intersectionality. The second part of the class focuses on race and social stratification, examining discrimination, wealth inequality, residential segregation, educational stratification, mass incarceration, and health. We will also discuss why COVID-19 has disproportionately affected minority communities, the Black Lives Matter movement, and the future of racial stratification. Students will examine policies that have perpetuated racial and ethnic inequality as well as those that attempt to ameliorate it.
Fall or Spring
1 Course Unit

SOCI 0004 The Law in our Lives
This seminar will provide students with the opportunity to engage in a discussion of the rule of law and how to make sense of it in their daily lives in light of the various theoretical perspectives and doctrines of law. Frequently, law is viewed exclusively to be what lawyers and judges do and what law students study, but its enduring presence in our lives is often not thought about. The very building in which a student is taking a class is governed by legal codes. If a student stopped at the library to copy some research material, copyright laws are involved. If a student made a purchase prior to class, liability laws and contract laws are involved, and so forth. The interaction of the individual with the rule of law is not limited to domestic and national laws, it also extends to international law. In analyzing the individual’s interaction with the rule of law, this seminar will introduce students to the classical and contemporary perspectives of law and society. Students will then apply the concepts, theories and doctrines of law that they have learned to the various daily domestic and international interactions they have with the rule of law in all aspects of their social, economic and political lives.
Fall or Spring
1 Course Unit

SOCI 0005 Sociology of Education First-Year Seminar
Schools play an important role in social life, and educational institutions are crucial in the creation of the social stratification system. Generally, schools reflect social inequalities, but, in some cases, schools also provide a pathway for upward mobility for a select few. In this course, we will examine important debates in sociology of education including the contributions of different types of schools (e.g., public schools, charter schools, and private schools). We will briefly examine disparities in funding, and the remarkable turnover in staffing as teachers flee the profession. Teachers are not neutral actors – and we will look at the research showing how teachers more harshly discipline African American children (especially boys) compared to white children, as well as how middle class children gain crucial advantages in educational settings. Course requirements include a midterm, final, and a research paper (i.e., five to seven pages) on a unique topic of interest.
Fall or Spring
1 Course Unit

SOCI 0006 Anxious Times: Social Change and Fear
Anxiety disorders are among the most common psychiatric disorders in the US. Although over the last 150 years many have proclaimed to be entering an abrupt new age of anxiety, the prevalence of anxiety appears to have been increasing steadily over time. Anxiety is also treated more frequently by physicians, suggesting it is taken more seriously as an illness. This class will explore the rise of anxiety as the signature 21st century disorder. We will focus on how scientists have understood anxiety; its place relative to other psychiatric symptoms and disorders, such as depression; and what social factors have increased its prevalence. Along the way we will discuss the evolutionary dimensions of anxiety, as well as public beliefs about anxiety and its cultural significance.
Fall or Spring
1 Course Unit

SOCI 0007 The Future of Work - First Year Seminar
This course draws on sociological research and other perspectives from the social sciences to conceptualize the complex and dynamic relationship between work and technology, in order to shed light on the future of work. Rather than viewing technology as an immutable force that sweeps across societies and leaves social change in its wake, we will examine how the design, implementation, and outcomes of technological change are imbricated in political, economic, and social forces. Using this perspective, we will interrogate distinctions between analytic categories that we often take for granted, such as the “old” and “new” economies, and the “local” and the “global.”
Fall or Spring
1 Course Unit

SOCI 0008 Work and Careers in the 21st Century - First Year Seminar
The premise of the class is that the workplace is undergoing major transformations that may well generate jobs, careers and organizations quite different from those currently in place. Many interrelated changes are underway, including: globalization, the information and internet revolutions, the diffusion of monitoring and evaluation systems, the mechanization and automation of many jobs and industries, the prospect of working remotely and the growing diversity of the labor force. These changes can be best understood by studying contemporary developments along with placing these changes in an historical perspective. By examining how the theory and practice of work have evolved over the last century and a half, we will be in a better position to understand the changes already in progress and those that may transform work and the workplace over the course of your careers.
Fall or Spring
1 Course Unit
SOCI 0009 Diversity, Technology and the Penn Experience
Penn is diverse in many ways. Let us explore this diversity together and understand its subtleties. How has the word “diversity” evolved over the years? Why is it (at times) such a loaded concept? When, where and how does diversity change within various contexts? What does the concept mean in a university context? How might it change in the future? We will explore different constructions of diversity at Penn. Have new technologies changed the ways in which we perceive culture, communicate and share ideas? Increasingly, we construct notions of ourselves and of others using video and social media in addition to personal experiences. How do such technologies define who we are, and the boundaries we draw to define “us” and “them”? Do sub-cultures thrive now in new ways? How does each student’s journey to Penn bring in new perspectives on the university? Reflections on personal experiences in the context of theories (cultural capital, social capital) will be a core part of this seminar. Readings and research assignments are interdisciplinary and will require critical analysis of both classic and contemporary perspectives. In addition to other assignments, small weekly response papers are due before each class meeting to encourage engaged discussions.

1 Course Unit

SOCI 0010 Modern Families: Society and the Changing American Family
The purpose of this course is to understand the American family as a contemporary social institution. We begin by asking how families define themselves. Who counts as a family member, who decides, and how has the definition of family changed over time? We then uncover the work that families do to sustain themselves. How do families negotiate and carry out time-intensive activities like paid work, childrearing, caregiving, housework, emotional labor, self-care, and community involvement? We explore how social institutions like employers, schools, and government challenge or enable families to succeed in this work. Finally, we focus on inequalities between families. How do families absorb the gendered, racialized, and socioeconomic inequalities that permeate American society, and how do they push back?

1 Course Unit

SOCI 0100 Sociology of the Black Community
This course explores a broad set of issues defining important aspects of the Black/African American experience. In addition to the “usual suspects” (e.g., race, socioeconomic status, poverty, gender, and group culture), we also think about matters of health and well-being, the family, education, and identity in Black/African American communities. Our goal is to gain a deeper sociological understanding and appreciation of the diverse and ever-changing life experiences of Blacks/African Americans.

Spring
Also Offered As: AFRC 0008
1 Course Unit

SOCI 0270 The Immigrant City
This course focuses on immigrant communities in United States cities and suburbs. We survey migration and community experiences among a broad range of ethnic groups in different city and suburban neighborhoods. Class readings, discussions, and visits to Philadelphia neighborhoods explore themes including labor markets, commerce, housing, civil society, racial and ethnic relations, integration, refugee resettlement, and local, state, and national immigration policies. The class introduces students to a variety of social science approaches to studying social groups and neighborhoods, including readings in sociology, geography, anthropology, social history, and political science. Ultimately, the class aims to help students develop: 1) a broad knowledge of immigration and its impacts on U.S. cities and regions; 2) a comparative understanding of diverse migrant and receiving communities; and 3) familiarity with policies and institutions that seek to influence immigration and immigrant communities.

SOCI 1000 Introduction to Sociology
Sociology provides a unique way to look at human behavior and social interaction. Sociology is the systematic study of the groups and societies in which people live. In this introductory course, we analyze how social structures and cultures are created, maintained, and changed, and how they affect the lives of individuals. We will consider what theory and research can tell us about our social world.

Fall or Spring
Also Offered As: AFRC 1000
1 Course Unit

SOCI 1010 The Family
Family life is deeply personal but at the same time is dramatically impacted by social forces outside of the family. In this course we will examine how families are organized along the lines of gender, sexuality, social class, and race and how these affect family life. We will consider how family life is continually changing while at the same time traditional gender roles persist. For example, how "greedy" workplaces, which require long work hours, create work-family conflicts for mothers and fathers. We will also examine diverse family forms including single-parent families, blended families, families headed by same-gender parents, and families headed by gender non-conforming parents. The lectures will also examine how economic inequality shapes family life. Students will have the opportunity to apply key concepts to daily life.

Fall or Spring
Also Offered As: GSWS 1011
1 Course Unit

SOCI 1020 American Society
What is American Society? The literary critic Leslie Fielder once wrote: "...to be an American...is precisely to imagine a destiny rather than to inherit one; since we have always been, insofar as we are Americans at all, inhabitants of myth rather than history..." In this course we will explore the elements of the myth that form the basis of the civil religion as well as the facts on the ground that contradict our conceptions of American Society. Examples of mythic elements and their contradiction that we will explore are: A nation founded to pursue liberty and freedom yet allowed slavery, equality of opportunity and persistent structural inequality, and a welcoming of the Immigrant coupled with a suspicion of the outsider.

Fall or Spring
1 Course Unit
SOCI 1030 Deviance and Social Control
A sociological analysis of the origins, development, and reactions surrounding deviance in contemporary society. Topics include labeling theory, stigma, social organization, tradition, social power, crime, sexual deviance, drug use, and racism. Theoretical and methodological issues will be discussed and evaluated.
Fall or Spring
1 Course Unit

SOCI 1040 Population and Society
The course serves as an introduction to the study of population and demography, including issues pertaining to fertility, mortality, migration, and family formation and structure. Within these broad areas we consider the social, economic, and political implications of current trends, including: population explosion, baby bust, the impact of international migration on receiving societies, population aging, racial classification, growing diversity in household composition and family structure, population and environmental degradation, and the link between population and development/poverty.
Fall or Spring
Also Offered As: GSWS 1042
1 Course Unit

SOCI 1050 Social Stratification
In this course we study the current levels and historical trends of inequality in the United States especially in cross-national comparative perspective. We discuss causes and consequences of inequality as well as various policy efforts to deal with inequality. Topics include intergenerational social mobility, income inequality, education, gender, race and ethnicity among others.
Not Offered Every Year
1 Course Unit

SOCI 1051 Class Matters: Poverty, Prosperity, and the American Dream
Despite the United States being “the land of opportunity,” economic inequality is at an all-time high. The gap between the poorest and richest Americans continues to widen. Intergenerational social mobility continues to decline, and the “American Dream” of economic prosperity is becoming increasingly difficult to attain. So, who is rich and who is poor? How are income and wealth distributed in America? What are the causes and implications of this distribution? In this course, we will answer these questions from a sociological perspective. In the process, students will gain a fuller understanding of social class and how it relates to various domains such as family life, housing, education, employment, healthcare, and the legal system.
Not Offered Every Year
1 Course Unit

SOCI 1060 Race and Ethnic Relations
The course will focus on race and ethnicity in the United States. We begin with a brief history of racial categorization and immigration to the U.S. The course continues by examining a number of topics including racial and ethnic identity, interracial and interethnic friendships and marriage, racial attitudes, mass media images, residential segregation, educational stratification, and labor market outcomes. The course will include discussions of African Americans, Whites, Hispanics, Asian Americans and multiracials.
Fall or Spring
Also Offered As: AFRC 1060, ASAM 1510, LALS 1060, URBS 1060
1 Course Unit

SOCI 1070 Media and Popular Culture
This course relies on a variety of sociological perspectives to examine the role of media and popular culture in society, with a particular emphasis on the power of the mass media industry, the relationship between cultural consumption and status, and the social organization of leisure activities from sports to shopping.
Fall or Spring
Also Offered As: URBS 1170
1 Course Unit

SOCI 1090 Urban Sociology
This course is a comprehensive introduction to the sociological study of urban areas. This includes more general topics as the rise of cities and theories urbanism, as well as more specific areas of inquiry, including American urbanism, segregation, urban poverty, suburbanization and sprawl, neighborhoods and crime, and immigrant ghettos. The course will also devote significant attention to globalization and the process of urbanization in less developed counties.
Not Offered Every Year
Also Offered As: AFRC 1090, LALS 1090, URBS 1090
1 Course Unit

SOCI 1100 Sociology of Gender
Gender is an organizing principle of society, shaping social structures, cultural understandings, processes of interaction, and identities in ways that have profound consequences. It affects every aspect of people's lives, from their intimate relationships to their participation in work, family, government, and other social institutions and their place in the stratification system. Yet gender is such a taken for granted basis for differences among people that it can be hard to see the underlying social structures and cultural forces that reinforce or weaken the social boundaries that define gender. Differences in behavior, power, and experience are often seen as the result of biological imperatives or of individual choice. A sociological view of gender, in contrast, emphasizes how gender is socially constructed and how structural constraints limit choice. This course examines how differences based on gender are created and sustained, with particular attention to how other important bases of personal identity and social inequality—race and class—intersect with patterns of gender relations. We will also seek to understand how social change happens and how gender inequality might be reduced.
Fall or Spring
Also Offered As: GSWS 1101
1 Course Unit

SOCI 1110 Medical Sociology
This course will give the student an introduction to the sociological study of medicine. Medical sociology is a broad field, covering topics as diverse as the institution and profession of medicine, the practice of medical care, and the social factors that contribute to sickness and well-being. Although we will not explore everything, we will attempt to cover as much of the field as possible through four thematic units: (1) the organization and development of the profession of medicine, (2) the delivery of healthcare, especially doctor-patient interaction, (3) the social and cultural factors that affect how illness is defined, and (4) the social causes of illness. The class will emphasize empirical research especially but not only quantitative research.
Also Offered As: HSOC 1222
1 Course Unit
SOCI 1111 Mental Illness
This course is designed to give a general overview of how sociologists study mental illness. We will be concerned with describing the contributions of sociological research and exploring how these contributions differ from those of psychology, psychiatry, and social work. This overview will be done in three parts: we will discuss (i) what “mental illness” is, (ii) precisely how many Americans are mentally ill, (iii) how social factors (e.g., race, gender, class) and social arrangements (e.g., social networks) lead to mental illness, and (iv) how we as a society respond to and treat the mentally ill. Throughout the course, we will be concerned with uncovering the assumptions behind different definitions of mental health and exploring their political, social, and legal implications.
Fall or Spring
Also Offered As: HSOC 1312
1 Course Unit

SOCI 1120 Law and Society
After introducing students to the major theoretical concepts concerning law and society, significant controversial societal issues that deal with law and the legal systems both domestically and internationally will be examined. Class discussions will focus on issues involving civil liberties, the organization of courts, legislatures, the legal profession and administrative agencies. Although the focus will be on law in the United States, law and society in other countries of Africa, Asia, Europe and Latin America will be covered in a comparative context. Readings included research reports, statutes and cases.
Fall or Spring
Also Offered As: AFRC 1123
1 Course Unit

SOCI 1130 Discrimination: Sexual and Racial Conflict
This course is concerned with the structure, the causes and correlates, and the government policies to alleviate discrimination by race and gender in the United States. The central focus of the course is on employment differences by race and gender and the extent to which they arise from labor market discrimination versus other causes, although racial discrimination in housing is also considered. After a comprehensive overview of the structures of labor and housing markets and of nondiscriminatory reasons (that is, the cumulative effects of past discrimination and/or experiences) for the existence of group differentials in employment, wages and residential locations, various theories of the sources of current discrimination are reviewed and evaluated. Actual government policies and alternatives policies are evaluated in light of both the empirical evidence on group differences and the alternative theories of discrimination.
Not Offered Every Year
Also Offered As: AFRC 1131, GSWS 1130
1 Course Unit

SOCI 1140 Asian Americans In Contemporary Society
This course will explore Asian America through sociological frameworks and research. At the outset, we will establish a strong theoretical foundation by studying key sociological theories related to race and ethnicity, assimilation, and racial stratification. Additionally, we will briefly review key turning points in Asian American history. Throughout the semester, we will explore a broad range of contemporary topics, such as racial and ethnic identities (including multiracial identities); racialized desire and interracial relationships; controlling media images and subversive representations; transracial adoption; affirmative action; anti-Asian racism; and the role of the “model minority” myth in contemporary U.S. politics. Above all, this class will critically evaluate the viability of an Asian American panethnic identity while also exploring important axes of heterogeneity (e.g., class, gender, and sexuality) within the broader Asian American category.
Not Offered Every Year
Also Offered As: ASAM 1500
1 Course Unit

SOCI 1150 Fair Housing, Segregation and the Law
This course introduces students to the variegated roles of housing in society and has three broad aims. First, the roles of housing as shelter, locus of community, financial asset, and determinant of political power will be described and explored in detail. Second, the way the different functions of housing serve to create and reinforce social stratification is explored. Finally, the function and role of public policy in housing will also be examined.
Spring
Also Offered As: URBS 1155

SOCI 2000 Sociological Research Methods
One of the defining characteristics of all the social sciences, including sociology, is a commitment to empirical research as the basis for knowledge. This course is designed to provide you with a basic understanding of research in the social sciences and to enable you to think like a social scientist. Through this course students will learn both the logic of sociological inquiry and the nuts and bolts of doing empirical research. We will focus on such issues as the relationship between theory and research, the logic of research design, issues of conceptualization and measurement, basic methods of data collection, and what social scientists do with data once they have collected them. By the end of the course, students will have completed sociological research projects utilizing different empirical methods, be able to evaluate the strengths and weaknesses of various research strategies, and read (with understanding) published accounts of social science research.
Fall or Spring
Also Offered As: HSOC 2002
1 Course Unit
SOCI 2010 Social Statistics
This course offers a basic introduction to the application/interpretation of statistical analysis in sociology. Upon completion, you should be familiar with a variety of basic statistical techniques that allow examination of interesting social questions. We begin by learning to describe the characteristics of groups, followed by a discussion of how to examine and generalize about relationships between the characteristics of groups. Emphasis is placed on the understanding/interpretation of statistics used to describe and make generalizations about group characteristics. In addition to hand calculations, you will also become familiar with using PCs to run statistical tests.
Fall or Spring
Also Offered As: AFRC 2010
1 Course Unit

SOCI 2020 Social Statistics
This course is designed to introduce students to the quantitative study of factors that influence the health of populations. Topics to be addressed include methods for characterizing levels of health in populations, comparative and historical perspectives on population health, health disparities, health policy issues and the effectiveness of interventions for enhancing the health of populations. These topics will be addressed both for developed and developing world populations. The course will focus on specific areas of health and some of the major issues and conclusions pertaining to those domains. Areas singled out for attention include chronic diseases and their major risk factors, such as smoking, physical activity, dietary factors and obesity. Throughout the course, the focus will be on determining the quality of evidence for health policy and understanding the manner in which it was generated.
Fall or Spring
Also Offered As: HSOC 2202
1 Course Unit

SOCI 2200 Religion
How do the many religious institutions in our society differ, and what common qualities do they share? Why do some religious institutions adapt to modernity while others do not? In particular, why are the politics of sex and gender so fundamental to the current organization of the American religious landscape? These questions will be the central motivating questions for the semester. The course will begin with an introduction to current theories in the sociology of religion. We will then apply and critique those theories as we learn more about the histories, members, practices and beliefs of all the major religious groups in the US today, including Mainline, Fundamentalist and Evangelical Protestantism, Roman Catholicism, Judaism, and other groups such as the Seventh Day Adventists, Jehovah’s Witnesses and Mormons. Students will pick two religious groups (one liberal and one conservative) to observe over the course of the semester and will write papers comparing and contrasting the two groups.
Not Offered Every Year
Mutually Exclusive: SOCI 5200
1 Course Unit

SOCI 2210 Race and the Media
This course considers the theory and practice of minority representation in the public domain: film, theater, television, music, advertising and museums. How has “minority” been defined - who is included and why? How have notions of “minority” status been constructed in our public languages and what may be the impact of those images on both minority and non-minority populations? Our focus will be on representation and how it may work to marginalize or empower members of minority populations. While we will concentrate primarily on ethnic minorities, we will also consider how these same issues might affect sexual minorities. Our discussions will be supplemented by film and video examples. While the course will be theoretically situated in communication, it will consider how the perspectives of anthropology, feminism, and literary and ethnic studies have affected our understanding of public representations.
Not Offered Every Year
Also Offered As: AFRC 2210

Also Offered As: HSOC 2202
1 Course Unit

SOCI 2240 Law and Social Change
Beginning with discussion of various perspectives on social change and law, this course then examines in detail the interdependent relationship between changes in legal and societal institutions. Emphasis will be placed on (1) how and when law can be an instrument for social change, and (2) how and when social change can cause legal change. In the assessment of this relationship, emphasis will be on the laws of the United States. However, laws of other countries and international law relevant to civil liberties, economic, social and political progress will be studied. Throughout the course, discussions will include legal controversies relevant to social change such as issues of race, gender and the law. Other issues relevant to State-Building and development will discussed. A comparative framework will be used in the analysis of this interdependent relationship between law and social change.
Fall or Spring
Also Offered As: AFRC 2240

SOCI 2250 Work in a Changing World - The Sociology of Work
The material world is shaped and maintained through work, but so is the social world. How work is organized, allocated, and rewarded determines the opportunities people have for developing their own capacities, the kinds of ties they will have with others, and how much control they will have over their own lives. We will consider various sociological perspectives on work and compare alternative ways of organizing work, with a focus on the contemporary United States.
Not Offered Every Year
1 Course Unit
SOCI 2260 The Future of Work
This course draws on sociological and social scientific research and theorizing to conceptualize the complex and dynamic relationship between work and technology. Rather than viewing technology as an immutable force that sweeps across societies and leaves social change in its wake, we will examine how the design, implementation, and outcomes of technological change are imbricated in political, economic, and social forces. We will mostly, though not exclusively, focus on developments in and case studies of work and technology in the United States. We will begin by examining theoretical perspectives on the historical interplay between work and technology. Then, we will consider contemporary issues, building dialogues between our theoretical groundwork and empirical evidence to trace continuities and disjunctures. By the end of the course, you will be equipped to interrogate the role of technology in capitalism's past, understand its relation to our present age of digital disruption, and imagine the possibilities for our uncertain future.
1 Course Unit

SOCI 2270 Families and Capitalism
Despite highly romanticized and idealized views about family life, families play a crucial role in sustaining and organizing capitalist societies and inequalities by race, gender, and class. This course reviews classic and contemporary social theory to understand how family norms and behaviors shape and are shaped by political and economic structures. Students will learn about capitalism, racism, heteronormativity, and patriarchy, and engage with questions that connect these to family norms and behaviors. This includes questions like: why has gay marriage been outlawed until recently? Why were slaves denied marriage and family life? Why is caring for others disproportionately done by women and often unpaid? Why is poverty related to unstable family lives? Through engaging with this class material students will learn how to sociologically and critically rethink current family issues and the future of family life. Class structure and goals: This class requires carefully reading social theory texts (many of these texts might be dense, we will learn how to read them efficiently) and active participation in class discussion. Students will prepare short presentations, discussion questions, and write a research paper analyzing one policy related to family life (analyzing its politics and its relation to the social structures covered in class).
1 Course Unit

SOCI 2280 Sociology of Education
Schools play a crucial role in shaping inequality. In the United States, every child is told that anyone can grow up to become President. Yet, accidents of birth matter as children born to working-class families often have vastly different educational experiences than do the children born to upper-middle-class families. This course will provide an overview of educational institutions and the experiences of children within them. We will learn about social class and race differences in children’s experiences before school, during elementary school and secondary school, and in college. For example, racial inequality increases the more years children spend in school. There are also dramatic differences in the character of school experiences for children from different racial and ethnic groups. Learning about schools also helps us understand other social institutions including inequality in neighborhoods, family life, government policies, and the labor market.
1 Course Unit

SOCI 2281 Demography of Education
The proposed course will be open to undergraduate and graduate students with different assignments to each of undergraduate and graduate students. The major topic of the course is the impacts of education, especially college education, on various kinds of family behavior such as dating, cohabitation, living arrangements, marriage, fertility, parenting, divorce, and remarriage. In many countries, some family behaviors, if not all, are increasingly differentiated between college-educated and non-college-educated. For instance, increase in divorce is more evident among the less educated than their more educated counterparts, while marriage decline is more substantial among the less educated. Although parents' time and money investments in children's education have generally increased over time for both college-educated and non-college-educated parents, the increase is much more substantial among college-educated parents than their non-college-educated counterparts, leading to divergence. In such societies, college education has increasingly differentiated population with respect to family behavior, which has important implications for inequality of children's well-being. Of course, such diverging family behavior is not observed every society. In some countries, educational differentiation in family behavior is minimal. In this course, students first will be able to have a global perspective on education and family behavior by reviewing empirical evidence of the relationship between education and various kinds of family behavior across a variety of countries. After learning how different measurements and methods are used to identify the relationship between education and family behavior, students will be able to evaluate how empirical evidence is robust. Second, students will learn about different theories that explain why education has specific relationships with family behavior. Finally, students will have an opportunity to conduct their own research (in the format of either an empirical or a review paper) by choosing a specific context where they will first document the relationship between education and family behavior and apply theories to explain the relationship with explicit consideration of specific contextual factors.
Fall or Spring
Mutually Exclusive: SOCI 5970
1 Course Unit

SOCI 2290 Advanced Topics in Family Sociology
This course will focus on the intersection of family life and inequality. The course will cover theories and empirical research examining the ways in which the political economy of family life is implicated in sustaining and organizing inequalities by class, gender, sexuality, and race.
Fall or Spring
Mutually Exclusive: SOCI 5240
1 Course Unit

SOCI 2300 Environmental Sociology
This seminar will explore how sociologists and adjacent social scientists have investigated the intersections of the environment with inequalities of wealth and power, with a focus on a broad "climate change and society" field. The seminar will cover a) recent efforts to reframe the history of capitalism as the history of a socio-environmental system (and overlaps between that agenda and the "racial capitalism" framework); b) the genesis of US-based environmental justice scholarship; c) the global sociology of carbon emissions and international environmental movements; and, d) new trends in "climate change and society" studies.
1 Course Unit
SOCI 2310 Anxious Times: Social Change and Fear
This class will discuss the meaning, significance, and causes of anxiety. What is anxiety? How is anxiety different from depression, another common form of psychological distress? What does it mean to say we’re in an “age of anxiety”? And are we now, in fact, in one? Although this class is rooted in the sociological study of anxiety, we will also approach the topic from the standpoint of other disciplines, including psychology, psychiatry, history, and biology. We will discuss the development of anxiety as a concept; trends in anxiety over time and between cohorts; biological and social scientific research on anxiety’s causes; the cognitive dimensions of anxiety; and how anxiety is treated in medical settings. Some specific topics include the significance of status anxiety in the 21st century, social comparison processes, relationships, family, and attachment styles, and how social media has undermined mental health.
1 Course Unit

SOCI 2410 Metropolitan Growth and Poverty
This course analyzes the role of metropolitan regions in the U.S. and global economies, including the sources of metropolitan productivity, the ways that metropolitan structures affect residents, and analyses of public policy in metropolitan areas. The economic, political, and social forces that have shaped World War II urban and regional development are explored, including technology, demography, and government. Special attention is paid to how metropolitan change affects residents by income and race. Topics include: gentrification, schools, suburbanization, sprawl, metropolitan fragmentation, concentration of poverty, race, and various economic revitalization initiatives.
Fall or Spring
Also Offered As: URBS 2410
1 Course Unit

SOCI 2420 Social Problems and Public Policy
This course approaches some of today’s important social and political issues from a sociological vantage point. The course begins by asking where social problems come from. The main sociological perspectives of Marx, Weber and Durkheim are developed in connection with the issues of inequality, social conflict and community. We then turn to the social construction of social problems by examining how various issues become defined as social problems. This involves a consideration of the role of the media, social experts and social movements. The last section of the course considers how social problems are addressed. Here we discuss the relative strengths and weaknesses of government programs and regulations versus market-based approached. We also discuss the role of philanthropy and volunteerism. Finally, we consider the risk of unanticipated consequences of reforms. Along the way, we will consider a variety of social issues and social problems, including poverty, immigration, crime, global warming, and education.
Not Offered Every Year
1 Course Unit

SOCI 2430 Race, Science & Justice
What is the role of the life and social sciences in shaping our understanding of race? How has racial stratification influenced scientists and how have scientists constructed racial difference and helped to maintain or contest racial inequities? How have these racial theories shaped the production of scientific knowledge and the way we think about human bodies, diversity, and commonality—and what are the consequences for justice in our society? This course draws on an interdisciplinary body of biological and social scientific literature to explore critically the connections between race, science, and justice in the United States, including scientific theories of racial inequality, from the eighteenth century to the genomic age. After investigating varying concepts of race, as well as their uses in eugenics, criminology, anthropology, sociology, neuroscience, medicine, and public health, we will focus on the recent expansion of genomic research and technologies that treat race as a biological category that can be identified at the molecular level, including race-specific pharmaceuticals, commercial ancestry testing, and racial profiling with DNA forensics. We will discuss the significance of scientific investigations of racial difference for advancing racial justice in the United States.
Fall or Spring
Also Offered As: AFRC 2430
1 Course Unit

SOCI 2450 Poverty, Race and Health
This course is designed to introduce students to current literature on race/ethnic difference in health and mortality in the United States, covering such topics as explanations for why some race/ethnic groups fare better than others, how inner city poverty and residential segregation may contribute to racial/ethnic differences in health outcomes, and health of immigrants versus native-born populations. Current policy debated and recent policy developments related to health are also briefly discussed. The course is organized as a seminar with a combination of lectures and class discussions.

Also Offered As: URBS 2450
1 Course Unit
SOCI 2460 Social Inequality and Health
Eat well. Exercise regularly. Get 7-9 hours of sleep. We have all been bombarded with this type of advice for achieving and maintaining optimal health. But how are our health behaviors and outcomes shaped, influenced, and constrained by social factors? How does where we live influence how - and how long - we live? And how do racism, gender inequality, and other forms of social exclusion, oppression, and domination impact health and well-being? This course provides an introduction into how social forces, broadly, and social inequality, specifically, impact individual and population health. We will begin by learning about how health is more than the product of individual lifestyle choices and genetic factors by exploring the social determinants of health. We will then examine how social inequality - particularly along lines of race, immigration status, social class, and gender - contributes to population health differences. We will analyze how racism, gender inequality, and other forms of social stratification both shape access to health promoting resources and opportunities such as well-paying jobs and healthy and affordable foods and also pattern exposure to harmful stressors and toxins such as discrimination and violence. Finally, we will discuss and debate policy and programmatic approaches aimed at reducing population health disparities. In this course, we will examine concepts related to social inequality and health through a process called "active learning," which involves activities such as watching and reacting to films, reading about and responding to current events, and active dialogues and debates with classmates.
1 Course Unit

SOCI 2470 Outsider Within: Unpacking Intersectionality in Everyday Life
Who belongs within the fabric of American society? Put another way, who is protected by social and political structures and institutions and who is targeted? In what ways do social categories such as race, class, and gender render or reduce equal access to socio-political structures and institutions? Black feminist scholars have uncovered the ways in which social categories such as race and gender augment one’s social standing in American society, including the provision of equality, opportunity, and outcomes. Legal scholar Kimberle Crenshaw coined the term “intersectionality” to describe the interlocking oppressions that black women uniquely faced as occupants of two social identity categories: “black” and “woman”, not one or the other. Since then, critical scholars have greatly expanded the concept to include non-black women and other groups. Further, there has been a call to examine marginalized social groups beyond their oppressed status, but as agents of change. In this course, we will develop theoretical and practical knowledge of intersectionality in contemporary American society that goes beyond the original formulation of the theory. This is a critical speaking seminar with a focus on improving and evaluating oral communication skills. We will discuss the theoretical tenets of intersectionality and its uses for analyzing pressing social problems. Each week, we will analyze a contemporary sociological issue, drawing from popular culture, visual mediums, multi-media, and new media to understand and apply intersectionality theory. There will be written and spoken communication assignments due weekly. In addition to in-class assignments, our work will culminate in two major oral communication projects: an individual and group oral communication project, both with a multitude of creative possibilities. Come prepared to engage yourself as an orator, collaborator, and sociological thinker.
1 Course Unit

SOCI 2480 Economic Inequality, Advantage and the Rich
This class explores key issues of inequality from the perspective of advantage. While social scientists studying inequality have more traditionally focused on poverty and disadvantage, we will read and discuss issues of capital, riches, and economic advantage, paying attention to intersections of economic advantage and riches with gender, ‘race’ and class. We will address inequalities in the labour as well as capital markets, debate how we can conceptualise and measure those who are ‘rich’, and look at the relationship between riches, whiteness, masculininity and privilege. Students are encouraged to bring their ideas of riches and advantage to class.

SOCI 2490 Work, Love, and Independence: Coming of Age in East Asia
How do millennials in East Asia make transition to adulthood? What does it mean to become an adult in East Asia? Under the contexts of rapid educational expansion, growing economic inequality, and shifting cultural norms, Chinese, Japanese, Korean, and Taiwanese young people are facing various challenges in coming of age. The dim outlook for landing a full-time, stable, and good job, for instance, had led many Korean millennials to ‘give up’ dating, marriage, and parenting, considered as major milestones of adulthood. More and more young millennials delay departure from their parental home. At the same time, East Asian millennials are highly educated, tech-savvy, and culturally diverse, distinguishing themselves from older generations. This course first offers an overall view of changing patterns and timing of transition to adulthood in East Asia (particularly compared to experiences of young adults in the United States and Europe). In the class, students will be able to identify demographic, cultural and economic factors that shape specific pathways to adulthood in East Asia. The course highlights diversity and heterogeneity in stories of coming of age among East Asian millennials from different socioeconomic, cultural, and demographic backgrounds. Diverse narratives and perceptions of adulthood in East Asia are discussed.
1 Course Unit

SOCI 2600 Global Health
Combining lectures, discussions and documentaries, the course will help students develop a sociological perspective on global public health (GPH). This will include exploring the relationship between the discipline of sociology and field of public health; difference between sociology in and sociology of global public health; sociological critique of public health interventions and finally, proposing socio-medical model to the understanding global public health movement. It will also familiarize students with the key global public health concepts, patterns and trends of global burden of disease, central actors in global health, and policy interventions and implementation. Of particular importance are health-related millennium and sustainable development goals to address key global health threats and solutions, and recent reformulations for post-2015 health-related agenda. Furthermore, as the focus on the global dimension of public health does not override the concerns and consequences for micro and meso-levels, students will become aware of mechanisms and challenges involved in incorporating World Health Organization’s commitment to primary healthcare in 1978 with that of global public health principles that currently dominate the agenda of public health. Selected case studies will serve as illustrative material.
1 Course Unit
SOCI 2610 Latinos in the United States
This course presents a broad overview of the Latino population in the United States that focuses on the economic and sociological aspects of Latino immigration and assimilation. Topics to be covered include: construction of Latino identity, the history of U.S. Latino immigration, Latino family patterns and household structure, Latino educational attainment. Latino incorporation into the U.S. labor force, earnings and economic well-being among Latino-origin groups, assimilation and the second generation. The course will stress the importance of understanding Latinos within the overall system of race and ethnic relations in the U.S., as well as in comparison with previous immigration flows, particularly from Europe. We will pay particular attention to the economic impact of Latino immigration on both the U.S. receiving and Latin American sending communities, and the efficacy and future possibilities of U.S. immigration policy. Within all of these diverse topics, we will stress the heterogeneity of the Latino population according to national origin groups (i.e. Mexican, Puerto Rican, Cuban, and other Latinos), as well as generational differences between immigrants and the native born.

SOCI 2620 Social Movements
This course examines the main sociological theories and concepts in the analysis of revolutions, popular protest, and social movements. Special attention will be given to three theoretical traditions: resource mobilization, political process, and cultural analysis. We will study narratives, symbols, performances, and old and new media forms in the construction of identities and solidarities and the mobilization of publics. Historical and contemporary cases from the U.S. and around the world will be examined.
Also Offered As: COMM 2620
1 Course Unit

SOCI 2630 Contemporary Issues in African Society
This course will deal with law and society in Africa. After surveying the various legal systems in Africa, the focus will be on how and to what extent the countries of Africa "re-Africanized" their legal systems by reconciling their indigenous law with western law and other legal traditions to create unified legal systems that are used as instruments of social change and development. Toward this end, the experiences of various African countries covering the various legal traditions will be included. Specific focus will be on laws covering both economic and social relations. This emphasis includes laws of contracts and civil wrongs, land law, law of succession, marriage and divorce and Africa's laws of International Relations, among other laws. Throughout this course a comparative analysis with non-African countries will be stressed.
Also Offered As: AFRC 2630
1 Course Unit

SOCI 2640 Media Culture & Society in Contemporary China
This course covers Chinese media, culture, and society from the 1970s to the present. It examines the causes and consequences of social and institutional transformation, with an emphasis on civic engagement, cultural change, and the impact of digital media. In analyzing these developments, the course pays special attention to historical contexts and draws on concepts and theories from sociology, communication, and related fields. The course helps students develop nuanced and sophisticated approaches to the understanding of contemporary Chinese media, culture, and society and cross-cultural phenomena more broadly.
Also Offered As: COMM 2640
1 Course Unit

SOCI 2650 Sociology of the Climate Emergency
We're in the midst of a climate emergency, with climate change the most pressing problem. We need to transform our social and economic system to avoid the worst. There's still time to do this, while establishing the conditions for us, and our descendants, to live brilliant, stimulating lives. To move forward, we need to supplement natural science with social science. In the course, will ask, how did we get into this ecological crisis? How does climate figure in contemporary politics? How do the climate and water crises intersect with inequalities around the world? How does an ongoing revolution in the energy sector reflect these tendencies, and what is its promise? What are the big competing paradigms for positive, transformative change today? This fresh-person seminar will tackle these vast questions by introducing students to a range of novel social perspectives on the contemporary global environmental crisis - a crisis that is usually otherwise represented in coldly scientific terms or according to cliches about environmentalists.
Also Offered As: LALS 2650
1 Course Unit

SOCI 2660 International Migration
A comprehensive review of theories and research on international migration. The course introduces the basic precepts of neoclassical economics, the new economics of labor migration, segmented labor market theory, world systems theory, social capital theory and the theory of cumulative causation. Readings examine patterns and processes of global migration during the classic age from 1800-1914 as well as during the postwar period from 1945 to the present. The course also covers a history and evaluation of immigration policies around the world, and devotes signification attention to theoretical and empirical perspectives on immigrant adaptation. Within this larger topic, we will also discuss internal migration and urbanization; the relationship between gender and migration; the spatial distribution of immigrants within the United States, immigrant communities, and ethnic enclaves; and the undocumented population in the United States.

1 Course Unit

SOCI 2670 Sociology of Immigration
TBD
1 Course Unit
SOCI 2680 Contemporary Immigration in the U.S.
While this course will engage immigration issues more broadly, we will centrally focus on questions of immigrant incorporation and the effects of U.S. immigration policy. We will start with the broad question of what should be done about the estimated 10.5 million undocumented immigrants living in the United States. Then, we will take a deeper look at the ways in which macro-level forces such as our laws and institutions shape the micro-level, everyday lives of undocumented immigrants and those living in mixed-status families. We will pay close attention to the circumstances of young people, including their experiences of exclusion and belonging across social and educational contexts. More specifically, we will examine how these factors might affect young people's development, schooling experiences, academic trajectories and aspirations, assimilation and ethnic identity, family dynamics, civic engagement, and employment.

SOCI 2690 Comparative and International Education - Focus on East Asian Education
East Asian societies, specifically China, Japan, South Korea, and Taiwan, have experienced extraordinary expansion of education during the last few decades, probably the most rapid expansion in human histories so far. The spectacular development of education has been considered as a critical source of dramatic economic growth and technological advance in the region as well as global popularity of East Asian cultures. East Asian education is distinctive not only with respect to quantitative expansion but also to its qualitative development. East Asian students have constantly occupied top ranks in various international academic tests such as PISA (Programme for International Student Assessment) and TIMSS (Trends in International Mathematics and Science Study).
The excellence performance of East Asian students has attracted attention of policy makers and educators in other parts of the word to learn sources of their educational success. Despite all these quantitative and qualitative developments, however, East Asian education has also been criticized with its high levels of educational standardization, centralization, and exam-focused learning among others. Critics, both inside and outside of the region, have increasingly questioned whether East Asian education would be appropriate for flexible and globalized economies that require more individualized and differentiated learning opportunities. These distinctive features and developments of East Asian education provide an extremely useful case with which to understand the roles of education for individuals and societies. The proposed course will focus on the following four themes: 1) Historical background of East Asian Education; 2) Features of School Learning and Beyond in East Asia; 3) Educational Inequality in Comparative Perspective; and 4) Consequences of Education for Individuals and Societies. This course will be designated as a Penn Global Seminar, which requires a short-term travel after a semester-long class. During the semester of Spring 2023, students will learn historical development and various features of East Asian education. After finishing the semester, students will have an opportunity to actually visit South Korea. The focused trip to Korea will provide unique experiences of seeing and learning how education actually works in an East Asian society. In Korea, students will visit actual K-12 schools to observe how daily learning occurs inside of Korean schools and to talk with school teachers and students. The trip will also include visits to some education-policy institutions as well as higher education institutions.

1 Course Unit

SOCI 2691 Innovation, Regulations, Technology, and Society: Experience from East Asia
Innovation and creativity are universally recognized as aspects of modern life. From stem cell research to nanotechnology and machine learning, innovation is heralded as a thing of value to be actively fostered, as a key ingredient for the betterment of the human condition, and often as a desirable process for economic growth. While existing innovative activities are often based in the so-called advanced economies, particularly the United States and the European Union, increasingly we see new players on the global scene vying for influence and offering new forms of innovation and upgrading. These new players are often countries from East Asia. What positions do these East Asian countries occupy in the global knowledge economy? How are they navigating a constantly evolving and competitive frontier technology market where ownership of intellectual property rights remains in the hands of a handful of advanced economies? Technological innovation can take a toll, not least in the form of increased level of risks that a society must bear, as well as in environmental degradation, worker strife stemming from a shortage of jobs, gender disparity, and expanding wealth and knowledge gaps (including access to knowledge) between different socioeconomic classes. In this course, we will consider how regional patterns (and national variations) of economic growth and sociocultural changes under way in East Asia have been influenced by the global technological revolution, as well as the infrastructure of power and governance. Particularly, the course exposes students to scholarship on the governance of the global political economy, with a focus on the socio-legal regulation of emerging science and technology. The course will begin with discussing how states strike a balance between innovation and protection through implementing relevant regulatory frameworks. In addition, we will explore what implications emerging technologies have for societies, as well as how these evolving dynamics impact the lived experience of local communities.

1 Course Unit

SOCI 2700 Current Issues in Contemporary Japan
In this course, we aim to understand what social issues in Japanese society exist and how they occur. Japan had experienced rapid industrial and economic developments until the 1980s. The Japanese systems of education, labor markets, and social security, which have continued until today, were established by this period approximately. Although people at that time were suffered from problems like harsh entrance examinations for secondary and higher educations, long working hours after they started a job, and gender inequality, they accepted these problems in exchange for their economic flourishing.

1 Course Unit
SOCI 2810 Designing a Green New Deal: From Concept to Program
This advanced social science and design seminar is about mobilizing expert knowledge to develop transformative policy ideas to make the Green New Deal come alive. We'll look at cutting edge social science and design scholarship on the problems we're trying to solve, and the successes and failures of past efforts at transformative policy. And we'll focus in particular on the built environment. How might a Green New Deal make the physical changes to our infrastructures, homes, energy landscapes, transportation systems, public recreation amenities, care facilities, and more, in ways that slash carbon emissions, increase resiliency, and abolish inequalities of race, class, gender, and nation? That's not a rhetorical question: in this class, we'll assemble knowledge, get into teams, and come up with concrete proposals.

1 Course Unit

SOCI 2903 Exhibiting Black Bodies
This course concerns the exhibiting of Black Bodies in Museums and gallery spaces. We will trace the evolution of public history from the "Cabinets of Curiosity" in 18th and 19th Century Europe, through to the current institutional confirmation of the vindications traditions represented by Museu Afro Brasil (Sao Paulo, Brazil), National Museum of African American History and Culture (Washington, D.C.), and the Museum of Black Civilization (Dakar, Senegal). We will give particular attention to "why these representations at these times in these places?" In the process of addressing these questions we will give voice to the figures who conceived the curatorial content from those with the colonial mentality, to those with the abolitionist and nationalist and Pan-African visions.
Also Offered As: AFRC 2903
1 Course Unit

SOCI 2904 Oil to Diamonds: The Political Economy of Natural Resources in Africa
This course examines the ways in which the processes of the extraction, refining, sale and use of natural resources — including oil and diamond — in Africa produce complex regional and global dynamics. We explore how values are placed on resources, how such values, the regimes of valuation, commodification and the social formations that are (re)produced by these regimes lead to cooperation and conflict in the contemporary African state, including in the relationships of resource-rich African countries with global powers. Specific cases will be examined against the backdrop of theoretical insights to encourage comparative analyses beyond Africa. Some audio-visual materials will be used to enhance the understanding of the political economy and sociality of natural resources.

1 Course Unit

SOCI 2905 Everyday Life in Africa
This course will explore the different dimensions of everyday life in Africa. Everyday life has been described by Agnes Heller (1978) as "the secret yeast of history." What constitutes this "yeast of history" in contemporary Africa? In exploring everyday life, we will examine the existing (in)capacities in the structures of state and society in Africa for human well-being in relation to the differences between political life (bios) and bare life (zoe). The course engages with the everyday life in terms of how social, economic, and political lives are constituted and the implications of this process for whether Africans live well or not, how they die, and their struggles for alternative lives. With (ethnographic) accounts and perspectives from different countries in Africa, the course focuses deeply on how to understand and explain the conditions under which everyday social needs and economic necessities are turned into political/existential struggles as well as the conditions under which political exigencies can transform into economic, social and bodily fatalities. The overarching questions that will animate this course include these: What are the prevalent conditions of everyday life in Africa? What and who determines (in)eligibility regarding the everyday tools of good life and human survival? How are these determinations related to the differential distribution of potential and/or actual injury, harm, and damage to human life and the conditions of its survival? What can ethnographic insight contribute to our understanding of everydayness in Africa? The roles of sexualities, gender, generation, humor, identities, racism, hate, memory, memorial, transactions, etc., in the construction, reconstruction, and deconstruction of daily life — and death — in the continent will be examined. Audio-visual materials will be used to analyze important themes about quotidian life in Africa.

**SOCI 2907 Race, Rights and Rebellion**
This course provides an in-depth examination of theories of race and different kinds of social struggles for freedom around the globe. We will critically engage the latest scholarship from a variety of scholars and social movement actors. From anti-slavery revolts to struggles for independence to anti-apartheid movements, this course will emphasize how racialized peoples have employed notions of rights and societal resources grounded in cultural differences. Though much of the readings will highlight the experiences of African descendant peoples in Africa and its diaspora, the course will also explore the intersections of Black struggles with social movements organized by indigenous peoples in the Americas. Students will also have the unique experience of accessing readings primarily written by primarly Black scholars, some of whom have participated as key actors in the social movements they describe. Key concepts include power, resistance, subaltern, hegemony, identity politics, consciousness, and intellectual activism. The course will be organized around the following objectives: 1. To explore a range of contemporary theoretical perspectives and methodological approaches to the study of social movements; 2. To focus on the relationship between race, gender, class, culture, and politics in the African diaspora; 3. To study the historical development of organized struggles, social protests, uprisings, revolutions, insurgencies, and rebellions; 4. To examine the political agency of African descendant peoples in the global struggle for liberation and citizenship.

1 Course Unit

**SOCI 2910 Globalization And Its Historical Significance**
This course sets the current state of globalization in historical perspective. It applies the concepts of anthropology, history, political economy and sociology to the study of globalization. We focus on a series of questions not only about what is happening, but about the growing awareness of it and the consequences of this increasing awareness. In answering these questions we draw on a variety of case studies, from historical examples of early globalization (e.g. The Atlantic and Indian Ocean Worlds, global flows of conspicuous commodities such as sugar, coffee, and tea, the rise and transformations of early capitalism), to issues facing our current globalized world (e.g. mass-mediatization and multilingualism, border regimes and international migration, planetary urbanization). The body of the course deals with particular dimensions of globalization, reviewing both the early and recent history of each. The overall approach is historical and comparative, setting globalization on the larger stage of the economic, political and cultural development of various parts of the modern world. The course is taught by anthropologists who draw from economic, linguistic, sociocultural, archaeological, and historical perspectives, offering the opportunity to compare and contrast distinct disciplinary approaches. It seeks to develop a general social-science-based theoretical understanding of the various historical dimensions of globalization: economic, political, social and cultural.

**SOCI 2920 Criminology**
This introductory course examines the multi-disciplinary science of law-making, law-breaking, and law-enforcing. It reviews theories and data predicting where, when, by whom and against whom crimes happen. It also addresses the prevention of different offense types by different kinds of offenders against different kinds of people. Police, courts, prisons, and other institutions are critically examined as both preventing and causing crime. This course meets the general distribution requirement.

Fall
Also Offered As: CRIM 1000
1 Course Unit

**SOCI 2921 Criminal Justice**
This course examines how the criminal justice system responds to crime in society. The course reviews the historical development of criminal justice agencies in the United States and Europe and the available scientific evidence on the effect these agencies have on controlling crime. The course places an emphasis on the functional creation of criminal justice agencies and the discretionary role decision makers in these agencies have in deciding how to enforce criminal laws and whom to punish. Evidence on how society measures crime and the role that each major criminal justice agency plays in controlling crime is examined from the perspective of crime victims, police, prosecutors, jurors, judges, prison officials, probation officers and parole board members. Using the model of social policy evaluation, the course asks students to consider how the results of criminal justice could be more effectively delivered to reduce the social and economic costs of crime.

Spring

1 Course Unit
SOCI 2933 Global Chinas and Chinese Diasporas
This seminar delves into the global imprint of contemporary Chinese diasporic communities, examining their significant influence from the lens of multiple sectors and regions—from Wenzhou migrants shaping the fashion industry in Italy to copper mining enterprises in Zambia to Chinese-owned nail salons and massage parlors dotting New York City. This exploration situates Chinese communities within the context of an interconnected world. As China has ascended to become the world's second-largest economy, its impact is not confined within its borders but extends into international politics, culture, commerce, technology, and beyond. This class endeavors to unpack the complexities of China's global engagement and deepen students' understanding of Chinese communities worldwide. The course is divided into two main sections. The first section provides an overview of the historical journey of China on the global stage and an introduction to research methods specific to studying this phenomenon. In the second half, the course adopts a more granular approach, delving into critical topics such as race and ethnicity, gender and family dynamics, transnational identity, educational achievement, labor, entrepreneurship, and soft power.
Also Offered As: ASAM 2620
1 Course Unit

SOCI 2940 Homelessness & Urban Inequality
This first-year seminar examines the homelessness problem from a variety of scientific and policy perspectives. Contemporary homelessness differs significantly from related conditions of destitute poverty during other eras of our nation's history. Advocates, researchers and policymakers have all played key roles in defining the current problem, measuring its prevalence, and designing interventions to reduce it. The first section of this course examines the definitional and measurement issues, and how they affect our understanding of the scale and composition of the problem. Explanations for homelessness have also been varied, and the second part of the course focuses on examining the merits of some of those explanations, and in particular, the role of the affordable housing crisis. The third section of the course focuses on the dynamics of homelessness, combining evidence from ethnographic studies of how people become homeless and experience homelessness, with quantitative research on the patterns of entry and exit from the condition. The final section of the course turns to the approaches taken by policymakers and advocates to address the problem, and considers the efficacy and quandaries associated with various policy strategies. The course concludes by contemplating the future of homelessness research and public policy.

SOCI 2942 Cities, Suburbs, Regions
This course will explore the political, economic, social, and demographic forces impacting development patterns in metropolitan areas, with a particular focus on Philadelphia. We will examine the government policies, economic forces, and social attitudes that affect the way a region grows, and the impact of these forces on poverty, equity and segregation. Specific topics to be discussed include the factors that make a region competitive, the city's changing role in the region, the impact place has on opportunity, and approaches to revitalizing and improving communities.
Spring, odd numbered years only
Also Offered As: URBS 2530
1 Course Unit

SOCI 2943 Global Urban Education
This course examines the demographic, social, and economic trends impacting the growth of global cities—providing the context for global urban education. Through the dual lens of globalization and local urban culture, we explore relationships between urban education and economic development, democratic citizenship, social movements, social inclusion, equity, and quality of urban life. We consider key historical legacies (e.g., Colonialism), informal settlements and “slums,” the rise of the “knowledge economy,” and the role of international aid. Additional topics include: early childhood; gender equity; youth culture; impacts of crisis and war; urban refugees; teacher training and identity; accountability & governance; information & computer technology; religion, indigenous cultures, and language identity; & the role of the private sector and school choice. We focus on cities like Sao Paolo, Mexico City, Shanghai, Hong Kong, Ho Chi Minh City, Johannesburg, Lagos, Nairobi, Jakarta, Mumbai, Lahore, Tehran, and Cairo, and draw comparisons to cities like New York, London, Paris and Tokyo.

Also Offered As: URBS 2580
1 Course Unit

SOCI 2944 Perspectives on Urban Poverty
This course provides an interdisciplinary introduction to 20th century urban poverty, and 20th century urban poverty knowledge. In addition to providing an historical overview of American poverty, the course is primarily concerned with the ways in which historical, cultural, political, racial, social, spatial/geographical, and economic forces have either shaped or been left out of contemporary debates on urban poverty. Of great importance, the course will evaluate competing analytic trends in the social sciences and their respective implications in terms of the question of what can be known about urban poverty in the contexts of social policy and practice, academic research, and the broader social imaginary. We will critically analyze a wide body of literature that theorizes and explains urban poverty. Course readings span the disciplines of sociology, anthropology, urban studies, history, and social welfare. Primacy will be granted to critical analysis and deconstruction of course texts, particularly with regard to the ways in which poverty knowledge creates, sustains, and constricts meaningful channels of action in urban poverty policy and practice interventions.

**SOCI 2945 Globalization & The City: Global Urbanization**

In 2008, the UN estimated that the world's population had become primarily urban, for the first time in history. According to the OECD, by the end of the century, close to 85% of the projected population will live in cities. The transition towards an urban planet is likely to have far-reaching economic, environmental, social, political, and cultural impacts on our species, many of which we cannot yet predict. But what is urbanization? Will it lead to more inequality, exploitation, conflict, resource consumption, and exposure to natural disasters and climate change, or is it an opportunity to move the world in a more sustainable and equitable direction? Taught by Chandan Deuskar and Patricio Zambrano Barragan, this course aims to explore these questions. In the first half of the semester, we will discuss various challenges associated with global urbanization and its impacts. In the second half, we will focus on responses to these challenges. The assignments will allow students to explore some of the most salient debates around global urbanization. By the end of the semester, students will be better able to understand the context for any future academic research, professional work, or business activities in the cities of the ‘developing world’. The course will help provide a foundation for any students considering graduate studies or professional work in the fields of urban planning or international development.

**SOCI 2950 Population and Public Health in Eastern Europe**

Since the collapse of communism in 1989 in Eastern Europe (and 1991 in the Soviet Union), many of the countries in the region have experienced public health crises and demographic catastrophe. Below replacement fertility rates and massive out migration have decimated the populations of these countries even as populations age and place unsustainable strains on pension systems and medical services. The demographic collapse has also been accompanied by falling male life expectancy and the rise of alcoholism, depression, domestic violence, and suicide. The economic exigencies of the transition from communism to capitalism dismantled welfare states at the exact moment when health services were most needed, leaving charities and nongovernmental organization to try to fill in the gaps. Through a combination of readings from the fields of epidemiology, demography, and medical anthropology, this course examines the public health implications of poverty and social dislocation in post-communist states. All readings and assignments are in English.

1 Course Unit

**SOCI 2951 The History of the Information Age**

We are said to live in an "information age." Information technologies have been credited with ushering in an era of unprecedented information creation, collection, storage, and communication. We experience the impact of this firsthand: these technologies increasingly pervade our homes, our workplaces, our schools, our most private spaces. But what exactly do we mean when we speak of the information age? When and how did it come into being? What developments—social, economic, political, or technological—made the digital world possible? How do these fit in the longer history of technology and society? And how is all this different from earlier eras? In this course, we explore these questions by looking to the history of information, information technologies, and information sciences, a history that long predates the digital computer. Although, at the center of our story will be the development of new information technologies—from the printing press and the telegraph to the computer and of course the Internet—our focus will not primarily be on machines, but on people and how individuals conceptualized, contributed to, made sense of, and dealt with the many transformational changes that have shaped the contours of our modern digital world. We will explore forms of identity, knowledge, and community that have emerged within this information age. Our goal will be to deepen historical perspectives and build analytical tools to critically evaluate the role of information in our increasingly digital world today.

1 Course Unit
SOCI 2952 Health and Social Justice
This course considers various theoretical approaches to justice and health, motivated by the idea that a moral framework is needed to address the ethical challenges posed by inequalities in access, quality, financial burdens, and resource priorities, as well as rising health care costs. The course includes four parts. The first part examines ethical frameworks that involve various approaches to medical and public health ethics. The second part presents an alternative theory of justice and health, the health capability paradigm (HCP), grounded in human flourishing. The third part explores domestic health policy applications, including equal access, equitable and efficient health financing and insurance, rising costs and allocating resources. The fourth and final part of the course investigates domestic health reform, particularly a normative theory of health policy decision making grounded in political and moral legitimacy. The course scrutinizes the relevance of health justice for governing health at the domestic level, that is within countries, offers a new theory of health and social justice, the health capability paradigm, and of health governance, shared health governance, evaluating current domestic health systems and proposals for reforming them in light of these alternative theoretical frameworks.

SOCI 2960 Participatory Cities (SNF Paideia Program Course)
What is a participatory city? What has that term meant in the past, what does it mean now, and what will it mean going forward? Against the backdrop of increasing inequality and inequity, and the rise in a search for solutions, what role can citizens play in co-creating more just cities and neighborhoods? How can citizens be engaged in the decision-making processes about the places where we live, work, and play? And most importantly, how can we work to make sure that all kinds of voices are meaningfully included, and that historically muted voices are elevated to help pave a better path forward? This course will connect theory with praxis as we explore together the history, challenges, methods, and approaches, and impact of bottom up and top down approaches to community participation and stakeholder involvement in cities. Multiple opportunities will be provided to be involved in community engagement work for live projects in Philadelphia.
Not Offered Every Year
Also Offered As: URBS 3140
1 Course Unit

SOCI 2970 Social Inequalities: Caste and Race
This course introduces students to two systems of inequity, caste in South Asia, particularly in India, and race in the United States. It’s main objective is to demonstrate how these modes of inequity, sometimes dismissed as outdated or irrelevant, continue to shape social and state institutions like family, law, and bureaucracy. The course will explore sociological literature on caste and race and examine how these systems existed in a range of historical contexts. It will examine how certain groups were recipients of economic, political, and social privilege, and how these groups othered communities such as Afro-Americans in the United States and Dalits in India. We will consider how privileged groups continue to represent modern institutions like state and law that fail to protect disadvantaged communities in both India and the United States. The course will also explore how privileged communities employ the tool of gendered violence of different kinds like physical violence against men and sexual violence against women of Afro-American communities and Dalit communities to maintain forms of social power and control. The final unit of the course will deal with the emerging and imagined solidarities between Afro-American social and political movements in the United States and Dalit movements in India.
Also Offered As: AFRC 2219, GSWS 2219, SAST 2219
1 Course Unit

SOCI 2971 Bioethics
This course is intended to introduce students to the fundamental principles of bioethics and the many ethical issues that arise in the rapidly changing fields of biomedicine and the life sciences. The first half of the course will provide an overview of the standard philosophical principles of bioethics, using clinical case studies to help illustrate and work through these principles. In the second half of the course we will focus on recent biomedical topics that have engendered much public controversy including diagnostic genetics, reproductive technologies and prenatal screening, abortion, physician assisted suicide, human experiments, and end of life decision making. We will use the principles learned in the first half of the course to systematically think through these bioethical issues, many of which affect our everyday lives.

Also Offered As: HSOC 1330
1 Course Unit

SOCI 2972 Sex and Socialism
This seminar examines classic and current scholarship and literature on gender and sexuality in contemporary Eastern Europe, and examines the dialogue and interchange of ideas between East and West. Although the scholarly and creative works will primarily investigate the changing status of women during the last three decades, the course will also look at changing constructions of masculinity and LGBT movements and communities in the former communist bloc. Topics will include: the woman question before 1989; gender and emerging nationalisms; visual representations in television and film; social movements; work; romance and intimacy; spirituality; and investigations into the constructed concepts of “freedom” and “human rights.”
Also Offered As: ANTH 1688, GSWS 1680, REES 1680
1 Course Unit
**SOCI 2973 Culture on Trial: Race, Media & Intellectual Property**

This course explores the US intellectual property regime's impact on the production, distribution and consumption of media and art. By the end of the class, students will come away with historical, theoretical, and practical understandings of how media technology changes the law and how the law has subsequently responded to changes in media technology. This course is affiliated with CWIC (Communication Within the Curriculum). See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

---

**SOCI 2974 Adivasis/Indigenous Peoples & British Colonialism in India**

Modern Western colonialism impacted the world in many ways. However, each country and community has had a different encounter and experience with colonialism. For the Adivasis (indigenous peoples) of India, it was catastrophic and marked a new phase in their history. The pre-colonial symbolizes a period of freedom in the hills and forest, whereas the colonial era symbolizes state coercion, eviction from land and the end of free movement in the forest. The proposed course discusses Adivasis’ encounters with the British colonial state. The course examines Indian history from the perspectives of Adivasis and contrasts these with dominant paradigms of Indian history. In this way, the course allows students to understand India from a different perspective. Under British colonialism, the diverse ethnic self-governing communities were imagined as primitive, uncivilized, barbaric, violent, backward and childlike people. The course discusses how such constructions impacted Adivasi social life and development. It traces how the expansion of the colonial state in forests and hills put an end to self-rule and induced massive migration from the plains of India and asks how Adivasi areas were integrated into the colonial economy. How did the colonial state use revenue and forest policies and regulations to bring these areas under its control? How did commercialization of agriculture and forest conservation work to further marginalize Adivasis? The course also examines how Adivasi knowledge of cultivation and forest conservation were viewed by the colonial state and asks why the colonial state encouraged caste-Hindu peasant migration into Adivasi areas. Finally, it traces the ways that colonial intervention has resulted in a series of contestations, acts of resistance, and insurgencies by Adivasi groups? Tracing forms of Adivasi resistance, the course puts these into conversation with intellectual history, emphasizing the role of rumours, myths, and orality, which provided the basis for the new insurgent consciousness that spread throughout Adivasi communities. Adivasi resistance movements have been documented and analyzed by colonial rulers and anthropologists. Colonial discourses were successful in criminalizing Adivasi politics. Ironically, many colonial-era discourses concerning Adivasis have been perpetuated within the post-colonial academy. The anti-colonial struggles of Adivasis were constructed as sporadic, spontaneous, unorganized and apolitical. The inauguration of the Subaltern Studies Project has reversed such arguments and attempted to provide ideological integrity to Adivasi politics. Students will be introduced to important literature on Adivasi anti-colonial insurgent consciousness and will be encouraged to think critically about the concepts and theories of subaltern politics. Assigned readings include texts by James Scott, Ranajit Guha, David Arnold, David Hardiman, Ajay Skaria, Dhanagare, Ramachandra Guha, Biswamoy Pati, Alpa Shah, Crispin Bates, Jangkhomang Guite and Bhangya Bhukya. One aim of the course is to sensitize the students to how the political and cultural mobilizations by subalterns have contributed to the shaping of democracy.

SOCI 2977 American Race: A Philadelphia Story (SNF Paideia Program Course)

This course proposes an examination of race with a two-pronged approach: one that broadly links the study of race in the United States with a multi-disciplinary approach and also simultaneously situates specific conversations within the immediate location of Philadelphia, home to the University. The broad historical examination advances key concepts of race and racialization, explores key theoretical methodologies, and highlights major scholarly works. For example, students will engage with the study of race through Africana Studies, Asian American Studies, Urban Studies and through Latin American & Latinx Studies. Readings and methodologies will introduce students to critical issues in education, in literature, in sociology, and with methods in oral history, archival work, and ethnography. Most importantly, this extensive approach highlights the impact of race across multiple communities including Black Americans, immigrant populations, and communities that are marginalized to emphasize connections, relationships, and shared solidarity. Students are intellectually pushed to see the linkages and the impacts of racism across and among all Americans historically and presently. As each theme is introduced a direct example from Philadelphia will be discussed. The combination of the national discourse on race, with an intimate perspective from the City of Philadelphia, engages students both intellectually and civically. The course will be led by Fariha Khan and Fernando Chang-Muy but guest instructors with varied disciplinary backgrounds and guest speakers from local community organizations. Each instructor not only brings specific disciplinary expertise, but also varied community engagement experience.

SOCI 2977 Just Futures Seminar I

This seminar analyzes the historical construction of race and ethnicity in the Americas by focusing on the processes of dispossession—of land, bodies, and heritage—that started with the European colonization of the continent. The first part of the class builds a theoretical framework that will allow students to understand the origin of ethnic and racial classifications as acts of symbolic power, and their connections to specific historical conjunctures. The second and main part of the class focuses on the historical processes that resulted in the colonization of the Americas and the global transformations that came from the encounter of people in the “New World” (the development of capitalism, the emergence of settler colonialism, the Atlantic slave trade, and modern liberalism) in order to trace the genealogy of the ethnic and racial classificatory systems that continue to be used today. We will pay particular attention to the transformation of land tenure and labor regimes and how different political economies produced different logics of racialization. The focus of the seminar is in the Americas as a unit, including both North and South America, and the Caribbean, from the 15th century to the present. The readings come from a wide range of disciplines, including sociology, anthropology, history, political science, settler colonial studies, and law. The last part of the class is organized as a workshop where students will develop their ideas for a final project and discuss student-selected readings.

Not Offered Every Year

1 Course Unit

SOCI 3000 Sociological Theory

This course will introduce students to sociological theory until the 1970s. We will read excerpts of original works from key theorists in, or influencing, the discipline. We will read original works of Tocqueville, Marx, Weber, Durkheim, DuBois, Gramsci, Marcuse, C. Wright Mills and more. We will also read a few more recent works echoing classical theory. The goal of this course is to help students understand the core concepts, including those of class, race, power, markets and the state, in classical sociological theory and to sharpen their own sociological imaginations.

Fall or Spring
1 Course Unit

SOCI 3010 Contemporary Sociological Theory

This course will explore contemporary social theory with an emphasis on theories and theoretical orientations related to social interaction, identity, culture, and inequality. For example, we will discuss sociological theories from the last half century about race and racism, gender, social class, education, emotion, and violence. Importantly, we will consider theory in the context of its application to empirical social science research and real world concerns. The course fulfills the theory requirement for sociology minors and all sociology majors.

Fall or Spring
Mutually Exclusive: SOCI 6010
1 Course Unit

SOCI 3200 Qualitative Methods

Some social scientific questions are best answered, or can only be answered, using qualitative methods, such as participant observation and interviewing. Qualitative methods can give otherwise unattainable insights into social reality and thus provide understanding of the mechanisms and meanings of social processes that might remain black boxes using non-qualitative methods. But the complexity of raw social situations and the fundamental nature of the methods required to describe and analyze these situations raise serious challenges for systematic and explanatory research. Over the course of the semester you will learn first-hand about the power and challenges inherent in qualitative methods by using them. You will design and carry out your own pilot research project using significant participant observation and interviewing. You will carefully construct a research plan intended to answer a specific, novel research question in the first few weeks of the course and then watch that design collide with the reality of the social world. You will spend the semester implementing, reflecting on, and revising that research plan. Class time will consist of instructor presentations, examinations of research based on qualitative methods, and workshops in which you will develop your plan or field techniques and evaluate the research of classmates in a constructive manner. Throughout the semester you will be evaluated through a series of small assignments. These smaller assignments will build upon one another and ultimately contribute to your final assignment, which is a research proposal designed to answer a specific, novel question grounded in the research you conduct during this class.

Not Offered Every Year
1 Course Unit
**SOCI 320 Sample Survey Methods**
This course provides an introduction to survey data collection. In meeting this objective, we examine the major planning tasks necessary for conducting surveys, including problem formulation, study design, questionnaire and interview design, pretesting, sampling, interviewer training and field management, code development and coding of data, and data cleaning and management. We critically explore the design of surveys and collection of data from epistemological and ethical perspectives. Students will leave the class with a solid understanding of the basic process of survey data collection and a familiarity with its strengths and weaknesses as a method of inquiry into human behavior.

Not Offered Every Year
1 Course Unit

**SOCI 3220 Basic Demographic Methods**
This course provides an introduction to basic demographic concepts, data, indicators, and techniques. The course emphasizes hands-on applications of techniques in the analysis of population dynamics in the U.S. and elsewhere. Students will learn about the main sources of demographic data, including censuses, surveys, and vital statistics, and methods to estimate demographic processes (e.g., mortality, fertility). Students will leave the course with a solid grounding in a) the sources and limitations of demographic data; b) the construction of basic demographic indicators; and c) appropriate use of basic demographic techniques to answer questions about human populations.

Fall or Spring
1 Course Unit

**SOCI 3230 Demography of Race**
This course will examine demographic and statistical methods used to capture the impact of racial stratification in society. This course covers the skills and insights used by demographers and social statisticians in the study of racial data. A key challenge facing researchers is the interpretation of the vast amount of racial data generated by society. As these data do not directly answer important social questions, data analysis and statistics must be used to interpret them. The course will examine the logic used to communicate statistical results from racial data in various societies. We will question the scientific claims of social science methodology by extending the critical perspective to biases that may underlie research methods. We will discuss good and bad practices within the context of the historical developments of the methods.

Also Offered As: AFRC 3230
1 Course Unit

**SOCI 3240 Demographic, Economic, and Social Interrelations**
The course investigates economic and social determinants of fertility, mortality, and migration, and it discusses the effects of population variables on economic and social conditions, including economic and social development. Topics discussed in the course include: How do economic changes affect marriage, divorce, and child bearing decisions? How do households make decisions about transfers and requests? How can economic and sociological approaches be combined in explanatory models of demography change? How does immigration to the US affect the ethnic composition of the population, the earnings of native workers, taxes on natives, and the macro-economy? What causes the aging of populations, and how will population aging affect the economies of industrial nations, and in particular, pension programs like Social Security? What accounts for the rise in women’s participation in the wage labor force over the past century? How are family composition and poverty interrelated? Does rapid population growth slow economic development with low income countries? In addition to these topics, the course also covers selected methods not included in DEMG/SOCI 535/536 and 609.

Not Offered Every Year
1 Course Unit

**SOCI 3250 Methods of Investigation**
In a time of abundant fake news and mis-information, it becomes ever important for students (for all, really!) to learn how to critically assess (and produce) robust empirical evidence to uncover patterns and trends about social life. The goal of this course is to do just that through the use of census microdata, video and photographs, with a focus on social inequality! Or, in other words…a first goal of this course is to introduce students to empirical work that will let them identify robust evidence on social inequality across a diverse set of topics and countries. A second goal of the course is to provide students with key analytical skills through working with microdata to uncover social inequality globally. Having exposure and hands-on experience with the correct tools to read (and produce) evidence on patterns and trends on social research is an important skill for students in any major. We will use publicly available census microdata on more than 100 countries from IPUMS and photographs from the Dollar Street Project. Students will work with a country, produce their own analysis and combine it with photographs and videos. As a Signature Course, a third key goal of the course is to teach students skills that will enable them to more easily read empirical work and write results more clearly and concisely. Students will practice reading academic research, do class exercises, write case studies, and complete a research paper/video/photo essay that will aid them in these goals.

1 Course Unit

**SOCI 3998 Independent Study**
Directed readings and research in areas of sociology. Permission of instructor needed.

1 Course Unit
SOCI 4100 Thesis Workshop I
The purpose of this course is to guide senior sociology majors in writing a research proposal for a senior honors thesis. Students will learn about various research approaches, how to write a focused literature review, and kinds of data necessary to answer a wide variety of research questions, including their own. Throughout the course, students will work on designing a research question, generation researchable hypotheses, and coming up with a design for their proposed study. The final paper for this course will be a research proposal that is the basis for students’ independent research project. This course satisfies the research requirement for sociology majors and is designed primarily for seniors who are planning to write an honors thesis.
Spring
Prerequisite: SOCI 2000
0.5 Course Units

SOCI 4101 Thesis Workshop II
This is the second part of the Thesis Workshop course. Prerequisite: SOCI 4100. Permission must be granted by the department.
Fall or Spring
Prerequisite: SOCI 2000 AND SOCI 4100
0.5 Course Units

SOCI 4998 Honors Independent Study
Independent study section for senior Sociology majors working on an honors thesis. Students are assigned an advisor by the undergraduate chair.
Fall or Spring
1 Course Unit

SOCI 5200 Religion
How do the many religious institutions in our society differ, and what common qualities do they share? Why do some religious institutions adapt to modernity while others do not? In particular, why are the politics of sex and gender so fundamental to the current organization of the American religious landscape? These questions will be the central motivating questions for the semester. The course will begin with an introduction to current theories in the sociology of religion. We will then apply and critique those theories as we learn more about the histories, members, practices and beliefs of all the major religious groups in the US today, including Mainline, Fundamentalist and Evangelical Protestantism, Roman Catholicism, Judaism, and other groups such as the Seventh Day Adventists, Jehovah’s Witnesses and Mormons. Students will pick two religious groups (one liberal and one conservative) to observe over the course of the semester and will write papers comparing and contrasting the two groups.
Mutually Exclusive: SOCI 2200
1 Course Unit

SOCI 5240 Advanced Topics in Family Sociology
This course will focus on the intersection of family life and inequality. The course will cover theories and empirical research examining the ways in which the political economy of family life is implicated in sustaining and organizing inequalities by class, gender, sexuality, and race.
Fall or Spring
Also Offered As: DEMG 5240
Mutually Exclusive: SOCI 2290
1 Course Unit

SOCI 5300 Sociology of Race and Ethnicity
Race and ethnicity are, above all, both converge as system of ideas by which men and women imagine the human body and their relationships within society. In this course we will question the concept of race and ethnicity and their place in modern society (1500 - 2020). While the course reviews the pre-1500 literature our focus will be on the last 500 years. This course reviews the research that has contributed to the ideas about ethnicity and race in human society. The review covers the discourse on race in political propaganda, religious doctrine, philosophy, history, biology and other human sciences.
Also Offered As: AFRC 5330, DEMG 5330
1 Course Unit

SOCI 5350 Quantitative Methods I
This course is an introduction to the practice of statistics in social and behavioral sciences. It is open to beginning graduate students and—with the permission of the instructor—advanced undergraduates. Topics covered include the description of social science data, in graphical and non-graphical form; correlation and other forms of association, including cross-tabulation; bivariate regression; an introduction to probability theory; the logic of sampling; the logic of statistical inference and significance tests. There is a lecture twice weekly and a mandatory "lab."
Fall
Also Offered As: DEMG 5350
1 Course Unit

SOCI 5351 Quantitative Methods II
As the second part of a two-semester sequence, this graduate course focuses on regression analysis as used in social science research. In particular, we discuss features and assumptions of linear regression and logistic regression models. We learn how to apply regression models to real social science data using Stata and how to interpret the results.
Spring
Also Offered As: CRIM 6351, DEMG 5351
Prerequisite: SOCI 5350
1 Course Unit

SOCI 5400 Discourse Analysis
Discourse Analysis examines both verbal and non-verbal communication to explore the making of claims of meaning, truthfulness, and authority, in everything from political speech to advertising to scientific reports. The course presents a range of methods and theoretical frameworks for analyzing discourse in a wide variety of social contexts (journalistic, legal, political, medical, familial). Readings and exercises draw from theories of signs, symbols, gestures, and language to analyze communicative acts and events. The goal of the course is to provide a solid grounding in the theories of speech, writing, symbols, and images, and to survey a broad array of empirical studies that have grown out of these theoretical frameworks. The course is appropriate for graduate students and advanced undergraduates.
Also Offered As: COMM 5400
1 Course Unit
SOCI 5430 Climate, Environment, and Childhood in Low- and Middle-Income Countries

Climatic and environmental hazards and their implications for the health and welfare of children are a major global concern. In a recent press release, the United Nations Children's Fund (UNICEF) estimated that approximately one billion children are at extremely high risk of experiencing impacts of the climate crisis; many will experience multiple climate shocks combined with poor essential services such as water, sanitation, and healthcare. Children from poorer countries and those from economically, socially, and politically marginalized groups within countries may be particularly vulnerable to climate risks and environmental hazards. Focusing on low- and middle-income countries, this class will explore the question, how do global childhood inequalities, broadly defined, condition both the risks of experiencing climatic and environmental hazards and the impacts, once exposed. The course is appropriate for graduate students and advanced undergraduates.
1 Course Unit

SOCI 5440 Sociology of the Climate Emergency

This seminar will explore how sociologists and adjacent social scientists have investigated the intersections of the environment with inequalities of wealth and power, with a focus on a broad “climate change and society” field. The seminar will cover a) recent efforts to reframe the history of capitalism as the history of a socio-environmental system (and overlaps between that agenda and the “racial capitalism” framework); b) the genesis of US-based environmental justice scholarship; c) the global sociology of carbon emissions and international environmental movements; and, d) new trends in “climate change and society” studies.
Fall or Spring
1 Course Unit

SOCI 5450 Economic Development, Education, and Inequality in East Asia

Where are East Asian economies and education headed? Can a new model of East Asian economy and education be established to achieve economic sustainability and equity in rapidly changing global contexts? In this seminar, we will survey 1) evolution of the East Asian economic model, focusing on changes in economic development strategies, labor market structures, and relationships with global economies; and 2) features of East Asian educational systems, focusing on educational opportunities and learning outcomes. In reviewing East Asian economy and education, a central question is not only how productive East Asian economy and education is but also how equal economic and educational opportunities are in the region. In the final part of the seminar, students will come up with some policy recommendations for East Asian economy and education to better achieve economic sustainability and equity. This graduate-level course is also open to advanced undergraduate students.
Also Offered As: EALC 5702, EDUC 5450
1 Course Unit

SOCI 5500 The Sociology of Poverty

This seminar will provide a graduate-level overview of and training in the sociology of poverty. It takes a comparative perspective by examining poverty across different theoretical perspectives, dimensions, and substantive domains as well as across different time periods and place contexts. This course will cover a range of topics pertaining to poverty such as the conceptualization and measurement of poverty, poverty levels and trends, and disparities in poverty. We will study how poverty research has evolved, various theories of the causes of poverty, and the consequences of poverty for individuals and society. We will explore the link between poverty and place, including poverty within urban, suburban, and rural contexts and across different sub-national units (e.g. regions, states, neighborhoods). While we will focus much attention to poverty in the U.S., we will also examine poverty across rich democracies and in less developed countries to gain a better understanding of global poverty and its broader impact. We will also explore how poverty is produced and maintained through various domains such as the family, education, the labor market, housing, the criminal justice system, and the welfare state. Finally, we will assess the effectiveness of poverty policies as well as other anti-poverty strategies. Throughout the course, we will use an intersectional lens that considers the roles of race/ethnicity, gender, age, and other axes of inequality in the perpetuation of poverty. By the end of this course, students will be able to draw on different perspectives and methodological approaches to critically discuss poverty and issues pertaining to poverty.
Course requirements include weekly readings, class participation, critical responses, and a research paper.
1 Course Unit

SOCI 5530 Ethnography of Sociological Research

This course is designed to introduce graduate students to basic skills and concepts in ethnographic field research, including participant observation, interviewing, field documentation, and the scholarly presentation of qualitative data. Students will learn to apply these skills and concepts through an assigned set of exercises in concert with a semester-long project based on intensive fieldwork at a research site of their choosing. In addition, we will examine exemplars of published fieldwork in both classical and contemporary sociology.
Fall or Spring
1 Course Unit

SOCI 5550 Pro-Seminar in Sociological Research

In the non-credit seminar students will be introduce to key areas in sociological research, and a set of professional skills necessary to navigate graduate school and a successful academic career. Students will also be introduced to faculty and resources available at Penn. This course is required for all first-year graduate students in Sociology.
Fall
0 Course Units

SOCI 5560 Pro-Seminar in Sociological Research II

This graduate seminar for first-year graduate students will be a two-semester course covering the major subfields of sociology – their classical and contemporary theories, current methods and substance.
Fall or Spring
1 Course Unit
SOCI 5610 Cultural Sociology
Studies culture as values, scripts, practice, performance, and style in the contexts of everyday life, social class, and status groups, social movements, and changes of communication technologies. Approaches politics, society, institutions, identities, and social change as dynamic processes and complex interactions at both micro/meso and meso/macro levels. Examines the production, reception, circulation and effects of signs, symbols, and stories. Readings include both classic authors (Elias, Simmel, Bakhtin, Goffman, Foucault, Bourdieu, Raymond Williams, etc.) and contemporary works from sociology and communication studies.
Not Offered Every Year
Also Offered As: COMM 5610
1 Course Unit

SOCI 5620 Soci Movements & Poli Sc
This course explores the impact of systems of government on the collective call to action of populations, and vice versa. Through a local, national, and global lens, this course analyzes the tensions that are produced by the at-times divergent priorities of those in political power versus those who seek social progress and change.
1 Course Unit

SOCI 5630 Mechanisms for Perpetuating or Reducing Inequality by Class, Race and Gender
TBD
1 Course Unit

SOCI 5635 Sociology of Health and Illness
The sociology of health and illness is a broad field covering a range of substantive and empirical issues, including (but not limited to): the social production of health, illness, morbidity and mortality; inequalities in health, illness, and disease; medicalization; the experience of illness and the sick role; and the organization and delivery of health care. While we cannot cover everything, this course is designed to give students an overview of central topics and key debates in the field, with particular emphasis on the social, structural, political, economic, and cultural forces shaping the production of health and illness. Though the course will focus predominately in the U.S. context, we will also integrate global and comparative perspectives whenever possible. The course will emphasize active discussion, cooperative learning, and continuous improvement.
1 Course Unit

SOCI 5637 Gender and Health in Post-Socialist Society
In terms of gender and health arrangements, post-socialist societies have provided through the course of their history examples both of radical empowerment and of evident discrimination, rapid emancipation and conservative backlashes. Social policy researchers frequently refer to this as a sui generis social laboratory, where health and gender policy experiments have taken place. This course aims to examine the premises and societal outcomes of such ‘experiments’ both on the empirical and conceptual levels. The course pursues two interconnected goals (1) to explore the specificities of gender and health in post-socialist societies, i.e. to consider how these phenomena are grounded in and affected by the political and institutional transition from state socialism; (2) to explore theoretical insights that social studies of the post-socialist experience provide for our understanding of health and gender. The course is structured thematically and chronologically. By tracing transformations of socialist and post-socialist gender order the first part of the course introduces students to the political and institutional context of societies under consideration. The second part of the course discusses social science categories that are used to analyze gender and health (medical professionalism, medical knowledge, emotions in healthcare, etc.) and examines, how attention to socialist and post-socialist experience can enhance our conceptualizations. The third part is devoted to different dimensions of health and gender inequalities on post-socialist space. Empirical researches discussed in this part are mostly concerned with the case of Russia, but are not limited to it. Generally, the course builds into the discussion on what analytical results can be gained through comparing health and gender in post-socialist and ‘Western’ contexts, and what variations between and within post-socialist societies exist. This is an introductory level graduate course.

1 Course Unit

SOCI 5640 Poverty, Race and Health
This course is designed to introduce students to current literature on race/ethnic difference in health and mortality in the United States, covering such topics as explanations for why some race/ethnic groups fare better than others, how inner city poverty and residential segregation may contribute to racial/ethnic differences in health outcomes, and health of immigrants versus native-born populations. Current policy debated and recent policy developments related to health are also briefly discussed. The course is organized as a seminar with a combination of lectures and class discussions.
Also Offered As: LALS 5640
1 Course Unit

SOCI 5670 Urban Sociology
This course will examine the urban structures and processes which characterize the social and cultural milieu of the contemporary American city. Specific course topics will include the social organization of local urban subcultures and neighborhood communities, the cultural consequences of gentrification and racial segregation, the reputation of cities in the public imagination, and the commodification of the urban landscape.
Also Offered As: URBS 5670
1 Course Unit
SOCI 5680 Contemporary Immigration in the U.S.
While this course will engage immigration issues more broadly, we will centrally focus on questions of immigrant incorporation and the effects of U.S immigration policy. We will start with the broad question of what should be done about the estimated 10.5 million undocumented immigrants living in the United States. Then, we will take a deeper look at the ways in which macro-level forces such as our laws and institutions shape the micro-level, everyday lives of undocumented immigrants and those living in mixed-status families. We will pay close attention to the circumstances of young people, including their experiences of exclusion and belonging across social and educational contexts. More specifically, we will examine how these factors might affect young people's development, schooling experiences, academic trajectories and aspirations, assimilation and ethnic identity, family dynamics, civic engagement, and employment.

SOCI 5700 Oil to Diamonds: The Political Economy of Natural Resources in Africa
This course examines the ways in which the processes of the extraction, refining, sale and use of natural resources – including oil and diamond – in Africa produce complex regional and global dynamics. We explore how values are placed on resources, how such values, the regimes of valuation, commodification and the social formations that are (re)produced by these regimes lead to cooperation and conflict in the contemporary African state, including in the relationships of resource-rich African countries with global powers. Specific cases will be examined against the backdrop of theoretical insights to encourage comparative analyses beyond Africa. Some audio-visual materials will be used to enhance the understanding of the political economy and sociality of natural resources.
Fall
Also Offered As: AFRC 5700, ANTH 5700
Mutually Exclusive: AFRC 4500
1 Course Unit

SOCI 5710 Visualizing W.E.B.DU BOIS
This seminar will focus on a project that views history as a result of our contemporary society in which biographical truths are constantly shifting. So the historical biographers write about the way they remembered and visualize the past, and not about the way that it happened. We will take Du Bois’s biography in his own words and interrogate his narrative with the visual narratives of his life and influence produced by others. "Visualizing W.E.B Du Bois" focuses on photographic, film, and video representations intended to present some aspect of Du Bois’s reality, primarily for the purposes of instruction or maintaining a historical record. Such projects include photos, materials originally shot on film stock, and digital images that can be either displayed in a book or magazine, and moving images made into a film or video for a TV show or released for screening in cinemas, or other broadcast mediums like YouTube and Vimeo.
Not Offered Every Year
Also Offered As: AFRC 5710
1 Course Unit

SOCI 5960 Sociology of Education
This graduate seminar will introduce students to some of the key theoretical and empirical work in the sociology of education. We will examine how schools work to maintain or alleviate inequality, and focus on differences in educational achievement and attainment by race, ethnicity, immigrant status, class, and gender. We will review work on the educational experiences of youth from early childhood to young adulthood.
Not Offered Every Year
1 Course Unit
SOCI 5970 Demography of Education
The major topic of the course is the impacts of education, especially college education, on various kinds of family behavior such as dating, cohabitation, living arrangements, marriage, fertility, parenting, divorce, and remarriage. In many countries, some family behaviors, if not all, are increasingly differentiated between college-educated and non-college-educated. For instance, increase in divorce is more evident among the less educated than their more educated counterparts, while marriage decline is more substantial among the less educated. Although parents’ time and money investments in children's education have generally increased over time for both college-educated and non-college-educated parents, the increase is much more substantial among college-educated parents than their non-college-educated counterparts, leading to divergence. In such societies, college education has increasingly differentiated population with respect to family behavior, which has important implications for inequality of children’s well-being. Of course, such diverging family behavior is not observed every society. In some countries, educational differentiation in family behavior is minimal. In this course, students first will be able to have a global perspective on education and family behavior by reviewing empirical evidence of the relationship between education and various kinds of family behavior across a variety of countries. After learning how different measurements and methods are used to identify the relationship between education and family behavior, Students will be able to evaluate how empirical evidence is robust. Second, students will learn about different theories that explain why education has specific relationships with family behavior. Finally, students will have an opportunity to conduct their own research (in the format of either an empirical or a review paper) by choosing a specific context where they will first document the relationship between education and family behavior and apply theories to explain the relationship with explicit consideration of specific contextual factors. The proposed course will be open to undergraduate and graduate students with different assignments to each of undergraduate and graduate students.
Fall or Spring
Also Offered As: DEMG 5970
Mutually Exclusive: SOCI 2281
1 Course Unit

SOCI 6002 Criminal Justice Data Analytics
This course covers the tools and techniques to acquire, organize, link and visualize complex data in order to answer questions about crime and the criminal justice system. The course is organized around key questions about police shootings, victimization rates, identifying crime hotspots, calculating the cost of crime, and finding out what happens to crime when it rains. On the way to answer these questions, the course will cover topics including data sources, basic programming techniques, SQL, regular expressions, webscraping, and working with geographic data. The course will use R, an open-source, object oriented scripting language with a large set of available add-on packages.
Fall
Also Offered As: CRIM 6002
Mutually Exclusive: CRIM 4002
1 Course Unit

SOCI 6010 Contemporary Sociological Theory
This is a graduate-level course that will explore contemporary social theory with an emphasis on theories and theoretical orientations related to social interaction, identity, culture, and inequality. For example, we will discuss sociological theories from the last half century about race and racism, gender, social class, education, emotion, and violence. Importantly, we will consider theory in the context of its application to empirical social science research and real world concerns.
Not Offered Every Year
Also Offered As: COMM 6010
Mutually Exclusive: SOCI 3010
1 Course Unit

SOCI 6020 Proseminar in Classical Sociology
This course is designed to introduce graduate students to the classical foundations of sociology by drawing on canonical readings by Marx, Engels, Durkheim, Weber, Du Bois, Addams, Simmel, Park, and Goffman, among others. We will read these texts in the context of three major sociological themes: work and social inequality, culture and social structure, and urban interaction and culture in the city. Final papers will require students to draw on classical sociological works in their analyses of contemporary empirical research in sociology.
Fall or Spring
1 Course Unit

SOCI 6030 Master's Research in Sociology
This graduate course is intended to be helpful to students as they produce an MA thesis. The course is structured to provide social support and feedback as students move through the stages in the development of a project (i.e. data analysis, review of the literature, development of a thesis, and revision). Students should begin the semester with a data set in hand; additional data analysis will occur during the term. (In some cases, students may be finishing their data collection.) In addition, the course is intended to provided professional development opportunities for students by providing “insider” information about the publication process. Students will be given examples of journal review (including reviews that reject a paper), copies of papers as they move through the revision process, and guidelines for producing a publishable piece of work. The goal is for students to produce a manuscript that can be submitted for publication in the near future. This is a required course for second year graduate students in Sociology.
Fall or Spring
1 Course Unit

SOCI 6040 Methodology of Social Research
This course will give students familiarity with the common research methods social scientists use to conduct research. Ethnographic, interview, survey, experimental and historical/comparative research methods will be covered. Four themes will be explored: 1) the basics of solid research design, 2) the various advantages and disadvantages of each method, 3) when the use of a method is appropriate or inappropriate for the research question, and 4) how to evaluate researchers’ claims on the basis of the evidence they present. These themes will be explored by reading examples of and conducting exercises designed to give students hands-on experience in each of the methods. Students will conduct the exercises on a topic of their choice, which together will culminate in their final paper.
Fall or Spring
Also Offered As: DEMG 6040
1 Course Unit
SOCI 6050 Public-Use Data for Social Science Research
Public-use data are quantitative information obtained from surveys and other databases that are available for anyone to use at no cost. This course prepares students to work with public-use data to address social science research questions. Participants will become familiar with the origins, purpose, design, structure, and limitations of US and international public-use data to study individuals, families, neighborhoods, and institutions such as schools and state and national governments; acquire skills to design analytic samples and manage data for reproducibility and replicability; and apply a variety of quantitative methods to public-use data to answer illustrative research questions.
1 Course Unit

SOCI 6070 Introduction to Demography
A nontechnical introduction to fertility, mortality and migration and the interrelations of population with other social and economic factors.
Fall
Also Offered As: DEMG 6070
1 Course Unit

SOCI 6090 Basic Demographic Methods
The course is designed to introduce students to basic concepts of demographic measurement and modeling used to study changes in population size and composition. The course covers basic measures of mortality, fertility and migration; life table construction; multiple decrement life tables; stable populations; population projections; and age patterns of vital events. Students will learn to apply demographic methods through a series of weekly problem sets.
Fall or Spring
Also Offered As: DEMG 6090
1 Course Unit

SOCI 6110 Structural Equation Models
Statistical modeling with multiple equations and latent variables. The first part of the course will focus on linear models that could be estimated with any of the well-known SEM programs (e.g., LISREL, EQS, or Amos). Both Mplus and SAS will be used exclusively in this part of the course. The second part will focus on Mplus models for variables that are categorical, count, or censored. Maximum likelihood methods for missing data will also be covered.
Not Offered Every Year
1 Course Unit

SOCI 6120 Categorical Data Analysis
This course deals with techniques for analyzing multivariate data which the dependent variable is a set of categories (a dichotomy or polytomy). Topics will include linear probability models, logit (logistic) regression models, probit models, logit analysis of contingency tables, cumulative logit and probit (for ordinal data), multinomial logit, conditional logit (discrete choice), unobserved heterogeneity, log-linear models, square tables, response-based sampling, and repeated measures. Methods will be illustrated using the Stata System. There will be several assignments using Stata to analyze data provided by the instructor.
Not Offered Every Year
Also Offered As: DEMG 6120
1 Course Unit

SOCI 6130 Event History
An applications-oriented course on statistical methods for the analysis of longitudinal data on the occurrence of events, also known as survival analysis, failure-time analysis, hazard analysis or duration analysis. Emphasis on regression-like models in which the risk of event occurrence is a function of a set of explanatory variables. Topics include accelerated failure-time models, hazard models, censoring, Cox regression models, time-dependent covariates, competing risks, repeated events, unobserved heterogeneity, discrete-time methods.
Not Offered Every Year
Prerequisite: SOCI 5351
1 Course Unit

SOCI 6200 Sociological Research II
This course is intended to aid in the selection, framing, writing and revising of sociological dissertation proposals. It is also intended to provide a forum for the presentation of dissertation research in progress. The goal is to provide a forum for the acquisition of professional socialization in sociology. We will discuss the framing of research questions, the design of research strategies, and the writing of dissertation proposals. We will discuss the process of submitting manuscripts for conferences and journals, preparing a curriculum vitae, job search strategies, and preparing for effective colloquium presentations. We will also review articles currently under review at the American Sociological Review. It is expected that third year graduate students in Sociology will enroll in this class.
Fall or Spring
1 Course Unit

SOCI 6210 Health, Mortality and Aging
The course focuses on the description and explanation of health and mortality in human populations and their variability across several dimensions such as age, time, place, social class, race, etc. The course includes general theories of health, mortality and morbidity, investigations of mortality and related processes in developing and developed countries, and discussions of future mortality trends and their implications for individual lives and the society at large.
Not Offered Every Year
Also Offered As: DEMG 6210
1 Course Unit

SOCI 6220 Fertility
The biological, social and demographic factors explaining the levels, trends and differentials in human fertility. Data, measures, and methods used in the context of the more and the less developed countries, with an emphasis on the historical and current course of the fertility transition.
Not Offered Every Year
Also Offered As: DEMG 6220
1 Course Unit
SOCI 6280 Migration and Development
International migration is one of the most important phenomena driving urban, community, economic, and human development. This course focuses on the ways that migrants and community, government, and private institutions work to influence development around the world. We explore a range of large- and small-scale economic development, human and community development. After a brief introduction to histories and theories of migration and development, our major themes include: 1) the work of institutions, governments, and private sector firms in sending and receiving nations that influence migration and development; 2) diaspora-led transnational development, including remittances, hometown and country associations, and transnational advocacy and community organizing; and 3) local revitalization, labor and housing markets, workforce and enterprise development in migrant-receiving settings. Readings are drawn from a variety of social sciences, planning and development studies, including from academia and practice. Guests from local and transnational development organizations will visit the class. Assignments include short papers on the readings and a research paper or project designed by each student in consultation with the instructor. Ultimately, the course aims to help students develop: 1) a broad knowledge of migration and development in geographic and institutional settings around the world; 2) an in-depth understanding of community and economic development practices in migrant sending and receiving communities; and 3) familiarity with social science approaches to evaluating the dynamics and impacts of migration and development. Spring, even numbered years only
Also Offered As: CPLN 6280
1 Course Unit

SOCI 6320 Demography of Race
This course will examine demographic and statistical methods used to capture the impact of racial stratification in society. This course covers the skills and insights used by demographers and social statisticians in the study of racial data. A key challenge facing researchers is the interpretation of the vast amount of racial data generated by society. As these data do not directly answer important social questions, data analysis and statistics must be used to interpret them. The course will examine the logic used to communicate statistical results from racial data in various societies. We will question the scientific claims of social science methodology by extending the critical perspective to biases that may underlie research methods. We will discuss good and bad practices within the context of the historical developments of the methods.
Also Offered As: DEMG 6320
1 Course Unit

SOCI 6331 Population Processes II
Population Processes II is part of a two-course sequence designed to introduce students to the core areas of demography (fertility, mortality, and migration) and recent developments in the field. PP II is divided into two parts. The first focuses on family demography and the biological, social and demographic factors explaining levels, trends, and differentials in human fertility transition with an emphasis on the historical and current course of fertility transition in developed and developing countries. The second part of the course provides a comprehensive review of theories and research on international migration. Readings examine patterns and processes of global migration during the classic age from 1800-1914 as well as during the postwar period from 1945 to the present. The course also covers a history and evaluation of immigration policies around the world, and devotes significant attention to theoretical and empirical perspectives on immigrant adaptation, including the relationship between gender and migration.
Spring
1 Course Unit

SOCI 6430 Social Stratification
This is an advanced level graduate seminar where we will review contemporary research on social stratification and mobility. We will examine empirical and theoretical studies not only in the US but also in other countries to address how the pattern of social stratification varies across societies and over time. The main topics to be discussed are social mobility, occupational attainment, educational inequality, gender and race, and family processes and stratification. We will also examine studies that address how national contexts mediate social stratification. Advanced undergraduate students will be admitted with permission.
Not Offered Every Year
Also Offered As: DEMG 6430
1 Course Unit

SOCI 6490 A Course on Elites
Most of the studies of inequality look at poverty and the impact of poverty. This course will be a study of those at the top of the social stratification system. We will take a broad vision of elites to include the upper-middle-class as well as those in the top 1%. The course will examine the concentration of wealth in American society. It will examine elite families. It will also look at elite education. There will be a unit on the financial industry, the 2008 debacle, and the failure of the government to regulate this important industry. We will also study the influence of race by comparing the black upper-middle-class with white upper-middle-class families. Thus, we will also look at the power of elites in a number of spheres. Finally, we will also read theoretical perspectives including the work of C. Wright Mills, Marx, and Bourdieu. Thus, in addition to the focus on social stratification, this course cuts across sociology of the family, economic sociology, cultural sociology, and race and ethnic relations.
1 Course Unit

SOCI 6600 Exhibiting Black Bodies
This course concerns the exhibiting of Black Bodies in Museums and gallery spaces. We will trace the evolution of public history from the “Cabinets of Curiosity” in 18th and 19th Century Europe, through to the current institutional confirmation of the vindications traditions represented by Museu Afro Brasil (Sao Paulo, Brazil), National Museum of African American History and Culture (Washington,D.C.), and the Museum of Black Civilization (Dakar, Senegal). We will give particular attention to “why these representations at these times in these places?” In the process of addressing these questions we will give voice to the figures who conceived the curatorial content from those with the colonial mentality, to those with the abolitionist and nationalist and Pan-African visions.
Fall or Spring
Also Offered As: AFRC 6200
1 Course Unit

SOCI 6620 Panel Data Analysis
This course focuses on the ability to use, analyze, and understand panel data. Panel data contain repeated measurements of the dependent variable for the same individuals, and possibly repeated measurements of the predictor variables as well. Panel data offer important opportunities for controlling unobserved variables and for answering questions about causal ordering.
Also Offered As: DEMG 6620
1 Course Unit
SOCI 6670 Social Interaction
The dynamics of interpersonal interaction, especially in face-to-face encounters during limited short periods of time. Topics include: the theory of interaction rituals deriving from Durkheim, Goffman and their contemporary followers; conversation analysis; micro-ethnographic studies of non-verbal behavior and embodied interaction; sociology of emotions; symbolic interactionist theory and the social nature of mind, self, and inner dialogue; electronically mediated interaction and its effects on social ties; and the relationship between micro and macro sociology.
Not Offered Every Year
1 Course Unit

SOCI 6770 International Migration
A comprehensive review of theories and research on international migration. The course introduces the basic precepts of neoclassical economics, the new economics of labor migration, segmented labor market theory, world systems theory, social capital theory and the theory of cumulative causation. Readings examine patterns and processes of global migration during the classic age from 1800 to 1914 as well as during the postwar period from 1945 to the present. The course also covers a history and evaluation of immigration policies around the world, and devotes significiation attention to theoretical and empirical perspectives on immigrant adaptation. Within this larger topic, we will also discuss internal migration and urbanization; the relationship between gender and migration; the spatial distribution of immigrants within the United States, immigrant communities, and ethnic enclaves; and the undocumented population in the United States.
Not Offered Every Year
Also Offered As: LALS 6770
1 Course Unit

SOCI 7070 Second Year Research Seminar I
This course is intended to hone the skills and judgment in order to conduct independent research in sociology and demography. We will discuss the selection of intellectually strategic research questions and practical research designs. Students will get experience with proposal writing, the process of editing successive drafts of manuscripts, and the oral presentation of work in progress as well as finished research projects. The course is designed to be the context in which master's papers and second year research papers are written. This is a required course for second year graduate students in Demography. Others interested in enrolling in only one of the courses may do so with the permission of the Chair of the Graduate Group in Demography.
Fall
Also Offered As: DEMG 7070
1 Course Unit

SOCI 7071 Second Year Research Seminar II
This is the second part of a two-course sequence designed to introduce and familiarize second year students with current norms for academic research, presentation and publishing in the field of Demography. Students are expected to finalize the analyses and to complete their second year research paper. This is a required course for second year demography students. Others interested in enrolling in the course may do so with the permission of the Chair of the Graduate Group in Demography.
Spring
Also Offered As: DEMG 7071
1 Course Unit

SOCI 7310 Advanced Demographic Methods
This course considers a variety of procedures for measuring and modeling demographic processes. We will consider both deterministic (drawn from classic demographic methods, stable population theory, and the like) and stochastic (drawn from statistics) perspectives and methods, including their integration. Pre-requisites: DEMG 609 and SOCI 536 (or its equivalent).
Not Offered Every Year
Also Offered As: DEMG 7310
Prerequisite: SOCI 6090 AND SOCI 5351
1 Course Unit

SOCI 7468 Ethnographic Research Methods
A course in ethnographic participant observational research; its substantive orientation, literature, and methods. Emphasis is on the interpretive study of social organization and culture in educational settings, formal and informal. Methods of data collection and analysis, critical review of examples of ethnographic research reports, and research design and proposal preparation are among the topics and activities included in this course. Prerequisite: This course is designed to follow after Qualitative Modes of Inquiry (EDUC 682) and as such it is suggested that students have some background in qualitative methods before enrolling.
Not Offered Every Year
Also Offered As: EDUC 7468
1 Course Unit

SOCI 7960 Demographic, Economic, and Social Interrelations
The course investigates economic and social determinants of fertility, mortality, and migration, and it discusses the effects of population variables on economic and social conditions, including economic and social development. Topics discussed in the course include: How do economic changes affect marriage, divorce, and child bearing decisions? How do households make decisions about transfers and requests? How can economic and sociological approaches be combined in explanatory models of demography change? How does immigration to the US affect the ethnic composition of the population, the earnings of native workers, taxes on natives, and the macro-economy? What causes the aging of populations, and how will population aging affect the economies of industrial nations, and in particular, pension programs like Social Security? What accounts for the rise in women's participation in the wage labor force over the past century? How are family composition and poverty interrelated? Does rapid population growth slow economic development with low income countries? In addition to these topics, the course also covers selected methods not included in DEMG/SOCI 5350/5360 and 6090.
Not Offered Every Year
Also Offered As: DEMG 7960
1 Course Unit
SOCI 8810 The Performance Society: Readings in Social and Media Theories
Social action has a performative character - people act as if on a stage in response to audience expectations, whether offline or online. This seminar traces the history of this line of critical thought from Weber and Bakhtin through Goffman and Victor Turner to contemporary authors such as Judith Butler, Byung-Chul Han, Jon McKenzie, and Charles Tilly. Special attention will be devoted to the relationship between media and performance, examined through recent work by media scholars and sociologists such as Ben Agger, Jeffrey Alexander, Jeffrey Berry, Danah Boyd, Alice Marwick, and Sarah Sobieraj. A central issue concerns the will to perform. Why are individuals in modern society compelled to perform? What are the manifestations and forms of performance in institutional and non-institutional politics (such as revolutions and social movements)? How are performances related to emotion? How do the internet and digital media shape the forms and meanings of performance? What are the consequences of the performative imperative? A term paper is required.
Not Offered Every Year
Also Offered As: COMM 8810
1 Course Unit

SOCI 9320 Proseminar in Management in Qualitative Methods
This course is designed to provide students with an understanding of the methodological approaches we commonly think of as qualitative, with special emphasis on ethnography, semi-structured interviews, case studies, content analysis, and mixed-methods research. The course will cover the basic techniques for collecting, interpreting, and analyzing qualitative (i.e. non-numerical) data. In the spring quarter, the course will operate on two interrelated dimensions, one focused on the theoretical approaches to various types of qualitative research, the other focused on the practical techniques of data collection, such as identifying key informants, selecting respondents, collecting field notes and conducting interviews. In the fall semester, the course will operate on two interrelated dimensions, one focused on the theoretical approaches on building arguments and theory from qualitative data, the other focused on the practical techniques of data collection, such as analyzing data, writing, and presenting findings. Note: This class is part of a two-part sequence which focuses on qualitative data collection and analysis. The first of this course, offered in the Spring, focuses on data collection and the second half of the course, offered the following Fall, will focus on qualitative data analysis. Each course is seven weeks long. Students may take either class independently or consecutively.
Two Term Class, Student may enter either term; credit given for either

South Asia Studies (SAST)

SAST 0001 Introduction to Modern India
This introductory course will provide an outline of major events and themes in Indian history, from the Mughal Empire in the 16th century to the re-emergence of India as a global player in the 21st century. The course will discuss the following themes: society and economy in Mughal India; global trade between India and the West in the 17th century; the rise of the English East India Company's control over Indian subcontinent in the 18th century; its emergence and transformation of India into a colonial economy; social and religious reform movements in the 19th century; the emergence of elite and popular anti-colonial nationalisms; independence and the partition of the subcontinent; the emergence of the world's largest democracy; the making of an Indian middle class; and the nuclearization of South Asia.

Also Offered As: HIST 0850
1 Course Unit

SAST 0002 The City in South Asia
This interdisciplinary social science course examines key topics, themes, and analytic methods in the study of South Asia by focusing on significant South Asian cities. With one-fifth of the world's population, South Asia and its urban centers are playing an increasingly important role in recent global economic transformations, resulting in fundamental changes within both the subcontinent and the larger world. Drawing primarily on ethnographic studies of South Asia in the context of rapid historical change, the course also incorporates research drawn from urban studies, architecture, political science, and history, as well as fiction and film. Topics include globalization and new economic dynamics in South Asia; the formation of a new urban middle class; consumption and consumer culture; urban political formations, economic dynamics in South Asia; the formation of a new urban middle class; and the nuclearization of South Asia.

SAST 0003 History, Culture, and Religion in Early India
This course surveys the culture, religion and history of India from 2500 BCE to 1200 CE. The course examines the major cultural, religious and social factors that shaped the course of early Indian history. The following themes will be covered: the rise and fall of Harappan civilization, the "Aryan Invasion" and Vedic India, the rise of cities, states and the religions of Buddhism and Jainism, the historical context of the growth of classical Hinduism, including the Mahabharata, Ramayana and the development of the theistic temple cults of Saivism and Vaisnavism, processes of medieval agrarian expansion and cultic incorporation as well as the spread of early Indian cultural ideas in Southeast Asia. In addition to assigned secondary readings students will read select primary sources on the history of religion and culture of early India, including Vedic and Buddhist texts, Puranas and medieval temple inscriptions. Major objectives of the course will be to draw attention to India's early cultural and religious past and to assess contemporary concerns and ideologies in influencing our understanding and representation of that past.

SAST 0006 Hindu Mythology
Premodern India produced some of the world's greatest myths and stories: tales of gods, goddesses, heroes, princesses, kings and lovers that continue to capture the imaginations of millions of readers and hearers. In this course, we will look closely at some of these stories especially as found in Purana-s, great compendia composed in Sanskrit, including the chief stories of the central gods of Hinduism: Visnu, Siva, and the Goddess. We will also consider the relationship between these texts and the earlier myths of the Vedas and the Indian Epics, the diversity of the narrative and mythic materials within and across different texts, and the re-imagining of these stories in the modern world.
Fall or Spring
Also Offered As: COML 0006, RELS 0006
1 Course Unit

SAST 0007 Introduction to Modern South Asian Literatures
This course will provide a wide-ranging introduction to the literatures of South Asia from roughly 1500 to the present, as well as an exploration of their histories and impact on South Asian society today. How are literary movements and individual works - along with the attitudes towards religion, society, and culture associated with them - still influential in literature, film, and popular culture? How have writers across time and language engaged with questions of caste, gender, and identity? We will read from the rich archive of South Asian writing in translation - from languages that include Braj, Urdu, Bengali, and Tamil - to consider how these literatures depict their own society while continuing to resonate across time and space. Topics of discussion will include the Bhakti poetries of personal devotion, the literature of Dalits - formerly referred to as the Untouchables - and the ways in which literature addresses contemporary political and social problems. Students will leave this course with a sense of the contours of the literatures of South Asia as well as ways of exploring the role of these literatures in the larger world. No prior knowledge of South Asia is required; this course fulfills the cross-cultural analysis requirement, and the Arts and Letters sector requirement.
Fall or Spring

1 Course Unit

SAST 0008 India: Culture and Society
What makes India INDIA? Religion and Philosophy? Architectural splendor? Kingdoms? Caste? The position of women? This course will introduce students to India by studying a range of social and cultural institutions that have historically assumed to be definitive India. Through primary texts, novels and historical sociological analysis, we will ask how these institutions have been reproduced and transformed, and assess their significance for contemporary Indian society.
Fall or Spring
Also Offered As: HIST 0851, RELS 0008
1 Course Unit

SAST 0009 Introduction to Hinduism
This course introduces students to the history, texts, philosophies and rituals of South Asia's oldest living religious traditions, represented today by the term "Hinduism." At the same time, it problematizes the idea of a monolithic "Hindu Tradition," in favor of an approach that recognizes several distinct, dynamic, yet symbiotic Hindu religious cultures. The course also places emphasis on the vitality of today's Hinduism(s), and the various historical, ritual, cultural, and social contexts that they represent and constitute. The course is organized around six modules: (1) Issues in the Academic Study of Hinduism; (2) Sanskrit (textual) tradition; (3) Philosophy; (4) Theology; (5) Ritual; and (6) Modernity and Contemporary Politics.

SAST 0012 Spices, Gunpowder, and Pagodas: A History of Southeast Asia
This undergraduate course introduces students to the history of Southeast Asia from the earliest centuries of the Common Era to c. 1950. It introduces students to Southeast Asia as religion, constituent historical societies of the region, and to the major academic literature and debates pertaining to the historical development of Southeast Asian societies and the region. Key themes explored include the origins and character of early civilizations, ideas and ideology about power and prowess, material culture, the transformation of ethnic, class, and gender relations, the impact of the arrival of world religions and early European expansion, and the nature of indigenous responses to the diffusion of new beliefs and ideas and intercultural contact.

SAST 0018 Climate Change and Community in Indonesia
Climate change isn’t fair. Countries and small island states that have contributed little to cause climate change are already confronting the worst impacts. This trend will continue. While wealthy countries in the Global North scramble to respond to sea level rise, drought, extreme weather, and other impacts with technological and infrastructural solutions, countries in the Global South know they won’t be able to protect their vulnerable populations in that way. For them, part of the answer lies in social resilience: the ability of a community or neighborhood in a city or region to withstand and recover from climate shocks and stresses. What are the ingredients that promote social resilience? In this first-year seminar, we will take Indonesia, the fourth most populous country in the world, as an example. Classified as a newly industrialized developing country, Indonesia has the capacity to mount some large projects such as the decision to move the government from Jakarta to a newly created capital city on the island of Borneo. At the same time, in Jakarta and all along the coasts of the thousands of islands that make up this archipelagic nation, vulnerable communities must foster resilience within themselves. Participants in this seminar will become acquainted with Indonesia’s colonial and recent history, learn about its deep cultural resources, and engage with its current efforts to mitigate emissions and adapt to climate change. Highlights include modules on the plan to protect Jakarta, designing the new capital city, and the use of the arts to increase community resilience in urban and rural kampongs in other parts of the country.

SAST 0050 Introduction to Indian Philosophy
This course will take the student through the major topics of Indian philosophy by first introducing the fundamental concepts and terms that are necessary for a deeper understanding of themes that pervade the philosophical literature of India – arguments for and against the existence of God, for example, the ontological status of external objects, the means of valid knowledge, standards of proof, the discourse on the aims of life. The readings will emphasize classical Hindu, Buddhist, and Jain philosophical articulations (from 700 B.C.E to 16th century CE) but we will also supplement our study of these materials with contemporary or relatively recent philosophical writings in modern India.

SAST 0054 Religion and Resistance in South Asia
In this course, we focus on various medieval and contemporary devotional forms of Hinduism, Buddhism and Islam in South Asia. Several definitions try to tie the idea of devotion to classicism and traditionalism with a set of conservative ideas. However, this course introduces the students to a diverse and pluralistic understanding of Hinduism, Buddhism and Islam that also has a history of resistance and protest beginning with poets such as Kabir and others from the Bhakti movement, and Sufi devotional contexts in South Asia. We read about the histories of these rebellious poets and their interventions into the traditional practices of devotion. We also discuss about how these medieval trends find their way into contemporary times enriching the discourses of Dalit, Muslim and Feminist movements.

SAST 0057 Planning to be Off-shore?
First-Year Seminar. In this course we will trace the economic development of India from 1947 to the present. Independent India started out as a centrally planned economy in 1949 but in 1991 decided to reduce its public sector and allow, indeed encourage, foreign investors to come in. The Planning Commission of India still exists but has lost much of its power. Many in the U.S. complain of American jobs draining off to India, call centers in India taking care of American customer complaints, American patient histories being documented in India, etc. At the same time, the U.S. government encourages highly trained Indians to be in the U.S. Students are expected to write four one-page response papers and one final paper. Twenty percent of the final grade will be based on class participation, 20 percent on the four response papers and 60 percent on the final paper.
Fall

SAST 0058 Doing Research: First-Year Seminar
This interdisciplinary course introduces students to qualitative research methods and frameworks in the social sciences and humanities. The goals of the semester will be for each student to develop their own research proposal for a specific project that they could imagine pursuing over the summer or later in their undergraduate career, and to develop a web-based exhibit of one Penn-based research collection of interest. Students will be introduced to a range of textual, archival and media collections and databases available at Penn, with particular attention to South Asia and other specific regions of interest to course participants. The class will visit the Penn Museum object collections and archives, the Art library, the Kislak Center for Rare Books and Manuscripts, Film Archives, and other special collections on campus, and meet with a representative from the Center for Undergraduate Research Funding (CURF). Students will learn how to frame an effective research question, situate it in relation to existing research, select the most appropriate methods for addressing the question, and develop an effective research plan. Each week students will be introduced to a new set of frameworks for analysis, see specific examples of their application drawn from anthropological, historical, and related scholarship and have opportunities to practice applying and evaluating the strengths and weaknesses of specific methodological tools. Students will also have the opportunity to identify sources of funding for summer research projects and prepare applications for these opportunities as part of the course. The course is ideal as an introduction to both the excellent libraries and research collections housed at Penn, and to a wide range of intellectual frameworks for engaging with these collections - a great way to kick off your undergraduate experience at Penn!

Sugar and Spices. Tea and Coffee. Opium and Cocaine. Hop aboard the Indian Ocean dhows, Chinese junks, Dutch schooners, and British and American clipper ships that made possible the rise of global capitalism, new colonial relationships, and the intensified forms of cultural change. How have the desires to possess and consume particular commodities shaped cultures and the course of modern history? This class introduces students to the cultural history of the modern world through an interdisciplinary analysis of connections between East and West, South and North. Following the circulation of commodities and the development of modern capitalism, the course examines the impact of global exchange on interactions and relationships between regions, nations, cultures, and peoples and the influences on cultural practices and meanings. The role of slavery and labor migrations, colonial and imperial relations, and struggles for economic and political independence are also considered. From the role of spices in the formation of European joint stock companies circa 1600 to the contemporary cocaine trade, the course's use of both original primary sources and secondary readings written by historians and anthropologists will enable particular attention to the ways that global trade has impacted social, cultural, and political formations and practices throughout the world.

SAST 0111 Beginning Hindi-Urdu Online (Startalk)
This introductory, proficiency-based course covers the core content of first-year Hindi-Urdu. It is designed for students with little or no prior exposure to Hindi or Urdu. The course covers all four language skills (speaking, listening, reading, and writing), but there is a special focus on developing speaking and listening skills. Students will also develop literacy skills in one script of their choice (Hindi or Urdu script). All written materials will be provided in both scripts. All classes are interactive and students acquire the language by using it in realistic contexts. Culture is introduced through various authentic materials including Bollywood songs. This program has a special application process. Please visit our website (https://www.southasiacenter.upenn.edu/startalk) for more information on the program and how to apply.
Summer Term

1 Course Unit

SAST 0570 Colonial South Asia, 1700 - 1950
The East India Company established its first trading outpost in India in 1612 and by 1765, was granted the right to collect revenue in eastern India on behalf of the Mughal Emperor. By 1858, Queen Victoria was Empress of India and by 1947, two independent nation states had emerged upon decolonization, India and Pakistan. The course will familiarize students with the outlines of the history of colonial South Asia, while exploring the following themes: How do we know what we know as historians, about the colonial era? What new institutions emerged in India under the British and, more importantly, what older institutions did they replace or modify? What kinds of modernity did South Asians begin to embrace, and what was the role of colonial rule in shaping and constraining these changes? How did different groups of South Asians perceive and respond to colonial rule, and how did this shape the emergence of new political movements in the early twentieth century?
Also Offered As: HIST 0570
1 Course Unit

SAST 0690 Love and Hate
This course focuses on important constants of human life as they are grappled with across religious traditions. Drawing on data across a range of religious traditions (such as Christianity, Hinduism, Judaism, Islam, Buddhism and Mesoamerican Religion), we will explore topics such as sexual identity, politics, religion and the individual in contemporary life; and eroticism, sex and love as they are reflected in religious literature, art and history. Divine love and religious devotion will be examined in relation to acts of violence, including human sacrifice and self-sacrifice in the past as well as the present. Other important questions considered in this course include: how does the body function as the locus in which religion is enacted? What is the conflict between our agency over our bodies and socioreligious claims over individual autonomy? Is violence an integral part of religion? What are religious understandings of the relationship between our agency over our bodies and socioreligious claims over individual autonomy? Is violence an integral part of religion? What are religious understandings of the relationship between love and sex? What does it mean for human beings to love God?

SAST 1000 South Asians in the United States
This course investigates the everyday practices and customs of South Asians in America. Every immigrant group has its own history, customs, beliefs and values, making each unique while simultaneously a part of the "melting pot" or salad bowl of American society. Yet how do people define themselves and their ethnicities living in a diasporic context? By taking into account the burgeoning South Asian American population as our model, this course will explore the basic themes surrounding the lives that immigrants are living in America, and more specifically the identity which the second generation, born and/or raised in American, is developing. South Asians in the U.S. will be divided thematically covering the topics of ethnicity, marriage, gender, religion, and pop culture. Reading and assignments will discuss a variety of issues and viewpoints that are a part of the fabric of South Asia, but will focus on the interpretation of such expressive culture in the United States.

1 Course Unit
SAST 1115 American Race: A Philadelphia Story (SNF Paideia Program Course)
This course proposes an examination of race with a two-pronged approach: one that broadly links the study of race in the United States with a multi-disciplinary approach and also simultaneously situates specific conversations within the immediate location of Philadelphia, home to the University. The broad historical examination advances key concepts of race and racialization, explores key theoretical methodologies, and highlights major scholarly works. For example, students will engage with the study of race through Africana Studies, Asian American Studies, Urban Studies and through Latin American & Latinx Studies. Readings and methodologies will introduce students to critical issues in education, in literature, in sociology, and with methods in oral history, archival work, and ethnography. Most importantly, this extensive approach highlights the impact of race across multiple communities including Black Americans, immigrant populations, and communities that are marginalized to emphasize connections, relationships, and shared solidarity. Students are intellectually pushed to see the linkages and the impacts of racism across and among all Americans historically and presently. As each theme is introduced a direct example from Philadelphia will be discussed. The combination of the national discourse on race, with an intimate perspective from the City of Philadelphia, engages students both intellectually and civically. The course will be led by Fariha Khan and Fernando Chang-Muy but guest instructors with varied disciplinary backgrounds and guest speakers from local community organizations. Each instructor not only brings specific disciplinary expertise, but also varied community engagement experience.

SAST 1117 Sounds of Power, Pleasure, and Resistance: Music, Media, and Performance in Modern South Asia
This undergraduate seminar will explore the interplay between music, media, and performance in the making of modern South Asia (c. 1750 to the present). We will study primary source materials including manuscripts, printed texts, sound recordings, films, and video-clips. What can the emergence of print and recorded sound on the subcontinent teach us about modernity? How did authors, entrepreneurs, politicians, and performers across time and space make use of new media and technologies? How did colonial rule and anti-colonial nationalism affect traditional methods of knowledge transmission and communities of hereditary performers? The class is organized along thematic fields that provide exposure to the content, history, and effects of various media and performance practices. Beginning with the function of music and dance at royal courts, we will familiarize ourselves with the transformation of North Indian Hindustani and South Indian Karnatak music under colonialism. We will pay particular attention to the multiple ways in which print, performance, and sound recording and transmission media played a role in the development of colonial institutions, nationalist mass movements, and cultural identities on the subcontinent. We will look at the realm of commerce and technology to explore the impact of lithographic print, the gramophone, the radio, and film on the development of knowledge and the shaping of colonial power and anti-colonial resistance. Finally, we will reflect on new modes of media consumption in the post-colonial nation states of India, Pakistan, Bangladesh, and Sri Lanka, and what they tell us about contemporary narratives of South Asian history.

1 Course Unit

SAST 1120 Community, Freedom, Violence: Writing the South Asian City
The South Asian city—as space, symbol, and memory—is the subject of this course. Through a range of readings in English and in translation, we will gain a sense for the history of the city and the ways in which it is a setting for protest and nostalgia, social transformation and solitary wandering. We will see reflections of the city in the detective novels sold in its train stations, the stories scribbled in its cafes, and films produced in its backlots. Readings will attempt to address urban spaces across South Asia through a range of works, which we will examine in the context of secondary readings, including histories and ethnological works that take up life in the modern city. Students will finish this course prepared to pursue projects dealing with the urban from multiple disciplinary perspectives. This course is suitable for anyone interested in the culture, society, or literature of South Asia, and assumes no background in South Asian languages.

1 Course Unit
SAST 1144 Modern Islam and Poetry
This course focuses on a basic question: How and why a modern poem turns into a narrative device to debate contemporary Islamic discourses? We begin exploring this question by taking note of how a 12th-century Persian poet Rumi became - as described by Time magazine - "the best-selling poet in the US today," and then introduces students to poems and various social, cultural and religious moments that were key in the making of modern Islam. Although the course primarily emphasizes the study of poetry produced and circulated among various Muslim communities world-wide, it also covers a diverse set of secondary readings from the field of religious studies, anthropology and literature to outline more clearly the contours of contemporary Islam. Readings begin with internationally famous Rumi and then include poets emerging from Arabic, Persian, Urdu, and several vernacular literary cultures in both Muslim and non-Muslim countries.

1 Course Unit

SAST 1160 Democracy and Development in India
This course introduces students to the complex issues surrounding questions of political and economic development in India, the world's largest democracy, and home to a large chunk of the globe's low-income population. Not surprisingly, the successes and failures of India are tremendously important to the study of democracy and development. The experiences of countries in this region have given rise to influential theories of development. The policy prescriptions these theories have produced have in turn been applied back onto India, with spectacular results - both positive and negative. Over the course of the semester, we will use the concrete experiences from the past seven decades in India to ask and answer fundamental questions about development, including: Does democratic politics help or hurt prospects for economic development? Why are some poor countries like India able to maintain democracies, while equally poor countries in the region, such as Pakistan, are not? How did British colonialism shape the nature of post-colonial development? Should the state or the market play a dominant role in the economies of newly independent nations? How can we best measure poverty, and what have been the challenges to reducing it in the developing world? What are the challenges and opportunities produced by rapid international migration to rich countries? The course is divided into four thematic units, which build upon one another. Within each theme, we draw from a wide array of source materials, reading scholarship in political science, economics, sociology, and anthropology, journalistic non-fiction, and even film. While empirically focusing on India, we will also read about the experiences of other countries in South Asia, and also from East Asia, Latin America, and sub-Saharan African in specific weeks. This will help students place the experiences of South Asian countries in broader comparative perspective.
Also Offered As: ANTH 1169
1 Course Unit

SAST 1169 Merchants, Saints, Slaves and Sojourners: the Worlds of the Indian Ocean
Do oceans serve to divide and demarcate distinct cultures and regions? Or do they facilitate exchange, connection and cosmopolitanism? This course will explore the manner in which the Indian Ocean has played both roles throughout history, and how the nature of those divisions and connections has changed over time from the ancient to the modern world. We will reconstruct the intertwined mercantile, religious and kinship networks that spanned the Indian Ocean world, across the Middle East, East Africa, South Asia, Southeast Asia and China, illuminating the histories of Hinduism, Buddhism and Islam, while also considering the role of successive imperial political formations, from Rome to Britain. Throughout the semester we will seek to understand the Indian Ocean through the people who lived and worked in its milieu - from consuls and military commanders, to traders, brokers, sailors, prisoners and slaves. Course materials will draw on a variety of disciplines (anthropology, archaeology, material culture, religious studies) to construct the cultural, economic, and environmental history of the Indian Ocean.

SAST 1171 Devotion's New Market: Religion, Economics, and the City
This graduate and undergraduate level course introduces students to the new forms of devotion as circulated in various urban centers in South Asia with a focus on growing market economy and urbanization. This course will particularly discuss case studies of how different modes of Hinduism, Islam, Christianity and other minor religions operate in an urbanized middle-class and educated communities. We will read theoretical and ethnographical works of contemporary research in religious studies and anthropology that deal with the questions of modernity, reformism and economic developmentalism. Throughout the semester, we focus on 1) how does religious forms such as sainthood practices, private and public rituals, narrative modes and everyday life evolve in the background of growing politics of development; 2) we discuss the tensions between classical notions of devotion and their new transformations in the city life, and finally 3) theoretically, we analyze concepts such as reformism, fundamentalism, recent discourses on identity politics and gender implications as connected to urban religious life.

Also Offered As: ASAM 2010, NELC 1615
1 Course Unit

SAST 1730 Introduction to Buddhism
This course seeks to introduce students to the diversity of doctrines held and practices performed by Buddhists in Asia. By focusing on how specific beliefs and practices are tied to particular locations and particular times, we will be able to explore in detail the religious institutions, artistic, architectural, and musical traditions, textual production and legal and doctrinal developments of Buddhism over time and within its socio-historical context. Religion is never divorced from its place and its time. Furthermore, by geographically and historically grounding the study of these religions we will be able to examine how their individual ethic, cosmological and soteriological systems affect local history, economics, politics, and material culture. We will concentrate first on the person of the Buddha, his many biographies and how he has been followed and worshipped in a variety of ways from Lhasa, Tibet to Phrae, Thailand. From there we touch on the foundational teachings of the Buddha with an eye to how they have evolved and transformed over time. Finally, we focus on the practice of Buddhist ritual, magic and ethics in monasteries and among lay communities in Asia and even in the West. This section will confront the way Buddhists have thought of issues such as "Just-War" Women's Rights and Abortion. While no one quarter course could provide a detailed presentation of the beliefs and practices of Buddhism, my hope is that we will be able to look closely at certain aspects of these religions by focusing on how they are practiced in places like Nara, Japan or Vietnam, Laos.

SAST 1770 1947-49: British Empire and the Partitions of South Asia and Palestine
The partitions of South Asia and Palestine marked the end of the British Empire in those regions. British colonial rule in India ended in 1947 with the emergence of not one, but two nation states, India and Pakistan. Decolonization was marked by mass migration and ethnic cleansing along their borders. An estimated million people died in the violence in less than a year, and 12.5 million people migrated from their homes. The British Empire also gave up its claims to Palestine in 1947, exhausted by the two nationalisms of Zionists and Palestinians. This partition set up the declaration of the state of Israel, and the War for Palestine. By 1949, almost a million Palestinians found themselves displaced over many borders, some also within the borders of Israel. This comparative course is organized around three themes - the prehistories of these cataclysmic events, the role of Empire in catalyzing them, and the afterlives of these events that continue to haunt us into the present, seventy-five years later. It explores the political history - and the collapse of politics - that led to violence on a scale that was without precedent in the history of the Indian subcontinent. It examines the political, social and cultural events that led to decades of war and exile, and shaped the lives of generations of Palestinians, Israelis and the wider Middle East. Primary sources will help to explore the perspectives of ordinary people whose lives were turned upside down in both places.

SAST 2120 Cities and Temples in Ancient India
The wooden architecture of ancient India’s cities is represented in relief carvings from Buddhist religious monuments of the early centuries A.D. and replicated in remarkable excavated cave cathedrals. This lecture course will trace that architectural tradition, its transformation into a symbolic vocabulary for a new structure, the Hindu temple, and the development of the temple in India from ca. 500-1500 A.D.

SAST 2200 Creating New Worlds: The Modern Indian Novel
Lonely bureaucrats and love-struck students, Bollywood stars and wayward revolutionaries: this course introduces students to the worlds of the Indian novel. From the moment of its emergence in the 19th century, the novel in India grappled with issues of class and caste, colonialism and its aftermath, gender, and the family. Although the novel has a historical origin in early modern Europe, it developed as a unique form in colonial and post-colonial India, influenced by local literary and folk genres. How did the novel in India—and in its successor states after 1947—transform and shift in order to depict its world? How are novels shaped by the many languages in which they are written, including English? And how do we, as readers, engage with the Indian novel in its diversity? This course surveys works major and minor from the past 200 years of novel-writing in India—with surveys both into predecessors of the Indian novel and parallel forms such as the short story. Readings will include works in translation from languages such as Hindi, Bangla, Urdu, Telugu, and Malayalam, as well as works written originally in English. Students will leave this course with an understanding of the Indian novel, along with the social conditions underlaying it, especially those relating to caste and gender.

SAST 2208 Doing Research: Qualitative Methods and Research Design
This interdisciplinary course introduces students to qualitative research methods and frameworks in the social sciences and humanities. Students will learn how to frame an effective research question, situate it in relation to existing research, select the most appropriate methods for addressing the question, and develop an effective research plan. Each week students will be introduced to a new set of frameworks for analysis, see specific examples of their application drawn from anthropological, historical, and related scholarship and have opportunities to practice applying and evaluating the strengths and weaknesses of specific methodological tools. The goals of the semester will be for each student to develop their own research proposal for a specific project. Students will be introduced to a range of textual, archival and media collections and databases available at Penn, with particular attention to South Asia and other specific regions of interest to course participants. Students will also have the opportunity to identify sources of funding for summer and/or thesis research projects, and submit applications for these opportunities as part of the course. The course is ideal for students considering summer research, an undergraduate thesis, or an application to the Fulbright or other research program. It may be taken by itself as a freestanding course, or may be sequenced with SAST 209, Writing Research, the following fall semester.

SAST 2211 Sex, Sexuality and Sexual Science in South Asia: Perspectives from the Past and Present
This course will introduce students to the problems of sex, sexuality and sexual science in South Asia over the centuries. Its central problem will be how sex, society and knowledge about sex have been transformed in South Asia under the conditions of colonial and postcolonial modernity. It will consider how a multitude of indigenous practices and knowledges, from the famous Kamasutra and its allied knowledges to the transgender communities, from the Lazzaat-un-Nisa to concubinage and the sexual norms of elite households, were framed and reframed during the nineteenth and twentieth centuries through the agency of a variety of institutions, groups and individuals. The course will also show how South Asia played a crucial role in the global evolution of sexual knowledge. Topics will include the varieties and functions of traditional sexual knowledges, colonial sexology, changing sexual identities and practices, the relation of psychiatry and medicine to sex, queer and transgender sexualities, and the complex and shifting role of the state and civil society to all of these topics.

1 Course Unit

SAST 2219 Social Inequalities: Caste and Race
This course introduces students to two systems of inequity, caste in South Asia, particularly in India, and race in the United States. It's main objective is to demonstrate how these modes of inequity, sometimes dismissed as outdated or irrelevant, continue to shape social and state institutions like family, law, and bureaucracy. The course will explore sociological literature on caste and race and examine how these systems existed in a range of historical contexts. It will examine how certain groups were recipients of economic, political, and social privilege, and how these groups othered communities such as Afro-Americans in the United States and Dalits in India. We will consider how privileged groups continue to represent modern institutions like state and law that fail to protect disadvantaged communities in both India and the United States. The course will also explore how privileged communities employ the tool of gendered violence of different kinds like physical violence against men and sexual violence against women of Afro-American communities and Dalit communities to maintain forms of social power and control. The final unit of the course will deal with the emerging and imagined solidarities between Afro-American social and political movements in the United States and Dalit movements in India.

1 Course Unit

SAST 2225 Imagining New Futures: Science Fiction and the Fantastic in South Asian Literature
This course examines the many ways in which writers have imagined the future, the past, and the unreal in South Asia. Rather than view science fiction as an isolated, modern genre, we will situate it alongside a range of genres and approaches to the fantastic. Although literature called science fiction is today a dynamic genre across South Asian languages, with a literary history in the twentieth and nineteenth centuries, writers draw from a range of other South Asian literary and cultural traditions, including Hindu mythology, Persian Qissa story cycles, and Sanskrit literature. In this course, therefore, we will explore the many genealogies of contemporary South Asian literature. Science fiction, and fantastic literature more generally, often functions as a means to depict social and technological change, the perception of the larger world, and contemporary politics. How did writers use amazing stories of brilliant inventions, dreams of a woman-led utopia, or dark conspiracies of disease to explore a range of questions. We will also consider how popular literary genres, such as the detective story, intersect with these other genres. Students will leave this course with a knowledge of the dynamic history of South Asian science fiction as part of a long history of imaginative literature, as well as as well as a deeper understanding of genre and the social history of literature.
1 Course Unit

SAST 2229 Dalit and Black Literatures: Caste, Race and Representation
The aim of this course is to study the historical conversations and comparisons between caste and racial oppression and the forging of categories of caste and/as race in the Dalit and African American literatures. Beginning with a brief survey of the historical conversations between the Black Panthers and Dalit Panthers, the course introduces some selected scholarly and literary debates on caste and/as racial discrimination, history of Afro-Dalit solidarity, literary representation of identities of caste and race and themes of freedom and equality. Selections of seminal texts and debates from the Dalit and African literary and cultural movements are included for discussion and analysis.

SAST 2231 The Sanskrit Epics
Ancient India’s two epic poems, originally composed in Sanskrit and received in dozens of languages over the span of two thousand years, continue to shape the psychic, social, religious, and emotional worlds of millions of people around the world. The epic Mahabharata, which roughly translates to The Great Story of the Descendants of the Legendary King Bharata, is the longest single poem in the world (approximately 200,000 lines of Sanskrit verse in the 1966 Critical Edition) and tells the mythic history of dynastic power struggles in ancient India. An apocalyptic meditation on time, death, and the utter devastation brought upon the individual and the family unit through social disintegration, the epic also serves as sourcebook for social and political mores and contains one of the great religious works of the world, The Bhagavad Gita (translation: The Song of God), in the middle of its sprawling narrative. The other great epic, The Ramayana (Rama’s Journey), though essentially tragic and about the struggles for power in ancient India, offers a relatively brighter narrative in foregrounding King Rāma, an avatar of the supreme divinity Viṣṇu, who serves as an ideal for how human beings might successfully negotiate the challenges of worldly life. Perhaps the most important work of ancient Asia, the Rāmāyaṇa also provides a model of human social order that contrasts with dystopic polities governed by animals and demons. Our course will engage in close reading of selections from both of these epic poems (in English translation) and scholarship on the epic from the past century. We will explore the Sanskrit epic genre, its oral and textual forms in South Asia, and the numerous modes for interpreting it over the centuries. We will also look at the reception of these ancient works in modern forms of media, such as the novel, television, theater, cinema and the comic book/anime.

SAST 2239 Adivasis/Indigenous Peoples & British Colonialism in India
Modern Western colonialism impacted the world in many ways. However, each country and community has had a different encounter and experience with colonialism. For the Adivasis (indigenous peoples) of India, it was catastrophic and marked a new phase in their history. The pre-colonial symbolizes a period of freedom in the hills and forest, whereas the colonial era symbolizes state coercion, eviction from land and the end of free movement in the forest. The proposed course discusses Adivasis’ encounters with the British colonial state. The course examines Indian history from the perspectives of Adivasis and contrasts these with dominant paradigms of Indian history. In this way, the course allows students to understand India from a different perspective. Under British colonialism, the diverse ethnic self-governing communities were imagined as primitive, uncivilized, barbaric, violent, backward and childlike people. The course discusses how such constructions impacted Adivasi social life and development. It traces how the expansion of the colonial state in forests and hills put an end to self-rule and induced massive migration from the plains of India and asks how Adivasi areas were integrated into the colonial economy. How did the colonial state use revenue and forest policies and regulations to bring these areas under its control? How did commercialization of agriculture and forest conservation work to further marginalize Adivasis? The course also examines how Adivasi knowledge of cultivation and forest conservation were viewed by the colonial state and asks why the colonial state encouraged caste-Hindu peasant migration into Adivasi areas. Finally, it traces the ways that colonial intervention has resulted in a series of contestations, acts of resistance, and insurgencies by Adivasi groups? Tracing forms of Adivasi resistance, the course puts these into conversation with intellectual history, emphasizing the role of rumours, myths, and orality, which provided the basis for the new insurgent consciousness that spread throughout Adivasi communities. Adivasi resistance movements have been documented and analyzed by colonial rulers and anthropologists. Colonial discourses were successful in criminalizing Adivasi politics. Ironically, many colonial-era discourses concerning Adivasis have been perpetuated within the post-colonial academy. The anti-colonial struggles of Adivasis were constructed as sporadic, spontaneous, unorganized and apolitical. The inauguration of the Subaltern Studies Project has reversed such arguments and attempted to provide ideological integrity to Adivasi politics. Students will be introduced to important literature on Adivasi anti-colonial insurgent consciousness and will be encouraged to think critically about the concepts and theories of subaltern politics. Assigned readings include texts by James Scott, Ranajit Guha, David Arnold, David Hardiman, Ajay Skaria, Dhanagare, Ramachandra Guha, Biswamoy Pati, Alpa Shah, Crispin Bates, Jangkhomang Guite and Bangya Bhukya. One aim of the course is to sensitize the students to how the political and cultural mobilizations by subalterns have contributed to the shaping of democracy.

SAST 2249 Re-enchanting Modernity: A Guide to Sufism in South Asia
This undergraduate level course introduces students to Sufism in modern South Asia, with a particular focus on how Muslim 'mystics' and their 'mystical' methods interacted with modernity, colonialism, technological developments and globalization. This course is divided into three parts. In the first part of this course, students are provided with an overview of the theological and historical background of the dominant expression of Islam that came to be identified as 'Sufism' or 'Islamic mysticism', the historical development of Sufi institutions and spaces in South Asia, and the historical emergence of South Asia as a prominent global center of Sufism. The second and main part of this course introduces students to a range of anthropological and historical works that are revelatory about how Sufi in modern South Asia were and remain intimately connected to modern political and technological developments. Providing students with an overview of Sufi re-enchantments of modernity from the 19th to 21st century, this section of the course focuses upon Sufi movements and masters who perpetuated or defended customary Islam through sophisticated appropriations of technologies and print networks, and negotiations with non-Muslim rulers and societies. Moreover, students will be introduced to anthropological and historical scholarship on religious worlds in modern South Asia that were and remain steeped in 'customary Islam' and Sufi performances and interpretations of Islam. These sources reveal how 'mystical' methods of performing Islam through ecstasy and spiritual restoration, and interpretations of dreams and visions, have regularly interacted with contemporaneous technologies. The third part of this course introduces students to the globalization of South Asian Sufism in North America, Europe and Southeast Asia. Herein, students will be encouraged to engage with anthropological and literary works pertaining to itinerant South Asian Sufi masters and their devotional cults, and introduced to active South Asian Sufi centers in Philadelphia. Not Offered Every Year
1 Course Unit

SAST 2250 History of Hinduism
This course will explore the history of the religion(s) designated by the term 'Hinduism' from their earliest articulations down to the rise of modern reforms in the nineteenth century. The study of Hinduism is perhaps unique among the scholarly traditions on world religions in that it has to date had no serious connected account of its historical development, as scholars have preferred to take structural, sociological, phenomenological, and doctrinal approaches to the religion. The course, after a brief review of scholarly approaches to Hinduism and their interpretive legacies, will seek to develop a historical sense of the religion through attention to shifts in liturgy, ritual, theology, doctrine, sacrality, kingship, and soteriology. The course will include the reading of primary sources relevant to understanding these changes a well as highlight both modern and premodern traditions of their interpretation. It will also consider and assess some of the key interpretive ideas in the study of Hinduism, including Sanskritization, Great and Little Traditions, cult formation, regional and popular religious movements, and canon formation. There will also be sustained consideration of the question of religion and socio-political power as well as relations between Hinduism and other religions like Buddhism and Islam. SAST 2251 Muslim Sainthood Practices
This course aims at introducing various classical, popular and modern Muslim saints in South Asia. We will read the life stories of these saints and focus on their contribution to various religions in South Asia. We will read the life stories of these saints and focus on their contribution to various religions in South Asia. We will learn about the major concepts initiated and circulated by these saints and their distinctive ways of dealing with spiritual aspects. While focusing on their sainthood practices, we also study the nature of the dialogue which addresses the questions such as pluralism, localism, and a new paradigm of spirituality that continually interacts with diverse modes of everyday life in South Asia. In order to understand their impact on visual and media cultures, we also watch two documentaries and compare these visual sources with sainthood literature and practices. Not Offered Every Year

SAST 2260 Women and the Making of Modern South Asia
This course on women in South Asian history has four objectives. 1. To acquaint ourselves with the historiography on South Asian women. 2. To gain an understanding of evolving institutions and practices shaping women's lives, such as the family, law and religious traditions. 3. To understand the impact of historical processes - the formation and breakdown of empire, colonialism, nationalism and decolonization - upon South Asian women between the sixteenth and twentieth centuries. 4. To become familiar with some of the significant texts written about and by women in this period. We will read a wide variety of primary sources including a Mughal princess' account, devotional verse authored by women, conduct books, tracts, autobiographies and novels. Spring

SAST 2262 The Making of Medieval India
This course will provide an in-depth understanding of South Asia in what is often called its 'medieval' period from the rise of the great temple kingdoms until the end of the Delhi Sultanate in the sixteenth century (c. 500 CE - c. 1500 CE). This millennium is arguably one of the most transformative in South Asia's history, a period when many of its most distinctive social and cultural features evolved. The course will provide both an overview of the period as well as an introduction to major interpretations and types of sources (textual, visual, and archaeological). The focus throughout the course will be on the heterogeneous development of states, societies and cultures with special attention to long-term processes of transformation. One set of themes explored will be largely social and economic, focusing on the development of agrarian and peasant societies, aristocracies and intellectuals, as well as the role of mercantile, pastoralist, nomadic and forest-living groups. Another set of themes will explore cultural transformation, including the development, transformation and interaction of religious practices, the emergence of cosmopolitan and regional literary cultures, and the rise of distinctive urban, courtly, and rural world views. Special themes of discussion may include violence and manners, material cultures, religious conflict, devotional religion and gender relations. Not Offered Every Year
Mutually Exclusive: SAST 6262
1 Course Unit
SAST 2293 Caste & Class in South Asia
This course will explore the reality of caste and class in South Asian society, and the theories, classical and modern, that attempt to explain it. We shall survey a wide sweep of sources, from the earliest evidence for a division into caste-classes in the Rig-Veda to reports in modern media of caste-related social problems; from orthodox Hindu normative texts justifying and upholding a rigid hierarchical division of society to voices, in Sanskrit and in vernaculars, criticizing the caste system. Our goal is to gain a nuanced and many-sided insight into a deeply pervasive phenomenon that has shaped South Asian society, culture, and religion in general (Muslim, Sikh, and Christian castes) from ancient time up to the twentieth century.

SAST 2334 A Survey of Sanskrit, Pakrit, and Classical Tamil Literature in Translation
This course will cover most of the genres of literature in South Asia’s classical languages through close readings of selections of primary texts in English translation. Special focus will be given to epics, drama, lyrical poetry, satirical works, and religious literature.
Not Offered Every Year
Also Offered As: COML 2334
1 Course Unit

SAST 2350 Eastern Christianities
The history of Christianity is often told from the perspective of its spread westward from Israel to Rome. Yet, in the first millennium, there were more Christians living in the East, in places as far away as Persia, Yemen, India, China, and Mongolia, than in the West. Spread across the Asian continent, these Christians were actively involved in local and imperial politics, composed theological literature, and were deeply embedded in the cultural fabric of their host societies. This course traces the spread of Christianity eastward, paying particular attention to its regional developments, its negotiations with local political powers, and its contact with other religions, including Buddhism, Manichaeanism, and Islam. Readings will cover a broad range of sources, including selections from classical Syriac literature, Manichaean texts, Mesopotamian magic bowls, the so-called “Jesus Sutras,” and the Quran. All readings will be provided in English, and no background is presumed.

Also Offered As: NELC 3260, RELS 2350
1 Course Unit

SAST 2452 Urdu Literature in Translation
This course will look at Urdu-Hindi expressions of resistance to militant fundamentalism trends, as well as literature resisting the influence of liberal progressive thought. Through comparisons of these divergent trends, we will explore the real inersections, comfortable comprises and contradictions that are internalized by people on the ground in developing societies. The historical and linguistic roots of resistance poetry will be studied, contrasting South Asian Urdu-Hindi poetry and prose (original and translated) with resistance movements from other parts of the world. This course provides students with the opportunity to deepen their knowledge of Urdu culture, literature, and society while expanding and refining their Urdu language skills. We will explore various social, political, and cultural issues through authentic sources such as journalism and media, prose literature and poetry, and film and music. The course is designed to be flexible to address students’ needs and interests. It targets students with two years of Urdu study or the equivalent proficiency. Prerequisite: Intermediate reading, writing and speaking skills in Urdu are recommended but contact the instructor if you are unsure of your eligibility and want to discuss further.

SAST 2550 Modern Southeast Asia
This first-year friendly course provides a broad introductory overview of modern Southeast Asia, surveying the region’s extraordinary diversity and ongoing social, economic, and political transformations. Centering on the nation-states that have emerged following the second World War, we will assess elements of Southeast Asian geography, history, language and literature, cosmologies, kinship systems, music, art and architecture, agriculture, industrialization and urbanization, politics, and economic change. We will remain particularly attentive to the ways Southeast Asians negotiate and contend with ongoing challenges with modernization, development, and globalization.
Also Offered As: ANTH 2550
1 Course Unit
SAST 2551 Media and Religion
This course will look at the ways that religion intersects with media in South Asia—exploring how the medium is the message. The class begins with a discussion of how it is difficult to define “religion” and “media” in the Global South, specifically in South Asia. We will analyze how religion and media are inextricable, and also how news media has gone about the business of turning religion into news. The class will familiarize students with a variety of media forms aside from the obvious sources of internet, TV and newspaper—these include traditional architecture, devotional texts, devotional poetry, music, visual-sensorial worship, modern film, recorded music, clothing, and live performance. We will conclude with a look at religion in forms of contemporary media, with particular attention to new media (TV, radio, internet). The course also offers students lectures providing a foundation of knowledge on a few of the primary religious traditions that will be central to the regions under discussion: Islam, Hinduism, Sikhism, Jainism, Zoroastrianism, and Christianity. There will be guest speakers and a visit to Penn Museum. While much of the course will be immersed in the history and the past, we will conclude by considering contemporary contexts, both globalized and local. There is no prerequisite for the course. All students are welcome.

1 Course Unit

SAST 2610 The Asian Caribbean
Although Asians have lived in the Americas for centuries, the Asian American community and experience tends to be defined by the post-1965 wave of immigration to the United States. In an effort to correct this narrative this course will explore the histories, experiences, and contributions of some of the forgotten Asians of the Americas. In particular, we will focus on the earlier labor migrations of Chinese and South Asian individuals to the Caribbean and the United States. The experiences of these individuals, who built railroads, cut sugarcane, and replaced African slave labor, complicate our understandings of race today. By examining the legal and social debates surrounding their labor in the 19th century and exploring how their experiences are forgotten and their descendants are rendered invisible today, we will complicate what is Asian America and consider how this history shapes immigration policies today.

SAST 2680 Art and Empire in India, 1750-1900
This course surveys transformations in visual culture between the Mughal and British empires in India from the mid-eighteenth through the nineteenth centuries. We shall consider changes in artistic production, patronage, publics, and viewing protocols in the contexts of the court and bazaar. We shall examine the emergence of new technologies and its impact on visual forms, media, and genres, focusing on the interplay of photography, print, and painting. We shall explore the role of institutions—the art school, the museum, and the archeological survey—and the professions and practices they engendered. We shall analyze how architecture and urban planning created new built environments and social relationships in colonial India. We shall view objects first-hand in the Penn Museum, Penn Libraries, and Philadelphia Museum of Art. This is a reading- and writing-intensive course. Students with a background in related disciplines such as literature, history, religion, anthropology, and South Asian Studies are welcome.

SAST 5189 Islam and the West
How did Muslims and modern South Asia interact with the West? What Islamic idioms, orientations and movements emerged in the nineteenth and twentieth centuries? Was South Asia a prominent global center of Islam? What kinds of Islamic educational institutions developed in modern South Asia? How did Muslims appropriate technologies? What materials were printed by Muslims? Were Muslims part of the British army? What was jihad in modernity? How did Muslim 'modernists' and 'traditionalists' respond to the challenges of colonialism and modernity? What was the nature of Sufism in modern South Asia? What was the nature of political Islam in South Asia? How did some Muslims demand a Muslim State? What was the Partition? How has Muslim history been remembered in Bangladesh, India and Pakistan? This is an introductory course, and aims to introduce students to a facet of the long history of Islam, Muslims, and the West.

How did the colonial state use revenue and forest policies and regulations to bring these areas under its control? How did commercialization of agriculture and forest conservation work to further marginalize Adivasis? The course also examines how Adivasi knowledge of cultivation and forest conservation were viewed by the colonial state and asks why the colonial state encouraged caste-Hindu peasant migration into Adivasi areas. Finally, it traces the ways that colonial intervention has resulted in a series of contestations, acts of resistance, and insurgencies by Adivasi groups? Tracing forms of Adivasi resistance, the course puts these into conversation with intellectual history, emphasizing the role of rumours, myths, and orality, which provided the basis for the new insurgent consciousness that spread throughout Adivasi communities. Adivasi resistance movements have been documented and analyzed by colonial rulers and anthropologists. Colonial discourses were successful in criminalizing Adivasi politics. Ironically, many colonial-era discourses concerning Adivasis have been perpetuated within the post-colonial academy. The anti-colonial struggles of Adivasis were constructed as sporadic, spontaneous, unorganized and apolitical. The inauguration of the Subaltern Studies Project has reversed such arguments and attempted to provide ideological integrity to Adivasi politics. Students will be introduced to important literature on Adivasi anti-colonial insurgent consciousness and will be encouraged to think critically about the concepts and theories of subaltern politics. Assigned readings include texts by James Scott, Ranajit Guha, David Arnold, David Hardiman, Ajay Skaria, Dhanagare, Ramachandra Guha, Biswamoy Pati, Alpa Shah, Crispin Bates, Jangkhomang Guite and Bhangya Bhukya. One aim of the course is to sensitize the students to how the political and cultural mobilizations by subalterns have contributed to the shaping of democracy. Course Requirements: Short writing responses to readings In-class presentations on readings Midterm short essay Final research paper based on primary and secondary sources. (No exams) Instructor's Objectives: 1. Students will understand indigenous perspectives on Indian culture and history. 2. Students will be able to situate indigenous movements in relation to Subaltern Studies, dominant schools of historiography, and colonial and postcolonial ethnography. 3. Students will be able to analyze primary sources and identify different schools of thought within secondary literature. 4. Students will be able to analyze the impact of colonial practices and discourses on indigenous cultures, histories and practices, and the forms of resistance that indigenous groups have utilized.

SAST 5410 Religion and the Visual Image: Seeing is Believing

Seeing is Believing engages in a historical, theoretical, and cross-cultural analysis of the place of visuality in religion and of religion in visual culture. We will examine images, buildings, places, objects, performances and events. The geographical, cultural and historical scope of the material is broad, including subjects from Europe, the Islamic World, non-Muslim South Asia, the US and Latin America from the medieval period until the present. Theoretical works will be read in conjunction with representative examples to invite intellectual engagement in a socially and historically grounded way. Important issues to be covered include the relationship of visual to material culture; visual theories versus theories of vision; locating religion in human sensory experience; perception at individual and collective levels; authenticics, fakes and simulacra; iconoclasm and image veneration; aesthetics, use and utility, and things.

SAST 5503 Historical Transitions in Early India

This course will focus on major historical transitions in the South Asian subcontinent until approximately AD 1200. It will focus on particularly on political, social and liturgical philosophical change. It will also introduce students to the major narratives and interpretations of the ancient and early medieval periods as they bear on these questions and will also familiarize students with the sources upon which this history has been based. It will review debates, critical perspectives and recent trends in this historiography with a view toward developing a sensitivity to the theoretical problems that attend the study of pre-modern India. Its persistent themes will be historical continuity and disjuncture in the history of religious practices and ideas, the emergence of political forms and the nature of the ‘state’ in precolonial India, transformations of society and economy, and the relationship between discursive production and relations of power. It will be of interest to students of history, literature, religion and archaeology.

1 Course Unit

SAST 5550 History of Hinduism

This course will explore the history of the religion(s) designated by the term 'Hinduism' from their earliest articulations down to the rise of modern reforms in the nineteenth century. The study of Hinduism is perhaps unique among the scholarly traditions on world religions in that it has to date had no serious connected account of its historical development, as scholars have preferred to take structural, sociological, phenomenological, and doctrinal approaches to the religion. The course, after a brief review of scholarly approaches to Hinduism and their interpretive legacies, will seek to develop a historical sense of the religion through attention to shifts in liturgy, ritual, theology, doctrine, sacral kingship, and soteriology. The course will include the reading of primary sources relevant to understanding these changes as well as highlight both modern and premodern traditions of their interpretation. It will also consider and assess some of the key interpretive ideas in the study of Hinduism, including Sanskritization, Great and Little Traditions, cult formation, regional and popular religious movements, and canon formation. There will also be sustained consideration of the question of religion and socio-political power as well as relations between Hinduism and other religions like Buddhism and Islam.

SAST 5552 MLA Proseminar: Philosophy East and West: An Introduction to Indian and Chinese Philosophy

This course will take the student through the major topics of Indian philosophy by first introducing the fundamental concepts and terms that are necessary for a deeper understanding of themes that pervade the philosophical literature of India -- arguments for and against the existence of God, for example, the ontological status of external objects, the means of valid knowledge, standards of proof, the discourse on the aims of life. The readings will emphasize classical Hindu, Buddhist, and Jain philosophical articulations (from 700 B.C.E. to 16th century CE) but we will also supplement our study of these materials with contemporary or relatively recent philosophical writings in modern India.

SAST 5554 Religion and Resistance in South Asia

In this course, we focus on various medieval and contemporary devotional forms of Hinduism, Buddhism and Islam in South Asia. Several definitions try to tie the idea of devotion to classicism and traditionalism with a set of conservative ideas. However, this course introduces the students to a diverse and pluralistic understanding of Hinduism, Buddhism and Islam that also has a history of resistance and protest beginning with poets such as Kabir and others from the Bhakti movement, and Sufi devotional contexts in South Asia. We read about the histories of these rebellious poets and their interventions into the traditional practices of devotion. We also discuss about how these medieval trends find their way into contemporary times enriching the discourses of Dalit, Muslim and Feminist movements.

SAST 5560 Modern History of Pakistan

This course is designed as an introduction to the contemporary history of Afghanistan and Pakistan, with an emphasis on the intertwined history of both countries; their other regional neighbors; and global politics. The course focuses on global trends such as empire, nationalism, the Cold War, superpower competition, and transnational Islamism. At the same time, participants will explore how local people viewed their lives amidst these trends, and how local dynamics on this northwestern fringe of the Subcontinent changed the face of global politics. The readings supplement political and economic history with primary sources drawn from popular poetry, oral narrative, and memoir. Finally, we'll be following current events in the region, and placing them in their sociohistorical context. Therefore, there are two main goals for this course: (1) to introduce the specific history of Afghanistan and Pakistan up to present, and (2) to introduce typologies of social institutions and events, assisting class participants to develop their own frameworks for interpreting current events in the region after the end of the course.

SAST 5571 Devotion's New Market: Religion, Economics, and the City
This graduate and undergraduate level course introduces students to the new forms of devotion as circulated in various urban centers in South Asia with a focus on growing market economy and urbanization. This course will particularly discuss case studies of how different modes of Hinduism, Islam, Christianity and other minor religions operate in an urbanized middle-class and educated communities. We will read theoretical and ethnographical works of contemporary research in religious studies and anthropology that deal with the questions of modernity, reformism and economic developmentalism. Throughout the semester, we focus on 1) how does religious forms such as sainthood practices, private and public rituals, narrative modes and everyday life evolve in the background of growing politics of development; 2) we discuss the tensions between classical notions of devotion and their new transformations in the city life, and finally 3) theoretically, we analyze concepts such as reformism, fundamentalism, recent discourses on identity politics and gender implications as connected to urban religious life.

1 Course Unit

SAST 5860 History of Islam in Asia
This class is designed to structure reflection on Islam and Islamic culture in South Asia—Indonesia, Pakistan, India, and Bangladesh. Contrary to the popular perception that the Middle East defines Islam, Asian countries not only host the most Muslims in the world but have been the source of some of Islam’s most important social and reform movements in the last three hundred years. This class looks at the history of Muslim societies across Asia not just as a religious community but also as a social and cultural bloc (a distinctive part of what Marshall Hodgson called the ‘Islamicate’ world, but also an area that challenges some of Hodgson’s assumptions about the Islamicate world). This course allows for the study of the Muslim world between the years 1700 to present. The class will allow students to compare and contrast Muslim societies over the last three centuries, examine points of confluence for geographically- or culturally-distinct Muslim peoples in the last three centuries, and in their writing assignments focus on the history of one society in a wider Islamicate context. In the process students will gain a more nuanced awareness of how Islam has made an impact in Asian countries, and how Asian countries have in turn impacted Islam.

SAST 6200 SAST Proseminar: History, Methods, and Theories of South Asian Studies
This course aims to provide students with the methodological tools and disciplinary perspectives necessary for the contemporary study of South Asia, while situating that study in the larger history of Area Studies as an interdisciplinary field of study. The course will include both in-depth discussion of the theory and history of Area Studies in the United States and the relation of area-specific study to nineteenth-century fields of philology and orientalism, as well as orientations and case studies in the major fields associated with South Asian Studies. Alongside these thematic concerns, studies will practice skills necessary for further study, including working with sources and archives, field-standard citation practices, and developing familiarity with new methodologies in the digital humanities. Relatedly, this course will deal with the major genres of academic writing associated with South Asian studies, including both departmental milestones such as the proposal and the dissertation, as well as journal articles and grant applications. The course will culminate in a student project which will work with one of these genres to present their own research interests. Completion of this course will prepare students to engage in the diverse conversations that make up contemporary South Asian Studies.

1 Course Unit

SAST 6262 The Making of Medieval India
This course will provide an in-depth understanding of South Asia in what is often called its 'medieval' period—from the rise of the great temple kingdoms until the end of the Delhi Sultanate in the sixteenth century (c. 500 CE - c. 1500 CE). This millennium is arguably one of the most transformative in South Asia’s history, a period when many of its most distinctive social and cultural features evolved. The course will provide both an overview of the period as well as an introduction to major interpretations and types of sources (textual, visual, and archaeological). The focus throughout the course will be on the heterogeneous development of states, societies, and cultures with special attention to long-term processes of transformation. One set of themes explored will be largely social and economic, focusing on the development of agrarian and peasant societies, aristocracies and intellectuals, as well as the role of mercantile, pastoralist, nomadic, and forest-living groups. Another set of themes will explore cultural transformation, including the development, transformation and interaction of religious practices, the emergence of cosmopolitan and regional literary cultures, and the rise of distinctive urban, courtly, and rural world views. Special themes of discussion may include violence and manners, material cultures, religious conflict, devotional religion and gender relations.

SAST 6604 Neoliberalism and the City
Over fifty percent of the world’s population now lives in cities. Neoliberalism—the ideology and accompanying policies and practices that champion the shifting of political decision making from the public sector to the private sector—has been widely recognized as having shown dramatic growth worldwide since the 1970s. It has also been widely regarded as a product of globalization. This course traces the history of neo-liberalism in global context with particular attention to neoliberalism’s relationship to cities, and examines the role that urban growth has played in spurring neoliberal policies and practices. It asks how policy makers, voters, and private interest worldwide have responded to the growth of urban poverty and slums, challenges with urban public education, unequal resource distribution, environmental pressures experienced within urban sanitation and waste disposal systems, and increased demands for municipal services like water, electricity, and transport infrastructures, and examined the rise of public-private partnerships, gated communities, initiatives to privatized education and municipal services, and efforts to relocate slum-dwellers and beautify cities as explicit strategies for attracting “global capital”. The course also asks how the recent rise of neoliberal policies and practices differs from earlier market-driven and private sector-led forms of political governance. The British and Dutch East India Companies are two famous examples of joint stock companies that assumed administrative and political roles over their colonies. How did the rise of these colonial relationships differ from current neoliberal shifts? Readings will draw heavily from ethnographic and urban studies, scholarship on South Asia, as well as Latin America, South Africa, the Middle East, Europe, and North America, exploring what each of these specific contexts has to teach us more generally about the relationship between urbanization, global capitalism, public and private sectors, and political processes and decision making. The course also asks how the recent rise of neoliberal policies and practices differs from earlier market-driven and private sector-led forms of political governance. SAST 6611 Sex, Sexuality and Sexual Science in South Asia: Perspectives from the Past and Present
This course will introduce students to the problems of sex, sexuality and sexual science in South Asia over the centuries. Its central problem will be how sex, society and knowledge about sex have been transformed in South Asia under the conditions of colonial and postcolonial modernity. It will consider how a multitude of indigenous practices and knowledges, from the famous Kamasutra and its allied knowledges to the transgender communities, from the Lazzat-un-Nisa to concubinage and the sexual norms of elite households, were framed and reframed during the nineteenth and twentieth centuries through the agency of a variety of institutions, groups and individuals. The course will also show how South Asia played a crucial role in the global evolution of sexual knowledge. Topics will include the varieties and functions of traditional sexual knowledges, colonial sexology, changing sexual identities and practices, the relation of psychiatry and medicine to sex, queer and transgender sexualities, and the complex and shifting role of the state and civil society to all of these topics.
1 Course Unit

SAST 6617 Readings in Modern Indian History
This course will introduce students to the major themes and debates of modern Indian historiography. Though the course will not provide a survey outline of events, it will be organized around themes that have a broad chronological sequence. It will touch on key topical themes like the transition to colonialism, the development of the colonial economy, the evolution and significance of colonial knowledge systems, the impact and shape of religious and social reform, the rise of nationalism and communalism, and peasant, labour and subaltern history. The goal of the course will be to provide students with an understanding of the significance of debates around key themes in modern Indian history and a familiarity with the different 'schools' or 'traditions' of historical interpretation, including Nationalist, Marxist, the so-called 'Chicago', and 'Cambridge' schools, as well as the Subaltern collective and post-Subaltern historiography.

SAST 6625 PHILOLOGY AND HISTORY: READING SOUTH ASIAN TEXTS
This course provides students with an overview of how South Asian texts have been treated historically and, specifically, the methods employed to read, interpret, and historicize these texts, the mechanics of their production and reception, literary and philological criticism, performance, and overarching theoretical perspectives from classical South Asia and contemporary critical theory. Topics and themes covered include: an overview of the languages of South Asia, trends and debates in South Asian literary history, issues of translation studies and vernacularization, the politics and poetics of language and hermeneutics, the process of making a critical edition, translation and theories of translation, and the use of literary materials by historians in research contexts.
1 Course Unit

SAST 6627 South Asia Literature as Comparative Literature
This course takes up the question of reading South Asian Literature both as a collection of diverse literary cultures, as well as the basis for a methodology of reading that takes language, region, and history into account. It takes as a starting point recent work that foregrounds the importance of South Asian language literatures, and their complex interactions, to an understanding of South Asian literary history, as well as critiques of the concept of world literature that question its underlying assumptions and frequent reliance on cosmopolitan languages such as English. In what ways can we describe the many complex interactions between literary cultures in South Asia, rooted in specific historical contexts, reading practices, and cultural expectations, while maintaining attention to language and literary form? How, in turn, can we begin to think of these literatures in interaction with larger conversations in the world? With these considerations in mind, we will examine works of criticism dealing with both modern and pre-modern literatures, primarily but not exclusively focused on South Asia. Topics will include the concept of the cosmopolis in literary and cultural history, the role of translation, the transformations of literature under colonialism, and twentieth century literary movements such as realism and Dalit literature. Readings may include works by Erich Auerbach, Frederic Jameson, Aijaz Ahmad, Gayatri Spivak, Aamir Mufti, Sheldon Pollack, David Shulman, Yigal Bronner, Shamshur Rahman Faruqi, Francesca Orsini, Subramanian Shankar, Sharankumar Kimbale, and Torlae Jatin Gajarawala. We will also examine selected works, in English and in translation, as case studies for discussion. This course is intended both for students who intend to specialize in the study of South Asia, as well as for those who focus on questions of comparative literature more broadly.

SAST 6631 The Sanskrit Epics

Ancient India's two epic poems, originally composed in Sanskrit and received in dozens of languages over the span of two thousand years, continue to shape the psychic, social, religious, and emotional worlds of millions of people around the world. The epic Mahabharata, which roughly translates to The Great Story of the Descendants of the Legendary King Bharata, is the longest single poem in the world (approximately 200,000 lines of Sanskrit verse in the 1966 Critical Edition) and tells the mythic history of dynastic power struggles in ancient India. An apocalyptic meditation on time, death, and the utter devastation brought upon the individual and the family unit through social disintegration, the epic also serves as sourcebook for social and political mores and contains one of the great religious works of the world, The Bhagavad Gita (translation: The Song of God), in the middle of its sprawling narrative. The other great epic, The Ramayana (Rama's Journey), though essentially tragic and about the struggles for power in ancient India, offers a relatively brighter narrative in foregrounding King Rama, an avatar of the supreme divinity Viṣṇu, who serves as an ideal for how human beings might successfully negotiate the challenges of worldly life. Perhaps the most important work of ancient Asia, the Rāmāyaṇa also provides a model of human social order that contrasts with dystopic polities governed by animals and demons. Our course will engage in close reading of selections from both of these epic poems (in English translation) and scholarship on the epic from the past century. We will explore the Sanskrit epic genre, its oral and textual forms in South Asia, and the numerous modes for interpreting it over the centuries. We will also look at the reception of these ancient works in modern forms of media, such as the novel, television, theater, cinema and the comic book/ anime.

SAST 6632 Hinduism and Colonial Modernity

This seminar deals with the question of modernity in South Asia, with a specific focus on the construction, dissemination, and politicization of Hinduism in nineteenth and twentieth century India. It focuses on three central heuristic lenses—namely those of European imperialism, Orientalism, and nationalism—to study modernity and its discontents. What was at stake in the encounter between colonial modernity and India's religions in nineteenth and early twentieth centuries? How did colonial and native discourses on "reform" and "revival" shape Indian religions as we understand them today? How is modern "Hinduism" inextricably hinged to early forms of cultural transnationalism, Orientalism, and incipient forms of nationalism? This seminar approaches questions such as these and others, with an eye to understanding how nineteenth and early twentieth century discourses continue to shape contemporary understandings of Hinduism in deep and highly politicized ways.

SAST 6634 Realism and South Asian Literature

This course examines problems of realism as a concept in relation to South Asian literature in the 19th and 20th centuries. Realism, both in its broadest sense as mimetic depictions in literature, as well as specific instantiations in art history, literature, and politics, has had a decisive impact on South Asian literary history. Yet as a topic realism presents several unique challenges, not unlike its twin in twentieth-century literature, the equally-protean modernism. In part this may stem from its conceptual and disciplinary range, pulling together problems in the history of science, the politics of art, and aesthetics. With these caveats in mind, we will examine a range of texts, both those specifically dealing with South Asian literature, as well as those considered foundational to understandings of realism at play. Readings in criticism may include Hegel, Marx, Ian Watt, Rabindranath Tagore, Gyorgy Lukacs, Bertold Brecht, Raymond Williams, Frederic Jameson, Theodor Adorno Walter Benjamin, Namwar Singh, Ram Vilas Sharma, WRRC, Michael Lowy, and Meenakshi Mukherjee, along with fiction and poetry by Nazeer Ahmed, Tagore, Munshi Premchand, Sa'adat Hasan Manto, Ismat Chughtai, O.V. Vijayan, and Uday Prakash. We will also discuss, when relevant topics relating to art history and cinema studies. This course will be suitable both for those students who wish to investigate realism in South Asian history, as well as those who want a thorough grounding in the theory and literary historiography of realism more generally.

SAST 6635 Marxist Concepts and Historical Writing

This course will introduce students to the main topics in Marxist historical analysis, with the aim of helping students understand the themes, concepts and debates that have animated Marxist historiography of different kinds. It will focus primarily on writing available in English, but will include work on both Europe and the wider world, particularly the colonial and postcolonial world. It will outline basic analytical traditions within Marxism and their relations to historical writing. Concepts will include economy and society, mode of production, surplus value, bourgeois revolution, imperialism, primitive accumulation, ideology, and hegemony. Themes and debates will include the agrarian and commercial contexts in the rise of capitalism, global dynamics of finance/late capitalism, peasant and worker histories, including class formation and rebellion and resistance. Readings may include excerpts from Marx's writing itself as well as Marxist thinkers like Lenin, Trotsky, Gramsci, Althusser, Adorno, Thompson, Banaji, and Harvey.

1 Course Unit

SAST 6645 Religion in Modern South Asia

This core seminar introduces graduate students to key themes in the study of religion in modern South Asia, with a focus on debates related to Hinduism, Islam, and Christianity in India from the nineteenth century to the present. Drawing upon a range of methodological and theoretical approaches, the seminar covers themes such as colonial and missionary constructions of religious categories, Orientalism and textual authority, social and religious "reform" movements, questions of caste and gender, and debates about religious nationalisms, democracy, and secularism.

SAST 6646 Performance, Politics, and Power in Modern India
This course locates performance in modern India – understood here as music, theatre, and dance – in the context of its social production and the production of its value. On the one hand, the course builds on perspectives drawn from Marx, Bourdieu, and others, and on the other, it examines themes of social hierarchy, taste habits, labor and corporeal exertion, and caste to think about the braiding of the arts and politics in modern India. A primary objective of the course is to de-center earlier nationalist-inflected histories about the arts in modern India, and bridge new thinking on performance across diverse forms of knowledge and critical methods. The course revolves around a number of significant questions for the study of culture in modern India. How does the modern Indian nation-state mediate and mold taste-habits and hierarchies? How do we historicize the making of the hierarchy of so-called “classical” and “folk” performance in modern India? How can we think of the arts as commodities of exchange and vessels of capital in the context of the majoritarian state? To what extent do late nineteenth and early twentieth-century “reform” and projects of cultural reinvention undergird the contemporary practice of these arts, particularly in the age of the majoritarian Hindu state? How do Dalit-Bahujan and minority religious communities claim their pasts and engage in articulatory practices that stage new modes of identity and resistance?

SAST 6680 Art and Empire in India, 1750-1900
This course surveys transformations in visual culture between the Mughal and British empires in India from the mid-eighteenth through the nineteenth centuries. We shall consider changes in artistic production, patronage, publics, and viewing protocols in the contexts of the court and bazaar. We shall examine the emergence of new technologies and its impact on visual forms, media, and genres, focusing on the interplay of photography, print, and painting. We shall explore the role of institutions -the art school, the museum, and the archeological survey- and the professions and practices they engendered. We shall analyze how architecture and urban planning created new built environments and social relationships in colonial India. We shall view objects first-hand in the Penn Museum, Penn Libraries, and Philadelphia Museum of Art. This is a reading- and writing-intensive course. Students with a background in related disciplines such as literature, history, religion, anthropology, and South Asian Studies are welcome.

SAST 7307 Intellectual Histories of South Asia in Global Context: Genealogies of the Present
This graduate seminar explores intellectual histories of contemporary South Asia. Readings will trace selected literary, cultural, political, religious, and linguistic genealogies that have shaped present-day understandings, practices, alliances and categories of thought in South Asia. Particular attention will be placed on 19th and 20th century global influences and interactions, including with England, Ireland, Germany, the Soviet Union/Russia, Turkey and the Arab World, East and Southeast Asia, the United States, and Africa. Topics will including histories of mapping and census efforts, publishing projects (including those funded by the Soviet Union and the United States), international conferences (e.g., the 1893 World’s Parliament of Religions at the World’s Fair in Chicago, 1955 Bandung Conference, the 2009 Durban Conference), technological influences and exchanges, and educational institutions and practices. The course will also include discussions of methods for carrying out intellectual history projects and would therefore be of use for students conducting research in other regions of the world.

SAST 7704 State, Society, and Culture in South Asia
This interdisciplinary course introduces graduate students to both classic and more recent theoretical frameworks used in understanding and analyzing society, culture, and the state, with particular reference to South Asia. Topics include bureaucracy and the state; power and performance; hierarchy and individualism; caste, community, and domination; money and markets; credit and debt; globalization and consumption; economic liberalization and political transformations; local and trans-local contexts of meaning; the environment, politics, and urban and rural ecologies; and culture and the changing shape of politics. Particular emphasis will be placed on the ways in which recent ethnographic and historical monographs have positioned their interventions in relation to broader debates and scholarship, both within scholarship on South Asia and more generally.
Not Offered Every Year
Also Offered As: ANTH 7704
1 Course Unit
SAST 7717 Literature in Translation: South Asia and the World
This course primarily introduces how to critically read literature in light of major global developments in contemporary literary theory and aesthetics from the past century (including structuralism, semiotics, reception theory, deconstruction, Marxist approaches to literature, feminist readings of texts, translation theory, etc.). It also draws attention to scholastic practices of textual criticism, paleography, and the preparation of critical editions. In doing so, the course emphasizes specific texts and essays related to South Asian literature, literary theory, and aesthetics from the past two millennia as case studies in order to: a) supplement students' knowledge of South Asian cultural production, b) frame social and historical questions related to art and aesthetics in contexts that have been otherwise under-explored, and c) to inspire debate about the extent to which analytical models and approaches developed within a given cultural setting are translatable to literary materials produced elsewhere. Students will develop their own projects, workshop what they have already begun, or explore new directions for studying literature and literary culture. Comparative approaches with other literary traditions are welcome and no background in South Asian languages or history is required.
Not Offered Every Year
1 Course Unit

SAST 7730 Southeast Asian Manuscript Traditions
This is an advanced PhD seminar in which the students will need advanced proficiency in Pali and at least one Southeast Asian Language (Burmese, Thai, Khmer, Lao, Leu, Khoen, Shan, and/or Lanna). Original manuscripts from Penn's collection of Southeast Asian religious, medical, botanical, historical, art, and literary archives will be examined and discussed.
Not Offered Every Year
Also Offered As: EALC 7590, RELS 7730
1 Course Unit

SAST 7762 Women in South Asia
This course on women in South Asian history has several objectives. To comprehend the genres of narratives in which South Asian women between the sixteenth and twentieth centuries have spoken and have been spoken about. To gain an understanding of evolving institutions and practices shaping women's lives, such as the family, law and religious traditions. To understand the impact of historical processes – the formation and breakdown of empire, colonialism, nationalism and decolonization – upon South Asian women between the sixteenth and twentieth centuries. We will read primary sources in addition to familiarizing ourselves with the historiography of women in South Asia.

SPAN 0091 Sustainable Development and Culture in Latin America
This interdisciplinary course exposes students to the three dimensions of sustainable development - environmental, economic, and social - through an examination of three products - peyote, coca, and coffee - that are crucial in shaping modern identity in areas of Latin America. The course integrates this analysis of sustainable development in relation to cultural sustainability and cultural practices associated with peyote, coca, and coffee and their rich, traditional heritage and place in literature, film, and the arts.
Fall, even numbered years only

SPAN 0092 Corona Capitalism: Crisis and Inequality Across the Americas
The coronavirus pandemic has exacerbated existing social inequalities. It has also accelerated the pace of history so sharply that the course of events has become nearly impossible to predict. This CWIC critical speaking seminar takes as its starting point our shared participation in the experience of uncertainty. At the same time, in looking to Latin America and the US, it articulates the fact that COVID-19 is anything but a "great equalizer": its impact varies widely and decisively across race, class, and gender. As the world confronts multiple layers of wreckage, not only biological but also ecological and economic, how can we frame and communicate both uncertainty and truth in a thoughtful way? We will examine social problems that have been laid bare by the pandemic and have since become sites of ethical and political reevaluation, namely health disparities, ecological racism, the distribution of labor, and criminal justice. This seminar's aim is to collaboratively assess one fundamental question: How can we understand COVID-19 not as an exceptional moment in history, but as a crisis of racial capitalism? By studying media, activism, policy, and scholarship produced during the pandemic alongside foundational critical theory, students will gain the analytical tools to contextualize its disproportionate global impact on poor communities and people of color, and to envision a just post-pandemic recovery. We will engage Marxist, feminist, and anti-racist theoretical approaches, and while familiarity with these methods is not necessary, an openness to them is. Self-examination is crucial to the success of the course, which requires students reflect on their own political, intellectual, and emotional investments in racialized inequality. This is a speaking intensive seminar intended to improve students' oral communication and listening skills through class discussions, prepared presentations, and mixed-media communication projects. Conducted in English.

1 Course Unit
SPAN 0093 Latinx Environmental Justice
This course explores the involvement of the Latinx environmental justice movement since the 1960s. It addresses theories and concepts of environmental racism and environmental justice, underscoring how Latinx have challenged, expanded, and contributed to the environmental justice discourse. In this course, students will explore national case studies of environmental and racial injustice as they bear on Latinx communities both in rural areas and in urban barrios throughout the United States. The course will analyze these case studies through the lens of Latinx artistic and literary texts (essays, paintings, short stories, documentaries, and short films) as they provide a unique historic and multicultural perspective of the Latinx experience with environmental injustice and of how Latinxs imagine alternative transitions and responses to environmental marginalization. In addition, the works of Latinx artists and writers will serve as case studies to deconstruct racial stereotypes of Latinxs as unconcerned about environmental issues, shedding light on how they share a broad engagement with environmental ideas. The case studies analyzed in this course emphasize race and class differences between farmworkers and urban barrio residents and how they affect their respective struggles. The unit on farmworkers will focus on workplace health issues such as toxic chemicals and collective bargaining contracts. The unit on urban barrios will focus on gentrification, affordable housing, and toxic substances in the home. We will also review current and past programs that have been organized to address the aforementioned problems. This is an Academically Based Community Service Course (ABCS course) through which students will learn from and provide support to a Latinx-serving organization in the City of Philadelphia on preventing exposure to hazardous substances, thus bridging the information gap on environmental justice issues in the Latinx community in Philadelphia. Information dissemination and education efforts will be conducted by collaborating with Esperanza Academy Charter School in Philadelphia to implement lessons on preventing exposure to hazardous substances. Studying environmental justice and pairing it with community service will heighten students' awareness of the complexities of culture, race, gender, and class while providing them with an invaluable experience of cross-cultural understanding.

1 Course Unit

SPAN 0100 Elementary Spanish I
This course is a first-semester language course that emphasizes the development of foundational listening, speaking, reading and writing skills while exploring the rich cultural mosaic of the Spanish-speaking world. Through listening activities and videotaped interviews with native speakers, your aural and oral abilities will improve at the same time that you will become familiarized with different varieties of standard spoken Spanish. You will be given ample opportunities to practice orally and in writing so that you can reinforce newly acquired vocabulary and grammatical structures. Reading strategies will facilitate your comprehension of the texts included in the course syllabus. Readings focused on a specific country or region, visual items (such as maps, photos, films) and a class project will advance your knowledge of Hispanic cultural practices and products while increasing your intercultural competence. Conducted entirely in Spanish, this class will provide you with guided practice before moving to more independent and spontaneous language production. Working in small groups and in pairs, you will participate in class activities that simulate real-life situations that will help you gain confidence communicating in Spanish. Goals: By the end of this course you can expect to handle a variety of day-to-day situations in a Spanish-speaking setting: 1) Greet and introduce people, invite people to events, accept or reject invitations, ask for directions, tell time, shop and order meals in a restaurant. 2) Talk about yourself, family, and friends regarding physical and emotional states, daily routines, leisure, preferences and plans. 3) Use the cultural information learned in class as an icebreaker to find common ground with a wide variety of Spanish speakers. Pre-requisite: Score below 380 on the SAT II or; below 285 on the online placement examination

SPAN 0103 Spanish for the Medical Professions, Elementary I
This course is a first-semester elementary Medical Spanish Language course and the first in the Spanish for Medical Professions sequence. It is designed for students with no prior coursework in Spanish. This course teaches beginning students the fundamentals of practical Spanish with an emphasis on medical situations and basic medical terminology. In this course, particular attention will be given to developing speaking and listening skills, as well as cultural awareness. It incorporates activities, vocabulary, and readings of particular interest to healthcare practitioners, while adhering to the goals and scope of Spanish 0100, the first-semester Spanish language course. Students who have already taken Spanish 0100 will not receive credit for Spanish 0105. Although these courses have different numbers, they are at the same level. Students who have already fulfilled the language requirement (AP, SAT II, etc.) or have taken courses at the 1000 and 3000 level, may not take basic-level language courses in the same language. They will not receive credit for this course (Spanish 0105). Prerequisite: Offered through the Penn Language Center.
Fall or Spring
1 Course Unit
SPAN 0120 Elementary Spanish I and II: Accelerated
This course is an intensive course designed for students who have already satisfied the language requirement in another language and have not previously studied Spanish. By combining the curriculum of Spanish 0100 and 0200, Spanish 0120 seeks to develop students’ foundational listening, speaking, reading, and writing skills while exploring the rich cultural mosaic of the Spanish-speaking world. Through listening activities and mini documentaries shown in class, students will develop their aural and oral skills at the same time that they will become familiarized with different varieties of standard spoken Spanish. Students will be given ample opportunities to practice orally and in writing so that they can reinforce newly acquired vocabulary and linguistic structures. Readings focused on a specific country or region, visual items (such as maps, photos, and films) and a class project will advance students’ knowledge of Hispanic cultural practices and products while increasing their intercultural competence. Goals: By the end of this course students can expect to handle a variety of day-to-day situations in a Spanish-speaking setting such as: 1) Introduce themselves, use greetings, describe people, places and things, give instructions, tell time, go shopping, order meals in a restaurant, and make travel plans. 2) Talk about themselves, families, and friends regarding academic life, daily routines, health, work, leisure, and preferences (using the present and past tenses). 3) Use the cultural information learned in class as an icebreaker to find common ground with a wide variety of Spanish speakers. Permit required from the course coordinator

SPAN 0210 Elementary Spanish I and II: Advanced Beginners
This course is designed for students who have some prior experience in Spanish. It is an intensive elementary-level language course that in one semester covers the material studied over two semesters in our Spanish 0100 and Spanish 0200. The course provides a quick-paced review of material normally covered in a first-semester Spanish course and then proceeds to introduce new material so students will be prepared to take Spanish 0300 during the subsequent semester. As in other Spanish courses, Spanish 0210 emphasizes the development of foundational listening, speaking, reading, and writing skills while exploring the rich cultural mosaic of the Spanish-speaking world. Through listening activities and mini documentaries shown in class, students will develop their aural and oral skills at the same time that they will become familiarized with different varieties of standard spoken Spanish. Students will be given ample opportunities to practice orally and in writing so that they can reinforce newly acquired vocabulary and linguistic structures. Readings focused on a specific country or region, visual items (such as maps, photos and films) and a class project will advance students’ knowledge of Hispanic cultural practices and products while increasing their intercultural competence. Conducted entirely in Spanish, this class will provide you with guided practice before moving to more independent and spontaneous language production. You will participate in paired, small-group and whole-class activities that simulate real-life situations that will help you gain confidence communicating in Spanish. Goals: By the end of this course students can expect to handle a variety of day-to-day situations in a Spanish-speaking setting such as: 1) Introduce themselves, use greetings, describe people, places and things, give instructions, tell time, go shopping, order meals in a restaurant, and make travel plans. 2) Talk about themselves, families, and friends regarding academic life, daily routines, health, work, leisure, and preferences (using the present and past tenses). 3) Use the cultural information learned in class as an icebreaker to find common ground with a wide variety of Spanish speakers.

SPAN 0215 Spanish for Health Care Professionals I and II
Spanish 0215 Elementary Medical Spanish I and II is an accelerated elementary-level language course that covers in one semester the material studied over two semesters in Spanish 0215 and 0205 (first and second semester elementary Medical Spanish). Designed for students who have some prior experience with the language, this course teaches the fundamentals of Spanish with an emphasis on medical situations and basic medical terminology. Particular attention is given to developing speaking and listening skills, as well as cultural awareness. Course activities, vocabulary, and materials are selected to be of particular relevance to healthcare practitioners. After successful completion of this course, students will be prepared to enroll in either SPAN 0300 or 0305. Prerequisite: A score between 380 and 440 on the SAT II or the written departmental exam; a score between 285 and 383 on the online placement examination, or permission of the instructor.
Summer Term
1 Course Unit
SPAN 0300 Intermediate Spanish I 
This course, a first-semester intermediate-level course, emphasizes students' acquisition of new vocabulary and linguistic structures in a cultural and communicative context while building on their previous speaking, reading, listening and writing skills. A substantial amount of the course is devoted to learning and using the past tenses. As in other Spanish courses, students will take part in a wide range of activities, including role-plays, film viewings, listening to music and class discussions of current social and cultural topics. Goals: By the end of the course students can expect to handle a variety of common situations in a Spanish-speaking setting such as: 1) Narrate past actions, ranging from personal anecdotes to historical events 2) Give advice, recommendations, and commands to people 3) Express their feelings and doubts when reacting to what others have said 4) Talk about their future expectations and wishes 5) Demonstrate their knowledge and understanding of Hispanic cultural practices and products.
Fall or Spring 
1 Course Unit

SPAN 0305 Spanish for the Medical Professions: Intermediate I 
This course is a first-semester intermediate-level language course that emphasizes the development of the four basic skills (reading, writing, listening, and speaking), and the acquisition of medical terminology. Students will be expected to participate in classroom activities such as role-plays based on everyday situations that they may encounter at work settings such as doctors' offices, clinics, hospitals, and emergency rooms in order to develop meaningful and accurate communication skills in the target language. Students will also review and acquire other essential tools of communication in the target language applicable both within and outside the medical field. Major course goals include: the acquisition of intermediate-level vocabulary, the controlled use of the past tense, and the development of writing skills at a paragraph level with transitions. Students who have already taken Spanish 0300 will not receive credit for Spanish 0305. Although these courses have different numbers, they are at the same level. Students who have already fulfilled the language requirement (AP, SAT II, etc.) or have taken courses at the 1000-3000 level may not take basic-level language courses in the same language. They will not receive credit for this course (Spanish 0305). Note: Offered through the Penn Language Center.
Fall or Spring 
1 Course Unit

SPAN 0340 Intermediate Spanish I and II: Accelerated 
This course is limited to those students who have satisfied the language requirement in another language. Spanish 0340 is an intensive intermediate-level language course that covers the material presented in Spanish 0300 and Spanish 0400. The course emphasizes the development of the four canonical skills (reading, writing, listening and speaking) within a culturally based context. Class time will focus on communicative activities that combine grammatical concepts, relevant vocabulary, and cultural themes. Students will participate in pair, small-group and whole-class activities to practice linguistic skills in a meaningful context. Major course goals include: the acquisition of intermediate-level vocabulary, the controlled use of the past tense and major uses of the subjunctive, and the development of writing skills. Students who have already fulfilled the language requirement in Spanish may not take basic level language courses (0100-0405) in the same language. Any questions about placement should be addressed to the Director of the Spanish Language Program.
Spring 
2 Course Units

SPAN 0400 Intermediate Spanish II 
This course is a fourth-semester language course that both reinforces and enhances the communicative skills (listening, speaking, reading and writing) previously acquired while exploring the rich cultural mosaic of the Spanish-speaking world. Class activities are designed so that students can build up these four skills in order to function at an intermediate language level. Readings focused on contemporary social and political issues of the Hispanic world will advance your knowledge of Hispanic and cultural practices while increasing your intercultural competence. Unique to this course is the preparation of an oral presentation on a topic related to the Hispanic world throughout the semester and presented during the last days of classes. The purpose of this task is to help students develop their presentational competence in Spanish. Conducted entirely in Spanish, this class will provide students with ample opportunities to work in small groups and in pairs while gaining confidence communicating in Spanish. This course satisfies the language requirement at Penn. Goals: By the end of this course, students can expect to handle a variety of situations in a Spanish-speaking setting, such as: 1) Express their opinions on a variety of contemporary events and issues 2) Defend their position when presented with a hypothetical situation 3) Deliver short presentations on a chosen subject after thorough preparation 4) Demonstrate their knowledge and understanding of Hispanic cultural practices and products.

1 Course Unit

SPAN 0405 Spanish for the Medical Professions: Intermediate II 
Spanish 0405, the continuation of Spanish 0305, is an intermediate-level integrated skills language course. It emphasizes the development of reading, writing, listening, and speaking abilities. Students will be expected to participate actively in classroom activities such as communicative activities, role-playing based on typical doctor/patient interactions as well as other medical situations. Students will also review and learn other essential tools of communication applicable both inside and outside the medical field. Students who have already taken Spanish 0400 will not receive credit for Spanish 0405. Although these courses have different numbers, they are at the same level. Students who have already fulfilled the language requirement (AP, SAT II, etc.) or have taken courses at the 1000-3000 level may not take basic level language courses in the same language. They will not receive credit for this course (Spanish 0405). This course satisfies the language requirement in Spanish. Note: Course is offered through the Penn Language Center. Pre-requisite: successful completion of Spanish 0300 or 0305 or a score of 550-640 on the SAT II or 454-546 on the online placement examination.
Fall or Spring 
1 Course Unit

SPAN 0800 Spanish Conversation 
SPAN 0800 is a half-credit conversation course. This course is restricted to residents of the Modern Language College House. This course can be taken twice for credit.
Two Term Class, Student must enter first term; credit given after both terms are complete 
0.5 Course Units
**SPAN 1000 Advanced Spanish**
The purpose of this course is twofold: (a) to develop students’ communicative abilities in Spanish, that is, speaking, listening, reading and writing, and (b) to increase their awareness and understanding of Hispanic cultures and societies. Homework and classroom activities are designed to help students build their oral proficiency, expand and perfect their knowledge of vocabulary and grammatical structures, improve their reading and writing skills, and develop their critical thinking abilities. The material for this class includes short stories, newspaper articles, poems, songs, cartoons, video clips and a novel, such as Cesar Aira’s La villa. At the completion of this course, students will feel confident discussing and debating a variety of contemporary issues (cultural and religious practices, family relationships, gender stereotypes, political events, immigration to the USA, etc.). Any questions about placement should be addressed to the Director of the Spanish Language Program.

Fall or Spring
Prerequisite: SPAN 0400
1 Course Unit

**SPAN 1005 Advanced Spanish for the Medical Professions**
The goal of this course is to provide advanced practice in Spanish to those students who are interested in pursuing careers in the medical and health care fields. Through readings and authentic materials on contemporary health issues, for example, i.e., H1N1 influenza, comparative healthcare systems, obesity, “chagas” disease, etc., students will acquire the vocabulary and grammatical structures needed to discuss a wide array of topics pertaining to the health-related professions. Students will also gain awareness of those health care issues affecting the Hispanic/Latino patient. Oral and written presentations will complement topics covered in class.

Spring
Prerequisite: SPAN 0400 OR SPAN 0405
1 Course Unit

**SPAN 1010 Business Spanish I**
Spanish for Business I provides advanced-level language students with technical vocabulary and oral communicative skills by studying business concepts as they apply to the corporate dynamics of the Spanish-speaking world, with an emphasis on the startup ecosystem. Students also analyze the business environment in a number of countries in Latin America and Spain taking into consideration local economies and markets in light of their recent history as well as current events.

Fall or Spring
Prerequisite: SPAN 0400
1 Course Unit

**SPAN 1110 Business Spanish II**
This course is specifically designed for advanced speakers of Spanish (i.e., native speakers, high-level heritage speakers, and students who have studied in a Spanish-speaking country for at least one semester). Through the study of entrepreneurship case studies in Latin America, students will take an in-depth look at the business dynamics and practices in a number of countries in the region. Students will also enhance their business and language skills through the creation of an entrepreneurial project that culminates in a final business pitch.

Fall
1 Course Unit

**SPAN 1200 Advanced Spanish II: Grammar and Composition**
This course is an advanced-level language course that emphasizes the acquisition of the tools necessary for successful written expression in Spanish. These tools include a solid knowledge of the major points of Spanish grammar, ample vocabulary, control of the mechanics of the language (spelling, punctuation, etc.), and a thorough understanding of the writing process. Throughout the semester, students will use these tools to analyze authentic texts and to produce a variety of written assignments. By the end of the course, students will have developed their awareness of the norms of standard Spanish and learned to incorporate these features into their own writing. The class will be conducted in Spanish and students are expected to speak in Spanish at all times. Any questions about placement should be addressed to the directors of the Spanish language program.

Fall or Spring
Prerequisite: SPAN 1000
1 Course Unit

**SPAN 1210 Spanish for the Professions**
Spanish for the Professions is designed to provide advanced-level language students with a wide-ranging technical vocabulary and the enhancement of solid communicative skills within the cultural context of several developing Latin American countries. Focusing on topics such as politics, economy, society, health, environment, education, science and technology, the class will explore the realities and underlying challenges facing Latin America. Through essays, papers, articles, research, discussions, case studies, and videotapes, we shall take an in-depth look at the dynamics of Latin American societies. The course will focus on--but not be restricted to--Mexico, Cuba and Argentina. Any questions about placement should be addressed to the Director of the Spanish Language Program.

Spring
Prerequisite: SPAN 1000
1 Course Unit

**SPAN 1300 Foundations of Spanish Culture and Civilization**
A general introduction to the study of Spanish culture, this course is designed to help students understand the historical foundations of contemporary Spanish society, its values and its institutions. The focus is on the main events of Spanish history and the origins and continuity of social and political institutions from pre-modern Spain up to the beginning of the modern era. This course is offered in the Penn-in-Madrid summer program.

Summer Term
1 Course Unit

**SPAN 1800 Contexts of Hispanic Culture and Civilization**
The primary aim of this course is to develop students’ knowledge of the geographical, historical and cultural contexts in those regions where Spanish is used. At the same time that they are introduced to research techniques and materials available in Spanish, students strengthen their language skills through readings, class discussions, and frequent writing assignments. This course is designed to give students a broad understanding of Hispanic culture that will prepare them for upper-level course work and study abroad.

Fall or Spring
Prerequisite: SPAN 1000 OR SPAN 1200
1 Course Unit
SPAN 1900 Introduction to Literary Analysis
By helping students develop skills to carefully read and analyze Spanish literary works, Spanish 1900 prepares them for upper-level courses and study abroad. After reviewing the main elements and conventions of the most popular genres (narrative, poetry, theater and essay), students become familiarized with current theoretical approaches to the study of literature with the purpose of applying them to their own analytical writing. The last weeks of the semester are devoted to the reading of a well-crafted detective novel and the examination of both its formal features and its ideological underpinnings. Throughout the course, students will have ample opportunities to hone their skills through the close reading and class discussion of varied and stimulating literary works produced by canonical and non-canonical Hispanic authors. Fall or Spring
Prerequisite: SPAN 1000 AND SPAN 1200
1 Course Unit

SPAN 3110 Introduction to Hispanic Linguistics
This course is an introduction to Hispanic linguistics, with special emphasis on the Spanish sound system (phonetics and phonology) and Spanish word-formation (morphology). Topics to be covered include articulatory phonetics, use of the phonetic alphabet, English and Spanish contrastive phonology, regional and social variations of Spanish pronunciation, word formation (derivation and composition), and the structure of the Spanish verb (inflection). We also explore basic notions of morphosyntax. Evaluation will be based on participation and homework, periodic quizzes, mid-term exam, and a final examination during finals week. Students will be required to write a linguistic autobiography.
Not Offered Every Year
Prerequisite: SPAN 1800 OR SPAN 1900
1 Course Unit

SPAN 3120 History of the Spanish Language
The course will explore three main issues: (1) The external history of the Spanish language: How do linguists read history? What cultural and historical events are important for the development of the Spanish language? As linguistic historians, we shall follow a canonical chronology that will examine pre-Roman influences, the spread of Latin, the linguistic fragmentation of the Peninsula, medieval attempts at standardization, trans-Atlantic expansion, the rise of the Academia, and the linguistic revival of the Autonomías. (2) The internal history of the Spanish language. Just when did Latin become Spanish? Why are some linguistic changes predictable while others aren’t? Why don’t Spanish speakers say “festivo” or “dueremimos”? But what about “cuentista”? Why do some Spanish speakers say “hablastes”, “sientensen” and “la di el libro a María”? And what about that lisping king? (3) What did the earliest Spanish texts look like? No prior knowledge of Latin or linguistics is necessary, but having an unquenchable curiosity about language is a definite advantage.
Not Offered Every Year
Prerequisite: SPAN 1800 OR SPAN 1900
1 Course Unit

SPAN 3130 Spanish-English Translation
This course is designed for students who already have a solid foundation in Spanish and English grammar. It provides an introduction to the theory and practice of translating between English and Spanish, addressing important topics such as discourse strategies, register and mood, dialect, genre, and cultural norms linked to written and oral communication. This is a very writing-intensive class, both in and out of the classroom. There are assigned readings from the textbooks and/or assignments online for every class meeting, which will be used to discuss both the practicalities and the cultural implications of translation. Class meetings will consist of class discussions about translation in general, and critiques of your own translation efforts in particular, combined with small group or pair work on translation exercises. While there will necessarily be some use of English, the class is conducted primarily in Spanish.
Not Offered Every Year
Prerequisite: SPAN 1800 OR SPAN 1900
1 Course Unit

SPAN 3200 Studies in the Spanish Middle Ages
This course treats the major works of the Spanish Middle Ages in light of their cultural and historical context. Course content may vary. Please see the department website for current course offerings: https://www.sas.upenn.edu/hispanic-portuguese-studies/undergraduate/hispanic-studies
Not Offered Every Year
Prerequisite: SPAN 1800 OR SPAN 1900
1 Course Unit

SPAN 3300 Studies in Golden Age and Early Modern Spanish Literature and Culture
A study of the major literary and cultural achievements of the Spanish Golden Age and early modern period. Course content may vary. Please see the department website for current course offerings: https://www.sas.upenn.edu/hispanic-portuguese-studies/undergraduate/hispanic-studies
Not Offered Every Year
Prerequisite: SPAN 1800 OR SPAN 1900
1 Course Unit

SPAN 3350 Don Quijote
A study of Miguel de Cervantes’ Don Quijote. Special attention will be paid to this masterpiece’s cultural and historical context, as well as to its reception.
Not Offered Every Year
Prerequisite: SPAN 1800 OR SPAN 1900
1 Course Unit

SPAN 3400 Studies in Spanish Literature and Culture: 1700-Present
Studies in Spanish Literature and Culture from the early Enlightenment through the present (1700 onward). Course content may vary. Please see the department website for current course offerings: https://www.sas.upenn.edu/hispanic-portuguese-studies/undergraduate/hispanic-studies
Not Offered Every Year
Prerequisite: SPAN 1800 OR SPAN 1900
1 Course Unit
SPAN 3402 The Evolution of the Don Juan Myth in the Western Literary Tradition
In this course, we will study the appearance and evolution of the Don Juan myth in Spain and in the Western literary tradition. We will start with Tirso de Molina’s Don Juan in his El Burlador de Sevilla and move from the Baroque and Romantic periods up to the modern day. In addition to studying the myth in its social and historical context, we will analyze the different dramatic and literary strategies used by authors in their construction of Don Juan. Finally, we will see how filmmakers have interpreted and deviated from the original myth.
Not Offered Every Year
1 Course Unit

SPAN 3404 The Spanish Short Story
In this course, we study the development and evolution of the Spanish short story from its origins to the present. Students learn to analyze and recognize different points of view, voices and narrative strategies in the readings, thus becoming more aware of their active role as readers in the text.
Not Offered Every Year
1 Course Unit

SPAN 3406 The Gothic Tradition in Spanish Literature
This course examines how the Gothic tradition is manifested in Spain by reading and analyzing the works of different Spanish writers from the Romantic period to the present. Although this is a course on Spanish literature, film and literary works from other national traditions will be incorporated in order to compare the different uses of the Gothic genre. By the end of the semester, students will have gained a better understanding of what the Gothic tradition is and how it manifests itself in different cultures.
Not Offered Every Year
1 Course Unit

SPAN 3430 Studies in Modern and Contemporary Spanish Literature
A study of the major literary works of modern and contemporary Spain. Course content may vary. Please see the department website for current course offerings: https://www.sas.upenn.edu/hispanic-portuguese-studies/undergraduate/hispanic-studies
Not Offered Every Year
Prerequisite: SPAN 1800 OR SPAN 1900
1 Course Unit

SPAN 3432 The Generation of 1898
"The Generation of ’98" is the name used to bring together a group of Spanish writers, essayists, and poets that were profoundly affected by the moral, social and political crisis in Spain caused by the military defeat by the US and the subsequent loss of its last overseas colonies. The shock of Spain's defeat in the war, which left it stripped of its last vestiges of empire and international prestige, provided an impetus for many writers and thinkers to embark on a period of self-searching and an analysis of Spain’s problems and its destiny. Novelists, poets, essayists, playwrights and thinkers such as Miguel de Unamuno, Antonio Machado, Azorín, Ramiro de Maeztu, Valle-Inclán, Gavíet, and Pío Baroja reinvented Spanish letters and restored Spain to a position of intellectual and literary prominence that it had not held for centuries. Some of the topics covered in this course may include Spanish nationalism and the identification of Spain with Castile, regionalisms, the crisis of Spain, tradition and reform, religion, the perception and position of Spain in the world, etc.

1 Course Unit

SPAN 3434 Spanish Post-Franco Narrative by Women
Since the final years of the Francoist dictatorship, women writers started to abandon the subterfuge strategies through which they had avoided the regime’s censorship. Soon they began to explicitly state issues that had been dangerous to mention previously, such as sex and female bodily experience, national and individual identity, collective and personal memory, and surrounding changing realities like consumerism, media, migration, counter cultural movements, globalization, and human (in)communication. Using journalistic collaborations and literary prizes, they wrote their way up to the editorial market and the Royal Academy of Language, becoming prominent figures in the aesthetic and gender debates of a new canon in the making. In this course we will analyze women’s writing in post-Franco Spain from a variety of perspectives and theoretical positions to explore what it means to be a woman writer: to be feminine, to be queer, to be oneself, to be a part of, to be free.
Not Offered Every Year
1 Course Unit

SPAN 3450 The Spanish Avant-Garde
A study of the Spanish avant-garde including the poetry of García Lorca, the films of Luis Buñuel, and the paintings of Salvador Dalí. We will explore the reception of the avant-garde and of Surrealism in Spain followed by the transformation of the avant-garde into two politically rival ideologies.
Fall or Spring
Prerequisite: SPAN 1800 OR SPAN 1900
1 Course Unit

SPAN 3502 Studies in Spanish, Latin American and Latinx Cinema
This course explores fundamental aspects of Spanish, Latin American, and Latinx cinema. Course content may vary. Please see the department website for current course offerings: https://www.sas.upenn.edu/hispanic-portuguese-studies/undergraduate/hispanic-studies
Fall or Spring
Also Offered As: CIMS 3600
Prerequisite: SPAN 1800 OR SPAN 1900
1 Course Unit
SPAN 3602 Cyborgs, Robots, Gadgets: Technologies in Contemporary Hispanic Cinema
Contemporary Latin American and Spanish Cinema offer a great reflection on the role that new technologies have in the film industry, and in our lives, in the digital era. Often, we find that technologies are used in an original way to overcome financial shortages in times of crisis, or when resources are limited. In this context, sometimes it is actually thanks to the new technologies that the work of new directors can be produced or distributed. Some recent Latin American and Spanish sci-fi movies find genuine ways to bring about social and political commentary through the use of technological narratives. Reflections on technology are often found in many other film genres too. Our aim in this course will be to explore the use of technology in film in the present and in the past, as well as to study narratives that place technology at the center. We will focus our study on films where technology is a key factor and will reflect on the impact of technologies in our experience as spectators as well.

Fall or Spring
Also Offered As: CIMS 3602, LALS 3602
1 Course Unit

SPAN 3620 Contemporary Spanish Cinema
A survey of Spanish cinema from the 1940's to the present. Special attention will be paid to the political, cultural, and social discourses that the films reproduce, adapt or question. This will allow an understanding of the implicit or explicit social dialogues that shaped cinematographic production in Spain from the post-civil war years, through Franco’s dictatorship, the advent of the democratic state in the 1970’s, and the economic and political crisis of the 21st century. At the same time films will be analyzed from the standpoint of their rhetorical construction, examining the specificity of cinematic language and its particular case.

Fall or Spring
Also Offered As: CIMS 3620
1 Course Unit

SPAN 3622 Spanish Non-Fictional Film
This course will explore the flourishing of the genre of documentary and non-fiction film in the last decades in Spain. We will study poetic, experimental, and social documentaries in their socio-historical context. For this we will need to engage not only films and film theory texts, but also historical recounts of contemporary Spain. We will also analyze the limits between non-fiction and fiction film, focusing on some recent works that have critically blurred the distinction between both genres.

Fall or Spring
Also Offered As: CIMS 3622
1 Course Unit

SPAN 3624 Crossing Borders in Spanish Cinema
Through the lens of border crossing, we will explore various current topics in Contemporary Spanish Cinema, such as immigration and emigration narratives in times of globalization and economic crisis, cinematic transgressions, and the emergence of glocal vs. national films. A fluid conceptualization of the border will guide our exploration on how Contemporary Spanish Cinema talks about gender, race, nationalisms, migration, history, and psychology.

Fall or Spring
Also Offered As: CIMS 3624
1 Course Unit

SPAN 3626 The Films of Pedro Almodóvar
One of the most acclaimed filmmakers of the world, Almodóvar is unquestionably the most international of today’s Spanish filmmakers. The aim of the course is to familiarize students with Pedro Almodóvar’s films and to shed some light to the intrincacies of its themes, cultural background, and visual style. Together with primary and secondary texts, we will offer an overview of Almodóvar’s career from his early iconoclastic Post Franco films of the late 1970’s and early 1980’s to his most recent work that has gained him a reputation as an international auteur. Some of the topics covered will include questions of national identity, gender, sexuality, as well as Almodóvar’s original use of genre, visual style, and the director’s relationship to the postmodern concepts of performance and parody.

Fall or Spring
Also Offered As: CIMS 3626
1 Course Unit

SPAN 3650 Latin American Cinema
This course aims to familiarize students with the major achievements and cultural moments of Latin American cinematography. We will cover a broad set of themes, nations and time periods employing multiple theoretical positions.

Fall or Spring
Also Offered As: CIMS 3650, LALS 3650
1 Course Unit

SPAN 3652 Crossing Borders in Latin American Cinema
Through the lens of border crossing this course will explore various current topics in Contemporary Latin American Cinema such as immigration, exile and travel narratives, gender crossing, social and political transgressions, transnationalism, and co-productions. The concept of the border will be fluid and central to the course, and through it we will reflect upon what separates and unites people at an individual, sexual, social, cultural, political, national, and geographical level. This focus will help us explore a wide variety of “movements”, negotiations, and transgressions taking place in the Latin American Cinema of the last three decades.

Fall or Spring
Also Offered As: CIMS 3652, LALS 3652
1 Course Unit

SPAN 3680 Studies in Hispanic Theater
This course offers students the chance to explore the rich theatrical traditions of Spain and Latin America as well as works by new Latinx writers. Course content may vary. Please see the department website for current course offerings: https://www.sas.upenn.edu/hispanic-portuguese-studies/undergraduate/hispanic-studies

Not Offered Every Year
Prerequisite: SPAN 1800 OR SPAN 1900
1 Course Unit
SPAN 3682 Staging Gender in Latin America
This course is based on an understanding of theater as a social space and a cultural practice that allows a collectivity—in its most concrete sense, the audience—to think in public about itself and about the fundamental forces facing and shaping it. In this course, we will mainly read contemporary Latin American and Latinx theatrical texts produced by women and queer authors. Our focus will be to discuss how, in the last approximately four decades, the stage as space and performance as practice have been used in Latin America as vehicles to represent and discuss issues related to gender and sexuality, to reconfigure the parameters of these debates, to examine and question existing social structures and attitudes, to propose and rehearse alternative solutions to the problems faced by marginalized subjects, and overall to explore the transformative capabilities of theater. We will also examine how conceptions and representations of gender and sexuality intersect with other identitarian coordinates, such as race, class, and nationality.
Not Offered Every Year
Also Offered As: LALS 3682
1 Course Unit

SPAN 3684 Theatrical Modernity and Postmodernity in Latin America
This course will focus on the theatrical tradition of Latin America during the twentieth and twenty-first centuries. In addition to reading some of the most influential playwrights of the region, we will discuss the aesthetic theories and sociohistorical contexts that have shaped contemporary Latin American and Latino theater and performance practices. We will also explore how the stage has served as a space in which to represent, debate, negotiate, and complicate issues related to national, gender, political, and ethnic communities and identities.
Not Offered Every Year
Also Offered As: LALS 3684
1 Course Unit

SPAN 3686 Spanish Theater: Text and Representation
This course treats multiple aspects of Spanish theater from the Golden Age (16th and 17th centuries) to the present through the reading of some of the main dramatists of the Spanish literary canon, such as Lope de Vega, Cervantes, and Lorca. We will focus on textual analysis and performance as two fundamental elements in the understanding and appreciation of Spanish theater. Students will thus gain an understanding of how to interpret the theatrical text, whether for meaning or performance.

SPAN 3700 Studies in Colonial Latin American Literature and Culture
The colonial period in Latin America spans more than 400 years. In this course, we study the culture of the Spanish-speaking Americas from the moment Christopher Columbus arrived in the Caribbean to the Latin American wars of independence during the 19th century. We analyze the role that religion and race played in the emergence of colonial societies and the development of national revolutionary discourses. We reflect on the tensions between indigenous populations and Spanish settlers and study the literary culture that developed in the New World. Course content may vary. Please see the department website for current course offerings: https://www.sas.upenn.edu/hispanic-portuguese-studies/undergraduate/hispanic-studies
Not Offered Every Year
Also Offered As: LALS 3701
Prerequisite: SPAN 1800 OR SPAN 1900
1 Course Unit

SPAN 3702 There Will Be Blood: The Spanish Conquistador in Latin America
Who was the Spanish conquistador? A brave soldier, a devoted religious man or a voracious murderer? An enemy or a benefactor? This course will study the Spanish “conquest” of the so-called New World through the analysis of a variety of cultural artifacts, from early modern chronicles, poems, and paintings, to contemporary literature and film. We will also reflect on the many forms in which Spanish colonialism is still visible in the present in Latin America and the United States.
Not Offered Every Year
Also Offered As: LALS 3704
1 Course Unit

SPAN 3730 Studies in Modern and Contemporary Latin American and Latinx Literature
Studies in Modern and Contemporary Latin American and Latinx Literature is an upper-division seminar taking a literary-studies approach to Latin American cultural production of the 19-21st centuries. Traditions covered may include Spanish American, Brazilian, and U.S. Latinx literature. Course content may vary. Please see the department website for current course offerings: https://www.sas.upenn.edu/hispanic-portuguese-studies/undergraduate/hispanic-studies
Not Offered Every Year
Also Offered As: LALS 3730
Prerequisite: SPAN 1800 OR SPAN 1900
1 Course Unit

SPAN 3732 New Women's Writing in Latin America
Something unprecedented has been happening lately in the Latin American literary market and scene. Women writers in great numbers have been publishing without encountering major constraints or pressures, and their fictional work has been receiving more awards and critical accolades than ever before. Hence, the assertion made by a critic in El País that “the other Latin American Boom is female” (“El otro ‘boom’ latinoamericano es femenino”) merits to be considered and unpacked. For example, compared to their literary precursors, have the 21st-century female authors presented the customary topics of family, motherhood, sexuality, illness, etc. in a radical new way? Which are the social, political, economic, and aesthetic conditions that have given rise to this proliferation of female authors and the wide acceptance of their fictional worlds? How do these conditions differ from the Latin American literary Boom of the 20th century? These are among the questions we will explore.
Not Offered Every Year
Also Offered As: LALS 3732
1 Course Unit

SPAN 3734 The Boom in Latin American Literature
Why has Latin American literature of the 1960s and 70s enjoyed such popular and critical success? What distinguishes this literature from that which was written earlier or later outside Latin America? Who were the major writers of the boom generation, and what unites or separates them? In this course we will consider these questions as we read important works of fiction by authors such as Cortázar, Donoso, Fuentes, GarcÃ­a MArquez, and Vargas Llosa as well as criticism that sheds light on the phenomenon of the boom.
Not Offered Every Year
Also Offered As: LALS 3734
1 Course Unit
SPAN 3736 Gabriel Garcia Marquez and Contemporary Latin American Literature
The publication of Cien años de soledad in 1967 was one of the highest moments in 20th century Latin American literature. Behind this masterpiece was the arduous and tireless work of a writer that had been searching for a personal style during almost a decade. This search also has a continental dimension. In García Marquez’s work, readers find the main topics, aesthetic quests, and political conflicts that hold the Latin American imagination, from the “crónicas de conquista” to the artistic vanguard adventures of the middle of the century. His narrative brings together early discussions about magical realism and the literary boom, anthropological inquiries rooted in transculturation and critical regionalism, as well as questions on class, race, and gender. In this course we will read different moments of his work, from his early short stories to some of his major novels. In addition, we will compare his writing to some of their contemporaries’, in order to have a comprehensive idea about the formation of the Latin American contemporary canon.
Not Offered Every Year
Also Offered As: LALS 3736
1 Course Unit

SPAN 3738 Coming of Age in Latin America
This course examines contemporary narratives of childhood and adolescence from Latin America. These stories critique the forces that shape young people as they attempt to define themselves in societies marked by racial, ethnic, gender, and class divisions. Texts for the course will be drawn from different geographical regions and will include novels, short stories, and films from the second half of the twentieth century through the present.
Not Offered Every Year
Also Offered As: LALS 3738
1 Course Unit

SPAN 3740 Latin American Non-Fiction
Non-fiction is a narrative mode that presents an account of a subject as fact, but it is a label that began to be used to describe narratives dealing with real events and real people fairly recently. This course studies the boundaries and tensions between facts and fiction in Latin America from a historical perspective. We start by analyzing early modern writing by the Spanish conquistadors: cannibals, human sacrifices, sirens, sea monsters, and El Dorado are just a few subjects that 16th-century "non-fiction" presents as facts. We move then to discuss 19th-century journalism about cosmopolitanism and urban modernization. Technological innovations blur the boundaries between fact and fiction, something that film, narrative journalism, and literary chronicles would exploit throughout the 20th century. Finally, we study non-fictional narratives in contemporary podcasts and social media.
Not Offered Every Year
Also Offered As: LALS 3740
1 Course Unit

SPAN 3742 Detectives, Criminals, and Writers in Latin American Fiction
Born as a sub-genre, crime fiction (a denomination which encompasses a wide number of texts: classical detective stories, hard-boiled, true-crimes and the non investigative crime novel) has become one of the most attractive literary forms for writers, and one of the favorites for readers. Because it is built around topics like the crime and the law, the search of the truth and the unstable identity of the subject in mass societies, it has become an ideal vehicle for the expression of the anxieties and fears that dominate the contemporary culture. Its versatility has been used by many Latin-American authors to express the social and political conflicts of the continent, as well as to explore its literary possibilities through formal searches, characterized by parody, meta-literary and auto referential games. The aims of this course are, on the one hand, to offer a panoramic vision of the crime fiction in Latin America through the reading of some representative authors; and, on the other, to explore how they can be read from different theoretical approaches.
Not Offered Every Year

SPAN 3800 Studies in Modern and Contemporary Latin American and Latinx Culture
Studies in Modern and Contemporary Latin American and Latinx Culture is an upper-division seminars focusing on significant issues or historical moments in Latin American and Latinx culture. Course content may vary. Please see specific Section Details.
Not Offered Every Year
Also Offered As: LALS 3800
Prerequisite: SPAN 1800 OR SPAN 1900
1 Course Unit

SPAN 3802 Rural Modernity in Latin America
This course focuses on literary representations of rural Latin America in the 19th and 20th centuries. While it remains common to understand rural societies as traditional or backward in contrast with the city (considered the true center of modernity), this course approaches rural social orders as sites of modernity and modernization in their own right. We will be primarily concerned with examining how works Latin American literature and film created rural visions of modernity, particularly in relation to land reform, political revolution, and capitalist agriculture. While our principal focus will be literature, we will also consider how other forms such painting, film, and political documents envisioned rural transitions.
Not Offered Every Year
Also Offered As: LALS 3802

SPAN 3806 Representations of Dictatorship in Latin America
This course explores the phenomenon of Latin American dictatorship through literature, film, graphic novels, and visual and public art, asking how these different media and genres depict and respond to state violence, censorship, and trauma. Not Offered Every Year Also Offered As: CIMS 3806, LALS 3806 1 Course Unit

SPAN 3808 Urban Life in Latin American Literature
Cities exist not just in their geography, but in their spirit, and that spirit is captured in literature. In this course we will read compelling works from Mexico City, Lima, and Buenos Aires that represent life in these Latin American capitals at different points between 1950 and the present. As we explore fiction and non-fiction writing by both established authors and emerging writers, we will learn about the forces and events that have shaped narratives of the urban experience in Latin America. Not Offered Every Year Also Offered As: LALS 3808 1 Course Unit

SPAN 3810 Jungle Narratives: la selva
The Amazon evokes opposing images. It has been described alternately as paradise lost and green hell, a place to retreat from the restraints of civilization or to be devoured by savage men and beasts, a land of natural abundance and environmental degradation. Our objective in this course is not to determine which of these descriptions is most accurate, but to understand how these opposing visions were created and what they aim to communicate. As we explore the Amazon through works of fiction we will gain an appreciation of the problems and promise of the region as well as greater knowledge of important authors, themes, and techniques of Latin American literature. Not Offered Every Year Also Offered As: LALS 3810 1 Course Unit

SPAN 3812 Afro-Latin America: Culture, History, and Society.
A transnational and interdisciplinary examination of the black experience in Latin America and the Spanish, French and English-speaking Caribbean, since slavery to the present. Combining cultural analysis with the study of fundamental theoretical works on race and racialization, students will gain a thorough comprehension of historical, political and sociocultural processes shaping the existence of Afro-descendants in the Americas. The scrutiny of systemic racial exclusion and marginalization will allow the understanding of how these dividing practices condition cultural production. Fall or Spring Also Offered As: AFRC 3812, LALS 3812 1 Course Unit

SPAN 3814 The Caribbean and Its Diaspora: Culture, History, and Society
A thorough panorama of contemporary Caribbean societies and their diasporic communities, this course enhances the students' knowledge of the region's main historical, political, and sociocultural trends. We will examine Caribbean multiple narratives of survival and resilience within a global context, through the study of 20th and 21st-centuries literary, cinematographic, musical, visual and performative works. The cultural analysis will be supported by a theoretical framework encompassing critical Caribbean theories on identity and identification. Fall or Spring Also Offered As: AFRC 3814, LALS 3814 1 Course Unit

SPAN 3800 New Hispanisms and Latin Americanisms
This course engages students with current theoretical trends and approaches to Spanish and/or Latin American literatures and cultures. Course content may vary. Please see the department website for current course offerings: https://www.sas.upenn.edu/hispanic-portuguese-studies/undergraduate/hispanic-studies Not Offered Every Year Prerequisite: SPAN 1800 OR SPAN 1900 1 Course Unit

SPAN 3902 What Is Mexico? Questioning Mexican Icons
This course studies Mexico through many lenses. From history to art, from anthropology to pop culture, from literature to film, our primary objective is to question current and past iconicity to develop a more complex and nuanced understanding of Mexican history and culture. Not Offered Every Year Also Offered As: LALS 3902 1 Course Unit

SPAN 3904 Latin American Marxisms
This course examines Marxist thought in Latin America, from the early twentieth century to the present. We will study a range of materials from across Spanish America, including essays, novels, films and speeches. We will ask after the specificities of Latin American Marxist thought (on the land and indigenous questions, dependency, guerrilla warfare, etc), at the same time as we contextualize those specificities within a wider Marxist tradition. We will also inquire into the waning and resurgence of Marxism in recent decades in the region. Not Offered Every Year Also Offered As: LALS 3904 1 Course Unit

SPAN 3906 The Ethnographer in Latin American Literature and Film
This course asks students to read ethnographic accounts as literature and to read literature in light of interdisciplinary concerns surrounding representation and cultural difference. The course is transhistorical and transatlantic but with a strong focus on Latin America. Not Offered Every Year Also Offered As: LALS 3906 1 Course Unit

SPAN 3908 Body and Soul: Hispanic Perspectives on Health, Illness, and Healthcare
TBD Not Offered Every Year Also Offered As: LALS 3908 1 Course Unit

SPAN 3910 Sustainable Development And Culture in Latin America
This interdisciplinary course exposes students to the three dimensions of sustainable development -environmental, economic, and social- through an examination of three products -peyote, coca, and coffee- that are crucial in shaping modern identity in areas of Latin America. The course integrates this analysis of sustainable development in relation to cultural sustainability and cultural practices associated with peyote, cocoa, and coffee and their rich, traditional heritage and place in literature, film, and the arts. This is an upper level seminar open to majors and minors of Spanish and those who have completed Pre-requisite SPAN 1800 or SPAN 1900 or permission of the Undergraduate Chair. Fall, even numbered years only Also Offered As: ENV 3053, LALS 3910 Prerequisite: SPAN 1800 OR SPAN 1900 1 Course Unit
SPAN 3912 Labor in Contemporary Latin American Literature and Film
This course studies different forms of cultural production (film, novel, short story, critical essay) as entry-points into new settings and conditions for work in Latin America, in four sectors that have become especially salient in the region: services, finance, agro-industry and the informal economy (particularly drug trafficking). We will pay particular attention to how cultural production allows us to envision the coordinates of the larger, indeed global, economy into which workers are inserted. We will examine how cultural production allows us to map shifting class structures; we will also track how gender and race shape national and international divisions of labor.
Not Offered Every Year
Also Offered As: CIMS 3912, LALS 3912
1 Course Unit

SPAN 3914 Madness and Women in Contemporary Hispanic Culture
The first goal of this course is to examine different “cases” of mental disturbances suffered by women in Hispanic cultures as they have been depicted in novels, short stories and films in the last 50 years. We will study “cases” of female madness precipitated by maternity, domesticity, sexuality, creativity, historical events, and biculturalism. Secondly, we will focus on the “causes” psychoanalysts, authors and literary critics have proposed for those mental illnesses. Additional readings on a wide range of disciplines—feminism, literary theory, psychology and psychoanalysis—will enhance our understanding of the works selected for the course and will help us identify their political and ideological underpinnings.
Not Offered Every Year
Also Offered As: LALS 3914
1 Course Unit

SPAN 3916 Contemporary Latin American and Latinx Cultural Production
This course provides an insightful understanding of the main aesthetic, socioeconomic, political and cultural dynamics at play in the 20th and 21st centuries Latin American societies and Latinx communities in the United States. Combining the analysis of literary, cinematic, musical, visual and performative works with theoretical readings, students will discuss issues on national, racial, gender and sexual identifications; pervasive inequalities, the impact of globalization and new technologies; migration, violence, terror, revolutions, dictatorships, the Cold War, and the implementation and effects of Neoliberalism.
Not Offered Every Year
Also Offered As: LALS 3916
1 Course Unit

SPAN 3930 Latinx Environmental Justice
This course explores the involvement of the Latinx environmental justice movement since the 1960s. It addresses theories and concepts of environmental racism and environmental justice, underscoring how Latinx have challenged, expanded, and contributed to the environmental justice discourse. In this course, students will explore national case studies of environmental and racial injustice as they bear on Latinx communities both in rural areas and in urban barrios throughout the United States. The course will analyze these case studies through the lens of Latinx artistic and literary texts (essays, paintings, short stories, documentaries, and short films) as they provide a unique historic and multicultural perspective of the Latinx experience with environmental injustice and of how Latinxs imagine alternative transitions and responses to environmental marginalization. In addition, the works of Latinx artists and writers will serve as case studies to deconstruct racial stereotypes of Latinx as unconcerned about environmental issues, shedding light on how they share a broad engagement with environmental ideas. The case studies analyzed in this course emphasize race and class differences between farmworkers and urban barrio residents and how they affect their respective struggles. The unit on farmworkers will focus on workplace health issues such as toxic chemicals and collective bargaining contracts. The unit on urban barrios will focus on gentrification, affordable housing, and toxic substances in the home. We will also review current and past programs that have been organized to address the aforementioned problems. This is an Academically Based Community Service Course (ABCS course) through which students will learn from and provide support to a Latinx-serving organization in the City of Philadelphia on preventing exposure to hazardous substances, thus bridging the information gap on environmental justice issues in the Latinx community in Philadelphia. Information dissemination and education efforts will be conducted by collaborating with Esperanza Academy Charter School in Philadelphia to implement lessons on preventing exposure to hazardous substances. Studying environmental justice and pairing it with community service will heighten students’ awareness of the complexities of culture, race, gender, and class while providing them with an invaluable experience of cross-cultural understanding.
Spring

SPAN 4000 Honors Thesis
Honors thesis in Hispanic Studies. This course is open to undergraduate majors by permit only.
Not Offered Every Year
Prerequisite: SPAN 1800
1 Course Unit
SPAN 5010 Norte, Desierto, Frontera: Countertopographies of the NAFTA Era
Analyzing Mexican, Central American, and Chicano cultural production, this course examines the uneven reconfiguration of the U.S.-Mexico borderland in the era of the North American Free Trade Agreement. Drawing from critical geography, migration and border studies, and the environmental humanities, we consider how different cultural artifacts have imagined, projected, and challenged the political and socioeconomic boundaries of the Americas. Likewise, we consider how trans-border bodies, spaces and species can help us interrogate the history of the nation-state as well as the social, emotional, and economic toll experienced on both sides of the border from the early 1990s onward. Interdisciplinary in methods and scope, this course strives to develop an understanding of how cultural production responds to and, at the same time, participates in the process of the production of social space. Particularly, we consider how the production of desert and border as sites of socio-ecological devastation prefigures a new paradigm in the relationship between the environment, migration, and the global circulation of capital. Special attention is given to demographic trends and new patterns of forced migration that arose in the aftermath of the so-called Mexican "War on Drugs" (2006). Assignments include presentations, discussion facilitation, and a seminar paper. Alongside readings and class discussions, students will work as a group on a digital timeline/story map using a platform of their choosing (StoryMapJS, ArcGIS StoryMaps, etc.) The goal is to create an annotated cartography of North America's recent history. The class is structured around four units, each refers to a particular concept that specifies the relation between spatial literary studies and the regional integration of North America: 1. North. Focusing on the entanglements between industrial agriculture and the rise of the maquila industry, we ask how labor and labor relations across the U.S.-Mexico border evolved during the last decade of the 20th century. We consider how urbanization and patterns of residential differentiation affected populations on both sides of the border, while allowing for the consolidation of Northern Mexican and Chicano identities. 2. Desert. Moving beyond the city as a spatial referent, we consider how the representation of the desert biome in contemporary Mexican and Central American narratives refracts the increased use of violence as a stabilizing agent for capital accumulation. We consider the novel's ecological imagination and the valences of form to think through the ecological crisis associated with the urban climatic. 3. Border. Studying how neoeextrativism intersects with new patterns of international forced migration, we analyze changes in public space, gender, and ethnic identities derived from the contemporary proliferation of borders (political, economic, geographical). We consider the role cultural production plays in the changing border and migration regimes across the Americas. 4. Countertopographies. Finally, we study how memorialization, nostalgia, and loss in contemporary Mexican, Central American, and Chicano cultural production become spatial vectors that extend the sense of belonging in geographical form. We consider how literary form delineates a countertopography to NAFTA's ideal of globalization.

1 Course Unit

SPAN 5450 Pedagogy Across the Spanish Curriculum
The aim of this seminar is to prepare graduate students in Hispanic Studies to teach a wide range of courses typically offered at North American universities and colleges—from the elementary Spanish language level to upper-division seminars—while familiarizing themselves with current approaches and methodological trends in foreign language instruction. By designing a content-based syllabus, including selecting and sequencing of reading materials and choosing the appropriate teaching in an effective and professional manner.

SPAN 5600 Pedagogy Across the Spanish Curriculum
The aim of this seminar is to prepare graduate students in Hispanic Studies to teach a wide range of courses typically offered at North American universities and colleges—from the elementary Spanish language level to upper-division seminars—while familiarizing themselves with current approaches and methodological trends in foreign language instruction. By designing a content-based syllabus, including selecting and sequencing of reading materials and choosing the appropriate learning outcomes and assessment methods, graduate students will gain a greater awareness of curricular planning and development and acquire skills that will significantly ease their future teaching endeavors such as using a backward design model, incorporating their own research interests into their lessons and courses, or taking advantage of the resources available to language learners on campus. By the end of the course, graduate students will be able to talk about and reflect on their teaching in an effective and professional manner.

SPAN 6942 Impossible Innocence: the Films of Luis Buñuel
This seminar provides an overview and introduction to the cinema of Luis Buñuel with a particular focus on the Spanish filmmaker's engagement with Surrealism. Drawing on the expertise of Professors Ignacio Javier López and Michael Solomon, each seminar session will unfold in two parts: first, Solomon will offer a general introductory lecture and discussion covering various aspects of Buñuel's filmography including technical and formal analyses that touch on cinematic form, montage, and adaptation, and a contextualization of Buñuel's cinema within the Spanish, Mexican, Latin American, and European (inter) national cinemas and cinematic movements; second, López will offer a close examination of individual films focusing on Buñuel's longstanding ties with (the ideas of) Surrealism from the movement's initial moment of scandal and provocation—understood by its participants as a new philosophy, a new way of seeing in an endless process of discovery—to a second moment in which Surrealism admits its failure to enact its revolutionary goals. Films covered in the seminar include Buñuel's Un Chien Andalou (1929), L'Age d'or (1930) Menjant garotes, Las Hurdes/Terre sans pain (1933/36) Los Olvidados (1950) Susana (1951) Ensayo de un crimen (1955), Death in the Garden (1956), Nazarín (1959), Viridiana (1961) The Exterminating Angel (1962), Belle de jour (1967), Tristana (1970), and Obscure Object of Desire (1977). Students will start working early on a final project (seminar paper), reworking the draft several times during the semester.

SPAN 6971 Afro-Latin America
In-depth analysis of the black experience in Latin America and the Spanish, French and English-speaking Caribbean, since slavery to the present. The course opens with a general examination of the existence of Afro-descendants in the Americas, through the study of fundamental historical, political and sociocultural processes. This panoramic view provides the basic tools for the scrutiny of a broad selection of literary, musical, visual, performance, and cinematic works, which leads to the comprehension of the different ethical-aesthetic strategies used to express the Afro-diasporic experience. Essential concepts such as negritude, creolite, and mestizaje, as well as the most relevant theories on identity and identification in Latin America and the Caribbean, will be thoroughly examined, in articulation with the interpretation of artistic works. Power, nationalism, citizenship, violence, religious beliefs, family and community structures, migration, motherhood and fatherhood, national and gender identities, eroticism, and sexuality are some of the main issues discussed in this seminar.
Not Offered Every Year
Also Offered As: AFRC 6971, ENGL 7971, LALS 6971
1 Course Unit
SPAN 6980 Workshop on Scholarly Writing
This course aims to develop awareness about what constitutes effective scholarly prose in Spanish. It proposes to hone the student's handling of writing as a vehicle for the expression of intellectual thought, but also to develop a consciousness of the rhetorical strategies that can be used to advance a critical argument effectively. Extensive writing exercises will be assigned; these will be followed by intense and multiple redactions of the work originally produced. The ultimate goal is for students to develop precision, correctness, and elegance in their written work. Students will also work on a class paper written previously, with a view to learning the process of transforming a short, limited expression of an argument into a publishable article.
Not Offered Every Year
1 Course Unit

SPAN 8000 Field Exam
PhD Exam Preparation
Not Offered Every Year

SPAN 9990 Independent Study
Independent research under the supervision of a department faculty member. Research topic is determined in consultation with the supervising faculty member.
Fall or Spring
1 Course Unit

Spanish and Portuguese (SPPO)
Statistics and Data Science (STAT)

STAT 0001 Introduction to Statistics and Data Science
In this course, we will learn introductory statistics using R with a focus on the application of statistical thinking to business problems. We will learn basic statistical concepts such as mean, variance, quantiles, and hypothesis testing, and basic R programming for data management and analysis. We will work with traditional R's data, frame structure as well as the modern tibbles structure. Prerequisite: Percentages, average, powers, exponential, linear equation of a line, polynomials.
0.5 Course Units

STAT 0002 Introduction to Statistics and Data Science
Continuation of STAT 0001. In this course, we will learn basic statistical inference procedures of estimation, confidence intervals, and hypothesis testing. We will also cover statistical inference of bivariate data, including correlation and simple linear regression models. Prerequisite: STAT 0001 or equivalent coursework. Basic R knowledge.
0.5 Course Units

STAT 1010 Introductory Business Statistics
Data summaries and descriptive statistics; introduction to a statistical computer package; Probability: distributions, expectation, variance, covariance, portfolios, central limit theorem; statistical inference of univariate data; Statistical inference for bivariate data: inference for intrinsically linear simple regression models. This course will have a business focus, but is not inappropriate for students in the college. This course may be taken concurrently with the prerequisite with instructor permission.
Fall or Spring
Mutually Exclusive: STAT 1018, STAT 1110
Prerequisite: MATH 1070 OR MATH 1400 OR MATH 1100
1 Course Unit

STAT 1018 Introductory Business Statistics
The STAT 1018 honors section, which fulfills the STAT 1010 requirement, will cover the fundamentals of statistics through the lens of a skeptical statistician. Students will be introduced to the R language, used widely in industry as well as in upper-level statistics and data science courses. Using real-world examples from current events, we will critically examine both well-accepted and controversial claims. We will cover the basics of probability and statistics (using a textbook costing less than $20), in order that you can use data to answer the following four questions:
1. What are the chances? 2. What's the best estimate? 3. Is there a difference? 4. How are these things related? This course is recommended for those considering a statistics and data science concentration or minor, as well as anyone interested in a more challenging introductory approach to statistical concepts. STAT Minors, and STAT Concentrators are strongly encouraged to take 1018 and 1028. No prior knowledge of programming, probability or statistics is required for this course.
Fall
Mutually Exclusive: STAT 1010, STAT 1110
Prerequisite: MATH 1070 OR MATH 1400 OR MATH 1100
1 Course Unit

STAT 1020 Introductory Business Statistics
Continuation of STAT 1010 or STAT 1018. A thorough treatment of multiple regression, model selection, analysis of variance, linear logistic regression; introduction to time series. Business applications. This course may be taken concurrently with the prerequisite with instructor permission.
Fall or Spring
Mutually Exclusive: STAT 1028, STAT 1120, STAT 4310
Prerequisite: STAT 1010 OR STAT 1018
1 Course Unit

STAT 1028 Introductory Business Statistics
Honors continuation of STAT 1010 or STAT 1018. A thorough treatment of multiple regression, model selection, analysis of variance, linear logistic regression; introduction to time series. Business applications. This course may be taken concurrently with the prerequisite with instructor permission.
Mutually Exclusive: STAT 1020, STAT 1120, STAT 4310
Prerequisite: STAT 1010 OR STAT 1018
1 Course Unit

STAT 1110 Introductory Statistics
Introduction to concepts in probability. Basic statistical inference procedures of estimation, confidence intervals and hypothesis testing directed towards applications in science and medicine. The use of the JMP statistical package. Knowledge of high school algebra is required for this course.
Fall or Spring
Mutually Exclusive: STAT 1010
Prerequisite: STAT 1010 OR STAT 1018
1 Course Unit

STAT 1120 Introductory Statistics
Further development of the material in STAT 1110, in particular the analysis of variance, multiple regression, non-parametric procedures and the analysis of categorical data. Data analysis via statistical packages. This course may be taken concurrently with the prerequisite with instructor permission.
Fall or Spring
Mutually Exclusive: STAT 1020
Prerequisite: STAT 1110
1 Course Unit

<tr>
<td>STAT 4010</td>
<td>Sports Analytics: A Capstone Course</td>
<td>This course would introduce undergraduate students to the growing field of sports analytics, while allowing them to implement and integrate their knowledge base by exploring real sports data sets to solve real problems. While the context will be sports related, the skills and techniques gained will be widely applicable and generalizable with applications in diverse areas. Prerequisites: Mutually exclusive with STAT 7050. Permission from the Instructor is required. Interest in sports is highly recommended. Prerequisite: WH 1010 AND WH 2010 AND MGMT 3010 0.5 Course Units</td>
</tr>
<tr>
<td>STAT 4020</td>
<td>Communicating Quantitative Analyses: A Capstone Course</td>
<td>This seminar-based capstone course provides an opportunity for students to hone their data science and statistical modeling skills, together with an emphasis on communicating quantitative results. This is not a &quot;theoretical class&quot;, but rather, experiential. It allows students to bring their existing knowledge from different disciplines to bear on new problems. Four real-life datasets will be analyzed during the quarter, and students will be expected to create and deliver in-class presentations for each analysis. The course will be suitable for anyone who wants more opportunities to analyze data, continue developing their programming skills and those who want to gain experience and confidence in presenting results and conclusions to an audience. Prerequisites: The course presumes that students have taken a sequence of stat courses such as STAT 1010/1020, or 4300/4310 and so are familiar with multiple regression analysis. In addition, they should have been exposed to more advanced techniques such as logistic regression and tree-based methods as taught in classes like STAT 4220/4230/4710. Finally, it will be assumed that students have knowledge of a programming language such as R or Python and an IDE such as R-Studio or Jupyter notebooks. Classes such as STAT 4050/4700 would meet this requirement. Prerequisite: (STAT 1010 OR STAT 1018 OR STAT 1020 OR STAT 1028 OR STAT 4300 OR STAT 4310) AND (STAT 4050 OR STAT 4700 OR STAT 4710) AND WH 1010 AND WH 2010 AND MGMT 3010 0.5 Course Units</td>
</tr>
<tr>
<td>STAT 4050</td>
<td>Statistical Computing with R</td>
<td>The goal of this course is to introduce students to the R programming language and related eco-system. This course will provide a skill-set that is in demand in both the research and business environments. In addition, R is a platform that is used and required in other advanced classes taught at Wharton, so that this class will prepare students for these higher level classes and electives. Fall or Spring Mutually Exclusive: STAT 7050 Prerequisite: STAT 1020 OR STAT 1120 OR STAT 4300 0.5 Course Units</td>
</tr>
<tr>
<td>STAT 4100</td>
<td>Data Collection and Acquisition: Strategies and Platforms</td>
<td>This course will give students a solid grasp of different data collection strategies and when and how they can be applied in practice. At the same time, important current ideas such as data confidentiality and ethical considerations will be addressed. The students will have designed and fielded a sample survey and designed and fielded an online experiment (A/B test). Students will collect data through web scraping activities and/or using an API. Students will summarize their collected data and subsequent inferences, culminating in an in-class presentation. The course is structured in two parts. The first part is a &quot;Strategies&quot; component that addresses different data collection strategies. It will discuss sample designs, experimentation, and observational studies. The second part of the course is about &quot;Platforms&quot; and goes into the practicalities of the implementation of the different strategies. Given the data science perspective of this course, this is focused on web enabled approaches. Familiarity with either R or Python is expected and specifically the R-Studio or Jupyter notebooks platforms. Courses such as Stat 4050 or Stat 4770 would meet this requirement. Statistics, through the level of multiple regression is required. This requirement may be fulfilled with undergraduate courses such as Stat 1020 or Stat 1120. Mutually Exclusive: STAT 7100 0.5 Course Units</td>
</tr>
<tr>
<td>STAT 4220</td>
<td>Predictive Analytics for Business</td>
<td>This course follows from the introductory regression classes, STAT 1020, STAT 1120, and STAT 4310 for undergraduates and STAT 6130 for MBAs. It extends the ideas from regression modeling, focusing on the core business task of predictive analytics as applied to realistic business related data sets. In particular it introduces automated model selection tools, such as stepwise regression and various current model selection criteria such as AIC and BIC. It delves into classification methodologies such as logistic regression. It also introduces classification and regression trees (CART) and the popular predictive methodologies known as random forest and boosted trees. By the end of the course the student will be familiar with and have applied these concepts and will be ready to use them in a work setting. The methodologies are implemented in a variety of software packages. Applications in JMP emphasize concepts and key modeling decisions. This course may be taken concurrently with the prerequisite with instructor permission. Fall or Spring Mutually Exclusive: STAT 4230, STAT 7220, STAT 7230 Prerequisite: STAT 1020 OR STAT 1120 OR STAT 4310 0.5-1 Course Unit</td>
</tr>
<tr>
<td>STAT 4230</td>
<td>Applied Machine Learning in Business</td>
<td>This course introduces students to machine learning techniques used in business applications. The main topics include: cross validation, variable selection procedures, shrinkage methods such as lasso, logistic regression, k-nearest neighbors, ROC curves and confusion matrix, trees, kernel based learning, resampling techniques, random forests, boosting, neural networks &amp; deep learning, matrix methods including singular value decomposition (SVD) and its application in principal component analysis (PCA), and some unsupervised methods such as k-means and density based clustering. Students will learn to apply these methods in a wide range of settings such as marketing and finance, and will gain hands-on experience through class assignments and competitions. This course may be taken concurrently with the prerequisite with instructor permission. Mutually Exclusive: STAT 4220, STAT 7220, STAT 7230 Prerequisite: STAT 1020 OR STAT 1120 OR STAT 4310 1 Course Unit</td>
</tr>
</tbody>
</table>
STAT 4240 Text Analytics
This course introduces modern text analytics, and the tools of natural language processing. Text and language are powerful repositories of knowledge and information, but the semi-structured nature of language makes deriving insights from text challenging. Modern analytic techniques introduced in this course make it significantly easier even for non-specialists to use text and language data to drive deep insights. The course will use several examples from real world applications in different industries such as ecommerce, healthcare and finance to illustrate these techniques. Students should be familiar with regression models at the level of Stat 6130 or Stat 1020, and the Python language at the level of Stat 4770 or Stat 7770. Familiarity with the Jupyter notebook development environment is presumed, as well as common Python packages such as pandas, NLTK and SpaCy. Those with more knowledge of Statistics, such as from Stat 7220/4220, or computing skills will benefit. The predominant software used in the course is Jupyter notebooks that use a Python interpreter. Familiarity with basic probability models is helpful but not presumed.
Fall or Spring
Mutually Exclusive: STAT 7240
0.5 Course Units

STAT 4300 Probability
Discrete and continuous sample spaces and probability; random variables, distributions, independence; expectation and generating functions; Markov chains and recurrence theory.
Fall or Spring
Mutually Exclusive: STAT 5100
Prerequisite: MATH 1080 OR MATH 1410 OR MATH 1510
1 Course Unit

STAT 4310 Statistical Inference
Graphical displays; one- and two-sample confidence intervals; one- and two-sample hypothesis tests; one- and two-way ANOVA; simple and multiple linear least-squares regression; nonlinear regression; variable selection; logistic regression; categorical data analysis; goodness-of-fit tests. A methodology course. This course does not have business applications but has significant overlap with STAT 1010 and 1020. This course may be taken concurrently with the prerequisite with instructor permission.
Fall or Spring
Mutually Exclusive: STAT 5100
Prerequisite: STAT 4300
1 Course Unit

STAT 4320 Mathematical Statistics
An introduction to the mathematical theory of statistics. Estimation, with a focus on properties of sufficient statistics and maximum likelihood estimators. Hypothesis testing, with a focus on likelihood ratio tests and the consequent development of "t" tests and hypothesis tests in regression and ANOVA. Nonparametric procedures. This course may be taken concurrently with the prerequisite with instructor permission.
Spring
Mutually Exclusive: STAT 5120
Prerequisite: STAT 4300 OR STAT 5100
1 Course Unit

STAT 4330 Stochastic Processes
An introduction to Stochastic Processes. The primary focus is on Markov Chains, Martingales and Gaussian Processes. We will discuss many interesting applications from physics to economics. Topics may include: simulations of path functions, game theory and linear programming, stochastic optimization, Brownian Motion and Black-Scholes.
Fall or Spring
Mutually Exclusive: STAT 5330
Prerequisite: STAT 4300 AND (MATH 2400 OR MATH 3120 OR MATH 3140)
1 Course Unit

STAT 4350 Forecasting Methods for Management
This course provides an introduction to the wide range of techniques available for statistical modelling and forecasting of time series. Regression methods for decomposition models, trends and seasonality, spectral analysis, distributed lag models, autoregressive-moving average modelling, forecasting, exponential smoothing, and ARCH and GARCH models will be surveyed. The emphasis will be on applications, rather than technical foundations and derivations. The techniques will be studied critically, with examination of their usefulness and limitations. This course may be taken concurrently with the prerequisite with instructor permission.
Fall or Spring
1 Course Unit

STAT 4420 Introduction to Bayesian Data Analysis
The course will introduce data analysis from the Bayesian perspective to undergraduate students. We will cover important concepts in Bayesian probability modeling as well as estimation using both optimization and simulation-based strategies. Key topics covered in the course include hierarchical models, mixture models, hidden Markov models and Markov Chain Monte Carlo. A course in probability (STAT 4300 or equivalent); a course in statistical inference (STAT 1020, STAT 1120, STAT 4310 or equivalent); and experience with the statistical software R (at the level of STAT 4050 or STAT 4700) are recommended.
Spring
1 Course Unit

STAT 4700 Data Analytics and Statistical Computing
This course will introduce a high-level programming language, called R, that is widely used for statistical data analysis. Using R, we will study and practice the following methodologies: data cleaning, feature extraction; web scrubbing, text analysis; data visualization; fitting statistical models; simulation of probability distributions and statistical models; statistical inference methods that use simulations (bootstrap, permutation tests). Prerequisite: Waiving the Statistics Core completely if prerequisites are not met. This course may be taken concurrently with the prerequisite with instructor permission.
Fall or Spring
Prerequisite: (STAT 1010 AND STAT 1020) OR (STAT 1110 AND STAT 1120) OR STAT 4310 OR (ECON 2300 AND ECON 2310)
1 Course Unit
STAT 4710 Modern Data Mining
With the advent of the internet age, data are being collected at unprecedented scale in almost all realms of life, including business, science, politics, and healthcare. Data mining—the automated extraction of actionable insights from data—has revolutionized each of these realms in the 21st century. The objective of the course is to teach students the core data mining skills of exploratory data analysis, selecting an appropriate statistical methodology, applying the methodology to the data, and interpreting the results. The course will cover a variety of data mining methods including linear and logistic regression, penalized regression (including lasso and ridge regression), tree-based methods (including random forests and boosting), and deep learning. Students will learn the conceptual basis of these methods as well as how to apply them to real data using the programming language R. This course may be taken concurrently with the prerequisite with instructor permission.
Fall or Spring
Prerequisite: STAT 1020 OR STAT 1120 OR STAT 4310
1 Course Unit

STAT 4740 Modern Regression for the Social, Behavioral and Biological Sciences
Function estimation and data exploration using extensions of regression analysis: smoothers, semiparametric and nonparametric regression, and supervised machine learning. Conceptual foundations are addressed as well as hands-on use for data analysis. This course may be taken concurrently with the prerequisite with instructor permission.
Spring
Also Offered As: CRIM 4740
Prerequisite: STAT 1020 OR STAT 1120
1 Course Unit

STAT 4750 Sample Survey Design
This course will cover the design and analysis of sample surveys. Topics include simple sampling, stratified sampling, cluster sampling, graphics, regression analysis using complex surveys and methods for handling nonresponse bias. This course may be taken concurrently with the prerequisite with instructor permission.
Not Offered Every Year
Prerequisite: STAT 1020 OR STAT 1120 OR STAT 4310
1 Course Unit

STAT 4760 Applied Probability Models in Marketing
This course will expose students to the theoretical and empirical "building blocks" that will allow them to construct, estimate, and interpret powerful models of consumer behavior. Over the years, researchers and practitioners have used these models for a wide variety of applications, such as new product sales, forecasting, analyses of media usage, and targeted marketing programs. Other disciplines have seen equally broad utilization of these techniques. The course will be entirely lecture-based with a strong emphasis on real-time problem solving. Most sessions will feature sophisticated numerical investigations using Microsoft Excel. Much of the material is highly technical.
Spring
Also Offered As: MKTG 4760
1 Course Unit

STAT 4770 Introduction to Python for Data Science
The goal of this course is to introduce the Python programming language within the context of the closely related areas of statistics and data science. Students will develop a solid grasp of Python programming basics, as they are exposed to the entire data science workflow, starting from interacting with SQL databases to query and retrieve data, through data wrangling, reshaping, summarizing, analyzing and ultimately reporting their results. Competency in Python is a critical skill for students interested in data science. Prerequisites: No prior programming experience is expected, but statistics, through the level of multiple regression is required. This requirement may be fulfilled with Undergraduate courses such as Stat 1020, Stat 1120.
Also Offered As: OIDD 4770
Mutually Exclusive: PHYS 1100
0.5-1 Course Unit

STAT 4800 Advanced Statistical Computing
This course will build on the fundamental concepts introduced in the prerequisite courses to allow students to acquire knowledge and programming skills in large-scale data analysis, data visualization, and stochastic simulation. Prerequisite: STAT 7700 or 7050 or equivalent background acquired through a combination of online courses that teach the R language and practical experience. This course may be taken concurrently with the prerequisite with instructor permission.
Spring
Prerequisite: STAT 4050 OR STAT 4700
1 Course Unit

STAT 4900 Causal Inference
Questions about cause are at the heart of many everyday decisions and public policies. Does eating an egg every day cause people to live longer or shorter or have no effect? Do gun control laws cause more or less murders or have no effect? Causal inference is the subfield of statistics that considers how we should make inferences about such questions. This course will cover the key concepts and methods of causal inference rigorously. The course is intended for statistics concentrators and minors. Knowledge of R such as that covered in STAT 4050 or STAT 4700 is recommended.
Spring
Mutually Exclusive: STAT 5900
Prerequisite: STAT 4300 AND (STAT 1020 OR STAT 1120 OR STAT 4310)
1 Course Unit

STAT 5000 Applied Regression and Analysis of Variance
An applied graduate level course in multiple regression and analysis of variance for students who have completed an undergraduate course in basic statistical methods. Emphasis is on practical methods of data analysis and their interpretation. Covers model building, general linear hypothesis, residual analysis, leverage and influence, one-way anova, two-way anova, factorial anova. Primarily for doctoral students in the managerial, behavioral, social and health sciences. Permission of instructor required to enroll.
Fall
Also Offered As: BSTA 5500, PSYC 6110
1 Course Unit
STAT 5010 Introduction to Nonparametric Methods and Log-linear Models
An applied graduate level course for students who have completed an undergraduate course in basic statistical methods. Covers two unrelated topics: log-linear and logit models for discrete data and nonparametric methods for nonnormal data. Emphasis is on practical methods of data analysis and their interpretation. Primarily for doctoral students in the managerial, behavioral, social and health sciences. Permission of instructor required to enroll.
Spring
Also Offered As: PSYC 6120
1 Course Unit

STAT 5030 Data Analytics and Statistical Computing
This course will introduce a high-level programming language, called R, that is widely used for statistical data analysis. Using R, we will study and practice the following methodologies: data cleaning, feature extraction; web scrubbing, text analysis; data visualization; fitting statistical models; simulation of probability distributions and statistical models; statistical inference methods that use simulations (bootstrap, permutation tests).
Prerequisite: Two courses at the statistics 4000 or 5000 level.
Fall or Spring
1 Course Unit

STAT 5100 Probability
Fall or Spring
Mutually Exclusive: STAT 4300
1 Course Unit

STAT 5110 Statistical Inference
Graphical displays; one- and two-sample confidence intervals; one- and two-sample hypothesis tests; one- and two-way ANOVA; simple and multiple linear least-squares regression; nonlinear regression; variable selection; logistic regression; categorical data analysis; goodness-of-fit tests. A methodology course.
Fall or Spring
Mutually Exclusive: STAT 1020, STAT 4310
Prerequisite: STAT 5100
1 Course Unit

STAT 5120 Mathematical Statistics
An introduction to the mathematical theory of statistics. Estimation, with a focus on properties of sufficient statistics and maximum likelihood estimators. Hypothesis testing, with a focus on likelihood ratio tests and the consequent development of "t" tests and hypothesis tests in regression and ANOVA. Nonparametric procedures.
Spring
Mutually Exclusive: STAT 4320
Prerequisite: STAT 4300 OR STAT 5100
1 Course Unit

STAT 5150 Advanced Statistical Inference I
STAT 5150 is aimed at first-year Ph.D. students and builds a good foundation in statistical inference from the first principles of probability.
Fall
Prerequisite: STAT 4300 AND STAT 4310 AND MATH 2400
1 Course Unit

STAT 5160 Advanced Statistical Inference II
STAT 5160 is a natural continuation of STAT 5150, and the main focus is on asymptotic evaluations and regression models. Time permitting, it also discusses some basic nonparametric statistical methods.
Spring
Prerequisite: STAT 5150
1 Course Unit

STAT 5200 Applied Econometrics I
This is a course in econometrics for graduate students. The goal is to prepare students for empirical research by studying econometric methodology and its theoretical foundations. Students taking the course should be familiar with elementary statistical methodology and basic linear algebra, and should have some programming experience. Topics include conditional expectation and linear projection, asymptotic statistical theory, ordinary least squares estimation, the bootstrap and jackknife, instrumental variables and two-stage least squares, specification tests, systems of equations, generalized least squares, and introduction to use of linear panel data models.
Fall
Prerequisite: (MATH 1080 OR MATH 1410) AND MATH 3120
1 Course Unit

STAT 5210 Applied Econometrics II
Topics include system estimation with instrumental variables, fixed effects and random effects estimation, M-estimation, nonlinear regression, quantile regression, maximum likelihood estimation, generalized method of moments estimation, minimum distance estimation, and binary and multinomial response models. Both theory and applications will be stressed.
Spring
Prerequisite: STAT 5200
1 Course Unit

STAT 5330 Stochastic Processes
An introduction to Stochastic Processes. The primary focus is on Markov Chains, Martingales and Gaussian Processes. We will discuss many interesting applications from physics to economics. Topics may include: simulations of path functions, game theory and linear programming, stochastic optimization, Brownian Motion and Black-Scholes.
Fall or Spring
Mutually Exclusive: STAT 4330
Prerequisite: STAT 5100
1 Course Unit

STAT 5350 Forecasting Methods for Management
This course provides an introduction to the wide range of techniques available for statistical modelling and forecasting of time series. Regression methods for decomposition models, trends and seasonality, spectral analysis, distributed lag models, autoregressive-moving average modeling, forecasting, exponential smoothing, and ARCH and GARCH models will be surveyed. The emphasis will be on applications, rather than technical foundations and derivations. The techniques will be studied critically, with examination of their usefulness and limitations.
Fall or Spring
1 Course Unit

STAT 5420 Bayesian Methods and Computation
Sophisticated tools for probability modeling and data analysis from the Bayesian perspective. Hierarchical models, mixture models and Monte Carlo simulation techniques.
Spring
Prerequisite: STAT 4300 OR STAT 5100
1 Course Unit
STAT 5710 Modern Data Mining
Modern Data Mining: Statistics or Data Science has been evolving rapidly to keep up with the modern world. While classical multiple regression and logistic regression technique continue to be the major tools we go beyond to include methods built on top of linear models such as LASSO and Ridge regression. Contemporary methods such as KNN (K nearest neighbor), Random Forest, Support Vector Machines, Principal Component Analyses (PCA), the bootstrap and others are also covered. Text mining especially through PCA is another topic of the course. While learning all the techniques, we keep in mind that our goal is to tackle real problems. Not only do we go through a large collection of interesting, challenging real-life data sets but we also learn how to use the free, powerful software “R” in connection with each of the methods exposed in the class. Prerequisite: two courses at the statistics 4000 or 5000 level or permission from instructor.
Fall or Spring
1 Course Unit

STAT 5800 Advanced Statistical Computing
This course will build on the fundamental concepts introduced in the prerequisite courses to allow students to acquire knowledge and programming skills in large-scale data analysis, data visualization, and stochastic simulation. Prerequisite: STAT 5030, 7050, or 7700 or equivalent background acquired through a combination of online courses that teach the R language and practical experience.
Spring
Prerequisite: STAT 5030 OR STAT 7050 OR STAT 7700
1 Course Unit

STAT 5900 Causal Inference
Questions about cause are at the heart of many everyday decisions and public policies. Does eating an egg every day cause people to live longer or shorter or have no effect? Do gun control laws cause more or less murders or have no effect? Causal inference is the subfield of statistics that considers how we should make inferences about such questions. This course will cover the key concepts and methods of causal inference rigorously. Background in probability and statistics; some knowledge of R is recommended.
Spring
Mutually Exclusive: STAT 4900
1 Course Unit

STAT 6130 Regression Analysis for Business
This course provides the fundamental methods of statistical analysis, the art and science if extracting information from data. The course will begin with a focus on the basic elements of exploratory data analysis, probability theory and statistical inference. With this as a foundation, it will proceed to explore the use of the key statistical methodology known as regression analysis for solving business problems, such as the prediction of future sales and the response of the market to price changes. The use of regression diagnostics and various graphical displays supplement the basic numerical summaries and provides insight into the validity of the models. Specific important topics covered include least squares estimation, residuals and outliers, tests and confidence intervals, correlation and autocorrelation, collinearity, and randomization. The presentation relies upon computer software for most of the needed calculations, and the resulting style focuses on construction of models, interpretation of results, and critical evaluation of assumptions.
Fall
Prerequisite: STAT 6110
1 Course Unit

STAT 6210 Accelerated Regression Analysis for Business
STAT 6210 is intended for students with recent, practical knowledge of the use of regression analysis in the context of business applications. This course covers the material of STAT 6130, but omits the foundations to focus on regression modeling. The course reviews statistical hypothesis testing and confidence intervals for the sake of standardizing terminology and introducing software, and then moves into regression modeling. The pace presumes recent exposure to both the theory and practice of regression and will not be accommodating to students who have not seen or used these methods previously. The interpretation of regression models within the context of applications will be stressed, presuming knowledge of the underlying assumptions and derivations. The scope of regression modeling that is covered includes multiple regression analysis with categorical effects, regression diagnostic procedures, interactions, and time series structure. The presentation of the course relies on computer software that will be introduced in the initial lectures. Recent exposure to the theory and practice of regression modeling is recommended.
Fall
0.5 Course Units

STAT 7010 Modern Data Mining
Modern Data Mining: Statistics or Data Science has been evolving rapidly to keep up with the modern world. While classical multiple regression and logistic regression technique continue to be the major tools we go beyond to include methods built on top of linear models such as LASSO and Ridge regression. Contemporary methods such as KNN (K nearest neighbor), Random Forest, Support Vector Machines, Principal Component Analyses (PCA), the bootstrap and others are also covered. Text mining especially through PCA is another topic of the course. While learning all the techniques, we keep in mind that our goal is to tackle real problems. Not only do we go through a large collection of interesting, challenging real-life data sets but we also learn how to use the free, powerful software “R” in connection with each of the methods exposed in the class. Prerequisite: two courses at the statistics 4000 or 5000 level or permission from instructor.
Fall or Spring
1 Course Unit

STAT 7050 Statistical Computing with R
The goal of this course is to introduce students to the R programming language and related eco-system. This course will provide a skill-set that is in demand in both the research and business environments. In addition, R is a platform that is used and required in other advanced classes taught at Wharton, so that this class will prepare students for these higher level classes and electives.
Fall or Spring
Mutually Exclusive: STAT 4050
Prerequisite: STAT 6130 OR STAT 6210
0.5 Course Units

STAT 7070 Modern Data Mining
0.5 Course Units
**STAT 7100 Data Collection and Acquisition: Strategies and Platforms**
This course will give students a solid grasp of different data collection strategies and when and how they can be applied in practice. At the same time, important current ideas such as data confidentiality and ethical considerations will be addressed. The students will have designed and fielded a sample survey and designed and fielded an online experiment (A/B test). Student will collect data through web scraping activities and/or using an API. Students will summarize their collected data and subsequent inferences, culminating with an in-class presentation. The course is structured in two parts. The first part is a "Strategies" component that addresses different data collection strategies. It will discuss sample designs, experimentation, and observational studies. The second part of the course is about "Platforms" and goes into the practicalities of the implementation of the different strategies. Given the data science perspective of this course, this is focused on web enabled approaches. Familiarity with either R or Python is expected and specifically the R-Studio or Jupyter notebooks platforms. Courses such as Stat 7050 or Stat 7770 would meet this requirement. Statistics, through the level of multiple regression is required. This requirement may be fulfilled with MBA courses such as Stat 6130/6210, or by waiving MBA statistics.
Mutually Exclusive: STAT 4100
0.5 Course Units

**STAT 7110 Forecasting Methods for Management**
This course provides an introduction to the wide range of techniques available for statistical modelling and forecasting of time series. Regression methods for decomposition models, trends and seasonality, spectral analysis, distributed lag models, autoregressive-moving average modeling, forecasting, exponential smoothing, and ARCH and GARCH models will be surveyed. The emphasis will be on applications, rather than technical foundations and derivations. The techniques will be studied critically, with examination of their usefulness and limitations. This course may be taken concurrently with the prerequisite with instructor permission.
Fall or Spring
Prerequisite: STAT 6130 OR STAT 6210
1 Course Unit

**STAT 7220 Predictive Analytics for Business**
This course follows from the introductory regression classes, STAT 1020, STAT 1120, and STAT 4310 for undergraduates and STAT 6130 for MBAs. It extends the ideas from regression modeling, focusing on the core business task of predictive analytics as applied to realistic business related data sets. In particular it introduces automated model selection tools, such as stepwise regression and various current model selection criteria such as AIC and BIC. It delves into classification methodologies such as logistic regression. It also introduces classification and regression trees (CART) and the popular predictive methodologies known as random forest and boosted trees. By the end of the course the student will be familiar with and have applied these concepts and will be ready to use them in a work setting. The methodologies are implemented in a variety of software packages. Applications in JMP emphasize concepts and key modeling decisions. This course is formerly STAT 6220.
Fall or Spring
Mutually Exclusive: STAT 4220, STAT 4230, STAT 7230
Prerequisite: STAT 6130 OR STAT 6210
0.5-1 Course Unit

**STAT 7230 Applied Machine Learning in Business**
This course introduces students to machine learning techniques used in business applications. The main topics include: cross validation, variable selection procedures, shrinkage methods such as lasso, logistic regression, k-nearest neighbors, ROC curves and confusion matrix, trees, kernel based learning, resampling techniques, random forests, boosting, neural networks & deep learning, matrix methods including singular value decomposition (SVD) and its application in principal component analysis (PCA), and some unsupervised methods such as k-means and density based clustering. Students will learn to apply these methods in a wide range of settings such as marketing and finance, and will gain hands-on experience through class assignments and competitions.
Mutually Exclusive: STAT 4220, STAT 4230, STAT 7220
Prerequisite: STAT 6130 OR STAT 6210
1 Course Unit

**STAT 7240 Text Analytics**
This course introduces modern text analytics, and the tools of natural language processing. Text and language are powerful repositories of knowledge and information, but the semi-structured nature of language makes deriving insights from text challenging. Modern analytic techniques introduced in this course make it significantly easier even for non-specialists to use text and language data to drive deep insights. The course will use several examples from real world applications in different industries such as ecommerce, healthcare and finance to illustrate these techniques. Students should be familiar with regression models at the level of Stat 6130 or Stat 1020, and the Python language at the level of Stat 4770 or Stat 7770. Familiarity with the Jupyter notebook development environment is presumed, as well as common Python packages such as pandas, NLTK and SpaCy. Those with more knowledge of Statistics, such as from Stat 7220/4220, or computing skills will benefit. The predominant software used in the course is Jupyter notebooks that use a Python interpreter. Familiarity with basic probability models is helpful but not presumed.
Fall or Spring
Mutually Exclusive: STAT 4240
0.5 Course Units

**STAT 7700 Data Analytics and Statistical Computing**
This course will introduce a high-level programming language, called R, that is widely used for statistical data analysis. Using R, we will study and practice the following methodologies: data cleaning, feature extraction; web scrubbing, text analysis; data visualization; fitting statistical models; simulation of probability distributions and statistical models; statistical inference methods that use simulations (bootstrap, permutation tests).
Prerequisite: Two courses at the statistics 4000 or 5000 level.
Fall or Spring
1 Course Unit

**STAT 7760 Applied Probability Models in Marketing**
This course will expose students to the theoretical and empirical "building blocks" that will allow them to construct, estimate, and interpret powerful models of consumer behavior. Over the years, researchers and practitioners have used these models for a wide variety of applications, such as new product sales, forecasting, analyses of media usage, and targeted marketing programs. Other disciplines have seen equally broad utilization of these techniques. The course will be entirely lecture-based with a strong emphasis on real-time problem solving. Most sessions will feature sophisticated numerical investigations using Microsoft Excel.
Much of the material is highly technical.
Spring
Also Offered As: MKTG 7760
1 Course Unit
STAT 7770 Introduction to Python for Data Science
The goal of this course is to introduce the Python programming language within the context of the closely related areas of statistics and data science. Students will develop a solid grasp of Python programming basics, as they are exposed to the entire data science workflow, starting from interacting with SQL databases to query and retrieve data, through data wrangling, reshaping, summarizing, analyzing and ultimately reporting their results. Competency in Python is a critical skill for students interested in data science. Prerequisites: No prior programming experience is expected, but statistics, through the level of multiple regression is required. This requirement may be fulfilled with MBA courses such as STAT 6130/6210; or by waiving MBA statistics. Also Offered As: OIDD 7770
0.5-1 Course Unit

STAT 7800 Advanced Statistical Computing
This course will build on the fundamental concepts introduced in the prerequisite courses to allow students to acquire knowledge and programming skills in large-scale data analysis, data visualization, and stochastic simulation. Prerequisite: STAT 5030, 7050, or 7700 or equivalent background acquired through a combination of online courses that teach the R language and practical experience.
Spring
Prerequisite: STAT 5030 OR STAT 7050 OR STAT 7700
1 Course Unit

STAT 8990 Independent Study
Written permission of instructor, the department MBA advisor and course coordinator required to enroll.
Fall or Spring
0.5-1 Course Unit

STAT 9150 Nonparametric Inference
Statistical inference when the functional form of the distribution is not specified. Nonparametric function estimation, density estimation, survival analysis, contingency tables, association, and efficiency.
Not Offered Every Year
Prerequisite: STAT 5200
1 Course Unit

STAT 9200 Sample Survey Methods
This course will cover the design and analysis of sample surveys. Topics include simple random sampling, stratified sampling, cluster sampling, graphics, regression analysis using complex surveys and methods for handling nonresponse bias.
Not Offered Every Year
Prerequisite: STAT 5200 OR STAT 9610 OR STAT 9700
1 Course Unit

STAT 9210 Observational Studies
This course will cover statistical methods for the design and analysis of observational studies. Topics will include the potential outcomes framework for causal inference; randomized experiments; matching and propensity score methods for controlling confounding in observational studies; tests of hidden bias; sensitivity analysis; and instrumental variables.
Fall or Spring
Prerequisite: STAT 5200 OR STAT 9610 OR STAT 9700
1 Course Unit

STAT 9250 Multivariate Analysis: Theory
This is a course that prepares PhD students in statistics for research in multivariate statistics and high dimensional statistical inference. Topics from classical multivariate statistics include the multivariate normal distribution and the Wishart distribution; estimation and hypothesis testing of mean vectors and covariance matrices; principal component analysis, canonical correlation analysis and discriminant analysis; etc. Topics from modern multivariate statistics include the Marcenko-Pastur law, the Tracy-Widom law, nonparametric estimation and hypothesis testing of high-dimensional covariance matrices, high-dimensional principal component analysis, etc.
Not Offered Every Year
Prerequisite: STAT 9300 OR STAT 9700 OR STAT 9720
1 Course Unit

STAT 9260 Multivariate Analysis: Methodology
This is a course that prepares PhD students in statistics for research in multivariate statistics and data visualization. The emphasis will be on a deep conceptual understanding of multivariate methods to the point where students will propose variations and extensions to existing methods or whole new approaches to problems previously solved by classical methods. Topics include: principal component analysis, canonical correlation analysis, generalized canonical analysis; nonlinear extensions of multivariate methods based on optimal transformations of quantitative variables and optimal scaling of categorical variables; shrinkage- and sparsity-based extensions to classical methods; clustering methods of the k-means and hierarchical varieties; multidimensional scaling, graph drawing, and manifold estimation.
Not Offered Every Year
Prerequisite: STAT 9610
1 Course Unit

STAT 9270 Bayesian Statistical Theory and Methods
This graduate course will cover the modeling and computation required to perform advanced data analysis from the Bayesian perspective. We will cover fundamental topics in Bayesian probability modeling and implementation, including recent advances in both optimization and simulation-based estimation strategies. Key topics covered in the course include hierarchical and mixture models, Markov Chain Monte Carlo, hidden Markov and dynamic linear models, tree models, Gaussian processes and nonparametric Bayesian strategies.
Not Offered Every Year
Prerequisite: STAT 4300 OR STAT 5100
1 Course Unit

STAT 9280 Statistical Learning Theory
Statistical learning theory studies the statistical aspects of machine learning and automated reasoning, through the use of (sampled) data. In particular, the focus is on characterizing the generalization ability of learning algorithms in terms of how well they perform on "new" data when trained on some given data set. The focus of the course is on: providing the fundamental tools used in this analysis; understanding the performance of widely used learning algorithms; understanding the "art" of designing good algorithms, both in terms of statistical and computational properties. Potential topics include: empirical process theory; online learning; stochastic optimization; margin based algorithms; feature selection; concentration of measure. Background in probability and linear algebra recommended.
Spring
1 Course Unit
STAT 9300 Probability Theory
Measure theoretic foundations, laws of large numbers, large deviations, distributional limit theorems, Poisson processes, random walks, stopping times.
Fall
Also Offered As: AMCS 6481, MATH 6480
Prerequisite: STAT 4300 OR STAT 5100 OR MATH 6080
1 Course Unit

STAT 9310 Stochastic Processes
Continuation of MATH 6480/STAT 9300, the 2nd part of Probability Theory for Ph.D. students in the math or statistics department. The main topics include Brownian motion, martingales, Ito’s formula, and their applications to random walk and PDE.
Not Offered Every Year
Also Offered As: AMCS 6491, MATH 6490
1 Course Unit

STAT 9550 Stochastic Calculus and Financial Applications
Selected topics in the theory of probability and stochastic processes.
Fall
Prerequisite: STAT 9300
1 Course Unit

STAT 9600 Statistical Algorithms and Computation
This course aims to prepare students for graduate work in the design, analysis, and implementation of statistical algorithms. The target audience is Ph.D. students in statistics or in adjacent fields, such as computer science, mathematics, electrical engineering, computational biology, economics, and marketing. We will take a fundamental approach and focus on classes of algorithms of primary importance in statistics and statistical machine learning. Some meta-classes of algorithms that may receive significant attention are optimization, sampling, and numerical linear algebra. I aim to make the content complementary rather than overlapping with other courses at Penn, such as ESE6050, CIS6770, and the CIS7000 series. While there may be some overlap in the portions of the course that cover optimization, the sampling (Monte Carlo and related) aspects of the course are, to my knowledge, hard to find elsewhere at Penn. The course is fast paced and I expect a certain degree of mathematical preparation. Most students in the above mentioned programs will have the requisite mathematics background. I also expect familiarity with an appropriate programming language such as R, python, or matlab. The course will be mostly language agnostic. However, I may at times give example code in one of these languages, and you will be expected to be able to read the code even if it is not in your “primary” language. We may make use of various open-source toolboxes and packages for these environments, such as the Stan probabilistic programming language (best used with R) and the cvx toolbox for convex programming (available for multiple platforms but perhaps best used with matlab).
Spring
1 Course Unit

STAT 9610 Statistical Methodology
This is a course that prepares 1st year PhD students in statistics for a research career. This is not an applied statistics course. Topics covered include: linear models and their high-dimensional geometry, statistical inference illustrated with linear models, diagnostics for linear models, bootstrap and permutation inference, principal component analysis, smoothing and cross-validation.
Fall
Prerequisite: STAT 4310 OR STAT 5200
1 Course Unit

STAT 9620 Advanced Methods for Applied Statistics
This course is designed for Ph.D. students in statistics and will cover various advanced methods and models that are useful in applied statistics. Topics for the course will include missing data, measurement error, nonlinear and generalized linear regression models, survival analysis, experimental design, longitudinal studies, building R packages and reproducible research.
Spring
Prerequisite: STAT 9610
1 Course Unit

STAT 9700 Mathematical Statistics
Decision theory and statistical optimality criteria, sufficiency, point estimation and hypothesis testing methods and theory.
Fall
Prerequisite: STAT 4310 OR STAT 5200
1 Course Unit

STAT 9710 Introduction to Linear Statistical Models
Spring
Prerequisite: STAT 9700
1 Course Unit

STAT 9720 Advanced Topics in Mathematical Statistics
A continuation of STAT 9700.
Fall or Spring
Prerequisite: STAT 9700 AND STAT 9710
1 Course Unit

STAT 9740 Modern Regression for the Social, Behavioral and Biological Sciences
Function estimation and data exploration using extensions of regression analysis: smoothers, semiparametric and nonparametric regression, and supervised machine learning. Conceptual foundations are addressed as well as hands-on use for data analysis.
Spring
Prerequisite: STAT 1020 OR STAT 1120
1 Course Unit

STAT 9770 Seminar in Advanced Application of Statistics
This seminar will be taken by doctoral candidates after the completion of most of their coursework. Topics vary from year to year and are chosen from advanced probability, statistical inference, robust methods, and decision theory with principal emphasis on applications.
Fall or Spring
0.5-1 Course Unit

STAT 9910 Seminar in Advanced Application of Statistics
Written permission of instructor and the department course coordinator required to enroll.
Fall or Spring

**Sudanese Arabic (SARB)**

**SARB 0100 Sudanese Arabic**
Sudan is a country with a rich history and diverse cultures and people. Sudan is surrounded by nine countries. Two of Sudan’s neighbors have Arabic as their official language (Egypt & Libya). While in neighboring Chad and Eritrea, Arabic is widely spoken. The only barrier that divides Sudan from Arabia is the Red Sea. Arabic is the official language of the Sudan, and Sudanese pidgin Arabic (Juba Arabic) is widely used in the southern part of the country. Sudanese colloquial Arabic has close resemblance to Egyptian Colloqui Arabic and to Classical Arabic. Sudanese colloquial Arabic is also spoken and is intelligible in Eritrea, Chad, Nigeria and many places in West Africa. This course will focus on speaking, listening, reading, & writing Sudanese Arabic through the followings: 1- Speaking: Conversing in Sudanese Arabic in various settings. 2- Reading & Writing: Reading and writing of Sudanese Arabic Texts. 3- Listening: Listening to various audio recordings of Sudanese Arabic in different forms and settings.

Not Offered Every Year
1 Course Unit

**SARB 0200 Sudanese Arabic II**
Continuation of SARB 0100
Spring
1 Course Unit

---

**Swahili (SWAH)**

**SWAH 0100 Elementary Swahili I**
The Elementary Swahili I course can be taken to fulfill a language requirement, or for linguistic preparation to do research on East Africa/Africa-related topics. The course emphasizes communicative competence to enable the students to acquire linguistic and extra-linguistic skills in Swahili. The content of the course is selected from various everyday life situations to enable the students to communicate in predictable common daily settings. Culture, as it relates to language use, is also part of the course content. Students will acquire the speaking, listening, reading, and writing skills at the mid-high novice level, based on the ACTFL scale. The mid-high level proficiency skills that the students will acquire constitute threshold capabilities of the second semester range of proficiency to prepare students for Elementary Swahili II course materials.

Fall
1 Course Unit

**SWAH 0111 TEST**

1 Course Unit

**SWAH 0200 Elementary Swahili II**
This course continues to introduce basic grammar, vocabulary, and the reading and writing of Swahili to new speakers. During this term, folktales, other texts, and film selections are used to help introduce important aspects of Swahili culture and the use of the language in wide areas of Africa.

Spring
Prerequisite: SWAH 0100
1 Course Unit

**SWAH 0300 Intermediate Swahili I**
The objectives of this course are: to strengthen students’ knowledge of speaking, listening, reading, and writing Swahili and to compare it with the language of the students; to learn more about the cultures of East Africa and to compare it with the culture(s) of the students; to consider the relationship between that knowledge and the knowledge of other disciplines; and using that knowledge, to unite students with communities outside of class.

Fall
1 Course Unit

**SWAH 0400 Intermediate Swahili II**
At the end of the course students will be at Level 2 on the ILR (Interagency Language Roundtable) scale.

Spring
Prerequisite: SWAH 0300
1 Course Unit

**SWAH 1100 Advanced Swahili I**
This is an advanced Kiswahili course which will engage learners in extended spoken and written discourse. Advanced learners of Kiswahili will listen to, read about, write and speak on authentic video materials, contemporary novels, and newspapers. They will also participate in various discussions on cultural and political issues.

Fall
Prerequisite: SWAH 0300
1 Course Unit

**SWAH 1200 Advanced Swahili II**
The objectives are to continue to strengthen students’ knowledge of speaking, listening, reading, and writing Swahili and to compare it with the language of the students; to continue learning about the cultures of East Africa and to continue making comparisons with the culture(s) of the students; to continue to consider the relationship between that knowledge and the knowledge of other disciplines; and using that knowledge, to continue to unite students with communities outside of class. Level 3 on the ILR (Interagency Language Roundtable) scale.

Spring
Also Offered As: AFRC 2851
1 Course Unit

**SWAH 1300 Swahili Lang/Culture I**
This course taught in Swahili will focus on reading/writing skills and speaking/listening skills as well as structural and cultural information. The course will be structured around three thematic units: History, Politics, and Education. The course will provide background on the Swahili-speaking world: Who were the first Swahili speakers and what varieties of the language did they speak? How did Swahili spread from the coast to other Swahili-speaking areas as far inland as Uganda, Rwanda, and Congo? Swahili is a lingua franca and has importance in the spread of religion and trade movements. Influences of other languages on Swahili and influences of Swahili on local languages will be discussed. Political and educational systems will be discussed as well.

Not Offered Every Year
Prerequisite: SWAH 1100 AND SWAH 1200
1 Course Unit

**SWAH 1400 Swahili Lang/Culture II**
Continuation of Swahili Language & Culture I. Course is taught in Swahili and focuses on reading/writing skills and speaking/listening skills, as well as structural and cultural information. The course is structured around three thematic units: History, Politics, and Education.

Not Offered Every Year
1 Course Unit
SWAH 5100 Intermediate Swahili I
The objectives of this course are: to strengthen students' knowledge of speaking, listening, reading, and writing Swahili and to compare it with the language of the students; to learn more about the cultures of East Africa and to compare it with the culture(s) of the students; to consider the relationship between that knowledge and the knowledge of other disciplines; and using that knowledge, to unite students with communities outside of class. Prerequisite: Offered through Penn Language Center
Fall
1 Course Unit

SWAH 5200 Intermediate Swahili II
This is part II of the Intermediate Swahili sequence I/II. The objectives of this course are: to strengthen students' knowledge of speaking, listening, reading, and writing Swahili and to compare it with the language of the students; to learn more about the cultures of East Africa and to compare it with the culture(s) of the students; to consider the relationship between that knowledge and the knowledge of other disciplines; and using that knowledge, to unite students with communities outside of class. At the end of the course students will be at Level 2 on the ILR (Interagency Language Roundtable) scale. Offered through the Penn Language Center
Spring

Swedish (SWED)

SWED 0100 Elementary Swedish I
Elementary Swedish I
1 Course Unit

SWED 0200 Elementary Swedish II
Part two of the elementary level Swedish course. Authentic texts and media will be introduced, as well as opportunities to communicate with native speakers. By the end of the spring semester you will be able to handle a range of practical situations, such as ordering in restaurants and cafes, shopping, talking about family, holidays, plans, daily routines, health, sports/hobbies, jobs and studies. You will work on expressing your opinions and intentions, likes and dislikes, and understanding basic authentic source media, spoken language, etc. You will also learn about Sweden in an international context.
Spring, odd numbered years only
Prerequisite: SWED 0100
1 Course Unit

SWED 0300 Intermediate Swedish I
In part one of the intermediate year, students will research and explore a broad range of topics using authentic sources and course materials to gain greater fluency and familiarity with language and culture. You will meet native Swedish speakers and visit Swedish organizations in the Philadelphia area. Projects and assignments will give you ample opportunity to explore areas that are of special interest to you from academic, professional, and personal perspectives. We will learn about Swedish innovation, business, socio-economic and political structures, geography, tourism, migration, history, and about what it is like to live in Sweden today.
Fall, even numbered years only
Prerequisite: SWED 0200
1 Course Unit

SWED 0400 Intermediate Swedish II
Part two of the intermediate level Swedish course. Through in- and out-of-class interactions, you will continue to engage with your peers and native or fluent Swedish speakers. We will look at Swedish products, practices and perspectives, and we will discuss how Swedish culture and society are adapting to a rapidly changing world. We will complement the course literature with relevant authentic sources, such as online media, films, newspapers, etc. With a small class size, we have the flexibility to adapt the content to individual interests, and you will have plenty of opportunity to contribute to the total learning experience while elevating your Swedish vocabulary, grammar and communication skills.
Spring, even numbered years only
Prerequisite: SWED 0300
1 Course Unit

SWED 5010 Elementary Swedish I
Elementary Swedish I
1 Course Unit

SWED 5020 Elementary Swedish II
Part two of the elementary level Swedish course. Authentic texts and media will be introduced, as well as opportunities to communicate with native speakers. By the end of the spring semester you will be able to handle a range of practical situations, such as ordering in restaurants and cafes, shopping, talking about family, holidays, plans, daily routines, health, sports/hobbies, jobs and studies. You will work on expressing your opinions and intentions, likes and dislikes, and understanding basic authentic source media, spoken language, etc. You will also learn about Sweden in an international context.
Spring, odd numbered years only
Prerequisite: SWED 5010
1 Course Unit
SWED 5030 Intermediate Swedish I
In part one of the intermediate year, students will research and explore a broad range of topics using authentic sources and course materials to gain greater fluency and familiarity with language and culture. You will meet native Swedish speakers and visit Swedish organizations in the Philadelphia area. Projects and assignments will give you ample opportunity to explore areas that are of special interest to you from academic, professional, and personal perspectives. We will learn about Swedish innovation, business, socio-economic and political structures, geography, tourism, migration, history, and about what it is like to live in Sweden today.
Fall, even numbered years only
Prerequisite: SWED 5020
1 Course Unit

SWED 5040 Intermediate Swedish II
Part two of the intermediate level Swedish course. Through in- and out-of-class interactions, you will continue to engage with your peers and native or fluent Swedish speakers. We will look at Swedish products, practices and perspectives, and we will discuss how Swedish culture and society are adapting to a rapidly changing world. We will complement the course literature with relevant authentic sources, such as online media, films, newspapers, etc. With a small class size, we have the flexibility to adapt the content to individual interests, and you will have plenty of opportunity to contribute to the total learning experience while elevating your Swedish vocabulary, grammar and communication skills.
Spring, even numbered years only
Prerequisite: SWED 5030
1 Course Unit

Tamil (TAML)

TAML 0100 Beginning Tamil Part I
This course introduces students to colloquial Tamil and formal written Tamil. A balance between production skills, namely writing and speaking, and comprehension skills, namely reading and listening, will be maintained throughout the course. Reading materials will introduce students to customs and habits of the Tamil speakers in Tamil Nadu, Sri Lanka, Malaysia, and Singapore. Lessons in the class will be based on a set of Tamil learning lessons and videos made available at http://www.southasia.upenn.edu/tamil and the book by the Instructor titled "Tamil Language in Context", information available at http://www.thetamillanguage.com. By the end of the semester, students will have a working knowledge in reading Tamil text with a basic skill to write and speak the language at ACTFL's Beginner mid level.
Fall
1 Course Unit

TAML 0200 Beginning Tamil Part II
This course is a continuation of the Beginner Tamil TAML406. It continues to teach grammar and spoken sill from semester I. Lessons in the class will be based on a set of Tamil learning lessons and videos made available at http://www.southasia.upenn.edu/tamil and the book by the Instructor titled "Tamil Language in Context", information available at http://www.thetamillanguage.com. By the end of the semester, students will have a working knowledge in reading Tamil text with a basic skill to write and speak the language at ACTFL's Beginner High level.
Spring
Prerequisite: TAML 0100 OR TAML 5100
1 Course Unit

TAML 0300 Intermediate Tamil Part I
This course develops the skills obtained either from the Beginning Tamil course or from students' prior exposure to Tamil by other means. Basic knowledge of Tamil script, reading and writing in Tamil is required to take this course. Heavy emphasis will be made on using the language in actual environments both in spoken medium and in written medium. Multimedia materials such as audio and video facilities from the book and the website Tamil Language in Context (http://www.southasia.upenn.edu/tamil) will be used extensively to provide students an exposure to the Tamil culture and customs as followed in Tamil Nadu, India. Besides improving their speech and writing, students will also be introduced gradually to Tamil literature, which has two thousand years of Literary history. The learning process in this course will be facilitated by the lessons and videos as provided in the website and the book. By the end of this course, students will have ACTFL's intermediate mid level proficiency in Tamil.
Two Term Class, Student must enter first term; credit given after both terms are complete
1 Course Unit

TAML 0400 Intermediate Tamil Part II
This course is a continuation of Intermediate Tamil I (TAML426) and it continue to develop the skills obtained either from the Beginning Tamil course or from students' prior exposure to Tamil by other means. The emphasis will be on using the language in actual environments both in spoken medium and in written medium. Multimedia materials such as audio and videos as provided in the website http://www.southasia.upenn.edu/tamil or http://www.thetamillanguage.com will be extensively used to provide students an exposure to the Tamil culture and customs as authentic as possible. Besides improving their speech and writing, students will also be introduced gradually to Tamil literature, which has two thousand years of literary history. By the end of this course, students will have ACTFL's intermediate high proficiency level.
1 Course Unit

TAML 1500 Advanced Tamil
This course is a continuation of the Advance Tamil Course I and its primary focus is to concentrate particularly on any one of the genres of the Tamil language namely Sangam, medieval or modern Tamil, which span a vast variety of texts from Aham, Puram, religious poems along with a whole array of Tamil inscriptions. The familiarity from Advanced Tamil I course will be adequately used to master in any aspect of these three genres of the Tamil language. Based on the general interests of the students who are enrolled in this course specific variety of the text to concentrate upon will be selected. In the past, we have read poems from the Sangam genre Puranaranu, Ahananuru, Silappatikaram, Manimekalai etc., along with the parallel religious poems from Tirumurai, Malayira Divyaprabandam and so on. We have also read as part of this course texts from Islam literature, Tamil inscriptions and other related kinds. Text from the instructors book (to be published), "ilakkiyap payaNangkaL" will be used to give a birds eye view to students about Tamil literature and the transitions that took place from Sangam, medieval and modern period. This course will train students to have a near-native proficiency in Tamil along with a professional skill in any particular variety of the Tamil language.
Spring
1 Course Unit
TAML 5100 Beginning Tamil Part I
This course introduces students to colloquial Tamil and formal written Tamil. A balance between production skills, namely writing and speaking, and comprehension skills, namely reading and listening, will be maintained throughout the course. We have also read as part of this course texts from Islam literature, Tamil inscriptions and other related kinds. Text from the instructors book (to be published), "Ilakkiyap payaNangkaL" will be used to give a birds eye view to students about Tamil literature and the transitions that took place from Sangam, medieval and modern period. This course will train students to have a near-native proficiency in Tamil along with a professional skill in any particular variety of the Tamil language.
Spring 1 Course Unit

Telugu (TELU)

TELU 0100 Beginning Telugu Part I
This course introduces students to the basic Telugu language skills, with an emphasis on practice for listening comprehension, and speaking Telugu. Combined with exposure to Andhra culture, the classroom and online work in this course will enable interested students to pursue further language study in Telugu at the intermediate level, to carry out field research in Andhra Pradesh, or to prepare them to advanced work in Telugu Studies. An introduction to Telugu like this will also be useful for students who just want to acquire basic Telugu language skills for learning a new language or being able to communicate with Telugu speaking family and friends or to enjoy Telugu music and films.
Fall 1 Course Unit
TELU 0200 Beginning Telugu Part II
This course continues students to the basic Telugu language skills, with an emphasis on practice for listening comprehension, and speaking Telugu. Combined with exposure to Andhra culture, the classroom and online work in this course will enable interested students to pursue further language study in Telugu at the intermediate level, to carry out field research in Andhra Pradesh, or to prepare them to advanced work in Telugu Studies. An introduction to Telugu like this will also be useful for students who just want to acquire basic Telugu language skills for learning a new language or being able to communicate with Telugu speaking family and friends or to enjoy Telugu music and films.
Spring
Prerequisite: TELU 0100 OR TELU 5100
1 Course Unit

TELU 0300 Intermediate Telugu Part I
This course is designed to expand the students' basic language skills in Telugu in order to allow them to function adequately in a Telugu-speaking environment, to immerse themselves in the rich Andhra culture, and to accomplish a more advanced competency in an interesting foreign language. This course is also aimed at students planning to conduct scholarly research in Telugu history, literature or society, or humanities or social science fieldwork in Telugu speaking areas.
Two Term Class, Student must enter first term; credit given after both terms are complete

Thai (THAI)

THAI 0100 Beginning Thai I
An introduction to the spoken and written Thai language. Beginning Thai will explain the fundamentals of the modern Tibetan language in its literary and spoken forms. Students will develop the ability to read the Tibetan script and identify and analyze Tibetan grammatical forms. Students will also learn conversational Tibetan, and be introduced to the structure of spoken grammar and its pronunciation. This class will provide a foundation for reading Tibetan literature, both classical and modern, and for speaking Tibetan.
Two Term Class, Student must enter first term; credit given after both terms are complete
1 Course Unit
THAI 0200 Beginning Thai II
Beginning Tibetan II will develop fundamentals of the modern Tibetan language in its literary and spoken forms. Students will continue learning to read Tibetan and analyze Tibetan grammatical forms. Students will also continue learning conversational Tibetan, and increase familiarity with the structures of spoken grammar and pronunciation. This course will provide a foundation for reading Tibetan literature, both classical and modern, and for speaking Tibetan. The rich and colorful culture of Tibet will be part of the curriculum.
Two Term Class, Student must enter first term; credit given after both terms are complete
Prerequisite: THAI 0100
1 Course Unit

THAI 0300 Intermediate Thai I
A continuation of Beginning Thai II, the spoken and written Thai language.
Two Term Class, Student must enter first term; credit given after both terms are complete
Prerequisite: THAI 0200
1 Course Unit

THAI 0400 Intermediate Thai II
A continuation of Intermediate Thai I, this class builds on the speaking and writing skills learned in that class.
1 Course Unit

Theatre Arts (THAR)

THAR 0020 Fundamentals of Acting: First-Year Seminar
Rooted in the system devised by Constantine Stanislavsky, but incorporating a wide variety of approaches, including improvisation, this course takes students step by step through the practical work an actor must do to live and behave truthfully on-stage. Beginning with relaxation and physical exercise, interactive games, and ensemble building, students then learn and put into practice basic acting techniques, including sensory work, the principles of action, objectives, given circumstances, etc. The semester culminates in the performance of a scene or scenes, most often from a play from the Realist tradition. This course strongly stresses a commitment to actor work and responsibility to one's fellow actors. Practical work is supplemented by readings from Stanislavsky and a variety of other acting theorists that may include Uta Hagen, Robert Cohen, Stella Adler, among others. Students are required to submit short essays over the course of the semester in response to the readings and in preparation for their final scene project. This First-Year Seminar covers the same material as THAR0120 Introduction to Acting, and a student may not receive credit for both courses.
Mutually Exclusive: THAR 0120
1 Course Unit

THAR 0076 Theatre in Philadelphia
What *is* the role of theatre in our always-on-screen American culture? More specifically, what is the role of theatre in the life of Philadelphia? And in our own lives? Is it for “special occasions” only? Or might it play an important part in the intellectual, social, and political fabric of our society—and within our own world views? The focus of this course will be on the subject of its title: Theatre in Philadelphia. Each week, we will travel together across our city, encountering a wide array of plays, performances, and places, analyzing live theatre as both an art form and a cultural experience. These theatrical events will be examined in their entirety, as we consider: performance spaces; audiences; production elements such as directing, acting, and design; as well as the text of the plays themselves. Our readings will provide historical and theoretical contexts for our viewing; we will also examine the scripts of some of the plays we see, as well as critical commentary about them, and about theatre in Philadelphia. The course will include tours of local theatres, and discussions with professional artists.
Not Offered Every Year
1 Course Unit

THAR 0100 Introduction to Theatre Arts
This course is an introduction to theatre as a unique art form, in which we will pursue the following questions. What is theatre? For whom—and by whom—is it created and performed? What does it take to “make theatre?” What is the role of theatre in society and in our culture(s)? We will learn to read plays as scripts designed for performance, and one of our key goals will be to discover how to interpret and assess the experience of live performance itself. Among the things we will consider are the distinct roles of actors, directors, designers, playwrights, producers, spectators, and critics; we will also visit a variety of performance spaces in Philadelphia, where we will view live theatre together. The class will feature visits from professional artists, and may present opportunities for creative as well as analytical work.
Fall or Spring
1 Course Unit

THAR 0101 Theatre, History, Culture I: From Classical to the Middle Classes
This course investigates the history of theatre practice in Europe and Asia from Fifth-Century Athens to roughly the end of the Eighteenth Century. In addition to analyzing major dramatic works, this course examines the evolution of production methods—scenography, acting, costuming, theatre architecture—across cultures and key socio-historical moments. Readings will be drawn from historical research, theoretical writings, plays and contemporary social documents. A particular focus will be on the integral role that the theatre plays as a cultural institution in the ongoing civic life of major cities. The course approaches theatre as broadly interdisciplinary and examines its intersection with religious practice, political developments, national identity, geography, the visual arts and the urban landscape.
1 Course Unit
THAR 0102 Theatre, History, Culture II: Romantics, Realists and Revolutionaries
This course investigates the history of theatre practice from the end of the Eighteenth-Century to the present, with an emphasis on interplay of mainstream practices with the newly emerging aesthetics of acting, scenography, and theatrical theory, and the interplay of popular entertainment and audiences with the self-defined aesthetic elitism of the Avant Garde. Among the aesthetics and phenomena we will examine are romanticism and melodrama; bourgeois realism and revolutionary naturalism; emotional-realist acting; the reaction against realism; political theatre; physical theatre; theatre and media; non-dramatic theatre; and theatre that challenges long-standing categories of national identity, empire, gender, and sexuality. Also Offered As: ENGL 1875
1 Course Unit

THAR 0103 The Play: Structure, Style, Meaning
How does one read a play? Theatre, as a discipline, focuses on the traditions of live performance. In those traditions, the play text must be read not only as a piece of literature, but as a kind of "blueprint" from which productions are built. This course will introduce students to a variety of approaches to reading plays and performance pieces. Drawing on a wide range of dramatic texts from different periods and places, we will examine how plays are made, considering issues such as structure, genre, style, character, and language, as well as the use of time, space, and theatrical effects. Although the course is devoted to the reading and analysis of plays, we will also view selected live and/or filmed versions of several of the scripts we study, assessing their translation from page to stage. Fall or Spring
Also Offered As: COML 1859, ENGL 1859
1 Course Unit

THAR 0104 On the Stage and in the Streets: An Introduction to Performance Studies
What do Hamilton, RuPaul's Drag Race, political protest, TikTok Ratatouille, and Queen Elizabeth's funeral have in common? They all compose repertoires of performance. From artistic performances in theatres, galleries, and concert halls to an individual's comportment in everyday life, to sporting events, celebrations, courtroom proceedings, performance studies explores what happens when embodied activities are repeatable and given to be seen. In this course we ask: what is performance? How do we describe, analyze, and interpret it? What do theatre and everyday life have in common? How does performance legitimize or challenge the exercise of power? How has social media shifted our understanding of the relationship of our daily lives to performance? How does culture shape what is considered to be performance and how it functions? What isn't performance? Throughout the semester students will apply key readings in performance theory to case studies drawn from global repertoires of contemporary and historical performance. In addition to analyzing artistic performances, we will also consider sporting events, celebrations, political events, and the performance of everyday life. We will attend to the challenges provoked by performance's embodied, ephemeral, affective, effective, relational, and contingent aspects. Coursework will include discussion posts, class facilitation, and the opportunity to choose between a research paper or creative project for the final assessment. Also Offered As: ANTH 1104, COML 0104, ENGL 1890
1 Course Unit

THAR 0114 Playwriting Workshop
This course is designed as a hands-on workshop in the art and craft of dramatic writing. It involves the study of new plays, the systematic exploration of such elements as storymaking, plot, structure, theme, character, dialogue, setting, etc.; and most importantly, the development of students' own short plays through a series of written assignments and in-class exercises. Since a great deal of this work takes place in class - through lectures, discussions, spontaneous writing exercises, and the reading of student work - weekly attendance and active participation is crucial. At the end of the semester, students' plays are read in a staged reading environment by professional actors. Spring
Also Offered As: ENGL 3604
1 Course Unit

THAR 0115 Self-Scripting: Writing through Body and Space
Students in Self-Scripting will write through a variety of exercises and activities that put text into play with the body and space. Over the course of the semester, students will actively engage space and composition as they develop and explore scriptwriting for performance. This course aims to expand on techniques for writing plays, poetry, and experimental biography. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Not Offered Every Year
Also Offered As: ENGL 3650

Mutually Exclusive: THAR 0020
1 Course Unit

THAR 0121 Introduction to Directing
This class will introduce the basic principals of stage directing, beginning with the fundamentals of three-dimensional storytelling in script and character analysis. The aim of this course is to provide students with a basic knowledge of directing through an introduction to the functional tools of the craft. Classes provide lectures and practical work in dealing with topics such as the function of the director, analyzing a script, visual composition, blocking, stage business, and working with actors. This course is a prerequisite for Advanced Directing. Fall or Spring
1 Course Unit
THAR 0130 Introduction to Light, Set, and Costume Design
Design for theatre (and all of the performing arts) is a dynamic, collaborative process that engages both intellect and emotion in staging the dramatic moment. The personal vision of the designer must navigate the often-uncharted waters of the production process, from the earliest, personal moments of design inspiration to the opening night performance. Design flows from creativity, is structured by research and theory, and is realized in living form by collaboration in the dynamic process of theatre-making. This class will integrate history, theory and practice of stage design in the interactive setting of the Collaborative Classroom in Van Pelt Library in this special interdisciplinary, active-learning course offering open to all Penn students. Group and individual projects, field visits, practical projects and guest speakers will be featured in this newly-revised course.
Fall or Spring
1 Course Unit

THAR 0170 Voice for the Actor
This introductory course is designed to help the actor find new freedom and range of expression with their voice and to connect their voice to their impulse. Our focus on relaxation, sensitivity and awareness, using Fitzmaurice Voicework techniques inspired by yoga and meditation, help the student access and develop their own authentic sound. They will learn how to support their voice in a healthy way, with a view to longevity, spontaneity and flexibility of use. In this course, these kinds of vocal exercises will be applied to short, character monologues, in order to foster sensitivity to our voices and breath and to the habits and tensions we have formed around speaking in public. For an actor, reconnecting with their authentic voice is essential for an honest, connected and compelling performance. This training is also useful for anyone who wants to speak in public with confidence, sincerity and ease.
Fall
Prerequisite: THAR 0120
1 Course Unit

THAR 0171 Movement for the Actor
The study of the art of bodily expression throughout history in theory and practice, from Classical and Oriental, African and Latin forms of dance and movement theater to the contemporary dance and theater, including mime, modern dance, post modern dance, physical theater, film, and performance art.
Spring
1 Course Unit

THAR 0180 Acting for the Camera
This class focuses on teaching students the creative and technical skills needed to excel in on-camera acting. Beginning by exploring theatre techniques to investigate character, relationship and conflict, this class will then focus on identifying the parameters of film & TV scripts of the last five years. Students will learn to identify the primary function of their character within that structure, and to imagine, create, and make playful choices that foster the story being told. By exploring acting techniques that bridge stage and screen, students will gain experience with producing professional self-tapes that reflect current industry standards, understanding the complexity of framing, vocal quality and eyelines in Zoom callbacks, and experimenting with the use of digital media in theatre.
Also Offered As: CIMS 0180
1 Course Unit

THAR 0785 Queer Archives, Aesthetics, and Performance
This course focuses on questions of how to represent the queer past, which it approaches from several angles: through training in archival methods and in scholarly debates about historiographical ethics (or, in the words of David Halperin, "how to do the history of homosexuality"); through engagement with the work of artists who make archives central to their practice; and through lab-based training that aims to represent encounters with queer history through embodied performance. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Fall, odd numbered years only
Also Offered As: ENGL 0785
1 Course Unit

THAR 1025 Narrative Across Cultures
The purpose of this course is to present a variety of narrative genres and to discuss and illustrate the modes whereby they can be analyzed. We will be looking at shorter types of narrative: short stories, novellas, and fables, and also some extracts from longer works such as autobiographies. While some works will come from the Anglo-American tradition, a larger number will be selected from European and non-Western cultural traditions and from earlier time-periods. The course will thus offer ample opportunity for the exploration of the translation of cultural values in a comparative perspective.
Fall or Spring
Also Offered As: COML 1025, ENGL 0039, NELC 1960, SAST 1124
1 Course Unit

THAR 1114 Advanced Playwriting
This course is intended to reinforce and build upon the areas covered in Level 1 Playwriting (THAR 0114) so that students can refine the skills they've acquired and take them to the next level. Topics covered will include techniques for approaching the first draft, in-depth characterization, dramatic structure, conflict, shaping the action, language/dialogue (incl. subtext, rhythm, imagery, exposition etc), how to analyse your own work as a playwright, dealing with feedback, the drafting process, techniques for rewriting, collaboration (with directors, actors etc) and the 'business of the art' - working with theatres, agents, dramaturgs etc. Students will undertake to write their own one-act plays over the course. The classes will be a mixture of lecture, discussion, study of dramatic texts, writing exercises and in-class analysis of students' work.
Not Offered Every Year
Also Offered As: ENGL 3605
Prerequisite: THAR 0114
1 Course Unit

THAR 1115 Adaptation
This course is designed to explore the techniques and practices of adaptation in order to transform stories not originally written for the stage into plays. We will reimagine material from other media, considering how the original author's intent intersects with a student's own artistic voice. Through reading and writing exercises, we will focus on themes, characters, setting, as well as theatricality, and better understand the value of transferring ideas from the page to the stage. Students will investigate what makes a story stage worthy as they work to create a short play from source material of their choosing.
Also Offered As: ENGL 3607
1 Course Unit
THAR 1117 Plague Lab: Writing through Infection and Affliction
How do we write through a plague? In this creative writing class we will begin with the question of how plagues make and disrupt meaning. In addition to canonical examples, we’ll explore off-center, anti-colonial, and non-Western literary and popular culture works. Students will then produce across a number of genres including poetry, fiction, memoir, zines, double-blind studies, sculpture, installation, performance, or found object scavenging. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Not Offered Every Year
Also Offered As: ENGL 3517, FNAR 3517
1 Course Unit

THAR 1120 Advanced Acting
This course continues the work begun in the Introduction to Acting class. The specific focus of the course will be on helping students to connect more deeply and truthfully with each other on stage, freeing up the body of the actor to fulfill the physical demands of characterization, and analyzing the dramatic text to clarify objectives and focus action through unit breakdown. Attention will also be given to helping students work through specific problems and personal, creative obstacles. The basis of the course will be scene work taken from the twentieth-century repertoire (realist and non-realist plays), a classical monologue, and exercises taken from a variety of performance traditions. The course also includes readings from modern theorists and practitioners.
Not Offered Every Year
Prerequisite: THAR 0120
1 Course Unit

THAR 1131 Concepts of Lighting
In this course we will cover the basic concepts of the art and craft of Stage Lighting Design. As a craft we will examine mechanics and technology of lighting design including light sources, power distribution, optics, and control. As an art we will explore how lighting ties together all the visual elements of a production and helps create an appropriate atmosphere that heightens the audience’s understanding and enjoyment of the play. Topics include: what light is, what it does, and how light influences our perception and understanding of what we see. Exercises will help the student learn how to see and to understand how light shapes and affects the appearance people and objects on stage and in everyday life. Projects work will emphasize design theory and practice (design methods, script analysis, and drafting skills). Lighting design has it roots in the theatre. The theatre continues to be a prime training ground for lighting designers, no matter what their field.
Fall
1 Course Unit

THAR 1132 Concepts of Stage Design
In this course we will cover the basic concepts of Scenic Design for the stage. Scene Design is about the look or physical appearance of the stage for a play. It reflects the way that the stage is composed artistically in regard to props, actors, shapes and color. We will explore Scene Design and the Theatre (story telling, place and local, time and period, society and culture), Scene Design as a Visual Art (principals of design and composition, style, use of space, expression of concept) and examine how it ties together all the visual elements of a production to create an appropriate atmosphere that heightens the audience’s understanding and enjoyment of the play. Topics will include: Script Analysis, Technical Production, Period Decor and Ornament; Drawing, Drafting, Model Making; and Scene Painting.
Fall
1 Course Unit

THAR 1133 Costume
Costume history and design provides a framework for organized study and practice in this particular facet of theatre production. It is a one-semester course, scheduled to meet once a week for a three hour session.
Spring
1 Course Unit

THAR 1135 Theatrical Collaboration: Directors and Designers
This course aims to teach students the art and craft of theatrical collaboration between directors and designers. Through the study of effective collaborative practices and the examination of production case studies, students will learn theory they can put into practice not only in this course, but also in endeavors beyond the classroom. During the course’s three major projects, students will bring the independent work of script analysis, dramaturgical research, and creative inspiration to the collective work of conceptual synthesis, design visualization, and project proposal. Individually and together, students will learn and practice how to create the world of the play through physical space, character-defining costumes, visual representation, and styles of performance. While rotating through the roles of director, scenic designer, and costume designer, students will learn new technologies to foster expression and comprehension between and among team members, whether in-person or remote. The four plays examined in this course will require an exploration of the politics, social issues, and cultures of the period in which they are each written.

1 Course Unit

THAR 1271 American Musical Theatre
The American musical is an unapologetically popular art form, but many of the works that come from this tradition have advanced and contributed to the canon of theatre as a whole. In this course we will focus on both music and texts to explore ways in which the musical builds on existing theatrical traditions, as well as alters and reshapes them. Finally, it is precisely because the musical is a popular theatrical form that we can discuss changing public tastes, and the financial pressures inherent in mounting a production. Beginning with early roots in operetta, we will survey the works of prominent writers in the American musical theatre, including Kern, Berlin, Gershwin, Porter, Rodgers, Hart, Hammerstein, Bernstein, Sondheim and others. Class lecture/discussions will be illustrated with recorded examples.

Mutually Exclusive: THAR 0271
1 Course Unit
THAR 1272 Broadway Musicals in the 21st Century
Wicked, Spring Awakening, Dear Evan Hansen, Hadestown. And of course, Hamilton. The innovations we see in Broadway musicals since 2000 are particularly fascinating in that they, so to speak, boldly go where no musicals have gone before—while at the same time honoring and building on the long-standing traditions of this beloved form. From the powerfully romantic Light in the Piazza, which nods to roots in European operetta, to the boundary-defying Black queerness of A Strange Loop... and everything in between. In this course, we will go year by year through musical theater from the quarter-century, to see where the form has gone recently... and where it’s headed. In addition to the works already mentioned, we’ll look at Caroline or Change, The Color Purple, In the Heights, Fun Home, and more. This course will also consider some recent “revisals,” like director Daniel Fish’s Oklahoma!, and Marianne Elliott’s gender-reassigned Company: reinterpretations of classic American musicals that imagine them in more contemporary light.
Also Offered As: CIMS 1275, ENGL 1891
1 Course Unit

THAR 1273 Dark Comedy in Theatre and Film
This course will examine the “troublesome genre” of dark comedy by looking at the ways in which theatre and film use comic and tragic structures and traditions to explore concepts and stories seemingly at odds with those traditions. Although not always organized chronologically in time, we will examine the formal and structural characteristics of tragicomedy by tracing its development, from some of its earliest roots in Roman comedy, to its manifestation in contemporary films and plays. Aside from close readings of plays and analysis of films, we will read selected critical essays and theory to enhance our understanding of how dark comedies subvert categories and expectations. We will look at how dark comedies affect audiences and read sections of plays aloud in class. Issues to be considered include comparing the way the genre translates across theatre and film (adaptation) and examining the unique placement of the genre at the heart of contemporary American culture. Students will have the opportunity to experiment with creating tragicomic effect through performance in their presentations. The class is a seminar, with required participation in discussions. Other assignments include an 8-10 page paper and a presentation. We will read plays by authors as diverse as Plautus, Anton Chekhov, and Lynn Nottage, and filmmakers including Charlie Chaplin, Sofia Coppola, and Bong Joon-ho.
Also Offered As: CIMS 1273, ENGL 1273
1 Course Unit

THAR 1274 The Musical Theatre of Stephen Sondheim
Just days before Stephen Sondheim died in November 2021, he attended a revival of Assassins at Classic Stage Company, as well as a radical rethinking of Company that had transferred from London to New York. A few days later, a public performance of the song “Sunday” was organized in Duffy Square by Lin-Manuel Miranda. A new production of Into the Woods is currently on Broadway, and another of Sweeney Todd is planned for February 2023. Though it’s been nearly 15 years since Sondheim’s final new musical, he is very much part of our theatrical present—through his own works, which continue to be produced internationally, and through his influence on several generations of composers, lyricists, and more. Still today, among theatre critics and a large sector of the public, Sondheim is generally considered the most significant composer and lyricist in the contemporary theatre; he is, in fact, accorded the kind of serious consideration generally reserved for “legitimate” playwrights. In this seminar, we will examine in detail Stephen Sondheim’s writing over six decades. We’ll begin with Sondheim’s earliest work as a lyricist, collaborating with composers Jule Styne (Gypsy), Leonard Bernstein (West Side Story), and later, Richard Rodgers (Do I Hear a Waltz?). Beginning in 1970, Sondheim – now both composer and lyricist – in partnership with director Harold Prince produced a series of musicals (including Company, Follies and Sweeney Todd,) still thought to be among the most innovative and substantial in the history of the genre. We will also focus on Sondheim’s musicals after his 1981 break with Prince. These later works, created with writers and directors including James Lapine (Sunday in the Park with George, Into the Woods, Passion), Jerry Zaks (Assassins), and John Doyle (Road Show) are often smaller in scale, intensely personal, and incorporate elements of performance art and popular culture. Finally, we will consider revival productions of Sondheim’s work, which often are reconceived from their original form, often with Sondheim’s involvement and occasional rewriting. This course is open to all students interested in theatre and musical theatre. The ability to read music is not required.

1 Course Unit
THAR 1279 Women in Theatre and Performance
What is feminist theatre? How do artists use live performance to provoke not only thought and feeling, but also social, personal, and political change? This course will examine a wide array of plays and performances by and about women; these pieces are, in turn, serious, hilarious, outrageous, poignant--and always provocative. Our focus will be on English-language works from the late 20th century to the present (#metoo) moment. We will read these performance texts and/or view them on stage/screen; we will also read essays that provide contextual background on feminist theatre theory and history. Throughout the semester, we will engage diverse perspectives on women and race, ethnicity, class, sexuality, and gender identity; the issues we encounter will also include marriage and motherhood, career and community, feminism and friendship, and patriarchy and power. The class will take full advantage of any related events occurring on campus or in the city, and will feature visits with guest speakers. Students will have the opportunity to pursue research on their own areas of interest (some recent examples are "women in comedy," trans performance, drag kings, feminist directing, etc.).

THAR 2236 Acting Shakespeare
All the world's a stage and Shakespeare's plays were written to be performed on it. In this open-level acting course we'll explore the performance of three of Shakespeare's greatest dramatic works (Hamlet, Twelfth Night, and Romeo and Juliet). We'll dive deep into the language, verse, rhetoric, and dramaturgy of Shakespeare's texts to create performances that are passionate, spontaneous, and real. Through acting exercises, text analysis, scene study, and vocal training, we will develop the skills needed to bring Shakespeare's dramatic works to their most impactful life. Students will leave the course not only with techniques to perform and appreciate Shakespeare's work, but with expressive tools that will serve them in all kinds of performance or public speaking.

1 Course Unit

THAR 2240 Advanced Topics in Theatre History
The purpose of this course is to introduce students to the basic materials and methods of theatre history and historiography, as applied to a particular topic, organized around a specific period, national group, or aesthetic issue. This course is concerned with methodological questions: how the history of theatre can be documented; how primary documents, secondary accounts, and historical and critical analyses can be synthesized; how the various components of the theatrical event--acting, scenography, playhouse architecture, audience composition, the financial and structural organization of the theatre industry, etc.--relate to one another; and how the theatre is socially and culturally constructed as an art form in relation to the politics and culture of a society in a particular time and place.
Fall or Spring
1 Course Unit

THAR 2325 August Wilson and Beyond
"The people need to know the story. See how they fit into it. See what part they play?"- August Wilson, King Hedley II If you want to get to know community members from West Philadelphia, collaborate deeply with classmates, gain deeper and more nuanced understandings of African American history and culture, engage in a wide range of learning methods, and explore some of the most treasured plays in the American theatre, then this is the course for you. No previous experience required, just curiosity and willingness to engage. In this intergenerational seminar, Penn students together with older community members read groundbreaking playwright August Wilson's American Century Cycle: ten plays that form an iconic picture of African American traditions, traumas, and triumphs through the decades, nearly all told through the lens of Pittsburgh's Hill District neighborhood. (Two of Wilson's plays are receiving fresh attention with recent acclaimed film versions: Fences with Denzel Washington and Viola Davis; Ma Rainey's Black Bottom with Davis and Chadwick Boseman.) Class participants develop relationships with one another while exploring the history and culture that shaped these powerful plays. As an Academically Based Community Service (ABCS) course, the class plans and hosts events for a multigenerational, West Philadelphia-focused audience with community partners West Philadelphia Cultural Alliance / Paul Robeson House & Museum, and Theatre in the X. Class members come to a deeper understanding of Black life in Philadelphia through stories community members share in oral history interviews. These stories form the basis for an original performance the class creates, presented at an end-of-semester gathering. Wilson's plays provide the bridge between class members from various generations and backgrounds. The group embodies collaborative service through the art and connection-building conversations it offers to the community.
Fall

1 Course Unit

THAR 2500 Theatre Workshop
This course will examine a specific aspect of theatrical practice, taught by a visiting professional theatre artist. The course, with different topics, may be repeated for credit. Recent topics have included performance art, Jacques LeCoq technique, Suzuki, and Viewpoints.
Not Offered Every Year
1 Course Unit
THAR 2520 Collaborative Practices: Staging Projects Together
Collaborative Practices is an ABCS course in which Penn students will build and hone their stage practices in collaboration with young artists and performers in Philadelphia. Collaborative Practices offers models for staging original works in collaboration from start to finish and interrogates assumptions about collaboration inside a hands-on mentorship relationship. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Also Offered As: ENGL 3653
1 Course Unit

THAR 2720 American Theatre and Performance
This course examines the development of the modern American theatre from the turn of the century to the present day. Progressing decade by decade the course investigates the work of playwrights such as Eugene O’Neill, Arthur Miller, Tennessee Williams, Edward Albee, David Mamet, August Wilson and Tony Kushner, theatre companies such as the Provincetown Players and the Group Theatre, directors, actors, and designers. Some focus will also be given to major theatrical movements such as the Federal Theatre Project, Off-Broadway, regional theatre, experimental theatre of the Sixties, and feminist theatre.
Not Offered Every Year
Also Offered As: ENGL 2888
1 Course Unit

THAR 2740 Dramaturgy
This course will examine the functions and methods of the dramaturg—the person in the theatrical process who advises the artistic collaborators on (among other things) new play development, the structure of the script, the playwright’s biography and other writings, the play’s first production and its subsequent production history, and the historical and regional details of the period depicted in the plays action. We will study the history of the dramaturg in the American theatre and discuss contemporary issues relating to the dramaturg’s contribution to the theatrical production (including the legal debates about the dramaturg’s contribution to the creation of RENT). And, in creative teams, the class will create dramaturgical portfolios for a season of imaginary (and, potentially, a few actual) theatrical productions.
Not Offered Every Year
Also Offered As: ENGL 2899
1 Course Unit

THAR 2800 Improvisation: History, Theory, Practice
With roots in Vaudeville, Commedia dell’Arte, and beyond, improvisatory theatre has a rich tradition of political, social and artistic subversions. In this course, we will both explore the history and theory of improvisation, and experiment with it in practice. Some classes will be devoted mainly to discussion of assigned readings and viewings, and some mainly to the practice of improvisation (there can be overlap between discussion and practice in any given class). Students are required to write a paragraph about all assigned readings on Canvas. Students are expected to come to each session fully prepared to discuss all assigned materials, and to participate in all exercises and improvisations. (Participants need to wear comfortable clothing that allows for freedom of movement.) Additional assignments are listed separately. Classes may occasionally deviate from the syllabus; in this case, advance notice will be given. The course features class visits from professional theatre artists with an expertise in improvisation and devised theatre, from whom students will learn a rich variety of traditions and techniques.

1 Course Unit

THAR 2810 Method Acting: From Self to Stage and Screen
What, exactly, is “method acting”? Jeremy Strong became notorious on television’s Succession for “staying in character” while filming, to the great irritation of his castmates. Jared Leto “transformed” himself by gaining sixty pounds for a role in Chapter 27, then losing another thirty for a role in Dallas Buyer’s Club. Are such approaches really “method” acting? Are they healthy and sustainable? And do they produce truly compelling performances? This course aims to demystify “the method” through a combination of historical inquiry and hands-on acting work. We will explore the cultural phenomenon of “the method” by tracing its historical, theatrical roots, from the core theories and practices of Russian actor-director Konstantin Stanislavsky through the American Group Theatre experiments of the 1930s, the heyday of New York’s Actors Studio in the 1950s, and its culmination in iconic stage and film performances. (One prime example is Marlon Brando’s famed portrayal of Stanley in Tennessee Williams’s A Streetcar Named Desire, as directed by Elia Kazan). Our studies will involve reading historical, theoretical, and dramatic texts, viewing selected films, and practicing acting exercises. Course assessment will comprise participation, facilitation, short responses, and a final project that can take the form of a research paper, presentation, or performance.
Also Offered As: CIMS 2810, ENGL 2882
1 Course Unit

THAR 2820 Theatre and Politics
This course will examine the relationship between theatre and politics in the twentieth and twenty-first centuries. How do theatre artists navigate their artistic and political aims? How do we distinguish between art and propaganda? Throughout the semester we will ask how the unique components of theatre—its poetic structure, engagement with spectators, aesthetics of representation, relationship to reality, and rehearsal process—contribute to its political capacity. Students will read a variety of plays drawn from late twentieth century and contemporary global theatre practice alongside political and aesthetic theory to interrogate the relationship between artistic production, power, and resistance. We will conclude with a consideration of the ways politics is itself a performance, considering how power is supported by theatrical means and how performance functions in resistance movements.
Also Offered As: COML 2820, ENGL 2880, LALS 2820
1 Course Unit
THAR 2825 The Threat of Climate Change and Theatre
Can theatre save the world? In the face of the climate crisis, this question feels especially urgent. This course will consider the relationship of theatre to the environment and climate change, looking at how we got to this point, and where we might go from here. We will consider how ideas about the environment have been spread through classic texts such as Shakespeare's The Tempest and Ibsen's Enemy of the People. We'll compare how non-western performances offer different relationships with the environment. And we'll analyze how performance has responded to climate anxiety; through visions of dystopia and an end of the world, as in Caryl Churchill's The Skriker and Anne Washburn's Mr. Burns, A Post-Electric Play; through arts activism; and through experimental performance like environmental and immersive theatre. This course is for anyone who is concerned about climate change and interested in how the arts could respond. Most sessions will function as seminar, with short lectures and in-depth discussion about artistic and theoretical texts. We will also workshop different ideas on their feet. The aim is for students to become comfortable enough with this artistic and theoretical mode that they can critique performances across genres from this perspective, articulate their own relationship to it, and see how it might inform their own work.
Also Offered As: ENGL 2881
1 Course Unit

THAR 2830 Backstage Drama in Theatre and Film
Inviting audiences into a special relationship with illusion, backstage dramas (whether on film or on stage) and within-plays reach beyond and alongside traditional plot-driven narratives, to reflect on the process of representation itself. Drawing from classical debates about the relationship between reality, illusion, representation, and imitation (mimesis), we will examine a variety of plays and films as we articulate the complex network of responses and underlying assumptions (whether cultural, political, or social), about art and life, that these works engage.
Fall, odd numbered years only
Also Offered As: CIMS 2830, ENGL 1896
1 Course Unit

THAR 2840 Icons in Performance: Actors and Others Who Have Shaped the Arts
Many talented performers bring works to life on a stage or in film. But a select few artists are so distinctive they become icons, defining for audiences-often for many years beyond their careers-the art they serve. Marlon Brando defined a new kind of American acting. Sidney Poitier broke the color barrier for leading black movie stars. Maria Callas showed that opera was equal parts theatre and music. Greta Garbo helped us understand the visual power of a film image. This seminar will focus on iconic performers, directors and others, and the roles they play in defining their art forms. It is part analysis (interpreting in detail what it is these artists do) and part cultural study (why it matters, and also seeking to understand the larger circumstances at play in forging an icon). In addition to the performers mentioned above, we'll also study Mae West, Fred Astaire, Marilyn Monroe, Elvis Presley, Judy Garland, Frank Sinatra, and more. We will also look at a handful of iconic directors-including Alfred Hitchcock, Douglas Sirk, and others-whose style makes a definitive mark on American film and theater. And we will also look at how critics (in addition to popular audiences) assess performers through comparisons, and by understanding the evolution and tradition of the art. To support our work, we will use film, audio recordings, scripts, criticism and analytical essays, biography, and more.
Also Offered As: CIMS 2840, ENGL 2890
1 Course Unit

THAR 2850 The Black Arts Movement: Theatre and Performance
This course examines the Theatre and Performance practices of the Black Arts Movement from the mid-1960s to mid-1970s. The Black Arts Movement (BAM) emerges in New York, New Jersey, Chicago, Los Angeles, San Francisco, and Philadelphia among other locations, as a cultural component of the Black Power Movement, and its legacy continues to this day. BAM artists, poets, playwrights, musicians, dancers, producers, directors, and teachers, shared a goal to develop an alternative theatre based in Africanist and Black aesthetics combining poetry, music, and dance in a non-linear fashion allowing stories to emerge through alternative and abstract structures that are activist in nature. We will ground our examination of the period in a growing global black consciousness, as well as the relationship between black aesthetics and self-determination. The course will explore a breadth of mid twentieth century Black experimental theatre ranging from Jean Genet’s The Blacks and Imamu Amiri Baraka’s Black Arts Repertory Theater and School, to Ntozake Shange’s Choreopoems, and the performance poetry Jayne Cortez. The course culminates in the work of present-day performance artists that have taken up and evolved the form. The course is designed to incorporate theory and practice through play and poetry readings, movement investigations, student presentations of Theatre/Performance Artists, and viewing performances either virtually or in person. Students will develop either a choreopoem of their own or curate an imagined Black Arts Movement theatre festival or season.
Also Offered As: AFRC 2852, ENGL 2850
1 Course Unit

THAR 2860 Latin American and Latinx Theatre and Performance
This course will examine contemporary Latin American and Latinx theatre and performance from a hemispheric perspective. In particular, we will study how Latin American and Latinx artists engage with notions of identity, nation, and geo-political and geo-cultural borders, asking how we might study "national" theatres in an age of transnational globalization. Our consideration of plays, performances, and theoretical texts will situate Latin American and Latinx theatre and performance within the context of its politics, culture, and history.
Also Offered As: COML 2086, ENGL 0490, LALS 2860
1 Course Unit

THAR 3000 Acting & Directing Lab
This course operates as a continuation of both Introduction to Acting (THAR120) and Introduction to Directing (THAR121). Students can take the course as actors, directors, or both. Each semester the course covers a unique topic of exploration for actors and directors. This is a studio class with a focus on scene work within various genres, styles and concentrations of theatrical practices. Some special topics might include: Japanese Theatre, Theatre as Event, Experimental Theatre, and Feminism and Form.
Spring
Prerequisite: THAR 0120 OR THAR 0121
1 Course Unit
THAR 3120 Scene Study
Scene Study is an advanced acting class that combines intensive script analysis with performance of scenes; material to be explored will be chosen specifically for the members enrolled in class. Open to students who have successfully completed Introduction to Acting, this course continues with greater emphasis on the actor’s work with the text. We will study several plays together as a group, conducting Stanislavskian table work. We will then workshop and perform scenes from these plays in subsequent class sessions. In consultation with the instructor, students will identify individual goals, building on discoveries made in other Theatre Arts courses and/or prior stage work, exploring roles and plays that present actors with new challenges and expand their range. Depending on the number of students enrolled in the class, we are likely to perform at least three scenes and a monologue. Plays will be read alongside key theoretical texts, and class work will be complemented by attendance at selected live productions on campus and in Philadelphia. Fall
Prerequisite: THAR 0120
1 Course Unit

THAR 3355 Japanese Theater
Japan has one of the richest and most varied theatrical traditions in the world. In this course, we will examine Japanese theater in historical and comparative contexts. The readings and discussions will cover all areas of the theatrical experience (script, acting, stage design, costumes, music, and audience). Audio-visual material will be used whenever appropriate and possible. The class will be conducted in English, with all English materials. Fall or Spring
Also Offered As: COML 3555, EALC 3355

THAR 3600 The Planets in my Pen: Experiments in Writing, Visual Art & Performance
The Planets in my Pen is a multi-genre creative arts workshop constellation around experimentation. We will be looking at innovative writing, visual art and film as models for the making of poetry, fiction, memoir, drawing, painting, sculpture, installation, plays and performance. The genres, techniques and movements of science fiction, surrealism, performance art and the political essay will be key with an emphasis on feminist, queer, left and anticolonial models of art and world making. The works of William S. Burroughs, John Rechy, Nelly Santiago, Jean Genet, Ntozake Shange, Octavia Butler, Adrienne Kennedy, Lucrecia Martel, Aimé Césaire, Jamaica Kincaid, Regina Jose Galindo, Raul Ruiz, Josefa Baez, Zadie Smith and Cherrie Moraga will be among those read, viewed and studied. As their final project students will submit a final manuscript, performance and/or art object as well as participate in a public reading/viewing/screening.
Also Offered As: ENGL 3608, GSWS 3600, LALS 3600
1 Course Unit

THAR 3606 Experimental Playwriting
A course on writing for theater and performance. Students will take cues from myriad experimental playwrights and performance artists who have challenged conventional ideas of what a script should look and sound like, how narrative is constructed, how characters are built, and what a setting can be. This class will push beyond the formal structures of the well-made play script and address how writers explore and reinvent form and language as a means for radical change. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.

1 Course Unit
**Tigrinya (TIGR)**

**TIGR 0100 Elementary Tigrinya I**
This course will focus on developing interpersonal and interpretive skills to enable students to acquire Level 1+ on the Interagency Language Roundtable (ILR) scale. Students will be able to initiate and maintain predictable face-to-face conversations and satisfy limited social demands in the language. They may, however, have little understanding of the social conventions of conversation. Range and control of the language will be limited. Speech will largely consist of a series of short, discrete utterances. For example, students will be able to satisfy most travel and accommodation needs and a limited range of social demands beyond exchange of skeletal biographic information. Speaking ability may extend beyond immediate survival needs. Accuracy in basic grammatical relations will be evident, although not consistent. May exhibit the more common forms of verb tenses, for example, but may make frequent errors in formation and selection. While some structures are established, errors occur in more complex patterns. The individual typically cannot sustain coherent structures in longer utterances or unfamiliar situations. Ability to describe and give precise information is limited.

**Turkish (TURK)**

**TURK 0100 Elementary Turkish I**
This is a course for beginners who have no previous knowledge of Turkish. Using a communicative approach, Elementary Turkish introduces basic vocabulary and grammar rules and focuses on building language competencies in listening, reading, speaking and writing. By the end of the course, students will be able to participate in simple conversations, to know daily expressions, and will understand simple dialogues in day-to-day context and will be able to count and tell time. Will be able to speak about events that happened in the past and express plans for the future. Students will also develop writing strategies that will allow them to write simple letters and fill in commonly-used forms.

Fall
1 Course Unit

**TURK 0150 Introduction to the Languages of Central Asia**
This is a survey course that introduces students to the main languages spoken in Central Asia. Various Turkic languages would be introduced in this course: Kazakh, Uzbek, Kyrgyz or Azeri. Students will be able to start their introduction to the languages that support the study of Central Asian region. The language study will facilitate student research in topics like politics, history, and cultural events. This course aims at generating interest in the languages and studies of Central Asia spanning different periods of its history, with main focus is on the linguistic forms and the cultural activities.

Fall
1 Course Unit

**TURK 0200 Elementary Turkish II**
This course is a continuation of Elementary Turkish I and is designed to strengthen and extend students' listening, speaking, reading and writing competence and to deepen an understanding of Turkish people in Turkey. By the end of this course, students will be able to handle a variety of day to day needs in Turkish-speaking settings and engage in simple conversations. Students can expect to be able to order food and drinks, purchase things, and to be able to be familiar with current social topics. Students will be able to talk about all tenses, present, future, past, past continuous, make comparisons, describe people and things in detail, make travel plans, make reservations in hotels and holiday resorts, write complaint letters. By the end of the course, students will be able to talk about their studies and their plans for the future. Also, students will develop reading strategies that should allow them to understand the general meaning of articles, and short literary texts. Students will learn practical life in Turkey and will explore Turkish culture on the internet.

Spring
Prerequisite: TURK 0100
1 Course Unit
TURK 0250 Elementary Uzbek II
Continuation of Elementary Uzbek I. Designed to cover beginning college levels of language instruction, Uzbek: An Elementary Textbook provides learners and instructors with a wide selection of materials and task-oriented activities to facilitate the development of language learning. It offers a thematically organized and integrative approach to the Uzbek language and its culture, including a functional approach to grammar; an emphasis on integrated skills development, and the use of authentic materials such as videos filmed in various regions of Uzbekistan. Uzbek: An Elementary Textbook contains one CD-ROM that includes authentic audio and video materials to accompany the text and integrated, interactive exercises and games, all in Flash format and all of which are keyed to the textbook. It includes a supplementary Cyrillic reader, an extensive glossary, and four-color illustrations and photographs throughout.
Spring 1 Course Unit

TURK 0300 Intermediate Turkish I
A continuation of elementary Turkish, with emphasis on grammar and reading. This course is for students who have previous knowledge of Turkish or students who have completed Elementary Turkish I and II. This course is designed to improve students' writing and speaking competence, to increase vocabulary, to deepen grammar usage and to help develop effective reading and listening strategies in Turkish. Students' Turkish language proficiency and cultural awareness and knowledge will increase by exposing to authentic materials and coursework. In order, give them cultural knowledge, students are exposed to authentic materials.
Fall
Prerequisite: TURK 0200

TURK 0400 Intermediate Turkish II
Expands students writing and speaking competence in Turkish, increases vocabulary, and helps students' practice effective reading and listening strategies. Our In-class discussions are based on role-plays and weekly readings and news reports from TV and newspapers. We create Discussion wil take place in this course and let them and students will communicate through, threaded discussions, chat rooms and skype. The review of grammar will not be the primary focus of the course. Students' will, expand and deepen their knowledge of grammar will be extended through specific grammar exercises. They Students will have the opportunity to practice and read about the cultural and historical issues and get prepared for an advanced level Turkish.
Spring 1 Course Unit

TURK 1000 Advanced Modern Turkish I
The study of modern Turkish at the advanced level; emphasis on grammar and reading, focusing on Business Turkish. Interviews with professionals from different business groups will take place, such as, education, medicine, business law and political science. The study of modern Turkish at the advanced level; emphasis on conversational fluency and on increased ability reading and comprehending texts, including newspaper prose and Turkish cultural materials. Grammar and reading, focusing on Business Turkish. Interviews with professionals from different business groups will take place, such as, education, medicine, business law and political science.
Fall
Prerequisite: TURK 0400
1 Course Unit

TURK 4000 Advanced Spoken Turkish and Cinema I
In this course, we will look at differing degrees of interaction between literature and the films it inspires. Discussions of each novel will be followed by screening the related film, allowing us to explore themes such as the different forms of banditry (old school vs. organized), honor killings, the use of books in films, the problems of artistic representation. This course will give students the opportunity to improve significantly written and spoken discourse strategies and raise language competence to an academic register. Students work across Turkish Language, literary genres and media as they interpret and analyze cultural, political and historical moments in Turkish movies. Students will attempt to understand how political shifts over the past 20 years have impacted the current situation and cultural conception, religious and cultural norms and traditions. Contemporary Turkish authors' books will be analyzed and discussed in this course. We'll have sessions in Penn Museum related to exhibitions from Turkey and the region.
Fall 1 Course Unit

TURK 4100 Advanced Spoken Turkish and Cinema II
This course offers students the opportunity to improve significantly written and spoken discourse strategies and raise language competence in advance level. Students work across media and movies as they interprit and analyze cultural, political and historical moments in Turkish movies. Special attention will be given to the development of an academic discourse style during in-class discussions, threaded discussions and, written compositions. Interviews and discussions will take place in this course. There will bein class movie screenings and course concludes with an in-class presentation of the collaborative creative project and the final Spring

TURK 4200 Advanced Turkish Culture & Media I
This course is for students who are from all different levels of Turkish knowledge. They are expected to write and talk about Turkish movies, culture, politics according to their own level and pace. They will talk to Turkish visitors and interview them. Turkish movies will be the part of the course and once a month, students will watch a Turkish movie and analyze it. Discussions will take place and students will write essays about the movie. This course is designed with a technology-rich, project based approach. The materials will go beyond instruction in grammar and vocabulary to support the acquisition of socio-cultural pragmatics, and intercultural learning.
Fall 1 Course Unit

TURK 4300 Advanced Turkish Culture & Media II
This course will give students the opportunity to improve significantly written and spoken discourse strategies and raise language competence to an advanced level. Students work across Turkish Language, literary genres and media as they interpret and analyze cultural, political and historical moments in Turkish movies. Students will attempt to understand how political shifts over the past 20 years have impacted the current situation and cultural conception, religious and cultural norms and traditions. Twi (TWI)

TWI 0100 Elementary Twi I
The Elementary Twi I course can be taken to fulfill a language requirement, or for linguistic preparation to do research on Ghana/Africa-related topics. The course emphasizes communicative competence to enable the students to acquire linguistic and extra-linguistic skills in Twi. The content of the course is selected from various everyday life situations to enable the students to communicate in predictable common daily settings. Culture, as it relates to language use, is also a part of the course content. Students will acquire the speaking, listening, reading and writing skills at the mid-high novice level, based on the ACTFL scale. The mid-high novice level proficiency skills that the students will acquire constitute threshold capabilities of the second semester range of proficiency to prepare students for Elementary Twi II course materials.
Fall
1 Course Unit

TWI 0200 Elementary Twi II
This course will focus on developing interpersonal and interpretive skills to enable students to acquire Level 1+ on the Interagency Language Roundtable (ILR) scale. Students will be able to initiate and maintain predictable face-to-face conversations and satisfy limited social demands in the language. They may, however, have little understanding of the social conventions of conversation. Range and control of the language will be limited. Speech will largely consist of a series of short, discrete utterances. For example, students will able to satisfy most travel and accommodation needs and a limited range of social demands beyond exchange of skeletal biographic information. Speaking ability may extend beyond immediate survival needs. Accuracy in basic grammatical relations will be evident, although not consistent. May exhibit the more common forms of verb tenses, for example, but may make frequent errors in formation and selection. While some structures are established, errors occur in more complex patterns. The individual typically cannot sustain coherent structures in longer utterances or unfamiliar situations. Ability to describe and give precise information is limited.
Spring
1 Course Unit
TWI 0300 Intermediate Twi I
This course will engage students in interpersonal and interpretive activities to enable them to satisfy most work requirements with language usage that is often, but not always, acceptable and effective. They will be able to handle with confidence, but not with facility, most normal, high-frequency social conversational situations including extensive, but casual conversations about current events, as well as work, family, and autobiographical information. Students can get the gist of most everyday conversations but have some difficulty understanding native speakers in situations that require specialized or sophisticated knowledge. Students will show considerable ability to communicate effectively on topics relating to particular interests and special fields of competence. Often, they will show a high degree of fluency and ease of speech, yet when under tension or pressure, the ability to use the language effectively may deteriorate. Comprehension of normal native speech is typically nearly complete. Typically, students with this proficiency level can participate in most social, formal, and informal interactions, but limitations either in range of contexts, types of tasks or level of accuracy hinder effectiveness.

Fall
1 Course Unit

TWI 0400 Intermediate Twi II
Prerequisite: Offered through the Penn Language Center
Spring
1 Course Unit

TWI 1100 Advanced Twi I
Students will engage in interpersonal and interpretive tasks to develop productive skills to use the language with sufficient structural accuracy and vocabulary to participate effectively in most formal and informal conversations in practical, social and professional topics. Discourse will be cohesive. Students will use the language acceptably, but with some noticeable imperfections; yet, errors will never interfere with understanding and will rarely disturb the native speaker. Students will effectively combine structure and vocabulary to convey their meaning accurately, speaking readily and filling pauses suitably. In face-to-face conversation with natives speaking the standard dialect at a normal rate of speech, comprehension will be quite complete. Students can typically discuss particular interests and special fields of competence with reasonable ease. Can use the language as part of normal professional duties such as answering objections, clarifying points, justifying decisions, understanding the essence of challenges, stating and defending policy, conducting meetings, delivering briefings, or other extended and elaborate informative monologues. Can reliably elicit information and informed opinion from native speakers. Use of structural devices is flexible and elaborate. Without searching for words or phrases, students use the language clearly and relatively naturally to elaborate concepts freely and make ideas easily understandable to native speakers. Errors occur in low-frequency and highly complex structures

Fall
1 Course Unit

TWI 1200 Advanced Twi II
Prerequisite: Offered through the Penn Language Center.
Spring
1 Course Unit

TWI 1300 Twi Language & Culture I
Students will engage in interpersonal and interpretive communicative modes of language use to satisfy professional needs in a wide range of sophisticated and demanding tasks. While students will be able to demonstrate obvious strengths, they may exhibit some hesitancy, uncertainty, effort or errors which limit the range of language-use tasks that can be reliably performed. Occasional patterned errors may occur in low frequency and highly-complex structures. Typically, there will be particular strength in fluency and one or more, but not all, of the following: breadth of lexicon, structural precision, discourse competence in a wide range of contexts and tasks often matching a native speaker's strategic and organizational abilities and expectations.

Ukrainian (UKRN)

UKRN 0100 Ukrainian I
This course is the first in a series of first-year courses, intended for students with no previous background in Ukrainian. The course develops competence in speaking, reading, writing, and understanding contemporary Ukrainian. It will also introduce you to Ukrainian culture through exciting authentic materials, including songs, videos, and short stories. Class work emphasizes development of communicative competence in real-life situations, spontaneous interactions, pair and group work and is conducted almost entirely in Ukrainian. By the end of the course, you will be able to engage in simple conversations in Ukrainian on topics concerning your daily life. You will also be able to write short personalized messages in Ukrainian.

Two Term Class, Student may enter either term; credit given for either
1 Course Unit

UKRN 0200 Ukrainian II
This course is the second in a series of first-year courses, continuation of Ukrainian I. The course continues to develop competence in speaking, reading, writing, and understanding contemporary Ukrainian. We will continue the exploration of Ukrainian culture through exciting authentic materials, including songs, videos, and short stories. Class work emphasizes development of communicative competence in real-life situations, spontaneous interactions, pair and group work and is conducted almost entirely in Ukrainian. By the end of the course, you will be able to engage in simple conversations in Ukrainian on many topics in informal and some formal contexts concerning your daily life. You will also be able to write longer personalized messages in Ukrainian.

Two Term Class, Student may enter either term; credit given for either
Prerequisite: UKRN 0100
1 Course Unit
UKRN 0300 Ukrainian III
This course is the first in a series of second-year courses, continuation of Ukrainian II. The course will strengthen students' competence in speaking, reading, writing, and understanding contemporary Ukrainian and will expand students' active and passive vocabulary on a variety of topics. We will continue the exploration of Ukrainian culture through exciting authentic materials, including Ukrainian newspaper articles on current events in business, education, politics, science, sports, and other topics. Class work emphasizes development of communicative competence in real-life situations, spontaneous interactions, pair and group work and is conducted almost entirely in Ukrainian. By the end of the course, you will be able to engage in increasingly complex conversations in Ukrainian on many topics in informal and formal contexts concerning your daily life, significant personal and cultural events and situations, important cultural figures. You will be able to write longer messages in a variety of informal and formal contexts.

Urban Studies (URBS)

URBS 0002 The City in South Asia
This interdisciplinary social science course examines key topics, themes, and analytic methods in the study of South Asia by focusing on significant South Asian cities. With one-fifth of the world's population, South Asia and its urban centers are playing an increasingly important role in recent global economic transformations, resulting in fundamental changes within both the subcontinent and the larger world. Drawing primarily on ethnographic studies of South Asia in the context of rapid historical change, the course also incorporates research drawn from urban studies, architecture, political science, and history, as well as fiction and film. Topics include globalization and new economic dynamics in South Asia; the formation of a new urban middle class; consumption and consumer culture; urban political formations, democratic institutions, and practices; criminality & the underworld; population growth, changes in the built environment, and demographic shifts; everyday life in South Asia and ethnic, cultural, and linguistic identities, differences, and violence in South Asia’s urban environments. This is an introductory level course appropriate for students with no background in South Asia or for those seeking to better understand South Asia’s urban environments in the context of recent globalization and rapid historical changes. No prerequisites. Fulfills College sector requirement in Society and foundational approach in Cross-Cultural Analysis.
Fall or Spring
Also Offered As: ANTH 0002, SAST 0002
1 Course Unit

URBS 0003 Origin and Culture of Cities
The UN estimates that 2.9 of the world’s 6.1 billion people live in cities and that this percentage is rapidly increasing in many parts of the world. This course examines urban life and urban problems by providing anthropological perspectives on this distinctive form of human association and land use. First we will examine the "origin" of cities, focusing on several of the places where cities first developed, including Mesopotamia and the Valley of Mexico. We will then investigate the internal structure of non-industrial cities by looking at case studies from around the world and from connections between the cities of the past and the city in which we live and work today.
Fall
Also Offered As: ANTH 0103, NELC 0003
1 Course Unit
URBS 0005 Poverty and Inequality
What does it mean to live in poverty in the "land of plenty" and experience inequality in the "land of opportunity?" This First-Year Seminar explores these questions and others related to poverty and inequality in contemporary America. The first part of this course focuses on poverty. We will examine topics such as poverty perceptions and measurement, poverty trends, causes of poverty, poverty-related outcomes, and anti-poverty policy. The second part of this course focuses on inequality more broadly. We will examine how inequality is defined and what it looks like in the U.S. We will compare the "Haves" and the "Have Nots" and discuss social class, mobility, wealth, and privilege. Lastly, we will explore how different domains (e.g. education, the labor market, health, the justice system) produce, maintain, and reproduce inequalities. Throughout the semester, we will consider the roles of race/ethnicity, gender, age, and place, and how they help deepen our understanding of poverty and inequality.
Fall or Spring
Also Offered As: SOCI 0001
1 Course Unit

URBS 0010 Homelessness & Urban Inequality
This first-year seminar examines the homelessness problem from a variety of scientific and policy perspectives. Contemporary homelessness differs significantly from related conditions of destitute poverty during other eras of our nation's history. Advocates, researchers and policymakers have all played key roles in defining the current problem, measuring its prevalence, and designing interventions to reduce it. The first section of this course examines the definitional and measurement issues, and how they affect our understanding of the scale and composition of the problem. Explanations for homelessness have also been varied, and the second part of the course focuses on examining the merits of some of those explanations, and in particular, the role of the affordable housing crisis. The third section of the course focuses on the dynamics of homelessness, combining evidence from ethnographic studies of how people become homeless and experience homelessness, with quantitative research on the patterns of entry and exit from the condition. The final section of the course turns to the approaches taken by policymakers and advocates to address the problem, and considers the efficacy and quandaries associated with various policy strategies. The course concludes by contemplating the future of homelessness research and public policy.

URBS 0050 Ancient Civilizations of the World
This course explores the archaeology (material culture) of early complex societies or civilizations in Egypt, Mesopotamia, and the Aegean. According to the traditional paradigm, civilization first emerged during the fourth millennium BCE in Egypt and Mesopotamia. In the Mediterranean, state-level societies first appeared in Crete and mainland Greece in the early second millennium BCE. This course investigates how and why these civilizations developed, as well as their appearance and structure in the early historic (or literate) phases of their existence. A comparative perspective will illustrate what these early civilizations have in common and the ways in which they are unique. This course will consist largely of lectures which will outline classic archaeological and anthropological theories on state formation, before turning to examine the available archaeological (and textual) data on emerging complexity in Egypt, Mesopotamia, and the Aegean. This course does not presuppose any knowledge of archaeology or ancient languages; the instructor will provide any background necessary. Because this is a course on material culture, some of the class periods will be spent at the Penn Museum of Archaeology and Anthropology. These will consist of a guided tour of a relevant gallery, as well as a hands-on object-based lab with archaeological materials selected by the instructor.
Spring, odd numbered years only
Also Offered As: ANTH 0105, NELC 0050
1 Course Unit
URBS 0093 Latinx Environmental Justice
This course explores the involvement of the Latinx environmental justice movement since the 1960s. It addresses theories and concepts of environmental racism and environmental justice, underscoring how Latinxs have challenged, expanded, and contributed to the environmental justice discourse. In this course, students will explore national case studies of environmental and racial injustice as they bear on Latinx communities both in rural areas and in urban barrios throughout the United States. The course will analyze these case studies through the lens of Latinx artistic and literary texts (essays, paintings, short stories, documentaries, and short films) as they provide a unique historic and multicultural perspective of the Latinx experience with environmental injustice and of how Latinxs imagine alternative transitions and responses to environmental marginalization. In addition, the works of Latinx artists and writers will serve as case studies to deconstruct racial stereotypes of Latinxs as unconcerned about environmental issues, shedding light on how they share a broad engagement with environmental ideas. The case studies analyzed in this course emphasize race and class differences between farmworkers and urban barrio residents and how they affect their respective struggles. The unit on farmworkers will focus on workplace health issues such as toxic chemicals and collective bargaining contracts. The unit on urban barrios will focus on gentrification, affordable housing, and toxic substances in the home. We will also review current and past programs that have been organized to address the aforementioned problems. This is an Academically Based Community Service Course (ABCS course) through which students will learn from and provide support to a Latinx-serving organization in the City of Philadelphia on preventing exposure to hazardous substances, thus bridging the information gap on environmental justice issues in the Latinx community in Philadelphia. Information dissemination and education efforts will be conducted by collaborating with Esperanza Academy Charter School in Philadelphia to implement lessons on preventing exposure to hazardous substances. Studying environmental justice and pairing it with community service will heighten students’ awareness of the complexities of culture, race, gender, and class while providing them with an invaluable experience of cross-cultural understanding.

URBS 0101 Asian American Communities
Who is Asian American and how and where do we recognize Asian America? This interdisciplinary course explores the multiple factors that define Asian American identity and community. In order to provide a sketch of the multifaceted experience of this growing minority group, we will discuss a wide variety of texts from scholarly, artistic, and popular (film, cinematic) sources that mark key moments in the cultural history of Asia America. The course will address major themes of community life including migration history, Asian American as model minority, race, class, and transnational scope of Asian America. In combination with the readings, this class will foster and promote independent research based on site visits to various Asian American communities in Philadelphia and will host community leaders as guest lecturers.

URBS 0171 The Socialist City
This course will explore the ideology and politics of the socialist city in the Soviet Union, East Europe, and the Second World. We will focus on how design professionals, politicians, and residents realized utopian socialist values in the face of national design traditions, local politics, and limited resources. Beginning with the Soviet case, the course will consider how planners and architects addressed modernization, multi-family housing, and neighborhood units in new city plans. We will consider capitals, like Moscow, as well as less well-known regional centers that had strong local identities, such as Tashkent, Belgrade, and Prague. We will examine the state’s use of public spaces for commemorations and preservationists’ reinterpretation of existing historic sites. In addition, we will consider how everyday residents experienced the socialist city, such as multi-family housing, shopping centers, and subway systems. We will address how citizens circumvented official state channels to obtain state housing and illegally build homes for themselves, sometimes in a folk style. The course will center on Soviet and East European cities, but also address socialist cities in Cuba and Africa whose design was influenced by transnational exchanges. Most broadly, this course explores the question, what was the socialist city? How did its planners, architects, and politicians understand it, and what did they intend to construct? And, what resulted? In the past fifteen years, North American scholars have begun to take seriously the study of the socialist city, and this course draws on the emerging scholarship on this exciting, cross-disciplinary topic. How do scholars understand the socialist city today? We will examine the shared legacies that socialist cities across East Europe shared with their Western European counterparts, as well as the particularities of design that have sparked North American scholars’ debates on what distinguished the socialist city from ones that emerged in a capitalist context. In our discussions, we will seek to understand how socialist design professionals understood their work and the emerging cities at the time, as well as how North American scholars view the socialist city today. Disciplinarily, the focus of the call will fall at the intersection of architectural history and politics.

URBS 0180A Music in Urban Spaces
Music in Urban Spaces is a year-long experience that explores the ways in which individuals use music in their everyday lives and how music is used to construct larger social and economic networks that we call culture. We will read the work of musicologists, cultural theorists, urban geographers, sociologists and educators who work to define urban space and the role of music and sound in urban environments, including through music education. While the readings make up our study of the sociology of urban space and the way we use music in everyday life to inform our conversations and the questions we ask, it is within the context of our personal experiences working with music programs in public neighborhood schools serving economically disadvantaged students, that we will begin to formulate our theories of the contested musical micro-cultures of West Philadelphia. This course is over two-semesters where students register for .5 cus each term (for a total of 1 cu over the entire academic year) and is tied to the Music and Social Change Residential Program in Fisher Hassenfeld College House which will sponsor field trips around the city and a final concert for youth to perform here at Penn, if possible. Students are expected to volunteer in music and drama programs in Philadelphia neighborhood public schools throughout the course experience.
Two Term Class, Student must enter first term; credit given after both terms are complete

URBS 0248 The Urban Food Chain
This class explores the social, economic, ecological, and cultural dynamics of metropolitan and community food systems in U.S. cities. Field trips and assignments immerse students in various forms of experiential learning - including farming and gardening, cooking, eating, and more. After a broad introduction to global, regional, and urban food systems in our first three weeks, across most of the semester we follow the food chain (or cycle), from production to processing, distribution, cooking, consumption, and waste. Specific topics include urban agriculture, community kitchens, grocery, hunger and food assistance, restaurants, neighborhoods, food cultures, food justice, and community food security. Students will gain broad literacies in: metropolitan and neighborhood food environments; food production, processing, distribution, access, and preparation; and the relationships between food, culture, and society. Students taking this class should be open to trying new things, getting hands dirty, and working with others in various settings and activities.

URBS 0270 The Immigrant City
This course focuses on immigrant communities in United States cities and suburbs. We survey migration and community experiences among a broad range of ethnic groups in different city and suburban neighborhoods. Class readings, discussions, and visits to Philadelphia neighborhoods explore themes including labor markets, commerce, housing, civil society, racial and ethnic relations, integration, refugee resettlement, and local, state, and national immigration policies. The class introduces students to a variety of social science approaches to studying social groups and neighborhoods, including readings in sociology, geography, anthropology, social history, and political science. Ultimately, the class aims to help students develop: 1) a broad knowledge of immigration and its impacts on U.S. cities and regions; 2) a comparative understanding of diverse migrant and receiving communities; and 3) familiarity with policies and institutions that seek to influence immigration and immigrant communities.

URBS 0335 Investigating the Old 7th Ward
The great scholar and civil rights leader, W.E.B. Du Bois, came to Philadelphia in 1896 to research the Black population of the Seventh Ward. The University of Pennsylvania published his study in 1899 as The Philadelphia Negro. Together, we will study the impact of Du Bois’ work and the relevance to understanding racism, violence, and inequity in Philadelphia today. Taking inspiration from Du Bois’ mixture of research methods and data sources, the course will focus on a range of historical research and digital humanities methods, including oral history, geographic information systems mapping, podcasts, and video. Students will develop new materials for teaching about Du Bois and the Old Seventh Ward and support Philadelphia public school teachers developing and implementing related lessons in K-12 schools.

URBS 1020 Iraq: Ancient Cities and Empires
Iraq: Ancient Cities and Empires is a chronological survey of the ancient civilization that existed in the drainage basin of the Tigris and Euphrates Rivers from the early settled village farming communities of the 7th millennium BCE to the middle of the 1st millennium BCE, when Nebuchadnezzar II ruled Babylon and much of the Middle East. Though organized period by period, NELC 241 explores various social, political, economic, and ideological topics, exposing students to various strands of evidence, including settlement survey data, excavated architectural remains, artifacts, and documentary sources, as well as an eclectic mix of theoretical perspectives. The course aims to provide students with a strong foundation for the further study of the ancient and pre-modern Middle East.

URBS 1030 Industrial Metropolis
Although we no longer think of most U.S. cities as industrial cities, metropolitan areas today are all products of industrial economies, technologies, and social systems. This course explores the industrialization and deindustrialization of American cities within their evolving global context from the era of European colonization to the present. It includes weekly readings and discussion, regular response papers and walking tours, in-class exercises, and a research paper using primary sources. Themes include energy and ecology, labor and production, inner city and suburban development, globalization, and economic restructuring. Ultimately, the class aims to give students a broad knowledge of 1) the history of industrial capitalism, 2) its effects on cities and regions over the past three centuries, and 3) analytical tools for understanding the past, present, and future of metropolitan economies, geography, and society.
Fall
1 Course Unit

URBS 1050 Metropolis: Culture of the City
An exploration of modern discourses on and of the city. Topics include: the city as site of avant-garde experimentation; technology and culture; the city as embodiment of social order and disorder; traffic and speed; ways of seeing the city; the crowd; city figures such as the detective; the criminal, the flaneur, the dandy; films as the new medium of the city. Special emphasis on Berlin. Readings by, among others, Dickens, Poe, Baudelaire, Rilke, Doeblin, Marx, Engels, Benjamin, Kracauer. Films include Fritz Lang's Metropolis and Tom Tykwer's Run Lola Run.

URBS 1070 Berlin: History, Politics, Culture
What do you know about Berlin's history, architecture, culture, and political life? The present course will offer a survey of the history of Prussia, beginning with the seventeenth century, and the unification of the small towns of Berlin and Koeln to establish a new capital for this country. It will tell the story of Berlin's rising political prominence in the eighteenth century, and its position as a center of the German and Jewish Enlightenment. It will follow Berlin's transformation into an industrial city in the nineteenth century, its rise to metropolis in the early twentieth century, its history during the Third Reich, and the post-war cold war period. The course will conclude its historical survey with a consideration of Berlin's position as a capital in reunified Germany. The historical survey will be supplemented by a study of Berlin's urban structure, its significant architecture from the eighteenth century (i.e. Schinkel) to the nineteenth (new worker's housing, garden suburbs) and twentieth centuries (Bauhaus, Speer designs, postwar rebuilding, GDR housing projects, post-unification building boom). In addition, we will read literary texts about the city, and consider the visual art and music created in and about Berlin, and focus on Berlin's Jewish history. The course will be interdisciplinary with the fields of German Studies, history, history of art, urban studies, and German-Jewish studies. It is also designed as a preparation for undergraduate students who are considering spending a junior semester with the Penn Abroad Program in Berlin.

URBS 1120 Community, Freedom, Violence: Writing the South Asian City
The South Asian city—as space, symbol, and memory—is the subject of this course. Through a range of readings in English and in translation, we will gain a sense for the history of the city and the ways in which it is a setting for protest and nostalgia, social transformation and solitary wandering. We will see reflections of the city in the detective novels sold in its train stations, the stories scribbled in its cafes, and films produced in its backlots. Readings will attempt to address urban spaces across South Asia through a range of works, which we will examine in the context of secondary readings, including histories and ethnological works that take up life in the modern city. Students will finish this course prepared to pursue projects dealing with the urban from multiple disciplinary perspectives. This course is suitable for anyone interested in the culture, society, or literature of South Asia, and assumes no background in South Asian languages.
Fall or Spring

URBS 1150 American Race: A Philadelphia Story (SNF Paideia Program Course)
This course proposes an examination of race with a two-pronged approach: one that broadly links the study of race in the United States with a multi-disciplinary approach and also simultaneously situates specific conversations within the immediate location of Philadelphia, home to the University. The broad historical examination advances key concepts of race and racialization, explores key theoretical methodologies, and highlights major scholarly works. For example, students will engage with the study of race through Africana Studies, Asian American Studies, Urban Studies and through Latin American & Latinx Studies. Readings and methodologies will introduce students to critical issues in education, in literature, in sociology, and with methods in oral history, archival work, and ethnography. Most importantly, this extensive approach highlights the impact of race across multiple communities including Black Americans, immigrant populations, and communities that are marginalized to emphasize connections, relationships, and shared solidarity. Students are intellectually pushed to see the linkages and the impacts of racism across and among all Americans historically and presently. As each theme is introduced a direct example from Philadelphia will be discussed. The combination of the national discourse on race, with an intimate perspective from the City of Philadelphia, engages students both intellectually and civically. The course will be led by Fariha Khan and Fernando Chang-Muy but guest instructors with varied disciplinary backgrounds and guest speakers from local community organizations. Each instructor not only brings specific disciplinary expertise, but also varied community engagement experience.

URBS 1151 Comparative Cultures of Resilience and Sustainability in the Netherlands and the United States
Coastal and riverside cities worldwide are under increasing pressure from sea level rise and other effects of climate change. Resilience and sustainability are paradigmatic concepts for the ways in which cities address the effects associated with global warming: sea level rise, extreme weather, changing climate, and their impacts on water, food, energy, and housing. This course focuses on the cultural side of resilience and sustainability in four signature cities: Rotterdam (with areas 6 meters below sea level), Nijmegen (which has devised a new way to live with a major river), New York City (which was devastated by Hurricane Sandy), and New Orleans (one of the most vulnerable American cities). Of course, other cities (Amsterdam, Arnhem, Boston, The Hague, Houston, Miami, etc.) will also come into play. In deeply uncertain times, cities such as these confront an array of interconnected choices that involve not only infrastructural solutions, but priorities, values, and cultural predispositions. Ideally, the strategies that cities devise are generated through inclusive processes based on the understanding that resilience and sustainability should be grounded in the cultural life of their communities. When this is the case, resilience and sustainability can become unique and motivating narratives about how cities and their residents co-develop the kinds of hard, soft, and social infrastructure the climate emergency requires. With this in mind, we will analyze the cities’ climate action plans and resilience strategies; explore their cultural histories relative to flooding events; and consult with Dutch and American experts in climate adaptation, governance, community development, and design. The highlight of the course will be travel to the Netherlands during spring break for site visits and discussions with experts. Spring

URBS 1170 Media and Popular Culture
This course relies on a variety of sociological perspectives to examine the role of media and popular culture in society, with a particular emphasis on the power of the mass media industry, the relationship between cultural consumption and status, and the social organization of leisure activities from sports to shopping. Fall or Spring
Also Offered As: SOCI 1070
1 Course Unit

URBS 1310 Small Business Anthropology
With a focus on minority-owned small businesses in the City of Philadelphia, this class will introduce students to the work of anthropologists who have made their careers in the business world using the tools they acquired through training in anthropology. By bringing anthropological perspectives into the workplace, business anthropologists seek to promote well-being for employees and owners, as well as consumers and the communities in which businesses operate. The class will also introduce students to Philadelphia from the point of view of minority owned small businesses. One of the two class days each week will focus on business anthropology as a profession and include readings on organizational culture, design anthropology, and the role of anthropologists in marketing and advertising, as well as in globalization processes and entrepreneurship. The second of the two days each week will focus on the city of Philadelphia and the role of small businesses within it. We will study the spatial layout of the city, the kinds of small businesses that are operative within the city and where they are located, the relationship of business to ethnicity, gentrification and its impact on small business, and the role of government and community groups in relationship to small businesses and their owners and employees. As part of the class, students will engage in guided research on specific small businesses, with the aim of developing an ethnographic understanding of the experiences of owners and employees, the opportunities they have seized upon and the problems they have confronted. We hope in the course of the semester to provide an ethnographic profile of a sampling of small businesses from different industries, which can in turn contribute to understanding larger social and cultural patterns within Philadelphia. Through a class blog or other means, we hope as well to contribute to the ability of minority small business owners to voice their experiences, as well as their fears and hopes for the future, to members of the University community and beyond. Spring
Also Offered As: ANTH 1310
1 Course Unit
URBS 1400 Inequity and Empowerment: Urban Financial Literacy
This course provides students with a rich look at the historical and contemporary factors that have shaped America's wealth gaps. By studying the economic impacts of systemic forces such as discriminatory housing, predatory lending, and unbanking, students will develop a deep financial understanding of today's urban communities. Students will also explore their own financial awareness and exposure, creating personalized financial histories and empowerment plans.
By breaking the silence on topics such as credit scores, auto purchases, renting vs. owning a home, insurance, retirement plans, debt management, and investing, Urban Financial Literacy will prepare students for a financially healthy life at Penn and beyond. The course will also explore larger financial examples and case studies, including endowment funds and major foundations, the promises and perils of sports and entertainment, start-ups and the gig economy, and more.
In contrasting the opportunity and excess that is possible, with the debilitating realities of intergenerational poverty in America, the idea is that students will end the course with a robust appreciation for financial literacy, a portfolio of practical strategies, and a commitment to create new possibilities for financial wellness.

1 Course Unit

URBS 1780 Faculty-Student Collaborative Action Seminar in Urban University-Community Rln
This seminar helps students develop their capacity to solve strategic, real-world problems by working collaboratively in the classroom, on campus, and in the West Philadelphia community. Students develop proposals that demonstrate how a Penn undergraduate education might better empower students to produce, not simply "consume," societally-useful knowledge, as well as to function as caring, contributing citizens of a democratic society. Their proposals help contribute to the improvement of education on campus and in the community, as well as to the improvement of university-community relations. Additionally, students provide college access support at Paul Robeson High School for one hour each week.
Fall or Spring
Also Offered As: AFRC 1780, HIST 0811
1 Course Unit

URBS 2000 Introduction to Urban Research
This course will examine different ways of undertaking urban research. The goal will be to link substantive research questions to appropriate data and research methods. Computer-based quantitative methods, demographic techniques, mapping / GIS and qualitative approaches will be covered in this course. Student assignments will focus on constructing a neighborhood case study of a community experiencing rapid neighborhood change.
Fall or Spring
1 Course Unit

URBS 2020 Urban Education
This seminar focuses on two main questions: 1) How have US schools and urban ones in particular continued to reproduce inequalities rather than ameliorating them? 2) In the informational age, how do the systems affecting education need to change to create more successful and equitable outcomes? The course is designed to bridge the divide between theory and practice. Each class session looks at issues of equity in relation to an area of practice (e.g. lesson design, curriculum planning, fostering positive student identities, classroom management, school funding, policy planning...), while bringing theoretical frames to bear from the fields of education, sociology, anthropology and psychology.
Fall or Spring
1 Course Unit

URBS 2030 Introduction to City Planning: Planning Urban Spaces
This course will provide a general introduction to the concepts and practice of city planning. Topics to be discussed include: the process and nature of planning - theories, methods and roles as manifested in practice; history and trends in city planning; functional planning practice; planning within constraints—a field project; planning in the international arena; present crisis in planning.
Summer Term
1 Course Unit

URBS 2040 Urban Law
This course will focus on selected aspects of urban law that are particularly relevant to areas of high population density. After an introduction to the American judicial system, it will examine the legal issues that arise in the management of land development and use, with special attention to constitutional questions involving equal protection, due process, and the " takings" clause, and routine run-of-the-mill zoning challenges. This course meets the Cultural Diversity requirement.
Fall
1 Course Unit

URBS 2050 People and Design
The built environment of a city is more than a mere backdrop; the design can actually affect people's experiences. Environmental design primarily focuses on the relationship between people and the built environment. It also looks at how the built environment interacts with the natural one (and the potential for greater sustainability). This course will allow students to gain a deeper understanding of how people create, perceive, and use the designed environment. We'll approach these concepts by analyzing design at a variety of scales, from products to interior design to architecture. Finally, using that knowledge, we'll conclude by analyzing urban spaces of the city.
Spring
1 Course Unit

URBS 2060 Public Environment of Cities: An Introduction to the Urban Landscape
This course will explore the role of public spaces - streets, boulevards, parks and squares - in cities and their social uses. With the University of Pennsylvania campus and the City of Philadelphia serving as our laboratory, we will critically examine the evolution of the movement of corridors, open space and buildings of the urban landscape and their changing uses. Following the flaneur tradition of Baudelaire and Benjamin, we will walk the city to experience and understand the myriad environments and neighborhoods that comprise it.
Spring
1 Course Unit
URBS 2090 Neighborhood Dynamics of Crime
Crime varies in time, space and populations as it reflects ecological structures and the routine social interactions that occur in daily life. Concentrations of crime can be found among locations, with antisocial activities like assaults and theft occurring at higher rates because of the demographic makeup of people (e.g. adolescents) or conflicts (e.g. competing gangs), for reasons examined by ecological criminology. Variation in socio-demographic structures (age, education ratios, and the concentration of poverty) and the physical environment (housing segregation, density of bars, street lighting) predicts variations between neighborhoods in the level of crime and disorder. Both ethnographic and quantitative research methods are used to explore the connections between the social and physical environment of areas and antisocial behavior.

1 Course Unit

URBS 2445 Civil Dialogue Seminar: Civic Engagement In A Divided Nation
The goal of this course is to help students develop concepts, tools, dispositions, and skills that will help them engage productively in the ongoing experiment of American democracy. This nation’s founders created a governmental structure that sets up an ongoing and expansive conversation about how to manage the tensions and tradeoffs between competing values and notions of the public good. These tensions can never be fully resolved or eliminated; they are intrinsic to the American experiment. Every generation must struggle to find its own balance, in no small part because in every era people who previously had been unjustly excluded from the conversation find a way to be heard. That inevitably introduces new values and changes how enduring ones get interpreted. The challenge of each generation is to develop that capacity to its fullest. The goal of this course is to equip you to engage fully in your generation’s renewal of the conversation. Class sessions will use a variety of modalities: lecture, discussion, case studies, opportunities to experiment with the tools and techniques of civil dialogue and writing. Each session will include some theory or historical context, a case study, exploration of a key concept of civic dialogue with a related tool or technique, and an interactive exercise. This course is part of a larger effort by the university (called the Paideia program) to help Penn students build these skills.

URBS 2450 Poverty, Race and Health
This course is designed to introduce students to current literature on race/ethnic difference in health and mortality in the United States, covering such topics as explanations for why some race/ethnic groups fare better than others, how inner city poverty and residential segregation may contribute to racial/ethnic differences in health outcomes, and health of immigrants versus native-born populations. Current policy debated and recent policy developments related to health are also briefly discussed. The course is organized as a seminar with a combination of lectures and class discussions.

URBS 2500 Urban Public Policy: Philadelphia -- A Case Study
An introduction to a broad range of substantive policy areas affecting the city, and an exploration into the complexities of policy formulation and implementation in a large and pluralistic metropolitan setting. The course subtitle, "Philadelphia -- A Case Study," describes our approach. Donna Cooper leads the region’s foremost child advocacy organization focused on poverty, child welfare and education issues, she formerly served as the Deputy Mayor for Policy for the City of Philadelphia, and Secretary of Policy of the Commonwealth of Pennsylvania.
Fall or Spring
1 Course Unit
URBS 2501 Cities in Chinese History
This seminar will study the development of Chinese cities over the past two millennia with respect to their spatial structure, social constitution, economic system, political functions, and cultural representation (including cityscape paintings, maps, and films). As China transitioned from a collection of city-states to a united empire to nation state, Chinese urbanism underwent transformations as drastic as those of the country itself. Cities, which serve as a critical mechanism for the operation of a vast agrarian empire/nation like China, offer a unique vantage point for us to observe and analyze the continuities and discontinuities between dynastic empires as well as the radical transition from empire to modern nation state. Topics include: the city-state system in ancient China; the creation and evolution of imperial capitals; the medieval urban revolution and the subsequent collapse of classic city plans; the development of urban public sphere/public space in late imperial China; the rise of commercial power in urban politics; the negotiation of urban class and gender relations via cultural consumption; the role of cities in the building of a modern Chinese nation state; the anti-city experiment under the communist regime; urban citizenship in the reform era; as well as the expanding urbanization and shifting urbanism of Greater China as reflected in cinematic representations of Shanghai, Hongkong, and Taipei.

URBS 2520 Urban Journalism
Powerful forces are rocking journalism. Newspapers and networks are battling financial woes along with blizzards of misinformation and mistrust. But it’s an exciting time, too. Independent news outlets are blossoming. Newsrooms are heeding calls for diversity and inclusion. And one teenager’s video not only broke news -- it changed history. This course will examine some of those forces and offer direct experience in urban journalism. Students will report and write stories about Philadelphians’ lives. Involvement in The Daily Pennsylvanian or other news outlets is encouraged -- let’s get you published! The course is taught by Dan Biddle, a journalist and author whose investigative reporting for The Philadelphia Inquirer won a Pulitzer Prize.

URBS 2530 Cities, Suburbs, Regions
This course will explore the political, economic, social, and demographic forces impacting development patterns in metropolitan areas, with a particular focus on Philadelphia. We will examine the government policies, economic forces, and social attitudes that affect the way a region grows, and the impact of these forces on poverty, equity and segregation. Specific topics to be discussed include the factors that make a region competitive, the city’s changing role in the region, the impact place has on opportunity, and approaches to revitalizing and improving communities.

1 Course Unit

URBS 2580 Global Urban Education
This course examines the demographic, social, and economic trends impacting the growth of global cities—providing the context for global urban education. Through the dual lens of globalization and local urban culture, we explore relationships between urban education and economic development, democratic citizenship, social movements, social inclusion, equity, and quality of urban life. We consider key historical legacies (e.g., Colonialism), informal settlements and “slums,” the rise of the “knowledge economy”, and the role of international aid. Additional topics include: early childhood; gender equity; youth culture; impacts of crisis and war; urban refugees; teacher training and identity; accountability & governance; information & computer technology; religion, indigenous cultures, and language identity; & the role of the private sector and school choice. We focus on cities like Sao Paolo, Mexico City, Shanghai, Hong Kong, Ho Chi Minh City, Johannesburg, Lagos, Nairobi, Jakarta, Mumbai, Lahore, Tehran, and Cairo, and draw comparisons to cities like New York, London, Paris and Tokyo.

1 Course Unit

URBS 2590 Nutritional Anthropology
The course is an introduction to nutritional anthropology, an area of anthropology concerned with human nutrition and food systems in social, cultural and historical contexts. On the one hand, nutritional anthropologists study the significance of the food quest in terms of survival and health. On the other hand, they also know that people eat food for a variety of reasons that may have little, if anything, to do with nutrition, health, or survival. While the availability of food is dependent upon the physical environment, food production systems, and economic resources, food choice and the strategies human groups employ to gain access to and distribute food are deeply embedded in specific cultural patterns, social relationships, and political and economic systems. Thus, nutritional anthropology represents the interface between anthropology and the nutritional sciences, and as such, can provide powerful insights into the interactions of social and biological factors in the context of the nutritional health of individuals and populations. Because food and nutrition are quintessential biocultural issues, the course takes a biocultural approach drawing on perspectives from biological, socio-cultural and political-economic anthropology. Course content will include: a discussion of approaches to nutritional anthropology; basics of human nutrition; food systems, food behaviors and ideas; methods of dietary and nutritional assessment; and a series of case studies addressing causes and consequences to nutritional problems across the world.

URBS 2600 Asian American Food
You are what you eat. Asian American Food explores the history, politics, and ethnic identity of food through a cultural lens. Growing food, eating, and sharing meals serve as intimate expressions of self and community. By examining the production and consumption of food, the course investigates the ways that Asian Americans navigate traditions, gender norms, religious dietary laws, food habits, and employment as they create lives in the United States. The course overviews the history of Asian American foodways, but has a particular focus on Philadelphia’s Asian American communities.

URBS 2770 Gender, Sex & Urban Life
Is urban space gendered? Do we change how it is gendered as we move through it? Does it change us? This course explores gender and sexuality in the contemporary global city through the study of urban spaces. We will consider feminist, queer, and transgender theories of the city, as we investigate how practices of using and making space are gendered and sexualized. Each week of the course will be organized around a type of space, including subway, school, and birthing center, nightclub, suburb, and park. Assignments will include an auto-ethnography, a short critical essay, and a final assignment that asks you to propose an additional type of space in which to study the intersections of sex, gender, and the urban built environment. In each space, we will conduct an interdisciplinary exploration, drawing from sociology, anthropology, geography, city planning history, feminist and queer theory, as well as from fiction, poetry, music videos, photography, and documentary film.

1 Course Unit

URBS 2900 Metropolitan Nature
In order to understand the complex and often skewed relationship between the built and natural systems, we must think in processes and examine different scales simultaneously. The course explores urban sustainability and resilience. At its core, sustainability is a radical concept that integrates the economy, equity (social justice), and the environment. Co-opted by marketing slogans, stripped of meaning and context, it has become vague and pliable. Sustainability and resilience demand a holistic systems view of the world. The course focuses on communities such as New Orleans and Eastwick where urban development has focused on economic concerns at the expense of the environment and equity resulting in unintended, and sometimes, catastrophic consequences. Students will have the opportunity to interact with community residents who have organized to develop strategies to address these ongoing issues.
Fall
1 Course Unit

URBS 2940 Global Cities: Urbanization in the Global South
This course examines the futures of urbanization in most of the world. With cities in "developing" countries set to absorb 95% of urban population growth in the next generation, the course explores the plans, spaces and social experiences of this dramatic urban century. How do proliferating urban populations sustain themselves in the cities of Latin America, Africa and Asia? What kinds of social and political claims do these populations make more just and sustainable cities? The course investigates the ongoing experiences in urban planning, infrastructure development and environmental governance in cities of the Global South. In so doing, it imagines new forms of citizenship, development and sustainability that are currently unfolding in these cities of the future.

URBS 2950 Palermo: Urban Migration, the Built Environment, and Global Justice
This City Seminar sponsored by Penn’s Humanities+Urbanism+Design initiative explores Palermo, Italy, its migrant communities, built environment, and related questions of justice. In the first half of the semester, we will survey Palermo’s long history as one of the most “conquered” cities in the world, tracing different empires and peoples’ impacts on the city, its social life and built environment, to its recent history as a “sanctuary city” and center of diverse communities from Africa, Asia, and Europe. The class will travel to Palermo during the week of fall break, documenting the built environments of historic and contemporary immigrant neighborhoods, and meeting with leaders of city government, immigrant rights movements, and migrant community associations. Assisted by “cultural mediators” from various communities, students will produce case studies of different migrant communities, their civil society organizations, and the recent impacts they have had on the city and its built environment. Leaders of Palermo’s elected migrants’ city council, the Consulta delle Culture, will be our partners in this class and its engagement with migrant communities. During the second half of the semester, we will continue to explore contemporary topics related to migration, the built environment, and social justice in the city while students work to develop their case studies, which we will publish at the end of the semester on a web site that we build together.
Also Offered As: ITAL 2950

URBS 2970 Nature Culture Environmentalism
Water wars, deforestation, climate change. Amidst many uncertain crises, in this course we will explore the emergent relationship between people and the environment in different parts of the world. How do people access the resources they need to live? How, when and for whom does 'nature' come to matter? Why does it matter? And what analytical tools we might use to think, mitigate and adapt to the effects of climate change? Drawing together classical anthropological texts and some of the emergent debates in the field of climate studies and environmental justice, in this class we focus on the social-ecological processes through which different groups of humans imagine, produce and inhabit anthropogenic environments.

2 Course Units

URBS 3050 Housing, Race, and Community in the United States
One’s home is the first site of self-identity, socialization, and notions of citizenship. In the United States, neighborhoods are the basic units of political organization, educational options, and familial wealth. This course explores the intersections between race and housing in the United States with a specific focus on the experiences of African-Americans in urban centers. The intersectional housing experiences of Asian, Latinx, first-generation immigrants, Arab, and indigenous communities will also be analyzed. This course represents both a timely and nuanced opportunity to address housing as a focal point of existing racial tensions and deepening socio-economic inequalities in the U.S. Increasingly, housing has become a contested subject, with heated debates concerning its status as a human, and potentially constitutional, right. Students will explore urban governance values, the commodification of urban landscapes, and the institutional dimensions of race in the United States. Students will develop a critical understanding of the underlying structural causation for the issues faced by minority populations seeking adequate, affordable, and safe housing in the U.S. Prior knowledge of urban planning, housing, or social policy is not necessary for this course. Students will finish the course equipped with a broad knowledge base of associated development topics including globalization, commodification, and social justice.

Spring
Also Offered As: AFRC 3051
1 Course Unit

URBS 3120 Vulnerable Vets (SNF Paideia Program Course)
Drawing from interdisciplinary scholarship in the fields of sociology, history, psychology, psychiatry, and public health, this course interrogates the identity of vulnerable veterans (veterans who are incarcerated, homeless, or struggling with suicidal ideation). The course focuses on justice-involved veterans who are at the nexus of two of the United States largest, most powerful, and well-funded institutions—the criminal justice system and the military. “Sweet is war to those who have never experienced it,” states the Latin proverb. Central to the curriculum is this very disconnect, between those who have experienced war and those who have not. In addition to communing with veterans, we will analyze popular depictions of war, veterans, violence, and prisons in order to assess how military members, justice-involved people, and survivors of violence are understood in the public imagination versus how they in fact understand themselves and their realities. Students will have in-person dialog with both official and lay experts, including clinicians, veterans, military members, chaplains, and incarcerated people. Students will attend workshops at both the VA and a state prison.

1 Course Unit

URBS 3140 Participatory Cities (SNF Paideia Program Course)
What is a participatory city? What has that term meant in the past, what does it mean now, and what will it mean going forward? Against the backdrop of increasing inequality and inequity, and the rise in a search for solutions, what role can citizens play in co-creating more just cities and neighborhoods? How can citizens be engaged in the decision-making processes about the places where we live, work, and play? And most importantly, how can we work to make sure that all kinds of voices are meaningfully included, and that historically muted voices are elevated to help pave a better path forward? This course will connect theory with praxis as we explore together the history, challenges, methods, and approaches, and impact of bottom up and top down approaches to community participation and stakeholder involvement in cities. Multiple opportunities will be provided to be involved in community engagement work for live projects in Philadelphia.

URBS 3200 Who Gets Elected and Why? The Science of Politics
What does it take to get elected to office? What are the key elements of a successful political campaign? What are the crucial issues guiding campaigns and elections in the U.S. at the beginning of the 21st century? This class will address the process and results of electoral politics at the local, state, and federal levels. Course participants will study the stages and strategies of running for public office and will discuss the various influences on getting elected, including: Campaign finance and fundraising, demographics, polling, the media, staffing, economics, and party organization. Each week we will be joined by guest speakers who are nationally recognized professionals, with expertise in different areas of the campaign and election process. Students will also analyze campaign case studies and the career of the instructor himself. Edward G. Rendell is the former Mayor of Philadelphia, former Chair of the Democratic National Committee, and former Governor of Pennsylvania.

URBS 3260 Tutoring in Urban Public Elementary Schools: A Child Development Perspective
The course provides an opportunity for undergraduate students to participate in academically based community service learning. Student will be studying early childhood development and learning while providing direct, one-to-one tutoring services to young students in Philadelphia public elementary schools. The course will cover foundational dimensions of the cognitive and social development of preschool and elementary school students from a multicultural perspective. The course will place a special emphasis on the multiple contexts that influence children's development and learning and how aspects of classroom environment (i.e., curriculum and classroom management strategies) can impact children's achievement. Also, student will consider a range of larger issues impacting urban education embedded in American society. The course structure has three major components: (1) lecture related directly to readings on early childhood development and key observation and listening skills necessary for effective tutoring, (2) weekly contact with a preschool or elementary school student as a volunteer tutor and active consideration of how to enhance the student learning, and (3) discussion and reflection of personal and societal issues related to being a volunteer tutor in a large urban public school.

1 Course Unit

URBS 3350 Investigating the Old 7th Ward
The great scholar and civil rights leader, W.E.B. Du Bois, came to Philadelphia in 1896 to research the Black population of the Seventh Ward. The University of Pennsylvania published his study in 1899 as The Philadelphia Negro. Through this seminar-style class, students will study the impact of Du Bois' work then as well as its enduring impact and legacy for urban studies, sociology, public health, and social work. Taking inspiration from Du Bois' mixture of research methods and data sources, the course will focus on a range of historical research and digital humanities methods, including oral history, geographic information systems mapping, podcasts, video, augmented reality, visualization, and gaming. Students will develop skills in one or more of these methods and develop new materials for teaching about Du Bois and the Old Seventh Ward through a public history project and high school curriculum. There are no prerequisites for this course, but it is recommended that you have either already taken URBS 2000 (Intro to Urban Research), or have experience with ArcGIS.
Not Offered Every Year
1 Course Unit

URBS 3424 Political Ecologies of the City
Cities have been centres of aspiration for much of human history. They have provided a limited yet critical focus for social mobility, both in political and economic terms. As large agglomerations of political and economic power, urban residents have also consumed growing proportions of the earth's mineral, food and water resources from the national (and international) body. The contradictory aspects of urban aspiration frame this course. Drawing on the frameworks of political ecology, in this course we think through the cities of the global south to understand how cities are made. To do this, we will first focus on the construction on the liberal city and how it has been occupied, both formally and informally, by urban subjects in most of the world. Next, we will learn about projects through which natural resources have been directed to and through the city. Finally we will conclude with a particular attention to how urban resources are claimed by marginalized migrants, and the particular sorts of governance institutions these practices engender.

Mutually Exclusive: ANTH 5424
1 Course Unit

URBS 3500 Cities and Stories
So much of what we know about cities comes from the stories we tell about them. This course takes the city-in-stories as both our subject and our muse. We will work across genres and disciplines, reading a mix of fiction and nonfiction in which cities figure prominently, from Italo Calvino's Invisible Cities to Sarah Broom's Yellow House. We'll go from Mumbai, in Katherine Boo's Behind the Beautiful Forevers, to Oakland, in Tommy Orange's There There. With each text, we'll examine how the city is represented, including what and who we see and don't see, and the role it plays in the narrative. We'll also explore the author's craft and write our own creative nonfiction about city streets and neighborhoods. The class will be part discussion-based seminar and part peer-review writing workshop. It is open to both creative writing and urban studies students excited to explore the intersections between our stories, our cities, and ourselves.

URBS 3705 Jews and the City
Jews have always been an extraordinarily urban people. This seminar explores various aspects of the Jewish encounter with the city, examining the ways that Jewish culture has been shaped by and has helped to shape urban culture. We will examine European and American cities as well as some in Palestine/Israel, covering an expansive view of urban culture. We will consider Jewish involvement in political and cultural life, the various neighborhoods in which Jews have lived, relations with other ethnic groups, as well as many other topics. We will read some classic works in the field along with contemporary scholarship. No prior background in Jewish history is required. *This course may be applied toward the US, European, or Middle East requirements for the History Major or Minor, depending upon the research paper topic. Students must consult with the instructor to determine which geographic requirement will be fulfilled.*

Also Offered As: HIST 3705, JWST 3705
1 Course Unit

URBS 3930 Latinx Environmental Justice
This course explores the involvement of the Latinx environmental justice movement since the 1960s. It addresses theories and concepts of environmental racism and environmental justice, underscoring how Latinx have challenged, expanded, and contributed to the environmental justice discourse. In this course, students will explore national case studies of environmental and racial injustice as they bear on Latinx communities both in rural areas and in urban barrios throughout the United States. The course will analyze these case studies through the lens of Latinx artistic and literary texts (essays, paintings, short stories, documentaries, and short films) as they provide a unique historic and multicultural perspective of the Latinx experience with environmental injustice and of how Latinxs imagine alternative transitions and responses to environmental marginalization. In addition, the works of Latinx artists and writers will serve as case studies to deconstruct racial stereotypes of Latinxs as unconcerned about environmental issues, shedding light on how they share a broad engagement with environmental ideas. The case studies analyzed in this course emphasize race and class differences between farmworkers and urban barrio residents and how they affect their respective struggles. The unit on farmworkers will focus on workplace health issues such as toxic chemicals and collective bargaining contracts. The unit on urban barrios will focus on gentrification, affordable housing, and toxic substances in the home. We will also review current and past programs that have been organized to address the aforementioned problems. This is an Academically Based Community Service Course (ABCS course) through which students will learn from and provide support to a Latinx-serving organization in the City of Philadelphia on preventing exposure to hazardous substances, thus bridging the information gap on environmental justice issues in the Latinx community in Philadelphia. Information dissemination and education efforts will be conducted by collaborating with Esperanza Academy Charter School in Philadelphia to implement lessons on preventing exposure to hazardous substances. Studying environmental justice and pairing it with community service will heighten students' awareness of the complexities of culture, race, gender, and class while providing them with an invaluable experience of cross-cultural understanding.

URBS 4010 Urban Studies Honors
Students in the fall Urban Studies Senior Seminar (URBS400) whose papers are exceptional and show promise for publication will be invited to participate in the spring honors seminar. If they choose to participate, honors seminar participants will revise and refine their research/papers with the goal of their work for publication in an academic journal relevant to the topic. The seminar meets periodically during the semester, structured around a set of assignments geared to facilitate the process of revision. Students will be assigned to read each other’s work and meetings take the form of a workshop with students reporting on progress and providing feedback to improve and develop each other’s papers. In addition to completing the revised paper for a grade, participants in the honors seminar are required to present their work to a wider Urban Studies audience in a special session at the end of the semester and to provide documentation that they have submitted their papers for publication. Students who successfully complete the honors seminar will graduate with distinction in the major, noted on their transcripts and in the graduation materials.
Spring
Prerequisite: URBS 4000
1 Course Unit

URBS 4040 Philanthropy and the City
This course will focus on how urban communities are shaped by the nonprofit sector and the billions of philanthropic dollars that fuel their work. By bridging theory and practice, the class explores what dynamics are at play to deliver vital services or programs in healthcare, education, the arts, community development, and other issues. The course will also focus on these important questions: (1) Whose responsibility is the public good? How is that responsibility shared by the public, private, and nonprofit sectors? and (2) Given that responsibility for the public good, which individuals and groups make the decisions about how to serve the public good? How are these decisions made, and who benefits from these decisions? Students will consider these questions in an interdisciplinary context that will bring a historical and philosophical perspective to the examination of the values and institutions that characterize the contemporary philanthropy and the nonprofit sector.
Fall
1 Course Unit
URBS 4050 Religion, Social Justice & Urban Development
Urban development has been influenced by religious conceptions of social and economic justice. Progressive traditions within Judaism, Christianity, Islam, Buddhism, Hinduism, Jainism, Baha’i, Humanism and other religions and systems of moral thought have yielded powerful critiques of oppression and hierarchy as well as alternative economic frameworks for ownership, governance, production, labor, and community. Historical and contemporary case studies from the Americas, Europe, Africa, Asia, and the Middle East will be considered, as we examine the ways in which religious responses to poverty, inequality, and ecological destruction have generated new forms of resistance and development.

Also Offered As: URBS 4050, RELS 4050
1 Course Unit

URBS 4100 Urban Communities and the Arts
Urban Communities and the Arts concerns itself with Arts, Music and Activism in Philadelphia. We investigate the social, economic and cultural fabric from which activism in the arts arises. To do so, we will investigate the histories and artistic reactions to oppression in Philadelphia by drawing on specific examples from various sections of the city and through the media of music, visual art, theater, and dance. The long history of systemic and individual oppression in the US manifests itself in different ways in various urban neighborhoods in Philly and artists of various genres and inclinations participate in activism in many different ways. Examples of artistic and musical responses to the various forms of oppression will be offered and class participants will be asked to bring their own examples to share and analyze. By visiting significant arts practitioners and organizations that provide access to arts education and justice work, participants will have a hands-on experience to unpack the dynamics of artistic production in city life. In addition to art as an outlet for exposing oppression, we will also consider the ways that art and music become markers of the uniqueness of a neighborhood or city, which further complicates the idea of art as a tool for activism. Participants in Urban Communities and the Arts will unpack the role of music and art in defining city or neighborhood cultures by considering a few key sectors that reveal the ways in which cities fail to provide equal access to resources or participate in outright discrimination. At the same time, cities continue to cultivate creative spaces and socio-economic opportunities for economic gain and social understanding through art and music. It is the contradictions that this course will concern itself with and out of our study we will invite course participants to respond creatively. Participants will create either an original work of art, music or intellectual response like a visually interesting research poster as part of a final art/music show. Ultimately students will be asked to reflect back on the role of art in social and political activism to better understand the successes and failures of such movements as they come to define the ethos of city life and its limits.

URBS 4120 Building Non-Profits: The Business of a Mission-Driven Organization
This course will cover the basic elements of building and growing a non-profit organization, including the development of the mission and the board; needs assessment, program design, development, and management; financial management, contract compliance and understanding an audit; fundraising, public, foundation, corporate, and individual; communication and marketing; organizational administration (including staff and volunteer selection, management and development); public policy, research and advocacy. Students will make site visits and engage role play, in addition to research and writing.

Fall
1 Course Unit

URBS 4150 Urban Real Estate Markets
Cities evolve over time, comprised of various inputs of different sizes at different stages of urban evolution. However, as cities continue to densify and navigate real estate market cycles, opportunities to redefine the urban context, while promoting the individual brand, become ever more sensitive. Projects are increasingly complex, often involving multiple partnerships among private developers, public agencies, non-profits, and community groups. Today's development professionals need to be well-versed across a variety of disciplines and property types to effectively execute in an urban environment. As an introductory course in real estate development, this course will provide the underpinnings for critical decision-making in markets that change frequently and often unevenly - whether for financing, investing, development, public policy formulation, or asset management/disposition.

Spring
1 Course Unit

URBS 4170 Cities and Sustainability
A good idea is not enough - developing innovative and sustainable projects in cities requires understanding “how to get things done.” Developing projects to promote sustainability in major US cities requires sensitivity to the political and operational context within which cities implement innovative initiatives. Cities and Sustainability uses Philadelphia as a case study to explore the issues confronting modern American metropolises as they look to manage their resources and promote environmentally friendly policies. URBS 417 will introduce students to leading Philadelphia practitioners of sustainability and municipal projects. Students will be given the tools to politically, economically and critically analyze various sustainable policy initiatives across the United States.

Spring
1 Course Unit

URBS 4190 Urban Transportation in Flux
Transportation systems and networks impact everything from the literal shape of American cities to their economic vitality and the well-being of their citizens. Urban Infrastructure in Flux provides students with an over view of the political, business, and policy concerns and processes that inform how Americans get around by foot, transit, and car. URBS 419 explores the use and reuse of legacy infrastructure, and roots innovations such as driverless cars, and scooters, in a historical conflict over the right-of-way (ROW). Students will have the opportunity to meet professionals in the field and engage in primary source research and data analysis.

Fall
1 Course Unit
URBS 4200 Perspectives on Urban Poverty
This course provides an interdisciplinary introduction to 20th century urban poverty, and 20th century urban poverty knowledge. In addition to providing an historical overview of American poverty, the course is primarily concerned with the ways in which historical, cultural, political, racial, social, spatial/geographical, and economic forces have either shaped or been left out of contemporary debates on urban poverty. Of great importance, the course will evaluate competing analytic trends in the social sciences and their respective implications in terms of the question of what can be known about urban poverty in the contexts of social policy and practice, academic research, and the broader social imaginary. We will critically analyze a wide body of literature that theorizes and explains urban poverty. Course readings span the disciplines of sociology, anthropology, urban studies, history, and social welfare. Primacy will be granted to critical analysis and deconstruction of course texts, particularly with regard to the ways in which poverty knowledge creates, sustains, and constricts meaningful channels of action in urban poverty policy and practice interventions.

Also Offered As: HIST 0812, SOCI 2944
1 Course Unit

URBS 4280 Undergraduate Urban Research Colloquium
A seminar run in conjunction with the Institute for Urban Research at Penn, students will learn about the range of cutting-edge topics in urbanism that Penn faculty are working on and work closely with a faculty member on current research. Students will learn about new topics and methods in interdisciplinary urban research, and get first hand experience collecting urban data under the close supervision of an experienced researcher. Students and faculty jointly will present their findings for discussion. This course is a good introduction for how to frame and conduct an urban research project.
Spring
1 Course Unit

URBS 4300 Quantitative Methods and Tools for Urban Research
This course is an in-depth exploration of quantitative methods and tools fundamental for urban social science research. This course discusses concepts such as significance levels, t-tests, and regression. Additionally, this course provides students, including those with no previous background in R or other programming language, with a basic fluency in R. Concepts will include tabulating data, creating a regression model, and working with spatial data.
Not Offered Every Year
Prerequisite: URBS 2000
1 Course Unit

URBS 4350 The Political Economy of Urban Development
This course provides an introduction to the economic and political theories that have come to shape, for better or for worse, the spatial characteristics of late 20th century urbanism. It is intended to offer a range of analytical approaches to understanding the urban structures and processes that strategies of community-based organizers and urban policy planners seek to influence. The course focuses on postwar U.S. cities (Chicago and other Midwestern/ Northeast rust belt cities in particular), though a number of readings explore these issues in broader contexts. As a way to further understand postwar US urbanism, we will expand our focus briefly to the geopolitical/international scale during the weeks on neoliberalism and microfinance. Urban political economy refers to different theoretical traditions within the social sciences that explain urban development in terms of the relationship between markets, states, and community actors (or, civil society).
Part I of the course covers four different theories of modern political economy. Neoclassical, Keynesian, Marxist, and Neoliberal. Our purpose is to provide a framework for political economic analysis and an historical foundation for understanding postwar transformation. Part II of the course grounds the foundational material of Part I by tracing the economic and political forces that have shaped post-war urban development trends in Northeastern and Midwestern cities (especially Chicago, Detroit, Philadelphia and NY). Particular attention will be given to issues such as race, suburbanization, deindustrialization, welfare state retrenchment, gentrification, and public housing transformation. Part III examines a range of contemporary (post 1970) approaches to urban development, focusing on processes of neoliberalization, neo-clientalism, urban informality, sub prime mortgage lending, and microfinance.

1 Course Unit

URBS 4400 Introduction to City Planning: History, Theory and Practice
This course introduces students to the history, theories, and contemporary practice of city and regional planning. Readings, lectures, class discussion, and walking tours focus on: - The evolution of planning ideas, strategies, institutions, and powers, and of planning's influence on cities and regions around the world; - The structure and dynamics of urban change; - The ways planners and social and environmental scientists have understood, theorized, and responded to social, economic, political, and environmental conditions and change over time; and - The development of the planning profession and its relationships with allied fields, examining various types of planning, urban development, and design.
Fall
1 Course Unit

URBS 4480 Neighborhood Displacement and Community Power
This course uses the history of black displacement to examine community power and advocacy. It examines the methods of advocacy (e.g. case, class, and legislative) and political action through which community activists can influence social policy development and community and institutional change. The course also analyzes selected strategies and tactics of change and seeks to develop alternative roles in the group advocacy, lobbying, public education and public relations, electoral politics, coalition building, and legal and ethical dilemmas in political action. Case studies of neighborhood displacement serve as central means of examining course topics.

Also Offered As: AFRC 4480
1 Course Unit
URBS 4500 Urban Redevelopment
This course explores the politics and practice of urban development, examining and contrasting efforts led by government, community-based groups, and the private sector. Topics will include: the historical context, dating to the early 20th century, of contemporary practice; how decisions that shape neighborhood change are made and who makes them; technical aspects of community/economic development; and redevelopment and racial equity. The class will be in seminar format, mixing lecture, discussion, and guest speakers. The course requirements include a mid-term writing assignment, an in-class charrette, and a final presentation.
Spring
1 Course Unit

URBS 4510 The Politics of Housing and Urban Development
This course offers an exploration of how legislative action, government policymaking, and citizen advocacy influence plans for the investment of public capital in distressed urban neighborhoods. Course topics this semester will include an evaluation of the results of City of Philadelphia development policies under the administration of former Mayor Michael A. Nutter, as well as consideration of plans being undertaken by the administration of Mayor James F. Kenney, who took office in January. The course will also include an assessment of a large-scale property acquisition and development strategy being implemented by the Philadelphia Housing Authority in North Philadelphia and a review of recent and current reinvestment proposals for Camden’s waterfront and downtown-area neighborhoods.

Mutually Exclusive: GAFL 5690
1 Course Unit

URBS 4520 Community Economic Development
Community economic development concerns the revitalization of impoverished communities. As with all things economic, poor and working people may be the subjects or the objects of development. We will utilize case studies from Philadelphia and around the world in an exploration of various models of economic justice and sustainable development. Note: Attendance at the the first class is mandatory (for those already enrolled and for those considering enrollment in the course). Enrolled students who miss the first class must drop the course. Those who were not able to enroll but who attend the first class will be permitted to enroll.
Fall
1 Course Unit

URBS 4540 City Limits: The Impact of Urban Policy
This course assesses the changing role of public policy in American cities. In the past, government often believed that it could direct urban development. New realities - the rise of an informal labor market, global capital and labor flows, the flight of businesses and the middle class to the suburbs - have demonstrated that government must see itself as one - but only one - ‘player’ in a more complete, transactional process of policy making that crosses political boundaries and involves business, organized interest groups, and citizens. This seminar uses a case-study method to study how public policy can make a difference in the revitalization of distressed American cities. The seminar is designed for advanced undergraduates and graduate students. Seminar readings and projects will be organized around three themes: 1) history and vision, 2) data and analysis, and 3) policy and implementation. Students will be divided into project teams assigned to work on current development issues that will be reviewed by both public and private-sector experts. Extensive use will be made of real estate, economic development, and social indicator data to understand the complex forces at work in both large and small cities. Students will learn to access, analyze, and map information; to frame and interpret these data within a regional perspective; and to construct profiles of cities and neighborhoods. Students will study recent urban redevelopment initiatives in the Philadelphia region, including Philadelphia’s Neighborhood Transformations Initiative and New Jersey’s Camden Revitalization plans.
Spring
1 Course Unit

URBS 4570 Globalization & The City: Global Urbanization
In 2008, the UN estimated that the world’s population had become primarily urban, for the first time in history. According to the OECD, by the end of the century, close to 85% of the projected population will live in cities. The transition towards an urban planet is likely to have far-reaching economic, environmental, social, political, and cultural impacts on our species, many of which we cannot yet predict. But what is urbanization? Will it lead to more inequality, exploitation, conflict, resource consumption, and exposure to natural disasters and climate change, or is it an opportunity to move the world in a more sustainable and equitable direction? Taught by Chandan Deuskar and Patricio Zambrano Barragan, this course aims to explore these questions. In the first half of the semester, we will discuss various challenges associated with global urbanization and its impacts. In the second half, we will focus on responses to these challenges. The assignments will allow students to explore some of the most salient debates around global urbanization. By the end of the semester, students will be better able to understand the context for any future academic research, professional work, or business activities in the cities of the ‘developing world’. The course will help provide a foundation for any students considering graduate studies or professional work in the fields of urban planning or international development.

**URBS 4730 The History & Theory of Community Organizing**
"Workers of the world, unite!"--Karl Marx. "Don't mourn. Organize!"--Joe Hill. "Strong people do not need strong leaders."--Ella Baker. "Freedom is a constant struggle."--Angela Davis. We will review the history and theory of critique, resistance, and solidarity, as we consider old and new social movements and freedom struggles around the world (Africa, the Americas, Europe, Asia)--from encampments for indigenous sovereignty of tribal lands to demonstrations by poor and working people seeking "the right to the city," from sit-ins and strikes to occupations and takeovers, from uprisings and insurrections to revolutions and counterrevolutions, from anti-capitalist, anti-colonial, anti-caste, and anti-racist insurgencies to mobilizations for racial and gender justice and solidarity economy; from civil rights, labor rights, student rights, human rights, animal rights, and environmental organizing to movements for peace, democracy, equality, and liberation--and more (based on student interests and commitments). Strategies and techniques will be reviewed. Successes and failures will be registered. Limitations and possibilities will be debated. Source material will be drawn from mainstream and radical traditions within popular praxis and numerous fields, including urban studies, philosophy and critical theory, religion, history, artand culture, anthropology, politics, development economics, social psychology, sociology, organizational development, and law. Note: Attendance at the first class is mandatory (for those already enrolled and for those considering enrollment in the course). Enrolled students who miss the first class must drop the course. **URBS 4760 Urban Housing & Community Development Policy in America**
This course examines how public policy influences housing markets and how markets influence public policy. The course reviews the development of housing policy since World War II and how shifts in policy have influenced people's ability to find suitable shelter. Topics include: poverty and affordability, residential segregation / civil rights in housing, the financial crisis of 2008, mortgage foreclosure, affordable housing, and homelessness. The course focuses on the changing roles of different levels of government in housing policy and how the financial sector, the construction industry, and non-governmental organizations influence Americans housing options. Not Offered Every Year
1 Course Unit

**URBS 4800 Liberation and Ownership**
Who is going to own what we all have a part of creating? The history of the Americas, and of all peoples everywhere, is an evolving answer to the question of ownership. Ownership is about: the ties that bind and those that separate; production, participation, and control; the creation of community and the imposition of hierarchies--racial, sexual, and others; dreams of possessing and the burdens of debt and ecological despoliation; dependency and the slave yearning to breathe free. Of all the issues relevant to democracy, oppression, injustice, and inequality, ownership is arguably the most important and least understood. Utilizing a variety of disciplinary perspectives--with a particular emphasis on radical and critical theories of liberation, and by focusing on particular global sites and processes of capitalism, students will assess and refine their views regarding ownership and liberation in light of their own social, political, religious, aesthetic, and ethical commitments. Fall

**URBS 5050 Women and Urban Struggles in Latin America**
In Latin America, 80% of the population lives in a city. As many of these cities enter the worldwide competition for attracting networks and capitals—and to join the select club of the so-called global cities—many city residents become progressively dispossessed and excluded to the peripheries, where urban services are rarely adequate. Power relations of class, race, and gender play an essential role in how dispossession is orchestrated in the city and experienced by its residents. This course focuses on how women, specifically, find ways to "endure" in the cities of Latin America, exploring different cases of urban struggles led by women. Across the region, many have been pointing out the extraordinary leadership of women in a wide variety of political struggles—from occupying public places, to denouncing the disappearance of loved ones, and to community organizing that helps build necessary infrastructure in their neighborhoods. Women are also at the forefront of environmental and ecological transformations, leading initiatives to green their city through urban agriculture, reforestation, recycling, and compost projects. Addressed through a holistic approach to caring, these initiatives are embedded in broader struggles for housing, security, and wellness, specifically in the urban peripheries. The contingency of these projects is, at their core, multifaceted: they are typically part of women's implication in popular education, artivism, and human rights defense. During this course, we will explore and analyze how the specific urban contexts of Latin America affect women and their political subjectivities and how, through their struggles, they play an essential role in re-shaping their cities. URBS 5300 GIS Applications in Social Science
This course will introduce students to the principles behind Geographic Information Science and applications of (GIS) in the social sciences. Examples of GIS applications in social services, public health, criminology, real estate, environmental justice, education, history, and urban studies will be used to illustrate how GIS integrates, displays, and facilitates analysis of spatial data through maps and descriptive statistics. Students will learn to create data sets through primary and secondary data collection, map their own data, and create maps to answer research questions. The course will consist of a combination of lecture and lab.
Fall
1 Course Unit

URBS 5320 Mapping Philadelphia
Philadelphia is a city that was mapped before it was built, inhabited before it was developed. Founder William Penn's original concept for the gridded city continues to inform the historical evolution of Philadelphia, even as city planners, architects, artists, and social justice activists work to transform the layers of our built environment. This class will study the city through a variety of archival maps, historical mapping practices, and emergent digital approaches to representing space and time. We will explore public history projects that seek approaches to place-making and place-keeping at neighborhood intersections, share dialogue with social practice artists who produce site-specific works, and visualize civic data through platforms such as OpenDataPhilly. Each student will pursue a final research project resulting in a close study of a particular street or intersection in the city. This is an MLA course open primarily to MLA students, Urban Studies undergraduate seniors, and Urban Studies graduate certificate program students. If you would like to register for the course, please contact Urban Studies Coordinator Vicky Karkov.

1 Course Unit

URBS 5420 Archiving Jazz: Visuality And Materiality In The Phila Jazz Community 1945-2019
This seminar will be organized around three distinct pathways. First, it will serve as an introduction to Jazz Studies and thus be attentive to the ways that jazz music has sparked an interdisciplinary conversation that is wide-ranging and ongoing. Second, we will be partnering with the African American Museum of Philadelphia to consider jazz within the realm of visual art. In light of efforts to map the "black interior," how have visual artists (e.g. painters, sculptors, filmmakers, and photographers) sought to represent jazz? Third, we will endeavor to develop partnerships with the Philadelphia (and beyond) jazz community, especially as it pertains to creating and sustaining an archive that serves as way to understand jazz as an instrument of placemaking and also as a vehicle for jazz musicians to take ownership of their narratives. The seminar will meet at the African American Museum of Philadelphia and be taught with members of the Museum staff. The course will culminate with a virtual exhibit of visual works and archival materials centering on Philadelphia's jazz community and (if funding is available) a free concert to be held at AAMP. Undergraduates are welcome to register for the course with permission of the instructor.

URBS 5440 Public Environmental Humanities
This broadly interdisciplinary course is designed for Graduate and Undergraduate Fellows in the Penn Program in Environmental Humanities (PPEH) who hail from departments across Arts and Sciences as well as other schools at the university. The course is also open to others with permission of the instructors. Work in environmental humanities by necessity spans academic disciplines. By design, it can also address and engage publics beyond traditional academic settings. This seminar, with limited enrollment, explores best practices in public environmental humanities. Students receive close mentoring to develop and execute cross-disciplinary, public engagement projects on the environment. In spring 2018, participants have the opportunity to participate in PPEH's public engagement projects on urban waters and environmental data. These ongoing projects document the variety of uses that Philadelphians make of federal climateand environmental data, in and beyond city government; they also shine light onclimate and environmental challenges our city faces and the kinds of data we need to address them. Working with five community partners across Philadelphia, including the City's Office of Sustainability, students in this course will develop data use stories and surface the specific environmental questions neighborhoods have and the kinds of data they find useful. The course hosts guest speakers and research partners from related public engagement projects across the planet; community, neighborhood, open data, and open science advocates; and project partners in government in the City of Philadelphia and Commonwealth of Pennsylvania. Course assignments include: * 2 short-form essays (course blog posts); * a 12-hour research stay (conducted over multiple visits) with a community course partner to canvas data uses and desires; * authorship of 3 multimedia data stories; * co-organization and participation in a city-wide data storytelling event on May 2, 2018.

URBS 6604 Neoliberalism and the City
Over fifty percent of the worlds population now lives in cities. Neoliberalism-the ideology and accompanying policies and practices that champion the shifting of political decision making from the public sector to the private sector - has been widely recognized as having shown dramatic growth worldwide since the 1970s. It has also been widely regarded as a product of globalization. This course traces the history of neo-liberalism in global context with particular attention to neoliberalism's relationship to cities, and exam the role that urban growth has played in spurring neoliberal policies and practices. It asks how policy makers, voters, and private interest worldwide have responded to the growth of urban poverty and slums, challenges withing urban public education, unequal resource distribution, environmental pressures experienced within urban sanitation and waste disposal systems, and increased demands for municipal services like water, electricity, and transport infrastructers, and examined the rise of public-private partnerships, gated communities, initiatives to privatized education and municipal services, and efforts to relocate slum-dwellers and beautify cities as explicit strategies for attracting "global capital". The course also asks how the recent rise of neoliberal policies and practices differs from earlier market-driven and private sector led forms of political governance. The British and Dutch East India Companies are two famous examples of joint stock companies that assumed administrative and political roles over their colonies. How did the rise of these colonial relationships differ from current neoliberal shifts. Readings will draw heavily from ethnographic and urban studies, scholarship on South Asia, as well as Latin America, South Africa, the Middle East, Europe, and North America, exploring what each of these specific contexts has to teach us more generally about the relationship between urbanization, global capitalism, public and private sectors, and political processes and decision making. URDU 0100 Beginning Hindi-Urdu Part I
In this course, students learn the fundamentals of Hindi-Urdu through hands-on practice using the language. Classes are interactive and there is a strong emphasis on the acquisition of speaking skills with attention to reading and writing to support this goal. Topics include: introductions; talking about yourself, your friends and your family; describing physical spaces such as the home and the city; daily life and daily routines; and likes, needs, wants, and interests. Students will also engage with level-appropriate authentic materials from the Hindi-Urdu speaking world. Beginning Hindi-Urdu I assumes no previous knowledge of Hindi-Urdu. Students with listening abilities but no speaking abilities are also welcome to enroll. The course teaches a single core spoken language style that is common to both Hindi and Urdu. All written materials are provided in both scripts, and students learn one script of their choosing. Fall
Also Offered As: HIND 0100
Mutually Exclusive: HIND 5100
1 Course Unit

URDU 0200 Beginning Hindi-Urdu Part II
Beginning Hindi-Urdu II is the second part of the first-year Hindi-Urdu sequence. In this course, students continue to learn the fundamentals of Hindi-Urdu through hands-on practice using the language. Classes are interactive and there is a strong emphasis on the acquisition of speaking skills; students also continue to improve literacy skills in the script of their choice (Hindi or Urdu – all materials are provided in both scripts). New topics include but are not limited to: future plans, recounting past events, traveling in South Asia, and navigating shopping and travel-related situations. Students will also engage with level-appropriate authentic materials from the Hindi-Urdu speaking world. After completing this course, students will be able to interact successfully with native speakers in a variety of everyday communication contexts. Beginning Hindi-Urdu II assumes one prior semester of classroom study or the equivalent proficiency. Students with some speaking ability but no reading-writing abilities may place into the course but should contact the instructor a few weeks before the beginning of the semester to ensure that this is the appropriate level. Spring

URDU 0300 Intermediate Urdu Part I
This course allows students to continue improving their Urdu proficiency while also gaining a broad foundational understanding of Urdu society and culture throughout South Asia. The course provides students the tools needed to handle a variety of authentic written and spoken Urdu sources including film, music, media reports, folk tales, and simple literature. Student will also continue to increase their speaking and writing proficiency to be able to discuss a broad range of concrete, real-world topics. The course is designed for students with one year previous Urdu or Hindi study or the equivalent proficiency. Students with speaking ability in Urdu or Hindi but without reading/writing skills are encouraged to contact the instructor for placement. Two Term Class, Student must enter first term; credit given after both terms are complete
Prerequisite: HIND 0100
1 Course Unit

URDU 0301 Intermediate Urdu Part II
This course allows students to continue improving their Urdu proficiency while also gaining a broad foundational understanding of Urdu society and culture throughout South Asia. The course provides students the tools needed to handle a variety of authentic written and spoken Urdu sources including film, music, media reports, folk tales, and simple literature. Student will also continue to increase their speaking and writing proficiency to be able to discuss a broad range of concrete, real-world topics. The course is designed for students with one year previous Urdu or Hindi study or the equivalent proficiency. Students with speaking ability in Urdu or Hindi but without reading/writing skills are encouraged to contact the instructor for placement. Two Term Class, Student must enter first term; credit given after both terms are complete
Prerequisite: HIND 0100
1 Course Unit
URDU 0400 Intermediate Urdu Part II
This continuing second-year course allows students to continue improving their Urdu proficiency while also gaining a broad foundational understanding of Urdu society and culture throughout South Asia. The course provides students the tools needed to handle a variety of authentic written and spoken Urdu sources including film, music, media reports, folk tales, and simple literature. Students will also continue to increase their speaking and writing proficiency to be able to discuss a broad range of concrete, real-world topics. The course is designed for students with one year of previous Urdu or Hindi study or the equivalent proficiency.

Two Term Class, Student must enter first term; credit given after both terms are complete
1 Course Unit

URDU 1500 Advanced Urdu: Language and Literature
This course is designed to give in-depth exposure to some of the finest works of classical and modern Urdu prose and poetry along with the historical and socio-political trends they represent. Figures covered range from Ghalib (b.1797) to Faiz, Fehmida Riaz, and post 9/11 Urdu prose and poetry. The course is open to both undergraduates and graduate students, subject to having intermediate level proficiency. The course is repeatable, and the content changes every semester. Multi-media content such as music, videos, blogs etc. will be actively incorporated. Every effort will be made to accommodate individual interests. Students are encouraged to contact the instructor with any questions, or if they are unsure about eligibility.

Fall
Prerequisite: URDU 0300 OR URDU 5300
1 Course Unit

URDU 5100 Beginning Hindi-Urdu Part I
This introductory course core proficiency in Hindi-Urdu up to the intermediate level. It is designed for students with little or no prior exposure to Hindi or Urdu. The course covers all four language skills (speaking, listening, reading, and writing) and all three models of communication (interpersonal, presentational, interpretive). Students will develop literacy skills in the primary script of their choice (Hindi or Urdu script). All written materials will be provided in both scripts. All meetings are interactive and students acquire the language by using it in realistic contexts. Culture is embedded in the activities and is also introduced through various authentic materials.

Fall
Also Offered As: HIND 5100
Mutually Exclusive: HIND 0100
1 Course Unit

URDU 5200 Beginning Hindi-Urdu Part II
This introductory course core proficiency in Hindi-Urdu up to the intermediate level. It is designed for students with little or no prior exposure to Hindi or Urdu. The course covers all four language skills (speaking, listening, reading, and writing) and all three models of communication (interpersonal, presentational, interpretive). Students will develop literacy skills in the primary script of their choice (Hindi or Urdu script). All written materials will be provided in both scripts. All meetings are interactive and students acquire the language by using it in realistic contexts. Culture is embedded in the activities and is also introduced through various authentic materials.

Fall
1 Course Unit
Veterinary & Biomedical Science (VBMS)

VBMS 6020 Histological Basis of Pathology
This course covers microscopic anatomy of tissues and organ systems of mammals important in veterinary medicine, e.g. dog, cat, mouse, rat, horse and cow. The central thread in the course is light microscopic structure as observed in standard stains, but this picture is amplified by electron microscopy, special stains and histochemistry. The material is presented, through lecture and laboratory, from the point of view of experimental biology, cell function, and disease. The course reveals that the structure or histology of the tissues of an animals body is not an arbitrary assemblage of cells but rather the structural expression of the diverse cell types that interact to carry out the functions of the body. Thus, through the microscopic study of the structure of tissues (histology) the functions of the tissues of the body may be inferred.
5 Credit Hours

VBMS 6030 Developmental Biology
The course examines classic and modern concepts in embryonic development as they relate to veterinary medicine. The lectures are designed to cover recent advances in the field with special emphasis on stem cells, specification of cell fate, manipulation of the genome and organogenesis. Examples of pathologies associated with aberrant development of major organ systems will be presented and discussed in the context of veterinary medicine.
3 Credit Hours

VBMS 6040 Introduction to the Neurosciences
This is an introductory course to the neurosciences and assumes a basic background in anatomy, cell biology, histology and biochemistry. At the cell/molecular level the course covers neurocytology, membrane bioelectrical events and their channel protein basis, neurotransmitters and their actions at the synapse. It also covers aspects of neurochemistry, neuropharmacology and focuses on neuroanatomy and function of neural systems. The latter include the somatic and autonomic components of the peripheral nervous system, the spinal cord and reflexes, primary sensory systems, motor pathways and limbic-vesical systems of the brain.
5 Credit Hours

VBMS 6050 Cellular and Biochemical Foundation of Disease
This course teaches the principles of biological chemistry as applied to metabolic relationships underlying cellular and physiological processes and the molecular mechanisms of disease. The first third of the course covers the basic biochemistry of amino acids, proteins (e.g., enzymes), nucleic acids, vitamins and coenzymes, carbohydrates and lipids. Normal as well as disease-related pathways for the processing of these biological materials are discussed. Species differences in metabolic pathways and clinical relevance are pointed out, wherever pertinent. The latter part of the course includes discussions of molecular genetics, and the physiological-biochemical functioning and regulation of cellular structures, tissues and organs: membranes, endocrine glands and hormones, blood, bone and connective tissue, liver, muscle, etc. Diseases specific to these structures are discussed in the context of veterinary medicine. Also included are such topics as prostaglandins, biochemistry of growth regulation, vision, taste, cell cycle and cancer. Laboratories include clinically relevant problem-based and library research projects that relate biochemistry to veterinary medicine, and identification of reproductive and endocrine conditions by diagnostic problem solving using student generated biochemical data.
10 Credit Hours

VBMS 6060 Animal Physiology
A strong training in animal physiology is crucial for veterinary education. Extensive and profound knowledge of normal processes that maintain animal life and enable animals to cope with a changing environment provides the crucial foundation for the understanding of breakdowns in homeostasis and disease states, and of key principles underlying diagnostics and treatment of animal diseases. The course provides a brief review of relevant molecular and cell biology concepts that enhance the comprehension of physiology (including metabolism, cell membrane permeability, bioelectric potentials, active transport, etc.) and a detailed study of the functional processes in the circulatory, respiratory, digestive, endocrine, muscular, renal and reproductive systems. This course primarily focuses on normal physiologic mechanisms in mammals and includes comparative physiology material pertinent to other vertebrates of veterinary interest. Furthermore, pathophysiological alterations of normal function and physiological principles of diagnostics and therapy are amply illustrated by clinical case examples.
10 Credit Hours

VBMS 6070 Pharmacology & Toxicology
The major objective of this course is to help veterinary students learn the principles of pharmacokinetics, the mechanisms of drug action, the sites at which drugs act, and how drugs may interact with, and alter the activity of, various organ systems. The material will also include properties, mechanisms of action, and biological effects of various chemical substances (drugs, environmental pollutants, toxins of plant origin, etc.) that interfere with normal cell and organ function. The course is intended to deal chiefly with basic Pharmacology and Toxicology rather than clinical therapeutics, although some therapeutics and clinical material will be discussed in relevant areas.
10 Credit Hours

Veterinary Clinical Studies - Medicine Courses (VMED)

VMED 6000 Introduction to Clinical Veterinary Medicine I
This course provides an introduction to clinical veterinary medicine for first year veterinary students, and includes sessions on management, restraint and physical examination of small animal patients. Laboratory sessions provide the opportunity for practicing physical examination and restraint of animals in supervised small groups. This course will be graded P/F.
Two Term Class, Student must enter first term; credit given after both terms are complete
2 Credit Hours

VMED 6010 Introduction to Clinical Veterinary Medicine II
Using a case-based organ/system approach, this course provides an introduction to the practice of clinical veterinary medicine in companion animals, and provides an introduction to special species companion animal, laboratory animal, and captive and wild animal veterinary practice. The course also introduces the concept of evidence-based medicine. Laboratory sessions provide exposure to auscultation, behavior abnormalities, clinical rounds discussion, grief management, nursing techniques and special species companion animal and laboratory animal examination.
4 Credit Hours
VMED 6020 Introduction to Clinical Veterinary Medicine III
This course provides an introduction to equine and production animal veterinary medicine for first year veterinary students, and includes sessions on management, restraint and physical examination of large animal patients. Laboratory sessions provide the opportunity for practicing physical examination and diagnostic procedures on horses and production animal species.
4 Credit Hours

VMED 6030 Introduction to Radiology
This lecture course is designed to provide the fundamental principles of clinical imaging in veterinary medicine as they pertain to physics and instrumentation. The emphasis is on radiography, but principles of ultrasonography, computerized tomography, magnetic resonance imaging and nuclear medicine are also discussed. Topics include production of diagnostic images, radiation safety, differences between the various imaging modalities and some features of normal radiographic anatomy of small animals (thorax and abdomen). The course includes a two-hour mandatory laboratory, focusing on case presentations with emphasis on thoracic and abdominal radiography.
2 Credit Hours

VMED 6040 Veterinary Medical Genetics
The objective of this course is to provide a background for understanding the underlying mechanisms, distribution, and control of genetic disease in domestic animals. Emphasis will be on concepts and information useful on a clinical level. Problem-based learning exercises integrate the concepts presented in the course.
2 Credit Hours

VMED 6050 Nutrition
Fundamental principles of nutrition are the background of recommendations for feeding various classes of animals. Types of foodstuffs and their nutrient composition are evaluated in relation to nutrient requirements, voluntary intake and food preferences of domestic species. Feeding programs for nutritional management of animal classes commonly encountered in veterinary medicine are discussed, and examples of clinical nutrition applications are presented.
3 Credit Hours

VMED 6060 Principles of Epidemiology
The fundamentals of descriptive, analytic, and clinical epidemiology will be covered as they relate to both population and individual animal problems in veterinary medicine. The major aims of the course are to provide an analytic basis for clinical decision making and the ability to interpret the veterinary literature for application in a practice setting. These aims will be accomplished by using examples to illustrate the epidemiologic approach to studying infectious and non-infectious disease, and in clinical decision-making.
2 Credit Hours

VMED 6070 Veterinary Public Health
This course examines the nature and scope of animal-human interactions with emphasis on the consequences of this relationship from an epidemiologic viewpoint. Included are the zoonotic diseases, those naturally transmitted from animals to man, and the role of pets in society. The traditional involvement of veterinarians in prevention and control of food borne diseases and in public health practice will also be discussed.
3 Credit Hours

VMED 6080 Introduction to Poultry, Swine, and Dairy Medicine
This course will cover clinical problem solving for disease diagnosis, treatment and control. In addition, current topics of interest in food animal medicine will be discussed. These include food safety, regulatory medicine, environmental impact, welfare issues and opportunities for food animal veterinarians. Class time will be used for both lecture and discussion. All material for quizzes will be presented in class. The grade for the course will be based on weekly quizzes.
2 Credit Hours

VMED 6090 Infectious & Metabolic Diseases
A core course of lectures on infectious and metabolic diseases of domestic animals. The topics in this course include: Rabies, Lymphosarcoma, Blue Tongue, Parturient Paresis, Listeriosis, Anthrax, Botulism, Leptospirosis, Canine Distemper, and many other polysystemic diseases.
7 Credit Hours

VMED 6100 Clinical Reproduction
Course covers reproduction in large and small domestic species, and includes the estrous cycle, heat detection, pregnancy, pregnancy loss, obstetrics, parturition, the postpartum period, male and female reproductive physiology, behavior, breeding soundness examination, and fertility problems. A two-hour problem solving session with the class divided into small groups will be held to discuss clinical cases. Grades will be based on a mid-term and a cumulative final examination.
5 Credit Hours

VMED 6110 Veterinary Medicine/Surgery I
Principles of diagnosis, including radiology, and medical and surgical management of infectious and noninfectious diseases of the head, neck and chest, including diseases of the oral structures, eye, ear, nose and throat, esophagus, lung, heart, pleura and chest wall. Course material is broken down in 4 sections covering ophthalmology, cardiology, diseases of the head and neck and non-cardiac intrathoracic diseases. An examination covering the lecture material is administered after each section.
9 Credit Hours

VMED 6120 Veterinary Medicine/Surgery II
This portion of the Medicine/Surgery core course deals with the pathophysiology, clinical features, and medical and surgical treatment of hematologic, endocrine, nephrologic, urogenital and oncologic disorders.
9 Credit Hours

VMED 6130 Veterinary Medicine/Surgery III
This core course covers the important medical and surgical diseases of the gastrointestinal system and the medical aspects of neurological diseases. Specific disease topics will include noninfectious gastrointestinal disorders; hepatobiliary, pancreatic and splenic disorders; and central and peripheral neurological diseases of domestic animals.
8 Credit Hours

VMED 6150 Dermatology
A core course of lectures discussing the infectious, ectoparasitic, allergic, autoimmune and metabolic cutaneous disorders of small animals, exotics and horses. Diseases are discussed with particular emphasis on pathogenesis, clinical recognition and treatment. Methods of diagnosis also are stressed so that the student is prepared to recognize and treat the various dermatoses met in the clinical year.
3 Credit Hours
VMED 6160 Clinical Animal Behavior
Behavior problems are among the most frequent reasons for surrender and euthanasia of pets. In this course we will discuss the most common behavior problems of dogs and cats, with an emphasis on diagnosis and treatment using both behavior modification and drug therapy. Prognosis and safety issues will also be discussed. Attention will be paid to the thought process used in working up and/or preventing behavioral disorders.
1 Credit Hour

VMED 6170 Veterinary Ethical Issues
The course goal is to enhance students overall ethical literacy. The course involves a combination of lectures on ethical theory and methodology, and group discussions of ethical case studies drawn from various branches of veterinary practice. The course will be graded as Pass/Fail and full attendance by all students is required unless otherwise pre-authorized by the course organizer.
1 Credit Hour

VMED 6180A Introduction to Clinical Veterinary Medicine IV
This year-long course for second year veterinary students is designed as a reinforcement of the first year introduction to clinical veterinary medicine series (VMED 6000, VMED 6010, 6020) and as a transition to the clinical year rotations. The emphasis is on practical experiences in our hospitals that will increase your clinical and technical skills as you familiarize yourselves with the hospitals facilities, policies and operations. The course will include approximately 11 hours of lecture; 32 hours of small-group practical clinical sessions per student (NBC) and 29 hours of small-group practical clinical sessions per student (MJR-VHUP). This will be a graded course - A, B, C or F.
Two Term Class, Student must enter first term; credit given after both terms are complete
2 Credit Hours

VMED 6180B Introduction to Clinical Veterinary Medicine IV
This year-long course for second year veterinary students is designed as a reinforcement of the first year introduction to clinical veterinary medicine series (VMED 6000, VMED 6010, 6020) and as a transition to the clinical year rotations. The emphasis is on practical experiences in our hospitals that will increase your clinical and technical skills as you familiarize yourselves with the hospitals facilities, policies and operations. The course will include approximately 11 hours of lecture; 32 hours of small-group practical clinical sessions per student (NBC) and 29 hours of small-group practical clinical sessions per student (MJR-VHUP). This will be a graded course - A, B, C or F.
Two Term Class, Student must enter first term; credit given after both terms are complete
2 Credit Hours

VMED 6190 Emerging and Exotic Diseases
This course will be offered on the internet through the Association of American Veterinary Medical Colleges website. The Center for Food Security and Public Health at Iowa State University maintains the course and operates the learning management system. The course is part of a larger effort by US Department of Agriculture to improve awareness of and preparedness for foreign animal disease incursions among veterinarians and veterinary students. The ability of a veterinarian to suspect and assist in the diagnosis of a foreign animal disease in livestock or companion animals is crucial to safeguarding Americas animals and ag ricultural sector and to protecting public health. In addition, the course also aims to convey a more comprehensive understanding of the role of accredited veterinarians in world agriculture. Parts of this course will be required training for subsequent USDA veterinary accreditation of new graduates. There will be a mandatory one hour session to introduce the course site, objectives, materials and requirements. The course site comprises six overview topics; four accreditation modules; nineteen case scenarios and twenty infectious disease inquiries. There are short tests associated with the various sections and students are required to score at least an 80% on each test. Students can take the test multiple times if needed to achieve that score. In addition to the course per se, there are numerous links to supplementary materials.
3 Credit Hours

VMED 6200 Introduction to Clinical Veterinary Medicine V
This course will comprise 8 hours of lecture/classroom exercises and discussion per student in addition to a series of online tutorials. Two of the 8 hours of lecture time will be devoted to orientation and trouble-shooting sessions to help students access and complete the online tutorials. Students are expected to complete the online tutorials outside of the classroom setting. The online tutorials will demonstrate how to navigate the hospital computer systems at both campuses so that students will be familiar with them prior to entering the clinics in their fourth year. The material presented in this course will build upon principles learned in previous ICVM courses, specifically by providing further instruction on and practice of written and verbal communication skills and by building upon the orientation to the teaching hospitals provided in ICVM IV. After completing this course, students should be able to: - Describe and use key aspects of client communication skills that are essential in the veterinary medical setting. - Recognize and interpret common aspects of non verbal communication understand how their non verbal communication can be used to improve their encounters with clients. - Understand and demonstrate the basic elements of a written discharge summary. - Navigate and utilize the electronic hospital systems on both campuses.
Fall
2 Credit Hours

VMED 6300 Foundational Toolkit I
The Foundational Toolkit I course provides the background material necessary to understand upcoming blocks in the first year of the veterinary curriculum. Content includes the role of veterinarians in society and One Health, fundamental concepts in population/production medicine and its interaction with the environment and human health, fundamental concepts in biochemistry, cell biology, developmental biology, histology, and molecular biology, basic anatomical principles, scientific and medical terminology, and foundations in the basis of image formation and interpretation of radiography and ultrasonography.
6-9 Credit Hours
VMED 6301 Foundational Toolkit II
The Foundational Toolkit II course provides background material necessary to understand the Spring semester blocks. Content builds on the Foundational Toolkit I and includes additional fundamental concepts in biochemistry, cell biology, and molecular biology and an introduction to cross-sectional imaging principles.
3-7 Credit Hours

VMED 6302 Capstone I
The Capstone I course offers a period at the end of the first semester for students to apply and integrate the information they have learned in the preceding blocks and courses. The assessments at the end of each block will focus largely on recall of information, assessments during the Capstone will emphasize higher-order thinking skills and real-world applications. Students will be involved in integrated case scenarios, reflective journaling of elective experience that related to curriculum, review for NAVLE, interdisciplinary evidence based medicine discussions, and critical thinking assessments. The Capstone period will also permit time for remediation of students who have been identified as requiring intervention.
1-4 Credit Hours

VMED 6303 Capstone II
The Capstone II course offers a period at the end of the second semester for students to apply and integrate the information they have learned in the preceding blocks and courses. While the assessments at the end of each block will focus largely on recall of information, assessments during the Capstone will emphasize higher-order thinking skills and real-world applications. Students will be involved in integrated case scenarios, reflective journaling of elective experience that related to curriculum, review for NAVLE, interdisciplinary evidence based medicine discussions, and critical thinking assessments. The Capstone period will also permit time for remediation of students who have been identified as requiring intervention.
3-5 Credit Hours

VMED 6304 The Hippiatrika: Becoming a Veterinary Clinician I
Hippiatrika I is the first in a series of four courses that take place in the fall and spring of the first two years of the curriculum. Named after one of the earliest collections of writings on veterinary medicine from the 5th and 6th century AD, the Hippiatrika series emphasizes the art and practice of clinical veterinary medicine, focusing on hands-on clinical skills as well as material associated with population medicine, One Health, communication, collaboration, professionalism, veterinary medical ethics, and regulation and finance. When applicable, course material is horizontally integrated with concurrent blocks.
5-7 Credit Hours

VMED 6305 The Hippiatrika: Becoming a Veterinary Clinician II
Hippiatrika II is the second in a series of four courses that take place in the fall and spring of the first two years of the curriculum. Named after one of the earliest collections of writings on veterinary medicine from the 5th and 6th century AD, the Hippiatrika series emphasizes the art and practice of clinical veterinary medicine, focusing on hands-on clinical skills as well as material associated with population medicine, One Health, communication, collaboration, professionalism, veterinary medical ethics, and regulation and finance. When applicable, course material is horizontally integrated with concurrent blocks.
5-7 Credit Hours

VMED 6306 Of Clouds and Clocks: Becoming a Veterinary Scientist I
Of Clouds and Clocks I is the first in a series of courses spanning the first two years of the core veterinary curriculum, named in homage to Karl Popperâs philosophy that the world is divided into mechanisms that are predictable (âclocksâ) and ones that are unpredictable (âcloudsâ). This analogy sums up the difficulties of applying science to complex organisms with complex diseases, which is a vital skill for every clinician-scientist. This semester will focus on the role of basic science in the practice of veterinary medicine and introduces basic concepts of clinical epidemiology. Lectures and group-based learning allow students to integrate science with clinical concepts from parallel courses.
2-3 Credit Hours

VMED 6307 Of Clouds and Clocks: Becoming a Veterinary Scientist II
Of Clouds and Clocks II is the second in a series of courses spanning the first two years of the core veterinary curriculum, named in homage to Karl Popperâs philosophy that the world is divided into mechanisms that are predictable (âclocksâ) and ones that are unpredictable (âcloudsâ). This analogy sums up the difficulties of applying science to complex organisms with complex diseases, which is a vital skill for every clinician-scientist. This semester will focus on fundamental statistics, the hierarchy of evidence and design and assessment of clinical studies. Lectures and group-based learning allow students to integrate science with clinical concepts from parallel courses.
2-5 Credit Hours

VMED 6308 Support & Movement I
The Support and Movement block in year 1 of the core curriculum introduces the musculoskeletal system from a comparative perspective and will cover the normal development, gross and micro anatomy, physiology and function of bones and muscles, including their cellular, extracellular and molecular components. It will impart foundational biological and clinical knowledge about the musculoskeletal system and ask students to apply this knowledge. Blocks will use a combination of lectures, laboratories, group assignments, seminars, and out of class projects to teach and reinforce the information. Case examples will be used to help the students better understand, research, integrate and think about the concepts taught in the classroom and laboratory.
6-10 Credit Hours

VMED 6309 Circulation & Respiration I
The Circulation and Respiration block in year 1 of the core curriculum will cover the normal development, gross and micro anatomy, physiology, function, and clinical assessment of the cardiovascular and respiratory systems. Blocks will use a combination of lectures, laboratories, group assignments, seminars, and out of class projects to teach and reinforce the information. Case examples will be used to help the students better understand, research, integrate and think about the concepts taught in the classroom and laboratory.
5-7 Credit Hours

VMED 6310 Reproduction & Development I
The Reproduction and Development block in year 1 of the core curriculum will cover the normal development, gross and micro anatomy, physiology, function, and clinical assessment of the reproductive system. Emphasis is placed on how structure lends to reproductive function, mechanisms of sexual development, the reproductive endocrine axis, reproductive cyclicity, sexual behavior, genetics, the processes of fertilization through parturition, and lactation. Blocks will use a combination of lectures, laboratories, group assignments, seminars, and out of class projects to teach and reinforce the information. Case examples will be used to help the students better understand, research, integrate and think about the concepts taught in the classroom and laboratory.
4-7 Credit Hours
VMED 6311 Defense & Barriers I
The Defense and Barriers block in year 1 of the core curriculum will cover the foundational understanding of the immune system, its innate and adaptive functions, its cellular and molecular participants and its sites of activity, including the primary, secondary organs as well as the barrier and mucosal organs (e.g. skin and gut). Students will also be introduced to the microbes that interact with the immune system, as well as the biological basis for the ability of microbes to induce and/or evade an immune response. Blocks will use a combination of lectures, laboratories, group assignments, seminars, and out of class projects to teach and reinforce the information. Case examples will be used to help the students better understand, research, integrate and think about the concepts taught in the classroom and laboratory.
4-7 Credit Hours

VMED 6312 Digestion & Metabolism I
The Digestion and Metabolism block in year 1 of the core curriculum will offer students an understanding of how the body processes nutrients, and how they are utilized to create energy. It will cover the normal development, gross and micro anatomy, physiology, function, and clinical assessment of the digestive tract for the domestic and exotic species as well as core nutritional concepts including nutrient requirements, feeds and feeding, macronutrient and micronutrient metabolism, and fundamentals of ration formulation. Blocks will use a combination of lectures, laboratories, group assignments, seminars, and out of class projects to teach and reinforce the information. Case examples will be used to help the students better understand, research, integrate and think about the concepts taught in the classroom and laboratory.
4-7 Credit Hours

VMED 6313 Elimination & Detoxification I
The Elimination and Detoxification block in year 1 of the core curriculum focuses on the detoxification and elimination roles of the hepatobiliary and urinary systems. It will cover the normal development, gross and micro anatomy, physiology, function, and clinical assessment of these systems. Topics covered include hepatic processing and removal of toxins, the urea cycle, renal mechanisms of fluid homeostasis, and the role of the kidney in acid-base balance. Blocks will use a combination of lectures, laboratories, group assignments, seminars, and out of class projects to teach and reinforce the information. Case examples will be used to help the students better understand, research, integrate and think about the concepts taught in the classroom and laboratory.
2-5 Credit Hours

VMED 6314 Cognition, Senses & Responses I
The Cognition, Senses and Responses block in year 1 of the core curriculum will examine the central and peripheral nervous systems, incorporating the gross and microscopic neuroanatomy of the brain, spinal cord, nerves, and eye, the physiology of the nervous system, and the neurobiology of behavior. Core topics in the principles of anesthesia and pain control will also be covered. Blocks will use a combination of lectures, laboratories, group assignments, seminars, and out of class projects to teach and reinforce the information. Case examples will be used to help the students better understand, research, integrate and think about the concepts taught in the classroom and laboratory.
4-7 Credit Hours

VMED 6315 Testing Course
Testing Course Attributes
6-9 Credit Hours

VMED 6400 Foundational Toolkit III
The Foundational Toolkit III course provides the background material necessary to understand upcoming blocks in the second year of the veterinary curriculum that focuses on the diagnosis and treatment of disease. Content includes fundamentals of pharmacology and toxicology, neoplasia and inflammation, and routine laboratory diagnostic techniques.
5-9 Credit Hours

VMED 6401 Foundational Toolkit IV
The Foundational Toolkit IV course provides background material necessary to understand the Spring semester blocks. Content builds on the Foundational Toolkit III and includes further diagnostic tools and advanced imaging modalities.
3-9 Credit Hours

VMED 6402 Capstone III
The Capstone III course offers a period at the end of the first semester for students to apply and integrate the information they have learned in the preceding blocks and courses. While the assessment in the tests at the end of modules will focus largely on recall of information, assessments during the Capstone will emphasize higher-order thinking skills and real-world applications. Students will be involved in integrated case scenarios, reflective journaling of elective experience that related to curriculum, review for NAVLE, interdisciplinary evidence based medicine discussions, and critical thinking assessments. The Capstone period will also permit time for remediation of students who have been identified as requiring intervention.
1-6 Credit Hours

VMED 6403 Capstone IV
The Capstone IV course offers a period at the end of the second semester for students to apply and integrate the information they have learned in the preceding blocks and courses. While the assessment in the tests at the end of modules will focus largely on recall of information, assessments during the Capstone will emphasize higher-order thinking skills and real-world applications. Students will be involved in integrated case scenarios, reflective journaling of elective experience that related to curriculum, review for NAVLE, interdisciplinary evidence based medicine discussions, and critical thinking assessments. The Capstone period will also permit time for remediation of students who have been identified as requiring intervention.
2-5 Credit Hours

VMED 6404 The Hippia trika: Becoming a Veterinary Clinician III
Hippiatrika III is the third in a series of four courses that take place in the fall and spring of the first two years of the curriculum. Named after one of the earliest collections of writings on veterinary medicine from the 5th and 6th century AD, the Hippia trika series emphasizes the art and practice of clinical veterinary medicine, focusing on hands-on clinical skills as well as material associated with population medicine, One Health, communication, collaboration, professionalism, veterinary medical ethics, and regulation and finance. When applicable, course material is horizontally integrated with concurrent blocks.

When applicable, course material is horizontally integrated with concurrent blocks.
4-8 Credit Hours

VMED 6406 Of Clouds and Clocks: Becoming a Veterinary Scientist III
Of Clouds and Clocks III is a course that teaches the first two years of the core veterinary curriculum, named in homage to Karl Popper’s philosophy that the world is divided into mechanisms that are predictable (“clocks”) and ones that are unpredictable (“clouds”). This analogy sums up the difficulties of applying science to complex organisms with complex diseases, which is a vital skill for every clinician-scientist. This semester will focus on integrating evidence-based clinical research in the practice of veterinary medicine. Lectures and group-based learning allow students to integrate science with clinical concepts from parallel courses.
1-5 Credit Hours

VMED 6407 Of Clouds and Clocks: Becoming a Veterinary Scientist IV
Of Clouds and Clocks IV is the final course in a series of courses spanning the first two years of the core veterinary curriculum, named in homage to Karl Popper’s philosophy that the world is divided into mechanisms that are predictable (“clocks”) and ones that are unpredictable (“clouds”). This analogy sums up the difficulties of applying science to complex organisms with complex diseases, which is a vital skill for every clinician-scientist. This semester will focus on integrating evidence-based clinical research in the practice of veterinary medicine. Lectures and group-based learning allow students to integrate science with clinical concepts from parallel courses.
1-6 Credit Hours

VMED 6408 Support & Movement II
The Support and Movement block in year 2 of the core curriculum covers the pathology (gross, histopathologic, and clinicopathologic), medical ethics, and regulation and finance. When applicable, course material is horizontally integrated with concurrent blocks.
4-8 Credit Hours

VMED 6409 Circulation & Respiration II
The Circulation and Respiration block in year 2 of the core curriculum covers the pathology (gross, histopathologic, and clinicopathologic), diagnosis, medical treatment, and surgical interventions for diseases of the cardiovascular and respiratory systems. Blocks will use a combination of lectures, laboratories, group assignments, seminars, and out of class projects to teach and reinforce the information. Case examples will be used to help the students better understand, research, integrate and think about the concepts taught in the classroom and laboratory.
5-9 Credit Hours

VMED 6410 Reproduction & Development II
The Reproduction and Development block in year 2 of the core curriculum covers the pathology (gross, histopathologic, and clinicopathologic), diagnosis, medical treatment, and surgical interventions for diseases of the reproductive system. Blocks will use a combination of lectures, laboratories, group assignments, seminars, and out of class projects to teach and reinforce the information. Case examples will be used to help the students better understand, research, integrate and think about the concepts taught in the classroom and laboratory.
3-7 Credit Hours

VMED 6411 Defense & Barriers II
The Defense and Barriers block in year 2 of the core curriculum covers the pathology (gross, histopathologic, and clinicopathologic), medical treatment, and surgical interventions for diseases of the hematolymphoid system and skin/mucosal barriers. Blocks will use a combination of lectures, laboratories, group assignments, seminars, and out of class projects to teach and reinforce the information. Case examples will be used to help the students better understand, research, integrate and think about the concepts taught in the classroom and laboratory.
3-7 Credit Hours

VMED 6412 Digestion & Metabolism II
The Defense and Metabolism block in year 2 of the core curriculum covers the pathology (gross, histopathologic, and clinicopathologic), medical treatment, and surgical interventions for diseases of the digestive system. Blocks will use a combination of lectures, laboratories, group assignments, seminars, and out of class projects to teach and reinforce the information. Case examples will be used to help the students better understand, research, integrate and think about the concepts taught in the classroom and laboratory.
4-8 Credit Hours

VMED 6413 Elimination & Detoxification II
The Elimination and Detoxification block in year 2 of the core curriculum covers the pathology (gross, histopathologic, and clinicopathologic), medical treatment, and surgical interventions for diseases of the hepatobiliary and urinary systems. Blocks will use a combination of lectures, laboratories, group assignments, seminars, and out of class projects to teach and reinforce the information. Case examples will be used to help the students better understand, research, integrate and think about the concepts taught in the classroom and laboratory.
3-6 Credit Hours

VMED 6414 Cognition, Senses & Response II
The Cognition, Senses and Response block in year 2 of the core curriculum covers the pathology (gross, histopathologic, and clinicopathologic), medical treatment, and surgical interventions for diseases of the central and peripheral nervous systems, sensory organs, and behavior. Blocks will use a combination of lectures, laboratories, group assignments, seminars, and out of class projects to teach and reinforce the information. Case examples will be used to help the students better understand, research, integrate and think about the concepts taught in the classroom and laboratory.
4-8 Credit Hours
Veterinary Clinical Studies - New Bolton Center (VCSN)

VCSN 6300 Equine Neonatology & Intensive Care Medicine
The objectives of this course are to: (1) Introduce students to neonatal physiology and behavior as it applies to the foal; (2) Acquaint students with the clinical signs and pathophysiologic mechanisms of diseases in neonates; and (3) Provide students experience in the neonatal intensive care unit learning monitoring techniques (e.g. noninvasive blood pressure measurements, PCV, TP, stall side blood glucose, etc.) Observing normal and abnormal neonatal behavior and neonatal/maternal interactions, learning techniques of neonatal restraint, and assisting with diagnostic and therapeutic procedures as well as general nursing. Lectures will focus on foal diseases, intensive care therapies, periparturient problems, ventilatory support, musculoskeletal disorders, pharmacology and the neonate. Seminars will be used to apply lecture and reading material to clinical case discussions. A set of clinically-oriented problems covering case presentations, blood gas analysis, nutrition formulations, fluid therapy, nursing care protocols and periparturient events will be completed during the fourth quarter. The course grade will be based upon evaluation of clinical case problems, seminar participation, and mastering clinical skills (monitoring techniques, etc.) learned during foal-sitting. Enrollment requires approval of the course organizer and satisfactory academic standing.
4 Credit Hours

VCSN 6320 Diseases & Management of Sheep & Goats
This course is an introduction to small ruminant medicine and surgery. Flock and herd health programs involve control of infectious, parasitic, reproductive and metabolic disorders and provision of proper housing, feeding and reproductive management systems. Prevalent diseases and management systems of the Eastern U.S. will receive emphasis.
3 Credit Hours

VCSN 6330 Animal Health Economics
An introduction to a variety of economic concepts and decision making techniques that relate to the business of an agricultural enterprise and to the impact of veterinary services on that enterprise. Discussion of the role of production medicine in the overall profitability of animal agriculture.
2 Credit Hours

VCSN 6340 Clinical Biostatistics
This course presents a unified approach to the analysis and interpretation of clinical data. We start with a discussion of general linear models and show the types of problems to which they apply, and then move to generalized linear models, to survival models, and finally to general estimating equations. Our goal is to acquaint participants with a fairly comprehensive array of approaches to data analysis and, most particularly, to circumstances to which they apply. The objective is to prepare students for research activities, either as a career, or as a step towards "Board Certification" enabling them to plan studies, analyze data ensuing from studies, and to critically read articles in their area of interest.
2 Credit Hours

VCSN 6350 Equine & Farm Animal Anesthesia
This course will discuss sedation and intravenous or inhalant anesthesia of equine, food animal, and camelid patients. The lectures will review the clinical pharmacology of the commonly used anesthetic drugs and the anatomic and physiologic differences among the species and their relevance to anesthetic management. Patient preparation, drug selection, induction and intubation techniques, intra-operative monitoring and management of cardiovascular and respiratory abnormalities, post-operative analgesia and recovery complications will also be discussed. Three case-based problems with multiple questions related to various aspects of anesthesia care will be distributed during the course. The problems are take-home, open-book and students may work alone or in pairs. Time will be spent discussing the cases after the written answers are turned in.
2 Credit Hours

VCSN 6360 Clinical Applications of Pharmacology
This course is focused on the clinical pharmacological management of the major problems in veterinary practice. The vast majority of lectures directly apply to companion animals but when necessary, to emphasize a drug group or specific clinical problem, there are also several large animal lectures. This is an extension of core pharmacology and not an expanded version. The lectures will be given by the clinical and basic sciences faculty in their areas of expertise. Emphasis will be on the clinical aspects of drug therapy such as dosage range, duration of therapy, evaluation of therapy, and problems encountered with current drug therapy. Pharmacological therapy in the following areas of medicine and surgery are covered: antibiotics, cardiovascular, neurology, respiratory, urinary, gastrointestinal, endocrine, emergency medicine, ophthalmology, chemotherapeutic agents, fluid therapy, anti-inflammatory, pain medications and other topics as needed for the most comprehensive clinical overview. Emphasis is on case-based approaches to drug therapy. The major objectives of this course are: (1) Provide practical information on rational drug therapy before entering the clinics and the real world of veterinary practice. (2) Provide a sound basis for rationally evaluating the presently available drugs and the drugs of the future. The course grade is based on a weekly quiz and/or mid-term/final.
4 Credit Hours

VCSN 6370 Animal Production Systems
This elective course provides an overview of: (i) management and operational basics of food animal production systems (dairy, beef, swine, poultry, and aquaculture), (ii) contemporary issues concerning current practice and sustainable future of animal production systems, e.g., food safety & biosecurity, antibiotics & antimicrobial resistance, nutrient management & environmental regulations, and animal welfare & public concerns. Students will work in teams on debates from pre-arranged topics, and will complete periodic assignments. Course grades will be based on class participation (40%), homework assignments (30%), and team debate performance (30%).
2 Credit Hours
VCSN 6380 Introduction to Animal Welfare
This course will cover the basic principles, history, and application of animal welfare science for multiple species. Over a series of lectures, the complex issue of assessing good versus poor welfare will be addressed. The first few lectures will provide students with the background of this field, as well as key terms which define the assessment methods of animal welfare science. The multifaceted issue of poor versus good welfare will be addressed in a lecture on ethics and sociology. The background lectures will also cover the disparity in the assessment of pain, pleasure, stress, and suffering based on applying physiological versus behavioral measurements. Given the tools provided by the background lectures, the students will then learn about species-specific welfare issues in the subsequent lectures to include swine, poultry, bovine, equine, aquaculture, exotic/zoo animals, lab animals, shelter animals, companion animals and current events. Following each one-hour lecture, the students will engage in an hour of hands-on activities, and debates concerning that weeks topic. Students will also participate in one wet lab where they will have the opportunity to apply methods of welfare assessment that they have learned in class.
4 Credit Hours

VCSN 6390 Animal Welfare Science
This course is a foundational course for students enrolling in the Animal Welfare Certificate Program. This course covers the basic principles, history, and application of animal welfare science. Over a series of video modules, online discussions, assignments, and quizzes, this course will teach students to assess the welfare of animals in a variety of settings using science-based methods and reasoning. Students will learn current welfare issues by species. This class will engage in activities that build the skills to find and assess scientific sources of information. Finally, the link between science and ethics will be explored such that students understand various ethical frameworks and how they relate to animal welfare. The objective of the course is to provide students with the background and tools to apply animal welfare science in order to facilitate students’ ability to successfully engage in welfare deliberations and welfare science in a variety of fields.
6 Credit Hours

VCSN 6400 Large Animal Reproduction - NBC
This course covers in-depth reproductive management of cattle, horses, swine and small ruminants. Emphasis is placed on the herd or flock as a unit rather than on the individual animal. This course is the same as VCSN644 but with one-half of the laboratory time. The course is intended for those students who intend to pursue a career that will be exclusively or predominantly companion animal. A three-hour canine reproduction laboratory is included. The Laboratories include demonstrations by clinicians and hands-on practical experience for students in evaluating the male and the female reproductive status: PATH F - female pathology, PATH M - male pathology, OB1 - obstetrics, B&R - bull and ram breeding soundness examination, DOG - dog breeding soundness examination, vaginal cytology of the bitch, MARE1 - palpation of the genital tract per rectum of mare, COW1 - physical exam of the bovine genital tract, ULTRA - ultrasonography of the genital tract of animals.
3 Credit Hours

VCSN 6410 Advanced Poultry Medicine - NBC
This lecture/laboratory course is designed to provide students with a working knowledge of the recognition and diagnosis of selected diseases of poultry. Lectures will include discussion of the clinical, post-mortem and technical aspects of the diagnosis of selected avian diseases. The laboratory will provide each student with an opportunity to necropsy birds. Field visits to local poultry farms may be taken. The course grade will be based on weekly quizzes and a group project.
2 Credit Hours

VCSN 6420 Dairy Cattle Nutrition - NBC
The complexity of evaluating and balancing rations requires computer models. CPM-Dairy - developed at Cornell University, The University of Pennsylvania and The William H. Miner Agricultural Research Institute - evaluates and formulates rations according to a modified National Research Council (NRC) model and according to The Cornell Net Carbohydrate and Protein System (CNCP). CPM-Dairy will be used to describe nutrient requirements, supplies and utilization. Environmental effects on nutritional requirements will be demonstrated. The dynamics of ruminal fermentation and microbial growth will be illustrated in terms of how they affect nutrient supply. "Hands on Computer Sessions" will lead participants through ration formulation.
3 Credit Hours

VCSN 6430 Large Animal Reproduction - NBC
This course covers in-depth reproductive management of cattle, horses, swine and small ruminants. Emphasis is placed on the herd or flock as a unit rather than on the individual animal. This course is the same as VCSN644 but with one-half of the laboratory time. The course is intended for those students who intend to pursue a career that will be exclusively or predominantly companion animal. A three-hour canine reproduction laboratory is included. The Laboratories include demonstrations by clinicians and hands-on practical experience for students in evaluating the male and the female reproductive status: PATH F - female pathology, PATH M - male pathology, OB1 - obstetrics, B&R - bull and ram breeding soundness examination, DOG - dog breeding soundness examination, vaginal cytology of the bitch, MARE1 - palpation of the genital tract per rectum of mare, COW1 - physical exam of the bovine genital tract, ULTRA - ultrasonography of the genital tract of animals.
3 Credit Hours

VCSN 6440 Large Animal Reproduction - NBC
This course covers in-depth reproductive management of cattle, horses, swine and small ruminants. Emphasis is placed on the herd or flock as a unit rather than on the individual animal. Laboratories include demonstrations by clinicians and hands-on practical experience for students in evaluating the male and the female reproductive status of dogs and large domestic animals. Therapeutic information will be covered in problem-based cases that will be solved and formally presented by small student groups. Grades will be based on the therapeutic presentations, laboratory participation, mid-term exam and a comprehensive final examination. In addition to the laboratories listed in VCSN643 are the following eight laboratories: OB2 - fally, STALL - stallion breeding soundness examination SWINE - boar semen evaluation, heat detection and AI of sows, MARE2 - mare breeding soundness examination, palpation, MARE3 - using breeding soundness examination to solve infertility case, palpation, COW2 - bovine estrous cycle, palpation, COW3 - pregnancy diagnosis, palpation, COW4 - therapeutics, palpation.
4 Credit Hours
VCSN 6450 Large Animal Surgery & Surgical Exercises - NBC
Lectures given in this course will cover common surgical problems of the respiratory, gastrointestinal, musculoskeletal, and urogenital systems of horses and of the gastrointestinal system of domestic ruminants. Lecture material will cover the procedures to be done in each laboratory beforehand so that ample opportunity is allowed for preoperative preparation. Lectures are given on anesthesia with special emphasis on drugs to be used during the laboratory sessions. The surgical exercises and related laboratory procedures are designed to teach surgical techniques and principles, surgical anatomy, and basic surgical procedures in horses and domestic ruminants. Students will administer general anesthetics and apply the principles and techniques of physiologic monitoring of anesthetized large animals. The importance and the application of preoperative and postoperative management will be emphasized and students take full responsibility for their patient’s progress throughout the course. The course grade is derived from performance in the laboratories, quality of patient care, participation in conferences, and one final exam.
4 Credit Hours

VCSN 6460 Equine Lameness - NBC
This course covers the principles of lameness diagnosis and treatment in horses. The course features didactic lectures, actual lameness examinations, video tape viewing, computer aided learning and a diagnostic nerve block laboratory using cadaver specimens.
4 Credit Hours

VCSN 6470 Equine Orthopedics - NBC
The course reviews specific techniques in equine orthopaedics, and emphasizes understanding orthopaedic principles that are applicable to all species. Topics include more detailed information on internal fixation, relevant first-aid techniques, osteochondrosis and orthopedic sepsis.
1 Credit Hour

VCSN 6480 Equine Sports Medicine - NBC
This seminar course concerns the clinical application of basic physiologic and pathologic principles as they relate to the diagnosis and management of exercise-related diseases in the horse. Material will be presented in light of the demands of specific types of athletic activity. Laboratory demonstrations using the high-speed treadmill will be provided. Hands-on sessions are also provided to demonstrate the collection of arterial blood gas samples and upper airway endoscopy. Paper or oral presentation required.
3 Credit Hours

VCSN 6490 Large Animal Diagnostic Imaging - NBC
The course consists of a series of lectures, a radiographic positioning laboratory and an ultrasound/anatomy laboratory. Plain film radiography comprises the majority of the lectures but ultrasound, scintigraphy and prepurchase examination are included. A brief introduction to CT & MRI is also presented. Strong emphasis is placed on the equine species but incorporates radiography of other large animals. The course is designed to cover the basic principles of the different imaging techniques, radiographic and sonographic anatomy, and the basic interpretation of the imaging modalities.
3 Credit Hours

VCSN 6500 Applied Animal Welfare and Behavior
This course aims to provide students with practical skills helpful in the study of animal welfare and in the future offer a bridge to our proposed master’s program. Students will be exposed to critical reading of the scientific literature, development and testing of hypothesis as well as examining experimental paradigms used commonly to probe animal welfare and behavior. The goal of the course is for each student to conceive, develop, write, and present a research proposal on a question of interest in animal welfare that could provide the foundation for a future capstone project. Student assignments will include selected readings, synchronous and asynchronous online discussion of relevant course materials, and an oral presentation and written description of their research proposal.
6 Credit Hours

VCSN 6520 Regulations and Animal Welfare
This course will focus on regulations in the United States that have an impact on animal welfare. It will also look at oversight of research, clinical trials and informed consent in veterinary medicine. Over a series of video modules, online discussions, assignments and quizzes, this course will teach students the history and tenets of the current regulatory framework. Each week a synchronous session will explore the implications of regulations on animal welfare.
3 Credit Hours

VCSN 6530 Capstone in Animal Welfare and Behavior
This online course follows directly from the MSc Proseminar course (VPTH 637) where students developed their research questions, hypotheses, methods and piloted their approach to an investigation that could either be the product of original literature analysis and synthesis of new ideas or the result of investigative work that involves data collection and analysis*. Through structured meetings with mentors, peers and other AWB faculty, this semester long (6 credit) capstone course will provide Penn Vet MSc students with the guidance required to gather and interpret their data and communicate their results in written and oral form. Students will provide weekly updates on their research progress and will discuss and troubleshoot their projects with their peers and advisors in weekly synchronous sessions. Students will generate a formal protocol for their research approach, maintain online records of raw data, give a public oral presentation of their results and generate a paper describing their results in a format appropriate for publication.
Fall or Spring
6 Credit Hours
VCSN 6540 Animal Welfare in the Shelter and Community
Millions of cats and dogs enter shelters in the United States each year, where they can face increased stress, reduced quality of life, and, in some cases, an elevated risk of euthanasia. Developing a complex understanding of shelter management/structure and the environmental, behavioral, and physical factors that impact animal welfare are critical to developing constructive, evidence-based, and humane decisions and programs for both shelters and the community. Particular emphasis will be placed on behavioral problems and assessments as behavior is a leading risk factor for the relinquishment of dogs and cats and can drastically impact animal welfare. Shelters and welfare organizations are also striving to improve animal welfare in the community through public health type programming including addressing concepts like access to care and harm reduction. In this course, students will learn about key factors that impact animal welfare in the shelter and community and understand the utility of welfare assessments and scientifically informed policy. Students will discuss the multi-faceted role of animal shelters in the community in the context of One Welfare. They will also critically evaluate programs and policies designed to improve animal welfare using current scientific literature. In their final project, students will utilize this knowledge to recommend a protocol/policy to implement in a specific shelter or community setting. They will create a scientific policy paper targeted at the academic/scientific audience and then translate that information and present it to a lay audience via recorded PowerPoint. Prerequisite: VCSP 6330 AND VCSN 6390 AND VCSP 6390 AND VCSN 6500 6 Credit Hours

VCSN 6570 One Health & Global Food Security
By 2050 can the world sustain a population of over 9 billion people in the face of climate change, limited water and other natural resources, pollution, urbanization, political and income inequality, conflict, changing diets and patterns of disease? An interdisciplinary group of faculty will explore this complex question through six broad trends that affect global food sustainability and environmental health; 1) nutritional needs; 2) changing patterns of communicable and non-communicable diseases of humans and all types of animals; 3) natural resource inventory and management; 4) production technologies (intensive/extensive systems); 5) societal changes impacting production and food demand; 6) food distribution systems and access to food. The course is open to graduate and undergraduate students and will involve student participation and research. Spring 4 Credit Hours

VCSN 6580 Evolution of Animal Welfare
This course addresses how changing societal expectations about animal use impact animal welfare expectations. 3 Credit Hours

VCSN 6590 Contemporary Issues in Animal Welfare
This course covers contemporary animal welfare issues and some of their ethical implications 3 Credit Hours

VCSN 6590 Contemporary Issues in Animal Welfare
This course is intended to cover the animal welfare assessment requirements as outlined in the ACAW guidelines for board certification but also allows any students pursuing the master’s program to improve their welfare assessment abilities. Students must participate in assessment of Companion animals, Poultry production, Hooved stock production, Equids, Laboratory animals and Zoo animals. They must also choose at least 2 to assess from the following: Aquatic animals, aquaculture/fisheries, Wildlife/exotic animals, Animals in exhibitions/entertainment, Animals in education, and Working/assistant animals. Students will work on 3 assessments per week for a total of 9 assessments. The final week of the course will be dedicated to working on case studies from the student’s own experience. This will include identification of a situation where welfare would need to be assessed, determination of how to assess the welfare of the animal(s) and a written report of the assessment, including recommendations for steps that could be instituted so that the welfare could be improved. Each week a video and reading assignments will familiarize students with assessment techniques and tools. 3 Credit Hours

VCSN 6610 Swine Neonatology - NBC
This is an introductory course for students who want to learn more about swine production and swine medicine. It aims to familiarize 2nd and 3rd year veterinary students with several important aspects of swine neonatology/farrowing room management that includes parturient physiology and behavior of both the sow and the piglet, baby pig processing, and sow dystocia. All students will be required to attend the four hours of lecture, and four laboratory shifts. Each laboratory shift is 7 hours and available nights and weekends. Students will be required to monitor the farrowing house for sows in labor and attend the farrowings as needed to critically assess animal well-being. Students will be expected to provide appropriate sow or piglet interventions when indicated. Students will also assist with any routine management tasks such as piglet processing and vaccination. Students will be graded on their participation and success in meeting the course objectives. 1 Credit Hour

VCSN 6620 Applied Small Animal Behavior: Dog and Cat
Behavior problems are the most frequent reasons for surrender and euthanasia of pets. In this course, we will discuss the normal behavior and the most common behavior problems of dogs and cats with an emphasis on management including safety recommendations, environmental modification, and behavior modification. Expected outcomes, welfare and legal implications (for example, in case of dog aggression) will be discussed. Attention will also be paid to the thought process used in working up and/or preventing behavioral disorders. Prerequisite: VCSP 6330 AND VCSN 6390 AND VCSP 6390 AND VCSN 6500 6 Credit Hours
VCSN 6630 Professional Portfolio Development
This course will be the forum for students to organize portfolios and for students to meet and give peer feedback. The graduating cohort will be responsible for organizing peer review and the presentation of the portfolios. Any professional track student may participate in the ongoing Canvas community for the professional track development course and will be encouraged to do so. The student cohort that is graduating will enroll in the official course and organize weekly synchronous meetings for working on portfolio development and getting feedback. They will also be responsible for organizing presentations for each student to present their portfolio to the larger community. Two faculty advisors will be available as needed to facilitate. Prerequisite: VCSN 6330 AND VCSN 6390 AND VCSN 6500
6 Credit Hours

VCSN 7005 Large Animal Medicine - Foundation - NBC
Students in this rotation will assist clinicians in history taking, examinations and the medical management of large animal patients presented to the hospital at New Bolton Center. Students will participate in daily ward and Medicine teaching rounds, Radiology rounds and Pathology rounds. All students, whether in core or elective, will be expected to participate in night and weekend duty on a rotating basis. All students will prepare and present one clinical case discussion for Grand Rounds. Time commitment: at least 8 hours per day plus night and weekend duty. 6 Credit Hours

VCSN 7015 Large Animal Emergency/Critical Care - Foundation Rotation - NBC
This rotation is designed to teach students basic principles of large animal emergency medicine and surgery as well as the daily management of critically ill equine patients. Students will be involved in a variety of large animal emergency admissions including diagnostic procedures and surgery as well as post-operative or post-admission case management of horses with gastrointestinal disease. Students will attend regular 8 am morning rounds (see course description for Large Animal Surgery, VCSN 800), followed by morning case-based discussion rounds. The day will be spent either on emergency admissions or procedures and management of in-house patients. Daily afternoon rounds will be topic-based, and may be selected from the following topics: Laceration Repair, Emergency Stabilization of Fractures, Acute Abdomen (colic), Diarrhea, Fluid Therapy, Respiratory Distress, Acute Blood Loss/Hemorrhagic Shock, Food Animal Emergencies, Blood Gas Interpretation, Acute Neurologic Patient, Monitoring the Critically Ill Patient, Reproductive Emergencies, Management of Rectal Tears, Critical Care Journal Club. 6 Credit Hours

VCSN 7125 Food Animal Reproduction - NBC
The course is designed for those students anticipating entering large animal or mixed practice. Students will participate in the diagnosis and treatment of clinical reproductive cases in the hospital. Students will be responsible for the daily treatment and examination of all hospitalized cases at the Hofmann Center. Students will also assist in the management of reproductive problems of Widener Hospital patients. Exposure will vary due to fluctuations in case load. Additional "hands-on" practice of reproductive procedures will occur by the use of teaching animals. Organized laboratories will allow the student to become comfortable with diagnostic techniques of large animal species. On-call, weekend, and night duty are required. Students will be required to give a 15 minute presentation during the rotation and prepare two case letters/discharge instructions on animals they evaluated during the rotation. If student interest and time permit, students may go on field trips to breeding farms. 3 Credit Hours

VCSN 7135 Field Service - NBC
Students in this rotation will assist staff doctors in history taking, physical examinations, and the medical management of patients seen on the Field Service activities of the School's large animal practice. The student is required to attend the appropriate 8:00 a.m. daily rounds at New Bolton Center. The remainder of the day will be spent on field calls. The student will be required to be on night and weekend duty. Night duty will be divided equally among field service students in the rotation. Students on emergency duty are required to be within 15 minutes from New Bolton Center while on duty. Case presentations will be given by students on the second Wednesday of the rotation. Boots and coveralls are essential for this rotation. 6 Credit Hours

VCSN 7155 Diagnostic Ultrasound in Large Animals - NBC
This rotation will provide students with experience in the diagnosis and treatment of large animal cardiac diseases and the use of M-mode, 2-dimensional real-time, pulsed wave, color flow and continuous wave Doppler echocardiography and exercising electrocardiography. Students will also gain experience in the use of diagnostic ultrasonography in the evaluation of tendon and ligament injuries, diseases of the thorax and abdomen, and the evaluation of masses, swellings, neonates and high-risk pregnancies. Students will also gain experience in patient preparation; obtaining a quality ultrasonographic or echocardiographic image and cardiac Doppler studies; and in interpretation of these images and studies with staff and faculty supervision. Students will be responsible for patient care of animals presented to the Heart Station/Ultrasound Service during the rotation. Prerequisite: Core Medicine and Surgery Also Offered As: VCSN 7755 5 Credit Hours

VCSN 7165 Ultrasonography in Large Animals - NBC
For full course description see VCSN 7150. Prerequisite: Core Medicine and Surgery Also Offered As: VCSN 7765 2 Credit Hours
VCSN 7705 Large Animal Medicine -Foundation - NBC
Students in this rotation will assist clinicians in history taking, examinations and the medical management of large animal patients presented to the hospital at New Bolton Center. Students will participate in daily ward and Medicine teaching rounds, Radiology rounds and Pathology rounds. All students, whether in core or elective, will be expected to participate in night and weekend duty on a rotating basis. All students will prepare and present one clinical case discussion for Grand Rounds. Time commitment: at least 8 hours per day plus night and weekend duty.
6 Credit Hours

VCSN 7725 Food Animal Reproduction - NBC
The course is designed for those students anticipating entering large animal or mixed practice. Students will participate in the diagnosis and treatment of clinical reproductive cases in the hospital. Students will be responsible for the daily treatment and examination of all hospitalized cases at the Hofmann Center. Students will also assist in the management of reproductive problems of Widener Hospital patients. Exposure will vary due to fluctuations in case load. Additional "hands-on" practice of reproductive procedures will occur by the use of teaching animals. Organized laboratories will allow the student to become comfortable with diagnostic techniques of large animal species. On-call, weekend, and night duty are required. Students will be required to give a 15 minute presentation during the rotation and prepare two case letters/discharge instructions on animals they evaluated during the rotation. If student interest and time permit, students may go on field trips to breeding farms.
3 Credit Hours

VCSN 7735 Field Service - NBC
Students in this rotation will assist staff doctors in history taking, physical examinations, and the medical management of patients seen on the Field Service activities of the School's large animal practice. The student is required to attend the appropriate 8:00 a.m. daily rounds at New Bolton Center. The remainder of the day will be spent on field calls. The student will be required to be on night and weekend duty. Night duty will be divided equally among field service students in the rotation. Students on emergency duty are required to be within 15 minutes from New Bolton Center while on duty. Case presentations will be given by students on the second Wednesday of the rotation. Boots and coveralls are essential for this rotation.
6 Credit Hours

VCSN 7745 Large Animal Clinical Reproduction - NBC
The course is designed for those students anticipating entering large animal or mixed practice. Students will participate in the diagnosis and treatment of clinical reproductive cases in the hospital. Students will be responsible for the daily treatment and examination of all hospitalized cases at the Hofmann Center. Students will also assist in the management of reproductive problems of Widener Hospital patients. Exposure will vary due to fluctuations in case load. Additional "hands-on" practice of reproductive procedures will occur by the use of teaching animals. Organized laboratories will allow the student to become comfortable with diagnostic techniques of large animal species. On-call, weekend, and night duty are required. Students will be required to give a 15 minute presentation during the rotation and prepare two case letters/discharge instructions on animals they evaluated during the rotation. If student interest and time permit, students may go on field trips to breeding farms.
6 Credit Hours

VCSN 7755 Diagnostic Ultrasound in Large Animals - NBC
This rotation will provide students with experience in the diagnosis and treatment of large animal cardiac diseases and the use of M-mode, 2-dimensional real-time, pulsed wave, color flow and continuous wave Doppler echocardiography and exercising electrocardiography. Students will also gain experience in the use of diagnostic ultrasonography in the evaluation of tendon and ligament injuries, diseases of the thorax and abdomen, and the evaluation of masses, swellings, neonates and high-risk pregnancies. Students will also gain experience in patient preparation; obtaining a quality ultrasonographic or echocardiographic image and cardiac Doppler studies; and in interpretation of these images and studies with staff and faculty supervision. Students will be responsible for patient care of animals presented to the Heart Station/Ultrasound Service during the rotation. Prerequisite: Core Medicine and Surgery
Also Offered As: VCSN 7155
5 Credit Hours

VCSN 7765 Ultrasonography in Large Animals - NBC
For full course description see VCSN 7150. Prerequisite: Core Medicine and Surgery
Also Offered As: VCSN 7165
2 Credit Hours

VCSN 7775 Large Animal Neonatal Intensive Care Rotation - NBC
This elective provides students with experience in the management of critically ill large animal neonates and dams with periparturient complications. Daily rounds emphasize the use of monitoring techniques (e.g. capnography, ECG, BP monitor, fetal and neonatal ultrasonography), and various treatment modalities (e.g. parenteral nutrition, positive pressure ventilation, and fluid therapy) required in the management of critically ill neonatal foals and late-term pregnant mares. Students will have the opportunity to master the following manual and theoretical skills: arterial puncture and arterial blood gas analysis, calculation and application of parenteral and enteral nutrition formulations, catheterization techniques for veins and bladder, principles of fluid therapy as applied to patients with septic shock and patients requiring maintenance fluids, radiographic interpretation of neonatal thoracic and musculoskeletal disease, interpretation of fetal and neonatal sonograms, familiarity with different types of respiratory support and resuscitation protocols, and a working knowledge of a wide variety of pharmacologic agents including antibiotics, anticonvulsives, sedatives, analgesics, pressors and inotropic agents.
6 Credit Hours

VCSN 7785 Equine Welfare Clinical Elective
This 2-week clinical elective would be open to all fourth year veterinary students, and would be offered once per year, in rotation 1. The enrollment limit is 6 students, and is limited to students who have taken either of the two welfare courses (Applied Animal Welfare and Behavior, Dr. Parsons; Animal Welfare Science, Dr. Pierdon), and then to equine majors if there are any remaining places. Course goals: To provide a comprehensive and nuanced examination of the issues and concerns regarding equine welfare in the US.
5 Credit Hours
VCSN 7805 Ration Evaluation and Formulation - NBC
This course is intended to provide students with practical experience in evaluating dairy feeding programs and formulation of rations. Students will visit dairy farms, inspect feed storage and delivery systems, obtain representative samples of feedstuffs for analysis, examine production records, and assess animal body condition. Students will then evaluate the nutritional and economic adequacy of the whole feeding program, suggest recommendations for its improvement and prepare producer reports for discussion with faculty prior to implementation.
6 Credit Hours

VCSN 8005 Large Animal Surgery-Foundation - NBC
Students rotating through Large Animal Surgery at NBC will participate in all aspects of examination and diagnosis, including lameness evaluation and endoscopy, medical and surgical treatment and daily patient care of large animals. During one week of the two-week rotation, each student will be assigned to treat cattle, other domestic farm animals and horses, and during the other week, horses only. Night, weekend and holiday assignments, including treatments and emergency service, will be made according to the requirements of the overall hospital operation during a given session. Students usually are exposed to various surgical procedures (general soft tissue, abdominal, orthopedic, etc.) during any one rotation. During the rotation, students may gain experience with horses being examined on the High Speed Treadmill or undergoing imaging in the Nuclear Scintigraphy Unit. Students will also participate in a variety of didactic teaching rounds, barn rounds and teaching laboratories as described: Monday, Tuesday, Wednesday, Friday 4-5 pm - Surgery Teaching Rounds. Thursday 3-5 pm - Surgery Teaching Laboratory (Wet labs). Monday 8-9 am Radiology Rounds (case-based discussion led by the surgery faculty). Tuesday 8-9 am - Lameness Rounds (case-based discussion led by the radiology faculty). Wednesday 8-9 am - Radiology Rounds (case-based discussion led by the radiology faculty). Thursday 8-9 am - Grand Rounds (Student case presentations). Friday 8-9 am - Medicine Teaching Rounds (case-based discussion with Medicine faculty and house officers).
6 Credit Hours

VCSN 8125 Sports Medicine/Imaging - NBC
Goals of this rotation are to provide the students with the opportunity to obtain diagnostic skills through the use of different modalities and to incorporate these techniques into the decision-making process during the diagnosis and treatment of horses with performance problems. Students in this rotation will take more responsibility for their cases and follow them through the different specialties without being drawn away to the next case in their assigned area. Each student will spend his/her time in the following areas: 1 week - Ultrasound/Cardiology. 1 week - Nuclear Scintigraphy/Radiology/MRI. 1 week - Treadmill/Podology. 1 week - Poor performance clinic (lameness)
10 Credit Hours

VCSN 8145 Large Animal Radiology - NBC
In this rotation, students will gain experience in making and interpreting large animal radiographic examinations. They will assist the radiology technicians in taking and processing routine radiographs, attend film reading sessions, daily hospital rounds and review large animal radiographs independently and under supervision. Students will be required to write radiology reports.
5 Credit Hours

VCSN 8155 Large Animal Anesthesiology Service - NBC
During the Large Animal Anesthesiology Service Rotation, students will gain experience in: (1) anesthetizing equine and other farm animal patients for elective and emergency procedures; (2) alleviating pain in animals; (3) maintaining adequate vital functions during anesthesia and (4) managing fluid, electrolyte and acid-base disturbances in the perioperative period. In addition, the course offers the opportunity to apply the clinical pharmacology of perianesthetic drugs in various farm animal species. Students are requested to attend Anesthesia Service rounds on Mondays and Fridays (8-9:00 am) during their clinical rotation, which will also offer the opportunity to discuss anesthesia cases. Night and weekend emergency duty is mandatory and shared with veterinary technician students. The maximum emergency duty is 4 weekday nights and one 24-hour weekend day. Students are expected to report to the Sports Medicine Conference Room or Anesthesia Office promptly at 8:00 am on the first Monday morning of the 2-week rotation with scrubs, stethoscope and calculator. Students are requested to review the information contained in the class notes of the following courses for appropriate sections prior to entering the rotation: General Pharmacology and Toxicology (VBMS 607), Animal Physiology (VBMS 606), Anesthesia (VSUR 604), and the Equine and Farm Animal Anesthesia Elective (VCSN 635). Students should also be familiar with dosages of commonly used drugs and their clinical pharmacology and technical aspects of the practice of large animal anesthesia.
6 Credit Hours

VCSN 8165 Food Animal Anesthesiology Service - NBC
In this rotation, students will gain experience in planning and performing sedation and anesthesia in small ruminants, swine and cameldids. Specific clinical objectives during the five-day rotation include physical and chemical restraint, regional and general anesthesia techniques in various food and fiber producing animals, and operation and use of various anesthetic monitoring devices. Emphasis is on techniques and drugs commonly used in the field. Students will formulate plans for sedation and/or short term anesthesia in sheep/goats, pigs and cameldids and will then carry them out on teaching animals. Techniques for regional anesthesia for flank surgery in the bovine will be performed at Marshak Dairy.
3 Credit Hours
VCSN 8705 Large Animal Surgery-Foundation - NBC
Students rotating through Large Animal Surgery at NBC will participate in all aspects of examination and diagnosis, including lameness evaluation and endoscopy, medical and surgical treatment and daily patient care of large animals. During one week of the two-week rotation, each student will be assigned to treat cattle, other domestic farm animals and horses, and during the other week, horses only. Night, weekend and holiday assignments, including treatments and emergency service, will be made according to the requirements of the overall hospital operation during a given session. Students usually are exposed to various surgical procedures (general soft tissue, abdominal, orthopedic, etc.) during any one rotation. During the rotation, students may gain experience with horses being examined on the High Speed Treadmill or undergoing imaging in the Nuclear Scintigraphy Unit. Students will also participate in a variety of didactic teaching rounds, barn rounds and teaching laboratories as described: Monday, Tuesday, Wednesday, Friday 4-5 pm - Surgery Teaching Rounds. Thursday 3-5 pm - Surgery Teaching Laboratory (Wet labs). Monday 8-9 am Radiology Rounds (case-based discussion led by s u r g e y faculty). Tuesday 8-9 am - Lameness Rounds (case-based discussion led by Sports Medicine faculty). Wednesday 8-9 am - Radiology Rounds (case-based discussion led by radiology faculty). Thursday 8-9 am - Grand Rounds (Student case presentations). Friday 8-9 am - Medicine Teaching Rounds (case-based discussion with Medicine faculty and house officers).
6 Credit Hours

VCSN 8715 Equine Surgery Clinic - NBC
This elective is specifically designed to provide students interested in equine practice after graduation with additional exposure to a variety of orthopedic and soft tissue surgical problems of horses. Students will actively participate in all aspects of lameness and soft tissue diagnosis, treatment, surgery and patient care. Teaching rounds will involve daily barn rounds, daily didactic presentations and/or wet labs covering surgical topics. Laboratories include internal fixation of fractures, wound repair, arthroscopy, intestinal surgical techniques, laser surgery, head and neck surgery, video analysis of lameness and field anesthesia. Every effort is made to have students in this course perform field castrations with local veterinarians. Students will be expected to participate in after-hours treatments and surgical emergencies of horses; however, students will not be assigned to food animal patients during this rotation.
6 Credit Hours

VCSN 8725 Sports Medicine/Imaging - NBC
Goals of this rotation are to provide the students with the opportunity to obtain diagnostic skills through the use of different modalities and to incorporate these techniques into the decision-making process during the diagnosis and treatment of horses with performance problems. Students in this rotation will take more responsibility for their cases and follow them through the different specialties without being drawn away to the next case in their assigned area. Each student will spend his/her time in the following areas: 1 week - Ultrasound/Cardiology. 1 week - Nuclear Scintigraphy/Radiology/MRI. 1 week - Treadmill/Podology. 1 week - Poor performance clinic (lameness)
10 Credit Hours

VCSN 8735 Large Animal Emergency/Critical Care - Foundation Rotation - NBC
This rotation is designed to teach students basic principles of large animal emergency medicine and surgery as well as the daily management of critically ill equine patients. Students will be involved in a variety of large animal emergency admissions including diagnostic procedures and surgery as well as post-operative or post-admission case management of horses with gastrointestinal disease. Students will attend regular 8 am morning rounds (see course description for Large Animal Surgery, VCSN 800), followed by morning case-based discussion rounds. The day will be spent either on emergency admissions or procedures and management of in-house patients. Daily afternoon rounds will be topic-based, and may be selected from the following topics: Laceration Repair, Emergency Stabilization of Fractures, Acute Abdomen (colic), Diarrhea, Fluid Therapy, Respiratory Distress, Acute Blood Loss/Hemorrhagic Shock, Food Animal Emergencies, Blood Gas Interpretation, Acute Neurologic Patient, Monitoring the Critically Ill Patient, Reproductive Emergencies, Management of Rectal Tears, Critical Care Journal Club.
6 Credit Hours

VCSN 8745 Large Animal Radiology - NBC
In this rotation, students will gain experience in making and interpreting large animal radiographic examinations. They will assist the radiology technicians in taking and processing routine radiographs, attend film reading sessions, daily hospital rounds and review large animal radiographs independently and under supervision. Students will be required to write radiology reports.
5 Credit Hours

VCSN 8755 Large Animal Anesthesiology Service - NBC
During the Large Animal Anesthesia Service Rotation, students will gain experience in: (1) anesthetizing equine and other farm animal patients for elective and emergency procedures; (2) alleviating pain in animals; (3) maintaining adequate vital functions during anesthesia and (4) managing fluid, electrolyte and acid-base disturbances in the perioperative period. In addition, the course offers the opportunity to apply the clinical pharmacology of perianesthetic drugs in various farm animal species. Students are requested to attend Anesthesia Service rounds on Mondays and Fridays (8-9:00 am) during their clinical rotation, which will also offer the opportunity to discuss anesthesia cases. Night and weekend emergency duty is mandatory and shared with veterinary technician students. The maximum emergency duty is 4 weekday nights and one 24-hour weekend day. Students are expected to report to the Sports Medicine Conference Room or Anesthesia Office promptly at 8:00 am on the first Monday morning of the 2-week rotation with scrubs, stethoscope and calculator. Students are requested to review the information contained in the class notes of the following courses for appropriate sections prior to entering the rotation: General Pharmacology and Toxicology (VBMS 607), Animal Physiology (VBMS 606), Anesthesia (VSUR 604), and the Equine and Farm Animal Anesthesia Elective (VCSN 635). Students should also be familiar with dosages of commonly used drugs and their clinical pharmacology and technical aspects of the practice of large animal anesthesia.
6 Credit Hours
VCSN 8765 Food Animal Anesthesiology Service - NBC
In this rotation, students will gain experience in planning and performing sedation and anesthesia in small ruminants, swine and cameldids. Specific clinical objectives during the five-day rotation include physical and chemical restraint, regional and general anesthesia techniques in various food and fiber producing animals, and operation and use of various anesthetic monitoring devices. Emphasis is on techniques and drugs commonly used in the field. Students will formulate plans for sedation and/or short term anesthesia in sheep/goats, pigs and cameldids and will then carry them out on teaching animals. Techniques for regional anesthesia for flank surgery in the bovine will be performed at Marshall Dairy.
3 Credit Hours

VCSN 8775 Food Animal Medicine and Surgery Clinic - NBC
This elective rotation is designed to provide additional experience in food animal medicine and surgery to students who are likely to pursue bovine practice following graduation. Students will participate in the diagnosis and treatment of food animal (primarily dairy cattle) medical and surgical diseases. Teaching rounds will involve daily barn rounds, didactic presentations and wet labs covering medical and surgical topics. The emphasis will be on individual animal (as opposed to herd health) problems. Students will be responsible for after-hours treatments and emergencies of food animals only; students will not work with equine patients during this rotation. Each student will have three weeknights and one 24-hour weekend shift during the rotation (based on 8 students enrolled). Note: students that desire further experience in medical or surgical problems of all large animal species should elect either VCSN 7705 or VCSN 8705.
9 Credit Hours

VCSN 8785 Sports Medicine Clinic - NBC
The Sports Medicine Clinic provides exposure to many types of problems facing the equine practitioner, concentrating on lameness and performance evaluations. While part of the course stresses traditional lameness evaluation and clinical diagnoses, high-speed treadmill evaluations and nuclear scintigraphy enable the student to participate in more intricate problems affecting sport horses. The course will provide students with the opportunity to develop techniques of examination and diagnosis, and permit direct contact with clients. Students are expected to perform in all areas and participate to the maximum of their ability. Duties may include care and SOAPs of in patients and may include care over a weekend. There IS NO emergency duty. In order to participate students are required to have satisfactorily completed the prerequisite courses.
5 Credit Hours

VCSN 8795 Equine Podology - NBC
This course covers the principles of both normal and corrective shoeing as well as examining the current theories of hoofcare. The student will: attend surgery rounds beginning in radiology each morning; and work with the resident farrier and equine clinicians on the various lameness problems presented to the clinic. Foot anatomy and physiology will be stressed. While the students will not be required or expected to manually make or nail on a shoe, they will be required to participate in and observe the procedures utilized. Procedures expected of Equine veterinarians such as removing shoes and debriding the sole will be covered in detail. Additional specialties such as the application of extensions to foal hooves can be incorporated into the rotation if requested.
2 Credit Hours

VCSN 8805 Dairy Production Medicine Clinic - NBC
This program is an integrated curriculum sponsored by the Sections of CAHP, Field Service and Reproduction as a part of the Food Animal Majors Program of the School of Veterinary Medicine. Curriculum begins with an overview of the "Economic Reality" of dairy production progressing through "Quantitative Skills" - T test, Chi Square, and Proportions; "Semen Selection" - visit stud, concepts in genetics semen selection and allocation and linear programming approaches; "Heifer Rearing" - systems view of heifer rearing, evaluation of heifer weight gain and evaluation of heifer reproduction; "Dairy Herd" - vaccination programs through body condition scoring; "Milk Quality" - principles of milking machine, procedures evaluation, mastitis control programs, DHIA, SCC monitoring programs, microbiology and quality assurance Reproduction - traditional programs, new programs and evaluation and interpretation of infertility and pregnancy loss; "Monitoring Reproduction" - current measures, heat detection, breeding intervals, developing a heat detection program; "Record Systems" - DHIA records, paper records, DAIRY COMP 305 (down loading data); "Dairy Nutrition" - ration evaluation using Spantan, interaction with reproduction, MUN interpretations; "Culling" - basic economic concepts and sample applications; "Facilities Evaluation" - ventilation and free stalls; "Computer Data Bases" - DairyL, AABPL, Merck Diagnostic Program, Cornell Diagnostic Program and Internet sites; "Laboratories" - obstetrics/fetotomy, special procedures, follow the estrus cycle in a cow (2 students/cow), milk progesterone kits and breeding soundness examination; "Herd visits with private practitioners" 24 Credit Hours

VCSN 8815 Food Safety and Quality Assurance - NBC
The purpose of this course is to prepare the student to: 1) Identify human health hazards in food of animal origin. 2) Define some of the roles of the veterinarian in preventing/reducing the introduction of biohazards into the food chain. 3) Discuss the principles of safe food practices for both animals and humans. 4) Recognize and describe where laboratory studies (microbiology, toxicology, chemistry) would help define real or potential problems. 5) Define the appropriate times to utilize laboratory evaluations and become familiar with interpretive criteria. 6) Participate in field trips to learn about different practices and processes. Assess sites in terms of HACCP criteria. 7) Interact with representatives from local and federal agencies concerning policies, application of technology and recommendations concerning problem solving issues. 8) Discuss intervention actions that can be initiated during acts of bioagroterrorism and/or naturally-occurring disasters (using recent events as models for discussion). Case studies will be introduced as problem solving activities. 8 Credit Hours
VCSN 8825 Swine Production Medicine - NBC
On-farm problem solving and client communications will be emphasized in this course. Students will be required to interact with producers. Students will write a follow-up report describing the findings and recommendations from the farm visit. Each student will also be assigned a case that will require collation of careful history taking, judicious performance of diagnostic tests and critical analysis of computerized production records to reach their diagnosis. Students will visit farms and other allied industries to survey production systems and collect data to be analyzed in the course. Various production systems and cycles will be reviewed, performance targets will be explained, and their elasticity and economic prioritization will be discussed. Records and data will be analyzed and students will learn how to identify significant production deficiencies and associate these with disease processes - either non-infectious, management-related, or infectious. Strategies for dealing with specific deficiencies will be outlined and the benefits of intervening to improve productivity will be compared to the costs of disease and used in developing a recommendation for action by the producer.
6 Credit Hours

VCSN 8835 Advanced Swine Production Medicine - NBC
A new role for swine veterinarians is emerging in large scale swine production. So-called “corporate veterinarians” are employed by a single company and have the challenge of overseeing the production and health care concerns of the animals owned or managed by their employer. This course provides students with the opportunity to gain exposure to this emerging discipline in swine veterinary medicine. Principles of epidemiology, economics and health care delivery systems and their application to optimizing swine health and production will be provided. Students will work closely with selected professionals who are in a leading role in defining the veterinarians place in large scale, vertically integrated swine production. This course extends the offerings in VCSN 8825. Students will be expected to complete a small project or investigation during their visit.
6 Credit Hours

VCSN 8845 Swine Production - NBC
Veterinarians today cannot make useful contributions to the swine industry without an intimate understanding of swine production. The successful practice of modern swine production medicine depends on the ability of the veterinarian to interweave their traditional training in medicine with the intricacies of swine husbandry. This course provides students with the opportunity to gain hands-on experience in modern swine production systems and/or swine production medicine practices. Students will learn through immersion the basic management, husbandry and/or production medicine practice by working with a practice or a farm in specific phases of swine production at a few selected, nationally recognized swine companies. Permission of instructors required.
9 Credit Hours

VCSN 8855 Equine Ophthalmology - NBC
This course is designed to provide students with ophthalmology experience to supplement what they obtain in the Large Animal Medicine foundation rotation, and, if taken, the Small Animal Ophthalmology elective. It is intended both for students with a special interest in ophthalmology, to broaden their exposure to include equine ophthalmology, and for equine students, to provide them with ophthalmology training that will benefit their equine patients in either general or specialty practice. This latter is particularly important given that most equine students do not take the Small Animal Ophthalmology elective and so graduate without clinical ophthalmology experience. Students will participate in the diagnosis and treatment of clinical ophthalmology cases in the hospital. Students will assist with evaluation of new cases, both inpatient and outpatient, and will be responsible for the daily treatment and examination of all hospitalized ophthalmology cases. Students will handle communication with clients and construct discharge summaries when appropriate. Exposure will vary due to fluctuations in case load. Organized laboratories in slit-lamp biomicroscopy, indirect ophthalmoscopy, and tonometry will allow the student to become comfortable with ophthalmic diagnostic techniques.
6 Credit Hours

VCSN 8900 Large Animal Medicine and Surgery Holiday Emergency Rotation - NBC
Students will assist emergency clinicians and house officers in history taking, examinations, and the medical and surgical management of large animal patients presented on an emergency basis to the hospital at New Bolton Center. Students will also be responsible for the care and treatment of medical and surgical patients hospitalized at New Bolton Center. This rotation will consist of two 12-hour shifts per day including the weekends and any holidays (example Christmas and New Years Day). All students will be expected to participate in night, weekend, and holiday duty on a rotating basis. Students in this rotation will be responsible for five 12-hour shifts each during the one-week rotation. Students are expected to be on the premises during their duty shifts. Rounds to acquaint students with the hospitalized patients will be held daily during each shift with the emergency clinician/house officer/nursing staff on duty, but no formal teaching or Grand Rounds will occur during this rotation.
3 Credit Hours

Veterinary Clinical Studies - Surgery Courses (VSUR)

VSUR 6010 Surgical Principles
This Core lecture/laboratory/computer course emphasizes the basic principles of surgery and the application to surgical diseases of domestic animals. Attendance at laboratories for this course is mandatory. Missed laboratories will result in the grade of Incomplete for the course. Missed laboratories will be made up during the next time the missed laboratory becomes available. Clinical Exercises, Course VSUR 602, in Quarter 1 cannot be taken until all course requirements for Surgical Principles have been completed.
4 Credit Hours

VSUR 6020 Clinical Exercises
1 Credit Hour
VSUR 6030 Clinical Orthopedics
This course presents the basic principles of orthopedic surgery and orthopedic disease. Course material includes small animal orthopedics, large animal orthopedics and orthopedic radiology. Laboratories include two radiograph reading sessions, one splint lab, and a lab pining and wiring plastic bones.
4 Credit Hours

VSUR 6040 Anesthesia
This course reviews basic physiologic and pharmacologic aspects and their relationship to clinical application of general anesthesia. Uptake of anesthetic agents and distribution to various organ systems are discussed as are the changes in acid-base balance produced by the state of anesthesia. Effects of anesthesia on pulmonary gas exchange and cardiovascular function are emphasized. The clinical aspects of pre-anesthetic medications, the choice of anesthesia, equipment and techniques, cardiopulmonary resuscitation, and the management of specialized cases are discussed. One progressive examination is given, and the final exam is comprehensive.
5 Credit Hours

Veterinary Clinical Studies and Advanced Medicine - Philadelphia (VCSP)

VCSP 6320 Diagnosis of Common Veterinary Intoxications
The diagnosis of poisoning in small animals has become an important part of Veterinary Medicine. All parts of Veterinary education are used in making diagnoses and formulating treatment of the poisoned animal patient. Thus, the course involves the integration of preclinical and clinical subjects, rather than simply the study of toxicology. The instructors will provide detailed descriptions of cases from the Emergency Service files, integrated with the more typically academic aspects of toxicology. A variety of common toxins will be discussed including ethylene glycol, lead, zinc, organophosphates, rodenticide anticoagulants, cholecalciferol and non-steroidal anti-inflammatory drugs. The format for this course will be creative and include interactive lectures and discussions. The major emphasis of the course will be the clinical diagnosis and clinical management of intoxicated patients utilizing basic physiological and pharmacologic principles.
2 Credit Hours

VCSP 6330 Fundamentals of Animal Behavior
The ingestive (feeding and drinking) behavior of domestic and laboratory animals: affiliative and aggressive behavior, body language. locomotion and exploration. The social behavior of domestic and laboratory animals: environmental needs, body care, mechanism, adaptive value, ontogeny, and phylogeny. The ecology of individual development of a behavior, including the analysis of its modification through learning, and animal cognition. The evolution course will cover: The anatomy and physiology that regulate behavior, large (farm) animals, poultry, and laboratory animals. Specifically, the fundamental tools to interpret the behavior of small (companion) and large animal orthopedics and orthopedic radiology. Laboratories include two radiograph reading sessions, one splint lab, and a lab pining and wiring plastic bones.
6 Credit Hours

VCSP 6340 Emergency Preparedness and Response
Emergency preparedness and response integrates core professional competencies including communication, collaboration, management, lifelong learning, scholarship, promoting the value of research, leadership, diversity and multicultural awareness, and adapting to changing environments. The organization of this course emphasizes the clinically relevant aspects of public health in the context of emergency preparedness. The importance of emergency preparedness/response and public health is especially evident in the time of the Covid-19 pandemic, and this course should help emphasize the importance of understanding these concepts in a clinical setting for any graduating veterinarian. The course will help prepare students for approaching a patient from the population or response levels. This is relevant to all practitioners, as emergency preparedness and response is currently an asset in the execution of Covid-19 response strategies in private practice as well as sheltering or public health settings.
3 Credit Hours

VCSP 6350 Introduction to Companion Avian Medicine
This course is designed to provide the future veterinarian with the tools to evaluate, diagnose, and treat pet avian species in clinics and beyond. Although the course will mainly focus on common psittacine species kept as pets, information on columbiform and passerine species will be provided as well. Topics covered will include pet parrot taxonomy, husbandry, nutrition, clinical examination, common infectious and noninfectious diseases, and practical diagnostic and surgical techniques. The final grade is based on attendance (students with 3 unexcused absences will receive a penalty to their grade) and completion of an in-class final examination. Submission of a course evaluation at the end of the course is required for a grade.
2 Credit Hours

VCSP 6360 Introduction to Reptile and Amphibian Medicine
This course is designed to provide the future veterinarian with the tools to evaluate, diagnose, and treat captive reptiles and amphibians in clinics and private practice, zoological institutions, and herpetological collections. This course will focus on the more common species kept as pets. Topics covered will include captive husbandry, basic herpetology, nutrition, clinical examination, common infectious and noninfectious diseases, surgery and anesthesia, diagnostic and treatment techniques. The final grade is based on attendance (students with 3 unexcused absences will receive a penalty to their grade) and completion of an in-class final examination. Submission of a course evaluation at the end of the course is required for a grade.
2 Credit Hours

VCSP 6365 Introduction to Reptile and Amphibian Medicine
This course is designed to provide the future veterinarian with the tools to evaluate, diagnose, and treat captive reptiles and amphibians in clinics and private practice, zoological institutions, and herpetological collections. This course will focus on the more common species kept as pets. Topics covered will include captive husbandry, basic herpetology, nutrition, clinical examination, common infectious and noninfectious diseases, surgery and anesthesia, diagnostic and treatment techniques. The final grade is based on attendance (students with 3 unexcused absences will receive a penalty to their grade) and completion of an in-class final examination. Submission of a course evaluation at the end of the course is required for a grade.
2 Credit Hours

VCSP 6370 Professional Foundations
Includes: 1) making the transition from student to employed veterinarian (resumes, cover letters/letters of intent, interviews, and job selection); 2) personal finance and investment strategies; 3) negotiation skills; 4) stress management; 5) evaluating disability insurance and understanding basic retirement planning options to know what to ask in an interview as part of your benefit plan; 6) time management & goal planning and 7) workshops on obtaining internship or a residency, and (b) Interview Role-Playing/Communication skills. Students are required to submit detailed personal budgets for their first year after graduation and a typewritten resume or curriculum vitae. To receive an “A” students also must submit a 3-year personal, professional, and financial plan. Course notes will be distributed at the first class session.
2 Credit Hours
VCSP 6380 Legal Issues for Veterinarians
Course is a broad overview of the legal issues veterinarians face on a daily basis, including legal constraints on practice; overview of laws regulating animals (including laws specific to Pennsylvania); divorce and custody battles; illegal drug compounding; internet pharmacies; lemon laws; pet health insurance; vaccination and liability; negotiating and understanding the employment relationship; veterinary malpractice and state board investigations; responding to client complaints; importance of medical records/informed consents; and, applied professional ethics with clients and colleagues including study of social media. A course hand-out will be provided. Testing of students will be through the use of 2 homework assignments. Attendance mandatory.
2 Credit Hours

VCSP 6390 Animals & Society
This course is a foundational course for students enrolling in the Animal Welfare Certificate Program. It will describe the changing roles and status of animals in society, and examine the history of human-animal relationships through the lens of subsistence hunting, animal domestication, farming and pastoralism, animal research, and pet keeping. The historical development of ambivalent/oppositional attitudes to animal exploitation will also be described and discussed, and the remarkable diversity of contemporary human-animal relationships and their impacts on animal welfare will be explored across cultures and contexts. The influence of science, government, business, and non-governmental organizations in defining and influencing animal-related laws and policies will also be addressed.
6 Credit Hours

VCSP 6410 Small Animal Pediatrics
The objective of this course is to further familiarize the student with the small animal pediatric patient and the proper approach to clinical diagnosis. Lectures are complemented with case reports which serve as a basis for small group discussions. Emphasis is placed on integration of new and previously acquired knowledge to construct differential diagnoses when presented with appropriate historical data and physical as well as laboratory findings. Diagnostic tests and therapeutic regimes for various conditions are discussed in the context of these cases. Grading is based upon attendance, participation in case discussions and performance at a final take home exam.
2 Credit Hours

VCSP 6420 Topics in Neurology
This seminar series will stress broad topics, the majority to be selected by the students, which relate to clinical neurology or neuroscience in general. Seminar topics will be selected and presented by students. The course grade (Pass/Fail) is based on class participation.
2 Credit Hours

VCSP 6430 Small Animal Clinical Nutrition
The first half of the small animal nutrition course will be devoted to: (1) information on feeding normal dogs and cats for maintenance and the prevention of disease and (2) the pet food industry, including labeling, regulation and laboratory on the evaluation of pet foods. The second half of the course will examine the role of dietary manipulation in the management of a wide variety of canine and feline diseases. The course format utilizes a combination of individual and group exercises, discussion, cases, and lectures some of which will require preparation outside of scheduled class time. Grading will be pass/fail and based on attendance, class participation and an individual take-home project.
2 Credit Hours

VCSP 6460 Small Animal Surgery
This course will cover selected topics of advanced surgical procedures in dogs and cats. Emphasis will be given to diseases and conditions where treatment usually requires elaborate procedures. Material presented will involve most major organ systems such as the gastrointestinal tract, the respiratory tract and the urogenital tract. Furthermore, the skin, the endocrine system, and the peritoneal and pleural cavities will be given special consideration. Minimally invasive surgery as well as advanced surgical tools and equipment will also be discussed. The course will be restricted to what is generally understood as soft tissue surgery.
3 Credit Hours

VCSP 6470 Small Animal Surgery/Anesthesia Laboratory
The class is divided into 2 groups. Building on the Core Anesthesia and Surgery laboratory course, this course provides the student with experience as assistant surgeon, surgeon and anesthetist while performing exploratory laparotomy and hysterectomy in cats. The cats are provided by an animal shelter and are returned to the shelter for adoption following surgery. Students enrolled in the course, working in teams of three, are responsible for examination and veterinary care (under supervision) at least daily while the cats are at the Veterinary School. There are two additional laboratory sessions. One is a session during which enterotomy, intestinal anastomosis and other soft-tissue procedures will be performed by each student on tissues. The other is an orthopedic procedure session during which pinning and plating techniques are performed by each student on models.
2 Credit Hours

VCSP 6480 Small Animal Anesthesia
This lecture and discussion course will stress the application of physiology, pharmacology, clinical pharmacology, and economics to the problems encountered during the clinical administration of anesthesia.
1 Credit Hour

VCSP 6490 Emergency/Critical Care Medicine
Small group case-based discussions pertain to the clinical evaluation and management of small animal emergency and critical care patients. Life-threatening abnormalities of the nervous, cardiovascular, respiratory, endocrine, gastrointestinal, and urinary systems are presented in a problem-oriented manner. Actual clinical case material is used to illustrate principles with emphasis placed on the physiology and pathophysiology of the presenting problem. Monitoring and therapeutic procedures (both conservative and non-conservative) will be presented. The grade will be based on a final examination given to small groups at the end of the course. The examination will be a clinical problem similar to all the other clinical problems presented in the course. Everyone in the same group will receive the same grade.
3 Credit Hours

VCSP 6500 Small Animal Dentistry and Oral Surgery
Building on the dentistry and oral surgery information presented in VMED611, Med/Surg I, the lectures cover the spectrum of dental and oral diseases and procedures seen and practiced in small animals. The course is integrated with oral surgery lectures presented in VCSP 648, Small Animal Surgery elective. Although there are normally no laboratory practice sessions included in this course, laboratory practice sessions based on material in this course are included in the Small Animal Dentistry and Oral Surgery clinical rotation (VCSP 817,VCSP 877).
2 Credit Hours
VCSP 6510 Practice Management
Includes establishing a realistic fee schedule; effectively marketing veterinary services; determining how much income a practice owner really makes; the veterinary client's perception of value; establishing a small or mixed animal practice; medical records as a legal defense and to generate income; understanding the vet-pet-client relationship to develop a bond-centered practice; introduction to personnel management and employment law; understanding the Internal Revenue Code, the payment of taxes, and the need for a schedule C to reduce one's tax liability; successfully organizing one's basic business management strategies; and marketing veterinary services. A 300-page notebook and 150 page hard cover book entitled *The Art of Veterinary Practice Management* will accompany this course and be provided at no charge by a corporate sponsor. The final examination consists of a group project to be completed by 2-4 people using a typical practice management "head-ache" as the problem to be resolved. Four guest speakers will participate in this course.
3 Credit Hours

VCSP 6520 Introduction to Shelter Animal Medicine
This course is designed to complement the senior year Shelter Animal Medicine rotation by introducing students to some of the particular problems and issues facing veterinarians who work with animal shelters and animal control facilities. The course will combine lectures and discussion periods, and will involve significant out-of-course reading assignments. Topics covered will include: Husbandry and disease management, pet population dynamics and control, behavior and behavior problems, feral cats, and animal cruelty & neglect. Course grades will be determined by attendance, participation in discussions and a final take home exam.
2 Credit Hours

VCSP 6540 Small Animal Critical Care Medicine
This course offers a comprehensive overview of several key aspects of critical care medicine. Lectures will primarily use a "case-based" approach with discussion of the physiology of organ function and the pathophysiology of disease, and will highlight state-of-the-art concepts for these exciting patients. The final session will be a "hands-on" laboratory in which the students will work with the monitoring instruments that have been discussed during the course. Evaluation will be based on a take home examination.
2 Credit Hours

VCSP 6550 Introduction to Wildlife Medicine I
This course is designed to provide an overview of the field of wildlife medicine for first year veterinary students through a lecture and wet lab format. Lecture and/or laboratory topics will include zoonotic diseases, diseases of native mammals, marine mammals, reptiles and birds; pathology, physical examination techniques, and introductions to necropsy techniques, fracture immobilization, and emergency care. The format will consist of six lectures, each approximately one hour in length, and three two-hour wet labs. Optional lectures may be scheduled during the semester based on student interest and speaker availability. Students are expected to attend all lectures and participate in the wet labs to receive credit for the course. Grades will be based on attendance (50%) and on three worksheets (50%); a five-page paper may be substituted with approval of the instructor. Opportunities for clinical experience at the Frink Center for Wildlife will be scheduled during the semester; students are expected to sign up in advance and are responsible for their own transportation.
1 Credit Hour

VCSP 6560 Introduction to Wildlife Medicine II
This course is designed to provide an introduction to the clinical aspects of wildlife medicine for first year veterinary students through a lecture and wet lab format. Lecture and/or laboratory topics will include zoonotic diseases, diseases of native mammals, marine mammals, reptiles and birds; pathology, physical examination techniques, and introductions to necropsy techniques, fracture immobilization, and emergency care. The format will consist of six lectures, each approximately one hour in length, and three two-hour wet labs. Optional lectures may be scheduled during the semester based on student interest and speaker availability. Students are expected to attend all lectures and participate in the wet labs to receive credit for the course. Grades will be based on attendance (50%) and on three worksheets (50%); a five-page paper may be substituted with approval of the instructor. Opportunities for clinical experience at the Frink Center for Wildlife will be scheduled during the semester; students are expected to sign up in advance and are responsible for their own transportation.
1 Credit Hour

VCSP 6570 Aquatic Animal Medicine
The goal of this course is to give an introduction to aquatic animal medicine by providing students with information regarding the species and their care for pet, aquarium and aquaculture aquatic species. Water quality maintenance, clinical techniques, and common infectious and non-infectious diseases will be reviewed. This course is designed to cover NAVLE focused material as a review and it is designed to equip future aquatics veterinarians with clinically-relevant resources that will enable them to become practice ready after graduation.
2 Credit Hours

VCSP 6580 Pet Small Mammal Med/Surg
This introductory course will mainly cover pet rabbits and ferrets with some discussion of rodents and other small mammals seen in veterinary practice. Husbandry, physical examination, diagnostic testing, and treatment techniques of these animals will be presented. The most common health problems and surgeries will be discussed. After this course, the student should be better prepared to see these patients during their clinical rotations and in practice. Student evaluation will be based on a final exam.
2 Credit Hours

VCSP 6590 Small Animal Advanced Cardiology
This course will build on the core cardiology curriculum by introducing a wider range of topics involving cardiovascular disease, treatment, and research in small animals. In-depth topics include diagnosis and treatment of cardiac arrhythmias, correction of congenital heart defects using minimally invasive catheter-based therapies, echocardiography of feline cardiomyopathy, clinical pathophysiology of degenerative mitral valve disease, and a review of the clinical trial evidence that forms the basis of standard treatment recommendations for congestive heart failure. The course is designed for a relatively small number of students so that discussion and interaction with the instructor(s) is facilitated. The course is suitable for students that might be interested in cardiology specialization or research careers as well as for future general practice veterinarians that wish to provide a high level of cardiac care for their patients.
1 Credit Hour
VCSP 6600 Advanced Small Animal Electrocardiography and Arrhythmias
This course will build on the core cardiology curriculum by providing practical experience involving electrocardiographic (ECG) interpretation and the diagnosis and treatment of cardiac arrhythmias in small animals. Specific topics include diagnosis of both supraventricular and ventricular arrhythmias as well as proper selection of antiarrhythmic therapy and a introduction to artificial pacemaker implantation. The course is designed for a relatively small number of students so that discussion and interaction with the instructor(s) is facilitated. The course includes 6 hours of laboratory where students will work through ECG cases in a small group setting. The course is suitable for students that might be interested in cardiology specialization as well as for future practice veterinarians that wish to provide a high level of cardiac care for their patients.

2 Credit Hours

VCSP 6640 Student Shelter Opportunities
This course is an introduction to High Quality High Volume (HQHV) surgery in the shelter environment and consists of 17 online lecture hours and 3 hours of in-person lecture hours of material that utilizes the Association of Shelter Veterinarians' Veterinary Medical Care Guidelines for Spay-Neuter Programs. Lecture topics, assignments, and pre/post tests are delivered online and include an overview of HQHV surgery, patient handling, anesthesia and pain management in the shelter environment, partner protocols, patient monitoring, patient pre-surgical preparation, basic surgical principles, sterilization of the male and female cat, and sterilization of the male and female dog. In-person lecture and discussion sessions will complement and expand upon online material. The lab component of this course consists of four hours of skills lab and 16 hours in a clinical setting with shelter medicine faculty participating in perioperative activities, which include physical exam, induction, patient preparation, surgery, and recovery. Emphasis in this course is a holistic approach to HQHV spay/neuter including pre-clinical skill acquisition that also introduces some concepts of shelter medicine and community programming. Grading is pass/fail. Purchase of an online webtext is required. Curriculum/course to cover high-quality, high-volume surgical and anesthetic principles to properly prepare students for not only these experiences, but give them a better foundation for learning life-long skills and enhancing their surgical experience at Penn via authentic learning experiences. Students will have to complete extensive online learning, assessments, and skills labs for this course.

3 Credit Hours

VCSP 6670 Student Shelter Opportunities II
This course is designed to be a continuation of Shelter Surgical Opportunities I and consists of six hours of online lectures/exam that cover inhalant anesthesia, more advanced knots and suture patterns, sterilization of the female cat, special sterilization cases, emergency procedures in the shelter environment and surgical instruments and pack preparation. Eighteen hours of on-site work at a partner shelter will be devoted to learning to spay and participation in peri-operative activities. Lecture topics, assignments, and pre/post tests are delivered online. Emphasis in this course is a holistic approach to HQHV spay/neuter including pre-clinical skill acquisition that also introduces some concepts of shelter medicine and community programming. To be eligible to spay, neuter and dogs or do specialty procedures, students must reach an appropriate level of competency in performing the feline spay, feline castration, and clinical skills as determined by course instructors. Every effort will be made to allow students to meaningfully participate in non-sterilization surgeries such as mass removal, enucleation, amputation and wound repair after they are spay certified, although achievement of this goal may require an on-call option depending on caseload and individual student interest. This course can be taken any time, including the Summer, after passing Student Shelter Opportunities II and grading is pass/fail.

1 Credit Hour

VCSP 7005 Small Animal Internal Medicine-Foundation
The Internal Medicine rotation involves clinical training in all core medicine disciplines including endocrinology, gastroenterology, hematology, infectious disease, nephrology, oncology and pulmonary medicine. Fourth year students will assist doctors in history taking, physical examinations and the medical management of patients presented to the Matthew J. Ryan Veterinary Hospital of the University of Pennsylvania. Students will also have directed supervision on nutritional aspects of internal medicine cases by a board-certified clinical nutritionist. Emphasis will be placed on problem solving, understanding of pathophysiology and integration and utilization of principles of medicine. As experience is gained, students will assume more responsibility in patient management. Students and staff will participate in daily rounds and conferences.

12 Credit Hours

VCSP 7105 Small Animal Internal Medicine
The elective rotation in small animal internal medicine will provide further contact and experience in problems of internal medicine (diseases of the endocrine, gastrointestinal, hematologic, pulmonary, and urogenital systems). Students in the elective rotation will be assigned more complex cases, and they will be expected to assume more responsibility for patient management and decision-making.

6 Credit Hours
VCSP 7125 Small Animal Intensive Care Medicine Service
The ICU rotation provides a good medical approach to the management of critical and often very unstable patients. Since these cases are often very challenging diagnostically, and also very dynamic, they provide an excellent learning experience, with ample opportunity for one-on-one discussion with the clinician, and for background reading. Students have an opportunity to become familiar with use and interpretation of the advanced technical equipment available in the ICU, and are also encouraged to perform and perfect technical skills such as catheterization of blood vessels and urinary bladder, obtaining arterial blood samples, etc. During the rotation, we encourage integration and a team approach among the students, the ICU clinicians, and the nursing staff. Students on the ICU service start daily at or before 7:00 a.m., and stay until their cases are stable and all of the proposed diagnostics have been completed (usually 6-7 p.m.). Students are expected to SOAP the cases daily including weekends, to be closely involved in decision-making, diagnostics and therapeutics, and to present and discuss the cases at daily rounds. Students are internally scheduled to assist in treatments in the Intensive Care Unit; patient care shifts may include evening and overnight responsibilities. Weekend duties are distributed equitably among all assigned students. Cage rounds are held daily at approximately 2 P.M. Student teaching rounds are held most weekdays at approximately 2:30 P.M. 6 Credit Hours

VCSP 7155 Small Animal Cardiology Service
Students will participate in outpatient and inpatient cardiovascular examinations and treatments. Cardiology Clinic days are currently Wednesday/Thursday/Friday, but are subject to change. Cardiology invasive procedures are performed on Tuesdays. Cardiology also provides consultation to other services and accepts transfer of Cardiology cases for primary care. Student responsibilities include obtaining a complete medical history and performing a thorough physical examination with emphasis on the cardiovascular system. After an orientation period on the first day, students are responsible for recording and interpreting electrocardiograms as well as interpreting thoracic radiographs and pertinent clinical laboratory data. Students assist with recording echocardiograms and are expected to become familiar with echo image recognition and common measurement techniques. Students are also expected to summarize pertinent findings in cases under their care at daily rounds and be able to discuss their significance. Completion of the medical case record for review by the attending cardiologist is required. The group captain will develop a schedule for the daily examination and morning treatments (seven days/week) of all hospitalized cases for which the cardiology service is responsible. A quiz is administered the final day of the rotation and determines 15% of the students grade for the rotation. Students should review notes for VMED 611 and the small animal cardiology computer assisted learning site prior to beginning the rotation. 5 Credit Hours

VCSP 7165 Dermatology & Allergy Service
This course exposes the student to case material presented to the Dermatology and Allergy Clinic at the small animal. This course exposes the student to case material presented to the Dermatology and Allergy Clinic at the small animal hospital, and may include case material presented to the large animal hospital at New Bolton Center. Special emphasis is given in the discussion of each patient to the etio-pathogenesis, diagnosis, and treatment of disease. Attendance during receiving of large animal cases at NBC may be required on one Wednesday of each block, although volunteers will be sought first. 5 Credit Hours

VCSP 7175 Comprehensive Cancer Care Service
This rotation will expose students to a comprehensive approach to clinical oncology in small animals, including cancer diagnosis, staging, treatment, and palliative care. This service is primarily comprised of faculty and staff from Medical Oncology, Surgery, and Radiation Oncology. Other services, such as Interventional Radiology and Dentistry and Oral Surgery, will also be involved. Students are expected to participate in the care of outpatient and hospitalized cases (including pre and post-operative care for Surgical Oncology patients) and in patient care rounds in the morning and afternoon. Weekend duties include morning and afternoon treatments for hospitalized patients. Each student will present and discuss a journal article or relevant tumor topic once during the rotation. 6 Credit Hours

VCSP 7215 Primary Care Services
This rotation will offer students the opportunity to evaluate cases scheduled with the Primary Care Service (PCS). The Primary Care Service is designed to give students first-hand experience in dealing with common general practice clinical cases and with client communication. The main objective is for students to have the opportunity to be the vet while working under the guidance and supervision of a PCS veterinarian. 5 Credit Hours

VCSP 7220 Small Animal Pediatrics/Genetics/Reproduction
The Small Animal Pediatrics-Genetics-Reproduction Clinic is run under the supervision of two board-certified faculty and two residents and emphasizes the unique care of pediatric patients, the approach and management of hereditary diseases, and reproductive problems. Pediatric and genetics clinics are held on Mondays and Tuesdays, and reproduction appointments are seen any day of the week. In addition to the clinical appointments, there is opportunity to see several unique genetic diseases in dogs and cats and handle the youngest of pediatric patients in the animal colonies, as well as get an appreciation for the specialty diagnostic laboratories. The clinical rotation deals with the initial yet crucial pediatric wellness visits including nutrition, socialization and preventive care and disease issues specific to this age group. The clinic highlights the evaluation of normal development and diagnosis of diseases of puppies and kittens (<1 year). Moreover, kittens and puppies with known or suspected inherited disorders are examined for which genetic counseling or special diagnostic studies are required. It provides experience with routine immunizations, treatment and prevention of parasitism, and nutritional and spay/neuter counseling. Also Offered As: VCSP 7820 2 Credit Hours

VCSP 7705 Small Animal Internal Medicine
The elective rotation in small animal internal medicine will provide further contact and experience in problems of internal medicine (diseases of the endocrine, gastrointestinal, hematologic, pulmonary, and urogenital systems). Students in the elective rotation will be assigned more complex cases, and they will be expected to assume more responsibility for patient management and decision-making. 6 Credit Hours

Also Offered As: VCSP 7220
2 Credit Hours

VCSP 7900 Small Animal Medicine Holiday Rotation
The holiday internal medicine rotation will be a “learning on your feet” experience. Students will have similar responsibilities as during the core medicine rotations. Clinic appointments will be scheduled only for the first part of week one. Students will be assigned out patients and ES transfers and will evaluate these patients, formulate problem lists and appropriate diagnostic plans, participate in diagnostic procedures (e.g., bone marrow aspirate, tracheal wash), and perform treatments. Formal teaching rounds may not be held, but students will discuss patients on an individual basis with clinicians. The hours of the rotation shifts will be 6AM to 6 PM and 12 noon to 12 midnight. Each student will be assigned to five shifts and will likely cover four 6 AM to 6 PM shifts and one noon to midnight shift.
3 Credit Hours

VCSP 7980 Small Animal Neurology Holiday Rotation
The holiday internal medicine rotation will be a “learning on your feet” experience. Students will have similar responsibilities as during the core medicine rotations. Clinic appointments will be scheduled only for the first part of week one. Students will be assigned out patients and ES transfers and will evaluate these patients, formulate problem lists and appropriate diagnostic plans, participate in diagnostic procedures (e.g., bone marrow aspirate, tracheal wash), and perform treatments. Formal teaching rounds may not be held, but students will discuss patients on an individual basis with clinicians. The hours of the rotation shifts will be 6AM to 6 PM and 12 noon to 12 midnight. Each student will be assigned to five shifts and will likely cover four 6 AM to 6 PM shifts and one noon to midnight shift.
3 Credit Hours

VCSP 8005 Small Animal Soft Tissue Surgery
This is an elective clinical rotation equivalent to courses VCSP 8000. Prerequisite: Core Surgery Courses CONFERENCE HOURS: 3 hrs/day of clinics (5) = 15 hours. 2-4 hrs/day of surgery (5) = 10-20 hours. 1 hr/ weekend morning (4) = 4 hour. TOTAL 29-39 hours.
6 Credit Hours

VCSP 8115 Small Animal Orthopedics
This is an elective rotation equivalent to SA Orthopedic Surgery VCSP 8115. Prerequisite: Core Surgery Courses
6 Credit Hours
VCSP 8135 Small Animal Emergency Service
Students are assigned to a busy 24-hour, 7-day per week emergency service on a shift system. The students are responsible for diagnosis and management of animals presented to the service under the supervision of Emergency Service staff. Emergency Service rounds are held Monday through Thursday inclusive, and include topics related to emergency medicine and surgery centered around case discussion.
6 Credit Hours

VCSP 8145 Small Animal Radiology Service
This course primarily offers experience in small animal diagnostic radiology with some exposure to diagnostic ultrasound. Principles of radiographic interpretation teaching rounds are held daily. Students will assist in the positioning of animals and taking of routine and special procedure radiographic examinations and will observe and assist with ultrasonographic examinations of Ryan Hospital clinic cases. Students will also interact with the radiologist or radiology resident during their interpretation of the clinic cases. A 2-hour examination is given on the last day of the rotation. See Learn.vet for information on clinical competencies to be assessed in this rotation and to access additional study materials.
6 Credit Hours

VCSP 8155 Small Animal Anesthesiology Service
Students are responsible for anesthetizing animals presented to the anesthesia service under the supervision of the Anesthesia staff. During the day, students will work closely with either the anesthesiologist on duty or a senior technician. Students will be scheduled with a technician for "on-call" night and weekend duty. On-call duties begin on the first Tuesday (or second day) of the rotation and continue to the last Sunday (or last day before the next rotation). The anesthesia service provides on-call services from 8 pm until 8 am during weekdays, and from Friday 8 pm until Monday 8 am over the weekend. In general, students schedule themselves for the on-call duties. Most rotations assign one student on-call per night during weekdays and split the weekend into 8-12-hour shifts. Anesthesia student rounds are conducted Mondays, Wednesdays, Thursdays, and Fridays. The first rounds on the first day of the rotation (usually a Monday) will occur at 9 am. Rounds on Wednesdays are at 8 am. Rounds on Thursdays and Fridays are at 7:30 am. Students are expected to attend grand rounds on Tuesdays. It is highly recommended that students prepare for their rotation by reviewing the course notes from the anesthesia core course and student surgery labs. The anesthesia handout will be given to students on the first day of the rotation. The rounds schedule and topics will be presented in more detail then.
6 Credit Hours

VCSP 8175 Small Animal Dentistry and Oral Surgery
Students participate in the client communication (including assessment of medical history), clinical examination, diagnostic testing (including patient restraint for intravenous catheter placement), treatment planning and treatment of animals presented with dental and oral diseases, including periodontal, endodontic, restorative and occlusal problems and oral and maxillofacial inflammation, infection, malformation, trauma and cancer. Mondays and Wednesdays are clinic appointment days, with rounds and a teaching laboratory or treatment procedures in the afternoons. Tuesdays, Thursdays and Fridays are treatment days. Occasionally, cases are hospitalized into Saturdays, and emergency cases may be referred from ES on Saturdays and Sundays. Responsibility for Saturday and Sunday patient care will be one to maximum two weekend days per student during the two-week rotation, and will most often consist of being on-call. Typically, Mondays and Wednesdays run from 8.30am-5.30pm (only rarely are there cases to SOAP on these mornings), and Tuesdays and Thursdays from 7am-6.30pm. One student will be assigned to early-call (7am) on Fridays (other students will have an 8.30am start); Friday responsibilities typically extend to 4pm, except for one late-call student. Prerequisite: Core surgery lecture courses.
5 Credit Hours

VCSP 8705 Small Animal Soft Tissue Surgery
This is an elective clinical rotation equivalent to courses VCSP 800. Prerequisite: Core Surgery Courses CONFERENCE HOURS: 3 hrs/day of clinics (5) = 15 hours. 2-4 hrs/day of surgery (5) = 10-20 hours. 1 hr/weekend morning (4) = 4 hour. TOTAL 29-39 hours.
6 Credit Hours

VCSP 8715 Small Animal Orthopedics
This is an elective rotation equivalent to SA Orthopedic Surgery VCSP 8115. Prerequisite: Core Surgery Courses
6 Credit Hours

VCSP 8725 Small Animal Ophthalmology
The goals of this clinical rotation are to ensure that students achieve proficiency in performing a complete ophthalmic examination and become familiar with recognizing and treating common problems in small animal ophthalmology practice. All students are required to meet at 7:30 am the first day, and then at 8:00 am on subsequent days of the rotation. Attendance is not required on Friday of each week but the free time is expected to be dedicated to independent study in ophthalmology. An introduction to the service will be given on the first day of the rotation which will include a graded, short quiz. It is recommended that students prepare for the clinical rotation by reviewing their course notes in ophthalmology. Clinical rounds will take place several times weekly. Topic rounds and a cadaver (pig eye), surgery wet lab will be included if time permits. Outpatient service (each day of the rotation): Students are responsible for history taking, clinical examination, treatment planning, preparation of client discharge instructions and some client communication. Surgery patients (each day of the rotation): Students assigned a patient for surgery will be responsible for helping with the patients admission (7:30am the day of surgery). In preparation for surgery, the student must have reviewed the surgical technique, performed a complete physical examination and reviewed pertinent bloodwork. SOAPs, a surgical report and client communication following the procedure are also expected. There will be an opportunity to assist with some of the surgical procedures.
6 Credit Hours
VCSP 8735 Small Animal Emergency Service
Students are assigned to a busy 24-hour, 7-day per week emergency service on a shift system. The students are responsible for diagnosis and management of animals presented to the service under the supervision of Emergency Service staff. Emergency Service rounds are held Monday through Thursday inclusive, and include topics related to emergency medicine and surgery centered around case discussion.
6 Credit Hours

VCSP 8745 Small Animal Radiology Service
This course primarily offers experience in small animal diagnostic radiology with some exposure to diagnostic ultrasound. Principles of radiographic interpretation teaching rounds are held daily. Students will assist in the positioning of animals and taking of routine and special procedure radiographic examinations and will observe and assist with ultrasonographic examinations of Ryan Hospital clinic cases. Students will also interact with the radiologist or radiology resident during their interpretation of the clinic cases. A 2-hour examination is given on the last day of the rotation. See Learn.vet for information on clinical competencies to be assessed in this rotation and to access additional study materials.
6 Credit Hours

VCSP 8755 Small Animal Anesthesiology Service
Students are responsible for anesthetizing animals presented to the anesthesia service under the supervision of the Anesthesia staff. During the day, students will work closely with either an anesthesiologist on duty or a senior technician. Students will be scheduled with a technician for “on-call” night and weekend duty. On-call duties begin the first Tuesday (or second day) of the rotation and continue through to the last Sunday (or last day before the next rotation). The anesthesia service provides on-call services from 8 pm until 8 am during weekdays, and from Friday 8 pm until Monday 8 am over the weekend. In general, students schedule themselves for the on-call duties. Most rotations assign one student on-call per night during weekdays and split the weekend into 8 or 12-hour shifts. Anesthesia student rounds are conducted Mondays, Wednesdays, Thursdays, and Fridays. The first rounds on the first day of the rotation (usually a Monday) will occur at 9 am. Rounds on Wednesdays are at 8 am. Rounds on Thursdays and Fridays are at 7:30 am. Students are expected to attend grand rounds on Tuesdays. It is highly recommended that students prepare for their rotation by reviewing the course notes from the anesthesiology core course and student surgery labs. The anesthesia handout will be given to students on the first day of the rotation. The rounds schedule and topics will be presented in more detail then.
6 Credit Hours

VCSP 8765 Small Animal Behavior Clinic
This is an elective clinical rotation in small animal behavioral medicine. Clinics are Wednesday and Thursday. Appointments are also seen on Fridays, and students are invited, but not required, to join us. Out-patient behavior clinic appointments are scheduled at approximately 3-4 hour intervals. Each student is responsible for reviewing behavior notes from VMED 6160 (9005), prior to his/her first scheduled clinic. Students are required to attend all case rounds (twice per day), review records before rounds, and be prepared to present all cases. Students will assist with medical and behavioral history-taking, physical examination and diagnosis, and are responsible for a selecting handouts and writing discharge letter summarizing the recommendations made. Behavioral topics and volunteer training sessions are offered, when possible, between afternoon appointments and rounds.
5 Credit Hours

VCSP 8775 Small Animal Dentistry and Oral Surgery
Students participate in the client communication (including assessment of medical history), clinical examination, diagnostic testing (including patient restraint for intravenous catheter placement), treatment planning and treatment of animals presented with dental and oral diseases, including periodontal, endodontic, restorative and occlusal problems and oral and maxillofacial inflammation, infection, malformation, trauma and cancer. Mondays and Wednesdays are clinic appointment days, with rounds and a teaching laboratory or treatment procedures in the afternoons. Tuesdays, Thursdays and Fridays are treatment days. Occasionally, cases are hospitalized into Saturdays, and emergency cases may be referred from ES on Saturdays and Sundays. Responsibility for Saturday and Sunday patient care will be one to maximum two weekend days per student during the two-week rotation, and will most often consist of being on-call. Typically, Mondays and Wednesdays run from 8.30am-5.30pm (only rarely are there cases to SOAP on these mornings), and Tuesdays and Thursdays from 7am- 6.30pm. One student will be assigned to early-call (7am on Fridays (other students will have an 8.30am start); Friday responsibilities typically extend to 4pm, except for one late-call student. Prerequisite: Core surgery lecture courses.
5 Credit Hours

VCSP 8785 Exotic Companion Animal Medicine/Surgery
The purpose of this rotation is to introduce the student to exotic companion animal medicine and surgery. Students will gain knowledge of these animals by hands-on experience and participation in rounds. The student will be expected to obtain histories, develop a rule-out list and a diagnostic plan on all appointments. Students will participate in patient management and assist with various diagnostic and treatment procedures for all scheduled appointments and exotic animal emergencies transferred from the emergency service. There will be a Monday through Sunday clinic schedule as appointments are seen 7 days a week. Additionally, students are expected to be "on-call" for night and daytime emergencies with a clinician. Students should expect the typical day to run from 8:00 AM - 7:00 PM.
6 Credit Hours

VCSP 8795 Working Dog Medicine
To gain experience with all aspects of working dog medicine: Students will handle working dogs to perform general physical examinations as well as specialized assessments including but not limited to breeding soundness exams to assess dogs value in reproduction, dental examinations, and fitness evaluations. Student examinations and handling will be incorporated into behavioral training of dogs to being handled and touched on all areas of their body. Students will participate in routine preventive care and assess and treat injuries or illnesses that occur in the WDC working dogs. Students will gain experience in behavior and sports medicine through participation in impulse control, search work, fitness and conditioning exercises. Students may incorporate other aspects of working dog medicine into their rotations depending on their interests. These areas include sports nutrition, dentistry, and various aspects of research.
6 Credit Hours
VCSP 8805 Shelter Animal Medicine
This rotation gives a complex overview of the field of shelter medicine and community outreach by partnering via a service-learning model with open and closed admission shelters, HQHV surgical clinics, schools, and outreach organizations like Pets for Life. A typical rotation focuses on authentic hands-on learning including four surgical days, mentored primary case management of medical cases and shelter population rounds, public clinical outreach, herd health management, training and behavioral assessment, and providing veterinary CE for shelter staff. Rounds and tour topics include cruelty investigation and humane law enforcement, behavior, ethics, exotics, and risk analysis. Dentistry, necropsies, consults, special procedures, and outreach to local middle schools can also be included as part of the rotation depending on the week.
5 Credit Hours

VCSP 8900 Small Animal Surgery Holiday Rotation
This rotation will be similar to a regular surgery rotation with some modifications dictated by the holiday schedule. Students will assist surgery faculty and house officers in history taking, examinations, and the surgical management of small animal patients presented on an emergency basis to the Veterinary Hospital of the University of Pennsylvania. Students will be responsible for the daily care of surgical patients hospitalized at Ryan Hospital. They will also assist in surgery and perform treatments. All students will be expected to participate in night, weekend, and holiday duty on a rotating basis. Two students will be assigned to On Call duty each night and will perform treatments until midnight and assist with cases needing surgery in the night and evening hours. Assignments will be made the first day of the rotation. Rounds to acquaint students with the hospitalized patients will be held each morning and as time permits with the emergency clinician/house officer/nursing staff on duty, but formal teaching or rounds will occur as time permits during this rotation.
3 Credit Hours

VCSP 8930 Small Animal Emergency Service Holiday Rotation
This rotation will be very similar to the Emergency Medicine clinical rotation elective course. Students will be involved in triage, patient stabilization, history and physical examination, diagnostic workup and treatment of patients seen in the emergency room. (We want students who have an interest in learning more about emergency medicine!) Specific time will not be set aside during the rotation for student rounds; however, teaching on a case-to-case basis will be stressed. Rotation shifts will be 8 AM to 8 PM and 8 PM to 8 AM. Each student will be assigned to 5 shifts during the rotation. There will be at least two students assigned to each shift.
3 Credit Hours

VCSP 8940 Small Animal Radiology Service
3 Credit Hours

Veterinary Independent Study & Research (VISR)

VISR 6480 Computer-Aided Learning
Independent study working on computer assisted learning (CAL) projects for the summer. Students work with Linda Lewis and various faculty members depending on the projects available. CAL students must be self-motivated and self-disciplined and able stay on task with minimal supervision. Students will need their own laptop and internet access or can work on either campus. Students should be comfortable working with computers, using Microsoft office, and browsing the web. Experience editing images, videos, and websites are helpful. Students may need to travel to NBC occasionally through the summer. Students work individually and as part of a team and typically work 40 hours/week for 10 weeks.
5 Credit Hours

VISR 6970 Independent Study and Research: Animal Welfare and Behavior Program
This course enables students to undertake a self-directed study and research on a topic in Animal Welfare and Behavior, under the supervision of a faculty member. Students may also use this course to finalize any dissertation requirements.
1 Credit Hour

VISR 6990 Independent Study and Research
This course enables students to undertake a self-directed study on a topic in Veterinary Medicine, under the supervision of a faculty member. Students are required to submit an Independent Study & Research (ISR) application to the Registrar Manager in the Office for Students. Credit may vary.
1-8 Credit Hours

VISR 6995 Independent Study and Research (VISR)

Veterinary Pathobiology (VPTH)

VPTH 5500 One Health Study Design Seminar
This seminar course will introduce students to One Health approaches that address critical local, regional and global health problems. Students will work in interdisciplinary teams to review case studies and analyze past and current literature where One Health approaches have been applied. The course is specifically designed to foster the development of skills that allow students to think and communicate across professional disciplines. It will also help students develop transdisciplinary connections that might serve them in their professional futures. Students will be assigned a transdisciplinary team. Grading will be based on team-led presentations and analysis of literature, participation in discussion, and a final capstone project (One Health in Practice Plan) in the form of both a paper and presentation.
Also Offered As: VPTH 6500
6 Credit Hours
VPTH 6020 General and Systemic Pathology
The course includes general pathology and systemic pathology. The general principles and mechanisms of disease are discussed through the basic principles of cell and tissue reactions to injury, including degeneration, necrosis, pathological pigmentation, disturbances of circulation, disturbances of growth, inflammation and neoplasia. This course completes the systemic pathology of domestic animals with emphasis on the etiology, pathogenesis, gross and microscopic lesions, and diagnosis of diseases of the organ systems in the body. Formal classroom lectures are complemented with laboratory classes, gross pathology demonstrations and Moodle-based exercises all aimed at interpretation of gross and microscopic lesions.
16 Credit Hours

VPTH 6030 Parasitology
This core course is concerned with fundamentals of the morphology and developmental cycles of helminth, arthropod and protozoan parasites of animals and those that are transmissible from animals to man. The epidemiology and control of the infections are stressed along with pathogenesis, pathology and immunology. Lectures are supplemented by demonstrations of living and fixed materials and by exercises in identification and diagnosis. Laboratory exercises are supplemented by independent work on case studies of clinical parasitisms.
8 Credit Hours

VPTH 6040 Immunology
This course aims to educate students in Veterinary Medicine on fundamental aspects of immunology, including functional anatomy of the immune system, mechanisms of innate and adaptive immunity, immunological mechanisms of disease, and principles of vaccination.
4 Credit Hours

VPTH 6050 Microbiology
This course presents the fundamentals of medical microbiology (bacteriology, mycology, virology) and the applied art of diagnostic bacteriology. Emphasis is placed on the microbial agents of veterinary disease, their biology, mode of pathogenesis, and control with some introductory material concerning treatment and recognition. This course is presented as prerequisite to a later study of infectious disease.
7 Credit Hours

VPTH 6060 Clinical Pathology
Appropriate test selection and interpretation are essential to diagnostic evaluation. This course is an introduction to Clinical Pathology presented via case-based learning. Topics include hematology, serum chemistries, urinalysis, cytopathology, clinical endocrinology and blood banking. Within each topic, discussion will cover indications, limitations and interpretation of specific tests, but the emphasis will focus on integrating this information in the context of laboratory panels. Laboratory exercises provide the opportunity to perform and demonstrate basic competency in urinalysis, blood smear preparation and evaluation, and blood banking, as well as to evaluate clinical cases individually and in groups. A microscope is needed for the laboratories.
6 Credit Hours

VPTH 6150A Intro Comp Med Research
This year-long course for second year veterinary students is designed as a reinforcement of the first year introduction to clinical veterinary medicine series (VMED 6000, 6010 and 6020) and as a transition to the clinical year rotations. The emphasis is on practical experiences in our hospitals that will increase your clinical and technical skills as you familiarize yourselves with the hospitals facilities, policies and operations. The course will include approximately 11 hours of lecture; 32 hours of small-group practical clinical sessions per student (NBC) and 29 hours of small-group practical clinical sessions per student (MJR-VHUP). This will be a graded course - A, B, C or F.
1 Credit Hour

VPTH 6150B Intro Comp Med Research
This year-long course for second year veterinary students is designed as a reinforcement of the first year introduction to clinical veterinary medicine series (VMED 6000, 6010 and 6020) and as a transition to the clinical year rotations. The emphasis is on practical experiences in our hospitals that will increase your clinical and technical skills as you familiarize yourselves with the hospitals facilities, policies and operations. The course will include approximately 11 hours of lecture; 32 hours of small-group practical clinical sessions per student (NBC) and 29 hours of small-group practical clinical sessions per student (MJR-VHUP). This will be a graded course - A, B, C or F.
1 Credit Hour

VPTH 6330 Ecotoxicology for Veterinarians
The major goal of this course is to provide an introduction to ecotoxicology, the science of assessing the effects of toxic substances on ecosystems with the goal of protecting entire ecosystems. The course will present lectures about various research and career opportunities involving ecotoxicology, such as measuring the effects of pollutants on ecosystems, wildlife serving as monitors of environmental quality, important environmental pollutants such as insecticides, petroleum hydrocarbons and metals, and approaches to rehabilitating damaged ecosystems. Students will research, plan, and present a PowerPoint presentation on a topic relevant to ecotoxicology. The course grade will be based on attendance, the group presentation, and student participation in class discussions.
2 Credit Hours

VPTH 6340 Microbial Pathogenesis
The goal of this course is to provide the student with a conceptual framework regarding the mechanisms of microbial pathogenesis. A range of host-microbe interactions will be studied to illustrate how different microbes breach host lines of defense and lead to infections. Transmission, etiological diagnosis, as well as prophylactic and therapeutic approaches against infectious agents will be discussed with examples related to viral and bacterial pathogens, including zoonotic and Category A select agents.
2 Credit Hours
VPTH 6350 Introduction to Fish Diseases
This course is intended to introduce veterinary students to the biology and medicine of teleost fish. The first few lectures will provide a foundation in the classification, gross anatomy and immunology of fish, including practical laboratory classes. The remainder of the course will be more clinically oriented, and will present the most prevalent diseases of fish, emphasizing both the pathology and etiology of the diseases. In addition, the course will also focus on health maintenance through the control of water quality and treatment of diseases in fish. This part of the course will include some practical laboratory demonstrations. Grades will be determined on the basis of class participation and a 5-6 page research paper on a topic of the students choice.
2 Credit Hours

VPTH 6370 Capstone Proseminar in Animal Welfare and Behavior
This semester long (6 credit) online course for students enrolled in the MSc in Animal Welfare and Behavior is designed to guide students in their development of their capstone Master's project. It will provide students with the skills to refine and communicate their research questions and goals, engage in scholarly discussion in an interdisciplinary setting and the opportunity to deepen their knowledge of cutting edge research in their area of interest. Through structured synchronous meetings with mentors and peers and opportunities to attend virtual seminars across campuses, the Proseminar course also exposes students to a network of future mentors and colleagues who may play important roles in their career development. The course culminates in a written proposal describing a research question and hypothesis with a scholarly introduction to the topic and an annotated bibliography.
6 Credit Hours

VPTH 6400 Large Animal Pathology & Toxicology
The first goal of this course is to introduce large animal autopsy techniques for the purposes of identification of common postmortem lesions and review of clinical-oriented anatomy. The second goal is to provide a systems-based approach to domestic and global diseases commonly encountered large animal species, including horses, cattle and small ruminants, swine, camels and cervids. The course requires students to recognize pertinent gross and microscopic lesions correlated with clinical history in order to formulate appropriate differential diagnoses and promote in-depth knowledge of non-infectious and infectious etiopathogeneses, including zoonoses and domestic and foreign reportable diseases. Components of this course include lecture, gross autopsy demonstration and laboratories that involve inspection of fresh gross specimens, and interactive small group seminars pertaining to toxicology and species-specific lesions. Grades will be determined by two homework assignments, one final exam, and attendance to laboratories and small group seminars.
3 Credit Hours

VPTH 6410 Laboratory Animal Medicine
Note: This course is encouraged as a prerequisite for VPTH 789 ULAR - Laboratory Animal Medicine Clinical Rotation. This course is designed to provide further information about laboratory animal medicine to those students with a potential interest in the field. Issues of pain and distress, facility design, regulatory issues, and special procedures involving rodents and rabbits are addressed. Students will also be introduced to the mechanism of an Institutional Animal Care and Use Committee and will be primary participants in a “mock” meeting with visiting members of the committee here at Penn and actual research protocols. Grades will be determined by class participation and a short paper on a topic relevant to laboratory animal medicine.
2 Credit Hours

VPTH 6500 One Health Study Design Seminar
This seminar course will introduce students to One Health approaches that address critical local, regional and global health problems. Students will work in interdisciplinary teams to review case studies and analyze past and current literature where One Health approaches have been applied. The course is specifically designed to foster the development of skills that allow students to think and communicate across professional disciplines. It will also help students develop transdisciplinary connections that might serve them in their professional futures. Students will be assigned a transdisciplinary team. Grading will be based on team-led presentations and analysis of literature, participation in discussion, and a final capstone project (One Health in Practice Plan) in the form of both a paper and presentation. Also Offered As: VPTH 5500
6 Credit Hours

VPTH 7105 Small Animal Diagnostic Services
The course in the Small Animal Section consists of exposure to the Diagnostic Services of MJR-VHUP, namely clinical pathology, anatomic pathology (necropsy service), parasitology and microbiology. The course is focused on development of clinical pathology and necropsy skills and will include a practicum of necropsy technique. A portion of the rotation is also focused on biopsy, parasitology and microbiology. Furthermore, students will be exposed large animal necropsy by spending time at PADLS at New Bolton Center. The bioanalytical pathology portion, which comprises clinical pathology, parasitology and microbiology, will be divided into microscopy, discussion, and online interactive lesson sections. During the microscopy section, students will work with the supervising clinical pathologist or resident in the evaluation, interpretation, and reporting of cytologic specimens and blood film reviews. Discussions involving parasitology and microbiology will also include treatment options and best practices. Online lessons include work in parasitology, clinical pathology and microbiology. Students are also required to perform necropsies, write necropsy reports and to familiarize themselves with the pathophysiology, histopathology and the clinical manifestations of various disorders encountered. Participation of students in presentation and discussion of cases is required. Students will be evaluated based upon enthusiasm, effort, ambition, and advancement in pathology knowledge as evaluated through the directed group discussions, necropsies, microscopy sessions and clinical competency outcomes assessments. A short paper is required.
6 Credit Hours
VPTH 7115 Farm Animal Pathology-NBC
The course will provide students with experience in farm animal and companion animal autopsies and biopsies including interpretation of gross and microscopic lesions in the context of clinical history, and proper collection of samples for histology and ancillary diagnostics (e.g. microbiology, parasitology, cytology and toxicology). Students will participate in the diagnostic services provided by the Pennsylvania Animal Diagnostic Laboratory System (PADLS) at New Bolton Center. Multiple species commonly encountered at our diagnostic laboratory (horses, cattle and small ruminants, swine, camelids and cervids, small animals and exotics) will be utilized to illustrate the pathogenesis of infectious and non-infectious disease, and the principles of gross and microscopic description with formulation of morphologic diagnoses. Students will be evaluated based upon enthusiasm, effort, ambition, and advancement in pathology knowledge as evaluated through diagnostic autopsy technique, directed group discussions, microscopy sessions and clinical competency outcomes assessments. A short paper providing a succinct scientific review of a select topic pertaining to large animal pathology is required. Although gross pathology will be emphasized, exposure to histopathology and occasionally cytology will be included. Although there is no lecture component to this course, there is a web-based introduction to VPTH 711 Diagnostic Services and VPTH 771 Diagnostic Services Elective, which students must review prior to the start of their rotation. Students may find this introduction by logging in to https://learn.vet.upenn.edu with their Penn Key and Vet Domain password.
Also Offered As: VPTH 7715
6 Credit Hours

VPTH 7185 Poultry Production Medicine-NBC
This course is designed to provide students with a working knowledge of the management and production of poultry from hatchery to processing. The course will involve multiple field trips to a hatchery, grow out pullet house, layer house, breeder house, processing plant and a feed mill. There will also conduct necropsies on cases submitted to the diagnostic laboratory and learn the diagnostic procedures such as serology, virology and PCR testing.
8 Credit Hours

VPTH 7705 Small Animal Diagnostic Services
The course in the Small Animal Section consists of exposure to the Diagnostic Services of MJR-VHUP, namely clinical pathology, anatomic pathology (necropsy service), parasitology and microbiology. The course is focused on development of clinical pathology and necropsy skills and will include a practicum of necropsy technique. A portion of the rotation is also focused on biopsy, parasitology and microbiology. Furthermore, students will be exposed large animal necropsy by spending time at PADLS at New Bolton Center. The bioanalytical pathology portion, which comprises clinical pathology, parasitology and microbiology, will be divided into microscopy, discussion, and online interactive lesson sections. During the microscopy section, students will work with the supervising clinical pathologist or resident in the evaluation, interpretation, and reporting of cyto logical specimens and blood film reviews. Discussions involving parasitology and microbiology will also include treatment options and best practices. Online lessons include work in parasitology, clinical pathology and microbiology. Students are also required to perform necropsies, write necropsy reports and to familiarize themselves with the pathophysiology, histopathology and the clinical manifestations of various disorders encountered. Participation of students in presentation and discussion of cases is required. Students will be evaluated based upon enthusiasm, effort, ambition, and advancement in pathology knowledge as evaluated through the directed group discussions, necropsies, microscopy sessions and clinical competency outcomes assessments. A short paper is required.
6 Credit Hours

6 Credit Hours
Vietnamese (VIET)

VIET 0100 Elementary Vietnamese I
An introduction to the language of North and South Vietnam. Instruction includes reading, writing, speaking and listening.
Fall or Spring
1 Course Unit

VIET 0200 Elementary Vietnamese II
This is the continuation course to Elementary Vietnamese I. It is intended for learners who want to achieve an elementary-level in Vietnamese. Based on an interactive communication approach, its goal is to train students speaking, listening, reading and writing skills in Vietnamese. Learners are thoroughly involved in communicative activities such as conversations, performance simulations, drills, role-plays, games, etc. there are task-based activities in open communication settings where students can practice Vietnamese, make mistakes, and learn from them. Learners improve their reading and writing abilities by developing their grammar and meaning-based vocabulary.
Fall
1 Course Unit

VIET 0300 Intermediate Vietnamese I
A continuation of ALAN 110, the written and spoken language of Vietnam.
Fall or Spring
1 Course Unit

VIET 0400 Intermediate Vietnamese II
This is the continuation course of VIET 0300 Intermediate Vietnamese I. Instruction includes reading, writing, speaking and listening through the use of Conversational Vietnamese textbook, other media, and through students participation in various classroom activities. Learners will also acquaint themselves with Vietnamese culture through lesson content and supplementary course materials. By the end of the course students should be able to further their knowledge of reading and writing skills, enhance their conversation skills, and read and write short narratives.
Spring
1 Course Unit

VIET 0500 Advanced Vietnamese I
This is the continuation course to Intermediate Vietnamese II. Instruction includes reading, writing, speaking and listening through the use of Conversational Vietnamese textbook, other media, and through students participation in various classroom activities. Insight into Vietnamese culture will be achieved through lesson content and supplementary course materials. Course emphasis is on conversation skills and the ability to read and write short narratives.
Not Offered Every Year
1 Course Unit

VIET 0600 Advanced Vietnamese II for Healthcare Professionals
Advanced Vietnamese for Health Professions is a content-based course designed for students who have successfully completed the Intermediate Vietnamese course (or have an equivalent level of proficiency) and plan to work in health care professions. This course especially facilitates Penn medical and nursing students who are going to serve the underserved Vietnamese communities in the U.S. and Vietnam.
Not Offered Every Year
1 Course Unit

VPTH 7805 Poultry Production Medicine-NBC
This course is designed to provide students with a working knowledge of the management and production of poultry from hatchery to processing. The course will involve multiple field trips to a hatchery, grow out pullet house, layer house, breeder house, processing plant and a feed mill. There will also conduct necropsies on cases submitted to the diagnostic laboratory and learn the diagnostic procedures such as serology, virology and PCR testing.
8 Credit Hours

VPTH 7895 ULAR-Laboratory Animal Medicine
This rotation will provide an opportunity to work with the wide variety of animal species used in biomedical research at the University of Pennsylvania, including nonhuman primates, small rodents, guinea pigs, rabbits, dogs, cats, pigs, and sheep. The students will participate in all aspects of the care and treatment of these animals across the facilities at the University of Pennsylvania. Participation may include handling, husbandry, diagnosis, treatment, anesthesia, and assistance with surgery. Students will perform daily rounds with the clinical veterinarians and other staff members. The student may have the opportunity to observe on-going interdisciplinary research programs including cardiopulmonary bypass, organ transplantation, gene therapy, device implantations, and metabolic disease progression. Students will participate in clinical rounds, didactic training classes, and related seminars and journal clubs as scheduled. Participation in necropsies of clinical cases, sentinel animals, and study animals is expected. A brief assignment on aspects of lab animal medicine will be required prior to completion of the rotation. Depending upon scheduling, the students will have an opportunity to attend a meeting of the Institutional Animal Care and Use Committee. A recent (within 6 months) negative skin test against tuberculosis is required by the first day of the rotation.
5 Credit Hours

VPTH 7900 Small Animal Pathology Holiday Rotation
This is an elective rotation similar to the necropsy component of the Diagnostic Services Rotation, VPTH 710,770. The rotation consists of practicum spent in performing necropsies and interpreting findings. Students are required to perform necropsies, write necropsy reports and to familiarize themselves with the pathophysiology, histopathology and the clinical manifestations of various disorders encountered. There will be two one-week rotations over the Holiday period, each for 2 credits. Each rotation will consist of half of the Holiday period and will not meet on either Christmas Day (week one) or New Years Day (week two). There is no clinical pathology, parasitology or microbiology component to this rotation. No paper is required for this rotation.
2 Credit Hours
Viper (VIPR)

VIPR 1200 Vagelos Integrated Program in Energy Research (VIPER) Seminar, Part I
This is the first part of the two-semester seminar designed to introduce students to the VIPER program and help them prepare for energy-related research. During this course, invited speakers from across Penn will share their research to introduce students to a breadth of different topics within energy science, and research articles on various energy-related topics will be discussed. Students will be provided guidance on how to identify research groups of interest and reach out to faculty members in preparation for their research projects during the summer. Library research, presentation of data, basic research methods, research ethics, data analysis, and advisor identification will also be discussed. Students will develop their scientific research skills by reviewing scientific literature and synthesizing their findings, and they will build their collaboration skills by regularly working together in small, interactive student groups. Sample energy topics discussed will include: Applications of nanostructured materials in solar cells; Solid oxide fuel cells; Global climate modeling; radiant heat transfer; Nanocrystal-based technologies for energy storage; Photo-bioreactor systems for mass production of micro-algae; Advanced rare earths separations chemistry; Modeling of oxides for solar energy applications; and Electronic transport in carbon nanomaterials. Admission to VIPER program required to enroll.
Spring
0.5 Course Units

VIPR 1210 Vagelos Integrated Program in Energy Research (VIPER) Seminar, Part II
This is the second part of the two-semester seminar designed to introduce students to the VIPER program and help them prepare for energy-related research. Students will build upon their work in VIPR-120 crafting scientific research projects, and in VIPR-121, they will focus on how to communicate science effectively using a variety of different platforms. Students will develop their communication skills by critically thinking about elements of content development and visual design to best engage with their audience, and they will develop their collaboration skills by regularly working together in small, interactive student groups and by providing peer feedback to each other. Students will continue to discuss how to conduct research ethically and responsibly as well as critically evaluate the systems used to communicate science and their challenges.
Fall
Prerequisite: VIPR 1200
0.5 Course Units

VIPR 1300 VIPER Undergraduate Energy Research and Leadership Development
This course is designed to support and prepare students in the Vagelos Integrated Program in Energy Research (VIPER) in their on-going commitment to research activities and enhance their development as energy research leaders. This course is offered in the summer, fall, and spring terms, and module assignments will be specific to the term, as described below. Students are expected to complete a minimum number of graded module assignments which can be tailored to reflect their current research efforts and plans. This structure is designed to support sophomore, junior, and senior students throughout their undergraduate career. Students may register repeatedly for VIPR-1300 as they continue with their research experiences throughout their undergraduate career. Activities include making arrangements to conduct VIPER research over the summer, reading scientific literature related to their summer research projects, writing reports in preparation for and summarizing their summer research activities, summarizing and reflecting on their on-going research efforts during the semester, being actively involved in energy-relevant activities and submitting reflections about their experiences, and preparing materials for and presenting their energy research to the Penn community in the form of poster sessions and/or campus-wide presentations.
Fall, Spring, and Summer Terms
Prerequisite: VIPR 1200
0-0.5 Course Units

Visual Studies (VLST)

VLST 1010 Eye, Mind, and Image
Visual Studies 101 provides an introduction to the collaboration of eye, mind, and image that produces our experience of a visual world. How and what do we see? How do we perceive color, space, and motion? What is an image? Does seeing vary across cultures and time? What can art tell us about vision? Is there a 21st-century form of seeing? This course combines different approaches to the study of vision, drawing from psychology, cognitive science, philosophy, history of art, and fine art. Professors representing two or three disciplines present lectures that demonstrate the methods of their disciplines and draw connections across fields. This course combines different approaches to the study of vision, drawing from psychology, cognitive science, philosophy, history of art, and fine art. Professors representing two or three disciplines present lectures that demonstrate the methods of their disciplines and draw connections across fields.
Fall or Spring
Also Offered As: ARTH 1500
1 Course Unit

VLST 1020 Form and Meaning
This course will introduce students to the theory and practice of image making, focusing on the development of observational skills and analytical thinking. We will look at conventions of artistic representation across time and cultures; discuss types of visual information and modes of formal language; explore visual narrative techniques; and seek to expand our understanding of the role images play in our culture. We will look at conventions of pictorial representation across time and cultures; discuss types of visual information and modes of formal language; explore visual narrative techniques; and seek to expand our understanding of the role images play in our culture.
Fall or Spring
1 Course Unit
**VLST 1030 3 Dimensions: Time and Space**

Through studio projects, readings and class discussion, this class will begin to address, both conceptually and physically, basic 3D structures and translations between 3D and 2D, as well as materiality, experiential phenomena, light and time-based processes. The interconnection between mediums in our cultural climate employs a wide range of tools, processes, and ideas. It is imperative that visual studies students recognize and think through these connections. The work produced and ideas confronted in this class will facilitate discussions and constructive criticism on the fundamentals of space and time via the experiential, conceptual, and the formal as essential elements of meaning. The interconnection between mediums in our cultural climate employs a wide range of tools, processes, and ideas. It is imperative that visual studies students recognize and think through these connections. The work produced and ideas confronted in this class will facilitate discussions and constructive criticism on the fundamentals of space and time via the experiential, conceptual, and the formal as essential elements of meaning.

Fall or Spring
1 Course Unit

**VLST 1050 Inventing Photography**

Photography is a young medium and yet its history can be traced through differing narratives. Was the medium born in a French patent office, when the sun burned a handprint in silver salt, or when human eyes saw an inverted image projected into a dark space? Does photography reflect the perspective and biases of its inventors and users, or does it reinvent how we see the world? This seminar will take material and theoretical approaches to understanding the histories of photography. Students will handle original materials from photography’s history, make photographs using historic chemical-processes and styles while we learn about the history of early photography. This class will also include lectures and discussions of readings. This class will visit archives and museums on and off of campus. Prior experience with photography is welcome but not required.

Fall, even numbered years only
1 Course Unit

**VLST 1060 Virtual Reality Storytelling**

What does it mean to compose for an open world, in 3 dimensions, where the audience can move with 6 degrees of freedom? How does embodiment in a 360 degree space change the experience of the audience? What control does the director maintain when the user chooses their own immersive adventure? In this course, we will explore the past, present, and future of immersive narrative through a variety of media, including fictional texts, dystopian television shows, and Virtual Reality films. Using the critical theory of media scholars from diverse backgrounds, students will critique VR applications as models to inform their own iterative design process. Students will prototype their own VR narrative films with the tools available through the library makerspaces and media lab. No experience with film or emerging technology necessary.

Spring, even numbered years only
Prerequisite: None
1 Course Unit

**VLST 2090 Visual Culture through the Computer’s Eye**

Visual studies and the humanities more generally have thought about and modeled seeing of artworks for many centuries. What useful tools can machine learning develop from databases of art historical images or other datasets of visual culture? Can tools from machine learning help visual studies ask new questions? When put together, what can these fields teach us about visual learning, its pathways, its underlying assumptions, and the effects of its archives/datasets? Class project teams will ideally be composed of both humanities majors and engineering majors who will develop datasets and/or ask important questions of datasets, in addition to thinking and writing more generally about how computer vision could help in teaching and analyzing visual art. We are looking for a variety of students from different majors and schools to bring their diverse skill sets to the course. No programming knowledge is required. The course offers an example-based introduction to machine learning, so no prior knowledge of machine learning is required.

Fall or Spring
Also Offered As: CIS 1070
1 Course Unit

**VLST 2110 Perception**

How the individual acquires and is guided by knowledge about objects and events in their environment.

Fall
Also Offered As: PSYC 1340
Prerequisite: PSYC 0001 OR COGS 1001
1 Course Unit

**VLST 2120 Research Experience in Perception**

In this research course, students will begin by first replicating earlier experiments to measure human visual memory capacity. After several class discussions to discuss ideas, each student will design and conduct their own experiment to further investigate visual and/or familiarity memory.

Fall or Spring
Also Offered As: PSYC 4340

**VLST 2130 Images in Science**

Pictures, diagrams, graphs, and (more recently) computer images are ubiquitous in modern science. Visualizations are crucial in the process of research; for communicating evidence, theories, and experiments to other scientists; and for transmitting scientific ideas to the public. But serious questions about the validity of using images to convey knowledge about nature have been raised from the earliest natural philosophers onwards, and understanding precisely what any particular scientific image does can be surprisingly difficult. In this class we will investigate, as historical and cultural artifacts, images related to the generation or transmission of knowledge about nature, knowledge that has claims to a privileged epistemological status. The focus will be on three kinds of visual depictions: images of the macrocosm (the universe as a whole), images of the microcosm (the body and its parts), and the visualization of theories and data. What are the material and technological conditions underlying these images? What can the images we examine tell us about the communities and societies, including our own, in which they were created? What do they reveal about the nature of the scientific enterprise, about the relationship between the sensible world and the mind, and about ideals concerning truth, objectivity, and morality?

1 Course Unit
VLST 2140 Art as Intercultural Dialogue (SNF Paideia Program Course)
Art, dialogue theory and cultural differences come together in this experiential course. Students will explore and learn about all three of these components. They will experience true dialogue and learn about it. They will engage in interpersonal encounters with art, the key driver of cultural content for this course. Art will provide a neutral platform for perceiving cultural differences through careful exploration, verbal description, and an exchange of insights into ways artists express concerns, biases, and world views. Students will engage in dialogues to inquire into these and other personal and cultural differences, thereby participating in intercultural communication. Altogether the course will offer a safe space for students to exchange cultural and personal points of view as expressed in many forms of art and to then participate in dialogues that delve into these rich and complex forms of expression. True dialogue is not a discussion or argumentation aimed to unveil a single truth. True dialogue is a co-creation, a creative process, a source of newness, a discovery journey, and a portal to a new reality. This course is for students who want to be disrupted by a new understanding of art and to embrace new cultural realities as they stretch their perceptions, ideas and experiences. "Art opens a window into a culture's dreams, drives, and priorities" revealing "aspects of a culture's soul." It is frequently ambiguous and asks to be questioned. Individual perceptions and insights are worthy and do not fall into right or wrong categories. Because art is a dynamic and flexible tool to build personal equity, meaning a sense of fairness, students will enlarge their capacity to connect to the world's diversity through its multiple expressions. The ensuing dialogues will open thought rather than close it down and encourage openness to other ways of seeing the world. Because students will engage in true dialogue with one another and with art that arises from diverse backgrounds and ways of interpreting the world, they will emerge with increased confidence to interpret complex issues and manage diverse relationships. The course is experiential and hands-on. It requires personal commitment, an open mind and a desire to grow using new, non-traditional and effective ways of connecting art and intercultural dialogue. It does not require prior knowledge of or experience with art. As part of the experiential learning, some of the course activities will take place in museums and art galleries in Philadelphia.

1 Course Unit

VLST 2170 Visual Neuroscience
An introduction to the scientific study of vision, with an emphasis on the biological substrate and its relation to behavior. Topics will typically include physiological optics, transduction of light, visual thresholds, color vision, anatomy and physiology of the visual pathways, and the cognitive neuroscience of vision.

Spring
Also Offered As: NRSC 2217, PSYC 2240
Prerequisite: NRSC 1110
1 Course Unit

VLST 2210 Introduction to Philosophy of Mind
This course will survey several central topics in philosophy of mind, as well as investigate how philosophy of the mind interacts with scientific study of the mind. Among the questions we'll be asking are: What is it to have a mind? What is the relationship between the mind and the brain? Can there be a science of the mind? What can it tell us? What can philosophy contribute to a science of the mind? What is consciousness? What is it to think, to perceive, to act? How are perception, thought, and action related to one another? Fall or Spring
Also Offered As: PHIL 2640
1 Course Unit

VLST 2220 Philosophy of Perception
A seminar for majors in Philosophy. Taking our perceptual experience as a given, what causes it? In a realistic mood, we accept that objects in the environment, or in the "external world," cause us to have the perceptual experiences that we do (as of a table with food, or as of a garden with flowers in it). Yet on this realistic view, our perception is the result of a causal chain that leads from object to eye to brain to experiences, and we are only given the last element: the experience. So how do we really know how our experiences are caused, and where do we get the idea that they are caused by an external world of physical objects? The seminar will focus on the problem of the external world as examined by David Hume, Thomas Reid, G. E. Moore, and Bertrand Russell, along with recent authors.
Not Offered Every Year
Also Offered As: PHIL 3623
1 Course Unit

VLST 2230 Philosophy and Visual Perception
In this course, we'll use the biology, psychology and phenomenology of vision to explore philosophical questions about color, such as these: Color vision helps us get around in our environments, but in what sense is it a window onto reality, if it is? Are colors properties of objects, or are they inherently private, subjective properties of minds? What can non-human forms of color vision teach us about the nature of color, and how should we empirically study color vision? Do we need to see in color to understand it? How do our ordinary ways of talking and thinking about colors relate to the experiences we have in color? How does color vision figure in aesthetic judgment? And to what degree can it be influenced by learning, or by social biases like sexist or racist prejudices?
Also Offered As: PHIL 2843
1 Course Unit

VLST 2320 The Artist in History, 1400-Now
This course is an introduction to the history of art in a global context from the early 1400s to the present. Lectures will introduce students to significant moments in artistic production in both the Western and Eastern hemispheres through focused studies on crucial aspects of exchange between cultures and continents. Covering an era of increasing economic transactions, imperial conquests, and industrialization, this course will build recursively through themes such as: the emergence of authorial identity and models of artistic collaboration, the traffic of artistic materials and techniques and their adaptation in different cultural settings, and the foregrounding of art to both document and initiate political change. Developing vocabularies to discuss painting, sculpture, architecture, and prints, as well as photography and film, students will learn to analyze art's decisive role during times of social transformation, including modernization, colonization, and technological advances. We will also examine the role of broad-reaching media and the advent of art criticism in forming public opinion. Assignments will encourage students to think widely across geographies and study intimately local examples in the Philadelphia museums. This course fulfills Sector III: Arts and Letters and counts towards the History of Art major and minor requirements.
Spring
Also Offered As: ARTH 1020
1 Course Unit
VLST 2330 Art and Civilization in East Asia
Introduction to the major artistic traditions of China and Japan and the practices of art history. We will also consider aspects of Korean and Indian artistic traditions as they relate to those of China and Japan. Our approaches will be methodological in addressing how we understand these objects through careful looking; chronological in considering how the arts developed in and through history; and thematic in studying how art and architecture were used for philosophical, religious and material ends. Special attention will be given to the relationship between artistic production and the afterlife; to the impact of Buddhism and its purposes; to painting traditions and their patronages; and to modernist transformations of traditions.

Also Offered As: ARTH 1030, EALC 0100
1 Course Unit

VLST 2340 Art of Global Asia
This course surveys flows of ideas, images, and objects across, within, and beyond Asia. It considers how the art of Asia is and has been global from antiquity through the present, and introduces ‘Asia,’ ‘globality,’ and ‘art’ as key terms and concepts that shift over time and place. Artistic traditions are presented within broader historical, cultural, social, and economic frameworks, with attention to their local and regional significance. Trade, exchange, and interaction between cultures and groups, including but not limited to artists, pilgrims, merchants, warriors, and rulers, and the transmission of concepts through languages, religions, and philosophies, will be highlighted throughout. We shall address problems of iconophilia and iconoclasm, narrative and temporality, archeology and historiography, ritual and religion, sovereignty and kingship, gender and sexuality, colonialism and nationalism, diasporas and migration as they pertain to the images, objects, and sites of our study. We shall make use of local resources at the Penn Museum and Penn Libraries, as well as other sites, to show how objects retain and inflect these ideas. The course builds out from a central focus on the arts of South Asia or the arts of East Asia, depending upon the specialty of the faculty member teaching the course, with additional faculty offering guest lectures as available. Students with a background in art history, studio art, architecture, history, religion, literature, anthropology, and/or South or East Asian Studies are especially welcome.

1 Course Unit

VLST 2360 Art Now
One of the most striking features of today's art world is the conspicuous place occupied in it by the photographic image. Large-scale color photographs and time-based installations in projections are everywhere. Looking back, we can see that much of the art making of the past 60 years has also been defined by this medium, regardless of the form it takes. Photographic images have inspired countless paintings, appeared in combines and installations, morphed into sculptures, drawings and performances, and served both as the object and the vehicle of institutional critique. They are also an increasingly important exhibition site: where most of us go to see earthworks, happenings and body-art. This course is a three-part exploration of our photographic present.
Spring
Also Offered As: ARTH 2940, ENGL 2639, GSWS 2940
1 Course Unit

VLST 2370 Material History of Photography
Photography is a young medium and yet its history can be traced through differing narratives. Was the medium born in a French patent office, when the sun burned a handprint in silver salt, or when human eyes saw an inverted image projected into a dark space? Does photography reflect the perspective and biases of its inventors and users, or does it re-invent how we see the world? This seminar will take theoretical and material approaches to understanding the histories of photography. In addition to lectures and readings, students will handle original materials and make photographs using historic chemical-processes and styles.
Fall, even numbered years only
1 Course Unit

VLST 2390 Virtual Reality for Artists
With rapid developments in virtual reality technology, artists have new opportunities to exhibit work at any scale, create interactive and immersive experiences, and bridge distances between makers and viewers. This course will focus on creating art for virtual (and augmented) reality, and learning about the development of VR as a medium and how it is being utilized by contemporary artists. Students will create virtual exhibition spaces for images, videos, sculptures, and develop interactive work that can only exist in Virtual Reality. We will also develop 3D sculptures for augmented reality. We will develop our camera and editing skills for making still and video-based VR media and learn the fundamentals of 3D modeling in Blender. We will also develop advanced skills in Adobe Photoshop, Premier, and Rhino3d. Readings in this course will cover contemporary topics in VR and consider pre-VR immersive mediums such as Panorama painting and stereographic photography.
Fall
1 Course Unit

VLST 2500 Introduction to Printmaking
The course offers an introduction to several forms of printmaking including: intaglio, screen printing, relief, and monoprinting. Through in-class demonstrations students are introduced to various approaches to making and printing in each medium. The course enhances a student's capacity for developing images through two-dimensional design and conceptual processes. Technical and conceptual skills are developed through discussions and critiques.
Spring
Also Offered As: FNAR 1100
1 Course Unit
VLST 2510 Introduction to Photography
This course is an introduction to the basic processes and techniques of black & white photography. Students will learn how to expose and process 35mm film, SLR camera operation, darkroom procedures & printing, basic lighting and controlled applications. It begins with an emphasis on understanding and mastering technical procedures and evolves into an investigation of the creative and expressive possibilities of making images. This is a project-based course, where students will begin to develop their personal vision, their understanding of aesthetic issues and photographic history. Assignments, ideas and important examples of contemporary art will be presented via a series of slide lectures, critiques and discussion. No previous experience necessary. 35mm SLR cameras will be available throughout the semester for reservation and checkout from the photography equipment room.

1 Course Unit

VLST 2530 Drawing I
This course is designed to develop visual awareness and perceptual acuity through the process of drawing. Students learn to sharpen perceptual skills through observational drawing, and to explore the expressive potential of drawing. A variety of problems and media will be presented in order to familiarize students with various methods of working and ways of communicating ideas visually. Subject matter will include object study, still life, interior and exterior space, self-portrait and the figure. Different techniques and materials (charcoal, graphite, ink, collage) are explored in order to understand the relationship between means, material and concept. Critical thinking skills are developed through frequent class critiques and through the presentation of and research into historical and contemporary precedent in drawing.
Fall or Spring
Also Offered As: FNAR 0010
1 Course Unit

VLST 2600 Photography Practices
This course is an introduction to the basic principles, strategies and processes of photographic practice. It is designed to broaden the student’s aesthetic explorations and to help the student develop a visual language based on cross-disciplinary artistic practice. Through a series of projects and exercises students will be exposed to a range of camera formats, techniques and encouraged to experiment with the multiple modes and roles of photography - both analogue and digital. Attention will also be given to developing an understanding of critical aesthetic and historical issues in photography. Students will examine a range of historical and contemporary photowork as an essential part of understanding the possibilities of image making. This course is primarily for first-years and sophomores. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
Fall or Spring
Also Offered As: FNAR 1020
1 Course Unit

VLST 2610 Video I
In this studio based course, students are introduced to video production and postproduction as well as to selected historical and theoretical texts addressing the medium of video. Students will be taught basic camera operation, sound recording and lighting, as well as basic video and sound editing and exporting using various screening and installation formats. In addition to a range of short assignment-based exercises, students will be expected to complete three short projects over the course of the semester. Critiques of these projects are crucial to the course as students are expected to speak at length about the formal, technical, critical and historical dimensions of their works. Weekly readings in philosophy, critical theory, artist statements and literature are assigned. The course will also include weekly screenings of films and videos, introducing students to the history of video art as well as to other contemporary practices.

VLST 2640 Art, Design and Digital Culture
This course is an introduction to the fundamental perception, representation, aesthetics, and design that shape today’s visual culture. It addresses the way artists and designers create images; design with analog and digital tools; communicate, exchange, and express meaning over a broad range of media; and find their voices within the fabric of contemporary art, design, and visual culture. Emphasis is placed on building an extended form of visual literacy by studying and making images using a variety of representation techniques; learning to organize and structure two-dimensional and three-dimensional space, and designing with time-based and procedural media. Students learn to develop an individual style of idea-generation, experimentation, iteration, and critique as part of their creative and critical responses to visual culture. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
Fall or Spring
Also Offered As: DSGN 0010
Mutually Exclusive: DSGN 5001
1 Course Unit
VLST 2650 Digital Photography
This class offers an in-depth technical and conceptual foundation in digital imagery and the opportunity to explore the creative, expressive possibilities of photography. Students will become proficient with the basic use of the camera, techniques of digital capture, color management and color correction. They will also develop competency in scanning, retouching, printing and a variety of manipulation techniques in Photoshop. Through weekly lectures and critiques, students will become familiar with some of the most critical issues of representation, consider examples from photo history, analyze the impact of new technologies and social media. With an emphasis on structured shooting assignments, students are encouraged to experiment, expand their visual vocabulary while refining their technical skills. No previous experience is necessary. Although it is beneficial for students to have their own Digital SLR camera, registered students may reserve and checkout Digital SLR cameras and other high-end equipment from the department.
Fall or Spring

1 Course Unit

VLST 3010 What is Visual Studies?
Visual Studies 301 is a seminar-format course that challenges students to develop independent ideas about how the eye, the mind and the image that is created therein, all work together to inform our conception of the world at large. Rather than present a unified viewpoint, the course asks the question, "What is visual studies?" by examining parallel and sometimes antagonistic approaches to the ways that human beings understand sight and the concept of visuality. Over the course of the semester, students will discuss and write about various approaches to vision, examining this contested field through the lenses of several disciplines -- including psychology, philosophy, and art history. By parsing and assimilating diverse ideas, students will decide for themselves what are the most pertinent and relevant approaches to the various avenues of research that present themselves in the emerging interdisciplinary field of Visual Studies.
Fall or Spring
Prerequisite: VLST 1010
1 Course Unit

VLST 3030 The Rise of Image Culture: History and Theories
Today images are everywhere; two centuries ago, they were rare. This seminar considers key historical and theoretical contexts for this change and its social consequences. With the help of some of the strongest critics and theorists of image culture, we will consider five interrelated aspects of the rise of image culture. - First, we will explore how new media and mechanical reproduction has changed the idea of the image over in the free market. - Second, we will explore how images operate through the psyche and gaze and how that operation is tied to social and political power. - Third, we will examine how representations make meaning and form identity in coded systems. - Fourth, we will consider the relationship between visual space and concepts of reality. And finally, we will interrogate how the physical and digital material that images are made from affects their meaning.
Spring
Also Offered As: ARTH 3070
1 Course Unit

VLST 3050 What is an Image?
The course explores various concepts of images. It considers natural images (as in optics), images as artifacts, virtual images, images as representations, and works of art as images. Themes to include: the image controversy in cognitive science, which asks whether some cognitive representations are irreducibly imagistic; the question of whether some images resemble what they represent; the development of the concept of the virtual image and of three-dimensional images; the notions of pictorial representation and non-representational images in art. Readings from C. S. Peirce, Nelson Goodman, Robert Hopkins, Dominic Lopes, W. J. T. Mitchell, John Kulvicki, and Mark Rollins, among others.
Fall
Also Offered As: ARTH 3071
1 Course Unit

VLST 3090 Investigative Photography for Scientists and Artists
Artists and scientists are likeminded when they make an image in pursuit of new insights. Pictures can reveal the composition of a specimen, expose a person's character, capture a place's distinctiveness, or produce a new occasion for intimacy. Rosalind Franklin's famous "Photograph 51" of DNA resulted from a desire to see the physical shape of heredity. The artist Shimpei Takeda places film directly on the ground in Fukushima to create a blind measurement of the radioactivity that remains in the earth. This course will introduce photography as an investigative medium for art and science. We will begin with learning the fundamentals of photography while considering ways in which photographs have changed and continue to change the way we perceive space and time. As the class progresses, students from the arts and sciences will work together to learn specialized photographic techniques and complete assignments that explore photography as an investigative medium.
Spring
1 Course Unit

VLST 3220 The Big Picture: Mural Arts in Philadelphia
The history and practice of the contemporary mural movement couples step by step analysis of the process of designing with painting a mural. In addition students will learn to see mural art as a tool for social change. This course combines theory with practice. Students will design and paint a large outdoor mural in West Philadelphia in collaboration with Philadelphia high school students and community groups. The class is co-taught by Jane Golden, director of the Mural Arts Program in Philadelphia, and Shira Walinsky, a mural arts painter and founder of Southeast by Southeast project, a community center for Burmese refugees in South Philadelphia.

WH 1010 Business and You
WH 101 is the first step of the Leadership Journey at Wharton. The course is designed to fuel students’ unique interests in academic, research, and professional pursuits; to raise awareness of the complexity of business; and to increase understanding of the interrelatedness of business disciplines. Students will also acquire greater awareness of their strengths and leadership potential as members of the Wharton community and as future professionals. Students will come to appreciate that leadership is an act and best developed through study, feedback from trusted colleagues and peers, and stretch experiences that stimulate growth and development. Students will also begin to hone skills essential to the pursuit of personal, academic, and professional goals: thinking creatively, analyzing problems, applying what you have learned, and reflecting on learnings. A case-analysis project will engage students with the community through helping local agencies examine business challenges that they face. This course is for Wharton students only.

WH 1500 Evaluating Evidence
WH 150 provides an introduction to all stages of the research process for business topics. In the first third of the course, we discuss theory building, hypothesis development, and research design choices particularly in casual research. In the second third, we discuss data collection methods (e.g., surveys, experiments, case studies and fieldwork) and the use of archival databases. This part of the course emphasizes the interplay between research design and sampling/data collection methods. In the final third of the course, we introduce data analysis and interpretation, including methods for converting raw data into measurable constructs suited to statistical analysis.
Fall or Spring
1 Course Unit

WH 2010 Business Communication for Impact
The objective of WH 201 is to prepare you to communicate effectively as you pursue your educational, professional, and personal goals over the next few years. We have incorporated input from employers, employees, alumni and past WH 201 students to create a course that will prepare you to succeed at all types of communication: spoken and written, formal and informal, prepared and spontaneous. Communication is a skill that requires repeated practice to master. The class size is limited to eight students to allow you the opportunity to practice communicating every week. Class will meet for 80 minutes once a week for fourteen weeks. Please note that we are piloting different approaches to teaching this year in different sections of the course. The logistical details of some sections may differ from others, but everyone will be taught the same material and complete the same assignments.

**WH 2990 Honors Thesis**

This seminar takes place over two semesters and provides students with the skills to perform their own research under the guidance of a Wharton faculty member. At the conclusion of the fall semester, students will produce a thesis proposal including literature review, significance of the research, methodology, and exploratory data if relevant. Throughout the fall semester faculty guests from a range of disciplines will present on their research in class, highlighting aspects that are relevant to the work students are engaging in at that point. During the second semester, students will collect and analyze data and write up the results in close collaboration with their faculty mentor. At the end of the spring semester, each student will present their research in a video presentation. Throughout the course, students will work individually, in small groups, and under the mentorship of a Wharton faculty member. The goal is to become capable independent researchers who incorporate feedback and critical (self-) analysis to take their research to the next level.

Two Term Class, Student must enter first term; credit given after both terms are complete

1 Course Unit

YDSH 0400 Intermediate Yiddish II
Continuation of YDSH 0300. Emphasis on reading texts and conversation.
Not Offered Every Year
Also Offered As: JWST 0460
Prerequisite: YDSH 0300
1 Course Unit

YDSH 0550 Readings in Modern Yiddish Literature
This course will survey modern Yiddish literature through readings of Yiddish prose and poetry from the end of the 19th century through the late 20th century. The class will be conducted in both Yiddish and English. Reading knowledge of Yiddish is required, although some texts will be available in English translation. Authors include I.L. Peretz, Isaac Bashevis Singer, Moyshe-Leyb Halpern, and Kadya Molodowsky.
Not Offered Every Year
Also Offered As: JWST 0550
1 Course Unit

YDSH 5010 Beginning Yiddish I
The goal of this course is to help beginning students develop skills in Yiddish conversation, reading and writing. Yiddish is the medium of a millennium of Jewish life. We will frequently have reason to refer to the history and culture of Ashkenazie Jewry in studying the language.
Fall
1 Course Unit

YDSH 5020 Beginning Yiddish II
In this course, you can continue to develop basic reading, writing and speaking skills. Discover treasures of Yiddish culture: songs, literature, folklore, and films.
Spring
Prerequisite: YDSH 5010
1 Course Unit

YDSH 5030 Intermediate Yiddish I
The course will continue the first year's survey of Yiddish grammar with an additional emphasis on reading Yiddish texts. The course will also develop conversational skills in Yiddish.
Not Offered Every Year
Prerequisite: YDSH 5020
1 Course Unit

YDSH 5040 Intermediate Yiddish II
Continuation of YDSH 0300. Emphasis on reading texts and conversation.
Not Offered Every Year
Prerequisite: YDSH 5030
1 Course Unit

YDSH 5080 Readings in Modern Yiddish Literature
This course will survey modern Yiddish literature through readings of Yiddish prose and poetry from the end of the 19th century through the late 20th century. The class will be conducted in both Yiddish and English. Reading knowledge of Yiddish is required, although some texts will be available in English translation. Authors include I.L. Peretz, Isaac Bashevis Singer, Moyshe-Leyb Halpern, and Kadya Molodowsky.
Not Offered Every Year
1 Course Unit
YDSH 5090 Topics in Yiddish Literature: Modernist Jewish Poetry
One version of this seminar considers works by Jewish women who wrote in Yiddish, Hebrew, English, and other languages in the late 19th through the 20th century. The texts, poetry and prose, will include both belles lettres and popular writings, such as journalism, as well as private works (letters and diaries) and devotional works. The course will attempt to define "Jewish writing," in terms of language and gender, and will consider each writer in the context of the aesthetic, religious, and national ideologies that prevailed in this period. Because students will come with proficiency in various languages, all primary texts and critical and theoretical materials will be taught in English translation. However, those students who can, will work on the original texts and share with the class their expertise to foster a comparative perspective. Because we will be discussing translated works, a secondary focus of the course will, in fact, be on literary translation's process and products. Another version of this seminar presents Jewish modernism as an international phenomenon of the early 20th century. The course will attempt to define "Jewish modernism" through the prism of poetry, which inevitably, given the historical events in Europe and America during this time, grapples with aesthetic, religious, and national ideologies and methods. The syllabus will focus mainly on poetry written in Yiddish and English, and will also include German, Russian, and Hebrew verse. All poetry, critical, and theoretical materials will be taught in English translation, although students who know the languages will work on the original texts and will bring to the table a comparative perspective. Because we will be discussing translated poems, a secondary focus of the course will, in fact, be on literary translation's process and products.
Not Offered Every Year
Also Offered As: COML 5090, GRMN 5090, GSWS 5090, JWST 5090
1 Course Unit

Yoruba (YORB)

YORB 0100 Elementary Yoruba I
The Elementary Yoruba I course can be taken to fulfill a language requirement, or for linguistic preparation to do research on Nigeria and the diaspora/Africa-related topics. The course emphasizes communicative competence to enable the students to acquire linguistic and extra-linguistic skills in Yoruba. The content of the course is selected from various everyday life situations to enable the students to communicate in predictable common daily settings. Culture, as it relates to language use, is also part of the course content. Students will acquire the speaking, listening, reading, and writing skills at the mid-high novice level, based on the ACTFL scale. The mid-high novice level proficiency skills that the students will acquire constitute threshold capabilities of the second semester range of proficiency to prepare students for Elementary Yoruba II course materials.
Fall
1 Course Unit

YORB 0200 Elementary Yoruba II
The main objective of this course is to further sharpen the Yoruba linguistic knowledge that the student acquired in level I. By the end of the course, the student should be able to (1) read, write, and understand simple to moderately complex sentences in Yoruba; and, (2) advance in the knowledge of the Yoruba culture.
Spring
Prerequisite: YORB 0100
1 Course Unit

YORB 0300 Intermediate Yoruba I
This course will engage students in interpersonal and interpretive activities to enable them to satisfy most work requirements with language usage that is often, but not always, acceptable and effective. They will be able to handle with confidence, but not with facility, most normal, high-frequency social conversational situations including extensive, but casual conversations about current events, as well as work, family, and autobiographical information. Students can get the gist of most everyday conversations but has some difficulty understanding native speakers in situations that require specialized or sophisticated knowledge. Students will show considerable ability to communicate effectively on topics relating to particular interests and special fields of competence. Often, they will show a high degree of fluency and ease of speech, yet when under tension or pressure, the ability to use the language effectively may deteriorate. Comprehension of normal native speech is typically nearly complete. Typically, students with this proficiency level can participate in most social, formal, and informal interactions, but limitations either in range of contexts, types of tasks or level of accuracy hinder effectiveness.
Fall
1 Course Unit

YORB 0400 Intermediate Yoruba II
Continuation of Intermediate I course: Level 2+ (Limited Working Proficiency, Plus)
Spring
1 Course Unit

YORB 1100 Advanced Yoruba I
Students will engage in interpersonal and interpretive tasks to develop productive skills to use the language with sufficient structural accuracy and vocabulary to participate effectively in most formal and informal conversations in practical, social and professional topics. Discourse will be cohesive. Students will use the language acceptably, but with some noticeable imperfections; yet, errors will never interfere with understanding and will rarely disturb the native speaker. Students will effectively combine structure and vocabulary to convey their meaning accurately, speaking readily and filling pauses suitably. In face-to-face conversation with natives speaking the standard dialect at a normal rate of speech, comprehension will be quite complete. Students can typically discuss particular interests and special fields of competence with reasonable ease. Can use the language as part of normal professional duties such as answering objections, clarifying points, justifying decisions, understanding the essence of challenges, stating and defending policy, conducting meetings, delivering briefings, or other extended and elaborate informative monologues. Can reliably elicit information and informed opinion from native speakers. Use of structural devices is flexible and elaborate. Without searching for words or phrases, students use the language clearly and relatively naturally to elaborate concepts freely and make ideas easily understandable to native speakers. Errors occur in low-frequency and highly complex structures.

YORB 1300 Yoruba Language and Culture
Students will engage in interpersonal and interpretive communicative modes of language use to satisfy professional needs in a wide range of sophisticated and demanding tasks. While students will be able to demonstrate obvious strengths, they may exhibit some hesitancy, uncertainty, effort or errors which limit the range of language-use tasks that can be reliably performed. Occasional patterned errors may occur in low frequency and highly-complex structures. Typically, there will be particular strength in fluency and one or more, but not all, of the following: breadth of lexicon, structural precision, discourse competence in a wide range of contexts and tasks often matching a native speaker's strategic and organizational abilities and expectations.

Not Offered Every Year

ZULU 0800 Elementary Zulu I in Residence
This elementary course is for beginners and it requires no prior knowledge of Zulu. The course will expose students to the Zulu language and culture and will be based in the National Standards for Foreign Language Learning. Students will be engaged in communicative language learning through interpersonal, interpretive and presentational modes of language learning techniques. They will gain knowledge and understanding of the Zulu culture. They will use their Zulu language and culture learning experience to connect with other disciplines and further their knowledge of these disciplines through perspectives acquired from their Zulu class. They will also develop insight into the nature of language and culture through comparisons of the Zulu language and culture and their own. Through movies, songs, and other cultural activities online students will acquire the natural use of the language which will enable them to acquire linguistic and cultural skill to become life-long learners who can participate in Zulu communities in the U.S. and overseas.
